Best Minecraft Server Hosting UK

Do you permit us to use any mods or server jars that we need?

Yes you can install and use any mods or server jars of your choice and have complete FTP file access to your server through the control panel. You can use custom modes and jars using the file manager within your game's control panel. You can upload and install it manually or contact our support team for assistance.

Here's a step-by-step guide to uploading and installing Minecraft Modpacks.

1. Download the Modpack server file. 2. Arkadne igre onto your computer. Upload all files to your server. 3. Change the file's name from "modpack.jar" to "custom.jar". 4. Configure your server to use a custom.jar. Go to the option that says "change your server type", then click "change to the selected jar". 5. Click on Save to add a new game to the control panel. This lets mods enhance your game experience by altering world generation and ore-spawning.
