

imperial OBELISK

LITEPAPER

V 1.0
Sep. 2021

WHAT IS IMPERIAL OBELISK?

Imperial Obelisk \$IMP is a cryptocurrency on the ERC20 blockchain that applies a redistribution fee and a developmental fee in each transaction. Each transaction with \$IMP will reflect back towards holders. This incentivizes holding. Our goal is to soar to the sky and become the best community in the crypto world.

**WHY PLAY
IMPERIAL
OBELISK?**

Breakthroughs in the Gaming world are rare nowadays. With Imperial Obelisk, we do not aim to subvert trends that have proven to be loved by the Gaming community, but instead to refine and reshape Gaming with the use of seamless NFT integration. We are aiming to create an immersive resource gathering, world exploring and crafting experience by taking on elements of games such as Minecraft, Decentraland and Terraria and combining them to create the ultimate indie adventure experience powered by NFTs.

WHY INVEST?

In 2020 alone, Crypto Games generated gamers a worldwide revenue of \$321,000,000. This was before this year's bull market run and subsequently it's NFT bull market run. In the growing space of crypto gaming, the upside for all investors is immense.

**IMPERIAL
OBELISK'S
TOKENOMICS**

\$IMP has unique tokenomics that allow investors to gain passive income just by holding. \$IMP's tokenomics can be highlighted by the following:

- 1 Quintillion total supply (All on Uniswap)

- 5% Developmental/Marketing fee

- 5% Redistribution fee to holders

- Liquidity locked for 208 days!

(<https://team.finance/view-coin/0x42A0D24Cb5c423EAAF926cE3984aAfF0C4ff6FE2?name=Imperial%20Obelisk&symbol=IMP>)

We're not shying away from our Meme influences with our outlandish supply however we believe having all of our supply available to our community is what sets us aside from other Crypto Gaming projects.

IS THE TOKEN NEEDED?

As fellow crypto investors, we hear the phrase “Token not needed” quite a lot. What it usually refers to is a token lacking utility or being useless in the context of the product that it stands for.

With Imperial Obelisk, our token \$IMP is essential for those wanting to rapidly expand their monument collection. \$IMP is required for the purchase of 20x20 plots in our 20000x20000 world map. \$IMP is also required for ingame staking and for equipment upgrades.

**SO HOW DOES
IT ALL COME
TOGETHER? 1/2**

\$IMP will be used to purchase 20x20 land plots which will grant a player access to all the resources and monsters within that 20x20 plot. The players will purchase the plots with \$IMP from OpenSea in the form of a 200x200 pixel that is an upscaled version of the surface of the 20x20 plot purchased.

The player will only be aware of the land type, climate, temperature, humidity and NPC count of each plot. These attributes will determine the types of resources and NPCs that the players will encounter in these plots.

Depending on the resources collected, players will be able to fuse said resources together and form a monument. The monument type depends on the resources that the player uses.

**SO HOW DOES
IT ALL COME
TOGETHER?
2/2**

For example: if a player uses 3 Sand Flasks, 10 Egyptian Fortune pieces, 10 Oasis Water flasks and one Pharaoh's Amulet he can craft the "Pyramids of Giza".

On another note, if a player purchases a 20x20 plot with hill terrain on and comes across that terrain's resources, he can craft "King Arthur's Castle".

Crafting each of the 20 monuments allows a player to combine them to form the "Imperial Obelisk", an NFT that resets the player's progress on the skill tree but grants him increased APY staking and access to in-game cosmetics and rewards.

BEYOND THE GAME

We want to make Imperial Obelisk into an all-encompassing experience. As such, we plan to release merchandise and real-life trinkets in the future that can be redeemed by players with the corresponding in-game achievements.

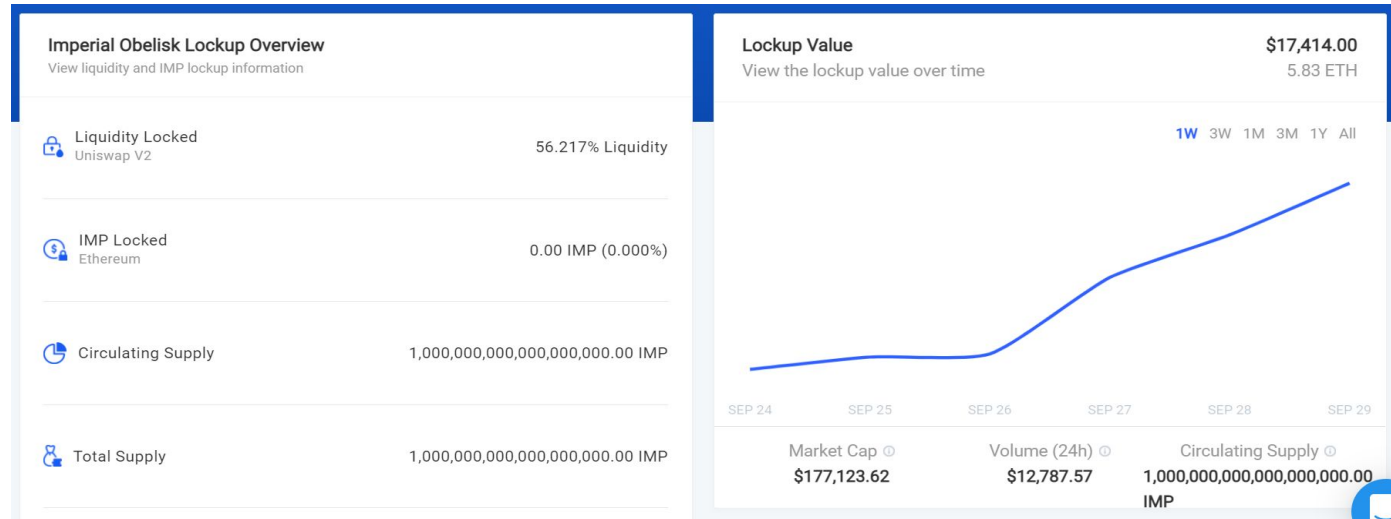

Alternatively, those who have not completed said achievements can still purchase the merchandise with \$IMP at a discount or with Ethereum at full price.

CROWDFUNDED LIQUIDITY

\$IMP's community took it upon themselves to add liquidity at Unprecedented rates! As of September 30, 2021, \$IMP has around 56%

Of the liquidity locked and the other 44% coming from holders Themselves. This makes \$IMP unique to many other coins nowadays

As it shows just how much everyone believes in the project!

UPCOMING TASKS

- Links updated to etherscan
- Contract audit
- Coingecko, coinmarketcap listings
- Begin process for more Unity devs
- 1000 \$IMP holders!
- Begin work on & release the first ever \$IMP NFTs
