

Get Trained on Sitecore CMS in 2021

by Taruna70988

Content Management System(CMS)

A content management system is commonly abbreviated as CMS. It is a software application that works upon four major areas such as content, optimization, management, system HTML, and website. This software helps the users to generate, supervise, and improve the content on the webpage without any specialized technical knowledge requirement.

In short, the content management system is equipment that assists the user to construct a webpage without writing the codes. This makes the content management system come into the top 10 trending technologies.

What makes up a content management system?

A CMS is basically made up of two core main parts:-

Content management application (CMA): This application allows a user to add and manage the content on the webpage. Content delivery application: This application works behind the scene which operates the content one put in CMS, to store it carefully and make it visible to the visitors.

Simultaneously they both systems work to make it easy to perpetuate the website.

Top trending CMS platforms: –

Learn More on Sitecore CMS

Sitecore has emerged as an unparalleled well-crowned customer experience platform, crafted with a variety of solutions like CMS, commerce, and digital marketing tools, making people yearning to learn it. You should opt for training which matches your set of requirements. Whether you are looking to learn Sitecore as a developer or as the editor & want to get yourself familiarized with its various intricacies, will serve your appetite impeccably. But, before you pick up training, let me guide you with the basics which are a prerequisite for the training & will help you sail easily in the learning process of Sitecore. So basically, learning can be divided into categories:

1) The Sitecore works on .NET framework; hence for the beginner in programming & development, it is imperative to learn the .NET framework and basics of HTML and CSS first.

2) For people already familiar with the .NET framework and aspiring for the full stack Sitecore development, I would suggest to brush-up your C#/.NET skills. For the User interface, focus on the HTML5, CSS3, JavaScript,

and bootstrap. They are the icing on the cake, which can profoundly affect user experience. Moreover, It is advised to focusing more on MVC rather than web forms, as it is cleaner, and also web forms are old methodology, which is fading away.

After you are through with the basics, learning the use of Sitecore APIs is not troublesome you can easily kick start learning with the training programs. In case, you are facing some problem specific to some niche domain of Sitecore, then you can contact the Sitecore Developer community nimbly. There are a plethora of Sitecore enthusiasts who are always happy to help & share their knowledge & it can be further enriched by your contribution. Before commencing the development, a glimpse of what all is required to be done will provide a peek inside the Sitecore & enhance understanding of the basic structure, building blocks, and practices. Few basic things which are required:

§ Installing and running Sitecore under IIS.

§ Breaking down a website page into data template, layout & components.

§ Creating a 'node' or pages in Sitecore.

§ Preview & publish a page and understand how everything comes together to create a web page.
