

These Lenovo Chromebooks Cost \$99 (or Less!) for Prime Day

Three Lenovo Chromebooks are on sale for Less Than \$100 on Prime Day. This is an affordable price for the Chromebook that is likely to be decent in the event that one is willing to purchase an additional device.

Typically, our list of the top Chromebook deals for Prime Day includes possibly one Chromebook that costs less than \$100. We've found a variety, including several Chromebooks at prices as low as \$79 from Lenovo, which offers massive savings of as much as 70.

These are the specifics:

Lenovo IdeaPad 3 (11-inch), \$99.99 (55 percent off) at Amazon
Lenovo Chromebook 3 (11.6-inch), \$79.00 (43% off) at Best Buy

Lenovo Chromebook 3 (14-inch) with Headset Bundle, \$89.00 (68% off) at Walmart

Are they worth the effort? We think they are worth it, but only barely. All three Chromebooks are powered by the Celeron N4020 processor. This dual-core processor is only a few years old. All three Chromebooks have 4GB of memory. The minimum required for the minimum capacity of a Chromebook is 64GB. We've seen Chromebooks with 32GB storage. However, we've seen Chromebooks with more than that. If you are using Chromebooks for web work the extra storage space is helpful. Things like a touchscreen however, aren't included. The Walmart bundle comes with headphones, which are a nice but small extra.

Remember, this is an actual Chromebook running Chrome OS. It's not equipped to play Roblox or Minecraft like laptops would. (Refer to our story on laptops versus Chromebooks for more information.)

The weakest feature of the three Chromebooks is their 768p screen that should be sufficient for their small screens, but is still far less pixel-packed than the 1080p screens used by the majority of laptops. But don't fret, especially if you already have invested in a technology over the years. Each of the three Chromebooks comes with at least one USB C port and one with DisplayPort over USBC. This allows you to connect an external display to the Chromebook, increasing the screen resolution and size.

Serverlist101

How? You'll need a USB-C hub or dongle from our list of top USB-C hubs for your

Chromebook or laptop, which can cost you between \$20 and \$40 depending upon what you buy. It's possible that the 768p display is right for you, as they're small, portable Chromebooks. You'll require an external 1080p display. This is the 23-inch 1080p screen for \$97. Aopen screen available on Prime Day.

What's the best price out of these three? Walmart is the most value for money. We recommend Best Buy's deal because it offers the best price. If you decide the cost of a Chromebook isn't your thing then check out our list of the top Prime Day laptop sales instead.
