HISKART

Working of Filagra Super Active

- [Filagra Super Active](#) is actively filled with a PDE5 inhibitor medication that stops the degradation of cGMP; it acts for blocking the PDE5 enzyme.
- Sildenafil Citrate is the active component for increasing blood to the phallus.
- Nitric oxide levels and cGMP levels increase and work for dilating the blood vessels and boosting blood flow.
- Erection is attained under the influence of sexual stimulation.
