

A Widely Used
Ophthalmic Solution:

LOTEMAX

HISKART

About Lotemax

- Lotemax is widely recommended for inflammation in the eye.
- This drug is actively composed of Loteprednol as an active component.
- Loteprednol is an ophthalmic steroid.
- This is an H drug, which is a non-addictive medication.

How does Lotemax act?

- The corticosteroid Loteprednol in this Gel shows anti-inflammatory activity against causative agents.
- It effectively acts to prevent and reduce edema, collagen, fibroblast proliferation, and so on.
- Lotemax works for inhibiting the secretion of prostaglandins.
- This Lotemax is effective for different eye irritation problems.
