Hey and welcome again to a different JonOfAllGames tutorial. Right now I am going to show you the way to put in mods in minecraft. Like a minimap with coordinates, and one thing known as inventory tweaks that auto types your inventory and chests with a single click or keypress.

1. Go to your begin menu, then your person account folder eg. "Jon"
2. click on set up, folder choices, or go to manage panel and folder options.. ClickView/ then click present hidden system information and folders.
3. go into AppData/ Roaming/ .minecraft
4. Download a .rar archive tool akin to Winrar <http://cnet.co/2AXnxb>
5. download Modloader <http://bit.ly/xO2U5i> Rei's Minimap v3.0_01 <http://bit.ly/x9CJXS> Inventory Tweaks <http://bit.ly/xReRep>
6. backup the .minecraft folder to save lots of your single player worlds
7. run minecraft to create new recordsdata (only if you wish to do a clean install "finest likelihood" at it working appropriately)
8. go to .minecraft/bin proper click on minecraft.jar and open with... Teamextrememc . Open modloader with winrar, Highlight all the information in that archive and left click on hold drag them to the minecraft.jar archive, ***ensure you arent putting them into a folder within the archive, just in the area where the person recordsdata are. Click on Okay when prompted.
