

Some Enjoyable Makes Use Of For A Remote Mac Mini Server

MacStadium does distant Mac mini internet hosting, providing clients a fully linked Mac mini in a safe, managed datacenter (just like the folks at MacMiniColo, who we have visited and written about before). When Hunter have a Mac mini already, you may even send it to them for internet hosting, or you can rent or buy one yourself proper from the corporate. Having a remote server all for yourself can be very helpful, and using a Mac mini for the job may be one among the most affordable and easiest ways to take action.

In actual fact, not solely does MacStadium run internet hosting, however the company has additionally been putting up weblog posts during the last month or so, going via a number of alternative ways to utilize a related mini for your self. You could possibly set up a distant Minecraft server on it, for example, making a world that you and your pals can log into anytime. Or you would arrange something like Kerio Connect, which serves as a Microsoft Trade-type way to share and ship email, contacts and calendars across a quantity of various users.

Clearly, these tutorials are for MacStadium's hosted minis, but they need to work for any Mac mini you've set as much as be accessed remotely. Apple's littlest Mac is comparatively low cost but nonetheless very powerful and MacStadium's tutorials may very well be a begin to help you get the most out of your remote mini.
