

# Experience the Magic of Walt Disney World and Magic Kingdom In Minecraft!

I'm running it on the Bedrock version of Minecraft in VR using an Oculus Quest 2 in Rift S mode. It's absolutely amazing, and I'm not even going to lie. It's amazing how closely it follows the design of the actual park at a true one to one scale. It was difficult to decide which rides would work well in a minecraft simulation. "It's a Small World", while it seems like an almost 100% recreation, will still leave you amazed. However, if you don't feel the thrill in real life, you can scale down the experience like "Country Bear Jamboree" to a mere few seconds. This is a wise choice due to the presentation mode.

I'm certainly looking forward to seeing other parks presented in this manner and will be the first in line when they are released. Kudos to your design team!

Kelly, November 29, 2021 at 6 :24 AM It's absolutely stunning and the details are amazing. You have outdone yourselves Disney and everbloom. Minecraft-servers.Cc I am looking forward to more updates and more theme parks such as Epcot and the animal kingdom. My bois and I had fun playing this map, and a few of my friends are excited to play it. SO GREAT JOB! !
