Determining the specific apolipoprotein E (APOE) genotypes in patients with type III hyperlipoproteinemia APOE genotyping has been used to assess susceptibility for Alzheimer disease. However, the use of APOE analysis for predictive testing for Alzheimer disease is not currently recommended by the American College of Medical Genetics due to limited clinical utility and poor predictive value. Diagnostic Lab. The diagnostic lab at Greenwood Genetic Center is named to honor the Center's co-founder, Harold A. Taylor. The facility is made of three separate, but integrated laboratories: the biochemical lab, the cytogenetic lab and the molecular lab.
