Classification

The factors for each rating step in the rating algorithm are determined as follows:

Territory

Territory factor is determined by:

1. Principal garaging address of automobile.
2. If a territory is zip code rated, and a zip code splits or new zip codes are introduced, apply the territory in which the prior zip code falls.
3. If a territory cannot be determined considering above, then assign the territory to an adjacent zip code.
4. Automobiles principally garaged out-of-state are unacceptable.

Personal Auto Program Rules**

Vehicle Age

1. The model year of the auto is the year assigned by the auto manufacturer.

Notes:

B is rebased to the deductible of 1,000, Named Insured Only, and Work Loss Excluded from A

(9): Average of (1) through (8)

(11) : Consistency test is calculated as [Change in Factor from Prior Deductible] / [Change in Limit offered from Prior Deductible]

The selected factors pass the consistency test when the rates of change are negative and decreasing as deductibles increase

(1) CW ECY from 9/1/2019 to 6/1/2021 as of 6/1/2021

(2) Claim frequency from 9/1/2019 to 6/1/2021 as of 6/1/2021

(3) Indicated frequency calculated based on a line fit to the raw frequency data. The line was fit using an intercept of 0.0568 and a slope of 0.0031 per 1,000 annual miles.

(4) = (3) / [(3) for 16,000 annual miles]

(5) Rebased the indicated frequency relativity to the total Average Factor using ECY as weights

(6) Selected factor is based on the rebased indicated frequency relativity, and by grouping the annual mileage into bands of 3,000 miles for significance.

(7) Selected factor for rating is a rebased version of the selected factor

Notes:

B is rebased to the limit of 100,000 / 300,000 from A

(9): Average of (1) through (8)

(11): Consistency test is calculated as [Change in Factor from Prior Limit] / [Change in Limit offered from Prior Limit], using per person limit

The selected factors pass the consistency test when the rates of change are positive and decreasing as limits increase

Proposed Deductible Factors

Deductible factors from the following companies informed our selection of the proposed deductible factor curves. Deductible factors referenced are current as of the filings and dates listed below.

Competitor factors were only included in the analysis where competitors offered a multiplicative factor for a given deductible.

Final deductible factors were selected with consideration of consistency test.

(2) Claim frequency from 9/1/2019 to 6/1/2021 as of 6/1/2021

(3) Indicated frequency calculated based on a line fit to the raw frequency data. The line was fit using an intercept of 0.0568 and a slope of 0.0031 per 1,000 annual miles.

(4) = (3) / [(3) for 16,000 annual miles]

(5) Rebased the indicated frequency relativity to the total Average Factor using ECY as weights

(6) Selected factor is based on the rebased indicated frequency relativity, and by grouping the annual mileage into bands of 3,000 miles for significance.

(7) Selected factor for rating is a rebased version of the selected factor

Personal Auto Program Rules**

Classification

The factors for each rating step in the rating algorithm are determined as follows:

Territory

Territory factor is determined by:

1. Principal garaging address of automobile.
2. If a territory is zip code rated, and a zip code splits or new zip codes are introduced, apply the territory in which the prior zip code falls.
3. If a territory cannot be determined considering above, then assign the territory to an adjacent zip code.
4. Automobiles principally garaged out-of-state are unacceptable.

**Tesla Property & Casualty, Inc.
Personal Auto Program Rules**

Vehicle Age

1. The model year of the auto is the year assigned by the auto manufacturer.
2. For rebuilt or structurally altered autos, the model year of the chassis determines the model year for rating.
3. The vehicle age is calculated as the policy effective year – vehicle model year. A vehicle age less than 0 will be rated at vehicle age 0.

Tesla Property & Casualty, Inc.
Personal Auto Program Rules

Mileage

1. Annual mileage is calculated by prorating the average historical verified mileage upon every renewal.
2. For non-Tesla vehicles and Tesla vehicles without sufficient historical verified mileage, self-reported annual mileage will be used upon signup and can be updated throughout the term. Both of the following criteria need to be met to be considered sufficient historical verified mileage:
 - a. At least 100 miles of trips have been accumulated
 - b. Vehicle has been in force and taken a trip for at least 30 days before the evaluation

**Tesla Property & Casualty, Inc.
Personal Auto Program Rules**

Monthly Trend Factor

To determine the trend month for a policy, take the policy effective date less the new business rate revision effective date, divide by 30.5 days, and truncate the number to an integer. See the Monthly Trend Factor table for the appropriate factor to be applied. This factor will be used for the duration of the policy term. The Monthly Trend Factor applies to new and renewal business.

NOTICE REGARDING YOUR SAFETY SCORE CALCULATION

The vehicle's Safety Score is determined by an algorithm that assess driving data and is computed after every trip. The vehicle's Safety Score and trip data are final and not negotiable upon posting in the insured's Tesla App. However, requests by an insured to remove certain trips from the Safety Score calculation is permitted in limited circumstances where Tesla determines in its sole discretion that the driving trip data is faulty due to a damaged sensor or software malfunction.
