# Gripen for the Philippines

Unmatched price, performance and partnership today

# Gripen – the smart fighter

Gripen leads the way with its unique combination of superior operational performance, complete affordability and strong partnerships.

This cutting-edge air dominance system provides unrivalled air power, with the best weapons for strategic deterrence, plus long range, high sortie rates and rapid deployment.

## Whenever you need it

Made for the skies, Gripen is available anywhere, any time, and can be flown in the most severe weather conditions. It can operate from damaged runways, small civil airfields and even highways. Gripen's standard-sized containerised support system is deployable to almost any location. Gripen's high availability, combined with low lifetime support cost and repair time, guarantees more time in the air than any other fighter.

## Remote operation made easy

Uniquely designed for deployed operations, Gripen's short take-off and landing (STOL) capability means a basic road measuring 800 x 16 metres can be used as a runway.

### Best-in-class weaponry

Gripen's superior flexibility is underlined by the wide range of weapons it can accommodate. It operates with the very latest and best-in-class weaponry, including the MBDA Meteor beyond visual range air-to-air missile (BVRAAM).

The Meteor can engage air targets autonomously, at extreme ranges and in harsh electronic warfare environments. Its ramjet propulsion system can defeat manoeuvring and fast-moving targets thanks to its unrivalled 'no escape zone'.

### Unparalleled turnaround

Gripen can be airborne within just 60 seconds of the scramble alert. Once back on the ground, turnaround time is unmatched, requiring minimal personnel and resources. Rearming with a full load plus refuelling takes only 10 minutes, with just 5 ground crew required. Gripen is always combat-ready.

### True independence

As a national asset, Gripen ensures sovereignty in all domains and supports your independence. With maintenance, repair and overhaul capabilities all located within home borders, the system gives the Philippines the freedom to control its own future.

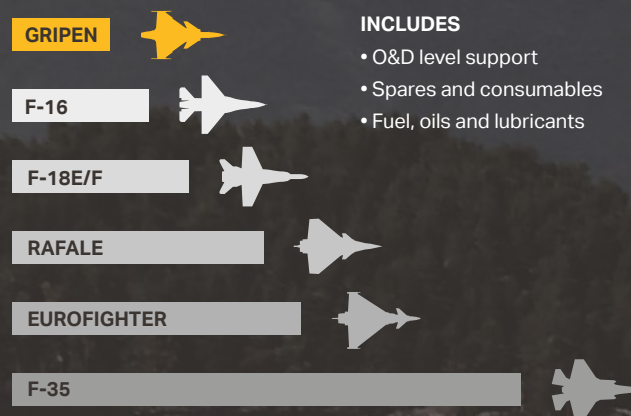

### Designed for cost-efficiency

From the production line to the front line, Gripen has cost-efficiency built in at every step. All spares and support items are included for low and predictable life cycle costs. The system's guaranteed cost per flight hours are the lowest of all comparable fighter platforms, delivering superior overall affordability.

### Express delivery

Aircraft can be delivered just 24 months from the contract effective date, so squadrons can start using the fighter in record time.

# Defending Philippine sovereignty

Gripen provides supreme operational performance, flexibility, availability, independence and cost-efficiency, whatever the mission. Interoperability is a given: every aircraft can use the Link 16 network to work with NATO and other allies. Gripen guarantees the ability of the Philippines to cooperate with its friends while always protecting its national interests.
