# PATHFINDER ANGUS

25<sup>th</sup> ANNUAL SALE

OFFERING 124 STUD & APR BULLS

---

*Moyle*

PATHFINDER

**Wednesday 23rd February, 2022**

On Property at "Gazette", Peshurst 11.00am

**Account**

N.S. & S.M. Moyle | Pathfinder, Peshurst 3289

**Selling Agent**

Nutrien

**Inspection**

Sale bulls will be available for inspection at  
Victorian Beef Field Days, Thursday, February 3rd  
on property at "Gazette"

2126 Macarthur-Peshurst Road, Gazette  
and from 9.30am on Sale Day.

## Dear Friends,

Welcome to our 25th Annual Bull Sale. Thank you to those people who continue to support and believe in our breeding program.

The Pathfinder breeding program comprises a herd of 1800 stud and commercial Angus females, with over 1600 females inseminated to the industry's top sires and approximately 200 embryos implanted from our elite cows. We constantly scan Australia, USA, and New Zealand for sires that will make both our herd and our clients' herds more profitable. If there are better proven genetics out there, we will find them, however with our strict criteria of good structure and docility, combined with high scrotal, a lot of popular sires don't make it to first base!

We have a number of proven, high performance and new sires represented in 2021.

**Calving-Ease Sires** – Garth, Newly, General G18, K7 and Komplete have proven that you can have calving ease, with plenty of growth and carcass. We don't have to put up with low growth to sleep at night during calving!

**For Moderate Birth and Maximum Curve Bending Growth** – super sires Pathfinder Genesis, Nationwide, Beast Mode and ultimate Carcass Bulls - Pathfinder, Intensity L519, Prophet and Lotto have been included.

Breedplan has revolutionised our ability to make genetic progress, along with AI and ET, however the challenge is to find an optimal level of production traits that suit both our environment and premium market specifications. Our breeding philosophy is simple – we want the heaviest, thickest, docile calves possible from an unassisted birth and have carcass traits that provide feed-lotters with a high return. Most importantly, we want consumers to have a pleasurable eating experience – marbling is critical to achieve this. We have a policy of continually using the top proven sires that already have progeny performing under commercial conditions. This greatly increases the reliability and consistency of our bulls. These genetics are then transmitted to our clients' herds, resulting in an even drop of calves, with a higher percentage hitting premium specifications.

Having a well-bred herd of renown proven performance bloodlines adds huge value to your beef enterprise. If you need assistance in relating EBV's and sire selection for your production system, please don't hesitate to call. Our cattle are run at above district stocking rates with hay being fed sparingly. The bulls are normally grass-fed, giving a good indication of their doing-ability. Being a locally based owner/operator, we pride ourselves on providing service and back-up immediately, should the need arise. Our program of having mainly grass-fed semen-tested bulls from proven genetics has eliminated most of the common problems. We will be participating in the Victorian Beef Field Days on Thursday, 3rd February and the South Australian Beef Field Days on Monday, 7th February, we invite you to inspect the bulls on these days, or on Sale Day, from 9.30. A light lunch and refreshments will be provided at the sale.

We look forward to seeing you there.

**Nick, Sara, Elle, Harry, Tom & Linley.**

*"Family and family values are priceless. Relationships are how we relate to each other are also priceless.*

*We must seize the moment and make the most of every single day."*

*Moyle*

## PATHFINDER

### THE ORIGIN

Nick and Sara were so taken by the American Angus Society Pathfinder program that it was an easy decision to call their stud Pathfinder.

The program identifies superior cows and sires based on their performance in the Angus Herd Improvement Records.

The focus is on performance traits that are economically important for efficient beef production. Pathfinder is an award for excellence.

It fits in well with the general philosophy behind Nick and Sara's herd. The Pathfinder program was started in 1978. The 2016 Pathfinder report listed 9,480 individual cows, and 268 sires, that met the criteria. Records of over 2 million eligible cows, and just over 7.5 million weaning records, were examined in the preparation of this report.

To qualify cows must calve at 2, 3 and 4 years of age, and each calf must weigh at least 5% above the herd average at weaning. Clearly they must be consistent performers over at least three calving's. Once a cow is designated as a Pathfinder cow she is a Pathfinder cow for life. She may however not qualify for listing every year once she has gained this status unless she meets certain production criteria. Bulls that sire five or more qualifying females also qualify.

The Australian Angus Society does not have a similar program to the American Pathfinder program. Nick said this did not stop them applying the same criteria in describing the quality of their herd. "Currently we collect a lot of information on each animal so it is not difficult to identify our elite performers."

The American Pathfinder selection criteria are the best, most simple and effective formula for a profitable beef herd. It is the core of Nick & Sara's breeding program.

## Understanding Estimated Breeding Values (EBVs)

Calving Ease	CEDir	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.
	CEdtrs	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.
	GL	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.
	BW	Genetic differences between animals in calf weight at birth.
Growth	200 Day	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.
	400 Day	Genetic differences between animals in live weight at 400 days of age.
	600 Day	Genetic differences between animals in live weight at 600 days of age.
	Milk	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.
Fertility	DtC	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.
	SS	Genetic differences between animals in scrotal circumference at 400 days of age.
Carcase	CWT	Genetic differences between animals in hot standard carcase weight at 750 days of age.
	EMA	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcase.
	Rib Fat	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcase.
	IMF	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcase.
Selection Index	\$A	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems.
	\$A-L	<p>Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems.</p> <p>The \$A-L index is similar to the \$A index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low.</p> <p>While the \$A aims to maintain mature cow weight, the \$A-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.</p>

# THE MOST IMPORTANT PERFORMANCE TRAIT IS PROFIT

Profit is generated not only in the sale ring but also through an economic and efficient cow herd.

For over 60 years, selection of the most functional females from a continuous line of cow families, has developed a time proven cow herd that is known for quality, consistency and problem free genetics.

Over generations, fads have come and gone. But we have continually chosen our females based on efficiency and functionality. The result is a cow herd that delivers superior maternal traits, paying long term dividends.

From this productive cow herd, we offer sound, eye appealing, rising two-year-old bulls, to add economic strength to your herd.

The cows have worked for our family and their progeny can work for you.

## SARGOOD

It was initially through a connection with Pathfinder's Elle Moyle from a mutual love of polocrosse, that Rachel and Jamie Sargood first heard about Pathfinder Angus and thought they'd give the south east Australian stud a crack.

Along with their two sons, Sam and Jett, the couple run around 12000 breeders on their 17000 acre property, 'Wellwater' near Tambo in central west Queensland. Their home country ranges from heavy brigalow to softwood sandy loam soil types and a mix of range country running east toward the coast in the Barcoo River region. The country's Great Dividing range begins on their property, predominately developed to buffel grass, legumes such as stylo's and brassicas.

Currently running the majority of their breeders at Wellwater, they're maintaining another five hundred of their core herd on agistment properties around Augathella, Mungindi and Tambo, whilst on the lookout to buy more country closer to home.

When Nick and Sara Moyle trucked a load of Pathfinder Angus bulls to a sale at Barcardine, the Sargoods went home with three new sires to trial over a selection of their Santa Gertrudis cows.

Although the area's average rainfall is supposed to be around 21 inches, it's been in decline for the past 5-6 years. In 2016 the annual rainfall was 15 inches and has declined around an inch a year until now. "So far", Rachel said "2022 is looking pretty good".

Dry, hot summers are par for the course, with 40 degree days being pretty standard. Winter can get down to zero with freezing mornings but the winter days are fairly mild. Jamie said he's found the Angus bulls have had no trouble acclimatising into what is considered a pretty tough environment. "We've bought Eaglehawk, Millamurra and Ascot Angus bulls before but we find the Pathfinder fellas pretty solid and we're really happy with their calves".

They've been very impressed with the performance of the Pathfinder sires to date. Even in a season with only a 13-14 inch rainfall, the bulls just kept on working and resulted in a tremendous calving rate upwards of 90%. "I don't know how poor a bull has to be before he stops working, but these were exceptional" Jamie said.

The Sargoodsrun a continual grazing system, leaving the bulls in all year around. Controlled joining was trialled but they found it was too difficult to manage steer numbers and to coordinate a large number going off all at once and they don't have an area big enough to contain them to bring them up to feedlot weight.

“Things could get pretty nasty if the cows all calved at once during dry times - and we’ve been predominantly dry over past few years - so continuous calving works for us under those conditions” Jamie said. Mustering 2-3 times a year gives the business a steady flow of weaners year round, branding and weaning as the numbers dictate.

The larger structure of Pathfinder bulls have been a perfect fit for their roomy Santa Gertrudis females. After being a little dubious when they were first considering introducing Angus into the herd, they’ve found the results to be very convincing. “One of the appeals of Pathfinder, was the option to source the bigger framed types” Jamie said. “They’re really solid, decent sized bulls and very good doers and once they’re acclimatised, the heat up here doesn’t seem to worry them at all. Last month, I put one of our Pathfinder bulls over the scales and he hit the one tonne mark - in his working clothes and under very dry conditions”.

The only issue they’ve found is walking them long distances in very hot weather. With a 10km trek from the farthest corner of Wellwater to the yards, the mob are walked in, processed and walked back out again. “We find sometimes, if the Angus calves are very young, they just bail out, find some shade and won’t move for hours” Jamie laughed.

The Pathfinder bulls have stamped their progeny with their excellent temperament and are very easy to handle according to Jamie and Rachel and have found the Angus cross weaners very different to the Santa’s when it comes to breaking them in. “The blacks have a completely different flight zone and are quite a bit less sensitive. At first, we thought they’d run over the top of us in the yards, instead they’d come up pretty close compared with the Santa’s, which tend to hang back a bit. Once they’re broken in, they’re great to handle”.

A containment area was first established on the Sargood’s property, to combat drought conditions and they’ve lot fed steers for the past three years, on hay and pellets sourced from Rockhampton for 70 days, to heavy feedlot weights, then onselling on as heavy feeder steers.

The Pathfinder blood steers have stacked up extremely well in the feedlot. “They feed well, there’s no eye or pizzle issues and they’re no more or less trouble than our purebred Santa’s, with their standard weight gain in the feedlot being up to “a pretty phenomenal” 3kg/day and better” Jamie said.

The Sargood’s recently sold a load of 90 steers through Roma saleyards. Too heavy for the feedlots, weighing from 450-550kg (av 510kg) they were split into two mobs by colour – 45 reds and 45 blacks - both pens selling at similar prices. The pen of black steers (milk tooth) held their own and stacked right up against the Santa Gertrudis pen, selling at \$2360 or \$5.15/kg.

With the fourth crop of Pathfinder calves about to drop, Jamie and Rachel missed out on buying the stud’s new genetics last September at Roma when they couldn’t make it into the sale and had to bid by phone instead. Unfortunately, they didn’t manage to secure any of the bulls they selected. With the Angus breed making a big push into the central west Queensland area, Pathfinder have developed a very strong following making the sales very hotly contested.

“At the start, everyone thought it was crazy trying to introduce the Angus breed up here but instead, it’s proven to be pretty successful – although it’s imperative you get the right bull. If you buy something unsuitable for our conditions, it’ll just die because they can’t handle the heat. But if you stick to the best quality, you’ll be fine – Pathfinder have nailed it and their bulls have adapted perfectly. Overall, the trial has worked out well and we’re really happy with the Pathfinder genetics”.

# MANAGING YOUR NEW SIRE

*Dr David Rendell*

To the best of their ability Pathfinder have produced a fit, healthy sire and to get the most of your bull I would make the following suggestions:

When the bull/s arrives at your home, let them settle in by leaving them in the yards overnight and observe how they are reacting to their new home. Give them fresh water and good quality hay. If you have purchased only one bull, find a mate or two for him straight away. The mate should either be a single, similar sized and aged bull, or a few steers none of which are heavier than the bull.

If you have bought multiple bulls from a number of different management groups, it is often better to put all those new bulls of a similar weight and age together at once. Introducing new bulls into a mob one at a time can lead to the new bull being given a very hard time indeed by his contemporaries...

Your bull is still growing so for the first summer at least will need substantially higher quantity and quality of supplementary feed than do mature age bulls - another reason to run newly purchased sale bulls separately to older bulls. Bulls are much more susceptible to worms than cows and need around double the drenches particularly in the first year of purchase where they may benefit from up to 3 or 4 drenches.

Pathfinder drenched the sale bulls with Bomectin on the 18/01/22, and their next drench is not due until around 5- 6 weeks post the autumn break. In the first year after purchase, they should be drenched every 2- 3 months during winter and spring. In the second and subsequent years after purchase (cows all 3 years plus) a single midsummer drench and one or two winter drenches is all that is needed on most properties. Pathfinder has vaccinated your bull with 7 in 1, Pestivirus and Vibrio. To maintain this protection they will need vaccinating with 7 in 1 & Pestivirus annually, with Vibrio just prior to joining. In the seven weeks prior to joining and during joining inspect your bulls 3 x per week. It is very important to get prompt, meticulous treatment of any infection such as foot abscess, as ANY delay in treatment at this point can have serious effect on semen quality. During joining, you must remove the bull from the cows and treat at the very first sign of lameness or penis injury (e.g. sheath swelling, discharge or penis hanging out). You need to inspect the full length of the sheath as burst blood vessels can occur just in front of the scrotum. With any delay in removal and treatment, the chance of recovery plummets.

Swap bulls mid-joining especially if singularly mated. Record dates of swap and mob details etc. If observing a bull mounting, but not serving, you'll need to remove him from the cows for about four hours. Observe closely when the bull has been returned to cows. If the bull is sound and the cow is still on heat he will serve straight away.

Inspect bulls three times weekly during joining. For further advice please do not hesitate to call Nick as he knows your bull well.

***All bulls have been independently semen tested, structurally and docility assessed.***

## HEALTH & SAFETY OF VISITORS

All the sale bulls have been screened for temperament and are quiet to handle under normal circumstances.

However, there are inherent risks associated with cattle handling.

**VISITORS ARE ADVISED NOT TO ENTER THE CATTLE PENS, AND DO SO AT THEIR OWN RISK CHILDREN MUST NOT ENTER THE YARDS**

People entering the yards are at risk of injury. Be especially alert for bulls fighting and if one is playful with you, do not respond by patting his head. We do not expect the bulls to be aggressive with humans, but sale day places extraordinary pressure on them as they experience an entirely foreign environment. Remember the quietest bull is in fact an unpredictable animal.

Do not crowd the bulls or loiter inside the pens. We cannot cover every example of the dangers of cattle handling, so please use common sense and be alert at all times. Don't enter the pens unnecessarily. If you feel threatened whatsoever, please do not act hardy. Do what is necessary to ensure the safety of yourself and others in the pen. We don't expect problems, but it is critical that visitors pay attention to the risks associated with the day.

## **SALE**

### **Guarantee**

Pathfinder guarantees the structural integrity and fertility of all bulls. The entry of every bull constitutes a guarantee by the Vendor that the bull will be replaced (without interest, expenses, cost and damages) if a bull proves totally infertile, incapable of service or structurally unsound. If any bull entered does not possess a reasonable fertility although not totally infertile, any dispute shall be settled by an arbitrator appointed by the agent. Any complaint must be lodged with the agent within 12 calendar months of the date of sale. The cost of taking delivery of and returning the bull to the Vendor is to be borne by the Purchaser. A Veterinary Certificate shall be produced by the Purchaser when required. The agent will assist in settlement of any dispute, but will assume no responsibility for any breach of warranty.

### **Insurance**

All lots offered will be insured by the Vendor for a period of 14 days from the time of sale. Insurance covers death only, additional cover can be arranged at the sale.

### **Health, Fertility & Structural Soundness**

The inclusion of every animal in this sale catalogue is contingent upon the following criteria:

- We consider the animal free from faults likely to interfere with its ability to live a normal productive life.
- All bulls have been Semen tested and scrotal measured.
- All bulls have been vaccinated in January 2022 for Pestivirus and 7in1.
- All bulls have been given their 1st vaccination for Vibrio – the 2nd shot should be done prior to mating.
- All bulls have been drenched with Mectin in January 2022.
- All bulls are pedigree free or tested free of AM & NH genes. This allows all sale bulls to be used with confidence, regardless of pedigree.

### **Semen Rights**

Pathfinder retains 50 percent semen rights in all bulls sold.

### **Agent Rebate**

A 3% rebate is offered to outside agents introducing buyers 24 hours prior to the sale in writing and settling within seven (7) days.

### **Stud History**

The stud was founded in 1983 based on elite cows selected from The Basin, with additions of top female lines introduced since then. An extensive AI and Embryo Transfer program has been in place from inception to develop these leading edge genetics.

### **Management**

Since the establishment of the stud it has been the policy of the management to raise stud cattle under conditions similar to those applying to commercial beef productions.

### **NBRS Breedplan**

This superior performance recording option was adopted by the stud in 1994. Under Breedplan, calculation of an animal's breeding merit includes not only its own performance but also the performance information on all record relatives. It is now possible to make accurate comparisons between animals in different management groups and different years.

## IMPROVING FERTILITY AND PRODUCTIVITY WITH MULTIMIN<sup>®</sup> EVOLUTION

First cycle conception means calves will have an extra 20 to 40 days to grow. Multimin<sup>®</sup> Evolution has been shown to improve the **first cycle conception rate** by up to **19.4%**<sup>4,5,6</sup>

Pregnancy rates in breeding females treated with Multimin<sup>®</sup> Evolution are up to **12% higher**<sup>7</sup> than untreated females.<sup>4,5,7-9</sup>

Bulls treated with Multimin<sup>®</sup> Evolution 90 days prior to joining had a **22% higher sperm concentration** and significantly more motile sperm than control animals.<sup>10</sup> Improved sperm quality improves bull performance during the joining season.
