## 2. NEW BUILDING COMPLEX IN PISA

The iconographic towers with the surrounding buildings in the new **Parco delle Torri in Pisa**, currently under construction, will design an entire residential district in the recently expanding part of Pisa, close to the new regional hospital and convenient to the various university centers, which see in Pisa 3 universities - Normale, Sant'Anna and Statale - with over 50,000 students.

Private Negotiation.

**Le Torri** – 9.300 sqm, structure started, with building permit to complete

**The Cisanello Park** – 7.350 sqm, building permit ready to start

The complex will be built on an area of about **five hectares** located along the new access route to the new hospital, close to the new Provincial Administration headquarters, the Court and the new Municipal Library, convenient to the various University sites.

The area is also characterized by a strong attraction for **social relations, leisure and free time** (San Pio X church, Arci club, multiplex cinema ...). The project involves a building around a vast urban park of about one hectare, enhanced by the presence of some bodies of water.

The entire complex is strongly characterized by the construction of **two residential towers** that will have the double value of a reference and symbol pole: 45 meters high, they will dialogue, in fact, at a distance with the monumental presence of Piazza dei Miracoli and the Leaning Tower.

L'intero intervento sarà **protetto dalla circolazione automobilistica che verrà raccolta sulla cintura esterna dall'ampio sistema dei parcheggi**. Complessivamente, è prevista la realizzazione di circa **400 unità abitative**, con alcuni **piccoli inserimenti commerciali**, pensati per garantire un adeguato servizio alle necessità primarie dei residenti.

The entire intervention will be protected from motor vehicle traffic which will be collected on the outer belt by the large parking system. Overall, the construction of **around 400 housing units is planned (the number of units can still be changed according to the chosen destination, e.g. private or students or other)** with some small commercial entries, designed to ensure adequate service to the primary needs of the residents.

In the design, fundamental importance was given to **the use of the latest technologies in the field of energy saving** of buildings as well as the production of alternative energies.

The executive design, in order to improve the formal and qualitative level of the execution of the work, arises from the design synergy between the masterplan's editor and a **prestigious international signature** of important and significant European architectural works.

*Note: on the 9.350 sqm Area, 2 residences were built on the street side, a supermarket, the metal bearing structure of the Towers. The internal partition project can still be modified.*

*7.350 sqm of slu are still to be built. The project can be modified and merged according to needs.*
