PLACING AN AD

Advertisers will furnish **FIREARMS NEWS** with copy legibly printed or typewritten on one side of the paper only. Please leave a margin of at least 1" on all sides. Classified ad copy can be submitted on disk, e-mailed to **firearmsnews@outdoorsg.com**, through **www.firearmsnews.com**, or picked up from your web site.

Contact the Art Director before submitting electronic display advertising.

Due care and diligence is used in checking advertising copy for accuracy, but the Publisher makes no warranty, express or implied. Advertisers and **FIREARMS NEWS** are not responsible for typographical errors, mistakes or misprints.

All ads received too late for the current issue will be inserted in the following issue, unless you qualify the submission of the ad. Existing ad copy may be substituted if new copy fails to arrive by the specified date.

Advertising is credit card, check or money order in advance. If uncertain as to the cost of your ad, submit it and we will advise the amount to be remitted, and we will refund any overage.

Artwork is kept in our files for 13 months and then destroyed. Reproduction quality is not guaranteed.

FIREARMS NEWS reserves the right to omit any ads that in its opinion are objectionable.

In addition, **FIREARMS NEWS** will no longer accept ads offering the following items for sale: Plans, videos or books for converting semi-automatic firearms into full-automatic firearms.

Sound suppressor plans, and videos. Plans or formulas for making explosives, booby traps, etc.

Lock picks, Slim-Jims, etc. and lock picking instructions.

Also, items related to the above.

If in doubt about your ad, call us.

AD DEADLINE DATES			
ISSUE	DEADLINE	ISSUE	DEADLINE
Vol. 75 - Issue 4	Jan. 11	Vol. 75 - Issue 7	Feb. 22
Vol. 75 - Issue 5	Jan. 25	Vol. 75 - Issue 8	Mar. 8
Vol. 75 - Issue 6	Feb. 8	Vol. 75 - Issue 9	Mar. 29

NOTE: ALL ad space MUST be reserved and art materials MUST be received BEFORE the above DEADLINE DATES!

COMPLAINTS AGAINST ADVERTISERS

We want **FIREARMS NEWS** readers to receive prompt, friendly service from our advertisers. If you have experienced bad service from a **FIREARMS NEWS** advertiser, you may submit a complaint in writing to **FIREARMS NEWS**, Dept. CL, 2 News Plaza, 3rd Floor, Peoria, IL 61614. You can e-mail to **firearmsnews@outdoorsg.com** or fax to (309) 679-5476. We do not accept complaints by telephone. Note that **FIREARMS NEWS** is not a law enforcement agency and cannot investigate complaints. We will contact the advertiser on your behalf, and a continuing pattern of complaints can cost an advertiser its advertising privileges.

SUBSCRIPTION INQUIRIES

BE AWARE THAT FIREARMS NEWS ONLY ACCEPTS SUBSCRIPTION REQUESTS FROM AUTHORIZED AGENTS! WE MAY NOT HONOR REQUESTS FROM UNAUTHORIZED AGENTS, AND YOU THEREFORE MAY LOSE YOUR MONEY IF YOU BUY FROM AN UNAUTHORIZED AGENT. If you are offered a subscription to **FIREARMS NEWS**, please call 1-800-345-6923 to determine if the agent is authorized. For more information on subscription scams, please visit **www.ftc.gov**.

To change your address: Call our toll-free customer service number or E-mail us with your new address **6 to 8 weeks before** your move. **If you receive a bill after you've paid:** Our letters probably crossed in the mail. Please disregard any bill or renewal notice you receive soon after mailing your payment or order. (If you continue to receive notices, please let us know.)

If your issue is damaged or missing: Call our toll-free number or E-mail us. We'll replace the issue or extend your subscription, whichever you prefer. Remember, **FIREARMS NEWS** is published 24 times a year.

NIGHT VISION FOR EVERY APPLICATION

MINI B 16MM SERIES

Lightweight and Performance find the perfect balance in the MINI B 16mm Series. At less than 375 grams, it may be small in size, but not in power. These systems come fully loaded with features such as High Performance Photonis® 16mm 4G image tubes, weight-saving optics, and fully focusing eyepieces.

REFURBISHED AN/PVS-30

These AN/PVS-30 Clip-on Weapon Sights feature a brand new body and a refurbished green phosphor image intensifier tube. They feature the Single Interchangeable Battery (SIB)® use of either 123 or AA single batteries for over 24 hours battery life. These refurbished systems are available at a fraction of the price of a brand new system.

THE RUK-9BT: ROCK RIVER'S LIGHT COMPACT AR PISTOL IN 9MM!

The RUK-9BT is a light, compact AR pistol that's based on RRA's BT-9 billet lower receiver and sized for maximum portability. It incorporates a flared mag well that accepts GLOCK style magazines, allowing the pistol to work in unison with a 9mm GLOCK, ensuring ammo and magazine cross-compatibility anytime, anywhere. This AR pistol includes a 4.5-inch chrome-lined barrel chambered in 9x19mm, a 4.25-inch RRA lightweight free-float hand-guard and an SB Tactical SBA3 adjustable stabilizing arm brace. Additional features include RRA NSP flip-up front and rear sights, RRA two-stage trigger, an integrated winter trigger guard, Smith Vortex flash suppressor, Low-Pro hand stop, and a Hogue rubber grip.

MSRP: \$1,380 Website: RockRiverarms.com Phone: (866) 980-7625

BARNAUL .300 AAC BLACKOUT FROM MKS SUPPLY

The new Barnaul .300 AAC Blackout is offered in 145-grain FMJ with a 1,985 fps-rated muzzle velocity.

Intended for high-volume target shooting and training for the increasingly popular .300 AAC Blackout AR-platform rifles and pistols, this cartridge delivers all the key features that have made Barnaul ammo the go-to choice of discerning, price-conscious shooters across two continents. Please contact your local dealer or online retailer for more information.

For technical information visit BarnaulAmmo.com

THE GRIZZLY! POCKET OVER/UNDER GREATNESS FROM BOND ARMS!

Bond Arms announces the newest member of its Rough Series family—the Grizzly. The new single-action, double-barrel derringer, chambered in .45LC/.410, inherits the premium features found on all Bond Arms firearms. As with all Bond Arms handguns, the Grizzly features stainless-steel barrels and frames, cross-bolt safety, retracting firing pins, spring-loaded cam-lock lever and rebounding hammer.

For more information please visit BondArms.com, or call (817) 573-4445

SHOWCASE

KEYSTONE SERIES MID-TIER SCOPE RINGS MADE IN THE USA!

The people behind EGW saw the need for a US-made, mid-tier scope ring. One that was versatile, robust, AND also a great value and they weren't happy with the current options on the market, so they created their own. Introducing the Keystone Series scope rings.

Improvements:

- Machined in-house in one of our CNC machining centers
- 6061 aircraft grade aluminum
- T15 mounting hardware for the ring caps
- Chromoly cross bolt and 1/2" nut for reliable and repeatable engagement
- Fits picatinny and weaver style rails
- Horizontally split design allows for easy installation
- These rings are measured from where the ring sits on the top of the base, to the center of the ring.

For more information call (215) 538-1012 or visit EGWGuns.com

TEX MAG BOX

TexMagBox.com offers a complete line of USGI ammo cans with industrial-grade liners, which accept and hold Modern Sporting Rifle magazines for AR-15, Ruger Mini-14, AK-47 and its clones, Galil, and many other semi-automatic and fully automatic rifles.

The PA-108 "Fat-50" Ammo Can RANGE BOX holds 12 magazines upright, in the best and most desirable surplus can on the market today.

The M2A1 "50-Cal" Ammo Can HOME BOX holds 8 magazines horizontally in a double-decker arrangement of 4 magazines per layer.

The M19A1 ".30-Cal" Ammo Can TRUCK BOX holds 5 magazines in a single horizontal slot, securely storing them in your vehicle until needed, for 150 rounds on the go.

All TEXMAGBOX liner inserts are Industrial-Grade, One-Piece, Die-Cut Foam, for years of protective service for your magazines. No thin, laminated foam parts are used.

All TEXMAGBOX.COM cans and components are MADE IN AMERICA. All Online orders are shipped FREE.

To order yours, please visit: TEXMAGBOX.COM

COLT DELTA ELITE

—10MM RULES THEM ALL

By Patrick Sweeney Cover and lead photo by Mike Anschuetz

There are those who think the .45 ACP has “too much recoil.” My pity for them does not rise to the level of that of B.A. Baracus, but I have been known to become a bit derisive. Oh, I draw the line on recoil, but for me it starts up where handgun cartridges use half-inch diameter projectiles or generate more than a ton of kinetic energy. So, the 10mm is a nice, peppy, cartridge by my standards.

I was first introduced to it by Dan McDonald, the gunsmith who taught me the trade, who had by some

miracle acquired a Bren Ten. With a magazine. (Or two, I don’t remember that part as well.) The only ammo at the time was loaded by Norma, and someone, somewhere, had misplaced a numeral or something during its development. The supposed 200-grain bullet at close to 1,200 fps was actually (chrono’d later) going closer to 1,350. That is on the low end of .44 Magnum power, and more than the Bren was capable of. It was also a lot more than what the FBI was willing to entertain. With the Bren Ten a non-starter

BCM GUNFIGHTER™

BCMGUNFIGHTER™ Pistol Grip

- Reduced grip angle keeps wrist in line for improved trigger control
- Hinged Trap Door interior storage with water resistant rubber gasket
- Mod 0 similar to A1/A2 backstrap, Mod 1 with high rise backstrap
- Mod 2 up to 1/4 inch wider with interchangeable backstraps/inserts
- Mod 3 up to 1/4 inch wider with high rise backstrap/extended insert
- All Mods available in Black, Flat Dark Earth, Foliage Green, Wolf Gray

BCMGUNFIGHTER Pistol Grips Prices start at \$17.95

BCMGUNFIGHTER™ Vertical Grip

- Forward angle increases rigidity of the forearm, provides more natural wrist angle
- Featuring an aggressive texture, and generous storage volume
- Cross bolt designed to work with improvised tools
- Reversible clamp for fastener setup on either side
- Made in the U.S.A. from high quality, impact resistant polymers
- Available in Black, Flat Dark Earth, Foliage Green and Wolf Gray

BCMGUNFIGHTER VG - Screw Mount . . . \$20.00

BCMGUNFIGHTER™ VG

- Low-profile length for increased mobility and decreased "snag" factor
- The forward angle increases the rigidity of the forearm, while providing a more natural wrist angle
- Can be mounted in reverse angle to increase control when grabbing handguard and grip
- Flat sides with aggressive texture give better control to the shooter
- Anchor and bolt system offers a simple and robust design, while maintaining a light-weight 1.9 ounces
- Made in the U.S.A. from high quality, impact resistant polymers
- Available in Black, Flat Dark Earth, Foliage Green and Wolf Gray

BCMGUNFIGHTER VG-KM-MOD-3 - KeyMod Version \$18.95

BCMGUNFIGHTER VG-1913-MOD-3 - Picatinny Rail Version. . \$19.95

BCMGUNFIGHTER™ Stock

Over a year in design, specifically engineered geometry, with no weak links. New patent pending latch reinvents the interface with the receiver extension, providing superior strength.

- Simple modular, snag free design utilizes only 5 parts and 1 screw
- 2 ambidextrous sling mounting options including QD swivel socket
- Color matched rubber buttpad for secure shoulder placement
- Available in Black, Flat Dark Earth, Foliage Green and Wolf Gray

BCMGUNFIGHTER Stock \$55.95

BCMGUNFIGHTER™ Vertical Grip -Short

- Low-profile length for increased mobility and decreased "snag" factor
- Forward angle increases rigidity of the forearm, provides more natural wrist angle
- Aggressive texture, generous storage volume
- Made in the U.S.A. from high quality, impact resistant polymers
- Available in Black, Flat Dark Earth, Foliage Green and Wolf Gray

BCMGUNFIGHTER VG-S - Short, Screw Mount Version . . \$35.95

BCMGUNFIGHTER VG-S-KM - Short, KeyMod Version. . . \$39.95

BCMGUNFIGHTER™ KAG Kinesthetic Angled Grip

- Forward rake gives positive retention when using "C-clamp" method of handguard support, works as a rest for supported firing positions
- Slight angle without bulk adds just the right amount of strain relief to the wrist without substantially increasing the girth of the handguard
- Small profile, textured front and back for positive engagement
- Innovative patent pending attachment method allows for robust clamping and alignment with minimal hardware and accessory size
- Made in the U.S.A. from high quality, impact resistant polymers
- Available in Black, Flat Dark Earth, Foliage Green and Wolf Gray

BCMGUNFIGHTER KAG-KM - KeyMod Version \$18.95

BCMGUNFIGHTER KAG-1913 - Picatinny Rail Version. . . \$19.95

The new Colt Delta Elite, a 10mm powerhouse.

Pure Colt 1911 in the 21st century, and with 10mm to boot.

[Cont. from page 13]

(people don't buy pistols they can't get magazines for) and the FBI spurning the 10mm almost as fast as they adopted it, it looked like the 10mm cartridge was going to go the way of other flash-in-the-pan proprietary cartridges like the .401 Herters Powermag.

Then Colt stepped up.

The Colt Delta Elite came out in 1987, and it was a marvel. Finally, we could load a 1911 pistol up past

the limits of the .45 ACP, and not have to wince a little on each shot, expecting a blown case. With the recent interest in the FBI in the 10mm, all the ammo companies had a full lineup of loadings (well, full by the standards of the late 1980s, anyway) and the brass was hell for stout. With a pressure ceiling in the mid-30,000 PSI range, you could get excellent performance out of the 10mm and still expect a good long case life. In fact, I do not recall ever having a case crack in the years of loading 10mm ammo. The 10mm was an excellent cartridge, the Colt version more than strong enough to hold up to it, and ammo was plentiful. The world was a 10mm oyster. So, what happened?

The 40 S&W is what happened.

Most shooters were looking for thug defense, not bear defense. They didn't need, nor want, a 200-grain bullet at 1,200 fps, where a 180 at 950 was plenty good enough for their needs. And the added bonus that they could have that in a pistol that held 15 rounds in

a magazine, one no bigger than a 9mm pistol sealed the deal. The general gun-buying population turned away from an all-steel heavy-hitter, and the 10mm was left to wander in the wilderness. Which is where it excels. As often happens, the wheel turns, and hunters and those exploring the backwoods found they needed more than what a .40 could deliver. Yes, there was the .44 Magnum, but that held six shots, and double-action shooting is not so easy to learn. So, the 10mm creeps more and more into the minds of shooters, and makers re-introduce it to their lineups.

Enter the Colt Delta Elite. The original was brought out in 1987 and lasted until 1996. Colt brought it back into the lineup 2009, and then did a facelift to it in 2015. They sent me one of the new ones for this review, and I have to say I was pleasantly surprised. Colt takes the basic 1911A1 platform and updates it as well as building it to handle the 10mm cartridge. On top, we have a round-top slide contour with a set of Novak sights. These are the classic 1980s three-dot sights, white paint and no tritium. Also, in keeping with the 1980s, the slide does not have front slide serrations. This is something that modern 1911s apparently have to have, but I am happy to do without. The serrations that are there are square-bottomed grooves, seven of them (just like a classic Jeep grille) with ridges in-between that are narrower than the grooves.

OK, first complaint: the grooves are sharp. As in *sharp* and they are not the only edges on the Delta Elite that are in need of de-horning. The round top of the slide is

With the Delta Elite just closing, up, the sights are almost back on target. Yes, there's recoil, but once you know how to handle it, you can shoot very quickly.

The roll-marks on the old and new differ, but not so much that you'd confuse either with a non-10mm pistol.

The new Delta, above, has the frontstrap lifted, and the old one is just the way 1911s had been made since 1911.

The sights are a Novak (a real Novak, not a knock-off) in a dovetail....

On the left, the new Delta with its Novak front sight, and on the right the old model, with a staked-in front sight.

matted, and the flats are polished stainless steel, which is why the edges are sharp. Colt polishers take great pride in polishing pistols without rounding corners, even when those corners and edges probably should be rounded. Not buffed off, but at least beveled. Or broken. Or melted. Whatever adjective you care to use.

Colt has also taken the opportunity to update the roll-marks on the slide. My old Delta is marked differently than the new one, on both sides, but not in such a way that you'd confuse either with a non-10mm pistol.

The barrel uses a regular barrel bushing, no cone lockup here, and there is a regular recoil spring assembly inside, no full-length guide rod. I know I've said this before, but if Browning had wanted a full-length guide rod, he'd have put one in there in 1910. The recoil spring is noticeably stronger than on a pistol in .45 ACP, and that is a good thing. The ejection port is lowered and scalloped, but it is not as low as I would like to see on a modern 1911. I'm of the opinion that the scalloped part on a slide is pretty much for looks. I've seen scalloped slides that dinged brass, and non-scalloped that didn't, and it is more a matter of using a correct weight recoil spring for that brass-handling part, and a lowered ejection port side wall, than a scallop on the slide. A too-high sidewall is more of a brass-mangler than the lack of a scoop on the back end.

OK, second complaint: the barrel is a standard feed ramp to barrel setup. Given that the 10mm is the platform you'd choose for a heavy-duty critter-stomper load, a fully-supported chamber, with a barrel that had an integral-ramp design, would be my first choice. I would rather the Delta Elite had an integral

feed ramp, but it doesn't. Oh well, I am not going to be feeding it enough max-end heavy-bullet hard-cast loads that I have to worry about using up my brass supply should I bulge case heads. And, being realistic, the number of shooters who will need an integral ramp is most likely small, indeed.

A change Colt made back when they started 10mm production, that they have continued with, is on the left-hand rail. You'll notice that the rail has a gap in it right at the spot where the slide stop passes through. That part of the rail really doesn't do much of anything, and it is not unusual to find it cracked on high-mileage 1911s in .45. In 10mm, they crack pretty quickly, so Colt, to keep shooters who don't understand it from complaining, just milled the rail away there. It doesn't weaken it, it doesn't hinder accuracy or reliability, it is just a way to keep the un-informed from complaining. I suspect that had anyone pointed it out to old JMB, he would have said "No problem,

go ahead" and then designed three more pistols that were improvements and didn't have that minor crack-ing non-problem.

As mentioned, underneath the barrel Colt has not gone with a full-length guide rod. Instead, they have a two-spring system that uses a polymer guide rod. The two springs add up to 23 pounds of recoil spring. Now, the initial spring force seems pretty much on-par with a standard Government model. Then you hit the second one, and the force goes up. Why? Well, to get the slide unlocked and the empty extracted, when you are dealing with 35,000 PSI as the maximum average pressure, you'd want a slide that starts out briskly. Then, once you have that task handled, you want to buffer down the slide impact on the frame, both to add to longevity, and to dampen felt recoil. The polymer

[Cont. to page 20]

The cocking serrations are seven wide, flat-bottomed grooves angled on the rear of the slide.

The old cocking serrations compared to the new, on the bottom.

While generously and properly ramped, the Delta Elite barrel is a traditional design, not an integrally-ramped one.

Notice the slot cut through the rail. The rail performs no function right here, and cracks with amazing regularity in 10mm, so Colt just cut it away.

[Cont. from page 17]

guide rod is part of that. I'm sure there will be plenty of experts who tell you the first thing you have to do is to replace the "crappy" polymer guide rod for a steel unit. Sure, but you'll make the felt recoil harsher, if you do. And perhaps decrease longevity. The "solution" to that will next be to add in a shock buffer, to dampen recoil. But now you are shortening the slide stroke, and that's not good either. Nope, stick with polymer, and replace it every five or ten thousand rounds. In case you are worried that the polymer will get chewed up and mangled by the slide, Colt faces the guide rod head, front and back, with a sheet metal overlay. That overlay takes the hit of the slide and the frame and distributes it across the polymer head.

The firing controls are pure 1911. The trigger is a lightweight body with three holes through it, and then on the back end there is a grip safety. Not the grip safety of the original 1911, 1911A1 or Delta Elite, but a modern beavertail with speed bump grip safety. Colt has wisely left the slide stop alone (the extended "combat" slide stop is one "modern" change they have never, ever, gone with as far as I can recall, good for them) and behind the slide stop is an extended thumb safety. The trigger pull is clean and crisp, and the grip safety has a comfortable engagement. It clears the trigger bow at about halfway through the grip safety travel, so you have a little bit of leeway if your grip isn't perfect. I've seen some non-Colt 1911s that had grip safeties timed so late that you have to have a crush-grip on the pistol just to ensure the grip safety was free of the trigger.

Behind the trigger is the magazine release, and in-between there are black composite grips with the Colt Delta logo inset into them. On the bottom rear, Colt has installed a flat, grooved mainspring housing. Back in the old days we used to obsess over the size and shape of the mainspring housing. Arched, flat, grooved, checkered, wedge-shaped, "ergonomic" you name it, someone tired it. (Hey there wasn't a lot we *could* do to the 1911 back then.) These days, I really don't care. In fact, in a lot of instances I don't even notice the mainspring housing shape until I start writing up the details. I have found that flat or arched makes no difference to my shooting. Now, if it does to yours, the mainspring housing is one of the easiest parts to swap out. You could even use a mainspring

The recoil spring guide rod is polymer, with sheet metal facings front and back.

The controls are pure 1911, just where you expect them, and Colt has upgraded the grips, but kept the Delta medallion inset.

The magazine well has been treated to a subtle bevel, to speed reloads.

The mainspring housing is flat, plastic and plenty durable for the job. If you don't like it, swapping out a mainspring housing is the easiest gunsmithing task you can perform on a 1911.

housing swap as a test. If someone is so mechanically inept that they can't manage that task, then you really need to be arming them with an aluminum baseball bat, and not a firearm. But I digress.

On the bottom, Colt has done a useful and low-profile bevel job on the magazine well opening.

The Delta Elite comes in a lockable hard plastic case, with one magazine, lock and owner's manual. Magazines are not difficult to come by, ranging from the standard eight-shot to premier magazines such as Wilson Combat, that hold nine rounds each.

When I mentioned to my test-fire crew that I had a Delta to test, one tester in particular wanted to be at the range. Always a 10mm fan, Rob had an unaltered

Delta Elite from the 1990s, as I did. So I had a chance to compare the new Delta Elite 10mm to two first-era-run pistols.

The first thing that jogged my memory was the grips. Rob still had the rubber wrap-around grips on his.

BEAR GUNS? REALLY

I've said it before, and I'll say it again, my idea of a suitable bear cartridge starts at the .338 Winchester and goes up from there. But finding a holster for a .338 (or better yet, a .375 H&H) is going to be.... difficult. The true benefit of a handgun is that you can have it with you any time you are wearing clothes. (You want to be naked in the Alaska outback, you're on your own, I'm not going there.) Since it has to be on your belt, and it has to be out of the way, that limits what you can use. Yes, a .500 S&W is better than a 10mm, but can you wear it? And do the camp things you need to do when hunting? I thought not. By the time you get down to something you can wear all the time, you're well within the 10mm region.

Bullet choice? Simple: since depleted uranium is not an option, I'll go with the heaviest, hard-cast bullet with a big meplat that I can get to feed. No expansion needed here, just a combination hammer and drill. And the two big advantages of a 10mm are speed of one-handed shooting, and reloading. Yes, a good wheelgunner can shoot as fast as an average pistolero, but who is that good? Raise your hand. You might scoff at reloading, but it is an advantage. If I'm ever in a bear-gun situation, I do not want to be in the position later of telling St. Peter *"I'd still be down there if I had reloaded faster."* **FN**

[Cont. from page 20]

Mine, I found the grips were so hideous to my hands that I could not swap them out fast enough. So, mine bears smooth wood grips with the Colt medallion inset, while his is original. His was made in 1988, mine in 1989, so we have a pretty good read on what was going on in Colt then. The current Delta has checkered composite grips, with the Delta red triangle medallion inset behind the magazine button. They are much more comfortable than the old rubber wrap-arounds, and more non-slip than my smooth wood ones. The second jogging detail were the sights. For 1988–89, the Delta Elite sights were pretty darned good for factory sights. Gone were the low, thin, front blades and rear

Taking the Delta Elite apart is like any other 1911, but notice the two-spring recoil system. For the 10mm, you need that.

notches to match. However, even though by 1988–89 improved dovetail sights were known and being used, Colt went with a staked-in front blade and a standard rear blade. And blued, both on Rob's blued Delta, and my stainless one. Third were the grip safeties. While the Delta was an interesting change by Colt back then, using a commander-shaped hammer on a government-sized pistol, they did not go with any kind of new-and-improved beavertail grip safety. They simply milled a clearance arc on the top rear of the standard safety and called it "done." So, the modern grip safety on the current Delta Elite is a big step up. It is fitted a bit loose, with noticeable play in it, but it works as a grip safety and it is timed properly.

The real big change was one both Rob and I noticed when checking the pistols before shooting: the triggers. Now, the current Delta Elite uses a Series 80 trigger system. This involves a lever linked to the trigger bow. When you press the trigger it lifts the lever, which presses spring-loaded plunger in the slide. The plunger blocks the firing pin travel until it has been lifted enough to provide clearance for the firing pin. When

it came out, we all hated it. The trigger pulls sucked by various amounts, and there were other problems. That all came back when we dry-fired the old and new Deltas. The old Deltas had the same not-good trigger pulls, from six pounds or almost six and a half pounds. The current one? Four pounds, ten ounces,

[Cont. to page 24]

You can see the Series 80 firing pin safety lever here, in its raised position, as it would be when clearing the firing pin for forward movement.

ENGINEERED TO OWN THE DAY

Center®**
by Smith & Wesson®

The kind of accuracy the modern Delta Elite delivers. Considering that this is a box-stock pistol, and this load is a 180 at 1,100 fps, this is good performance. Even with the hardest-kicking loads the Delta Elite will easily keep all its shots on this sticker at 25 yards.

COLT DELTA ELITE 10MM CHRONOGRAPH AND ACCURACY DATA					
Ammunition	Bullet weight (gr.)	Velocity	Es	sD	Accuracy, Ave & best
Hornady Crit Def.	175	1,159	23	10.2	2.9" / 2.4"
Buffalo Bore JHP	175	1,365	21	8.9	3.1" / 2.7"
SIG FMJ	180	1,234	47	18.7	2.7" / 2.4"
Hornady XTP	180	1,146	26	12.8	2.4" / 2.0"
Armscor FMJ	180	1,096	56	20.4	2.9" / 2.5"
Speer Gold Dot	200	1,035	12	4.6	3.0" / 2.7"
Federal HST	200	1,099	20	8.2	3.0" / 2.6"
DoubleTap WFNGC	200	1,213	8	3.0	3.1" / 2.7"
Buffalo Bore HC-FN	220	1,195	25	10.6	3.2" / 2.8"

Accuracy results are averages of 3, 5-shot groups at 25 yards off a Champion shooting rest. Velocities are averages of 10 shots measured on a Labrador chronograph set to read 15 feet from the muzzle. WFNGC: Wide Flat Nose Gas Check, HC-FN: Hard Cast Flat Nose.

RELOADING THE 10MM

OK, first of all, the 10mm uses large pistol primers. And second, despite running at the same pressure as other high-intensity cartridges, i.e., the mid-30,000 PSI range, the brass essentially lasts forever. This is due in part to ammo makers knowing by the mid-1980s what it took to make tough brass for stout cartridges. And second, with the exception of the Glock lineup, 10mm makers don't make sloppy chambers. So your brass isn't over-worked. With top-40SW-equivalent loads, and mid-range 10mm loads, I'm not sure anyone has found a service life ceiling for 10mm brass. You lose cases before they wear out. At the top end, you can get tens of loadings out of 10mm brass. A comparable cartridge is the .38 Super. It too is a straight-wall case that runs in the mid 30's. Back when I was shooting .38 Super major I used the same cases, and they simply didn't quit. The headstamp on some of them was unreadable from the ejector hits, and the nickel was worn off of some of the cases, but they didn't crack, and they didn't suffer primer pocket expansion. You can expect much the same service life from the 10mm. **FN**

[Cont. from page 22]

clean and crisp enough that you wouldn't know it was a Series 80 unless you looked.

The real test is in the shooting, so we proceeded to send lead downrange. The current Delta Elite worked just fine with all the ammo as long as I used the magazine that came with it. This is not a criticism of the Delta, the other 10mm magazines on hand I have accumulated in the 30 years or so since I won mine at the Second Chance bowling pin match have all been tuned to my pistol. Once I figured out that the odd behavior was magazine-related, we stuck with the one sent and had no problems. Later, I found that the Delta and its higher sidewall and ejector shape liked to toss empties up more than over. So, when I was standing under my home club's baffle system, the overhead sometimes bounced an empty back to me. Again, not a problem Colt has to consider, and if you were out in the wilderness dealing with angry critters, you wouldn't either. Accuracy was plenty good for a hard-hitting pistol like this. I would not expect Bullseye-level accuracy from a factory pistol, especially at this power level. Even at the moderate 10mm power levels, you are dealing with .45 ACP+P recoil, and it will have an effect. (Think otherwise and you are just fooling yourself.) Group size going up as recoil goes up is more a matter of the shooter than the pistol. After all, a 200-grain bullet at 1,200 fps is hard on the heels of an Elmer Keith-level .44 Magnum load in power and

[Cont. to page 26]

Proper technique allows you to handle recoil. It is work, and gets tiring, but that's what it takes to dispense bruin-whacking power. A modern trip safety also makes it a lot easier.

Rob getting to know the new Delta Elite. Like the old Delta Elite, but better.

Yes, a 10mm pistol is going to kick, but that's the price of near-magnum power in a self-loading pistol.

[Cont. from page 24]

recoil. Back when I was learning IPSC and building 1911s, Colt had apparently forgotten how to make a good barrel. That was part of the reasons so many barrel makers got into the business of making 1911 barrels. Well, Colt has figured out accuracy again, because despite the relatively loose fit of the Delta Elite (well, loose compared to the custom 1911s I've been testing lately) this is one nicely accurate pistol.

One detail that came to the fore when we tested the old and new side-by-side was the grip safety. Yes, there is a reason the whole world has gone to a beaver-tail grip safety since the 1980s. With the milder (in a 10mm context, of course) the difference wasn't much. But when I moved up in power, the old grip safety was

noticeably less comfortable than the new one. Were mine not a historical example by this time, I'd have fitted a beavertail grip safety just as soon as I could manage it. I still might.

The question of ammo choice and use will of course be a subject of much debate. You can, if you wish, use regular-power level ammunition for self defense. When I traveled to South Africa for the World Shoot, back in 2002, my competition gun was a hi-cap in .40 (I shot in the now-gone Modified Division) I packed as my "backup" this 10mm, with three magazines worth of XTPs as part of my ammo load-out. Looking back, I would have probably been better off with the hi-cap and JHPs for it. But I used what I had, and could leave behind if needed. As a defensive choice now, the 10mm is just fine. The Hornady Critical duty, a 175-grain bullet at a tested 1,159 fps, is one of those .45ACP+P equivalent loads I spoke of. If you need more than the Federal HST is a 200-grain bullet at a tested 1,099 fps. And if you really need to smack something, hard, with a self-loading hand cannon, then the Buffalo Bore Heavy 10mm Outdoorsman, a hard-cast 220 grain truncated cone, at a tested 1,195 fps, will put the hurt to pretty much anything, two-legged or four.

The hard part will be hanging onto the back end during loud-noise events, because a 220 at 1,200 fps is a handful. I know, I learned that lesson back in the middle of the 1980s, when Sonny Crockett was supposedly hiding his 10mm underneath a silk sport coat. The modern iteration of the Delta Elite is a good-hearted attempt by Colt to bring the pistol fully into the 21st century. As much as I love to hate the Series 80 trigger system, Colt clearly has it figured out. The modern grip safety makes the full-power 10mm ammo a lot more fun to shoot than the old guns wee. You want power, Colt has it. The new Delta Elite is a definite good choice for being in the back woods and having a backup handgun with you at all times. **FN**

An array of Deltas, top to bottom, made in 1988, 1989 and 2020.

COLT DELTA ELITE 10MM SPECIFICATIONS	
Type:	Recoil-operated pistol
Caliber:	10mm
Capacity:	8+1 round
Barrel:	5"
Length:	8.5"
Height:	5.1"
Weight:	35 oz
Trigger:	4 lbs., 10 oz.

BORE BATTLER

The Brügger & Thomet APC10 PRO 10mm Pistol

By James Tarr

First, let's get this out of the way, since it's been bugging me for years, and I used the occasion of this article to ask someone at B&T itself — Brügger & Thomet is pronounced Brooger and Tommit. And from now on I'm just going to type B&T as I don't like having to track down the U with the umlaut (ü) every time. Europe needs to get its vowels in order, they're getting uppity.

This small Swiss company has been making interesting firearms and components since 1991, including the iconic side-folding stock for the HK MP5K PDW. Some of you might not have heard of them. Some of you might have only heard of them recently, after B&T won a sub-compact weapons contract (SCW) with the U.S. Army with their APC9K 9mm sub-machinegun.

The Army was looking for a compact subgun to replace their aging HK MP5s for personal security detachments and other elite groups and specified a 5.5-inch barrel and a telescoping stock. The B&T APC9K is fed by proprietary translucent polymer magazines, and semi-auto pistol versions have been available for sale commercially. However, the problem with the APC9K and the larger APC9, as some people saw it, was the caliber. They wanted something ... bigger. B&T began offering the APC40 and APC45 chambered in .40 S&W and .45 ACP respectively, but they still weren't done.

Those still-unfulfilled big bang wishes have been granted with the introduction of the APC10 PRO. This is the same well-regarded firearm, but now chambered in what some people consider the ultimate pistol and SMG cartridge, 10mm auto, and fed by perhaps the most-well regarded pistol-caliber magazine design in the world, the Glock.

The APC9 (Advanced Police Carbine, in 9mm) was introduced in 2011, and has undergone several design changes as well as caliber additions. The newer PRO series is available in 9mm, .40 S&W, .45 ACP, and 10mm, and offers features not seen on other guns. First, they're all fed by Glock-pattern magazines. The bilateral charging handle no longer reciprocates, they have improved controls, and the guns use a detachable AR-pattern pistol grip.

The B&T APC10 PRO can be ordered as seen here, with a collapsible brace adapter tipped with a Gear Head Works Tailhook Mod 1 brace. It comes with the flip-up sights, but not the optic.

These pistols are made in Thun, Switzerland. As I'm writing this the APC10 is so new it's listed on the B&T home website (BT-Ag.ch), make sure you click the British flag on the top right corner for English, but not the website of the U.S. importer B&T Arms (BT-Arms.com), although that probably will have changed by the time you're reading this. If not, just give them a call, they can get you one.

The standard pistol models have a bare back end with just a sling swivel attachment. I secured a version with a specially modified telescoping brace adapter equipped with a Gear Head Works Tailhook Mod 1 brace (more on that in a bit).

Old-School Ugly

At first glance the APC10 PRO is a bit of old-school Cold War-era ugly. Black, blocky and angular, even awkward. Initially it resembles an SMG out of the eighties, something that would look right at home in the hands of a drug dealer on Miami Vice ... who Sonny Crockett would then shoot with his 10mm Bren Ten. However, the more you examine the B&T, the more you see modern features. The upper receiver is angular and machined aluminum — if this was a true eighties gun it would be stamped steel, and the lower receiver is polymer.

In standard pistol form (without a brace), the APC10 is 15 inches long and weighs 6.1 pounds. As configured my pistol weighed 6 pounds 14.5 ounces empty (with provided flip-up sights and empty magazine inserted) and was 17.5-inches long with the brace collapsed, and 23.75-inches long with the brace fully extended. With the brace fully extended the pistol balanced over the magazine well.

The barrel is 175mm long, which works out to 6.9-inches. It is not threaded but sports a three-lug suppressor mount. With the 10mm auto cartridge 6.9 inches is enough to give you a slight velocity increase over a standard pistol, but not as much as you might think (likely 50 fps). For whatever reason, the 10mm does not seem to benefit as much from longer barrels as the 9mm, but it sees more of a velocity increase out of long barrels than the .45 ACP.

With the brace collapsed the pistol is just 17.5-inches long, and can be fired like this, although Tarr is not sure why anyone would want to.

The barrel free floats inside the aluminum receiver. The front handguard area comes with 3.7-inch 8-slot MIL STD 1913 rail sections at 3, 6, and 9 o'clock. The side rail sections are polymer and removable, and taking them off reveals an M-LOK accessory mounting slot. The bottom rail section is aluminum and one piece with the receiver.

Just a reminder — you can attach a hand stop or an angled grip to the front of your pistol, but attaching a vertical foregrip to a pistol is a violation of federal firearm laws. Which are in their entirety a clear violation of the “shall not be infringed” part of the Second Amendment, but you don't want to be the guy in cuffs arguing that in front of a federal judge, so FYI.

Across the top of the pistol is just over twelve inches of MIL STD 1913 “Picatinny” rail, which is more than enough to accommodate any kind of optic you'd like. Provided with the pistol are flip-up AR-style “emergency” sights. These are all polymer construction, including the front sight post, so when they say emergency, they mean it.

Just a reminder for those of you not yet attuned to my pet peeves as a professional writer, “bilateral” means having two sides (description), and “ambidextrous” means being able to use both sides (action). Which means, technically, the controls on the APC10 PRO — all of them — are more correctly described as bilateral, not ambidextrous. Although I will admit “ambi everything” sounds better than “bi everything”.

SHOOTFASTER

PISTOLOADER™ IS UNIVERSAL

- Loads cartridges into semi-auto magazines from 22 LR to 50 AE
- Loads both rimmed and rebated rim cartridges
- Loads single-stack, double-stack, drum, and extended magazines
- Loads magazines using either hand- it's ambidextrous

QuickLoad® Also Makes Speedloaders for Your Revolvers

- The StripLoader™ is the original and best hybrid strip available- (16) models
- The RoundLoader™ is simple and effective- (5) models

PISTOLOADER™ IS:

- Simple, compact, and easy to use
- Fast and Painless
- Rugged, durable, and made with quality materials
- Designed, manufactured, and packaged in the USA

**TRUE BOLT ACTION
AR10 / AR15
RIFLES & UPPERS**

The Tailhook brace works by cradling your forearm. It is constructed of aluminum and the adapter is two-position adjustable.

The pistol comes with a hard case, single-point sling, cleaning kit, and one 15-round magazine.

If the fire control group looks familiar, that's because the APC10 uses an AR-pattern hammer and trigger. Unlike an AR, you can engage the safety even if the hammer is not cocked.

The U.S. Army has adopted a 9mm SMG version of the APC, but some people just aren't interested in such "small" calibers. The 10mm is considered the ultimate defensive cartridge for semi-auto pistols, and some people think it's the ultimate caliber for SMGs and "large frame pistols" like the APC10 as well.

The collapsible brace adapter uses the same arms as the stock, but has been modified so it does not extend as far, to keep the ATF happy. To extend it, just pull. To close it, push up on the big button seen here.

The Swiss build good stuff, but they're very proud of it, which means you're going to have to part with serious coin to afford the APC10 PRO. But with that purchase you'll be getting a very well made and exotic piece.

The APC10 PRO features totally bilateral controls. Here you can see the left-side safety, bolt release, and the magazine release button.

[Cont. from page 30]

The charging handles are spring-loaded steel levers just below and to either side of the front sight that fold flat when not in use. They do not reciprocate when firing. Between their compactness and the adjoining rail sections you might find them a little tough to grab, especially if you're wearing gloves.

For the magazine release, on the right side of the gun, at the rear of the magazine well and in fact projecting a bit back into the trigger guard area (so everyone can easily reach it with their finger tip) is a pivoting serrated steel lever. The left side magazine release is a large polymer button at the front of the magazine well.

The bolt does lock back on an empty magazine. The bolt stop/release is a polymer tab about where

you'd find the bolt stop on an AR on the left side of the receiver, and above the magazine release on the right side of the gun. The left-side tab is a bit larger than the right. Unless you have very short fingers you should be able as a right-hander to lock the bolt back while keeping a firing grip on the gun by pushing upward on the right-side bolt stop with the tip of your index finger while pulling the bolt back. You can also release the bolt with the tip of your index finger as well.

The safety is a short polymer lever with a 45-degree throw. The left-side lever is a bit larger than the right. When pushed down I could feel it lightly against the knuckle of my trigger finger on the right side, but it did not poke me when firing, which is a very good thing.

The provided pistol grip works just fine, and had a convenient compartment inside, but if you don't like it the APC10 PRO takes all AR-pattern pistol grips.

The lower receiver is held in place by two pins in a setup that should be very familiar to anyone who has taken apart an AR. The pins push left to right and are captive. Once pushed out, the lower receiver pulls down off the upper receiver. Looking inside the polymer lower you'll see a fire control group that looks just like what you'll see in an AR, with a slightly bobbed hammer.

My sample had a very serviceable two-stage pull weight of 5.75-pounds. But serviceable ≠ exceptional, and the fact that it looked so much like an AR fire control group made me curious.

[Cont. to page 34]

SECRETS OF A BILLIONAIRE REVEALED

"Price is what you pay; value is what you get.

Whether we're talking about socks or stocks, I like buying quality merchandise when it is marked down."

— wisdom from the most successful investor of all time

We're going to let you in on a secret. Billionaires have billions because they know value is not increased by an inflated price. They avoid big name markups, and aren't swayed by flashy advertising. When you look on their wrist you'll find a classic timepiece, not a cry for attention— because they know true value comes from keeping more money in their pocket.

We agree with this thinking wholeheartedly. And, so do our two-and-a-half million clients. It's time you got in on the secret too. The **Jet-Setter Chronograph** can go up against the best chronographs in the market, deliver more accuracy and style than the "luxury" brands, and all for far, far less. \$1,150 is what the **Jet-Setter Chronograph** would cost you with nothing more than a different name on the face.

With over two million timepieces sold (and counting), we know a thing or two about creating watches people love. The **Jet-Setter Chronograph** gives you what you need to master time and keeps the superfluous stuff out of the equation. A classic in the looks department and a stainless steel power tool of construction, this is all the watch you need. And, then some.

Your satisfaction is 100% guaranteed. Experience the **Jet-Setter Chronograph** for 30 days. If you're not convinced you got excellence for less, send it back for a refund of the item price.

Time is running out. Now that the secret's out, we can't guarantee this **\$29** chronograph will stick around long. Don't overpay to be underwhelmed. Put a precision chronograph on your wrist for **just \$29** and laugh all the way to the bank. Call today!

The right-side magazine release is a pivoting lever and in a familiar place to anyone who has used an AR-15. The bolt stop/release lever is just above it.

The APC10 PRO was reliable with every kind of ammo tried, including these JHPs with big cavities from SIG. The magazine well has a slight bevel.

The barrel has a three-lug suppressor mount. The steel charging handle folds flat, but with the rail section just beneath it and the front sight above, it's not so easy to manipulate, especially if you're wearing gloves.

[Cont. from page 32]

I checked with my contact at B&T and was told that the APC would in fact take standard AR trigger components. I had a vague recollection that Geissele made a trigger for the B&T APC, but upon checking their website saw they were no longer offered (although you still might be able to find a few online). I checked with Bill Geissele himself (pronounced Guy-Silly, in case you're wondering) and he explained the trigger was discontinued because it just didn't sell — not enough B&Ts on the market. He also told me, "A standard G (Geissele AR trigger) works OK, I just didn't like how close the front edge of the hammer comes to the receiver edge."

This pistol does have a straight blowback operating system, but it also uses a B&T hydraulic buffer at the rear of the upper receiver to absorb the recoil forces. When you're cycling the pistol by hand, you can feel the buffer engage at the very back end of travel. There is not a hard stop, but rather a you can feel the buffer providing some resistance. This is good, because a blowback gun at this weight, chambered in 10mm, and with nothing else to absorb recoil, would likely be somewhere between energetic and abusive.

Tricks and Treats

In Europe B&T seems to be currently shipping all of their carbines and SMGs with Aimpoint optics, specifically the new ACRO. Aimpoint is located in nearby Sweden. Well, actually, I have no idea if Sweden is near Switzerland, and I don't care. True Americans only care about the location of foreign countries if

we're vacationing or fighting wars there, and maybe not even then.

The US pistols do not come with optics, only the standard flip-up emergency sights, but the folks at BT Arms were nice enough to send an Aimpoint Micro TL with my pistol. Due to the height of the rail you can attach the optic directly to it, you don't need a riser, and that's a B&T mount you see in the photos clamping the Aimpoint to the rail.

Check out the photos, and especially take a look at the flip-up sights. The optic mounts so low to the rail that when the sights are folded down they still obscure the bottom third or so of the optic window, and this is true with the Aimpoint ACRO sold on the guns in Europe. When you flip the sights up they won't be useable, the post and aperture are directly in line with the top of the optic body. Better have a QD mount on that optic in case it dies so you can use the sights, right? WRONG.

You don't need to flip the sights up to use them!

There is a post front and notch rear sight molded into the tops of the flip-up sights when folded, so they can be used when folded down. While minimal and somewhat crude, they work. Not only do they work, their existence tells me that B&T is either staffed with very smart people with real-world experience or is consulting them.

This pistol is fed by Glock 20 magazines. The standard G20 magazine has a 15-round capacity, and if you're working a personal protection detail and have the APC10 PRO in a briefcase or under your very bulky jacket, that's all you want, as it does not protrude

further than the pistol grip. But this is America, where we always want more. You are in luck.

SGM Tactical makes extended 30-round 10mm magazines in the Glock 20 pattern. Kriss makes magazine extensions which turn your 15-round magazines into 30-round big sticks. Mo' bullets=Mo' betta, as Mother Teresa used to say, and the APC10 just doesn't look right to me unless it's got that long mag in place. I used 10mm SGM Tactical magazines extensively when testing the CMMG Mk10 10mm last year and never had a problem.

However, the pistol mags are short, and the 30-rounders are quite long. If you're looking for standard extended basepads to split the difference in length and capacity, you might be surprised. A number of places offer extended basepads for the .45 ACP Glock 21 magazines, which are similar in size, but 10mm G20 mags seem to be another thing entirely. SLR Rifleworks makes a +5 magazine extension for the G20 magazines, and while I haven't tried it, every other product of theirs I've used has been excellent. Taylor Freelance makes a magazine extension that is supposed to work with both .45 ACP G21 (+4) and 10mm G20 (+5) mags. TTI makes a +4 mag extension for the G21 magazine but the website specifically says they don't work with 10mm G20 magazines, which intrigued me considering TF's offering. I spoke to owner Taran Butler and he told me that when attached to G20 magazines they usually work just fine, but "... the slides won't lock back. Because of the slide velocity and case pressures the 10mm is its own worst enemy when it comes to magazines."

Length Matters, Especially to the ATF

Now let's tackle the collapsible brace. The steel arms are the same on the brace as they are for the original stock, and it operates the same way — pull it out to extend it, and push in the button at the bottom rear of the receiver to collapse it.

At the rear the stock buttplate has been replaced with a Gear Head Works Mod 1 Tailhook. The Tailhook is aluminum and folds out, and is designed to cradle your forearm to help counterbalance the weight of the pistol while you're shooting.

However, you will note that while the steel arms have three positions for length adjustment, you can use only two of them. That is because the maximum overall length of the brace had to be adjusted to keep

the ATF happy, and 13.5 inches (what ATF is calling "length of pull") and under seems to make them happy at this point. The polymer stops at the end of the arms have been lengthened to reduce the extendable length of the brace.

While they have not put anything in writing, the BATFE has made it very clear to brace manufacturers that braces should not have the same length of pull as stocks. They consider a 13.5-inch length of pull (distance from the rear of the brace to the trigger) the maximum, and that is what you'll get with this brace on the APC10. The brace itself extends nine inches from the rear of the receiver.

Whether it's a select-fire SMG, carbine, or this brace-equipped pistol, common sense would dictate

that you would and should deploy the stock or brace before shooting. However, excrement sometimes happens, and you'll note that the right-side arm of the brace (which is identical to the arm used for the stock) covers part of the ejection port.

So ... can the pistol fire with the brace collapsed? The answer is yes. If you look close at the photo in question, you'll see the interior edge of the brace arm is beveled to aid in cartridge clearance from the ejection port. However, I wouldn't recommend doing this any more than necessary, because even with that added bevel the ejection port is still slightly obstructed.

My first time shooting this gun ... it wasn't this gun, it was a select-fire SMG version sent to Pat Sweeney (see article in this issue). Apart from the three-position selector and a stock at the end of the steel arms instead of a Gear Head Works Tailhook, the two guns were (I believe) identical. And in full-auto form, I have to admit I wasn't impressed. It is very bouncy, and I didn't like the stock.

The high cyclic rate of a full auto gun will show you things you might not otherwise notice in standard semi-auto fire. I will tell you that it has noticeably more recoil than a 9mm, perhaps twice as much. That hydraulic buffer can only do so much. However, you're throwing substantially more foot-pounds downrange with every bullet, which is why people wanted a 10mm in the first place. Apart from the lack of full-auto capability due to unconstitutional laws, I much prefer this gun in pistol form.

You can see how flat the charging handle folds. Check out the nub in the center of the folded front sight—that is a crude front sight post that can be used through the optic when the sights are folded.

When folded the rear sight has two posts which work as a rear sight notch for use through the optic.

The APC10 PRO broken down into its main components. The hydraulic buffer can be seen attached to the brace/stock mount which attaches to the rear of the receiver.

Ballistic Therapy

The more I examined the APC10, the more I liked it. It has a superficially 1980s look and feel (which, as a child of the 1980s I love) but modern performance. But handling a gun in your office is not the same as shooting it until the barrel is so hot you accidentally burn yourself (which I did with the APC10). I was eager to head out to the range, simply because the B&T was such a unique piece.

The first thing I learned was to seat magazines firmly. If you don't, you're likely to work the charging handle only to see the loaded magazine dropping into the dirt. But that tight fit was a good thing — I didn't have a single malfunction, and deliberately tested the gun with all sorts of ammo including hollow points with big cavities.

Shooting the APC10 in semi-auto (compared to the full-auto SMG Sweeney had) allowed me to more closely examine the recoil cycle. The recoil impulse is softer than a standard straight-blowback gun, and interesting. The muzzle first dips down and then goes back up above your aiming point before settling back into place.

On full-auto the muzzle of this gun doesn't climb. Instead, the whole gun just bounces up and down, and this is what you'll experience shooting semi-auto. In fact, I've seen people shooting the full-auto 9mm SCW, and it doesn't have muzzle rise either — group dispersion is sideways. I presume this has to do with the action of the hydraulic buffer. Because of that buffer, in 10mm recoil is more than a 9mm but not abusive at all.

When collapsed the right arm of the brace blocks some of the ejection port, but a closer look shows the inside of the steel arm has an angle cut into it, so you can in fact fire the B&T with the brace collapsed. Ejection is inconsistent, though, and Tarr doesn't recommend it.

When shooting it with the brace closed ejection was inconsistent as the cases bounced off the brace arm. A few of them came straight back toward me, but there were no malfunctions. When not using the brace at all recoil is much more pronounced and the gun rocks back and forth quite a bit in your hands. B&T provides a single-point sling with the gun, and if you're not using the brace, pushing it out against the sling will provide a surprising amount of stability.

The first round out of a magazine, or the first round fired after a lengthy break, often had substantially less recoil than subsequent follow-up shots. I know exactly what causes this as I've experienced it before, including with the CMMG 10mm I tested last year. That difference is due to the magazine spring and how much force it is exerting against the cartridges which are pressing on the underside of the bolt.

The B&T proved to be quite accurate. Pistol caliber carbines, no matter the barrel length, tend to be less accurate than rifles, in part because pistol bullets have more wind resistance. Still, at fifteen yards it would put an entire 15-round magazine into one large ragged hole and would do three- to four-inch groups at 50 yards all day long.

“Large-format pistols” like the B&T, as the industry seems to have decided to name them, are easier to shoot at distance than traditional handguns because they can mount an optic, you can grab them front

Tarr tried a number of different ammo types with various bullet profiles, but the B&T ran it all.

and back, and they have an additional point of contact or two when wearing a brace. At fifty yards, shooting offhand and trying to keep a roughly one-shot-per-second pace, I put thirty rounds into a six-inch group on an IDPA target. With my carry gun I'd be happy just to hit the target every time shooting at that speed.

Does It Add Up?

I have to admit, that in spite of my initial resistance to this gun I ended up liking it very much. In 9mm SMG form, with an advertised RPM of 1,100, it is likely a soft-shooting buzz saw, and I understand why the Army chose it (especially since they're paying for it with your money).

In many ways the APC10 PRO reminds me of the CZ Bren 2Ms I reviewed in these pages last year. In fact, I wish this was a CZ, because then it would be about \$1,000 cheaper. The Swiss, apparently, are very proud of their stuff.

The base pistol is \$2,650. The collapsible brace adapter is an additional \$689, and the Gear Head Works Tailhook Mod 1 brace is \$100, so the MSRP for this pistol as configured is \$3,439. While that's still the cost of a low-end custom 1911, it is pricier than competing large-format pistols, although there are not many 10mm PCCs on the market. The CMMG Mk10 10mm I tested was half the cost of this B&T ... but that was “just another AR”.

Thirty rounds at fifty yards, fired offhand at a rate of one per second, for a six-inch group. This shows the advantage of a “large format” brace-equipped pistol. With a standard pistol Tarr would be happy just to hit the target shooting at that speed.

The B&T APC10 PRO is very definitely NOT just another AR.

It has interesting looks and unique features. It is, dare I say, exotic. And chambered in an exotic cartridge. It's built tough enough for military and law enforcement use. If you like the looks and the features, and aren't scared away by the price tag, this is one 10mm that I would very definitely recommend. **TN**

SACRED STONE OF THE SOUTHWEST IS ON THE BRINK OF EXTINCTION

Centuries ago, Persians, Tibetans and Mayans considered turquoise a gemstone of the heavens, believing the striking blue stones were sacred pieces of sky. Today, the rarest and most valuable turquoise is found in the American Southwest— but the future of the blue beauty is unclear.

On a recent trip to Tucson, we spoke with fourth generation turquoise traders who explained that less than five percent of turquoise mined worldwide can be set into jewelry and only about twenty mines in the Southwest supply gem-quality turquoise. Once a thriving industry, many Southwest mines have run dry and are now closed.

We found a limited supply of turquoise from Arizona and snatched it up for our **Sedona Turquoise Collection**. Inspired by the work of those ancient craftsmen and designed to showcase the exceptional blue stone, each stabilized vibrant cabochon features a unique, one-of-a-kind matrix surrounded in

Bali metalwork. You could drop over \$1,200 on a turquoise pendant, or you could secure 26 carats of genuine Arizona turquoise for **just \$99**.

Your satisfaction is 100% guaranteed. If you aren't completely happy with your purchase, send it back within 30 days for a complete refund of the item price.

The supply of Arizona turquoise is limited, don't miss your chance to own the Southwest's brilliant blue treasure. Call today!

BAD BOY, BAD BOY, GET SOME

The Bad Boy does offer recoil, but handles it by rotating in your grip, dissipating the recoil by making the muzzle lift.

POWER!

A close-up photograph of a hand holding a Cimarron 10mm Bad Boy Single-Action Wheelgun. The hand is positioned on the left side of the frame, gripping the handle. The revolver is angled upwards and to the right, with its long barrel pointing towards the top right corner. The background is a blurred field of green and brown grass, suggesting an outdoor setting. The word "POWER!" is superimposed in large, white, bold, sans-serif capital letters across the top half of the image, partially overlapping the barrel of the gun.

Cimarron's 10mm Bad Boy Single-Action Wheelgun

By Patrick Sweeney

In the Summer of 1865, Colt had a problem. They had made a bazillion cap and ball revolvers for the war effort. Now, not only were all those pistols no longer needed by the Army, they were going to be a marketplace glut for future Colt sales. And as if *that* wasn't bad enough, the design, with its open top frame, was clearly not as strong as solid-frame revolvers were, and everyone knew it. The nasty icing on the cake was the future: it was going to be cartridge revolvers, not front-loading cap and ball wheelguns. It's as if you had just finished making ten million M16/M4 rifles for the government, and

someone else invents the phased plasma rifle in the 40-watt range.

What did Colt do? They designed the Single Action Army. Basically, the AK47 of its time. Strong enough to handle the most powerful handgun cartridge of its time, the .45 Colt. Durable enough to ride the West with. Simple enough that it could be repaired pretty much anyplace by someone with skills and tools. And since the real firearm to depend on there and then was a shotgun or rifle, the five rounds of the SAA (we'll get into that in a bit) were usually plenty. And if not, well, it was easy enough to have a second one close at hand.

The Cimarron Bad Boy is now available in 10mm. Yes, a pistol cartridge in a revolver.

Some details are traditional, like blued steel. Some are modern, like adjustable sights. And some are just eye-grabbing like an octagonal barrel. But a good eye-grabbing.

The Bad Boy is rollmarked right on the barrel, no mistaking it for another revolver.

The rear sight is adjustable. Also, the top strap is drilled and tapped for a scope mount, should you want to put an optical sighting system on top of your 10mm revolver.

Fast forward to the 1950s. Colt decides that the SAA has had its time, and it no longer needs to be made. Five minutes later, the American entertainment market is flooded with Westerns; TV shows and movies. Everyone wants a single action revolver. Quick Draw and Fast Draw (yes, there's a difference) were so popular that Hollywood stars entered, competed, and were proud to show off their trophies (Dean Martin, Sammy Davis, and the list goes on). Lots of people get into the market, including a small Italian firm by the name of Uberti. Today, Uberti isn't small, and they export enough 19th century style firearms to the US market to arm several cavalry regiments on a regular basis. Cimarron is proud to be bringing in Uberti-made revolvers under their name, and today's test pistol is one of them, the Bad Boy.

The original Bad Boy is/was/is made in .44 Magnum. I don't want to disparage the .44 Magnum, but that's not the most exciting choice. Not exciting until you consider that Uberti/Cimarron managed to fit the .44 Magnum into a single action army frame and cylinder, and have it survive the experience. Expected service life was one of the reasons Colt never offered such a combo. The SAA wasn't really up to the pressures

and recoil, at least not without more metallurgical wizardry than Colt was willing to do when the .44 Magnum showed up in the 1950s. And today? The Cimarron Bad Boy is now also chambered in 10mm.

The frame is the SAA "pre-war" frame that Cimarron offers as one of two choices in their models. The Old Model frame has a screw entering from the front of the frame, below the barrel to hold the base pin in place. That is the way the original Colt revolvers were made in the 19th century, through the first 164,000 revolvers. It took them 23 years to get there, and I suspect they had many, many complaints about the design well before 1896. To disassemble those for cleaning, you needed a screwdriver. And if you didn't have one that fitted properly, you'd soon make a chewed-up mess of the frame and screw. Lose the screw? Oh yes, that happened. The Cimarron Pre-War frame uses the spring-loaded base pin retaining design

that rides cross-ways to the base pin, and one that we are all very familiar with.

The barrel is eight inches long and octagonal. In the interests of making shooting easy, Cimarron has adjustable sights on top of the Bad Boy (in both calibers, but we'll be focused on the 10mm from here forward). The front sight is a ramped blade set on top of a base that rides the top flat of the octagonal barrel. The base has a dovetail slot in the barrel to provide it with additional security, as recoil is something to be expected from a 10mm. At the upper rear of the frame, the rear sight is adjustable for windage and elevation. The contour of the top strap is more robust than a fixed-sight SAA frame, but not as squared as a flat-top model. As an extra 21st century bonus, the top of the Bad Boy frame is drilled and tapped, and you can remove the rear sight and install a red-dot optical sight, should you wish.

ALL GENERATION SHOTGUN - 18"

// ROCKISLANDARMORY.COM

**WHAT DO YOU CALL
A SHOTGUN
SUITABLE FOR ALL GENERATIONS?
CLEVERLY, WE CALL IT
THE ALL GENERATION
SHOTGUN.
SEE WHAT WE DID THERE?**

Take a good look at the new All Generation Shotgun Series from RIA Imports. With 5 + 1 capacity, they're easy to handle and take efficiency and reliability to a new level. And because they come with spacers and an adjustable cheek rest, they can be used comfortably by shooters of any age.

Available in 12-, 410-, and 20-gauge.

RIA
IMPORTS

The firing pin is fixed to the hammer and passes through the frame to the primer.

To load, cock the hammer to the first click, and flip open the loading gate. The cylinder will now spin freely, and you can load or unload.

[Cont. from page 40]

Below the barrel and on the right side is the ejector assembly. This is a simple, spring-loaded rod. As with the Old Model and Pre-War, the ejector rod head has a different shape between the two design eras.

At the rear, Cimarron has opted for the Old Army grips on the Bad Boy. OK, a pause for another time-travel info update. When Colt (everything goes back to Colt, in the middle of the 19th century, or before, when Samuel Colt was still alive) the Colt Old Army .44 was the revolver we fought the Civil War with (there were others, but that was pretty much the main one). When the Colt designers came up with the SAA, they changed the grip design slightly for the new pistol. However, for reasons only they knew, they kept the same screw pattern and grip strap/frame dimensions to hold the grip straps onto the frame. So, you could should you wish, swap the SAA grips straps and grips out for the Old Army grip straps and grip. This is what Cimarron has done. Now, in the esoteric world of single-action-revolver shooting, there are advocates for each design. Both tout the advantages of their choice. Me, I really don't notice. What can I say? I learned to shoot single actions with Rugers, drink coffee brewed at radio stations, and drive Fords. As a result, to the world at large, I have no taste. What I do have a keen sense for are triggers, and the Bad Boy has a good one. The Cimarron action is not like the Colt in that there are not four clicks as you thumb the hammer back, but three. The first one is the loading/unloading position, and the last is full cock. The middle one is just parts getting set for the next step of the action. There is no "safety notch." The frame, barrel and grip straps are blued steel, and the hammer is color case-hardened. The grips themselves are a single piece of walnut.

And now it is time for another history lesson and safety update. The way the single action works is that you, once it is loaded, cock the hammer to its fully-back position. Aim, press the trigger, and experience a loud noise. The muzzle rises into the air, due to the shape of the grip and grip straps. It is supposed to rise up, that is how recoil is dealt with. If you crush-grip the pistol (that's what they were called back then) to keep the muzzle down, you are defeating the recoil-reducing grip shape. To fire again, repeat. Cock, aim,

John Wayne, in *The Shootist*, told Ron Howard and the viewers to only load five. (MovieStillsDB.com)

press. Now here's the history part and safety part: when the hammer is fully down, the firing pin rests on the primer. The firing pin is fixed to the hammer, and passes through the frame to reach the firing pin, which it does when at rest. No, that is not a mis-print, and it isn't a dimensional discontinuity. That's the way it was designed and built, for decades. Actually, now for 148 years. There is no "half-cock" setting you can depend on. The sear is the tip of the trigger, which is a simple pivoting bar. The hammer notch is only as large as is needed to provide a clean trigger pull when it is cocked. So, the "Frontier Six Shooter" is actually only safely carried as a five-shot revolver. You carry it with the hammer fully at rest on an empty chamber, period, end of story. How to get there? Simple: cock the hammer partially back, until it is at the loading position. This lowers the cylinder bolt, and allows the cylinder to spin freely. Open the loading gate. Starting from empty, load one round. Skip over the next chamber and leave it empty. Then load the next four. Cock the hammer and then gently lower it onto the empty chamber. It's as simple as that.

What happens if you load all six? Well, a lot of cowboys found that out the hard way in the old west. If you have a six-shooter loaded with six, and you are saddling your horse, you put the stirrup on the side you are working on, up on the saddle horn. You then toss it up on top of the horse, on top of the saddle blanket, so you can cinch the belly band. If the stirrup

slips off the horn, it will swing down, and most likely hit the hammer of your holstered six-shooter, firing that round. Some cowboys limped back then, they shot themselves. Don't be like them. This was even discussed in the movie *The Shootist*, John Wayne's last movie. Ron Howard, the point of view character, asks

[Cont. to page 44]

HISTORY OF CIMARRON

The start of Cimarron, as far as we're concerned, came in the mid 1980s, when Mike Harvey wasn't happy with the firearms coming out of Italy. Specifically, they weren't authentic enough. While functional and reliable, they weren't to the dimensions of the originals, and the Italian proof laws required proof marks. Mike sent detailed instructions to uberti, and even went so far as to get originals to Brescia (the city Uberti is in, a nice little city at the foot of the Alps) to let them see for themselves. He also had them move the proof marks, but stay within Italian law. I remember the imports before then, and Mike was right. While they worked, they weren't the same, and they didn't look right. Well, that's all changed now. **FN**

For most cleaning, this is as far as you have to go. The Bad Boy in 10mm comes with two cylinders, one in 10mm and the other in .38-40

[Cont. from page 42]

"Only five?" J.B. Books reply makes it clear that you can carry six, but at great hazard, and only when you feel the hazard is worth the advantage. For us, today, there is no advantage, only hazard, so: Don't.

The 10mm, being a rimless round, obviously headspaces on the case mouth. Not a problem, the 10mm case is stout and there's plenty of case mouth to stop the rounds in each chamber. No, you cannot use .40 S&W as a lower-recoil alternative, as you can in a .357 or .44 Magnum. Those two use their rims to headspace, and that's what lets you use Specials in them. So, what to do if you want to shoot something a little less powerful than the usual 10mm which can range from .45ACP+P power up to the .41 Magnum, and the lower end of the .44 Magnum range? Again, Cimarron has thought of that. When Jeff Cooper was encouraging experimentation in what later became the .40 G&A, those experimenters used a near-obsolete at the time cartridge, and its bullet, the .38-40. Which is, wait for it, .400" in diameter in its jacketed mode. Yep, the .38-40 was the .40 S&W and 10mm of its time. Cimarron includes a fitted .38-40 cylinder with each 10mm Bad Boy, so you can shoot the super-softy Cowboy Action Shooting .38-40 loads that are more common now than when I started. Lots more common. Now, there was a time when people turbocharged the 38-40. My friend Michael Bane had Hamilton Bowen build him an S&W N-frame in .38-40, and he shoots 10mm-level loads out of it. With the 10mm, and plenty of revolvers, like the Bad Boy, to use it in, I really don't see the point any more.

The Cimarron Bad Boy uses the Pre-War cylinder pin latch, a spring-loaded cross pin to hold the base pin in place.

Shooting the Bad Boy was everything I expected it to be. The recoil depended on the power level of the ammo I used. The accuracy was plenty good, and probably better than I can shoot. It has been a long time since I shot a single action at distance, but banging the gongs at 100 yards was no problem. I mentioned that I learned to shoot single actions on a Ruger. My brother and I would go to the range with the family .357 and shoot at tin cans at 100 yards. The rules of the competition were simple: you got to shoot until you missed, then it was the other brother's turn. We got so good at it that we stopped using the big

UBERTI

Modern manufacturing methods and old-world craftsmanship, that's Uberti.

If you are thinking of a small shop with a bunch of guys using hand files, hammers and cordless drills, making firearms, you couldn't be more wrong. (Not that they ever were that, please.) My visit to Uberti showed me rows of CNC machines, slaved together with tracks to shuttle the tombstones between machining centers. The files are reserved for the hand-fitting and final assembly, where needed, and each craftsman had his own workbench, complete with photos. It is not unusual to see a workbench with tools in neat rows, and an array of photos of supercars, super models, the favorite soccer team, and the Pope, all in one booth. This is Italy, and only tourists order cappuccinos after breakfast. The workmen take great pride in doing it right, and assembling properly functioning firearms that will be appreciated by discerning American shooters. **FN**

The mountains behind Brescia, seen over the rooftops.

cans and used smaller and smaller ones. Oh, and Dad added an extra rule: We had to stop when one of the other hunt club members came to the rifle range to sight in their deer rifle. He didn't want anyone to think we were showing off.

The Bad Boy, had it been available back then, would have been just the thing for that competition. You see, a hit back then was "Did the can move?" If it moved, you "hit" it. A 10mm is going to offer a larger "Moved it" radius than a .357 would.

The best part? The Bad Boy is available for a listed price of \$726.05. That's a big-bore single action revolver, with two cylinders, and with adjustable sights. Boy, am I tempted. **FN**

Finish:	Blued steel
Grips:	Wood
Sights:	Fixed front, adjustable rear, optic ready
Trigger:	3.5 lbs.
MSRP:	\$726
Manufacturer:	Cimarron Cimarron-Firearms.com (877) 749-4861

SHOOT A SINGLE ACTION FAST

No, not fanning. Fanning is for movies and very, very Fast Draw (done with specialized blanks) competition. To shoot a single action quickly, hold it as you would a pistol, with both hands. Now, right-handed shooters, reach up with the thumb of your left hand and cock the hammer. Fire, repeat. This is how cowboy action shooters in some divisions shoot. Well, it was the way my brother and I had figured out how to shoot back in the early 1970s. We weren't looking for fast, because we were shooting at 100 yards. But we found that it could be fast, when you wanted it to be fast. So, to shoot fast, get both hands on the gun. As for Fast Draw, using blanks with coarse gunpowder, or wax bullets, the idea is to draw and shoot pretty much at the reaction time of a normal human being. To do that you draw with one hand and slap the other hand over the hammer, all while just clearing the holster, in a few tenths of a second. Not my game, I have to say, but it sure looks like fun. **FN**

CIMARRON BAD BOY CHRONOGRAPH AND ACCURACY DATA						
Ammunition	Bullet weight (gr.)	Velocity (fps)	Es	sD	Ave. Group (in.)	Best Group (in.)
Hornady Critical Duty	175	1,242	41	15.1	3.2	2.7
SIG FMJ	180	1,282	14	6.3	3.3	2.9
Armcor FMJ	180	1,165	45	19.1	3	2.5
Federal HST JHP	200	1,198	21	8.2	3	2.6
DoubleTap WFNGC	200	1,313	34	14.1	3.2	2.8
Buffalo Bore HC-FN	220	1,271	21	9.1	3.3	2.4

Accuracy results were to be averages of 3, five-shot groups at 100 yards off a Champion shooting rest. Scope power set at 5X. Velocities are averages of 10 shots measured on a Labradar chronograph set to read 15 feet from the muzzle.

Depending on what you expect to be defending yourself from, the Bad Boy can deliver performance varying from .45ACP+P to the low end of .44 Magnum. Your choice, but equally accurate.

WANT A CIMARRON BAD BOY IN 10mm?

Check out Davidson's Gallery of Guns at GalleryOfGuns.com!

Davidson's offers the GuaranteeD® Lifetime Replacement Warranty which backs all the firearms you buy through GalleryofGuns.com. It works like this: if anything ever goes wrong with any gun you buy with the Davidson's GuaranteeD® Lifetime Replacement Warranty, it will be replaced. If no replacement is available, it will be repaired at no charge to you. Simply return it to the retailer where you purchased it, pay for the return shipping and upon receipt Davidson's will ship the returning retailer a brand-new gun for you provided one is available. If a replacement is not available your firearm will be repaired for free. For complete warranty information please refer to the Guaranteed Warranty link found at the home page of GalleryofGuns.com **FN**

A close-up, side-profile photograph of a middle-aged man with grey hair and glasses, wearing a black MSA headset. He is holding a black submachine gun (B&T APC10) with both hands, aiming it forward. He is wearing a light grey t-shirt over a blue and white striped shirt. The background is a blurred outdoor setting with green grass and bare trees under a clear blue sky.

“AND

Yes, being a gun writer is fun. Work, but fun, and some days are even more fun than others. Like this one, with the B&T APC10, a 10mm SMG.

I'M THUMPER."

THE BRÜGGER & THOMET APC10 PRO SUBMACHINE GUN

(Bonus points if you know the movie that line is from.)

By Patrick Sweeney

Jeff Cooper had an idea. He wasn't the first, but he had a knack for putting things into words. The idea was simple: something compact, that hit hard, was easy to handle, and would be handy in a predicament. He called such a tool "thumper." He was thinking, at the time, of a 10mm submachine gun (SMG) or the like. Or what later came to be called a PDW. The FBI asked for just that, post-Miami, and HK tried to adapt the MP5 to it. The result was a really nice bit of gear (had a chance to shoot one, one lovely afternoon), but it floundered due to the FBI themselves; many of the agents couldn't handle full-power 10mm ammo, and kept asking to have the ammo loaded down and down. Once they got to a recoil level they could handle, the HK MP5/10 couldn't be depended on to function with the varying levels of power. The roller-lock system of the HK SMG could not both handle a 200-grain bullet at 1,200 fps and a 180-grain at 950 fps. The HKs went into inventory, and then into scrap. And there things stood, until B&T stepped into the 10mm world.

They are now making a 10mm SMG, which I had the opportunity to test and let my test-fire crew loose on. Now, a select-fire firearm is no longer available to us, due to the Hughes Amendment of the Firearm Owners Protection Act of 1986. So, you won't be able to lay hands on this one as a mere mortal. But, B&T is offering the APC10 Pro 10mm in a pistol and carbine, non-select-fire version. Oh, baby. (See Jim Tarr's article in this issue.)

Based in Switzerland, B&T (Brügger & Thomet) has been making firearms for some thirty years, starting with suppressors and then building up and branching out as they expanded. The firearm we're testing today is a hulking big SMG, chambered in 10mm. Unlike the HK, with its fancy-shmanzy delayed blowback roller-lock system, the B&T APC10 Pro is a blowback system, which is the big brother to the APC9, the SMG the US armed forces have adopted.

The APC10 is constructed of durable materials; steel, aluminum and high-strength polymer.

The APC10 Pro is pretty straightforward in function, while also being 21st century simplicity and brutalist in design. On top, there is an aluminum receiver. This holds the bolt and recoil mechanism, and the barrel is secured to the upper receiver. The upper is the firearm, as is customary in Europe. The upper has a full-length top rail for sights and optics. The APC10 came with a pair of folding sights, which I used only in the giggle-worthy part of the testing. For the accuracy and chrono work, I folded the sights down and installed a Primary Arms 1-6X scope on top, bolted on with a Geissele super Precision mount. Yes, the mount costs almost as much as the optic, and the two of them cost as much as a commodity-grade pistol-caliber carbine (PCC), but it was the optics combo I had handy at the time I needed to do accuracy testing. And it worked just fine, thank you very much.

The receiver also has extra rails, one each at the 3, 6 and 9 o'clock locations, as places to mount lights, lasers, rangefinders, a cup holder, who knows what these days. They do make the forearm portion of the upper an angled, hand-grabby assemblage, but that comes in handy when you are keeping the muzzle down on full auto. Now, the APC series, both 9 and 10mm (there's a .40, but since the FBI kicked the .40 to the curb, I suspect I/we will never see one of those. Not a big miss, I have to say) differ from the GHM9 in that the handguard of the APC is an integral part of the receiver. On the GHM9, you can swap out handguard lengths and make it what you want. On the APC, what you get is what you get. Not a problem.

[Cont. to page 50]

The B&T APC10 Pro, a compact 10mm SMG, that can also be had as a semi-automatic pistol.

Here you can see the front takedown pin, the ambidextrous mag button and the blot stop. Oh, and it's Swiss made.

The selector on this one goes from Safe to Semi to Auto, and that means a long list of volunteers for test-firing.

*We don't build the perfect round.
We strive to build millions of perfect rounds.*

Perfection is a moment.

A fleeting one.

But the quest for perfection—
that's a never-ending journey.

The endless pursuit of that
unreachable arête is what spurs
us on, teaches us, and tests us.

It's taken everything we've got.
It's given us everything we've got.
So it doesn't matter how good we get.
It only matters how good we stay.

On the handguard there is plenty of rail estate, and you can also see the folding, non-reciprocating charging handle.

The three-lug HK style suppressor mount.

The rear plate is the mounting point for a stock, an arm brace, or other aids.

The upper is an aluminum tube, machined for the bolt, and with the barrel, ejector and other parts attached.

[Cont. from page 48]

There are three hefty torx-head bolts on each side of the receiver, in-between the ejection port and the side rails, and they secure the barrel in place. Leave them alone unless you are replacing a worn barrel or swapping one out for one with a different length or mounting system at the muzzle. The barrel on the APC10 Pro I handled was just under seven inches in length and equipped with a three-lug HK type suppressor mount.

Above the side rails there is an ambidextrous charging handle. The handle is non-reciprocating, so you needn't worry about a full-power 10mm round leaving your support hand a dented and painful mess of fingers or thumb. The handles also fold, to get them out of the way and keep the package from being too bulky.

Inside the receiver, the bolt has a hefty extractor, and this can be counted on to haul each empty out of the chamber, and introduce it to Mr. Ejector, which hurls it a goodly distance away. But before we get too deep into the innards, we need to complete our tour of the upper, and then move on to the lower. At the back of the upper receiver, B&T shipped the APC10 with a two-rail telescoping stock. This is one of those European must-haves, the detail that distinguishes it from a mere firearm, and makes it a professional's tool. Oh gosh, I wish they had shipped it with the folding stock instead. If you are ever in the position of ordering a B&T (or any other euro-blaster) pass right over the

two-rail stock, and get something else. I hated the first one I ever shot, an HK, some 35 years ago, and no design has made me warm to it since. I had forgotten that, else I would have really strongly asked for something else, to at least the other design as well as, so I could compare them side-by-side. Because B&T makes an excellent folding stock design as well as one that is both folding and adjustable for length of pull.

Anyway, the rails of the stock slide alongside the upper receiver when it is telescoped closed, and at first glance I wondered if this would cause a problem in

The two-bar stock assembly has the right-hand bar relieved where it overlaps the ejection port, so empties have a clear path out.

ejection. Nope. The rail on the right side is relieved so there is room for the empties to pass by, and the ejection pattern is up at an angle as well. The back of the telescoping stock is a simple vertical plate, attached in the middle, and the rubber is non-slip but not much for dampening felt recoil. To extend or retract, push the tab underneath the rail set, and slide it until it is the length you need. There are notches along the rail for the stops, those are the length options you have. If you want to use a sling, you will have to find a sling mount to clamp onto the side rail of the receiver. The stock assembly (whichever one you opt for) has a set of sling loops for a clip-on type sling mount. My test fire crew and I had no time for slings, so we simply left that part untested.

The lower is polymer. The controls are ambidextrous, magazine and bolt release and safety/selector lever. While I applaud making ambi controls, I suspect the lower on this one, a brand-new test loaner, hadn't been fully broken in. I may be getting old, but I simply could not use the right-side mag release lever to drop the magazine. I could not press it hard enough without shifting my hand off of the pistol grip. Part of that problem of mine might be the leverage I didn't have. The right-side-mag catch is worked by means of a lever system that extends back from the front of the magazine well, to the opening of the trigger guard. I

[Cont. to page 52]

Here you can see the right-side magazine catch, and the lever system to operate it.

The APC10 uses Glock 10mm magazines. Alas, all I could get in time were these fifteen-round magazines. Sigh.

The pistol grip is replaceable by any AR-15 pistol grip, should the one B&T installs not be to your liking.

The button underneath is how you extend or retract the stock. Well, you can extend it by just grabbing and yanking, but it won't collapse the same way.

The two takedown pins work just like those on an AR-15.

[Cont. from page 50]

just couldn't press the lever far into the trigger guard opening enough to get the magazine to release. Using my left-hand thumb on the other side worked just fine. I suspect a few dozen more iterations, watching some movie late at night would work it in and get it so I could use it on the right side. The magazines? Glock. And in 10mm that means the G20. The test APC10 came with three Glock magazines, each of fifteen rounds. I looked around, and found larger-capacity ones, but could not get them on-site in time to test them out. I suspect that B&T found themselves between a rock

and a hard place on this subject. The obvious choice would be to use an HK UMP-style magazine for this, as they did with the APC45. But you can't make a .45 magazine feed 10mm reliably, and to make a 10mm magazine means an entire new mold, as the magazine tubes are injection molded. That's a big chunk of change, and if you can source existing magazines (and they are reliable) then your smart choice is to go with someone else's magazines. Except, in this case, it means Glock. Oh well, it isn't like there's a worldwide shortage of Glock magazines, even in 10mm.

GLOCK MAGS INFO

OK, usually, if you want to increase magazine capacity, you simply go to Taylor Freelance, and there Robin Taylor can supply you with all kinds of magazine extenders. (State law permitting, of course.) Alas, here Glock has not been.... kind. I asked Robin about this, and the sigh he gave me was a clear head's-up of a predicament. It seems that a while back, when Glock updated the big-body pistols, they upgraded the .45 magazines, but the 10mm magazines? We're not really sure if they did or didn't, and if they did, they are not now the same as the .45s. At least, not in a way that helps us here. So, the various upgrades, modifications and capacity increases to the .45 magazines, which would otherwise mean they'd work on the 10mm magazines, don't. Well, they do, sometimes. But not always, and there are no guarantees. So, you can bolt on a .45 magazine capacity increase to your 10mm tubes, and if it works, great. If it doesn't, then, that's what we warned you about. I'm sure there's someone out there who has tracked all the changes, and worked out the details of the various dimensions, but until they let us know, increasing the capacity of a Glock 10mm magazine is a roll of the dice.

The APC10 locks open when the last shot is fired, by means of the bolt hold-open lever that is actuated by the magazine follower.

Now, the no-increase basepads, that's not a problem. But for higher capacity, you need to get a magazine that is already there, in 10mm, and not increase the ones you have. **FN**

The pistol grip should look sort of familiar. That's because B&T used the AR-15 receiver dimensions as the mounting point. While the one shipped liked like the love child of an ar-15 pistol grip and an M-249 SAW grip, it was comfortable enough. And if you don't like it, well, there's even less of a worldwide shortage of AR-15 pistol grips than there are of Glock magazines. The selector lever is, thankfully, positioned much like the AR-15, and is reachable by normal human hands. Again, when I first felt the two-rail stock, I had flashbacks to the MP5 and the

The APC10 as disassembled as you need to, to clean it thoroughly.

The lower is a polymer housing with the internals held in place by cross pins. Once off, you can dunk it, douse it, scrub it, lube it, and then re-install it.

The stock assembly, showing the secondary buffer for the 10mm chambering. The APC10 needs it.

selector that needed orangutan thumb transplants to be reachable. None of that here, the Swiss are too clever to adopt something like that. Up, at the white dot, is Safe. One click down, the single red dot, is Semi. And then, thumbing the lever forward to the red dash gets you to Auto. No burst control here, again, more Swiss “We don’t need that” design. What with the Glock magazine being angled, and both the magazine

and lower receiver being polymer, a magazine dropping free was not guaranteed. And in an SMG, who cares? My late Father and his experience with SMGs in France and Germany, was on my mind when I was shooting the APC10. Dad always told us he’d cinch his belt tight and take his empty magazines and dump them down his shirt, because he’d need them later. (No dump pouches in WWII.) So dropping a mag wasn’t really something I was expected to be doing, and wouldn’t miss it if it wasn’t going to happen. Did they drop free? I don’t remember, I always grabbed and pulled, to do a reload. Old habits die hard, even when second-generation ones.

OK, the internals. To get there you have to disassemble the APC10. That’s easy. The two cross pins are just like those on an AR-15, press them across and separate the two halves. The lower comes down off of the upper, and the stock/rear cap/brace/whatever you have installed there comes off to the rear by pulling it down to clear the locking tab, and back to get it out of the receiver. Pull the recoil spring assembly out to the rear. It is a self-contained set of spring and guide rod, you won’t be dropping parts of it on the floor. You can then draw the bolt assembly out to the rear. That’s it, you’re done for disassembly, Everything there can now be scrubbed, dunked (optics permitting on the upper, of course) and lubed and reassembled. One detail you’ll notice is that the stock assembly (actually, the upper receiver rear cap, it is common across many of the rear assemblies) has a buffer spring installed on it. This is, after all, a 10mm firearm, and there’s a bit more energy to handle. Hence the extra buffer spring.

On the lower, you’ll notice a sheet metal arm that extends from the left rear of the magazine well, up to the front left corner of it. This is the bolt hold-open lever, and it is activated by the follower of the magazine after the last round has been fired.

CYCLIC RATE

I used my Competition electronics timer to track the cyclic rate with various loads. Being a blow-back system, the rpm of the system is going to reflect the power being disbursed. You’d think it was a ratio of bullet mass to rpm, but that’s not it entirely. An example would be the Remington and Armscor 180 FMJ loads. Their velocities are 20 fps apart, but their cyclic rates are 170 rpm apart. And the slowest rate was the Speer Gold Dot 200-grain bullet. I’m not a fan of high-cyclic-rate SMGs, and in the ammo tested here, I would have to give the nod to the Gold Dot. Not only is it the heaviest standard-weight bullet to be had in the 10mm, but the cyclic rate was 10% slower than the next-slowest load. And three-quarters the rate of the fastest. But they were all fun. Not having a three-lug adapter to fit onto a .45 ACP suppressor, I was unable to see if a suppressor would change the cyclic rate. **FM**

One of my test-fire crew, giggling his way through a magazine of full-auto fun.

This is how the bolt fits into the receiver. No need for guide rods or rails, the bolt fits the receiver and is guided by it.

The recoil spring assembly is a self-contained guide rod and spring set. It fits the upper portion of the bolt assembly.

Yes, a 1-6X optic on top of an SMG is a bit odd. But at 1X it is still fun to shoot, and at 6X it lets you really wring out the accuracy. Plus, the weight doesn't hurt when it comes to taming felt recoil.

Reassembly is the opposite, if a bit of a three-handed operation. Line up the front pin and the upper receiver, and press the pin across to hold them together. Slide the bolt in, and before it disappears into the receiver, slide the recoil spring assembly into it. Pivot up the lower receiver, then press the rear cap assembly up and into the upper receiver and wriggle them until the three parts nestle together. New, this is a tight fit and it may take some wok. I suspect that as the high spots on the surfaces burnish each other, it will get easier, but you may need a third hand the first few times. Then once lined up, press the rear take-down pin across. Done.

To Fire, load the magazines. Insert a magazine, Pull back the charging handle and let go. There's a round in the chamber, and the APC10 Pro fires from a closed bolt. With sights up, stock extended, move the selector, aim and fire. One thing is for sure, the Swiss know how to make barrels, and they know how to install them in accurate firearms. After the test-firing with my volunteers, I then spent time on the range doing the chrono work and accuracy work. I was glad to have had as my only option an LPVO instead of a red-dot sight, because at 6X, shooting 50-yard groups was easy. Well, it was easy until I saw each group being formed and had to remind myself "that's a nice group, ignore it and just shoot the next shot."

Now, the empty weight of the B&T APC10 Pro is just under six pounds. As big-bore SMGs go, this is on the light side. An M3 Grease Gun SMG, in .45ACP, weighs a couple of ounces over eight pounds. A Thompson is ten pounds to almost eleven, depending on the model. The APC10 needs the second buffer spring, and I would have asked (if the Swiss had been asking for input) for the bolt to have had a bit more travel, or some other way to lengthen the cyclic stroke. In 10mm, and less than six pounds, the APC10 was a handful. Add in the face-abusing two-bar stock, and at times the fun level got to be a bit less fun. I would have enjoyed the experience a lot more with one of their other stock designs, and when you go to buy yours, I would strongly suggest you opt for one of the other stock designs besides the two-rail one.

Buy yours? Yes, because while this one is a select-fire model, B&T offers a pistol (with arm brace adapter) and carbine versions. Fun, and quality does not come cheap. As this is made in Switzerland, and imported, the list price is a bit much compared to what firearms prices were back when Jeff Cooper came up with the idea of Thumper. It is not, however, out of line with what quality costs these days. Really, when I asked for the MSRP, I braced myself, expecting the price to be at least another Grover Cleveland (that's a \$1,000 bill, now valued at more than \$1,000 by collectors) higher than I was told. And beside fun, a 10mm carbine, using Glock magazines or other makers of higher capacity, strikes me as a really useful firearm. As a pistol, a real powerhouse that can reach out further than a Glock might. With a comfortable stock, and the extra weight of ten more inches of barrel, a carbine 10mm is going to be fun, fun, fun and there's no taking the T-Bird away.

Oh, and the answer? *Diamonds Are Forever* (the actress was Trina Parks as "Thumper"). **FN**

B&T APC 10 PRO SUBMACHINE GUN	
Type:	Blowback-operated select-fire SMG
Caliber:	10mm

10mm

An extra inch gets you more benefit from the sight radius than it does from the velocity boost. If you want the boost, you have to load your own, with slower-burning powders than the factory loaders use.

FOREVER?

(MAYBE, BUT NOTHING LASTS FOREVER.)

Patrick Sweeney Tests 16 10mm loads!

By Patrick Sweeney

Oh, it was a fabulous day. I was there to bust a cap on the future of firearms. I was to shoot a Bren Ten, with 10mm ammo. And it even had magazines! The Bren Ten was the pistol of the future, the 10mm was going to be the new cartridge that solved every problem. And I was going to be there at the beginning. What I found out that day was that the first batches of ammo, from Norma, were, er, ah, ambitious. The “book” specs on 10mm ammo were supposed to be a 200-grain bullet at 1,200 fps. The actual results, on the then-new chronos we had, was a lot closer to, and sometimes even over, 1,300 fps. The 170 grain bullets? *Oh, dear God.*

And the Bren Ten, well you all know the history of that.

The ten millimeter was developed in part by the late Jeff Cooper. Unfortunately, it ended up in much the same position as the .44 Magnum, developed by Elmer Keith and the .41 Magnum, promoted by Skeeter Skelton. They all wanted more-powerful, but controllable, cartridges that were to do more than previous ones had. By the time the ammo factories were done, both were beyond the limits they had intended. Elmer wanted a 250-grain bullet at 1,200 fps and got a 240 at 1,400 fps. Skeeter wanted a 210-grain bullet at 950 fps, and got a 210 in the 1,300's. Cooper was happy in the .40 G&A with a 180-bullet at 1,100 fps as the top, and an even 1,000 fps for those who didn't need a magnum. A 200 grain at 1,200 fps? Oh, my.

The Bren Ten fizzled, however Colt rescued the 10mm when they came out with the Delta Elite in a 1911. The 10mm was then enthusiastically adopted by the FBI after the Miami shootout, and they seriously expected agents to qualify with the new cartridge. Even in the expected factory power levels, 200s at 1,200, they were looking at low-end .44 Magnum performance. The new “wunder-round,” the FBI-anointed 10mm, was going to be the defensive cartridge that swept all before it. As if. As if accountants and lawyers in Brooks Brothers suits were going to daily carry a full-sized, all-steel pistol, and were going

If you want fast, then Ft. Scott has the ammo for you. A 124 going Mach 1.61 is going to get a lot of attention.

to shoot passing scores in annual qualifications with that ammo. Short answer: no.

The FBI kept going back and asking the ammo companies to ease up on the throttle. The FBI 10mm load became 180-grain bullets at 1,200 fps, then 180s at 1,100, then a requested 180-grain JHP at 950 fps. At that point there was so much dead air space in the case that Winchester just shortened the case, created the .40 S&W, and the 10mm was as dead as a Norwegian Blue parrot. Oh, there were those who loved it, and rightly so. But the entire LE world moved on to the .40.

Me, I had just won a Colt Delta Elite at the old Second Chance bowling pin shoot, and since my entertainment then was reloading, I just had to load ammo for it. I soon found that unlike the .40, the 10mm delivered on anything and everything it promised. You could load it down, and duplicate the .40 S&W, or go even lower. I had some lightweight bullets loaded to slow velocities, for use in the local Sheriff's Department indoor PPC league, if they ever insisted on a duty pistol class. (They didn't, at least not until more than a decade after I stopped shooting PPC.) That load was a 155-grain plated truncated cone bullet, at a blistering 900 fps. Loading the 10mm to make Major for IPSC shooting was easy, a piece of cake. It only took equaling the .40 S&W, a 180-grain bullet at 950–975 fps, and that was before the Power Factor for Major was lowered. Once it got edged down, a 180 grain at 920 fps made Major. At pin-load power levels, the 10mm was still loafing along, where a 200 at 1,000 fps was plenty to blow pins off of the tables. And for the future, when I'd be hiking

or hunting in Alaska, and "needed" a bear protection handgun? Well, the 10mm, loaded with hard-cast 220 grain bullets, would do the job. There, the limit was more me than the case or pistol, and if I was up to it, a 220 at 1,100 fps would penetrate linear-feet of critter.

In the meantime, the 10mm faded. Yes, Glock had come out with their G20, a 10mm companion to the G21 in .45. Colt continued to make the Delta. A lot of USPSA/IPSC competitors built up 10mm pistols, but they used a .40 barrel in them, loaded the round long to make it feed slick as butter, and shot what were essentially 40 S&W loads in them.

OK, a short break for the technical stuff, which is important to know. The 10mm uses large pistol primers, in part because manufacturing methods back then were still a bit, shall we say, sloppy. By using large primers, the 10mm could shrug off a bit of misalignment in barrel lockup. Had it used small pistol primers, making sure the firing pin hit the primer would have been more work. By 1990, when the .40 S&W was developed, it was going to go into 9mm pistols (we all know how well that worked out) and as a result, it was made to work with small pistol primers. 10mm, big primers, .40, small primers. Oh, there was also the problem of large pistol primers in a 9mm pistol envelope, and the ejector hitting said primers when unloading. Bad form, and corrected with the switch to small pistol primers.

The case diameters are the same, just the lengths differ. Unlike revolvers, where you can use a shorter case, such as using .38 Specials in a .357 Magnum, you cannot do so in a pistol. The results will be messy at best, and gun-breaking at worst. They use the same

If you want to carry your 10mm for defense, there is still plenty of good ammo to be found. Look for 180 grain JHPs, but don't look for casual velocities.

bullets, in diameter, weight and shape. This is in part due to the .40 becoming the dominant cartridge. Bullet and ammo makers made bullets that worked in the .40, and then just loaded them into the 10mm. This changed when the 10mm shifted to being a hunting cartridge. A 180-grain bullet for hunting, in the 10mm, needs to be built with a stouter jacket, than a 180-grain bullet for defense, used in a .40.

The diameters are the same, with jacketed bullets for both being an even .400 of an inch, and lead bullets measuring .401 of an inch. Unlike revolvers, with a much longer history, the 10mm does not have the legacy of bullet, and bore, diameters shifting over time and place. It has always and ever will be, .400 and .401 for bullets.

As a defensive cartridge, the 10mm languished once the FBI kicked it to the curb. Everyone wanted lots and lots of bullets in a magazine, and while the G20 gave some of that, the capacity of a 10mm could never compete with the smaller grip size of the .40s and the capacity of 9mms. And the old-timers, who wanted something bigger, just jumped right back up to the .45.

But, over time, things changed. The buying public shifted from revolvers to pistols. Also, a lot of State DNR regulations got changed, to promote and recognize handgun hunting. The big change that was almost uniformly adopted, was that a handgun could only use a straight-wall cartridge for hunting. Despite what you might think, the various State DNRs know hunters. They knew that if they allowed handguns for hunting, but did not limit cartridges, there would be swarms of hunters, armed with single-shot handguns

This was hi-tech and modern pistolsmithing for practical use, just a generation ago. Now it hardly gets noticed.

The Para (Labeled Remington R1, now an orphan) shows the progress we've made. Almost all handguns now have accessory rails.

chambered in .30-30 and .35 Remington all over the place. Not exactly what they had in mind as "hand-gun" hunting.

Combine the buying public shifting from revolvers to pistols, with the interest in handgun hunting and the need for straight-wall cases, and the 10mm began a resurgence. This time, however, not as a defensive cartridge, but as a hunting cartridge. Instead of leaned-out, .45 clone loads, the ammunition companies started offering full-weight or heavier bullets, at serious hunting velocities. We're right back to where Norma had us in 1984.

The modern focus on hunting means that testing 10mm ammunition will involve a lot of recoil. If you want to ease your way up to that power level, then reloading is the way to go. Despite the 10mm not being as popular as predictions would have had it, there is plenty of loading data available for the 10mm. However, I have to offer up one caveat. And that is, use powders you find in loading manuals. Do not extrapolate to other, "suitable" powders. The only time I have ever blown a case in reloaded ammo was with a 10mm. I was getting to the bottom of a customer's problem, and used a handgun powder that seemed to be in the suitable burning range. And in a suitable weight for the case and bullet.

The first two rounds I chronographed showed an average velocity of 800 fps, with an extreme spread of 400 fps (not a typo, 400 feet per second) and then the third shot blew the case. I found the magazine parts, reassembled the magazine, and just to show how stubborn I can be, blew the next case. That was it, no more of that powder for me.

I phoned the powder maker, and started to describe the situation. The ballistician interrupted me, and asked "Were you using XYZ powder?" Why, yes. "There's a reason we don't list it in the loading data."

So, the 10mm is a tough case, but not for that powder. Use powders listed, don't go making things up.

And speaking of tough cases, the 10mm is durable to a fault. In decades of loading the 10mm, I have not lost a case to a cracked mouth. Nor to expanded primer pockets. (Those large pistol primers, you remember.) I lose them because I can't always find them at the range, but not because they have worn out or otherwise expired on me. In other calibers in heavy use, I find cracked mouths, cracked case bodies, primer pockets that expand and primers that fall out. The 10mm rim is stout, and I have never seen one where the extractor pulled through, or the rim bent and the case could not be used. If you can find your brass, it will never quit on you.

So, for those who want to work their way up, I have listed a few 10mm loads for your reloading efforts. But mostly I surveyed the top-end, top-power ammunition offerings, and whoo-boy there are some real stout ones to be had.

The use of jacketed bullets in magnum loads is usually done to handle or prevent leading that can come from top velocities. If you are going to the heavy-for-caliber offerings, you won't be going much over 1,200 fps, and a hard-cast bullet, with a good lube on it, can handle that without a problem.

I tested the loads with two 10mm pistols. The first is my old Delta Elite, the prize gun from bowling pin shooting back in the mid-1990s. It is a mostly-box-stock Series 80 Colt 1991 in stainless steel. It has had one real change since then, done soon after I won it. I replaced the stock thumb safety for an Ed Brown thumb safety, as I had this idea that I would use the prize gun to go back to the match and use it to win yet more prizes. I wised up and returned the next year (and every year after) with the gun that won the 10mm, not with the 10mm.

The other is a Para Ordnance single-stack Hunter model, with a six-inch barrel. It has a fiber optic front sight, adjustable rear, accessory rail on the frame, and an ambidextrous thumb safety. The grip safety is a

Fiber optic is de rigeur on modern pistols, and it wasn't that long ago they were seen only on competition guns.

In the old days we could only dream of grips this durable, aggressive and common. VZ G10 grips with a super-aggressive non-skid pattern.

beavertail design, with a “speed bump” at the bottom. The finish is a black PVD DLC applied over stainless steel frame, slide and barrel, and the aggressive VZ G10 grips keep it securely locked in your grip when you touch off any 10mm round. With Remington folding the Para name into its 1911 operations back in 2015, you could for a while find this as the Remington R1 10mm Hunter. All the specifications were the same, it was just the name on the slide and frame that were different. Now that Remington is gone, I have no idea what might replace it, in the hands of the new owners.

These two pistols demonstrate the changes in the handgun universe that have happened over the time the 10mm took to come back. In the late 1980s and early 1990s, no-one was thinking in terms of “I need a place to mount a light or laser on my handgun.” Now it is customary. Back then, a fiber optic front sight was a precious competition detail, not an expected detail you insisted on. G10 was an exotic material used in electronics and back in “the day” plain old stainless was deemed to be good enough. No need to use an aerospace coating like PVD-DLC on it. That would have been gilding the lily.

Why a single-stack, in this world of hi-cap self-loading pistols? Because if you need more than the 8+1 capacity of the R1 10mm to hunt deer, you are doing it wrong.

My Delta is the personification of the end days of *Miami Vice*, and the R1 is the perfect hunting pistol, or the backup you need when dealing with platinum-plated space squids.

And the ammo?

There is no lack of 180-grain defensive-oriented ammunition, despite the 10mm not being at the forefront of defensive use since Sonny Crockett was forced to wear socks. What it does, however, is make the .40 S&W look like the big-bore wanna-be that it is. If you think a 180-grain bullet at 950 fps is more than sufficient for defensive use, then the delivery of the 180 and 200 grains “standard” loads in ten millimeter are akin to the hammer of Thor. (Quick; what is the hammer’s name? It has a name.)

And the hunting loads? A 200 grain, hard-cast bullet is going to, at the very least, punch a ten millimeter hole clean through a whole lot of different critters. And when you combine it with a meplat like that on the Buffalo Bore, or the even wider meplat on the Doubletap, then you will have a much more effective wound channel. Just be ready for the recoil. While the music, cars and fashions of the 1980s have changed, the recoil hasn’t. A 200-grain bullet at 1,200 fps is going to get your attention. It is not the load you

want to start with, and it certainly isn’t the load you want to have a new shooter try first.

One final note; the barrel length difference in velocities. You’d assume that by increasing barrel length by twenty percent, you’d see a big jump in speed. Well, no. Handgun ammunition is formulated to give a complete burn in handgun-length barrels. Some loads, depending on the powder used, will show sharp increases. Others, not much at all. We see in the chrono tests that the smallest increase was 10 fps, and

The two thumpers, the Doubletap 200 grain Wide, Flat-nose gas check, and the Buffalo Bore 220 hard-cast. Shoot something in the right place with one of these, it goes down and stays down.

If you reload the 10mm (and you should) you have a wide choice of bullet weights to select. On the left, a 155-grain plated bullet, good for softy practice. In the middle, a 175 SWC, a great competition bullet, and on the right a 220-grain hard-cast bullet, suitable for thumping critters.

A pair of 10mms and the ammo they shot. Big bullets, going fast.

the largest was an anomalous 96 fps. One showed a decrease, and the rest were grouped in the 18 to 28 fps boost, hardly a great leap forward. Some barrels are slower, some faster, but what you mostly get with a long-slide pistol is a much longer sight radius, which is a big help in aiming. If you want to get as much as

you can from the longer barrel, you have to load your own, use a slower-burning powder, but again, use one that is listed for 10mm use.
If you are entertaining the notion of a 10mm, and want to have the power, then learn to reload. Start at .40 S&W/.45 ACP power levels, and then work your

way up. It's one thing to have a powerful handgun at the range, with everyone admiring the noise, recoil, and flying brass. It becomes something else when they realize you aren't hitting anything. That can be the cost of not starting easy.
Love the 10mm, but don't be that guy. **FN**

The array of ammunition ranged from relatively light (180 grain) defensive ammo, to the heavyweights, the 220 hard-cast bullets that will plow through feet of critter you are hunting.

Legend: WFNGC, wide flat nose gas-check. TC-HC, truncated cone, hard-cast.

10mm WINS AGAIN:

ENCORE

Dan Wesson Kodiak at the Helm

By Patrick Sweeney

There are advantages, good things, about being old. The Zombies were recently inducted into the Rock 'n roll hall of fame. I remember when they were new. I remember when gasoline was less than a dollar a gallon, and Democrats weren't trying to out-crazy each other. I remember when the Walkman revolutionized personal music, when disco was king, and when the 10mm debuted.

When the 10mm cartridge debuted, I had been shooting IPSC for a few years (The USPSA had not yet been formed. I'm a USPSA Plank Owner.) I was learning gunsmithing, and how to lose gracefully at IPSC from Dan McDonald. He was a superb 1911 craftsman, wicked fast shooter, and he managed to score a Bren Ten. And miracle of miracles, it even came with a magazine. The future truly had arrived.

Now, I had been shooting for a while by then, and had even dabbled for a season in Handgun Metallic Silhouette in the early days, using an eight-inch S&W M-57. So, I was not unfamiliar with recoil. Holy frak Batman, the Bren Ten had recoil. And muzzle blast. And on the indoor range we were shooting in, flash. It was so ferocious, I don't think the small group of us even finished the box of ammo. It was that un-fun.

The Norma ammo was supposed to be a 200-grain bullet at 1,200 fps. Much later I had a chance to chronograph that load (back in 1983, chronographs were expensive, and few and far between, so it was a while before I had data) and found it to be over 1,300 fps. I suspect the Bren Ten was rather under-sprung for the factory ammo it was being fed. *[Cont. to page 66]*

It was a bright, sunny day, and this was as much flash as the 10mm produced. You don't need flash to produce power.

The Dan Wesson Kodiak, longslide 10mm thumper.

[Cont. from page 62]

The 10mm came about from experimenting encouraged by Jeff Cooper. Back in the early 1970s, he had Whit Collins and others modify a Browning Hi Power to accept bullets from the .38-40. Those bullets, despite the “.38” in the cartridge name, were actually .400” in diameter. Using cut-off .30 Remington rifle brass, they managed to boost the 180s up to 1,100 fps before the cases would give out.

A noble endeavor for a cartridge named the .40 G&A, but even in the mid 1970’s the advantages were deemed to be marginal. The Hi Power magazine would hold ten rounds of .40 G&A, not enough more than the seven of the 1911 to be worth the conversion expense. (Within a few years, 1911 magazines could be had that held 8 rounds of .45 ACP.) And the power of that experimental .40 was easily within the reach of .45 ACP+P loads.

A later version, the .40 G&A Magnum, used the bottom end of .224 Weatherby rifle brass. (The .30 Remington brass was rare, the .224 Weatherby brass was both rare and expensive.) With the stronger brass, the .40 G&A Magnum was able to boost a 180-grain bullet to over 1,200 fps without brass destruction.

But, the cartridge at the time that was still sucking all the oxygen out of the room was the .44 Magnum. Inspector Callahan had made it famous in 1971, and even a decade and more later people were willing to pay a bump over listed retail to get one of those.

Jeff Cooper discovered the CZ75. If there is a self-loading pistol with a sexier “grip appeal” than the Hi-Power with the right grips, it is the CZ75. Cooper loved its ergonomics, and advocated for a big-bore version

of it. That’s how the Bren Ten saga got started. (And that story is for another time.)

Alas, once the Bren Ten project got to the point of needing ammo, Norma did to the 10mm, to the horror of Cooper, what Remington had done to the .44 Magnum, to the horror of Elmer Keith. And after the .44, Remington did it again to the .41 Magnum, to the horror of Skeeter Skelton. Basically, they cranked it up to 11. (Nod if you get the reference. Thank you.)

Even when dialed back a bit by the American ammunition companies, with 180s at an actual 1,100 fps, the 10mm was a handful. That’s right at the threshold of a good bowling pin load, and not something every shooter looks forward to.

When the FBI announced that the 10mm was going to be the new cartridge for the Bureau, I wish I had been able to find a line in Vegas on the odds. Because I knew it wasn’t going to happen, no-way, no-how, nuh-uh. There was not a chance in the world that the Bureau was going to get entire offices full of lawyers, accountants and white-collar-bunko criminal investigators to pass any kind of actual qualification course, firing full-power 10mm ammo. A passing score, firing 180s at even 1,100 fps? Nope, never gonna happen.

Faced with ferocious recoil, the FBI did not act like Billy Idol, and ask for more, more, more, they kept going back to the ammo companies, asking for less and less. (meanwhile, asking for, get this, an airweight version of the M1076, for easier carrying.)

And in due time, the .40 S&W appeared, sporting a 180-grain bullet at a blistering 950 fps. Yawn. Soon after that time, I acquired a 10mm, actually, I won it at the Second Chance Combat Shoot, a stainless Colt Delta. Still have it, and still really like the 10mm.

The FBI inability to handle recoil began the 10mm wandering in the wilderness. If you went with full-power ammo, you have more than you needed (unless it wasn’t) and you still didn’t have the capacity of the

You can see the tri-tone finish, with gray, black and bronze on the Kodiak.

In case you had any doubts about Dan Wesson matching slide to frame to barrel, here's the barrel, with the last four digits of the serial number marked before it was blued.

9mm and .40 pistols. And if you throttled it back, what you had was a .40 without the magazine capacity, Oh, you could opt for the Glock 20, but that pistol has a butt big enough to make a rap stars eyes glow.

But through all that time, hunters persisted. Because the 10mm makes a cracking good hunting round. And to that end, Dan Wesson makes a cracking good hunting pistol, the Kodiak.

If you are not in the circle of 1911 cognoscenti, you might be surprised to learn that Dan Wesson is considered the sleeper 1911 brand by many of the in crowd. In that, you get the kind of build, fit and detail you can expect from a custom pistolsmith, but at normal, real working-man prices. And you can get them now, not years in the future, which is the schedule most of the high-end 'smiths I know have. You can have a vanilla-plain Dan Wesson, or you can have one with some bells and whistles. This is about one of them with more than a few bells and whistles.

The Kodiak starts, as all Dan Wesson 1911s do, with forged parts, starting with the slide and frame. Once the two have been machined to the fitting stage, they get hand-fitted, slide to frame and then barrel to the mated slide and frame. That trio then stays together all the way to your hands.

The Kodiak is another blast from the past, a longslide 1911. That particular idea came to us from the bullseye crowd, in particular Jim Clark, Sr. A successful bullseye competitor (records as long as your arm) he was also a first-rate 1911 builder. One day in a surplus store, he happened to notice a steel drum full of de-milled 1911 slides. He bought them for their weight in steel, and proceeded to learn how, and then produce, longslide 1911s. He'd clean up the ends of the stub and the old slide, and then weld them into creating a longer slide, then fit a longer barrel, and viola, you had a 1911 with a 6" barrel and slide to match.

I don't know how long they lasted in bullseye, or if they offered an actual advantage. (Sweeney's Competition Rule #7: If you think it offers an advantage, it probably does.) I do know that the longslide idea lasted not quite two seasons of IPSC competition. Longer sight radius, check, Lessened recoil due to weight and cyclic mass, maybe check. Slower to track from target to target, oops. When the IPSC shooting pace accelerated from the brisk to manic to turbo, and then to warp-speed, longslide pistols fell out of favor. The miserable excuse for a human being, but really good actor James Caan used a longslide in *Thief* (a pistol built by James Hoag) and that really kicked things off. Looking cool is one thing, winning

matches is another, and competition shooters can be fickle.

But that is not what we are doing here, because no-one shoots a full-power 10mm pistol at warp-speed. If you can, then you can make your name in competition, so get cracking.

Back to the Kodiak.

Once the slide, frame and barrel have been fitted, then the builder gets to work. The slide gets machined for sights. The front is a transverse dovetail that will have a fiber-optic blade installed. The green one in the Kodiak that arrived provided a

bright green dot in sunlight, and a lesser, but still highly visible green dot in overcast or shade. The result, for those looking to shoot quickly at close range, is a setup that shoots almost as fast as a red-dot optic. If you don't like green, then there are many colors to choose from, and a fiber optic tube is easy to change. You don't even have to move the sight blade.

The rear gets machined to the Bo-Mar pattern, and a Dan Wesson logo'd adjustable rear sight gets fitted. The ejection port is lowered and scalloped in the initial machining, so it doesn't have to be modified later by a gunsmith. One of the first gunsmithing milling machine operations I learned was how to set up a slide in the mill vise and then machine the ejection port lower. No need here, nor has there been for a couple of decades now.

The lowered ejection port allows your empties to not only eject with 100% function, but to take the trip without being dented, dinged, creased or mangled. This is important in the 10mm both because the empties can be hurled with great force, and they are not as common as other calibers. You'll want your brass back, for later loading.

The front sight has a fiber optic tube in it, so you get a bright green dot. If you want some other color, it is easy to change the tube.

The rear sight is adjustable for windage and elevation, and is machined on the old Bo-Mar pattern, but has the Dan Wesson name and logo.

The Dan Wesson logo on the rear sight.

Here you can readily see the coned lockup of the Kodiak longslide barrel. No bushing, and no extra parts or machining for the bushing.

The lack of a bushing means the barrel comes flush to the slide, and this means a deep crown to protect the ends of the rifling. Also, the recoil spring retainer is a reverse plug, installed from the breech end.

The rear of the slide gets five rectangular slots for use as cocking serrations, and thankfully Dan Wesson did not opt for forward serrations. If you want those, you're on your own.

Inside, the Dan Wesson match barrel has been fitted to the slide without a barrel bushing. The front of the barrel is machined with a coned front end, and the external diameter of the cone matches the inner diameter of the slide. As the slide goes forward, it cams the barrel up, and just as the rear is up and locking the front is nestled in a tight fit at the muzzle. A tight fit without the extra parts and dimensional headaches of a separate bushing.

The recoil spring, since there isn't a bushing, is made instead as a reverse plug. When you reassemble, you have to insert the recoil spring plug from the breech end of the slide, not the muzzle and then hold it in place while you install the slide onto the frame. Once you get the feel for it, it is easy to do.

The longer barrel and slide promises to add velocity to any load, the sight radius makes aiming easier, and the heavier slide should dampen felt recoil. The barrel length addition depends on the powder used in the load fired, and some will show only small increases. Others will show useful boosts. The benefit of the greater slide mass is a yes-and-no proposition. The extra weight will put a damper on recoil, but the extra mass bottoming out in the frame can offset that, causing extra muzzle rise. It all depends on how you perceive recoil.

The frame has very useful additions to the basic 1911 design. First of all is the accessory rail. You can mount a light or laser there, although you had better check

with the DNR of where you are hunting to determine if that is kosher or not. Even if they aren't, the extra mass here is good. It may only be a few ounces, but it is underneath the bore, and forward of your hands. Those are the places you want extra weight.

The trigger is a long, solid but lightweight trigger, fitted to the Dan Wesson lock parts for a clean, crisp trigger pull. In testing, I had no complaints at all with the trigger pull, and found it very useful for punching groups. The thumb safety is an ambidextrous design. I usually find ambi safeties to be something of a bother. My grip on a pistol, developed back in the Neolithic era, has my hand so high and hard on the gun that most ambi safeties get in the way. Or rather, my knuckle gets in the way of the right-hand safety paddle. Not so with the Dan Wesson Kodiak, the safety clears my knuckle well enough that I didn't even notice it at first.

In taking the Kodiak apart, I noticed the slide stop is marked with a large "10". Good going, Dan

[Cont. to page 70]

The frontstrap is checkered well, the diamonds are sharp, so the grip is high, tight and non-slip.

The accessory rail provides you with a place to mount a light or laser, but you should check to make sure they are allowed where you plan to hunt or carry the Kodiak.

The thumb safety is an ambidextrous design, and this one rides high enough that it clears my hand.

NEW!

If You want to Become a Gunsmith You need to read this book!

LEARN HOW YOU CAN BECOME A CERTIFIED GUNSMITH!

Becoming an American Gunsmith shows you a path to follow to become a Certified Professional Gunsmith, without having to give up your lifestyle, income, leave home, or spend tens of thousands of dollars attending a campus based school.

Mr. Kelly details how mastering the Design, Function, and Repair (DF&R) training concepts revealed in this book will enable you to maintain, repair, build, and customize firearms as a Certified Gunsmith.

This information will provide you with the ability to follow your passion of working on firearms and ensure your personal freedom and financial security. Included:

- How to set up your shop
- What tools and equipment are *really* necessary
- Numerous suggestions and resources to help you establish a *successful* gunsmithing shop.

Read this book and learn how you can be a Certified Gunsmith, protecting and participating in the ongoing history of firearms in America.

MAINTAIN YOUR GUNS!

Be Prepared for *WHATEVER* is Coming!
**AGI Armorer's Courses on DVD are
How-to Maintenance Videos for Your Guns!**

- You will learn **detailed step-by-step** Design, Function, and Operation of your specific model.
- AGI Armorer's Courses use **cut-away guns to provide close-up views inside the firearms.**
- Learn how to completely disassemble and reassemble ALL your guns with confidence.
- **Advanced Training** on DVD by Master Gunsmiths. *This is NOT just basic field stripping.*
- **Training on DVD so they can't block you!** Have this information available when you need it.

Become an Expert on every gun you own! Each AGI Armorer's Course DVD runs 90 minutes to 2 hours in length, covers the entire "family" of that particular model of firearm, and includes a free printable schematic. **66 different courses available! Here are just a few . . .**

AKS47 Semi-Autos • Beretta 92 Pistols • Glock Pistols • Colt 1911 .45 Auto Pistols • SKS Rifles • AR15 Rifles
M1 Garands • Remington 870 & 1100 Shotguns • S&W Revolvers • Mossberg Shotguns • Ruger® Revolvers
Ruger® 10/22® Rifles • Ruger® LCP®/LC9® • Ruger® Mini-14® • S&W M&P Pistols

You can clearly see the “10” marked on the Kodiak slide stop.

The trigger is long, the thumb and grip safety are Ed Brown, and the end result is a great feeling and easy handling pistol.

[Cont. from page 68]
Wesson. The 1911, in order to work correctly (i.e., flawlessly) it has to have the appropriate slide stop installed. The .45, 10mm and 9mm/.38 super each need a very slightly different slide stop. Some builders just use a .45 stop, which works most of the time, mostly well. And some use a .45 stop, and modify it a bit so it works better. In my experience, longslides

The G10 grips are machined to provide a non-slip grip. They are held on with allen-head screws.

can be particularly fussy in this regard. Dan Wesson clearly goes the extra step, and marks the slide stop so there's no confusion.
Back of the slide stop and safety is an Ed Brown pattern grip safety, complete with a speed bump on the bottom. That bump is to ensure that your hand fully disengages the grip safety when you get a firing

Dan Wesson installs a magazine well funnel on the Kodiak, for when you need to reload quickly.

grip on the pistol. Below the grip safety, the frame has checkering on the frontstrap, and a flat mainspring housing with a checkered surface. The frontstrap is checkered, a very clean and precise checkering job, and the top of the frontstrap has been lifted and given a tighter radius than the traditional government model. This also lets your hand get higher on the frame, and the checkering means you won't have the Kodiak slipping in recoil.
Completing the grip ensemble are a set of G10 grips with a particularly aggressive non-slip pattern on them. They are held on via allen-head screws.
On the bottom of the frame, Dan Wesson has elected to install a magazine funnel, so if you do need to speed-reload, you have every chance to get it right.
In its lockable plastic storage case, each Kodiak comes with a pair of eight-round 10mm magazines, owner's manual, and lock.
The finish on the Kodiak sent is their “Tri-Tone” finish. The slide is done in a matte gray finish, a kinda

The mainspring housing is flat, but checkered, for added non-slip grip.

At eight rounds per magazine, the Kodiak isn't a “hi-cap” pistol. But it has plenty of horsepower for each of those eight shots, plus the one in the chamber.

INGENIOUS GUN WORKS

When I was working on the first steps of testing the Kodiak, the bossman reminded me of a company with some really clever products; Ingenious Gun Works. IGW has shown me their hammer/sear set a while before, and I'd been having a grand time trying it in a shelf full of 1911s. They also have a sight option, or service, that can make shooting easier.

Ok, first the hammer and sear. What IGW did was separate the safety notch from the sear engagement. What looks like the sear isn't, it is just the drop shelf. And if the hammer drops, the sear engagement is not involved.

The sear is the curved cam surface under what looks like the sear in the original design. OK, why a cam surface, why curves? Simple: in the original sear design, you have to have two flats that agree in six orientations or axes, and have properly polished surfaces, to have a good trigger pull. That we can do it now does not mean it is the best way to do it.

The Ingenious Gun Works hammer and sear would make Browning proud. They separate the safety drop notch from the sear engagement surfaces, and make the sear engagement a matter of geometry and not surface polishing.

But a cam? Cams don't care about four of those six orientations, and are a lot more forgiving of surface polish. There's a reason engines have cams, on cam shaft, and not the equivalent of sears and notches.

So, the Ingenious Gun Works hammer sear set are a simple drop in that requires no polishing, fitting or adjusting. Well, there's some fitting. You'll want to make sure your trigger/disconnector spring is doing its job, and you may have to (probably will) re-fit your thumb safety lug, to ensure the IGW sear is properly blocked when the pistol is on Safe. But then, all sear/hammer sets have that potential.

But the change is impressive. I have an embarrassingly large number of 1911s in the safe

[Cont. to page 72]

This is the kind of accuracy you can expect from a Kodiak, provided you can hang on while dispensing 10mm power.

DAN WESSON KODIAK 10mm PISTOL — Chronograph and Accuracy Data					
Ammunition	Bullet weight (gr.)	Velocity (fps)	Es	sD	Accuracy (in.)
Federal Bonded SP	180	1,279	15	7.7	2
SIG V-Crown JHP	180	1,288	23	8.6	1.9
Buffalo Bore JHP	180	1,374	40	14.8	2.1
Hornady XTP	180	1,301	19	8.2	1.75
Buffalo Bore LTC	220	1,219	27	11.3	2

Accuracy results are averages of three, five-shot groups at 25 yards off a Champion shooting rest. Velocities are averages of 10 shots measured on a Labradar chronograph set to read 15 feet from the muzzle.

metallic battleship gray. The frame is black, while the thumb safety, magazine catch and slide stop are given a bronze finish. If that is too flashy for you, you can have the Kodiak in black slide and frame with bronze safety, mag catch and slide stop.

Since it is a Dan Wesson, there was no point in checking slide to frame and barrel fit, but I couldn't help myself. So, I vainly attempted to find play, slop or wriggle in the fit of any of them. Nope, none.

The 10mm has a wide variety of ammo options, with a power spread wider than almost any other cartridge, perhaps with the exception of the .38 Special. The whole point of the Kodiak is as a hunting pistol, or a bear defense pistol. (We'll set aside the debate about whether a pistol is "enough" gun in case of a bear problem. Personally, my idea of "enough" requires either Brenneke 12 ga slugs or a rifle caliber that starts .375 or greater. But those won't fit into a holster.)

I found that I was perhaps a bit too enthusiastic about finding the upper-level 10mm loads for bear use. Even with the recoil mitigation of a heavier slide, and heavier pistol, the recoil of the top-end loads were.... brisk. When the "light" loads are in the high end of bowling pin loads, and the stoutest ones are hard on the heels of the fabled .44 Magnum, you've got a

handful when you press the trigger. Now, when hunting, or being hunted, felt recoil becomes much less of a thing. But you have to practice to get good, and practice when you are shooting ammo with a Power Factor between 250 and 275 quickly becomes work.

My recommendation is that when you receive your Dan Wesson Kodiak, you also get set up to reload your own ammo. You can begin your practice with ammunition that duplicates .45 ACP. Then step up to .45 ACP+P, and move on up as you get accustomed to the recoil.

If you start right in at the top end, you may find you have built bad habits from too much recoil too soon.

The 10mm loads, once I spent an afternoon getting accustomed to the recoil, were grand fun. I resisted the temptation to abuse the club's falling plate rack, as I still remember when I was club President, and having to assist the welder in repairing the rack we had then when someone else so-abused it. Full-power 10mm ammo, on a handgun falling plate rack even at 25 yards, can make them bounce back upright. That isn't good for them. Instead I worked over the rifle plates on the 100-yard range. Now, when you have a pistol that routinely shoots two-inch groups at 25 yards, a 10-inch plate at 100 is not very difficult to hit. As long as I did my part,

[Cont. from page 71]

(although no USGI ones, curiously, I'll have to correct that) and dropping the Ingenious sear/hammer combo in gave them all match-grade trigger pulls. The heaviest came in at a couple ounces over three pounds, the lightest was down at two and a quarter. All were clean and crisp, and all were trigger pulls any gunsmith would have been envious of back in my competition days, had I been able to let them dry-fire it.

I'd bet that a big part of that quality feel is the nickel boron nitride finish Ingenious applies to the parts. A slick finish does a lot to reduce friction, and improve trigger pull.

In all fairness to those looking to improve the trigger pull on their 1911, I'd suggest you buy a new thumb safety to fit to the Ingenious set, just in case the old one doesn't fit, or you want to return your 1911 to the original parts. (Most of you won't want to go back.)

At a very reasonable \$139 for the set, the Ingenious set is not an impulse buy. However, it is not out of line with other hammer/sear sets. You can easily exceed the cost of the Ingenious parts, buying other manufacturers trigger-pull improving parts.

As those who have raced know, going fast is usually a matter of money. How fast do you want to go? As improvements go, this is not a wallet-busting upgrade, and you get a lot for it.

On a pistol as well-made as the Dan Wesson, a sear/hammer upgrade may not be needed, even though it is appreciated. But all 1911s will benefit from improvement. It is up to you to decide how much.

Diamonds are forever, and diamonds are also very eye-catching. Ingenious Gun Works offers diamond inserts for sights. And when there's enough light to see by, they really stand out.

The sights? Ingenious takes advantage of two things; that diamonds are good at reflecting light, and that diamonds are inexpensive. Oh, if you buy jewelry-grade gemstones you'll pay through the nose, the DeBeers cartel makes sure of that. But diamonds less than that grade still reflect light, and boy are they durable.

Ingenious has figured a geometry for diamond cutting to make them practically glow, and fit

[Cont. to page 73]

the Kodiak rang the gong on every shot, and did so with great authority.

The Ingenious Gun Works sear/hammer set was a very useful aid in whacking plates. The light, crisp trigger pull made it a lot easier to get the shot off when the sights were right. But, as with all such improvements, you should practice to get used to the new normal.

Do you need a trigger this light, clean and crisp? No, not really. Will it, by itself, make you a better shooter? Again, no. But, if you have hit your own performance ceiling, or you want to start out with the best (as musicians are encouraged to do) then the ingenious sear/hammer set will go a long way towards upping your game. And if the trigger pull in your 1911 starts out at less than stellar, then jumping in to the Ingenious Gun Works upgrade is just common sense.

The slightly difficult part of a longslide is the carrying part. The extra inch of slide gets to be a bit much but on the bright side, Mr. Kodiak (bear or pistol) don't really care if you are concealed or not. Go ahead, you're out in the Alaska bush, carry it openly.

DAN WESSON KODIAK

Type:	Recoil operated semi-automatic
Caliber:	10mm
Capacity:	8+1
Barrel:	6 in.
Overall length:	9.7 in.
Height:	5.8 in.
Width:	1.5 in.
Weight:	47 oz.
Finish:	Black w/ bronze controls, or tri-tone
Sights:	Fiber optic front, adjustable rear
Trigger:	4.5 lbs., single stage
Price:	\$ 2,349
Manufacturer:	Dan Wesson (607) 336-1174 DanWessonFirearms.com

The 10mm generates power and recoil. But with proper technique and practice, you can easily control the Kodiak even with the hottest of loads.

[Cont. from page 72]

them into sights. The end result are three-dot (or you can have the front sight only) sights that reflect light and show up as the light fades, better than other systems.

The sights sent me were for the Kodiak setup, a Novak front dovetail, and a BoMar rear adjustable sight installation.

In bright daylight, they acted and appeared just like any three-dot sight setup. But when I stepped into the club's inside shooting range, they jumped right out and were clearly visible in the dim light.

Are they night sights? No, they don't glow in the dark. But if there's enough light to identify what, and that you should, shoot at, then the Ingenious Gun Works diamond sights will be a big asset.

Oh, and if you are planning on swapping sights more than once, a good sight mover is a valuable asset. I used the MGW Sight Pro, from Brownells. The instructions are almost a book, but you could probably adjust the sights on an ICBM with one of these. (Well, the manual backup sights, anyway.) Yes, a bit pricey, but what is the replacement cost of mangled sights, mangled because you didn't have the proper tool? **FN**

The MGW Range master is a serious piece of gear. You will keep it in your range bag “In case you need it.” But the weight is worth it to avoid marring sights, slides, or fingers.

The 10mm offers bullet weights from 150 to 220 grains, and whatever power level you care to load them to. When it comes to versatility, the 10mm is hard to beat.

It isn't like the local fauna are going to be triggered by it and call the police.

At a listed \$2,350 the Kodiak may seem a bit pricey. But, having priced a longslide back in the steam-driven past of IPSC shooting, I can tell you that you could not have started a longslide project back in 1980 unless you put down the modern equivalent of the Kodiak price as a down-payment. Adjusted for inflation, people would put down two grand as a deposit, and then spend that again on delivery. Yep, back in “the day,” people (some, not all) were willing to spend the modern equivalent of four grand, to have a longslide pistol. The Kodiak is not only top quality, it is a bargain.

That said, and as much as I love the Dan Wesson line, I'm going to have to send this one back. I already have a raft of 10mm pistols on the shelf. I got the longslide lust out of my system back when The Gipper was still in office. I'm probably not going to be going

to Kodiak Island to see about tagging a Kodiak bear with a Kodiak pistol, and as much as I really, really like this pistol, someone else deserves to get out and tangle with an *ursus arctos horribilis* using it.

Let us know how you do, will you?
Oh, and the Zombies? They had three hits, and split up before the third one hit the charts, then worked for many years without the success they should have had. That dollar-a-gallon gasoline was when I was driving a Ford LTD II, an enormous boulevard cruiser that got 16 mpg on the highway. Adjusted for inflation, that's \$2.58 a gallon, so gas costs more now. But the car I drive now gets 30+ mpg on the highway, so that daily commute to and from the gun show would cost me \$5.32 in 2019 dollars in the LTD II, but \$3.20 in today's car. And \$1.75 if I drove my wife's car.

The Walkman cost about \$150 in 1979 (That's almost \$500 in 2019 cash) and used “cassettes.” These are/were tapes in a small case that held an hour's worth of music, half on each “side.” I was working in radio then, so I made my own mix tapes (aka an iPod playlist) and had a grand time. I still have it.

Disco now sounds pretty good, and even gets airtime on classic rock stations. Pretty much everything that was en vogue back then is now a historical curiosity.

Meanwhile, the 10mm is better than ever. **FN**

GALLERY OF GUNS.com®

WANT A DAN WESSON HANDGUN?

Check out Davidson's Gallery of Guns at GalleryOfGuns.com!

Davidson's offers the GuaranteeD® Lifetime Replacement Warranty which backs all the firearms you buy through GalleryOfGuns.com. It works like this: if anything ever goes wrong with any gun you buy with the Davidson's GuaranteeD® Lifetime Replacement Warranty, it will be replaced. If no replacement is available, it will be repaired at no charge to you. Simply return it to the retailer where you purchased it, pay for the return shipping and upon receipt Davidson's will ship the returning retailer a brand-new gun for you provided one is available. If a replacement is not available your firearm will be repaired for free. A black and white photograph of a hand holding a Springfield XD-M 10mm pistol. The hand is wearing a dark jacket. The background is a snowy, wooded area. The pistol is held horizontally, pointing to the right. The slide is locked back, and the magazine is visible. The overall tone is serious and professional.

ENCORE

TEN FOR THE WIN!

SPRINGFIELD ARMORY DELIVERS WITH THEIR XD-M 10MM PISTOL

By Patrick Sweeney

There was a time, decades ago, when Springfield Armory had two, maybe three products in the lineup. Now, you practically need a program to keep up on what they have to offer, and all of it excellent. Case in point: the 10mm.

The 10mm languished in the wilderness for many years. Once the FBI realized that they couldn't get offices full of accountants to shoot a passing score on any qualification course, let alone a real one, the 10mm was once again orphaned. But, the wilderness was exactly where it needed to be. You see, once you give up the idea that the 10mm is a soft-recoiling defensive cartridge, you can grasp that it is a really hard-hitting pistol cartridge for hunting. And other wilderness "adventures."

To get the full benefit of the 10mm cartridge, from a pistol, you have to give up the idea of an EDC-sized pistol. If you want the 10mm hammer, you can't get it from a four-inch barrel. Enter the big boy of the XD-M line, the one with a 5.25" barrel.

The full-sized XD-M was first introduced as a competition pistol. With an adjustable rear sight, as much sight radius as you can get on a handy pistol, and a comfortable grip, the XD-M was a killer competition pistol. The competition model, made in 9mm, was joined by a .45 version, because this is America, and any pistol worth having has to have the .45 option, am I right?

The step up to 10mm was obvious, but Springfield still should be given kudos for doing it, because not all pistols are suited to 10mm, and not all makers make something chambered for it. Before I gush over the 10mm, let's review the features of the XD-M Competition.

We've got the full-length slide, and the 5.25" barrel inside, a barrel that is full ramped and supports the cartridge case as well as any can. The XD-M does not use a barrel bushing, so that eliminates extra parts, and allows for a precision lockup. The slide is lightened with a cut on the top surface, a cut that goes through the slide, and exposes the barrel. It is perhaps not needed for the 10mm, which has all the horsepower you'd want, to run a longer, heavier slide, but there it is. The slide is forged, machined, and given a Melonite treatment. Then it and the barrel are blackened.

The Springfield XD-M in 10mm is a handful, but a manageable handful, and can be very comforting in a sticky situation.

The XD-M with a 5.25" barrel is big, but a proper holster makes that a lot easier to carry. And besides, you aren't hiding it from the bears, are you?

On top, ahead of the opening, there's a fiber-optic front sight blade. Don't like the color? No problem, swapping fibers is no big deal, and you have the entire spectrum to select from. On the back end, there is a large, adjustable rear sight, which allows you to fine-tune your sights and get the XD-M 10mm sighted in with pretty much any load you care to use.

The slide has cocking serrations in front of and behind the ejection port, and the ejection port is also the barrel locking lug location. The extractor is internal, stout, and worked by a coil spring inside of the slide. Additionally, there is a loaded chamber indicator, a hinged part that pops up above the slide when there is a cartridge in the chamber. You can assure yourself that there is a round in the chamber by simply running a fingertip over the slide, at the back of the chamber.

The barrel is machined with an integral feed ramp, and the ramp provides a clean and solid path to the chamber for each cartridge. Also, once closed, the ramp is "tight" enough (sharp enough angle) to the chamber that the cases are fully supported. The barrel is forged, finished and then given a Melonite treatment, which provides a hard and corrosion-resistant surface.

Underneath the barrel, there is a one-piece recoil spring guide rod, to ensure the spring can't bind, kink or otherwise cause you problems.

As the XD-M is a striker-fired pistol, the rear of the slide has a cover plate, holding in the various parts, including the striker, its spring, various safety parts, extractor, and so-on. Unless you take a spill into really muddy or silty water, you won't need to take that apart for some time. However, were you planning on taking the XD-M 10mm to Alaska, as back up, then it would be a good idea to know how, practice, and take the tools with you to do a detailed strip-down and cleaning. You wouldn't want your XD-M, having been sloshed through glacial runoff, to fail you when you need it most.

There is a grip safety, but no thumb safety, so the controls are very simple. In a very stressful situation, simple is good.

The frame is polymer, with an accessory rail out front. Now, if you are using this as a hunting handgun, you won't have much use (nor will the DNR look kindly) with a light or laser on the front end. But, if it is meant as bear defense, in camp, then a light or laser might be useful. (Check with the guide, or the DNR, about in-camp versus out hunting, on this application.) Kosher or not hunting, it is there if you need it for other uses.

On the opposite end of the frame, the XD-M has a grip safety. This is a nice addition to a striker-fired pistol, and I don't know why more don't have it. The trigger has the customary safety blade in the middle, and unless your finger has depressed the blade, the trigger itself won't move far enough to release the striker.

The XD-M trigger press is nicer and cleaner than the traditional striker-fired system. It won't compare to a custom 1911, but then again, a custom 1911 trigger job could by itself cost you an appreciable fraction of the full-up cost of the 10mm XD-M.

The frame is sculpted behind the trigger to allow easier finger access to the trigger, and the overall shape of the grip is comfortable, and amazingly compact for the size of the rounds and the capacity of the magazine. As part of the slim-for-its-capacity frame, Springfield has also managed to fit an ambidextrous magazine release into the mix. Southpaws, you have a choice.

The front is given a non-slip tread pattern, and the rear has rectangular blocks. The backstrap is also removable, and can be swapped for one or ones with different sizes. If you find the XD-M grip too big or too small as it comes out of the box, you can change that.

The slide is lightened with a cut on the top, although the 10mm chambering probably doesn't need it.

The rear sight is an adjustable one, so you can dial in your 10mm loads.

The front sight is a fiber optic blade. Don't like the color? Fiber optic is easy to change. Pick something you can quickly and easily see.

The loaded chamber indicator is easy to feel with a fingertip when there's a round in the chamber.

The barrel has an integral feed ramp, and the chamber (a match chamber, part of a match barrel) offers full case support.

You can see the grip safety, and the aggressive non-slip pattern Springfield has molded into the frame.

The backstrap is removable, and you can change it to one of another size.

The magazine release is ambidextrous, for them that needs such.

[Cont. from page 76]

The magazines are nickel-plated steel, with polymer base pads, and the 10mm holds 15 rounds per. You can find extra-capacity basepads should you wish, and that might be comforting, were you in the position of using the 10mm as a bear gun. After all, if some is good, and more is better, can too much be not enough?

The 10mm cartridge has evolved since the first ones appeared. Back then, the starting point was the Norma load, with a 200-grain bullet at a book velocity of 1,200 fps. (They did more than that.) The FBI couldn't handle that (To be fair, most shooters couldn't.) so they asked for the ammo to be down-loaded. And more, and more. They ended up with a 180 at 950, which left so much empty space in the case that Winchester could simply make it shorter, and call it the 40 S&W.

With the .40 handling the self-dense side of things, 10mm fans looked to improve the already robust performance of the 10mm. This led to hunting loads such as the Federal bonded 180s, and also to hard-cast bullets of 200 and 220 grains, from makers like Buffalo Bore.

When Springfield decided to make an XD-M in 10mm, they were determined to not be in the position of offering a 10mm pistol that couldn't take the work. So, they had a pallet of 10mm ammo shipped to the test-fire range, and proceeded to make sure the design would survive. This involved putting 10,000 rounds of Federal Premium

Hydra-Shok ammo downrange. Oh, they worked the XD-M hard, but they didn't abuse it. They lubed it at 2,000 round intervals, and they changed the recoil spring halfway through. At this point I'd usually crack a joke about the test-shooters being wimps, and babying the pistol. I mean, really? Lube it? Change the recoil spring? And not ever throw it in the dirt, or submerge it in icy water? But then the thought of being challenged to do 10,000 rounds of 10mm ammo myself comes up, and I think "Maybe I'm past the point of doing that sort of endurance test."

So, when the XD-M in 10mm arrived, I scoured the ammo shelves to see what I had. A lot, as it happened. Since the adoption (and later spurning) of the .40 by the FBI, the 10mm has found itself receiving a lot of R&D interest. It took a while, but we now have a wide range of loads to select from, and we shooters have benefited greatly.

I've been speaking of the XD-M in 10mm as a bear gun, but it would make a really useful home-defense gun should you opt for it in that role.

As long as your hands are not so tiny that the XD-M, even with the smallest backstrap, is a comfortable handful, look at the benefits: You get a cartridge that

With fifteen rounds in the magazine, one in the chamber, and fifteen more on each reload, the XD-M in 10mm is going to be handy when trouble arrives.

10MM BULLETS

If you plan to reload, and you should, the 10mm is a well-behaved cartridge. Jacketed bullets should be .400" in diameter, lead ones .401". The 10mm case uses large pistol primers, so you have plenty of ignition power to set off even the slowest-burning pistol powder, not that they are all that slow to burn. There is one trick to getting soft-feeling ammunition that the 10mm can use, that the 40 finds risky: heavy bullets.

The standard 10mm/.40 bullet weight is 180 grains. The 10mm can easily use a 200-grain bullet, with no problem. The .40 struggles, as there isn't enough case capacity to get it up to much of the speed you need. You probably won't even find much, if any, loading data for the .40 and 200-grain bullets. Why? Competition. Competition shooters tried to max out all the variables. They used 200-grain bullets, and the fastest-burning powders, and found the .40 was very unhappy about it. Spiked pressures happened, and that meant busted guns.

The real heavies, the 220-grain bullets, are beyond the reach of the 40. But not the 10mm. The 10mm has enough case capacity to handle the 220 grain bullets, as long as you don't use the fastest burning powders. For me, I'll stick with HP38 or WW231 as the bottom end of 10mm burn rate powders for softy-load ammo.

For real horsepower, go slower in burn rate, use a hard-cast or coated 220, and you will be able to develop a load that will punch through big game. Or, if you don't want to load your own, then just be on good terms with Buffalo Bore, and they can supply you with wrist-thumping ammo.

But whatever you do, do not listen to your friend who says he can load up 40 ammo to be the equal of the 10mm. He's wrong. Don't shoot his ammo, even in his guns. **FN**

CHRONOGRAPH AND ACCURACY DATA					
Bullet Make	Bullet Weight (gr.)	Velocity	Es	sD	Accuracy
SIG V-Crown JHP	180	1,247	17	6.8	2"
Federal Bonded JSP	180	1,253	15	7.6	N/A
Armstrong FMJ	180	1,119	34	12.9	N/A
Hornady Critical Duty JHP	175	1,062	26	10.1	1.9"
CCI Gold Dot JHP	200	1,069	14	5.8	2.1"
Buffalo Bore JHP	180	1,357	22	7.1	N/A
Buffalo Bore LTC	220	1,149	25	12.9	2.3"

Accuracy results are averages of 3, 5-shot groups at 25 yards off a Champion shooting rest. Velocities are averages of 10 shots measured on a LabRadar chronograph set to read 15 feet from the muzzle. LTC: Lead, truncated cone, hard-cast.

is as well-performing as the .45 ACP, even at the bottom end of 10mm horsepower. The grip is comfortable, and can be handled by someone even of average hand size. That same grip holds a magazine with fifteen rounds of 10mm, with fifteen more on the reload. The accessory rail lets you mount a light, laser or combo unit on front, so you can light up (with lumens, first) things that go bump in the night. And all this at a price that doesn't break the bank, recoil hat doesn't induce a flinch, and with plenty of accuracy.

With that in mind, I swept pretty much all the 10mm off the shelf I had time to chrono. This was an assignment on a short deadline, so I could chronograph them all, but I could not shoot them all for accuracy. (One is quick and easy, the other is real, time-consuming, work.) What I found was something I had forgotten: a full-sized pistol, with the regular-power 10mm ammunition is almost soft to shoot. Oh, I wouldn't let a new shooter spend an afternoon plinking with it, but the "light" stuff is not at all oppressive. The heavy loads, on the other hand, well, be prepared.

I found the Springfield armory XD-M, with the 5.25" barrel, to be soft with the easy ammo, and easily controllable with the heaviest. Accuracy was what I expect from a Springfield pistol, and while it would not be my first choice as a bullseye gun, that has as much to do with the level of recoil as anything else. In a couple of decades of loading 10mm brass, I have found that you simply can't wear it out with loads held within the pressure specs. I don't remember ever having to toss a case because of loose primer pockets, and only a few with cracked case mouths. Most of my inventory shrinkage has simply been a matter of "Where did the empties go?" finding them on the range.

The XD-M, having been put through a 10,000-round endurance test, then I suspect none of us will ever come close to wearing one out. (You can watch the complete video if you find you have that much time on your hands.)

Takedown is easy. Unload. Lock the slide back. Remove the magazine. Rotate the disassembly lever up. Release the slide and ease it forward, off of the frame.

The Melonite and polymer construction means

SPRINGFIELD ARMORY XD-M 5.25" 10MM	
Type:	Recoil operated semi-automatic
Caliber:	10mm
Capacity:	15+1 rounds
Barrel:	5.25"
Overall length:	8.3"
Height:	5.75"
Width:	1.2"
Weight:	33 oz.
Finish:	Melonite & polymer
Sights:	Adjustable rear, fiber optic front
Trigger:	5.5 lbs.
Price:	\$779
Manufacturer:	Springfield Armory, (800) 680-6866, Springfield-Armory.com

you needn't worry about rain, snow, dirt or dust. And should you fall into a swamp or muddy, silty river, it is easy enough to clean. Oh, one bit of advice to pass on: when I was last in Alaska, I was advised "Most rivers are deeper, faster and colder than you expect." Falling into a river in Alaska, your biggest and most immediate worry is not "Is my XD-M going to work?" the first thing you need to do it find shelter, warmth and dry clothes. Or you will die.

Failing that, there's no need to worry about the XD-M protecting you from the bear. The bear will find it easy to deal with your frozen-stiff corpse. You have to be alive to handle the bear problem. If you manage that, then the XD-M is going to do its part. Well, if you practice with it. So, stay warm and dry, stay practiced, and stay alert. Stay with Springfield. **FN**

For home defense, you do not need bear loads, and there are plenty of soft-shooting but hard-hitting 10mm loads to choose from.

Once you've unloaded, the lever goes up to take the XD-M apart.

With Melonite on the steel, and the rest polymer or nickel plated, the XD-M will be easy to clean if it gets muddy or dirty.

‘FUDDS FOR BIDEN’ CONTINUES DEMOCRAT TRADITION OF LYING TO GUN OWNERS

By David Codrea

“Today, as millions of Americans begin their annual ritual of fall hunting, Biden for President announced the launch of Sportsmen and Sportswomen for Biden — a coalition of more than 50 prominent hunters and anglers from across the country, who have come together to endorse Joe Biden for President of the United States,” a September campaign press release announced. “This bipartisan group of hunters and anglers have come together because they know that Joe Biden shares their values, will protect our ability to hunt and fish, and because they know that Trump’s presidency has been a disaster to everyone who treasures the out-

doors. Over the next nine weeks, they have committed to reach out to other sportsmen and sportswomen across the country, and to organize state chapters in all of the most closely contested states.”
“Joe Biden has committed to key principles that will ensure a strong future for hunting and fishing in America,” the promo piece promises. “Protect the Second Amendment rights of law-abiding Americans to purchase and responsibly use firearms for hunting and sporting.”
There is, of course, one huge problem with that, one which *Firearms News* regulars don’t need me to remind them of:

The Second Amendment Ain’t About Duck Hunting.
Or deer hunting. Or target shooting. Or competitions. Or collecting. Or even strictly about “self-defense.”
We know the Founders intended the core purpose to be “security of a free State,” and that in order to make that work, the people needed to be recognized as the ultimate guarantors of their own freedom via the most egalitarian power-sharing arrangement ever conceived: their duty to participate in “the Militia of the several States,” only made possible by their unfringed right to keep and bear arms, that is, “ordinary

military equipment” intended to be taken into “common defense” battles.

“This ‘sporting use’ strategy was used before,” Jews for the Preservation of Firearms Ownership’s research documents. “The Nazi Weapons Law (18 March 1938) forbade importation of weapons under substantially the same test. Section 25(1) of that Law proclaimed: ‘It is forbidden to manufacture ... and to import: Firearms which fold-down, break-down, are collapsible, or are speedily dismantled — beyond the common limits of hunting and sporting activities.’ Section 21 of the Nazi Law (and its enforcing regulations) employed the ‘sporting use’ exception also where they permitted licensed persons to carry ‘firearms, designed for — and usually used for — the hunting of fair game.’”

What Joe Biden and his string-pullers think about firearms minimally suitable for core purpose use is clear.

“Weapons of war have no place in our communities,” he tweeted recently, repeating what he threatens to do on his campaign website. “We need to ban assault weapons and high-capacity magazines.”

Government excepted, of course, when “assault weapons” magically transform into “patrol rifles.”

“WEAPONS OF WAR HAVE NO PLACE IN OUR COMMUNITIES,” HE TWEETED RECENTLY, REPEATING WHAT HE THREATENS TO DO ON HIS CAMPAIGN WEBSITE. “WE NEED TO BAN ASSAULT WEAPONS AND HIGH-CAPACITY MAGAZINES.”

And he’s demanding plenty more. Biden’s site lists a host of other Intolerable Acts, including scrapping the Protection of Lawful Commerce in Arms Act so manufacturers can be sued out of existence, expanding on prior restraints with enhanced registration-enabling “background checks,” adding to “red flag” prohibitions with the so-called “boyfriend loophole” (aka revenge of the jilted) and “hate crime loophole” (and guess who defines what those are?), endorsing state licenses to own a gun and “put[ting] America on the path to ensuring that 100% of firearms sold in America are smart guns.”

This Is What “Fudds for Biden” Is Enabling.

This is where a word about “Fudds,” derived from the “wabbit hunting” cartoon character, Elmer, might be appropriate, because some gun owners who are primarily hunters and sport shooters have been known to take offense to the term. If you believe the Second Amendment means what it says, don’t worry. It’s reserved for “hobbyists” who are OK with throwing the rest of us under the bus as long as they’re left alone.

Many will remember the flap over outdoors writer Jim Zumbo, who almost destroyed his career when he blogged about semiautos, saying “I’ll go so far as to call them ‘terrorist’ rifles.” While he’s back working again, thanks largely to the “rehabilitation” efforts of celebrities like rocker Ted Nugent and syndicated radio host Tom Gresham, his ignorance earned his

name a place in the Urban Dictionary, with the top definition being “A name usually given to FUDDs who are quislings to the 2nd Amendment.”

If you’re *not* a sporter who disparages the reason for the right, you’re not a Fudd. As a matter of fact, keeping the “gun culture” alive through your activities and examples is one of the most effective ways of recruiting for and expanding it, especially those of you involved in youth activities. But if you are a Fudd, particularly one supporting the political evisceration of the Second Amendment, take all the offense you like. We’ve seen avowed RKBA enemies like John Kerry and Bill Clinton dressed in camo and carrying game birds as props to impress the ignorant and the willful, for whom “quisling” is not too strong a word.

Quislings like Fudds for Biden...

So, Who Are These Guys?

Sportsmen and Sportswomen for Biden is “bipartisan”? You can’t tell from the two “co-chairs,” Democrat apparatchik Eric Washburn and Theodore “Tod” Sedgwick, the former organizer of “Sportsmen for Obama.” You’ve got to go down the list a way to find a name associated with the GOP, Bill Rustem. He’s a one-time adviser to former Michigan Governor and “Republican for

Biden” Rick Snyder, who himself was a political chameleon endorsed by both NRA AND Michael Bloomberg, later praised by Everytown for “buck[ing] the NRA by vetoing their priority legislation.”

There is a handful of others, equally obscure. The bottom line is the self-styled “Republicans” are not only 2A turncoats, they also will enable higher taxes and ensure federal judge appointments to uphold everything on the Democrat wish list, from business-killing regulations to radical social changes and cultural terraforming.

The Democrat side is also somewhat obscure but has some names you’ll probably recognize, political frauds like Jon Tester of Montana. He’s a prime example of a self-serving opportunist who recognized that he had to vote “pro-gun” in order to be elected in that state, and was allowed to get away with it by Party leadership because it served their purposes to have him advance the rest of the agenda. We also saw him get bolder as Montana changed with an influx of “progressive” residents fleeing the nests they fouled in states like California and bringing their politics with them.

Revealingly, Tester showed his true nature when he voted to keep Post Offices “gun-free zones.” The last straw for NRA was Tester’s Supreme Court confirmation votes (for Kagan and Sotomayor, against Gorsuch and Kavanaugh), when they downgraded his one-time “A” to a “D.”

The Sincerest Form of Flattery

They’re coming out of the woodwork this election year. We have The Lincoln Project, run by Biden-endorsing swamp denizens from the cheap labor/gun-grabbing wing of the Republican party. Not to be outdone, after having run the “neocon” *Weekly Standard* into the ground, Bill Kristol (of “I don’t think they have a right to semi-automatic, quasi-machine guns that can shoot hundred bullets at a time” notoriety) is spearheading Defending Democracy Together in an attempt to create a permanent Democrat supermajority, whether that’s his intent or not.

There’s a spinoff from Kristol’s group, Republicans and Independents for Biden, headed by Christine Todd Whitman, who asks “Who, besides law enforcement and the military, really needs a weapon designed for the battlefield?”

Then we have NRA “A”-rated former Ohio Governor John Kasich and NRA “A”-rated former Senator Jeff Flake flaking out for Biden...

No New Thing Under The Sun

Sportsthings for Biden isn’t the only Fudd game in town. There’s another group, Gun Owners for Safety, being bankrolled by Giffords.

“We can prevent gun violence while also supporting the Second Amendment,” they lie, when you consider their support for Joe Biden will enable him to actualize his stated agenda. “Gun Owners for Safety unites hunters, sport shooters, and collectors who want commonsense gun laws.”

Gabby’s husband, Arizona Senate candidate Mark Kelly, probably the ultimate Fudd, tries to portray himself as reasonable, too. He was so “commonsense” that when he tried to buy an AR-15 to show the media how “unobtrusive” background checks were, the store refused to let the sale go forward because “Kelly made statements in the media that the rifle purchase was ‘for reasons other than for his personal use,’” which would have made the transfer a violation of the Form 4473 attestation.

Astroturf groups like the Sportsthings and Gabbyfudds, as with all “progressive” ideas, are hardly original and new. Gun owners who were active in advocacy 15 years ago or so will remember the abortive American Hunters and Shooters Association, “created with the specific intent to provide political cover for anti-gun politicians by allowing them to claim support from a ‘sportsmen’s’ group.”

“AHTA president Ray Schoenke has a long history of giving political donations to some of the most anti-gun politicians, including Al Gore, John Kerry, Barbara Boxer, Bill Clinton, Dianne Feinstein and Ted Kennedy,” NRA-ILA warned members. “In 2000, Schoenke donated \$5,000 to Handgun Control, Inc. (now the Brady Campaign) and the Ray and Holly Schoenke Foundation also made donations to the Brady Campaign. AHTA Board member John Rosenthal remains the leader of Stop Handgun Violence, the Massachusetts anti-gun group. And one of the leading organizers of AHTA is Bob Ricker, who has been a paid expert witness against gun manufacturers in a number of reckless lawsuits.”

Not to be outdone, in 2013 Michael Bloomberg “bankroll[ed] a \$12 million campaign with ads star-

ring gun-toting Average Joe to advocate for universal background checks.”

Money, lies, and slick Madison Avenue propaganda. That's all these people have.

What's amazing — and inexcusable considering the information resources available and what is at stake — is that any American gun owners are still taken in by this, and that any but clinical idiots and/or the rankest of hypocrites would support a Biden/Harris ticket. What they seem to fail to realize is, after they're used, they'll be expendable. A substantial and growing Democrat constituency has nothing but contempt for “blood sports” and would like to ban them outright, and regulate them to death until then, such as with the junk science lies used to enact lead ammo bans.

Consider the plight of Kate Small of Boise ID, an “ethical hunter” who “only kills animals for food or ‘conservation.’”

“I have actually received thousands of death threats,” Small noted after posting some hunting photos on social media. “People saying things I'd never wish on my worst enemy. I've had hundreds of people

also threaten to rape and murder my one-year old daughter. I recall one person saying, ‘I'm going to put your baby in a blender and listen to her scream.’”

Do Fudds for Biden really think that they'll be needed if a Democrat supermajority ever gains power? Talk about a group ripe for cancel culture harassment. If you remember ancient Greek epics, you'll recall the drunken cyclops Polyphemus' promise to Odysseus that he would eat him last. The intent, nonetheless, was still to eat him.

True, I get that Donald Trump is far from the gun owners' BFF and have written about his many failings to live up to campaign rhetoric many times in these pages, and how the November election is his to blow with gun owners. Like it or not, the choice in November is binary. If the president doesn't win, Joe Biden will.

And hell, as the saying goes, follows with him.

(EDITOR'S NOTE: The Founders of this great nation understood human nature, as well as the history of governments oppressing and/or murdering their own people. The 2nd Amendment is about your

God-given riven right to defend yourself, your family, and your liberty against a tyrannical government, and your ability to do so with whatever weapons available. It is a nonsensical argument for anyone to state that they support the 2nd Amendment, and then in the same breath state that “assault weapons” and “hi-capacity” magazines should be illegal. As David Codrea stated, it isn't about duck hunting, gun collecting, or just defense against common criminals.]

ANTIFA WEAPONIZING ARSON?

By Nedd Scott

Nothing about the year 2020 has been even close to subtle or normal thus far. To call it divisive would be a gross understatement. Political division is currently at levels only seen during the lead up to our nation’s independence and the American Civil War. The country’s ideological left incorrectly assumes it has both the popular majority and moral imperative to mold our society completely into their vision. This has led to a stand-alone complex being created. You have multiple factions of this ideology attempting to achieve this through different means and for different reasons. It gives the appearance that its one unified force but it’s the opposite. Although the more mainstream and establishment political organizations operate under the faulty logic that they can control the others. These others are the more extreme and direct-action groups like Black Lives Matter (BLM) and Antifa.

Over the past few months, BLM and Antifa have mostly been conducting their operations to varying degrees in the safer stomping grounds of large cities. They are allowed a great deal of freedom to operate because these cities have leadership which thinks it can use these groups to their advantage. Thankfully, the federal government has been able to operate effectively enough to keep them not only occupied but contained. However, Antifa especially has learned how to operate from our foreign enemies like Al-Queda. These highly independent cells are able to coordinate through social media and prove than can challenge established law enforcement. They have also likely learned from the COVID-19 pandemic the power of nature disaster to control the populace.

This now brings us to a question being raised by some about their involvement in the forest fires that have been plaguing the west coast states this year. While some have been linked to specific causes, there are still many with unexplained origins. The most common natural-ignition source is a lightning strike. Yet the weather patterns this year have seen a very limited number of lightning storms to be the cause of so many fires. The other common factor is human interaction. Which brings us back to Antifa. Many have asked the question about whether some of its members are starting these fires and is the government downplaying this or outright trying to cover it up?

We will start with the latter issue and its plausibility. So far, for years the democratic super majorities in the governing bodies of states like California thru Washington have allowed for environmental extremists to push through incredibly short-sighted laws pertaining to management of woodland areas. Preventing them from being safely maintained to help reduce both the chances and size of wildfires. One of the most significant examples of these laws are the ones to prevent the deliberate removal of dead and fallen timber in these forests. By not clearing these timbers and other

An open source map showing all of the wildfires in the US and photos of those recently arrested for arson related to these forest fires. The Photos include Fulton, Lopez and Acord.

underbrush, the accumulation of it is just building a natural fire pit. These laws started to have a massive affect beginning in 2013 and by 2019 the state of California alone suffered over 1,500 wildfires. Oregon and Washington were somewhat spared because they have not had the issues of drought until more recently. State leaderships have gone on to blame the usual suspects of climate change and electric power companies for the cause of these fires instead of recognizing their failed policies.

These state governments have been suffering sadly from super majorities where the halls of power have become an echo chamber. A chamber completely dominated by big city prejudices and biases. Many have been following the lead of many federal politicians in trying to use these wildfires are some reason to blame President Trump. These past few years have seemed to be nothing more than a sounding board to blame him and his administration to not only hurt him politically but deflect their own incompetence at governing their own jurisdiction.

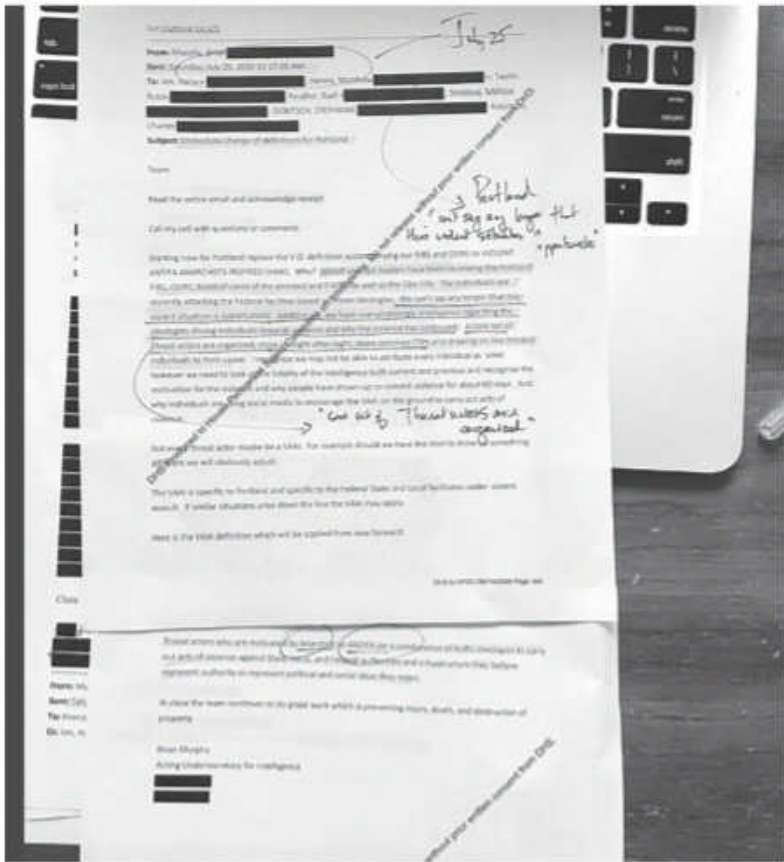

Photo of leaked DHS document stating that the violence in Portland is now focused on achieving a goal and is no longer just criminal opportunism. This underlines the serious threat Antifa poses but is ignored by our political leadership.

Now we have Antifa, who over the last several months has been helping to facilitate the number and level of violence of riots across the country. They have been helping stoke the anger within minority communities over several highly publicized incidents with police. Their effectiveness has been aided by the prolonged, extensive lockdowns caused by the COVID-19 pandemic. When Atlanta was gripped with riots, videos on social media popped up about cars filled with black-clad passengers pulling up to random people of color and offering “assistance.” Antifa frequently has agents mixing in with BLM groups to help act as agitators and increase the tensions. Meanwhile, in areas that have become Antifa strongholds like Portland, more direct action is possible. Both police stations and courthouses have been targeted there, with attempts to burn them down. Especially the US District Courthouse and Immigration Courthouse which are only blocks apart in downtown Portland. The use of makeshift incendiary devices has been a common choice for these rioters. Although the effectiveness of the federal law enforcement at preventing success may have caused several of their number to seek out softer targets.

These targets would definitely include the more rural areas of these states which still elect Republicans to the House of Representatives. Oregon has one while Washington has three and California currently has seven, although several previous districts were red until the 2018 election. Removal of people from these districts to allow them to be dissolved or merged into Democrat districts would allow for the furtherance of their extremist policies at the federal level. Since Antifa itself has no control over the economy or other factors that force relocation the liberal use of arson would be their most direct means to achieve this goal. There is an obvious underlying motive as to why Antifa would engage in starting some of these fires.

Several Antifa cells across the nation, like this one, use social media platforms to softly coordinate their activities. These businesses have been actively allowing this to happen while suppressing Antifa's opposition.

This now brings us to the list of examples of people who have been caught trying to start fires. KPIC news reported that in Glide, Oregon a machete armed man confronted firefighters. He claimed he was responsible for the several fires that had been reported in a logged area. Law enforcement took Jedediah Fulton, 39 into custody under multiple charges of Reckless Burning. It took over three hours for crews to put out the fires.

Even the questionable news agency CNN reported a story on September 18th about the arrest of three people who are accused of setting up illegal roadblocks near wildfire evacuation zones. The goal of this could only be to prevent people from safely leaving the area and add to the number of fatalities associated with these fires. Currently that number across the West Coast stands at 35.

In the same area as the previous example a man, Domingo Lopez Jr. was arrested in connection of several brushfires in the ditches and medium of a highway. Lopez gave statements to police about using a Molotov cocktail to help start the fires and material evidence has been found that seems to corroborate his statements.

EVEN THOUGH THEY CAN'T CONTROL ANTIFA THESE POLITICIANS WILL DO ANYTHING TO ALLOW THEM TO CONTINUE TO FRACTURE THE NATION.

It is worth noting that all of these previously listed stories are all connected as they come from counties adjacent to Portland or easily reached from Portland via Interstate 5. So, it is quite easy for the urban Antifa rioters to depart their usual areas and head into the more rural surroundings.

The only confirmed activist with ties to either Antifa or BLM that we know of publicly is Jeffrey Acord. He was arrested for starting fires in the Highway 167 median near Tacoma Washington. He was present at the scene and even filmed his own arrest on Facebook live. We will likely know more about all of the recently arrested arsonists when their cases go to trial.

It's also been a long standing among the law enforcement community that criminals will mostly operate in areas they are familiar with or close to a base of operation. Since Portland houses many Antifa mem-

bers, even ones from out of state it adds credence. You also have social media postings like the Scarsdale NY Antifa group claiming to have some representatives in the area deliberately starting the fires. Since they are from out of state they would likely operate close to places easily accessible from Portland.

As previously stated these group operate independently of each other but can find mutual coordination through the use of social media in order to have some appearance of higher organization. Fox News recently reported that across the three states where these fires have been happening, four people have been charged with arson. Two in Washington state and one each in the other two states. These groups and their members simply feed off the reported acts of the others and it causes a chain reaction.

That concern of spotlighting these activities have led law enforcement to take the position of denying that Antifa is heavily involved with these fires. Most of these statements have come from the FBI Portland Field Office and not from more senior leadership. It's understandable they might want to downplay this as to not increase the level of panic around these events. That extra level of panic could likely lead to more violence as normal citizens may start taking matters into their own hands and become more violent themselves.

It's not just federal law enforcement agencies actively suppressing the story about Antifa's involvement with these fires. Local agencies have been desperately trying to control the narrative as well. A recent video went viral in which a Multnomah County Deputy Sheriff told the person on camera to leave the area because of Antifa's presence and possible connection to the local fires. That deputy has since been put on administrative leave. Like the FBI, they don't want to deal with the issue of local vigilantism along with everything else.

All of this sounds horrible enough all on its own. Yet now we go back to the leadership at the state level politicians and their overarching involvement. Which they have a two-part role. They first created the physical conditions with their own environmen-

tal laws which they refuse to back away from. They then allowed many of these Antifa groups to operate freely within their borders for years. When the protests started over immigration in 2017, these leaders said nothing. That pattern continued to the present as they haven't harshly condemned the violence until it affected the balance of the upcoming election.

All three governors, Newsome, Inslee and Brown have all made recent public statements blaming climate change and the current administration. They are simply unable to take any responsibility for their involvement. That and their all-consuming desire to see President Trump fail in his reelection bid. Showing no concern for the lives of their state's citizens and all the other losses connected with these devastating fires. Even though they can't control Antifa these politicians will do anything to allow them to continue to fracture the nation. **FN**

WILL PRESIDENT TRUMP LET ATF CONTINUE TO RULE BY UNCHECKED DIKTAT WITH HONEY BADGER 'RECLASSIFICATION'?

By David Codrea

“The Bureau of Alcohol, Tobacco, Firearms and Explosives (‘ATF’) recently informed firearm manufacturer Q, LLC that, in ATF’s view, Q’s ‘Honey Badger’ pistol with stabilizing brace is actually a short-barreled rifle and therefore subject to the National Firearms Act (‘NFA’), the National Rifle Association Institute for Legislative Action noted in an Oct. 6 alert asking members to take action by contacting the Department of Justice. “Since 2012, ATF has repeatedly found that firearms with pistol stabilizing braces, like the one equipped on Q’s Honey Badger pistol, are not ‘designed, made, and intended to be fired from the shoulder,’ and are therefore not subject to regulation under the NFA. Now, with no notice or opportunity for public input, ATF appears to be reversing course.”

NRA directed members to a notice from Q, LLC that explained the “cease and desist” letter ATF had sent the company in August, with instructions emphasized in bold-case ordering the company to:

1. **Cease and desist all manufacture and transfer of the “Honey Badger Pistol” firearm unless you properly register each firearm** manufactured on an ATF Form 2 as required by the NFA, and file the appropriate ATF Form prior to the transfer.
2. **Contact ATF to develop a plan for addressing those firearms already distributed...**
3. **Provide a sample of the Sugar Weasel and Mini Fix firearms to ATF for an official clarification...**

Just to make sure everyone was clear they were telling, not asking, ATF warned of consequences if they weren’t promptly obeyed:

“Your failure to take the above steps may result in (1) law enforcement action by ATF, including a referral of this matter to the United States Attorney’s Office for criminal prosecution; (2) tax assessment and collection; and/or (3) seizure and forfeiture of the firearms and property involved in violations of Federal law.”

Boston Field Division Special Agent in Charge Kelly Brady didn’t even think highly enough of the

subjects he was threatening to sign the order himself but assigned that to an underling. When projecting unopposable power, it pays to be arrogant.

For its part, “Q has ceased all production of the Honey Badger Pistol, and submitted a comprehensive letter to ATF and the Department of Justice (‘DOJ’) stating why we disagree with this classification.” With no “definitive guidance from ATF” received, they provided “proactive measures” to Honey Badger Pistol possessors on steps needed to avoid criminal charges.

Additionally, on its Facebook page, the company has advised owners “If you choose to Form 1 your Honey Badger Pistol, Q will refund your \$200 tax. Why? Because you’re f-ing awesome.”

“Years after approving pistol braces and determining that a brace does not make a pistol into an SBR, rumors started to swirl that ATF was planning to reclassify these particular pistols into SBRs,” Gun Owners of America alerted its members. GOA pointed out a connection to a “diabolical” 2018 push by

the Giffords gun-grab group to outlaw not only pistol braces, but .50 caliber ammunition, certain handguns, and the Mossberg Shockwave for close to two years.

Instead of contacting DOJ, GOA asks members to “contact President Trump and let him know that you are counting on him to put a stop to this new ATF overreach and order them to reinstate the Honey Badger Pistol’s status as a pistol equipped with a brace. Then, contact your member of Congress and insist that they cosponsor H.R. 5289, The Home Defense and Competitive Shooting Act.

“[F]irearms owners would no longer be forced to figure out barrel length or determine if their firearm had a brace or a butt stock,” GOA explained. “Despite its lengthy name, H.R. 5289 will change federal law and allow SBRs to be bought and sold just like any other rifle. In short, H.R. 5289 removes SBRs from the provisions of the NFA.

“The sad reality is that if Congress would do its job and pass legislation such as H.R. 5289, The Home Defense and Competitive Shooting Act, firearms owners would no longer be forced to figure out barrel length or determine if their firearm had a brace or a butt stock,” GOA concluded. “Despite its lengthy name, H.R. 5289 will change federal law and allow SBRs to be bought and sold just like any other rifle. In short, H.R. 5289 removes SBRs from the provisions of the NFA.

The Backstory

That GOA asks members to contact Trump instead of the DOJ is an effort to remind the president that his continued lip service about “our beautiful Second Amendment” followed by his deliberate indifference and even support for outright infringements serves only to demoralize gun owners, which in turn serves the purposes of ban-whatever-he-can Joe Biden. But the fact is, rumblings on this brace nonsense started over a year ago, and the buck for it stops squarely at the president’s desk. We know he’s not a “gun guy,” but he needs to listen to those who are, and I’m not talking about prop marriages of political convenience or do-nothing “advisory boards” designed to pander to the gun vote, but a genuine “cabinet” of serious advocates who will actually have his ear and who he will subordinate his presumptions for and listen to.

“I’m going to surround myself only with the best and most serious people. We want top of the line professionals,” Trump famously pledged in his first campaign. We’re certainly not seeing it at ATF, where the bureaucrats have either taken it on themselves to act like their inconsistent rulings are immutable law subject to no oversight. His one attempt to bring “leadership” to the bureau via a “permanent” director resulted in the wholly unacceptable (to gun owners) Kenneth Charles Canterbury, Jr., the former head of the Fraternal Order of Police who supports nationwide concealed carry for retired cops but opposes it for “ordinary citizens,” and supported Sonia Sotomayor and Eric Holder. Unsurprisingly, and that fact ought to outrage the hell out of us, then NRA-ILA head Chris Cox ran cover for Canterbury in a softball “interview,” highlighting the nominee’s fraudulent contention that “I take a back seat to no one in my reverence for the Second Amendment.”

The reality remains, in the last 3½ years we never got any “best people” in the BATFE Technology Branch,

NFA Branch, Imports Branch, or even a chief unlike Canterbury, who could and would roll back anti-gun interpretations and policies without Congressional approval (like constructive possession/intent, multiple NFA dealer samples issues, multiple dealer inspection issues, import issues, etc.).

Well, he has been kind of busy, apologists will counter. No doubt. But if you actually understand the Second Amendment and its core purpose, you’ll understand it is “necessary to the security of a free State.” There is no more important priority, even if most Americans have been conditioned into not knowing that.

“A rumor appears to have been verified as fact last night ... as firearms Attorney Joshua Prince posted on Instagram that his sources have informed him that the BATFE will be issuing a statement regarding pistol arm braces at the request of President Trump,” *Firearms News* reported in August 2019. “[He] has been proving himself to be one of the most anti-2nd Amendment presidents in the last 50 years with the emperor-like push of his bump stock ban, his support of over 21-gun purchase legislation, his obvious lack of understanding the 2nd Amendment, his ignoring of gun control laws which passed in the last two years in [the states] (without an effortless tweet in opposition), support for soviet-esque red flag laws ... and his statement that he does not like silencers.”

Firearms News reported again in June of this year, citing previous ATF’s previous determination that “the attachment of arm braces to large pistol platforms does not constitute the manufacture of a short-barreled rifle,” citing Rep. Matt Gaetz’s letter to Attorney General William Barr and ATF Acting Director Regina Lombardo, co-signed by Republican Reps. Neal P. Dunn, Bill Posey, W. Gregory Steube, John Rutherford, Ted S. Yoho, and Daniel Webster.

“Unbeknownst to the general public, ATF has ordained in private determination letters that it considers ‘any firearm with a length of pull over 13-1/2 inches to be designed to be fired from the shoulder,’ thereby making it a short-barreled rifle,” the Gaetz letter observed. “However, ATF has also privately proclaimed that even firearms under this length of pull can be classified as a short-barreled rifle, if ATF identifies other (and often unspecified) applicable ‘indicators.’”

“Even more troubling are reports that these non-public standards are being used to criminally prosecute unsuspecting gun owners. Given ATF’s refusal to explain these standards, it is impossible for the public to comply with ATF’s ever-changing body of secret law,” Gaetz continued. “To criminally charge an individual or threaten a company based on one ATF employee’s opinion of whether an arm brace shares enough unpublished ‘design features’ with a shoulder stock is an appalling abuse of power and shows a blatant disregard for due process.”

More Questions Than Answers

Knowing he possessed much personal knowledge of dealing with ATF, I approached friend and colleague, firearms designer Len Savage, president of Historic Arms, LLC, and asked him to share some of his relevant experience and insights with *Firearms News* Readers. What he tells us is not only instructive, but may hold a key to putting the heat back where it belongs, squarely on ATF:

“I submitted a product two years ago and never heard from ATF,” Savage recalls. “I subsequently submitted a Freedom of Information Act Request (FOIA) through my attorney for all submission samples over 18 months unresolved at ATF and I received some 250-plus pages that were sent to Representative Gaetz’s Chief of Staff, Jillian Layne Wyatt, 48 hours after the congressman sent the letter to ATF (they appear to have responded to his request not mine).

“I can tell you ATF has documented the fact they have not processed industry submissions and are NOT providing guidance to be compliant to the NFA and GCA, but are however more than willing to threaten to prosecute when something is not compliant,” Savage observes. “They are in effect saying ‘We won’t tell you what’s legal, but we will be more than happy to bust you.’

“As to the Honey Badger Issue specifically: Why is a field office making national policy for ATF and why was this not a release from HQ or Firearms Enforcement Programs?” Savage questions. “Has anyone asked for ‘Correspondence Approval and Clearance Form’ (ATF form 9310.3A)?

“It will have every ATF official who signed off on this nonsense...Perhaps somebody should ask to see it?” he continues. “Also, there should also be a ‘ATF Report of Technical Examination’ (ATF form 3311.2)?

“This form should be the basis of any determination and if there is not one to support the ‘Correspondence Approval and Clearance Form,’ well then somebody made this up out of whole cloth and those somebodies signed off on it before it was sent out,” Savage concludes. “It not hard to find out, it’s getting anybody to give a damn.”

The Shape of Things To Come?

So where do we go from here? So far, similar “cease and desist” orders by ATF to other companies making similar brace products have not been reported, Q’s Kevin Brittingham told “gun rights” activist, lawyer, and web series host Colion Noir in an Oct. 7 YouTube video. They have not yet received further direction from ATF in answer to their letter – in fact, he claims ATF is refusing to respond in writing and NRA has apparently stepped back its efforts because they don’t want to “offend” the president. There is, however, a more immediate concern, one Brittingham recalled in closing:

“When I told my son, he’s about to turn 17, we were going public, you know what he said to me? ‘Don’t let ‘em turn our house onto Ruby Ridge or Waco.’”

Don’t let them. And don’t let them turn the land of the Second Amendment into the land of capricious bureaucratic gun grabs.

By all means, fill out the NRA and GOA forms, and it wouldn’t hurt to contact Donald Trump on your own via the White House website or his @realDonaldTrump Twitter account and tell him you’re a gun-owning voter and you expect him to put a halt to this nonsense and stop taking fire out of our bellies this close to the election.

TRADITIONAL 'DON'T TREAD ON ME' CAPS

Take a Stand & Send a Message as Familiar as Our Country's Founding. One size fits just about all.... These caps are comfortable, adjustable, and embroidered with the famous 'Gadsden' coiled snake motif of the Revolutionary War era. Originally designed emblem of 1775, was used by Continental Marines and American Patriots through the remainder of the War and beyond. A reminder to those who would 'control'.... & that 'over reach' or aggression by those in power, will not be tolerated. Perfect gift for the Rebel in your life! Available in 3 colors: **\$14.95 each**
HAT12-YELL Yellow, Don't Tread on Me Hat

DIGITAL WINTER CAMOUFLAGE CLOTH

Very effective winter camouflage fabric sold by the meter to make blinds, clothing, uniforms, car seat covers, car covers, tents etc. This digital blend works well in snow or partial snow environments. Sold by the meter in length (enter how many meters in quantity). Actual size per meter is @39.37" by 59". Can be purchased in a continuous running length..... **\$20.00/meter** MISC686

CONVERTIBLE DIGITAL SNOW JUMP SUIT

Sarco has a really effective snow camouflage jump suit that has removable arm & leg segments and can be worn over existing clothing. Capacious pockets and a double zip front make this a great 'wilderness', 'hunting', or 'garage work' suit. Remarkably effective camouflage pattern as used by current military contractors. Sizes LG, XL, 2XL. Specify size when ordering **\$115.00** MISC796

LARGE SIZE TACTICAL GLOVES IN 5 FLAVORS

Comfortable for range work, driving, utility, or CQB engagements. We have 5 styles of Tactical Gloves with wrist fasteners and extra padding in areas normally not well padded against violent impacts. Two styles with 'Half' fingers and Three styles with 'Full' fingers. A mix of materials like leather, synthetic fabric, and rubber are melded together to make these form fitting gloves which provide warmth and dexterity. From Left to Right in the picture above:
'Half Finger' Black Tactical Gloves **\$11.50** MISC692
'Full Finger' Mixed Green Gloves..... **\$12.50** MISC694

We still have a few ORIGINAL WW2 ERA GARAND STOCKS W/ MARKINGS.

See our website!

M1 GARAND RIFLE 'LINED' JEEP SCABBARD

Marked improvement over the WW2 issue scabbard! Has the same outward appearance with brass guard for the charging handle and rich brown color with two leather straps and has been improved with a soft lining on the inside to protect your valuable investment from scratches and undue wear. Great for all sorts of similar sized rifles and works beautifully on horseback too!

DON'T TREAD ON ME FLAG

Cotton 3'x 5' flag with loop on top and cord on the bottom. Vibrant message gets the point across!

\$18.00 FLAG14

M14 FIBERGLASS STOCK

Military Service stocks used on M14 rifle 'sniper' platforms by the Israeli Army. We purchased these from Israel as 'Sniper M14 Stocks', and we are not sure if they were used as 'M21 configuration' stocks or an Israeli Army version. They basically look like M14 composite stocks. Some minor storage blemishes, but they look great. We have about a dozen of these stocks complete with front sling swivel riveted in place..... **\$69.95** M14365

M1 GARAND PART SETS

We can piece together a few M1 Garand parts sets – All but the receiver – The stock and handguard set will be our new stock set GRD278. Condition of all parts is from good to new. Most are G.I. Sorry, but these have to be \$730 as some Garand parts are getting tough to acquire and cost is high. .30-06 **\$730.00** GRD380

Just In !! NEW VARIATION OF THE .308 M1 GARAND KIT

Again, all parts but the receiver with an original Italian .308 barrel. This unit is ½ inch shorter than a standard Garand **\$495.00** GRD387

Barrels are brand NEW !

BRAND NEW M1 GARAND BARRELS

Currently produced in USA by a 30 Year Top Line Barrel MFG

.30-06 barrels in stock!

Newly manufactured barrels ready to install on your M1 Garand Receiver. Made by one of the premier barrel manufacturers in the USA, these .30-06 caliber barrels are manufactured from 4140 steel with 4 groove rifling and a 1 in 10 twist. Beautiful high quality parkerized replacement barrels. Because they are made here in the US, they do not have the ungainly import barrel markings. A great chance to get rid of that 'Blue Sky' or other import marked barrel and also restore accuracy! Barrels should always be installed by a qualified gunsmith.

.30 06..... **\$149.95** GRD157

US Made by old school barrel maker

M1 GARAND STYLE REAR SIGHT BASE...
For Your Next Project!
Originally designed for the M1
Garand rifle, this great little
sight base is perfect for your
next project. It allows you to
actually add the superb and
precise M1 Garand Rear Sight assy. components
onto the weapon of your choice. Imagine having
the ability to dial elevation and traverse measure-
ments on a commercial or project rifle the same
way you can on the Garand! With the same ease
and precision that you don't find on most rifles.
The base has a concave bottom with 2 mounting
holes. Accepts the superior M1 Garand windage
pinion & elevation aperture sold separately. Fits
well on the Ruger 10-22 as well, but can be used on
almost any project you come up with

HERE'S A FEW ITEMS WE JUST GOT IN !!

COMBAT HARNESS
SUSPENDERS IN HEAVY
CANVAS

Very strong Grayish canvas with solid and well riveted aluminum hardware in the old style with strong springs on the release latches. Original unissued military surplus.
..... **\$9.95** MISC942

USMC M-1941
ORIGINAL SUSPENDERS

We don't see these very often, but we have a very limited supply of these suspenders used in conjunction with the Springfield or Garand cartridge belts. A staple of Marine field gear in the early part of WW2. Used /Good condition. Original surplus, not repros! Set of two suspender straps.
\$30.00 MISC956 *Very Limited*

U.S. ARMY
'LITTER' STRAPS

Original WW2/ Korean era canvas straps with two hook snaps in very good condition for their age. Used for helping to carry stretchers with the wounded, but also a strap found on many other canvas bags throughout the supply system to include Signal Corp. items etc. @45-48" long. *Very limited.*
..... **\$15.00 Each** MISC957

EUROPEAN 'PETITE
SLING SWIVEL'

Applied to avant-garde European small arms including compact handguns hidden in undergarments and pulled by a leather strap connected to this small swivel that has a capacity to handle up to a 3/4" sling or strap. They don't make 'em this small anymore! Limited supply... **\$4.95 each, 3 for \$11.95, 10 for \$29.95** GOD91

SERIOUS ABOUT COMBAT SHOOTING? ROTO 4M
COMPENSATED BARREL

DOD contractors have been buying up our Roto 4M barrels because they work! MODEL 1911 COMPENSATED BARRELS in 3 calibers will reduce recoil and speed your target acquisition especially during multiple shots. Takes a minute to install our barrel that comes with Barrel Bushing and permanently attached and ported Compensator. Also there is less weight on the muzzle end than with conventional screw on muzzle compensators. Most people comment on the change of performance, but also that it looks great too! Sold elsewhere for \$175-\$200, Sarco's price is **\$89.95 \$99.95**
Specify caliber when ordering: New, made in USA. **.38 cal C45024, .45 cal C45015, .400 corbon C45194**

OUTSTANDING ASSORTMENT OF QUALITY 1911 BARRELS

ROTO 4M HAMMER FORGED
.45 ACP, 9MM & .38 SUPER

Built to precise tolerance by a special hammer forging process, these barrels are the best you can buy! The hammer forging forms the barrel around a precision mandrel and holds the tolerance to .0001". This is much better than the typical broached barrels found elsewhere Note: 5" & 6" .45 barrels are L.H. twist all others are R.H. twisted

COMPARE THE ROTO-4M BARREL FOR ROUNDNESS
AGAINST A STANDARD BROACHED BARREL FROM A WELL KNOWN MANUFACTURER. ALL ROTO-4M BARRELS ARE

MADE IN THE USA. Brand new extra length barrels for all Colt/1911/Government Model type automatic pistols. These barrels are made by the Special Roto 4M Hammer forge process which produces the most precise and consistent barrels for the best accuracy. Minor hand fitting may be necessary for some guns.

Barrels do not include link & pin. Link & pin available w/barrel purchase for additional \$5.00 C45281 Available in:

SUPER FIND! ORIGINAL BRITISH ENFIELD BRASS OILERS!

Enfield collectors...we have been so fortunate to find about 100 original Enfield brass oilers in the mountain. Earl has been nice enough to sort out all of these into the original sources. Some we only have one of, while others we have a few. I can't believe he found 22 different variations! Take a look and satisfy your desires while they last - They were covered in 80 years of grease & grunge. He cleaned 'em up so he could read the markings. See our website (#OIL008) for the various markings.

NEW ITEM!

TURKISH M5 BAYONET W/ ALUMINUM HANDLE JUST IN!!!

Fed up with plastic grips that would chip or crack in combat, the Turkish Army changed over to an aluminum grip for the M5 Bayonet as used with the Garand Rifle that they used since the Korean War. The end result is a really solid bayonet with a weathered profile that is unique and provides an 'almost soldier proof' damage free grip. Used for Turkish Honor Guards too. Feels solid, looks rugged.....

\$19.95 BAY357

1918 U.S. TRENCH KNIFE MODEL

Developed by the American Expeditionary Force, this combat fighting knife was contracted to U.S. and French manufacturers. METAL BAYONET SCABBARD GRAB BAG

From decades of importing original military bayonets from overseas, we have accrued a 'mound' of metal scabbards which are not perfect, but may help you complete your bayonet collection where scabbards are missing. Some dings, some dents, some rust may appear as well as perhaps missing or damaged throats on some, but on the whole, an interesting group of metal scabbards that range anywhere from 8.5 inches to 19.5 inches long. Set of 10 scabbards, sold as is.....

(Picture shown is random set, and there may be variations in sets)

U.S. 1917 BOLO KNIFE & SCABBARD

Made is substantial numbers during WW1 and in several variations from 1897 to 1917, we can offer this full tang, tempered version of the 1917 model complete with period markings on knife & cloth and leather bound scabbard. This is a real 'Chopper', meant to use both blade and heft to hack things apart from fire wood to the 'Hun' in the Trench. With a little care, it will last a lifetime!

M1 CARBINE BARRELS

New & Made to the G.I. Print !

Sarco has obtained brand new U.S. made barrels in 4140 steel that are completely machined, bored, properly cut with inlets for the front sight, machined & swedged gas block/ piston, breech with proper hood not found on commercial barrels, and bore with a 1 in 20 twist! Barrels are in the 'white', without finish. Finally you can be assured of the perfect replacement barrel for your M1 Carbine.

NOTE: features of this barrel also include: Short chambered .015, Heat treated 4140 (28-30 RC) Gas Cylinder/Block made from 4140 steel, rolled and swedged onto the barrel. These are NOT castings nor are they soldered or welded onto the barrel, but made from forged bar, pressed, swedged, and rolled into place as the original GI barrels were prepared!

Sarco's special introductory price: \$159.95 CRB183

.... \$40.00 HOL001

SKS RIFLE PARTS & ACCESSORIES

SKS PHENOLIC STOCK W/ FOREND

China's military machine under Mao, ramped up production of phenolic or synthetic stocks during the late 60s when it became clear that the tensions along the Sino Soviet border were intensifying toward 'all-out war'. Wood was too precious to strip for the manufacture of millions of Chinese SKS rifles so synthetics were applied to AKs and SKSs alike. Good stocks are getting hard to find. We have a few dozen original SKS stocks w/forend. Some minor color blemishes, but overall very good \$99.95 SKS100

SKS CHINESE STOCK & HANDGUARD

used with metal and handguard. Good condition \$99.95 SKS090

Stock is cut for the Chinese spike bayonet.

We are Always in the Market to Purchase Quality Machine Guns. We will never sell guns until they have been received and inspected. My staff and I welcome prospective clients to come and inspect the firearms they are interested in purchasing in our state of the art, high security facility. We are dedicated, full time dealers with a full-time staff. Every item we offer for sale is in stock and owned by us. We are not brokers, or a consignment store. We send every HK conversion to Terry Dyer for inspection and upgrade.

Please visit our website for the full list of inventory specials.

WE PROVIDE THE BEST QUALITY GUNS ON THE MARKET.

S5270

SARCO, INC. -MIG 21 jet fighter cockpit section from the DDR (East German) Air Force. We have only one single-seater. ATF will not allow the import of military aircraft, so this is the end. Ours was saved from the smelter at the last possible minute. The single-seater will be missing the stick and maybe some instruments. The cockpit was cut out of existing planes that were

phased out of service. **Single cockpit MIG - \$9000.00 MMP011.** Please call us at (610) 250-3960 to order this item. These are oversized items. Cockpit shipped via truck at our 55% discount. See pictures of the actual unit and read more by visiting our website www.E-Sarcoinc.com.

IRON PRESS™

Representing the next evolution in single stage press technology, the Lock-N-Load® Iron Press™ is built to be the heaviest, most rigid press in its class. Tight tolerances in manufacture and assembly combine to provide consistency and precision that will deliver match accurate ammunition, round-after-round, year-after-year.

AUTOMATIC PRIMING SYSTEM

The gravity fed Automatic Priming System (sold separately or with the Kit) helps increase reloading efficiency by allowing more processes to happen simultaneously.

ACCESSORY DECK

Provides quick access to trays for bullets or cases, and storage for chamfer and deburr tools, case neck brushes, primer pocket cleaners and more.

PATENTED SHELL HOLDER PLATFORM

Allows users to deprime, pause and remove the case to chamfer and deburr, then easily replace the case to prime.

LOCK-N-LOAD® BUSHING SYSTEM

Incorporating our patented Lock-N-Load® bushing system, change overs are lightning fast.

SUPERIOR STRENGTH

Industry leading strength and further ease of use comes from the spring assist 1-1/8" solid steel ram and ambidextrous handle.

*Pictured with accessories from the Iron Press Kit.
Dies and cartridge components sold separately.*

HELLFIRE STEALTH

**The name says it all!**

**ONLY
\$39.95**
(plus S&H)

*You simply just squeeze
the trigger.*

*Activate/Deactivate/
Adjust with the hidden
Micro knob.*

LEGAL IN ALL 50 STATES!! ATF LEGAL WITH CERTIFICATE.

This incredible new system installs invisibly within your grip on any AR15 style rifle invisibly. It can be activated or deactivated in seconds. It legally allows you to pull your guns trigger at it's highest rate legally. It installs in minutes and nobody but you will know it's there. It features a micro-adjust for activation and deactivation. It looks absolutely built in. It is revolutionarily the best rapid fire system for these new volatile times. Get them now before new laws outlawing "Fast Shooting" arrive. This may very well be the best system ever devised for AR15 platforms. It is constructed of all Steel for a lifetime of reliability. The shooter always maintains control and single function of the trigger so you can fire single, double, bursts or empty mags and it is the only system that is 100% legal for now in all 50 states!

"If cowardly and dishonorable men some-
times shoot unarmed men with army pis-
tols or guns, the evil must be prevented by
the penitentiary and gallows, and not by a
general deprivation of a constitutional priv-
ilege." Arkansas Supreme Court, 1878,
concerning the Arkansas Constitution's
right to keep and bear arms.

"The fifth and last auxiliary
right of the subject, that I
shall at present mention, is
that of having arms for their
defense, suitable to their
condition and degree, and
such as are allowed by law.
(I)t is indeed a public al-
lowance, under due restric-
tions, of the natural right of
resistance and self-preser-
vation, when the sanctions
of society and laws are
found insufficient to restrain
the violence of oppression."
William Blackstone's Com-
mentaries on the Laws of
England (1765), the most
widely read law book in
Colonial America.
