

"12/70 Salvatore Granello\* Mobster linked to both Hoffa, Trafficante, and Castro assassination plots  
Murdered  
1971 James Plumeri\* Mobster tied to mob-CIA assassination plots Murdered  
3/71 **Clayton Fowler Ruby's chief defense attorney Unknown**"

<http://www.whatreallyhappened.com/RANCHO/POLITICS/JFK/deaths.html>

Father of Spacey **Thomas Geoffrey Fowler** linked to **Jack Ruby** and **Clay Shaw**, Clayton Fowler (cousin of Thomas) was Ruby's defense attorney in November, 1963

<https://www.myheritage.com/research/record-10182-1943722/thomas-fowler-in-biographical-summaries-of-notable-people?indId=externalindividual-645ac2f4c3eb9ad3eb128555bda4a52&mrid=a3acd413e47af855a964b54a68f5ab23>

First official proof with **Alberto Fowler** (also related to **William K. Fowler** and **Thomas Fowler**) being directly on scene for the JFK assassination. **Clay Shaw** again mentioned and photographed.

"On the same day, November 22 1963, a CIA officer was handing an assassination instrument to Rolando Cubela, code-named AMLASH, in the latest of CIA attempts to murder Fidel Castro. The case officer's superior, Special Affairs Staff Desmond Fitzgerald, had personally met with Cubela earlier, and presented himself as a personal representative of Robert Kennedy. Both Fitzgerald and his boss Richard Helms later testified that RFK had not been informed.

Rolando Cubela with Fidel Castro in 1959.

Rolando Cubela with Fidel Castro  
in 1959.

Were the Kennedy brothers trying to kill Castro at the same time they were trying to reach an accommodation with him? Pursuing such multiple tracks would not be out of character for JFK, and the circumstantial evidence is fairly strong that he and his brother authorized at least some of the plots to kill Castro. But direct evidence of Presidential authorization has never been forthcoming. This may very well be the result of the desire to maintain "plausible denial," but it is also true that the informal stories that "the Kennedys knew" tend to come from their political enemies, making final judgments difficult. The CIA had its own agenda, as well; when Robert Kennedy was told in 1962 of plots to kill Castro involving organized crime, for instance, he was falsely told that these plots had been terminated.

Some of the figures involved in these CIA-Mafia plots - Johnny Roselli, Santo Trafficante, Sam Giancana, Bill Harvey - have long been "persons of interest" in the Kennedy assassination. Roselli and Giancana were both murdered during the Church Committee's investigation. The coalition involved in these plots - mob figures beset by RFK's war on organized crime, Cuban exiles frustrated with Kennedy's inaction on Cuba, and CIA officers similarly dismayed by perceived Kennedy weakness - had both the motive and the means to turn on JFK. Whether they did so remains in dispute.

The CIA and the Warren Commission

In the aftermath of the JFK assassination, a senior officer named John Whitten was put in charge of collecting investigative data on Oswald and the assassination. Within weeks he was replaced and James Angleton's CounterIntelligence division was put in charge. Angleton's group had opened a file on defector Lee Henry [sic] Oswald in 1960 and had opened his mail under its HTLINGUAL program run by Birch D. O'Neal. With CounterIntelligence officer Ray Rocca as the main contact point, the CIA supplied the Warren Commission with information about Oswald and his wife Marina, their contacts in the Soviet Union, Oswald's trip to Mexico City, and more.

Angleton was also responsible for the incarceration of Yuri Nosenko, a Soviet defector who arrived in the U.S. with the seemingly unwelcome news that the KGB had had no interest in Oswald during his tenure in the Soviet Union. Angleton and other CounterIntelligence officers were convinced that Nosenko was a false defector sent by the KGB on a mission. Nosenko was locked in a small room and interrogated for

more than three years, while a battle raged within the CIA over his bona fides. Because this issue was unresolved during the Warren Commission's tenure, the Commission received reports about him but did not use his information in its publications.

A prominent Warren Commissioner was former CIA Director Allen Dulles, who Kennedy had let go after the Bay of Pigs fiasco. Dulles maintained some contact with the Agency during the Commission's tenure, including coaching it on what questions the Commission might ask; one internal memo summarizing such a contact included this: "I agreed with him [Dulles] that a carefully phrased denial of the charges of involvement with Oswald seemed most appropriate."

The CIA and the Garrison Probe

The ill-fated investigation of New Orleans District Attorney Jim Garrison into the Kennedy assassination was not running for long before it started to pull CIA assets into its sights. An internal CIA memo from September 1967 lists those claimed by Garrison to have Agency ties: Clay Shaw, Lawrence LaBorde, Emilio Santana, Victor Manuel Paneque, Alberto Fernandez Hechavarria, Carlos Bringuier, Gerald Patrick Hemming, Jack Rogers, William Dalzell, Schlumberger Corp., Donald Norton, and Gordon Novel. Only in the latter two cases did the CIA claim absolutely no relationship; others were at least contacts or in some cases more (Carlos Bringuier's DRE anti-Castro organization was "conceived, created, and funded by the CIA").

New Orleans businessman Clay Shaw.

New Orleans businessman Clay Shaw.

Clay Shaw, the man Garrison charged with conspiracy in the JFK murder, testified under oath "No, I have not" to the question "Mr. Shaw, have you ever worked for the Central Intelligence Agency?" The truth of this answer may depend on the meaning of the word "work." It was later revealed that Shaw had been an informant to the CIA's Domestic Contacts Service during the period 1948 to 1956. More interestingly, a document surfaced which seemed to imply that Shaw was cleared for "Project QK/ENCHANT." Other persons cleared for this project include J. Munroe Sullivan, Shaw's "alibi," Peter Maheu (son of Robert), and no less than CIA officer E. Howard Hunt. The nature of this project is still classified; what little information there is suggests that those cleared for the project may possibly have been "unwitting," and that it may have been related to gathering information from businessmen. Certainly there is no indication it was assassination-related. Author Bill Davy (Let Justice Be Done) also uncovered a CIA memo which appears to confirm Shaw's use of the alias "Clay Bertrand," which was central to the trial.

CIA Director Helms' assistant Victor Marchetti revealed in the 1975 that Helms held meetings where he would ask "are we giving them all the help we can?" Counterintelligence officer Ray Rocca held meetings on 20 Sep 1967 and 26 Sep 1967, and incorrectly predicted that "Garrison would indeed obtain a conviction of Shaw" (Shaw was acquitted after an hour of deliberation). The Agency also produced a series of 9 numbered memos tracking the Garrison investigation (see sidebar), and circulated to station chiefs a guidebook for defending the Warren Report, with specific strategies for refuting the critics.

Beyond the monitoring of Garrison, there have long been allegations that CIA agents infiltrated the DA's staff, which certainly produced its share of defectors and leakers. Many stories swirled around William Martin (who had been a former CIA contact), **William Wood aka "Bill Boxley" (also former CIA, though known as such by Garrison), and anti-Castro exiles Bernardo de Torres and Alberto Fowler**. The truth of the level of infiltration of Garrison's staff remains murky. The real attack on Garrison

came from the mainstream media, including an NBC reporter who had formerly worked for the CIA, NSA, and Robert Kennedy - Walter Sheridan. The Justice Dept. also played a role, including taking the step of flying JFK autopsy doctor Boswell to New Orleans during the trial to be ready to rescue his floundering colleague, Dr. Finck. " [https://www.maryferrell.org/pages/The\\_CIA\\_and\\_the\\_JFK\\_Assassination.html](https://www.maryferrell.org/pages/The_CIA_and_the_JFK_Assassination.html)

World War II boat by William K.(Alfred) Fowler. <https://www.librarything.com/author/fowlerwilliamk>

"He has an older brother, Randy Fowler, who is a limo driver and Rod Stewart impersonator in Boise, Idaho, and a sister, Julie Ann Fowler Keir, an office worker. [10] [11] His family relocated to Southern California when Spacey was four years old. [12] Randy Fowler (from whom Spacey is estranged) [13] has stated that their father, whom he described as a racist " Nazi supporter", was sexually and physically abusive, and that Spacey had shut down emotionally and become "very sly and smart" to avoid whippings. [14]

Spacey attended Northridge Military academy, Canoga Park High School in the 10th and 11th grades. He graduated co-valedictorian (along with Mare Winningham) of the class of 1977 of Chatsworth High School in Chatsworth, California. [15] [16] [17] At Chatsworth, Spacey starred in the school's senior production of *The Sound of Music*, playing the part of Captain Georg von Trapp with Winningham as Maria von Trapp. He started using his middle name "Spacey", which is also his paternal grandmother's maiden name. [9] [18]"

**Fowler, William Alfred. Courtesy of Caltech (Fowler holding the National Medal of Science)**

**The scientific career of William Fowler has enduringly enriched astronomy by providing a systematic treatment of nuclear reaction rates in stars. This achievement earned him the 1983 Nobel Prize in Physics, shared with Subrahmanyan Chandrasekhar.**

**Fowler grew up in Lima, Ohio, where he acquired a lifelong fascination for steam engines. He was valedictorian of his class at Lima Central High School (1929). Enrolling at Ohio State University, Fowler graduated in 1933 with a B.S. degree in engineering physics. He was accepted into the California Institute of Technology (Caltech) as a graduate student in physics. His career was opened (in Fowler's own opinion) by becoming a research student under Charles C. Lauritsen, who had constructed the 750-kV X-ray tube at Caltech's High Voltage (now Sloan) Laboratory. Following the discovery of artificially induced nuclear reactions by John D. Cockcroft and Ernest T. S. Walton, Lauritsen and Fowler became pioneers in particle-induced reactions at low energies. Toward this end, they constructed a new electrostatic accelerator based on the principle of Robert J. Van de Graaff. With it, Fowler discovered radiative capture reactions, which are also important processes occurring inside stars.**

**This remained his goal for five decades. Personnel from his laboratory not only participated in most of the seminal measurements of the reaction rates for hydrogen, helium, carbon, and oxygen fusion reactions, but also focused on an appropriate theory of low-energy reactions and on the parametric representations of data that would be most useful for astronomers modeling the evolution of stars. Fowler was first and foremost a nuclear physicist, but he came to be known more broadly as a "nuclear astrophysicist."**

he Kellogg faculty was moved to Washington (1940/1941) to work on proximity fuses for the detonation of anti-aircraft shells. They returned to Pasadena to set up work on solid propellants for rockets at the Naval Ordnance Test Station at China Lake, California. For his public service rendered in wartime, Fowler received the Naval Ordnance Development Award in 1945 and the President's Medal for Merit in 1948.

Immediately after the war, Fowler and the Lauritsens made their decision to study the reactions of light nuclei, with an emphasis on their significance to stars. Their goal was not what is today called "nucleosynthesis," the origin of the chemical elements. Instead, their objective was to understand and quantify thermonuclear power in the Sun and stars. The work of Hans Bethe and others had made it clear, however, that nuclear reactions would modify the abundances of light elements. The time was ripe for a theory of nucleosynthesis in stars, which was begun in England by Fred Hoyle. Fowler and Hoyle would not meet for some time, but would eventually become one of the foremost teams in the history of astronomy. Many have argued that Hoyle should have shared the 1983 Nobel Prize with Fowler by including the theory of nucleosynthesis in stars. The citation, however, emphasized the experimental estimation of stellar nuclear reaction rates, which was Fowler's life work.

In the early 1950s, the big question in Fowler's mind concerned the fusion of helium nuclei. Was a star out of fuel after its hydrogen has been consumed? Nuclear experiments at Kellogg Laboratory showed that no stable nucleus of mass 5 existed. Moreover, their demonstration that beryllium-8 spontaneously broke apart made it clear that no stable nucleus of mass 8 existed. Stellar ions seemed impotent at this impasse. When Edwin E. Salpeter spent one summer (1951) at the Kellogg Laboratory, he implemented an idea of Bethe's, by which a small equilibrium concentration of beryllium-8 could capture a third alpha particle and, with the emission of a gamma ray, transmute to a stable carbon-12. We now call this reaction series the triple- $\alpha$  process; Salpeter correctly proposed it as the energy source for red giant stars."

[https://link.springer.com/referenceworkentry/10.1007%2F978-1-4419-9917-7\\_474](https://link.springer.com/referenceworkentry/10.1007%2F978-1-4419-9917-7_474)

British-American optical spectroscopist E. Margaret Burbidge is known throughout the astronomical community as the first B of B2FH (Burbidge, Geoffrey Burbidge, William Fowler, and Fred Hoyle, 1957). Called "Synthesis of the elements in Stars," this paper, along with a less well-known one by Alastair G. W. Cameron, summarized the nuclear physics and astrophysics of the origin and abundance of the chemical elements at the time and has provided a strong, long-lived foundation for work since. She, frequently in collaboration with her husband, Geoffrey R. Burbidge, also contributed a great deal to studies of rotation of galaxies and observational properties of quasars and other active galactic nuclei. In the course of her career, she gradually moved away from mainstream cosmology and late in life definitely doubted that all the ordinary matter we observe had passed through a hot dense stage (the Big Bang) and also doubted the formula can work."

#### **Nazi history promoted in Hollywood**

"which the French fought unsuccessfully to keep Vietnam as part of their empire (and filmed partly on location in and near Saigon itself). The film follows British journalist Thomas Fowler (Michael Redgrave) and an idealistic young American for whose death Fowler becomes responsible (listed only as 'The American' in the credits and played by Audie Murphy), his rival for the affections of a young Vietnamese woman.

Part of *The Quiet American* is a debate between Fowler and the American on the war and the United States' perspective on it. Fowler insists that as a journalist he is not involved, and the American replies, 'My friend, you are a mass of involvement'. In Fowler's case the journalistic ideal of detachment proves humanly impossible. "

<https://www.ijpc.org/uploads/files/Depiction%20of%20War%20Correspondents.pdf>

#### **Operation Mockingbird**

"William Fowler is a historian with the capacity to convert meticulous research into flowing narrative. Here he fuses political and naval history, looking at political forces in the rapidly expanding U.S. society as well as at naval ordnance, operations, and the fateful and exciting battles at sea."

<http://www.endeavourpress.com/books-cat/history/>

"One of the main concerns of the CIA was the portrayal of race-relations in Hollywood movies. It was argued that the left was using this issue to undermine the idea that America was a democracy based on equal rights. Letters from Jackson sent to the producers of films called for scenes showing African Americans mixing on equal terms with whites. One of Jackson's proposals involved "planting black spectators in a crowd watching a golf game in the Martin and Lewis comedy *The Caddy*".

In 1955 Graham Greene published *The Quiet American*. The novel is set in Vietnam and involves the relationship between Thomas Fowler and Alden Pyle. Fowler is a veteran British journalist in his fifties, who has been covering the war in Vietnam for over two years. Pyle, the "Quiet American" of the title, is officially an aid worker, but is really employed by the CIA. It is believed that the Pyle character is partly based on that of Edward Lansdale."

- H. J. Fowler, D. R. Archer"

"Thomas matriculated from merchant taylor with London University's examination in 1919 and its intermediate examination in 1921. He obtained a scholarship to trinity college, cambridge, by examination and began his studies there in 1921, focusing on pure and applied mathematics. He attended lectures by Charles G. Darwin, John E. Littlewood, Geoffrey I. Taylor, Ralph H. Fowler, Arthur S. Eddington, E. Arthur Milne, and Joseph Larmor, among others. He seemed to have moved effortlessly through trinity and the university, receiving a senior college scholarship in 1923 and an isaac newton studentship based on his performance in the mathematical tripos in 1924, graduating with a first-class honors B. a. in mathematics with distinction in applied mathematics. He then began research with fowler just as fowler went away for a year to niels Bohr's institute in Copenhagen."

"In 1929, with R. H. Fowler's recommendation, Ohio state University offered thomas an assistant professorship of physics, which he accepted. he remained there, apart from wartime service, for 17 years, advancing through the ranks to full professor in 1936.

The archival holdings in the library at north carolina State University show that at Ohio state he taught a wide range of advanced courses in physics, astrophysics, and astronomy. His research ranged widely over atomic and nuclear physics, astrophysical applications of fluid dynamics, quantum theory of solids and complex molecules, design of cyclotrons, self-energies in quantum field theory, and mobilities of electrons and ions in gases, as well as applied mathematical topics such as numerical methods."

"Meanwhile, Nazis and Klansmen and women began converging at Brent Fletcher's house on Randleman Road, on the outskirts of Greensboro. Klansman Lawrence Morgan drove his yellow van from Lincolnton, picking up Billy Franklin, Harold Flowers, 3 Roy Toney, Michael Clinton, Chris Benson, Mark Sherer, Grady Hoppes, Roy Splawn and Lee McClain. On the way, they stopped to buy seven dozen eggs to throw at the Communists and talked about "getting into some fistfights" in Greensboro.

In Winston-Salem, 16 year-old Claude McBride rode with his stepfather Milano Caudle and other Nazi party members Jack Fowler, Roland Wood, and Charles Finley in Caudle's blue Ford Fairlane. McBride said he had a "vague idea that there was going to be a fistfight in Greensboro and that his stepfather had planned it."

## "CHAPTER I

### CIRCULATION OF NITROGEN IN NATURE

LITERATURE

CROSSLEY.—*Pkarm. Jourti.*, 1910, 30, 329.

FOWLER.—" Bacteriological and Enzyme Chemistry.<sup>53</sup> 1911.

BRAUN.—Abegg's " Handbk. d. anorg. Chem," vol. 3, pt. 3, 216.

NITROGEN is an essential component of animal and vegetable living matter, and must be supplied to them in an assimilable form. Animals obtain their nitrogen in an "organically combined" form from vegetable matter. Plants, however, obtain their nitrogen principally in the form of nitrates or ammoniacal salts, which they absorb from the soil. To a much smaller extent they take up (at least some varieties do) nitrogen directly from the atmosphere."

**Captain William Fowler** had a big heart (which is how he founded Skull and Bones.)

"No? Neither did members of the Thirteen Club. Back in 1882, Civil War vet Captain William Fowler set out to debunk the myth that 13 is a "bad" number. You see, he had fought in 13 major battles; had to retire from combat on August 13, 1863; and purchased a cottage on the 13th of the month shortly thereafter.

The group walked under a ladder to get to their seats at the dinner table and then insisted on spilling salt without throwing some over their shoulders. They sat down to forks crossed in an "x" and dined under a red banner that said "Morituri Te Salutamus," or "We who are about to die salute you." It would appear that none of them had any trouble living over the next 12 months."
