

# Valve Is “not Planning To Disable Downloading Outdated Builds” On Steam

Replace - September 28, 2021: Valve has responded to claims that Steam could possibly be eradicating the choice to obtain older game versions.

September 28 - Valve has shared an announcement with PCGamer that explains the studio doesn't have plans to remove the option to obtain older recreation builds. “We are literally not planning to disable downloading previous builds,” a spokesperson tells the positioning. “What we're working on is an strategy on dealing with edge circumstances involving unowned content, and helping partners more simply take down builds that must be removed for things like copyright issues. We'll have more to share on that work when it's ready to ship.” Unique story follows.

The newest Steam beta has added a function that seemingly removes the power for users to roll again recreation updates or play older versions of games on Steam. Below the new version, customers cannot obtain depots of Steam games to play earlier updates of video games they personal - and lots of are sad about this variation.

There are lots of video games that change radically between updates - there's a whole fan collective devoted to discovering and archiving all the various versions of Minecraft over time, for instance, and the likes of Counter-Strike update commonly with large adjustments.

As of proper now, it's fully possible to obtain and play older versions of games owned on Steam with the help of someplace like SteamDB - all that you must do is find the depot of the version you want to play. Nevertheless, the September 23 beta replace of Steam has seemingly put a stop to this follow - so once this replace goes stay in Steam correct nobody will be capable to play older versions on Valve's shopper. This was noticed by SteamDB creator Pavel Djundik, who confirms that it might now be inconceivable to download older game depots of Steam video games and play them with this new code in place - no less than if Steam enforces it for all video games. Pavel additionally says that this implies SteamDB will now must “go again to the occasions where it may only monitor information for what it owns” if it goes ahead. You possibly can learn Pavel's full, detailed clarification over on SteamDB.

Last Steam beta introduced an vital change to sport downloads.

With this modification, it is not doable to obtain older recreation versions, because client asks for a code (GetManifestRequestCode) that rotates every five minutes.
