Don't Leave Home Without the Right Suitcase and Luggage Size

With built-in features such as built-in GPS locators, lightweight scales that avoid over-packaging, double-length (stern) USB charging ports, solar-powered electric-powered batteries, remote key systems, and smart color-coded compartments, smart luggage is a game changer in the luggage industry. You can carry more personal items and accessories, have a more comfortable travel experience, and save a lot of money on your travel costs. Here are some smart tips for carrying your luggage on a plane or train:

Lighter Luggage Smart luggage provides a lightweight option for frequent travelers. Some brands, such as Osprey and Kelty, offer complete kits for lightweight suitcases. These bags can be removed from their carrying handles and hung from a hook on the top of the bag. They come in a variety of weights, so you can select the type of bag that best suits your needs.

Versatile Travelers Rather than being limited to one airline or checking in at one airport, smart luggage allows you to bring your travel gear wherever you go. Most airlines allow you to pack your personal items and check into a hotel of your choice after you arrive at your destination. This gives you more freedom and flexibility when traveling. It also allows you to avoid checking your bags in with the rest of your luggage at the airport. For international travel, it's recommended that you check in your bags separately from your personal items.

Storing Luggage Storing your luggage in a suitcase may seem more convenient. But if you have many carry-on bags and suitcases, storing them in one big suitcase may not be your best option. In addition to taking up valuable storage space, your suitcase may not get to your destination until the last minute. If you travel frequently, consider buying an airline membership, which entitles you to a certain amount of luggage storage space for a certain fee. This is a great option for frequent business travelers as well.

Luggage Size Restrictions The size of your suitcase is a major concern for those who regularly travel on major airlines. Before choosing a particular airline or station, be sure to read their luggage size restrictions. Many hotels and resorts place limit sizes on suitcases, so it is important to make sure you know exactly what your size will be before leaving home. For frequent travelers, this can be a significant cost factor.

Luggage Inspections Many travelers do not like the idea of carrying around a suspicious-looking piece of luggage, but there are times when you must travel with something you cannot get a hold of on your own. If you're traveling overseas, there are many airports with security checkpoints. At these airports, you'll likely need to pass through metal detectors and security scanners in order to keep your suitcase from getting searched. winners luggage If you have a smart phone with a camera, it's smart to stash it in your smart phone's memory unit. Most smart phones have a slot for flash memory, so you can take pictures of security checkpoints, pass out to friends, then upload the pictures to your phone and let the world know that you're loaded down with goodies.

Carry-On Luggage Spinner Wheels Don't forget your carry-on luggage size, because it's up there with the size of your suitcase. You're going to need more than twenty inches of room in your carry-on to keep everything within easy reach. That means if you're packing for a one-week vacation in Europe, you should pack as much clothes as possible and leave the suitcases at home. For many people, the most exciting part of taking a trip is checking in, unpacking, and finally, walking through the airport. That means that you're going to need a lot of room in your carry-on for your toiletries and shoes.

For that reason, many airlines are now offering special luggage compartments that are lighter, easier to move around, and more durable. These types of luggage pockets are made out of strong, lightweight material such as nickel cadmium, which is used in high end watches. However, this material is also used in medical equipment, industrial tools, and even cell phones. So, don't rule out the possibility of finding a good deal on lithium ion luggage storage during your next vacation. Just make sure that you check with your airline or travel agent to see what kind of restrictions they have on this type of luggage.
