

Helmet Vision - Wireless VR Helmet

The Helmet Vision company is the developer and producer of a helmet of virtual reality. They are always ready to cooperate with talented software developers and developers of devices connected with virtual reality. Thousands of developers create the world of virtual reality into which it is possible to look with Helmet Vision.

A virtual reality headset provides virtual reality for the wearer. VR headsets are widely used with computer games, but they are also used in other applications, including simulators and trainers. They comprise a stereoscopic head-mounted display providing separate images for each eye, stereo sound, and head motion tracking sensors which may include gyroscopes, accelerometers, structured light systems. Some VR headsets also have eye-tracking sensors and gaming controllers. A person using virtual reality equipment is typically able to look around the artificial world, move about in it and interact with features or items that are depicted on a screen or in goggles. Most virtual realities are displayed either on a computer monitor, a projector screen, or with a virtual reality headset. HMDs typically take the form of head-mounted goggles with a screen in front of the eyes. Programs may include audio and sound through speakers or headphones.

Virtual reality also refers to remote communication environments which provide a virtual presence of users with through telepresence or with the use of a virtual artefact. The immersive environment can be like the real world to create a lifelike experience, or it can differ significantly from reality where gamers can use fictional powers.

A spokesperson for Helmet Vision explained, "In Helmet Vision, we use the panoramic lens by means of which viewing of video become more comfortable, and a viewing angle of 120° allows to do the greatest capture of the picture. The maximum acoustic insulation and stereo sound make the process of listening to music an individual and tangible, and immersion in VR - deeper and more personal".

It's quite hard; to sum up, what Helmet Vision is in just a few words. They are very proud of their guide and service, but then they are biased. What delights them is that they receive so many positive comments from people who aren't.
