

Minecraft Server Hosting

Our control panel is equipped with the most well-known Minecraft server versions that are available. Once you have decided between Java Edition or Bedrock you can further refine the software that will serve as the heart of your server. The initial version will be selected at checkout. You can change this at any point.

If you decide to go with a Java Edition server that is preferred by PC players, there are many more options to consider. If you'd like to personalize your server plugins are an excellent way to do this on Spigot, Bukkit or Paper. You can use one our packages to create a minigame server such as Paintball or MCMMO. Forge is the best server for modders. You can pick which mods you would like to use. There are a lot of modpacks available in the panel, so make sure to check out some great modpacks from FTB, Technic, and others.

If you're not sure which version to start with, our support team can assist. Just Say Yes Every version gives you a different experience, and we suggest that you test a variety of versions to have a fun time playing with friends on your server.
