

**Andreu World**

New designs 2022

## **Sustainability is the new beauty**

Innovation lies in sustainability. Innovation also lives within Andreu World's experience as a company that works with traditional techniques, but in an industrialized manner. In this way, we ensure that the manufacture of our designs is optimal and respectful in terms of the environment, using construction systems that make it easier and more sustainable to separate each component at the end of its life. Then, they can be put into a new cycle, have a new life, respecting the framework of circularity.

This is the starting point of the new 2022 collections, a selection of circular designs, starting with Oru, a range of seating and tables designed by Patricia Urquiola, iconic and material-forward for any public or private use. Also Mariya, a sofa by Philippe Starck, where the construction system defines its personality, full of functionality and comfort. Workspaces are transformed with collections such as In Out Office, a furniture system created by Alfredo Häberli, which provides an innovative vision for hybrid uses. There is also Calma Chair, a work chair that combines the functionality of an operational and ergonomic seat, created by Benjamin Hubert. Extra Conference, Connect Table and Solid Conference boost their versatility with new versions, sizes and finishes that combine technology with new ways of working.

In short, durable designs created for wellbeing, ergonomics and health, which guide us through a holistic vision to create collaborative or individual spaces that are healthier, more natural and respectful of the planet.

# Oru Chair

by Patricia Urquiola

The Oru collection is strongly influenced by the design of the 70's and is also inspired by a certain Japanese feeling and mood.

A vigorous, iconic and bold design in which the striking architecture of the three legs is reminiscent of the shape of an oar, and is the result of precise wood craftsmanship.

What stands out are the joints between the wooden pieces and the upholstered parts, which have a natural and harmonious finish, making Oru a unique design that represents an innovative and personal vision of the seating concept. Innovation lies in sustainability. The upholstery is made of recycled fabric and the internal foam is also made of recycled fibers, combining craftsmanship with industrial technology.

The Oru collection consists of chairs and armchairs, with two width options, stools in two heights and a lounge chair version. Its solid construction system is based on a structure of three ash wood legs, which provides maximum resistance in the most demanding uses. The seat is always upholstered and in the case of the chair, armchair and stools, the backrest is in solid wood, with the option of an upholstered backrest, while in the lounge chair the backrest is always upholstered. Its ergonomic design offers optimum body support, and its seat provides a high level of comfort thanks to the combination of foam and elastic webbing bands.

**SI2270**

# Oru Table

by Patricia Urquiola

Following the concept of a soft office, Oru Table is designed for all those casual and formal places where work happens today, where furniture needs to be flexible, adaptable and have a feeling of home comfort. The design of its legs, whose elaborate geometry, without a single edge, is a statement of intent, drawing particular attention to where the pieces meet.

The range includes various types of coffee, dining, meeting and occasional tables, which share the characteristic gesture of its wooden structure, its great formal beauty and in which the tradition of craftsmanship and the delicacy of the details with soft, rounded and exquisitely crafted geometries are expressed. It is an ecodesigned collection created for the circular economy, with a minimal carbon footprint and designed so that all components are easily separable and recyclable at the end of their useful life.

A collection of tables made from FSC® solid wood and available in different sizes and versions of coffee, dining and side tables.

The coffee table version is available with a round top in four widths. The dining and meeting table version is available with a round top in three sizes and a rectangular top in three widths.

The occasional table is available in two heights.

# Mariya

by Philippe Starck

Sometimes the construction system of a design defines its personality and gives it its own personality and new functions. This happens with Mariya, the collection of sofas designed by Philippe Starck, where the plywood board is the protagonist of an elaborate construction system inherited from the cabinetmaking tradition, drawing on systems of joints and interlocking made of wood, without a single screw, and in which its arms -in the two and three-seater versions- create a storage system that enhances its functionality.

The precision and constructive complexity of its structure contrasts with the softness of its upholstered seat and backrest, which encourage comfort and relaxation without losing an ounce of personality.

The structure of this sofa is based on three transversal beams fixed to both arms and on which rest the wooden panels of the seat and backrest with the upholstered cushions on top. Thanks to its intelligent construction system, it is a circular design, with a carefully studied carbon footprint and ecodesigned so that all components are easily separable and recyclable.

Mariya is a collection of lounge chairs in two widths and 2 and 3-seater sofas. Its structure, made of oak veneered plywood board, is designed not to use any mechanical joining system. Its joints are made by means of a “clavet”, a handcrafted closure that recovers the cabinet-making tradition of the Middle Ages and that Starck has been able to transfer to our times to contribute to the circularity of the new designs. The intricate upholstery of the edge trim can be in the same tone as the upholstery, or in white, black, sand or brown.

# Calma Chair

by Benjamin Hubert

Calma Chair is a line of chairs for work from home that combines the functionality of an operational and ergonomic seat with the appeal and approachability of the home. Its design is encapsulated in a die-cast aluminum frame that wraps around the backrest to create a frame that flows seamlessly into the circular armrests.

As people return to the physical workplace, it is essential that these environments are inspiring and calming to replicate the benefits many found in working from home.

Calma Chair draws inspiration from the comfort of home in its palette of handcrafted materials and simple lines to create a welcoming work seat, a soothing presence in the often stressful environment of the workplace. Its lines envelop the user to enhance comfort and tranquility, by means of a design where engineering and beauty go hand in hand, resulting in a perfect solution for any public or private space.

Calma Chair is designed to allow a high degree of customization. Its lightweight, die-cast aluminum frame facilitates five different types of backrest: a fully upholstered backrest; a backrest with an upholstered front with wooden casing; and a breathable mesh backrest. It is available with a 5-wheel base or four casters, allowing it to be used both for our home-office desks and for conference or meeting spaces. The high backrest versions offer the option of a headrest cushion.

CALMA CHAIR

# In Out Office

by Alfredo Häberli

We need workspaces to be warmer and make us feel at home. At home, we also need to feel more productive and for furniture to adapt dynamically to our needs.

In Out Office incorporates acoustic reduction solutions to provide privacy and soundproofing both individually, to promote concentration, and when used together for collaborative work.

It is a furniture system that meets all these needs, providing an innovative vision for hybrid uses in work and private spaces. Comprising sofas, lounge chairs, poufs and tables with different panel heights.

Thanks to its wheels, In Out Office can be adapted to the characteristics of each space, allowing the configuration of multiple and varied compositions, individual or group, and combining the different modules in a fast, agile and versatile way, enabling group work and collaboration.

Ergonomics and comfort also play a central role in this system that adapts perfectly to the human physiognomy with the addition of feeling mentally at ease due to experiencing the pleasant sensation of space. It also offers integrated connectivity and wire-management solutions, both in sofa solutions and in tables, facilitating agile and customizable work that adapts to new ways of working.

In Out Office is composed of 1, 2 and 3-seater sofas with back panel in two different heights and with two types of backrest, fixed in one piece or with individual cushions. Its die-cast aluminum base can be fixed or on casters that incorporate a braking system.

**SF2255**

# Extra Conference Table

by Lievore Altherr Molina

The architectural character of Extra Conference Table and its innovative construction concept make it a universal table system. Extra Conference table is based on a simple but definitive concept, a light aluminum structure, from which infinite combinations can be configured through the play of materials. While its multiple combinations of table tops and legs, come in a wide variety of shapes and sizes.

The Extra range has been extended with the addition of Extra Conference Table, in which the sizes of the table tops are increased, intermediate leg are added to create long continuous table solutions and a new base option with a cylindrical leg is incorporated, where the rectangular top has rounded corners to adapt to this leg.

Extra Conference Table boosts its versatility and possibilities in corporate environments and transcends the concept of a configurable table by offering connectivity and multimedia options integrated into its structure, allowing it to combine technology with new ways of working.

It is a table system of 1.500 mm./59 inches width and lengths from 3.000 mm./118,25 inches to 6.000 mm./236 inches. It can be configured with square, delta or cylindrical leg in aluminum or covered in oak. The table tops are available in a wide variety of materials and offer integrated wiring and electrification systems in accordance with international standards.

EXTRA CONFERENCE TABLE

# Connect Table

by Gensler Design Consulting

Connect Table is a technological and flexible table with a concise design that allows the personalization of any public or private workspace, where flexibility and adaptation to the space is needed. This system expands with a version of inverted Y-shaped base with wheels, which brings greater dynamism to the collection while maintaining all its features and versatility.

Extremely functional, its table top can be flipped over by means of its exclusive turning device and thanks to its wheels, the table can be easily moved and stored to save space, in addition to having joining systems that allow several tables to be efficiently joined together, creating varied and multiple spaces for meetings or collaborative work.

Multiple connectivity options are available for solutions on both the surface and out of sight. Individually or in a group, Connect allows multiple configurations for individual work, collaboration or team meetings and stands out as an intelligent system with multimedia and energy connection that is highly versatile.

# Solid Conference Table

by Estudio Andreu

Solid Conference Table is characterized by the elliptical design of its base, with a soft rounding of its edges. It now incorporates a new version with a base in oak plywood, which opens up the option of using it in environments that require added warmth and naturalness. Solid is a totem column with an elliptical geometry in harmony with the table top, with a square shape and rounded corners, which allows a continuous and fluid path along its entire contour.

It presents an elegant and neutral aesthetic that integrates into the architecture of any public or private space. It uses 100% recyclable and 100% recycled materials for its interior and FSC® oak wood with chain of custody for its exterior.

An iconic design, honest and attractive for its forcefulness and simplicity of form that make it the quintessential central column table for business meetings or for the home.

Solid Conference Table is a range of tables with Pure ECO® thermo-polymer bases covered with sheets of FSC® oak plywood available in different shades, which are combined with tabletops in multiple sizes and materials. It has an elevating height option that makes it the essential model for business meetings or for the home.

---

Meeting table with a central polyethylene base and with the option of an FSC® oak plywood base available with different top options.

---
