

The long trip back home to celebrate Thanksgiving is always informative. I take lectures with me.

Here's what has been going on in my life recently. I'm in college, it's online but I am learning lots of valuable knowledge to prepare for my dream job as a Youtube celebrities or Instagram influencer. It's possible to laugh, but I've already started down this path with more than 1800 followers. It's not much, but it can be accomplished with lots of positive thoughts and exclusive content packed with brilliant ideas. I will soon become famous. It's not that difficult to get there, like Nas once said. Nas' words have always been an motivation to me.

It was a lengthy and boring journey home that looked just like every other. Being a hefty and bulky individual I don't like sitting in a small bus seat. The last time I was stuck, I made a decision to overcome boredom. Yes! Two classes at my college include a great number of lectures. They are stored on their servers, however they are they are also available uploaded to Youtube. Youtube offers several high-quality options. It has been extremely helpful for me teachers and I have copied their lectures onto Youtube.

I am currently making myself ready for my eight hour bus ride. I'm trying to decide what to do and how I can have amusement. Perhaps some thought-provoking. I looked over my lecture over and found out that there were more than 7 hours of video. I downloaded the video to my Ipad. I listened to the lecture in the car on my way back from Thanksgiving. Thanks to YouTube's mp3 converter, it allowed me to do exactly that.. The first step was to convert Youtube video to mp3 file, downloaded to my phone , in case my iPad was going to die too soon and too young. I did audio only for the phone because I simply have very little space, and an audio lecture is just like podcasts. Also, nothing visual happens in these lectures. The content is presented in terms of watching a person aged two to three years old, so it's quite easy to understand, even if you are not watching or listening. Then I converted the video to mp3 and then set up my headphones. <https://ytmp3.sh> I don't have the costly new AirPods which is why I am still using my basic headphones.

However, I also downloaded videos from YouTube as mp4 files to my iPad, which could be a

huge help in the beginning of the trip. You can see the teacher and listen to what's happening and it's cool. Although mp3s have a much smaller size than video mp4, I was unable fit all the video onto my iPad. Additionally, I did not want to remove Family Guy (also downloaded via Hulu) to make room for my journey.

I was so pleased that I had packed both audio and video lectures. After two hours, my iPad stopped working. Then my phone came into. I was listening to audio instead of watching the video, so it was able to make it to my destination. When I returned to class, as college began again it was very simple for me to recap what I learned on my trip, and impress my teacher with my knowledge. It's exciting to see the potential of technology to help students in their classes. Youtube as well as other video storage sites offer an endless amount of information, such as tutorials and DIY videos. This is something worth looking into.
