

Son Of Safemoon Whitepaper

Son Of Safemoon is an ambitious project on the BSC network. Using a collection of team members who are knowledgeable about the current state of the BSC nanocap market, we have released a token that is designed to rocket up to hundreds of times your return on investment.

The project is ran by based developer who's known by spending on non-stop on marketing, getting every single influencer, taking every community suggestion into consideration.

The team is very transparent with every stage of the process and we hope that you will take the time to join us in chat to discuss future plans and the prospects of this token. On the following pages will be a breakdown of the tokenomics of SON OF SAFEMOON.

TOKENOMICS

There is a max transaction limit of 2% of the total supply, with a maximum wallet size of 3%.

A 10% tax is taken out of each SON OF SAFEMOON transaction, distributed as follows:

6% Marketing
2% Buyback
2% Liquidity Pool

WHEN MOON?
DeFi made simple

These tokenomics allow for SON OF SAFEMOON's marketing wallet to grow so we spread our mission statement, a buyback to help with the dips on our way out of orbit and a rising price floor with a larger liquidity pool. See page 3

MARKETING

Everyone learns of SON OF SAFEMOON in their own way, there are many audiences out in the world of crypto investing and it's our due diligence to reach them. A marketing wallet and tax allows for the volume of SON OF SAFEMOON to support our mission statement and provide funds in order to grow the potential holders and volume of the token. This is critical to our success!

BUYBACK

Buybacks allow for the smooth launch into out of orbit. As this wallet grows we get more opportunities as a team to help shape our trajectory in order to entice new investors and to protect our astronauts already strapped in for the ride.

LIQUIDITY POOL

The final tokenomic tool is a tax which sends funds to the liquidity pool. By increasing the available liquidity we are establishing a rising price floor and more stable ecosystem. The goal here is to prevent larger dips when whales sell their tokens later in the life cycle of SON OF SAFEMOON and making our dedicated holders rest easier with their investment.
