

Iranian F-4D Color Scheme and Paint Chips

The above Iranian F-4D color scheme is taken from a MAC photo number C12-461-4 dated 15 August, 1969. The camouflage pattern is as described on the previous page and the markings are as follows.

The roundels are red, white and green with red in the center. The turbine warning stripe around the fuselage under the roundel is red, and is on the upper surface only. The fin flash is also in the national colors with the red stripe being on the bottom. The old USAF serial number 14870 is carried on the fin as is the number 3-602, both in black. IIAF is carried on both sides of the intake ducts in black. The significance of the black Arabic script beneath the cockpit is not known. Other markings include red ejection seat warning triangles(both sides),yellow rescue arrow(port only) and black foot guides(also port only).

The following notes refer to the camouflage pattern and are taken from MAC drawing No. 53--00023.

Paint top inboard portion, the stainless steel and titanium skin area of stabilator with black sicon enamel No. 7X983, per M.A.C. P.S. 13314.

Camouflage pattern on aircraft shall approximate that shown but need not duplicate it exactly. Demarcation area between colors shall be blended.

Markings requiring yellow or white paint shall be fogged over with a thin coating of green or tan paint as required to tone down the bright yellow or white.

Top and bottom leading edges of stabilator outboard of black area are not painted.

For walkway area on top surface of wing, apply appropriate corogard, matching surrounding camouflage color paint, over No.22 Black corogard. A 0.5 inch black outline surrounds the walkway.

Interior surface of aft missile wells are painted with MMS 405 epoxy primer, interior green.

All metal parts of the landing gear are painted gloss white.

Interior surfaces of forward missile wells are painted white.
