

## DOSING CAPSULES

For clean and easy loading.  
Dosing Capsules can be prefilled,  
stored in the Magazine, and inserted into the  
Filling Chamber before operation.  
This way, patients have their daily doses  
contained and portable.

Dosing Capsules are suitable for herbs.  
Liquids can be used with the additional  
Liquid Pad.\*

Also compatible with the **VOLCANO MEDIC**  
in combination with the **MEDIC VALVE**  
Filling Chamber Reducer.

\*Liquids are only to be used with the **VOLCANO MEDIC**

Certified Quality  
ISO 60.601 Medical Devices

## INTENDED USE

The **VOLCANO MEDIC** and the **MIGHTY MEDIC** are intended for vaporizing and subsequently inhaling cannabinoids. The goal is the application of active ingredients in the human body via the alveoli for the appropriate medical indication. It is suitable for the temporary inhalative application of cannabinoids prescribed by a physician for use at home or in a hospital.

## EFFICIENCY

The inhalative application of cannabinoids is by far the most preferred method to ingest cannabinoids. One of the reasons is the rapid onset of effect. Both, the **VOLCANO MEDIC** and the **MIGHTY MEDIC** ensure an effective inhalation. They vaporize cannabinoids by hot air, without combustion. Therefore, no noxious combustion substances are generated.

Reference values validated in studies show that approx. 1/3 of the cannabinoids inserted into the device enter the bloodstream. Since 2009, the **VOLCANO MEDIC** has allowed medical inhalation therapy with pure cannabinoids dissolved in alcohol and cannabinoids directly from dried hemp flowers. **VAPORMED** inhalers have been used in numerous medical studies and have established their reputation as certified medical inhalers for cannabinoids, licensed for Europe, Canada and other countries.\*

## MEDIC VALVE BALLOON

The removable Valve Balloon allows a large freedom of movement and an application independent of the basic device. Inhalation out of the Valve Balloon is comfortable due to practically no draw resistance.

## MEDICAL AND PORTABLE

The new **MIGHTY MEDIC** is the first medically approved portable inhaler. It uses a full hot air convection heating combined with additional conduction, ensuring an efficient vaporization from the first draw.

The mobile, battery-powered **MIGHTY MEDIC** vaporizer is characterized by its ease of handling. The two high-performance rechargeable batteries ensure a long period of use and short heating-up times. It also offers a Cooling Unit for pleasant inhalation:

Great performance, pocket sized.
