AuctionsPlus

Dear Friends,

Welcome to our 26th Annual Bull Sale. Thank you to those people who continue to support and believe in our breeding program.

The Pathfinder breeding program comprises a herd of 1800 stud and commercial Angus females, with over 1600 females inseminated to the industry's top sires and approximately 200 embryos implanted from our elite cows. We constantly scan Australia, USA, and New Zealand for sires that will make both our herd and our clients' herds more profitable. If there are better proven genetics out there, we will find them, however with our strict criteria of good structure and docility, combined with high scrotal, a lot of popular sires don't make it to first base!

We have a number of proven, high performance and new sires represented in 2023.

Calving-Ease Sires – Newly, Nobleman, General K7 and Komplete have proven that you can have calving ease, with plenty of growth and carcass. We don't have to put up with low growth to sleep at night during calving!

For Moderate Birth and Maximum Curve Bending Growth – super sires Nationwide, Beast Mode and ultimate Carcass Bulls - Intensity L519, Prophet, Pinnacle and Lotto have been included.

Breedplan has revolutionised our ability to make genetic progress, along with AI and ET, however the challenge is to find an optimal level of production traits that suit both our environment and premium market specifications. Our breeding philosophy is simple – we want the heaviest, thickest, docile calves possible from an unassisted birth and have carcass traits that provide feed-lotters with a high return. Most importantly, we want consumers to have a pleasurable eating experience – marbling is critical to achieve this. We have a policy of continually using the top proven sires that already have progeny performing under commercial conditions. This greatly increases the reliability and consistency of our bulls. These genetics are then transmitted to our clients' herds, resulting in an even drop of calves, with a higher percentage hitting premium specifications.

Having a well-bred herd of renown proven performance bloodlines adds huge value to your beef enterprise. If you need assistance in relating EBV's and sire selection for your production system, please don't hesitate to call. Our cattle are run at above district stocking rates with hay being fed sparingly. The bulls are normally grass-fed, giving a good indication of their doing-ability. Being a locally based owner/operator, we pride ourselves on providing service and back-up immediately, should the need arise. Our program of having mainly grass-fed semen-tested bulls from proven genetics has eliminated most of the common problems. We will be participating in the Victorian Beef Field Days on Friday, February 3rd and the South Australian Beef Field Days on Monday, February 6th, we invite you to inspect the bulls on these days, or on Sale Day, from 9.30. A light lunch and refreshments will be provided at the sale.

We look forward to seeing you there.

Nick, Sara, Elle, Harry, Tom & Linley.

"Family and family values are priceless. Relationships are how we relate to each other are also priceless.

We must seize the moment and make the most of every single day."

Moyle

PATHFINDER

THE ORIGIN

Nick and Sara were so taken by the American Angus Society Pathfinder program that it was an easy decision to call their stud Pathfinder.

The program identifies superior cows and sires based on their performance in the Angus Herd Improvement Records.

The focus is on performance traits that are economically important for efficient beef production. Pathfinder is an award for excellence.

It fits in well with the general philosophy behind Nick and Sara's herd. The Pathfinder program was started in 1978. The 2016 Pathfinder report listed 9,480 individual cows, and 268 sires, that met the criteria. Records of over 2 million eligible cows, and just over 7.5 million weaning records, were examined in the preparation of this report.

To qualify cows must calve at 2, 3 and 4 years of age, and each calf must weigh at least 5% above the herd average at weaning. Clearly they must be consistent performers over at least three calving's. Once a cow is designated as a Pathfinder cow she is a Pathfinder cow for life. She may however not qualify for listing every year once she has gained this status unless she meets certain production criteria. Bulls that sire five or more qualifying females also qualify.

The Australian Angus Society does not have a similar program to the American Pathfinder program. Nick said this did not stop them applying the same criteria in describing the quality of their herd. "Currently we collect a lot of information on each animal so it is not difficult to identify our elite performers."

The American Pathfinder selection criteria are the best, most simple and effective formula for a profitable beef herd. It is the core of Nick & Sara's breeding program.

Understanding Estimated Breeding Values (EBVS)

UNDERSTANDING ESTIMATED BREEDING VALUES (EBVS)

Calving Ease/Birth	CEDir	%	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	CEDir	%	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	GL	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
	BW	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.
Growth	200 Day	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
	400 Day	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
	600 Day	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
	MCW	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
	Milk	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
Fertility	DtC	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
	SS	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.
Carcase	CWT	kg	Genetic differences between animals in hot standard carcase weight at 750 days of age.	Higher EBVs indicate heavier carcase weight.
	EMA	cm ²	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate larger eye muscle area.
	Rib Fat	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more fat.
	P8 Fat	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcase.	Higher EBVs indicate more fat.
	RBV	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcase.	Higher EBVs indicate higher yield.
	IMF	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more intramuscular fat.
Feed/Temp.	NFI-F	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.
	Doc	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.
S Structure	Claw Set	score	Genetic differences in claw set structure (shape and evenness of claws).	Lower EBVs indicate a lower score.
	Foot Angle	score	Genetic differences in foot angle (strength of pastern, depth of heel).	Lower EBVs indicate a lower score.
	Leg Angle	score	Genetic differences in rear leg structure when viewed from the side (angle at front of the hock).	Lower EBVs indicate a lower score.
Selection Index	SA	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems.	Higher selection indexes indicate greater profitability.
	SA-L	\$	The SA-L index is similar to the SA index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the SA aims to maintain mature cow weight, the SA-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	Higher selection indexes indicate greater profitability.

THE MOST IMPORTANT PERFORMANCE TRAIT IS PROFIT

Profit is generated not only in the sale ring but also through an economic and efficient cow herd.

For over 60 years, selection of the most functional females from a continuous line of cow families, has developed a time proven cow herd that is known for quality, consistency and problem free genetics.

Over generations, fads have come and gone. But we have continually chosen our females based on efficiency and functionality. The result is a cow herd that delivers superior maternal traits, paying long term dividends.

From this productive cow herd, we offer sound, eye appealing, rising two-year-old bulls, to add economic strength to your herd.

The cows have worked for our family and their progeny can work for you.

MANAGING YOUR NEW SIRE

Dr David Rendell

To the best of their ability Pathfinder have produced a fit, healthy sire and to get the most of your bull I would make the following suggestions:

When the bull/s arrives at your home, let them settle in by leaving them in the yards overnight and observe how they are reacting to their new home. Give them fresh water and good quality hay. If you have purchased only one bull, find a mate or two for him straight away. The mate should either be a single, similar sized and aged bull, or a few steers none of which are heavier than the bull.

If you have bought multiple bulls from a number of different management groups, it is often better to put all those new bulls of a similar weight and age together at once. Introducing new bulls into a mob one at a time can lead to the new bull being given a very hard time indeed by his contemporaries...

Your bull is still growing so for the first summer at least will need substantially higher quantity and quality of supplementary feed than do mature age bulls - another reason to run newly purchased sale bulls separately to older bulls. Bulls are much more susceptible to worms than cows and need around double the drenches particularly in the first year of purchase where they may benefit from up to 3 or 4 drenches.

Pathfinder drenched the sale bulls with Bornectin on the 19/01/23, and their next drench is not due until around 5- 6 weeks post the autumn break. In the first year after purchase, they should be drenched every 2- 3 months during winter and spring. In the second and subsequent years after purchase (cows all 3 years plus) a single midsummer drench and one or two winter drenches is all that is needed on most properties. Pathfinder has vaccinated your bull with 7 in 1, Pestivirus and Vibrio. To maintain this protection they will need vaccinating with 7 in 1 & Pestivirus annually, with Vibrio just prior to joining. In the seven weeks prior to joining and during joining inspect your bulls 3 x per week. It is very important to get prompt, meticulous treatment of any infection such as foot abscess, as ANY delay in treatment at this point can have serious effect on semen quality. During joining, you must remove the bull from the cows and treat at the very first sign of lameness or penis injury (e.g. sheath swelling, discharge or penis hanging out). You need to inspect the full length of the sheath as burst blood vessels can occur just in front of the scrotum. With any delay in removal and treatment, the chance of recovery plummets.

Swap bulls mid-joining especially if singularly mated. Record dates of swap and mob details etc. If observing a bull mounting, but not serving, you'll need to remove him from the cows for about four hours. Observe closely when the bull has been returned to cows. If the bull is sound and the cow is still on heat he will serve straight away.

Inspect bulls three times weekly during joining. For further advice please do not hesitate to call Nick as he knows your bull well.

All bulls have been independently semen tested, structurally and docility assessed.

HEALTH & SAFETY OF VISITORS

All the sale bulls have been screened for temperament and are quiet to handle under normal circumstances.

However, there are inherent risks associated with cattle handling.

VISITORS ARE ADVISED NOT TO ENTER THE CATTLE PENS, AND DO SO AT THEIR OWN RISK CHILDREN MUST NOT ENTER THE YARDS

People entering the yards are at risk of injury. Be especially alert for bulls fighting and if one is playful with you, do not respond by patting his head. We do not expect the bulls to be aggressive with humans, but sale day places extraordinary pressure on them as they experience an entirely foreign environment. Remember the quietest bull is in fact an unpredictable animal.

Do not crowd the bulls or loiter inside the pens. We cannot cover every example of the dangers of cattle handling, so please use common sense and be alert at all times. Don't enter the pens unnecessarily. If you feel threatened whatsoever, please do not act hardy. Do what is necessary to ensure the safety of yourself and others in the pen. We don't expect problems, but it is critical that visitors pay attention to the risks associated with the day.

SALE BULLS

Special note:

The first 10 lots were hand-picked by the stud to be used over heifers prior to the sale because of their excellent phenotype and outstanding EBVs.

Due to them being out working, they loose weight compared to their contemporary group. To get the most accurate EBVs possible their 600 day weights are kept separate. Unfortunately in the last EBV run their data was not separated and because of this, their growth EBVs are inaccurate (lean working bulls compared to non working bulls)

We will have the rectified EBVs on the supplementary sheet at the sale. When you consider these bulls please chat to me regarding this.

Cheers, Nick

SALE

Guarantee

Pathfinder guarantees the structural integrity and fertility of all bulls. The entry of every bull constitutes a guarantee by the Vendor that the bull will be replaced (without interest, expenses, cost and damages) if a bull proves totally infertile, incapable of service or structurally unsound. If any bull entered does not possess a reasonable fertility although not totally infertile, any dispute shall be settled by an arbitrator appointed by the agent. Any complaint must be lodged with the agent within 12 calendar months of the date of sale. The cost of taking delivery of and returning the bull to the Vendor is to be borne by the Purchaser. A Veterinary Certificate shall be produced by the Purchaser when required. The agent will assist in settlement of any dispute, but will assume no responsibility for any breach of warranty.

Insurance

All lots offered will be insured by the Vendor for a period of 14 days from the time of sale. Insurance covers death only, additional cover can be arranged at the sale.

Health, Fertility & Structural Soundness

The inclusion of every animal in this sale catalogue is contingent upon the following criteria:

- We consider the animal free from faults likely to interfere with its ability to live a normal productive life.
- All bulls have been Semen tested and scrotal measured.
- All bulls have been vaccinated in January 2023 for Pestivirus and 7in1.
- All bulls have been given their 1st vaccination for Vibrio – the 2nd shot should be done prior to mating.
- All bulls have been drenched with Mectin in January 2023.
- All bulls are pedigree free or tested free of AM & NH genes. This allows all sale bulls to be used with confidence, regardless of pedigree.

Semen Rights

Pathfinder retains 50 percent semen rights in all bulls sold.

Agent Rebate

A 3% rebate is offered to outside agents introducing buyers 24 hours prior to the sale in writing and settling within seven (7) days.

Stud History

The stud was founded in 1983 based on elite cows selected from The Basin, with additions of top female lines introduced since then. An extensive AI and Embryo Transfer program has been in place from inception to develop these leading edge genetics.

Management

Since the establishment of the stud it has been the policy of the management to raise stud cattle under conditions similar to those applying to commercial beef productions.

NBRS Breedplan

This superior performance recording option was adopted by the stud in 1994. Under Breedplan, calculation of an animal's breeding merit includes not only its own performance but also the performance information on all record relatives. It is now possible to make accurate comparisons between animals in different management groups and different years.

IMPROVING FERTILITY AND PRODUCTIVITY WITH MULTIMIN[®] EVOLUTION

First cycle conception means calves will have an extra 20 to 40 days to grow. Multimin[®] Evolution has been shown to improve the **first cycle conception rate** by up to **19.4%**^{4,5,6}

Pregnancy rates in breeding females treated with Multimin[®] Evolution are up to **12% higher**⁷ than untreated females.^{4,5,7-9}

Bulls treated with Multimin[®] Evolution 90 days prior to joining had a **22% higher sperm concentration** and significantly more motile sperm than control animals.¹⁰ Improved sperm quality improves bull performance during the joining season.
