Minecraft Launcher won't open on Windows PC

Download PC Repair Tool to quickly find & fix Windows errors automatically Minecraft is among the most played Windows games for a long time. It is a virtual world in which players fight spiders, zombies, and monsters. It's a sandbox-style game and is pretty addictive. So, what if you're a Minecraft player and suddenly the game is not working on your computer. It's frustrating, isn't it? Don't worry, we got your back.Today in this blog we will look at the possible reasons Minecraft is not launching on your PC , and the solutions of course.

Why is Minecraft not being launched?

A poor internet connection is the most frequent reason Minecraft crashes on your Windows PC. Verify your internet connection and fix it if needed. Then, try launching Minecraft again. Corrupt launcher files – If the launcher file in your computer is damaged and the game won't start. In MINECRAFT SERVERS 'll need to remove the launcher files and launch the game again. You can find the launcher files ".minecraft" folder.Drivers issue - This is again a frequent issue. This is a very common issue. Verify if you've installed any recent updates in your operating system. If it is an optional one then you can remove it and then try to launch the game again.The system isn't updated Every game or program has specific requirements for your system, check if your PC is compatible or not.Too many mods - If your have installed too many mods in your PC this could cause problems when you try to launch the game.Minecraft Launcher will not work on a Windows PC

Let's now check a few solutions to the issue.1. Check your internet connection. Remove corrupt launcher files Update the graphic card driver4. Run Minecraft as administrator5. Remove Minecraft mods6. Re-install Minecraft 1] Verify your internet connection

Connectivity issues are a common reason why a game does not launch. Your internet connection might not be game-optimized and Minecraft won't launch. Change your internet connection to start the game again. 2] Clean up the launcher files that are corrupt.

If the launcher's files become corrupt, it will not allow the game to start. The only fix to this

issue is to delete the launcher files from the "Minecraft" folder on your PC, but then you have to install all your profiles manually. To find the Minecraft launcher files-- Open the Run dialog box by pressing Win+R- Type %appdata%- Go to the ".minecraft" folder- Locate the file called "launcher_profiles.json" and delete it.- Launch Minecraft and make new profiles from Settings. 3. Update your graphics card driver

Minecraft won't launch If you're running obsolete versions of the graphic card driver on your PC. You can use any free driver updater to update and repair the problem with the graphics drivers, and this will allow you to start the game smoothly. To look for graphics driver updates: Go to Device Manager within Control Panel You can also open the Run dialog box and enter "device manager". Go to Display adapters, and double-click on the device shown there. Click on the Drivers tab and see whether it's updated or not. Update if required and then launch the game again. You can also look for driver updates. 4. Run Minecraft administrator

Privilege issues may be the reason your game isn't launching. To fix this issue, you have to run Minecraft as an administrator. To do this, go to Minecraft, right-click and then run it as an administrator. This should resolve your problem.

The game will usually add all available mods (modifications). These are user-created modifications and are intended to enhance the game's experience, however they can cause issues when the launch of your game. Remove all the added Minecraft Mods before launching the game. 5. Re-install Minecraft

If none of the above-mentioned solutions worked for you, you better uninstall the game and install it again. To remove Microsoft Press Win+R and enter "%appdata" Right-click on the Minecraft folder. Click Delete. This will uninstall the game from your computer.- Go to the launcher and start the game afresh. These are a few solutions. Do try them and let us know if they worked for you.
