

MINI DOGECASH WHITEPAPER

JULY 2021

WHAT IS MINI DOGE CASH

MiniDogeCash is one of the fastest growing tokens to be listed on many platforms. It's a community based DeFi project which was launched on Binance Smart Chain (BSC) Network. MiniDogeCash comes as an improvement on the famous Mini Doge token which was launched recently and been trending since the date of launch. MiniDogeCash aims at those people who missed the chance to enter the "MiniDoge" Project Early.

With MiniDogeCash holders receive instant rewards with deflationary tokenomics and static reflections from each transaction, the protocol automatically distributes rewards to holders as well as auto-locks a portion of the fees as liquidity. In short, holding MiniDogeCash will reward the holders more MiniDogeCash coins automatically from each transaction.

MiniDogeCash is one of the most powerful tokens ever made in BSC Blockchain. Its smart contract is well enhanced from many previous successful tokens, taking the most powerful features and removing all the drawbacks through innovative protocols to make strong perfect token.

The team is comprised of professional developers, creative designers, branding experts and community managers. All with big experience in Crypto space since 2013-2015.

COMMUNITY DRIVEN

Since MiniDogeCash is a decentralized project, it is ultimately owned by the community. The team will make sure that the project gets a good startup through paid marketing while encouraging holders towards marketing, community engagement and development. Working together will help everyone to achieve more which will be reflected as a reward to everyone.

TRANSLUCENCE

The team aims for full transparency and open communication with the community with no barriers. The community will be informed about the current and future direction of the project growth through MinidogeCash official contact channels.

RESPONSIBILITY SAFETY, AND TRUST

Would you invest in any project without making sure your funds are safe? The team takes this concern seriously, a new Cryptocurrency project without trust worth's nothing. This means not only providing transparency, but security and responsibility as well. Since it will be presale launch, the team decided to host it on DxSale as it's a trusted platform and it secures investors funds through the presale and after launch by locking the liquidity automatically. Not just that, the team will make sure security audits in place to make sure all investors funds are safe.

HOLDING REWARDS

Holders are rewarded just for holding MiniDogeCash tokens, no minimum tokens required, every holder is eligible for it. The tokenomics of MiniDogeCash just rewards every holder with each transaction. So, Hold MiniDogeCash tokens to earn more tokens.

TOKENOMICS, TRANSACTION FEES DISTRIBUTION
