2. Sort this in the search window: ~/Library/Application Help/minecraft
3. Click on the Launcher.jar file.
4. The Minecraft launcher should now open as a Java tab and you should now have the ability to launch the recreation.

If you're operating Minecraft 17w43a and Minecraft 17w43b, here are the steps to fix the bug:

1. In your Minecraft launcher, go to Launch Options.
2. Click in your Minecraft profile.
3. Uncheck Decision.
4. Go to the Information tab, then press Play.
5. Minecraft ought to now load and you should be able to play the game in the new snapshot.

If you're not affected by these bugs but you can't open Minecraft on macOS, it's best to give the following solutions a shot.

Minecraft Crash on Launch on macOS: Common Fixes

If your version of Minecraft will not be included in the versions affected by the bugs listed above, then the frequent crashing is probably attributable to one thing else. However before you strive any of the solutions beneath, ensure that to do some home cleaning first to keep away from complications and to enhance the possibilities of these fixes to work.

Listed below are some basic troubleshooting tips you should follow:

- Disable your antivirus or other security software program that is perhaps interfering with the launching of Minecraft.
- Clear up your system using a Mac cleansing software. This should get rid of cached knowledge and junk information which are cluttering your system. Uninstall apps that you simply now not must free up more space to your games.
- Restart your Mac. A fresh begin can do a lot of wonders on your system.

As soon as your Mac has been prepped and prepared, you possibly can start to work your manner down the checklist to see which solution works for you.

Fix #1: Update Your Minecraft App.

If you're using an earlier version of Minecraft, it's best to improve to the latest model to get pleasure from new app developments and improve your gaming experience.

To update Minecraft, open the app launcher. The launcher should routinely show you the latest model of the appliance. If it's not updated, click on the arrow located on the precise aspect of the Play button. Click the newest Launch link to update your Minecraft to the most recent version. Observe the on-screen directions to complete the update process.

Fix #2: Replace Your Java Set up.

One of the frequent causes of Minecraft crashing on startup situation is an outdated Java set up. Having an up to date Java is vital, significantly for these playing the Java Version of the sport. It's also crucial that you simply set up the Java version that's appropriate to your macOS model. Install the 32-bit Java for the older macOS version and the 64-bit Java for Catalina and different recent macOS versions. For those who don't need the trouble of searching for the compatible software program in your app, you need to use a driver updater as an alternative.

Take into account that starting from Minecraft 1.12, Minecraft will need Java 8 to run. If you don't have it otherwise you don't know what Java version you've put in in your Mac, you don't

have to worry because the installer comes with its own Java version by default. Simply make sure that to uninstall your present Java set up to avoid conflicts because of a number of Java installations.

Fix #3: Set the Java Directory Manually.

If in case you have a number of Java installations and also you need to use a particular model for the Minecraft game, it's essential manually set the path for the game to avoid confusion.

To do this:

1. Click on the Apple Menu > System Preferences > Java.
2. Click on on the Java tab, then select View.
3. Choose and duplicate the entire textual content underneath Path. The trail to the Java set up ought to appear to be this:
/Library/Internet Plug-Ins/JavaAppletPlugin.plugin/Contents/Dwelling/bin/java
4. Open the Minecraft launcher, then click on Launch options.
5. Click on on the version of the Minecraft recreation you wish to run.
6. Scroll all the way down to Java executable and switch the feature on.
7. Paste the text you copied (below Path) into the box.

Close the window and check out launching Minecraft as soon as again.

Repair #4: Redownload the Launcher.

1. If in case you have a corrupted or incomplete launcher, you possibly can download an excellent working copy from this [hyperlink](#).
2. Set up the launcher by double-clicking on the launcher file and dragging the Minecraft icon to the Applications folder.
3. Disregard any notifications about your Java installation being outdated.
4. As soon as the brand new launcher has been installed, try opening the appliance once more and see if the brand new launcher works.

Fix #5: Use the Bootstrap.jar as Launcher.

If you've downloaded a brand new launcher and it doesn't appear to work, you possibly can attempt opening the application utilizing the Bootstrap.jar file as an alternative. To entry the file, comply with the steps under:

1. Double-click on on the Minecraft application and choose Show package contents.
2. Navigate to Contents > Sources > Java.
3. Double-click on Bootstrap.jar to open it. This could work because the Minecraft Launcher.
