How to choose the very best Minecraft server hosting for you

There are some things to keep in mind when choosing your provider. Hardware is, after all, crucial when internet hosting a web-based multiplayer game.

The bigger the server, the more gamers and slots, and the more superior and reliable the hardware needs to be. You'll need enough RAM and processing power to support all the connections. Shockbyte undoubtedly stands out in this regard, with as much as 64GB RAM accessible. That mentioned, ScalaCube and MCPProHosting both have plans of up to 32GB, which is plenty for all however the largest servers.

Cost is also an element. If you're simply starting out and wish to learn the ins and outs of running a Minecraft server, it's arduous to beat ScalaCube's free plan, although Shockbyte also gives some very low-value plans. You'll must weigh this in opposition to your hardware wants, although.

Server configuration is one other important factor. Apex Hosting's one-click on configuration of mods and mini-video games makes it tremendous easy to go from a blank slate to a totally functioning Minecraft server in little time. When you've got more expertise and need more control, the guide Linux environments supplied by Hostinger are a great option.

Finally, no matter what your server configuration, it's essential to have good assist options. If your server goes down otherwise you need assistance putting in a brand new mod, you'll

want reliable, responsive consumer assist, and you'll need it quick to keep your game going. Apex, Shockbyte, MCPProHosting, and ScalaCube all offer 24/7 consumer assist.
