

# This Minecraft Fan's Recreation Of FFXIV's Kugane Is Stunning

A Minecraft player has put a blocky spin on Remaining Fantasy XIV's Kugane city, and it seems pretty darn impressive. I spotted ZombieSpaceApe's build on Reddit while waiting in certainly one of FFXIV Endwalker's hefty queues, so I reached out to ask them just a few questions - I imply, I definitely won't be taking part in Endwalker anytime quickly.

ZombieSpaceApe tells me that they had been impressed by the presence of Kugane's domineering tower and the problem of recreating a build large enough to capture the sense of the jap-influenced city adequately. "There is a certain permanence to Minecraft," they say. "Once you build one thing, it's in your world forever. As with all nice artwork, like Kugane, it's inspiring, and i selfishly wished to have it ceaselessly. Not that it doesn't exist in FFXIV, however there may be sure possession in realizing that you positioned every block."

ZombieSpaceApe tells me that they initially tried to put the muse by eye but swiftly ran into bother. Whereas one specific brick in FFXIV then gave them a way of the spacing they wanted in Minecraft, it wasn't till they stumbled upon another area with ten bricks in a line that they'd the "Rosetta Stone for the remainder of the build".

It took the Minecraft fan round four months to complete the Kugane build, though it wasn't without extra challenges. Whereas System32 'll be able to float around in Minecraft's creative mode, you have no such luxury in Remaining Fantasy XIV. As such, ZombieSpaceApe found it difficult to get the "proportion and appropriate detail" of specific locations like the structures that line the castle wall.

Here's the construct:

So, what's next? ZombieSpaceApe tells me that they wish to deal with Eulmore and probably its inside, which will certainly keep them busy for another four months no less than. They haven't decided if they're going to make the map available for obtain, though that's partly because they're undecided how to try this, precisely.

FFXIV has now got a spherical of fixes for Endwalker login errors, so you must have a better time getting in than I did. If you're looking for some aid, though, our FFXIV Reaper and FFXIV Sage guides will level you where it's worthwhile to go to get the brand new jobs unlocked.

For extra cool Minecraft builds, you can click on that hyperlink. Someone has spent 13 days building a large Oreo in survival mode, and you know what? All the facility to 'em.
