If you know someone whose child(ren) are struggling with maths, please do send them to look at [Kids Printable Games](#).

One of the most important aspects of learning maths is to practice over and over again. This can be boring and tedious. Kids hate to be bored – and so do I! Maths games are a great way to learn without being bored. All the family can take part and it makes learning a relaxed and fun experience. Learning becomes less stressful and more joyful. You don't even have to buy a traditional board game – just print and play! My print and play times tables math games are focused on maths and literacy.

Learning should be fun!

I started designing games for my students – particularly the ones that failed to listen to much of what I said, unless it was time to play a game!

Games and songs are a wonderful way to learn the times tables, alongside worksheets. Worksheets can be tedious and uninspiring, but when combined with a range of interesting activities, they can be fun!

I have selected times tables as they are the building block of maths alongside addition, subtraction and problem solving.

Also, I have included new vocabulary on many of my Kids' Printable Games as this helps with developing language skills and is part of literacy.

Throughout my ten years of teaching, I have never had a student that did not go away smiling at the end of a lesson. We always have fun and if it gets too difficult, we just play a game, tell some jokes, solve a riddle or listen to a song. Learning should be stress-free.

Just Print and Play, that's what I say!

Have a great day and spread the word – learning can be fun!
