

Everything you need to know about Hollywood Laser Hair Removal

Hollywood Laser Hair Removal is the process of removal pubic hair from female and male genital area.

When it comes to male and female pubic hair removal, you can find many different methods being followed.

Out of those methods, Hollywood Hair Removal has received a lot of attention. That's because it removes pubic hair completely from the surrounding area, including bum, labia and lower abdomen.

Understanding IPL laser hair removal

A laser light is used to target hair follicles and destroy the melanin inside.

The pigment within hair follicle would absorb light pulse from the laser. It can damage hair follicle and discourage regrowth. Only the hair follicle can absorb laser beam and surrounding tissues will not be affected by it.

The laser hair removal process is called as photo-thermolysis. Photo refers to light, whereas thermolysis refers to destruction with heat. Main reason behind the popularity of laser hair removal is the ability of it to destroy hair follicles, without any kind of impact on the skin.

This method is completely different from electrolysis. In electrolysis, an electric current is sent directly into the hair follicle. It will be a time-consuming and a painful process. However, [laser hair removal](#) is not time-consuming and the user experience almost no pain. It can target a large volume of hair within a short period of time as well.

The benefits of Hollywood Laser Hair Removal

The exact benefits a person can get out of Hollywood Laser Hair Removal differs from

one individual to another.

For most of the people(males and females), it is a cosmetic procedure, which can help to enhance personal appearance. Any woman who wants to get rid of pubic hair and has an active lifestyle can think about going forward with this method. For example, it can benefit women who are engaged with sports such as swimming to overcome the hassle of shaving pubic hair once a week.

Other studies have mentioned that removing pubic hair can enhance sexual function and females and males are more receptive to performing or receiving oral sex.

Can Laser Hair Removal help you with ingrown hairs in the genital area?

Yes laser hair removal is an excellent method available for you to get rid of ingrown hairs. This is one of the main reason why many women prefer to use it to get rid of ingrown hair in the bikini line.

Skin around genitals is delicate and soft. On the other hand, hair grown in the area is heavy and coarse. Therefore, a traditional hair removal method such as shaving or waxing will not be able to deliver the best possible

results to you with removing ingrown hairs. They can cause a lot of pain and become infected as well.

If you want to get rid of ingrown hair around then genitals, laser hair removal is an excellent method to use. It can help you reduce hair growth in this region significantly. Most users see significant improvement after 5-8 sessions.

When hair becomes finer, they also lose the ability that they have to cause a skin infection. Therefore using the IPL laser in the genital area is an excellent option if you suffer form ingrown hairs.

Can laser hair removal deliver long lasting results?

The results you get out of Laser Hair Removal can last for several months. However, it depends on few factors. The number of laser hair removal sessions you had is the main

determining factor. In addition to that, color of hair in the area, color of skin, genetics, and underlying hormone or medical conditions can create an impact on the longevity of results you could get.

In general we found that eight sessions will be able to help you reduce around 90% of hair in the genital area. Then you just need to go ahead with maintenance sessions, which can be done every 6 months.

What makes Hollywood Laser Hair Removal unique?

The big difference between this method and other has to be that this method removes all the hair on pubic bone while other methods don't. Hollywood Laser Hair Removal is a process, which is designed to remove hair completely from the female and male genital area. It leaves the genital area without any traces of pubic hair. Hollywood hair reduction also covers other sensitive areas surrounding the genitals, including bum and labia. Lower

abdomen is also covered.

When using the Bareskin - it will only take around 20 minutes for a Laser Hair Removal session on the pubic bone and surrounding area. You will need to go through 6 to 8 such sessions to start seeing results.

Is Hollywood Laser Hair Removal painful?

Laser Hair Removal can cause mild discomfort for some of the people. However, it is not possible to call this as a painful procedure at all. That's because IPL laser beam is targeting hair follicles and it doesn't create an impact on the skin.

According to Zenhealth only 11% of people experience slight discomfort while most of them says the first couple of session are the most uncomfortable. When you proceed with the hair removal sessions, [you can reduce overall discomfort.](#)

When using the [Bareskin](#) handset you can adjust the laser settings to help you remain comfortable throughout treatment. Since it can

deliver long lasting results as appose to waxing or shaving, you will even be able to end up with measurable results after a couple of sessions.
