M

THE POPULAR CHOICE
FOR PAINT GRADE WOOD

POPLAR

Another designer favorite when paint-grade wood is needed, Poplar is one of the softer wood species. Typically, Poplar's smaller lengths of wood have been used to create finger joints, where ends of pieces are notched and slid together – just like interlacing your fingers. We have aligned and combined sections of Poplar to create larger lengths of this beautiful wood, commonly called engineered Poplar.

BENEFITS OF METRIE PRIMED FINGERJOINT POPLAR MOULDING:

- Finger joint poplar is an engineered material, that is more affordable than a solid poplar.
- Because of its wood characteristics, it is considered a step up from MDF moulding as it is more durable and long lasting, even in high humidity or in extreme temperatures.
- Metrie is the exclusive manufacturer in the Ontario area to offer superior primed, ready-to-paint moulding elements.
- Primed finger joint poplar moulding is available in spec length sizes.
- Our quality and capabilities are unmatched in the industry.

SELECT THE RIGHT DOOR TOO!

We've selected moulded panel doors, which can be painted to match our finger joint poplar moulding. These doors enhance the style you are looking to bring to your space.

SAFE 'N SOUND® OPTIONS AVAILABLE WITH:

- 5-year warranty
- Reduces the transmission of sound from room to room
- Offers the durability, heft & feel of real wood
- 20-minute fire rated options with 1-3/4" thickness
- Door core is engineered from wheat straw, a renewable resource

METRIE

THE ART OF FORM

Poplar wood is the preferred material for interior finishings such as baseboard, casings, crowns and other mouldings profiles found in high-end homes located in the Ontario area.

Metrie™ knows that selecting interior finishing products can be a daunting task.

That is why we've partnered with **Don Lea Lumber Ltd.** to help you easily choose the right combination of moulding and interior doors.
