

## Reasons why site inspection is essential

Site verification is the most essential when using any Toto site for betting in this day and time. The reason is that as the day goes by, the methods of eating and drinking are developing in various ways. As a result of a recent survey of 1000, it was found that 85% of members using the Toto site have to face certain types of scams. The most common types of scams that have occurred to members are work betting excuses and malicious betting excuses.

Many scam sites often change their site and domain name when a scam happens to the sites. There it is difficult to eat and run websites to collect their records and history, and self-verification becomes difficult.

In that case, it can be said that it is very important to conduct eat-and-run verification through verification sites such as [totodubai.com/](http://totodubai.com/). This type of site collects the history and records of all the sites and provides a clear picture of the site information, operation method, and past scam cases so that users can identify safe sites.

Also, it will be more beneficial to users because scanning sites provide a list of listed scammers and how to prevent scams.

1. Damage types and countermeasures for scam sites
2. Look out for examples of scam sites
3. To avoid being ruined by scam sites just follow these
  - **Avoid using unknown sites:** the popular sites are already famous among the users. There are many cases where users use newly created sites as it provides attractive events. This is never the correct way. The more new sites, the higher the probability of scams because they are financially weak.
  - **Do not use invited sites:** always try to ignore the site for which you get invitations through spam text messages or a direct link message. If you once used the Toto sites, you will start receiving messages encouraging you to join other Toto sites. This is the most common way of promotion, and it is absolutely free. But every free thing is not safe. Before using any site and putting your personal information in, always try to check if it is safe and secure.
  - **Offering higher bids is a scam:** the scam sites often offer higher bids. If a site gives you an excessive dividend rate then there is a high chance that the site is malicious.
