

# 5 Sustainable Materials You Can Use For Interior Design In 2021

- Designing your interiors is fun. But, interior designs can cost your environment.
- Though there are sustainable materials that can help you create attractive interior designs and yet keep the environment pollution free.
- Interior designers have been experimenting with newer materials.

- Whether it's wood or fibers, there are certain alternatives to these materials that are truly aesthetic and yet environment-friendly.
- Exploration of such materials has to lead to a surge in the ready to assemble furniture market.

- RTA furniture market is growing at a year over the year growth rate of 5.14%. And with a compound annual growth rate of 6%.

- At this rate, it will register an incremental growth in revenues of \$1.54 billion by 2023. The RTA furniture market is driven by sustainable furniture.
- If you are planning to use such materials, you should have some idea on the same. Though you can go with a professional interior designer.

- But, if you are in a big cities then you can finding [best interior designer in Ahmedabad](#) is easily.

So, let's get to know some of these materials:

### **Bamboos:**

- Bamboo can be used as a sustainable material in different forms. You can use bamboo for furniture, as a fabric, and even for showpieces.

- Bamboo is a highly sustainable material. It is easy to harvest. It can reduce energy usage in your space.

- You can use foldable curtains made of bamboo fabrics to gain more daylight in spaces.
- Bamboo can absorb higher carbon dioxide and release oxygen.
- So, it is also a great pollution-reducing material. But, most of all it is quite durable, strong and lasts for years.

## Rattan and Wicker:

- These are excellent sustainable natural materials that can be used for furniture.

- If you are looking for such rattan and wicker chairs or sofa, a professional [home interior designer in Ahmedabad](#) can help you with the same.
- This material is also used for creating gorgeous kitchenware. Baskets and other attractive utensils can be created from it.

## Natural Stones:

- Natural stones like granites, marble, and others are not new. But, they can be sustainable materials too.

- It depends on the interior design and usage of these stones.
- Many stones are used today, like tabletops, countertops, shower walls, and even bathroom floors.

## Insulators:

- Insulators are thermal resisting materials used by many interior designers.

- These materials can control the temperature.
- Many interior designers use them in commercial space too.
- Common insulators like carpets and rugs are used in houses too.

## Floor Coatings:

- If you are planning to save on your energy bills inside your workplace, floor polish coatings are the best.

- You can look for [office interior designer in Ahmedabad](#) who can help you find such polishing.
- Polished flooring can reflect more light in daytime reducing the need for artificial light.

## Conclusion:

- Interior designing is not just any profession. It is the art of creating functional space.
- Ans if one can create aesthetically pleasing functional spaces with sustainable materials. Then it is more like an icing on the cake.
