It is truly a unique adventure where you create your story.

Embark on expeditions in search of the rarest minerals and combine raw materials to invent something entirely new. Dig deep into the ground or build a palace that reaches up to the clouds. Build defensive walls and place animal pens. There are no limits in the world of cubes.

Game modes

Choose the gameplay style that suits you best! Just say yes In Creative Mode, you can spend hours of addictive gameplay focused solely on building - while in Survival, you will face hordes of enemies that come only at night. If you feel up to it, choose the rough Hardcore mode where every death is permanent. Or maybe you are interested in exploring the map from a completely different perspective? Such an option is available in the Spectator mode, in which you will explore the map as a ghost! Or maybe you would like to play with other players on their servers? You will find this kind of fun in the Adventure mode.

There are two versions of Minecraft available: Bedrock Edition and Java Edition. Although very similar, they differ in several features. Minecraft Java Edition is the oldest and first version from Mojang providing cross-platform gameplay between Windows, Linux, and macOS. What's more, Java Edition allows you to make many modifications and new game modes that are completely free. Such features in Bedrock are available in the micropayment system.

And one more thing - Java Edition is the standard pixel Minecraft gameplay without additional

smoothness or refinements. If you are a fan of the classics and want to become part of an extensive community of players creating their own mods and original worlds - try Minecraft Java Edition.
