

Maintaining Desired Comfort

Keep Your RO & Inverters 100% Functional

Staying at home can get boring. If you have a nice TCL LED and a home theatre system from Sony perhaps, things could get much easier for you. But the human nature is very complex and by default, we just do get impatient quite a lot. When it is about maintaining comfort within your home, you would want your electronic appliances to always function the way you wish. As several [Luminous inverter dealers in Kharar](#) say, the one thing that they have been noticing relentlessly is the number of problems arising with UPSs and inverters. Same is the case with many [Kent RO dealers in Mohali](#) because people have become more aware of how important it is to take care of their health. They want clean mineral drinking water 24/7.

Common Inverter Problems Tell Us You Face Them Too!

This goes without saying because these problems are the story of every household in the City.

- ***Weak Or Faulty Battery***

If the battery of your inverter is weak or faulty this means you need to replace it entirely. You can find a reliable Luminous inverter dealer in Kharar and Mohali very easily for this purpose. Only go for authentic products.

- ***Battery Connection Loose***

If the battery connection is loose, tighten them and only then switch it on. If you have been moving things around in your home this could cause the inverter battery connections to get loose.

- ***Tripped Inverter***

We all know that the entire Tricity region faces frequent voltage fluctuations. This could make the inverter switch trip unexpectedly. Check for any such problems and switch on your inverter again.

- ***Rusty / Corroded Battery Terminals***

If the battery has corroded or has become rusted, replace it immediately. Carbon deposits on the battery are very common and therefore, the right approach is to get them cleaned by a professional or just invest in a new one.

Now Coming To The Problems Related To Your Kent RO Systems

- ***Bad / Dirty Filters***

If you think that your reverse osmosis system is dispensing foul water or bad tasting water, the problem could be old and worn out filters. We tend to ignore this little replacement procedure and given the lockdown situation that we had been facing up until a few weeks ago, this problem is bound to come. Get them replaced as soon as possible.

- ***Leaking Faucets***

This is a hardware related problem and should not be intervened into unless you are properly qualified for it. The RO system is a delicate apparatus and most parts are just better handled by experts only. These problems are very minute and can be taken care of very easily provided you are aware of what is going on around your home. Taking care of your electronics is critical if you want to maintain the desired degree of comfort in your home.
