Cognitive FX improves the way in which concussions are perceived and taken care of and has seen countless numbers of patients world wide. Their ground-breaking diagnostics and procedures help patients to eliminate their symptoms and take back their lives, irrespective of how much time it has been since their personal injuries.

Almost two decades ago, Dr. Alina Fong and Dr. Mark Allen identified an excessive lack in the field of concussion and brain injury treatment.

"Most medical providers view post-concussion symptoms as inconveniences that will diminish with time," Dr. Fong, said. "But we understand that, for many people, the symptoms can be life-altering and never 'just go away' on their own."

After many years of exploration and clinical practice, they formulated Cognitive FX. This Utah-based medical clinic is separate because of its unique well-designed Neuro Cognitive Imaging (fNCI), that allows Cognitive FX's clinical practitioners to find out specifically which brain areas are suffering as a direct result of a patient's injury.

While using the overall results of the fNCI, their highly-trained staff of multi-disciplinary medical practitioners and practitioners emphasize those regions in a one-week or two-week-long treatment regimen.

Cognitive FX is the sole health care clinic in the world that produces modern day imaging and diagnostics together with a multi-disciplinary staff of doctors and therapists in an individual location and the outcomes prove how they are leaders in the concussion-related treatment field.

Just after their week-long treatment program, patients almost always report noticeable improvement, boasting a 60% diminishment in symptoms. Patient testimonials can be found on the Cognitive FX's YouTube channel.
