

What Is Cosmetic Dentistry?

Cosmetic dentistry is an approach of professional oral treatment that focuses on mending the view of your mouth, teeth and smile. And although [low cost cosmetic dentistry procedures](#) are consistently elective, preferably than critical, some cases of treatment further provide restorative benefits.

Types of **cosmetic dental treatments** are:

Teeth Whitening

Teeth whitening are credible the most generally recommended cosmetic dentistry procedure. Teeth are regularly stained from smoking, cuisine, drink (coffee, high tea or red wine) or poor oral hygiene. Bleaching the teeth enhances the view of your smile.)

Composite Bonding

Chipped, broken, discolored or decaying teeth can be repaired or have their view corrected using a procedure called composite bonding. A dental composite material by the entire glare of enamel and dentin is applied towards the cavity or onto the surface of a tooth.

Composite Veneers

Designed to replacement for tooth enamel, veneers are sharply, thin shells of tooth-colored things that cut back cover a diversity of dental imperfections.

Porcelain Crowns

Heavily decaying teeth can be covered mutually by natural-looking porcelain crowns, which relegate more spontaneous tooth structure than veneers.

Dental Implants

Dental implants are artificial tooth root replacements that are used as a symbol of prosthetic (artificial replacement) dentistry in term to regain for tooth loss.

Inlays & Onlays

Also known as suggested fillings, inlays and onlays restrained from porcelain or composite materials are a durable yet cosmetic way to provide a "filling" to teeth with tooth decompose or similar structural damage.
