[Checklist of all out there servers.](#)

3. Run the server

Unzip the downloaded server file. [ebookmarks](#)

The server.jar file is positioned in the server folder. Right-click on on it and choose Open, after which your server will begin.

4. Connect with the server

You'll be able to connect with the server out of your pc utilizing IP tackle 127.0.0.1.

For people to hook up with you from other computer systems, you need to buy a dedicated IP tackle from your Web provider. Once you get the IP tackle, flip off the server, open the server.properties file within the folder containing your server, and at the end of the file add the line `server-ip=YOUR_IP` (change YOUR_IP with your IP tackle).

5. Make your Minecraft Server work 24/7

Not like if you find yourself creating a server in your computer, when creating it on the hosting service, gamers from all over the world will be capable to hook up with you with out problems. The server will run 24/7 uninterrupted and have a great Internet reference to a low ping. It is going to be protected towards DDoS assaults. In addition, you'll be able to mechanically set up servers by means of the management panel, replace them, use a site to hook up with the server, and create your individual web site.
