

[Website online](#)

This is a simple generator that you can use to make fonts for Instagram. Simply put your normal text in the first box and fonts for Instagram bio/captions/etc. will appear in the output box with all sorts of cool symbols. You can copy and paste the fonts anywhere you want - including places like Tumblr, Twitter, Facebook, etc. But special fonts and symbols on Instagram are fairly popular so I figured I'd make a translator just for Instagram fonts. I noticed there were a few apps doing the same thing but who wants to download (or even pay) for an app when you can instantly generate fonts online and copy and paste them straight away.

For those interested: this generator actually produces Unicode symbols, so they're not real Instagram fonts per se, but rather Instagram symbol sets. That's why you can copy and paste them and use them in your bio and comments. If they were real fonts then you wouldn't be able to copy them to other places (to copy and paste a 'font' doesn't really make sense - website creators decide on the font you use and that can't be changed).
