BIBLIOGRAPHER

Leslie S. B. MacCoull
The idea of producing a dictionary of Byzantine studies was formulated by the late Gyula Moravcsik in an article published in 1949 (Byzantinoslavica 10 [1949] 7). Several years later, Johannes Irmscher developed this proposal during a visit to Moscow, and plans were made to prepare such a dictionary as a joint German-Soviet enterprise; however, the project was never launched. In 1968 Peter Wirth in Munich began publication of an ambitious work, entitled Reallexikon der Byzantinistik, rivaling Pauly-Wissowa's Real-Encyklopädie in scope; this dictionary collapsed after the appearance of a few fascicles.

In America plans for the preparation of a dictionary of Byzantium began to materialize at Dumbarton Oaks in 1980 in conversations among Alexander Kazhdan, Anthony Cutler, Speros Vryonis, and Jelisaveta Allen. With the encouragement and support of Giles Constable, then director of Dumbarton Oaks, editorial and advisory boards were established, a preliminary list of entries was drawn up, and in 1982 an initial application was made to the National Endowment for the Humanities. After the receipt of NEH funding, the project formally commenced in November 1983; in 1984 an office was established at Dumbarton Oaks and a contract was signed with Oxford University Press.

A number of existing encyclopedias deal to a limited extent with Byzantine history and culture. In some of them Byzantium is considered as an integral part—but only a part—of the subject matter; to this category belong, first and foremost, the Lexikon des Mittelalters (as yet unfinished) and the recently completed Dictionary of the Middle Ages. Other encyclopedias include separate fields of Byzantine studies, limited chronologically (thus Pauly-Wissowa's Real-Encyklopädie elucidates the history of the late Roman Empire and also treats later authors relevant for ancient history) or topically (there are numerous patristic, theological, liturgical, and church historical dictionaries and encyclopedias as well as reference books on prosopography, topography, art, and iconography, including the Prosopography of the Later Roman Empire, the Prosopographisches Lexikon der Palaiologenzeit, the Tabula Imperii Byzantini, and the Reallexikon zur byzantinischen Kunst). Ours is, however, the first attempt to collect within a single work data concerning all fields of Byzantine studies.

Encyclopedias differ in that some of them (such as the Real-Encyklopädie or the Dictionnaire d'histoire et de géographie ecclésiastiques—the latter still in progress) claim comprehensiveness of both information and bibliography, while others are selective and therefore more concise (e.g., the three-volume Dizionario patristico di antichità cristiane). The Oxford Dictionary of Byzantium (hereafter ODB) was from the outset planned as a selective dictionary following the model of other Oxford dictionaries.
As a result it was necessary to make choices in three areas: the number of entries, their length, and the bibliographical references.

From the very beginning we limited the ODB to approximately five thousand entries. It goes without saying that this is a number insufficient to include all Byzantine names and terms; thus we had to decide who and what would be treated, who and what would be excluded. Only one category, that of the Byzantine emperors, is complete, while a selection has been made among saints, patriarchs, writers, places, fiscal and administrative concepts, and so forth. The decision process was long and painful: we started it before the editorial board was fully operative, we consulted with members of the Dumbarton Oaks community, in 1986 we published the preliminary Working Lists of entries and distributed this pamphlet to leading Byzantinists. We continued to make changes in the list right up to the time of galley proofs, thanks to the understanding of the Oxford University Press. The final result is comprehensive coverage of all aspects of Byzantine history and civilization, with special depth in subjects such as bureaucratic titles and fiscal terms, urban life, and rural economy.

Our original goal was to create a work of approximately 1.1 million words, exclusive of bibliographies. We established the average length of an entry as two hundred words and of a major article as one thousand words, but we did grant our contributors some latitude. We restricted bibliographical references: we requested that only one edition of a text (the best) be indicated and that the “literature” section include no more than four or five items. As a consequence, however, of adding new entries in the course of our work, of increasing the wordage of many entries in order to permit adequate coverage of the subject matter, and of expanding the bibliographies to incorporate the most recent scholarship, the completed product is considerably longer than anticipated, a three-volume work of approximately two million words, including bibliographies. We were able to keep revising the bibliographies until June 1989; in only a few instances was it feasible to add references to new editions, articles, and monographs that appeared in 1989 and 1990.

We decided to divide the subject matter into about 135 “clusters” of entries and invited certain contributors to serve as cluster leaders responsible for a particular topic such as fiscal system or geography of Asia Minor. In most instances, the cluster leader was asked to write both a general survey article on his or her topic of specialization as well as the related shorter entries. Our reasoning was that the system of clusters would permit more coherence within the group of entries and more flexibility for these contributors who, in the course of work, were to decide which person or object was more and which less significant; we also expected thereby to lessen repetitions and inconsistencies. Certainly, the system had its shortcomings: often it was impossible to make a strict separation between different clusters, and some topics appeared in different clusters, even under different names. Some cluster leaders subcontracted a part of their entries, thus multiplying the legion of contributors. It is our judgment nevertheless that this system helped to
produce a certain uniformity and to avoid unnecessary duplication of information.

It was difficult to impose a consistent structure on the entries and especially difficult to decide whether an entry should merely state facts or should also include source references, scholarly discussions, and scholarly doubts. Thus many entries have no scientific scaffolding and supports, while others are heavily loaded with scholarly apparatus. This difference in treatment has been determined both by the preference of individual contributors and by the controversial nature of certain topics. In any case, we tried to avoid unilateral solutions and sometimes presented in the running text, or at least in bibliographical references, conclusions we or our contributors do not share.

We also faced the difficult question of to what extent a dictionary should summarize already established data and to what extent authors should go beyond the déjà connu and suggest new viewpoints and new solutions. At the beginning, we set as our goal the summation of elementary knowledge about Byzantium; it turned out, however, that there are many questions that have not even been asked and many traditional views that are not substantiated by the sources. We found ourselves obliged to touch upon topics developed by western medievalists but not yet studied by Byzantinists and to question a number of traditional perceptions and dates.

Preparation of the ODB was the joint effort of more than a hundred contributors, dozens of cluster leaders, and a handful of editors. Could such an assemblage reach a unified approach and work as a team? We tried to achieve such a goal but were not always successful. Over a seven-year period we had long discussions, both at meetings and in correspondence; the editorial board insisted, surrendered, and insisted again, and frequently was unable to find unity within its own ranks. Nevertheless we hope that in the end we managed to develop certain general principles, even though they could not be uniformly applied, partly owing to the lack of data, partly to the strength of traditional approaches.

First of all, we addressed issues of chronology and geography. The chronological scope of the dictionary was defined as the period from the 4th to the 15th century; classical authors such as Euripides and Plato are included, but discussion of them is focused on the transmission and knowledge of their writings in Byzantium. The post-Byzantine tradition (Byzance après Byzance) was deliberately omitted. It proved much more difficult to set geographical limits for the ODB because of the constant fluctuation in the borders of the empire and the far-ranging impact of Byzantine culture and its contacts with distant lands. All regions that at any time formed part of the Byzantine Empire are covered, as are sites outside the empire's borders that had significant connections with Byzantium. In entries treating areas bordering on the empire, the emphasis is on relations with Byzantium or Byzantine culture. Thus, the ODB entries on the Qur'an and Muhammad differ greatly from their counterparts in the Encyclopedia of Islam, in that they focus on Byzantine perceptions of the Holy Book and Prophet of Islam. To
take another example, in the realm of art and architecture, only those churches of medieval Serbia have been emphasized for which it can be demonstrated that Byzantine artists or architects were primarily responsible.

The second principle we followed was to make the entries in the ODB interdisciplinary in nature. We wanted to have entries in which history, philology, art, and liturgy were interwoven and combined; even short entries were sometimes written by three professionals so that a person or an event is viewed from several vantage points. This approach is closely linked to our belief that elements of Byzantine culture did not exist in isolation.

This brings us to the very complex problem of whether Byzantium was a living, developing organism or only a guardian of ancient and patristic traditions. The question is complex since so much in Byzantium imitated the past and the sources themselves gloss over changes and alterations, but in the words of Paul Lemerle “to represent Byzantium as immutable over a period of eleven centuries is to fall into a trap set by Byzantium itself” (Lemerle, Cinq études 251). In fields as disparate as literature, military strategy and organization, science, medicine, law, and philosophy, the editorial board has taken the position that Byzantium did not merely transmit the traditions of antiquity but developed its own models and worldview.

A final point is that the ODB includes many topics not normally found in traditional encyclopedias and dictionaries. The editors have made a deliberate attempt to emphasize realia and the man in the street (homo byzantinus), with special focus on subjects such as the family, diet, emotions, and everyday life.

It is our hope that the ODB will provide its reader with a body of knowledge about Byzantium. We also expect it to demonstrate many areas of study that are still underdeveloped, unclear, and confused, and by so doing to stimulate the further evolution of our discipline.

NOTE TO THE READER

Entries in the ODB are arranged in alphabetical order, strictly letter by letter, not word by word. A space between words is thus ignored, so that Leo Grammatikos precedes Leonard of Chios, but Leo of Catania follows Leontios Scholastikos. Entries on emperors, popes, patriarchs, and others with identical names are arranged in chronological order. Cross-references, indicated by small capitals (e.g., FARMS, IRENE), will guide the reader to other entries that should offer pertinent related information. We recommend that the reader doing research on a topic also consult the major survey article; thus, someone interested in farms might also read the article on agriculture, where numerous other relevant entries will be mentioned.

Some monuments are subjects of independent entries made under the name of the specific church or monastery (this is the case for the
monuments and monasteries of Constantinople, Athos, and Thessalonike), while others are discussed in entries under the name of the site (as for Mistra, Venice, Rome, etc.). Many artists and architects who are not subjects of separate entries are discussed in the major articles on artists and architects, respectively. Toponyms are generally listed under the form of the name commonly used in the Byzantine period, for example, Ankyra instead of modern Turkish Ankara. Modern names are used for sites for which the medieval name is unknown or uncertain, for example, Alahan Manastiri, Umm el-Jimal.

References to primary sources are given in two different ways: either the work is cited in the form of a bibliographic abbreviation (e.g., Theop. or De cer.), which can be found in the list of bibliographic abbreviations, or the name of the author or text is printed in small capitals, to indicate that the cross-referenced entry will provide information on editions of the works.

Greek terms and the names of most people and places have been strictly transliterated, but in many instances a traditional latinized or anglicized form (e.g., Homer, Aeschylus, Thebes, Nicaea) was used. We have also adopted the anglicized form of Greek first names that are common in English, for example, John, Nicholas, Peter. Armenian has been transliterated in accordance with the guidelines of the Revue des études arméniennes, Arabic and Ottoman according to the rules of the International Journal of Middle East Studies. For Slavic languages we have followed the “modified Harvard system,” employed in Byzantinische Zeitschrift. In Latin we have used the initial form jv-, rather than iv-, for example, jugum, jus; we also distinguish between v and u.

The bibliographies are selective and emphasize monographs on a given subject; they are supplemented by bibliographical citations in the running text. Usually the most important item is listed first, but in some cases a recent book or article was added at the end. In order to avoid repetition, some works have been omitted from the bibliography of an entry if they are listed in the bibliography of another entry cross-referenced in the text. For the sake of simplicity, many articles are cited in the reprint edition of a scholar’s articles (such as Variorum Reprints), with the date of original publication indicated in parentheses. For books, reprint information is given wherever known. When possible, we have tried to emphasize works in western European languages (especially English), but where appropriate a conscious decision was made to include numerous works in Greek, in Slavic and other eastern European languages, and in languages of the Middle East.

Among the challenges faced by the editorial board was that of reconciling our contributors’ differing definitions of the term Byzantine and their often conflicting terminology for the successive stages of Byzantine history. In early drafts of entries the period from the 4th to 7th century was variously termed late antique, early Christian, late Roman, early Byzantine, proto-Byzantine, and even late Byzantine (by scholars dealing with the history of Syro-Palestine and Egypt). The term Middle Byzantine was used by different contributors to refer to the 8th to 11th century, the 9th to 12th century, etc. Because of the lack of precision
and confusion engendered by Byzantinists' inconsistent terminology for the periodization of Byzantine history, the editors have tried to substitute exact centuries wherever possible. In general, the ODB has chosen to use the term *late Roman* or *late antique* for the period of the 4th to the early or mid-7th century and to employ *Byzantine* for phenomena of the 7th century and later, but inevitably there are inconsistencies in our usage.

**ACKNOWLEDGMENTS**

*The Oxford Dictionary of Byzantium* would never have been realized without the assistance and goodwill of numerous institutions and individuals.

Three successive directors of Dumbarton Oaks have supported the project in manifold ways, beginning with the initial encouragement given by Giles Constable, who provided invaluable advice during the early phases of organization, preliminary overtures to the National Endowment for the Humanities, and negotiations with publishers. His successors, Robert Thomson and Angeliki Laiou, have continued this policy of strong institutional commitment and have also themselves made a scholarly contribution to the *ODB* by writing and reviewing entries. Throughout the long years of the project, Dumbarton Oaks has provided office space, paid some staff salaries, made accommodations available, and offered various kinds of administrative and logistical support. We are grateful to the staffs of the Financial Office (especially Marlene Chazan and José García), the Byzantine Library (especially Irene Vaslef, Steve Rouser, and Mark Zapatka), and the Department of Visual Resources (especially Natalia Teteriatnikov and Astrid Williams), who helped to administer our grants and finances, to track down obscure bibliographic citations and rare and missing books, and to provide photographs for the illustrations, respectively.

The Advisory Board, composed of six senior scholars, played an important role in the planning of the *ODB*, reviewing general guidelines and advising on the list of entries and selection of contributors. The advisers have supported the project throughout its duration, as contributors and especially as reviewers of entries written by other scholars.

We also wish to acknowledge warmly the important contribution to the project of Gary Vikan, one of the two original editors for art history, who had to leave the Editorial Board at the end of 1984. He was extremely helpful in the early phases of the project, especially in revising the list of art entries and in preparing the initial application to the National Endowment for the Humanities.

We would indeed be remiss if we did not pay special tribute to our 127 contributors from seventeen different countries whose combined efforts were essential for the realization of this project. In order to avoid the translation of entries, we looked first to scholars from English-speaking countries, but for certain specialized topics we were not able
to adhere to this principle. Many of our contributors not only agreed
to serve as cluster leaders and to write large numbers of entries but
also were collaborators in the true sense of the word, working with the
editors as a team and demonstrating a concern for the relationship of
their entries to the _ODB_ as a whole.

One of the advantages of preparing the _ODB_ at Dumbarton Oaks has
been the availability to the editors of the many American and in-
ternational scholars who visit the Byzantine Library to conduct their
own research. Many of these individuals have been extremely generous
in their willingness to read and comment upon sizable groups of en-
tries. Entire clusters were reviewed by Ute Blumenthal (Papacy), Rob-
ert Browning (Rhetoric, Literature, Education), Bernard Coulie (Ar-
menia, Georgia), Paul Hollingsworth (Russian Literature), David Jacoby
(Economy/Agrarian Relations), Leslie MacCoul (Coptic Art and Ar-
chaeology), Cyril Mango (Culture), Michael McCormick (Papacy), John
Meyendorff (Ecclesiastical Structure, Church Councils, Patriarchates),
Nicolas Oikonomides (Bureaucracy, Athos), Andrzej Poppe (Russian
Literature and Geography), Lennart Rydéén (Hagiography), Ihor Šev-
čenko (Palaeography, Antiquity, Literature, Late Byzantine Authors),
Irfan Shahid (Ethiopia and South Arabia), and Rainer Stichel (Theol-
ogy). Some scholars in permanent residence at Dumbarton Oaks who
also reviewed entries are Jelisaveta Allen (Serbian Geography), Ange-
liki Laiou (Economy, Family, Urban Life), and William Loerke (Architec-
ture). Furthermore we wish to acknowledge the advice from afar of
János Bak (who read the entries on Hungary), Dimitri Conomos (Hym-
nography), Elena Metreveli (Armenia, Georgia), and Isidore Twersky
(Jews). Many other scholars read and commented on individual en-
tries; we regret that it is not possible to mention them all by name.

One of our greatest difficulties was in reconciling conflicting systems
of transliteration for the many languages cited in the _ODB_. We are
particularly grateful for the assistance of Steven Reinert and Elizabeth
Zachariadou with Ottoman Turkish, of Sidney Griffith and Peter Cowe
with Syriac, of Robert Thomson with Armenian and Georgian, of Irfan
Shahid with Arabic, and of Leslie MacCoul with Coptic. Stefan Gero
also counseled us on the translation of theological terminology from
German into English.

We would also like to recognize the difficult assignment capably ex-
ecuted by Ruth Macrides and Kenneth Wesche, who translated from
German the clusters on law and theology, respectively.

The _ODB_ project has been fortunate to enjoy throughout its course
the services of a devoted and able staff. Catherine Brown Tkačz, who
joined the project in January 1984 as project coordinator and then be-
came project manager, was responsible for the challenging task of de-
signing the computer programs and organizing office procedures. In
addition to performing countless other duties in connection with the
management of the project for more than four and a half years, she
also served as assistant editor.

After her resignation in 1988, Catherine Tkačz was succeeded as
project manager by Margaret Scrymser, who had originally joined the
staff in 1986 as project assistant. Margaret ran the office efficiently and calmly for the final two years of the project, supervising staff and volunteers during a period of constant deadlines and never-ending pressure. In addition she keyed all final revisions into the computer before the entries were sent to press and oversaw the process of bibliographic verification.

Another key staff member during the final phase of the project was Susan Higman, who served as assistant editor in 1989–90. She was an invaluable assistant to the executive editor as well as serving as liaison with Oxford University Press, coordinating the checking of galley proofs, and performing numerous other tasks. Roberta Goldblatt preceded Susan as assistant editor for a few months in 1988–89.

An essential part of the preparation of the ODB was the keying of more than five thousand entries, a challenging assignment because of the multilingual character of the material. Catherine Tkacz and Margaret Scrymser keyed a large number of entries during the early years of the project. We also wish to acknowledge with gratitude the skilled work of Gerry Guest (fifteen months, 1988–89), whose computer expertise was invaluable, and Leilani Henderson (ten months in 1989–90). Jane Baun and Barbara Hartmann also did clerical work for short periods of time in 1986.

For almost two years (1988–90) Leslie MacCoull faithfully carried out the tedious but necessary task of verifying the more than thirty-five thousand bibliographic citations. Her scholarly background and linguistic ability made her ideally suited for this assignment, and we are much indebted to her. Monica Blanchard of the Institute of Christian Oriental Research at the Catholic University of America made available to us the specialized resources inventory of the institute’s library and helped with the verification of Georgian bibliography.

A loyal group of volunteers assisted the project in many ways: processing new entries, filing and other clerical tasks, proofreading, maintaining a bibliographic inventory, bibliographic research, and providing computer expertise. We are enormously in the debt of this cheerful band of men and women, who were willing to undertake almost any task at hand. Without their services we would never have been able to complete the project within the time allotted. In order of years of service, we wish to express our profound thanks to Helen McKagen, Peggy Nalle, and Joan Theodore (six years); Eleanor Hedblom (five years); Jane Woods (three years); Teresa Mc Ardle, Ginger McKay, Betty Wagner, and Hal Warren (one to two years); and Jane Baun, Gianni Guindani, Patricia Hardesty, and Paul Hollingsworth (less than one year). In addition, Michael Tkacz helped out on more than one occasion over a four-year period.

A special word of appreciation is due to James C. Moeser, dean of the College of Arts and Architecture at the Pennsylvania State University, and to G. Micheal Riley, dean of the College of Humanities at the Ohio State University, for agreeing to release Anthony Cutler and Timothy Gregory, respectively, from some of their teaching duties so that they could carry out their editorial responsibilities.
We have benefited from the expert advice and assistance of the Oxford University Press throughout our long years of common association. In the early stages of the project we worked closely first with David Attwooll and then with William Mitchell as executive editors of reference books. Since 1988 we have had a congenial working relationship with Claude Conyers, editorial director for reference books, and with Jeffrey Edelstein, who served as the Press's project editor during the demanding final phases of the project. Among former staff members at Oxford University Press, we should like particularly to thank Marion Britt.

A project of this magnitude and duration required considerable financial assistance. From the beginning we have received the indispensable support of the National Endowment for the Humanities, which has provided both outright grants and matching federal funds. In addition we wish to thank particularly the Andrew W. Mellon Foundation and Dumbarton Oaks, which supplemented Endowment funding with generous grants throughout the seven-year period of preparation of the *ODB*. The Getty Grant Program of the J. Paul Getty Trust and the Samuel H. Kress Foundation were also major benefactors, making substantial contributions to offset costs relating to art historical portions of the project. We are also most appreciative of the funds provided by the Menil Foundation, the Gordon Fund, Capt. Nicholas Kulukundis, and Helen McKagen.

BYZANTIUM
AARON ('Ααρών), brother of Moses and first high priest of the Israelites, plays a significant supporting role in a number of events in Moses' life, notably those illustrated in the extensive cycle (between Ex 4:14 and Num 20:29) in the Octateuchs. An attempt to show Aaron in the priestly vestments described at length in Exodus 28 is also made in the illustrated MSS of Kosmas Indikopleustes, in the text of which their symbolism is considered (Kosm. Ind. 2:74–81). Usually Aaron is identified merely by the priestly diadem. He occasionally appears among the Prophets in monumental art as a companion to Moses, or as the bearer of the rod, considered one of the prefigurations of the Virgin. In Palaiologan churches more complex Marian connections with Aaron were derived from the liturgy (G. Engberg, DOP 21 [1967] 279–83).

Lit. H. Dienst, LCI 1:2–4.  
—J.H.L.

AARONIOS ('Ααρώνios, 'Ααρών), Byz. noble family descended from the last Bulgarian tsar, JOHN VLADISLAV, whose wife Maria was granted the title ZOSTE PATRIKIA soon after 1018 and settled in Constantinople. Her older sons were involved in plots and rebellions: Presianos ca.1029, Alousianos in 1040. The third son, Aaron, who gave the name to the lineage, was governor of Iberia (ca.1047), Mesopotamia (ca.1059), and perhaps of Ani and Edessa; his son Theodore, governor of Tarōn, fell in battle against the Turks in 1055/6. Another Aaron governed Mesopotamia in 1112. Seals of Radomir Aaron, strategos and doux, are preserved, but his identification remains problematic; he probably belonged to the family, since Radomir was also the name of Maria's fifth son. The Aaronioi were in double affinity with the KOMNENOI: Isaac I married Maria's daughter, Catherine, and Alexios I married the granddaughter of Ttioan, IRENE DOUKAINA. In 1107, however, the Aaronioi were exiled for participation in a plot against Alexios I. THEOPHYLAKTOS of Ohrid dedicated two epigrams to a certain Aaron whose relationship with the lineage remains unclear. After Alexios I's reign, the family became obscure; Isaac Aaron from Corinth, interpreter at Manuel I's court, apparently did not belong to the aristocracy. In 1393 Alexios Aaron went as ambassador to Russia. The Alousianoi belonged to this lineage. (See genealogical table.)

ABASGIA. See ABCHASIA.

`ABBĀSID CALIPHATE (750–1258), ruled by a dynasty whose members were descendants of the uncle of Muḥammad, al-`Abbās ibn `Abd al-Muṭṭalib ibn Ḥāshim. His great-grandson Muḥammad and his son Ibrāhīm prepared the revolt in Khurāsān against the Umayyad Caliphate. Although the Umayyads captured Ibrāhīm, his brothers Abū`l-`Abbās and Abū Ja`far energetically continued the struggle. Proclaimed caliph in 749, Abū`l-`Abbās became known as al-Saffāh, “the Bloody.” His brother, Abū Ja`far al-Manṣūr, made Baghdad his residence. The `Abbāsid dynasty counted among its most illustrious caliphs Harūn al-Rashīd. The dynasty weakened after Turkish mercenaries became important in the caliphate of Mu`tāsīm in the 830s, and the Mongols under Hulagu destroyed it at Baghdad in 1258. (See [table for a list of `Abbāsid caliphs of Baghdad.] A few of the `Abbāsid family escaped to Egypt, where one became nominal caliph under the name of al-Mustanṣir. The last `Abbāsid caliph was al-Mutanawakkil, who surrendered all civil and religious authority to the Ottoman sultan Selim I in 1517 and died in 1538.

The early `Abbāsid caliphs, culminating in Harūn, showed zeal in fighting the Byz. The last major campaign by an `Abbāsid caliph against Byz. occurred under al-Mu`tāsīm in 838. Yet there were important cultural contacts, including embassies in which such scholars as Photius and John (VII) Grammatikos participated. These contacts led to exchanges of information and copying of MSS on mathematics, astronomy, astrology (esp. in the caliphate of al-Ma`mūn), literature, and music (and probably musical instruments, such as water organs). This intercourse probably reached its zenith in the 9th-C. Muslim geographers (see Arab Geographers) who wrote important descriptions of Byz. during the `Abbāsid caliphate. The deterioration of central authority in Baghdad reduced Byz. diplomatic contact with Baghdad and increased it with the border emirs.

ABBREVIATIONS (sometimes called compendia), found in inscriptions, papyri, and MSS, were frequently substituted for words, syllables, or the ending of words or single letters to save time and space. Sometimes the abbreviations include recognizable Greek letters, usually in ligature; more commonly they are composed of a variety of strokes and dots, similar to modern shorthand. The breathings and accents are often included. A particular kind of abbreviation is the nomina sacra, first used for Christian sacred names in papyri

and uncial MSS, for example, XC for Χριστός.
In minuscule MSS from the 9th C. onward, the
nominia sacra occur in nonbiblical contexts also
(e.g., anthropos, pater), even for compounds like
patrarches or philanthropia. The abbreviations for
endings in book script are sometimes identical
with elements from tachygraphy. Monograms
sometimes use an abbreviated form of a name.

E.G., A.M.T.

ABCHASIA (Ἀβσάργια), northern portion of an-
cient Colchis bordering on the eastern shore of
the Black Sea. In the 4th C. Abchasia became part
of the kingdom of Lazika; it probably developed
only in the 6th C., even though Theodoret of Cytthus mentioned its existence in 423. Similarly,
though the Arabic version of Agathangelos claims
that Abchasia was Christianized at the order of St.
Gregory the Illuminator, the surviving Armeni-
ian version lacks this information, pointing again
to a post-6th C. date.

Byz. became familiar with Abchasia during the
Lazic wars of the 6th C. when they built the
fortresses of Sebastopolis and Pitiunt (mod. Pitzunda); a large proportion of Byz. eunuchs were
said to have come from this region. The empire
maintained some sovereignty over this area from
the period of Justinian I to that of Herakleios and
of the Arab invasions, when power passed to the
native Anch'abadze eristavi, who assumed the title
of kings of Abchasia late in the 8th C. They
expanded their territories toward western Iberia
(K'art'li) until checked by the Bagratids of Tao
in the 10th C. In 989 Bagrat III, son of Gurjan,
Kouropalates of K'art'li, inherited Abchasia through
his mother Guranduxt Anch'abadze. Although
Basil II prevented his inheriting from his adoptive
father David of Tayk/Tao in 1000/1, Bagrat received the title of Kouropalates from Byz. His
inheritance of K'art'li from his natural father in
1008 joined the crowns of Abchasia and K'art'li
to form the first united kingdom of Georgia.

N.G.G.

'ABD AL-MALIK, son of Marwan I; Umayyad
caliph (685–705); born 646/7, died 9 Oct. 705.
Campaigning already at 16 under Mu'awiyah, 'Abd
al-Malik was a determined foe of Byz. through-
out his reign. He particularly aimed at eliminating
Byz. influence in the caliphate: Arabs replaced
bureaucrats of Greek descent, Arabic became the
official language, and coins were minted without
Greek inscriptions or Byz. images. After his acces-
sion, internal opposition, the invasion of Armenia
by Leonios, and raids by the Mardaites compel-
el him to renew the agreement that had been
made between Constantine IV and Mu'awiyah. The
ten-year treaty, signed most likely in 688, required
Justinian II to withdraw the Mardaites from Leb-
anon and 'Abd al-Malik to pay a weekly tribute
of 1,000 solidi, one horse, and one slave, and
stipulated that the revenues from Cyprus, Arme-
nia, and Georgia be shared equally. During
this period 'Abd al-Malik probably received Byz.
help in building the Dome of the Rock in Jeru-
salem.

In the early 690s hostilities flared. Although
Theophanes the Confessor (Theoph. 365,8–21) blames Justinian for attempting to resettle Cyprus and
refusing to accept 'Abd al-Malik's new coinage,
the aggressor was likely 'Abd al-Malik, who
eliminated his final domestic rival in 692 and may
have resented the appearance of Christ's image
on Justinian's own coinage. His brother Muham-
mad defeated Justinian in 693 as a result of the
desertion from the Byz. ranks of Nebonos and
his Slavic troops. 'Abd al-Malik's son, 'Ubayd Al-
lah, invaded Armenia and captured Theodosiou-
polis in 700, and in 702 Muhammad attacked
Armenia IV and took Martyropolis. Despite a Byz.
invasion of Syria, 'Abd al-Malik had effectively
subdued Armenia by 703. During a lull in the
fighting the caliph reportedly allowed Tiberios II
to repatriate Cypriot captives and repopulate Cyprus with them. He also attacked Byz. lands in the West; armies sent from Egypt in 694–98 captured Carthage (see John Patrikios) and ended Byz. control of North Africa.

‘ABDISHÔ BAR BERIKÂ, or Ebedjesus, a polymath monk, Nestorian metropolitan of Šobá (Nisibis) and Armenia, and prolific writer in Syriac; died 1318. ‘Abdishô composed influential works of biblical commentary, theology, and liturgical poetry. For the Byzantinist, his most important writings are the List of all the Ecclesiastical Writers and the Collection of the Synodical Canons. The former is a bibliography of church books, metrically composed and arranged in four parts: books of the Old Testament, books of the New Testament, books of the Greek fathers, and books of the Syrian fathers. The Collection of the Synodical Canons, in the form that goes back to ‘Abdishô, bears the name Nomokanon and is a systematic presentation of the church laws: the first division gives laws affecting lay persons; it is followed by a second part containing laws dealing with church organization and the clergy. Some MSS also include a Syriac version of the Apostolic Canons, and the canons of the synod of the Nestorian katholikos Timothy I (760–823).

ABEL. See Cain and Abel.

ABGAR. See Mandylion.

ABINNAEUS ARCHIVE, the papyri of Flavius Abinnaeus, Roman praefectus alae of Dionysias in the Fayyûm, covering the years 340/1–351. The documents, 80 in Greek and two in Latin, probably came from Philadelphia in the Fayûm and were acquired in 1893 by the British Museum and the University of Geneva. They include letters, petitions, contracts, accounts, and Abinnaeus’s narrative of his appearance before Constantius II and Constans at Constantinople in 337/8. He had accompanied envoys from the Blemmyes to the capital and later was stationed among them for three years. He served as garrison commander at Dionysias, was dismissed, but sought successfully to be reinstated. He married Aurelia Nonna, an Alexandrian. His papers illustrate the extent to which 4th-C. civilians in Egypt appealed to the military power for justice. His correspondents include Christian clerics and lay people, soldiers, and ordinary inhabitants of his district. His archive forms a small but rich source for provincial administration in the post-Constantinian period.

ABIOTIKION (ἀβωτικίον, from abiotos, lit. “unlivable”), a charge on the transfer of the property of an individual who died intestate and without children. Andronikos II’s novel of May 1306 (Reg 4, no.2295) states that in this case the property of the deceased should not be divided solely between the fisc and “those churches or monasteries that held [the person] as paroikos” (Zepos, Jus 1:534–31–32), but a third part must go to the surviving spouse. It is unclear from the novel whether the ecclesiastical institution was granted its share as the paroikos’s lord or for memorial rites (mnemosyne). A charter of 1311 shows that the lord could replace the fisc: a certain Doukopoulos confirmed the transfer to the Docheiarious monastery of two-thirds of the property of “his inherited paroikos” (i.e., the mnemosyne and the lord’s share) and transmitted to the monastery another third part (meridikon triton) that he had received from another paroikos who had died without children (Docheiar., no.11.1–8). The term abiotikion is known from 1259 on (Lawra 2, no.71.80) as a tax on the childless recipients of an inheritance: thus an act of 1400 (?) mentions the collectors of abiotikion (MM 2:342.28) who demanded that a widow display “the hyperpyra listed in the will.” Abiotikion is mentioned in several chrysobulls, usually together with the phonikon and parthenophthoria. In 1440 the abiotikion in Monemvasia was used for the repair of the fortifications (E. Vranoussi, EIBalk 14 [1978] no.4:83–85).

The right of the state and the church to inherit the property of a person who died intestate was
recognized by Byz. law: Constantine VII enjoined that in such a case two-thirds of the hypostasis be given to the relatives or the fisc and one-third to God for the salvation of the soul of the deceased (Zepos, *Jus* 1:237.3–6). The novel of 1306 prescribed that after the death of a child who had only one parent his property was to be divided between the surviving parent, the parents of the deceased parent, and the church. This regulation, dubbed trimoira by modern legal historians, probably originated from local customs (N. Matzes, *BNJ* 21 [1971–74] 177–92). (See also INTESTATE SUCCESSION.)

—A.K.

**ABLAHIUS** (Ἀβλάβως), an influential family in the eastern part of the later Roman Empire. The family founder was Flavius Ablabius, a Cretan. A man of humble origin, he served under the governor of Crete, then went to Constantinople where he amassed a fortune. He became a member of the senate under Constantine I and was praetorian prefect from 329 to 337 (*PLRE* 1:3) or after 326 (O. Seeck, *RE* 1 [1894] 109). Constantius II dismissed Ablabius and banished him to his estates in Bithynia; he was eventually executed. In 354 his daughter Olympias married Aršak III, king of Armenia. Flavius’s son Seleukos, a pagan, supported Julian, but Seleukos’s daughter Olympias became the staunchest ally of John Chryso- stom. The family was still influential at court in 431 when Cyril of Alexandria proposed to bribe Ablabius, *domestikos* of the quaestor.

The Ablabii were an educated and intelligent family: although none of their works survives, it is known that Flavius wrote verses on Constantine; Seleukos reportedly composed a history of Julian’s Persian campaign; a certain Ablabius compiled a history of the Goths based on Gothic legends; and the death of a physician Ablabius was lamented by Theosebia, a poet of the 5th/6th C. (*AnthGr*, bk.7, no.559). The Ablabii are a rare example of a relatively stable aristocratic family in the East.

—A.K.

**ABORTION** (άμβλασις), usually motivated by illegitimate conception, was practiced in Byz. but condemned by both imperial legislation and church canons. Justinian’s Digest included excerpts of early Roman law that frowned on the practice; both those who concocted abortifacient potions and the women who underwent the abortion were punished. Especially among prostitutes, however, the use of abortifacients persisted; according to the scurrilous account of the young Theodora by Prokopios (*SH* 17.16), ingredients for these drugs were well known and easily available in the 6th C. Abortion spikes are preserved in collections of Roman surgical instruments; Aetios of Amida records recipes for abortifacient drugs in his 16th *Sermo* (ed. S. Zervos, *Aetios: Peri tou en metra pathous* [Leipzig 1901] 18–22). Zonaras mentions the use of a weight to compress the abdomen (Rhalles-Potles, *Syntagma* 3:63f). In the 14th C. the price of an abortifacient drug was five hyperpyra, a cloak, and a glass vase (MM 1:548.25–26). Significantly, 6th-C. Byz. medical thought held that abortion was impossible after the fetus had taken on “human form.” Aetios writes that abortifacients were to be used only in the third month of pregnancy. Civil and canon law, however, and lay opinion equated abortion with murder, notwithstanding the age of the embryo. (See also CONTRACEPTION.)

—J.S., A.M.T.

**ABRAHA** (Ἀβραὰμος), Axumite ruler of ḤIMYAR in South Arabia, from 535–58 (Lundin, *infra* 86). According to Prokopios (*Wars* 1.20.4), Abraha was a Christian, the slave of a Roman trader in ADULIS in Ethiopia. A soldier or officer in the Axumite army occupying Ḥimyar, he led a revolt against Esimphaios (probably Sumayfa Ashwa’), the representative of ELESOAM in South Arabia. He assumed power but acknowledged vassalage to Axum by paying tribute. Abraha consolidated Ḥimyar and in 547 carried out a successful expedition in central Arabia.

Abraha maintained an alliance with the Roman Empire, and Justinian I attempted to use him in military operations against Iran; although the emperor sent several embassies to Ḥimyar, he could not persuade Abraha to act. Abraha possibly shifted South Arabia from Monophysitism to Orthodoxy;
he built a pilgrimage church (al-Qalîs, from ekkle-
sia) at Ṣan‘ā’ (I. Shahid, DOP 33 [1979] 27, 81f).

LIT. A. Lundin, Južnaja Aravija v VI veke (Moscow-
Leningrad 1961) 61–87; S. Smith, “Events in Arabia in
the 6th c.,” BSOS 16 (1954) 431–41.

- A.K.

ABRAHAM (אִבְרָאָם), Old Testament patriarch
(Gen 11–25). In patristic literature Abraham
was interpreted as an ideal of asceticism and
obedience to God: his departure from Canaan
indicated the necessity of purification in order
to achieve the Promised Land. He is said to have
lived 175 years in hesychia, prætes, and justice,
and his demise is described in an apocryphal Testa-
ment of Abraham.

From the early period, Abraham appears in
a number of scenes, such as the Philoxenia. The
most popular seems to have been the Sacrifice of
Isaac (Gen 22), found already in the Synagogue
at Dura Europos and included in the Commen-
datio animae. The dramatic nature of this scene
was explored, for example, by Gregory of Nyssa,
in terms that imply familiarity with an image (PG
46:572CD). This text was cited in support of holy
images at the Second Council of Nicaea (Mansi
433.8) and others emphasized that Christ was
both the beloved son (like Isaac) and the sacrificial
lamb. These eucharistic connotations were some-
times exploited visually, as at S. Vitale in Ravenna.

Narrative cycles of Abraham’s life are found, no-
tably at S. Maria Maggiore in Rome (432–49), in
5th/6th-C. Genesis MSS, and in the later Kosmas
Indikopleustes and Octateuch MSS, which may
derive from earlier sources. Christ’s parable of
the rich man and of Lazarus in Abraham’s bosom
(Lk 16:19–31) provided Abraham with a place in
New Testament illustration, notably in the icono-
graphy of the Last Judgment. On the basis of
his appearance, St. David of Thessalonike was
described by his 8th-C. biographer as a new Abra-

ABRAMIOS, JOHN, astrologer and astronomer;
fl. Constantinople and Mytilene, 1370–90. Abra-
mios (אֶבְרָעִים) practiced magic and cast hor-
oscopes on behalf of Andronikos IV and his son
John VII, in their quarrels with John V and
Manuel II. His most important role was as the
editor of texts of classical astrology, the author
of treatises on astronomy (opposed to the Pto-
lemaic tradition of Theodore Metochites, Ni-
kephoros Gregorias, and Isaac Argyros, Abra-
mios followed the Islamic tradition of Gregory
Choniaides, George Chrysokokkes, and Theo-
dore Meliteniotes), and as the founder of a
school in which these activities were continued
until ca.1410. His successors were Eleutherios Ze-
slenos, also known as Eleutherios Elias (born
1343), and Dionysov (PLP, nos. 6012, 5441).

A number of MSS of astronomical, astrological,
medical, magical, and rhetorical content pro-
duced by Abramios and his school survive. They
produced editions of Ptolemy, pseudo-Ptolemy,
Hephaestion of Thebes, Olympiodorus of Al-
exandria, and Rhetorios of Egypt. These edi-
tions are characterized by changes in both the
grammar and the order of the presentation of
the technical material of the original texts, and by
the insertion of extraneous material into them.
These MSS also contain some examples of Greek
translations of Arabic astronomical texts, notably
the Mysteriae of Abū Ma‘ṣhar and the Introduction
of Aḥmad the Persian.

In 1376 Abramios wrote a treatise on the con-
junctions and oppositions of the sun and moon
based on the New Tables of Isaac Argyros, but
then criticized his source because he followed Ptolemy
rather than the Persian Tables popularized by
Chrysokokkes. This led to the computation by
both sets of tables of the dates, and sometimes
the details, of 39 lunar and solar eclipses between
1376 and 1408, and an inept attempt to prove
that the Islamic value for the rate of precession
of the equinoxes is superior to that of Ptolemy.

Horoscope of CP,” in Prismata 305–15. PLP, no.57.

- D.P.

ABRITUS (אָבְרִיטָס), late Roman city at Hisar-
lük near Razgrad in northeastern Bulgaria, where
in 251 Decius was defeated and killed. The city
continued to exist despite successive invasions un-
til the end of the 6th C., when the Avars destroyed
it. In the 7th or 8th C. a Bulgarian settlement was
established on the ruins of the Roman city, but it
was abandoned in the late 10th C. as a result of an attack by the Pechenegs or Rus’.

Excavations since 1953 have revealed a city built on the typical Roman grid pattern, with Ionic colonnades along the principal streets. Many statues, reliefs, mosaics, and inscriptions bear witness to the prosperity and culture of Abritus in Roman times, but little is known of the Bulgarian site.

—R.B.

ABÚ AL-FIDÁ‘, more fully Iṣmā‘īl ibn ‘Ali Abū al-Fidá‘, Syrian scholar-prince related to the Ayyūbid rulers of Hamāh; born Damascus Nov./Dec. 1273, died Hamāh (EIPHANEIA) 27 Oct. 1311. A man of wide-ranging military and political experience, he participated in the campaigns against the Franks and established a political position in Hamāh (1299), becoming governor in 1310. Invested as sultan of Hamāh in 1320, he retained the title until his death. A generous patron, he was also esteemed for his poetry and learning. He may have known some Greek; he was certainly interested in Byz. affairs and Greek culture, about which he sought information from travelers and pilgrims.

His two extant Arabic works, though largely derivative, remain useful. The Concise History of Mankind, a universal history based on Ibn al-Athfr, ends with the memoirs of Abū al-Fidā‘ (1285–1329). Though preoccupied with the Franks and Mongols, he discusses developments in Armenia and Cappadocia in the Palaiologan period, provides valuable details on the social relations between Christians and Muslims in Asia Minor, and recounts the fall of Rhodes to the Hospitallers in 1308. In his descriptive geography, Survey of the Countries (written in 1321), material on Syria includes well-informed personal observations. For Byz. lands, he relies on eyewitnesses for the topography and monuments of Constantinople, the cities of Asia Minor, and possibly details on Byz. administrative geography.

—L.I.C.

ABŪ BAKR (‘Abūbēlēchos, ‘Apōtákērs), first caliph and successor of Muhammad from 8 June 632; born shortly after 570, died Madīna 22/3 Aug. 634. After crushing rebels in the Riddah Wars following the death of Muḥammad, Abu Bakr’s armies scored major early successes against the Byz., including the battles in the ‘Arabah (May 633) and at al-Fustār or the camp of Areopolis (Ar. Māb, mod. Rabba), and at Dathin and Ajnādayn (July 634), as well as the occupation of much of the land east of the Dead Sea; in his lifetime the Muslims seized Transjordania and southern Palestine from the Byz. Abu Bakr skillfully selected his generals and directed them from Madīna, but did not personally fight against Byz. armies or visit conquered Byz. territories or towns. He possessed great leadership qualities, which contributed significantly to the consolidation and advance of Islam. He also showed a sense for military strategy and operations, although Hera kleios and contemporary Byz. commanders probably did not consider him a serious opponent. His motives and calculations concerning Byz. can only be inferred, for no contemporary source details his decision to invade Byz. Syria. The invasion of Iraq also took much of his attention. Most scholars now accept the historicity of his caliphate, which Crone and others had challenged (P. Crone, M. Cook, Hagarism [Cambridge 1977] 28, 178, n.72, partly retracted in P. Crone, M. Hinds, God’s Caliph [Cambridge 1986] 111–13).

—W.E.K.

ABŪ FIRĀS, more fully al-Ḥārith ibn Saʿīd ibn Hamdān al-Ṭaghlibī, Arab prince, warrior, and poet; born Iraq 932, died Syria 4 Apr. 968. His mother was of Byz. origin, and after his father’s death in 935 he grew up under her care and the patronage of his Ḥamānīd cousin Sayf al-Dawla at Aleppo. He participated in several expeditions against Byz. and in 962 was wounded and captured by Theodosios Phokas. Kept in chains at Charsianon, he later enjoyed princely treatment in Constantinople, was focal in negotiating a general exchange of prisoners, and was finally released in 966. Legend credits him with a spectacular escape from an alleged earlier imprisonment. While governor of Manbij, he was killed during his unsuccessful revolt against Sayf al-Dawla’s son.
As poet-warrior Abū Firās reflected the ideal of Arab chivalry and sincerity; spontaneity and verve characterize his poetry. He is most esteemed for his Byzantine Poems (Rūmiyyāt) composed during his captivity, expressing defiance in adversity, yearning for loved ones, and reproach to Sayf al-Dawla for delay in ransoming him. His poems, often with his own illuminating historical notes, provide important information on expeditions, frontier toponymy, Byz. prosopography (e.g., the Phokas and Maleinos families), conditions of prisoners, and Byz.-Arab mutual perceptions, as in his debate with Nikephoros Phokas on the fighting abilities of Byz. and Arabs.

ABŪ MĪNĀ, famous Early Christian settlement (the ancient name is unknown) and pilgrimage center in Mareotis, west of Alexandria, where the underground tomb of St. Menas was venerated from the late 4th C. onward. The inner core consists of a large square, with xenodochia on the north and churches on the south. The martyrion over the saint's tomb is the most important of the churches. Its earliest foundations date from the late 4th C.; enlarged several times, it was rebuilt under Justinian I as a tetraconch. To the east is a large transept basilica (early 6th C.), to the west a baptistery. At the south rear lies an unusual semicircular structure which probably held incubation rooms for sick pilgrims. There are also two baths within the town, colonnaded streets, and many private houses. Other churches have been found in the environs of Abū Minā. A basilica to the north is a very regular building extra muros, closely connected with a residential quarter that perhaps served as the residence for non-Chalcedonians. A church to the east, another tetraconch, is surrounded by several houses for anachoretes. All churches and official buildings were built of local limestone. For their decoration extensive use was made of marble spolia from destroyed buildings in Alexandria. The famous Menas flasks were produced as pilgrim souvenirs at Abū Minā from the early 6th C. onward.

During the Persian invasions of 616–20 Abū Minā was almost totally destroyed, and it was rebuilt only modestly afterwards. After the Arab conquest (639–42) the town, which was formerly Chalcedonian, came into the hands of the Coptic Monophysite church, and presumably about the time of the Coptic patriarch Michael I (744–68) the martyrion was rebuilt as a five-aisled basilica. The site was finally abandoned after the 10th C.

ABYDIKOS (άβδικος), an official in control of navigation. The name is evidently derived from Abydos and originally designated the inspector of sea traffic through the Hellespont. Ahrweiler suggests that he was a successor to the archon or komes of the Straits (ion Stenon) or of Abydos, known from an edict of Anastasios I, from Procopios, and other sources. The term later acquired a generic meaning; abydikoi of Thessalonike, Amisos, Chrepos, and Euphras are mentioned on seals. His function could be combined with that of kommerkarios. A military rank on the staff of the Drungarios tou Ploimou, abydikos was equivalent to, and commonly replaced, the rank of komes. It remains under discussion whether the abydikos was the same official as the paraphylax of Abydos mentioned frequently on seals. Abydikoi are attested until the early 11th C.

ABYDOS ("Αβύδος), city on the Hellespont, near modern Çanakkale. Abydos and Hieron were the two customs posts where taxes were assessed on shipping to and from Constantinople. Abydos was administered by an archon or komes ton Stenon who commanded a small fleet, stopped illegal transport of weapons, checked travel documents, and collected taxes. The amounts were fixed by a decree of Anastasios I that forbade excessive charges (J. Durliat, A. Guillou, BCH 108 [1984] 581–98). Justinian I replaced this system with a customs house (demostion telometion) under a komes with a fixed salary. Abydos long retained its function: its archon or komes is attested through the
10th C. Taxes collected there were reduced by Empress Irene in 801; the Venetians won a special reduction in 992. This function was so important that the name Abydos was applied to similar officials throughout the empire. Abydos was a strategic naval base subordinate to the theme of the Aegean Sea; it later became a separate command under its own strategos (or katepano, mentioned in 1086: LaVra 1, no.48.3). Its role and location made Abydos the frequent target of foreign and domestic enemies from the 7th through the 12th C. It was taken by the Venetians in 1204 and remained Latin until its reconquest by John III Vatatzes. By that time it had yielded in importance to Callipolis; the last period of its history is obscure. Originally a suffragan bishopric of Kyzikos, Abydos became a metropolis in 1084. No remains have been reported.

—C.F.

ACADemy OF ATHENS, a school of higher education, claiming descent from Plato’s Academy, which preserved the traditions of Neoplatonism. It flourished in the 4th C. and attracted both pagan and Christian students, including Basil the Great, Gregory of Nazianzos, and Julian the Apostate. Students formed close groups around their teachers, and fights between different groups were common. By the end of the 4th C. and in the 5th C. the Academy had acquired a predominantly pagan character with such teachers as Plutarchos, Syrianos, and the philosopher Proklos. The teachers emphasized the importance of ancient traditions and the role of the “divine philosopher” as opposed to the “tyrant.” After the death of Proklos (485), Alexandria briefly evolved into the leading center of philosophical study, but at the beginning of the 6th C., under Damaskios, the Academy again became the most influential pagan school. Malalas (Malal. 451.16–18) records that in 529 Justinian I forbade the teaching of philosophy and law in Athens, but some teaching continued there. Circa 532 leading philosophers from Athens emigrated to Persia; disappointed in Chosroes I, who turned out not to be an ideal philosopher-king, they came back to the Byz. Empire. Damaskios, however, returned not to Athens but to Emesa in his native Syria. The Academy continued to function and, despite confiscations, still possessed substantial funds in the 560s. According to the autobiography of Ananias of Sirak, an anonymous “doctor from Athens” was a famous teacher in Constantinople at the beginning of the 7th C. (Lemerle, Humanism 92f).

The commentaries on Plato and Aristotle by such teachers as Proklos and Simplikios provide an idea of the range and quality of teaching in Athens. The Life of Proklos by Marinos and the Life of Isidore by Damaskios give a picture of the activity and attitudes of teachers at the Academy.

—A.K., R.B.

ACANTHUS (ακάνθος), classical Greek term for a perennial plant, common to the Mediterranean, whose leaf form inspired decorative motifs in architectural sculpture, particularly the Corinthian capital. In the 5th and 6th C., the traditional, naturalistic form of the acanthus was modified by flattening the leaves against a deeply undercut ground and creating a lacy texture of light and dark, solid and void, punctuated by deeply drilled points (Grabar, Sculptures 1, pls. XIX–XX). The organic Roman form thus became an abstract motif used as an element of overall pattern. “Wind-blown” capitals of the 5th C. preserve the naturalistic treatment of the individual leaves but twist the entire form, denying its mass. The motif was further applied to a wide range of architectural features—impost blocks, capitals, architraves, and archivolts. The acanthus remained an abiding decorative feature in sculpture and other media. Delicate, lacy friezes decorated arcades and marked interior divisions between domes, drums, and bodies of churches. Acanthus motifs were also used on icon frames, arcosolia, and templen barriers, as at Hosios Loukas and the Chora (Grabar, Sculptures II, pls. XVII–XX, CVII).

—K.M.K.

ACCIAJUOLI (Ατζαιώλης), name of a Florentine banking family, one branch of which rose to
prominence in 14th-15th-C. Greece; etym. Ital. acciaio ("steel"). The Acciajoli first made their fortune in Italy in the 12th C. through the operation of a steel foundry; they then turned to banking. By the 14th C. they had amassed considerable wealth and were closely linked with the Angevins of Naples. In addition to holdings in Italy, Niccolò Acciajoli (died 8 Nov. 1365) acquired extensive lands in Greece, particularly in Elis, Messenia, and Kephalenia (P. Topping, Studies on Latin Greece A.D. 1205–1715 [London 1977] pts. V, VI). In 1358 he was granted the Corinth region by Robert II, son of Catherine of Valois. He undertook the repair of fortifications at the Isthmus of Corinth.

The family reached its height in Greece during the reign of Nerio I Acciajoli (died 25 Sept. 1394), lord of Corinth (1371–94), who took Athens from the Catalans on 2 May 1388 and founded a Florentine duchy of Athens (which included Thessaly). Nerio I was succeeded as duke of Athens by his illegitimate son Antonio I, who enjoyed a lengthy and relatively peaceful reign (1403–35). The Acciajoli family maintained its rule over Athens until 4 June 1456, when the city fell to the Turks. Franco Acciajoli, the last duke of Athens (1455–56), spent his final years as lord of Thessaly (1456–60) until he was murdered at the command of Mehmed II. The Greek branch of the family intermarried with the Palaiologos and Tocco families.

The Acciajoli property in the Morea, known from acts of donation, included fields, vineyards, meadows, forestland, etc. The documents list the paroi who were attached to the land, as well as their animals, and enumerate the rental payment owed by each peasant, usually in cash.

—A.M.T.

ACCIDIE. See Akedia.

ACCLAMATIONS (sing. ευθημία, πολυχρόνιον). Cadenced unison shouts, which applauded or criticized magnates and esp. emperors, characterized Byz. public life. Against the silence attending the emperor’s appearances or the reading of his words, acclamations manifested public reaction. Thus, acclamations by the army and people formed the key consensual act in an imperial CORONATION. Acclamations at public meetings (e.g., church councils) were increasingly written down, painted, or inscribed in public places in the 4th–5th C. and developed their own iconography. Chants or loyal petitions improvised at the circus offered Byz. crowds a rare channel of communication with their rulers; acclamations concerning provincial officials were forwarded to the prince as evidence of public opinion (Cod. Theod. I 16.6).

Acclamations grew more complex and formalized as the factions orchestrated their performance. The 9th- and 10th-C. acclamations of De ceremoniis show uniformly obscure texts performed at every ceremony by imperial employees under the præpositos (McCormick, Eternal Victory 223–25). This elaborateness and professional performance pushed acclamations toward political poetry and culminated, for example, in Theodore Prodomos. The army and public continued to voice shorter, more formulaic shouts, like those appearing on coins (e.g., DOC 3.1:177), as responses to the factions’ acclamations and esp. to demonstrate loyalty in crises. Usurpers supposedly extorted them by force (John Mauroposium, no.186.25, ed. Lagarde, p.189) and their potential insincerity fooled no one (Themistios, Orationes 8, 1:156.1–3). At 9th- and 10th-C. state banquets and audiences, organs gave the cue for all to stand and join the factions in acclaiming the emperor (Oikonomides, Lists 203,31–34).

In all periods legitiMcy, divine support, orthodoxy, victory, and long life were favorite themes. Acclamations often observed a responsorial pattern, whereby persons were acclaimed, starting with God or the emperor and proceeding in order of precedence, followed by specific praises or requests. Acclamations’ content thereby illuminates the ceremonies they accompanied. Late Roman acclamations mixed Greek and Latin, but gave way to overwhelmingly Greek texts by the 10th C.; a few fossilized Latin acclamations continued to be performed on special occasions. Rough isosyllab and rhythm of stress accent determined the metrical structure of acclamations (P. Maas, BZ 21 [1912] 28–51; Cameron, Circus Factions 329–33) and anticipated developments of Byz. prosody like POLITICAL VERSE.
ACCLAMATIONS, APOTROPAIC, words or phrases expressing religious conviction in brief, exclamatory form, often found on amulets. At first simple utterances of shared religious feeling, such acclamations lent themselves naturally—because of the frequency with which they invoke the power of the deity—to eventual apotropaic use; for instance, praise of God invokes his aid against demons. Some (e.g., Hygieia, “health”) are little more than banal expressions of good luck, while others (e.g., Heis Theos ho nikon ta kaka, “One God conquering evil”) are more specifically directed against evil spirits. The roots of Christian apotropaic acclamations lie in the ceremonial protocol of the Hellenistic and Roman imperial courts, for example, the Trisagon (Hagios, Hagios, Hagios), which appears frequently on amulets of the 5th through 7th C.

Lit. E. Peterson, Heis Theos (Göttingen 1926). —G.V.

ACHAIA (Ἀχαία). The toponym Achaia has several meanings in the Byz. period.

1. It was a late Roman province embracing the Peloponneseos and central Greece south of Thermopylae, identified by Hierokles with Hellas and credited with 79 cities. The capital was Corinth. Under Diocletian, Achaia was part of the diocese of Moesia, but it was later transferred to Macedonia under the praetorian prefect of Illyricum. Most of the province (with the exception of its western parts) was eventually included in the theme of Hellas. The ecclesiastical province of Achaia survived, but presumably designated only the Peloponneseos; Patras is listed as its metropolitan see from the 8th or 9th C.

2. In a general geographic sense, the term refers to the northwestern Peloponneseos, whose main city was Patras. Aside from a narrow coastal strip along the Gulf of Corinth, Achaia is mountainous and sparsely populated. Among the churches of the region is the Panagia at Mentzaina, a timber-roofed basilica, dated to the mid-10th C. (A.G. Moutzale, Archaiologika Analetka Athenon 17 [1984] 21-42).

3. Achaia was also the name of a Frankish principality founded in southern Greece after the Fourth Crusade (see Achaia, Principality of).

Paul (2 Cor 5:1) to describe metaphorically the resurrected body of Christ, the term *acheiropoietain* was applied to images of sacred persons that came into existence miraculously, usually at the will of that person. The most famous *acheiropoietain* not only appeared miraculously, they could also replicate themselves miraculously. *Acheiropoietai* are cited first and most often in the period between Justinian I and Iconoclasm, the most important of them emerging in the context of the Persian Wars: the MANDYLION, the KERAMION, and the images of the KAMOULIANAI Christ, which Herakleios carried into battle like a new LABARUM. The same period yields reports of other *acheiropoietai*: the imprint of Christ’s face on a cloth in Memphis, his imprint on the column of his flagellation in Jerusalem, and an *acheiropoieton* of the Virgin Mary at Lydda (Diospolis). Several of these are described in the LETTER OF THE THREE PAPIARCHS, but only the Mandylion and Keramion continued to be represented after Iconoclasm. Few other *acheiropoietai* are known. With rare exceptions they represent either Christ or Mary. It is no longer possible to associate the shroud described by Nicholas MESARITES in 12th-C. Constantinople with that most enigmatic of *acheiropoietai*, the imprinted linen cloth known as the Shroud of Turin.

**ACHEIROPONETOSCH**. The Church of the Acheiropoietos (*"Αχειροποιηστός*, lit. "not-made-by-hands") in Thessalonike is so named because it housed a miraculous icon (see **ACHEIROPONETOS**) of the Virgin Hodgetria (A. Xyngopoulos, Helenika 13 [1954] 256-62). Dedicated to the Virgin, the Acheiropoietos was a wooden-roofed, three-aisled basilica, approximately 28 m wide and 36.5 m long (nave alone). The aisles are screened from the nave by high stylobates, there are galleries above the two side aisles, and the outer narthex was flanked by towers. Perhaps the earliest of the churches still standing in the city, it was probably built between 450 and 470; bricks from the fabric of the building have been dated to ca.450 (M. Vickers, BSA 68 [1973] 285-94) and the mosaics of birds, chalices, and crosses in the soffits of the nave arcade in the church are assigned to the period 450-60 (Ch. Bakirtzes in Aphieroma ste
ACHILEUS (Ἀχέλευς), a river (or, according to Skyl. 203.95, a fortress) near ACHILALOS where SYMEON OF BULGARIA won a decisive victory over the Byz. on 20 Aug. 917 (in Skyl., 6 Aug.). The Byz. army, commanded by Leo PHOKAS, domesticos ton scholon, was accompanied by the fleet under ROMANOS I LEKAPENOS. Romanos headed for the mouth of the Danube, where he expected to find Pecheneg auxiliaries; the Serbian prince Peter was also expected to join the Byz. Symeon launched his attack before these forces could unite. Skylitzes (Skyl. 203.94–204.37) provides two explanations of the defeat. According to the first version, Leo Phokas's horse bolted and returned riderless to camp, causing the soldiers to think that Leo had fallen in battle. The second version recounts that Leo was pursuing the Bulgarians when he heard a rumor that Romanos Lekapenos had diverted to Constantinople in order to seize the imperial power; immediately Leo headed for camp to learn the truth. Whatever the cause, the Byz. were routed, many commanders were killed (including Constantine Lips), and Leo barely escaped to MESEMBRIA.

-A.K.

ACHILLES, the principal Greek hero of the Iliad. Achilles retained his popularity well beyond late antiquity. This popularity can be explained by the search for the ideal warrior, still as apparent in the 11th-C. Kynegetika (Weitzmann, Gr. Myth., fig. 103) as in the 5th-C. illustrated Iliad in Milan (Ambros. F 205 inf.). The education (PAIDEIA) of Achilles by the centaur Cheiron was contrasted with Christian principles of upbringing (M. Hengel, Achilles in Jerusalem [Heidelberg 1982] 45–47), but still literally depicted on bone caskets and in MSS of the homilies of Gregory of Nazianzos (Weitzmann, Gr. Myth. 165–68). Later, Christian rhetoricians (e.g., Prokopios of Gaza) tried to adapt the theme of the paideia of Achilles to their own moralistic ideas; it appears as an exemplary education in many Byz. writers.

The Byz. gradually divested Achilles of his military prowess: in similes of Niketas Choniates, in the Histories of Tzetzes, even in the commentary of Eustathios of Thessalonike on the Iliad, Achilles is primarily a physician, a musician, a sober man. In his commentary on the Odyssey (Eust. Comm. Od. 1696.65, vol. 1:431), Eustathios critically notes that Homer was pany philachilus, “too pro-Achil-
lean." Already in Homer, Achilles had some features of a semibarbarian prince; Leo the Deacon (Leo Diac. 150.4–20) developed the idea that Achilles was "Tauruscythian," endowed with the typical cruelty of the Rus'.

ACHILLES TATIUS (Ἀχιλλεύς Τάτιος), author of the novel *Leukippe and Kleitophon* and, according to the *Souda*, other works of varied scope; born Alexandria, fl. end of 2nd C. The *Souda* also states, almost certainly incorrectly, that he became a Christian and a bishop. The romance, in carefully wrought prose with many *epiteleseis*, is narrated throughout in the first person; it relates the lurid adventures and dramatic separations (by pirates, shipwrecks, false deaths, and so on) of the hero and heroine before they can be reunited and married. A papyrus roll of the 3rd to 4th C. containing the romance is being edited at the university libraries of Duke and Cologne (W.H. Willis in *XVII Congresso Internazionale di Papirologia* [Naples 1984] 1:163-66). Despite reservations about the romance's moral qualities (see, e.g., Photios, *Bibl.*, cod.87; Psellos, *De Chariclea et Leukippe iudicium*), the novel seems to have maintained an intermittent readership, perhaps because of its potential for allegorical interpretation in terms of the salvation of a Christian soul as well as its Atticist prose style. When in the 12th C. novels began to be written once more, that of Achilles was taken as a model by Eustathios Makrembolites, used by Theodore Prodromos, and quoted in the Grottaferrata version of *Digenes Akritas*.

ACHMET BEN SIRIN (Ἀχμῆτ ὁ νῖος Σηρείμ), author of the longest and most important Byz. tract on dreams. Achmet is the pseudonym of a Christian Greek who used in his *Oneirokritikon* widely divergent sources: Arabic (N. Bland, *JRAS* 16 [1856] 118–71; M. Steinschneider, *ZDMG* 17 [1863] 227–44). Byz. (dream books of *Astrapychos* and the prophet *Daniel*), late Roman (Artemidoros, 2nd C.), and his own dream material. The pagan material, particularly in the first 14 chapters, has been reworked to conform to Christian orthodoxy. The treatise is dedicated to "the *protosymboulos* Ma'mûn," the caliph of "Babylon," whose dream interpreter Achmet purports to be, and contains the interpretations of hundreds of dream symbols attributed to Persian, Egyptian, and Indian seers. These attributions, patently false, are a scheme to project cosmopolitan erudition. The date of composition lies somewhere between 813 (the year of ascent of Caliph Ma'mûn) and the early 11th C., when the dream book appears in the marginalia and text of two MSS (D. Gigli, *Prometheus* 4 [1978] 65–86, 173–88; S.M. Oberhelman, *BZ* 74 [1981] 326f). The name Achmet also appears as the author of an astrological treatise, datable to the end of the 8th or the beginning of the 9th C. (E. Riess, *RE* 1 [1894] 248).

ACHYRAOUS (Ἀχυραός, Lat. Eseron), fortress of Mysia overlooking the Makestos River in northeastern Anatolia, near modern Balikesir. First mentioned in 812 as a village by *Theodore of Studios*, Achyraous became important only in 1139, when John II Komnenos made it a powerful and strategic fortified city to assure control of the region and its roads. Achyraous was then made a bishopric, under Kyzikos, and, in the late 12th C., an ecclesiastical metropolis. At that time, it apparently became the center of a separate civil province. After Latin occupation in 1204–20, Achyraous was a major Laskarid fortress. Although strengthened by Michael VIII in 1282, it barely survived a Turkish attack in 1302, was temporarily rescued by the Catalans in 1304, but fell to the Turks of Karaman soon after. The well-preserved fortress is built in a distinctive masonry with much brick decoration. Mt. Kyminas in the immediate vicinity contained important monastic settlements in the 9th–10th C.

-C.F.
ACOLYTE (ἀκόλουθος), the “follower” in a funerar cortège. Justinian’s novel 59, regulating the payment of funeral expenses out of the endowments of the Great Church, mentions akolouthoi among the various corporations that specialized in the performance of the necessary obsequies. There were to be three akolouthoi per cortège (asketron). The acolytes who constituted the lowest clerical order in the Roman church (H. Leclercq in DACL 1:348–56) apparently did not have a counterpart in Byz.

-P.M.

ACQUISITION. The most common legal means of obtaining property were transfer (Lat. traditio; Gr. paradosis), possession by prescriptive right (LONI TEMPORIS PRAESCRPTIO), occupatio, and acquisition ex lege. Property was obtained, for example, in fulfillment of a sale,- gift,- or dowry-contract through a physical transfer; from the time of Justinian I this transfer could take place informally, in contrast to the earlier formal act, the mancipatio. In case of a purchase (sale), payment had to accompany the transfer in order for the acquisition of the property to be complete. Occupatio, appropriation with the intent to keep the object as property, was the legal basis for the acquisition of an object which had no owner. Acquisition ex lege (i.e., an acquisition where the acquirer does not participate in the transaction), involved primarily the acquisition of an inheritance by the lawful heir of the testator. The acquisition of possession was based on the effective tenure of an object and by the wish to have it: corpore et animo (Gr. somati kai psyche, lit. “in body and soul”).

-M.Th.F.

ACRE, KINGDOM OF. After the Third Crusade recovered Acre from Saladin (12 July 1191) but failed to regain Jerusalem, Acre became the capital of the kings of Jerusalem and a major center for the production of Crusader art. John of Brienne was king there (1210–25) before becoming Latin emperor in Constantinople. Restricted to a coastal strip, the kingdom of Acre was dominated by Italian merchant communities in the cities. A conflict between Venetians and Genoese over a house belonging to the Church of St. Sabas in Acre (1256–70) drove Genoa to ally itself with Michael VIII, thereby facilitating his seizure of Constantinople. The Venetian-Genoese struggles, however, spread into Byz. waters, where much harm was done to Byz. Acre fell to the Mamluks on 18 May 1291.

LIT. Prawer, Royaume latin. -C.M.B.

ACROCORINTH. See CORINTH.

ACROSTIC (ἀκροστιχίς), a composition in prose or verse in which the initial letters of each section form a word, phrase, or alphabetic sequence. Acrostics are regularly found in hymns, both kontakia and kanones, where the first letters of each oikos, or verse, are linked to form the author’s name (e.g., Τοῦ Ρωμανοῦ), an indication of the subject matter (e.g., Εἰς τὸν ἱερόν Ρωμανὸν ἔπος), or to make an alphabet (as in the Akathistos Hymn); letters can be doubled to allow the text to expand (e.g., Εἰς τὸν Χρυσόσωστομὸν) and some phonetic spelling is permissible (e.g., ταπινόν). Alphabetic acrostics link chapters and entries in the gnomologia (see GNOME) and MIRRORS OF PRINCES, hortatory works to which are related a series of shorter penitential alphabets in prose and verse and in the vernacular as well as the learned languages (Krumbacher, GBL 717–20). Acrostics are found in secular enkomia, spelling the name of the recipient (e.g., in the works of Dioskoros of Aphroditó). Alphabetic acrostics are also used for love songs, as in the EROTOPAIGNIA.

-EMJ.

ACTA ARCHELAI, anti-Manichaean document in the form of a disputasion involving, on the Christian side, Archelas, bishop of Kaschara in Mesopotamia (ca.270), and for the Manichaeans Turbo and Mani himself. Although the dispute is certainly not historical, the text contains authentic documents and genuine tradition concerning MANICHEANISM. The Acta were written before 350 by an otherwise unknown Hegemonios and were cited by authors such as EPIPHERANIOS of Salamis and SORATES. Only a few fragments of the original Greek version survive, but the full text exists in a defective Latin translation.

v Rimskoj imperii po dannym Acta Archelai,” VDI, no.3 (1955) 168–79.

- T.E.G.

**ACTIONS (ἀγώναι).** Under the classical formulay procedure of Rome, actions were written statements of grievance (formulae) that were allotted to the parties by the praetor on the basis of their descriptions of the conflict, so that they could bring their lawsuit before the judge. The substantive claims set forth in this formal statement were closely connected with the relevant obligation; as a rule every obligatio had its own actio and, inversely, where there was no obligatio (see PACTA) there was no actio. With the elimination of the formulary system in 342 (Cod. Just. II 57.1), the procedural aspect of the action became irrelevant. Action became the name for the substantive claim (obligatio) that a plaintiff brought against a defendant. The name of the action had to be mentioned in the first sentence of the plaintiff’s writ (editio actionis). Consequently, lists were compiled of the names of actions; of these, only the work **De actionibus** from the 6th C. has been edited.

**Actions in the Post-Justinianic Period.** The Byz. developed a detailed system of classification of actions (e.g., Synopsis Basilicorum A. 24.1). In charters, however, the term (which is common) has a vague meaning of “claim,” with the connotation of an illegal procedure. It is used primarily in formulas assuring legal protection for a buyer or grantee against the seller (grantor) or a third person who was thus prohibited from initiating any claims concerning the transferred object (e.g., Iuvr. 1, no.3.19–20; Χένοφ., no.9.45, etc.). A document of 1377 (Lavra 3, no.148) describes a nomimos agoge (with no further definition) brought against the monastery; the plaintiffs eventually dropped the claim, refusing to turn to “any Christian agoge” that could assist them, and they subsequently guaranteed the property of the Lavra. There is a difference between the elaborate categorization of actions in legal texts and the simple interpretation of the agoge in documents as a claim in general.

- A.K.

**ACTOR.** In Roman law actors (Lat. histriones) and mimes were considered as belonging to an infamous profession and were classified with those whom the emperor expelled from the army for shameful behavior (Digest 9:2:1). Despite the defense of actors by some intellectuals (LIBANIOS, CHORIKIOS OF GAZA), this negative attitude toward actors prevailed in Byz.: clerics were forbidden not only to participate in performances, but even to see a show. Various decrees, secular and ecclesiastical alike (esp. the rules of the Council in TRULLO), restricted theatrical performances. As late as the 15th C. Manuel II characterized the theatrical show as typical of the Ottoman court and found it reprehensible. The principal accusation against actors was the sexual promiscuity allegedly characteristic of their way of life: musicians, dancers, and actors are frequently mentioned in the same context as prostitutes. Nevertheless, in the late Roman Empire actors were to be found everywhere; a law of 409 prevented local urban authorities from transferring actors, charioteers, and wild animals from their cities and thus lessening the appeal of popular festivities (Cod.Just. XI 41.5). With the decline of the theater, actors assumed the role of clowns and jesters.

- Ap.K., A.K.

**ACTS (Πράξεις τῶν ἀποστόλων),** the historical portion of the New Testament that describes events after Christ’s Crucifixion. The Byz. unanimously considered Luke to be the author of the Acts, but MS tradition links it more closely to the Epistles than to the Gospels: among almost 3,000 uncial and minuscule MSS of the New Testament listed by K. Aland (Kurzgefasste Liste der griechischen Handschriften des Neuen Testaments [Berlin 1969]), approximately 335 contain the Acts together with the Epistles, but without the Gospels, while only ten contain the Gospels and Acts without the Epistles. The major Byz. commentary on Acts is that of JOHN CHRYSOSTOM. A full exegesis of Acts was falsely attributed to the 10th-C. Thessalian bishop Oikoumenios—Beck (Kirche 418) dates it to the end of the 8th C. Another complete commentary, by THEOPHYLLAKTOS of Ohrid, draws upon that of Chrysostom. Other commentaries are known in fragments from CATENAЕ.

Chrysostom highly appreciated the book of Acts:
it is no less beneficial for us, he says (PG 60:13f),
than the Gospels, since it demonstrates the realiza-
tion (ergon) of what was prophesied by Christ
and presented in the Gospels. The book, he con-
tinues (col.15.15–16), related the acts of PAUL,
who labored more than any other; Chrysostom
completes his work with a panegyric of Paul.
Chrysostom’s interpretation of Acts is permeated
by his ethical ideals of poverty over wealth and
pious ignorance over pseudosophy; he uses
his material for attacks on theatrical perfor-
mances. The commentary of DIDYMOS THE BLIND,
on the other hand, emphasizes Christological
problems. Referring to Chrysostom, Didymos (PG
39:1672AB) discusses the contradiction
between Acts and Paul in the story of the miracle on the
road to Damascus. The contradiction is resolved
by pointing out that in one case the text states
that his companions heard Paul’s voice, while in
the other they saw only the light and did not hear
the voice of the Lord. Lecions from Acts (to-
gether with the Epistles) formed the liturgical
book called the PRAXAPOSTOLOS. Various APOC-
RYPHAL acts described the exploits of individual
apostles.

Acts Illustration. Illustration of Acts is rare in
Byz. art. In monumental painting, only the 21-
scene cycle in the narthex at Dečani (14th c.) in
Serbia illustrates Acts itself, rather than episodes
from hagiographical cycles, such as the scenes of
PETER and Paul at MONREALE. Only two MSS of
Acts—both 12th C.—contain anything more than
a prefatory portrait of its author, Luke: Paris,
B.N. gr. 102, fol. 7v (see Kessler, infra), has a grid
of four scenes—Peter and JOHN at the Beautiful
Gate, the martyrdom of JAMES, Peter liberated
from prison, and the stoning of Stephen—and
Chicago, Univ. Lib. 965, preserves 13 of its orig-
inal 19 framed illustrations. The earlier SACRA
PARALLELA contains 17 vignettes illustrating episo-
des from Acts. These four monuments, though
chronologically diverse, reveal consistencies in the
selection and interpretation of subject matter that
occur also in byzantinizing cycles from Italy and
indicate that a coherent Byz. tradition of Acts
illustration did exist. It was extensive, settling on
particular passages and illustrating them densely:
ASCENSION, PENTECOST, activities of Peter, Paul,
PHILIP, and Stephen. In contrast to the illustration
of hagiographical cycles, Acts illustration was strictly
canonical.

—J.I., A.K., A.W.C.

ACTS, DOCUMENTARY, documents of a for-
mal nature, preserved in original or in copy, and
varying according to their author and the nature
and importance of the question they concern.

Physical Characteristics. Normally acts were
written on PAPYRUS, PARCHMENT, or PAPER in black
or brown INK; emperors (and later despotai) used
purple ink for their signatures (and for some
other words, esp. in CHRYSOBULLS); the SEBASTO-
KRATORS and KAESARS used blue ink, the proto-
vestiarios green ink. Purple parchment, use of
gold or silver ink, and documents with miniatures
(12th, 14th C.) or with decorated initials (12th C.)
are rare. The script varies. In the 10th–12th C. a
notarial script is typical of official chanceries. Nor-
mally acts were written in Greek; the language
varies from moderately educated (chanceries) to
popular (some private deeds). Letters of foreign
relations were written in other languages (above
all in Latin) or were accompanied by translations
(few mentions of cryptographic or coded letters
survive). The contents of the document were
guaranteed by the author’s autograph signature
at the bottom, or by his protaxis, i.e., writing his
name at the top of the document; if the author
was illiterate, protaxis and subscription could be
replaced by a signon, i.e., an autograph cross in
the quarters of which the notary wrote the au-
тор’s name and titles. Some public documents
and most private ones bear also the signatures
(autograph, if possible) of witnesses and, if one
took part, of the tabellion or taboullarios (see No-
tary) who signed as a privileged witness. In some
cases, the transaction was further confirmed by
the signature of a bishop or an official, obviously
with the hope that thus the document would re-
ceive public fides. The authenticity of the docu-
ment was also guaranteed by a SEAL, hanging from
a string of variable value and color at the bottom
of an open document or securing a folded one:
the seals were made of gold (only the emperor),
of silver (rare; some despotai), lead and wax (gen-
eral use, including emperors and despotai). Several
annotations also survive; their interpretation is
not always sure: recognition that the contents of
the act reflect what was intended to be said; registration; or monocondyles on the place where two different sheets were glued together. Major chanceries had secret signs guaranteeing the authenticity of their acts, such as having the final word (kratos) of the chrysobulls written at the beginning of a line; other secrets of the patriarchal chancery (place of seal, way of folding, etc.) are described in the ΕΚΔΙΚΗ ΝΕΑ.

Composition. Most acts contain some (if not all) of the following parts. At the very beginning (protocol) and at the very end (eschatocol) of the document are formulas and pieces of information identifying author, addressee, and date. At the beginning is an invitatio, usually to the Holy Trinity; the intitulatio, with the name and titles of the author (emperors, patriarchs, certain officials) or the prooimion or signon (in private deeds); eventually indication of the addressees (inscriptio). The date is part of the protocol in certain documents, such as excerpts from decisions of the synod, some acts of public officials (until the 11th C.), as well as some private deeds of the late Roman period and, in southern Italy, of the 10th–14th C. Justinian I required a ready-made protocol with the date on which it was drafted. The eschatocol contains the date on which the document was written (edraphe) or issued (datum, Gr. apelythe) and the subscription(s). The date is expressed according to one of several chronologies: by consular years (until the 8th C.), regnal years (introduced in 537 and still used in the 11th C. in Italy), anno mundi (year of the creation), and indiction. The body of the act is composed of the prooimion (arena), a rhetorical introduction with philosophical and/or political considerations; the exposition of the affair (narratio); the decision or arrangement or order (dispositio); eventual spiritual or temporal sanctions for recalcitrants; and special clauses.

Probatory Value. The value of an act as evidence was limited, since its authenticity and validity could be contested at any time. An act of a state authority (instrumentum publicum) could be contested by the state itself (e.g., the privileges granted by an authentic imperial chrysobull would not be recognized by the authorities unless the chrysobull had been registered in time at the appropriate government services). An individual, however, could contest only its formal authenticity and bore the onus of proof. In the absence of notarial records (minutes) with probatory value, the diplomatic authenticity as well as the contents of private deeds could be contested in court. In such cases proof had to be brought in order to support them: testimony of the parties themselves, witnesses (including, first of all, the taboularios who drafted the deeds), judicial oaths, and graphological examination of the signatures (for the deceased).

Types of Acts. All chanceries and public or ecclesiastical authorities issued simple letters (grammata pitakia; see PITTAKIA), which, when sealed, were called sigillia. The imperial chancery also issued chrysobulls, edicts, novels (novellae), pragmaticae sanctiones, sacrae (sakrai), prolegomena, prooimia, horismoi, rescripta, lysis, etc. Horismoi and parakaleseis were also issued by despotai and other state or church dignitaries (caesars, patriarchs); entalmata, semeiomata, and hypomnemata were documents typical of the patriarchal chancery and of that of public servants, who also issued fiscal acts, such as apographia grammata, prakateria, periorismoi, isokodia (see KODIA), etc. All kinds of private documents survive: wills, deeds confirming sales, exchanges, and donations as well as documents that offer guarantees, make special agreements, etc.

ADAM AND EVE, the original ancestors of humankind, occupied an important place in Byz. theological doctrine. Adam (Ἀδάμ), whose name was interpreted as “man” or “earth,” was created perfect, but committed grave sin (original sin) by his own free will; his sin was considered more serious than that of Eve (Ευώ). Adam’s sin led to the loss of grace and to death, but Christ came to redeem his fall. Thus Christ was proclaimed a Second Adam, and Adam the prefiguration (typos) of Christ—either through similarity (created without human father) or in contrast (obedience versus disobedience, damnation versus salvation). Exegesis ascribed double prefigurative significance to Eve: as the typos of the church, since she was created from Adam’s rib and the church emerged from the open wound of Christ on the Cross, and as an antithesis to the Virgin Mary.
Representation in Art. Adam and Eve are depicted already at the Christian building at Dura Europos and play a significant role in art of the pre-Justinianic period, culminating in extensive cycles in the illustrated Cotton and Vienna Genesis MSS. Later they continue to occur in cycles which presumably reflect early models, such as the illustrated Octateuchs, the nave mosaics of the Cappella Palatina at Palermo and the cathedral at Monreale, and the narthex mosaics at S. Marco in Venice. Brief cycles, closely related iconographically, also appear on ivory caskets (Goldschmidt-Weitzmann, Elfenbeinschopf. I, e.g., nos. 67–69, 84), where their function is unclear. From the 9th C., the Anastasis provided an important new context for Adam and Eve with the youthful Adam of Genesis now a white-bearded patriarch; from the 12th C. the idealized features of Eve become lined and wrinkled.

ADDALI, DOCTRINE OF. See Doctrine of Addai.

ADDRESS, FORMS OF, various modes of exclamation, appeal, harangue, and greeting, preserved primarily in letters (both papyri and collections) as well as in documents and speeches; on rare occasions narrative texts preserve traces of formulas of oral address while recreating dialogues. Ziliacus (infra) suggests that in the 4th–6th C. a radical change in the form of addressing people took place, because of the bureaucratization of society, on the one hand, and its christianization, on the other. “Classicizing” authors, such as Libanius and Julian, retain the traditional literary forms of address: agathe, anthrope, kale, etc. In the papyri of the 5th–6th C., however, ancient forms of address practically disappear, being replaced by pious epithets (theotimatos, theophylaktos) or complicated adjectives with prefixes pan- and hyper-. The usage of the pluralis reverentiae ("plural of reverence"), unknown in the Christian milieu before the 4th C., was established thereafter, and from the 5th C. onward it became the rule in addressing the emperor. Some ancient epithets (philos, philatos, etc.) continued to be used throughout the Byz. period, while at the same time formulaic addresses were established: the emperor was "your majesty" (basileia sou), the bishop, "the most holy lord" (hagiota despoa). Terms of family relationship, father, brother, nephew, were also common, strictly distinguishing the type of connection between the correspondents. Platonizing forms of address (a laugurte) continue in works of high style until the end of the empire.

ADELPHATON (adelephaton), a "fellowship" in a monastery, which provided the holder (adelphatarios) with a living allowance (stipersia) for life. An adelphantos was normally granted in return for a gift of immovables or money (100 nomismata was the going rate in the 14th C.—N. Oikonomides in Dionys. 59) and guaranteed in a contract between the monastery and the beneficiary. Adelphata might also, however, be in the gift of the monastery’s patron, as with the adelphantos at the Mangana, which Manuel I gave to Manganeios Prodromos. There were two categories of adelphantarios: esomonitai, who joined the monastic community in some capacity, and esomonitai, who continued to live outside it. The institution is first attested in the 11th C. It always aroused some disapproval because it was seen to involve and encourage simony and lack of commitment to the monastic life; hence periodic attempts to restrict it to esomonitai, to keep it nonheritable, and even, in some monastic typika, to prohibit it altogether (e.g., Typikon of Charsianites, EEB 45 [1981–82] 491ff, 497. 510).

ADELPHOPPOIA (adelephopoia), the adoption of a brother or sister. Like adoption and baptismal sponsorship (see Godparents), with which it is always mentioned in treatises on prohibited degrees of marriage, adelphoporia was considered a spiritual relationship between two people, cre-
ated by the prayers of a ritual (Goar, *Euchologion* 706–8). Unlike these other spiritual relationships, however, *adelphia* was not recognized by civil or canon law and was therefore inconsequential with regard to rights of inheritance and marriage impediments (Demetrios Chomatenos, ed. Pitra, cols. 31–32, 726–26; John Pediasmios, ed. A. Schminck, *FM* 1 [1976] 156.375–81). A statement in the *Peira* (49.11), however, indicates that *adelphia* could be acknowledged as creating a marriage impediment between the two people who had contracted the tie. Repeated prohibitions against *adelphia*, including those in monastic *typik* show that the practice was widespread. *Adadelphia* was contracted by members of the ecclesiastical hierarchy (e.g., the patriarch Thomas I of Constantinople [607–10] and Theodore of Sykeon: *Life of Theodore of Sykeon*, ed. Festugière, 106.1–6). It could confirm a friendship, as in the case of Romanos IV Diogenes and Nikephoros Bryennios (An.Komm. 2:196.10–16) and carried with it an obligation of mutual help and support (e.g., Danelis’s son John and Basil I: *TheophCont* 228.6–7).

**ADLOCUTIO** (lit. “address”), public address of the emperor to his soldiers or the civilian populace, usually at the conclusion of a campaign. Two depictions of *adlocutio* survive from the period of the Tetrarchy. On the Arch of Galerius in Thessalonike the emperor stands frontally on a platform in the center of the composition and addresses his army, represented by cavalry and footsoldiers assembled on both sides of him. On a relief on the Arch of Constantine in Rome the emperor proclaims to the Roman citizens the new era to follow his victory over Maxentius (312). He stands on the Rostra in the Forum Romanum and is flanked by senators on either side. In both reliefs the viewer, because of the symmetry of the composition and the frontality of the emperor, becomes the direct recipient of the imperial message. These are the latest extant examples in monumental art; the last-known numismatic representation of *adlocutio* is on a silver medallion of Constantine I dated to 315. Thereafter the subject disappears from the repertoire of Late Antique art.

**ADMIRAL**. See Ameralios.

**ADMONITION** (παραίνεσις, νουθεσία, νουθέτησις), a genre of didactic literature. To designate its products, Gregory of Nazianzos and John Chrysostom used the term *parainetikos* (other church fathers considered parts of the Bible “paraenetic”), while Kekaumenos used the title *logos nouthetikos* for a section of his work, going back to Xenophon and to the theoretician of rhetoric, Demetrios (both 4th C. b.c.). Byz. “paraenetic” speech differed from late Roman deliberative oratory (Kennedy, *Rhetoric* 19–23) in that it was ethically rather than politically oriented and was presented in written form. The *basilikos logos*, a kind of *enkomiion*, in fact contained substantial elements of admonition. So did the Mirrors of Princes, as indicated by the title *kephalaia parainetika* of the *Mirror* attributed to Emp. Basil I. In the 11th and 12th C. admonitions were produced addressing various sectors of society (e.g., the so-called *Strategikon* by Kekaumenos, Spanias): biblical and ancient precepts were mixed with contemporary anecdotes, and the language was plain and even close to the vernacular. The paraenetic genre flourished in the monastic milieu from the 4th C. onward and usually affected the standard language: *Chapters* (*kephalaia*) of sentences (*gnomai*) inculcated rules of ascetic conduct, sermons had a didactic purpose, and *hagiography* also aimed at ethical indoctrination.

**ADNOMUIASTES** (ἄδνομμαστης), always used with the epithet *megas*, described by a 14th-C. ceremonial book (pseudo-Kod. 250.13–20) as a subaltern of the *megas domestikos*; his function was to issue horses and weapons to soldiers. In documents from 1290 onward the *megas adnoumi-
ADNOUMION (αδνούμιον, from Lat. ad nomen), an annual census and mobilization to enumerate and inspect soldiers of the provincial armies (the mata). The Life of St. Philaretos the Merciful, referring to a campaign against the Arabs in the later 8th C., describes an adnoumion at which soldiers were expected to present themselves with their horse and weapons (ed. M.-H. Fourmy, M. Leroy, Byzantium 9 [1934] 125-34-127.26). The 10th-C. De re militari (ed. Dennis, Military Treatises 320.3-322.41) recommends general adnoumia before and after campaigns to maintain accurate records of available manpower and equipment. The muster-lists recording these totals were kept at the bureau of the logothetes tou stratiotikou. The megas adnoumistas, marshaller, was in the 14th C. responsible for horses and equipment; he assisted the megas domestikos during the display of troops (pseudo-Kod. 250.13-20); the sign of his office was a silver staff with a dove on its haft.

LIT. Ahrweiler, Structures, pt.VIII (1960), 8f. —E.M.

ADOMNAN or Adamnan of Hy, Irish churchman and writer; abbot on the island of Iona, the Inner Hebrides (from 679); born ca.624, died 23 Sept. 704. His works, in Latin, include a treatise On the Holy Places (De locis sanctis), written before 686 or 688. It relies chiefly on eyewitness testimony dictated by Arculf, bishop of an unidentified see in Gaul, whose ship was blown off course and landed on Britain's west coast. Arculf visited the Holy Land in or before 683 or 684, traveled to Alexandria and from there, via Crete, to Constantinople, where he stayed for some eight months. He then sailed to Rome, probably via Sicily (whence his information on travel conditions, e.g., 211.8-10, 221.20-21, 222.8-10). Book 1, on the churches (Arculf sketched plans preserved in later MSS) and relics (E. Nestle, BZ 4 [1895] 338-42) of Jerusalem and its environs, is based almost exclusively on Arculf's nine-month stay there, while book 2's description of other sites depends more on written sources: e.g., the bustling shipping at Alexandria (223.55-60) is borrowed from "Hegesippus." Book 3 relates information Arculf collected in Constantinople on the city's legendary foundation (227.2-36), on Iconoclastic incidents involving an icon of St. George and its cult among the army at Diospolis, and on an icon of the Virgin (229.1-231.58, 233.1-31). It also describes Arculf's impression of Hagia Sophia (J. Strzygowski, BZ 10 [1901] 704f) and the ceremony of the veneration of the relic of the cross by the emperor and his court (228.21-38).

ADOPTIANISM, Christologies that depict Christ as a man whom God assumes or adopts as his Son, either at his baptism or resurrection. The adoption may be likened to the Servant of God in Deutero-Isaiah, or to the bestowal of the spirit on the Old Testament prophets. Or, it may conform to certain Hellenistic concepts (e.g., apophaticism) often associated with docetic or Gnostic views (see Gnosticism). All of these forms share a strictly monothestic conception of God, and for that reason they have been viewed in connection with Monarchianism. Adoptianism, in contrast to Modalism, retains the transcendence of God the Father while the Son is solely a reality within history, and the Spirit, in the history of salvation, is the unique gift of God, but not God himself.

To the extent that the Christology of the Antiochene School emphasized the full reality of Jesus' humanity, it could easily tend toward Adoptionism, as confirmed in Paul of Samosata (condemned in 268: H. de Riedmatten, Les actes du procès de Paul de Samosate [Fribourg 1952]). Later Antiochenes (Diodoros of Tarsos, Theodore of Mopsuestia, Nestorios), however, established their notions on the basis of the consubstantiality (see Homoousios) of the Father and the Son/Logos. Nevertheless, in their Christology they preferred
ADOPTION (victoria). In Byz. legal practice adoption did not establish patria potestas; the adopted child/adult could inherit from an adoptive parent only if the latter died intestate (Epaphroditos aucta 15.9) or expressly designated the adopted child as heir (Sathas, MB 6:628-31). Leo VI extended the right to adopt to eunuchs and unmarried women (novs. 26, 27) and stipulated that an ecclesiastical blessing, not any civil procedure, was to be the essential constitutive act of adoption (nov. 24; Balsamon in commentary on canon 53 of Trullo—Rhalles-Potles, Syntagma 2:429-31). Adoption thus became a spiritual relationship “above those of the flesh,” like baptismal sponsorship (see Godparent) with which it shared a common terminology and similar marriage impediments. From notarial contract formulas and case histories it emerges that children were given up for adoption by widows/widowers who could not afford to raise their offspring, while children were adopted by childless couples in order to obtain descendants and heirs. Michael Psellos' adoption of a daughter is the best documented case (A. Leroy-Molinghen, Byzantion 39 [1969] 284-317). Couples with children of their own might also adopt (D. Simon, S. Tróianos, FM 2 [1977] 276-83; G. Ferrari, Bollettino dell'Istituto storico italiano 33 [1913] 65, 81ff). A series of (proposed) adoptions by childless imperial couples in the 11th C. indicates a desire to provide an heir to the throne (Zoe's adoption of Michael [V] Kalaphates, nephew of her husband Michael IV), but also an attempt to forestall coups by their prospective adopted sons (Michael VI's adoption of Isaac Komnenos; Nikephoros Botaneiates' adoption of Nikephoros Bryennios).

In painting, the legitimization of patriarchy was expressed by the act of holding an adopted child upon the “father’s” knees. Probably derived from images of Abraham and Lazarus, as in the París Gregory (Omont, Miniatures, pl.XXIV), by the 11th C. this pose was used for the “Ancient of Days” (see Christ) and, from the 12th C., in images of the Trinity. A political extension of

the motif occurs in the Madrid MS of John Skylitzes (Papadopoulos, infra, figs. 1, 2) where both foreign princes adopted by the emperor and Byz. adopted by foreign rulers are shown on the knees of their “parents.”

A.DORATION OF THE MAGI. According to Matthew 2:1-12, the Magi (Magi) led by a star arrived at Jerusalem in search of the child who was born to become the Messiah or the king of the Jews; they were directed to Bethlehem, found Mary and Jesus, paid homage to him, and gave him three gifts: gold, frankincense, and myrrh. Matthew says only that they came from the Orient; some church fathers (e.g., Epiphanius) considered them as coming from Arabia, others (Diodoros of Tarsos, Cyril of Alexandria) from Persia, and others (e.g., the 5th-C. theologian Theodotus of Ankyra—PG 77:1364C) from Chaldaea. The number of the Magi was usually stated as three (primarily on the basis of the number of gifts), but the Syrian and Armenian tradition counts a dozen Magi. Later exegetes invented various names for the Magi; thus the 12th-C. writer Zacharias of Chrysopolis (Besançon in France) writes that their Greek names were Apellius, Amerus, and Damascus, meaning faithful, humble, and merciful, respectively (PL 186:83D).

Identified as kings already in the 3rd C., the Magi were interpreted as symbols of the conversion of the Gentiles, and so figured prominently in Early Christian art. As in Matthew, they were at first depicted as approaching the enthroned Virgin and Child, independent of the scene of the Nativity. Frequent pairings of the Adoration and Nativity on sarcophagus lids, ivories, and ampullae proclaim their common theme (the theophany of the Incarnation), not their narrative unity. The Adoration appears independently of the Nativity still in certain 11th-12th-C. monuments (churches in Göreme; Daphne) and, more frequently, in Palaiologan imagery influenced by the Akathistos Hymn. Usually, however, post-
Iconoclastic art integrates the Adoration and even the journey and departure of the Magi with the Nativity, because the Magi were commemorated on Christmas. Their original Persian costume is later assimilated to that of Old Testament priests; they mount horses, acquire names (Melchior, Balthasar, Kaspar) representing three races descending from Noah, and are extensively depicted in the frieze Gospels. A homily by John of Euboea in Jerusalem, Gr. Patr. Taphou 14 (11th C.) and Athos, Esphig. 14 (12th C.) (Treasures II figs. 342–392), is illustrated with 17 images of the Magi, many of them otherwise unparalleled.

**ADRAMYTTON.** See Atramyttion.

**ADRIANOPE** ('Αδριανόπολις, also Orestias, mod. Edirne), city in Thrace on the middle Hεbros River (navigable from Adrianople to the sea) and on the major military road Belgrade-Sofia-Constantinople. It was an important stronghold protecting Constantinople from invasions from the north, but is rarely mentioned as an administrative center: the 10th-C. Taktikon of Escurial lists the doux of Adrianople immediately after that of Thessalonike; in the 1040s the magistros Constantine Arianites held that position (Skyl. 458.48–49). As a bishopric Adrianople is known from the end of the 4th C., but its place in the ecclesiastical hierarchy declined from 27th in the 7th C. to 40th in the 10th C., despite its growing number of suffragans—from 5 to 11 (Laurent, Corpus 5:1:544). A center of the Macedonian nobility, esp. in the 11th and 12th C., Adrianople produced at least three usurpers: Leo Tornikios, Nikephoros Bryennios, and Alexios Branias; on the other hand, Macedonian troops supported Constantinople against eastern generals during the revolts of Nikephoros Phokas and Isaac Komnenos. In the 14th C. the demos of Adrianople became active, and in 1343 its revolt preceded the outbreak of the Zealots in Thessalonike.

Located at the intersection of important strategic routes, Adrianople was often the center of military activity: on 3 July 324 Constantine I defeated Licinius near Adrianople, on 9 August 378 Valens was routed here by the Goths (see Adria-

**ADRIANOPE, BATTLE OF**, in 586 the Avars besieged Adrianople in vain. In the 9th-10th C. Adrianople was a strong point in wars against the Bulgarians: Emp. Nikephoros I reportedly appointed an Arab experienced in “mechanics” to help defend the city, but to no avail (Theoph. 498.7–11); both Krum and Symeon managed to seize Adrianople temporarily. In the 11th C. resistance to the Pechenegs was based at Adrianople. Frederick I Barbarossa occupied the city and in 1190 signed there a treaty with Constantinople. Kalojan defeated Baldwin I of Constantinople at Adrianople on 14 Apr. 1205. In the 13th C. the city changed hands several times, being captured by the armies of Nicaea, Epirus, and Bulgaria. John III Vatatzes established Nicaean rule over Adrianople in 1242–46. In 1307 the Catalan Grand Company besieged it. Turkish begs seized it probably ca.1369, but the Ottoman sultan Murad I did not enter Adrianople before the winter of 1376–77 (I. Steinheir-Beldiceanu, TM 1 [1965] 439–61). It served as the Ottoman capital until their capture of Constantinople in 1453.

Hagia Sophia, an important domed quatrefoil church of the 5th–6th C., with ambulatories and galleries, was photographed in the 19th C., but no longer exists (N. Mavrodinov, 6 CEB, vol. 2 [Paris 1951] 286–90).

**ADRIANOPE, BATTLE OF**, the scene of a major defeat of the Roman army by the Goths on 9 Aug. 378. In 376 the Goths, under pressure from the Huns, crossed the Danube, probably in the area of DOROSTOLON, and were allowed to settle as foederati on Roman territory. Harsh treatment by Roman officials led the Goths to rebel, and some common people from Adrianople joined them. In 377 Valens left Antioch for Constantinople and sought assistance from Gratian, the emperor in the West. Valens led his troops to Adrianople, while Gratian's army was marching from Gallia to Sirmium. Relying on false reconnaissance information that the Gothic force was only 10,000 strong, Valens decided to launch an attack before the arrival of the Western army. Fritigern, the Gothic commander, sent envos
proposing an eternal peace treaty, but his overtures were rejected. The Roman cavalry, which at first attacked successfully, was soon exhausted, and the counterattack of Ostrogothic and Alan mounted warriors destroyed the Roman infantry. Valens stood firm for a while, with his select infantry, but then had to retreat.

The defeat was overwhelming; probably only a third of the Roman army was able to escape, and Valens was killed. According to one version, he was killed by an arrow, his body was stripped on the spot and later could not be recognized; another version relates that he was wounded, brought to a hut, and burned with the hut by his pursuers. Even though Fritigern was unable to take Adrianople, the Goths rampaged all over Thrace and reached the walls of Constantinople; only lavish gifts diverted them from the siege of the city. At news of the defeat, Gratian recalled his troops to the upper Rhine. Orthodox tradition connects Valens' defeat with his Arius persuasion.

- A. K.

ADRIATIC SEA (Ἀδριατικὸν πέλαγος), the narrow waterway extending north of the Ionian Sea from the Straits of Otranto; it lies between Italy on the west and Dalmatia on the east. Along the Italian coast there are few harbors between BARI and RAVENNA, and steep mountains rise along the eastern shore, but there are many islands and harbors on this side, with major entrepôts at ZARA, DUBROVNIK, and DYRRACHION. At the northern end of the Adriatic Sea are AQUILEIA and VENICE. Byz. maintained control of most of the cities along the east coast until the late 11th C., despite Slavic settlement and Arab raids as far north as Dubrovnik. The developing maritime power of Venice, from the 11th C. onward, made the Adriatic Sea a virtual Venetian lake.

- T. E. G.

ADSCRIPTICII (ἐναπόγραφοι, “registered”), landless cultivators recorded in census registers under the name of the owner on whose estate they lived and who was responsible for their tax liabilities; the term first appears in 451 (ACO, tom. II, vol. 1, pt. 2:353.9). Tenant adscripticii formed one type of coloni, but adscript status also encompassed some agricultural slaves and day laborers. Children of adscripticii normally inherited this status, while free proprietors could become adscripticii by alienating all their land or possibly through patrocinium vicorum. According to 5th- and 6th-C. legal texts, the condition of adscripticii approximated that of slavery (Cod. Just. XI 48.21): they could not possess personal property nor in most cases sue their masters (Cod. Just. XI 48.19; XI 50.1–2), they could not leave the land nor could an estate be sold without the adscripticii attached to it, and they could marry or receive ordination only with their master’s consent (Cod. Just. I 3.36). In reality, their condition might differ substantially from such legal prescriptions; some 6th-C. Egyptian adscripticii not only owned personal property, but even entered into contractual agreements with their landlord (P.Oxy. 1896). The adscripticii disappeared during the 7th C., although the term occurs anachronistically in later law codes (e.g., Ecloga ad Proceiron mutata 10.15).

- A. J. C.

ADULIS (Ἄδουλις), an Axumite trading city and episcopal see, located at the foot of the bay south-east of Massawa on the Red Sea coast of Abyssinia. It was visited by Kosmas Indikopleustes, who transmits (2.49–50, 54–65) the Greek text of a victory inscription of Ptolemy III Euergetes from a monument there, a copy of which was requested by Elesboam from the ruler of Adulis. The bishop of Adulis attended the Council of Chalcedon. Archaeological excavation has unearthed Axumite coins and the remains of a church with a semicircular apse. The city appears to have been destroyed by the Arab navy in the early 8th C.

ADULTERY (μοιχεία), or marital infidelity, was contrasted with fornication or illicit sexual intercourse; Gregory of Nyssa (PG 45:228C) defined porneia as the satisfaction of desire without offending another person, whereas moicheia is "a plot (epiboule) and injury (adikia)." On the ladder of sins described in the vita of BASIL THE YOUNGER, the toll houses for moicheia and porneia were positioned separately (ed. Veselovskij 1:31.28, 33.16). Some authors, however, equated fornication and adultery, since the only permissible union was in marriage. Canon law condemned adultery; both porneia and moicheia were considered as grounds for divorce, whereafter remarriage of the aggrieved partner was permissible.

Late Roman civil law introduced severe measures against adultery. In his law of 326 Constantine I (Cod. Just. IX 9.29.4) established the death penalty for adultery for both the guilty parties. Justinian I (nov. 134.10) retained the principle of Constantine's legislation but emphasized the possibility of reconciliation of the married couple: within a two-year period the marriage could be restored, but if the husband died before the end of this period, the adulterous wife was to be confined in a monastery for life. The Ecloga (17.27) introduced mutilation (cutting-off of noses) as the punishment for both men and women who committed adultery, and the Procheiron—in overt contradiction of Christian morality—allowed the husband to murder his wife's lover if they were caught in flagrante delicto (Hunger, Grundlagenforschung, pt.XI [1967], 311). It is difficult to judge to what extent these strict laws were applied in practice: many conflicts of this kind were probably resolved within the family, as described in the vita of MARY THE YOUNGER, who was beaten by her husband on suspicion of infidelity. Cuckolds were mocked and deer antlers used as a symbol of their disgrace (Nik.Chon. 322.55–59). Adultery by men seems to have been rarely punished in actuality.

Adultery could lead to property problems. According to novel 32 of Leo VI the husband of an adulterous wife was to receive her dowry as a "consolation" for his dishonor; her remaining property was to be divided between her children and the convent to which she retired.

The history of imperial adultery suggests certain changes in Byz. attitudes toward marital infidelity: Constantine VI's open adultery provoked the Moechian Controversy, and Leo VI's infidelity with Zoe, daughter of Stylianos Zaoutzes, initially had to be concealed; in the 11th C., however, Constantine IX overtly kept his mistress Skleraina in the palace. In the 12th C. Manuel I and Andronikos I officially promoted their illegitimate children.

—J.H., A.K.

ADVENTUS (ἀπώντησις), ceremonial arrival rooted in ancient society and religion. Although Byz. adventus ceremonies were held to greet bishops, officials, and saints' relics, the most spectacular adventus welcomed the emperor into a city. The two main ritual elements of adventus were the occasus (synanthesis, hypantesis, etc.) of a delegation out of a city to welcome the arriving party and its escort (propompe) into the city. The point of encounter was carefully defined (e.g., De cer. 495.1–15), since distance from the city and the delegation's composition symbolized the participants' relationship. Acclamations or existeroi poems (e.g., on Agnes of France), panegyrics, incense, lights, and crown offerings were traditional components of Byz. imperial adventus ceremonies. The route of the processions was decorated, included a visit to a shrine, and might have concluded with a banquet. Because the adventus expressed the bonds between the welcoming community and arriving emperor, it took on a deeper meaning as a demonstration of loyalty and consensus, particularly at an emperor's first entry, for example, Nikephoros II Phokas (De cer. 437.20–440.11). This made adventus important in imperial propaganda and explains its role in art and on coins. The adventus of an imperial fiancée lent unusual prominence to aristocratic women, for example, Irene, the bride of Leo IV (Theoph. 444.15–19; cf. pseudo-Kod. 286f). The ceremony was also adapted to other circumstances such as triumphs or conditional surrenders.

—M. McC.

Representation in Art. Depictions of the adventus ceremonies in Byz. art are very few. The monumental Arch of Galerius in Thessalonike and the Arch of Constantine in Rome show the standard Roman iconography: the emperor arriving in a chariot accompanied by cavalry and foot soldiers. On the silver largitio dish of Constantius II and on several commemorative medallions,
one as late as Justinian I, the scene is abbreviated, showing the emperor on horseback, led by a Nike figure and followed by a soldier. A fresco in the Church of St. Demetrios in Thessalonike, probably depicting the adventus of Emp. Justinian I into that city, is the last surviving representation commemorating a contemporary event. The two examples from the 11th C. usually interpreted as depictions of adventus deviate from the earlier examples. On a silk wall hanging in Bamberg a mounted emperor is flanked by two Tyché figures who present him with a crown and a helmet. More problematical is a scene on the ivory casket in Troyes, since the two emperors shown may be riding away in opposite directions from a fortified city placed in the center; it may depict a departure ceremony (PROFECTIO). Of a different nature are the miniatures of triumphal entries in the Madrid MS of John Skylitzes, since they illustrate a historical narrative and thus are not commemorative. Usually these show the emperors mounted and accompanied by horsemen approaching a city. The miniature depicting the triumphal arrival of John I Tzimiskes in Constantinople (Grabar-Manoussacas, Skylitzes, no. 449) shows an icon of the Virgin and Child on a wagon leading the procession.

AEDICULARA (Lat., lit. “small building”), the architectural frame of an opening (door, window, or niche), consisting of two columns or pilasters supporting a pediment; more specifically a shrine framed by two or four columns supporting an entablature, a pediment, an arch, or a roof. The motif, commonly used in Roman architecture and popular in 5th- and 6th-C. Syria (e.g., the Praetorium at PHAINA) and Egypt (e.g., the White Monastery, or Deir-el-Abiad at SOHAG), was modified in Byz. From the 10th C. onward, the aedicula played a major role in the articulation of the TEMPLON screen, where it was often used for framing icons of Christ, the Virgin, and saints. These usually appeared in pairs, referred to as PROSKYNETARIA, that flanked the main section of the temple, as in the Theotokos Church at Hosios Loukas, at NEREZI, and at the CHORA. The aedicula continued to be used in a more general decorative role, albeit less frequently, during the last centuries of Byz. architecture, for example, in the squinches under the main dome of the Paregoretissa at ARTA.

AEGEAN SEA (Ἄγαιον πέλαγος), the Byz. mare internum between Asia Minor, Greece, and Crete, characterized by a rugged coastline and many islands that differ widely in size, physical condition, and economy. The larger islands seem to have been more densely populated than the smaller ones, at least in the later period (J. Koder, ByzF 5 [1977] 232f). Some islands (Crete, Lesbos, Lemnos) were rich in agricultural products, and in the later period the northern islands supplied Mt. Athos with grain; at the beginning of the 12th C. the pilgrim DANIIL IGUMEN from Rus’ was surprised by the amount of livestock on the Aegean islands.

The natural protection of the islands made them into places of refuge during the Slavo-Avar invasion (S. Hood, BSA 65 [1970] 37–45), even though some Slav boats penetrated to individual islands. The Arab onslaught changed the situation, esp. when in the 820s they seized Crete—some islands (like Paros) were deserted and only occasional hermits inhabited them. From the 10th C. onward the Byz. constructed numerous fortresses to guard the islands: they were built on high rocks protected by nature and fortified with massive walls (H. Eberhard, JÖB 36 [1968] 188). Malamut (infra) suggested that in the 11th–12th C. the islands prospered economically, whereas Wirth (infra) noted that from the late 11th C. onward they were virtually dependent on Venice.

In late antiquity the islands were divided between the provinces of Achaia and Insulae (Islands); by the late 7th C. some were put under the command of the strategos of the KARABISANOI and later included in the theme of the KIBYRHIOTAI. The 9th-C. TAKTIKON OF Uspenskij (55, 18–19) mentions the droungarioi of the Aegean Sea and of the Kolpos; according to Ahrweiler (Mer 77–81), the territory was divided into
two administrative units—the Aegean Sea in the north, and Kolpos, centered around Samos and including most of the Cyclades. The vita of David, Symeon, and George of Mytilene mentions the strategos of the island [of Lesbos], but the extent of his power is unknown. In the late 11th C. the theme of Kyklades was administered by a krites; it included Chios, Kos, Karpathos, and Ikaria. In the 12th C. Rhodes, Chios, and Kos were separated from the theme, and each governed by a doux. In 1198 a province called “Dodecanese” is known, with its center probably in Naxos.

After 1204 most of the southern Aegean Sea fell under Venetian control, while the islands along the coast of Asia Minor were retained by the Latin Empire. The campaign of Licario against Euboea in 1275–76 restored much of the Aegean to Byz. control, although the duchy of Naxos maintained Latin power on that island and Andros. By the end of the 13th C., however, the Byz. navy had collapsed and the islands were lost to the Venetians, Genoese, the Hospitallers, and Turkish pirates.

AELIA CAPITOLINA. See Jerusalem.

AELIANUS, CLAUDIUS, Roman rhetorician who wrote in Greek; born Praeneste ca.170, died ca.235. His On the Characteristics of Animals, an unsystematic collection of largely paradoxical animal stories, was a major source of Byz. zoological lore used by writers in many genres and esp. by Theophilos of Gaza (the 12th-C. paraphrase of whose work contains 32 parallels), Theophylaktos Simokattes, John Tzetzes, Michael Glykas, Manuel Philes (J.F. Kindstrand, SItalCf 4 [1986] 119–39), and various anonymous zoological exerptors. A new Byz. edition, represented by the 15th-C. MS Florence, Laur. 86.8, rearranged the stories thematically. The surviving MSS of Aelianus’s Miscellaneous Stories (Varia Historia), a similar collection of mainly human anecdotes, transmit a Byz. epitome of a fuller text that was known to Stobaios, the Souda, Psellus, and Eustathios of Thessalonike. Aelianus’s 20 surviving Letters of imaginary peasants were uninfluential but are contained in two independent MSS of the 10th and 15th C. On Providence and On Divine Truths, attributed to Aelianus by the Souda, are probably alternative titles of a single stoicizing treatise now lost. Aelianus is almost certainly to be distinguished from the author of the Tactics, a work seldom used in Byz. scholarship.

AELIUS ARISTIDES. See Aristides, Ailios.

AER (ἐρή). The largest of three liturgical veils, the aer was carried in the Great Entrance procession and placed over the eucharistic elements after their deposition on the altar. Liturgical commentaries interpret the aer as the shroud of Christ as well as the stone that sealed the Holy Sepulchre; later commentaries even refer to aeres as epitaphios (Symeon of Thessalonike, PG 155:288A). Initially, aeres were made of plain linen or silk (e.g., a white aer in De cer. 15.20; a silk aer in the Patmos inventory [ed. Astruc 21:32–33]), but in the late 12th C. they began to be embroidered with images, esp. the Amnos (H. Belting, DOP 34–35 [1980–81] 12–15).

All surviving aeres date from the late Byz. period. They are made of silk, gold-embroidered with images of the Dead Christ, angels, symbols of the evangelists and, by the end of the 14th C., the Lamentation (threnos), as well as with liturgical and dedicatory texts. The eucharistic phrases together with the specific designation of the cloths as aeres in the dedicatory inscriptions help to differentiate the aeres from epitaphios, which are often similar in appearance. Important examples include the (lost) aer of Andronikos II Palaiologos, and that of Stefan Uroš II Milutin (Belgrade, Museum for Ecclesiastical Art), both from the early 14th C. The fine mid-14th-C. Thessalonike aer (Athens, Byz. Museum) is embroidered with a three-part composition: a central Amnos panel flanked by two smaller side panels showing the Communion of the Apostles (see Lord’s Supper).

AERIKON (ἀερίκον, also aer), a supplementary fiscal levy first mentioned by Prokopios (SH 21.1–2) as imposed by the praetorian prefect of Constantinople during Justinian I’s reign. F. Dölger (BZ 30 [1929–30] 450–57) hypothesizes that the name originated from a fine for violating laws mandating sufficient distance (aer, “air”) between buildings in cities (e.g., Cod. Theod. IV 24, Cod. Just. VIII 10, 12.5c). The Taktika of Leo VI (ch.20.71) indicates that the stratiotai were obliged to pay state taxes (phoroi) and aerikon. In the 11th C., aerikon appears either as a fine for felony (plaisma) (novel of 1086—Zepos, Jus 1:312.15–24) collected by a bishop and/or a praktor or as a supplementary tax imposed on a village in the amount of 4–20 nomismata (Skyl. 404.56–58).

In 13th- and 14th-C. documents, the aer (aerikon in Trebizond) is frequently encountered as a supplementary charge alongside the ennomion of bees (Docheiar., no.53.23), angareiai, and mitaton (Koutloum., no.10.61–62), etc. The aer appears as a fixed sum, and the fine for murder and parthenophthoria as well as the tax for the treasure trove were considered its parts (e.g., Chil., no.92.146–48). This suggests that for Byz. the distinction between “fine” and “tax” was far from absolute. Aer could be granted by the emperor to privileged monasteries. Ostrogorsky (Féodalité 362–64) hypothesizes, although without any source evidence, that the state grant of a monetized aerikon (aer) to a landowner also implied the transfer of the rights of [low] justice over the paroikoi held by the recipient.

—M.B.

AESCHYLUS (Ajax, Greek tragic poet; born Eleusis 525/24 B.C., died Sicily 456. The Attic tragedian least known in the Byz. period, Aeschylus was listed as an Athenian king in the chronicle of Malalas (Malal. 72.9) and was even ignored by the learned compiler of the Souda. The earliest MS of Aeschylus’s seven extant plays dates from the 10th or early 11th C. Subsequent evidence of revived interest in Aeschylus is found in Psellus—who commends Aeschylus for his profun-

dity and gravity but finds him generally hard to understand (cf. A.R. Dyck, The Essays on Euripides and George of Pisidia [Vienna 1986] 44.58–64)—and in two dramatic works, Christos Paschon, which contains some 20 quotations from Aeschylus, and the Katomyomachia of Theodore Prodromos, which shows some verbal borrowings. Annotated editions of Aeschylus’s most widely studied plays, the triad of The Persians, Prometheus, and Seven against Thebes, were produced in the 14th C. by Thomas Magistros and Demetrios Triklinios. The latter also edited the Eumenides and Agamemnon. Triklinios’s autograph MS (Naples, Bibl. Naz. 2 F 31) is the primary authority for most of the Agamemnon. The number of surviving MSS and of quotations in Byz. authors indicates that Aeschylus stood third in popularity after Euripides and Sophocles.

AESOP (Αἴσοπος), a Phrygian slave who lived in Samos in the 6th C. B.C. and was renowned as the author of metaphorical animal fables, in prose, with a moral point. Originally traditional tales, but then a recognized literary device that was classed as a progymnasma, all such fables came to be attributed to Aesop, the fables of Aphthonios being an exception. The first collection, now lost but possibly known to Arethas of Caesarea, was made in the 4th C. B.C. Aesop’s fables are known in three major revisions: (1) the Augustana, probably first compiled in the 2nd or 3rd C.; (2) the Vindobonensis, of uncertain date; and (3) the Accursiana, in which Maximus Planudes had a hand. The fables of Syntipas are Greek versions of a Syriac translation of Aesop. Similar moralizing anecdotes with animal characters exist in the Physiologos and the animal epics, while a scattering of late Byz. non-Aesopic fables attest to the enduring attraction of the genre. Also attributed to Aesop are a collection of Proverbs and Gnomai. The Life of Aesop, written originally in Egypt in the 2nd C., turns the legendary information on
Aesop’s career into a diverting narrative, whose popularity continued into late Byz. and beyond; linguistically it provides useful evidence for the development of spoken Greek.

A MS in New York (Morgan Lib. 397), a significant witness for the text of the Aesopic corpus, includes an important series of miniatures (M. Avery, ArtB 23 [1941] 103–16). Accompanied by brief texts, incidents from at least three of Aesop’s fables are depicted in a rock-cut chamber above the narthex at Eski Gümüş (M. Gough, AnatSt 15 [1965] 162–64).

—E.M.J., A.C.

AESTHETICS. The aesthetic principles of the Byz. were revealed both in works of literature (esp. ekphrasis, epigram, and literary portrait) and objects of visual art. The ekphrasis retained the ancient principle that an art object was to imitate nature, and even hagiography stressed the resemblance of the icon to the original (the stereotype of recognition of a saint by means of an icon). However, the concept of corporeal beauty as a reflection of absolute (divine) beauty contradicted this naturalistic approach. The main goal of art was to represent the eternal, not the ephemeral; therefore, it was focused on humans (placed in a conventional landscape), on the spiritual elements of the human body (the face, esp. the eyes), on stability (movement and disorderly gestures were signs of barbaric character), on frontality (a rear or profile view was reserved for the devil or the enemy). In his ceremonial pose man was an “imitation of a statue,” rather than the statue being a copy of a live human being. In literary portraits the person described was usually perceived not as an entity, but as a construction, consisting of certain parts (forehead, eyes, nose, etc., down to the soles of the feet), each element being characterized separately.

The idea of uniqueness was alien; even the drama of Christ’s crucifixion and resurrection was miraculously repeated in liturgy and church decoration. Each event belonged not only to its historical place and time, but simultaneously to the ever-repeating cycle of the divine plan, and the transfer from concrete historicity to eternal mystery was performed by symbolic interpretation, direct references to the Bible or classical texts, stylistic parallels, and use of stereotyped imagery and vocabulary. Since all events were symbolically or metaphorically interconnected, the world was an enormous enigma or riddle, and both the author and the reader could reach a solution only through a thicket of obscurity. Because art was a demonstration of the divine plan, each phenomenon registered had its profound meaning, and each personage had his place on the moral scale. Art was didactic and interpretive, and seemingly distant events and images (including those of pagan gods) explained the fundamentals of contemporary politics and ideology.

Despite this black-and-white didactic approach, the Byz. recognized the artistic pleasure that could be conveyed by rhetorical skill, richness of vocabulary, nuanced imagery, descriptions of curiosities and miracles, conflict of opposites, and unexpected turns of the plot. General aesthetic principles underwent alterations due to historical changes in taste, individual style, or particularities of genres.

—A.K.

AETHERIA. See Egeria.

AETHICUS ISTER, conventional name for the author of a Latin cosmography allegedly translated from Greek by the priest Hieronymus, sometimes identified with Jerome. The book was known by the 9th C., but neither the date of compilation nor the identity of the author and translator can be established. References to Constantinople and Augustine (as well as to some other 4th-C. theologians) suggest a terminus post quem of 400. It is plausible that the author originated from the area of the lower Danube (he calls himself “Scythian by nation”) and emigrated to the West. The book describes the cosmos (including paradise, the Devil, and angels) and pays special attention to peoples not mentioned in Scripture and to marvelous countries and islands.
at the edge of the earth; Alexander the Great's expedition is related in detail. Greece, Macedonia, Cyprus, and other islands of the "Great Sea" are presented in much greater depth than other regions of the Mediterranean. Asia Minor being only briefly described and Italy hardly mentioned. The author is interested in seafaring and characterizes various types of ships. His sobriquet "philosophus" has no relation to philosophy, but is reminiscent of the "wise philosophers" who serve as informants in the Cosmographer of Ravenna and in the Parastaseis syntomoi chronikal.

LIT. N. Vornicescu, Aethicus Historicus. Un filosof străvrômân de la Histra Dobrogeană (Craiova 1986).

AETIOS (Ἀέτιος), "Neo-Arian" (Anomoian) theologian; born Antioch ca.300 or ca.313 (Kopeck, infra), died Chalcedon 366/7. Born to the family of a low official, he embarked on a career as a goldsmith or physician. He then became interested in "logical studies" (as Philostorgius puts it) and traveled throughout Cilicia (Anazarbos, Tarso), making contacts with the Arian clergy and participating in theological discussions. In the 330s and 340s he taught in Antioch and Alexandria, inciting the enmity of the leaders of the Nicene party, esp. Basil of Ankyra. As a friend of the caesar Gallus he came under the suspicion of Constantius II and was exiled in 360; Julian, however, recalled Aetios from exile, appointed him bishop, and granted him an estate on Lesbos. He probably supported the rebellion of Prokopios and was consequently forbidden to enter Constantinople in 366.

Aetios was reputed to be a talented debater with a gift for sarcasm; he held a radical position condemning any attempt to seek reconciliation with the Orthodox. He supported the doctrine of anomoion (unlikeness) in opposition to the theory of the homooousion: the Ingenerate God (the Father) had no common essence with the created deity of the Logos. Aetios further asserted that the Son had one nature, will, and energy, being different from the Father (V. Grumel, EO 28 [1929] 159–66). Little survives from Aetios's literary works: his manifesto of 359 or 360 (the Syntagmation) is preserved (in a revised form?) in Epiphanius of Salamis (Panarion, bk. 76, ch.11); in addition a letter to a certain "Mazon tribunos" is known as are several fragments cited by later theologians.

AETIOS, eunuch and patrikios; died 26 July 811 (?). Aetios was protospatharios and trusted adviser of Empress Irene in 790, when Constantine VI exiled him. He regained influence after Irene's return in 792 and in 797 cleverly obtained the surrender of Caesar Nikephoros and his brothers. After Irene deposed Constantine in 797 Aetios vied with Staurakios to place relatives in power. In May 799 Aetios allied with Niketas, the domestikos ton scholon, against Staurakios; he became Irene's chief adviser, and, after the death of Staurakios in 800, probably logothetes tou droumou (D. Miller, Byzantium 36 [1966] 469). In 801 Aetios took command of the Opsikon and Anatolikon armies and appointed his brother Leo as monostategos of the Macedonian and Thracian themes in hopes of making him emperor. Aetios is credited (Theoph. 475:30–32) with blocking the proposed marriage between Irene and Charlemagne. He likely lost power after Nikephoros I deposed Irene, but may have been the patrikios Aetios who perished with Nikephoros in battle against Krum.

AETIOS OF AMIDA, physician; born Amida, fl. ca.530–60 in Alexandria and Constantinople. Aetios compiled a 16-book encyclopedia of medicine, traditionally called the Tetrabiblon from its division into four sections. His encyclopedia is rich in quotations from many authors of Greek and Roman antiquity; it begins with a summary of pharmaceutical theory, simplifying the often obscure thinking of Galen and Oríbasios on the topic (J. Scarborough, DOP 38 [1984] 224–26), followed by compactions of pharmacy, dietetics, general
therapeutics, hygiene, bloodletting, cathartic drugs, prognostics, general pathology, fever and urinary lore, diseases of the head, ophthalmology, and cosmetics and dental matters (bk. 1–8). The account of ophthalmology is the finest before the European Enlightenment (cf. E. Savage-Smith, *DOP* 38 [1984] 178–80). The remaining books of the *Tetrabiblon*—which await modern editors—contain significant summaries of toxicology and poisonous creatures (bk. 13) and gynecology and obstetrics (bk. 16). Compared with Alexander of Tralles, Paul of Aegina, and Oribasios, Aetius is arid in style and more interested in medical theory than in practice, but his *Tetrabiblon* is fundamentally important in its careful selections of ancient authorities and in its shrewd amalgamations of traditional and contemporary medical theory.

**AETIUS (Ἀετιος), magister militum;** born Durostorum (Dorostolon) ca.390, died Rome 21/2 Sept. 454. The son of an important military officer from Lower Moesia and an Italian noblewoman, Aetius in his youth was hostage to the Visigoths and Huns. After service under the usurper Ioannes he secured a military post from Valentinian III (ca.425) and was responsible for the defense of Gaul. In 432 he retired in temporary disgrace, but in 433 became *magister militum* of the West, a post he held continuously until his death. For years he was the most powerful figure in the Western provinces, dealing successfully with Visigoths, Burgundians, Alans, Franks, and others while supporting the throne of Valentinian III. His policy was to use various barbarian peoples (esp. Huns) against his enemies, both domestic and foreign. Aetius may have persuaded Valentinian not to give his sister Honoria in marriage to Attila. The Byz. sources allege that Attila’s purpose in attacking the West was to remove Aetius. In 451 Aetius allied with Theodoric the Visigoth and defeated Attila at the battle of the Catalaunian Fields, but he could not keep the Huns out of Italy. With the death of Attila, however, Aetius’s fortunes collapsed. In 454 he was assassinated by order of Valentinian, the emperor he had served so faithfully. Aetius made a great impression on contemporaries and was remembered by Prokopios (*Wars* 3.3.15) as one of the last of the Romans.

**AFRICA, CONTINENT OF.** Byz. knowledge of the configuration of Africa (Ἀφρική) did not go beyond that of Ptolemy. The northern coast was thought to be straight. The west coast was known as far as Cape Bojador, the east coast as far as Zanzibar. The interior, except for Egypt, Nubia, and Axum, was inaccessible or unexplored. The general name for the continent west of Egypt was Libya, although Olympiodorus of Thebes (ed. Blockley, fr.40) calls it Africa while Sozomenos (Sozom. *HE* 9.8.3) uses both terms interchangeably. Eunapios of Sardis (ed. Wright 440) says that “Africa” is the Latin equivalent of “Libya.” Byz. geographical descriptions are limited to east Africa. Prokopios of Caesarea and Kosmas Indikopoulos describe the Red Sea coast as far as Axum. Priskos of Panion (fr.21) traveled to the Egyptian-Nubian frontier; Olympiodoros (fr.35) penetrated five days’ journey into Nubia and visited the El Kharga (or Dakhla) Oasis (fr.32). Lives of saints, histories, and nonliterary documents provide many details about Egypt. After the Muslim conquest, esp. under the Fāṭimid, Ayyūbid, and early Mamluks (11th–13th C.), Byz. trade with Africa, focused at Alexandria, continued. Ivory was the most important trade commodity. Byz. itineraries written by Epiphanius Hagiopolites and John Abramius included Alexandria, and those by Andrew Libadenos and Agathangelos included the Thebaid (P. Schreiner, *XXII. Deutscher Orientalistentag [= ZDMG, supp. 6]* [1985] 141–49). (See also Corippus.)

AFRICA, PREFECTURE OF. The diocese of Africa was first raised to the level of a prefecture for a short period, between ca. 332 and 337, perhaps in response to unrest sparked by the Donatist controversy. This action, attaching the prefecture to someone outside the imperial family, was unusual, for other prefectures were attached to the emperor Constantine I or his sons. A precedent was perhaps the earlier expedition (309) of Maximian's praetorian prefect Caius Caeonius Rufius Volusianus to Africa to suppress Domitian Alexander. Apart from a brief revival in 412, the African prefecture was not again reconstituted as a separate entity until April 534, following the Byz. victory over the Vandals and recovery of its territory. The revived prefecture included the provinces of Africa Proconsularis, Byzacena, Tripolitania, Numidia, the two Mauritaniae, and Sardinia.

The primary function of the prefect of Africa was apparently to support the defense and administration of the African provinces through revenues raised within the prefecture. This was not easily achieved in the early years after the reconquest, as the Vandals had destroyed Roman tax records. By 549, however, the revenues were evidently stable enough for Solomon, in his capacity as prefect, to undertake the construction of a number of fortifications. At the end of the 6th C. the prefecture of Africa was replaced by the Exarchate of Carthage. The exarch (first mentioned in a letter of Pope Gregory I the Great) was a military commander (probably replacing the magister militum) who was placed over the praetorian prefect and gradually assumed the latter's civil functions. By this time Tripolitania was transferred to the diocese of Egypt.

Archaeological evidence from Italy, Gaul, and Spain in the 6th and early 7th C. reveals continued imports of oil, wine, fish sauce, and pottery from Africa, suggesting that the prefecture was reasonably prosperous. From letters of Pope Gregory I the Great addressed to African prefects and the works of Maximus the Confessor in the mid-7th C., one can deduce that prefects were...
expected to maintain civil order, protect against corruption, and defend orthodoxy. The Arab invasions of the late 7th C. drained the exarchate financially, forcing Byz. abandonment of Africa by ca.687 except for Carthage (which fell to the Arabs in 698) and SEPTEM (which surrendered in 711).

—R.B.H.

AFRICANUS, SEXTUS JULIUS, Roman author; born Jerusalem ca.160, died ca.240. Circa 221 Africanus wrote his Chronographies in Greek, which is preserved now only in fragments; it was either a world history or tables of synchronies and genealogies designed to integrate the Old Testament with Greek and Oriental secular history. He espoused the belief that the world would last 6,000 years from the Creation; the birth of Christ was placed in 5500. Although rejecting its millenarianism, EUSEBIOS OF CAESAREA made much use of the work, both as model and source; an intermediary source may have been the similar Chronika of Hippolytus (ca.235), like Africanus an acquaintance of ORIGEN at Alexandria. Other late Roman and Byz. users and preservers of fragments include SOZOMENOS, the CHRONICON PASCHALE, and GEORGE THE SYNKELLOS. Fragmented also is Africanus's Kestoi (Amulets), an encyclopedia full of remarkable information. Byz. military writers used it for such things as cavalry techniques (F. Lammert, BZ 44 [1951] 362–69), while its sections on chemistry and explosives figured in the development of the so-called Greek Fire. Numerous extracts from its agricultural lore are preserved in the Geoponika, while literary and magical items attracted the attention of PSELLOS.

—B.B.

AFRICA PROCONSULARIS, PROVINCE OF. Under Diocletian the proconsular province of Africa was reduced in size; the boundary with Numidia was modified and the new provinces of Byzacena and Tripolitania were formed out of the old proconsular province. The Verona List makes reference to Zeugitana, the old name of the region around Carthage. This has generally been construed as an additional or alternative name for the proconsular province. The 4th C. saw an increase in urban building activity after a period of stagnation in the 3rd C. The Annona continued to provide the underpinning for trade in African exports, making the proconsular province among the richest in the empire. The arrival of the Vandals in 439 terminated the strong social and economic links between the province and Rome, but increased trade with Gaul, Spain, and the East may have offset some degree the loss of the Annona. Vandal confiscations of the estates of African nobles may have undermined the prosperity of the province; the cities were clearly in decline during the 5th C.

The Byz. reconquest of the African provinces (533) led to the fortification of a number of towns in response to the razzias of the Mauri, which began under the Vandals. Although there is evidence of continued commercial activity between Constantinople, the East, and Africa in the 6th and 7th C. (largely in kind, it would seem), it is still to Gaul and Spain, and once again Italy, that the bulk of African goods seemed to be directed. The economy of the province appears, however, to have been in slow decline, if we are to believe some recent archaeological evidence that suggests a drop in rural settlement in the 6th C. Africa Proconsularis remained under Byz. control until Carthage was seized by the Arabs in 698.

—R.B.H.

AGALLIANOS, THEODORE (also known as Theophanes of Medeia), patriarchal official and writer; born Constantinople ca.1400, died before Oct. 1474. A student of Mark Eugenikos, Agallianos ('Αγαλλιανός) became a deacon in 1425 and was hieromonk from 1437 to 1440 and again from 1443 to 1454. A staunch anti-Unionist, he
was temporarily suspended from office from 1440 to 1443. Taken captive by the Turks at the fall of Constantinople, he was released in 1454 and returned to the patriarchate. A friend of Gennadios II Scholarios, he was promoted to the office of megas chartophylax (1454) and in 1466 to megas oikonomos; twice, however, he was forced into retirement by a faction bitterly opposed to Gennadios’s policy of oikonomia. Circa 1468 he became bishop of Medea and changed his name to Theophanes (Patrineles, infra 14–25).

The writings of Agalianos include treatises attacking Latins and Jews, a work titled On Providence, and 17 letters, four of which are addressed to George Amirotzes. Most significant are his two apologetic Logoi of 1463, which defend his policies at the patriarchate and provide important autobiographical data as well as information on the patriarchs in the tumultuous decade following the Ottoman conquest of Constantinople. Agalianos was also a copyst of MSS who transcribed some of his own works and, for Cyriacus of Ancona, the text of Strabo.

ED. Ch.G. Patrineles, ed., Ho Theodoros Agalianos kai hoi anekdotoi logoi autou (Athens 1966). For complete list of works, see Patrineles, 43–60.

AGAPETOS (Ἀγάπητος), a 6th-C. deacon (probably of Hagia Sophia), and author of the Ekthesis, 72 chapters of advice to Justinian I on how to rule. The small work was written between 527 and 548, probably closer to the earlier date. The central message is that the emperor is God’s representative on earth, unanswerable to human pressure, but himself a mere man, who shapes his kingdom into an imitation of heaven by his own philosophy, purity, piety, and exercise of philanthropy. The Ekthesis combines classical notions of the philosopher king (culled, probably indirectly, from pseudo-Isocrates and Plato), and traditional methods of discreetly advising a ruler through panegyric and patristic tags and echoes of Eusebios’s conceptions of kingship. The result is a very early example of the Mirror of Princes, a genre emulated at least a dozen times throughout the history of Byz. Agapetus influenced some Byz. Mirrors of Princes, particularly that by Manuel II, but his greatest impact was upon the political ideology of Orthodox Slavs, esp. Muscovy (I. Ševčenko, Harvard Slavic Studies 2 [1954] 141–79). He was the first secular author ever to be translated into a Slavic language (Bulgarian translation of ca.900). In western and eastern Europe, Agapetus was the most widely read and published Byz. author after the church fathers.

AGAPETUS I, pope (from 8 or 13 May 535); died Constantinople 22 Apr. 536; Roman feastday formerly 20 Sept. (the day of his interment in Rome), now 22 Apr.; Byz. feastday 17 Apr. Born to an aristocratic Roman family, Agapetus belonged to the circle of Cassiodorus and planned with the latter to found a Christian university in Rome. He worked to expand the authority of the Roman see; for example, he intervened in ecclesiastical controversies in Byz. Africa where, after Justinian I’s reconquest, the situation of the Arian church (which had been supported by the Vandals) became threatened; Agapetus insisted on a hardline attitude toward former Arians converted to Orthodoxy (e.g., preventing them from holding clerical offices). He also took measures against the bishop of Larissa in Illyricum. His policy is reflected in a story told by John Moschos and another author (probably Gregory I the Great) who recounted the pope’s intervention in the sphere of influence of an Italian bishop or abbot (A. de Vogüé, AB 100 [1982] 319–25). After the Byz. invasion of Ostrogothic Dalmatia and Sicily, the Ostrogothic king Theodahad sent Agapetus as his envoy to Justinian in an effort to end the war. In this the pope failed (if, indeed, he had ever tried to succeed), but he capitalized on the precarious situation to intervene in the disputes of the Byz. church. Using the canonical argument that the pro-Monophysite patriarch Anthimos had formerly been bishop of Trebizond, he forced his resignation and consecrated Menas in his place.
The death of Agapetus and the Byz. reconquest of Italy checked the growth of the Roman see's influence over the church of Constantinople.

**AGAPIOS OF HIERAPOLIS,** or Maḥbūb ibn Qustaṭṭin, Melkite bishop of Hierapolis in Osroene; died after 941. Agapios composed a universal history in Arabic, from Creation to his own time, entitled the *Book of the Title. “It is,”* he explained, “the sort of book that is named ‘Chronicle’ in Greek.” Although the work originally ended in 941, in its surviving form it extends only to 776. The history of Agapios preserves fragments of otherwise lost works, such as the Greek *Chronicle* of Theophilus of Edessa (died 785). In turn, the work of Agapios was a source for the *Chronicle of Michael I* the Syrian.

**AGATHANGELOS,** pseudonym for the author of the standard Armenian account of the life of St. Gregory the Illuminator and of the conversion of King Trdat the Great at the beginning of the 4th C. Although Agathangelos claims to have been an eyewitness, the work cannot have been composed before the 5th C.

The extant Armenian text is not the original. From an early, now lost, text Agathangelos was translated into Greek, Syriac, and Arabic. From a revised Armenian text—the standard “received” version—further Greek and Arabic translations were made. No other Armenian text ever circulated so widely outside Armenia.

The extant Armenian text covers the period from 224 to the death of St. Gregory after 325. It describes the early careers of Gregory and Trdat, the tortures and imprisonment of Gregory by the yet unconverted king, the martyrdom at Valarsapat of nuns (Hrip’imē and her companions) who had fled from Diocletian, the release of Gregory and ensuing conversion of Trdat and the court, and the destruction of pagan temples.

It also gives an account of Gregory’s consecration in Cappadocian Caesarea, the founding of an organized Armenian church, the visit of Trdat and Gregory to Constantine I, and of the succession of Gregory’s son to the patriarchate. The text in its present form includes a long theological document, the “Teaching of St. Gregory,” which dates probably to the mid-6th C. (M. van Esbroeck, *AB* 102 [1984] 321–28).

Of particular interest are the information on pagan temple sites, the emphasis on the dependence of the early Armenian Church on Caesarea, and the identification of Valarsapat with the main episcopal see. Syrian influence in early Christian Armenia is ignored, as is the fact that the original 4th-C. see was at Atšat, west of Lake Van. Agathangelos thus represents a reworking of the Armenian ecclesiastical history to which pseudo-P’awstos Buzand bears earlier witness.

**AGATHIAS (‘Agathias),** writer; born Myrina, Asia Minor, ca.532, died ca.580. Early in his career Agathias was apparently *curator civilis* (concerned with public buildings) at Smyrna. He later became a successful lawyer (scholastikos) at Constantinople. His early *Daphniaika,* short hexameter pieces on erotic and other themes, are lost; so are other unspecified prose and verse works. In the 560s Agathias collected contemporary epigrams (including 100 or so of his own) by various friends, often fellow lawyers, notably Paul Silentarios, who may have been his father-in-law. This collection of hellenizing epigrams on classical and contemporary themes, called the *Cycle,* is incorporated in the *Greek Anthology* along with its preface addressed by Agathias to an emperor, either Justinian I or Justin II (Al. & Av. Cameron, *JHS* 86 [1966] 6–25).
Agathias's *History*, written in formal continuation of Prokopios of Caesarea, stops after five books covering the years 552–59, apparently because he died. Eastern and western campaigns are described, with the general Narses in Italy a major theme; Justinian gets a sensibly mixed press. Social and intellectual history also receives due attention, though church matters are played down or omitted. This, however, is stylistic affectation rather than paganism; despite some contrary opinions, Agathias was certainly a Christian.

AGE (ἡλικία). The ancient Greeks and Romans often considered the life of man as consisting of seven periods that corresponded to the system of seven planets; Macrobius developed the idea of the hebdomadic (seven-year) rhythm in the life cycle, according to which 49 was the perfect age and 70 represented the complete life span. In contrast, Augustine rejected the mystical meaning of the hebdomadic rhythm and of the astral connections of the human ages and established the concept of six ages of man that correlated with the six ages of the world: Augustine’s ages were infancy, childhood, adolescence, the periods of one’s prime and of decline, and old age; senectitude, however, was to be followed by the new morning, the age of the future life that shall have no evening. The six-age theory was widely accepted in the West, by Isidore of Seville among others.

The Byz. knew the ancient seven-age theory but did not develop either it or Augustine’s view. In their practical definitions the Byz. distinguished several ages of man: infancy, childhood, puberty or marriageable age (marked by separation of the sexes), and old age. They did not precisely define the different stages, and the attitude toward them varied: the young Niketas Choniates, for instance, ridiculed old age, but later expressed indignation with impertinent and silly youth (A. Kazhdan, *Kniga i pisatel’ v Vizantii* [Moscow 1973] 87f).

For the most part, society respected old age, partially because the average Byz. had a relatively short life expectancy. The elderly also commanded respect because they had accumulated wisdom and experience (polyspeira) and understanding (episteme) that could be transmitted orally (Sacra parastela, PG 95:1305D–1508D). Village elders (gerontes, protogerontes) with a good recollection of local traditions often resolved disputes over boundaries and land ownership. Many elderly Byz. complained, however, of the infirmities of old age; Niketas Magistros, for example, regretted the effects of age on his literary creativity (ep.22.2–4). The Greek Anthology (*AnthGr*, bk.5, no.76) includes an earlier poet Rufinus, who described the physical decline of the elderly—gray hair, wrinkles, colorless cheeks, and sagging breasts—as "a coffin-like galley about to sink," although Agathias noted cases where "time cannot subdue nature" (*AnthGr*, bk.5, no.282).

Elderly parents expected children to care for them; according to Neilos of Ankyra (PG 79:600C–601A), two children were sufficient for the needs of old age. Parents might disinherit children who failed to provide for them, as, for example, in the case of a spiritual son who had promised in writing to look after his aged mother (A. Guillou, *La Théotokos de Hagia-Agathe* [Vatican 1972] no.30.12–18). Widows frequently lived with their children and might even act as heads of households. Some monasteries provided hospices for the elderly (gerokomeia); as an alternative, many widows and widowers took monastic vows and received care in a monastery in exchange for a donation of cash or property (see ADELPHATON).

– J.H., A.K.

AGENTES IN REBUS (ἄγγελοι ἀφόροι, "messengers," or μαγιστροὶ, "magister's men"), a corps (schola) under the *magister officiorum* created, probably by Diocletian, to replace the former *frumentarii*. First mentioned in 319, their primary function was to carry imperial messages, which gave them the right to the *cursus publicus* (see DROMOS); they also had the duty to inspect this
service. Their broader responsibilities included supervision of the activity of any state functionary and reports to the emperor on subversion and administrative malpractice. Some *agentes in rebus*, called *curiosi*, were sent to the provinces as a kind of secret police. In addition to these functions, *agentes* acted as state prosecutors, inspectors of customs offices, state construction, and the billeting of soldiers; they also led diplomatic embassies. Their activity was closely interwoven with that of the schola of notaries (W. Sinnigen, *AJPh* 80 [1959] 238–54). The corps of *agentes* had a tendency to increase in size. While Julian tried to restrict their number, by Leo I’s reign it had reached 1,248 (*Cod. Just. XII* 20.3). The enrollment of the relatives of *agentes* was welcomed, but Jews and Samaritans were expelled (Jones, *LRE* 2:948). *Agentes in rebus* were exempt from the jurisdiction of provincial governors and could be dismissed, originally, by the *magister officiorum*, but after 415 (in the East) only by the emperor. The *agentes in rebus* disappeared by the 7th C.

—A.K.

**AGHT'AMAR.** See *Ayt’amar.*

**AGNELLUS,** also called Andreas; 9th-C. priest and abbot of S. Maria ad Blachernas and St. Bartholomew’s in Ravenna. He came from a leading family; his ancestor Ioannicius served in the central administration of Justinian II. Between 850/1 and the late 840s Agnellus composed the *Liber pontificalis ecclesiae Ravennatis* (*Pontifical Book of the Church of Ravenna*) in imitation of the Roman *Liber pontificalis*. His biographies of the archbishops of Ravenna up to his own time champion Ravenna’s pretensions vis-à-vis Rome. They also shed light on late antique Ravenna, the exarchate, Justinian II, the adaptation of Eastern hagiographical legends to a Western context (F. Lanzoni, *FellRav* 8 [1912] 318–26; 17 [1915] 793f; 18 [1915] 795–97)—the issue of icon veneration is alive in his account—and life in a Byz. provincial town, as remembered two or three generations after the imperial authorities’ departure. His sources included the lost chronicle of Archbp. Maximian (546–66), hagiography, occasional archival documents (including Byz. imperial privileges—K. Brandi, *Archiv für Urgenksforschung* 9 [1924–26] 11–13), oral tradition—particularly with respect to his own family—and a remarkably intensive, if uneven, use of the images and inscriptions of his city, many of which are now lost. The surviving text is corrupt and a few biographies are missing altogether (J.O. Tjäder, *ItMedUm* 2 [1959] 431–39).

—M.McC.

**AGNES OF FRANCE,** Byz. empress (1180–85); born ca.1171/72, died after 1204; daughter of Louis VII and Adele of Champagne. In 1179, as the result of an embassy of Manuel I, she arrived in Constantinople; early in 1180, renamed “Anna,” she was splendidly wedded to Manuel’s heir, Alexios II. After Alexios was killed, Andronikos I married her. When in 1185 his downfall seemed imminent, Andronikos attempted flight with Agnes and a favorite concubine, but they were apprehended. From 1185 to 1203, Agnes apparently lived in Constantinople, where she entered a relationship with Theodore Branas; they could not marry, lest she lose her dowry. Sought out in 1203 by members of the Fourth Crusade, she bitterly rejected them and spoke through an interpreter who claimed that she had forgotten French. During the sack of Constantinople she took refuge in the Great Palace. Subsequently she married Branas, who entered the service of the Latin emperors.

—C.M.B.

**AGONY IN THE GARDEN.** Christ’s prayer in the garden of Gethsemane before his arrest is first found depicted on the 4th-C. Brescia Casket (Volbach, *Early Christian Art*, pl.89). Christ’s standing posture and the scene’s place at the beginning of the Passion cycle imply inspiration from John 17:1–13, which opens the Holy Week liturgy. The Rossano Gospels, fol.8v, and Corpus Christi Gospels (F. Wormald, *The Miniatures in the Gospels*
of St. Augustine [Cambridge 1954] pl.1) show Christ twice, in PROSKYNESIS and upbraiding the sleeping disciples, reflecting Matthew 26:36–46 and Mark 14:32–42. All three Christ figures, the sleeping disciples, and the angel of Luke 22:39–46 appear in the superb 11th-C. miniature opening the Holy Week lections in Athos, Dion. 587 (Treasures I, fig.226). This conflation of the synoptic Gospels and John yielded the components that characterize the scene’s subsequent iconography. An esp. exhaustive version appears in S. Marco, Venice (ca.1220).

—A.W.C.

AGORA (ἄγορα, “marketplace”; Lat. forum), the center of public life in many Byz. cities and large towns. The agora was generally laid out on a rectangular plan, though forms such as the oval (at GERASA and the Forum of Constantine in Constantinople) and the circle (JUSTINIANA PRIMA) are known. Lined with porticoes, or stoas, and dominated by important religious, civic, and commercial buildings, an agora was often embellished with imperial statues, honorific columns, monumental arches, and Nymphae. Besides the seven major examples in the capital (see CONSTANTINOPLE, MONUMENTS OF) agoras also remained part of the urban scene at PHILIPPPI and THESSALONIKE beyond the 5th C. Construction of buildings within forums was prohibited by a decree of 383 (Cod.Theod. XV 1.22), but it was not long before the agoras in most cities were encroached upon by new construction, a process that accelerated thereafter. The term, however, remained in usage.

—M.J.

AGRICULTURAL IMPLEMENTS. Besides the PLOW, Byz. farmers employed two similar TOOLS for tilling and weeding, the makele (mattock) and dikella (two-pronged drag-hoe). The former is depicted in an illustration from Hesiod’s Works and Days (Venice, Marc. gr. 464, fol.34r) as a long-handled implement outfitted with a triangular blade set at an angle to the haft. In this instance it appears to resemble extant examples of the Italian ligio (see K.D. White, Agricultural Implements of the Roman World [Cambridge 1967] 39, fig.19). An illustration of the dikella is found in a 5th- or 6th-C. mosaic in Constantinople (Great Palace, 2nd Report, pl.47); here a farmer, grasping the handle of the implement, pulls the bifurcated blade, attached at right angles to the haft, slowly toward him, its two cutting teeth digging lightly into the soil. For turning larger clumps of soil the lisanion (spade-fork) was employed. This implement (as illustrated in Paris, B.N. gr. 2774, fol.36v) was shaped like the Greek letter π; the tool was manipulated by a handle attached in the center of the horizontal cover-bar.

At harvest time grain was reaped with a sickle (drepanon) rather than a scythe and threshed not with flails but with a threshing-sled (dokane); it was separated from the chaff with a winnowing-
fork (lekmeterion) and/or winnowing-shovel (ptyon). The vinedresser’s essential tool was the klaudeuterion or pruning knife, which (as illustrated in Venice, Marc. gr. 464, fol.34r, and Paris, B.N. gr. 2786, fol.140r) might have two blades—one in the shape of a half-moon and the other like a quarter-moon. This instrument could be used for hacking, cutting, or pulling back.

Except for mills and wine and olive presses, more complex devices were rare. The 4th-C. agriculturalist Rutilius Palladius (Opus agricola, ed. R.H. Rodgers [Leipzig 1975] bk.7.2.2–4) describes the reaper on two wheels pulled by an ox that was common in 4th-C. Gaul, but this vehiculum was not used in the East. A device for preparing dough operated by animal power was invented in the Great Lavra of Athanasios on Athos.

Agriculture (γεωπονία). Byz. had a diversified soil and climate even after the loss of Syria, Egypt, and North Africa in the 7th C. Its lands ranged from the hot littoral of the Mediterranean, where olive trees and even cotton could grow, to the fertile valleys of Thrace producing barley and grapes, to the arid pastures of Cappadocia sustaining numerous flocks. The most general features were the predominance of rocky soil, scarcity of water supply, and warm summers. This resulted in the relatively small size of fields, in the development of horticulture and viticulture (to what some extent was detrimental to grain production), and in stock breeding characterized by transhumance.

Byz. agriculture was polycultural. The primary types of cultivated land were the choraphon producing grain, the vineyard, and the garden in which fruit and vegetables were planted; in addition, flax, cotton, and sesame were grown, and in Sicily and the Peloponnese the silkworm was cultivated. Olive groves were typical of areas near the sea. There was no irrigation on a large scale (after the loss of Egypt), but gardens, vineyards, and sometimes olive trees were supplied with water by small conduits from natural sources or cisterns.

Agricultural technology was predominantly a continuation of ancient and Mediterranean traditions, for instance, the sole-ard plow, supplemented on particularly stony soils and in gardens by hand cultivation with hoes and mattocks. Agricultural implements included the sickle (not scythe), which left high stalks in the fields as cattle fodder and as fertilizer. For the threshing of wheat, the grain was trampled by oxen or crushed by a threshing-sled, rather than flailed. Complex mechanical devices were limited to wine presses, olive presses, and mills, both animal- and water-driven; there is no mention of water-lifting devices or reapers in Asia Minor or Greece. The land was cultivated in both winter and summer, and in the warmest regions two crops were produced annually. For nurturing the land Byz. farmers employed a two-field rotation system. The degree to which lands were manured is problematic.

Some innovations took place after the end of the Roman Empire. The quality of grain improved: hard wheat spread in Asia Minor and rye was introduced in the Balkans. These types of grain were more stable and easier to store. The system of harness changed around the 10th C., permitting the horse to be used for plowing. Windmills appeared, probably in the 13th C. The role of livestock increased, and dairy products (esp. cheese) assumed greater importance in the Byz. diet. By the 14th C. cattle and flocks of sheep and goats seem to have been a more significant indication of wealth than land.

Figures of agricultural yield are difficult to establish. A 12th-C. writer (Eust. Thess., Opuscula 155,69–71) asserted that on a small field he was able to harvest grain 20:1, but such high yield is atypical. In the estates of the Accaiuoli in Greece in 1380 the yield ranged from 1.6:1 to 5:1 (Schilb. Merologie 57, n.6). In any case Western observers stressed the plentiful supply of agrarian products in Byz., and from the 12th C. onward Byz. exported grain, wine, and other agricultural products to Italy and Dubrovnik. The political situation in the 14th and 15th C. caused a drastic change in rural conditions—the abandonment of
lands and the impoverishment of households as reflected in the *praktika* of Mt. Athos. Byz. farms were small units managed by families using primitive techniques. Only from early 15th-C. Thessalonike is there evidence about large-scale husbandry aimed at the improvement of soil (in part by irrigation), subleasing to smaller tenants, and increasing income; this intensive exploitation of land met resistance from monastic landowners.

Apparently in the late Roman Empire there was more land than there were people to till it, and an important function of legislation was to persuade farmers to stay on their allotments. This situation had changed by the 10th C., and legislation tended to prevent (rich) neighbors from acquiring neighboring properties. Although reduced in extent from the 7th C., the empire still possessed territories that could provide enough grain and other victuals to feed its capital (and indeed allow it to grow in the 10th C.), to supply armies in the field that could counter Arab attacks and eventually reclaim lost lands, and to support a general increase in the population in the 9th and 10th C. There is little evidence on the clearing of forest land, but the will of Eustathios Boillas suggests that some individuals tried to open up new lands, and Psellos (like some other landowners) expressed interest in expanding and improving his estates.

Around the 10th C. the most fertile regions of the empire, besides Thrace and southern Italy, were located in Asia Minor, esp. on the seacoast, while the main centers of cattle breeding were in Bulgaria, Thessaly, and the interior of Asia Minor. By the 12th C., while Balkan cities flourished, the rural character of Asia Minor grew more and more evident; under the Nicaean emperors in the 15th C. the west coast of Asia Minor produced abundant grain for export and became famous for its domestic fowl "industry." Asia Minor was soon lost, however, to the Ottomans, and the northern Balkans were either conquered or suffered from invasions. The Peloponnesos, on the other hand, maintained a prosperous agriculture to the end of Byz.

**AIKAR** (Ἄχιάρχος), grand vizier of the Babylonian king Sennacherib (or Asarhaddon, in Aramaic). He was the hero of an oriental saga known in an Aramaic version of the 5th C. B.C. and alluded to in the Book of Tobit, an apocryphal book of the Old Testament; some ancient Greek authors (e.g., AESOP, in his fables) were familiar with the saga, as was the Qur'an. The legend made Ahikar a victim of the slander of his adopted son Nadian; Ahikar miraculously escaped execution, however, and eventually emerged to save his king when the Egyptians imposed on the king the impossible task of building a castle in the air. Numerous gnomoi and fables were added to the legend. The legend of Ahikar is preserved in Old Slavonic, beginning with a Glagolitic MS of 1468. A. Veselovskij (Skazki tysjači odnoj noči 2 [St. Petersburg 1890] xvi-xviii) and V. Jagić (BZ 1 [1892] 108-11) hypothesized that the Slavonic text was based on a Byz. version, but Grigor'ev (infra) suggested that it drew upon an Armenian original.

**AIGINA** (Αἰγίνα), name of both an island in the Saronic Gulf southwest of Athens and of its principal city; it was located in the province of ACHAIA and eventually in the theme of HELLES. Archaeological evidence shows that the ancient city site on the west coast was inhabited throughout the Byz. period, while the *Chronicle of Monemvasia* (ed. Dujčev 12.04-95) says that Aigina served as a place of refuge for the inhabitants of CORINTH during the Slavic invasions. In the 9th C. Aigina suffered from Arab raids; probably at this time a new settlement was established at Palaiahora on a hill in the interior. In the 12th C. the island was used by pirates as a base for attacks on the surrounding coastlines (Mich.Akom. 43.17-18). Although originally granted to the Venetians after
AIGOS HERODIANOS. See Herodian.

AIMILIANOS (Ἀιμιλιανός), patriarch of Antioch (from before 1074 to 1078). Aimilianos was patriarch long before 1074 when Nikephoros Bryennios (Bryn. 203.2–4) first mentions him as the moving spirit of the city’s anti-imperial opposition. Because of Aimilianos’s great popularity, Michael VII Doukas had him escorted secretly from Antioch to Constantinople in 1074. Nikephoritzes, during his tenure as governor, had first suggested the removal, since he, too, had been opposed by the patriarch. The new governor of Antioch, Isaac Komnenos, orchestrated the execution of this difficult assignment. Even in Constantinople, however, Aimilianos did not resign his see or abandon his political activity. According to Bryennios, he was a “cunning and energetic” individual who eventually incited the people (demos) to rebellion (245.3–4). In effect, he became the ringleader of the anti-imperial faction of churchmen and senators responsible for proclaiming Nikephoros III Botaneiates emperor (25 March 1078).

AINEIAS OF GAZA, teacher of rhetoric; fl. 5th or 6th C. After studying Neoplatonism under Hierokles at Alexandria and visiting Constantinople, Aineias (Alveias) returned home to practice as a Christian sophist. His major work is the Theophrastus, a dialogue in which the Aristotelian philosopher of that name is defeated in arguments concerning immortality of the soul and the resurrection. Twenty-five letters also survive.

AINOS (Ἄινος, mod. Enez), city in Thrace on the east bank of the HEBROS River near its mouth. Prokopios (Buildings 4.11.1–5) reports that Justinian I transformed its low city wall into an impregnable fortification, and the Synkedemos of Hierokles (Hierokl. 634.5) lists it as capital of the province of RHODOPE. Nothing is known about the city from the 7th to 11th C., but it did function as an ecclesiastical center: first as an autonomous archbishopric, and by 1032 a metropolis (Laurent, Corpus 5.1:614f). It reappears in historical narratives in 1090 when Alexios I established his headquarters there during his war against the Pechenegs (An.Komm. 2:135.27–29). Thereafter its role increased: in the 12th C. it was a market where monks of the Kosmosoteira monastery bought olive oil directly from boats (L. Peti, IRAIK 13 [1908] 50.1–4). A 15th-C. historian (Kritob. 193.6–11) characterizes Ainos as a large polis thriving on trade with the neighboring islands of Imbros and Lemnos (the description is partly borrowed from Herodotus). Strongly fortified, it withstood the attack of the Bulgarians and Tatars in 1265 and that of the Catalan Grand Company in 1307. According to Chalkokondyles (Chalk. 520f), ca.1384 the people of Ainos invited a member of the family of Francesco Gattilusio to be their ruler, and it remained an important Genoese possession until it fell to the Turks in 1456; in
1460 Mehmed II granted Ainos to Demetrios Palaiologos, the deposed despotes of the Morea, but in 1468 it returned to Ottoman control.

AITOLIA (Αἰτωλία), a mountainous region in the western part of central Greece, between the Ambraic Gulf and the Gulf of Corinth; west of Aitolia lay Akarnania, a part of which occupied the fertile valley of the Acheloos River; the Akarnanian coast faced the islands of the Ionian Sea—Leukas, Ithaka, and Kephallenia. The region was a part of the theme of Nikopolis, then of the despote of Epiros. The ancient names of Aitolia and Akarnania were still used in the 6th C., and Prokopios (Buildings 4.2.1) even speaks of Aitolians and Akarnanians; the Synekdemos of Hierokles (Hierokl. 648.4) mentions Aigion as the metropolis of Aitolia. The names then disappeared from Byz. nomenclature, but were revived by historians of the 14th–15th C. (Kantakouzenos, Gregoras, Laonikos Chalkokoundyles), who often used them side by side with Epiros and sometimes as synonyms for the latter (TIB 3:39). The name Aitolia had been revived even earlier in ecclesiastical lists, and Naupaktos was called "of Nikopolis" or "of Aitolia" (Notitiae CP 10.531). In the acts of the local council of 1367 the metropolitan of Naupaktos is titled "hypertimos and exarch of all Aitolia" and the bishopric of Arta defined as "in Akarnania" (MM 1:494.6, 13). – A.K.

AKAKIA (ἀκακία, lit. "guilelessness," also ἀνεξικακία, "forbearance"), a cylindrical pouch of purple silk containing a handful of dust that the emperor carried in his right hand on ceremonial occasions; in his left he held a scepter, an orb, or a cross ornamented with precious stones (De cer. 25.20–22). In the Klerotologion of Philotheos (Oi-konomides, Listes 201.13–16) the order of the hands is reversed. Two late Byz. writers (pseudo-Kod. 201.12–202.3; Symeon of Thessalonike, PG 155.356AB) both emphasized that the akakia symbolized the instability of temporal power and the humility of its mortal bearer. According to Hārūn ibn Yahya’s description of the emperor’s procession to Hagia Sophia on Ash Wednesday, the ruler went on foot carrying a golden box with a bit of earth in it; at every two paces his “minister” exclaimed, “Be mindful of death!” and the emperor paused, opened the box, looked at the dust, and wept (A. Vasiliev, SemKond 5 [1932] 159).

A representation of the akakia can be seen on the mosaic of Emp. Alexander in the gallery of Hagia Sophia (P.A. Underwood, E.J.W. Hawkins, DOP 15 [1961] 191, 195f and n.30, fig.1).

AKAKIAN SCHISM, a temporary rift (484–519) between the church of Constantinople and the papacy, so named after the patriarch Akakios. By the end of the 5th C. the bishop of the imperial capital faced resistance from East and West: on the one hand, the popes emphasized their primacy among the five archbishops as confirmed by canon 28 of the Council of Chalcedon in 451, and thus Pope Simplicius (468–83) entrusted Akakios with legatio pro nobis (PL 58.415C), treating him as the pope’s legate; on the other hand, the Eastern archbishops, irritated by the administrative decisions of Chalcedon (e.g., confirming for Constantinople the second place in the ecclesiastical hierarchy), tried in 477 to return to Ephesus the privilege of exarchate, to the detriment of the capital. The situation was aggravated by the theological split between Rome and the sees of Antioch and Alexandria that clung to Monophysitism, whereas Akakios wavered between the two creeds and kept shifting his allegiances.

In 482 Emp. Zeno and Akakios signed the Η- nikon, a compromise with the Monophysite Peter Mongos, but it was rejected by Kaldanson of Antioch (479–84) and by Monophysite monks in Egypt. The new pope, Felix III, sent envoys to Constantinople who regarded the compromise favorably. The Akoimetoi monks, the anti-Monophysite activists in Constantinople, accused the papal legates of succumbing to bribery and betraying the Roman interests; in July 484 Felix convoked a synod of bishops in Rome, abrogated the legates’ decision, condemned Mongos, and deposed Akakios. The papal letter enumerating the “sins” of Akakios was delivered to the patriarch by an Akoimeto monk who paid with his life for this courageous action.

As a result of the schism the name of Felix was...
removed from Constantinopolitan diptychs. Then Akakios moved against Kalandion, who was suspected of supporting the revolt of Leontios and Illos—he was deposed and replaced by Peter the Fuller; thereafter Martyrios of Jerusalem (478–86) signed the Henotikon.

Rome remained intransigent, however, and the pope had solid partisans in Constantinople; nor did the Henotikon find uncompromising adherents in Egypt, Syria, and Palestine. The revolt of Vitalian was carried out under the banner of the Chalcedonians. Patriarchs Makedonios (496–511) and Timothy I (511–15) tried to curb the Monophysite movement, but they refused to denounce the Henotikon and to remove Akakios from the diptychs lest they thereby acknowledge the victory of Rome. Reconciliation was difficult since Emp. Anastasios I expressed obvious pro-Monophysite sympathies; he even found Makedonios insufficiently anti-Chalcedonian and deposed him. Only the predominance of the Orthodox party under Justin I and the search for an alliance with Rome brought an end to the Akakian schism: on 28 Mar. 519 Justin abrogated the Henotikon and ended the break with Rome; the names of Akakios and Zeno were removed from the diptychs.

AKAKIOS (Ἀκάκιος), bishop of Berroia, Syria (from 378); born ca. 322, died ca. 433. Akakios became a monk at an early age, gaining a reputation for asceticism, kindness, and piety. He participated in the Council of Constantinople (381) and the Synod of the Oak (403). Because of his advanced age, he could not attend the Council of Ephesus (431) but played a mediating role behind the scenes. Contemporaries considered his only fault to be an implacable hostility toward John Chrysostom, a former friend with whom he had broken over a supposed insult. His follower Ba-laeus extolled his virtues in five Syriac hymns. A few of his many letters survive, including one to Cyril of Alexandria in support of Nestorios; they show him to be a man of personal and theological compromise.

AKAPNIOU MONASTERY, located in Thessalonike, perhaps on the acropolis. The date of its foundation is uncertain. V. Grumel (EO 30 [1931] 91–95) suggested that Akapniou (Ἀκαπνιοῦ, “without smoke”) was established by St. Photios.
of Thessaly in the early 11th C. on the evidence of a hymn by Demetrios Beaskos (end of 13th C.) that names a St. Photios as the këtor. The relationship of the monastery to the 11th-C. Akapnies family of civil functionaries (Laurent, Corpus 2, nos. 107, 159, 202) cannot be determined. Sometime in the 11th or 12th C., an early hegoumenos of the monastery, Ignatios, wrote a treatise on the mosaic of Christ at the Latomos monastery (V. Grumel, EO 29 [1930] 165–67).

During the Latin occupation of the 13th C. Pope Innocent III placed Akapniou under the protection of the Holy See. In the 14th C. it was involved in a number of disputes over properties located in Macedonia and in Thessalonike proper. Ignotij of Smolensk visited the monastery in 1405. After the Turkish conquest of Thessalonike in 1439 Akapniou lost most of its property (N. Oikonomides, SüdostF 35 [1976] 4).

AKATHISTOS HYMN (Ἄκαθιστος Ὑμνος), an anonymous kontakion sung in honor of the Theotokos while the congregation stands (i.e., a-kathistos, “not seated”; a recollection of the all-night vigil during which, according to tradition, the Akathistos Hymn was first sung in thanksgiving for the lifting of the Avar siege of Constantinople in 626). Despite the liturgical developments of the 8th C., when performance of kontakia in their entirety was abandoned, the Akathistos Hymn continued in use, at first at the Feast of the Annunciation (25 March) and subsequently during Lent. The Akathistos Hymn consists of a prooimion (three of which, probably, exist) and 24 oikoi, or stanzas, linked by an alphabetic acrostic. The oikoi follow two alternating structures, one shorter with the refrain “Alleluia,” the other longer and with a set of 12 Chairetismoi (Salutations) to the Theotokos, ending in the refrain “Hail, wedded maiden and virgin.” The first 12 oikoi give the biblical narrative on the Incarnation; the remaining 12 meditate upon its mysteries. The whole coalesces to create a subtly interwoven net of images that is one of the high points of Byz. poetry. The author and date of composition remain uncertain. One prooimion, “To the defender and commander,” and hence the entire Akathistos Hymn, is attributed in the synaxaria to Patr. Sergios I in 626 and in the Latin translation (8th or 9th C.) to Patr. Germanos I in 717/18; metrical patterns and theological considerations, however, point rather to a date in the early 6th C. Despite the temptation to ascribe this masterpiece to another craftsman working in the same genre at approximately the same time, Romanos the Melode probably did not write the Akathistos Hymn. The hymn survives in a rich MS tradition.

Four illustrated copies of the Akathistos Hymn are preserved. Two are Greek: in Moscow (Hist. Mus., gr. 429), probably a product of the Hodgon monastery from the third quarter of the 14th C., and in Madrid (Escorial R.I. 19), whose late 14th- or early 15th-C. decoration shows Western influence. Two are in 14th-C. Slavonic Psalters: the Tomic Psalter in Moscow (Hist. Mus. M.2752) and the Serbian Psalter in Munich (Bayer. Staatsbibl., slav.4). The cycle is found somewhat earlier in monumental painting, but may be Palaiologan in origin. Illustrations of the first 12 oikoi rely on traditional iconography of the life of the Virgin and consequently are relatively standardized. The next 12 required greater imagination on the part of artists, and results varied.

—E.M.J., R.S.N.

AKEDIA (ἀκηδία), accidie, sloth or torpor, term for a state of listlessness found in monks. It was recognized as a special problem for hermits who lacked the encouragement of brethren in a cenobitic community. Neilos of Ankyra defined it as the “weakness of a soul unable to withstand temptation” (PG 79:1157C). Akedia was thought to be the result of indulgence in vices such as laziness, loquaciousness, and absorption in the emotions but was sometimes attributed to preternatural causes, a demon that was active at the noon hour. The demon made monks restless, excitable, and
negligent with regard to prayer and reading. Ake-
dæa could be overcome through assiduous attention to prayer and study of the Scriptures, patience, avoidance of idle talk, and manual labor (PG 79:1456D–1460B). Theodore of Studios (PG 99:1724C) prescribed 40 days repentance as punishment for this vice, including three weeks without wine or oil and 250 penitent prostrations (metanoiai) daily, for if uncorrected the sin could lead to the depths of hell.

AKEPHALOAI. See Peter Mongos.

AKHMIM (Panopolis, Πανών πόλεις), metropolis of the Panopolite nome of Upper Egypt, a bishopric from the early 4th C. A church is mentioned in a text of 295–300 a.d. (P. Gen. inv. 108), but no early examples have survived. They may have been destroyed in the 14th C., since al-Nahrawâlî (Die Chroniken der Stadt Mecca, ed. F. Wüstenfeld, vol. 3 [Leipzig 1857; rp. Beirut 1964] 109) indicates that many marble columns from Akhmim were reused in the Ka'ba at Mecca. Akhmim has been famous since the 5th C. for its textiles, many of which were found in early Christian (5th–7th C.) tombs nearby. Other tombs have yielded small articles of daily use. Papyri attest to a flourishing classical literary culture in the 4th–5th C.

—P.G.

AKHNÂS, or Akhnâsiya (Ἡρακλεόπολις, Heraclopolis Magna), south of Fayûm, approximately 15 miles west of Beni Suef, metropolis of the Heracleopolite nome of Egypt, site of a bishopric from 325. From Akhnâs have come a number of 4th- to 5th-C. architectural sculptures, such as niche-heads, capitals, friezes, etc., which once adorned mausoleums in the cemetery; many of these are decorated with mythological scenes. The site is now deserted, a vast field of pottery hills surrounded by several modern villages. Traces of a colonnaded street are visible. Spots where huge columns abound are currently referred to as ka-
niša ("church") but are more probably the remains of other public buildings.

—P.G.

AKINDYNOS, GREGORY, anti-Palamite theologian; born Prilep ca.1300?, died 1348. His baptismal name and original surname are unknown: Gregory was a monastic, Akindynos (Ἀκινδύνος) an adopted name. Of humble, most probably Bulgarian, ancestry, Akindynos studied in Thessalonike with Thomas Magistros and subsequently became a schoolteacher in Berroia. There ca.1330 he met Gregory Palamas and became a monk; he was, however, rejected by four Athonite monasteries, perhaps because of his reputation for secular learning. Akindynos returned to Thessalonike, where he became friendly with Barlaam of Calabria.

By 1337 Akindynos was in Constantinople and involved in the controversy over Palamism; in its early stages he played a mediating role between Barlaam and Palamas. By 1341, however, he began to question the orthodoxy of Palamite doctrine on divine grace, and threw his support to Barlaam. He was apparently condemned at the July session of the local council of Constantinople of 1341 (see under CONSTANTINOPLE, COUNCILS OF). Akindynos was a protégé of Irene Choum-
naina and the spokesman of Patri. John XIV Kalekas, who ordained him deacon and priest (1344). With the erosion of the authority of Kalekas and the victory of John VI KANTAKOUZENOS, Akindynos fell into disgrace; he was excommunicated at the council of 1347 and died in exile soon after.

His correspondence provides important insights into the hesychast controversy from an anti-Palamite viewpoint; many of his theological treatises, including the Antirhetica against Palamas, are still unpublished. Unlike later anti-Palamites, Akindynos was neither a Latin sympathizer nor influenced by Greek philosophy, as his opponents claimed. In his works he did not inveigh against the spirituality of the monks but against the Palamite doctrine of the divine energies, thus ex-
pressing the conservative approach to theology of his fellow intellectuals.

A.K.T., A.C.H.

AKINDYNOS, PEGASIOS, AND ANEMPODISTOS (‘Ακινδύνος, Πηγάσιος, “Ανεμπόδιστος”), martyrs who lived in the Persian Empire under Shapur II (r. 310-79); saints; feastday 2 Nov. The Passio, preserved in two different versions (the earliest MSS from the 9th C.), concentrates on their ordeal: they were thrown into boiling lead, into the sea, into a ditch full of bloodthirsty beasts. They remained unharmed due to the help of angels and by their endurance converted many pagans to Christianity: Shapur’s servant Aphonithos (who was immediately decapitated), the senator Elpidephoros (murdered together with his companions), and even the mother of the “basileus.” She, the three martyrs, and 28 other soldiers (stratioti) were burned in an oven. The legend was reworked by Symeon Metaphrastes.

Representation in Art. The three saints, sometimes joined by Aphonithos and Epidephoros, are depicted wearing Byz., rather than Persian, court costume. The Menologion of Basil II (p.155) shows the saints being thrown in the sea, the Persian converts being beheaded, and the martyrs being burned alive in a brick oven, all in the same composition. These saints, though collectively called the “Holy Five,” should not be confused with the more famous Five, Eustratios and his four companions, the Five Martyrs of Sebastia.

A.K. N.P.S.

AKOIMETOI, MONASTERY OF, an early monastic community in Constantinople, allegedly founded by the archimandrite Alexander the Akoimetos in 405 (Beck, Kirche 21), ca. 420 (Janin, Églises CP 16), or ca. 425 (G. Dagron, AB 86 [1968] 272), and originally located near the Church of St. Menas in the Mangana quarter. The akoimetoi (άκοιμητοι, lit. “sleepless ones”) were pledged to perpetual praise of God; their offices (popularly known as the akolouthia ton akoimeton) were continuous and uninterrupted, performed by three choirs in succession, each doing one eight-hour shift per day. This was actually a mitigation of Alexander’s original ideal of perpetual prayer, a fundamentalist construction of the New Testament command to pray unceasingly; he had imposed an unending cycle of 24 offices, one per hour, with a minimum of time permitted for unavoidable bodily needs (Vita, ed. de Stoop, PO 6 [1911] 680f).

As a result of persecution, the akoimetoi were forced to move to a succession of monasteries almost immediately after their establishment; by the mid-5th C. they settled at Eirenaion on the eastern shore of the Bosporos. Here the monastery flourished under the leadership of the ardent anti-Monophysite Markellos the Akoimetos, who served as hegoumenos for ca. 40 years; in this period the monks reportedly numbered in the hundreds. The monastery of the akoimetoi housed a scriptorium and library; in its early period the monastic community was trilingual, including Greek, Roman, and Syrian monks (Lemerle, Humanism 78, n.82). A contingent of the monks moved in 463 to the recently founded monastery of Stoudios. The akoimetoi had no influence after Iconoclasm, when Stoudite monasticism prevailed in Constantinople. By the 9th C. the monastery of the akoimetoi had returned to Constantinople or had established a metochion in the city; when Antony of Novgorod visited Akoimeto in 1200, it was within the walls. The monastery is not mentioned in the sources after 1204 and does not seem to have survived the Latin occupation.

A.M.T., R.F.T.

AKOLOUTHIA (άκολουθία, lit. “succession”), a liturgical rite, esp. the ritual or sequence of elements comprised in a particular rite or office (e.g., the akolouthia of the Prothesis, the asmatike ako­louthia). The term also refers to the “proper,” or variable parts, of the office of a day or feast (e.g., the akolouthia of the Nativity or of St. Nicho-
AKLOUTHOS (ἀκόλουθος, perhaps from ἀκολούθεω, "to follow"), in the late 9th-C. Kletorologion of Philothaeos a subaltern officer under the droungarios tes vиглас or of the arithmos. From the 11th C. onward, as the droungarios tes viglas assumed primarily judiciary and police duties, the akolouthos became an independent commander of foreign, esp. Varangian, contingents (Oikonomides, TM 6 [1976] 130). Under Constantine IX, the patrikios and akolouthos Michael was one of the most prominent generals. In the 12th C. akolouthoi fulfilled predominantly diplomatic functions, for example, Eumathios Philokales, who is called acolitho in the Historia de expiditione Frederici (ed. Chroust, 60, 65). The last individual known to have held the position of akolouthos was John Nomikopoulos in 1199, but a 14th-C. ceremonial book was familiar with the office; it defines the akolouthos as the chief of the Varangians and states that he accompanied the emperor at the head of this group (pseudo-Kod. 184.20–24). (For ecclesiastical akolouthos, see Acolyte.)

AKRITAI (sing. ἄκριτης, from akro/akra, "summit, extremity"), term found in Byz. military treatises of the 10th and 11th C. denoting people stationed at the extremity of a given position, such as an army encampment or military formation. Its most common usage, however, designates inhabitants at the extremities of imperial territory, esp. along the eastern frontier. When used in this manner, the term akritai can, depending upon context, refer to army units stationed along the frontier, to the commanders of such troops, or to the civilian population along the border. The term does not seem to have had any technical meaning for Byz. provincial administration or military organization, nor does it refer to any specific type of unit composed of scouts or border guards, although such troops did exist and appear to have been called apelatai. In the epic poem Digenes Akritas, hai akrai generally denote the region near the Euphrates and the term akritai can refer to any inhabitant of this area including Muslims living outside the empire. In a later reference to Digenes' legendary exploits, Manuel I Komnenos was termed "a new Akrites" (H. Grégoire, Byzantium 25 [1955] 779–81).

AKRITIC IMAGERY. Episodes found in both Digenes Akritas and the Akritic Songs are possibly reflected in the sgraffito decoration of more than 100 ceramic plates of uncertain origin, but found as far afield as Constantinople, Thessalonike, Sparta, Corinth, and the Athenian Agora. At the last two sites, the pottery comes from a 12th-C. context. A plate found at Corinth, representing Digenes wooing Maximo, queen of the Amazons, seems to follow the epic closely, esp. in the depiction of costume and the setting (Grottaferrata MS, ed. Trapp, vv. 3114–17). On the other hand, a fragment from the Agora, showing the sword-bearing hero beside a dragon whose neck is pierced with five darts, reproduces the pente kontaria and other details in an Akritic ballad (ed. in Notopoulos, infra 127) without counterpart in the epic. Many plates show the warrior as foot soldier in contrast to both Digenes Akritas and the Akritic Songs, each of which describes the hero as a horseman. While 35 plates have the warrior wearing the podea or pleated kilt (sometimes called a fustanella) attributed to Manuel I, the "new Akrites," in a Ptochoprodromic poem, and 26 have him slaying a dragon, neither iconographic element is sufficient to identify the hero specifically as Digenes because both the kilt and the deed characterize other akritai named in the Akritic Songs. More identifiable is the subject of a relief from St. Catherine's in Thessalonike that shows a figure in plate armor tearing the jaws of a lion in accord with an event in Digenes Akritas (Grottaferrata MS, ed. Trapp, vv. 699–714). Evidence for illustrations to accompany the epic,
which may have been the source for five plates, may be found in the spaces left blank for illustration in the 16th-C. Escorial MS of *Digenes Akritis* and in the now lost MS seen in the 18th C. at the Xeropotamou monastery by K. Dapontes. Identification of these scenes as Akritic is, however, far from secure; they may well represent other folk tales now lost, but of which glimpses may be caught (e.g., in the romance of *Kallimachos and Chrysorrhoе*).

**AKRITIC SONGS**, narrative vernacular songs or ballads usually in political verse, in which characters' names or actions appear to reflect episodes from the epic-romance *Digenes Akritis*. The first examples of Akritic Songs were collected in Pontos around 1170, at about the time when the Trebizond MS of *Digenes Akritis* was discovered. According to Sathas and Legrand (L. Politis, *A History of Modern Greek Literature* [Oxford 1973] 29), these songs represented the remnants of an ancient epic cycle predating *Digenes Akritis*. Episodes from *Digenes Akritis* that have been linked to these songs include the abduction of Digenes' bride (*He apagoge tes kores tou strategou*), the building of his castle (*Akritas kastron ektizen*), his encounters with wild beasts (*Ho drakos*), and his death (*Ho Charos maura ephoresen*), though the dramatic struggle with *Charon*, which is a striking element in the songs, does not occur in the epic. The hero's name in the songs fluctuates: he can be Digenes or Constantis or Giannis. R. Beaton (*Byzantium* 51 [1981] 22–43) has stressed that the connections between the songs and the epic are slight and that similarities are likely to have arisen because both draw on a common pool of traditional folk material. Those songs that come closest to the surviving epic are more likely to have been influenced by it than vice versa. Since most of the songs were collected from oral sources in the late 19th C. and have been subject to the transformations of up to a thousand years of oral transmission, the identification of precise references to Byz. historical events can be only conjectural.

**AKROINON** (*'Ακροινόν*, also Akrounos, now Afyonkarahisar), a city of Phrygia. Located at a main highway junction, Akroinon first appears in history when the Arabs attacked it in 716 and 732. In 740, Leo III won a decisive victory there over the Arabs led by Sayyid al-Batūl. Akroinon drew importance from its strategic location and steep acropolis, which provides a remarkable natural defense. It was a city of the Anatolikon theme and a bishopric of Phrygia Salutaris, first attested in the 10th C. Still Byz. when its governor revolted against Alexios I Komnenos in 1112, Akroinon was conquered by the Seljuks before 1146, when Manuel I won a victory there. The citadel bears a Seljuk castle that may include Byz. walls; it depended on cisterns of Byz. origin.

**AKROPOLITES** (*'Ακροπολίτης*, fem. *'Ακροπολίτις τισσα*), a family of civic functionaries; in the 13th C. George Akropolites exaggerated when he called his ancestors a noble kin (Akrop. 1:49.18–19). The name derives from *akropolis*, referring most probably to the Acropolis in Constantinople; in the 10th C. the first known Akropolites acquired Gregoras Iberitzes' house (Preger, *Scriptores* 2:150.1–2), which presumably was at the Acropolis (Skyl. 198.46–47). If so, the family was of Constantinopolitan origin. From the end of the 11th C. onward, the Akropolitai were mostly fiscal officials: Nicholas, *chartularios* of the *logothetes tou stratitikh* in 1088; Michael, *megas chartularios tou genikou*, whom Laurent (*Corpus* 2, no.353) tentatively identified with several other Michaels active in the 1140s. The position of the Akropolitai became more prominent in the second half of the 13th C. when George Akropolites was appointed *megas logothetes*; his son, Constantine, held the same post in the 14th C. (see *Akropolites, George and Akropolites, Constantine*). Leo Akropolites served as *doux* of Serres and Strymon ca.1295 (*PLP*, no.521), but his relationship to George and his son is unclear. Several family members were intellectuals: George and Constantine were famous writers; Melchisedek Akropolites, another of George's sons (blinded or executed in 1299), corresponded with Planoudes and instigated Alexios Philanthropenos to revolt. The Akropolitai intermarried with the Philanthropenoi, Tor-

AKROPOLITES, CONSTANTINE, hagiographer and statesman; born mid-13th C., died Constantinople? in or before May 1324. The eldest son of George Akropolites, Akropolites opposed the Union of Lyons, in contrast to his father. Circa 1282 he became logothetes tou genikou, still bearing this title when he signed a treaty with Venice in 1285. From 1305 to at least 1321 he was megas logothetes. He was related by marriage to Alexios Philanthropenos, the Tornikes (see Tornikios) family, and the imperial family of Trebizond. A patron of the arts, Akropolites was ktetor of the Constantinople monastery of the Anastasis, for which he wrote a supplementary typikon (K.A. Manaphes, EEBS 37 [1969–70] 459–65); he also commissioned an icon of the Virgin and Child, now in the Tretyakov Gallery in Moscow (V.I. Antonova, N.E. Mneva, Katalog drevenurskoj zvoo­psi. XI–na­kalo XVIII veka, vol. 1 [Moscow 1963] no.221, pl.172).

Akropolites was a prolific hagiographer, who wrote enkomia of about 30 saints, thus earning the name of “the new Metaphrastes.” He wrote about saints of earlier centuries, rather than his contemporaries, the one exception being an enkomion of St. John the Merciful the Younger (D.I. Polemis, AB 91 [1973] 31–54). His Logos on the iconodule martyr Theodosia (PG 140:893–936) was evidently inspired by the miraculous cure of himself and his son-in-law at her shrine. Of his letters 194 survive, mostly unpublished; his correspondents included Gregory II of Cyprus and Nikephoros Choumnos. He also wrote a chronicle from the foundation of Rome to 1261. Akropolites severely criticized the Timarion for both style and content (M. Treu, BZ 1 [1892] 361–65).

AKROPOLITES, GEORGE, civil official, teacher, and historian of the empire of Nicaea; born Constantinople 1217, died Constantinople 1282. Related by marriage to Michael VIII Palaiologos, Akropolites was the father of Constantine Akropolites and the monk Melchisedek. His parents sent him at age 16 from Constantinople to the court of John III Vatatzes, where he continued his studies under Theodore Hexapterygos and Nikephoros Blemydes. In the 1240s he was a tutor to the emperor’s son, Theodore II Laskaris, and performed chancery and ambassadorial functions as a grammaticos. Under Theodore II, Akropolites became logothetes tou genikou (1255) and then praitor (1256), with the duty of overseeing the troops in Macedonia. He held the title megas logothetes from ca.1259 to 1282. In the reconquered Constantinople he helped restore higher education as a teacher of philosophy, geometry, and rhetoric, producing at least two known students, the future patriarch Gregory II of Cyprus and John Pediasmpos. In 1274, as part of a three­man delegation to the Second Council of Lyons, he swore to accept the primacy of the Roman church on his own behalf and that of the emperor.

Contemporaries acknowledged his learning and characterized Akropolites as a man who “gave much to the emperor” (Constantine Akropolites, Diatheke, ed. M. Treu, DIEE 4 [1892] 48) and was “neglectful in matters of conscience” (Pachym., ed. Failler 2:409.23–25). He restored the Church of the Anastasis in Constantinople, which he bequeathed to his son Constantine, and wrote various works, notably his Chronike Syngyrahpe, the main Greek source for 1203–61. Written with the hindsight of the victorious party of 1261, it is infused with admiration for Michael VIII. The work was a source for the so-called Chronicle of Theodore Skoutariotes (who also made valuable additions to it) and for Ephraim. Other works are an epitaphios for John III, prefatory verses to his own edition of Theodore II’s letters, and two tracts on the Procession of the Holy Spirit.

AKTEMON (ἀκτήμων, lit. "without property"), a fiscal designation for a peasant who possessed no plow animals and little or no real property (at most, perhaps, only small vineyard or garden plots) but who possessed other livestock (e.g., asses, sheep, goats, bees). The term appears in documents from 1073 to 1303 that categorize peasants and peasant-holdings for fiscal and administrative purposes: in decreasing order, zeugaratos, boidatos, aktemon, and aporos. As economic units producing a fiscal revenue, four aktemones were equivalent to one zeugaratos. Accordingly, in the cadaster of Lampaskos, the angareia of an aktemon was valued at half the angareia of a boidatos. Aktemones are probably identical to the pezoi (“on foot,” i.e., peasants who worked without draft animals) found in some contemporaneous sources. Aktemones probably leased land or earned their living as craftsmen, laborers (douloutai), or hired men (misthioi).

AKTOUARIOS (ἀκτούαριος, Lat. actuarius or actarius), the name of an official whose functions changed over the centuries. In the late Roman Empire the aktouarios was a fiscal official whose duty was the distribution of military wages and provisions (O. Seeck, RE 1 [1894] 301f.). The term was in use at least to the 6th C.—in papyri (Preisigke, Wörterbuch 3 [1931] 92), inscriptions (Grégoire, Inscriptions, no.211), and legislative texts. The Basilika retained some old laws concerning aktouarioi, stressing among other points the distinction between aktouarioi and the taboullarioi (Basil, 6.35.6). The aktouarios reappears in the 9th-C. Taktikon of Uspenski and the Kletorologion of Philotheos but in vague contexts. In a 10th-C. ceremonial book he is described as distributing awards to victorious charioteers on behalf of the emperor (De cer. 345.14-15). R. Guillard (BS 26 [1965] 3) calls the aktouarios the chief of the couriers. The term changed its meaning again in the 12th, or perhaps as early as the 11th C.—from this time onward, aktouarios was the title of the [court? ] physician.

AKTOUARIOS, JOHN. See John Aktouarios.

AL.- See under latter part of name.

ALAHAN MANASTIRI (formerly called Koca Kalesi), a ruined complex of ecclesiastical structures situated between Karman (Laranda) and Mut (Claudiopolis) on the boundary between Isauria and Lykaonia. The ruins occupy an artificial ledge on a mountainside, approximately 250 m long and 30 m wide. They consist of a cave chapel (the earliest feature on the site), a three-aisled basilica that retains an impressive carved doorway and, some 110 m farther east, another church lacking only its roof. The east church was covered by a central tower on squinches, probably terminating in a pyramidal timber roof. The two main churches were joined by a colonnaded walk, along which were built a baptistery and other structures. Notable architectural sculpture survives. Funerary inscriptions of Tarasis (died 462), builder of apanteteria (meeting rooms), and of the junior Tarasis, who served as paramonarios (see prosonarios) from 461 onward, provide chronological confirmation for the attribution of the bulk of the complex to the reign of Zeno. During a secondary phase a smaller church was built in the nave of the west basilica. The cave church, baptistery, and living quarters were also repaired, but the east church remained derelict. The generally accepted assumption that Alahan was a monastery appears incorrect, so that its proposed identification with “the monastery at Apadnas in Isauria” that was rebuilt by Justinian I (Prokopios, Buildings 5:9:33) should be abandoned. It was more probably a pilgrimage shrine.

ALAMANIKON (Ἀλαμανικῶν), or "German tax," imposed in 1197 by Alexios III after Henry VI demanded 5,000 pounds of gold as tribute and agreed to accept 1,600. Before this levy on the provinces and Constantinople, the emperor summoned an assembly of senators, clergy, and members of the trades and professions. When he proposed that the property of each be assessed, the
assembly rejected the imposition as contrary to custom. In near revolt, members of the crowd blamed Alexios's maladministration, citing the waste of public funds and the imposition of incompetent relatives of the emperor as provincial governors. Alexios hastily disavowed the plan. He next tried to collect costly ecclesiastical objects not of primary use in the liturgy; when this attempt also met with resistance, he turned to plundering the tombs of past emperors, abstaining only from that of Constantine I. Thereby he acquired some gold and 7,000 pounds of silver. Henry VI's death forestalled the dispatch of the money.

LIT. Brand, Byzantium 193. —C.M.B.

ALAMUNDARUS (al-Mundhir), king of Hīra who raided the Byz. frontier for almost 50 years (ca.505–54), both as a client of Persia and as Lakhmid king; died near Chalkis 554. Around 523 he captured two Roman generals, Timostratos and John, and released them in the following year for a large sum of money. He participated in the Persian campaign that ended with the battle of Kallinkos. His role in the Strata dispute (ca.539) and his subsequent negotiations with the Romans provided the Persian king Chosroes I with a pretext for beginning the so-called Second Persian War, in which Alamundarus took part. For some ten years after this war he fought with his Ghassānid adversary Arethas, but finally was defeated and killed. Toward the end of his life he apparently received subsidies from Justinian I. Although Alamundarus married a Christian woman, Hind, the daughter of Arethas, king of Kinda, he was a pagan in word and deed. If he was converted to Christianity ca.513, as claimed by some ecclesiastical historians such as Theodore Lector, his conversion was of short duration.

ALAMUNDARUS (al-Mundhir), son of the Ghassānid king Arethas and his successor as supreme phylarch and king of the Arab foederati (569–582). Like his father before him, he, too, distinguished himself in the wars of the period and also as an arbiter in the Monophysite controversies. He participated in the campaign of 580 against the Persians, during which disagreements developed between him and the Byz. commanders. On two occasions, in 570 and in 580, he captured Hīra, the capital of his Lakhmid adversaries, in two lightning campaigns. In 580 he was received by Tiberios I in Constantinople and was allowed to wear a crown instead of a coronet or a band. Throughout his career, he tried to settle religious differences between the Monophysites and the Chalcedonians and also within the ranks of the Monophysites. In the quarrel between two Monophysite leaders, Paul the Black, the Monophysite patriarch of Antioch, and Jacob Baradaeus, he took the side of Paul. His Monophysite persuasion was not well received in Constantinople. Justin II tried unsuccessfully to arrest him, but the two were later reconciled. Emp. Maurice, however, treacherously had him arrested and exiled to Sicily. Like his father, he was both patrikios and gloriosissimus.

ALANS (’Alanoi) were known in the West from the 1st C. A.D. Ammianus Marcellinus regarded them not as an ethnic entity, but rather as ubiquitous groups of professional warriors (cavalrymen) who practiced ritual adoption and used an East Iranian idiom as their lingua franca. Some of them took part in the exploits of the Goths, Huns, and Vandals, fought at the battle of Adrianople, and eventually settled in North Africa, Italy, and Gaul. Others became foederati; Aspar was reportedly of Alan origin.

Later sources distinguish two groups, the mountain Alans and the steppe Alans. The former, the Alans proper, lived in the northern Caucasus, between the Terek, Bol'soj Zelenčuk, and Argun rivers. Both groups were either subjects or associates of the Khazar state or Byz.; Justinian II sent an embassy to Alania (as the country is called by Theophanes the Confessor) seeking an alliance against the Arabs. Patr. Nicholas I Mystikos dispatched several church missions to the Alans, and between 914 and 916 Peter, archbishop of Alania, was active there. The remains of churches in Byz. style, dated to the 10th C., have been discovered in the region. In the 13th C. Theodore of Alania sent a report on his flock. Kulakovskij's attempt to locate the metropolis of
VICINA in Alania is erroneous (V. Laurent, EO 38 [1939] 91-103). The only known Christian Alan inscription (of the 10th–12th C., in a Greek script) was discovered on the Bol’soj Zelenčuk.

In the 11th C. Alans served as Byz. mercenaries. In the early 14th C. Andronikos II settled a 10,000-strong contingent of Alan men with their wives and children in Asia Minor to use against the Turks, but they were unsuccessful; their operation against the Catalán Grand Company in 1305 was no more fortunate. The Byz. made no clear distinction between Alans, Abchasians, and Georgians, even though John Tzetzes boasted that he knew how to address the Alans in their language. In the 11th C. the Georgian princess Maria was consistently called Maria of "Alania."

ALBANIA, CAUCASIAN ("Ἀλβανία, Ἄρμ. Aluan’k’), region northeast of Armenia and east of Iberia between the Kur River, the Caspian Sea, and the Caucasus range. From the 1st to the 6th C. it formed an independent kingdom with its own language and literature, now lost. It was evangelized from Armenia in the 4th C. (pseudo-P’awstos Buzand 3.5–6), whence it also received its alphabet in the next century (Koriwn, Life of Mashots, ed. K. Maksoudian [Delmar, N.Y., 1985] 70ff; pt.2, p.40). It remained within the orbit of the Armenian church, although it disputed the marchlands south of the Kur with the Arsacids. Ammianus Marcellinus (Amm.Marc. 18:6:22; 19:2.3) mentions Albania as an ally of Persia against the Romans in 359, a position confirmed by the Armenian sources for 369–70 (pseudo-P’awstos Buzand 5.4.13). Around 510 the Sasanians suppressed the Albanian monarchy and the country was ruled by a mazrpan residing at Partaw. In 628 Herakleios installed the Mihranid dynasty of Gardman in Albania; it remained in power under Arab suzerainty until 821, when Albania ceased to exist as an autonomous Christian principality.

ALBANIANS ("Ἀλβανοί"), also Arbanaiti, an ethnic group the origin of which is enigmatic. Attempts to connect medieval Albanians with those described by Ptolemy (e.g., E. Lange-Kowal, Zeit- schrift für Balkanologie 18 [1982] 136) do not pro-
vide sufficient evidence; Byz. texts begin to mention them only from the 11th C., and even these texts are open to question (E. Vranouse, *Symmeikta* 2 [1970] 207–54).

Hypothetically, we can assume that the Albanians were descendants of the ancient Illyrians (see *Illyricum*) who survived the period of barbarian invasions and, by the 11th C., occupied Arbanon, a mountainous valley of the Shkumbi River (A. Ducellier, *TM* 3 [1968] 353–68) that formed a part of the theme of *Dyrrachion*. The region was populated by a predominantly pastoral people. By the 13th C. the Albanians had spread far from this area; George Akropolites mentions the *phrourion* Kroia (Albanian Krujë) as a part of Arbanon.

In the 14th C. many Albanian nobles settled in different parts of *Epiros*: notable among them were Charles Topia ("princeps Albaniae," 1559–92) in Dyrrachion, John Spata in Arta, Balsa Bašić in Avlon, and the Kastrioti in Kroia. In Kroia the local lord, Skanderbeg, was able to defeat the Ottomans, but soon after his death the Ottomans completed their occupation of Albania. Dyrrachion, taken by the Venetians from Charles Topia in 1392, was evacuated by them in 1501. By the early 14th C. bands of Albanians had also spread into Thessaly. Around 1350 the *despotes* MANUEL KANTAKOUZENOS transplanted a large number of Albanians to the Morea to serve as soldiers and farmers in the depopulated peninsula; yet another wave of Albanians arrived in the Morea during the despotate of THEODORI I PALAIOLOGOS (Zakythinos, *Despotat* 101–05).

**ALBERTINI TABLETS**, 33 documents written in Latin on cedrood tablets and dating to the Vandal period (493–96); found on an estate in the Jabal Mrata south of the Tveste, they are named after their first editor. All but three of the documents constitute deeds of sale involving parcels of land under the category of *culturae Mancianae*, which formed part of the *fundus Tuleianus* and potentially neighboring *fundus*. The estate was owned by a landlord, Flavius Geminus Catullinus, *flamen perpetuus*, probably in absencia, but was evidently maintained by three brothers, Geminus Felix, Geminus Cresconius, and Geminus Janarius, possibly relatives of Catullinus, acting in capacities akin to the *conductores* of the Roman period. The reason for this rash of sales is not evident in the documents, but involved the purchase by the Gemini brothe rs of scattered plots, for rather low prices, from tenants of the estate (most of whom carry the family name of Julius, suggesting that they formed a single clan). It is evident from the deeds that it was the use of the plots and the ownership of the trees (mostly olive, but also fig, almond, and pistachio) and other crops cultivated on the plots, and not the plots of land themselves that were being sold.

*Cultura Manciana* was a land tenure arrangement, originally established under the terms of a Roman-period *lex Manciana* (evidently only in effect in Africa), in which lease or usage rights (*usus proprius*) to uncultivated land (*subsecivia*) on an estate was granted in perpetuity to an individual (*colonus/possession*) by the owner in exchange for shares of the crop. This arrangement is thought to have been designed to extend cultivation on estates through a system of tenancy. From the Albertini Tablets, however, it would appear that the predominant form of landholding on the estate of Catullinus was a Mancian tenure, suggesting that even primary parts of estates in Africa may have been brought into cultivation under the Mancian system. The tablets likewise suggest that this system was left essentially untouched by the Vandals.

In terms of agriculture, the tablets reveal continued arboriculture, particularly olive cultivation, as well as continued practice of floodwater farming technology along the Saharan frontier. The Albertini Tablets also provide valuable information on Vandal and early Byz. coinage and monetary values (P. Grierson, *JRS* 49 [1959] 73–80) as well as late Latin grammar, phonetics, and legal and agricultural terminology.

ALBERT OF AACHEN, canon; 12th-C. Crusader historian (the name is indicated only in two later MSS). Although he never traveled to the Levant, Albert authored in Latin the *Jerusalem History* (*Historia Hierosolymitana*), the most detailed contemporary account of the First Crusade (books 1–6) and the Crusader kingdom's early years (books 7–12). He likely began writing before 1119 (possibly as early as 1100–01; events of 1109–11 are dated one year too early). He probably wrote book 12 (events of 1111–19) in the 1120s and certainly before ca.1140 or 1150 (date of the earliest MSS: Knoch, *infra* 14–18); it contains apparently unfinished material. Albert enthusiastically but uncritically exploited the *Gesta Francorum*, oral reports of fellow Lotharingians, whom he lionizes, and possibly also lost sources, including an early form of Richard the Pilgrim's *Chanson d'Antioche*. Although Albert's reliability has been challenged, his data on the Hungarians, Pechenegs, and Byz. (bk.1, chs. 6–14) appear accurate (J. Kalić, *Beogradski Univerzitet, Zbornik filozofskog fakulteta* 10.1 [1968] 183–91). He treats the relations of Alexios I Komnenos with Peter the Hermit (bk.1, chs. 13–15, 22), Godfrey of Bouillon (bk.2), and Bohemund I (bk.9, ch.37, 47; bk.10, chs. 40–45) as well as a Turkish attack on Byz. territory (bk.12, ch.15).

-M.McC.

ALBOIN (Ἀλβόιος), Lombard king; born Pannonia?, died Verona 28 June 572. Circa 565, Alboin succeeded his fatherAudoin as king of the Lombards in Noricum and Pannonia. In 567, in alliance with the Avars, Alboin destroyed the Gepids, slew their king Cunimund, and married his daughter Rosamund. On 2 Apr. 568, allegedly at the invitation of Narses, Alboin left with his people for Italy, arriving in May 569. It is unlikely that Alboin entered Italy with the complicity of some Byz. authorities (Schmidt, *infra* 588f). By Sept. 569, aided by some Heruli, Rugians, Gepids, Alans, and Saxons, Alboin conquered Aquileia, Cividale, Venetia, and Lombardy. He entered Milan on 3 Sept. 569, easily overran Tuscany, Piedmont, and regions of Spoleto and Benevento (including Treviso, Vicenza, Verona, Brescia, and Bergamo), crossed the Po in 570, and took Pavia and Verona in 572. Alboin established himself in the former palace of Theodoric; in autumn 569 or early 570 he was proclaimed *dominus Italiae* at Milan. Alboin personified the valor and ethic of a warring society and had greater military than administrative ability. He capitalized on Justin II's preoccupation with other frontiers and the inadequacy of Byz. garrisons in Italy and started the process whereby Byz. control of Italy dissolved. His chamberlain Peredo slew him, possibly in league with Alboin's vengeful wife Rosamund.

-W.F.K.

ALCHEMY (χυμεία or χημεία). The "sacred art" of the transmutation of metals into gold or silver was, in Byz., a continuation of older Mesopotamian and Egyptian traditions of coloring or making alloys of cheaper materials so that they would be accepted as more expensive ones. Sometimes the writings of the alchemists are composed of simple RECIPES for achieving tinctures, confusions of metals, and other chemical effects, but often they are expressed in an allegorical mode infused with philosophical, religious, or astrological imagery that reflects their mystical nature, which is almost completely irrelevant to the perceptible world.

These two tendencies are clearly visible in the earliest Byz. alchemical texts, of the early 4th C.; the papyri of Leiden and of Stockholm contain recipes for imitating gold, silver, precious stones, and purple dye, while some of the surviving Greek treatises of Zosimos of Panopolis (3rd/4th C.) are primarily allegorical visions in which the transmutation of base metals into gold or silver is represented as a religious act whereby the adept ascends a series of ladders leading to the accomplishment of his goal. Other treatises ascribed to Zosimos in Greek, while still mystical, are more closely connected to actual chemical operations.

Indeed, early Byz. and Syrian alchemy, in combination with some material from Iran and India, is the foundation for the rich alchemical tradition in Arabic, which in turn inspired western Europe from the 11th C. onward. Much remains to be discovered in this vast literature in Syriac, Arabic, Persian, and Latin that is relevant to the history of Byz. science. The summary accounts given by Sezgin (*supra*, 77–111) and Ullmann (*supra*, 163–91) reveal the existence of works falsely attributed to *Apollonios of Tyana*; a *Kitāb al-Habīb* (Book of the Beloved), which had a Byz. original; many versions of Greek and Syriac treatises associated with the names of Plato, Aristotle, and Hermes; and Arabic translations of the alchemical works of *Stephen of Alexandria*, *Emp. Herakleios*, and *Marianos the Monk* (Lat. *Morienus*).

Works surviving in Greek of early Byz. alchemy (4th–7th C.) include the commentary on pseudo-Demokritos by *Synesios of Cyrene*, apparently composed before 389; the commentary on *Zosimos* composed by *Olympiodoros* (either the early 5th-century historian or—more probably—the 6th-C. philosopher); *On the Sacred Art* by *Pelagios the Philosopher* and *On the Divine Art* by *John the Archpriest*, who both use *Zosimos*; the mystical treatise *On the Making of Gold* by *Stephen of Alexandria*; two compilations, that of “the Christian” and an anonymous one, both of which cite *Stephen*; and the four alchemical poems ascribed to *Heliodoros*, *Theophrastos*, *Hierotheos*, and *Archelaos*. All of these texts and some anonymous compendia of recipes were included in a collection made in, perhaps, the late 9th or early 10th C. and dedicated to a certain Theodore. A primary descendant of this is the unfortunately mutilated Venice, Bib. Marc. 299, probably of the 10th C. It includes formulas and explanatory texts for the transmutation of metals, astrological diagrams purporting to show the heavenly *taxis* that allows the making of gold, and alembics and other apparatus for heating and distilling liquids. The MS was evidently still in use in the 14th C. when other drawings were added (Furlan, *Marciana* 4:11–15). Expanded versions of the collection are found in Paris, B.N. gr. 2325 (13th C.) and B.N. gr. 2327 (1478).

This last MS opens with a most significant contribution to alchemical literature, the letter *On How to Make Gold* addressed by Michael Pселlos to *Patr. Michael I Keroularios* in ca.1045/6 (J. Grosdidier de Matons, *TM* 6 [1976] 329f). In it he argues that the transmutation of one element into another is perfectly natural and then gives a series of recipes for manufacturing “gold,” degrading it, and extracting it from sand. Later in his career Pселlos attacked the unfortunate patriarch for having been such a good student (*CMAG* 6:73–89).

The final two authors under whose names alchemical treatises have been transmitted are *Kosmas the Monk* (who postdates Pселlos) and *Nikophoros Blemydes*, both of whom wrote collections of recipes. But in southern Italy a Latin alchemical treatise was translated into Greek already by the early 14th C.; the anonymous text, edited by C.O. Zuretti (*CMAG* 7), refers to Arnold of Villanova. Some other fragments of the alchemical works of Arnold of Villanova appear in a 15th-C. MS, Paris, B.N. gr. 2327. The *Semità recta* (Straight Path) falsely ascribed to Albertus Magnus is found in Paris, B.N. gr. 2419, perhaps translated into Greek by the scribe George Midiates in the 1460s.

The creative period of Byz. alchemy was the 4th–7th C., though the art continued to be studied and presumably practiced until the fall of Constantinople. Unlike astronomy, astrology, mathematics, and medicine, however, Byz. alchemy seems barely to have been enriched by translation from the Arabic, though there are some traces of eastern influence in the treatise from the 14th-C. codex Holkham gr. 290, now in the Bodleian (ed. O. Lagercrantz, *CMAG* 3), and in the work of *Kosmas*. The few treatises translated from the Latin texts influenced by the Arabic science were available only in Italy.

—D.P., A.C.

**ALEMANNI** ("Αλαμαννοί"), the Latin term for an amalgamation of a number of smaller Germanic tribes, including a segment of the Suevi. After some conflicts with the Roman Empire in the 3rd C., Alemanni concentrated in the area between the Upper Danube and middle Rhine. Relations with the native Roman population were frequently hostile. In 457 the Alemanni invaded Italy and later threatened Noricum. Following their defeat by Clovis (497?), some Alemanni escaped to Raetia to settle, after ca.500, south of Lake Constance under the protection of Theodoric the Great. Paganism remained widespread among the Alemanni until the late 6th C. They were eventually absorbed into the Frankish kingdom.

Coptic bronze vessels, Italian glass and ceramics, and a Byz. pectoral cross found in Alemanni graves indicate some economic and cultural links with the Mediterranean in the 5th to 7th C. The Byz. historians Prokopios and Agathias considered the Alemanni akin to the Germans; according to H. Ditten (*StBalc* 10 [1975] 73–86), their name was distorted by later copyists and rendered Albanoi. After a period of absence from the sources, the name reappears in the *Souda* (corrupted as Albanoi) and in many authors of the 11th to 15th C. in reference to the Germans, whereas the term Germanoi sometimes meant French. When Alexios III concluded a truce with Henry VI of Germany, a new tax called Alamanikon was introduced to pay tribute to the Germans.

—R.B.H.

**ALEPPO.** See Berroia: Berroia in Syria.

**ALEXANDER,** emperor (11 May 912–6 June 943); born Constantinople ca.870, died Constantinople. The youngest son of BASIL I and EUDOKIA INGERINA, according to the vita of St. BASIL THE YOUNGER, Alexander was co-emperor with his brother LEO VI from 879. During Leo’s reign Alexander was at odds with his brother and was even suspected of plotting against him. After ascending the throne, Alexander demoted Leo’s assistants (Himerios was imprisoned), possibly deposed Patr. Euthymios, and reinstated NICHOLAS I MYSTIKOS. Zoe Karbonopsina was expelled from the palace. Alexander’s administration had to face assaults from two directions: the Arabs attacked the area under the control of MELIAS, and SYMEON OF BULGARIA apparently invaded Byz. before Alexander’s death. R. Jenkins (SBN 7 [1953] 389–93) hypothesizes that an Arab embassy was sent to Constantinople during Alexander’s reign. Both the author of the vita of Euthymios and chroniclers are hostile toward Alexander and represent him as lecherous and lazy. A mosaic portrait of Alexander is preserved in the north gallery of Hagia Sophia in Constantinople (P. A. Underwood, E. J. W. Hawkins, *DOP* 15 [1961] 187–217). Coinage reflects Alexander’s bad relations with though condemned and excommunicated by a synod convened by Alexander ca.321, Arius refused to abandon his teaching. This led to the convocation of the First Council of NICAEA (325) in which Alexander, accompanied by his deacon ATHANASIOS (future bishop of Alexandria), played an important role. Of his voluminous correspondence, only three letters survive. In these he reveals himself as an active and persistent supporter of the Orthodox position concerning the Son’s perfect consubstantiality and eternal generation from the Father. Fragments of sermons ascribed to him are also preserved in Coptic and Syriac.

—A.P.
Alexander to seek refuge in France. There the pontiff tried to organize an anti-German coalition, but the French king Louis VII was indifferent to this plan. Alexander eagerly negotiated with Emp. Manuel I. In 1161 Cardinal William of Pavia sent a letter to Manuel asking him to recognize Alexander and complaining that “the barbarians” had usurped the imperial throne. These negotiations became known in Frederick’s camp, where Alexander was accused of making an alliance with the emperor. In 1167 Manuel sent the sebastos Iordanos to Rome, promising church union on condition that Alexander recognize him as the emperor of the East and West. The plan, however, was never executed because, although Alexander wanted to use Byz. resources against Frederick, he was not inclined to sever all links with Germany. In the 1170s Alexander based his anti-German policy primarily on the support of the Lombard League, a coalition of northern Italian cities.

—A.K., A.C.

Leo VI: Leo’s son, Constantine VII, although titular emperor from 908, does not share the reverse of Alexander’s solidi. Rather, his place is taken by John the Baptist shown crowning Alexander, the first depiction of coronation by a sacred figure (C. Jolivet-Lévy, Byzantium 57 [1987] 447f).

Alexander IV (Rainaldo, count of Segni), pope (from 12 Dec. 1254); born Siena between 1100 and 1105, died Rome 30 Aug. 1181. While a cardinal Alexander had favored a pro-Norman policy; therefore, his election to the papacy was opposed by Frederick I Barbarossa, who supported several antipopes and forced

Alexander III, pope (from Sept. 1159); born Siena between 1100 and 1105, died Rome 30 Aug. 1181. While a cardinal Alexander had favored a pro-Norman policy; therefore, his election to the papacy was opposed by Frederick I Barbarossa, who supported several antipopes and forced
ALEXANDER OF TRALLES, physician; born Tralles 525, died Rome 605. According to Agathias (Agath. 5:6:3–6), Alexander was one of five prominent sons of a physician named Stephen; most famous of the brothers was Anthemios, the architect-engineer of Hagia Sophia. Alexander’s family probably knew the navigator-explorer Kosmas Indikopleustes, a fact perhaps reflected in the Far Eastern drugs included in Alexander’s 12-book medical encyclopedia. In his writing, Alexander exhibits a humane, enthusiastic approach to medicine and a continually adaptive sensitivity to active practice and therapy. These qualities have caused medical historians to call Alexander the “most modern” of the Byz. physicians, even though he readily prescribes amulets and other magical means for cures. Compared with Aetios of Amida, Alexander is certainly less concerned with theory than with the practical application of pharmaceuticals (J. Scarborough, DOP 38 [1984] 226–28). Alexander is also rightly famous for his “Letter on Intestinal Worms,” indicating an acute skill in observation of symptoms and precise case histories. His medicine is eminently sensible and one reads good accounts of ophthalmology (bk.2), what moderns would call angina (bk.4), diseases of the lungs and pleurisy (bk.5–6), kidney and bladder ailments (bk.9), and gout (bk.12). Alexander knew his Galen and other classical authorities, but subsumed them within his medical practice, continually adapting data from the written texts, nicely illustrated by Alexander’s rearrangement of pharmaceutical ingredients in many of his suggested remedies for specific diseases.

ALEXANDER ROMANCE. Ascribed to Kallisthenes of Olynthos, the historian who accompanied Alexander the Great on his expeditions (hence, pseudo-Kallisthenes), the Alexander Romance is based on an anonymous novel written originally in the 3rd C. and widely copied, with frequent accretions of fantastic episodes. Five recensions of the text, which can be dated from the 4th to 7th C., are identifiable. For their reconstruction the translations in Armenian (5th C.), Latin (by Julius Valerius Probus, 4th C., and the archpriest Leo, 9th C.), Syriac, Coptic, and Ethiopic are important. These recensions survive only in late MSS. There are also late Byz. redactions, one (the Byz. Alexander-Poem) in political verse and dated to 1588 and another in prose of uncertain date that survives in several discreet MSS of the 13th to 16th C. The Alexandria became popular in Rus’, where at least two recensions were known: one inserted in the chronographs (probably of the 12th C.) was close to the Alexander Romance, another, the so-called Serbian Alexandria, appeared about the 15th C. It was a free adaptation of pseudo-Kallisthenes, with an emphasis on the love affair of Alexander and Roxane, the daughter of Darius.

Although Alexander is treated as a traditional hero of romance (with a mysterious birth, etc.), he is nonetheless regarded as the first basileus of the Hellenes. As Alexander came to hold an emotive place in the Byz. view of the past, so the more sober accounts of the chroniclers were supplemented in the popular imagination (in, e.g., the vita of Makarios of Rome and the Apocalypse of pseudo-Methodsios of Patara) by references taken from the Alexander Romance to the exotic palaces, giants imprisoned in mountains, strange monsters and barbaric peoples on the borders of the empire, and so forth that Alexander encountered on his campaigns. Figures from the Alexander Romance such as the cynokephalos and scenes of Boukephalas and Alexander’s pursuit of Darius entered the illustration of the Kynegitika of Oppian, while Weitzmann (infra) interpreted panels on bone caskets as depictions of the ma-

J.S., A.M.T.
gician Nektanebos, Olympias, and Philip of Macedon, drawn from the same source. Richly illustrated versions of the Alexander Romance in both Greek (L. Gallagher, Thesaurusmata 14 [1979] 170–205) and Armenian survive from the 13th to 15th C.

—E.M.J., A.C., A.K.

ALEXANDER THE AKOIMETOS, archimandrite and saint; died Gomon, Bithynia, ca.430; feastday 20 Feb., although not included in the Synaxarion of Constantinople. An islander by birth, Alexander was educated in Constantinople, where he began an administrative career. He then left for Syria, where he lived as a hermit, frequently intervening in the affairs of cities such as Edessa, Palmyra, and Antioch. From Syria he returned to Constantinople with a group of disciples and settled near the Church of St. Menas. The inflexibility of the service of perpetual prayer that Alexander instituted (see AKOIMETOI, MONASTERY OF) and his constant interference in political activity aroused the hatred of the authorities and local population. Accused of MESSALIANISM, Alexander was condemned by an ecclesiastical tribunal and narrowly escaped being torn to pieces by the demoi (de Stoop, infra 698.4). He found temporary refuge in the monastery of HYPATIOS OF ROUPHINIANI, then went to Gomon, where he died. The vita of Alexander is known from a single 11th-C. MS, the anonymous author describing himself as Alexander's pupil.

The chronology of Alexander's life is far from clear: R. Janin (EO 33 [1934] 340) asserts that Alexander arrived in Constantinople ca.405 and founded the monastery of the Akoimetoi ca.420 (Janin, Églises CP 16), but the vita places Alexander's quarrel with Theodotos, patriarch of Antioch (424–28) before his arrival. J. Pargoire (BZ 8 [1899] 447) speculates that Alexander's expulsion from Constantinople must have taken place before 430, since NEILOS OF ANKYRA alluded to Alexander's troubemaking. It is also uncertain whether Alexander was the founder of the Akoimeto monastery; his vita (p.700.16–17) says that the monastery was founded after his death.

Ed. E. de Stoop, "Vie d’Alexandre l’Acémète," PO 6,5 (1911) 645–705, with Lat. tr.

—A.K.

ALEXANDER THE GREAT (Alexander III of Macedon), son of Philip II of Macedon and Olympias; born 356 B.C., died 323. Alexander was the instigator of the first attempt at world domination by a Greek-speaking ruler. His life and exploits are recorded briefly by Byz. chroniclers with emphasis given to his meeting with the widowed Kandake, the priests of Jerusalem, and the Brahmins of India. Little detail is given on his military campaigns, which are noted for starting from Constantinople and for destroying the empire of the Persians, which was then followed by that of the Macedonians in the succession of empires. As the ruler of a world empire that could be viewed as a predecessor of the Byz. and could also be fitted into the Old Testament framework, Alexander from the time of Constantine I was regarded as a model of the ideal emperor and appears as such in chronicles, orations, eschatological texts, etc. The legendary figure of Alexander was fostered by the ALEXANDER ROMANCE and other shorter texts, dealing with his encounters with apocryphal sages, as well as by the chronicles. Textiles of the 6th–7th C. showed him on horseback (D. Shepherd, Bulletin of the Cleveland Museum of Art 58 [1971] 244–50), while later enamels and reliefs concentrated on the legend of his Ascension. Scenes from the life of Alexander—treated as the equivalent of the biblical heroes depicted there—decorated the palace of Digenes Akritas. The emotive and symbolic role that Alexander played in the Byz. popular consciousness is demonstrated by his continued importance in Greek folklore even after the fall of Constantinople.

—E.M.J., A.C.
ALEXANDER THE MONK, author of a treatise entitled *On the Cross*. He lived sometime between the mid-6th and 9th C.; the traditional date of the mid-6th C. or before 614 lacks any validity. Nothing is known of his biography. His identification with Alexander the Monk (from Cyprus?) who wrote an *enkomion* of the apostle Barnabas after the discovery of the apostle’s relic (488) is arbitrary.

*On the Cross* consists of two parts: a history of Christianity from the Roman emperor Tiberius to the discovery of the True Cross by Helena and the appearance of the Cross in Jerusalem in 351, and a panegyric on the Cross as the major symbol of Christianity: “God,” says Alexander (PG 87.3:4021B), “made every visible and invisible creature in the shape of a cross,” since everything in the world has “height, depth, breadth, and length” (cf. Eph 3:18); thus, the Seraphim are interpreted as “fourfold (tetramorphai) beings that prefigure the *typos* of the Cross” (4021C). The cult of the Cross exists in all cities, islands, and tribes (4072C). Because of this cosmic character of the Cross the Lord suffered death on the Cross (4036A). The treatise is known also in a Georgian translation whose earliest MSS belong to the 9th and 10th C.

Ed. PG 87.3:4016–88.

—A.K.

ALEXANDRIA (Ἀλεξάνδρεια), third largest city of the late Roman world (after Rome and Constantinople); founded by Alexander the Great in 331 B.C. Formerly capital of the Ptolemaic kingdom and the Roman province of Egypt, it was the administrative, military, and ecclesiastical center of the country as well as chief industrial entrepôt of the eastern Mediterranean and outlet for the annual shipments of Egyptian grain (the *embole*) to Rome and Constantinople. Its two harbors handled shipping for goods that had come down the Nile (papyrus, textiles, glass) and for the maritime trade of Orients as well as transshipments upriver of olive oil, metal goods, pottery, and wine. Laid out on the Hellenistic grid pattern, the city preserved splendid ancient monuments including the Pharos lighthouse (one of the so-called Seven Wonders); the Serapeum (temple of the syncretic god Serapis), which was partly demolished in Byz. times; and the Caesareum, converted into the patriarchal cathedral. Few remains are extant, except for the recently excavated theater, baths, and lecture hall at Kûm al-Dik (infra); the Moušeion and the Tomb (Sema) of Alexander are not attested after the 3rd C.

With its wealth, large population (about half a million) bilingual in Greek and Coptic, and flourishing infrastructure, Alexandria was the major intellectual and cultural center of the East, rivaling Constantinople in political influence as well. In literature, scholarship, science, and theology its schools attracted the best minds, and both secular and church patronage supported abundant production in written works and the visual arts. Christianity took root early, leading to the establishment of a powerful centralized patriarchate (see Alexandria, Patriarchate of), later split into Chalcedonian and non-Chalcedonian lines of succession; and a theological school, the Alexandria School, renowned for its Neoplatonic approach and allegorical method of exegesis. Large urban monasteries, such as the Ennaton and the Metanoia, which are attested in numerous 6th- to 7th-C. papyri, supported guilds of *philoponoi* (charity workers) and varied trades and professions. The mint of Alexandria was revived by Emp. Justin II.

Alexandria was briefly occupied by the Sasanians between 618 and 628/9 (L. MacCoull, *Studi classici e orientali* 36 [1986] 907–13); it fell to the Arabs under ‘Amr in 642 (Butler, *intra*, lxii–lxxvi), was briefly retaken by the Byz. in 645 but immediately recaptured by the Arabs; a second Byz. attempt at recovery in 652 proved unsuccessful.

Monuments of Alexandria. Almost no Byz. monuments have survived. Only the names and a few details regarding the history and location of its once numerous churches are known. The Greek Orthodox patriarchal Church of St. Sabas may preserve some sections of its original 7th-C. foundations. In the area called Kûm al-Dik (“pottery hill”) a late Roman bath, a 4th-C. odeon, and some 6th-C. Byz. houses have been excavated. There are also Early Christian tombs (e.g., the so-called Wescher Catacomb, now destroyed, which included a painted frieze representing the Feed-
ING OF THE MULTITUDE). With marble imported from Constantinople, a number of workshops in Alexandria produced architectural sculpture for use in the provincial towns of Lower Egypt; scores of examples have been found at ABU MINÆ as well as in Cairo.

ALEXANDRIA, PATRIARCHATE OF. In addition to using the title of pope (PAPAS), Alexandria’s bishop was, perhaps, the first to claim the title ARCHBISHOP. At NICAEA I (325) this see was mentioned, together with Rome and Antioch, among the major ecclesiastical divisions of the empire (canon 6). Its reputation was based on Alexandria’s political importance, the support received from monasticism, vast landed wealth, and Egypt’s long-standing tradition of centralization. In fact, by the 4th C. all of Egypt, the Pentapolis, and Libya had been brought under its central authority.

As a result, Alexandria played a prominent part in the theological controversies and ecclesiastical power politics of the 4th–5th C. Nevertheless, its powerful bishops’ claim to first place among the sees in the East gradually altered with the rise of Constantinople, promoted to second rank in 381. The bitter conflict that followed in the reigns of THEOPHILOS and CYRIL was finally resolved—at Alexandria’s expense and humiliation—at the Council of CHALCEDON (451). Indeed, Chalcedon’s rejection of DIOKOROS and his MONOPHYSITISM were fatal to Alexandria’s ecclesiastical and theological prestige and supremacy. Moreover, its unity also suffered. The patriarchate split into two unequal parties, with representatives of the non-Chalcedonian Monophysite majority contesting and sometimes occupying the patriarchal throne. This dissident group eventually formed the national Coptic church of Egypt. The decisive blow to the patriarchate came with the Arab con-

quest (641). Henceforth Constantinople, with the approval and confirmation of the caliphs, appointed Alexandria’s Orthodox patriarchs as a rule; the patriarchs controlled only a small minority of Christians in Egypt and followed Constantinople in all liturgical and canonical matters.

ALEXANDRIAN ERA, a system of computation of world chronology produced by two Egyptian monks and chronographers of the early 5th C., Annianos and Panodoros; the system is known from and was used by GEORGE THE SYNKELLOS (early 9th C.). Panodoros, a critic of EUSEBIOS OF CAESAREA, tried to harmonize the data of the Bible with those of pagan sources (esp. the Canon of Kings by Ptolemy). He came to the conclusion that the Creation took place on 19 Mar. and the birth of Christ occurred 5,494 years after the Creation. The computation of Panodoros is the major Alexandrian Era (aera Alexandrina maior); the minor Alexandrian Era was suggested by Annianos who dated the Creation to the vernal equinox (25 Mar.) and placed the birth of Christ in 5501.

The Alexandrian Era remained in use outside Egypt: George the Synkellos (6.13–16) defended the idea that the first of the Jewish month Nisan (25 Mar.) and not the first of Thoth (29/30 Aug.), according to Egyptian custom, or the first of Jan. (the Roman usage), was the day of Creation; he also dated the Incarnation 5,500 years after the Creation (p. 2.26–27). Traces of the Alexandrian Era can be found in Theophanes the Confessor as well. Maximos the Confessor (PG 19:1249B) also calculated that Christ was born 5,501 years after Adam. After the 9th C. the Alexandrian Era was abandoned even though a unified system of computation did not immediately replace it. The difference between the Alexandrian Era and the Byzantine Era is approximately 16 years, but one also has to take into consideration the difference in the beginning of the year: 25 Mar. according to Annianos and 1 Sept. according to the official calculation of the INDICATION and of the Byzantine Era. To convert an Alexandrian date to an A.D. date, 5,492 is subtracted for dates between 25 Mar. and 31 Dec., but 5,491 for dates
ALEXANDRIAN SCHOOL,  a conventional designation of two intellectual institutions. First of all, it was the theological tradition generally seen in opposition to the Antiochene School. As a developed institution it is attested from the early 3rd C. It consisted of an elementary (catechetical) school and a didaskaleion oriented toward the intellectual elite. The school operated under the control of the see of Alexandria, and a number of its teachers (Heraclas, Dionysios, Theognostos, Peter) became bishops of Alexandria in the 3rd C. The last known teacher of the school was Didymos the Blind. The theology of the Alexandrian School was developed by Clement of Alexandria and Origen, who envisioned primarily a cultivated and well-to-do urban audience and based their tenets on the Platonic tradition as revised by Philo. The main points were typological or allegorical interpretation of the Bible—viewing the Old Testament as a prefiguration of events of the New Testament; the doctrine of three hypostases with an anti-Monarchian emphasis; focusing on Christ’s divinity rather than his humanity; a dualistic anthropology in the manner of Plato; and a spiritual rather than “physical” perception of eschatology. The Arian distinction between the Father and Son was in a sense based on the Alexandrian concept of hypostases. Athanasios of Alexandria esp. Cyril of Alexandria signified a disruption rather than a continuation of the school, since they stressed the unity in substance and the divine nature of Christ, but not the diversity in hypostases.

The term also refers to the Alexandrian School of philosophy that flourished in the 5th to early 7th C.; it included scholars such as Hierokles, Hypatia, and John Philoponos; studied Aristotle no less than Plato; developed an interest in science; and remained devoted to Christian teaching.

T.E.G.

ALEXANDRIAN WORLD CHRONICLE, the conventional title given to a chronicle, illuminated fragments of which survive in the so-called papyrus Goleniščev (now in the Pushkin Museum, Moscow). The text is similar to that of Barbarus Scaligeri; the chronicle ends in 392. The papyrus has been dated by O. Kurz to ca.675–700 (in Kunsthistorische Forschungen, ed. A. Rosenauer, G. Weber [Salzburg 1972] 17–22). This MS is chiefly of interest to art historians, containing on eight fragments a profusion of unframed marginal illustrations, comparable to the Merseburg fragment of the Annals of Ravenna. The subjects represented include the Old Testament prophets, Roman emperors, a map of the Ocean and its islands, walled cities, and personifications of the Months in bust form (Iskusstvo Vizantii I, no.8).

B.B., A.C.

ALEXIOS (Ἀλεξίος), personal name (etym. “helping, supportive”). Classical antiquity knew the similar forms Alexis and Alexion (RE 1 [1894] 1466–71), but neither form is listed in PLRE, vols. 1–2, or mentioned by historians of the 6th–7th C. Theophanes the Confessor (Theoph. 466–5) refers to only a single Alexios, drourgarios tes viglas under Irene. Alexioi also appeared as shadowy figures among two groups of martyrs allegedly murdered under Leo III (BHG 1:14), and in the Synaxarium of Constantinople we find “Alexios, bishop of Bithynia,” also a very vague reference. As far as Alexios Homo dei is concerned, the origin of the legend remains obscure. After the 9th C. the name became more common: Skylitzes refers to three Alexioi, as does Anna Komnene. In Niketas Choniates’ time the name Alexios was popular; he lists 24 Alexioi, second only to John (35). The five emperors who bore the name ruled between 1081 and 1204. The fashion probably did not extend beyond the elite: in the acts of Laura, vol. 1 (10th–12th C.), the name appears only as that of emperors; in Laura, vols. 2–3
(13th–15th C.), we meet an insignificant number of Alexioi and the name has fallen to twentieth place. —A.K.

ALEXIOS I KOMNENOS, emperor (from 4 Apr. 1081; born ca.1057, died Constantinople 15 Aug. 1118. Son of John Komnenos and Anna Dalassene, Alexios began his career as general under Michael VII and Nikephoros III. Together with his brother Isaac, Alexios revolted against Nikephoros (14 Feb. 1081). Constantinople fell on 1 Apr. and was sacked. Alexios came to the throne with the support of the military aristocracy, esp. the Doukai, to whom he was linked by marriage to Irene Doukaina. He found a difficult situation: the government had to cope with the revolts of aristocrats, the Seljuks occupied most of Asia Minor, the Pechenegs threatened the Danubian provinces, and Robert Guiscard was preparing to attack Constantinople. Alexios acted effectively: in 1081–93 he overcame the Normans, defeated the Pechenegs at Mt. Lebounion, and repelled Tzachas from Constantinople.

Alexios's successes owed something to diplomacy—alliances with Venice and Germany against the Normans (T. Lounghis, Diptycha 1 [1979] 158–67) and with the Cumans against the Pechenegs. His domestic policy was equally important: he restricted the influence of senators and eunuchs and relied upon a few military families. Those aristocrats who did not join the “clan” of the Komnenoi, esp. the Anatolian magnates whose estates had been taken by the Seljuks, lost power. His reform of titles was intended to reshape the ruling class. Conspirators (esp. aristocrats) repeatedly but unsuccessfully challenged Alexios (B. Scolatos, Byzantium 49 [1979] 385–94). He supported provincial towns, regulated their trade, and by ca.1092 had restored a sound coinage. Alexios aimed at centralizing the state, even though this state was constructed on a familial or patrimonial principle. Thus his mother and his older brother Isaac acted as emperors. He consolidated the administration under the logothetes ton sekreton (see Logothetes) and entrusted various departments to his courtiers. In the case of Leo of Chalcidon Alexios broke the church's resistance to official fiscal levies, but he consistently supported the church as the bearer of the true ideology (I. Ćičurov, VizVrem 31 [1971] 238–42). He allowed the condemnation of heretical intellectuals such as John Italos and—against his will—Eustatrios of Nicaea; Alexios tried and burned Basil the Bogomil.

The First Crusade created a serious problem for Alexios. Although he rid himself of the bands of Peter the Hermit, constrained most Crusader leaders to acknowledge their dependence on the empire, and used their forces to regain the coast of Asia Minor, he was unable (partly due to Taktikos's mistakes, partly to the intrigues of Bohemund) to prevent the creation of independent Crusader states in Palestine. Alexios was critically judged by Zonaras, treated equivocally by Nikephoros Bryennios, and eulogized by Anna Komnene.

Zonaras described Alexios as having debased the coinage, which was already in a poor state at his accession, but this is true of only the first ten years of his reign. Circa 1092 he carried out a major monetary reform, restoring a gold coin of good fineness in the form of the hyperpyron and creating two new fractional denominations (see Trachy) of electrum (see Trikephalon) and billon, which with the copper (initially lead) tetarteron were to form the standard coinage of the Komnenian period.

Alexios's reputation for piety is suggested by his gift of an icon, establishing the type known as the Virgin Kykkotissa, to the Kykko monastery on Cyprus at the time of its foundation. He also erected a mural (in one of the imperial palaces, according to Nicholas Kallikles) of the Last Judgment with Alexios on the side of the damned (Magdalino-Nelson, "Emp. in 12th C." 124–26). The illuminated MSS apparently sponsored by Alexios include two copies of the Panoplia dogmatike of Euthymios Zygabenos and the Barberini Psalter (Vat. Barb. gr. 372—J. Anderson, CahArch 31 [1983] 35–67).

ALEXIOS I KOMNENOS, emperor of Trebizond (1204–22); born ca.1182, died 1 Feb. 1222. Elder son of Manuel, son of Andronikos I Komnenos, Alexios was connected to Tamara of Georgia; Manuel's wife may have been Tamara's sister (K. Barzos, Makedonika 20 [1980] 30–47). When
Andronikos I fell and Manuel perished, Alexios and his brother David Komnenos may have been taken to Georgia, but the fact that one of Alexios's sons was John Komnenos Axouch (1295–38) suggests that Alexios may have remained in Constantinople, possibly married a daughter or niece of John Komnenos "the Fat" (M. Kuršanskis, *ArchPont* 30 [1970] 107–16; K. Barzós, *Byzantina* 7 [1975] 173), and fled only after John's conspiracy (1200). The fall of Alexios III seemingly inspired T'amar to mount a Georgian expedition against Trebizond, with Alexios and David as nominal leaders (Mar.–Apr. 1204). Once the region from Phasis to Sinope had been occupied, Alexios remained at Trebizond, probably using an imperial title, while David advanced into Paphlagonia. Niketas Choniates criticizes Alexios for his inactivity. In 1214, when Kay-Kâvûs I seized Sinope, Alexios may have become his vassal: Ibn Bibi records an immense annual tribute owed. Alexios founded the dynasty of the Grand Komnenoi.

**ALEXIOS II KOMNENOS**, emperor (1180–83); born Constantinople 14 Sept. 1169 (P. Wirth, *BZ* 49 [1956] 65–67), died Constantinople ca. Sept. 1183. A porphyrogenetos, son of MANUEL I and MARIA OF ANTIOCH, Alexios was crowned co-emperor in 1171, an elevation celebrated in pictures of Alexios, his father, and grandfather (Magdalino-Nelson, "Emp. in 12th C." 146f). In 1175, Alexios accompanied Manuel on an expedition to rebuild Dorylaion (P. Wirth, *Eustathiana* [Amsterdam 1980] 78). He married AGNES OF FRANCE on 2 Mar. 1180, a match that Spatharakis (Portrait 210–30) proposed was the occasion of an illustrated epitalamion in the Vatican Library. Barely adolescent when he succeeded his father, largely uneducated, Alexios indulged in amusements, while his mother and Alexios Komnenos the protosebastos ruled. Their regime favored the Italian merchants and the aristocracy, who pilaged the treasury and exploited government offices. To counter incursions by BÉLA III of Hungary and Kilic Arslan II, the regency sought assistance from the pope and Saladin. Opposition from Maria Komnene was easily suppressed, but

Lit. Miller, *Trebizond* 31–44. 120. PLP, no. 12084.

**ALEXIOS II KOMNENOS**, emperor of Trebizond (1297–1330); born 1283, died 3 May 1330. Son of JOHN II KOMNENOS of Trebizond and Eudokia Palaiologina, he used the surname Palaiologos as well as Komnenos (O. Lampsis, *REB* 42 [1984] 225–28). He was only 14 when his father died; he then came under the tutelage of his uncle, the Byz. emperor ANDRONIKOS II. Alexios refused, however, to marry Irene, daughter of Nikephoros Choumnos, and thwarted the emperor's wishes by marrying the daughter of Bekha Jaqeli, the ruler of Samkhe, in 1300 (M. Kuršanskis, *REB* 35 [1977] 252f). In 1301 Alexios mounted a victorious campaign to drive the Turkmans out of KERASOUS; he had less success in his efforts to rid TEBIZOND of the Genoese domination of its commerce. Treaties with Genoa (1316) and Venice (1319) granted both Italian cities trading privileges and exemptions from customs duties. Alexios built the walls of Trebizond that run down to the sea. His patronage of the arts is revealed by his benefactions to the monasteries of St. Eugenios (in Trebizond) and of Soumela, as well as by his correspondence with the astronomer Gregory Chioniades, who wrote a hymn to St. Eugenios at his request (L.G. Westerink, *REB* 38 [1980] 236, 239). Upon the death of Alexios, Constantine Loukites, protonotarios and protoevristios, composed his funeral eulogy (ed. Papadopoulos-Kerameus, *Analekta* 1:421–30).

Lit. Miller, *Trebizond* 31–44. 120. PLP, no. 12084.

**ALEXIOS III ANGELOS**, emperor (1195–1203); born ca. 1153, died Nicæa 1211 or 1212. Elder brother of ISAAC II, Alexios spent most of the
reign of ANDRONIKOS I in Syria and was imprisoned in TRIPOLI ca.1185–87. Honored by Isaac, Alexios conspired and overthrew his brother. He was weak-willed, extravagant, and indolent, allowing birth, rank, and payments to guide his choice of officials, as in the case of Michael STRYPHNO. Provincial officials (Leo SGOURS, John Spyridonakes) sought independence, while the court's tyranny appears in the case of KALOMODIOS. The populace of Constantinople caused occasional outbursts but failed to support the uprising of John KOMNENOS “the Fat.” The strongest pillar of Alexios's regime was his wife EUPHROSYNE. Alexios experienced military successes in dealing with IVANKO and DOBROMIR CHRYSO; with KALOJAN, he made a treaty. He favored PISA and GENOA at the expense of VENICE. The Fourth Crusade found the empire in disarray; after a brief resistance, Alexios fled (17/18 July 1203). He wandered until he fell into the hands of BONIFACE OF MONTFERRAT (late 1204). Sent to Montferrat, Alexios remained there until ransomed (1209 or 1210) by MICHAEL I KOMNENOS DOUKAS of EPIROS, who dispatched him to KAY-KHUSRAW I (R.J. Loenertz, Byzantium 43 [1973] 370–76). When THEODORE I LASKARIS defeated the sultan (spring 1211), Alexios was captured. Theodore placed him in a monastery, where he died.

ALEXIOS III KOMNENOS, emperor of Trebizond (1349–1390); baptismal name John; born 5 Oct. 1338, died 20 Mar. 1390. Son of Basil I Komnenos (1332–40), the infant Alexios was exiled to Constantinople after his father's death. At age 11, however, he returned to TREBIZOND to claim the throne and, subsequently, enjoyed the longest reign of any Trapezuntine emperor. The early years of his rule were troubled by internal dissensions and the Turkoman threat. In 1355, he led an ill-fated expedition against the Turkomans that resulted in a rout of the Greeks; the chronicler PANARETOS narrowly escaped with his life. Alexios, however, also pursued a conscious policy of cementing good relations with the Turkomans by marrying two of his sisters and four of his daughters to various of their rulers (A. Bryer, DOP 29 [1975] 129–31, 136f., 148f.; E. Zachariadou, ArchPont 35 [1978] 339–51).

One of the main problems of Alexios's administration was relations with the Italian republics. At his accession, Alexios found the Venetian trading station ruined, and by 1350/1 regular transactions with Genoa ceased. In the 1360s the Venetians attempted to revive their activity in Trebizond and to attract Alexios to an anti-Turkish coalition, but chrysobulls issued by Alexios in 1364 and 1367 did not confer upon Venice any more privileges than it had had in the early 14th C. Since Alexios wanted to exploit Venetian trade for the benefit of his treasury, tensions arose. In 1376 Venice organized a military invasion, sponsoring the usurpers Michael Palaiologos the despotes (son of Emp. John V) and Andronikos the Grand Komnenos. Although the expedition failed to bring about Alexios's deposition, a new chrysobull in 1376 lowered Venetian kommerkia by 50 percent. Despite this chrysobull Venetian trade in Trebizond continued to decrease through the 1380s.

Alexios was a generous patron of monasticism, founding monasteries such as VАЗELOН in the empire of Trebizond and DIONYSIОU on Mt. Athos. The original chrysobull of foundation (dated 1374) of Dionysiou, portraying Alexios and his wife Theodora Kantakouzene, is preserved at that monastery (Dionys., no.4; Spatarakis, Portrait 185–87, fgs. 136–38). Alexios also restored the Soumela monastery.

ALEXIOS IV ANGELOS, emperor (1203–04); born ca.1182 or 1183, died Constantinople ca. 8 Feb. 1204. Son of Isaac II and his first wife, Alexios was left free after Isaac's blinding and in late summer/early autumn 1201 escaped to Italy. Welcomed in Germany by his sister Irene and PHILIP OF SWABIA, Alexios was present when Philip conferred with BONIFACE OF MONTFERRAT. About Dec. 1202–Jan. 1203 envoys from Philip and Alexios offered generous concessions to the Fourth Crusade at ZARA, if the Crusaders would put Alexios on the Byz. throne. Once the Crusaders accepted his offer, he joined them (May 1203) at Kerkyra. After Alexios III fled and Isaac II had been restored, the Crusaders required that Alexios IV be named co-emperor. He was crowned in early Aug., then joined them in an expedition to
Thrace (Aug.–Nov.). Upon his return, Alexios IV became the dominant emperor. Isaac and Alexios IV had vainly endeavored to fulfill the Treaty of Zara by formally submitting to the pope and collecting money for the Crusaders. When they could not be satisfied, Alexios fell under the influence of those hostile to the Crusaders, esp. the future Alexios V Doukas. Isolated from his former supporters, Alexios fell victim to Doukas, who induced him to flee the palace (28/9 Jan. 1204), then had him strangled in prison.

-C.M.B.

**ALEXIOS IV KOMNENOS**, emperor of Trebizond (1416–29); born 1382, died Achanto (near Trebizond) before 28 Oct. 1429. Son of MANUEL III KOMNENOS, Alexios served as co-emperor from 1395 to 1416. Sometime before 1404 he briefly rebelled against his father. Upon ascending to the throne, Alexios was first faced with war against the Genoese. In 1418 he agreed to pay them an indemnity of wine and nuts for four years. He tried to ensure the security of his kingdom through diplomacy, marrying his daughters to a White Sheep Turkoman chieftain and Emp. John VIII Palaiologos. It is unlikely that one of Alexios’s daughters married George Branković, ruler of Serbia, as is sometimes stated (A. Bryer, ArchPont 27 [1965] 28f). Alexios was assassinated during the coup d’état of his son, JOHN IV KOMNENOS (V. Laurent, ArchPont 20 [1955] 138–43).

-A.M.T.

**ALEXIOS V DOUKAS**, emperor (1204); died Constantinople ca. Dec. 1204. His sobriquet “Mourtzouphlos” (Μούρτζουφλος) was a reference to his overhanging brows, according to Niketas Choniates (Nik.Chon. 561.23–25), but C. Symeonides (Byzantina 13.2 [1985] 1619–28) suggests it means “melancholy, sullen.” A Doukas of unknown lineage, Alexios was allegedly behind the attempted usurpation of John Komnenos “the Fat” (1200); possibly for that reason he was in prison when the Fourth Crusade installed Alexios IV. Released, he was named protovestarios, but sought to undermine Alexios IV. To gain popular support for his intended usurpation, Alexios Doukas led raids on the Crusaders outside Constantinople. Between 27 and 29 Jan. 1204, when the populace made Nicholas Kannabos emperor, Alexios Doukas encouraged Alexios IV to seek Crusader assistance, then exploited this move to win Varangian support to depose Alexios. On 2 Feb., as emperor, Alexios V failed in an attempt to ambush some Crusaders. He strengthened the walls and revitalized his troops. Funds were secured by confiscating aristocratic property. His followers defeated the first Crusader attack (9 Apr. 1204), but on 12 Apr., when the Latins burst in, Alexios V fled to Thrace. Taking with him Empress Euphrosyne Doukaina Kamatera and her daughter Eudokia, his paramour, Alexios V encountered Alexios III at Mosynopolis (summer 1204). Alexios III first allowed Alexios V to marry Eudokia, then trapped and blinded him. Around late Nov., Alexios V was captured by Thierry de Loos, tried for treason to Alexios IV, and thrown from the Column of Theodosios.

-C.M.B.

**ALEXIOS HOMO DEI**, saint; feastday 17 March. Born in Rome under emperors Honorius and Arkadios, Alexios was the son of a wealthy senator. To avoid an arranged marriage, Alexios sailed off to Syria, where he lived as a beggar in Edessa. After 17 years he returned to Rome and lived 17 more years on charity in his father’s house, unrecognized. One day, when Archbp. Markianos (no pope of this name is known) was celebrating the liturgy, a divine voice indicated that Alexios was “the man of God” (homo dei). Alexios was found dead with a document in his hands revealing his origin and story. According to his vita, “the very pious emperors” attended his funeral. It is commonly accepted that the Greek legend summarized above was based on a Syriac vita of an anonymous “man of God”: this saint, born in Rome, fled from his wealthy parents and his finance, lived as a beggar, and died in Edessa. Sixth-century MSS preserve the Syriac version. In Byz. the legend was known by the 9th C., when JOSEPH THE HYMNOGRAPHER eulogized Alexios. The text of the anonymous Greek vita was copied in many MSS, including one of 1023 (F. Halkin, AB 98 [1986] 5–16). The legend did not spread to Rome.
before 977; thereafter it grew very popular in the West and in Slavic countries. The Ethiopic translation makes Alexios the son of Theodosios II and transfers the locale of his deeds to Armenia. The focus of the legend—rejection of family and marriage for the sake of God—was one of the most important hagiographical themes (B. de Gaiffier, *AB* 65 [1947] 157–95).

**Representation in Art.** Portraits of the saint, which are rare, give him the features of John the Baptist. The 11th-C. imperial menologion in Moscow (Hist. Mus. gr. 183, fol.210) shows the saint laid out on his bed, mourned by his father, as the emperor removes the document from the dead man’s hands.

**ALEXIOS STOUDITES**, patriarch of Constantinople (between 12 and 15 Dec. 1025–20 Feb. 1043 [V. Laurent, *EO* 35 (1956) 75f]); died Constantinople. A former hegoumenos of the Studios monastery, Alexios was appointed patriarch without the necessary canonical formalities by Emp. Basil II, who was on his deathbed. Alexios acted in concert with Constantine VIII, and in July 1026 the new emperor, the patriarch, and the senate promulgated a novel anathematizing any revolt against the basileus (PG 137:1245AB). Alexios tried to protect the independence of the clergy, stressing in Jan. 1028 that no clergyman or monk could be judged by a civil authority, and in 1027 he condemned the practice of charistikon. With great energy Alexios attacked the Monophysites, esp. those in the Melitene region. He dealt also with matrimonial regulations. In 1038 Alexios and the synod defined the prohibitions on marriage between close relatives; they did not make a clear decision, however, concerning individuals of the seventh degree of relationship. The patriarch’s relations with the government deteriorated under Michael IV: it is reported (Skyl. 401.67–80) that John the Orphanotrophos, who desired to become patriarch of Constantinople, incited some metropolitans to demand the deposition of Alexios under the pretext that he had not been elected canonically, but the plan failed because of Alexios’s courageous resistance. No more successful was the attempt of Michael V to depose Alexios.

In 1034 Alexios founded a monastery of the Dormition near Constantinople. Its *typikon* is lost in the original but has survived in Slavic MSS, the oldest of which is of the 12th C. It reveals certain modifications of the original made by the translator (I. Mansvetov, *Cerkovnyj ustav* [Moscow 1885] 113–28).

**ALIMPIJ**, late 11th-C. Kievian painter. The *Paterik* describes Alimpij as helping painters from Constantinople who came to decorate a church (of the Dormition) in the monastery of the Caves when Vsevolod was prince of Kiev and Nikon was third abbot of the monastery (1078–91). After the church’s dedication, Alimpij became a priest. Later portions of the *Paterik* are devoted to miracles associated with icons that he painted. Like many artists, therefore, Alimpij worked in a variety of media. VlADIMIR MONOMACH is mentioned as learning of the “venerable” Alimpij. The painter’s career thus spanned at least a quarter of a century. The date of his death is unknown; he was buried in his monastery.

**ALLAGION** (αλλαγήν), a military detachment that in the 10th C. consisted of 50–150 warriors: imperial *allagia* had 320–400 (A. Dain, *Sylloge tactorum* [Paris 1938] 56). In the late 13th–14th C. the term *mega allagion* designated a garrison, esp. in Thessalonike, and the old *allagion* of the emperor’s guards was probably replaced by two *paramonai*, one on horseback, the other on foot. The *Chronicle of the Morea* describes *allagia* as mounted companies; Constantine, the brother of Michael VIII, had at his disposal 18 *allagia*, for a total of 6,000 warriors (D. Zakythinos, *Despotat* 2:133). In the 14th C. the commander of the
allagion was called the archon tou allagion; side by side with him, a ceremonal book (pseudo-Kod. 138.34–35) mentions the protallagator, both subalterns of the megas primikieros. Since each of the allagatores stood at the head of a single paramone, the protallagator was the commander of the whole company; the difference between him and the archon tou allagion is not clear. According to Pertusi (infra), the name ta allagia was reflected in the Arabic toponym Ṭalājā or Tafala for a theme located near Constantinople.

ALLAXIMOI (ἀλλάξιμοι, from ἀλλάσσω, "to change"), or allaximoi of the kouboukleion (De cer. 7.1–6), aulic servants in charge of the emperor’s wardrobe. The word allaxima or allaximata designated ceremonial apparel (Ph. Koukoules, EEBS 19 [1949] 78) that was stored in great quantities in the palace. The Kletorologion of Philotheos calls these servants hoi epi ton allaximon and places them under the command of the deuterous (Oikonomides, Listes 193.16–18).

ALLEGORY (ἀλληγορία) in Byz. was used in the sphere of both literature and theology.

LITERARY ALLEGORY. In antiquity, literary allegory was understood as a trope whose goal was the expression of a concept that differed from the literal sense of the words but was connected with them by similarity or contrast. Allegory remained an important vehicle of Byz. literature: thus, the image of the castle in Palaiologan texts served the function of both romantic adventure and didactic allegory (C. Cupane, JÖB 27 [1978] 264). In literary interpretation, biblical exegesis, and philosophy, the search for allegory meant the revealing of hidden content.

The same principle was applied to classical texts: the allegorical exegesis of Homer (and other poets) was practiced by Neoplatonists, who also interpreted Plato allegorically. Tzetzes, too, in his commentary on Homer, distinguished three kinds of allegory: physical, psychological, and pragmatic (historical). Late antique or Byz. novels and romances were interpreted allegorically to neutralize their erotic content (cf. the commentary on the Athiopika of Heliodoros, perhaps by Philagathos, and Manuel Philes on Kallimachos and Chrysorrhoë). Allegory was applied far beyond literary and philosophical exegesis: the ceremonial of the imperial court, the color of attire, the behavior of animals, an earthquake, all could receive an allegorical interpretation, since the cosmos was perceived as a riddle that needed an explanation. This interpretative allegory could be many tiered, having various meanings that were construed as noncontradictory.

THEORETICAL ALLEGORY. For theologians, allegory was the key method of hermeneutics (or technē) in textual interpretation from the Hellenistic period onward. The apologists, particularly theologians of the Alexandrian School, applied it to biblical exegesis in a manner similar to the interpreters of Homer and Hesiod, either to uncover the deeper, spiritual meaning behind the literal or historical sense, or to reevaluate offensive passages. At the same time, they opposed the allegorical interpretation of myths, seen as the main support of contemporary polytheism, and Gnostic allegorization, thus distancing themselves from both views. Likewise, they opposed Marcion and fellow adherents of Gnosticism who denied any salvific value to the Old Testament, and who regarded the Old Testament as a foreshadowing (typos) of the New Testament. In Galatians 4:21–30 the Alexandrian apologists found a model and justification for their "theological method" based on the unity of the Old and New Testaments, conducted on the premise that the Old Testament prefigures Christ, and that both constitute sacred Scripture.

Relating the two Testaments to the contemporary situation to uncover the desired inner meaning is clearly evident in the exegetical commentaries and sermons of Origen. Therefore, so far as Origen is concerned, the old controversy originated by the reaction of the Antiochene School as to whether or not Alexandrian allegory is more than an arbitrary interpretation of the texts, and thereby different from the Hellenistic or Gnostic
mythical interpretations, is relativized but not resolved.

Despite assertions to the contrary by all representatives of the Antiainen tradition, it is doubtful that Antiainen theoria or anagoge differed from the allegory of Origen as a theological or hermeneutical method. It is true that Antiainen thought is oriented more toward the text, and in the catenae of patristic exegesis after the Council in Trullo (691) and in the Byz. erotapokriseis typological exegesis stemmed largely from this orientation, which today is distinguished from allegorical exegesis. Nonetheless, radical allegorization continued to flourish, as shown, for example, in the commentary on the Hexaemeron by pseudo-Anastasios of Sinai (PG 89:851-1077), in which the first chapter of Genesis is given an allegorical interpretation to reveal Christ and the Church.

K.H.U.

ALLELENGYON (ἄλληλεγγύνη, "mutual security"). The term allelenyghe first appears in papyri designating joint guarantors of a debt or other obligation (P. Oxy. 1408) and by the 4th-7th C. had in practice become synonymous with mutual fideissio. Justinian 1 (in novel 99.1 pr.) distinguishes two types of fideissio: one where the cosureties answered fully and equally any legal action against them, and the other where a special contract limited each individual's liability to a portion of the total liability; in this case wealthy cosureties were responsible only for their own portion and not for the liabilities of their impoverished or fugitive partners. Texts of the 9th and 10th C. employ the word in the context of obligations to the fisc, and it seems in some sense to have replaced the older term epibole to describe the longstanding principle of communal tax liability: Emp. Nikephoros I required peasants to pay allelenygos (collectively) for poorer neighbors engaged in military service (Theoph. 486.26); the Treatise on Taxation compelled peasants to pay the taxes of neighbors who had fled the land (Dölger, Beiträge 119.2). In 1002 Basil II introduced the allelenyghe, requiring dynatoi to pay the arrears of poorer taxpayers; the precise procedures employed under this measure remain obscure. Under pressure from ecclesiastical officials, Romanos III abolished the allelenyghe in 1028. Nevertheless, a deed of purchase of 1097 (Lauria 1, no.53.34) mentions property based on mutual solidarity—allelenygos and alleloanadochos—and ca.1100 Nicholas Mouzalon accused tax collectors of eliciting payments from members of the village community on the principle of allelenyghe (F. Dölger, BZ 35 [1935] 14).

ALMSGIVING (ἐλεημοσύνη) was a social function consistently praised by theologians and moralists, even though some writers, such as Symeon the Theologian, denied the importance of almsgiving for personal salvation (Kazhdan, "Simeon" 12). Almsgiving is a major topos of hagiography, which presents saints either distributing their property among the poor or in conflict with their families over charitable giving (cf. Philaretos the Merciful, Mary the Younger). Even monks in certain monasteries were permitted to have private funds for almsgiving, or at least the practice was tolerated (AASS Nov. 3:566D).

The scope of charitable giving is hard to calculate. John Elemon reportedly compiled a list of the poor in Alexandria (more than 7,000) who were supported by his program of philanthropy. John Chrysostom stated that a tenth of the population of Antioch required material assistance; in Constantinople he counted 30,000 men and 20,000 women in need of welfare (Constantelos, Philanthropy 257-59).

With so many in need, the problem of how to influence (and control) them was of great importance. The poor argued that they had a right to bread and entertainment; the state of the 4th-7th C. complied, distributing special tokens (tesserae) for theaters, bathhouses, etc. (glass tesserae of the 5th-7th C. are known; K. Regling, RE 2.R. 5 [1934] 854); esp. important was the distribution of grain. Eventually the church transformed this
right of the poor into the charity of the church, the state, and the wealthy; the recipients had to stop demanding "bread and circuses" and to beg for alms. —A.K.

ALOUSIANOS (Ἀλουσιάνος), second son of the Bulgarian tsar JOHN VLADISLAV, who gave his name to a Byz. family; fl. first half of the 11th C. The origin of the name is unclear: it has been interpreted as Armenian (J. Ivanov), Jewish (S. Gičev: from alluf, "prince"), or Latin (I. Dujčev, who connected it with "Aloisius"). He served as strategos of Theodosiopolis and possessed lands (his wife's dowry) in Charsianon. Alousianos sided with rebels in Bulgaria in 1040. He joined Peter Deljan at Ostrovo (near Thessalonike) and forced Deljan to accept him as co-ruler. During the siege of Thessalonike, discord in the rebel army broke out between Alousianos and Deljan. According to Litavrin (Bolgaria i Vizantija 376–96), the Bulgarian nobles supported Alousianos until he was defeated at Thessalonike. When Michael IV led an expedition against the rebels, Alousianos blinded Deljan and fled to the emperor. For his treason Alousianos was rewarded with the title of magistros. His son Basil was governor of Edessa. Another son, Samuel, was commander of troops in Armeniakon; perhaps the seal of a Samuel Alousianos entitled proedros and doux was his. Basil and Samuel's sister married Romanos IV. Several Alousianoi (Constantine, David) are known from seals with effigies of the military saints George and Demetrios. Later the family lost its military functions, although some Alousianoi became higher civil officials, e.g., Thomas Alousianos, krites katholikos in Constantinople ca.1380–97. They were related to the ARAONIOI.

ALP ARSLAN, Seljuk sultan (1063–73); born ca.1030, died Turkestan Jan. 1073. Nephew of TUGHRUL BEG, Alp Arslan ruled Iran, Iraq, and northern Syria. To keep his Turkomans occupied, he allowed them to raid Byz. In 1064 he captured Ani with great slaughter. About 1070 he made a treaty with ROMANOS IV, which Alp Arslan considered violated by Romanos's subsequent recovery of Mantzikert (1071). Moving speedily from northern Syria, Alp Arslan inflicted a crushing defeat upon Romanos (see MANTZIKERT, BATTLE of). Alp Arslan soon released Romanos, perhaps to encourage civil strife in Byz. MALIKSHAH succeeded Alp Arslan.

ALT'AMAR (Aght'amar), island in Lake Van in eastern Anatolia. Gagik Arcruni, Armenian king of VASPURAKAN (908–36), had a fortified city built on this island; according to the 12th-C. addition to the History of the House of the Artshunik' (tr. R. Thomson [Detroit 1985] 354–61), it included a church and a palace with domes or pavilions decorated with scenes of combat, courtly pleasures, and animals.

Only the church, dedicated to the Holy Cross, survives. Built probably 915–29, it became the center of an important monastery. A domed quadrifoil of the type of St. Hrips'imé in VELARSAPAT, its blocky exterior carries the decoration described in the History: rinceaux enclosing scenes of courtly entertainments, Evangelists, and King Gagik offering the church to Christ. Individual animals, full figures and medallion busts of prophets and saints, and Old and New Testament scenes complete this most extensive of all surviving Armenian sculptural programs. Sources should be sought in the art of the Arab 'Abbāsid court, in 6th-C. Palestine, and in earlier Armenian sculpture. No principle governing the arrangement of scenes has been adduced.

The interior has an equally ambitious fresco program, including, in the drum of the dome, a GENESIS cycle and, along the walls of three secondary apses, a Gospel cycle that, although one-quarter obliterated, still contains 23 scenes. The History does not describe these paintings; A. Grishin (Patrergon, n.s. 3 [1985] 39–51) has questioned a 10th-C. date, noting that in places two layers of painting are visible. A lost stone loggia balustrade featured heads of exotic animals, including an elephant (Grishin, fig.4).

ALTAR OF VICTORY, symbol of pagan resistance in 4th-C. Rome. A statue of Victory (NIKE) was apparently brought from Tarentum in the reign of Augustus and stood near the entrance to the senate, where senators regularly offered incense on a small altar as they entered. The altar was first removed by Constantius II, perhaps in 357, and there was no great resistance. It was put back in place by Julian and removed again by Gratian, but this time the opposition was considerable. A delegation of senators sought its return, but Pope Damasus and St. Ambrose persuaded the emperor not to yield. In 384 Symmachus, then prefect of the city, addressed his poignant appeal for restoration to the court of the young Valentinian II; it nearly succeeded until Ambrose threatened the emperor with excommunication. In 390 a delegation from the senate approached Theodosios I in Milan with the same request and after some hesitation he refused. After the return of Theodosios to Constantinople the senate again sought assistance from Valentinian II; even though the magister militum Arbogast favored restoration, the emperor did not yield. The usurper Eugenius feared an open break with Theodosios and did not replace the pagan symbol. Honorius restored the statue in the senate, but not the altar, claiming that it was merely decorative and not an object of worship.

ALUM (στινπηρία), double sulphate of aluminium and potassium, or aluminium and ammonium. In the Middle Ages, alumen designated a number of white astringent mineral substances. Primarily used as a mordant to fix dyes in wooden cloth and impart brilliance to the colors, it was indispensable to the textile industry and also useful to painters and tanners. For most of the medieval period, until the mines of Tolfa in Italy began to be exploited (1462), alum production was concentrated in Egypt and Asia Minor, and from there it was exported to the West. According to Pegolotti, the best quality was alume di rocca from Koloneia. Alum of excellent quality was produced in Phokaia and Koylaion (Kütahya), while

ALTAR (ἡ ἁγία τράπεζα), the holy table on which the Eucharist is offered; it was located in the sanctuary behind the templon, at first in front of the apse, later within the main (central) apse of the Byz. triple-apsed sanctuary. Interpreted in Byz. commentaries as at once Jesus’ tomb, the table of the Last Supper, Golgotha, the heavenly altar, and the throne of God, the altar as a symbol of God’s dwelling is reflected in the rites of access to the altar in Eucharist and ordination rites, and in the later practice of concealing it behind curtains (Taft, Great Entrance 279–83, 413–16). The altar also served as a place of asylum.

The earliest altars—sometimes called mensae—appear to have been of timber and were portable. From the 4th C., as their place in the church became fixed, they began to be made of stone. Altars dressed in silver and gold and studded with precious stones are also recorded (Sozom., HE 9.1.4). Altars of this period were box-shaped or free-standing, the latter consisting of a circular, semicircular, or rectangular slab, variously attached to a plinth (Orlandos, Palaiochr. basilike 2:444–52). Sometimes (as at Hagia Sophia, Constantinople), the altar was set on a small platform above the level of the sanctuary (R. Taft, OrChrP 45 [1979] 288.16, 298.8). Below or near the altar stood the thalassa (a small basin, usually connected with a drainage system, that served for the ceremonial washing of priests during the liturgy). In representations, an altar is often shown covered with an evynye.

As early as the 4th C. altars were furnished with a case, called the kathathesia, containing relics (K. Wessel, RBK 1:119). By the 8th C. relics became indispensable for the inauguration (enkainia) of a church. The relics were placed either in a socket in the altar’s plinth, as at Daphni (ABME 8 [1955–56] 76), or in a crypt under the altar. In Western churches transformed into martyria, the altar sometimes took the form of a sarcophagus enclosing the saint’s relics, with an opening (the fenestella) facing west.
there were also alum mines elsewhere in Asia Minor, in Thrace, and the islands of the Aegean. Descriptions of the production of alum may be found in Jordanus the Catalan (ca.1330) and Pegolotti.

The rich alum mines of Phokaia were ceded by Michael VIII to the Genoese Manuele and Benedetto Zaccaria in 1275. They built a manufacturing town and tried to monopolize the export of alum to the West by obtaining from Michael VIII a prohibition of the export of Kolonelia alum by other Genoese. Although the prohibition was not effective, the Zaccaria were able to build a fortune on alum. Eventually alum became a major commodity in the commerce of Genoa, which retained a predominant position in the alum trade throughout the Middle Ages, although the price of its alum declined after 1382, as a result of political conditions, extensive mining, and the competition of Egyptian alum. Phokaia fell to the Ottomans in 1455, by which time Western sources of alum were being exploited.

Alyates (Ἀλύατης), a family of unclear ethnic origin. Its first known member, Anthes Alyates, a staunch supporter of Bardas Skleros, fell in the battle of 976 at Koukou lithos (between Melitene and Lykandos). I. Gošev Starobulgarski giagolčeski i kirimski nadpisi [Sofia 1961] 31–35 identified him with the strateletes Alyates, using the insufficient data of a 10th-C. inscription from the Round Church in Preslav. The 11th-C. Alyata were primarily military commanders: Leo, strategos of Cherson and Sougdaia in 1059; Theodore, governor of Cappadocia; another Alyates fell in battle against the Normans in 1108. In the 12th-C. the Alyata switched to civil service and occupied relatively low positions. Andronikos Alyates, contemporary of Alexios III, was kanikles; the family retained the post, which Nikephoros Alyates held in 1258–61. Several Alyata were active in administration throughout the 13th C.: the vestarios Alexios Alyates was sent in 1275 with a fleet against Genoese pirates in the Black Sea; another Alyates was a fiscal functionary; a seal of the sebastos John

Alyates is dated by Laurent ( Méd. Vat., no.69) to the early 13th C. In the 14th C. the Alyata played an important role in provincial life: George, sebastos in Thessaloniki in 1327; an Alyates who was sebastos in Chalkidike before 1319; another Alyates, ktetor of a church in Philippopolis. Later they are known only as clerics; Gregory Alyates, hieromonachos, was a scribe and songwriter in 1433–47.

Amaedo VI, count of Savoy (1343–83); born Chambéry, Savoy, Jan. 1334, died near Castriopignano, Italy, 27 Feb. 1383. Amaedo, the “Green Count,” inherited the title to Savoy at age nine and expanded his territory into the Piedmont. A cousin of John V Palaeologos (through John’s mother Anna of Savoy), Amaedo became involved in Byz. affairs when he led a crusading expedition against the Turks. In 1666 he commanded a fleet and an army of 1,500–1,800 men that recovered Gallipoli (Kallipolis), which had fallen to the Ottomans in 1354. He was, however, distracted from further campaigns against the Turks by news of John V’s detention by the Bulgarians at Vidin. He sailed into the Black Sea and seized several Bulgarian coastal towns. Amaedo’s siege of Varna forced the Bulgarians to give the Byz. emperor a safe-conduct through their territory (Dec. 1366). He delivered Sozopolis and Mesembria to the Byz. in exchange for 15,000 florins (to pay his mercenaries). Amaedo encouraged John to seek Union of the Churches and persuaded him to go to Rome in 1369 to make his personal submission to the pope and seek military aid. Amaedo’s expedition was a rare example of cooperation between Crusaders and the Byz. Empire.

Amalarius of Metz, archbishop of Trier (after 804–14) and of Lyons (835–838/9); liturgist active at the Carolingian court; died ca.850. In 813 he traveled to Constantinople as ambassador

Lit.
of Charlemagne to Emp. Michael I Rangabe to confirm a treaty between the two powers; received at Constantinople by Leo V, Amalarius returned with the treaty and the Byz. ambassadors Christopher the spatharios and Gregory the deacon to find Louis I the Pious on the throne and lose his own see. Rehabilitated a few years later, Amalarius participated in the synod of Paris on Ikonoclasm (825) and may have been considered for a second embassy at that time. His Versus marini describes the trip to Constantinople via Zara (Ep. ad Hilduimun, 5, ed. Hanssens [infra] 1:342:1–14), an audience with Leo V, and the dangers of shipwreck and Slav or Arab attack, while his liturgical works allude to contemporary customs at Constantinople (e.g., Codex expositionis II, ibid. 1:280:14–20, on the Exaltation of the Cross; Liber officialis, ibid. 2:197:2–6, on Latin Lections at Constantinople).

AMALASUNTHA (Ἀμαλασούνθα), or Amalasuntha, Ostrogoth queen (526–34) and queen (534); died Lake Bolzano probably 30 Apr. 535. The younger daughter of Theodoric, in 515 or 516 she married Eucharic, also a member of the Amali, and bore him Matasuntha and Athalaric, who, after the deaths of his father (522) and grandfather, was raised to the Ostrogoth throne under Amalasuntha’s regency. Together with Athalaric, Amalasuntha is depicted on a diptych of Orestes, Western consil in 530 (Delbrück, Consularispiyuchen, no. 32). Her policy was pro-Roman; Prokopios and esp. Cassiodorus praised her highly as a well-educated and beautiful woman. Her pro-Roman tendency was opposed by the Gothic military aristocracy, led by Amalasuntha’s cousin Theodahad, so that she considered fleeing to Constantinople. She changed her plan—according to Prokopios, because Theodora was jealous, but probably because Amalasuntha arranged a compromise with Theodahad. After Athalaric died she ruled as queen briefly but was compelled to marry Theodahad. Once proclaimed king, he exiled her to an island on Lake Bolzano where she was strangled. The remonstrances of Peter, Justinian’s envoy, were of no avail and Theodahad asserted that the murder had been committed against his will. Amalasuntha’s death became Justinian’s excuse for war: he ordered Mundus to invade from Illyricum and called Belisarios to Sicily. Amalasuntha was unequal to the challenge of preserving the heritage of Theodoric and miscalculated the consequences of her Roman ties.

AMALFI (Ἀμάλφη), Tyrrenian port in southern Italy, first mentioned in 596. Until 839 Amalfi belonged to the Byz. duchy of Naples. After that date the city and its territory became an independent state, within the orbit of the Byz. Empire. Imperial titles were conferred on most of the local rulers, praefecturi and, after 958, duces. From the 9th C. many Amalfitans were active in Mediterranean trade. Their ships were known in Egypt, the Maghreb, and Spain. They had colonies in Dyrrachion and Antioch and are frequently described as furnishing Oriental luxury goods to the West. Their quarter in Constantinople, with its Church of S. Maria de Latina, is documented from the mid-11th C.; on Mount Athos an Amalfitan monastery dedicated to the Virgin flourished between the end of the 10th and the 13th C. (A. Pertusi in Mill. Mont-Athos 1:217–51). Clerics and monks of both institutions translated Greek hagiographical texts into Latin. Between 1053 and 1062 Amalfi tried in vain to organize an alliance of the Western and the Eastern empires against the Norman invaders of southern Italy. Following the Norman occupation of 1073, political relations between Amalfi and Constantinople cooled; commercial relations also declined, with Amalfi losing ground to Venice, Byz.’s main naval ally in the Mediterranean.

Bronze doors commissioned in Constantinople for the cathedral of Amalfi survive in situ, although the cathedral itself was completely rebuilt after 1204 and the façade was again rebuilt after 1871. Nearly identical doors are in nearby Atrani, on the Church of S. Salvatore.

AMALIC I (Ἀμάλικος), king of JERUSALEM (1163–74); born 1136, died Jerusalem 11 July 1174. Upon succeeding his brother BALDWIN III, Amalric sought a Byz. bride to renew the alliance with Manuel I. Manuel rejected his accompanying request to be recognized as overlord of ANTIOCH. In 1167 Amalric married Maria Komnene, daughter of John Komnenos the protosebastos. Amalric sought Byz. aid in 1168 to prevent ZANGID occupation of Egypt, but by 1169, when a joint expedition occurred, SALADIN already controlled Egypt. A combined siege of Damietta (Oct.–Dec. 1169) collapsed over disagreements between Amalric and the Byz. commander, Andronikos KONTOSTEPHANOS. In the same year, Ephraim and other mosaicists commissioned by Manuel worked in Jerusalem and Bethlehem. From Apr. to June 1171 Amalric visited Constantinople. He was received privately by Manuel, did homage, and was magnificently entertained (Runciman, infra). A treaty proposing joint action against Egypt was never implemented. With Amalric’s death, the alliance of Byz. and Jerusalem effectively ended.

ten,” in Varia 1 (Bonn 1984) 132–42.

AMASTRIS (Ἀμάστρις or Ἀμαστρα, now Amsra), city on the Black Sea coast of Anatolia. It first appears in Byz. history when Kyros, a local monk, predicted to Justinian II in 695 that he would regain the throne. Amastris gained importance in the 9th C. as a port for communication across the Black Sea and as a military base. The vita of GEORGE OF AMASTRIS mentions an attack of the Rus’ on Amastris, but the date of the attack and even its historicity are under discussion. The city prospered in the 10th C.: NIKETAS DAVID PAPHLAGON, in an enkomion of a local saint Hyakinthos (PG 105:421C), calls it “the eye of Paphlagonia and even of the oikoumene” and the EMPIRON for trade with the northern Scythians. Amastris was a city of the theme of PAPHLAGONIA and seat of a katepano in the 10th C. (Ahrweiler, Mer 111). In the 12th C. it was administered by a dux (Laurent, Coll. Orphidan, no.227). Amastris was ruled by the Laskarids after a brief occupation (1204–14) by David Komnenos of Trebizond. Its later history is obscure: in the late 13th or early
14th C. it apparently was turned over to the Genoese, whose merchants were already established there. Amastris was a suffragan bishopric of Gangra; it became a metropolis by 940.

The site occupies the neck and steep slopes of a peninsula, with two harbors. The ancient city, which stretched to the mainland, was abandoned, apparently after the Rus’ attack, as Amastris contracted within new walls. Its Byz. monuments include two small single-aisled churches, perhaps of the late 9th C., and remains of a monastery that have been dated to the early 8th C.

AMATUS, bishop, possibly of Paestum-Capaccio or Nusco (E. Cuozzo, Benedictina 26 [1979] 323–48), and monk of Montecassino; born Salerno ca.1010, died ca.1083? Amatus wrote several Latin poetical works and a History of the Normans, which survives only in a 14th-C. French version. Amatus’s account of events from 1016 to 1078 reflects Montecassino’s pro-Norman stance and includes the revolt of the Lombard Meles (pp. 26.6–32.12), the expedition of Maniates against Sicily, and the struggle for southern Italy (pp. 66.5–93.8).

AMBASSADORS (πρέσβεις, ἀποκρυστάριοι) in Byz. were normally recruited from the higher echelons of the administration, the emperor’s immediate entourage, or those clerics (sent mainly to Christian countries, and, for specific reasons, to Sasanian Persia) or laymen, regardless of class or experience, who were considered able to succeed in their missions abroad. Their rank depended upon the importance of the ruler to whom they were sent. None of them were permanently accredited to a foreign country; they were sent or exchanged only when required for specific reasons of diplomacy. Beyond having the emperor’s confidence, an ambassador was expected to be honest, pious, able to resist corruption, and ready to sacrifice himself if necessary for the empire. He was expected to know something of the country to which he was sent and, if possible, its language (interpreters were also available). Able negotiators were entrusted with a series of embassies (e.g., Leo Choirspartes) or had their sons appointed as ambassadors in their place (some cases in early Byz., e.g., Nonnosos).

Byz. ambassadors going abroad carried their own safe-conducts and letters of accreditation (prokuratorikon chrysoboullon). Unlike low-ranking letter-carriers, ambassadors were fully or partly empowered to negotiate. The state covered their expenses and those of their suite. Embassies could be quite large, with many interpreters and servants. One aspect of their mission was to collect intelligence about the country they visited. (See also Apokrisiarios. For ambassadors to Byz., see Embassies, Foreign.)

AMBO (ἀμβώ, also called πύργος), a platform, often standing on four, six, or eight columns, in a church. Ambos were first recorded in the second half of the 4th C. (e.g., at the Council of Laodicea of 371), but most surviving examples date from the 5th or 6th C. (C. Delvoye, RBK 1:127). The example in the Dormition Church in Kalambaka (Stagai) shows that at least in some places Early Christian ambos continued to be used in the 12th C. (G.A. Soteriou, EEBS 6 [1929] 292, 302–04). The ambo stood in the nave, between the chancel barrier and the west wall, and took one of four main forms: the first and earliest has a single staircase; the second is “fan-shaped” with two curving staircases; the third and most widespread type has two staircases on its east-west axis; distinct from these is the fourth, Syrian type, combining the functions of ambo and syntironon (R. Taft, OrChrP 34 [1968] 326-59). The ambo of Hagia Sophia, Constantinople, described by Paul Silentariou, was made of colored marbles of many hues and dressed with silver slabs (S.G. Xydis, ArtB 29 [1947] 1–24), but most surviving examples are carved in white marble. Some 13th-C. examples were of wood and portable (Kashdan, infra 425f).
Liturgically, the ambo (together with the bema) was one of the two focal points of the church, and processions back and forth along the solea or pathway connecting the two were a standard part of the ritual. It was at the ambo that the liturgy used to open with the intonation of the Trisagion and close with the final blessing or Opisthambonos Prayer (A. Jacob, Byzantion 51 [1981] 306–15). In Hagia Sophia the choir sang from beneath the ambo, the readers mounted it to read the lections, and the singers intoned from it the psalmody and troparia (Mateos, Typikon 2:281; Germanos, Liturgy 74). On the ambo or its steps the deacons proclaimed the litanies and other diaconika and exchanged the kiss of peace. Solemn orthros (Mateos, Typikon 2:309) and special ceremonies such as imperial coronation rites and the Exaltation of the Cross on 14 Sept. (illustrated in the Menologion of Basil II, p.35) were celebrated at the ambo, which also served as a pulpit for the proclamation of councils and their anathemas (Theodore Lector, ed. Hansen 119.17–20, 142.26, 144.12–13, 149.25–28), and even for secular announcements (Chron.Pasch. 715.16–716.8). Chrysostom even preached from the ambo by way of exception, the better to be heard (Sozom., HE 357.14–15).

Because the Gospel was proclaimed from the ambo, liturgical comments interpreted it as symbolizing the stone rolled back from Jesus’ tomb from which the angel announced the Resurrection to the Myrrphoroi in Matthew 28:2–7 (Germanos, Liturgy 62).

AMBOIDE, late 12th-C. Norman jongleur, possibly from Evreux. Ambroise participated in the Third Crusade and composed a lengthy verse Estoire de la guerre sainte (History of the Holy War) in Old French after his return from the Levant. Its vivid portrayal of the heroic deeds of Richard 1 Lionheart espouses the perspective of the average Crusader and describes, for example, the relations of the Greek population of Messina with the Crusaders (vv. 601–06) and the ruins of Rhodes (1287–1302). His account of Richard’s conflict with Isaac Komnenos of Cyprus and the king’ conquest of the island (1355–2106) includes a description of Isaac’s Greek and Armenian troops (1439–1700), his magnificent tent and gold and silver dishes (1669–72), the superb Byz. war horses (e.g., 1842–50, 1938), and Richard’s shaving of Byz.burgers who surrendered to him (1948). The Estoire was translated into Latin and incorporated into the revised version of Itinerarium peregrinorum by 1222.

AMBOUSE (Αμβρόσεως), bishop of Milan (from 373 or 374) and saint; born Trier ca.339, died Milan 4 Apr. 397; feastday 7 Dec. Son of a praetorian prefect of Gaul, Ambrose was trained as a lawyer and ca.374 became governor of Aemilia and Liguria, with his residence at Milan. In the same year the Arian bishop of Milan died and the people of the city demanded that Ambrose succeed him even though he was then a layman. Ambrose vigorously opposed Arianism and paganism and campaigned for the removal of the altar of victory from the Senate House in Rome; his moral authority forced Theodosios I to accept church-imposed penance after his massacre of thousands in Thessalonike in 390. Ambrose wrote in Latin but knew Greek and translated Josephus Flavius into Latin. He made extensive use of eastern ideas, esp. those of Basil the Great and Gregory of Nazianzos. Many of his works are commentaries on the Old and New Testaments. His funeral orations on Valentinian II and Theodosios I as well as his letters are important sources for the history of the late 4th C.

The Greek church held Ambrose in high regard. His vita by Paulinus was translated into Greek (Papadopoulos-Kerameus, Analekti 1:27–88), while an anonymous vita that relied upon Theodoret of Cyrrhus was compiled in Greek (C. Pasini, AB 101 [1983] 101–50); the latter served in its turn as the source for Symeon Metaphrastes (BHG 69). Numerous Greek hymns (kontakia and

**AMBULATORY**, a passage around a major space. Prokopios of Caesarea (Buildings 1.158) uses the term *aulë* (aisle?, lit. “courtyard”) for the colonnaded spaces around the naos (nave) of Hagia Sophia, Constantinople. Ambulatories facilitate movement in a church without disturbing central and sacred areas; they can give independent access to the pastophoria or lead to a contiguous church (LIPS monastery, Constantinople; Hosios Loukas). The ambulatories also served as spaces for ecclesiastical gatherings and for burials. The “ambulatory church” type consists of a naos separated by piers or columns from ambulatories to the south, west, and north, which often provided access to lateral chapels; the term has been applied to such late 13th-C. structures as the main church of the Pammakaristos (S. Eyice, *Anadolu Araştirmaları* 1.2 [1959] 223–34).

**AMBULATORY CHURCH.** See Church Plan Types.

**AMERALIOS** (άμεράλιος), commander of a fleet. A 14th-C. ceremonial book (pseudo-Kod. 183.21–23) defines an ameralios as subaltern of the megas doux and commander of the whole navy. It is generally accepted that the term was borrowed from the Catalans at the beginning of the 14th C. since Pachymeres (Pachym., ed. Bekker, 2:420.7–8) relates that Roger de Flor appointed an arch of his 12 ships, “whom their dialect calls amerales.” Amerales as a family name is known, however, at least from 1280 (*PLP*, no. 774). In the court hierarchy the ameralios was placed between the skouterios and epon ton deeseon.

**AMIDA** (Ἀμίδα, Diyarbakır in Turkey), capital and metropolitan bishopric of Mesopotamia. Fortified by Constantius II in 349. Amida was frequently contested between Byz. and the Sasanians. It was conquered by Shapur II in 359, retaken by Julian in 363, taken by Kavad in 502, and returned to the Byz. in 504; its buildings were restored by Anastasios I. It fell again to the Persians in 602, but was recovered in 628 by Heraclius, who built a Church of St. Thomas there. Amida came under Arab control in 640. The city walls, which still stand, are attributed to Constantius or Justinian I and were restored in the medieval period by various Muslim rulers. The Church of St. Kosmas disappeared in this century, but the sanctuary of the large tetracoon Church of the Virgin survives. According to *John of Ephesus*, a native of the region, there were five monasteries at Amida in his time. Amida was reportedly attacked five times by *John* (I) Tzimiskes: in 958, 959, 972, 973, and 974.

**‘AMİR.** See *Emir*.

**AMIROUTZES, GEORGE**, philosopher, theologian, and writer; born Trebizond ca.1400, died Constantinople after 1469. The name is a diminutive of the Turkish “emir.” Amiroutzes (*Ἀμιρούτζης*) is first mentioned as a lay adviser to the Byz. delegation to the Council of Ferrara-Florence, where he supported Union of the Churches (M. Jugie, *EO* 36 [1937] 175–80). Later, he allegedly repudiated his earlier views in a letter to Demetrius, duke of Nauplion (ed. M. Jugie, *Byzantion* 14 [1939] 77–93). Gill (*Personalities* 204–12) has, however, challenged the attribution to Amiroutzes of this anti-Unionist tractate. In 1447 Amiroutzes was an envoy from Trebizond to Genoa; from ca.1458 to 1461 he served as protovestarios and megas logothetes of the last Trapezuntine emperor, David I Komnenos (1458–61). After the surrender of Trebizond to the Turks (Aug. 1461), he went to the court of Mehmed II at Adrianople and then to Constantinople, where he continued his scholarly activity, discussing philosophy with the sultan and preparing a map of the world based on Ptolemy (F. Babinger, *Mehmed the*
Conqueror and His Time [Princeton 1978] 246–48). Because of his Turcophile stance, Amirouzes has frequently been charged with treachery and hypocrisy; he has been defended, however, by N.B. Tomadakes (EEBS 18 [1948] 99–143) and O. Lampsides (ArchPont 17 [1952] 15–54), who also dispute his alleged conversion to Islam.

The few surviving works of Amirouzes include a dialogue with Mehmed on Christianity, poems of fulsome praise for the sultan, and a few letters to contemporaries such as Bessarion and Theodore Agallianos.

LIT. PLP, no. 784. Beck, Kirche 772. —A.M.T.

AMISOS (Ἀμισός, now Samsun), coastal city of Pontos. Amisos is rarely mentioned before its capture by the Arabs in 863. It was a city of the Anatolikon theme and played an essential commercial role in supplying Cherson with grain (De adm. imp. 53:533–35). Seals mention several fiscal functionaries of Amisos: kommerkarios, dioketes, and abydikos. The city was occupied by the Turks in 1144, by the Komnenoi of Trebizond in 1204, and definitively by the Seljuks in 1214. During the first Turkish occupation it appears that Greek and Turkish settlements coexisted side by side. The remains of Amisos include late Roman walls, floor mosaics, churches, and inscriptions. Amisos was a suffragan of Amaseia.

Because of similarity of names, Amisos was formerly identified with the Sampson ruled by Sabbas Asidenos; his base was actually Priene.

—C.F.

AMMIANUS MARCELLINUS, Latin historian; born Antioch ca.330, died after 392. Born to a noble family, Ammianus saw wide military service in east and west as a staff officer (protector domesticus) in the years 354–63, including the siege of Amida (359) and Julian's Persian expedition (363). After returning home, he embarked on more scholarly travels to Egypt, Greece, and Rome, where, to judge from his resentful remarks, he fell victim to the expulsion of foreigners in the famine of 383. He was back in Rome in 392, enjoying the fame of his published history.

In his own concluding words (31.16.9), his Res Gestae covered the period 96–378 from the standpoint of a “former soldier and Greek.” The first 13 books, covering 257 years with a starting point designed to provoke comparison with Tacitus, are lost. The surviving books 14–31 cover in obviously much greater detail the years 353–78, ending in catastrophe (battle of Adrianople) and forebodings of doom. Ammianus combines traditional prejudices (patriotism, contempt for barbarians and mobs, outbursts against corruption and luxury) with a refreshing religious tolerance and balanced appreciation of his protagonists—even his hero Julian's feet of clay are acknowledged. His style is just as mixed, with Tacitean epigram and Vergilian color blended with a jagged Latin that wavers between clumsiness and power. Although a pagan, Ammianus includes a surprising amount of information and detached commentary on Christian affairs (E.D. Hunt, CQ n.s. 35 [1985] 186–200).

—B.B.

AMMONIOS (Ἀμμώνιος), teacher and commentator on Aristotle; born Alexandria late 5th C., died after 517. Ammonios imbued paganism from his philosophically minded parents; after the death of his father Hermeias, his mother took him and his brother to Athens to study under Proklos. His studies complete, Ammonios returned home where, except for some time in Constantinople, he remained as a lecturer on Plato and Aristotle. Photios (Bibl., cod. 187) vouchsafes his reputation in astronomy and geometry. He is variously praised and damned for his paganism, industry, and greed. Of his many writings, only the commentary on Aristotle's On Interpretation remains, though the gist of his lectures survives in students' notes. His most famous pupils included John Philoponus, who edited his lectures on Aristotle's Physics, Damaskios, Olympiodoros of Alexandria, and Simplikios.
AMNOS (ἀμνὸς “lamb”), term that refers esp. to the sacrificial lamb. In the Old Testament the lamb was a common sacrificial victim, esp. the paschal lamb; in the New Testament and church fathers it became a symbol of Jesus as victim (see LAMB OF GOD). In Byz. liturgical usage, the amnos is the central portion of the principal PROSPHORA bread, signifying Christ’s body; marked with a stamp, it is cut out at the PROTHESIS rite and consecrated at the Eucharist. GERMANOS I (Germanos, Liturgy, pars. 6, 21, 36) applied the symbolism of Isaiah 53 to this rite, and within a century the prophetic verses (Is 53:7–8) became the liturgical formula for the excision of the amnos. The use of a lance for this excision is symbolic of the soldier’s lance (see RELICS) that pierced Christ’s side at the Crucifixion (Jn 19:34). In wall painting at KURBINOV and elsewhere in and after the 12th C., the image of the amnos, in the form of a prone Christ Child on the altar, replaces the officiating Christ earlier represented in the apses of churches.

R.F.T., A.C.

AMORION OR PHRYGIAN DYNASTY, family that ruled from 820 to 867 and included MICHAEL II, THEOPHILOS, THEODORA, and MICHAEL III; it was so called because its founder, Michael II, was born in AMORION (see genealogical table). The dynasty is best known for its role in several significant religious events. It was responsible for the final defeat of ICONOCLASM, which Michael II had tolerated and Theophilos had revived, but which

Theodora ended (see TRIUMPH OF ORTHODOXY). Michael III created a schism with Rome by permitting the election of Patr. Photios, but his sponsorship of the mission of CONSTANTINE THE PHILOSOPHER and Methodios to Moravia and the baptism of Boris of Bulgaria helped draw the Slavs into the Byz. cultural orbit. The Amorian dynasty also witnessed the revival of secular learning through patrons such as Theoktistos and Caesar Bardas and scholars such as Leo the Mathematician. Under the dynasty the Arabs occupied Crete, Sicily, and parts of southern Italy, but, despite victories by MA’MON and Mu’TAŠIM over Theophilos, they made no permanent gains in Asia Minor and were on the defensive by the end of Michael III’s reign (Vasiliev, Byz. Arabes 1:22–264).

F.A.H.

AMORION (Ἀμόριον), now Hisar near Emirdağ on the borderlands of Galatia and Phrygia, was fortified by Zeno but gained importance only in the 7th C. when it became capital of the Anatolikon theme because of its strategic location on the main southern invasion route. First attacked by the Arabs in 644 and taken in 646, it was a frequent goal of their raids. In 742–43 it was the base of Constantine V during the revolt of AR-TABASDOS. Amorion gained its greatest fame when a native son, Michael II, became emperor and founded the “Amorian” dynasty. In 898, Amorion was taken and destroyed by the ‘Abbâsid caliph al-Mu’TAŠIM in a great campaign mounted against it. The officers and civic officials captured at that time and later executed for their refusal to renounce Christianity are renowned as the Forty-two Martyrs of Amorion. The city never

recovered from this attack, though it survived as a bishopric (under Pessinous; autocephalous by 787, metropolis before 860). Although Alexios I defeated the Turks there in 1116, Amorion had fallen definitively to the Seljuks after the battle of Mantzikert in 1071. The site preserves traces of its fortifications and foundations of several buildings, including a large church.

Lit. TIB 4:122-25.

AMORKESOS (Ἀμορκέσος, possibly Ar. Imru’ al-Qays), 5th-C. Arab chief (probably Ghassânid) in the service of Persia who for some reason left the Great King and crossed over to Byz. Having consolidated his position among the Arabs in northern Arabia he began to attack Byz. territory in Palestina III and finally crowned his successes with the occupation of the island of Iotabe in the Gulf of Elat. Desirous of becoming a Byz. phy- larch, he sent Bp. Petros to Constantinople ca.473 to negotiate with Leo I. This mission was successful and the emperor brought Amorkesos to Constantinople, where he treated him royally and made him phylarch.

AMPHILOCHIOS OF IKONION, churchman, theologian, and saint; born Diokaisarea? between ca.340 and 345, died after 394; feastday 23 Nov. Amphilochos (Ἀμφιλόχιος) was overshadowed by the big three Cappadocian Fathers to whom he was connected by friendship and family, Gregory of Nazianzos being his cousin. The hypothesis of K. Bonis (SBN 8 [1953] 3-10) that Amphilochos was the uncle of the deaconess Olympos was rejected by Oberg (infra 48, 78). After studying under Libanius at Antioch, and a decade or so as rhetor in Constantinople, he was consecrated bishop of Ikonion ca.373 at the behest of Basil the Great. An efficient fighter of heretics, he spoke at the Council of Constantinople in 381 and earned the praise of Theodosios I; subsequently he procured the condemnation of the supporters of Messalianism at the Council of Side ca.390. His last recorded appearance was at the synod of Constantinople in 394. The bulk of his writings is lost or fragmentary. Nine homilies survive, mostly on biblical texts, as does a treatise on false asceticism and his letter on the Holy Spirit. Most interesting are his 333 iambics For Seleucus, not so much for their routine exhortations to virtue as for their list of biblical books.

Lit. K. Holl, Amphilochoius von Ikionium in seinem Verhaltnis zu den grossen Kappadoziern (Tübingen 1904).

AMPHIPOLOS (Ἀμφιπόλις), city of Macedonia on the Via Egnatia not far from the mouth of the Strymon. In Roman times Amphipolis was capital of Macedonia I but by late antiquity it was subject to Thessalonike (Hierokl. 640.2). The bridges across the Strymon both north and south (at Mar- marion) of Amphipolis were used throughout the Byz. period. Slavs were established in the region in the 7th–8th C. The bishop of Amphipolis, first mentioned in 553, was suffragan of Thessalonike. The bishopric appears for the last time in a notitia dated after 787 (Notitiae CP 3.272). Even though authors of the 12th–14th C. continued to use the name as a geographic designation, F. Papazoglou (ZVR 2 [1953] 7-24) demonstrated that this was the result of conscious archaising and that the late antique city had ceased to exist; its place was taken by Chrysopolis, which is mentioned in various documents from the end of the 10th C. onward (including portulans of the 15th C.).

AMPHORA (Ἀμφόρεια), large ceramic transport and storage vessel used in all parts of the empire, at least through the 13th C. The amphora shapes of the 4th–7th C. were developed from ancient prototypes and manufactured in many centers throughout the eastern Mediterranean. Amphorae were normally either round or cylindrical in shape, with two handles extending from the shoulder to the mouth; the shoulder and often the whole body were marked with grooves, wheel-ridges, or combing, presumably to facilitate the use of ropes to secure the vessels in the holds of ships.

Archaeological evidence, from shipwrecks and land sites, reveals the extent of the use of amphorae in contexts ranging from household and commercial storage to long-distance transportation. Excavations in Constantinople (esp. at Sarachane and Kalenderhane), in Cherson and the eastern Crimea, and in Pliska, Tomis, and Diogenia show the development of amphora types in the 8th–10th C. when evidence from elsewhere is slight. By the 11th C. Byz. amphorae are again found commonly throughout the eastern Mediterranean and the Black Sea, a characteristic type being a relatively small conical-shaped amphora with heavy wheel-ridges, a mouth with a very short neck, and short handles. While amphorae of the 4th to 7th C. are frequently marked with graffiti, those of the 11th to 12th C. are occasionally stamped, usually on the shoulder. Since these stamps are often monograms or abbreviated names (Nicholas, John, George, etc.), Jakobson (infra) believes them to be potters' marks (see STAMPS, COMMERCIAL).

Amphorae were still quite common in the 12th–13th C., but their usage seems to have declined in the 14th C., perhaps because materials were transported in other containers, possibly barrels. Amphorae were inserted into the walls of churches, esp. in the masonry of pendentives; according to some authorities, this was for acoustical purposes, but the amphorae were probably used simply as lightweight filling material. Amphora-like vessels could also be made of metal (see PLATE, DOMESTIC GOLD AND SILVER).

AMPHORA STAMPS. See STAMPS, COMMERCIAL.

AMPHULAE, PILGRIMAGE, vessels of lead, clay, and other materials that were used by pilgrims to transport oil, water, earth, etc., from the Loca Sancta. Particular types include UNGUENTARIA and MENAS FLASKS. The main collections are at MONZA AND BOBBIO in Italy, where are preserved more than three dozen small (diam. approximately 7–9 cm), embossed tin-lead pilgrim flasks, closely

AMPHULAE, Pilgrimage. Ampulla; silver. Monza Cathedral Treasury. To the left of the seated Virgin and Child are the Three Magi; to the right, the Annunciation to the shepherds.
related to the Sancta Sanctorum Reliquary in date (ca.600), provenance (Palestine), iconography, and function. Their iconography is drawn from the Palestinian Christological Cycle, with special stress (by frequency of choice and size) on the Veneration of the Cross and the Myrrophoroi—scenes evocative of the Holy Land’s two most famous shrines, the Holy Sepulchre and Golgotha in Jerusalem. The pilgrim eulogia they contained is revealed by a recurrent inscription: “Oil of the Wood of Life of the Holy Places of Christ.” Indeed, the Piacenza Pilgrim describes a ceremony in the Church of the Anastasis in Jerusalem for the blessing of such oil flasks through contact with the True Cross. Their amuletic function for pilgrims is revealed by their emphasis on the scene of Peter Saved from Drowning, and the inscription on one specimen: “Oil of the Wood of Life, that guides us by land and sea.”

‘AMR (Ἀμρ, Ἀμρ) more fully ‘Amr ibn al-‘Áṣ; Muslim conqueror of Byz. Egypt; born Mecca between ca.575 and 595, died al-Fustāt (Cairo) 6 Jan. 664. He converted to Islam between 627 and 630. A member of the tribe of Quraysh, he was a trader between Hijaz, al-‘Arish, and towns in southern Palestine. Short but hardy and broad-shouldered, he was brave, cool-headed, and clever, and an excellent horseman. Muhammad gave him various military commands; Abu Bakr appointed him to lead one of four armies against Byz. Syria. Victorious in southern Palestine, ‘Amr conquered Jerusalem, Askalon, Gaza, and Eleutheropolis (Elousa) and participated in the siege of Caesarea. Strategically well placed for an attack on Byz. Egypt and aware of its vulnerabilities, in Dec. 639 ‘Amr launched the invasion. At his own or ‘Umar’s initiative, he set out with a small force (3,500 or 4,000) for Egypt, via the coastal route to al-‘Arish. Soon 10,000 or 12,000 reinforcements followed. After taking Pelousion, ‘Amr defeated the Byz. at Heliopolis (640); by 642 he had overrun Egypt, including Babylon (Cairo) and Alexandria, and captured Barca in Cyrenaica. ‘Umar restricted ‘Amr’s command to the army in the lower Delta. ‘Uthmān removed ‘Amr, but a Byz.-inspired rebellion of the Greek population in 645 and a Byz. maritime expeditionary army forced his reinstatement. He checked the Byz. army at Alexandria and retook the city.

AMULET (φυλακτήριον). Although it could take many forms, from medicinal animal fur to apotropaic door frames, an amulet was usually a small artifact worn on the body, such as a pendant, armband (see ARMbands, AMULETic), ring, or token. Severos of Antioch (PO 29.1:79 [583]f) advises against “the suspension and attachment to necks or arms or other members [of those objects] called phyIaketeria, or protective amulets . . . .”

Especially common in the 4th to 8th C., and among the lower strata of society, amulets were roundly condemned by the church fathers and the church councils (e.g., Laodikeia I, canon 36). Magical power was invoked through medium, inscriptions, and/or imagery. For example, the earth of which PILGRIM TOKENS were made was believed to convey the power of the deity or saint from whose LOCUS SANCtus it was taken. As for inscriptions, apotropaic acclamations, such as HeiΣ Theos, commonly appear on 4th- through 8th-C. amulets, as do Hebrew sacred names, such as Ia·d. These were thought to convey the protection of divine power as, commonly, was the 90th Psalm: “He that dwells in the help of the Highest. . . .”

Like these inscriptions, amuletic iconography reflects varied, often ancient, sources. The Holy Rider—the generic emblem of good conquering evil—was an esp. popular image with pre-Christian roots, as were the Greco-Egyptian RING SIGNS that commonly accompanied it. Alexander of Tralles (Alex.Trall. 2:377) prescribes a treatment for colic involving a jasper ring bezel engraved with HERA·KLES choking the Nemean Lion. Yet, much as biblical quotations eventually found a role on amulets, so also did biblical imagery. Most often themes of deliverance or protection—such as the Sacrifice of Isaac—were chosen with the aim of establishing a typological bond. The Adoration of the Magi was a preferred theme for pilgrim amulets. More generic in its applicability was the evil eye.

Medical Amulets. Amulets in this subcategory were designed for specific diseases—thus excluding relics, icons, and pilgrim tokens, whose mi-
raculous powers might incidentally encompass healing. Clearly some of the more common Greco-Egyptian medico-magical gem amulet types (governing sciatica and hemorrhaging) continued into Byz. times. Some 5th- through 7th-C. pendants include amulets bearing texts invoking “good digestion” and related benefits. As with more generally efficacious amulets, power could derive from substance (e.g., haematite, which was thought to absorb blood), symbols (e.g., ring signs), phrases, or images: the image of a man bending over to cut grain provided “sympathetic magic” to treat sciatica, much as a representation of the Woman with the Issue of Blood would be used to treat hemorrhaging.

Medusa Amulet. This is the modern term for a very popular form of uterine amulet known from the 5th to 8th C. and esp. favored from the 9th C. onward. Its power derives from an image characteristic of a human head with seven (earlier) or 12 (later) serpentlike rays, all enclosed in a solar disc, which may also include magical ring signs. This image appears frequently on pendant medallions and less often on ring bezels and armbands (here, in the company of the Holy Rider and locus sanctus iconography). That their magical domain was the uterus is clear from many of their inscriptions. The uterus (hystera) is addressed directly, usually with the double epithet “dark and black one.” It is often accused of “coiling like a serpent, hissing like a dragon, and roaring like a lion”—and then is admonished to “lie down like a lamb”; a ring excavated at Corinth is inscribed: hysteron phylaktieron (“uterus amulet”). The Medusa-like image on these amulets developed out of the Greco-Egyptian Chnoubis, one of antiquity’s most popular gem-amulets—and one long recognized as specifically effective in treating disorders of the abdomen and uterus.

‘AMWÁS. See EMMAUS.

ANACHARSIS OR ANANIAS (Ἀνάχαρσις η 'Avanias), title of an anonymous 12th-C. pamphlet (probably written soon after 1158). Chrestides (infra) unconvincingly attributed it to Niketas Eugeneianos. The pamphlet is in the form of a dialogue between Aristagoras and the personification of Grammar, but is in fact a soliloquy by Aristagoras. Anacharsis, whose name is John (identified by Chrestides as John Kamateros, logos the tou dromou), received his derisive nickname ("delighted with Anna") from the name of his second spouse, Anna. The author presented him as the scion of a rich family who was the antithesis to the ideal of elite behavior: Anacharsis was a failure as a warrior, rider, and hunter and an unsuccessful musician, scribe, and astrologer. (The author dwells much more on these "social" accomplishments of an aristocrat than on traditional moral values or failings.) To make matters worse, after the death of his model first wife, Irene, Anacharsis became involved with the Jewish community. At the instigation of the Jew Mordecai, he married Anna, described as a "frog" who was baptized but was not improved even by this sacrament. The originality of the main image is in contrast to the imitiveness of the vocabulary, which relies greatly on the Bible, ancient authors, church fathers, and contemporary writers, primarily Eugeneianos, Michael Italikos, and Prodromos.

-A.K.

ANACREONTICS, a short-lined lyrical verse named after the 6th-C. b.c. Ionian poet Anacreon. Since Anacreontics always had a basic eightsyllable pattern, they were adapted more easily than other forms of meter (whose syllable numbers were more varied) from ancient patterns of long and short syllables to the Byz. rules of stress accents. Anacreontics were used for religious compositions (e.g., by Gregory of Nazianzos and Synesios of Cyrene and by Sophronios of Jerusalem); they were used for a secular composition by Dioskoros of Aphrodisi. Subsequently they became assimilated into Byz. metrics as an eight-syllable verse, parallel to 12- and 15-syllable meters (dodecasyllable and political verse respectively). Later Byz. Anacreontics (which might better be called trochaic octosyllables) had a rather monotonous tendency to include a stress on odd-numbered syllables and a central caesura after the fourth syllable.

-M.J.
ANAGNOSTES (ἀναγνώστης), reader or lector, at first a layman, then a cleric in minor orders whose primary function was to read, from the ambo, the texts from the Epistles (and, until the 7th C., from the Old Testament) prescribed for the liturgy. Anagnostoi are classified by Byz. canonical commentators among the minor clergy (κλειρικοὶ), who received ordination through the sign of the cross (σφραγίς). In 535 Justinian I tried to limit the number of readers in the Great Church of Constantinople to 110 (nov. 3); in 612 Heralkeios set the limit at 160 (ed. J. Konidaris, FM 5 [1982] 68). The emperor Julian was an anagnostes before renouncing his Christian faith, as were the 9th-C. patriarchs John VII Grammatikos and Photios in the first stage of their clerical careers.

ANAGNOSTES, JOHN. See JOHN ANAGNOSTES.

ANAGRAPHUS (ἀναγραφῆς), fiscal official whose functions were hardly distinguishable from those of the epoptes. The earliest mention is on a seal of Leo, imperial baliator and anagrapheus of Opsikon (Zacos, Seals 1. no. 2095) of 750–850. The term is not used, however, in the taktika. Anagrapheus are mentioned in documents from 941 (Lavra 1, nos. 2 and 3) to at least 1189 (MM 4:320.7); Dölger thinks that they existed up to 1204. Their major function was the revision of the cadaster; thus an act of 1044 (?) states that anagrapheus can be sent by the emperor to confiscate the lands of those owners who did not pay demotion to the dioiketes (Pantel., no. 3.1–4). Their function presupposed the measurement of land (see Land Survey), and both Theophylaktos of Ohrid and Michael Choniates accuse anagrapheus of using false measures. Anagrapheus were usually attached to specific themes—Pelopponnesos (Zacos, Seals 1, no. 3220), Thrakieson (V. Laurent, EO 32 [1933] 36), Thessalonike, etc. (Dölger, infra 88).

There were also anagrapheus of special departments, such as George, anagrapheus of the Eastern dromos (Laurent, Corpus 2, no. 466), or the anagrapheus of the soldiers (kontaratoi) and of sailors (Kek. 268.4–5). The anagrapheus often combined his duties with those of the krites. After 1204 he was replaced by the apographeus.

Lit. Dölger, Beiträge 81f. Litavrin, Bolgarija i Vizantiya 301–05.

ANALOGY (ἀναλογία, lit. “proportion” or “resemblance”) was considered in antiquity, primarily by Aristotle, as a mode of predication using a term that is neither univocal nor equivocal but indicates a resemblance between parallel cases. In antiquity analogy served philosophical goals (primarily in mathematics and biology); the church fathers applied it to theology, esp. to discussing an essentially ineffable God. Origen (Comm. on Gospel of John 1:26.167—ed. E. Preußen [Leipzig 1903] 31), while defining Christ as “light of the world,” notes that spiritual concepts could have analogies to sensible objects. Gregory of Nyssa (PG 44:768A) states that the development of the soul presents a certain analogy to the stages of development of the human body through which is revealed order and sequence of the steps that lead man to the virtuous life. Greek theologians, however, did not elaborate a theory of analogy in the style of Thomas Aquinas. John of Damascus, who rarely mentions the word analogy (e.g., Contra Jacobitas 77.3—ed. Kotter, Schriften 4:134), broadly uses reasoning by analogy; he also attacks the weak analogies of his opponents, such as the Nestorians’ assertion that Christ was a human being because of his “dwelling” within a human being (i.e., the Virgin), just as he is called a Nazarene because of his “dwelling” in Nazareth, although he had been born in Bethlehem (Contra Nestor. 22.6–11—ed. Kotter, Schriften 4:271).

—A.K., M.W.T.

ANAMUR. See ANEMOURION.

ANANIAS OF ŠIRAK (Anania Širakac’i), the most notable early Armenian scholar of scientific subjects; he lived in the 7th C. (exact dates unknown). Ananias traveled to Theodosiopolis, Constantinople, and Trebizond, where he studied mathematics with Tychikos, a Greek from Pontus who had learned Armenian. Ananias wrote numerous works on cosmography, a Chronicle, and some theological works. The Geography (wrongly attributed to Moses Xorenac’i) has also been ascribed to him. Noteworthy is an introductory textbook of mathematics, with tables and a section of “Problems and Solutions,” the first of its kind in Armenian. The katholikos Anastasios (661–67) asked Ananias to establish a fixed calendar, but this was not put into effect (Grumel, Chronologie 143).
ANAPHORA (ἀναφορά, lit. “offering”), initially the eucharistic offering itself, but by the 6th C. the prayer accompanying that offering, the Eucharistic Prayer. Usually addressed to God the Father, the anaphora is the central element of the entire EUCARISTIA, the text that reveals its meaning: it recounts what Jesus did at the Last Supper (see LORD'S SUPPER) when he instituted the rite. Originally extemporaneous, fixed texts of the anaphora first appear in the 4th C. (A. Bouley, From Freedom to Formula [Washington, D.C., 1981] 217–53).

Eastern anaphoras show three structural types, Antiochene, Alexandrian, and East Syrian, distinguished from each other by the position of the intercessions (a later interpolation) relative to the anaphora's other, older elements. The Byz. anaphora of Sts. John Chrysostom, Basil, and James are all Antiochene in structure. They open with an introductory dialogue (R. Taft, OrChrP 49 [1983] 340–65; 52 [1986] 299–324; 54 [1988] 47–77; 55 [1989] 63–74) followed by a prayer of praise and thanksgiving to the Father for creation and salvation. This introduces the biblical TRISACTION, which is followed by a prayer recounting in greater or lesser detail the story of salvation in Jesus, esp. the account of the Last Supper, concluding with the chanting of Jesus’ Words of Institution over the bread and cup (“This is my body, this is my blood”). The anamnesis prayer follows, recalling Jesus’ command to repeat the rite (“Do this in memory of me,” Lk 22:19), his death, resurrection, ascension, and second coming. Then in the Epiclesis the Father is asked to send down the Holy Spirit upon the bread and wine to change them into Jesus’ body and blood for the salvation of those who receive them worthily in COMMUNION. This petition leads to others: the DIPTYCHS and the intercessions for the living and dead. The anaphora concludes with a DOXOLOGY, chanted aloud, to which the people respond with “The Great Amen.” The term anaphora may also refer to the PROSPHORA, whether consecrated or unconsecrated, or to the veil (AER).

ANAPOLUS. See BOSPOROS.

ANARGYROI (ἀνάργυροι, lit. “without money”), epithet of healing SAINTS who, unlike secular physicians, performed cures without taking payment. The wondrous HEALING of the anargyroi was favorably contrasted with the activity of pagan deities such as Asklepios and Isis and with ordinary PHYSICIANS (J. Duffy, DOP 38 [1984] 24f). The principal anargyroi were Kosmas and Damianos, but the epithet was applied also to Kyros and John, Sampson, and Panteleemon. From the 10th C. a similar term was used to designate a healing saint or his tomb ("the free hospital," amishon iatreion), for example, Loukas the Younger and Athanasios of Athos.

Representation in Art. The anargyroi, generally depicted as young or middle-aged, are clad soberly in tunics and phelonio. They carry attributes of their profession: little medicine chests (sometimes oblong, sometimes cylindrical like a pyxis), narrow boxes of medical instruments, phials, little spoons, spatulas, or pickers (see Physician's Box).

ANASARTHA (Ἀνασάρθα, now Khanzir in Syria) was made a polis of Syria I in 528 by Justinian I, who renamed it Theodoria after his empress (Malal. 444.20–22). Anasartha was situated on the desert LIMES. Two martyrta were built there in the 5th–6th C., apparently by Arab wives of Byz. generals (Victor and Silvanus). City walls were constructed in 594/5, in the name of Emp. Mauric, state officials, and the local bishop, perhaps by Isidore the Younger, a mechanikos who had earlier built the walls at Chalkis and buildings at Zenobia. The walls of Anasartha may have been extended in 604 by a local (Arab?) Gregory
Abimenes in the name of Emp. Phokas and his empress Leontia.

ANASTASIA, APOCALYPSE OF, a compilation that describes the fate of sinners whom the pious nun Anastasia chanced to see during her visionary journey to Hell. The text, dated by Speranskij (infra) in the 10th or 11th C. and by Beck (Kirche 653) in the 11th or 12th C., survives in late Greek MSS (of the 15th–16th C.) and in two Slavic versions. Its content is banal, with an emphasis on the moral decline of mankind, and its cosmogony is traditional, resembling that of the Book of Enoch. The author, however, mentions some historical personages and such events as the reconciliation of Emp. Nikephoros II Phokas with his murderer John I Tzimiskes. Anastasia also reports meeting the protospatharios Peter of the kastron of Corinth, who is replaced in the Slavic version by Paul Samonas.

ED. Apocalypsis Anastasiae, ed. R. Homburg (Leipzig 1903).

ANASTASIOPOLIS. See DARA.

ANASTASIOS (Ἀναστάσιος), patriarch of Constantinople (22 Jan. 730–Jan. 754), probably of Syrian origin (Gero, Leo III 29, n. 17). Anastasios was originally a disciple and synkellos of Patr. Germanos I. He changed sides, however, and supported the Iconoclastic policy of Leo III. After Germanos’s deposition, Leo appointed Anastasios patriarch. He compiled and signed a document (libellus) against the veneration of icons and sent synodika to Pope Gregory II defending the Iconoclastic position; the papal reaction was to excommunicate the patriarch. Nothing is known of any further activity of Anastasios during the reign of Leo III; after the emperor’s death he supported Artabasdos and denounced Constantine V, alleging in a public statement that the emperor had confessed to the patriarch that Christ had been an ordinary man and not the Son of God (Theoph.

415.24–29). After his victory, Constantine ordered that Anastasios be flogged and ignominiously paraded naked on a donkey in the Hippodrome; nevertheless he retained him on the patriarchal throne. When Anastasios died, Constantine kept the see vacant for several months before appointing his successor, the Iconoclast Constantine II (754–66); both actions contributed to the declining reputation of the patriarchate.

LIT. RegPatr, fasc. 2, nos. 343–44. R. Janin, DHGE 2 (1914) 1465f.

ANASTASIOS I, emperor (from 11 Apr. 491); born Dyrrachion ca.430, died Constantinople 8 or 10 July 518. He was nicknamed Dikoros (“with two pupils”) because his eyes were of different colors. His flatterers called Anastasios a descendant of Pompey, a later legend (in George Hamartolos) made him a son of a priest; his mother is described as a Manichaean. Theophanes the Confessor (Theoph. 149.27–150.1) calls him a supporter of the Manichees and rebukes him for patronizing a painter of this persuasion. He was famous for his Christian devotion (of Monophysite type). Circa 488 he was proposed as successor to Peter the Fuller as bishop of Antioch. Even though he held the relatively unimportant post of decurion of the silentarii, in 491 Zeno’s widow Ariadne selected him as emperor against the wishes of Patr. Euphemios (490–96) and of Zeno, who had wanted his brother Longinos to succeed him. Anastasios married Ariadne on 20 May 491 and banished Longinos to the Thebaid to die of starvation.

By 497 Anastasios quelled the independence of the Isaurian faction both in Constantinople and in Isauria. He reformed the fiscal administration by shifting the main tax burden from the urban centers (abolition of the Chrysargyron) to rural areas and transferred tax collection from the curiales to state-appointed vindices (E. Chrysos, Byzantina 3 [1971] 93–102). Anastasios created the comitia sacri patrimonii, transmitting a section of state property to the emperor’s private estate. In 494 he reformed the bronze coinage, issuing the large follis and several subdivisions. His frugal administration resulted in substantial economies so that at the time of his death the treasury contained 320,000 pounds of gold, despite energetic build-
ing activity in various frontier zones (I. Barnea, *Dacia* n.s. 4 [1960] 363–74).

Anastasios met with political resistance, esp. dangerous during the revolt of Vitalian, as well as religious opposition from the Orthodox, who accused him of Monophysite tendencies. He had to deal with severe tensions on the frontiers. After a period of relative calm on the Danube, the Bulgars began to penetrate into the empire. To check them, Anastasios ordered construction of the Long Wall in Thrace in ca. 503/4 according to B. Croke (*GRBS* 23 [1982] 73f). His relations with Theodoric the Great were hostile, and the popes condemned the Akarian Schism and tried to establish their jurisdiction over the northern Balkans. The Persians attacked Mesopotamia and temporarily seized Amida. Anastasios had no children, but his nephews and their descendants retained an influential position for at least five generations (Al. Cameron, *GRBS* 19 [1978] 259–76). Anastasios is sometimes held to be the emperor portrayed on the Barberini ivory.

---

**ANASTASIOS I**, patriarch of Antioch (559–70; 25 March 593–end of 598). Scholars (Sakkos, Weiss) now have rejected his identification with Anastasios of Sinai. Before his election as patriarch he had been *apokrissarios* of Alexandria to the see of Antioch. For his stiff opposition to the Aphthartodocetism of Justinian I, he was banished, probably to Constantinople, under Justin II (570). During this period he was befriended by the future Pope Gregory I, with whom he was later to correspond. His literary output is primarily dogmatic and polemic. Although the authenticity of some of his homilies is debatable, the address he delivered on his return to Antioch is genuine (25 March 593). Five of his treatises on the Trinity and the Incarnation exist in Latin translation. As a Neo-Chalcedonian, Anastasios used a strict Orthodox vocabulary but in some points (e.g., in the emphasis on the unity of divine and human natures in the Savior) he came close to moderate Monophysites. John of Damascus used him, and during the Iconoclast disputes both parties referred to Anastasios as an authority.

---

**ANASTASIOS OF SINAI**, theologian and saint; died after 700; feastday 21 Apr. S. Sakkos identified him with Anastasios II, patriarch of Antioch, murdered by the local Jews ca. 609. However, the brief note in the Synaxarion of Constanti

---

**ANASTASIOS II**, emperor (713–15): baptismal name Artemios; died Constantinople 1 June 719. Following the deposition of Philippikos by officers of the Opsikion theme, the protasekretis Artemios was crowned as Anastasios on 4 June 713. He reversed his predecessor’s support of Monothelitism by eventually replacing Patr. John VI (712–15) with Germanos I and by revalidating the Third Council of Constantinople. The raid of Maslama into Galatia in 714 prompted Anastasios to send envoys to Vida to Caliph Walid, but reports of large-scale campaign preparations in Syria spurred him to prepare Constantinople for an assault. He appointed competent thomoclan officers, including the future Leo III; ordered individuals in Constantinople to be able to support themselves for three years or else to leave the city; rebuilt the fleet; restored the land and sea walls; erected siege weapons; and stored grain. He also dispatched a fleet in 715 to destroy the Arabs’ timber supply in Phoenicia, but the expedition broke up in Rhodes and the Opsikion troops revolted in favor of Theodosios III. After a six-month struggle, Anastasios abdicated, became a monk, and was exiled to Thessalonike. In 719, at the instigation of the magistros Niketas Xylinites, he marched on Constantinople with help from Tervel, but eventually the Bulgars surrendered him to Leo and he was beheaded. His wife Irene buried him in the Church of the Holy Apostles, Constantinople.
and works which profit the soul." Anastasios participated in anti-Monophysite discussions in Alexandria between 635 and 640 but was still active ca.700, although he was a monk at the monastery of St. Catherine on Sinai.

His major work is the Guidebook (Hodegos), completed and supplied with the author's scholia sometime between 686 and 689. It is a polemic against heresies, esp. Monophysitism and Monothelitism. Anastasios also wrote sermons, including two that dealt with the creation of man: man was created from two natures, mortal and immortal, and thus was a paradigm of God's incarnation or Christ's synthesis. The distinction between his genuine works and spuria is not always clear. An erotapokriseis and a florilegium that had an anti-Monothelite tendency are ascribed in MSS to a certain Anastasios, who may be identical with the monk of Sinai. The hexaemeron is evidently not by Anastasios, although the conclusion of J. Baggarly (The Conjugates Christ-Church in the Hexaemeron of Pseudo-Anastasius of Sinai [Rome 1974]) that the author cribbed from Psellus and lived in the 11th-12th C. does not prove valid. In the Hexaemeron pseudo-Anastasios interpreted the six-day creation legend allegorically as a prefiguration of the relations between Christ and the Church. Some works of Anastasios are preserved in Oriental translations.

A.W. C.

ANASTASIS (Ἀνάστασις) or RESURRECTION is the Easter image of the Orthodox church. Usually believed to be based on apocryphal texts such as the Gospel of Nicodemus (but see Kartsonis, infra), it shows Christ bursting the gates of Hell and releasing those said to have believed in him before his Incarnation. First encountered in the 8th C., the Anastasis had assumed its classic form by the 11th: Christ strides over the shattered bolts of Hell's gates, sometimes treading upon the shackled personification of Hades; flanking Christ are sarcophagi from which emerge figures including Adam, Eve, and sometimes Seth on one side and David, Solomon, and John the Baptist on the other. Christ strides toward Adam, reaching to release him (Daphni), or upward, dragging Adam behind him (Hosios Loukas). A rare variant shows Christ standing centrally, exposing his wounds. In a Palaiologan version he pulls Adam with his right hand and Eve with his left (Chora). The image of the Anastasis is integral to Great Feast cycles in all media; accompanying the Easter lection (Jn 1:1-18), it opens many lectionaries and precedes John's Gospel in many Gospel books; it illuminates the Easter homily of Gregory of Nazianzos and hymns of resurrection; and it occupies the apse of certain late funerary chapels (Chora) and Crusader churches (see "Holy Sepulchre" under Jerusalem).

A.W. C.

ANASTASIOU BIBLIOTHECARIUS, papal official, Latin writer, and translator; born Rome ca.800 or before 817 (H. Wolter, LMA 1:573), died ca.879. Anastasius was 9th-C. Europe's leading expert on Byz. His rocky career saw him as cardinal priest of St. Marcellus in 847/8, a fugitive around Aquileia in 848-53, excommunicated and reduced to lay status by Pope Leo IV, and unsuccessful antipope in 855. Subsequently rehabilitated, Anastasius became abbot of S. Maria in Trastevere and, from 861 or 862, served as private secretary to Pope Nicholas I, regained the priesthood and became bibliotecarius Romanae Ecclesiae (head of the archive) to Hadrian II. From late 861, he shaped policy and authored diplomatic correspondence with Constantinople, particularly concerning Photios (N. Erth, Archiv für Urgudenforschungen 15 [1938] 82-121). Anastasius knew Constantine the Philosopher and Methodios and backed their endeavors to evangelize the Slavs (F. Grivec, Konstantin und Method: Lehrer der Slaven [Wiesbaden 1960] 78-82). In 868, Anastasius was accused of complicity in his relatives' attack on Hadrian's wife and daughter but was acquitted.

The following year, he traveled to Constantinople as Louis II's envoy to Basil I and probably negotiated the projected marriage alliance between the two empires. In the same capacity, he participated in the Constantinople council of 869-70 (see under Constantine, Councils of).
earning Basil’s irritation and papal satisfaction through a murky affair of documents stolen from the pope’s ambassadors. Between 2 Feb. and 13 Aug. 871, Anastasius probably wrote the letter of Louis II to Basil I preserved in the CHRONICON SALERNITANUM. After the accession of Pope John VIII in Dec. 872, his influence waned (P. Devos, Byzantion 32 [1962] 97–115) and he devoted himself to writing.

In addition to the many letters composed in his lords’ names, Anastasius probably wrote sections of the biography of Nicholas I in the Liber pontificalis—its views on Byz. are his—and influenced the author of the Life of Hadrian II. His unparalleled, if imperfect, knowledge of Greek allowed him to translate into Latin numerous works of Byz. literature desired in the West. A dozen such hagiographical texts, dedicated to popes, churchmen, and the Frankish ruler include a sermon by Theodore of Studios, Constantine the Philosopher’s lost writings on St. Kliment (the surviving preface from 877 or 878 sheds light on Constantine’s earlier career—P. Devos, P. Meyvaert, in Cyrillo-Methodiana [Cologne 1964] 65), as well as a Passion of Peter of Alexandria. These works seem to betray a fascination with the East combined with fear of Byz. heresy and political oppression (C. Leonardi in Hagiographie—cultures et sociétés [Paris 1981] 471–89).

Anastasius’s translations of theological works included Maximos the Confessor, a revision of John Scot Eriugena’s translations of pseudo-Dionysios the Areopagite, and Collectanea of documents from the crisis over Monotheletism. The recent relations of the papacy with Constantinople explain Anastasius’s improved translation of the acts of the Second Council of Nicaea, the version of and commentary on the 869–70 council of Constantinople (C. Leonardi, StMed 3 8 [1967] 59–192), and a Chronographia tripartita based in large part on Theophanes the Confessor, the nearly slavish translation of which (D. Tabachovitz, BZ 38 [1938] 16–22) reflects older and more reliable MSS than the revised Greek originals that have survived.

-M.McC.

ANASTYLOSIS. See DEPOSITION FROM THE CROSS.

ANATHHEMA (ἀνάθημα, “that which is set aside, accursed”), the highest form of ecclesiastical censure directed at obstinate or unrepentant heretics, normally found at the conclusion of conciliar decrees and canons. The earliest recorded usage of the term is at the Council of Elvira, ca.305 (canon 52). The New Testament formula εἰ τις... ἀνάθημα ἔστω (Gal 1:9), met frequently in conciliar documents, was first employed by the local council of Gangra. The term supposed exclusion from the church’s fellowship and, as such, does not appear to have been clearly distinguishable from excommunication. Nevertheless, anathema, in contrast with the disciplinary procedure of excommunication, was essentially a more solemn pronouncement of condemnation. It was thus not a precise ecclesiastical punishment as much as a curse directed almost exclusively against false teaching. From the 7th C. onward the term is clearly distinguishable from excommunication in conciliar decrees (cf. Nicaea II, canon 1). According to Balsamon the church cannot exercise the right of total or eternal anathema by which the transgressor is deprived of all hope of salvation (PG 137:1237A). The word, which was used broadly as a malediction by individuals (e.g., in purchase deeds, MM 6:159.26–27, 161.30–31), was often coupled with the curse (δρακ) of the 318 Fathers of Nicaea I. The Synodikon of Orthodoxy, first drafted in the early 10th C., with additions made up to the 15th C., contains numerous anathemas of heretics.

ANATOLIA. See ASIA MINOR.

ANATOLIKON (Ἀνατολικόν), one of the original themes of Asia Minor, attested by 669. Stretching from the Aegean to Lykaonia and Isauria, it ranked first among all the themes. Its troops rebelled against Constantine IV in 681,
and in 714 its *strategos* successfully revolted to become emperor Leo III. Conscious of the power of the general, Leo apparently detached the western districts to form the Thrakesion theme. Anatolikon supported Constantine V in 742 against Artabasdos; in 803 its *strategos* Bardanes Toukios led a revolt. Early in the 9th C. its eastern districts were removed to form Cappadocia; under Theophilos, Seleukeia became a separate theme; and Leo VI added the region west of the Salt Lake to Cappadocia. The capital of Anatolikon was Amorion until at least 898. In the mid-9th C. Anatolikon contained 34 forts; its *strategos*, who bore the title *patrikios*, commanded 15,000 troops and drew a salary of 40 pounds of gold. Anatolikon last appears when its *strategos* Nikephoros Botaneiates was proclaimed emperor in 1077.

**LIT.** A. Pertusi in *De them.* 114–17. TIB 4:63–66. —C.F.

**ANATOLIOS** (Ἀνατόλιος), member of a famous family of jurists, *antecessor*, professor at the law school of Berytos, and one of the eight addressees of the Constitutio *Omnem* of Justinian I from the year 533. Anatolios was appointed by Justinian to the commission for the compilation of the Digest. He is probably identical with the jurist Anatolios, named specifically in some scholia to the *Basilika*, who wrote Greek paraphrases to constitutions of the *Codex Justinianus*. According to the generally accepted view of K.E. Zachariassen von Lingenthal (*Kritische Jahrbücher für Deutsche Rechtswissenschaft* 8 [1844] 803f), the Greek versions of the *Cod. Just.* VIII 4–56 that were admitted into the text of the *Basilika* originate in a paraphrase of the *Codex* by Anatolios. Since Ferrini’s edition of approximately 200 anonymous paraphrases of constitutions of the *Codex* (two of which are inscribed with “Anatolios” in the scholia to the *Basilika*), these have been regarded as extracts from this paraphrase.

**LIT.** Zachariassen, *Kleine Schriften* 2:326–33. —A.S.

**ANAZARBOS** (Ἀναζαρβός), now Anavarza), a city in the eastern plain of Cilicia on a tributary of the Pyramos. The civil and ecclesiastical metropolis of Cilicia II, Anazarbos was destroyed by earthquakes and rebuilt by Justin I, then Justinian I, and assumed their names in turn. Occupied by the Arabs in the mid-7th C., its exposed frontier location led to depopulation until it was restored in 796. After many Byz. attempts, Nikephoros II Phokas took Anazarbos in 962. It became the seat of a *strategos*, but fell to the Armenians in 1085 and to the Crusaders in 1097. Retaken by John II Komnenos in 1137 and by Manuel I in 1158, it was finally lost again to the Armenians ca. 1174. The site contains two basilicas of the 6th C., a cruciform church of uncertain date, and extensive remains of fortifications, some of them Byz.

**ANCHIALOS** (Ἄνχιαλος), Thracian city on the Black Sea coast; in the late Roman period it was in the province of Haemimontus. According to Ammianus Marcellinus (Amm.Marc. 27.4.12), it was a *civitas magna*. Prokopios (*Buildings* 3.7.18) identified its inhabitants as Thracians. Occupied by Avars at the end of the 6th C., Anchialos was later contested between Bulgarians and Byz.: in 763 Constantine V defeated the Bulgarians in a battle on the “field of Anchialos” (*Theoph.* 433.5). Empress Irene ordered the fortification of Anchialos, but under Michael I the Christian population left the town. In 917 a Byz. army was defeated near Anchialos in the battle at Achelous, and the town was annexed to Bulgaria. Anchialos was in Bulgarian hands in the 13th and 14th C., although Michael VIII tried to regain it by marrying his relative Maria to the Bulgarian tsar Constantine Tich. It was under Byz. control ca. 1423, but soon thereafter was conquered by the Turks.

According to legend, Anchialos was a Christian city as early as the 1st C.; Eusebios mentions its bishop Sotas (ca. 170). From the 7th C. onward, Anchialos was an autocephalous archbishopric under the direct jurisdiction of Constantinople.

**ANCHORITE.** See HERMIT.
ANCIENT OF DAYS. See Christ: Types of Christ.

ANCONA (Ἀγκών), Adriatic port in central Italy and an important Byz. stronghold during the Gothic war of the 6th C. In the mid-12th C. Manuel I used the commune of Ancona, which recognized him as overlord, as a Byz. base to fight the Norman kingdom, the Venetian predominance in the Adriatic, and the growing influence of the Western Empire in Italy. With the help of Byz. money and military advisers Ancona resisted the German assaults in 1158, 1167, and 1173. From the second half of the 12th C. Anconitan merchants are known to have traded in Dalmatia and in the eastern Mediterranean. Their colony in Constantinople, with its Church of St. Stephen (attested from 1199), was headed by a consul. According to a chrysobull of Andronikos II (1088), Anconitan ships paid 2 percent tax on goods entering or leaving the port of Constantinople (Reg 4, no. 2315), the same percentage as that paid by Venetian and Genoese ships. The travels of CYRIACUS OF ANCONA in the eastern Mediterranean resulted in the first important archaeological information about this region. In 1453 the Anconitan consul helped to defend Constantinople’s walls.

ANDRAVIDA (Ἀνδραβίδα, Fr. Andreville, origin of the name disputed), city in Elis in the northwestern Peloponnesos; primary residence of the prince of ACHAIA. According to the CHRONICLE OF THE MOREA (vv. 1426–29, ed. Schmitt 98f), Andraida was already a town before the Frankish conquest, but was not fortified. GEOFFREY I VILLEHARDOUIN established himself in Andraida almost immediately after his arrival. Its location in the rich Elean plain allowed it to be well supplied for the great gatherings the Frankish chivalry so enjoyed, while its proximity to the sea, through the port at Clarenza, permitted easy contact with the West; never fortified, it was protected by the castle of Chlemoutsi 5 km to the east. The city witnessed great assemblies of troops and courtiers, including the marriage of Hugues de Brienne and Isabelle de la Roche in 1277. Geoffrey I transferred the bishopric of Olena (Notitiae CP 21.134) to Andraida and it kept that title, although the bishop was a Frank.

No monuments from before 1204 are known, but three churches of the Frankish period can be identified in the sources: St. Sophia, St. Stephen, and St. James; this last possessed a hospital and was the burial place of the Villehardouins. The sanctuary and side chapels of the Dominican Church of St. Sophia survive: it was an enormous cathedral, more than 41 m long and nearly 19 m wide. It can be paralleled by many late 13th- and early 14th-C. Gothic churches in France and Italy. Its plan resembles that of St. Paraskeve in Chalkis. Inside the church was the tombstone of the princess Agnes (died 1286), with what is probably the coat of arms of the Villehardouin family (A. Bon, MonPiot 49 [1957] 129–39).

ANDREJ OF BOGOLJUBOVO, prince of Suzdal’; born ca. 1111, died 29 June 1174. Intending, like his father JURIJ DOLGORUKIJ, to rule over all of Rus’, Andrej did not aim to be prince of Kiev, which his army sacked in 1169. He developed his capital Vladimir on the Klazma River after Kiev, Byz., and Romanesque models and maintained a country residence at Bogoljubovo, after which he was nicknamed. Andrej tried to erect a second metropolitan see at Vladimir, but the Byz. patriarch LOUKAS CHRYSOBERGES rejected this project in a letter (ca. 1165–1168; wrongly dated to ca. 1161 by Grumel in RegPatr, fasc. 3, no. 1052). Andrej promoted the cult of the THEOTOKOS as his and his principality’s patroness (see VIRGIN OF VLADIMIR) and the veneration as a saint of LEONTIOS, a Greek and the first bishop of Rostov, who was martyred by local pagans in the 1070s. Andrej participated in church discussions concerning fasting on holy days, a topic simultaneously debated in Constantinople. His relations with Byz. were not as close as those of his father because in Constantinople relations with the Kievan ruler
took priority. Andrej was ruthless toward both his family and his close associates, a policy that precipitated a plot which ended his days.

—An.P.

ANDREW (Anastas), apostle and saint; feastday 30 Nov. He was the brother of Peter and, like him, a fisherman. The early legend, preserved in EUSEBIOS OF CAESAREA, describes only his mission to Scythia; eventually he was said to have visited Thrace, and GREGORY OF TOURS states in passing that Andrew was in Constantinople as well. Not until the end of the 7th C., however, did the idea appear that Andrew ordained Stachys, the first (legendary) bishop of Constantinople. Photios (Bibl., cod.179) mentions "the so-called Acts of the twelve apostles, primarily Andrew" that were used by the Manichaeans Agapios, but we do not know the contents of the Manichaean legend.

The story of Andrew was developed by EPIPHANIOS OF KALLISTRATOS in Constantinople in the early 9th C. (PG 120:215—60); the author’s identity with EPHESIANS HAGIOPOLITITES has been suggested but remains questionable. Euphemiou was followed by various writers, including NIKETAS DAVID PAPHLAGON. Legend called Andrew the protokletos (first of the apostles) and made wordplays on his name (which means "courageous"); he is presented as a tireless missionary who traveled to Paphlagonia, the Caucasus, and the northern shores of the Black Sea. However, the notion of Andrew as the founder of the see of Constantinople did not become popular in Byz. and was invoked infrequently (e.g., by NICOSIOS DOXOPATRES in 1143). The cult of Andrew seems to have been more intense at Patras, with which legend associated his martyrdom and death. Constantine VII (De adm. imp., 49.26) ascribes to Andrew’s intervention the victory over the Slavs, who besieged Patras between 802 and 806.

Representation in Art. From the 6th C. onward, Andrew’s disheveled white hair and beard distinguish his portraits. He is often represented in the FEEDING OF THE MULTITUDE and with Peter in the scene of their calling. This usually follows Matthew 4:1—18 (Sant’Apollinare Nuovo, Ravenna; Tokali Kilise, Goreme) and only rarely John 1:37—42, in which Andrew is the central figure, shown introducing Peter to Christ as in an 11th-C. Gospel book in Vienna (ONB, theol. gr. 154, fol. 223r). Of the apocryphal events from Andrew’s life, only his crucifixion on a cross or tree is illustrated: Belli Kilise, Soğanli; bronze doors of San Paolo fuori le Mura in Rome, 1070. He is shown preaching in the marginal Psalters (Ps 19) and baptizing in the Paris Gregory (fol. 426v). He appears among other saints on 10th- and 11th-C. ivories. Though both the Liber pontificalis (S.V. Gregory III) and the Letter of the Three Patriarchs (p.351) mention panels portraying him, the earliest surviving single-figure icons of Andrew are from the 14th C. (Nicosia, Icon Museum; Venice, Museo Correr).

—J.I., A.K., A.W.C.

ANDREW, archbishop of Caesarea (563—614). Andrew composed the second oldest commentary on the Apocalypse after that of Oikoumenios, with whom he was often in principled disagreement. His exegesis is esp. valuable as a source for the textual tradition of the Apocalypse. Arethas of Caesarea freely exploited it in the 9th C., and its influence spread further afield through translations into Armenian, Georgian, and Slavonic. Fragments also remain of a work of moral comfort entitled Therapeutikon; his commentary on Daniel is lost.

ANDREW OF CRETE, poet, ecclesiastical orator, and saint; born Damascus ca.660, died Lesbos 4 July 740. tonsured at an early age at the mon-
Astery of the Holy Sepulchre in Jerusalem, Andrew became a notary of the Great Basilica there. Contrary to legend, he did not participate in the Council of Constantinople of 680. He was, however, sent on a mission to Constantinople in 685 and administered an orphanage and a poorhouse there. Between 692 and 719 he was elected metropolitan of Crete; the seal of Andrew, prōedros of Crete (Laurent, Corpus 5.1, no.619), is probably his. Andrew’s homilies allude to the invasions of the Scythians (Bulgarians) and of “the tribe of the maidservant Hagar” (Arabs) as well as to Leo III’s persecution of the Jews.

Andrew is often considered the creator of the new genre of the kanon that replaced the kontakion. His Great Kanon is enormously long, with 250 strophes. As a theologian Andrew was indifferent to monothelitism and developed the idea that the Virgin, although born of a human marriage, was in a sense the daughter of God (M. Jugie, EO 13 [1910] 129–35). Some works ascribed to Andrew in MSS are not genuine, for example the panegyric of James, the brother of the Lord (ed. J. Noret, H. Gaspart [Toronto 1978]). Andrew enjoyed considerable renown. His vita, written (9th C.?) by Patr. Niketas (to be distinguished from Niketas Magistros), was later re-worked several times. After 1204 a certain Akakios Sabaites produced a commentary on the Great Kanon that mentioned Basil II’s victory over the Bulgarians, the foundation of Mosynopolis, and the news of the Latin conquest of Constantinople (M. Richard, EEBS 34 [1965] 304–11).

Beck, Kirche 500–02.

ANDREW THE FOOL (ὁ σαλός), a “created” saint; feastday 28 May. He was supposedly a contemporary of the 5th-C. emperor Leo I, although his biographer presented him as an imitator of Symeon of Emesa, the holy fool who lived in the 6th C. A certain Nikephoros, priest of Hagia Sophia, wrote Andrew’s Life; its date remains disputed. According to C. Mango (RSBS 2 [1982] 309), the most probable date is between 674 and 695; J. Wortley (Byzantium 43 [1973] 248) ascribes to the vita a terminus post quem of 920, though he

dates some parts of it to the early 880s; L. Rydén (DOP 32 [1978] 129–55) prefers a date of ca.950–59. The earliest MS is a quire in Munich (Bayer. Staatsbibl. gr. 443) in a 10th-C. uncial script. The vita was translated into Georgian and Slavonic.

The Life of Andrew presents him as Scythian and the slave of the protospatharios Theognostos; Andrew acquired fluent Greek surprisingly quickly and became his master’s notary, but after a dream he turned to a spiritual life. He rejected all social conventions, lived in the streets, drank from puddles, slept on a dung heap, and not only endured hardships supernaturally but knew hidden things and foresees the future. His behavior, however, is less extreme than that described in the Life of Symeon. Andrew’s endurance is emphasized: he was beaten up by visitors to a tavern, a heavy cart ran over him, he survived bad storms. The Life introduces a certain Epiphanius, who was handsome, rich, socially conventional, and part of the establishment; he was nevertheless Andrew’s beloved pupil, whose election as “the bishop of the imperial city” Andrew predicted. The Life is consistently Constantinopolitan, its action unfolding on the streets of the capital. Its several visions and apocalypses include the prophecy that Egypt will pay her tribute, pakta (L. Rydén, DOP 28 [1974] 202.32–40). The Life describes Epiphanius’s vision of Hades: a murky area full of prisons and populated neither by devilish executioners nor tortured sinners but rather by animals that symbolize the souls of sinners.

Representation in Art. One of the very rare images of this saint is a late 12th-C. fresco in the cell in the Enkleistra of St. Neophytos on Cyprus. The rather emaciated saint wears a fleecy, short-sleeved, belted tunic and carries a little sprig of flowers (C. Mango, E. Hawkins, DOP 20 [1966] fig.92).

SOURCE. PG 111:627–888.

A.K., N.P.S.

ANDREW THE SCYTHIAN, late 9th-C. general of Basil I who distinguished himself in wars against Tarsos. He received the title of patrēkios and was appointed domestikos ton scholon. Andrew was re-
portedly (*TheophCont* 234–36) angered by a blasphemous letter sent him by the emir of Tarsos and led an expedition against this city; at the Podandos River he defeated an Arab army and took prisoner its commander, ʿAbd Allāh ibn Rashid (878). His enemies charged him with pusillanimity because, after his victory at Podandos, Andrew retreated without proceeding to Tarsos; according to another version (*TheophCont* 847.10–12), *Santabarenos* accused Andrew of supporting Leo against his father, Basil I. *Kesta Styppeiotes* replaced Andrew as *domestikos* (ca.883?), but Leo VI restored him to his previous position and possibly granted him the title of *magistros*.

**ANDRONIKOS I KOMNENOS**, emperor (1183–85); born ca.1118–20, died Constantinople Sept. 1185. Son of Isaac the brother of John II. Andronikos was nurtured with the future Manuel I, who remained personally partial to him. Andronikos, however, renewed his father's hostility to the ruling Komnenoi. Reconciled with Manuel in 1180, after many adventures, he became governor of Pontos. During the reign of Alexios II, he stirred opposition to Maria of Antioch. In Apr. 1182, Andronikos overthrew her, allowed a massacre of citizens of Pisa and Genoa in Constantinople, and became regent for Alexios II. He murdered Maria Komnene, her husband, and Maria of Antioch. His coronation as co-emperor (Sept. 1183) led to Alexios II's death.

Internally, Andronikos attempted reforms: provincial governors received adequate salaries, sale of offices ceased, corruption was prosecuted, pillaging of wrecked ships prohibited, and taxation moderated. He used the bureaucracy against the aristocracy; he harshly persecuted nobles, esp. rival Komnenoi (Kazhdan, *Gosp.klass.* 263–65); however, some nobles (including Constantine Doukas and Andronikos Doukas) were among his supporters. Many aristocrats (notably Alexios Komnenos the *pinnkernes*) fled to neighboring rulers, stirring opposition to Andronikos.

Externally, he had few successes. Beîla III occupied Niš (see Naissus) and Sofia (see Serdica) in 1182–83, then withdrew (1184). To gain naval support, Andronikos turned to Venice. The reappearance of Venetians in Constantinople alienated the populace. Cyprus fell to Isaac Komnenos. After the forces of William II took Thessalonike, the multitude in Constantinople were terrified; the populace seized an occasion to de-throne Andronikos (12 Sept. 1185). Captured after attempted flight, he was cruelly put to death.

Andronikos's talents and personality earned the people's admiration, but his violence and lasciviousness marred his achievements. His first wife was a Byz. aristocrat, his second *Agnes of France*; his favorite mistress was Theodora Komnene, widow of Baldwin III of Jerusalem. Representations of Andronikos are rare, though he is distinguished on his coins (Grierson, *Byz. Coins*, figs. 1109–12) by his long forked beard, remarked upon by Choniates.

**ANDRONIKOS II PALAIOLOS**, emperor (1282–1328); born 1259 or 1260, died Constantinople 13 Feb. 1332. His 46-year reign, the third longest in the history of the empire, was plagued by religious dissension, Ottoman advances, civil war, and financial problems; at the same time, arts and letters flourished, and Andronikos presided over a court that included such distinguished intellectuals as Theodore Metochites and Nikephoros Choumnos. During his reign there was considerable construction activity in the capital, esp. the restoration of churches and monasteries.

Co-emperor from 1272, Andronikos repudiated the unpopular Unionist policies of his father, Michael VIII, immediately upon the latter's death in 1282; he was unable, however, to resolve the Arsenite schism until 1310. He was staunchly Orthodox and pious, even superstitious, and very much under the influence of Patr. Athanasios I.

The financial difficulties of the empire during his reign are reflected in the continuing depreciation of the *Hyperpyron*. The resulting rise in prices and the emperor's use of a "scorched-earth policy" in Thrace in an attempt to stop the Catalans (A. Laïou, *Byzantion* 37 [1967] 91–113) led to widespread famine. Andronikos tried to increase revenues by raising taxes, adding a new tax on agricultural produce, and reducing tax exemptions. One of his most serious mistakes was
the dismantling of the fleet in 1285, which proved to be a false economy (Laiou, *infra* 74–76, 114f).

At the beginning of his reign Andronikos had to confront the growing threat of the Serbs on his northern frontier, under the leadership of Stefan Uroš II Milutin. After the Serbs took considerable Byz. territory in Macedonia, Andronikos decided to negotiate a peace treaty with the Serbs. As a pledge of alliance he married his five-year-old daughter Simonis to Milutin in 1298. The efforts of Andronikos to save Asia Minor from the Turks, such as hiring the mercenary Catalan Grand Company, proved fruitless; during his reign, the Ottomans seized much of Bithynia, including Prousa, which fell in 1326. The final years of the reign of Andronikos, 1321–28, were troubled by civil war with his grandson, the future Andronikos III. He was deposed on 24 May 1328 and died as the monk Antonios four years later.

Andronikos was married twice. His first wife, Anna, daughter of Stephen V of Hungary, whom he married in 1279, bore him Michael IX; his second wife was Irene-Yolanda of Montferrat.

Papadopoulos, *Genealogie*, no. 58.

–A.M.T.

ANDRONIKOS IV PALAILOGOS, emperor (1376–79); born Constantinople 11 Apr. 1348, died Selymbria 25 or 28 June 1385. Although the eldest son and heir of John V Palaiologos and his regent in 1366 and 1369–71, Andronikos was on uneasy terms with his father and twice engaged in open rebellion against him. The tension between the two men first surfaced in 1370, when Andronikos refused to help his father who was stranded penniless in Venice. In 1373, Andronikos joined forces with SAVCI BEG, son of Murad I, in conspiracy against their respective fathers. After the failure of the attempted rebellion, Andronikos was imprisoned and replaced as heir by his brother Manuel (II). He was also subjected to blinding, but apparently suffered the loss of only one eye.

In 1376, Andronikos escaped from prison. With Genoese and Ottoman support, he seized Constantinople and the imperial power. He was formally crowned on 18 Oct. 1377. His brief reign was marked by dependence on the Genoese and upon the Turks, to whom he ceded the crucial fortress of Gallipoli (Kallipolis). In 1379 John V overthrew his son and regained the throne. In a pact of 1381 he once more recognized Andronikos as his heir and granted him the appanage of Selymbria. In 1385, however, Andronikos again rebelled, unsuccessfully, against his father; he died shortly thereafter.

ANDRONIKOS V PALAILOGOS, a shadowy child emperor whose existence has only recently been acknowledged by Byzantinists; born ca.1400, died 1407? The title of a monody on the untimely death of a seven-year-old emperor (baseileus) specifically names the child Andronikos and describes him as the son of John VII. He was thus apparently the son of John and his wife Irene Gattilusio (subsequently the nun Eugenia), born while his father was regent in Constantinople. Andronikos must have predeceased his father, probably in 1407, since John VII is said to have died childless in 1408. Other evidence for Andronikos’ short life includes an ivory at Dumbarton Oaks, probably depicting John VII and Andronikos at Thessalonike in 1403/4 (Oikonomides, “Ivory Pyxis” 329–37).

ANEMAS (Ἀνεμάς), a family of the military aristocracy. The sobriquet Anemas is attested at the beginning of the 9th C. (Theoph. 482.30). The etymology of the name is debatable; the logical derivation from anemos, “wind,” was rejected by Ph. Koukoules, who connected it with aneme, “spool” (EEBS 5 [1928] 3). On the other hand, Chalandon (Commène 1:240) considered them descendants of the Cretan emir ‘Abd al-‘Aziz, whose son is called Anemas by Byz. chroniclers: he deserted to the Byz., became an army commander, and fell in the battle against Švjetoslav in 971. Whether the four Anemas brothers who were Alexios I’s generals belonged to his progeny is unknown; names of two of them—Leo and Michael—are attested. Despite their involvement in the plot of 1105, the family maintained its position; Manuel Anemas (died 1149), military commander, married Theodora, John II’s daughter, and had the high title of protosebastohyp催tatos. The family also intermarried with the Angeloi and Doukai. Alexios Anemas (who as a monk was called Athanasios) was eulogized in an anonymous epigram as a skilled archer and rider (Lamprkos, “Mark. kod.,” no.276.7–15). In 1162 Pankratios Anemas owned a prosteion and paroikoi near Thessalonike and a pronoia (Lavra 1, no.64). The family’s position declined after Manuel I’s reign, although sources mention them through the 15th C. (PLP, nos. 974–75).

ANEMOURION (Ἀνεμούριον, mod. Anamur), city and bishopric of Isauria, at the southernmost point of Asia Minor opposite Cyprus. Excavations have revealed the nature and development of Anemourion through the 7th C. After a major setback in the late 5th C., recovery is attested in the 4th by the construction of large baths and in the 5th by basilical churches with mosaic decoration. In 382, a new city wall was erected against the Isaurians, but their attacks led to a decline by the late 5th C.; prosperity returned with the establishment of peace in the 6th C. Major changes affected Anemourion in the late 6th and early 7th C., when large churches were abandoned and the baths and other civic buildings were filled with small houses and industrial workplaces, evidently a reflection of crowding and impoverishment. Anemourion was abandoned peacefully ca.660
when the Arabs gained control of Cyprus; its population probably retreated to the adjacent hill, whose extensive unstudied fortifications appear to include Byz. sections.

ANGAREIA (*ἀγγαρεία*), a term designating both state and private corvée. The term is of Persian origin, as noted by Eustathios of Thessalonike in his commentary on the *Odyssey*. The term was used in the Roman Empire for state corvée, esp. the service for the dromos, and for coercive sale of goods to the state. In Byz. it was expanded to include private services owed by peasants to their lord.

ANGEL (*ἀγγελός*, lit. "messenger"). Byz. angelology was developed primarily by pseudo-Dionysios the Areopagite (R. Roques, *L’univers dionysien* [Paris 1954] 135–67) and later by Patr. Nikephoros I (B. Giannopoulos, *Theologia* 44 [1973] 312–38). Angels were construed as spiritual, that is, incorporeal beings (asomatoi), even if in early patristic writing their incorporeality was treated as relative: they were described there as having spiritual bodies of finer substance than those of men. Angels were held to be much more numerous than men, or even innumerable. Created beings, angels were brought forth by divine will, either before the material world or simultaneously with it. They had free will and were liable to sin: thus the Devil was a fallen angel. They had no foreknowledge of the future. Their function first and foremost was to praise God. They also served Christ and the church, assisting the faithful in the struggle against demons. Some theologians (but not Dionysios) developed the idea of guardian angels protecting individuals, nations, and esp. the souls of the dead. John of Damascus insisted that angels were not demiurges, thus rejecting the interpretation of dualism.

Dionysios advanced the concept of a hierarchy, dividing the angels according to their proximity to God into nine orders and three triads: *seraphim*, *cherubim*, thrones; virtues, dominations, powers; principalities, archangels, angels. The idea of angelic hierarchy was understood as parallel to the human ascent to the divine via three rungs of purification, illumination, and unification with God; in this connection monastic status was defined as the "angelic life." The cult of angels developed esp. in southwest Asia Minor, arousing concern among some church fathers of the 4th–5th C.: the Council of Laodikeia in Phrygia warned against the worship of angels, and Theodoret of Cyrthmus stigmatized it as a specifically Jewish superstition (C. Mango, *DChAE* 4 [1984–86] 53). Nevertheless, their veneration was strong in Byz. Hagiographic texts often represented them as fulfilling divine commands and particularly as eunuchlike guardians, clad in white, who accompanied the Virgin.

After the 5th C., the wingless divine messengers of the Old Testament (in such scenes as the *Philoxenia of Abraham and Jacob’s Ladder*) were invariably represented like the Nike and the winged creatures of the *Annunciation* and the *Myrrophoroi*. Endowed with curly heads, Hellenic profiles, and white garments, even in groups angels displayed an unvarying perfect uniformity. Across a millennium, their only significant iconographical development was a marked tendency to multiply in number.

Commenting on their traditional iconography, Psellus (ed. K. Snipes in *Gnomon* 2001) declares that angels have human form because they are rational beings but are winged because of their motion toward heaven. They carry orbs to indicate their speed, for a sphere scarcely touches the ground; the fillet around their heads suggests purity and chastity.

ANGELOS ("Ἀγγελός, fem. Ἀγγελίνα"), a noble Byz. lineage founded by Constantine from Philadelphia, who married Theodora (born 1096), the daughter of Alexios I. According to a 12th-C. historian (Zon. 3:740.1–2), Constantine Angelos was handsome but of lowy origin. The derivation of the name from "angel" seems plausible; rhetoricians called members of the family angelon-.
moi, “named after the angels” or “bearing the name of angels.” This type of name formation is exceptional, however, in Byz., and it is possible that the Angeloi took their name from the toponym of Angel or Agel (a district near Amida); this would explain why John Kamateros called ISAAC II ANGELOS “a man of the Orient” (Regel, Fontes 2:247.12). In the 12th C. several Angeloi served as military commanders; their identification is not always possible. In 1185 Isaac II Angelos was proclaimed emperor, succeeded by ALEXIOS III ANGELOS and ALEXIOS IV. After the fall of Constantinople in 1204, the Angeloi asserted their power in EPIROS and THESSALONIKE, first as independent rulers, later as imperial dignitaries; there they assumed the name of Angeloi Komnenoi Doukas to distinguish themselves from the “humble” Angeloi who are known as functionaries, physicians, clergymen, etc. (PLP, nos. 159–224). (See MICHAEL I Komnenos Doukas, Michael II Komnenos Doukas, Theodore Komnenos Doukas, Demetrios Angelos Doukas, Nikephoros II of Epiros. See also genealogical table.)

ANI ("Ἀνίαν"). fortress and city in the district of Sirak on the west bank of the Axurean/Arpa-Çay River in northeast Anatolia. It became the capital of ARMENIA under the later BAGRATIDS.

ANI, which had an important strategic position, was already known in the 5th C. as a fortress belonging to the Kamsaran family. In the 9th C. ANI was sold to the Bagratids and became the royal capital with the coronation of AšOT III in 961. The city grew so rapidly as an administrative and trade center that its dimensions tripled within 40 years and it became known as “the city of 1,001 churches.”

In 1045, the Armenian katholikos Peter Getadjar surrendered the city to Byz. and it became for a time the capital of the theme of IBERIA. Captured by the Seljuks in 1064 and sold by them to the Kurdish Shaddādīd emirs in 1072, ANI continued to flourish under them and under the ZAKARIIDS. Its slow decline began with the Mongol capture in the 13th C.

Monuments of ANI. Although the city has only been partially excavated, hundreds of its structures are known. It is closed at the south by Smbat II's walls (989) and dominated by a citadel at its
narrow north end. Buildings lie outside the walls and along the cliffs; under the city, extensive chambers were cut from living rock. Palaces, comfortable homes, dovecotes, caravanserais, warehouses, cisterns, meeting halls, monasteries, churches, and at least one mosque survive. Very few of these structures are dated, and none to the period of Byz. rule.

Three buildings are attributed by inscription to the architect Trdat: for Smbat II and Katranide, the wife of Gagik I, he built the cathedral (989–1001); for Gagik I, he built in 1001–20 St. Grigor (i.e., GREGORY THE ILLUMINATOR). Like other Bagratid donations, these are variations on 7th-C. church plans: the cathedral on that of St. Gayanê at VAEARSAPAT; St. Grigor, on Zuart'noch'. The Church of the Redeemer, which Trdat built for the merchant Apšarip in 1036, is an octafoil carrying a very large dome.

A lifesize relief, almost in the round, of Gagik I (now lost) was unearthed at St. Grigor, along with bronze censers with New Testament scenes and a chandelier with birds. Commissioned by the merchant Tigran Honens’ Georgians frescoed (1215) the Church of St. Grigor, but the program includes Armenian features, such as a life of the saint. N. Thierry (in Cuneo [1984] infra) believes that the poorly preserved frescoes of its forechurch, which have Greek and Georgian inscriptions, are late 13th-C. Byz. work.

Ani adopted Turko-Iranian elements, particularly under the Zaku'rids. Armenian and Georginian palaces and forechurches in the city feature muqarnas (stalactite squinches) and double-storied portals in geometric polychrome stonework and carpet-like filigree relief.

ANICIA JULIANA (Ἀνίκια Διοκτώρ), patrika and patron of the arts; born Constantinople probably 461 or 463, died Constantinople 527 or 529. The daughter of the future Emp. Anicius Olybrius and Placidia the Younger, Anicia Juliana remained at Constantinople with her mother when Olybrius went to Italy to become emperor in 472. Probably by 478 Anicia Juliana was the sole heir of her two famous parents. She married Areobindus soon after 478 and had a son, Olybrius (junior), who married Irene, niece of Anastasios I. Anicia Juliana often visited St. Sabas at Constantinople in 511/12; she reportedly was served by many eunuchs, who became monks of the monastery of St. Sabas in Palestine after her death. At her house in Constantinople a mob proclaimed Areobindus emperor in 512. She was a devout Chalcedonian who resisted the theological pressures of Emp. Anastasios and the Constantinopolitan patriarch Timotheos (511–18); she also corresponded with Pope Hormisdas to help to end the Akarian Schism. She built and embellished many churches in Constantinople, including St. Euphemia, St. Polyeuktos, and a church of the Theotokos in the Honoratae quarter. The Vienna Dioskorides was written for her.

ANICIUS, a noble family, originating from Praeneste, which in the 4th C. became one of the most influential and wealthy lineages in Rome. Unlike most Roman senatorial aristocrats, the Anicii converted to Christianity and supported the emperor of Constantinople. In the 5th C. the Anicii were believed to favor the barbarians and rumor spread that Anicia Falconia Proba ordered her servants to open the gates of Rome to Alaric. Between 455 and 457 Anicius Olybrius married Placidia, youngest daughter of Valentinian III, and in 472 became Roman emperor; after a few months' reign he died on 2 Nov. 472 of natural causes, a rare case among 5th-C. Western emperors. His daughter Anicia Juliana moved to Constantinople and was an important patron of art and architecture. Sextus Claudius Petronius Probus belonged to this lineage. The family retained influence until at least the mid-6th C., when Anicius Faustus Albinus Basilius was the last consul.

Another branch of the Anicii stayed in Italy and contributed much to the alliance of the Roman aristocracy with the house of the Amali; Boethius, for example, served Theodoric. Theodahad, while promoting Maximus, a member of the family, praised the Anicii as a lineage almost equal to the princeps. Jordanes completed his Getica with the statement that a union between the Amali and Anicii was embodied in the persons of Germanus, the son of Justinian I's nephew, and of Mathesuentha (Matasunta), granddaughter of Theodoric the Great.

ANIMAL COMBAT (τοῦ θεάτρου κυνήγια). The exhibition of animals at the circus games, the so-called venationes, was popular in ancient Rome, but it seems that by the 4th C. large-scale shows were hard to arrange. Although the Historia Augusta describes the games in the Circus Maximus in 281, when thousands of ostriches, stags, and boars were on display and the next day hundreds of lions, leopards, and bears, the correspondence of Symmachus is a more dependable source. He tells of the difficulties he encountered while organizing animal shows, saying that he had to be satisfied with Irish hounds, Italian and Adriatic bears, Egyptian crocodiles, and probably some antelopes, lions, and leopards from Africa. Venationes were still being held in the Colosseum under the rule of Theodoric the Great, and Justinian I, in novel 105,1, ordered the consuls to arrange venationes and to show men fighting beasts. A Byz. legend relates that ritual required the emperor to kill a bear and a lion in the “theater”; since Galerius was allegedly afraid to undergo this trial, the young Constantine (Ⅰ) slaughtered the beasts (A. Kazhdan, Byzantion 57 (1987) 216f.).

Scenes of animal combat were common on consular diptychs, while, later, scenes of hunting animals and birds became predominant. Although gladiatorial battles were prohibited by Constantine in 325, animal combat survived despite protests of the church fathers (thus, John Chrysostom [PG 59:519.33-34] condemned both horse races and the show of theriomachyantes, as did the Council in Trullo). In the 12th C., Benjamin of Tudela observed the combat of lions, bears, leopards, and wild asses in the Hippodrome.

Combat between animals and humans occupies an important place in hagiography and art, providing numerous legends about martyrs thrown into the arena and beasts refusing to attack them, or about martyrs who were killed by wild animals.

ANIMAL EPICS, narratives akin to the fable, though normally on a larger scale and lacking an explicit moral. Such material, which also had a worldwide currency (see Stephanites and Ichneutae), circulated throughout Europe from antiquity onward in the stories attributed to Aesop, which were well known in Byz. Though it lacks the narrative element and includes inanimate objects in its christianizing observations, the Phy-
siologos can perhaps be viewed as an extension of the Aesopic tradition. In late 12th-C. France, the Roman de Renart, drawing on traditional material, but adding an element of social satire to the tales of the cunning Fox, sparked a new interest in animal epics, which spread rapidly throughout Europe.

Byz.'s representative in this genre is the Synaxarion of the Honorable Donkey. With a similar tone of mild cynicism, though a different range of characters, are the Diegesis Ton Tetrapodon Zoon, the Pouloglos, and the Cat and the Mice (Ho kates kat hoi pontikoi), all anonymous and written in political verse at a popular level of the language; they reflect 14th-C. social conflicts. Shorter, and in prose, are the Porikologos and the Opsarologos of approximately the same date, also anonymous; these satirize Byz. legal customs. Lively and written in the vernacular, the late Byz. animal epics offer many insights into both the small matters of everyday life and the larger issues of contemporary social tensions.

-E.M.J.

ANIMALS. The Byz. kept a wide variety of domesticated animals and livestock to provide meat, milk, eggs, leather, wool, and feathers (see Swine; Sheep; Goats; Fowl, Domestic) and to serve as draft animals, beasts of burden, or riding mounts (horses, camels, donkeys, oxen, etc.). Horses were also used for cavalry, hunting, and equestrian sports. The Byz. kept dogs, cats, and some birds as pets; predator birds, like hawks and falcons, were also used for hawking.

The Byz. clearly distinguished between wild beasts and domesticated animals; the wild were not always identified with evil and the domesticated with good, however. The Diegesis Ton Tetrapodon Zoon (11.15–16) discriminates between carnivorous and herbivorous beasts, and domesticated animals such as dogs and swine were sometimes perceived as the embodiment of demonic power.

Exotic Animals. In an empire that, at its greatest extent, stretched from the Atlantic to the Ti-
ANKARA, BATTLE OF. In 1402, on the Çubuk plain north of Ankara (Ankýra), the Ottomans, whose power had been rapidly expanding, suffered a temporary setback when they were decisively defeated by the Mongols. The battle took place on 28 July (Kleinchroniken 2:370). The course of the fighting is described by Greek historians (Chalk. 1:145–47; Sphr. 208.6–10). The Ottoman army of Bayezid I that occupied a hill was attacked by Timur and was defeated, chiefly owing to the defection of the Anatolian Muslim contingents, in contrast to the sultan’s Christian vassals (notably Stefan Lazarević) who fought loyally. Bayezid and his younger son Musa were taken captive by the victor. Rumors spread that John VII Palaiologos had conspired with Timur (Barker, Manuel II 504–09). After the battle Timur reestablished the traditional beyliks (see Beg) and reduced Ottoman territory in Anatolia to its original heartland; he did not, however, invade Rumeli. The ensuing struggle for succession among Bayezid’s sons İsâ, Süleyman Çelebi, Musa, Mehmed (1), and later Mustafa allowed Byzantium to recover its autonomy for a short period, down to 1424, when it again became tributary to the Ottomans.

—S.W.R., A.K.

ANKYRA (’Aγκυρα, mod. Ankara), civil and ecclesiastical metropolis of Galatia. Ankyra’s strategic location on the main highway across Anatolia made it a center of trade and a major military base. Frequently visited by emperors, it was an imperial summer residence in the late 4th and early 5th C. In the 4th C., Ankyra was the seat of a cultivated pagan landowning aristocracy (known from the letters of Libanios); they were closely connected with the governors, who frequently adorned the city with public works. The local ruling class became Christian only in the 5th C., when the rich were famed for their piety and philanthropy. In the 6th C., the governor, bishop, and local magnates dominated Ankyra; its population was devoted to St. Theodore of Sykeon, who reportedly wrought many miracles in the city. Ankyra remained peaceful and prosperous through the early 7th C. In 610–11 it was the base of the revolt of Komentiolos. Sources attest a large range of public buildings, both pagan and Christian; few survive.

In 622, the Persians captured and destroyed Ankyra; afterward the large area of the ancient city was abandoned and Ankyra retreated to its heavily fortified acropolis. It became capital of the Opsikon theme in the 7th C. and of the Bouklarion in the 8th. The frequent goal of Arab attacks, Ankyra fell to al-Mustašim in 838, was rebuilt by Michael III in 859, and taken by the Paulicians in 871. After the Turks captured it ca.1080, Ankyra only briefly returned to Byz. rule following the Crusade of 1101.

An important center of Christianity, Ankyra was the home of Sts. Plato and Clement and the site of councils in 314, 358, and 375. The council of 325, planned for Ankyra, was transferred to Nicaea.

The site contains scattered remains of civic buildings, including a large bath that functioned until the 7th C., traces of luxurious houses, and the Church of St. Clement, a cross-domed brick structure (8th/9th C.?). Its fortress, one of the greatest of Anatolia, consists of a citadel, an upper rampart with closely spaced pentagonal towers, and an extensive lower wall. The inner fortress apparently dates to the mid-7th C., the outer to the early 9th; all were rebuilt by Michael III.

—C.F.

ANNA (“Annâ”) or Hanna, feminine personal name of Hebrew origin (etym. “veneration”). A similar name appeared in Greek and Roman mythology (G. Wissowa, *RE* 1 [1894] 2223–25; M. Nilsson, *Geschichte der griechischen Religion* [Munich 1967] 251). In the New Testament (Lk 2:36) Anna is a prophetess of the tribe of Asher, but in a later Christian legend another Anna appeared, mother of the Virgin Mary. There is confusion between the female name Anna and the male Annas (also present in the New Testament); thus, ca.507 or
511 a man, Anna (probably of Germanic origin), was known as comes in Italy (PLRE 2:91f). Relatively rare in late Roman texts, the name became popular by the 11th C.: Skylitzes cites six Annas, more than Theodora and Irene. In the late Byz. acts Anna remained one of the most popular female names: vols. 2–3 of Laura list 48 Annas, second only to Maria.

LIT. M. Schönfeld, Wörterbuch der altgermanischen Person- und Völkernamen (Heidelberg 1911; rp. 1965) 22.

—A.K.

ANNA, princess of Kiev; porphyrogenetene daughter of Romanos II and sister of Basil II; born Constantinople 13 Mar. 968, died Kiev 1011 (acc. to Skylitzes, after her husband). In 968 Otto I unsuccessfully sought Anna's hand for his son Otto II. Hugh Capet (king of France 987–96), who desired alliance and kinship with Byz., was surprised in early 988 by news of Anna's impending marriage to Vladimir I of Kiev and withdrew from his plan to ask for the princess's hand for his son Robert. Although legend places Anna's marriage in Cherson in 989, it actually took place in Kiev in 988. In summer of that year Anna was welcomed in Rus', accompanied by a large retinue headed by Theophylaktos, the first metropolitan of Kiev (and formerly of Sebastia). In the 990s Byz. architects engaged by Anna raised Kiev's first stone buildings—the palace and the palace church of the Virgin, called the “Church of the Tithe.” Yahy̧ā of Antioch attributed to Anna the construction of many churches. Boris and Gleb were probably her sons.

—An.P.

ANNA KOMNENE. See Komnene, Anna.

ANNALES BERTINI ANI (so-called from the provenance of one MS from St. Bertin) continue the Annales regni Francorum. The first, anonymous section (a.830–34) was begun in the chapel of the Carolingian emperor Louis the Pious (814–40); it was continued by Prudentius, who took his work with him when he became bishop of Troyes (843–61), after which the tone grows increasingly independent of Charles the Bald. The continuation by Hincmar, archbishop of Reims (845–82), offers a wide-ranging but very personal view of the history of his times. In the royal annals' tradition, the Annales Bertiniani record Byz. diplomacy and military relations with the Franks (a.842, p.42; a.853, p.68; a.869, pp. 153, 164f; a.873, p.192) and the “Rhos” (a.889, pp. 30f) as well as Frankish activities among the Bulgars and Slavs (e.g., a.853, p.68; a.864, p.113; a.866, p.133f). They also attest to the impact of Byz. ceremonial on Frankish kingship (a.876, p.205) and Byz. pirates' activity in the western Mediterranean (a.848, p.55). Hincmar's relations with the papacy explain his knowledge of its affairs, particularly the Photian schism (a.867, pp. 138f; a.869, pp. 155f; a.872, p.187).

—M.McC.

ANNALES FULDENSES, Latin narrative of events from 714 to 887. The first section was compiled in the Mainz area (858–63) and subsequently (864–82) reflects views characteristic of the court of Louis the German (843–76) and his son, apparently in connection with the career of Liutbert, archbishop of Mainz, as royal archchaplain (870–82). Although it is not clear where compilation ends and year-by-year redaction begins, the Annales Fuldenses record eastern Frankish events, particularly in relation to Moravia, the Bohemians, and Bulgars (e.g., a.828–29, pp. 25f; a.845, p.35; a.866–67, pp. 65f), and document Byz. diplomacy, mentioning a crystal reliquary sent by Basil I to Louis the German (a.872, p.75; a.873, p.81), Western repercussions of the Photian schism (a.867, pp. 66f), and of Byz. ceremonial (a.876, p.86). The Bavarian continuation (a.882–901, pp. 107–35) preserves the court connection and describes Byz. embassies and Byz.-Magyar relations (a.896, pp. 129f).

—M.McC.
ANNALES IANUENSES, official historical record of the commune of Genoa and a prime source on relations with Byz. between 1099 and 1294. Caffaro (ca.1080–1166) began the Annales Ianuenses (by 1100?) and established the model for his successors. He had joined the First Crusade’s Genoese contingent (Aug. 1100–Jan. 1101) and visited the Orient again between ca.1130 and 1140. His career included stints as a diplomat (e.g., negotiations with Pisa, the papacy, and Frederick I), a successful admiral, and eight terms as consul (1122–49). In 1152, at Caffaro’s urging, the commune ordered a copy of the Annales Ianuenses for the public archive (preserved in Paris, B.N. lat. 10136; sketches illustrate various personalities and places), which he continued to 1163, narrating Genoa’s enterprises in the Levant and her competition with Italian rivals (e.g., the Pisan attack on 300 Genoese merchants at Constantinople: a.1162, 11.67.22–68.15). Caffaro also wrote a work On the Liberation of the Cities of the East (De liberatione civitatum orientis; ca.1155–56 in connection with a dispute with the kings of Jerusalem?) describing Genoese relations with Emp. Alexios I Komnenos and his lieutenants (11.114.15–115.7; 117.5–118.19) as well as travel distances in the Levant. From 1169 to 1294, the Annales Ianuenses were continued by various chancery officials, including the scribe and diplomat Ogerius, whose detailed account (1197–1216) records conflicts with the Latin rulers of Constantinople (e.g., a.1205, capture of a Venetian textile cargo, 12.98.22–99.16). Subsequent sections added by an anonymous continuator and by a committee treat the Palaiologans (a.1261, 1262, 1264–14.42.14–43.6, 44.9–45.15, 65.11–66.19).

ED. L.T. Belgrano, C. Imperiale di Sant’Angelo, Annales genovesi di Caffaro e de’suoi continuatori [== FSI 11–14 bis] (Genoa 1890–1929).

-M.McC.

ANNALES REGNI FRANCORUM, written in the chapel of Charlemagne and Louis the Pious (814–40), present a detailed but slanted—particularly by omission—record of royal activities (741–829). Writing probably began sometime between 787 and 793 with a retrospective account of events from 741 and continued to 795. The Annales Regni Francorum were then composed on a year-by-year basis to 829, with probable shifts in authorship in 808 and 820, and were continued in the Annales Bertiniani. They are an essential source on Byz. relations with the Franks, esp. diplomacy; a Byz. invasion of southern Italy (a.788, p.82); the capture of Sisinius, Patr. Tarasio’s brother (a.798, p.104); Emp. Nikephoros I’s recognition of Charlemagne as basilicus (a.812, p.136); competition over Venice and Dalmatia (a.806–10, pp. 122–30; a.817, pp. 145f; a.821, pp. 155f); relations of Byz. and the Franks with the Bulgars (e.g., a.812–13, pp. 136–39; a.824, pp. 164–67); an earthquake at Constantinople (Aug. 815, p.143); etc. Between 814 and 817, an unidentified member of the court began rewriting the text down to 817, improving the Latin, changing the political perspective slightly, and adding some details on Byz. (e.g., exarchs of Sicily in 788, p.83; a.798, p.105, the family name “Ganglano” of an ambassador). This revised version is called Annales Einhardi, reflecting an abandoned theory on its authorship.

-M.McC.

ANNALS OF BARI (Lat. Annales Barenses). The region of Bari produced three closely connected historical works on Apulia that are valuable sources for Byz.’s conflict with the Arabs and the Normans: (1) the Annales Barenses (605–1043), whose short notes grow more detailed for the 11th C. and are essentially local in focus; (2) the Annals (860–1102), ascribed in the 17th C. to “Lupus Protospatharius,” which are somewhat less parochial in their awareness of events elsewhere in the Empire; and (3) the Anonymous Chronicle of Bari (860–1115). All three relied on earlier, lost sources, some of which they shared (cf. Skabalanič, Gosudarstvo xxix–xxxiii).

ANNALS OF RAVENNA, conventional title of a Latin chronicle (probably of the 6th C.) of which only half of an 11th-C. folio (MS 202) has survived in the library of the cathedral in Merseburg (Saxony, in central Germany). The preserved folio encompasses events of 411–54, with numerous lacunas because of the absence of the upper half of the folio. The Annals, in the form of consular fasti with brief historical notes, belong to the type of the Calendar of 354 and like the latter are illustrated. The special characteristic of the Merseburg folio is its attention to Ravenna, usually ignored in other late Roman chronicles, and its indication of precise dates; the Annals mention the death of the Western emperor Honorius (who died in Ravenna) and give its precise date—27 Aug. 423—thus permitting a rejection of the date in Sokrates and Theophanes, 15 Aug. The Merseburg folio confirms the existence of the lost local annals of Ravenna, which may have been a source for such later chronicles as AGNELLUS as well as CASSIODORUS and MARCELLINUS COMES. Drawings in the columns of the text illustrate martyrdoms and other scenes of violence as well as an emperor (Valentinian III) enthroned on an orb in the manner of Christ in the apse of S. Vitale, Ravenna.

—A.K., B.B., A.C.

ANNA OF SOAVY, empress; baptismal name Ioanna; born 1306?, died Thessalonike ca.1365 (R.J. Loenertz, OrChrP 21 [1955] 218). Daughter of Count Amadeo V of Savoy, Anna married Emp. Andronikos III Palaiologos in Oct. 1326. She was accompanied by a large Italian entourage and promoted such Western customs as tournaments (see Sports) at the Byz. court. After her husband’s death in 1341, she became regent for her nine-year-old son John V. She joined with Patr. John XIV Kalekas and Alexios Apokaukos in opposition to John (VI) Kantakouzenos, eventually forcing him into the Civil War of 1341–47. The war necessitated drastic measures. Anna pawned the Byz. crown jewels to Venice (1343) and hired Turkish mercenaries to fight Kantakouzenos (1346). Although she converted to Orthodoxy at the time of her marriage, in 1343 Anna declared her submission and that of her son to the pope. In the hesychast controversy, she supported Kalekas, the opponent of Palamas, until 1347 when she turned against the patriarch and presided over the synod that deposed him, just as Kantakouzenos was entering Constantinople in triumph. Kantakouzenos pardoned Anna, but relations remained tense. In 1351 the empress went to Thessalonike to dissuade John V from rebelling against John VI. She remained there until her death, ruling the city as her appanage. Historians such as Gregorias and Kantakouzenos are very hostile to Anna, depicting her as a foreigner and cruel tyrant, but Nicholas Kabasilas composed a eulogy of her (M. Jugie, IRAIK 15 [1911] 112–21). Mosaic portraits of Anna and Andronikos survived in the Pammakaristos church in Constantinople until at least 1579.

—A.M.T., A.C.

ANNONA (res annonaria, ànvóva), financial term referring to (1) in-kind taxation, including both annona civica (which governed the requisition and transfer of commodities from Africa and Egypt for the maintenance of Rome and Constantinople) and annona militaris, or (2) any type of rations or provisions. Originally an irregular imperial levy of commodities, annona was established by Diocletian as the empire’s fundamental tax, paid in kind and based upon periodic assessments. From the end of the 4th C., however, the role played by annona in taxation diminished, as taxes came to be assessed and remitted in money; even the remaining annona, although still assembled in kind, was now frequently commuted into cash
payments (adaeratio). Thus, by the 6th C., the term was applied almost exclusively to rations and supplies, distinct from the public tax. When the term annona appears in later sources (e.g., the will of Eustathios BOILAS [ed. Lemerle, *Cinq études 27-217*]), it invariably refers to that portion of a salary paid in kind rather than with cash.

**ANNONA MILITARIS** (ἐκνύωνα). The *annona militaris* began as an unofficial tax in kind imposed by Septimius Severus (193–211) to obtain rations (wine, meat, oil, bread) or other necessities (e.g., wood) for the army. Another ration, the *capitus*, provided fodder for its horses. The *annona* and *capitus* became regular issue during the 3rd C., and the task of their assessment, collection, and distribution fell to the praetorian prefecture (Jones, *LRE* 448–62). These provisions were collected in supply depots and issued to the soldiers by the army quartermasters (actuarii). As taxes in kind were increasingly commuted to cash throughout the 5th C., the *annona* and *capitus* became ration allowances (in some cases at fixed rates of 5 and 4 solidi, respectively, in the *Cod. Just. I 27.1, par.22*), although rations in kind continued to be issued, esp. in the East. Eventually soldiers' pay, and that of civil officials, was computed in the cash equivalents of the *annona* and *capitus*, assessed at varying rates according to rank or grade of service (Haldon, *Praetorians* 120–25).

**ANNUNCIATION** (εὐαγγελισμὸς τῆς Θεοτόκου), feast of the angel Gabriel's announcement of the coming of the Holy Spirit on the Virgin Mary (Lk 1:26–38), celebrated 25 Mar. In Syria, Constantinople, and possibly Asia Minor, a feast of the Virgin that included the annunciation theme was originally part of pre-Nativity celebrations on the first or second Sunday before Christmas; this preparatory Sunday is attested in Constantinople before 431 (F.J. Leroy, *L’Homilétique de Proclus de Constantinople* [Vatican 1967] 66). But in 560 a letter of Justinian I defended 25 Mar. as the historical date of the annunciation event and affirmed that the feasts of the Nativity and Presentation in the Temple (HYPAPANTE) should be celebrated 25 Dec. and 2 Feb., respectively, because they depend on the Annunciation (M. van Esbroeck, *AB* 86 [1968] 351–71; 87 [1969] 442–44). Actually, the March date, probably introduced to Antioch in the 6th C., and to Jerusalem and the whole Christian world shortly thereafter, was chosen not in order to coordinate with Christmas, but because the identification of John the Baptist's conception with the autumn equinox put Jesus' conception at the spring equinox six months later and his Nativity (25 Dec.) at the winter solstice. The date 25 Mar. was, furthermore, considered the day of the Crucifixion, to make Jesus' life a perfect cycle, his conception and death had to coincide, since fractions were imperfect (Talley, *Liturgical Year* 8–13, 91–103).

One of the five Marian Great Feasts, and, with the Hypapante, one of two not based on New Testament apocrypha, the Annunciation is the
only one of the 12 fixed Great Feasts that can fall in Lent, Holy Week, or the week after Easter; if in Lent, it has an afterfeast of but one day, and if in Holy or Easter Week, this metheoria is suppressed entirely. On the day of the Annunciation, the emperor went in procession to the column of Constantine, celebrated the liturgy in the Church of the Chalkoprataeia, and feasted in the palace (De cer., bk.1, ch.30: Philotheos. Kletor. 195.16–197.5).

Illustrations of the Annunciation show Gabriel approaching the standing or seated Virgin Mary. Depicted by the 3rd C., the Annunciation became a pervasive Christian image. It appears in Christological cycles and also independently on jewelry, icons, bema doors, the triumphal arches of churches, and in some Gospel books preceding the text of Luke. The initial, simple confrontation of the holy figures was quickly elaborated. The well and purple wool, derived from the Protoevangelion of James (1:11–9), appear in 5th-C. art. The 6th-C. mosaic at Porec shows Mary enthroned before a basilican façade, as a royal figure, a type of the Church, and a portal of salvation. Post-Iconoclastic art, drawing on homilies, embroiders the scene with springtime elements incorporating Marian symbols (lilies, the closed garden) and doctrinal ones (the arc of Heaven, the dove and impregnating light, and—in the Hagioi Anargyroi at Kastoria—God himself). The richest of all Byz. Annunciation compositions is the late 12th-C. icon on Mt. Sinai, which, along with numerous Marian motifs, includes on Mary’s breast a faint mandorla containing the infant Christ, a reference to the Virgin Blachernitissa.

ANOINTING (χρίσμα), a ritual rubbing with a blessed oil or chrism, derived from widespread ancient use of unguents. Early Christian initiation rites like baptism used anointing; in the medieval West it marked accession to political power from the 7th C. onward. At what date anointing entered Byz. coronations is controversial. Old Testament metaphors, the Septuagint’s very frequent use of the phrase chrism basilica (e.g., 1 Sam [1 Kg] 11:5, 15:17), and the iconography of Davidic kingship (C. Walter, BMGS 2 [1976] 58–73) encouraged similar wording for the Byz. emperor’s accession, regardless of ritual. Neither De ceremoniis nor euchologia make reference to coronation anointing. Although there is some discussion about Niketas Choniates’ testimony (Nik.Chon. 457.15), anointing in connection with coronations appears irrefutably only after 1204, when debate waxed over whether Byz. anointing was introduced in response to Baldwin I’s Latin-style coronation anointing at Constantinople or could have entered Byz. ceremonial shortly before. Even in the latter case, the Western presence at court and in the imperial family scarcely excludes the possibility of Latin influence.

Theodore I Laskaris was anointed emperor in 1205 and anointing became solidly entrenched thereafter. A 14th-C. ceremonial book (pseudo-Kod. 258.3–29) describes how the patriarch mounted the ambo and anointed the emperor’s head just before crowning him, as he declared him “Holy!” (hagios) and the audience echoed the acclamation. Symeon of Thessalonike (PG 155:353B–D) gave the rite a chriostimimetic interpretation, reasoning that the emperor’s anointing paralleled that of Christ by the Holy Spirit. (For anointing of the sick, see Unction.)

ANONYMOUS, “ENANTIOPHANES.” jurist. Numerous scholia to the Basilika are inscribed “(τοῦ) Ἀνωνύμου” or “(τοῦ) Ἐναντιοφανοῦς.” According to the generally accepted opinion of K.E. Zacharià von Lingenthal (Kleine Schriften 2:152–54), these texts originate in the writings of an “elder Anonymous” and a “younger Anonymous,” the latter of whom should be identified with “Enantiophanes.” The “elder Anonymous” was perhaps active under Justinian I and may have composed a paraphrase of the Digest that served as the basis for the text of the Basilika. The “younger Anonymous” may have lived under Herakleios and provided the Digest paraphrase of
the "elder Anonymous" with explanatory notes (paraphrasi). The "younger Anonymous" was called "Enantiophanes" because he wrote a work entitled Peri enantiophaneion (On Apparent Contradictions), which is mentioned in the Nomokanon of Fourteen Titles, a work that likewise can be attributed to him.

ANONYMOUS FOLLES. See COINS; MINTS.

ANONYMOUS VALESII. See EXCERPTA VALESIANA.

ANSBERT. See HISTORIA DE EXPEDITIONE FRIDERICI.

ANSELM, author, ambassador, bishop of Havelberg (1129-55), and archbishop of Ravenna (1155-58); born Germany? ca. 1100, died Milan 12 Aug. 1158. In 1155/6 Anselm visited Constantinople as the ambassador of the German emperor Lothair III to John II Komnenos to discuss possible joint action against Roger II of Sicily. In Apr. 1156, with the cooperation of Emp. John and Patr. Leo Styppes (1134-43), he participated in public debates in Constantinople with Niketas, archbishop of Nikomedia, on the filioque, the azymes, and papal primacy. In order to rebut Niketas's criticism of the Roman church's "innovations" in faith and practice, Anselm used his own theory of the church's historical growth in understanding the faith through the Holy Spirit. He politely, but firmly, upheld the Latin filioque doctrine and claimed that Niketas accepted his compromise formula: the Holy Spirit proceeds from the Father and the Son, but "properly and principally" only from the Father. Niketas evidently also agreed that the Greek "through the Son" was equivalent to the Latin "from both" (ab utroque). Both Anselm and Niketas called for an ecumenical council that would, they hoped, result in UNION OF THE CHURCHES. At the request of Pope Eugenius II, Anselm wrote (1150) the Dialogues, a detailed account of his debates with Niketas.

In 1153 Frederick I Barbarossa sent Anselm to Manuel I Komnenos to negotiate a marriage between Frederick and the Byz. princess Maria. While in Thessalonike in 1154, en route home, Anselm discussed the procession of the Holy Spirit with Basil of Ohrid and acknowledged that Latin arrogance impeded reunion.

ANTAE ("Antae"), a group of people in the area north of the Black Sea. According to Jordanes, in the 4th C. the Goths defeated the Antae and murdered their "king" (reX) Boz and 70 elders. Other authors (Prokopios, pseudo-Maurice, etc.) mention the Antae, usually alongside the Sklavonoi, in connection with the events of 535-602. Prokopios describes the Antae as a conglomeration of primitive and dirty nomads who practiced democracy and made war on foot, half-naked, armed with only spears and shields; they venerated the god of lightning.

The origin of the Antae is hotly discussed. Many scholars (e.g., G. Bonev, EkBalk 19 [1983] no.3, 109-20) consider them early Slavs; G. Vernadsky (JAOS 59 [1939] 50-66) developed the theory of their Alan origin; B. Strumins'kyj (HUkSt 3/4 [1979-80] 786-96) saw them Goths. The Antae were probably professional warriors, neighbors originally of the Alans and subsequently of the Ostrogoths, the Huns, the Bulgars, and the Avars. Justinian I, who accepted the title "Antikos," made them allies, and between 545 and 602 the Antae usually cooperated with the empire. Around 580 the Avars began to assume hegemony in eastern Europe and to demand the loyalty of the Antae. Attempts at negotiation failed, and the Avars killed the Antae envoy Mezamer. In 602 the Antae allied with Maurice against the Avars; Simokattes (Theoph. Simok. 293.15-16) relates that the khatagan dispatched an army under the command of Apsich to exterminate the Antae but the Avars were afraid and began to desert; after 602 the Antae disappear from the sources.
ANTHEMIOS OF TRALLES, architect, engineer, physicist, and mathematician; born Tralles in Lydia, died Constantinople? before 558 (the traditional date of his death, ca.534, is erroneous: G. Soulis, *Speculum* 35 [1960] 124). Anthemios was the son of a physician, Stephen; one of his brothers, Metrodoros, was a grammarian, another was a lawyer, and others were doctors. Anthemios achieved fame as the architect (with Isidore of Miletus) of Hagia Sophia in Constantinople. Nothing is known of his other architectural projects. Prokopios relates that Justinian I consulted Anthemios about flood control at Dara. According to Agathias, Anthemios was one of those scientists “who apply geometrical speculation to material objects and make models or imitations of the natural world” (Agath. 5:6.3). Anthemios’s experiments included the production of an artificial earthquake (using steam power) and artificial thunder as well as the creation of a powerful reflector. He wrote treatises such as *Concerning Remarkable Mechanical Devices* and *On Burning-Mirrors*; in the former he describes a curved reflector similar to one that he is said to have built. According to Tzetzes, Anthemios also wrote on mechanical and hydraulic subjects.

ANTHEMIOS, *Antēμios), prefect under Arkadios and Theodosios II; died after 414. Probably of Egyptian origin, Anthemios was a member of one of the most distinguished aristocratic families of the period. He was *magister officiorum* in 404 and praetorian prefect of the East from 405 to 414. He may have assisted in the deposition of John Chrysostom in 404, but he was presumably a Christian and escorted the relics of the prophet Samuel into Constantinople in 406. Sokrates (Sokr. *HE* 7.1.1) reports that he was the virtual ruler of the empire during the critical period of the minority of Theodosios II. He reorganized the food supply of the capital (*Cod.Theod. XIII* 5.32) and rebuilt its walls (*Cod.Theod. XV* 1.51) before he fell from power (see *Pulcheria*).

**ANTHEMIOS OF TRALLES**

Western emperor (467–72); born Constantinople, died Rome 30 June or 11 July 472. Grandson of the prefect Anthemios and son-in-law of Marcian, *patrikios*, and commander against the Huns and Ostrogoths, Anthemios was a candidate for the throne in Constantinople in 454. Leo I named him caesar and in 467 sent him to Italy, where he was proclaimed Augustus by the army. Leo concurred in the nomination as did Ricimer (who married the daughter of Anthemios), both hoping to counter the power and influence of the Vandal king Gaiseric. Celebrated by Sidonius Apollinarius and by Leo as the hope for unity between East and West, Anthemios was distrusted as a Greek and suspected of pagan sympathies. He played no part in the naval expedition against the Vandals in 468. Hostility developed with Ricimer, who finally invested Olybrius with the purple in 492. Ricimer attacked Rome, and Anthemios was captured and beheaded.

**ANTHEMIOS OF TRALLES**

architect, engineer, physicist, and mathematician; born Tralles in Lydia, died Constantinople? before 558 (the traditional date of his death, ca.534, is erroneous: G. Soulis, *Speculum* 35 [1960] 124). Anthemios was the son of a physician, Stephen; one of his brothers, Metrodoros, was a grammarian, another was a lawyer, and others were doctors. Anthemios achieved fame as the architect (with Isidore of Miletus) of Hagia Sophia in Constantinople. Nothing is known of his other architectural projects. Prokopios relates that Justinian I consulted Anthemios about flood control at Dara. According to Agathias, Anthemios was one of those scientists “who apply geometrical speculation to material objects and make models or imitations of the natural world” (Agath. 5:6.3). Anthemios’s experiments included the production of an artificial earthquake (using steam power) and artificial thunder as well as the creation of a powerful reflector. He wrote treatises such as *Concerning Remarkable Mechanical Devices* and *On Burning-Mirrors*; in the former he describes a curved reflector similar to one that he is said to have built. According to Tzetzes, Anthemios also wrote on mechanical and hydraulic subjects.

**ANTHEMIOS OF TRALLES**

architect, engineer, physicist, and mathematician; born Tralles in Lydia, died Constantinople? before 558 (the traditional date of his death, ca.534, is erroneous: G. He wrote treatises such as *Concerning Remarkable Mechanical Devices* and *On Burning-Mirrors*; in the former he describes a curved reflector similar to one that he is said to have built. According to Tzetzes, Anthemios also wrote on mechanical and hydraulic subjects.
ANTHIMOS OF NIKOMEDAEA, martyr under Diocletian and saint; feastday 3 Sept. According to Eusebius of Caesarea (Eusebius, HE 8.6.6), Anthimos (Ἀνθίμος), bishop of Nikomedia, was decapitated in 303; he was among those charged with setting fire to the imperial palace in Nikomedia. A Life attributed to Symeon Metaphrastes presents the trial and torture of Anthimos by Maximian. It is questionable whether any of his writings survive: the legend of Sts. Donna and Indes mentions a letter of Anthimos to persecuted communities (PG 116:1073C–1076B); a fragment, On the Holy Church, attributed to Anthimos by G. Mercati, is actually a work of Markellos of Ankyra according to Richard (Opera minora 2, no. 33).

Representation in Art. The earliest known portrait of Anthimos, on a mosaic (now lost) in the south tympanum of Hagia Sophia, apparently showed the saint as an elderly bishop; this is the most usual type, though his features vary. In the Theodore Psalter (fol. 95v), he bears witness to the burning of the church in Nikomedia in which 20,000 Christians are said to have lost their lives. Four scenes enclosed in roundels recount his martyrdom (including torture on a wheel) in a menologion MS of Symeon Metaphrastes (London, B.L. Add. 11870, fol. 44v); other MSS depict only his beheading.

Source. PG 115:171–84.

ANTHOLOGIA PALATINA AND ANTHOLOGIA PLANUDEA. See Greek Anthology.

ANTHOLOGIES, collections of largely secular verse, esp. epigrams, similar to a florilegium (excerpts from theological texts) or a gnomologion (gnomai, or moralizing excerpts from secular texts in both prose and verse). Selections from the major classical anthologies (those of Meleager of Gadara, Philip of Thessalonike, etc.) were combined in the 10th C. by Constantine Kephala with material from the Byz. period, esp. from the Cycle of Agathias. This collection, now lost as an independent work, in turn formed the basis for the main surviving Byz. anthologies, the Anthologia Palatina and the Anthologia Planudea (see Greek Anthology). There also survive a number of short anthologies (e.g., the 9th-C. Sylloge Euphemiana, the 13th-C. Sylloge Crameriana, the 14th-C. Appendix Barbaro-Vaticana), which contain a few epigrams not attested by the two major collections.

ED. See Greek Anthology.
LIT. AnthGr 1:82–84.
- E.M.J.

ANTHOUA (Ἀνθοῦα, lit. “flourishing”), the name or epithet given by Constantine I the Great to Constantinople–New Rome. John Lydos uses the epithet as a translation of Roman Flora, but E. Fenster (Laudes Constantinopolitanae [Munich 1968] 93, n. 5) questions his explanation. The epithet appears in historians and panegyrics; Paul Silentiarios, for instance, speaks of “golden-clad Anthousa” who subjugates barbarians (vv. 150–58). It is also found in geographical nomenclature (e.g., Eustathios of Thessalonike’s commentary on Dionysios Periegetes), and Manuel Holobolos still used it in his speech on Michael VIII’s reconquest of Constantinople.

ANTHROPOLOGY. The classical Byz. definition of man stems from the Greek philosophical tradition and is common to theologians, philosophers, and even elementary school textbooks; man is a rational, mortal being, or corporeal essence, endowed with speech and thought, capable of reason and knowledge. Man, a being that unites two natures in one person, was the favorite model for the hypostatic union from the 6th C. In this context the soul or spirit of man is contrasted to the body in purely negative terms (incorporeal, immortal, incorruptible), and man is perceived as a simultaneous synthesis of opposites: as “a being united ineffably and simultaneously of different essences” (Anastasios of Sinai, ed. Uthemann, Viae Dux 2.5, p. 58f), or as a “mixture of opposites” (Maximos the Confessor, PG 91:212D, 1032B).

In referring to Genesis 1:27, the patristic tradition sees man as the image of God, or, insofar as the Logos alone is the image of God, man is seen as an “image in the image of God.” From Genesis 1:26, “Let us make man in our image, and according to our likeness,” man is seen as an image of the Trinity in the structure of his soul,
not in the sense of Plato's tripartite division of the soul, but rather in the relationship of man's psyche to his logos and nous or pneuma.

The ability of Byz. anthropology to shed its theological context, at least outwardly, is shown in the thought of Michael Psellos and John Italos in the 11th C. (See also Nemiosios.)

ANTHROPOS (ἀνθρωπος, "man", Lat. homo), a term designating an individual in a relation of personal dependence; its synonyms were philos ("friend"), oikeios, and lizios. The term anthropos could cover relations between a strategos and his retinue, as in the Strategikon of Maurice; this usage is also found later, for example, in a 10th-C. source (TheophCont 374-17) that relates that Leo Argyros attacked Tephrike "with his anthropoi." An anthropos could be a subordinate of a civil official; thus an anonymous letter of the 10th C. was addressed to an anthropos of the krites of the Aegean Sea (Darrouzès, Épistoliers 377, no.47). More evidence of the "parafeudal" nature of Byz. "homage" is revealed in sources of the 11th and 12th C., in a Cretan charter of 1118 (MM 6:95-99), and in Kekaumenos as well as in the typika of Pakourianos and of the Kosmosoteira monastery. A seal of Niketas, "anthropos of the most fortunate caesar," is published but not dated (Zacos, Seals 1, no.643). Anthropoi not only served as a private retinue that followed their commander to battle, but also received land for their service. In later documents the term anthropoi was also applied to paroikoi. The "imperial men," basileikoi anthropoi, formed a special category.

ANTIPHATOS (ἀντιφατος), Greek translation of Latin proconsul or consularis, a governor of some special provinces (B. Kübler, RE 4 [1901] 1140–42). The term probably also designated the head of the administration of Constantinople until 359, when it was replaced by the urban prefect. From the 9th C. anthypatos was used as a dignity. According to E. Stein (BNJbb 1 [1920] 372f), the taktikon of Uspenskij (842/3) still listed the anthypatos as a provincial governor—a conclusion based only on the place of the title in the list. Guiland suggests that anthypatos as a dignity was first applied to Alexios Mousele under Emp. Theophilos. In the late-9th-C. Kletorologion of Philotheos the term, often in conjunction with patrikios, was listed in a position between magistros and regular patrikios. The term protanthypatos is known from 11th-C. sources. A disanthypatos is also mentioned on a seal. These titles were not used after the beginning of the 12th C.

ANTICHRIST (Ἀντιχριστος), the greatest antagonist of Christ, esp. at the Second Coming (PAROUSIA). The Greek word Antichristos appears in the Bible only in the epistles of John (1 Jn 2:18–22; 4:3; 2 Jn 7), but the concept of the final struggle between a diabolic ruler (anti-Messiah or "the beast") and the divine forces is to be found in the Hebrew (esp. Essene and apocalyptic) tradition. Hippolytus of Rome in the 3rd C. was the first Christian author to devote a tract to the Antichrist (On Christ and on the Antichrist), the core of which was opposition to the Roman Empire. The theme was developed in Byz. commentaries on the Apocalypse by Oikoumenios, Andrew of Caesarea, Arethas of Caesarea, and Neophytos Enkleistos, since the two beasts in the Apocalypse that are identified with the Roman Empire or the cult of the emperor were interpreted as referring to the Antichrist.

Byz. theologians gave the Antichrist various names: Lampetis, Tetian, Lateinos, Benediktos (or Niketas), names for which the numerical equivalents of their Greek letters add up to 666, the number of the Antichrist (Rev 13:18). He was perceived either as the Devil incarnate or as a being consisting of a man combined with satanic energy. He was expected to come "when the time of the Roman Empire was fulfilled" (Cyril of Je-
ANTIGRAPHEUS (ἀντιγράφης), in the Kletorologion of Philotheos a subordinate of the quaestor. According to Bury (Adm. System 75f), antigraphes were successors of the late Roman magistri scriniorum under the magister officiorum. As the Greek rendition of the magister of a scrinium, the term antigraphus was used by various late Roman authors. It is not known what the functions of the antigraphis were after they moved to the department of the quaestor. Antigraphes are mentioned in the ECOLOGA (162.42, 166.104) as involved in the preparation of legislative acts. Later, the term antigraphe designated responses issued by the emperor (e.g., Latina 1, no.67.17), letters sent abroad (Dölger-Karayannopulos, Urkundenlehre 8g), etc. The seals of antigraphes, some dated to the 7th C., do not clarify their duties.

ANTIMENSION (ἀντιμήνιον), also antimesion (from Lat. mensa, “table”), a portable altar, often made of cloth. The term is first found in an enkomion of an obscure saint, Markianos of Syria; (text probably early 8th C.), where the “antimission” is identified as “mystike trapéza” (AASS June 3:281C–282D). Patr. Niketas I (766–80) reportedly set up an “antimission” in the Hippodrome and prayed before it when Leo IV crowned his son Constantine VI (Theoph. 450.16). The word occurs more frequently from the 12th C. onward when it refers specifically to a piece of cloth—linen (Symeon of Thessalonike, PG 155:332D–333A) or possibly silk. The so-called Nomocanon of Cotelier (J.B. Cotelier, Monumenta ecclesiae graecae 1 [Paris 1677]), produced between the 12th and 14th C., prescribes punishment for a priest who officiates without an antimension. The antimission contained a small pocket for relics and had to be consecrated by a bishop. Although consecrated as a portable altar, an antimission was to be used only when a consecrated altar-table was not available, or if consecration was in doubt. Its usage was quite common, esp. during the late period. The antimission became mandatory for the celebration of liturgy only in the post-Byz. period when it replaced the EILITON as the altar cloth on which eucharistic vessels were set; in earlier practice the antimission had been spread underneath the endyte. Since no Byz. antimensia are preserved, their exact appearance is not known, and there is no evidence that they were ever extensively decorated.

ANTINOÖPOLIS (Ἀντινόοπολις, also Antinoë, Antinou, mod. Shaikh Abada), town in Upper Egypt founded by Hadrian in 130; a flourishing center of Hellenic culture. In 297 Diocletian made Antinoëopolis an important administrative center and under Justinian I it became the seat of the doux of the Thebaid. It had a Christian community and was an episcopal see already in the early 4th C. The ANTINOŰPOLIS PAPYRI make reference to many churches, but excavations have unearthed only a few. There are two large basilicas in the east and south parts of the town, the latter of which dates probably from the 4th C.; it has five aisles and is built entirely of mudbrick. Of the former, only the crypt and sections of the atrium have survived. A third smaller church was discovered in the north cemetery. The site preserves traces of a colonnaded street, a large bath,
a theater, a hippodrome, and other public buildings. The ruins to the south of Antinoopolis are of early monasteries.

Among the burials of Antinoopolis the most famous is the chapel of Theodosia (probably late 4th C.): its frescoes represent Christ and the owner of the tomb accompanied by several saints. Other painted tombs were discovered in the mountains east of the city. The so-called Underground Church contains biblical scenes, e.g., The Marriage at Cana and the Massacre of the Innocents.

—P.G.

ANTINOÖPOLIS PAPYRI, literary and documentary papyri and parchments in Greek, Latin, Coptic, Arabic, Hebrew, and even Gothic, found by British and Italian excavations at the site of Hadrian’s foundation in Middle Egypt (modern Shaikh Abâda), attesting to the flourishing and multiformal culture of Antinoopolis from the 2nd C. until the Arab conquest. They include biblical, theological, medical, legal, grammatical, and stenographic texts, poetry, drama, philosophy, rhetoric, and all the usual documentary genres, from petitions to letters. The role of Antinoöpolis as capital of the Thebaid under its dux in the 6th C. is apparent from the abundant paperwork generated by the official chancery. The lawyer-poet Dioskoros of Aphroditó lived and practiced there during 566–73, and many papyri from his archive were written at Antinoöpolis. Illustrated Greek papyri were found at the site, including herbal illustrations and a drawing of charioteers. Coptic papyri, esp. tax receipts, provide evidence of ecclesiastical institutions and of the role of the dux of the Thebaid into post-conquest times.

—L.S.B. MacC.

ANTIOCH ('Αντιοχεια), the name of two cities in the Byz. Empire. The less important city was located in Anatolia, while Antioch on the Orontes, in Syria, was one of the major cities of late antiquity and the seat of one of the four Eastern patriarchates.

ANTIOCH OF PISIDIA, metropolis east of Lake Eğirdir on major routes through southern Anatolia; now Yalvaç. A Roman colony, Pisidian Antioch saw a revival of Latin and of prosperity in the 4th C. It remained a stronghold of paganism—centered on its temple of the moon god, Men—until ca.400, when the temple was destroyed and replaced by a church. Remains, which include a church with a floor mosaic of ca.380, indicate an active civic life in late antiquity. Thereafter, Antioch was exposed to attack: the Arabs wintered there in 665/6 and destroyed it in 717. The city never really recovered, but it did remain the ecclesiastical metropolis into the 12th C. The Paulicians established their church, Philippia, here in the mid-8th C. In 1097, the First Crusade rested in the fertile plain of Antioch, which by then had been permanently lost to the Turks.

—C.F.

ANTIOCH ON THE ORONTE (now Antakya in Turkey), city about 25 km from the Mediterranean and its port at Seleukeia Pieria, situated between the Orontes River and Mt. Silpios, and crossed east to west by the Parmenios torrent. Seleucid Antioch came to replace Berroia as the principal city of Syria until the latter city regained preeminence following the Arab conquest (636/7). The evidence varies as to the size of Antioch’s population. In 363 Libanios referred to 150,000 anthropoi, while 250,000 or 300,000 people reportedly perished in the earthquake of 526 (G. Downey, TAPA 80 [1958] 87–90). Excavations in 1939–45 at Antioch, its port, and the suburb of Daphne, revealed large houses and five churches at the three sites; a circus, stadium, the cardo, and several baths in Antioch itself; and a theater at Daphne. The numerous tessellated pavements uncovered illustrate the development of floor mosaics from the 2nd to 6th C. As an imperial residence (of Constantius II, Julian, Jovian, and Valens) in the 4th C., Antioch expanded. In its
The city walls were extended by Theodosius II in 430/1, and numerous other emperors also erected public buildings at Antioch. At least four gates led into the walled city, which was 3 km long from the years 430 to 540 and 2.3 km thereafter, when it was approximately 1.6 km wide.

The Tetrarchic palace, public baths, circus, and stadium (built 5th–6th C.) were on an island in the Orontes excluded from Justinian I’s circuit wall, which reduced the defended perimeter of Antioch. The island was connected by a bridge with the heart of the city, which was constructed in part over the Parmentios and contained the Forum of Valens, the praetorium of the governor of Syria I, a public bath (the Kommodion), and a market. To the southeast of this lay the district of Epiphaneia built against the slopes of Mt. Silpios. Here were concentrated the bouleuterion, the praetorium of the comes Orientis, a law court, two tetrapylons, an antíphoros (an open space in front of a forum), various civil basilicas and stoas, and the Church of Sts. Kosmas and Damianos. The south gate of the city, beyond the Jewish quarter of Kerateion, led to Daphne with its theater, hippodrome, and closely spaced “country houses.”

Antioch was capital of the diocese of Oriens under the comes Orientis, provincial capital from ca. 350 of Coele-Syria, and from ca. 415 of Syria I under a governor, and seat of the magister militum for Oriens. Antioch was also the seat of a patriarch (see Antioch, Patriarchate of). In 451, Jerusalem (which had been a suffragan of Caesarea Maritima) became a separate patriarchate with control over the three provinces of Palestine; in 488, the church of Cyprus was likewise made independent of Antioch.

Antioch has been described (Jones, LRE 857f) as a consumer rather than a manufacturing city. Certain goods were, however, produced there in connection with its role as an administrative center. It had an arms factory and a provincial mint from the 4th C. to 611, with workshops producing ceremonial armor and, in the 4th C. and 602–10, silver vessels with silver stamps. Antioch was also a commercial center whose port linked the trade routes from the East with the Mediterranean. There were kommerkiaroi of Antioch from the 6th C. The city apparently had a large middle class: in the late 4th C. John Chrysostom claimed that only 10 percent of the population was wealthy and only 10 percent poor. The inhabitants of Antioch were, moreover, “urbanized,” preferring the suburban pleasures of Daphne to rural villa life (Liebeschuetz, infra 51). The country around Antioch was noted for its pasture land (Libanius, or. 11.23, 26), and the province of Syria I contained such agriculturally productive centers as Dimas and Kaper Barada.

The literary culture of Antioch was primarily Greek, and the use of Latin by the imperial government was considered an intrusion. The city was noted for rhetoricians, historians, and theologians. In the 4th C. all these came under the influence of the pagan rhetor Libanius whose pupils at Antioch included—in addition to numerous future civil servants—not only Ammianus Marcellinus but also the Christian authors Basil the Great, John Chrysostom, and Theodore of Mopsuestia. The last, the foremost member of the Antiochene School, which later came to include Theodoret of Cyrus, applied to the Bible the principles of Hellenistic exegesis learned from his teacher. A prolific church writer in Greek in the 6th C. was the Monophysite Severos of Antioch (although his works survive only in Syriac). Three types of historiography are represented by the works of Antiochene authors: the classical history of Ammianus, who followed Tacitus; the universal chronicle of Malalas; and the church history of Evagrios Scholastikos—the last following in the tradition of Eusebius of Caesarea.

Antioch was proud of a classical heritage that also manifested itself in art (e.g., in the personifications and mythological subjects of its 5th–6th C. pavements) and in a civic pride, best exemplified by Libanius’s Oration on Antioch. In 438 the city was flattered by another oration, that of the visiting empress Athenais-Eudokia, who alluded to the Athenian heritage that she shared with Antioch. The city responded appropriately with the erection of two statues in her honor by the local boule. Other classical traditions were maintained: curial building continued alongside public works financed by the imperial government. Although described by Prokopios in 540 as hedonistic and “not seriously disposed” (Wars 1.17.37, 2.8.6), the Antiochene mentality was then undergoing a change toward a collective religious
consciousness. When in 459 the body of Symeon the Stylist the Elder was brought from Telanissos into Antioch, the people refused to give it up to Emp. Leo I because they felt it would protect their city. The sanctification of the city proceeded when, after the earthquake of 526, a cross appeared in the sky and Antioch was renamed (528) Theoupolis in propitiation for contemporary calamities.

Like other cities, Antioch experienced incidents of urban unrest in the 4th–7th C. After the Riot of the Statues (387), when, in response to increased taxation, the population overturned the imperial images, both city and rioters were punished by Theodosios I: Antioch was for a time stripped of metropolitan rank and its baths, hippodrome, and theaters closed; some rioters were executed. Antioch also witnessed the intrigues of the imperial usurpers Gallus (died 354) and Illos (died 488). The first outbreak of violence at Antioch involving the Blue and Green circus factions occurred in the Hippodrome ca.490, with further riots in 494/5 and 507, when the charioteer Porphyrios was transferred to Antioch from Constantinople. The unruliness of the factions and financial problems led to the closing of the Olympic Games at Antioch in 520, but the theater was still in use in 531.

Religious divisions and conflict recurred in this period. Paganism continued late at Antioch: the sophist Isokias was prosecuted for pagan beliefs in 468, and in 562 two pagan priests from Antioch were brought to trial in Constantinople. In 578 a circle of pagans, exposed by popular protest, was said to include highly placed individuals in several cities including Heliospolis, Edessa, and, at Antioch, the patriarch Gregory himself, who was, however, acquitted. Antioch was also the scene of heretical conflict: until 378 the Arians at Antioch were alternately supported and persecuted by the resident emperors Constantius, Julian, and Valens. The local council of 341 (see under Antioch, Local Councils of) dealt with the problem of Athanasios and Arianism by drawing up four creeds. With the rise of the Monophysite movement in the 5th–6th C., the Chalcedonian patriarch Stephen was murdered (479) and succeeded by the Monophysites Peter the Fuller (died 488) and Severos (512–18). From 518, when a separate Monophysite patriarch was established in exile, local Monophysites were persecuted, notably by Ephraim, Chalcedonian patriarch of Antioch (526–45). In 610 there was an uprising of both Monophysites and Jews at Antioch.

Antioch served as a military administrative center between the 4th and 7th C. The large army stationed in the East was paid and provisioned from here. It was the headquarters of the magister militum (e.g., Zeno, Belisarios, Tiberios, Maurice) and served as a base for imperial campaigns led by Constantius, Julian, and Jovian into Persia in the 4th C. and for Herakleios’s defense against the Arabs in the 7th C. The city itself was besieged by the Lakhmids in 529 and taken and sacked in 540 by the Persians; the Sasanians led away many of the inhabitants and resettled them in a replicated Antioch at Ctesiphon. After an unsuccessful attack in 573, the Persians occupied the city from 609/10 to 628.

According to Downey the decline of Antioch was occasioned by the Persian sack of 540, after which the city was rebuilt by Justinian on a lesser scale but never recovered its former vitality. Lasus, however, has demonstrated that in the 2nd half of the 6th C. the reconstruction of the main street was on a large scale. Furthermore, the city was again rebuilt by Maurice in 588, following an earthquake, and in 592 Evagrios Scholastikos mentions by name as still standing many of the buildings erected from the 4th C. onward (HE 1.16, 18.20; 3.28; 6.8). From the late 6th through 10th C. Antioch’s local history is obscure. Physically, however, many buildings erected before the 7th C. still stood in the Arab (later Byz. and Crusader) city, as attested by Arab geographers, and Justinianic circuit walls enclosed the medieval city.

After Antioch fell to the Arabs in 636–37 (Donner, Conquests 148–51), it became part of a frontier district called al-‘Awāsim and was hardly mentioned. In 944 it was taken by the Ḥamdānid Saff al-Dawla, who lost it in turn to the Byz. generals Michael Bourzites and Peter Phokas on 28 Oct. 969. Nikephoros II Phokas described it as the third city of the world, noted for its beauty, strength, size of population, and impressive buildings (Leo. Diac. 73.12–15). While Arab geographers likewise praised its attractions, Ibn Hawqal complained in 978 of the damage inflicted there by the Byz. (G. LeStrange, Palestine under the Moslems [rp. Beirut 1965] 369). After its recovery by the Byz., Antioch was administered after 969 first
by a strategos and then a doux or katêpano (V. Laurent, MelUnivios 38 [1962] 221–54). It served as a base of military operations elsewhere in the region against the Hamânâdis and, starting in 974, the Fatimids, whose authority had extended into central Syria. The Seljuk invasions of the Caucasus in the 1040s drove the inhabitants of Armenia into northern Syria, where they infiltrated the government at Antioch until in 1078 Philaretos Brachamios established his rule there, becoming a vassal of the atatêg of Mosul. Six years later Antioch fell to the Seljuks and in 1098 to the Crusaders (see Antioch, Princedom of).

ANTIOCH, LOCAL COUNCILS OF. Antioch was the site of two notable local councils.

LOCAL COUNCIL of 324/5. This pre-Nicene council convened under the presidency of Hosius of Cordoba. Its purpose was to forestall, through its censure of Arianism, any favorable outcome regarding Arius at the first ecumenical council of Nicaea. Its relationship to the latter is underscored by its provisional excommunication of the Arian sympathizer Eusebius of Caesarea, whose formal rehabilitation or condemnation was left to Nicaea to decide. Additionally, its anathemas anticipate those adopted later by the general council. Furthermore, its censure of Arius was quite explicit—Christ was said to be begotten “not from that which is not,” but ineffably and indescribably from the Father—even though the council was unaware of the theological terminology subsequently used at Nicaea. The council’s existence was unknown until E. Schwartz discovered a Syriac translation of its synodal letter. Its authenticity is now generally assumed, although contested initially by A. Harnack (Sitzungsberichte der königlichen preussischen Akademie der Wissenschaften 26 [Berlin 1908] 477–91).

LOCAL COUNCIL of 341. The pretext for the convocation (6 Jan.) of this “Dedication” council (concilium in encaenatis) was the consecration (Enkainia) of the Golden Basilica, begun in the reign of Emp. Constantine I the Great. Ninety-seven bishops and Emp. Constantius II, an Arian sympathizer, attended. The four creedal statements associated with the council were intended to avoid, if not reject, the homoousian terminology adopted by Nicaea I; hence their subsequent condemnation by the orthodox party. The first of these statements, it is true, is susceptible to an orthodox interpretation, while the second is possibly based on the creed of Lucian of Antioch. Equally, the council was not intentionally disloyal to Nicaea. Indeed, it expressly denied that its members were Arians. Still, the council’s pre-Nicene theology was semi-Arian, as Athanasios of Alexandria and the Western episcopate perceived. Most scholars believe the so-called 25 disciplinary “Canons of Antioch” to be the work of this council.

SOURCE. Mansi 2:1395–50.

ANTIOCH, PATRIARCHATE OF, one of the earliest bishoprics. Its archiepiscopal status and jurisdiction received canonical sanction at Nicaea 1 when it was recognized, together with the bishoprics of Rome and Alexandria, as a major see of Christendom (canon 6). Given Antioch’s size and importance within the empire, the city—the capital of the civil diocese of Oriens—was the major ecclesiastical center in the East after Alexandria. In the 5th C., however, the patriarchate began to lose its prestige as well as some of its jurisdiction—the result often of imperial pressure. At the Council of Ephesus (431) it failed to annex Cyprus, which was declared autocephalous. Then, at the
Council of Chalcedon (451), its Palestinian dioceses were placed under the jurisdiction of the newly created patriarchate of Jerusalem. This reduced the see to eleven provinces. The religious crises of Nestorianism and Monophysitism and the simultaneous growth of the patriarchate of Constantinople also contributed to Antioch's weakness and dismemberment. Monophysitism, in fact, resulted in permanent schism dividing the faithful into Melchites and Jacobites and the formation of a separate "heretical" hierarchy within its borders.

After the Arab conquest (636) Antiochene metropolitans with provinces still under imperial control were placed under the jurisdiction of Constantinople. The vacancy in the throne that occurred after 702 ended only in 742 when elections were again permitted. After the Byz. reconquest (969) candidates were appointed by the emperor and often consecrated, as in the case of John III, by the patriarch of Constantinople, but Antioch did not sever its relations with Rome (J. Nasrallah, Istina 21 [1976] 184f, 375f). Eventually, though, the synod of Antioch was allowed to present its own candidates for the emperor's selection. The Crusaders' promise not to elect the patriarch was not always kept. The existence of a Latin patriarch along with the Orthodox of course caused frequent tension. During the Crusades and Mamluk period, the titular patriarchs of this once powerful see usually resided in Constantinople. The transfer of the see to Damascus occurred under the Mamluks.

ANTIOCH, PRINCIPALITY OF. Founded by Bohemund after he took the city, the principality included the lower Orontes valley, the adjacent coast, and occasionally parts of Cilicia. Alexios I and his successors never abandoned their claims to the region, which still had a substantial Orthodox population. Bohemund's promised allegiance (1108) was refused by Tancred. Prince Raymond of Poitiers was constrained by John II to render homage but avoided surrendering the citadel to the emperor. Following conflicts with John and Manuel I, Raymond had to visit Constantinople and renew his allegiance. After Raymond's death, his widow Constance married Renaud of Châtillon, who first allied himself with Manuel, then, in 1155, plundered Cyprus. In 1158 Manuel's advance through Cilicia obliged Renaud to beg for mercy. He acknowledged his vassalage to Byz. and promised to yield the citadel of Antioch and accept a Greek patriarch. In 1159 Manuel entered the city in triumph. After Renaud's capture by the governor of Aleppo-Berroia (1160), Manuel assisted Antioch. In 1161 he married Constance's daughter Maria of Antioch. His general Constantine Kalamanos was captured by Nur al-Din along with Bohemund III in 1164. After Bohemund was ransomed by Manuel, he had to introduce an Orthodox patriarch into Antioch (1165–70). About 1178 Bohemund married a niece of Manuel, but abandoned her when Manuel died. Thereafter, Byz. was too preoccupied to pursue domination of the principality, one of the long-term goals of the Komnenoi. Antioch was seized by the Mamluks on 18 May 1268.

ANTIOCH “CHALICE,” dated to the 6th C., an ornate silver goblet on a low foot, composed of a plain cup set inside an openwork shell decorated with a grapevine containing 12 seated figures (identified as two representations of Christ and ten Apostles). It was reportedly found at Antioch in 1910, as part of the Antioch Treasure (see Kaper Koraon Treasure), and is now in the Metropolitan Museum of Art, New York. Its first modern owners, Kouchakji Frères, maintained that the inner cup was the Holy Grail, which Christ used at the Last Supper and which, as a holy object, had been placed soon after within the protective and decorative outer cup. Although initially accepted by some scholars as a work of the 1st C., it was seen by others as either a late Roman object or a modern forgery; the general consensus is for a date of 500–550 (Age of Spirit., no.542). Now corroded and in fragile condition, its craftsmanship was of a high order, including
figures carved from solid silver. Its original function—as a chalice or lamp—remains unclear.

—M.M.M.

ANTIOCHENE ERA. In antiquity there was a proliferation of eras in which events were dated from some fixed starting point of purely local, rather than cosmic, significance. The era used at Antioch in Syria began on 1 Oct. 49 B.C. in honor of some event associated with Julius Caesar (probably the commencement of his dictatorship). It was established in 47 B.C. when Caesar visited Antioch. Each new year of the Antiochene Era began on 1 Oct., until some point in the second half of the 5th C. when it reverted to 1 Sept., thereby bringing it into line with the official Byz. year. The Antiochene Era continued in use until the time of the Arab conquest and was esp. employed by two 6th-C. Antiochenes, the chronicler John Malalas and the church historian Evagrius Scholastikos. To convert an Antiochene date to an a.d. date, subtract 49 for dates between 1 Sept. (or 1 Oct.) and 31 Dec., but 48 for dates between 1 Jan. and 31 Aug. (or 30 Sept.).

—B.C.

ANTIOCHENE SCHOOL, a conventional designation for a group of theologians (Diodoros of Tarsos, Theodore of Mopsuestia, John Chrysostom, Theodoret of Cyrrihus) active mainly in Syria in the 4th and 5th C. Unlike the Alexandrian School it had no formal institution, and the “Antiochene” theologians taught in different cities. The origin of the tradition is obscure; it is often connected with Lucian of Antioch who reportedly conducted a didaskaleion ca.270-312, but Lucian was probably an editor of the Old Testament rather than an exegete. Eustathios of Antioch, the anti-Arian leader, attacked the Alexandrian School and its allegorical interpretation of the Bible and thus set the foundation for future Antiochene exegesis and theology. One of its main points was an emphasis on “historical” (sometimes literal) interpretation of the Bible in the manner of classical philology and its commentaries on Homer; allegorical exegesis was not completely rejected but the Antiochenes criticized arbitrary associations between the Old Testament, the New Testament, and contemporary events. Their glorification of the human nature of Christ was closely connected with this “rationalist” interpretation of the Bible. The Antiochene stress on the immutability of the Logos, and accordingly the existence of two natures in Christ as “Son of God” and “Son of Mary,” led to a conflict with Alexandrian Monophysitism and to a moderate attitude toward Nestorianism. The “school” did not survive the 5th C.; some of its representatives were posthumously condemned in the 6th C. (see Three Chapters, Affair of the, and allegorical biblical interpretation won out over a rationalist historical approach.

—T.E.G.

ANTIOCHOS (Ἀντίοχος), or Antiochites (Ἀν-

τιοχ(ε)ίται), a name, later a family name, deriving from the city of Antioch where it was common in the 4th C. Several 5th-

C. Antiochoi were high-ranking officials in Constantine (O. Seeck et al., RE 1 [1894] 2491; PLRE 2:101-06): the eunuch Antiochos, Persian by origin, had much influence with Arkadios but was dismissed by Theodosios II ca.421; Antiochos Chouzon (died between 438 and 444), was prae-

torian prefect of the Orient (430) and a member of the commission on the Theodosian Code; his son was praecon prefect of the Orient in 448. Another Antiochos was prefect of Italy from 552 to 554. Some Antiochoi were active in cultural life: Antiochos, the rhetorician, bishop of Pilemais (Palestine) ca.400, is known as an adversary of John Chrysostom; another Antiochos, author of the Pandektes, a collection of biblical and pa-

tristic quotations, witnessed the fall of Jerusalem in 614—his identification with Antiochos Strate-

gos, however, cannot be proved. In the mid-

8th C., Antiochos, logothetes tou dromou, was a very influential politician; condemned by the council of 754, he was blinded and exiled. Another Antiochos was protostratego of Italy ca.763. Antiochoi of the 10th and 11th C. held military posts: Antiochos, father of Paul of Latros, was kones of the fleet; another Antiochos was doux of the Me-
LINGOI; the protospatharios Antiochos was doux of Calabria probably in the 11th C.; another Antiochos commanded a troop of Macedonians in 1081.

As a surname, Antiochos appears from the 11th C. onward: Leo Antiochos, Isaac I's general, fell in battle in 1057; Constantine was megas hetaiorites ca. 1094; his contemporary Michael Antiochos was primikerios of the external vestiaritai. The sister of Stephen Antiochos married Constantius, son of the sebastos Isaac Komnenos ca. 1100—the identification of the Isaac is impossible. The noble family of Antiochos was supposedly involved in a plot against Alexios I. In the 12th C. Gregory Antiochos was an official and a literary figure (see Antiochos, Gregory).

Several 11th- and 12th-C. Antiochitai are known, primarily from seals that preserve their titles but rarely their offices (e.g., Theocharistos, a fortress commander, or kastrophylax). Epigrams of the 12th C. also mention several Antiochitai, praising George for decorating a monastery and Theodore and John for supporting the poor (Lampros, "Mark. kod.," nos. 77.3, 82.11). The social character of the Antiochites family is unclear, esp. since their identification with the Antiochoi remains questionable. Apparently part of the 11th-C. military aristocracy, they seem to have lost their military functions after Alexios I. They possessed lands and supported monasteries; they produced a few intellectuals, including a military engineer ca. 1091 and an Antiochites who corresponded with Eustathios of Thessalonike. The names of Antiochos and Antiochites are rare in later centuries (PLP, nos. 1031–40); Theodore Antiochites (died 1407), a friend of John Chortasmenos, was John VIII's tutor in 1400–03.

ANTIOCHOS, GREGORY, high-ranking official, writer; born Constantinople 1125?, died after 1196. Antiochos did not claim descent from a noble lineage (Darrouzès incorrectly hypothesized his relationship to the Komnenoi), but his father was a man of means able to found a small convent. Antiochos was educated in Constantinople under magistros ton rhetoron Nicholas Kataphloron, Nicholas Hagiotheodorites, and Eustathios of Thessalonike. His first datable work is of ca. 1159. He gave up intellectual circles and his literary career, however, and entered the civil service. After a brief and unhappy period of private employment, he served in the imperial administration; in 1181 he was imperial secretary, then a judge. It is plausible that Antiochos supported Andronikos I and Patr. Basil II Kamateros (1183–86) and was forced to resign under Isaac II. He reappeared in the administration as megas droungarios ca. 1196. Antiochos was a defender not only of imperial omnipotence, but also of the senate; he favored "democratic" phraseology but stood aloof from military commanders. As a writer he was influenced by Eustathios of Thessalonike (esp. in letters addressed to the latter). He presents a vivid description, tinged with sarcasm, of the climate of Bulgaria and the Bulgarian way of life. He gives life to books and fruits, and endows animals with reason.

ANTIOCHOS STRATEGOS, author of a narrative on the capture of Jerusalem by the Persians in 614. The Greek original is lost, the text preserved in Georgian and Arabic versions. The identification of Antiochos Strategos with a contemporary monk Antiochos, author of the Pandeke, is not proved. Antiochos Strategos describes the siege of Jerusalem, stressing, on the one hand, the role of the Jews in the massacre and, on the other hand, the desire of the patriarch Zacharias (609–31) to conclude a treaty with the Persians and to prevent the pillaging of the city. The last chapter of the narrative is dedicated to the restoration of the True Cross to Jerusalem by Heraclios on 21 Mar. 631.

**ANTIOCH TREASURE.** See Kaper Koraon Treasure.

**ANTIPHON** (ἀντιφώνον), a selection from the Psalter, followed by a doxology, to be sung in the liturgy by two choirs in alternation. The singing of antiphona (antipallaion) is known from the 4th C. onward (Basil the Great, PG 32:764A). An antiphon may consist of several psalms, not necessarily consecutive; of one psalm only; or even of single verses. A refrain is not essential, but when found it is called hypopsalma, ephymnion, hypaecho, or Troparion—the name antiphon never being applied to the refrain itself. An archaic musical feature survives in the cadence of the antiphon, where the last four syllables of a line are applied mechanically, without regard for word accent, to four fixed, stylized melodic elements.

**ANTIPROSOPON** (ἀντιπροσωπών), a deputy, probably identical with the ek prosopou. The term is known from 995 onward (Livr. 1, no.8.10–11) and was used primarily in the 11th C. The earlier chrysobulls describe exemptions from the antiprosopoues of the strategoi, but a charter of 1081 (Lavra 1, no.43.45–49) mentions the duties of both military commanders and civil officials; in later documents the antiprosopon of the parathalassites is cited (nos. 55.32–33, 67.57). Seals dated by the editors to the 11th C. belonged to the antiprosopoues of the genikon (Zacos, Seals 2, no.957), of the sekron of the sakelle (Laurent, Corpus 2, no.817), and of an unspecified sekron (Zacos, Seals 2, no.851). —A.K.

**ANTIQUITY.** The Greco-Roman heritage was a powerful tradition, which, together with that of the Bible, influenced Byz. culture. From antiquity Byz. inherited the Greek language, the system of education, Roman law, the basic principles of rhetoric and literary style, and substantial forms of social and political organization. The Byz. did not differentiate themselves from their ancestors who lived in the eastern Roman Empire, but called themselves Rhomaioi and viewed classical Greek authors as models for imitation: Homer was the Poet, Aristotle the Philosopher, Galen the Physician, etc. They often compared events of their lives with episodes of Greek or Roman history, their institutions with those of the Greco-Roman past. Nevertheless, Byz. cannot be placed within the framework of antiquity.

First of all, the general social and cultural setting had changed: high antiquity was primarily an urban society, but after the 7th C. the empire lost its predominantly urban character; antiquity was a society of cives (“citizens”), united around municipia and gentes, whereas Byz. was family oriented; antiquity was pagan, while Byz. was consistently Christian, thus entailing a radical change in ethical values and the replacement of pluralistic approaches in philosophy by mandatory doctrine. The ancient heritage, always present, was in a state of constant flux. This was partly a natural result of the passage of time. Thus the vernacular, developing beneath the surface of written compositions, from the 12th C. onward overtly penetrated into written literature, first into poetry: meter based on the length of vowels—hexameter, etc.—was pushed into the background by meter based on accentuation; toward the very end of Byz. rhyme began to develop under Western medieval influences. The transformation of the ancient heritage was also connected with the change in the social and cultural setting. Even though the principles of Roman law remained alive in the works of 14th-C. jurists, the elaborate system of contracts was simplified, the distinction between ownership and possession confused, the law of marriage radically changed, and the impact of the totalitarian state on law grew substantially. Education also retained general patterns of the ancient system, but Christian textbooks were introduced, concern with physical development (gymnastics) was abandoned, elementary education shifted from the school of the paedagogus to the church, monastery, or the family circle, and the purpose of liberal education became the development not of a free and noble citizen, but of a state functionary or a high ecclesiastic.

Second, even though the Byz. referred often to classical authors they were more likely to cite late Roman masters. In an analysis of Byz. attitudes toward the past, I. Ševčenko *infra* [1987–88] 20–
24) has suggested three phases, corresponding to the 4th–6th C., the 7th–11th C., and the 12th–15th C., respectively. During the 4th–6th C., there was a manifest familiarity with antique authors. In the 7th–11th C., Byz. writers made greater use of late antique models than of ancient Greek authors. Thus the works produced in the 10th C. under the patronage of Constantine VII Porphyrogennetos more frequently cited the Old Testament, Hellenistic and late Roman authors, even authors of the 6th–9th C., than Homer or Demosthenes. Similarly the Bibliotheca of Photios cites a number of late Roman historians while ignoring classical poetry. Finally, during the 12th–15th C., admiration for classical Greek authors revived, and Byz. scholars prepared commentaries on and new editions of the writings of high antiquity.

Third, there was an ideologically mandated ambivalent attitude toward antiquity among Byz. lay and ecclesiastical literati. Conditional veneration and respect had to go side by side with official rejection—this ambivalence was codified by church fathers (esp. the Cappadocians), who repudiated paganism, mythology, theater, “licentious behavior,” luxury, and the ideology of success, but in practice retained most elements of Hellenic culture (as transmitted by the Second Sophistic) as a powerful means of education and mental training. In the 10th and 11th C., involvement in the study of antiquity and ancient philosophy could make one liable to accusations of anti-Christian attitudes, and a few literati discussed the images of mythology and history to claim that “our” events are more significant, more virtuous, and more beneficial than those of antiquity. It must be remembered that more than half of surviving Byz. literature, for example, hagiography and hymnography, was virtually devoid of any influence from or allusions to classical authors.

Not many Byz. were able to understand the achievements of antiquity as well as did Michael Psellos or Eustathios of Thessalonike; cases of misunderstanding and distorting of tradition are numerous. Sometimes this distortion reflected a Byz. perspective: when Photios read Herodotus, he remained lukewarm to the development of Athens as a democratic republic—in his perception Herodotus was a historian of Persian basileis and of a Persian usurper; Eustathios used Homeric images to criticize excessive asceticism.

The concept of antiquity varied, depending on a Byz. author’s social and educational level. Thus the world chronicle of Malalas mentions almost nothing about Periclean Athens, but a great deal about Roman history, esp. the imperial period. On the other hand, Nikephoros Blemmydes is well informed on Persian campaigns against Athens. The concept of antiquity also changed as time went on. The late Roman period assumed antiquity to be a living phenomenon. Consequently, we view the philosophy of this period, represented by Proklos, Olympiodoros of Alexandria, and even John Philoponos, as a branch of ancient philosophy, while in 6th-C. Italy Boethius continued the same tradition. Historians such as Prokopios of Caesarea also worked in the classical vein and even many church fathers were educated in the principles of classical rhetoric and applied it to their sermons. It was probably the art and architecture of the period that diverged most from the antique ideal.

The second half of the 7th C. and the 8th C. were difficult times, when much of the learned tradition, including the ancient heritage, was lost. It is therefore logical that the next period of material and cultural revival—which acquired, undeservedly, the title of “Macedonian renaissance”—was devoted primarily to the retrieval and collection of the cultural, including ancient, heritage; from the Bibliotheca of Photios to the Souda the main tasks were the reediting and copying of the surviving texts, the accumulation of excerpts and fragments, and the ordering of scraps of information.

The situation changed in the 11th and 12th C., when the simple collection and organization of materials was replaced by commentaries and the development of the heritage. An advance was made from the satisfaction of practical needs (mathematics, agriculture, moral “science,” political “science”) that was predominant in the 9th–10th C. to an aesthetical perception of antiquity. The study of Homer, the tragedians, and Aristophanes progressed from the copying of scholia typical of the 9th and 10th C. to the essays and detailed commentaries of scholars such as Michael Psellos, Eustathios of Thessalonike, and John Tzetzes; a very nonorthodox Lucian was broadly copied and imitated, and Plato gained popularity on a level with Aristotle. There was a trend to combine both heritages—the ancient and the biblical—and direct comparison with personages of.
myth and ancient history became legitimate. Scholars and writers like Psellos, Tzetzes, and Eustathios had an enormous, if antiquarian, knowledge of ancient events, names, and terms. Thus reacquired in the 9th–12th C., after a short gap around the 8th C., the ancient tradition was not lost during the Palaiologan period. The greatest achievements of Byz. classical philology occurred during that period, in the work of Maximos Planoudes, Thomas Magistros, and Demetrios Triklinios. As a result of contacts with the West, the Byz. concept of antiquity was even expanded to the Latin heritage, including poets such as Ovid. Pletion made the most passionate attempt ever to use ancient tradition as a tool for reorganization of society and its beliefs, or at least as a vehicle for criticism of its social, political, and religious shortcomings. It was, however, impossible to restructure the Byz. world and to achieve a Platonic utopia. Moreover, the Byz. began to feel some weariness with regard to antiquity: Theodore Metochites was extremely well read in ancient literature (albeit he sometimes misunderstood his reading), but he complained that the ancestors of the Byz. had said everything so perfectly that there was no room for improvement by posterity. This awe of antiquity was in stark contrast to a Renaissance perception of ancient culture as exemplary, but distinct from the present.

ANTIRRHEETIKOS (ἀντιρρητικός), "refutation," a genre of polemical literature; often used as an adjective with such nouns as logos, kepalaia, and biblion. The word is rare in classical Greek (e.g., Sextus Empiricus 1:21), but Photios (Bibl., cod.160) uses it as a generic term when he writes that Chorikios of Gaza produced panegyrics, mono-

dies, epithalamia, and antirrhetics; by the last term Photios probably meant Chorikios's refutation of the common views that attacked the theater. Palladios in the Lausiac History (ch.38, ed. C. Butler [Cambridge 1898; rp. Hildesheim 1967] 2:121.1–2) relates that a certain deacon Evagrios wrote three books against demons, one of them entitled Antirrheikon. From the 9th C., when Patr. Nikephoros I and Theodore of Studios issued their antirrhetics against the Iconoclasts, and esp. in the 12th–15th C., the term designated treatises refuting heretical tenets: thus Nicholas of Methone devoted an Antirrheis to the refutation of Soterichos Pantugenos, and George Moschabari and John XI Bekkos exchanged antirrhetics (Beck, Kirche 678, 683); an anti-Palantine Arsenios wrote several antirrhetics against the Latins (Beck, Kirche 722), and Patr. Philoteos Kokinos composed antirrhetics against Gregoras. —A.K., E.M.J.

ANTI-SEMITISM. In Byz. anti-Semitism was manifested primarily in legal, secular, and religious texts; iconography; and periodic forced baptism of Jews. The economic rivalry and mob violence that characterized post-11th-C. Western Christendom appeared late in Latin-controlled areas such as Crete and Corfu. Theodosios II's codification of many local or ad hoc anti-Jewish laws effectively reduced Jews to a second-class citizenship, prohibiting proselytism, government or military service, and use of public baths. The Codex Justinianus interfered with their hitherto guaranteed social and religious autonomy as a religio licita (nov.146). Subsequent Byz. law codes (Basilika, Ecloga) and legal collections (Harmenopoulos) perpetuated some restrictions. Parallel Muslim discrimination, Jews were forbidden to ride horses.

Benjamin of Tudela observed that 12th-C. Greeks hated Jews (particularly tanners); further evidence of this prejudice is found in Anacharsis's snub of social climbers and Tzetzes' outright nastiness; the introduction of a humiliating oath; and their expulsion from Choni by Metri. Niketas. This secular and intellectual animosity was replaced under the Palaiologoi by concern over Jewish influence. Patr. Athanasios I protested their importance at court and in the market and objected to Byz. recourse to Jewish doctors; he tried
to banish all Jews from Constantinople. So too Maximos Planoudes complained of Jewish tanners housed in an abandoned monastery.

Byz. anti-Semitism derived mainly from polemics that justified the Christian appropriation of the Bible by denigrating Jews and Judaism. Byz. ecclesiastics effectively used the chastising and polemical language of the Septuagint and New Testament against Jews. In his *Evangelical Demonstration*, Eusebios of Caesarea emphasized Paul’s teaching of God’s rejection of Old Israel and Christ’s salvation of New Israel. Patristic and later sermons (John Chrysostom’s attack on the Jewish Sabbath) and hagiography (the vita of Basil the Younger even questions whether Jews can attain salvation) influenced the masses as did an iconography that depicted Jews as Christ-killers. In marginal Psalter illustration they are physically caricatured, to the point of being given dogs’ heads, and are shown tormenting Christ. Athanasios I refers to the “deicial synagogue”; and from the 11th C., in MS illustration the personification of Synagogue (see Ekklesia) is driven from the crucified Christ by an angel, while the apocryphal story of Jephonias the Jew, whose hands are cut off for upsetting the Virgin’s bier, enters images of the Dormition. Indeed, Jews were frequently accused of desecrating icons while Jewish insults to icons are an abiding theme in hagiography. A vocabulary of rejection permeates church canon and liturgy (esp. in Jerusalem). Theological polemics continued as a popular literary genre, for example, Matthew Blaistes and John VI Kantakouzenos. The non-Orthodox practices and beliefs of heterodox Christians (pejoratively called “Jews”) were rejected or punished as “judaizing,” as in Latin azymes. Even Iconoclasm was blamed on the Jews; for example Photios (Hom. 17.3) attributes the destruction of the apse mosaic of Hagia Sophia, Constantinople, to a Jewish hand. Christian ecclesiastics recognized and feared the passive challenge of Judaism both as ideology and system of practices and its potential appeal to Christian converts, heretics, and rebels against the state religion. Condemnation of Judaizing heresies—Quartodecimanism, Novatianism, Tetradism, etc.—permeate Byz. legislation. Judaism thus became the perennial foil against which Christian Byz. expressed its self-identity. (See also Jews and Judaism.)

—A.K., I.S.

ANTONINA (Ἀντώνινα), wife of Belisarios; born Constantinople (?) ca.484, died probably Constantinople after 548. She was the daughter and granddaughter of charioteers in Constantinople and Thessalonike. Her mother may have been an actress at Constantinople. Married to an Antiochene merchant, Antonina had one legitimate daughter and no legitimate sons before being widowed. She married Belisarios and accompanied him to Carthage in 533 and thence to Italy in 535/6; she was at Porto during the siege of Rome by Totila in 546. Antonina remained at Constantinople when Belisarios was ordered to lead armies against the Persians in 540, but later set out to join him. Prokopios accuses her of sinister political influence on Justinian’s wife Theodora (e.g., contriving to depose Pope Silverius [536–37] and undermine John of Cappadocia) and of conduct that made Belisarios look foolish, allegedly including a romance with her adopted son Theodosios and the execution of two pages to hide the affair.

—W.E.K.

ANTONY (secular name Dobrynja Jadreković), archbishop of Novgorod (1210–22, 1223, 1225–28); died 8 Oct. 1232. He authored a description of Constantinople, Kniga palomnik (The Pilgrim Book, ca.1200), and possibly also the Tale of the Taking of Tsar’grad [by the Franks] (M. Aleškovskij, Povest’ vremennyh let [Moscow 1971] 71–83). The most detailed account of Constantinople’s sacred sites immediately preceding 1204, the Kniga palomnik is esp. valuable for its information on objects destroyed or looted by the Latins, such as the icon of Christ Antiphonites taken from the Chalkoprateia. It describes sites in Constantinople, Pera, and Galata as well as Hagia Sophia, where Antony pays particular attention to the relationship between the church’s layout and the conduct of services, although he is not above inventing pipes, a cistern, and “patriarchal baths” in the galleries. Antony is esp. interesting on the use made of relics—the head of Stephan the Younger carried around Constantinople by the city eparch on the saint’s day—and miraculous objects: a door bolt, called the Romaniston, located somewhere in Hagia Sophia, would draw the venom from snakebites. Antony also notes items of specific interest for the Rus’ (two tombs, an icon and church of Boris and Gleb) and provides the only known reference to an embassy to Constantinople from Roman of Galč (Galitzza) in 1200. The literary and formal qualities of the Kniga palomnik have been variously interpreted as either a plain and factual guidebook with anecdotal digressions or as a rhetorical narrative in which Constantinople is presented as a model.

—S.C.F., A.C.

ANTONY I KASSYMATAS (Ἀντώνιος ὁ Ἐκκασυματας), patriarch of Constantinople (ca. Jan. 821–Jan. 837?); baptismal name Constantine. Of low birth, he received a good education and became a lawyer (nomikos) in the Sphoraiou district of Constantinople ca.800. Subsequently he became a monk and then hegumenos of the Constantinopolitan monastery called Ta metropolitou (Janin, Églises CP 197). By 814 he was the Iconodule bishop of Syllaiou; when Emp. Leo V ushered in a new period of Iconoclasm, however, Antony shifted his position, tempted by the offer of the patriarchate (Script. incert. 350–52). In 814 he became a member of the committee headed by John (VII) Grammatikos that prepared a florilegium of scriptural and patristic passages supporting Iconoclasm. In 821 Emp. Michael II named Antony patriarch, thus disappointing Theodore of Studios, who hoped that Nikephoros I might be recalled to the patriarchal throne. Around 822 Antony excommunicated Job, patriarch of Antioch, for proclaiming Thoma the Slav empeor (RegPatr, fasc. 2, no.412). According to the Letter of the Three Patriarchs (ed. L. Duchesne, Roma e l’Oriente 5 [1912–13] 359), Antony participated in an Iconoclast council (of uncertain date) and, as divine punishment, was stricken with a loathsome
disease. The sources differ on the length of his patriarchate, ranging from 12 to 16 years. V. Grumel argues that Antony was still alive in Apr. 836, but gravely ill, and continued to be patriarch until 837, when he was succeeded by his synkellos, John VII Grammatikos (EO 34 [1935] 162–66, 506). He was anathematized in the SYNODIKON OF ORTHODOXY (ed. Gouillard, “Synodikon” 57.173).

LIT. RegPair, fasc. 2, no. 112. Lemere, Humanism 161f. Laurent, Corpus 5.1, no. 4. —A.M.T.

ANTONY II KAULEAS, patriarch of Constantinople (Aug. 893–12 Feb. 901 [Synax.CP 461]) and saint; feastday 12 Feb. The scanty facts of Antony’s biography are known primarily from a 14th-C. vita by Nikephoros Gregoras. According to this source, Antony lost his mother as a child, became a monk at age 12, was subsequently ordained, and elected hegumenos of an unnamed monastery. He then came to the attention of Emp. Leo VI, who made him patriarch; Antony supported the emperor against Photios. Gregoras emphasized the charitable works of the patriarch and praised his acts of social justice.

Antony is best known as the founder or restorer of the monastery known variously as tou Kaleos, tou Kalliou, or tou Kaulea. After 1192 the foundation was called tou kyr Antoniou. Emp. Leo VI preached at the dedication of a church in this monastic complex (ed. Akakios, Leonios tou Sophou panegyrikoi logos [Athens 1868] 243–48), describing its mosaics, pavement, and polychrome marble revetment. This text, outlining a conventional program of church decoration of the 9th–10th C., is notable for the analogy drawn between the splendor of the mosaics and that of the emperor’s entourage. Antony was buried in this church, as was Stylianos Zaoutzes. The vita by Gregoras describes a number of posthumous miracles at Antony’s shrine.

ANTONY IV, patriarch of Constantinople (Jan. 1380–July 1390; early 1391–May 1397); died Constantinople May 1397. A former hieromonn, perhaps from the Dionysiou monastery on Athos (F. Tinnefeld, JÖB 36 [1986] 106 and n.130, 115), Antony served twice as patriarch under John V and Manuel II. He was deposed in 1390 during the occupation of Constantinople by John VII Palaiologos and temporarily replaced by Makarios (who had previously been patriarch during 1377–79). Antony was restored to the patriarchate after Manuel regained his throne.

Antony is best known for a letter addressed to Grand Prince Basil I of Moscow, probably in 1393 (Meyendorff, infra 254), which not only asserts the universal spiritual authority of the ecumenical patriarch but also defends the universal sovereignty of the Byz. basileus, even though the empire was severely weakened by Ottoman invasions. In response to Basil’s statement, “We have a Church, but not an emperor,” Antony replied, “It is not possible for Christians to have a Church without an emperor,” and urged that the name of the Byz. emperor be restored to the diptychs in Moscow. Antony also corresponded in 1397 with Jagiello, grand duke of Lithuania (1377–1434) and king of Poland (1386–1434), saying that he would consider UNION OF THE CHURCHES if Jagiello joined Sigismund, king of Hungary (1387–1437), in a crusade against the Turks. Three of Antony’s seals survive (Oikonomides, Dated Seals, nos. 155–57).

ANTONY THE GREAT, Egyptian hermit and saint; born Kome, Upper Egypt, ca.251, died Pispir 356; feastday 17 Jan. Antony is often cited as one of the founders of the eremitic form of MONASTICISM.

Born to a prosperous peasant family, Antony gave away all his property and withdrew from society in order to follow strict asceticism. After a period of complete isolation in an abandoned fort, he began to attract followers. Together they settled at Pispir in the Egyptian desert. Here the monks lived separately but received guidance from their leaders.

The Life of Antony (356–57), attributed to ATHANASIOS of Alexandria after a Coptic original,
made him the model for many Christians, even outside of Egypt, who were drawn to the solitary life. In the *Life*, Antony is depicted as the perfect man who follows moderate ascetic practices, supports the church hierarchy, and performs miracles with divine assistance. According to the *Life*, he visited Alexandria to support Athanasios against the Arians. But there is no independent confirmation of his anti-Arianism; in the sayings and letters, Antony addresses practical and ethical questions only.

Antony was Coptic-speaking, not Greek-speaking, and probably dictated his letters in Coptic, even though it is not impossible that a Greek papyrus contains a fragment of Antony’s letter to Am[on?], his pupil (G. Garitte, *Muséon* 52 (1959) 17, n.23). The letters of Antony are preserved in two collections: seven letters surviving in Latin translation are usually considered genuine since Jerome mentioned a collection of Antony’s letters in seven parts—but Bardenhewer (*Literatur 3:81*) questioned their authenticity; a collection of 20 Arabic letters is attributed to Antony. In addition, some Georgian, Syriac, and Coptic letters and fragments are known. The Sahidic vita of Pachomios contains fragments of two of Antony’s letters. Some forged texts exist under his name, including monastic rules. Some of his sayings were incorporated into the *Apophthegmata Patrum*.

—J.A.T. A.K.

**ANTONY THE YOUNGER**, saint; baptismal name John; born Phossaton near Jerusalem 785, died 11 Nov. 865. Born to a noble family, Antony left for enlisted in the navy, and was eventually promoted by Michael II to ek prosopon (deputy governor) of the theme of Kibyrrhaiotai. He successfully fought against Thomas the Slav in 822/3, but in 825 abandoned his post to become the disciple of a stylist monk. He took the monastic habit and lived in various monasteries on Bithynian Olympos and in Constantinople. Antony was very close to Petronas, whose victory over the Arabs (863) he predicted.

His picturesque vita, written by a contemporary and preserved in 10th-C. and later MSS, is rich in information about Byz. medical services, everyday life, law, and the administrative system; for example, the trial of Antony by the *epi ton deeseon* Stephen in 829/30 is described in detail.

—A.K.

**ANZAS** (Ἀνζᾶς, Ἀντζᾶς), a family of civil functionaries. Their origins are variously described: Zlatarski (lst. 2:554) considered Ivan Anzas (Anço, his transliteration) a Bulgarian name; S. Rudberg (*Études sur la tradition manuscrite de saint Basile* [Lund 1953] 149f) thought it Italian. The first of them, John Anzas, assisted Theodoulos, archbishop of Bulgaria, in building the Church of Hagia Sophia in *Ohrid* in 1056. The family was active in administration in the second half of the 11th C.: Michael, quaestor and *nomophylax* (1077); John, notary (1087); Niketas, judge of the *velum* (1098). Some are known only by their seals (Laurent, *Corpus* 2:679), which are dated primarily to the same period: Constantine, judge of the *velum*; Nikephoros, sym- ponus; Niketas and Nicholas, judges of the Hippodrome. The Anzades served throughout the 12th C. as civil (Nik. Chon. 57:57) and ecclesiastical officials: Leo, bishop of Argos and Nauplia (ca.1143–57) and founder of the AREIA MONAS TERY, calls himself nephew of Constantine Anzas; the monk and *orphanostrrophos* Basil Anzas was the addressee of Manuel I’s ordinance of 1171. The last known Anzas, John, was an official responsible for assigning land to the Genoese in 1202.

**ANZITENE** (Ἀνζιτηνῆ), district of the eastern Byz. frontier, southeast of Armenia, commanding major routes through Armenia and across the Euphrates. Conquered from Persia by Diccrarian in 297, Anzitene was important for frontier defense until Justinian I conquered territory farther east. Under the Arabs, who took it in the 640s, Anzitene was a base for attacks against Byz. and
for control of Armenia. During this period, much of its Christian population immigrated to the more protected hills to the north. The object of frequent Byz. attacks, Anzitene was reconquered by 950 and assigned to the theme of MESOPOTAMIA. Anzitene, whose centers were at ARSAMOSATA and CHARPETE, is best known from the narrative of the campaign of Sayf al-Dawla in 956 and from the surveys and excavations at Asvan and the Keiban region that have revealed many details of local conditions in the Byz. period, which here ended after the battle of Mantzikert in 1071.

APA ABRAHAM, bishop of Hermonthis in Upper Egypt and hegoumenos of the nearby monastery of Phoibammon; born ca.554, died 624. His archive consists of more than one hundred Coptic ostraka, primarily letters, and his will, written in Greek but dictated in Coptic. The contents illustrate the power and prestige of the local bishop: supervising the requirements for candidates for ordination; celebrating the Eucharist and administering the provision of the bread and wine; choosing his successor as hegoumenos and disposing of his property; imposing ecclesiastical sanctions; being concerned with the morals and behavior of his flock; and protecting the interests of the poor. His encaustic portrait is preserved in Berlin (M. Krause in Zeitschrift für ägyptische Sprache 97 [1971] 106–11), and a liturgical book binding (inscribed with his name) and other altar furnishings from his church near Luxor are in the Coptic Museum in Cairo (M. Krause in The Future of Coptic Studies, ed. R. McL. Wilson [Leiden 1978] 10–12).

ED. W.C. Till, Datierung und Prospopraphie der koptischen Urkunden aus Theben (Vienna 1969) 52 (list of sources), P.Lond. 1 77. W.E. Crum, Coptic Ostraca (London 1902) nos. 49–76.

APAMEIA (Ἀπαμεία) on the Orontes River, now Arab village of Qal‘at al-Mudiq in modern Syria; capital city and metropolitan bishopric of the province of Syria II that was formed between 413 and 417. The Neo-Platonic school of IAMBlichos flourished there in the 4th C. A synagogue was paved probably in 391 by donors who recorded in inscriptions the size of the area that each had financed. Following earthquakes in 526–28, the tetraconch cathedral was rebuilt (?) in 533 by the archbishop Paul, and what may have been the governor’s palace was redecorated in 539, with a hunting pavement. An important relic of the True Cross was preserved at Apameia until its removal by Justin II (566 or 574). In 540 Apameia was stripped by the Persians of over 10,000 pounds of silver (Prokopios, Wars 2.11.2–38), and of yet more silver in 573 when they burned the city (John of Ephesus, HE 6.6). Following this event the cardo, an “atrium church,” numerous large private houses, and other buildings were rebuilt or repaired. Urban life continued at Apameia after the Arab conquest of 659 and came to an end only at some undetermined period thereafter.

In the illuminated Kynegetika of the pseudo-Opian (Furlan, Marciana 5, fig.37a), Apameia is represented as a walled city, dominated by a huge domed church and flanked by the Orontes between Mt. Diokleos and Mt. Emblonos.

APATHEIA. See Emotions.

APELATAI (sing. ἀπελάτος, lit. “one who drives away”), irregular light soldiers stationed along the frontiers who supplemented their military activities with brigandage, first appear under Basil I (TheophCont 685.5). Their duties primarily involved raiding (and plundering) enemy territory and acting as border-scouts and guides for Byz. expeditionary forces (De re militari, ed. Dennis 292.16–34). Apelatai were recruited from Armenian and Bulgarian freebooters and from Byz. soldiers otherwise unable to fulfill obligations for military service (De cer. 696.4); their commanders were appointed by Byz. provincial officials (De velitattione, 4:1.19–20). Apelatai were included in the muster rolls of themes, although it is unclear whether their remuneration comprised simply cash and rations or also stratistiotika ktemata. In western portions of the empire, apelatai were also termed chonsarii (Bulg. for “thieves”—Souda
APHRAHAT (" Aphraētēs"), Syrian theologian, often called "the Persian Sage"; died ca. 345. Under his name have come down 23 spiritual treatises called Demonstrations (Syr. tawīyāthā). He lived in the Adiabene region of Persia, east of Nisibis, and was of clerical status, though apparently not a bishop or monk, but rather one of the celibate "Sons of the Covenant" (Syr. Benai Qyāmā) who lived in the world. His Demonstrations range in date from 336/7 to 344/5; the last one was written during the persecution of Shāpūr II (M. Higgins, BZ 44 [1951] 265–71). The first 22 are numbered by the letters of the Syriac alphabet.

Theology and writings of Aphrahat draw extensively on the Old Testament, reflecting the religious milieu of 4th-C. Mesopotamia in which Christianity was seeking to define its identity as separate from Judaism. He praises Christ as the divine conqueror of death and as the completion and fulfillment of all the types and prophecies of the Old Law. Aphrahat is concerned with how to live as a Christian in this world, with prayer, charity, endurance of persecution, and concern for the poor; Demonstration 1 preserves an early credal text. There is an Armenian translation (ascribed to Jacob of Nisibis) of 19 of the Demonstrations; separate ones are also known in Ethiopic and Georgian.

APHRODISIAS (Ἀφροδισίας, now Geyre), city of Caria, notable for its extensive and well-preserved remains. Aphrodisias was metropolis of the province and had active schools of sculpture and philosophy. It was a seat of pagan teaching through the late 5th C. and had an important Monophysite church—sometimes with its own bishop—in the 5th and 6th C. Aphrodisias assumed the name Stauropolis in the 7th C., but by the 12th was usually known by the name of the province, Caria. It was sacked by Theodore Mankphas in 1188 and by the Seljuks in 1197; it became Turkish in the late 13th C.

Excavations have revealed much of Byz. Aphrodisias within its mid-4th-C. walls. The city centered on its cathedral church, formerly the temple of Aphrodite (converted in the mid-5th C.). Palaces with audience halls, probably of the bishop and governor, flanked the church. The agora to the south was apparently abandoned after a devastating earthquake in the 4th C. permanently altered the water table; many public buildings were rebuilt at that time. The south part of the city included baths, a basilica where the PRICE EDICT of Diocletian was displayed, and the theater, before which lay a large paved square. This became the main marketplace after the agora was abandoned, and commerce extended into the adjacent bath, whose basilica was converted into shops. The city was destroyed in the early 7th C. and never recovered. Thereafter, the theater became the main fortress and center of habitation. In the 10th/11th C. the cathedral was restored and a triconch church was built over the intersection of two abandoned streets.

APHRODISIAS, (Ἀφροδισίας, now Geyre), city of Caria, notable for its extensive and well-preserved remains. Aphrodisias was metropolis of the province and had active schools of sculpture and philosophy. It was a seat of pagan teaching...
underwent the regular procedure of allegorization, even if, in the decorative arts (Age of Spirit, nos. 288, 318), her image appears to have been used without ulterior significance well into the 6th C. Malalas mentions Aphrodite in connection with the story of Paris who proclaimed her the greatest of goddesses; in discussing the Judgment of Paris (Malal. 92f), he says that Aphrodite means desire from which everything is born—children, wisdom, temperance, skills, and all other material and intellectual things. In later literature Aphrodite appears primarily as a metonymy for sexual desire: Tzetzes (Hist. 9:16) calls Antony the prisoner of Aphrodite, while Niketas Choniates (Nik.Chon. 139.31–32) describes Andronikos I Komnenos as giving himself completely "to the orgies of Aphrodite." Choniates also reports that during the sack of Constantinople in 1204 the Crusaders destroyed a statue of Paris handing the apple of discord to Aphrodite (648.42–43).

The birth of Aphrodite is depicted in a MS in Paris (B.N. Coisl. gr. 293). In a MS from Athos (Pantel. 6) the goddess is shown bare-breasted and standing on a column.

APHTHARTODOCETISM | 129

APHTHARTODOCETISM (from ἀθάρτος, "in-corruptible," and δοκεω, "to seem"), a form of MONOPHYSITISM; the doctrine was formulated by JULIAN OF HALIKARNASSOS after his flight to Alexandria. In contrast to SEVEROS of Antioch, Julian denied any distinction between ousia and physis in Christ and thus saw in him only divine substance. Accordingly, he asserted that Christ’s flesh was incorruptible not only after the resurrection but from the moment of conception—like Adam’s flesh before the Fall. Christ’s suffering was contrary to the nature of his flesh but was the result of a miracle and due to his will. Julian based his soteriology not on the principle of man’s similarity to Christ but on the dissimilarity—Christ was incorruptible in order to free others from corruptibility. Thus, he distanced Christ from mankind even further than other Monophysites.

Aphthartodocetism was criticized by the Orthodox (esp. LEONTIOS OF BYZANTIUM) and by Monophysites (Severos of Antioch). The teaching spread in the East, esp. in Egypt where Julian’s friend Gaianos propagated it; he managed temporarily to seize the see of Alexandria in 535; thus his supporters were called Gaianitai. Some went so far as to assert that Christ’s body was not created, giving them the sobriquet aktistetai (Patr. Timotheos, PG 86:44C). Late in his life Justinian I saw Aphthartodocetism as a means to promote unity among his subjects, and in 565 he issued a new, lost edict supporting its teachings. The patriarch Eutychios refused to sign it and was exiled, but further difficulty was prevented by the emperor’s death.

APHTHONIOS (Ἀφθόνιος), rhetorician from Antioch and pupil of Libanius; fl. late 4th to beginning of 5th C. Of his abundant works only a textbook of exercises (Progymnasmata) and 40 fables (mythoi) survive. He used the textbook of Hermogenes and described the same types of exercises, but following the example of Theon (1st C.) reintroduced the psogos (inventive) as a genre side by side with the enkomion. Aphthonios was popular with the Byz., who praised his clarity, contrasting it with Hermogenes’ complexity; Tzetzes (Hist. 11.112–48) evaluates Aphthonios at length, emphasizing his use of Examples. The progyrmnasmata are, however, treated in isolation and not integrated with other aspects of rhetorical theory. Used for the teaching of rhetorical, Aphthonios’s exercises were extensively commented upon by John of Sardis, John Geometres, and John Doxopatres. Eustathios of Thessalonike and Thomas Magistros considered him as a paradigm of Atticism.

—E.M.J., A.K.

APICULTURE (μελισσοκομεία), beekeeping, provided the major source of sugar in the Middle Ages; Byz was not influenced by the diffusion of sugar cane in the territories of the caliphate (A.M. Watson, Agricultural Innovation in the Early Islamic World [Cambridge 1983] 24–30). Apiculture also supplied Byz. with wax for candles and with the ingredients of medical remedies and alcoholic beverages: the Slavic (?) word for honey as a drink, in the form medos (cf. mead), was known to Priskos of Panion. Ancient traditions of apiculture were preserved in the Geoponika, which devoted book 15 to the location and construction of beehives, the behavior of bees, and the harvesting of honey. Byz. apiculture stood on a high level. A 12th-C. Jewish writer from northern France, Samuel ben Meyr, wrote that beekeeping in “the Greek realm” was more developed than in his homelandland (S. Krauss, Studien zur byzantinisch-jüdischen Geschichte [Vienna 1914] 113).

Beekeeping is mentioned in various sources. The vita of St. Philaretos the Merciful reports that he possessed 250 beehives (boutia), and prak-tika of the Palaiologan era show that peasants might possess as many as 30 beehives (melissia; cf. Laev. 2, no.91.III.4). A special tax on beehives, melissennomion, was levied, and a special name for beekeeper, melissourgos, was in use. The gathering of honey from wild bees is mentioned in the vita of St. Lazaros of Mt. Galesios and illustrated in the Venice Kynegetika of pseudo-Oppian (Kádár, Zoological Illuminations, pl.183, 1), where a man is shown being attacked by a swarm of wild bees as he raids their nest. Ceramic beehives of the 6th–7th C. have been found at several sites in Greece.

The image of the industrious bee was frequent in Byz. literature; thus Neilos of Ankyra (PG 79:180B) calls the prophets bees and Holy Scripture their beehive.

—A.K., A.C., J.W.N.

APION (Ἀπίων), an Egyptian family of large landowners of uncertain origin. Before 328 Aurelius Apion was eparch or prefect of Egypt (PLRE 1:82), but there is no evidence that either he or Flavius Strategius, comites and praeses of the Thebaid in 349 (PLRE 1:858–59), was related to the family that came to prominence in the late 5th C. Apion I, apo hyparchon in 497 (whose identity with Apio Theodosius, praeses of Arkadia in 488, cannot be proved), served under the command of Areobindus in 503. He fell from favor in 510 but returned to court under Justin I and in 518 became praetorian prefect. His son, Flavius Strategius, was comes sacrarum lationum from 535 to 538 and an envoy to the Persians in 531; Flavius’s son Apion II was consul in 539, but by 548 or 550 he had returned to Egypt where he was subsequently dow of Thebaid, administrator (pagarches) of Arsinoë, and chief of the curia in Oxyrhynchus. His descendants (attested until 623) bore high titles (patricios, honorary consul) and maintained a palace near the Hippodrome of Constantinople; in 603 Pope Gregory I the Great advised Apion III not to become involved in political activity (evidently against Phokas). The basis of the family wealth was their estate (oikos) in Oxyrhynchus. The Apions were Monophysites until 532 when Apion I solemnly abjured that form of Christianity. Gascou rejects Hardy’s hypothesis that in the second half of the 6th C. the
APELETON (ἀπελέκτον, from Lat. applicatum), lit. fortified camp; in documents of the 10th–14th C. the term designates the billeting of troops. The privilege granted to Ioannina by Andronikos II in 1319 prohibited the billeting (aplekeusai) of a soldier (stratiotes) in the house of a citizen “against his desire and will” (MM 5:81.27–28). In some documents the term aplekton is paired with mitaton (e.g., Lavra 1, no.6.23; Koutloum. no.10.62), and it is not always possible to understand the distinction between the two. Since a chrysobull of 1086 speaks of “the provisioning and aplekton of an army heading for or returning from war” (Lavra 1, no.48.44–45), one can hypothesize that aplekton was short-term billeting.

APOCALYPSE (᾽Αποκάλυψις), revelation, a genre of Hebrew and Christian literature that describes prophetic visions of the future. Several Hebrew books (Enoch, Baruch, etc.) belong to this genre, and among the Nag Hammadi texts are Apocalypses ascribed to Peter, Paul, and James. The Apocalypse included in the New Testament, often called the Book of Revelation, has traditionally been attributed to John the Apostle; Eusebios of Caesarea, however, doubted its authenticity, and Amphilochios of Ikonion confessed that most people considered it spurious.

From the beginning, exegesis of John’s Apocalypse was tinged with eschatological expectations of the end of the wicked world. In the West, this radical interpretation was rejected by Augustine: according to him, the Apocalypse gave only the general outlines of future history, without going into detail; in the East, the eschatological interpretation of the Apocalypse was abandoned already by Origen, and later exegetes (Okoumenios, Andrew of Caesarea, Arethas of Caesarea) avoided the concept of the millennial reign of God on earth before the Second Coming (Pa-rousia). After Arethas, creative interpretation of the Apocalypse came to a standstill.

Among later apocryphal apocalypses are those ascribed to Elijah, Mary, and the apostles Thomas, John, and Bartholomew. Some apocalyptic prophecies name as their authors nonbiblical personages: they deal primarily with the political future of Byz. and its struggle against the Saracens (pseudo-Methodios of Patara, Leo of Constantinople) as well as the vision of sinners punished in Hell (Anastasia).

Apocalypse Illustration. Despite the considerable quantity of Byz. apocalyptic literature treating the end of the empire, only one text—the Oracle of Leo VI—was surely illustrated. However, biblical apocalyptic illustration abounded, ranging from private mortality images through the Majestas Domini and prophetic Visions to the Last Judgment. Based on Old Testament visions, on Matthew 19 and 24–25, and on Ephrem the Syrian, it almost never reflects the Apocalypse of St. John. Though read, and in three surviving MSS prefixed with an author portrait, John’s Revelation was not accepted as canonical until the 14th C. and left no imprint on the Byz. liturgy. Its influence was peripheral, both geographically (Egypt, where Revelation was accepted as canonical, and Cappadocia, home of the two Byz. commentators on Revelation) and in content, as art reflects commentaries and magical texts more often than Revelation itself. In Cappadocia, 9th-C. versions of the Prophetic Vision and Last Judgment include the 24 Elders, the sea of glass, the river of fire, the sea vomiting up its dead, and the angel rolling up the scroll of Heaven. Of these motifs, only the sea of glass is unique to John, and it vanishes by the 10th C. The other elements continue to be used, but all reflect modifications based on non-Johannine sources, such as the Elders who carry the letters of the alphabet associated with them in magical texts; if other elements survive in Last Judgment representations, they are also from texts other than John’s.

APOCRYPHA (ἀπόκρυφα, lit. “concealed or rejected [books]”), works that in their title, form, and contents resemble books of the Old Testament and New Testaments, but are not accepted in the biblical canon. The discussion of what is canonical and what is apocryphal lasted through the 4th C.; in the early 6th C., a cleric in southern Gaul presented, in the so-called Decretum Gelasianum, the first (incomplete) list of apocrypha. The Old Testament apocrypha are mostly translated from Hebrew; among those that underwent substantial Christian revision are the Testaments of the Twelve Patriarchs, the Martyrdom and Ascension of Isaiah, the Testament of Solomon, and the Sibyline Oracles. New Testament apocrypha were more varied. They can be categorized as apocryphal gospels, acts, letters, and apocalypses, following the main New Testament genres. Some of them are as old as the 2nd C. and probably originated in (or were eventually connected by their orthodox opponents with) a Gnostic or Manichaean milieu. Some of them are known from papyri fragments, some from MSS from NAG HAMMADI. Several apocrypha have survived only in Oriental, Latin, and/or Slavic versions.

Among apocryphal gospels one may distinguish, besides earlier (primarily Judeo-Christian) texts, those dealing with the childhood of Jesus (Protoevangelion of James, the Gospel of Thomas, the story of Joseph the Carpenter—written in Greek ca.400 but known only in Coptic and Arabic versions) and with his trial and execution (the Gospel of Nicodemus, various texts on Pontius Pilate, the Coptic gospel of Gamaliel). The 2nd-C. Gospel of Peter (known to Eusebios of Caesarea) tends to whitewash Pilate and to impose the guilt for Jesus’s execution fully on the Jews and Herod. The apocryphal gospels had to satisfy pious curiosity in the areas where canonical texts were reticent; they stimulated imagery in art (e.g., Anastasis, Dormition), but had a lesser impact on literature.

The case of apocryphal acts was different. Most are associated with the apostles Peter (esp. the so-called pseudo-Clementinae, which describe his travels and preaching), Paul, Andrew, John, and Thomas; the story of the apostle Thaddeus emerges in the legend of the Mandylion—both in the letter of Abgar and in the Doctrine of Addai (written in Edessa ca.400). The apocryphal acts were influenced by Greek erotic romances, with their journeys to exotic regions, themes of separation and recognition, and mirabilia; hagiographic elements are also very strong—suffering, imprisonment, and martyrdom, together with the resultant mass and individual conversions, constitute their essence. Church leaders judged the apocryphal acts severely: Amphilochoi of Iconion called them “diabolical works” (R.A. Lipsius, Die apokryphen Apostelgeschichten und Apostellegenden, vol. 1 [Braunschweig 1889] 57), while Photios (Bibl., cod. 114) says that the acts of Peter, John, Thomas, Andrew, and Paul, published by a certain Leukios (Lucius?) Charinos, originated in a heretical milieu.

The original apocryphal acts are mostly lost: from the Acts of Peter only fragments survive, including the description of his martyrdom under Nero; Andrew’s Acts can be tentatively restored on the basis of later (partially Western) tradition; a substantial part of John’s Acts, ending with his death in Ephesus, is known. Significant sections of the Acts of Paul have been discovered in papyri as well as in Latin and Oriental translations; the story of his life served also as material for the vita of Thecla. The Acts of Thomas were written in Syriac, probably in the first half of the 3rd C. in a Gnostic milieu. They are the only apocryphal acts to survive in full; Greek, Latin, Ethiopic, and Armenian revisions of them are also preserved.

Apocryphal epistles include the so-called Epistle to the Inhabitants of Laodikeia, a 4th-C. compilation from Paul’s epistles that is sometimes inserted in Latin Bible MSS; the forged correspondence between Paul and a converted Seneca that was already known to Jerome; a third Epistle to the Corinthians, Paul’s refutation of the Gnostic tenets, that was eventually inserted in the Acts of Paul; the Epistle of Titus (Paul’s disciple) on the virtue of virginity—probably a Spanish work of the 5th C.; the Epistle of Barnabas; the Epistle of James on Christ’s teaching after his resurrection—a text of Gnostic character (probably of the 2nd C.); the Epistle of apostles reporting their conversations with Jesus after his resurrection—
the text, which probably originated in Asia Minor ca.170, survives in full only in an Ethiopic translation. The Epistle to the Alexandrians has disappeared without a trace. The genre was not developed in Byz., even though a number of hagiographic and homiletic works on Barnabas, Titus, and other apostles appeared.

The apocryphal APOCALYPTES were also unpopular in Byz. The genuine Byz. “apocalypses” dealt with the political situation of the empire more than with prophetic vision of the eschatological future of humankind.

The genre of apocrypha was more widely diffused in Slavic, Caucasian, and Oriental literature than in Byz. It was esp. important for the elaboration of Bogomil ideology (see APOCRYPHA, BOGOMIL).

J.J.

APOCRYPHA, BOGOMIL. The Bogomils, in an effort to justify and propagate their teachings, made use of the Slavonic versions of several early Greek APOCRYPHA, among them The Book of Baruch, The Book of the Secrets of Enoch, and The Vision of Isaiah. Only one apocryphal work is known to be an authentic Bogomil creation: the Interrogatio Johannis (or Liber Secretus, i.e., “Secret Book”), brought to Italy ca.1190 by Nazarius, the bishop of a CATHAR community in Lombardy, who had obtained it from a high-ranking Bogomil in Bulgaria. It is a dialogue between John the Evangelist and Christ, who replies to his disciple’s questions about the origin of the world, Satan’s power over man (whose body Satan created), and the end of all things. Satan’s final defeat, after the destruction of this world by fire, shows that the cosmological dualism of this text is of the “moderate” variety. The importance of this document lies in its uniqueness: no other known work stems directly from the Bogomils. It survives in two slightly different Latin versions, one of them going back to a document, now lost, from the archives of the Inquisition in Carcassonne. Whether the original was Greek or Slavonic is uncertain.

AHOEIPNÖN (ἀπόδειπνον, lit. “after supper”), compiled, the liturgical hour that completes the monastic day with prayer for a tranquil night free from sin and evil dreams. First seen in the Longer Rules of St. Basil the Great (PG 31:1016A) and possibly originating with him, apodeipnon is a monastic duplication of VESPERS, which had formerly constituted the final hour of the day. Psalm 90, cited by Basil, is always central to the apodeipnon ritual. Byz. apodeipnon also includes other psalms, the DOXOLOGY, the creed, a kanon, the TRISAGION, Our Father, TROPARIA, the Kyrie eleison repeated 40 times, prayers, a rite of mutual pardon, and a final LITANY. In the Byz. HOROLOGION, there are two forms of apodeipnon: the mega apodeipnon, reserved for Lent and certain vigils, is a series of three offices, each with its own introductory and concluding prayers, while the mikron apodeipnon is an abbreviated version comprising select elements of the mega apodeipnon, esp. its final part. Apodeipnon was unknown to the cathedral rite of Hagia Sophia in Constantinople (see ASMATIKE AKOLOUTHIA), which had instead an evening service called pannychis (see VIGIL); cf. Mateos, Typikon 2:285, 311.

LIT. A. Raes, “Les Complies dans les Rites orientaux,” OrChrP 17 (1951) 133–45.

APOEIPCHON (ἀπό εἰπαρχον), or apo hoparchon, designation of a high-ranking official as well as an honorific title. To the first category belonged people like the apo eparchon poleos Theodore, a participant in the council of Chalcedon (451), and probably another Theodore, a 7th-C. “apo eparchon and eparch of Italy” (Zacos, Seals 1, no.2923). Unlike these high-ranking officials, ordinary apo eparchon, whose numerous seals are predomi-
nanty of the 7th C., were modest dignitaries often involved in the supervision of state workshops or toll collection; others were notaries, chartoularioi, droungarioi, etc. The title was granted to various intellectuals such as Zacharias, physician of Tiberios II; the historians Evagrios Scholastikos and Menander Protector; and Elias, the 6th-C. commentator on Aristotle. The origin of the title is obscure—Justianin I refers to it as an "ancient" one. The last mention is in the left 9th-C. Kletorologion of Philotheos, in which the term is an "ancient" one. The last mention is in the 12th-C. Zonaras (Zon. 3:737f.) relates that Alexios I sent to "the fields and villages" apographeis who introduced some fiscal innovations. Dölger argues that Zonaras used the term in a nontechnical sense, but in 1175 a certain Andronikos Kantakouzenos functioned as the doux and apographeus of the theme of Mylasa and Melanoudion. The term remained in use through the 15th C. Sometimes apographeis combined their duties with those of the governor (doux or kepheale). Their signatures are found on various prakta; they appointed the posotes of paroikoi and land to the monasteries (Laoua 2, no.97,1-5) or conducted merismos (Laoua 3, no.165,31-32). Land survey for tax purposes was called apographe or more elaborately apographike exostes kai apokatastasis (e.g., Pantel., no.17,9)—it involved the measurement of land and the assessment of taxes. Apographeis were usually local functionaries (of Thessalonike, Lemnos, and so on); an act of 1344 employs the term katholikos apographeus (Dochetar., no.23,22), even though the individual, John Vatatzes, is known as apographeus of Thessalonike (PLP, no.2518).

APOKOUKOS ('Αποκουκος, fem. 'Αποκούκκος), family known from the end of the 10th C. Basil Apokaukos was strategos of the Peloponnesos ca.990. Two other strategoi named Apokau-

cos are known from seals (Davidson, Minor Objects, no.2764; Schlumberger, Sig. 363). From the end of the 12th C. Apokaukoi served as metropolitans in the region of Dyrrachion and Naupaktos (see, e.g., Apokaukos, John). The position of the family at the end of the 13th C. is far from clear: Gregoras emphatically asserts (Greg. 2:577,20-21, 575,5) that Alexios Apokaukos belonged to an obscure and low-born family (see Apokaukos, Alexios), but in 1277 a certain John Apokaukos bore the high title of sebastophanhyperlatos and served, together with George Akropolites and Theodore Mouzalon, as witness to Michael VIII's treaty with Venice (MM 3:96,24). Alexios Apokaukos's high position served to promote the careers of many of his relatives, who functioned as governors of Thessalonike and Adrianople, megas droungarios, etc. The family lost its position after 1345, even though George Apokaukos was an archon in Constantinople in 1403. Another Alexios Apokaukos, a painter and friend of Joseph Bryennios, settled in Crete after 1402. Demetrios Kyritzis Apokaukos was in the service of Mehmed II after the fall of Constantinople.

Lit. Polemis, Doukai 101. PLP, nos. 1178-95. —A.K.
for him (M. Sjuzjumov, VizVrem 28 [1968] 23f), and he backed the Zealot revolt there. According to Kantakouzenos, Apokaukos instituted a "reign of terror" in the capital, arresting wealthy citizens and confiscating their property; the family and followers of Kantakouzenos, in particular, were targets of the mob violence and destruction. Apokaukos was murdered by aristocratic political prisoners (archontes) as he was inspecting construction of a new prison.

Apokaukos built a fortress on the Bosporos at Epibatiai and may have founded or restored a church at Selymbria (S. Eyice, Byzantion 34 [1964] 77–104; O. Feld, Byzantion 37 [1967] 56–65). He had a lively interest in medicine. He commissioned the deluxe MS of Hippocrates (Paris, B.N. gr. 2144) that includes his fine portrait (Spatharakis, Portrait 148–51, hgs. 96–97). The De methodo medendi of John Aktouarios is dedicated to Apokaukos.

APOKOMBION (ἀποκόμβων, also κόμβον), a purse in which the emperor carried coins to distribute on feastdays. The term is derived from the word kombos, meaning joint or knot (e.g., Gregory of Nyssa, PG 46:669B), since apokombia were small bags tied with a ribbon. Sometimes the purse contained only one nomisma as a symbolic gift to a poor person (Oikonomides, Lístes 181.9), while apokombia given to the patriarch might hold more than 100 litrai of gold (De cer. 182.8–11). A 10th-C. ceremonial book (De cer. 76.22–23) describes
how the emperor took the apokombion from the praispositos and placed it on the holy altar. Representations of the apokombion are found in the mosaic panels in Hagia Sophia, Constantinople, depicting Emp. Constantine IX Monomachos (N. Oikonomides,  

REB 36 [1978] 220) and John II Komnenos.

-A.K.

**APOKRISIARIOS** (ἀποκρισιαρίωσ, Lat. responsalis), in its ecclesiastical sense, the messenger or representative of a bishop or hegoumenos in dealings with higher authorities. The institution existed in the 5th C., but was first systematically established by Justinian I to prevent the heads of churches from neglecting the care and wasting the resources of their flocks in prolonged or frequent absences (Cod. Just. I 3; nov.6.2-3; nov.123.25). Apokrisiarioi were received by patriarchs and metropolitan from their respective subordinates, but the chief function of apokrasiarioi was to represent provincial churches at the imperial court. The most important patriarchal, archiepiscopal, and metropolitan sees maintained resident apokrasiarioi in Constantinople. Among famous churchmen who served as apokrasiarioi were Pope Gregory I the Great, who represented the Roman church at the imperial court (ca.578-86), and Demetrius Chomatenos, who represented the see of Ohrid at the patriarchate at the end of the 12th C. (For apokrasiarioi as a term for diplomat, see Ambassadors.)

-P.M.

**APOLLINARIS**, or Apollinarios, bishop of Laodikeia (from ca.360), theologian; born Laodikeia ca.310, died ca.390. A friend of Athanasios of Alexandria, Apollinarios polemicized against Arius and Diodoros of Tarsos and elaborated a Christology stressing the divine element in Christ; he taught that in Christ the human soul was replaced by the Logos. Later Apollinarius revised his views and proposed that Christ had a human body and soul, but "heavenly now" (reason). At first accepted as orthodox, Apollinarius played the role of Athanasios’s successor, but then became embroiled with Basil the Great. At the Council of Constantinople in 381 his teachings were condemned; he was eventually proclaimed a precursor of Monophysitism and a heretic, and his works were destroyed or preserved under wrong names (E. Cattaneo, Trois homélies pseudochrysostomienues sur la Pâque comme ouvrage d’Apollinarius de Laodicée [Paris 1981]). Jerome, who attended the lectures of Apollinaris in Antioch (P. Jay, REAug 20 [1974] 36-41), knew his exegetic works on the Bible, but found them inadequate. According to Sozomenos (Sozom., HE 5.18.3-4) Apollinaris tried to replace Homer with a work in epic verse on the antiquities of the Hebrews in 24 parts, in which he presented biblical history from Creation to the reign of Saul; he imitated Pindar, Euripides, and Menander in writing on themes of the Holy Scriptures. Apollinaris also wrote hymns for church services as well as songs in praise of God to be recited at work and play (Sozom., HE 6.25-4-5). According to Sokrates (Sokr., HE 3.16) he recast the New Testament in the form of Platonic dialogues, none of which has survived. Attribution to Apollinaris of a hexameter paraphrase of the Psalms (ed. A. Ludwich [Leipzig 1912]) is questionable.

**APOLLO**, Greek god of the sun, music, truth, and healing. His embodiment of the divinity of the sun (Hélos, Sol Invictus) caused his veneration to continue into late antiquity, as seen in Constantine I’s solar piety (Panegyrici Latini 7.177.10, a.321) and the 4th-C. statues identified as Apollo (G. Mansuelli, FeltRav 127-30 [1984/5] 291-95; the anecdote of the statue of Apollo brought by Constantine from Troy in Malal. 320.10-19). As late as 529, Benedict of Nursia tried to stamp out the worship of Apollo in the vicinity of Montecassino (Grégoire le Grand: Dialogues, ed. A. de Vogué [Paris 1979] 2,466-69). Since Apollo’s oracle at Delphi was the most famous in antiquity until its suppression by Theodosios I in 392, Byz. legend sought to attribute to it prophecies of the coming of Christ. A 12th-C.
APOLLONIUS OF TYANA (in Cappadocia), pagan wonder-worker and Neopythagorean philosopher of the 1st C., whose reputation survived well into the Byz. era. His legendary biography, written by Philostratos after 217, reflects the cosmopolitan worldview of the Roman Empire, making Apollonios travel to Babylon, India, Egypt, Ethiopia, and the Pillars of Herakles. The cult of Apollonios, who was considered a magician and miraculous healer, was promoted esp. in the 3rd C., and he came to be regarded by pagans as a rival to Moses and Christ. Sosianos Hierokles of Nikomedea (ca.307) argued that Apollonios was a greater worker of miracles than Jesus; Apollonios was also praised by Flavianus Nicomachus and in the Historia Augusta. His image appears on contorniates. Eusebios of Caesarea (PG 22:795–868) wrote a response ca.312 to the claims of Hierokles, denouncing Apollonios as a charlatan who was perhaps in league with evil spirits. None-
theless, the Christian world was slow to reject the cult of Apollonios. Until the 12th C. Byz authors (Malalas, Kedrenos, Tzetzes) mention him in favorable light, remembering his power to tame snakes and scorpions and describing the talismans erected by Apollonios in various cities to ward off fierce animals, noxious insects such as mosquitoes, and natural disasters. Whereas some Christian writers (e.g., the hagiographers of St. Therka and Anastasios of Sinai) denied the ability of Apollonios to work genuine miracles, for others he was a semi-Christian prophet. It is possible that a saint Basinas, known from a Greek prayer, may represent a transformation of Apollonios (Speyer, infra 63).

-A.K., A.M.T.

APOLLONIOS OF TYRE, hero of a novel disseminated throughout Europe in the Middle Ages. The extant Latin version dates from the 6th C. Whether the original was written in Latin or Greek has been inconclusively debated. Certainly the plot presents many of the characteristics of a Greek romance of the 2nd or 3rd C.: separations, false deaths, violent storms, a happy ending, etc.

Two versions in medieval vernacular Greek exist: one, in 852 unrhymed political verses, based on a Tuscan reworking of the Latin and dated to the 14th C.; and another, in 1,894 rhymed political verses, a free adaptation of the Historia d’Apollonio de Tiro of the Florentine Antonio Pucci (ca. 1310–80) and dated to the late 15th C. Despite a veneer of Byz. piety and the Italian intermediaries, the world in both cases remains that of late antiquity.

ED. Lat.—Historia Apollonii Regis Tyrii, ed. G.A.A. Korkeakas (Groningen 1984). Greek—(1) Narratio necrogrceca Apollonii Tyrii, ed. A.A.P. Jansen (Nijmegen 1954); (2) Venice 1534; rp. 1805.

ED: Beck, Volkstiliteratur 135–98.

APOLLOXONOS ANO PAPYRI, documents discovered by French excavations in a jar at Edfu in 1921–22, comprising the bilingual archives of the Apollinopolite pagarches Papas from ca. 648 to ca. 708. R. Rémondon published 104 Greek documents in 1953, but the Coptic pieces are still being edited. The Greek documents include official letters and orders from the Arab governor, memoranda from the topoteretes, requisitions of men and supplies for the cursus (expeditions against Constantinople), lawsuits, tax records, contracts, accounts, lists of goods, and private letters. The competence of the Arab emir’s Greek-speaking chancery is apparent, as is the problem of fugitives and their tax responsibility in their origo. The language of the documents displays the richness of official terminology that lived on in both Greek and Coptic long after attempted arabization of the chancery. These documents, along with the 8th-C. Aphrodite Papyri, furnish a richly detailed picture of local administration in Egypt as it was carried on by Christian officials still in responsible positions after 642.

-A.K., A.M.T.

APOLOGY (ἀπολογία), speech of defense or self-defense such as Plato’s Apology of Socrates. The term was esp. applied to the speeches of martyrs in defense of the Christian faith: thus, Eusebios of Caesarea (Eusebios, HE 5.21.4) relates that the martyr Apollonios gave “the most rational apology” before the senate. The apology of Justin Martyr (2nd C.) is the first example preserved of this genre. The earliest apologies were directed against the misconceptions of Christianity held by pagans and Jews. As Christianity gathered momentum, the apology acquired the character of polemic rather than defense: Athanasios of Alexandria used this title for the defense of his escape, for his apology addressed to Emp. Constantius II, and for his Apoletikos against the Arians. The conventional term “apologist” has been introduced by scholars to designate Christian writers of the 2nd–5th C. who both defended Christianity and refuted pagan or Jewish views. After the final victory of Christianity the term was rarely used: Anastasios of Sinai wrote a Tomos.
apologistikos. As late as the 15th C., however, Andrew Chryssoberges addressed an apology to Bessarion dedicated to the Palamite question (Beck, Kirche 743).

In a secular sense apology referred to a literary genre of self-defense (e.g., Arethas of Caesarea wrote an apology to explain his political position), a judicial defense (Ecloga 17.3, ed. Burgmann p.226.777), or—in the field of diplomacy—a rebuttal of importunate claims (De adm. imp. 1.2.21).

APOLYSIS. See DISMISSAL.

APOPHTHEGMATA PATRUM ("Sayings of the Fathers"), the anecdotes and maxims of the Egyptian DESERT FATHERS, preserved in various collections and languages. The core anthology is the alphabetic one (organized by speaker's name) compiled in the 5th or 6th C., perhaps by admirers of a certain Poimen who is disproportionately well represented. This collection is supplemented by a group of 400 anonymous sayings. They are written in simple language and offer practical advice on problems faced by cenobitic monks and hermits. Some sayings inculcate extreme asceticism and reflect an antipathy toward book-learning and women, while others are imbued with a common-sense attitude toward the rigorous life of the anchorite. They may be viewed, in part, as conscious Christian rivals to the many anthologies of maxims of pagan thinkers, while unconsciously providing one of the most fascinating sources of social and intellectual life in the late Roman period. Latin translations survive of four different collections, along with Arabic, Coptic, Syriac, Armenian, and Church Slavonic versions.

On the basis of two miniatures in the SACRA PARALLELA, K. Weitzmann suggested that some MSS of the Apophthegmata were richly illustrated (Weitzmann, Sacra Parallela 250, 262).

APOROS (ἀπόρος, "without means"), term with several related meanings, all derived from the general meaning "lacking sufficient resources"; the Farmer's Law (par.14) mentions aporoi farmers, incapable of working all their land, who contract with another party to cultivate a portion of it. As an economic term, aporoi normally designates the destitute, such as a widow left impoverished by her husband's death (Ecloga 2:7), and can serve to distinguish them from the working P O O R (Zepos, Jus 1:216.17). The term also denotes individuals unable to fulfill some legal or social obligation; here it does not refer specifically to poverty, although it still normally encompasses economically marginal elements of the population. An aporos thief is one who cannot provide the legally mandated twofold restitution of stolen property (Ecloga 17:11), an aporos captive is one unable to provide reimbursement for his ransom (Ecloga 8:2). The De ceremoniis (De cer. 696.1) contrasts poor soldiers who can still meet their obligations for military service with exaporoi, who cannot. In documentary sources, aporos is applied to: (1) ruined, uninhabited, or uncultivated land (Trincher, Syllabus, nos. 7, 5.10, 14) or (2) individuals who lack land to cultivate (Lavita 2, no.91. I. 55; 3, no.196.166). In this context, aporos may also designate those who for some reason are unable to work.

APOSTLES (ἀπόστολοι, lit. "envoys"), term applied primarily to the 12 disciples of Jesus. The synoptic Gospels and Acts of the New Testament list the apostles with slight variations that caused difficulties for theologians: John Chrysostom (PG 57:380f) noticed contradictions between the lists in Mark's and Luke's Gospels. Simon Peter is always at the head of the Twelve; he is followed by Andrew, James, or John; then in all lists are Philip, Bartholomew, Thomas, Matthew the tax-collector, and James, son of Alpheus; Thaddeus, Simon the Canaanite, Simon the Zealot, and Jude, brother of James, do not occur in all lists;
at the end of the list is Judas Iscariot who, after his treachery, was replaced by Matthias. Paul is also called an apostle, although usually distinguished from the Twelve. The title was extended to other personages (esp. the Seventy Teachers, the successors of the Twelve), to Thecla, and to Constantine I the Great; the term was further applied to priests, bishops, and esp. to the pope, the holder of the "apostolic see."

Tradition stressed the humble origin and lowly professions of the Twelve: Chrysostom calculates that four were fishermen and two, tax collectors, and emphasizes that their leader was illiterate (PG 57:381.7–12). Nevertheless, they were "trumpets of the Spirit" (Tarasios, PG 98:1437B), prophets, and performers of miracles. They were held to be administrators of the church, legislators who created the Apostolic Constitutions, the authors of scriptural writings, and itinerant teachers of Christian truth. The Byz. compiled various brief indices to all apostles (attributed to Ephipanios, Dorotheos, and Hippolytos), but Byz. apocryphal, hagiographical, and homiletic texts are devoted to individual apostles, rather than the group. Nevertheless, Symeon Metaphrastes composed a didactic poem in dodecasyllables on the apostles; Nicholas of Methone produced a treatise on the indwelling of the Holy Spirit in the apostles; and Philothoos Kokkinos wrote an enkomion on the Twelve, as did Makarios Choumnos and Gennadios II Scholarios. A number of important churches were dedicated to the Holy Apostles, such as those in Constantinople and Thessalonike.

Representation in Art. Toga-clad, sandaled, and shown at first as beardless youths, the apostles were slowly individualized: Peter and Paul by the 4th C.; Andrew, Philip, John, and Thomas by the mid-6th C.; the others later and less consistently. The apostles initially acclaim Christ or his Cross (Sarigüzel sarcophagus [Volbach, Early Christian Art, pl. 75]); dome mosaics in Ravenna or are the witnesses obligatory in Late Antique images of theophany—observing Christ's miracles or witnessing while participating (Transfiguration, Ascension). As the original community of the faithful, the 12 apostles symbolize the church. Thus appearances of Christ after the Passion are represented with 12, rather than the canonical 11, disciples to indicate each scene's importance in the history of the church; the symbolic composition of the Communion of the Apostles (see Lord's Supper) shows the church's foundation in the Eucharist; and episodes involving Christ and the apostles as a group—Dormition, Pentecost, Last Judgment—adopt formalized compositions emphasizing their church-historical significance. Scenes from the individual lives of the apostles are rare and, except for the three surviving Acts cycles, largely apocryphal in origin. There are cycles of their martyrdoms (Hagia Sophia, Ohrid) that sometimes include vignettes of their ministry (see Holy Apostles, Church of the; Soćani; S. Marco in Venice); images of their preaching accompany Psalms 19 and 105 in the marginal Psalters.

—J.L., A.K., A.W.C.

APOSTOLES, MICHAEL, teacher, writer, and copyist of MSS; born Constantinople? ca. 1420, died Crete? after 1474 or 1486. After studying in Constantinople with John Argyropoulos, Apostoles (Ἀποστόλης, Ἀποστόλος) taught briefly at the Museum of the Xenon of the Kral, located at the Petra monastery. When Constantinople fell to the Turks, he was taken prisoner; after his release, he went to Crete, where he spent most of his remaining years teaching private pupils. He failed to achieve financial backing to set up his own school in Italy, and complained frequently of his straitened circumstances. He was a Uniate and made frequent visits to humanist circles in Italy. Bessarion commissioned Apostoles to seek out old Greek MSS for his library or, where necessary, to make copies; he is known to have copied (at least in part) about 115 MSS for Bessarion and others (partial list: C.G. Patrineles, EPMesArch 8–9 [1958–59] 69f). Apostoles made an important collection of proverbs (ed. Leutsch-Schneidewin, Corpus 2:233–744) and maintained an extensive correspondence. His literary oeuvre also includes treatises in defense of Plato (J.E. Powell, BZ 38 [1938] 71–86), an essay on the proper method of teaching Greek to Italians, and rhetorical pieces. His Oration on Greece and Europe, written after 1453, asserts the cultural superiority of the Greeks over Westerners; at the same time he recognizes that the Byz. era is at an end, while Italy is at the beginning of a new age (D.J. Geanakoplos, GRBS 1 [1958] 157–62).
APOSTOLIC CANONS (Κανώνες τῶν Ἀποστόλων), a collection of 85 ecclesiastical law canons, allegedly written by the Apostles; they form an appendix (8.47) to the Apostolic Constitutions. The regulations, which are generally very short and in no particular order, concern mainly the qualifications and duties of clerics and occasionally the conduct of laymen; they contain mostly threats of punishment. In the 85th canon, the canonical books of the Old and New Testaments are enumerated with certain, such as the omission of the and men Constitutions. The sources of the collection are the Apostolic Constitutions and the canons issued in the 4th C., esp. those of the councils of Gangra, Antioch (341), and Laodicea of Phrygia. The author, given in the 85th canon as Clement (I of Rome), is not necessarily identical with the compiler of the Apostolic Constitutions but must have been likewise active in the last quarter of the 4th C. in Antioch. The work was translated early on into Syriac, Arabic, and Ethiopic; ca. 500 it was partially rendered in Latin (only the first 50 canons) by Dionysius Exiguus. Its authenticity (disputed by the Decretum Gelasianum) was expressly recognized in 691 by the Council in Trullo (canon 2); from then on, the Apostolic Canons stood at the head of all canon collections. In the 12th C. they were the subject of commentaries by Alexios Aristenos, John Zonaras, and Theodore Balsamon.

ED. P.-P. Joannou, Discipline générale antique (IVe–IXe s.) 1.2 (Grottaferrata 1962) 1-53.

APOSTOLIC CONSTITUTIONS (Διαταγαί τῶν Ἀποστόλων διὰ Κλήμεντος), a collection of ecclesiastical law and liturgical matters, divided into eight books. Books 1–6 represent an expanded version of the Didaskalia, an ecclesiastical rite that originated in Syria in the 3rd C. and was esp. concerned with penitential discipline. The first part of book 7 (chs. 1–32) contains an expanded version of the Didache, a work of catechetical and liturgical content composed in the 2nd C. in Syria; the second part (chs. 33–49) is composed of prayer formulas (among them the Great Doxology) and baptismal instructions. The main source for book 8 (chs. 3–45) is the Apostolic Tradition of Hippolytus, a 3rd-C. ecclesiastical rite valuable for its exact description of the early liturgy (the so-called “Clement Liturgy”). The Apostolic Canons are attached to the work as an appendix. The compiler, ostensibly authorized by the Apostles, was possibly an Arian (according to Hagedorn, infra, an otherwise unknown Julian) active in Antioch during the last quarter of the 4th C. The Council in Trullo of 691 (canon 2) condemned the work (with the exception of its appendix) as a heretical forgery. Nevertheless, it was often copied, although rarely in full. Only short excerpts entered the collections of canon law.

APOSTOLOS. See Praxapostolos.

APOTHEOSIS (ἀποθέωσις). Deification of a mortal (a hero or ruler) was an idea broadly spread in the Hellenistic world (Alexander the Great was granted apotheosis) and came to be accepted, under the Latin term consecratio, by Roman emperors—first as a posthumous ceremony, later during their lifetime. It was accompanied by endowing the emperor with the title divus (divine) and developing a system of signs symbolizing his ascent to heaven—eagle, pyre, chariot. The concept of deification reached its acme under Diocletian, whose epithet, Jovius, indicated his direct connections with Jupiter; it was retained by Constantine I the Great and his successors, down to Theodosios I, who received the consecratio from the pagan senate. Some changes were introduced under Christian influence—the cremation rite was abolished, and the symbol of the regenerating
Phoenix disappeared; Constantine’s coins minted for his *consecratio* represented only the chariot and the hand stretched from the cloud in expectation of the divus. This tradition was alien to Christianity, however, and by ca. 400 it fell into disuse, leaving only some remnants in court terminology (Treitinger, *Kaiseridee* 155–57).

The term apotheosis appears in Nestorian polemics: Nestorios accused his opponents of the concept of the apotheosis of Christ’s human nature (F. Loos, *Nestorian* [Halle 1905] 167.1–2, 274.12–14), whereas he preferred to use the term “conjunction” (*synapheia*). Metaphorically, apotheosis could designate the mystical ascent to God. The image of the risen Christ, borne aloft by angels at his Ascension, depends upon Late Antique images of apotheosis.

**APPANAGE**, a conventional term borrowed from the vocabulary of western European *feudalism* and appearing in Byz. historiography with two meanings.

1. In the narrow sense, appanage designates a nearly independent territory granted by the emperor to a member of the imperial family, usually a younger son, to secure the grantee a source of livelihood or to insure a political and administrative connection between the provincial territory and the capital. The grantee characteristically maintained his own court, army, fiscal and judicial systems, and often conducted an independent foreign policy. His income was derived from the exercise of administrative rights over the territory and from land he held within the territory, though the grant of the appanage itself did not implicitly include the right of hereditary transmission. While the practice of granting substantial estates to imperial relatives was effected as early as the reign of Alexios I, the idea of an actual administrative partitioning of the empire between princes of the ruling dynasty was first entertained during the reign of Michael VIII. The civil wars of the 14th C. spurred the creation of appanages. From the mid-14th C., at one time or another, almost every younger son of an emperor held an appanage and most of the areas remaining in the empire were held as appanages: Thrace, Thessalonike with Macedonia, Thessaly and, most importantly, the Morea.

2. In the broad sense, appanage is conceived as any imperial grant, revocable at the will of the emperor, of an important region or *demesne* in hereditary title to an individual or institution.

Ahrweiler (*Structures*, pt.1 [1964], 112–14) contrasts appanages as held by members of the imperial family, by ecclesiastical institutions, and by wealthy laymen with the military *pronoia*.

**APPEAL** (*ἐκκάθητος*). The institution of appeal to a higher court existed in Roman civil and criminal procedure and acquired a coherent character through the reforms of Diocletian and Constantine I the Great. If the defendant was not satisfied with the judgment, he could appeal to the emperor or to judges vested with imperial authority; in the late Roman Empire these were governors and *praetorian prefects*, the latter’s judgment being final. Later, the *eparch* and the *droungarios tes viglas* served as appellate judges. The notion that their decisions were unappealable was rejected in Byz. (Simon, *Rechtsfindung* 20). The patriarch also had the right to consider appeals against lower courts. Besides a formal appeal, a petition for the emperor’s clemency was permitted; it had to be addressed to the office of the *epiton deeseon*.

**APPARENCES OF CHRIST AFTER THE PASSION** are variously reported in the Gospels, there being 11 different episodes in all. In pre-iconoclastic art, only the Doubting of Thomas (Jn 20:24–29) and the *Chairete* (Christ’s meeting with two *Myrrphoroi*) were represented. In the former scene, Christ stands centrally, framed by the door and flanked by 12 (not 11) disciples, including Thomas, who touches Christ’s side (Ravenna, Sant’Apollinare Nuovo). The *Chairete* scene corresponds best with Matthew 28:9, though sometimes one of the women is labeled Christ’s mother, in accord with hymns of Romanos the Melode
that hail the Virgin Mary as the first to see the risen Christ. The art of the 9th–12th C. continued to emphasize these events, the Doubting of Thomas often being added to cycles of the Great Feasts. In addition, a formal composition of Christ's Mission to the Apostles was introduced (Tokali Kilise, Göreme), the 12 Apostles displacing the canonical 11 disciples (Mk 16:15–18) to indicate the scene's symbolic significance as Christ's mission to his Church. Only extensive cycles (frieze Gospels, Monreale) represent Mary Magdalene in the garden (Jn 20:14–17) and the episodes at Emmaus (Lk 24:13–32), Tiberias (Jn 21:1–14), or in the closed room (Jn 20:19–23). Fourteenth-century fresco programs in Serbia regularly include post-Passion cycles, though they vary in the selection of scenes (STARO NAGORIČINO, Gračanica).

APPRENTICE (μαθητής). Apprentices are mentioned in the 10th-C. Book of the Eparch only once—the candlemakers were ordered not to send their slaves or mathetai to sell their wares in unauthorized places. M. Sjüzjumov (VizVrem 4 [1951] 23) surmised that there was no difference between an apprentice and a misthios. The 10th-C. vita of Elias of Heliopolis (ed. A. Papadopoulos-Kerameus, PPSb 19–9 [1907] 45–48) gives more detail about apprenticeship: Elias was 12 years old when he was apprenticed to a carpenter; he worked in the ergasterion but also waited upon his master and was paid a salary (ekmisthoma).

Several contracts of apprenticeship, called didaskalikai, are preserved in Egyptian papyri. The number of late Roman didaskalikai is very limited and their content is vague. I. Fikhman (Egiyet 80) explains the infrequency of late contracts by the increasing role of the hereditary artisan who was trained at home. Vat. gr. 952 preserves several contracts of apprenticeship for 14th-C. Constantinople. A furrier, a shoemaker, and a smith appear as masters in these contracts; the term of apprenticeship is 5–10 years, and the master usually is obliged to feed and clothe the apprentice and to give him (at the end of the training period?) a sum of 5–10 nomismata (G. Ferrari dalle Spade, SBN 4 [1935] 264–66). From these contracts one should distinguish contracts of service, some of which, written in Latin, were concluded between Italian masters and Greek journeymen (e.g., M. Balard, Génies et l’Outre-Mer, vol. 1 [Paris–The Hague 1973] no. 741; G. Balbi, S. Raiteri, Notai genovesi in oltremare [Genoa 1973] no. 68) for the term of 1–10 years.

APRENOΣ (ἀπρενός, lit. “idle”), term that in the taktika designated a certain kind of dignitary. In the late Roman Empire there were functionaries who received the cingulum, girdle, as the symbol of their duty, but fulfilled no function; they were called vacantes (R. Guillard, EEBs 37 [1969–70] 136–38). The vacantes should be distinguished from the honorati, retired dignitaries. The system seems to have been preserved in the 9th C., but it was confused. The first use of the term apratos is in a 9th-C. chronicler (Theoph. 375.6) who says that Justinian II ordered the empraktatoi and apratoi to be slaughtered; the meaning of the words here is unclear. The mid-9th-C. Taktikon of Uspenskij speaks not only of apratoi spatharioi, but also of tourmarchai and topoteretai (Oikonomides, Listes 59.12–14), that is, of officers who had functions but probably no title. In the Kletorologion of Philotheos apratoi are listed among the titularies of lower rank, such as strators or mandators.

APRENOΣ (Ἀπρενὼς), a family probably originating from Apros. The Aprenoi are described by Pachymeres as one of the greatest families of the mid-13th C., although nothing is known of their existence in the previous century. They intermarried with the Tarchanioi and Doukas families and sometimes bore the name of Aprenos Doukas. Andronikos Aprenos Doukas was prokoustrator ca.1266; the protovestiariates Aprenos fell in battle against Ivalio in 1280. Manuel Aprenos Doukas, oikeios of the emperor, is mentioned in a charter of 1293; he was apparently a wealthy landowner in the Smyrna region. The family still existed in the early 15th C. when John Aprenos, a high functionary in Thessalonike, signed a charter confirming the privileges of the Esphigmenou monastery (1409).

liT. Polemis, Doukai 102f. PLP, nos. 1206–11. —A.K.
APSE (καθίσμα, lit. “arch, vault”), a semicylindrical space vaulted with a conch, or quarter-sphere (Prokopios, Buildings 1.1.32); it may terminate the axis of a longitudinal space, normally at its east end. Its entrance is marked by a large arch, commonly referred to as a “triphal arch.” Apses of episopal churches housed a synthonon and a cathedra for the seating of clergy and bishop. The exterior may be semicircular, polygonal, or immured in the east wall of the structure, while the interior face is usually semicircular. Such disparities are no less true of subsidiary apses, when present, in the pastophoria.

APSEUDES, THEODORE, painter who worked at the Enkleistra of Neophytos Enkleistos on Cyprus. An inscription in the saint’s cell provides the artist’s name (Ἀπευδῆς) and the date of the decoration, 1182/3. The saint’s typikon confirms this date for the fresco of the Deesis in Neophytos’s cell that includes the saint’s likeness. Mango and Hawkins suggested that the saint’s protector, Basil Kinnamos, bishop of Paphos, brought Apseudes to Cyprus, where he painted the Anastasis and other frescoes in Neophytos’s tomb-chamber as well as those in the bema of the Enkleistra. Apseudes’ attenuated, serene figures exhibit the agitated drapery and intense expressions found also at Lagoçera. D. Winfield (Panagia tou Arakous Lagoudera [Nicòsia, n.d.] 16f) suggested that the Theodore named in an inscription there was the same Apseudes.

APULIA (Ἀπολλιά), southeastern part of Italy from the region of Monte Gargano down to Terra d’Otranto, separated from Lucania by the Bradano River. Apulia encompassed such cities as Bari, Brindisi, Otranto, Taranto, Lecce, Trani, and Gallipoli. The area was plundered during the Gothic wars of Justinian I; subsequently the Lombards conquered almost all of Apulia and annexed it to the Lombard duchy of Benevento. In the 8th C. Apulia was contested among the Lombards, Byz., and Arabs; in the 890s and 840s the Arabs occupied Brindisi, Bari, and Taranto and established several other settlements in the region. In the second half of the 9th C. the Carolingian king Louis II was unsuccessful in his war against the Arabs, but the Byz. emperor Basil I managed to reconquer Apulia; Byz. maintained a hold—though never total hegemony—on the region until the beginning of the 11th C.

The relative prosperity of urban communes, the large number of smallholders, and the development of wheat and oil production for the market provided the material resources for the Apulians’ struggle for independence (11th-C. revolts of Melo and later of his son Argyros). The Norman invasion, however, complicated the situation. In 1047 the German emperor Henry III recognized the Normans and granted their leader the title of duca, prompting an anti-Norman alliance of the papacy and Constantinople. The allies’ defeat at Civitate in 1053 and the conflict between the churches of Rome and Constantinople were followed by a restructuring of forces around Apulia. The reconciliation of Pope Nicholas II (1059–61) with Robert Guiscard expedited the Norman conquest of Apulia, accomplished by 1071.

Byz. had little impact on Apulian society. Town administration was in the hands of the Lombard aristocracy, and Lombard personal names outnumber Greek ones even in coastal cities (Wickham, Italy 157). Apulia was an important center of ceramic production in the 13th C.; so-called Proto-Maiolica ware was produced there and exported widely to Greece and the Levant.

Monuments of Apulia. Significant remains in Apulia include the large (5th-C.?) tetrachonch church of S. Leucio outside Canosa, related in design to contemporary Byz. churches and to S. Lorenzo in Milan, and 5th-C. vault mosaics in S. Maria della Croce at Casaranello, originally a cruciform chapel like the so-called Mausoleum of Galla Placidia in Ravenna. In Barletta is a colossal bronze statue of a 4th- or 5th-C. emperor, said to have been cast up from a shipwreck, presumably while being transported (in a Venetian ship?) from Constantinople (U. Peschlow in Studien Deichmann 1:21–33).

Like these early remains, the most important Byz. buildings are in the coastal cities where the ruling class resided. They include S. Pietro at Otranto and the architecturally similar S. Maria di Siponto (11th C.). The 11th-C. cathedral at
Canosa (S. Sabino) is a T-shaped building with five domes, possibly inspired by S. Marco in Venice and ultimately by the Holy Apostles Church in Constantinople. In Bari, medieval sources speak of a palacium or curte of the katepano; the arguments of Schettini (infra) that large parts of this building survive in the Norman church of S. Nicola have been generally rejected.

The most distinctive Byz. monuments of Apulia and Basilicata are the rock-cut churches and settlements usually inhabited by Basilian monks. The caves were mostly used in the 10th–11th C. and, as in Cappadocia, the churches were extensively painted. The oldest dated paintings are in the crypt of SS. Cristina e Marina at Carpignano Salesino, while the most completely preserved decoration is in the grotto of S. Biagio at San Vito dei Normanni, west of Brindisi; these paintings contain a Greek inscription of 1196.

AQUEDUCT (ὀχετός, ὕδραγωγός), essential element of a large city, bringing water for baths, nymphaeae, and public use. Aqueducts often reached far into the countryside and consisted largely of underground pipes or open cuttings, designed so that the water dropped gradually at an angle of less than 1 percent from the source. When valleys or swamps had to be crossed, aqueducts were supported on masonry arches, which are the most visible remains but rarely comprised 10 percent of the total length. Rome was supplied by 19 aqueducts; 32 km out of 428 rested on arches. Fourteen still functioned when cut by the Goths in 537. Constantinople originally drew its main water supply from Halkali, about 15 km northwest of the city, through an aqueduct built by Hadrian but universally known by the name of its restorer Valens. The arches, which carried it a distance of 970 m between the third and fourth hills, still stand and show much Byz. work. In the late 4th C., a network of aqueducts was constructed over 100 km west of Constantinople to satisfy the needs of the growing population. Their exposed location, however, obliged the city to depend also on vast cisterns (see under Constantinople, Monuments of). Aqueducts were esp. vulnerable to attack: that of Valens, cut by the Avars in 626, was only rebuilt in 758; it was restored on several occasions through the 12th C. Large provincial towns were also supplied by aqueducts (H. Hellenkemper, F. Hild, Neue Forschungen in Kilikien [Vienna 1986] 123–29). Most were destroyed during the troubles of the 7th C., after which cisterns became the main source of water for their reduced populations.

AQUILEIA (Ἀκύληα), naval and commercial city; capital of the province of Venetia et Istria in the 4th–5th C. and a center of communications between East and West. It served as a residence of Diocletian, Maximian, and Constantine I; Constantine’s sumptuous palace there is described in a panegyric (Panegyrici latini 6.6). Aquileia played a major role in the rivalries of 4th-C. emperors (e.g., Theodosios I defeated the usurpers Maximus and Eugenius near there). The city had a cosmopolitan population, saw extensive secular and ecclesiastical construction, and was described by Ausonius as the fourth city of Italy (MGH AuctAnt 5.2:100.65). A council condemning Arianism, presided over by St. Ambrose, was held there in 381; its bishops became increasingly powerful, exercising metropolitan jurisdiction over most of Venetia by 442. The bishops of Aquileia cultivated the tradition that St. Mark had evangelized the area as the basis of their claims to metropolitan jurisdiction in North Italy and to the title of patriarch (ranking with Rome, Alexandria, and other apostolic foundations), which they assumed sometime between the 5th and 7th C. The bishops opposed Justinian’s policy in the Three Chapters affair from ca.553.

As a strategic center close to the frontier of Italy Aquileia was subject to invasion: it was occupied by Alaric in 401 and 408 and was sacked
by Attila in 452. Its subsequent decline may, however, owe more to other factors, such as hydrographic changes and the breakdown of trade links with the areas north of the Alps than to barbarian attacks. After Aquileia was occupied by the Lombard king Alboin in 568, its patriarch, Paulinus I, transferred his see to Grado.

**Monuments of Aquileia.** In the 3rd–6th C. Aquileia was an influential center of the craft of floor mosaic. Most important are the pavements of the double cathedral, dated by inscriptions of Bp. Theodore (308–19). These include donor portraits, incidental motifs (wildlife, busts of seasons) with possible allegorical significance, and a large marine scene with the story of Jonah. In the 9th and 11th C. the south hall of the cathedral was rebuilt. Its crypt was painted around 1200 by a master or masters with access to the same cartoons used by mosaic workshops in Venice and Trieste.

**ARAB GEOGRAPHERS.** Early Arab geographers were mainly astronomers, administrative officials, or philologists; others were systematic geographer-cartographers, travelers, anthologists, or encyclopedists; many were polymaths. They provide valuable information on Byz.-Arab relations; on the Thughur (see ‘Awāsim and Thughūr); and occasionally on internal Byz. military, administrative, economic, and cultural affairs. Their most original information concerning the Themes and other administrative and strategic matters derives from official documents and accounts of returned prisoners and travelers. Ibn Khurḍābeh, Qudāma, and al-Maṣūdī preserve parts of the valuable reports of al-Jarmī, in addition to other primary documents and oral information. Ibn Rusta preserves the account of Ḥārūn ibn Yaḥyā, which is to be supplemented by al-Marwazī. The anthologist ibn al-Fakih (late 9th C.) gives isolated details, besides his list of Byz. themes as preserved by Yaqūṭ. Al-Maqqīṣī provides descriptions of Byz. naval warfare, routes through Asia Minor, and Byz. treatment of Muslim prisoners of war.

Ibn Ḥawqal, a native of the frontier and a systematic geographer, updates al-Ŷšarkhī and adds much original information. Both these and the great cartographer al-Idrīsī highlight the position of Constantinople and Anatolian towns on their maps. In the 13th and 14th C. the encyclopedist Yaqūṭ, the systematic geographer ibn Saʿīd of Granada (13th C.), and the travelers al-Ḥarawi, ibn Juvayr, and ibn Battiṭa are valuable sources for contemporary economic conditions and trade relations of Byz., its northern and
western neighbors, and, in the case of ibn Baṭṭūṭa, the turkification of Asia Minor. Constantinople, also known in Arabic as Būzanṭīyā, “Queen of Cities,” Istānbūlūn, and the “City of Caesar” (see Shboul, Al-Maṣ‘ūdi 243f.), continued to fascinate Arab geographers and visitors. Al-Harawi and ibn Baṭṭūṭa wrote esp. vivid descriptions of the Byz. capital. Other Arab geographers and cosmographers, for example, Aḥū al-Fidā‘ and al-Dīmāshiqi (13th–14th C.), also included Constantinople and Byz. in their surveys. Kračkovskij singled out several groups of Arab geographers: travelers of the 9th C.; authors of the general surveys of the 9th C. (ibn Khurdadbeh); the classical systematic school of the 10th C. (al-Īṣṭakhri, ibn Ḥawqal, al-Maqdisī) whose descriptions were based on detailed maps of the Islamic world; and the encyclopedists of the 13th–14th C. (Yaqqūt ibn ‘Abdallāh, ibn Baṭṭūṭa, et al.).

ARABIA, the Arabian peninsula, homeland of the Arabs and the Himyarites (see Himyar). Southern Arabia was famous for its riches, in spices, minerals, and fruits, although the rest of the peninsula was desolate and sparsely populated. Cities were founded largely on the caravan trade, developing along the western edge of the desert where Christians and Jews settled. Trade through Arabia involved not only items from the south but also from Axum, India, and China, allowing a rich interplay of ideas and cultures. Early visitors to Arabia from Byz. included the writer Nonnosos, his father Abrahām, and grandfather Euphrasios, who went on diplomatic missions to Kinda in the 6th C. Byz. imperial and ecclesiastical influence penetrated western Arabia but failed to convert Mecca, where Muḥammad appeared ca.610. His mission quickly and fundamentally changed the face of Arabia and its relationship with Byz., and Arabia became the base of operations against Byz. In the titanic struggle after Muḥammad died (632), the Arabs wrested Orients, Egypt, and the rest of North Africa from Byz. After the original conquests, however, Muslim operations against Byz. were conducted not from Arabia but from Umayyad Damascus in Syria, and thus Arabia practically lost its relevance to Byz.

ARABIA, PROVINCE OF. From 105 onward Arabia was the name of a Roman province created in the northwestern region of the former Nabataean kingdom (east of the Jordan) with its capital at Bostra. In the 4th C. its southern part (Negev) was separated from Arabia and named Palaestina Salutaris (Palaestina III); at the same time some northern regions were attached to the province of Arabia to create a barrier against independent Arab tribes. Arabia accepted the ecclesiastical jurisdiction of Antioch, although from the 5th C. onward Jerusalem tried to absorb the region into its sphere of authority, but failed; by 518 only its southern part (the bishopric of Areopolis) had changed its allegiance, but Madaba remained under Bostra. During the ecclesiastical disputes of the 4th–6th C., the province of Arabia served as a place of exile for defeated churchmen, including the partisans of John Chrysostom. After 636 the territory fell to the Arabs, who were newly converted to Islam, but much of the population remained Christian and church construction continued through at least the 7th C. The Armenian Basil of Ialimbana preserved the description by George of Cyprus of the ecclesiastical hierarchy of the province.

ARABIC LITERATURE. In its diverse genres, Arabic literature provides information on Arab perceptions of Byz. and occasionally on Byz. internal affairs. Pre-Islamic poetry (6th C.), the Qur’ān, and traditions attributed to Muḥammad allude to Byz. as a powerful neighbor. Chronicles (8th–15th C.) need to be supplemented by other writings, such as anecdotal anthologies, regional histories, and biographical compilations (e.g., ibn al-‘Adim, incorporating early material from the frontier region). Both
Arab historians (such as al-Baladhuri and al-Tabari) and Arab geographers are important. Works of jurisprudence (8th C. onward) and sermons from the frontier, such as those by ibn Nubata (died 984), provide insights into Byz.-Arab relations and reflect realistic attitudes (see Shboul [1981] infra).

Works of adab (belles-lettres, literary anthologies, and encyclopedias)—for example, by Jâhiz (died ca.869), Tanukhi (died 994), and Qalqashandi (died 1418)—contain valuable details on Byz.-Arab relations, including documents otherwise unknown. Poets, particularly those from the frontier such as Abu Firâs and al-Mutanabbi, illuminate aspects of the conflict and provide rare historical details.

Popular literature (e.g., proverbs and tales from the Thousand and One Nights) echo facets of the historical reality. In certain respects, the Arabic frontier cycles in prose (e.g., Dhat al-Himma) provide parallels with the Byz. Akritic songs and Diogenes Akritas.

Muslim polemics against Byz.—more political and cultural than strictly religious—include official epistles sent to Constantinople in the name of Arab rulers (e.g., Hârûn al-Rashîd) and criticism of local Christians with allusions to Byz. (e.g., by the polymath Jâhiz).

At least two semiofficial manuals (now lost) were written on Byz. administration and culture by Arab ex-prisoners of war: al-Jarmî (9th C.), and Ahwâzi (10th C.), quoted by al-Birînî (died 1048).

Unlike works of philosophy and science, few literary Greek works were translated into Arabic (see Fihrist [infra] 2:718), while few Arabic books (one on dreams) were rendered into Greek. Hellenistic influences on Arabic literature, directly or through Syriac, may be discerned, for example, in historiography, geography, literary criticism, and romance.

Arabic literature mirrors Arab attitudes toward Byz. as influenced by the vicissitudes of strategic, political, and cultural relations between the two worlds, and according to the different preoccupations of Arabic writers. In addition to the standard narrative histories and geographies, valuable perceptions are contained in biographical literature, works of jurisprudence, and other literary genres, including poetry and popular literature.

A distinction should be made between the official level expressed in documents, the learned level expressed by Arab scholars and men of letters, and the popular attitudes reflected in proverbs and tales, although the three levels cannot be mutually exclusive. The image of Byz. in Arabic literature, like the Arab-Byz. encounter and Arab history itself, must not be seen as static. Briefly, pre-Islamic poetry reflects Byz. as a powerful, wealthy, and civilized Christian neighboring empire, feared and admired by the Arabs. The Qur'ân and prophetic traditions are preoccupied with Byz. as a perpetual adversary. Official Arabic documents, however, such as letters addressed to Byz. emperors (e.g., Harun to Constantine V or Ikhsid to Romanos I), accounts of receptions of Byz. envoys, as well as works of Muslim jurists, generally show a pragmatic understanding of the dictates of politics and trade. The Fatimids, who at first reflect an unusually intransigent attitude, later resorted to political expediency.

The early image of Byz. as a civilized Christian neighbor, the existence in Islamic society of many individuals, slaves, and freedmen and women of Byz. background, as well as trade and travel between the two sides, modified hostile Muslim attitudes somewhat and provided real knowledge of Byz. culture. But concern about Byz. as the dangerous enemy remained paramount at all levels. In this context, Arabic literature, particularly at the popular level, partakes of the universal tendency to stereotype the adversary. Thus while Byz. slave girls appear lovely and industrious, the Byz. in general were most unattractive in Arab eyes.

ARABIC PAPYRI, found in the topmost levels of sites and rubbish dumps in Egypt from after 641. Arabic papyri, both documents and literary texts, have been found since 1824; they are scattered among collections and dealers the world over, and no comprehensive list of them exists.
Their texts include the Qur’ân and hadith, history and theology, official correspondence, tax records, protocols, poetry, proverbs, grammar, and medical and scientific works. Documents of the Arab administration are very numerous and comprise examples of every type, such as land-leases and sales, tax receipts, requisitions of men and supplies (esp. for the Arab fleet’s annual expedition against Constantinople), orders, safe-conduct passes (sigillata), and financial records. One can trace the beginnings of the use of Arabic by the Christian population in private letters and even marriage contracts. Christian Arabic literary texts on papyrus include a disputation text (in Heidelberg) and a polemical work (in Vienna). Papyri are of great importance for the history of the Arabic language and palaeography, for chronology, law, and economic history, and for every aspect of the institutions and culture of Egypt after removal from rule. Arabic papyri have also been found at sites outside Egypt (Damascus, Samarra, Israel).

**ARABISSOS** (Ἀραβισσός), modern Asin, ancient city in Cappadocia, later one of the cities of the Hexapolis in Armenia II, located on the road between Cappadocian Caesarea and Melitene. In late antiquity, Arabissos was a legionary station attested from 381 on as a bishopric (suffragan of Melitene). As it was his birthplace, Arabissos was embellished by Maurice. It suffered from the earthquake of 584/5 and esp. during the wars with the Arabs, when it was the center of a kleisoura. In the 11th C. Arabissos was known as an episkepsis, and in 1108 as a kastron. Near Arabissos is a cave where an unnamed martyr was revered; for the Arabs this became a site of the legendary Seven Sleepers.

In July 629 Herakleios met Shahrbaraz in Arabissos to arrange terms with Persia. Herakleios offered Shahrbaraz and his son the Persian throne. They agreed on the Euphrates as the frontier between the empires and probably negotiated the withdrawal of Persian troops from Syria, Mesopotamia, Palestine, and Egypt. Shahrbaraz promised to support Christianity and participated in the construction of the church named Irene ("Peace"). Patr. Nikephoros claims that Shahrbaraz agreed to become Herakleios’s subject. Although Shahrbaraz soon fell to an assassin, the terms of the treaty (Reg 1, nos. 200–01) at Arabissos continued to provide the basis for Byz.-Persian relations until the Muslim overthrow of the Sasanian Empire.

**ARABS,** called in the Byz. sources Arabes and Sarakenoi as well as Ismaelitai and Hagarenoi, meaning the progeny of the biblical Ishmael and Hagar.

Constantine I inherited from Diocletian a stable frontier with Arabia. To ward off invasions from the Peninsula, Byz. developed the system of foederati, who together with the soldiers of the limes Diocletianus, which extended from the Euphrates to the Red Sea, defended Roman Oriens. In the course of the late Roman period, the empire dealt with a succession of these Arab foederati: the Tānūkhids of the 4th C., the Ṣalihids of the 5th, and the Ghassānids of the 6th. The last were the most powerful and represented the maturest expression of the federate system. Their kings were integrated into the Roman military and administrative hierarchies: the official title of the federate chief was phylarch with the rank of clarissimus, but the supreme one was both patrikios and gloriosissimus. The system of phylarchs and foederati was so successful that the Strategon of Maurice is silent on the Arabs. The reign of Maurice witnessed a crisis in imperial-federate relations when the emperor had the Ghassānid Alamundarus exiled to Sicily. When the Muslim Arabs appeared in the 7th C. it was against a considerably weakened federate shield that they fought and won.

Before his death in 632, Muḥammad had united Arabia. His successors, the three “orthodox” caliphs, conquered the Byz. lands of Oriens and Egypt. The decisive battle was the Arabs’ victory at Yarmuk in 636. The Umayyads continued this career of conquest from Damascus, the new Arab capital: against the Byz. heartland, Anatolia, and
against the Byz. was continued by petty states in the east and in the west—the Aglabids, the Ḥamdānids, and the Fāṭimids, their military operations conducted from Kayrawān, Aleppo, and Cairo, respectively. During the entire 9th C., the Aglabids of Ifrikiya (Tunisia) dominated the middle Mediterranean and succeeded in conquering Sicily. In the east, the struggle was taken up in the 9th C. by the Ḥamdānids of Aleppo. The initial successes of Sayf al-Dawla were brought to naught, however, by Nikephoros II Phokas. The Fāṭimids of Egypt battled the Byz. in the 10th C., but John I Tzimiskes and Basil II contained their threats around Antioch and enlarged Byz. gains in northern Syria. The achievements of these three Macedonian emperors marked the turn of the tide against the Arabs. The destruction of the Church of the Holy Sepulchre by the Fāṭimid al-Hakim (996–1021) was one of the contributory causes of the Crusades, which were fought mainly between Latin Westerners and the Turks, while Byz. and the Arabs were spectators. The Turks, a new virile Muslim people, took up the struggle against Byz. where the Arabs left off in the 11th C.

Economic and Cultural Exchanges between Arabs and Byzantines. Within the ʿAbbasid caliphate there were Christian monasteries and lay communities, in which Greek literature flourished throughout the 8th C. and probably later. In this milieu, or among Palestinian émigrés in Constantinople, the unrealistic dream that the caliph would convert to Christianity was cherished. Scholarly contacts developed and the caliphs tried to invite Byz. scholars, such as Leo the Mathematician, to Baghdad, Greek MSS were collected and translated, and Photios was probably able to work in Baghdad during his embassy to the city. Similarly, Arab influence penetrated Byz. art and architecture, and Theophilos is said to have built his palace on Arab models (see Islamic Influence on Byzantine Art). Ṭabbāsid attempts to support Byz. insurgents—from Thomas the Slav to Andronikos Doukas—presuppose close contacts with certain circles in Byz.

Arabs visited Constantinople as merchants, and one could meet there a Hagarene merchant in a black cloak and brick-colored sandals (PG 111:68:1 B–C). Some Syrian merchants stayed in Constantinople for ten years. They appeared not only in Trebizond or Artze, but probably even
in faraway Athens, where archaeological evidence attests an Arab colony of the 10th–11th C. (G.C. Miles, *Hesperia* 25 [1956] 329–44). People of double origin (Arab and Greek) were so typical in the eastern provinces that one of them became the hero of the epic of Digenes Akritas. Arab families, such as the Sarrakopoulos, Syropoulos, Bempetziotai, and Aplesparai, penetrated the ranks of the Byz. aristocracy.

**Representation in Byzantine Art and Literature.** As major rivals of the Byz. until the 11th C., Arabs occupied an important place in Byz. literary texts and images. Two clichés predominated: either differences of race were ignored (esp. in the presentation of Arab saints such as Gourias, Samonas, and Abibas) or Arab stereotypes were exaggerated, for example, when they were shown as terrifying raiders. Ethnic features were rarely displayed: sometimes the turban distinguishes Arabs, including John of Damascus, sometimes Arab invaders wear the three-piece garment (long tunic, underskirt, and patterned stockings) that appears in some images of the Magi in their Adoration of Christ. When Arabs do appear in works during and after the 12th C. (Ohrid, Peribleptos; Venice, S. Marco), they are usually portrayed among the nations of the Pentecost or as people taught by the apostles. The Madrid Skylitzes (Grabar-Manoussacas, *Skylitzés*, figs. 98, 138, 189, 190, 192) presents a dispassionate record of Arab rulers, costume, and architecture. Another miniature in this MS (fig.58) depicts an Arab horseman displaying his skill in the Hippodrome.

- I.A.Sh., A.K., A.C.

**Arbantenos** (Ἀρβατάντε ρος), or Arabantenos, a family known from the second half of the 11th C. The name is probably derived from al-Rawandān in northern Syria (Honigmann, *Ostgrenze* 140, n.7). Arbantenoi are first mentioned in non-Greek sources: Matthew of Edessa relates that Aruantan, the dux of Edessa, was captured by Turks in 1066/7 (Oikonomides, *Dated Seals*, no. 94); Ordericus Vitalis mentions Ravendinos, Alexios I’s protospatharios, to whom the inhabitants of Laodikeia surrendered ca.1099, as well as (another?) Ravendinos, “a powerful Greek,” a Byz. envoy to Antioch in 1118/19 and later to Jerusalem. The sebastos John Arbantenos was extolled by Nicholas Kallikles; he married Anna of the Komnenoi, and the *typhon* of the PANTOKRATOR MONASTERY in Constantinople calls him the husband of John II’s niece. Thirty years later, in 1165, another sebastos John Arbantenos, Manuel I’s gambros (son-in-law?), was active. Several Arabantenoi are known only by their seals: one of them, Nicholas, was protonotarios of Chaldia, probably in the 11th C. (Schlumberger, Sig. 290); other seals, dated to the 11th and 12th C., have no information about the Arbantenoi’s offices, but some bear effigies of military saints that presumably indicate their military functions. In the 14th C. a few Arabantenoi are attested (PLP, nos. 1215–17) but they are known only as land and house owners.

---

**Arbogast (Ἀρβογάστης).** Western magister militum and power behind the revolt of Eugenius; died 394. Arbogast was a Frank and subordinate of the magister militum Bauto under Gratian and Theodosios I. Upon Bauto’s death ca.388, Arbogast used his popularity with the troops to seize the office of magister militum. In 388, after Arbogast accomplished the final defeat of the usurper Maximum, Theodosios left him to manage the affairs of the young Valentinian II, who became a virtual prisoner. When Valentinian attempted to dismiss Arbogast, the general tore up the order, implying that he took commands directly from Theodosios. In 392 Valentinian was found dead and some historical sources implicate Arbogast. Arbogast sought to rule the West in his own name, but ultimately elevated Eugenius, although continuing to seek reconciliation with Constantinople. Arbogast was a moderate pagan who supported the revival of paganism under Eugenius. He tried to ambush the forces of Theodosios at the battle of the Frigidus in 394, but was defeated and took his own life.
ARCH (άψίς, καμάρα), a structural element composed of wedge-shaped blocks of stone or bricks (vousoirs) spanning an opening, usually semi-circular in form. Arches enlarge interior space by transferring the heavy loads of superstructures to isolated points of support (piers, columns), which can be more widely separated than those of trabeated construction. Arches can penetrate walls without diminishing their strength, carry bridges over rivers, aqueducts over valleys, terraces over cisterns, domes over naos, or clerestory walls over open colonnades. The widest spans achieved by Byz. builders are those of the great arches in Hagia Sophia—about 31 m (about 108 Byz. feet). Immured, they may articulate walls with blind arcades or spare large wall areas for groups of windows. Blind arcades, used to enliven exterior façades, sometimes employ pointed and ogee arches in addition to round-headed ones, as at the CHORA MONASTERY in Constantinople. Trilobe arches are also found in architecture of the 13th and 14th C., usually as window openings.

ARCH, MONUMENTAL, a structure consisting of a large single arch resting on piers or a large arch flanked by smaller arches, erected for commemorative purposes. Provided with a columnar façade (freestanding or half-columns supporting an architrave), the arch itself carried an attic on which were displayed honorific inscriptions and sometimes statuary. The only known freestanding Byz. monumental arch is that of Theodosios I erected in the Forum Tauri, Constantinople, ca.390?; though not fully excavated, it has been reconstructed as a triple arch approximately 43 m broad and 23 m wide (Müller-Wiener, Bildlexikon, figs. 294–98). A variant, the tetrastyle, consists of four arches arranged around a square and supporting a groin vault or dome, as at the ARCH of GALERIUS in Thessalonike. Such arches were often placed at the intersections of major streets. Monumental arches were also adapted for other purposes, such as city gates. The Milion (see Mese) in Constantinople, built in the form of a domed tetrastyle, was the marker from which distances on the roads leading to the capital were measured. The tetrastyle was also adapted for use in Christian cult buildings, for example, the Tetrastyle of the Forty Martyrs in Constantinople, which stood until ca.1400 (Majeska, Russian Travelers 231). A tetrastyle could also be structurally integrated into a church, as at Aphrodiasis (R. Cormack in Classical Tradition 114).

ARCHAEOLOGY. Byz. archaeology is a relatively young field of scholarship. Aspects of the discipline have been separately studied as Christian and underwater archaeology. In addition, the method known as archaeological survey is a notable tradition in Byz. studies. Following an overview of the field, each of these separate disciplines will be discussed in turn.

AN OVERVIEW. Byz. archaeology does not really exist as a discipline of its own, and—although there are significant exceptions (such as the excavations of the GREAT PALACE and several important churches in Constantinople [e.g., St. POLYEUKTOS, Kalenderhane Camii] and such late antique centers as NEA ANCHALOS)—most Byz. sites are explored in connection with the investigation of classical monuments. Because most of these are on the Mediterranean littoral many important Byz. sites in the interior are hardly known; in addition, the Byz. components of many were either summarily treated or completely ignored, with the exception of some standing buildings (primarily churches and city walls). Churches and their decoration (mosaics, frescoes, icons, church furniture, liturgical vessels, etc.) formed the subject of “Christian archaeology” (see below) that in fact coincided with the study of Christian art. Only recently have ordinary Byz. objects (houses, ceramics and other utensils, tools, and weapons) found during excavation of ancient sites begun to be described, collected, and studied. Primary attention has been paid to cities (chiefly late Roman cities) such as Carthage, Apameia, Cae- sarea Maritima, Korykos, Aphrodiasis, Pergamon, Sardis, Ephesus, Corinth, Athens, Cherson, and cities on the lower Danube; in some of them “post-Roman” strata of the 7th C. and later have been excavated. The countryside has so far received only limited investigation (mostly in northern Syria, Bulgaria, and the Crimea). Necropolises have been excavated in many places, with esp. fruitful results.
in the region of barbarian invasions (Pannonia, Bulgaria).

Archaeology is essential for the study of material objects about which there is little information in written sources or visual representations (household utensils, tools, simple ornaments of bone or metal); it can also provide data on regions that were normally ignored by medieval writers (e.g., the provinces and esp. the frontier zone). The history of urban life and of the Germanic and Avaro-Slavic penetration into the empire has been rewritten in the last decades on the basis of archaeological discoveries. Archaeology, however, faces various problems: while some materials (e.g., ceramics, glass) are preserved in excellent condition, others (wood, leather, cloth) disappear entirely or are severely damaged (iron), thus distorting the picture of material culture—in only a few regions (desert or swampy areas) have organic materials been preserved. The excavated artifacts must be identified, dated, and located in a historical milieu (ethnic, religious, social, etc.).

Unlike documents and literary texts, archaeological finds are studied not so much as individual objects, but as part of a series (e.g., ceramic bowls or glass flasks) and of an archaeological complex; their location (position in the excavated room and in an archaeological layer or stratum) is no less significant than their identification as belonging to a certain series (type or subtype). The chronology of an artifact (save for rare specifically dated objects) has to be established either on the basis of typology (position in a dated series) or stratigraphy (position in a dated stratum). For establishing a chronology of archaeological finds, coins have primary importance; since they can be dated, at least within a certain reign but sometimes even to a narrower period, they often supply the scholar with a terminus post quem for the whole stratum. After a number of dated finds, some objects (esp. ceramics) can themselves be dated with relative precision and become the yardstick for further ("typological") dating.

Establishing the ethnic, religious, and social background of the objects (or, rather, of their long-dead owners) is very difficult unless we have direct indications; ornamented objects (earrings, necklaces, bronze belt fittings, fibulae) can be helpful, although sometimes problematic—conclusions of this sort are mostly hypothetical. Changes in quality and fashion reflected in objects allow one to study economic, social, and cultural development; archaeology provides us with great numbers of objects and therefore permits tentative analysis of quantitative changes (increase of production, transition from one type of object to another, etc.). Discoveries of Byz. artifacts in remote regions (the Urals, China, Scandinavia) provide evidence for the study of trade routes and cultural influences. Archaeology reveals many aspects of the past on which written sources remain reticent; on the other hand, by dealing with "real" material objects archaeology easily creates an illusion of veracity that it, as a matter of fact, does not have: archaeological observations and conclusions are often extremely hypothetical and should be compared with the independent data of written texts.

Christian Archaeology. Archaeology as a discipline emerged first to study the remains of classical and biblical antiquity, and it was only later extended to the remains of the postclassical period, including that of Byz. Originally research into this era was restricted almost exclusively to churches and objects of liturgical use, hence it was defined as Christian archaeology; its purpose commonly was to discover objects that shed light on the practices and beliefs of the early church, and a devotional goal frequently prompted (and distorted) investigation. Byz. archaeology originated as a branch of Christian archaeology and this heritage influenced its development—for example, the relatively late emergence of interest in the nonreligious aspects of Byz. society. Christian archaeology as defined today does not restrict itself to religious topics, and meetings such as the International Congress of Christian Archaeology and periodicals like Cahiers archéologiques allow for presentation of research from all areas of the Mediterranean in the early Middle Ages.

—T.E.G.
**Underwater Archaeology.** Over the past 30 years technological innovation and the development of effective means of underwater excavation have made possible the archaeological exploration of the sea bed. This investigation has focused on two kinds of sites: near-shore sites that were once upon land but have sunk beneath the sea, usually because of earthquake, and shipwrecks. An important example of the former is Kenchreai, the eastern port of Corinth, whose harbor facilities sank in an earthquake in the late 4th C. Excavated Byz. shipwrecks include the 4th- and 7th-C. Yassi Ada wrecks (G.F. Bass, F.H. van Doorninck, Jr., AJA 75 [1971] 27–37. Eadem, Yassi Ada 1 [College Station, Texas, 1982]), the 11th-C. Serçe Liman wreck (carrying a large load of glass; G.F. Bass, F.H. van Doorninck, Jr., *International Journal of Nautical Archaeology* 7 [1978] 119–32), and the 12th-C. Pelagonnesos wreck (with a cargo of at least 1,490 ceramic vessels; Ch. Kritzas, P. Throckmorton, *Athens Annals of Archaeology* 4 [1971] 176–85). A wreck found in 1960 off Marzamemi in southeastern Sicily contained unused church furnishings—ambo, plaques, parapet slabs, monolithic columns, 28 column bases, etc. G. Kapitán (*Archaeology* 22 [1969] 122–33) identified these as Prokonnesian marbles and suggested a date in the reign of Justinian I. Shipwrecks are particularly rich sources of archaeological material since they have not been disturbed by later human activity and their destruction took place at a single time that can often be fixed quite precisely; some materials also are better preserved in water than they are in the soil. Wrecks thus offer fixed points for the dating of archaeological objects and provide important information about trade and the economy.

T.E.G. A.C.

**Archaeological Survey.** A means of gathering information about an area through the utilization of a broad-based archaeological research program, normally without excavation, archaeological survey relies on an investigation of what appears above the surface. Survey allows the study of an area much larger than can be covered by excavation, normally at a fraction of the cost, but it relies on previous stratigraphic excavation for the identification and dating of surface finds. Survey normally involves systematic investigation by teams of people walking across the landscape; aerial reconnaissance, geophysical methods, and architectural study also play important roles.

Byz. studies have a long tradition of observation and recording of archaeological sites and monuments; W. Ramsay, J. Strzygowski, D. Talbot Rice, and others were the pioneers of this archaeological method, and contemporary scholars have continued this tradition. In the past 30 years the theory and method of archaeological survey have developed rapidly and have been used with considerable success in the eastern Mediterranean. Survey can provide information about settlement patterns, economy, land use, and other aspects of life not available from written or traditional archaeological sources. Nevertheless, despite its particular applicability to Byz., where frequently rich documentary materials can provide a check on the archaeological evidence, and despite some notable exceptions (R.M. Harrison, *AnatSt* 31 [1981] 198–200, A.W. Dunn, *JÖB* 32.4 [1982] 605–14), the results of archaeological survey have rarely been used by Byzantinists. Instead, Byz. material from large survey projects is frequently analyzed by non-Byzantinists who do not always understand the special problems or questions of the period.

Nevertheless, survey projects, mostly in the Aegean area, have led to a certain degree of consensus about the development of the Byz. settlement pattern: remarkable prosperity and widespread settlement in late antiquity (when the number of sites is commonly only slightly less than the peak in the classical period) followed by complete collapse in the late 6th to 10th C., when survey generally fails to recognize any settlement whatever, followed by a slow recovery and another peak in the 12th–13th C., followed again by decline. This broad outline may well be correct, but it is affected by our lack of knowledge about the chronology of many Byz. ceramics and other items.

**Archaism,** or classicism, was a current in high-style Byz. literature inherited from the *Second Sophistic,* where it originated. It encompassed both language and style (*Rhetorical Figures,* etc.) and the contents (conscious presentation of contemporary events in the guise of ancient *Terminology,* characters, situations, etc.). Obsolete meters such as hexameter or anacreontic tetrameter were used. The late antique and early Byz. professors established a canonical list of ancient au-
thors who provided models: Homer was still the Poet, Aristotle the Philosopher, Demosthenes the Orator, Galen the supreme authority on medicine. Archaisms was not limited to the literary sphere: the Byz. considered themselves as Romans (Rhomaiotai), their capital as "New Rome" or "New Jerusalem," their Bulgarian or generally Slavic neighbors as Scythians, Roman law as still effective, etc. All values were created in the past: "There is nothing of mine," John of Damascus said of his work. The Byz. had only to follow their predecessors; accordingly, the idea of novelty or innovation bordered on heresy and revolt (P. Wirth, Arch 45 [1961] 127f). Some writers, however, became weary of archaisms and lamented, like Theodore Metochites, that their ancestors had accomplished everything, leaving no opportunity for their own creativity (H.G. Beck, Theodore Metochites [Munich 1952] 50–75).

Archaisms was neither a cultural game, nor a simple imitative "mimesis." Unlike Italian humanists of the 15th C., the Byz. rarely felt a distance between past and present. Archaisms created an illusion of stability and continuity in the shaky and unstable world of the Byz. elite.

ARCHANGEL (ἀρχάγγελος, "chief angel"). Although Michael and Gabriel appear in both the Old and New Testaments, the word archangel is not used in the Septuagint and occurs only twice in the New Testament. Nonetheless archangels came to hold an important place in Jewish legend and apocrypha and were revered in Christian tradition. Pseudo-Dionysios the Areopagite ranked the archangels in the third and lowest triad of his celestial hierarchy, between the "principalities" and angels. Only three archangels were recognized by the Christian church—Michael, Gabriel, and Raphael, whereas other Jewish archangels (Uriel, Azael, etc.) were rejected by the pope Zacharias in 745. Of these three, Michael was held in the highest regard, whereas Gabriel and Raphael (who appears in the books of Tobit and Enoch) did not receive widespread veneration in Byz. A church was dedicated to Raphael in Alexandria, but the Synaxarion of Constantinople does not list a feastday for him. Other archangels appear in some apocrypha (e.g., Testament of Solomon) and in art.

Archangels were distinguished from regular angels as early as ca.500 (C. Mango, DChAE 12 [1984] 40f) by their court or imperial costume (chlamys or loros, red shoes) and attributes (such as the orb or sphaira). Michael and Gabriel stand dressed this way as an honor guard alongside Christ and the Virgin; they also head the heavenly host in images of the Synaxis ton Asomaton (see Asomatos). Their various appearances in the Old and New Testaments were collected into cycles of illustrations; in these narrative contexts the archangels are clad in the traditional angelic garb of tunic, himation, and sandals. Sometimes a large number of archangels, including Raphael and Uriel, is shown surrounding the figure of Christ Pantokrator in the dome, for example, at Palermo (Demus, Norman Sicily, pls. 13, 45), but images of archangels other than Michael and Gabriel are rare.

Michael was the archangelos par excellence; a church of "the archangelos" was assumed to be dedicated to Michael, one of "the archangeli" to Michael and Gabriel. The image of Michael is common on seals, whereas that of Gabriel is unknown.

ARCHBISHOP (ἀρχιεπίσκοπος, lit. "chief bishop"), a title initially used to designate certain metropolitans. It was applied to the bishops of the most important sees in the empire: Rome, Alexandria, and Antioch. Hence its application by EPIPHANIOS of Salamis (Panarion, ed. Holl, 3:141.11) to designate Peter of Alexandria (300–311). With the rise of Constantinople and Jerusalem to patriarchal status in the 5th C., the epithet was used for the five chief bishops of the empire. The conciliar documents of this period repeatedly employ the term in this sense. Since the title was associated with ecclesiastical independence or autonomy, it was understandably also applied to autocephalous ecclesiastics, such as the primate of CYPRUS (beginning in 431) and to the most important bishops (Ephesus, Thessalonike, Caesarea in Cappadocia, Athens, etc.). This distinction was not always maintained, however.
Archbishops not directly dependent on any metropolitan but on a patriarch (the so-called “autocephalous archbishops” without suffragans) were very numerous; they ranked below the metropolitan and were elected by the ENDEMOUSA SYNODOS and the patriarch.

ARCHERY (τροφεία). Encounters with the Avars and Hun horse-archers forced the Byz. to emulate or recruit their skills. A 6th-C. treatise on archery (ed. Dennis, Military Treatises 128–35) names accuracy, force, and rapidity of shot as the essential skills to be mastered either from a standstill or while in motion. Two draws were known: the Mediterranean release, with two or three fingers pulling back the bowstring and the arrow to the left of the bowstave; and the Mongolian release, using the thumb (sometimes thumb and forefinger) to pull the string with the arrow to the right of the bowstave (S. James, BAR Int. Ser. 336 [1987] 77–83). Mounted archers were trained to shoot in both directions to break up a fleeing enemy or to defend themselves when in retreat. Prokopios (Wars 1.14–15) attests the versatility and hitting power of contemporary archers, citing instances where Byz. archery proved superior against the Persians (1.18.31–35) and Ostrogoths (5.27.26–29; 8.32.6–10).

Scattered details on archery come from the 10th C. Leo VI criticized the decline of archery (Taktika of Leo VI 6.5) and called for constant practice with the bow (11.49) as a useful weapon against the Arabs (18.131, 134-35), a point later emphasized in the Praecepta Militaria (4.27–34; 17.13–16). Expeditionary forces sought out good archers (De cer. 658.1–2) and took along thousands of arrows (De cer. 657.12–13, 17–19). The shafts were sometimes furrowed to shatter on impact, thus preventing reuse by the enemy. Although Byz. archery was effective against the Arabs in the 10th C., it was no match for the 11th-C. Turkish mounted archers, whose superior skills the Byz. acknowledged by actively recruiting them in the 11th–12th C. (See also Weaponry.)

ARCHIMANDRITE (ἄρχιμανδρίτης, fem. ἀρχιμανδρίτισσα, lit. “chief of a sheepfold”), monastic term with two principal meanings.

1. First appearing in 4th-C. Syria, in the early period of monasticism (4th–6th C.) the term is a common equivalent of ἡγουμένος, the superior of a monastery. G. Dagron (TM 4 [1970] 268f) argues that the term archimandrite was used primarily in Constantinople, esp. for the hegoumenos of the monastery of Dalmatou. Under Justinian I, the term hegoumenos began to supplant archimandrite, although archimandrite remained in use until the 10th C. as the designation for hegoumenoi of a few major monasteries.

2. From the 6th C. onward, according to Pargoire, archimandrite began to be used for the chief of a region or urban federation of monasteries, akin to exarch or protos. In this sense archimandrite is applied to the protos of holy mountains like Athos, Latros, and Olympos, or to the head of a group of monasteries in one city, as in Athens.

ARCHIMEDES, ancient Greek mathematician and engineer; born Syracuse ca.287 B.C., died Syracuse 212 B.C. Archimedes profoundly influenced medieval Arabic and Latin science and late medieval and Renaissance Mathematics but had little impact on Byz. after the 6th C. Archimedes is cited directly in the 4th C. by Pappos and Theon. In the early 6th C. three of his works were commented on by Eutokios and were probably studied by Anthemiou of Tralles and Isidore of Miletus. In the 9th C. Leo the Mathematician evidently possessed a MS of Archimedes’ treatises, which perhaps represents the unique transliteration of the main corpus of Archimedes’ works from uncial into minuscule (Lemerle, Humanism 196). Other MSS also survived, however, as is evident from the Arabic versions and from the 10th-C. Constantinopolitan copy of the On Float-
ing Bodies and the Method of Mechanical Theorems
(J.L. Heiberg, Hermes 42 [1907] 235–303). Archimedes is mentioned by Psellos in the 11th C. (Psellos, Scripta min. 1:26.24, 369.1) and is cited frequently by Tzetzes in the 12th C., for example, in his poem 35 “On Archimedes and some of his Devices” (Historiae, 47.106–49.159). Two MSS of the main corpus of Archimedes’ works were available to William of Moerbeke when he made his Latin translation at Viterbo in 1269.

—D.P.

ARCHITECT. In the late Roman Empire architects were usually men of high social status and education. Some were trained in geometry, arithmetic, astronomy, physics, building construction, hydraulics, carpentry, metalwork, and painting. They drew plans, elevations, and possibly perspective renderings. Downey (infra) distinguishes between the mechanikos, the fully trained architect, and the architekton, a “master builder.” Both terms seem to have disappeared after the 6th C., though the epithet architekton continued to be applied to God as creator (e.g., Patr. Germanos I—PG 98:316D–317A); they were replaced by oikodemos, builder (a term also found in Roman inscriptions), and, later, protomaistor, chief of a team or guild (see MAISTOR).

Architects known by name include:

Euphrates, a legendary figure
Anthemios of Tralles
Isidore of Miletus
Isidore the Younger

Eustathios, a priest from Constantinople, and Zenobios, who together designed the martyrion-basilica at the Holy Sepulchre, Jerusalem.

Rufinus of Antioch, who built the cathedral at Gaza, using a plan sent from Constantinople

Asaph and Addai, architects of the rebuilt cathedral at Edessa (K. McVey, DOP 37 [1983] 98)

Stephen of Aila, responsible for the basilica at the monastery of St. Catherine on Mt. Sinai

Patrikes, a patrikios who built the palace at Bryas

Petronas Kamateros, a spatharokandidatos, architect of the fortress at Sarkel

Demitras, Eustathios, and Nikon, mentioned as oikodemos (Laura 1, nos. 1.33, 6.17, App.1.13)

Trdat, an Armenian who restored the western portion of Hagia Sophia, Constantinople, after 989

Ioannikios, oikodemos at Tmutorakan, died 1078

(E. Skržinskaja, VizVrem 18 [1961] 74–84)

Nikephoros, who erected the Pantokrator Monastery in Constantinople

Rouchas, a monk sent by Michael VIII to Constantinople to restore Hagia Sophia

John Peralta, a Catalan from Sicily, and the megas stratapedarches Astras (PLP, no.1598), who repaired the dome of Hagia Sophia after 1346

Demetrios Theophilos, another protomaistor (Docheiar., no.50.22, a.1389).

—M.J., W.L., A.K.

ARCHITECTURE. Byz. architecture constitutes a building tradition generally associated with the history of the late Roman and Byz. empires and, to an extent, with its wider sphere of influence over a period spanning from ca.300–ca.1450. Byz. architecture defies a comprehensive conventional definition on either cultural, geographical, chronological, or stylistic bases. Between the 4th C. and the 15th C. several more-or-less coherent architectural developments and interludes took place that can be roughly grouped into seven chronological periods.

First Period (4th to 5th C.). Architecture during this period represents the perpetuation of tradition within the cultural framework of the Greco-Roman world and the political framework of the Roman Empire. This perpetuation of established architectural practice accounts for the degree of continuity in the regional traditions of planning, structural solutions, building technique, and decoration. Two factors play a decisive role in the architectural development of the period: urban survival and active christianization. Urban centers witnessed a slow but steady shift from pagan to Christian patronage of public buildings. Christian churches—predominantly basilicas—derived generically from pagan prototypes, and
their construction was entrusted to established workshops that had previously been employed on imperial pagan projects. Large-scale building under imperial auspices was one of the major industries in the Roman world, and the movement of manpower and technical personnel (architects, surveyors, etc.) from one completed building project to another was standard practice. This, in fact, constituted the essence of what we refer to as "workshop practice."

Building types such as the martyrion, baptistry, and mausoleum were also constructed in large numbers. Martyria display a considerable variety of plan types, reflecting the particular requirements of preexisting customs and functions accommodated on their sites. Mausoleums, large and small, which initially were freestanding and independent, increasingly become attached to church buildings as christianization proceeded.

**Second Period (6th C.).** This was the period of greatest architectural productivity in Byz. history. Often identified with the policy of reconquest of Emp. Justinian I, the vast building program was, in fact, begun by his predecessors Anastasios I and Justin I and continued by his successor, Justin II. The success of this grand enterprise was facilitated by the survival of the imperial order within the framework of the fully christianized, urban society. In a comprehensive record of the building accomplishments of Justin I and Justinian I, Prokopios of Caesarea provides us with a catalog of buildings and relates many details about the realization of the imperial program. This meticulous account, which includes descriptions of whole new towns, forts, churches, palaces, public buildings, markets, cisterns, aqueducts, and so on, is substantially confirmed by preserved buildings and archaeological finds.

Notwithstanding the survival of regional building practices, the period was characterized by the much more pronounced impact of the capital. Certain building types (basilican churches, mausoleums, cisterns) continued to be constructed according to the established norms of a given region. At the same time, architecture was now also "exported" from Constantinople, the center of imperial administration. Whether in the form of new church plan types such as the domed basilica, new structural solutions involving the use of vaulting, standardized building techniques, or the nature of architectural decoration, there is a strong indication of direct connections of the center with regional affairs. The marble trade and the shipping of building components (columns, capitals, and church furniture), illustrate the degree and the character of the impact of Constantinople. This phenomenon is to be understood in the light of extensive construction in frontier regions, often in newly conquered territories, with the aim of consolidating recently established borders.

**Third Period (7th to mid-9th C.).** In striking contrast to the preceding building boom this period is characterized by a virtual absence of construction. Beleaguered by foreign wars and internal crises, the empire experienced profound changes. The decline of cities was manifested in the physical decay of their fabric. The very meaning of "construction" during this period was practically reduced to preservation, repair, and patchwork. New building other than fortifications was rare, and large-scale construction exceptional. The few surviving examples in the latter category reveal conservative traits and expedient dependence on spolia.

**Fourth Period (mid-9th through 11th C.).** By the middle of the 9th C. relative political, religious, and cultural stability within the territorially shrunken Byz. Empire had been restored. Under the auspices of the Macedonian dynasty, building began anew, though under very different circumstances. Given new cultural parameters and an altered social structure, an architecture emerged that showed marked signs of departure from the old tradition. Palaces and palace halls of this period reveal a fresh source of influence—Islamic art and architecture (see Islamic Influence on Byzantine Art). Aspects of Islamic impact can also be seen in the decorative vocabulary of Byz. architecture, now significantly expanded beyond its traditional, classicizing framework.

Church architecture also reveals other sources of external influence, for example, Armenia. Church types proliferated while undergoing considerable reductions in scale. The latter phenomenon has been viewed as the function of shrunken economic means and the reduced demand for space of a smaller population. Still, some fairly large churches, notably piered basilicas, continued to be built during this period. The frequent appearance of smaller, centralized, and domed churches, on the other hand, involved changes in
the shape of the liturgy and altered symbolic perceptions of the church building. Seen as a miniature version of the cosmos, the church functioned symbolically regardless of its size. Demands for space in churches during this period were generally solved not by increasing the volume of the naos but by adding lateral spaces and parekklesia. When built simultaneously with the church itself, these parekklesia, unlike the earlier mausoleums, were often carefully integrated aspects of a building's overall form. Thus, for example, the multiplication of domes on churches of this period was the direct by-product of multiple chapels planned integrally with the main church.

**Fifth Period (12th C.).** Notwithstanding the military setbacks and the resulting geopolitical changes that affected the empire during the last third of the 11th C., architectural activity in the Komnenian period displayed remarkable vitality, with Constantinople playing the role of central clearinghouse for architects, artisans, ideas, and materials. Formal characteristics, decorative features, and even structural techniques are shared by a very large number of buildings, many of which were built in the provinces and even beyond the frontiers of the empire. This phenomenon, which parallels a similar trend in Byz. painting, reflects an increasing mobility in the Mediterranean basin. Both can be related to a general increase in East-West cultural interaction.

**Sixth Period (13th C.).** The period of the Latin occupation of Constantinople (1204–61) saw the disappearance of the empire's hitherto preeminent architectural influence. Instead, architecture flourished in several new centers of the splintered empire (Nicaea, Trebizond, Arta), each displaying distinctive local architectural characteristics. The stylistic coherence of the Komnenian epoch gave way to a new diversity. Thus, the political decentralization of the empire left its lasting imprint on the development of Byz. architecture.

**Seventh Period (14th to 15th C.).** Following the Byz. recapture of Constantinople in 1261, the city once more became the premier center of architectural activity. In addition to the remodeling and expansion of existing buildings, a fair number of new churches, monastic buildings, and palaces were constructed, particularly during the last decade of the 13th C. and during the first two decades of the 14th C. Church architecture during this period perpetuated the tradition of small-scale construction. The major stylistic change came in the treatment of walls, which lost their tectonic qualities in favor of flat surfaces covered by decorative patterns. The same disregard for spatial-structural articulation also permeated interiors. Here flat wall surfaces carried several tiers of continuous horizontal bands of monumental painting broken up into numerous small individual scenes.

The civil wars of the 1320s and 1340s brought architectural activity in the capital to a virtual end. Constantinopolitan architectural style was transplanted elsewhere (e.g., Mesembria, Skopje and vicinity, Bursa), presumably by migrant workshops, which found themselves employed by Bulgarian, Serbian, and Ottoman patrons. A few centers, such as Thessalonike and Mistra, kept the local architectural traditions alive beyond the early demise of Byz. architectural production in Constantinople. (See also Constantinople, Monuments of.)

**ARCHITRAVE.** See Epistyle.

**ARCH OF CONSTANTINE,** the last major monument of ancient Rome, located between the Roman Forum and the Colosseum. It was probably begun in 312, directly after the victory of Constantine I at the Milvian Bridge, and completed by 315. It was dedicated to Constantine I and presumably paid for by the senate. A triple arch (see Arch, Monumental) faced in marble, it has engaged columns resting on bases that depict captives; in the spandrels are figures of Victory, while other personifications include the seasons and river gods. Friezes of Constantine's adlocutio and distribution of largess appear on the north side, his siege of Verona and the battle at the Milvian Bridge on the south. Spolia above these friezes and elsewhere on the monument are reliefs of the deeds of Trajan, Hadrian, and Marcus Aurelius with their heads recut. Inscriptions on either side of the central passage proclaim the emperor to be the liberator of the city and the source of peace. While this program, like that of
other Roman arches, celebrates imperial authority and victory, it has been read by Pierce (infra) as Constantine's appropriation of the achievements of earlier emperors. No recognizable Christian signs appear on the arch. Rather, Constantine and his victories are associated with the SOL INVICTUS whose image occurs four times. The style and iconography of the Constantinian parts of the monument are almost universally interpreted as harbingers of Byz. art.

—A.C.

ARCH OF GALERIUS. Located in Thessalonike, the Arch of Galerius is not a true monumental arch, but more properly part of a tetrastyle that was expanded into an octastyle through the addition of piers for secondary passageways. It was located between the Rotunda of St. George to the north and the palace of Galerius to the south; only the west side of the structure is partially preserved. The original monumental complex, which was probably domed, spanned an important street running east to west: the central passage of the arch crossed the roadway, while the two smaller side passages continued what were undoubtedly colonnaded walkways. It provided a monumental entrance and a point of transition between the city and the sacred area of the palace. The structure was begun in 299 and construction continued at least to 303. It was made of a core of irregular stone blocks, faced with marble revetment in its lower section and with brick above. Statues of the emperors presumably looked out from the top to east and west. It was of impressive size, with the keystone of the surviving central archway 12.28 m above the modern pavement; its width is 9.70 m.

The piers are covered with reliefs arranged in horizontal zones separated by bands decorated with ribbons or garlands. The sculptures depict and celebrate Galerius's victory over the Persians in 297. Various historical scenes can be identified, such as Galerius and Diocletian sacrificing, Galerius speaking to his troops, and the emperor victorious in battle; these scenes are not arranged in any particular order, however, and are mixed with generic scenes of processions and personifications of victories. The "arch" is a prime example of Tetrarchic art, with figures often outlined rather than carved in relief, little concern for scale, and a desire to fill every part of the surface with decoration.

ARCHON (ἀρχων), a word used in antiquity primarily to denote a magistrate. In Byz. archontes were synonymous with megistanes and dynatoi; the term signified any officials who possessed power. In the words of Symeon the Theologian, archontes were those who had honor (time) and power (arche); he further defined the strategoi and archontes as the emperor's servants and friends who—unlike the common people—had personal contact with the monarch. Some subordinates of high-ranking officials (e.g., strategoi) were also called archontes.

In a technical sense, archon designated first of all a governor. The 6th-C. TAKTIKON of Uspenski lists archontes of Crete, Dalmatia, Cyprus (a 9th-C. seal of an archon of Cyprus—Zacos, Seals 2, no.852), and so on, whereas seals of the 10th-12th C. mention archontes of certain towns, such as Kratiea and Klaudiopolis, Chrysopolis, Athens, Panion, etc.; accordingly the term archontia was employed to describe the district administered by an archon. The term could be applied also to independent princes, such as the archon of Rhosia (A.V. Soloviev, Byzantion 31 [1961] 237-44).

ARCHONTES TON ERGODOSION (ἀρχοντες των έργοδοσίων), directors of state ergasteria (see Factories, Imperial) that produced primarily silk, jewelry, and weapons. Seals of many archontes of silk workshops (tou blattiou) are dated to the 7th and 8th C. Archontes ton ergodosion were sometimes called ergasteriarchai and combined their functions with those of the kommerkiarioi. According to the Kletorologion of Philotheos, archontes, along
with the *meizoteroi* ("foremen") of workshops, belonged to the staff of the *eidikon*. On seals from the 9th C. onward they are often called *koura­tores*. A certain Thomas, *eskeptron blattion*, recorded on a 7th-C. seal, was probably not director of a single workshop, but of a group of textile manufacturers. The office of the *archon* of the *chryschoeion* (gold workshop) is also known; his relationship to the *archon* of the *charage* is unclear.

**LIT.** Laurent, Corpus 2:323–43. 708f. Kazhdan, Derevnya i gorod 338–42. –A.K.

**ARCHONTOPoulos** (ἀρχοντόπουλος), according to Anna Komnene (An.Komn. 2:108.20), a term invented by Alexios I, meaning "a son of an archon." The *tagma* of *archontopouloi* was created in 1090/1 and consisted of about 2,000 young men, the sons of soldiers who had fallen in battle. The *tagma* is not attested in sources after the reign of Alexios (Hohlweg, Beiträge 52). The term *archontopoulos* (also, neut. pl. *archontopoula*; in an act of 1478, fem. *archontopoulai*—MM 3:260.2) was a generic designation of the nobility of second rank: thus Stefan Uroš IV Dušan, in a chrysobull of 1346, speaks of his *archontes* and *archontopouloi* who served as his administrators (Zogr., no.37.49). *Archontes* and *archontopouloi* are known also in Venetian Crete (Jacoby, Recherches, pt.I [1976], 23f). In 1261 a group of *archontopouloi* were to receive *exaleimmata* and other properties in the Macander valley with an "appropriate monetary posotes" for the sake of their *oikonomia*; thus, evidently in the form of a *pronoia* (Patmou Engrapha 2, no.66.3–4). Before 1348, *archontopouloi* in Serres seized a monastic *metochion* with its *proskathemenoi* (Kouloum., no.21.3). *Archontopouloi* are also attested in the Morea, Trebizond, and Epiros.

**ARCOSOLUM** (term found only in Christian Lat. inscriptions, lit. an arch over a throne or urn), an arched niche, usually for a *tomb*, carved out of or built in front of a wall. Such recesses are known as early as the 3rd C.; in 4th-C. *cat­acombs* the tympanum beneath the arch often received painted decoration. Carved *arcosolia* were esp. favored in Palaiologan Constantinople (South Church of Lips Monastery); the most lavish examples are the hoods over the tombs in the Chora Monastery.

**LIT.** J. Kollwitz, RAC 1:643–45. –A.C.

**ARCRUNI,** or Artsruni, an Armenian princely lineage, some of whose members settled in Byz. territory in the early 11th C. A 12th-C. continuator of the Armenian chronicle by Thomas Arcruni (ca.900), the *History of the House of the Arcruni*, relates that the resettlement was smooth and peaceful: the Arcruni received lands, towns, and high titles (*Thomas Artsruni: History of the House of the Artsruni*, tr. R. Thomson [Detroit 1985] 370f). They retained the Gregorian creed. Senekerim (*Σεναχηρίμα*) Arcruni, last king of Vaspurakan, became *strategos* of Cappadocia in 1021 or 1022 and lord (? of Sebasteia and other towns and estates (Skyl. 354f). His son David helped suppress the rebellion of Nikephoros Phokas (1022) and was rewarded with Caesarea, Tzamandas, and other lands (H. Berberian, Byzantian 8 [1933] 553); he inherited Sebasteia after his father's death in 1025. David's successor, his brother Atom (Ašot), ruled Sebasteia from 1035; in 1079/80 Atom sided with Gagik of Kars in a feud against the local Greek lords of the Mandales in a futile attempt to rescue Gagik of Ani.

Other Armenian nobles who moved to Byz. simultaneously with Senekerim Arcruni include his nephew (?) Derenik and another relative, Abelgharib Arcruni. The latter received Sis, Adana, and several other towns. Circa 1080 his residence was Tarsos, and he apparently adopted the Chalcedonian creed. Probably some Arcrunis entered the Byz. ruling elite and took the family name of Senacherim: THEOPHYLAKTOS of Ohrid (ep. 77.22–23) complained of Senacherim "the Assyrian" who originated from Mesopotamia; Alexios I entrusted Theodore Senacherim with distributing lands among monasteries (*Xénoph.,* no.1.92–93). It is unclear whether Senacherim, an early 13th-C. general, and (another?) Senacherim, governor of Nikopolis (Epiros) in 1204, were related to this family.

**LIT.** Kazhdan, Arm. 33–36. –A.K.

**ARCULF.** See ADOMNAN.
ARDABOURIOS (Ἀρδαβούριος), consul (447); magister militum of the East and patriarch under Marcian; died Constantinople 471. Oldest son of Aspar the Alan, he commanded troops in both East and West and reportedly helped his father secure the elevation of Leo I. In 459 he sent a detachment of Gothic soldiers to guard the corpse of St. Symeon the Stylite the Elder. In 465/6, when Leo accused Ardabourios of entering treasonable correspondence with the Persians, he was deprived of his rank (vita of Daniel the Stylite, 55). After he instigated an open revolt in Thrace in 469/70, he and his father were executed; his brothers Patrikios and Ermanaric survived. His grandson was Areobindus, consul in 506.

-T.E.G.

AREIA, MONASTERY OF, called Hagia Mone or Nea Mone, was founded near Nauplia shortly before 1143 by Leo, bishop of Argos and Nauplia (ca.1143–ca.1157), who was a nephew of Constantine Antzas (see Anzas). Leo originally established the monastery, dedicated to the Virgin, at Areia (Ἀρεία) as a convent for 36 nuns. Circa 1143, however, he was forced by the threat of pirate raids to move the nuns farther inland to a new convent that he built at Bouze. He then installed 36 monks at Areia. In Oct. 1143, Leo composed a memorandum (hypomnemata) in which he guaranteed the monastery’s independent status. He also prepared a typikon, based on that of Studios, but more lenient in some of its provisions; for example, he urged the monks to bathe weekly and permitted two meals daily during the fast days preceding the feast of the Holy Apostles, “because the days are longer.” In 1212 the region of Nauplia was occupied by the Franks, and in 1389 it came under Venetian control, but the monastery remained in the hands of Orthodox monks. It retained its independence until 1679, when it became a metochion of the Holy Sepulchre.

The cross-in-square monastic church, dedicated to the Zoódochos Pege (Life-giving Source), was completed by 1149, the date of a dedicatory plaque that names Leo as ktetor. Built of brick on a high foundation, it is decorated on the exterior with marble crosses and maeander friezes, like Membaka and other churches in Argolis. Of its interior ornament little remains save for the elaborate composite capitals of the four columns beneath the dome.

ARENGA. See Acts, Documentary.

AREOBINDUS (Ἀρεόβινδος), more fully Flavius Areobindus Dagalaiaphus Areobindus; died after 512. He was the grandson of Ardabourios and the son of Dagalaiaphus and Godisthea, and thus an Alan; in 478/9 he married Anicia Juliana, daughter of the Western emperor Olybrius. Despite the fall of his family in 471, Areobindus had a distinguished military career, serving as magister militum of the East in 503–04, along with Hypatios and Keler. At this time he withstood a Persian invasion and devastated Persian Armenia. He served as consul in 506. In 512 the opposition to Anastasios I sought to make Areobindus emperor, but he had already gone into hiding. Five examples of his consular diplomas are preserved.

Lit. PLRE 2:143f.

ARETHAS, Arab martyred ca.520 in Najran; saint; feastday 24 Oct. When the judaizing Himyarite king, Yūṣuf, came to power ca.520, he wanted—according to the sources—to stamp out Christianity in South Arabia, esp. at Najran. Arethas, the chief of Najran, resisted the overtures of Yūṣuf to surrender the city, but was finally overruled by his counselors. Yūṣuf violated the terms of the capitulation and asked the Christians to apostasize. Those who refused were martyred, among them Arethas, who was decapitated. A hagiographical version of his speech before death is preserved. The martyrdom of Arethas and his companions had far-reaching consequences. It convulsed the Christian Orient and occasioned a successful Byz.-Ethiopian expedition (see Axum) against South Arabia to avenge the martyrs. The Ethiopian king made Arethas’s son chief of Najran and built three churches there, one of which was dedicated to the “Holy Martyrs and the Glorious Arethas.” Arethas and his companions were moderate Monophysites close to the views of Severos of Antioch. A possible echo of

162 ARDABOURIOS
the martyrdoms of Najran may be detected in chapter 85 of the Qur’an.

Representation in Art. Illustrations of ten episodes of this story accompany an 11th-C. MS with the passio of Arethas by Symeon Metaphrastes (Athos, Esphig. 14, fols. 196r–198v; Treasures 2, pl.212f): the city of Najran besieged, the Christians outside its walls taken into slavery, and the city opening its gates to Yusuf, etc. There are occasional representations of just the beheading of the elderly bearded nobleman and his companions (e.g., Menologion of Basil II, p.135), but Arethas is otherwise rarely represented.

ARETHAS (al-Hārith), king of the Ghassānids (529–69), son of Jabala; not to be confused with Arethas, the king of Kinda. Around 529 Justinian I put him in command of almost all the Arab foederati in Oriens and thus centralized federate power. As supreme phylarch Arethas fought for Byz. in all its eastern wars. He participated regularly in the two Persian Wars of Justinian’s reign, distinguishing himself at the battle of Kallinikos and in the campaign of 541 in “Assyria.” He fought his Lakhmids adversaries on various occasions and finally defeated Alamundarus of Hira at a battle near Chalkis in 554. He also conducted punitive expeditions in the Arabian peninsula. A staunch Monophysite, Arethas contributed substantially to the revival of the Monophysite church in Oriens. He was instrumental in the consecration of Jacob Baradaeus and Theodore as bishop ca.540. He also defended Monophysitism against teachings such as the alleged Tritheism of Eugenios and Konon. In recognition of his services to the empire, Arethas was made gloriosissimus; he was also patrikios.

ARETHAS OF CAESAREA, scholar and politician, archbishop of Caesarea (from 902); born in Patras mid-9th C., died after 932 (according to Beck [Kirche 591], not before 944). During the struggle over the tetragamy of Leo VI, Arethas first supported Nicholas I Mystikos, then sided with the emperor. As theologian Arethas produced a commentary on the Apocalypse (based primarily on that of Andrew of Caesarea) and other exegetical works. Deeply interested in antiquity, Arethas acquired a large library, commissioning some MSS, adding scholia to others. Some scholia form a polemical dialogue with the author, some allude to contemporary affairs: criticism of the luxury at Basil I’s court, ridicule of Stylianos Zaboutzes, references to the war with Bulgaria, or the dispute over the tetragamy. Some of Arethas’s letters expressed his views on Leo’s marriage (Jenkins, Studies, pt.VII [1956], 293–372). In others he discussed the books he had read (Č. Milovanović, ZbFilozFak 14.1 [Belgrade 1979] 59–67). He also wrote homilies and pamphlets. One, esp. vitriolic, accused Leo Choriophaktes of pagan beliefs. The attribution of some of his writings still remains disputable; Jenkins (Studies, pt.XI [1963], 168) rejected and P. Karlin-Hayter (Byzantion 35 [1965] 455–81) defended Arethas’s authorship of the letter to a Saracen emir; J. Koder (JÖB 25 [1976] 75–80) saw in Arethas the author of the Chronicle of Monemvasia.

Arethas has been severely judged by modern scholars as “a narrow-minded, bad-hearted man” (R. Jenkins, Byzantium: The Imperial Centuries [London 1966] 219) and his style criticized as turgid; in fact Arethas rejected the ideal of plain speech, and consciously ornamented his vocabulary “with proverbs, quotations, allusions, and poetic lines, like multi-colored mosaic cubes” (Westerink, infra 5:189,26–31), thus paving the way for the revival of Byz. rhetoric.

ARGOLID (‘Αργολίς), area of the northeastern Peloponnesos divided into two distinct regions: a rich central plain and a mountainous perimeter. The main city was Argos, but in late antiquity Epidaurus, Methana, Troizen, and Hermione also had civic status. Remains of that date, both ecclesiastical and secular, are attested from these sites (on Epidaurus, see Krautheimer, ECBArch 118,
ARGOS

ARGYROPOULOS, JOHN, writer and teacher in Constantinople and Italy; born Constantinople? ca. 1399/4 (Canivet-Oikonomides) or ca. 1415? (Cammelli), died Rome 26 June 1487. Argyropoulos (Ἀργυρόπουλος) is first attested as a member of the Byz. delegation to the Council of Ferrara-Florence in 1438/9. From 1441 to 1443 he studied at the University of Padua, learning fluent Latin and earning a degree in letters and medicine; at the same time he gave private Greek lessons. He returned to Constantinople, and by 1448 was teaching at the Mouseion of the XENON OF THE KRAL; a pro-Unionist, he had converted to Catholicism by this time as well. After the fall of Constantinople, he emigrated in 1456 to Florence, where for 15 years he taught Greek philosophy, primarily Aristotle and to a lesser extent Plato. His students included Lorenzo de' Medici. He is credited with shifting the interests of Florentine humanists from rhetoric to the metaphysical philosophy of Plato. In 1471 he moved to Rome, where he joined the curia of Pope Sixtus IV, then under the leadership of Bessarion. With the exception of a four-year residence in Florence (1477–81), he spent the rest of his life in Rome as teacher and translator.

Argyropoulos made Latin translations of Aristotle (the Nicomachean Ethics), Porphyry, and Basil the Great. His own writings, in both Latin and Greek, were varied: his rhetorical works include a monody for Emp. John VIII (Lampros, Pal. kai Pel. 3:313–19), three orations to Constantine XI., and an introduction to the Progymnasmata of Apollonios. In theology, he composed treatises on the Holy Spirit and the Council of Florence (PG 158:991–1008), and 12 short erotapokriseis. P. Canivet and N. Oikonomides (Diptycha 3 [1982–83] 5–97) have proposed that Argyropoulos is the author of an invective against a certain Katablatas.

ARGYROKASTRON (Ἀργυρόκαστρον, mod. Gjirokastra in Albania), on the left bank of the River Drino, strongly fortified city, known only from the 14th to 15th C. In 1338–39 Argyrokonstron supported Andronikos III but later it was in Albanian hands; in 1418 it fell to the Turks under Hamza Beg and served as a Turkish stronghold against Albanian resistance. The surviving fortifications, much rebuilt in early modern times, are Byz., and pottery of the 12th–13th C. has been found.

LIT. Tib 3:11f. —T.E.G.
ARGYROPRA'TES (ἀργυροπράτης, lit. "seller of silver," Lat. argentarius), term that in the 6th C. primarily designated a moneylender. *Argyropratai* were known in Alexandria and other large cities, but the *argyropratai* of Constantinople were esp. rich and influential. Their private activities (lending money at 8 percent interest, mediating in the sale of precious objects, guaranteeing payment of debts) were combined with various state functions that enabled some of them to acquire significant wealth and exercise political influence. Several seals of *argyropratai* (some of them collective, belonging to two men) dated to the 7th–8th C. imply that their official activity continued long after Justinian I, who devoted three special laws to *argyropratai*. Some *argyropratai*, like Julianus "Argentarius," were wealthy enough to build churches. The function of the *argyroprates* as a moneylender is still found in the 9th-C. Basilike.

The term *argyroprates* also designated a vendor of gold and silver. The 10th-C. *Book of the Eparch* (ch.2) describes the guild of the *argyropratai* as primarily concerned with the sale of gold and silver objects, of bullion, and of precious stones. It is unclear, however, to what extent these 10th-C. *argyropratai* functioned as craftsmen (see jewelers). Although there is one reference in the *Book of the Eparch* to the *argyroprates* serving as a money changer (ch.2.9), most of their financial operations seem to have been shifted to the *trapezai* or bankers, who formed a separate guild. The term *argyroprates* virtually disappears after the 10th C.

- A.K., A.C.

**ARGYROS**, son of Melo of Bari; magistros, vestes, and dox of Italy, Calabria, Sicily, and Paphlagonia (1051–58); born ca.1000, died after 1058, possibly Bari 1068. During Melo's first revolt, Argyros and his mother were sent to Constantinople. Returning to Italy in 1029, Argyros repeatedly rebelled against the Byz., in 1042 with Norman assistance. When his opponent, the *katepano* George Maniakes, tried to usurp the Byz. throne, Argyros went over to the emperor (Sept. 1042). Summoned to Constantinople in 1045, he assisted in defeating Leo Tornikios, but quarreled with Patr. Michael I Kouroularios. In 1051 he returned to Bari, as its first Lombard governor. To halt the Normans, he sought an alliance with Pope Leo IX. The alliance materialized, but in 1053 Argyros and Leo were separately defeated and the pope taken prisoner. From captivity, Leo sent Cardinal Humbert to Kouroularios. Humbert's embassy (1054) visited Bari, and eventually Kouroularios claimed Argyros had forged offensive papal letters and had Argyros's son and son-
ARGYROS, ISAAC, mathematician, astronomer, and theologian; born Thrace? between 1300 and 1310, died ca.1375. A student of Nikephoros Gregoras, the monk Argyros was the leading Byz. champion of Ptolemaic astronomy in the 1360s and 1370s. He wrote a Construction of New Tables and a Construction of New Tables of Conjunctions and Oppositions (of the sun and moon), for both of which the epoch is 1 Sept. 1367. In them he recomputes for the Roman calendar and the longitude of Constantinople the mean motions of the sun, moon, and planets, and the syzygies that Ptolemy had tabulated in the Almagest according to the Egyptian calendar and the longitude of Alexandria. These tables were soon plagiarized and criticized by John Abramiós (Pингree, “Astrological School” 1961). In 1367/8 Argyros wrote a treatise on the astrolabe (ed. Delatte, AnecdAth 2:236–53), closely based on the similar treatise of Gregoras. In late 1372 he dedicated a work on the computus (PG 19:1279–1316) to Andronikos Oinaiotes (A. Mentz, Beiträge zur Osterfestberechnung bei den Byzantinern [Kónigsberg 1906] 27–29); in this work he indicates that he was at Ainos in Thrace in 1318 (Mercati, Notizie 233–36). He also wrote scholia on Theon, but did not write, as has been alleged, the anonymous Instructions for the Persian Tables.

Argyros's mathematical works include one on the square roots of nonsquare numbers (A. Allard, Centaurus 22 [1978] 1–43); a treatise based on Heron’s Geometrics concerning the reduction of nonright to right triangles and other geometrical problems, composed in 1367/8; and a Method of Geodesy, also based on Heron (J.L. Heiberg, Heronis Alexandrini Opera, vol. 5 [Leipzig 1914] xcvi–cii). He also wrote scholia to Ptolemy’s Geography and edited with scholia his Harmonics (I. Düring, Die Harmonielehre des Claudios Ptolemaios [Götëborg 1930] xxxiii, lxvi).

Like Gregoras, Argyros supported Barlaam of Calabria in the Palamite controversy. He wrote three anti-Palamite treatises, including an attack on Theodore Dexios’s concept of the light on Mt. Tabor (M. Candal, OrChrP 23 [1957] 80–113).

LIT. Mercati, Notizie 229–46, 270–82. PLP, no.1285. —D.P.

ARIOANDIA, in Greek mythology daughter of Minos and spouse of Theseus; after Theseus had deserted her, she married Dionysos. Nonnos of Panopolis, in the 47th book of his Dionysiaka, concentrates on the sudden transformation of the abandoned and lamenting Ariadne into the happy bride of her “heavenly wooer” and describes her triumphal wedding; when in the battle against Perseus Ariadne was turned into stone (petrodes ymphphe), Nonnos notes that she was happy in her death “because she found one so great to slay her” and because she was taken up to the heavens. The idea of happiness through death was important for the world view of the 5th C. Malalas emphasized another aspect of the myth of Ariadne: he eliminates the theme of Ariadne’s romantic attraction to Theseus, made her the wife promised him by the Cretans if he destroyed the Minotaur, and finally claimed that she retired to “the temple of Zeus” (instead of marrying Dionysos).

The name Ariadne was popular in the late Roman period. Leo I’s daughter Ariadne became an empress, and a legend tells of a saint Ariadne, a young bond-maid in Phrygia who fled from persecutions and found a happy death disappearing into a rock (petra).

ARIOANDIA, more fully Aelia Ariadne, augusta; born before 457, died Constantinople end of 515. The elder daughter of Emp. Leo I and Verina, Ariadne married Zeno in 466/7 and Anastasios I on 20 May 491. Since Leo had no sons, Ariadne’s marriages served to perpetuate the dynasty. Her union with Zeno also signified Leo’s alliance with the Isaurians against Aspar and marked an important point in the growth of anti-Germanic sentiment in Constantinople. Upon the death of Leo (474), her son Leo II became emperor but soon died, leaving power in Zeno’s hands. Ariadne may
have been involved in the revolt of Basiliskos and sought to soften Zeno's anger against her mother in the aftermath. When Zeno died in 491 Ariadne dominated the court and chose Anastasios I to succeed him.

An unusually large number of portraits of Ariadne survive in marble and ivory, a fact to be explained perhaps by her dominance over her consorts and repeated status as sole heir to the imperial office (Age of Spirit., nos. 24–25).

T.E.G., A.C.

ARIANISM, subordinationist heresy that denied the consubstantiality of the Father and the Son: it was named for its main proponent Arius. Arianism involved a dispute about the relationship of members of the Trinity: it taught that the Son was not coeternal with the Father but was created by him from nothing. This preserved the monarchy of the Father and a strict monotheism but raised problems concerning salvation since the sacrifice of a Christ who was less than fully God might prevent the genuine deification (theosis) of mankind. Arianism arose in Alexandria, where it was condemned by the bishop Alexander; it gained many adherents, however, throughout the East, including Eusebius of Nikomedea. At the Council of Nicaea in 325 the Orthodox party, led by Athanasios of Alexandria, was successful in securing the acceptance of a declaration that Christ was homoousios with the Father, which resulted in the condemnation of Arianism. Emp. Constantine I, who at first supported the decisions of Nicaea, soon began to waver; the exiled Arians were recalled in 328 and many Orthodox bishops, including Athanasios, were banished.

Constantius II openly supported Arianism and persecuted the Orthodox; several councils in the East attempted to heal the rift through a variety of compromises. As a result several forms of Arianism developed. Most extreme were the Anomoians, who emphasized the difference between the Father and the Son, but the Homoians, the Homoiousians, and the Pneumatomachi represented other variations; prominent Arian spokesmen included Aetios and Eunomios. The struggle between Arians and Orthodox also reflected rivalry among various bishops, esp. those of Constantinople and Alexandria; Arianism may have been a particularly important urban phenomenon in the East, esp. in Constantinople, and the social orientation of Arian monks may help explain the movement's initial success.

After the death of Constantius II Orthodoxy gained ascendency in the West, although in the East the emperor Valens was an Arian. The final victory of Orthodoxy came under Theodosios I at the Council of Constantinople in 381 (see under CONSTANTINOPLE, COUNCILS OF), and the sect slowly disappeared from the East. In the West, Arianism remained a pressing problem since many Germanic tribes had been converted by Arian missionaries and this religious difference long remained the line between Romania and Germania.

Later legends often dwell on the heinous behavior of the Arians. An unknown chronicler Ankyrianos (sometimes but groundlessly identified as Neilos of Ankyra) was quoted as stating that the Arians burned portraits of the 4th-C. bishops of Constantinople displayed at the Milion (see Mese) together with an image of the Virgin and Child (Parastaseis 68.13–70.2); later MS illustrations show them burning Orthodox churches (Omont, Miniatures, pl.LII). John of Damascus (Imag. 3:90.33–43, ed. Kotter, Schriften 3:183), reports, referring to Theodore Lector (HE 131), that an emperor (the name, Anastasios, may be an insertion of John) commissioned a painting showing the death of the Arian Olympios who had insulted the Trinity. As late as the Theodore Psalter (Der Nersessian, L'illustration II, fig.176), the Arians are depicted as opponents of Orthodox beliefs.

Source. H.G. Opitz, Urkunden zur Geschichte des arianischen Streites (Berlin 1934).

T.E.G., A.C.
ruler, perhaps al-Ḥakam II (961–76). A practicing physician, he wrote on various medical subjects. He was deemed a competent philologist, and his astronomical, meteorological, and agricultural calendar was incorporated into the so-called Calendar of Cordoba.

His best-known work was a history epitomizing the annals of al-Ṭabarī and continuing the narrative into the 960s. Most of this work is apparently lost, but the MS Gotha 261 has been identified as the section for the years 903–32. This text focuses on Iraq, Spain, and North Africa, but includes no less than 12 accounts of conflicts with Byz. along the Thughūr (see 'Awāsim and Thughūr) as well as a brief report on a maritime expedition organized from al-Fustāt in 931. It also discusses diplomatic negotiations and Byz. embasies to Baghdad in 907 and 917.

ARILJE, a monastery in the western Serbian town of the same name, the seat of the Serbian bishops of Moravica. The main church, dedicated to St. Achilleios of Larissa, was founded by the Nemanjīd ruler Stefan Dragutin, the elder son of Stefan Uroš I, before 1296. Its essentially Byz. church plan has a single nave with short cross arms for the choir, a dome on a pendentives, a tripartite sanctuary, and a narthex. Its façade is decorated with a row of shallow arcades under the roof. According to a fragmentary inscription preserved in the drum of the dome, the frescoes were painted in 1296. To the traditional elements of a Byz. church program were added depictions of the Tree of Jesse, church councils, the Sacrifice of Abraham, the life of St. Nicholas (Sevcenko, Ni­cholas 40, 236–40), and the figure of a winged John the Baptist as well as portraits of Serbian bishops and archbishops (G. Babić in Savva Neman­jić 322–24) and members of the Nemanjīd dynasty. The style shows many features typical of Palaiologan art (see Monumental Painting), although certain mistakes in anatomy, the very strong contours that delineate both the figures and the painted architecture, and the relatively dark colors distinguish these frescoes from the best Constantinopolitan achievements of the time. The painters of Arilje were probably Greeks from Thessalonike: an inscription on a window soffit reads “MARPOU,” a Thessalonikan political slogan referring to Michael VIII (cf. Djurić, infra, and Pachym., ed. Failler, 1:48 n.2, 49.4). The painters’ evident preference for figural relief over the color harmonies favored by the previous generation (the Constantinopolitan artists working at Sopočani) also suggests a Thessalonikan origin for these frescoes.

ARISTAINETOS (Ἀρισταίνητος), fictitious author of two books of letters, probably written ca.520 (O. Mazzal, JOB 26 [1977] 1–5). The subject is sexual passion, treated in a variety of ways—as miniature romance, dialogue, description, etc. The style is rhetorical and full of quotations from earlier writers (Alkiphron, Menander, Plato, Lucian, etc., none later than about the 3rd C.). These are apparently known extensively and at first hand, a valuable indication of the literary works current in the early 6th C. and of the tastes of the time.

ARISTAKES LASTIVERTČI, 11th-C. Armenian historian. Aristakes came from Lastivert, near Erzurum; of his life nothing is known. His History of Armenia, describing the period 1000–72, is of particular value for Byz. expansion into Armenia, the collapse of the Bagratid dynasty, the invasions of the Seljuk Turks, and the eventual loss of eastern Anatolia. His attitude to Byz. is ambivalent: he often laments the misfortunes brought upon Armenia by foreign nations, but he blames the Armenians' own sins rather than Byz. malice. For the collapse of Armenian unity in the face of Byz. and Turkish invasions he blames the heresy of the Tondrakites, a group also attacked by Gregory Magistros.

ARISTEIDES, AILIOS, rhetorician of the Second Sophistic; born 117 or 129, died ca.189. In the discussion of the relative values of philosophy and rhetoric, Aristeides took a clear stand against Plato and asserted the primacy of Rhetoric. This probably was one of the causes of his popularity in Byz., where his works were copied (one of the best MSS was commissioned by Arethas of Caesarea) and provided with scholia. The Neoplatonist Olympiodorus of Alexandria polemized against Aristeides, not only in defending Plato but also, in a political context, while attacking the idea of democracy (F. Lenz, Opuscula selecta [Amsterdam 1972] 129–34). Aristeides was esp. often used by late Byz. authors such as Planudes, Thomas Magistros, and Chortasmenos; Theodora Raoulaina copied a MS of his Orationes. Metochites wrote a comparison of Demosthenes and Aristeides, arguing that the latter rivaled the more ancient orator in his mastery of eloquence and was superior to Demosthenes with regard to his moral and political attitude.

ARISTENOS ('Arístēnōs), a family of civil functionaries, mostly judicial. In the 12th C. Nikephoros Basilakes considered them a well-known lineage (A. Garzya, ByzF 1 [1966] 100.147–49); George Tornikios stated that they were famous not for their worldly brilliance but for piety (Darrouzès, Tornikés 176f). The Aristenoi are known from the mid-11th C. when at least two of them corresponded with Psellos. Gregory Aristenos, a judge at the trial of John Italos, is probably to be identified with his homonym, the proedros of 1094 (Gautier, "Blachernes" 258). Alexios Aristenos was an ecclesiastical official and canonist (see Aristenos, Alexios). Basil served as judge in 1196 (MM 4:305,12–13). Several Aristenoi are known only by their seals: an eparch (Laurent, Corpus 2, no.1036); a judge (no.901); Michael, the logothetes tou dromou (no.439); Basil, the parathalassites (no.1132). The family did not survive the fall of Constantinople in 1204.

ARISTOCRACY, ALEXIOS, mid-12th-C. canonist. Under Emp. John II Komnenos, Aristenos wrote a commentary on the Nomokanon (A. Pavlov, ŽMNP 309 [Jan. 1896] 172f) that probably antedated that of Zonaras. He fulfilled both ecclesiastical (proteidikos, skewophylax, megas oikonomas) and secular (nomophylax, dikaiodotes, orphanotrophos) functions. Since this combination was considered an infraction of canon law, the Council at Constantinople in 1157 required Aristenos to relinquish the position of dikaiodotes (see under Constantinople, Councils of). He was still alive at the time of Nikephoros, patriarch of Jerusalem (ca.1166–71). Nikephoros Basilakes wrote a panegyric of Aristenos. He was also close to Prodromos.

ED. Rhalles-Poties, Syntagma 2–4, or PG 137–38 (together with Zonaras and Balsamon).

ARISTOCRACY, a fluid concept in modern scholarship, usually denoting the ruling class, but equally applicable to those exerting moral and cultural as well as political leadership. The Byz. tended to avoid the words aristoi and aristokratia in favor of eugenés, literally "well-born," emphasizing the concepts of honorable ancestry and high-minded spiritual and moral qualities. The Byz. were ambivalent about what it meant to be "well-born." Scholarly debate has reflected this uncertainty. At one extreme, P. Bezobrazov (Otěrki vizantijskoj kul'tury [Petrograd 1919] 12) argued that Byz. had neither an aristocracy of noble origin nor a recognized nobility with strict privileges; at the other extreme, R. Guillard (BS 9 [1948] 15) claimed that Byz. always made a clear distinction between the old hereditary nobility and the nobility of rank and title.

It seems that the aristocracy of the late Roman era, an old landowning gentry with large estates worked by coloni, disappeared in the East with the crises of the 7th C. During the 7th–9th C. almost nothing survived that could be called a hereditary nobility but, then, from the mid-9th C. we see the rise of aristocratic families made up of landlords and military magnates, deriving their power from the theme organization, particularly in the frontier zones of Asia Minor or the northern Balkans. These became the dynatoi of 10th-
ARISTON AND DEIPNON, ancient terms designating midday and evening meals, respectively. The clear distinction between the two was lost in Byz., and Psellus reports that he taught his students the meaning of the word ariston (ἄριστον). Eustathios of Thessalonike, in his Commentary on Homer, sometimes identifies deipnon (δείπνον) as the evening, sometimes as the morning meal; ariston, he says, had the general meaning of meal. Nikephoros Bryennios (Bryn. 191.23–24) used ariston and deipnon interchangeably, as synonyms. Other sources, including monastic tytika, are more specific and distinguish ariston as the earlier and deipnon as the later meal. Monks ate their ariston after the orthros; sometimes it was their only meal. Laymen did not eat their first meal until midday: John II Komnenos is said to have had the ariston after hunting, and Niketas Choniates ridicules the emperors who were served an early deipnon. Nicholas Mesarites describes ariston as a noontime meal that included bread, wine, fish, meat, and vegetables (A. Heisenberg, Quellen und Studien zur spätbyzantinischen Geschichte [London 1973] pt.II, 3, pp. 41.35–42.2). The austere Ke­kaumenos (Kek. 224.21–22) recommended a large ariston and no deipnon. The anonymous author of On Food advises eating a full meal at noon and only bread and wine for deipnon (PhysMedGr 2:194.1–195.9).

ARISTOPHANES (Ἀριστοφάνης). Greek comic poet; born Athens ca.445 B.C., died Athens ca.388. The oldest MS to transmit Aristophanes’ 11 extant plays is of the late 10th C. At the same period, his life was recorded in the Souda along with some 5,000 entries from his text and scholia. Systematic study of Aristophanes began in the 12th C. with the extensive commentaries of John Tzetzes and continued in the 14th C. with the annotated editions by Thomas Magistros and Demetrios Triklinios. MS evidence shows that the plays selectively studied were Wealth, The Clouds, and The Frogs, with Wealth dominant because of its edifying message.

Known as “the Comic” (ho komikos), Aristophanes was considered the foremost standard for the Attic dialect (Gregory PardoS, ed. Schäfer, 6f). The wide range of his language and style as
well as the historical information in his plays undoubtedly caused his popularity with Byz. scholars and teachers who, it must be noted, made no attempt to expurgate his text. Tzetzes' judgment is particularly interesting: he criticizes Aristophanes' unfair treatment of Socrates but (Massa Positano et al., infra 2:377.1–10) admires Aristophanes' opposition to war and approves wholeheartedly of its obscenity when it serves to promote the noble cause of peace.

—A.C.H.

ARISTOTLE, ancient Greek philosopher; born 384 B.C., died 322. Byz. higher education always centered on the study of Aristotle. His works have been transmitted in over 1,000 MSS dated between the 9th and 16th C., making him by far the most widely copied ancient Greek author; he is also the most commented on. In the early period, interest in Aristotle was particularly strong at the school of Alexandria, where Ammonios and Olympiodoros of Alexandria managed to present philosophy in a way that avoided trouble with the church. Elias of Alexandria and David the Philosopher, who succeeded Olympiodoros as head of the Alexandrian school, were also commentators on Aristotle, as was John Philoponos. Compared to Plato, Aristotle was safer and of greater use to the Orthodox because parts of his system could be put directly to the service of theological discussion. After the 7th C., attention was concentrated on the logical treatises, which became the basis of philosophical studies. From then on the average educated Byz. had direct contact with Aristotle consisted of learning the main concepts of the Organon, beginning with the Categories and ending with Sophistical Refutations. At the same time, interest in the nonlogical works of Aristotle was never fully lost, and in the chain of commentators, which stretches unbroken from Photios in the 9th C. to John Chortasmenos in the 15th, several, through exegesis or paraphrase, made themselves and their students familiar with other parts of the Corpus. Striking examples are Psellos, who composed a commentary on the Physics, Michael of Ephesus, who commented on most parts of the Corpus including the zoological treatises, and Theodore Metochites, whose contributions to philosophical studies included paraphrases of the Parva naturalia. (See also John Italos and Eustratios of Nicaea.)

Aristotle and the Church Fathers. While the Alexandrian school made a serious study of Aristotle in the 4th–6th C., church fathers, esp. those of the Latin West, were cautious in their approach to Peripatetic philosophy; Jerome emphasized that it was heretics who cited Aristotle. In the East, Eusebius of Caesarea refuted various points of Aristotelian teaching, but some theologians (esp. Nemestos) drew upon Aristotle; Aristotelian logic became an important vehicle of argumentation in the Cappadocian fathers, and John of Damascus used Aristotle to build his system of Christian doctrine. The major points of Peripatetic philosophy that Byz. theologians found unacceptable were Aristotle's rejection of divine Providence as a decisive factor directing the universe; the concept that the god is physically represented in the fifth element, the ether, so that the god was reduced to the "soul of the world" that moves material things; the idea that visible things are coeternal with the god; and the doctrine of the mortality of the human soul, while only the nous (mind, intelligence) remained immortal.

—J.D., A.K.

ARITHMOS (ἀριθμός, lit. "number"), or poson, in documents from the mid-10th to mid-12th C. a fiscal term referring to the specific number of PAROKIKOS (or DOLOPOIKIKOS) families granted by the emperor to an individual or an ecclesiastical corporation. This number served as a means of quantifying a grant and could not be reduced or increased without imperial approval. In a chry-
suboll of 1148, Manuel I emphatically prohibited apósoz grants of paraioíkoí, that is, without indication of “number” (Zépos, Jus 1:377–26–27). Nikephoros III, in a chrysooboll of 1079, emphasized that the specific aríthmos could be increased or maintained only from the children and grandchildren of the douloí paraioíkoí of the monastery that received the grant (Laura 1, no.38.24–26); a similar formula is found in a charter of Manuel I of 1156—the poßen of 12 paraioíkoí was to be preserved, after the death of one of them, by drawing from their children (L. Petit, IRAIK 6[1900] 32.19–21). This meant that one and only one son (or grandson) of a peasant who was included in an aríthmos would replace his father in that role; the state could deprive the landowner of peasants above the aríthmos.

The fiscal and economic character of grants of an aríthmos as well as the status and obligations of paraioíkoí within an aríthmos are poorly understood. Although Kantakouzenos (Kantak. 2:63.14–15) uses aríthmos once to refer to the sizes of pronoía grants, the concept of aríthmos was superseded after the 12th C. by that of poßen, in which the object quantified was not the number of persons but the sum of endowed tax. In a charter of 1385 the monastery of St. Paul was granted not an aríthmos of peasants but all the “natural (phýskoi) paraioíkoí” of a certain area (A. Kazhdan, VizVrem 2[1949] 321). (For aríthmos as the term for a military unit, see VIGLA.)

ARİUS (Ἀρίους), theologian, founder of Ariantism; born Libya? ca.250, died Constantinople 336. A student of LUCIAN OF ANTIOCH, after ordination as a priest he became a popular preacher in Alexandria, and ca.318 his teachings began to excite controversy. Because he said that Christ was not coeternal with the Father, Alexander, bishop of Alexandria, condemned him and he fled to Nikomedea. The controversy soon spread throughout the East, and Arius won the support of many influential churchmen such as EUSEBIOS OF NIKOMEDAEA. Constantine I became involved in the controversy and summoned the Council of Ni-caea in 325; Arius was condemned and exiled to Illyria. In 328 Constantine recalled Arius, who soon managed to convince the emperor of the correctness of his views. ATHANASIOS of Alexandria opposed Arius’s teaching, but the latter allied with supporters of the first Meletian Schism; Athanasios was exiled, and the council of Tyre and Jerusalem rehabilitated Arius in 335.

“A man of the big city” (Kannengiesser, infra 208), Arius was an ascetic and a spiritual leader to numerous holy women and other disciples, a passionate preacher, and commentator on the Bible. Of his writings only fragments are left: a letter to Eusebios of Nikomedia and another to Alexander of Alexandria as well as the Thalia (Banquet), written at least partly in metric form (M.L. West, JThSt 33[1982] 98–105) before 320 (C. Kannengiesser in Kyriakov 1[Münster 1970] 346–51) and presenting his doctrine. Athanasios berates “the dissolute tone” and “effeminate tune” of the Thalia. According to Philostorgios (HE 2.2, p.136–8), Arius wrote songs for travelers on sea and land and for workers in the mills.

Athanasius relates that Arius died an ignominious death in a latrine. This tale, suspiciously resembling the fate of Judas, was developed in later legends (A. Leroy-Molinghen, Byzantion 37 [1967–68] 126–33; 38[1968] 105–11).

ARKADIA (Ἀρκαδία), mountainous central region of the Peloponnesos. The name Arkadia appears infrequently until the 15th C. (e.g., in pseudo-Sphrantzes). During the period of the Roman Empire, the area underwent an economic decline exacerbated by invasions of the Goths (end of the 4th C.) and Slavs (7th C.); the latter left substantial traces in local toponyms. Old cities (Orchomenos [at modern Kalamaki], Mantinea, Megalopolis) disappeared; the name Arkadia was applied to the city of Kyperissia on the west coast of the Peloponnesos, suggesting a population movement; in Tegea-Nikli archaeological excavations reveal a gap between levels of the 6th C. and those of the 10th–12th C. Byz. authority in the region was restored after the expedition of StauroKios in 783 and that of Skleros under Nikephoros I. The oldest church in Arkadia after the Byz. reconquest is probably St. Christopher in Pallantio of the 10th C. (A. Abramea in Geographica byzantina [Paris
ARKADIOPOLIS (Ἀρκαδιούπολις), name of two cities, in Asia Minor and in Thrace.

ARKADIOPOLIS IN IONIA (mod. Arakcilar in Turkey), suffragan bishopric of the metropolis of Asia (Notitiae CP 1.102). Its bishop attended the Council of Ephesus in 431; his successors are attested up to the 15th C. (E. Kurz, *VizYrem* 12 [1906] 103.8; J. Nicole, *REG* 7 [1894] 80.26). Laurent (*Corpus 5.1*, nos. 292–93) ascribes to this see two seals of bishops of the 10th–11th C., arguing that the hierarch of Thracian Arkadiopolis at that time would have been an archbishop.

ARKADIOPOLIS IN THRACE (mod. Luleburgaz, in European Turkey), city on the route from Adrianople to Constantinople, built on the site of ancient Bergoule. This ancient name was retained by late Roman geographers (*Tabula Peutingeriana*, Cosmographer of Ravenna, Hierokles, etc.) but in notitiae it appears already as Arkadiopolis—the see of the autocephalous archbishopric of Europe (*Notitiae CP* 1.49) and by the late 12th C. a metropolis. Most historians, from Theophanes to Kantakouzenos, make Emp. Arkadios the founder of the city; Kedrenos (*Cdr*. 1:568.5–7), however, relates that it was Theodosios I who built the *polis* on the site of ancient “Bergoulion” and named it in honor of his son (i.e., Arkadios).

As one of the strongholds (*kastron*—Beşevli, *Inschriften*, no.26) protecting Constantinople from northern invasions, Arkadiopolis was often subject to hostile attack. Attila seized the city in 441 and Theodoric besieged it in 473; Thomas the Slav retreated to Arkadiopolis after his assault on Constantinople; in 970 the Rus’ army reached Arkadiopolis but was defeated at its walls by Bardas Skleros. The stronghold was an important station on the route of the Third Crusade: the *Hystoria de expeditione Friderici* describes the attack of German soldiers on *Archadionopolis* where they found much wine and other stored goods. Near the “polisma” built by Arkadios,” writes Niketas Choniates (Nik.Chon. 445.67), the general Alexios Gidos was routed by rebellious Bulgarians and Vlachs in 1194. After the fall of Constantinople in 1204, the *civitas Archadiopoli* (A. Carile, *StVen* 7 [1965] 218.27) was given to Venice, but the rights to it were disputed, and the city changed hands several times; according to Choniates, it suffered serious destruction, and Villehardouin relates that its inhabitants left the city and sought refuge in Adrianople. According to Kantakouzenos (Kantak. 1:541.17–21), by his time Arkadiopolis was an ancient city in ruins; he mentions that in 1340 Andronikos III planned to rebuild it.

ARKADIOS (Ἀρκάδιος), emperor in the East (395–408); born Constantinople 377/8, died Constantinople 1 May 408. The son of Theodosios I and Aelia Flaccilla, he became augustus in 383. Left as regent in Constantinople in 394 when his father departed to fight the usurper EUGENIUS, he shared power with his brother HONORIUS after the death of Theodosios the following year. Apparently weak-willed and averse to action (*Zosim. 5.12.1; Philostorg., HE 11.3*), Arkadios was dominated by others, first by RUFINUS (395–96), then EUTROPIUS (396–400), his wife EUDOXIA (400–04), and finally the praetorian prefect ANTHEMIOUS (404–08). During Arkadios’s reign ALARIC ravaged the Balkans, while the Huns broke through the Caspian Gates and the ISAURIANS disturbed eastern Asia Minor. Although Arkadios may not have dominated policy, important developments marked his reign: the growing movement toward the proscription of paganism, the defeat of GAINAS and the Germanic threat to Constantinople, and the deposition of JOHN CHRYSTOSTOM. The court of Arkadios encouraged the development of a new concept of imperial victory based not on the
military prowess of the emperor but on his piety, reflected in new symbols of victory set up in the Hippodrome and in the Column of Arkadios erected in 400.

ARKARIOS (ἄρκαριος, Lat. arcarius), in the late Roman Empire the name of various subordinate officials of treasuries—imperial, provincial, military, even private—who were often slaves or freedmen (P. Habel, RE 2 [1896] 429–31). In Byzantine practice the term retained a very restricted meaning. In the Kletorologion of Philotheos the arkarios is a subaltern official of the orphana­tophios. The stackurakondidatos Leo, in the first half of the 11th C., held the offices of chartoularios, arkarios, and imperial “measurer” (metretes) (Zacos, Seals 2, no. 837), thus suggesting that the arkarios was probably involved in fiscal or economic operations. The Nomokanon of Fourteen Titles (Rhalles-Poîles, Synagoga I:175.7–11) repeats Justinian I’s law of 530 (Cod. Just. I 2.24.16) that ordered the oikonomoi of Constantinople to give an accounting to the arkarioi (of the Great Church—omitted in the Nomokanon) every one or two months. It is unclear whether this rule reflects reality or only tradition. In Rome of the 6th–8th C., the arcarius, as keeper of the papal treasury, was, along with the sacellarius, the most important fiscal official.

ARKLA (ἄρκλα, “box”), a kind of treasury, probably provincial. The Kletorologion of Philotheos mentions the chartoularioi of the arkla in the department of the genikon as well as their notaries; the De ceremoniis identifies these chartoularioi as “external,” that is, acting outside of Constantinople (De cer. 694.19). A seal of the 11th or 12th C. belonged to a certain Demetrios, chartoularios of the arkla (Laurent, Corpus 2, no. 383). An 11th-C. fiscal document (Iuv. 1, no. 30.34) is signed by Gregory Chalkoutzes, chartoularios of the arkla of the West, a department of the genikon.

LIT. Bury, Adm. System 87. Dölger, Beiträge 69. —A.K.

ARK OF THE COVENANT (κιβωτός [Ex 25:22] or σχημὴ τοῦ μαρτυρίου [Ex 37:5]). Usually found in narrative contexts such as the synagogue at Dura Europos and illustrations to Joshua (chs. 3–4, 6) (e.g., in the Joshua Roll, the Octateuchs), it occurs rarely and symbolically elsewhere: a fresco in the Chora treats the recovery of the Ark from the Philistines as a prefiguration of the Virgin (see also Noah’s Ark), while Kosmas Indikopleustes discusses the Ark’s cosmological significance. As a vessel threatened but divinely protected, the Ark symbolized the church for Niketas David Paplagon (Encomium, p.36) and other commentators. Gregory of Nyssa’s Life of Moses (2.179) glosses the tabernacle as Christ and the Ark as his powers.

ARMAMENTON (ἄρμαμέτρον, from Lat. ar­manentum), arms depot or arsenal in Constantinople. According to a 9th-C. chronicler (Theoph. 274.22–24), Emp. Maurice built an armamenton near Magnaura in 596 and set up his statue there; later sources ascribe both to Emp. Phokas. Guillaume (Topographie 1:42) surmises that there were two different armamenta. There are some data concerning other arsenals. An enigmatic inscription mentions a great arsenales of Theophilus (Guillaud, Topographie 2:107), and it is unclear whether this evidence can be connected with the mansion of Armamentarea (the wife of the chief of the arsenal?) allegedly built by Theophilus (Janin, CP byz. 455) or transformed by Empress Theodora into the monastery of St. Panteleemon (Oikonomides, Documents, pt. IX [1964], 195). Some anti-Iconoclast texts accused Leo III or Constantine V of transforming the Church of St. Euphemia into an arms depot. Armens in the Blachernai region and on the Propontis are known in the 14th C.

The administration of armamenta presents some problems as well. Both the taktikon of Uspskij and the Kletorologion of Philotheos mention the archon of the armamenton; Theophanes (297.17) speaks of ho epano of the armamenton in the reign of Phokas; Oikonomides (Listes 317) denies the existence of the katepano of the armamenton, whereas Ahweiler (Mer 424, n.4) doubts his thesis. Seals mention the archon, strategos, and chartoularios of the imperial armamenton. Questionable, however,
is the figure of the kourator of Arsanas or Artzanas whom Laurent considered a member of the staff of the armamenton—it would be more reasonable to interpret Arsanas as a local name, not as an arsenal. Armamenta possessed pack animals—a bronze tablet of the 6th C. indicates that they were exempt from angareiai (Zacos, Seals 2, no.187; cf. N. Oikonomides, Diptycha 4 [1986–87] 49–52).

ARMBAND (usually in plural form ψελ(λ)ία, Lat. armillae). The term usually refers to a military ornament, worn by Germanic soldiers on the upper arm. Elsewhere, it is described as armilla gallica, a bracelet inset with gem stones, worn on the lower arm. In the Romano-Byz. world the term armillae normally refers to military insignia in the form of armbands, made of silver and worn in pairs, one, or sometimes two, on each arm. Examples of armillae, as part of the emperor's largesse, may be seen in the exergues of 4th–7th-C. medallions (e.g., DOCat 2, no.2), where they are shown as complete rings. Elsewhere, as in illustrations in the Notitia Dignitatum, they are shown as incomplete hoops, with the open ends forming knobs. The two spectacular enameled bracelets found in Thessalonike in 1958 (Splendeur de Byz. 190) have also been called armillae.

ARMBANDS, AMULETIC, were manufactured in Egypt and Syria in the 6th–8th C. Most often silver, such jewelry is distinguished by recurrent inscriptions and images, and by a ribbonlike design with incised figural medallions. Typically these armbands show at least part of the Palestinian Christological Cycle as well as the beginning of the apotropaic 90th Psalm. More elaborate examples add ring signs, apotropaic acclamations, the Holy Rider, and some form of Chnoubis. Because these armbands are closely related to Medusa amulets, which in addition to the above words and images bear various uterine incantations, they too were probably made specifically for women and control of the uterus.

ARMENIA (Ἀρμενία), kingdom and province on the northeast frontier of Byz. Much of medieval Armenian history remains obscure and problematic because of the lack of native sources before the Armenian alphabet was created (5th C.) and the limited point of view of subsequent ecclesiastical historians. They were hostile to Iranian and Muslim cultures and Byz. Orthodoxy, which they rejected as nestorianizing after the Council of Chalcedon. They focused primarily on northern Armenia and often supported the interests of a particular noble family. The christianization of the country at the beginning of the 4th C. drew it toward the Romans and away from its Iranian past. Nevertheless, throughout the Middle Ages, Armenia remained a buffer zone oscillating between the classical world and the East. Consequently, its own history was conditioned by the balance of power beyond its borders, even though the native language, culture, and customs were stubbornly maintained. Internally, the sharp geographical divisions of the Armenian plateau fostered the centrifugal tendencies of the magnates, jealous of their prerogatives and inclined to view the ruler merely as primus inter pares.

Between 387 and 390 the earlier tripartite “Armenia” (the imperial province of Armenia Minor west of the Euphrates, the kingdom of Greater Armenia east of the river, and the southern Satrapies) was transformed by the division of the Arsacid realm of Greater Armenia into a smaller imperial portion and a much larger Persarmenia (comprising some four-fifths of the former kingdom) along a north-south line from Karin (Theodosiopolis) on the upper Euphrates to Dara in Mesopotamia. The Arsacid dynasty disappeared in both portions in the early 5th C. Thereafter, Persarmenia was governed by a marzpan, often a native magnate, residing at Duin, while the imperial portion, Armenia Interior, was first administered by a comes Armeniæ until Justinian I (nov.31 in 536) fused it with Armenia Minor, the Satrapies, and parts of Pontos to form regular imperial provinces known as Armenia I–IV. This pattern survived almost three centuries when Emp. Maurice, by the peace of 591, greatly increased the imperial portion by extending the Byz. frontier eastward almost to Duin and the northwest
corner of Lake Van. Armeno-Byz. relations grew increasingly strained during this period as Byz. attempts to force Armenia back into communion with Constantinople and to impose imperial institutions and customs fueled the hostility of the powerful native clergy and of the local magnates whose prerogatives were threatened. As a result, the Arab invasions of the mid-7th C. met comparatively little opposition.

At first, the Muslim occupation of Armenia was relatively mild and taxes remained low because the caliphate relied on the Armenian cavalry to repel the Khazars raiding through the Caucasian passes. Administratively, Armenia was now joined with Iberia and Caucasian Albania to form the province of Armenia. The crises of the 8th C. when the Turks profiting from the crises distracting Constantinople, tightened their hold. The turbulence of the Armenian nobles stirred up Muslim fanaticism and led to punitive expeditions, massacres, and deportations; much of the Armenian nobility was annihilated, and numerous Muslim emirates were established in the country.

From the 9th C. onward, Byz. eastward expansion and the simultaneous decline of the 'Abbasid caliphate permitted a native revival. The Bagratid dynasty established itself in the north while the Arcruni controlled most of Vaspurakan in the south. Armenian autonomy was recreated with the coronation of Ashot I the Great Bagratuni in 884 and that of Gagik Arcruni in 908, and the external balance of power was reestablished. This second period of independence, though politically fragile and increasingly fragmented, lasted almost two centuries; the native culture may have reached its zenith during this period (see Armenian Art and Architecture; Armenian Literature). Armenia likewise prospered through extensive international trade until Byz. expansion destroyed the external equilibrium once again.

Byz. expansion into Armenia began in the second half of the 10th C., and Taron became an imperial province in 966/7, but in 974 Emp. John I Tzimiskes was still collaborating with King Ashot III. Byz. annexation of Armenia accelerated in the next century. In successive campaigns, Basil II gained much of western Armenia, which became the theme of Iberia early in the 11th C. The cession of Vaspurakan threatened by the first Turkish invasions of the empire led to the creation of the Katepanate of Basprakania (Vaspurakan) in 1021/2. Byz. imperial pressure finally caused Gagik II to abdicate and surrender Ani to Byz. in 1045, after repeated attacks against the capital had failed. Imperial armies also failed to take Duin from the Muslims, but by the mid-11th C. most of Armenia had been converted into imperial themes—Tarun, Iberia, Basprakania, and Mesopotamia—while the native nobility migrated to Cappadocia, Georgia, or Cilicia.

As the Seljuks overran the country, the Byz. annexation of Armenia proved short-lived and ended with the Byz. defeat at Mantzikert in 1071. Therefore, Muslim dynasties controlled Armenia except for a brief revival under the Zakarids, who ruled the northern portion of the country for two centuries in the early 13th C. This Indian summer ended with the Mongol invasions of the 1290s; thereafter Armenia, dominated by various Muslim dynasties from the 14th C. onward, passed for centuries out of the orbit of the Mediterranean world.

The equivocal nature of Armeno-Byz. relations in every period is amply attested. Some collaboration unquestionably occurred because imperial support was indispensable if Armenia was to repel Eastern aggressions, and Byz. relied to a large extent on its Armenian military contingents. Armenian nobles repeatedly served the empire and settled and prospered in Asia Minor and Constantinople (see Armenians). Recurring religious dissensions marred these contacts, however, and Armenia’s traditional social structure (dominated by haughty magnates holding hereditary offices and domains) was fundamentally irreconcilable with the centralized and bureaucratic pattern characteristic of Byz., and with its fiscal policies. Despite Armenia’s rejection of Byz. language and religion, cultural and artistic ties were maintained; the Armenian architect Trdat was even summoned to Constantinople in 989 to restore the damaged dome of Hagia Sophia. Similarly, Armenia profited from the transit trade crossing the country—which led to the designation of Artašat as the only northern imperial customs post in the 5th–6th C. (Cod. Just. IV 63,4) and to the later prosperity of Ani—while Constantinople de-
pended on the same exchange for Eastern luxury goods and some Armenian products such as metals (silver, copper, lead, etc.) and the region's red-dyed and embroidered leathers and textiles. Nevertheless, Armenia's almost total deurbanization from 364 to late Bagratid times ran directly counter to the characteristic focus of the Mediterranean world on the city and hindered the development of Armenia's internal trade; lacking a native currency entirely, Armenia had to rely on Byz. or Arab coinage for all commercial transactions. The basic incompatibilities between Armenia and Byz. won out over their mutual reliance and prevented the integration of Armenia into the empire until both were overwhelmed by the Ottomans in the 15th C.

**ARMENIAKON** (Ἀμερινακῶν), one of the first themes of Asia Minor, originated in the command of the *magister militum* for Armenia instituted by Justinian I. Although 9th-C. sources (Theophanes the Confessor and al-Baladhuri) suggest that the theme may have existed as early as 629, its *strategos* is first unambiguously attested in 667. The theme encompassed eastern Anatolia from Cappadocia to the Black Sea and the Euphrates. In the 9th C. the *strategos* of Armeniakon commanded 9,000 troops and drew a salary of 40 pounds of gold; his domain included 17 fortresses. The army frequently played a role in politics, supporting the revolts of Leo III in 715 and Artabasdos (their former commander) in 742. They revolted against Irene in 790, but supported Michael II against Thomas the Slav. The importance of Armeniakon derived from its size and strategic location. The original area was divided early in the 9th C. into Armeniakon, Charsianon, and Cappadocia, and in the 10th C. Chaldia became separate, leaving Armeniakon to comprise the western Pontic coast as well as the mountains and valleys to the south. Its capital was Amaseia.

**ARMENIAN ART AND ARCHITECTURE.** The medieval art of Armenia falls into three main periods: that between the establishment of Christianity and the Arab invasions (ca. 305–750); that of the independent Armenian kingdoms (ca. 862–1021); and that of the pockets of Armenian power that survived under Seljuk, Georgian, and Mongol rule (ca. 1150–1500).

In architecture, many elements remain constant: churches are almost always made of a rubble conglomerate faced with large, finely joined tufa blocks. They are vaulted, and, after the 6th C., carry masonry domes. The exteriors of most Armenian churches barely hint at the spaces within. Domes are encased in cones or pyramids, and vaults are gabled. Apses are often embedded in straight walls. Steep niches indicate the position of aisles and apses.

**First Period (ca. 305–750).** Prior to the 6th C. Armenian churches were single-naved or simple basilicas (F. Gandolfo, *Le basiliche armene IV–VII secolo* [Rome 1982]). With the notable exception of Ereruk (ca. 500), they are also small and dark.

In the 7th C. the ties of Armenia with Georgia, Syria, and Palestine were strong, and this period produced a remarkable variety of centralized domed plans. Attempts to find examples, that surely predate the Justinianic taste for centralized churches have not been convincing.

Among the most popular domed church plan types is the cross-domed basilica (e.g., St. Gayan at Va'aršapat), in which transverse vaults raised to the height of the nave interrupt barrel-vaulted aisles. At the crossing, freestanding piers support a dome on squinches (a plan very similar to the Byz. cross-in-square). In the domed hall church (e.g., at P’thni, ca. 630) these piers abut the walls so that three deep niches replace each aisle. Here the dome is on pendentives. Small cruciform buildings with squinches were also popular, as was the domed quatrefoil superimposed on a cube (e.g., St. John at Mastara, 7th C.).

External sculptural decoration is generally restricted to cornices over windows and doors and at the gable-line; internal decoration is limited to capitals. Occasional figural elements appear: Old and New Testament scenes, or donor portraits. Memorial stelae illustrate the same subjects. A large relief of the Virgin Hodegetria survives, now built into the wall of the cathedral of Ojun. Vrt’anes K’ert’ol’s 7th-C. treatise in defense of

K'ert'ol also described MSS illuminated in the Greek style and bound in ivory. The 10th-C. Ejmiacin Gospels (Erevan, Mat. 2374) have 6th-C. Byz. ivory covers and include two illuminated pages taken from an earlier Gospel. The four full-page miniatures on these folia allow a fuller appreciation of the style preserved in the frescoes; all ha' strong ties with 7th-C. Byz. painting such as the apse mosaic at Krtt and the icon of Sts. Sergios and Bakchos at Kiev (Weitzmann, Sinai Icons, pl.12, no.B.9).

**Second Period (ca.862–1021).** Armenian kings of the 9th and 10th C. supported a very retrospective architecture. Seventh-century church types served as the basis for new dynastic monuments at Ani and Aht'amarn, and the same phenomenon occurs in smaller principalities (the Holy Apostles at Kars [937] copies St. John at Mastara) and in monasteries. The new versions are often steeper in elevation than their models. Sculptural articulation, though often based on 7th-C. forms, developed in new directions, from the elegant, attenuated arcading at Ani to the exuberant figural reliefs at Aht'amarn. Large-scale donor portraits, some carved nearly in the round, appear at Ani, Aht'amarn, Sanahin, and Hatbat. Islamic influence in this period is evident in the use of muqarnas (stalactite squinches), polychrome stonework, and large expanses of flat, leafy interlace, esp. in forechurches and secular buildings.

The xacr'k'ar ("stone-cross"), a stone slab carved with a cross and a variety of other motifs, was used from the 9th C. onward. Serving a number of commemorative purposes, xacr'k'ars are usually freestanding, but were sometimes incorporated into the walls of churches and other buildings. Especially after the late 13th C., donor portraits and Old and New Testament scenes appear on xacr'k'ars.

Extensive fresco cycles survive at Tat'ev (ca.930)—where Stephen Orbelian (died 1304) says the painters were "Frankish"—and at Aht'amarn.

In some MS illumination, Byz. is the predominant influence, for example, in the painting style, ornament, and imagery (but not the placement of the scenes) of the Trebizond Gospels (Venice, San Lazzaro 1400, 11th C.) and in the narrative scenes in the Gospels of Gagik of Kars (Jerusalem, Arm. Patr. 2556, 11th C.). Several Gospels like that copied in Melitene in 1057 (Erevan, Mat. 3784) include Byz. compositions (e.g., the Entombment of Christ) developed only after Iconoclasm. The illustrations, however, are placed at right angles to the side margins; the erratically drawn figures in bright, wash-like colors on bare parchment are not Byz. in character. Other MSS preserve pre-Iconoclastic imagery, some in a style reminiscent of the Rabbula Gospels or Ejmiacin Gospels (the Mk'e Gospels, Venice, San Lazzaro 1144, dated 862), others in a flattened, linear transformation (Jerusalem, Arm. Patr. 2555, 11th C.). The influence of Islamic court art is clear in the miniature of Gagik now bound into his Gospels, showing him with his family, dressed in oriental robes, seated cross-legged on rich carpets.

**Third Period (ca.1150–1500).** After the Seljuk invasions, smaller Armenian principalities fostered their own, often highly individual, art (e.g., the MS painting of Armenian Cilicia). Although some activity continued in cities (e.g., the patronage of Tigran Honenc), it was the monasteries that became the most important focus for princely patronage.

Although patrons still turned to 7th-C. church types, they developed new plans for other buildings. Among the Zakerian additions at Halbat is the forechurch of the Church of the Holy Sign (1208–10), its roof supported by four intersecting arches, with a three-story bell tower (1245) with chapels on each floor.

The sculpture of the Prosian funerary church at Gefard and its forechurch (1285) is typically exuberant. Fleshy vegetal motifs and muqarnas ornament the dome of the rock-cut church, while animals and New Testament figures share the surfaces of the forechurch with crosses and interlace.

In the 14th C., the Orbelian family had tympana carved at Amalü with a variety of new subjects, for example, the Ancient of Days (see Christ: Types of Christ) with the Crucifixion and Adam. This inventiveness also emerges in MS illumination of the period. At Glajor, under Orbelian protection, T'oros of Tarōn and other artists developed Old and New Testament imagery reflecting the anti-Chalcedonian theology of their abbot,
Esayi N’ec’i, including, at the same time, Western images, for example, the crowned Virgo lactans.

ARMENIAN CHURCH. Considering itself autocephalous, this church traces its origin from the preaching of St. Gregory the Illuminator at the beginning of the 4th C. and also claims to be an apostolic foundation through St. Thaddeus. This double tradition stems from two evangelizing waves: the earlier came from Syria-Palestine and reached southern Armenia before the end of the 2nd C., the other represented the hellenizing tradition of Cappadocian Caesarea introduced by Gregory into Armenia and continued by his descendants. This second wave, which predominated in the northern part of the country, ultimately prevailed over the Syrian one, whose existence was all but expunged from the sources.

The Armenian church still recognizes only the first three ecumenical councils. It rejects the Council of Chalcedon as Nestorian, while simultaneously condemning Monophysitism, and holds to the Christological definition of Cyril of Alexandria: "One is the nature of the Incarnate Logos." Armenian primates ceased to be consecrated at Caesarea after the death of St. Nerses I the Great in the 4th C., but a break with Constantinople came only considerably later, at a date that is still debated.

Despite this breach, adherents of Chalcedon remained numerous, esp. in the western provinces of Armenia, as evidenced by the pro-Chalcedonian Narratio de rebus Armeniae (8th C.). The Armenian patriarch of katholikos resided from the 5th to the 9th C. at Duin on Persian territory and was thus free to defy Byz ecclesiastical authority, but western Armenian bishops disregarded his injunctions and continued to attend Byz. church councils. After the new partition of Armenia in 591, the Emp. Maurice even succeeded in installing a rival katholikos at Awan near Erevan, thus creating a schism that lasted some 20 years. Herakleios and his successors continued efforts to bring the Armenian church back into communion with Constantinople, but all compromise formulas failed, and in 725/6 the Council of Mantzikert proclaimed the union of the Armenian and Syrian churches, while maintaining their rejection of extreme Monophysitism. Some attempts at negotiation continued in Bagratid times. Armenian patriarchs corresponded with Photios and Nicholas I Mystikos, but the Council of Ani in 959 again condemned Chalcedonianism and its adherents in Armenia. Relations worsened in the 11th C. with polemics and forced rebaptisms occurring on both sides. Armenian historians denounced Armenian Chalcedonians in the service of Byz.—such as Philaretos Brachamios—as traitors and "Iberians," that is, no longer Armenian. During the sojourn of the katholikoi in Cilicia (1051–1444), a final attempt at union under the katholikos St. Nerses the Gracious (1166–79) failed after Emp. Manuel I died (1180); negotiations then focused, ultimately without success, on the Latin church, although relations between Armenia and Byz. were not entirely severed.

Byz. influence can be traced in Armenian ecclesiastical practices: Armenian liturgy follows the Greek liturgy attributed to St. Basil and the custom of distinguishing between the black (celibate, monastic) and white (married, secular) clergy follows Byz. usage. Other customs, however, differed from those of Byz.: the use of azymes and unmixed wine for the Eucharist, for example, as well as the early traditions involving hereditary patriarchs and clan bishops are purely indigenous.

LIT. M. Ormanian, The Church of Armenia (London 1912).

ARMENIAN LITERATURE. Until the year 400 the Armenians used Greek or Aramaic for their inscriptions, coinage, and correspondence. Syriac also was known in ecclesiastical circles. Only after Mesrop Maistros invented the native script did a vernacular literature develop.

The pupils of Maistros traveled to centers of Christian learning, esp. Edessa, the Greek cities of Asia Minor, and Constantinople, to study Syriac and Greek and to make translations. A corpus of translated literature rapidly developed. At first the emphasis was on liturgical, biblical, and gen-
eral theological writings, but succeeding generations of Armenians translated and adapted many of the standard texts of late antiquity dealing with secular scholarly themes.

Some of the first translators themselves composed original works, the earliest being the *Life of Mas'otc* by his pupil Korjun, and the treatise on evil and free will by the latter's colleague Eznik. Though the authors of the earliest major histories are unknown, the genre of historical writing devoted to Armenian themes quickly took root: Agathangelos described the conversion of Armenia in hagiographical style; pseudo-P'awstos Buzand dealt with the conflict of Christian and traditional values in the 4th C.; Ezike described the struggle of Christian Armenians against Sasanian domination in the mid-5th C.; the later Moses Xorenac'i gave the first account of the beginnings of the Armenian nation and of Armenia's historical role between the Roman Empire and Iran down to the time of Mas'otc'.

Characteristically, historians wrote about a specific house or province rather than the country as a whole. Pseudo-P'awstos focused on the Mamikonan family, and Lazar of P'arpi composed a history of 5th-C. Armenia extolling the virtues of the same family for his patron, Vahan Mamikonian, governor of Armenia (485–505). The work of Moses Xorenac'i was primarily concerned with the fortunes of the Bagratid family, and Thomas Arcruni glorifies the merits of the Arcruni princes of southern Armenia in his History.

Interest in Hellenistic and early Christian literature is demonstrated by translations of many Greek and Syrian church fathers and of Greek texts used in the schools of the eastern Mediterranean. Among theological works of especial importance translated from Syriac are the writings of Aphrahat and Ephrem the Syrian, the Lives of 4th-C. martyrs in Persia, and the Ecclesiastical History of Eusebios of Caesarea (his Chronicle was translated from the original Greek). From Greek were also translated works by Athanasios of Alexandria, Basil the Great, Gregory of Nazianzos, and John Chrysostom. The Refutation by Timotheos Ailouros influenced later polemical catenae composed by Armenians. In the secular field the translation and adaptation for the Armenian language of the *Art of Grammar* by Dionysios Thrax led to extensive later commentaries on grammar. Works by the 6th-C. Alexandrians, David the Philosopher and Elias, led to an interest in logic. Rhetoric was studied through the *Progymnasmata* of Theon and of Aphthonios. An Armenian Book of *Chreiai*, attributed to Moses Xorenac'i, introduces Christian examples to illustrate traditional Greek themes. Pappos of Alexandria was used as a source for a unique work on geography, also attributed to Moses. Numerous works by Philo were very influential, and the *Jewish War* by Josephus was used, at least by Moses. The popular *Alexander Romance* was reedited with a Christian interpretation of its meaning in the 13th C. Also in the 13th C. the Syriac *Chronicle* by Patr. Michael I the Syrian was translated and adapted to Armenian interests.

The first translations were made in Edessa and Constantinople, where Armenians went to study. After the 5th C. Jerusalem became a significant center for Armenian (and Georgian) scholarly activity. Armenians joined Greek, Georgian, Syrian, and Western Catholic monks on the Wondrous Mountain near Antioch at the time of the Crusades, but being non-Chalcedonian Armenians had no monasteries on Mt. Athos. Numerous works, lost in Greek and Syriac, survive in Armenian versions: e.g., Irenaeus, Eusebios's *Chronicle*, some commentaries of John Chrysostom, Timotheos Ailouros's *Refutation*, Ephrem's *Commentary on the Diatessaron* (of which the original was discovered only in 1957). Translations from Armenian into Greek were rare, though Armenian was known by many Byz., e.g., the teacher of Ananias of Sirak. In addition, when Stephen of Siwnik' worked in Constantinople ca.715, he was assisted by a court official. Greek versions exist of two recensions of Agathangelos and one of the *Narratio de rebus Armeniae*.

Many Greek letters sent to Armenian bishops (5th–12th C.) are preserved with the Armenian responses in the Book of Letters, an official compilation of correspondence between Armenians, Greeks, Georgians, and Syrians. (Tendentious alterations to these documents are not uncommon). The compilation of canon law begun by John of Ojun (*katholikos*, 717–28) includes the canons of many Greek councils.

Armenian writers evince little interest in later Byz. literature, though patristic works continued to be popular. Thus in 696/7 the *Ecclesiastical History* of Sokrates was translated; Stephen of Siwnik' translated the corpus attributed to pseudo-
DIONYSIOS THE AREOPAGITE (ca. 715 in Constanti-

nople), as well as GREGORY OF NYSSA, On the Mak-
ing of Man, and NEMESIOS, On the Nature of Man.
The translation of the 7th-C. Hexaemeron of GEORGE
OF PISIDIA is, however, an unusual foray into later
Greek literature.

Armenian attitudes to Byz. were ambivalent:
interest in, and respect for, Greek learning re-
mained strong, but they were tempered by fear
of cultural and esp. religious domination. Not all
Armenians were staunchly anti-Chalcedonian, but
a defensive tone permeates much Armenian theo-
logical writing. Notably pro-Greek were the fa-
mous religious poet Gregory of Narek (ca. 950–
1010); NERSES SNORHALI, who worked toward a
reunion of the churches; and GREGORY MAGI-
STROS. Notably, the last's 88 letters reflect Byz.
attitudes towards learning and scholarship rather
than a traditional Armenian outlook.

The historians generally pay little attention to
Byz. save insofar as Armenian interests are di-
rectly involved. Thus the History of Heracleios of
Sebeos is of prime importance for the Byzantinist
because it describes Byz.-Persian rivalry, whereas
the histories of Lewond and John V Katholikos
are less directly useful because they describe Mus-
lim control of Armenia. Since Armenian histori-
ans concentrate on events in Armenia, they be-
come valuable witnesses after the eastward expan-
sion of Byz. power. In the late 10th and
11th C. Stephen of Taron (known as Asozik)
describes events up to the year 1000, while Ar-
istakes Lastivertc'i details the collapse of Ar-
menian independence. Matthew of Edessa is a
witness to the coming of the Turks, the collapse
of Byz. control in Armenia and eastern Anatolia,
and the arrival of the Crusaders.

Although they attempt both narrative and ex-
planation, the writers just named lack the sophis-
tication of the first historians (e.g., Eliše or Moses
Xorenac'ì). By the 11th C. more creative minds
had turned to poetry and theology. The Chronicle
of Samuel of Ani merely notes events year by
year, and this style became increasingly popular.
Histories on a grander scale were also produced,
however, the more important of these dealing
with eastern Armenia, Georgia, and the Mongols.
The last comprehensive history dealing at times
with Byz. is that of VARDAN VARDAPET, but it is a
secondhand source, since Vardan's career was spent
primarily in Greater Armenia and he had few
direct contacts with Greeks and none with Con-
stantinople.

Loss of Armenian political independence in the
11th C. did not disrupt cultural life or literary
production. Especially after the Armenians took
control of Cilicia, they were receptive to ideas and
influences from new quarters. Scholars traveled
even more than in the past, though not so fre-
quently to Constantinople. Latin and Arabic as
well as Greek were increasingly known. Gregory
Vkayaser (who abandoned his see as katholikos in
1067 after one year in office) and Nerses of
LAMBRON sought out numerous texts in Greek
and Latin not yet available in Armenian; at this
time the Black Mountain with its many monastic
centers of different nationalities became an im-
portant source for texts not yet translated into
Armenian. Medicine, primarily based on Arabic
sources, was studied. For the first time a secular
law code was compiled, by Mxit'ar Gos (died 1213).
SMBAT THE CONSTABLE revised this in light of
Cilician interaction with the Crusader principality
of Antioch, but Mxit'ar's work remained standard
in the Armenian diaspora in succeeding centuries.

Byz. as a source of inspiration was irrelevant to
Armenian writers after the 12th C. Nonetheless,
the fall of Constantinople in 1453 did spark a
literary reaction, and several laments (threnoi)
were written. This genre had a long history in
Armenian, e.g., Nerses Snorhali on the fall of
Edessa and GREGORY TZAY on the fall of Jerusa-
lem.

to Armenian Christian Literature (London 1960). R.W. Thom-
son, "The Formation of the Armenian Literary Tradition,
Hr. M. Bartikjan, To Byanton elas tos Armeniakas pegasus (Thes-

ARMENIANS formed an important and influ-
ential minority in the Byz. Empire. Before the
Arab invasion they were settled primarily in the
eastern provinces of the empire (Armenia I–IV)
and had lively economic and cultural connections
with the Syro-Palestinian world; certain Arme-
nians (e.g., Narses in the 6th C., Valentinos
Arsakuni in the mid-7th) held important military
and court positions in Constantinople. One might
expect that subsequent developments would have
severed relations between Armenia and the em-

pire. On the one hand, the decline of the city in Armenia and Byz. alike decreased trade and cultural exchange. On the other hand, the Armenian church rejected the decisions of the Council of Chalcedon; the radical anti-Orthodox movements of the TONDRAKITES and PAULICIANS attracted broad segments of the Armenian population. In reality, however, the role of Armenians in the empire kept growing, and many Armenians emigrated to Byzantium. The Armenian historian LEWOND relates several cases of mass flight from the Arabs, for example, that 12,000 Armenian nobles with their wives, children, and retinues found a home in Byz. ca.790. Some Armenian emigrés settled in Armeniakon and Chaldia, while others moved westward, to the northern Balkans (Philippopolis became one of the most important Armenian centers) and even to southern Italy.

Through the 10th C. Armenians played an important role in the Byz. army, producing many generals and several emperors: Leo V, Theodora (Theophilos's wife), Basil I, Romanos I Lekapenos, and John I Tzimiskes. Armenian commanders, such as MELIAS or KOURKOUS, were instrumental in expanding Byz. territories toward the Euphrates. These Armenians were predominantly Chalcedonian, some of them even holding high ecclesiastical positions in the Orthodox church; culturally they were hellenized and contributed much to the development of education and knowledge in Byz. Nevertheless, the Byz. attitude toward Armenians was often negative, and the stereotype of "the cunning and treacherous Armenian" became firmly implanted in Greek literature.

The number of Armenians in the empire increased drastically in the 11th C. as several Armenian states were annexed, and their population resettled in Cappadocia and neighboring lands. These newcomers probably retained their language, religion, and culture, including habits and costume. The clashes between semi-independent noble Armenians and local Orthodox landowners and bishops were sometimes acute; GAGIK II perished in one such conflict. Chalcedonian Armenian and Armeno-Georgian families (e.g., PAKOURIANOJ, TORNIKIOJ) continued to hold high positions (esp. as governors of frontier themes) and probably 10–15 percent of the Byz. aristocracy was of Armenian stock, but there was no Armenian emperor in this period, and few Armenians were affiliated with the Komnenian dynasty. From the end of the 11th C. the Armenian nobility tended to create independent states in CILICIA and nearby; from that time Armenians who served in the Byz. army were predominantly allies and not subjects of the emperor.

Frequent attempts to reach a reconciliation with the Armenian church produced vast polemical literature but no practical results. Enmity toward Armenians grew, and Patr. ATHANASIOS I, among others, considered contacts with Jews and Armenians defiling (ep.36.6); Patr. Joseph I Galesiotes called the Armenians "a morbid and rebellious people" (RegPatr, fasc. 4, no.1400). In the last centuries of Byz. history, Armenians lived in Constantinople as merchants but did not play any substantial role in the administration of the empire.

ARMOR. The 6th- and 10th-C. STRATEGIKA and other literary sources identify several types of body protection worn by Byz. soldiers. Body armor (thorax) for cavalrymen was made of chain mail or lamellar, small plates of horn or iron laced together or to a leather backing. These protective coats, called zabai, lorikia, or klibania, varied in length, reaching the ankles, knees, or waist. To guard against concussive as well as penetrative blows, heavy cavalrymen or KATAPHRAKTOI wore padded, waist-length surcoats (epilorikia, epanoklibania) made of wool, felt, or cotton over their mail or lamellar armor. They also wore apronlike coverings (pteriges, kremasmata) to protect the midsection. Armor for horses was made of hide, felt, lamellar, or mail, and covered the animal's face and chest; according to a 9th-C. chronicle (Theoph. 318.25–28), the horse of Herakleios survived a battle in 627 by wearing padded armor. Felt coverings hung from belts of light cavalrymen to protect their legs and part of their horses.

Infantrymen wore simple body armor such as knee-length quilted coats (kabadia) of felt or linen,
and other homemade types of armor are noted; a 12th-C. historian (Nik.Chon. 386.1–7) describes a soldier’s linen corset, stiffened by soakings in wine and salt, which was strong enough to resist arrows. Gauntlets (manikia) and padded wool or cotton arm guards (manikelia), sometimes overlaid with mail, and wooden or iron greaves are prescribed for both infantrymen and cavalrymen in the strategika. The sources attest helmets (kranea, kassida) made of iron, either segmented or cast whole, sometimes with flaps of chain mail or felt to protect the face and neck; felt caps (komellaukia), however, were more commonly used by infantrymen in the 10th C. Many illustrations show soldiers wearing caps or helmets with a cloth hung over the back of the neck, presumably to protect against exposure to the sun.

Shields of many types and sizes—oval, rectangular, and kite-shaped—were made of wood and often sheathed in leather or iron, and were secured over the soldier’s neck or shoulder by straps to leave both hands free to handle weapons. The average infantryman’s shield was fairly large, about 1.4 m long and 80 cm across, but light infantry- and cavalrymen carried smaller shields. After the 12th C., Western triangular shields appear in illustrations.

A warm climate and open, mobile warfare kept Byz. armor relatively limited in comparison with that of Western knights, but, in spite of the comments of Liutprand of Cremona that the Byz. were lightly armed, they were still better protected than their enemies in the later 10th C. The Arabs were amazed by the sight of the heavily armored Byz. katabraktoi, and Skylitzes records that few Byz. were killed in a 970 engagement against the Rus’, though many were wounded (Skyl. 291.95–99); he later cites the effects of heat on the “fully armored” Byz. soldiers during a long battle against the same enemy (306.44–46). Byz. soldiers were obliged to carry their weapons and shields on the march and could be severely punished for discarding their equipment along the way (Leo Diac. 57.4–58.10). For sake of comfort they did not wear armor while marching; instead it was carried nearby on pack animals, to be donned quickly in case of attack (Taktika of Nikephoros Ouranos, TM 5 [1973] 2921).

Practically no archaeological material exists to support the evidence of literary sources for Byz. armor, but details and changes in armor are recorded in art. The lamellar corset is worn by numerous military saints and emperors depicted on ivories and in illustrated MSS of the 10th and 11th C. This garment is supplemented by leather straps suspended from the shoulders and waist, but Roman “fighting skirts” still appear. By the 12th C. knee-length coats of mail are shown (Klavrezou, Steatitie, no. 21). The greaves depicted in the images of the 10th and 11th C. were probably archaisms by that time, but innovations such as the kite-shaped shield, replacing oval and circular types, can be traced in representations of David and Goliath in Psalter illustrations.

ARMOUR, SONG OF, a poem of Tragoudi preserved in 15th- and 16th-C. MSS. It describes the exploits of young Armoures-Armouropoulos (the son of Armoures) who crossed the Euphrates with the help of an angel and annihilated a Saracen army. Despite the late date of the MSS, H. Grégoire hypothesized that the poem was a 9th-C. work (REGr 46 [1933] 29–69). On the sole basis of the resemblance of the name of Armoures to the name of the city of Amorion, he affirmed that the poem dealt with the Byz. retribution for the Arab capture of Amorion in 858 and that Armoures was Michael III. Even bolder was G. Veloudis’s hypothesis that Armoures should be identified with the emir of Melite, ‘Umar al-Aqta (BZ 58 [1965] 313–19).

LIT. Beck, Volksliteratur 53–57.

ARMY (στρατός, στρατόπεδον, φοσσάτον). The history of the army in the late Roman and Byz. period begins with the military reforms of the early 4th C. The legions once massed along the frontiers were reorganized into local frontier militias (limitanei) and mobile field armies (comitatenses) garrisoned within the empire. By the 5th C. five such armies under the command of
MAGISTRI MILITUM defended the empire in the East. Two armies (praesentales) were stationed with the emperor at Constantinople, two (per Illyricum, per Thracia) along the Danube frontier, and one (per Orientem) along the Euphrates; a magister militum per Armeniam was created in the 6th C. The forces consisted of native Roman enlisted men equipped by the state, and the FOEDERATI of many nationalities who were under Roman command. Foreign mercenaries (symmachoi) were sometimes hired as separate units under their own commanders (J.L. Teall, *Speculum* 40 [1965] 294–322).

The Strategikon of Maurice illustrates the transition during the 5th and 6th C. from Roman to Byz. methods of warfare, which increasingly relied on CAVALRY and ARCHERY in imitation of Persian and Avar practices (Bivar, “Cavalry” 271–91). The army’s total manpower in the 4th and 5th C. is estimated to have been as high as 650,000, of which only a minority were well-trained, mobile fighting men (R. MacMullen, *Klio* 62 [1980] 451–60). By the 6th C., the period of the great campaigns of Generals Belisarios and Narses, Justinian I’s army had decreased to 150,000 men. The declining decline in the empire’s manpower and resources was so acute that an army sent to fight the Persians in 578 numbered fewer than 6,400 men (H. Turtledove, *BS/EB* 10 [1983] 216–22). Internal rebellions and defeats by the Avars and Persians made the late 6th and 7th C. a time of crisis for the Byz. Although by 628 Herakleios was able to reorganize the shattered imperial forces into an army capable of defeating Persia, new, more aggressive enemies—the Arabs, Bulgars, and Lombards—inflicted serious defeats on the imperial armies and overran much of Byz. territory during the 7th and 8th C.

Two fundamental reactions to the 7th-C. military crisis shaped the Byz. army from the late 7th to the 11th C. The first step was the stationing of army groups (thematia) in military districts (themes); four such armies are mentioned in 687 (R.-J. Lilie, *JÖB* 26 [1977] 7–47). The second step was the reimposition of hereditary military service (strategia) in exchange for land (Hendy, *Economy* 619f.). The thematic armies, recruited and maintained locally, were sometimes effective against invaders (as at Akroinon in 740) but were slow to mobilize and coordinate for campaigns. They often lacked discipline and military skill and were prone to rebellion (Kaegi, *Unrest*). This tendency led Constantine V to dissolve the Opsikon army, which had represented the imperial field force, and create new imperial units, known as the tagmata, which were based in or around Constantinople. The tagmatic units were better equipped and paid than the provincial armies and formed the crack regiments of the Byz. army; after the early 9th C. tagmatic and thematic troops commonly joined forces for expeditions. The army was mostly composed of native recruits through the 7th to 10th C., although foreigners were hired (e.g., Theophores) or foreign peoples were resettled within Byz. territory to provide manpower (Theoph. 364.11–18).

The army’s greatest period was in the 10th and early 11th C., when the Byz. recaptured much of the territory lost to the Arabs and Bulgars. As shown by contemporary strategika, the army’s increased effectiveness was rooted in the efforts of such soldier-emperors as Nikephoros II Phokas and Basil II to employ more heavily armed men (e.g., kataphraktoi) and to perfect combined infantry and cavalry tactics in battle or on campaign. At the same time, however, the army’s composition and structure began to change; command was centralized at Constantinople (N. Oikonomides, *TM* 6 [1976] 141–47), and the growing presence of mercenaries (Rus’, Normans), already well attested in the 10th C., became even more pronounced during the 11th and 12th C. The old tagmatic and thematic units were replaced by new contingents—mainly foreign troops—billeted in the provinces (J.-C. Cheynet, *TM* 9 [1985] 181–94). Especially under Manuel I Komnenos, the Byz. eagerly attempted to adopt the Western panoply and tactics, but this had mixed results (R.P. Lindner, *JÖB* 32.2 [1982] 207–13). They also accepted such Western traditions as tournaments and the glorification of military prowess in literature and art. The size and multilingual character of 12th-C. Byz. armies astonished their neighbors, but this and the centralization of command made the army unwieldy; the fall of Constantinople to the Fourth Crusade in 1203–04 demonstrated the superiority of Western feudal armies over the imperial forces.

The emperors of Nicaea developed the traditions adopted by Manuel I and learned from their Western rivals; their armies were small but effective. They were composed of Western, Cuman,
and Turkish mercenaries, supported by provincial levies; Theodore II Laskaris later attempted to convert them into a national army to control the number and cost of foreign soldiers. The restoration of the empire in 1261 precipitated attack from various claimants and created a burden that Byz. was incapable of bearing. On the one hand, acting in the interests of great landowners, the emperors abolished the last troops of peasant soldiers who guarded the frontiers; on the other hand, they were unable to maintain the navy and substantial land forces. They tried to transfer the obligation of military service to local landowners at a time when Byz. faced the growing centralized armies of the Ottomans, which were primarily composed of professional warriors (janissaries), and the swift fleets and skillful mariners of the Italian republics. The Chronicle of the Tocco reveals the relative strength of the forces in the Balkans in the first half of the 15th C. when it calculates the military detachments of local lords at between 20 and 100 men, and those of the emperor at 500 horsemen, whereas the Turks could afford to send 30,000 soldiers to Epirus (A. Kazhdan in Bisanzio e l’Italia [Milan 1982] 173). Nor could the Byz. compete with the Turks in military technology, lacking, for instance, cannons such as those the Turks used during sieges in the 15th C. (see Firearms).

ÁRPÁDS (’Aρπαδίης in De adm. imp. 40.48), a dynasty of princes (876–1000) and then kings (1000–1301) of Hungary. Constantine VII preserves a legend (contrary to Arabic sources) that Árpád, founder of the dynasty, received his power from the khagan of Khazaria and of the “Turks” (Hungarians). Circa 894, at the invitation of Emp. Leo VI, Árpád attacked Symeon of Bulgaria and thus began the occupation of Pannonia and neighboring lands by the Hungarians. From the 11th C. onward, the Árpáds were in close contact with Byz.: according to a 13th-C. legend, Prince Imre (Henry), son of István (Stephen) I, married ca.1020 the daughter of a Greek emperor, whom de Vijay (infra) arbitrarily identifies as Romanos III; ca.1075 Synadene, a relation of Emp. Nikephoros III, was given in marriage either to an Árpád (Géza I [r. 1074–77] or László I [Ladislaj]) or to a Hungarian lord (acc. to A. Kazhdan, ActaAntHungr 10 [1962] 163–66, but contrary to Gy. Moravcsik, BZ 55 [1962] 381); Álmos, the blinded brother of King Kálmán (Coloman, r.1095–1116), fled to Byz., where he was renamed Constantine and granted the town of Constantinia in Macedonia (F. Szentpétery, A. Domanoszky, Scriptores rerum Hungaricarum, vol. 1 [Budapest 1937] 442f); Pyroska (Irene), László’s daughter, married Emp. John II in 1104/5; István, a brother of King Géza II (r.1141–62), fled ca.1155 to Byz., where he married Manuel I’s niece, Maria in 1161; László, another brother of Géza, followed István to Constantinople. Béla III was, for a while, heir to the Byz. throne; his daughter Margaret-Maria married Isaac II. An enigmatic kralina, Arete Doukaina, who possessed lands in Byz. ca.1157/8, was possibly the spouse of Boris Kalamanovic (V. Laurent, BZ 65 [1972] 35–39). Circa 1222 Béla IV married Maria, daughter of Theodore I; Agnes-Anna of Hungary was the first wife of Andronikos II and mother of Michael IX.

ARRHA SPONSALICIA (ἀρράς, “engagement gift”), a payment in money or in kind that served as the guarantee of the betrothal promise. It fell to the bride if the groom broke off the betrothal without good cause; in the reverse situation, the bride had to return the arrha. As an essential act for the betrothal—as an alternative to the written contract with the groom, the Basilika (1.12) stipulated that no prostimon be arranged in addition to the arrha. If the arrha was, until Justinian I, an optional payment, in the Ecloga (1.12) it appears as an essential act for the betrothal—as an alternative to the written contract with prostimon. The Epanagoge (title 15) and the Procheiron (title 2) return, as does the Basilika (28.1–2), to the Justiniannic legal situation, which considers the consent of the engaged couple sufficient for valid betrothal, without payment of an arrha. Even so, the
securing of a betrothal through *arrha* or *prostimon* remained common. Leo VI stipulates (nov. 18)—contrary to Leo I—that this securing should ensue through the “more important” *prostimon* (in contrast to *arrha sponsalicia*), as this was already taking place in custom.

In the wake of the extensive equalization of marriage and betrothal, the *arrha sponsalicia* survives as a payment, bound together with the blessing of the betrothal (Reg. 2, no. 1116). *Arrabon* or *arrabonismos* become synonymous with betrothal. *Prostima*, on the other hand, are prohibited for “genuine” betrothals, since they should be as little dissoluble in exchange for a money payment as the marriage (Reg. 2, no. 1167). According to the *Petra* (17.5, 17.14, 49.2) the betrothal was, on the contrary, still dissoluble through payment of the *prostimon*.

**ARSABER** (‘Αρσαβήρ, Arm. Aršawir), early 9th-C. usurper. An Armenian of noble background (C. Toumanoff, *Traditio* 27 [1971] 150), he served the Byz. emperor as quaestor and *patricks*. In Feb. 808 a group of lay and clerical officials opposed to Emp. Nikēphoros I, including the *synkellos*, *sakellarios*, and *chartophylax* of Hagia Sophia, proclaimed the “pious and most eloquent” Arsaber as emperor (Theoph. 483, 25–26). When Nikēphoros discovered the plot, Arsaber was beaten, tonsured, and exiled to Bithynia, while his supporters were beaten, stripped of their property, and exiled. Arsaber had a daughter, Theodosia, who married Leo V (Genes. 16.82–83).

**ARSACIDS** (‘Αρσακιδαὶ, Arm. Aršakuni), junior branch of the Parthian royal house ruling in Armenia until the beginning of the 5th C. The precise date of their establishment in Armenia is uncertain, and even in the 4th C. their chronology remains confused and highly controversial. Re-established on the throne by the Romans after the peace of Nisibis of 298, the Arsacids generally followed a pro-imperial policy. This orientation, deriving from their hostility to the Sasanian usurpers of their family’s kingdom in Persia, was reinforced by their conversion to Christianity in 314. Their arianizing policy under Constantius II alienated the native clergy as well as the magnates, and Armenian sources disagree with the allegiance to the Romans claimed by classical sources. Jovian’s abandonment of Armenia to the Sasanians in 363 led to the Persian occupation of the country and to the ultimate downfall of the Arsacid house. After the partition of Armenia between Rome and Persia in ca. 387, the Arsacid branch on imperial territory died out within a decade, while the Iranian branch ended in 428. Descendants of the Arsacids maintained an important, if primarily military, role at the Byz. court: in the 7th C. an Arsacid named *Valentinos Aršakuni* made a bid for the Byz. throne; in the 9th C. an apocrphal pedigree made Emp. Basil I one of their descendants.

**ARSÁK II/III** (Lat. Arsaces), Arsacid king of Armenia (338/50–363/68); his birth and death dates are uncertain. According to Ammianus Marcellinus (25.7.12–13), Aršák was a “constant and faithful friend” of the Romans, who rewarded him in 358 with a tax exemption and an imperial bride. Probably because of his attempts at centralization and his adherence to Constantius II’s arianizing policy, however, Armenian aristocratic and ecclesiastical sources are hostile to Aršák, portraying him as cruel and vacillating in his allegiance. Aršák seems to have supported the campaign of Julian the Apostate against the Persians in 363 (Julian’s threatening *Letter* to Aršák is usually deemed spurious). Abandoned by the Sasanians by Jovian’s peace of the same year, Aršák was captured by Shāpūr (Lat. Sapor) II and deported to Persia, where he died in the “Castle of Oblivion” a few years later.

**ARSAMOSATA** (Ar. Shimshāti, called *'Aσμόσατον* [Asmosaton] in the 10th C.; often confused with Samosata in Commagene; now Haraba), a fortress on the Murad Su (Arsanias River) about
ARSENIOS, metropolitan of Keryra (9th-10th C.). According to his akolouthia, Arsenios was born in Bethany (Palestine) during the reign of Basil I and became a monk at age 12. After being educated in Seleukeia (or the Orontes?), he went to Constantinople where, under Patr. Tryphon (928-31), he was entrusted with “the care of churches” (the post of oikonomos?). He was then elected bishop of Keryra (ca.933–56), where he survived an invasion of “Scythians.” On the other hand, an inscription of 1669 states that Arsenios’s relics were transferred to the Cathedral of St. James, Kerya, in 869 (Athenagoras in Eis mnemen Spyridonos Lamprou [Athens 1935] 436).

Several enkomia are attributed to Arsenios’s pen: on the apostle Andrew (BHG 105), the martyr Barbara (BHG 218), and the martyr Therinos who died in Epiros (BHG 1799). J. Mateos (OrChP 22 [1956] 368–74) ascribes to Arsenios the authorship of the kanon on St. Timothy of Prousia. Arsenios probably wrote the kanon of euchelaios, the sacrament of extreme unction for the sick (M. Jugie, EO 26 [1927] 416–19), and several other liturgical verses, including an Anacreontic on Easter Sunday (Matranga, AnecGr 2:670–75), in which he not only underscored the cosmic festivity but also employed pagan mythological images to portray the joy of spring. Arsenios’s identification with his homonym, a contemporary of Theodore of Studios and a friend of Photios, is questionable.

the anachronistic title of basilopator (see Basileopator). A 12th-C. historian (Zon. 3:231.17–18) states that he was a deacon of the Roman church. After forty years in the palace, Arsenios fled to Egypt, obeying a voice from heaven, and became a hermit in Sketis, then in Troia, then on an island near Alexandria, and again in Troia. Theodore of Studios describes Arsenios as a hermit who worked with his hands, weaving and sewing, and educated his pupils and visitors with shrewd conversations. His short stories are reminiscent of the Apophthegmata Patrum, and indeed several stories in the Apophthegmata are ascribed to a certain Arsenios (PG 65:87–108). Theodore also describes Arsenios’s physical appearance: a tall, lean man, bent with age, his beard reaching to his belly, his eyelashes worn away by excessive weeping. Symeon Metaphrastes included Arsenios’s vita in his collection. The 14th-C. Nikephoros Kallistos Xanthopoulos was the first to mention Arsenios’s literary activity, so it is questionable whether two short pieces preserved under the name of a monk Arsenios (PG 66:1617–26) should be attributed to him.

**Representation in Art.** Portraits of Arsenios echo Theodore’s description of the venerable desert father: he is gaunt, with an extremely long white beard (sometimes four- or five-pointed), and wears monastic robes. One menologion of Symeon Metaphrastes (Moscow, Hist. Mus. gr. 9, fol.11r) ignores his ascetic achievements and illustrates only his arrival on horseback from Rome and his instruction of the two young princes in Constantinople. His burial is included in another menologion (Paris, B.N. gr. 1528, fol.211r) and possibly on a fragmentary icon on Mt. Sinai (M. Chatzidakis, Venezia e il levante, vol. 2 [1974] 97, fig.67).

**ARSINOES.** See FAYYUM.

**ART (τέχνη).** The Greek term *techne* had a broad range of meanings, including mental dexterity, linguistic ability, and trickery as well as the skills of rulers and physicians. It therefore implied something closer to craft and denied a privileged role to the work of art and to its creator. Art was understood not as completing nature, as in Aristotle, nor as possessing value independent of nature, as in the modern view, but as nature: art reproduced reality, including those aspects of it that were normally invisible (John of Damascus, ed. Kotter, Schriften 3:126.2–3). Despite centuries of theorizing about the relationship of the image to its prototype, not until the 15th C. (Manuel Chrysoloras) was a practical distinction drawn between the image and that which it represented. Equally, written accounts of works of art rarely distinguish the material of which they were made: differentiations between the principal genres and materials are usually to be found only in inventories where they served quite other purposes than aesthetic appreciation or even evaluation as stimuli to religious faith. But descriptions of mosaic and wall painting (see Monumental Painting), the two main types of monumental decoration in Byz., largely ignore the contribution of the medium to the work’s final effect, emphasizing...
instead the lifelike of the image and its impact upon the beholder. Where the medium can be discerned at all, reports on icons, ecclesiastical silver, enamels, and textiles—some of the most frequently noted categories of portable works—stress function rather than form, message rather than materials.

Literature provides our primary means of access to the Byz. response to that which we call art and confirms the view that the purposes of representational art took precedence over its nature and materials. The effects of art—the magnificence of a building and its decoration, the glittering splendor of a piece of metalwork—all but efface other considerations. The purpose of architecture is to magnify the builder and often, as described in the Vita Basilii, to show that he has recovered the glory of the past. Such an approach links imperial founders, ktetors of lesser rank, and church builders. The significant aspect of a structure lies in what it says about its patron: it shows that an emperor has restored (often “from the ground up”) what had crumbled, be it the fabric of a building, the reputation of a city, or the strength of right belief.

On the one hand, what was ancient, when it survived, was prized for its own sake; on the other, its restoration was a Christian’s duty and a credit to him. Since an icon was understood to function by virtue of perfect correspondence to its subject, panels were frequently “made anew” (Skyl. 384.21–24) and portraits in mosaics and MSS often remade. Lacking autonomous value as art, frescoes were overpainted with subjects sometimes quite different from the originals. Nonetheless, both the means by which pictures were produced and their iconography demonstrate the respect for authority and tradition (Mansi 13:252C) and the emphasis on orthodoxy of thought and behavior, apparent in other aspects of Byz. culture. Many works can be shown to have a more or less close dependence upon earlier examples, due in some cases to direct derivation but more often to the employment of a conventional and ubiquitous visual vocabulary. This lexicon included individual figures and poses, gestures and backgrounds preserved either in model-books (see Models and Model-Books) or, more likely, in the memory of craftsmen. Such elements were used or modified, and their syntactical relationships adjusted, according to context.

Thoroughly pragmatic, artists borrowed established forms, much as builders used spolia, and usually invented only when an exemplar was not at hand. How faithfully older forms were transmitted depended upon opportunities for access to models and the purpose, training, and native ability of the artist. This approach to artistic production was reinforced by socially sanctioned notions of decorum, of what was appropriate to a particular type of commission. Although there were variations in the size of a ktetor’s investment, church programs of decoration conformed to highly developed ideas of what was fitting. Works in other favored media, above all textiles, book illustration, and metalwork, display similar homogeneity. While the same genres characterized Islamic art, the latter exhibited neither the Byz. emphasis on sacred decoration nor the resultant body of canonical subject matter. The overriding Byz. concern with an established and limited iconographical corpus likewise distinguishes it from the medieval West: most of the “profane” subjects—the virtues and vices, the liberal arts, the representation of trades and crafts—are largely missing from Byz. art.

The exploitation of older models was a phenomenon common to the visual arts and literature. Just as the 10th-C. historian Leo the Deacon was content to use descriptions of battles taken from Agathias writing four centuries earlier, so the 14th-C. mosaics of the Chora monastery, for example, quote details from the 10th-C. Joshua roll. Such “antiques” were valued both for their age and their potential as models. As descriptions were interchangeable in texts, so were details of physiognomy, clothing, and setting in art: identity often depended as much on inscriptions as on formal variation. The benign and constant cannibalism of earlier work largely undercuts the notion of successive renaissances that have been imposed on particular periods. The supposition that painters of the 6th, 10th, and early 14th C. were more interested in antiquity than those of other times attributes to them an unusual motivation when, in fact, the use of ancient types was a form of economy on their part. The more frequent appearance of “classicizing” elements in certain eras is merely because of the fact that these were periods of cultural revival producing more works of high quality.

While particular instances of copying may reflect an act of choice on the part of a patron, this attitude was culturally determined. Overt ex-
amples of the political supervision of artistic produc-
tion are few, but social control was compelling
and depended on the various functions assigned
to the work of art. Basil the Great (PG 32:229A)
regarded images, like the lives of saints, as inspira-
tions to virtue. More concretely, for Gregory of
Nyssa (PG 46:737D) they had the value of "silent
writing." This didactic role was expanded in the
8th and 9th C. For the patriarch Nikephors I
the educative power of icons exceeded that of
words, while Photios saw representations of mar-
tyrdom as more vivid than writing (L. Brubaker,
Word and Image 5 [1989] 23 f). Independent of
such theoretical statements, art provided a vehicle
for the expression of supplications and gratitude
to God (Sophronios, PG 87.3:3388C). Icons were
a means of access to the divine and responsible,
Psellos' mother believed (An.Komn. 2:34.8-10),
for human success. As materially rich creations,
works of art were considered proper gifts at holy
sites (Piacenza Pilgrim) and, as the will of Eu-
stathios Boilas and the diatasis of Michael Atta-
леiates make clear, to churches and monasteries.

Other types of document, notably the ek-
phrasis, emphasize the presence of Christ, his
mother, and his saints, in their images. This sort
of "realism" differs from that which allowed ac-
tuality to obtrude into representations of agricul-
ture, navigation, and the like, and to invest biblical
and hagiographical events with details that the
artist's contemporaries could recognize. Since all
attention was paid to the immediate significance
of a scene, no attempt was made to present the
past as such (see History Painting). Constantine
I, for instance, was sometimes given the features
of the reigning monarch, and incidents of the
Old Testament were employed for their value
as prefigurations of current events.

Despite such constants, developments in both
style and subject matter are evident over the
centuries, particularly in monumental painting,
which, to a much greater extent than in the West,
was the dominant visual medium. Such changes
are in part to be explained by church doctrine:
the Second Council of Nicaea had defined the
manner of representation as the domain of the
artist. Before this time, art displayed the icono-
graphical and formal diversity characteristic of
late antiquity and its far-flung cities. Lively scenes
drawing on the everyday world distinguish both
imperial imagery (Barberini Ivory) and Christian
themes (Rossano Gospels). A more rigorous defi-
nition of acceptable subject matter and its modes
of presentation emerged from the search for au-
thoritative, ancient statements concerning the va-
validity of images both before and during Icono-
clasm. To a degree this debate was responsible
for the evolution of an attitude, akin to ency-
clopedism, toward the artistic heritage that was
at once selective and prescriptive. In the service
of dogmatic clarity, art of the 10th and early 11th
C. exhibits a formal austerity based on the prin-
ciples of frontality and symmetry.

These features have been seen as reducing the
monumentality attributed to the painting of the
"Macedonian Renaissance" but they are symptoms
not causes. Rather, the late 11th- and 12th-C.
desire to express more complex Christological
ideas and more affective expressions of emotion
widened the range of art, in the creation of which
the number of identifiable and named artists in-
creased greatly. But territorial losses and the fall
of Constantinople to the Latins in 1204 brought
to a close four centuries in which the artistic
hegemony of the capital had been recognized and
emulated beyond the confines of the empire. Al-
ready in the 12th C. both Latin and Turkic ele-
ments can be found in art; this trickle became
a spate in and after the late 13th C. Even before
the Civil War of 1341-47 cut short a brief Palaio-
logan revival, the sponsorship of works of art had
passed into the hands of local magnates, both lay
and ecclesiastical; the final 150 years display a
range of representational quality and manners at
odds with the splendor and uniformity that had
characterized 9th-12th-C. production and on
which the reputation of Byz. art has long been
based. Only very recently has the appropriateness
of modern standards such as aesthetic autonomy
and independence of its ideological well-springs
been questioned (R. Nelson, Art History 12 [1989]
144-57). The recovery of and sympathy for the
context in which this body of production came into
being is now seen as a more direct route to
the understanding of Byz. art.

ARTA (Ἀρτα), located at the site of ancient Ambrikia, on the river Arachthos, about 13 km north of the Gulf of Arta; capital of the state of Epiros from 1205 onward. There is no certain information on Arta before the end of the 11th C. In the 12th C., however, Arta was an important trade center frequented by Venetians and an archbishopric (its archbishop is attested in 1157); an episképsi of Arta probably existed within the theme of Nikopolis. The city flourished in the 13th C.: it was fortified evidently after 1227 (A. Orlandos, ABME 2 [1936] 156f.), and excavated artifacts suggest local ceramic production (A. Vavylopoloulou-Charitonidou, DChAE 4 12 [1984] 453–72). The CHRONICLE OF THE TOCCO describes Arta as the center of a fertile agricultural region with many water buffaloes, cows, and horses; merchants from Venice and Dubrovnik competed for the market of Arta, which supplied dried meat, lard, ham, furs, and indigo.

Arta was attacked by the empire of Nicea in 1259 to Nicean troops. The restored empire continued these assaults: Andronikos II attacked Arta unsuccessfully, but in 1338 Andronikos III took it. After a rebellion led by Nikephoros Basilakes the city surrendered to John Kantakouzenos. Afterwards Arta changed hands many times: it was conquered by Stefan Uroš IV Dušan, then passed to the Albanians, and in 1416 to Carlo I Tocco. It fell to the Ottomans in 1449.

The bishopric of Arta does not appear regularly in the notitiae and may have been combined with that of nearby Rogoi. In an act of 1367 Arta is named the “bishopric of Akarnania” (MM 1:494–13).

Monuments of Arta. The fortifications of the acropolis have been attributed to Michael I Komnenos Doukas, but in their present state they are largely post-Byz.; the palace has vanished completely.

There are churches in and around Arta that date, in part at least, from the 9th to 10th C.: simple wooden-roofed basilicas, sometimes topped by domes with high cylindrical drums (St. Demetrios tou Katsoure), or of a free-standing cross plan (St. Basil tes Gephyras, early 9th C.?). But the main building activity in Arta took place in the time of the despote of Epiros, when many of these early churches were also renovated. Because of the strength of this local tradition, the penetration of Constantinopolitan and Western influences into the region produced in Arta architectural forms of considerable originality that are behelden to neither. The 13th-C. structures, often still basilical in plan, have lively bands of brick and multicolored ceramic decoration, the latter even including figural plaques, as in the Church of St. Basil (S. Xenopoulos, EEB 6 [1929] 387–97), while stone figural sculpture adorns column capitals and tombs as well as church façades.

The most important monument in Arta is the large metropolitan Church of the Virgin Paregoritissa, founded by the despotes Nikephoros I Komnenos Doukas, his wife, and his son, ca. 1290. It has a square, blocklike exterior rising three stories like a palace; on its horizontal roofline appear five domes and a lantern. The interior is spacious, being a form of domed octagon like Nea Mone on Chios, though the eight piers here are divided into three tiers, with reused columns serving both as consoles and as vertical supports. The walls of the church had marble revetment up to the level of the surrounding galleries, and the dome itself has a Byz. program in mosaic: a huge figure of Christ Pantokrator surrounded by seraphim and cherubim, and 12 prophets between the windows of the drum. The mosaicists were presumably brought in from a Byz. center outside Epiros, though it is not known which. Western elements are also evident in the carved Romanesque monsters and reliefs with biblical themes that adorn the interior.

The Church of the Kato Panagia, built ca. 1250–70 by the father of Nikephoros I, the despotes Michael II Komnenos Doukas, has a barrel-vaulted nave, but a transverse vault rises high over the crossing to produce the effect of a dome. The plan, very similar to that of the Porta Panagia in Thessaly, has affinities also with Peloponnesian monuments of the 13th C. The monastery of Theodora (previously St. George) has a three-aisled basilica of the mid-12th C. The domed narthex added by St. THEODORA OF ARTA (ca. 1270) housed her tomb; a marble slab from her sarcophagus bears her portrait in relief, dressed as an empress, and that of a male figure, probably her son Nikephoros I.

Frescoes in the despotate churches of Arta are generally Byz. in inspiration (e.g., St. Nicholas tes Rhodias), most painted in the style of the early decades of the 13th C. The church of the Bla-
cherna convent preserves a fragmentary fresco showing a procession of the icon of the Virgin Hodegetria through the streets of Constantinople (M. Achimastou-Potamianou, DChAE 13 [1985–86] 301–06). The church itself (part of which may belong to the early 10th C.) is a three-aisled basilica with a dome over each aisle; fragments of its marble templeion with figures of angels flanking the Virgin have also been preserved, as has its marble mosaic floor, and some inscribed tomb reliefs that identify the deceased as members of the royal family.

T.E.G., N.P.S.

ARTABASDOS (Ἀρταβάσδως, Ἀρτάβαζος), usurper (742–43). An Armenian (Toumanoff, “Caucasia” 135), Artabasdos was appointed strategos of the Armeniakon by Anastasios II (713–15). He supported the revolt of Leo III against Theodosios III and subsequently received Leo’s daughter Anna in marriage, the title kourepalates (Guillard, Titres, pt.III [1970], 1981), and the position of komes of the Opsikon. The report of Eutychios of Alexandria that Artabasdos came from Germanieka, Leo’s birthplace, may explain their strong ties. After Leo’s death Artabasdos revolted against Constantine V in June of either 741 or 742, defeated him, and entered Constantinople, perhaps exploiting a reaction against Iconoclasm. He ruled with his eldest son Nikephoros as co-emperor and received recognition from Pope Zacharias. Artabasdos may also have crowned Anna and his youngest son Niketas (Synopsis chronike, ed. Sathas, MB 7:124.2–3). His most notable achievement was the restoration of icons (denied by Speck, infra, but reaffirmed by W. Treadgold, AHR 88 [1983] 94f). He sent Niketas as monostrategos to the Armeniakon, but Constantine defeated him in the summer of 743 and entered Constantinople on 2 Nov. of that year. Artabasdos and his sons were blinded in the Hippodrome.

ARTABASDOS, NICHOLAS RHABDAS. See Rhabdas, Nicholas Artabasdos.

ART AND THE WEST. While the dedication of Constantinople as the new Rome symbolized imperial and artistic unity and Constantinople was patterned after old Rome in its topography and monuments, their shared traditions contained the seeds of future separation. After the division of the empire and the decline of the Western part in the 5th C., it was the art of the Eastern part that upheld the classical standards of old Rome while developing new Christian form and content. When Rome gradually lost its position as artistic capital after ca.450, Constantinople assumed this role; by the 540s its impact on Italian soil was evident in the architecture and decoration of the Church of S. Vitale in Ravenna.

The new Byz. art followed in the path of Justinian’s generals and, where political hegemony was maintained, this art flourished. As the attempt to reestablish the empire in the West failed in the face of barbarian invasions, however, manifestations of Byz. art in Italy became less the product of state patronage and, as at S. Maria Antiqua in Rome, more the result of individual traveling artists or workshops commissioned by Italians. Byz. rule continued in parts of Italy until the 11th C., so Greek artists were readily available, and possibly so even in areas not under Byz. control (e.g., S. Maria di Castelseprio). Iconoclasm may also have stimulated the flow of artists to the outlying provinces and beyond. North of the Alps, however, the impact of Byz. art was less pronounced. Major works such as Charlemagne’s Palatine Chapel at Aachen and the early 9th-C. Lorsch ivory bookcover were sponsored by the Western emperor and other knowledgeable political patrons who sought to follow imperial Byz. models. An itinerant Greek painter may have worked on the Schatzkammer Gospels (Vienna) ca.800. Farther afield the strength and frequency of Byz. influence were much less. Discrete elements of the Lindisfarne Gospels show that the artist had indirect contact with Byz. art in the late 7th C.
Similarly the full-page Virgin and Child in the Book of Kells, ca.800, reflects a Théotokos at some distance, probably filtered through intermediate works.

In the 10th–11th C., direct Byz. influence on artists working for the Western emperor intensified with the marriage of Otto II and Théophanie: an ivory (Paris, Cluny Museum) made for their coronation depends upon a Greek prototype. Byz. ivories also transmitted to Ottonian book-painters iconographic types such as the Dormition of the Virgin, and a Greek artist probably worked on the face and hands of Christ and the Virgin in the Codex Aureus of Henry III (Escorial Vit. 17, 1043–46). By contrast, in the British Isles much more selective iconographic borrowings continue to be found, for example, at Winchester in the Benedicentum of St. Aethelwold made for the Western emperor intensification of Otto II and Théophanie. Farther south direct Byz. artistic intervention did occur at Montecassino, however, to which Emp. Constantine IX made large donations and where Abbot Desiderius employed Greek artists. The impact of this project is visible in some of the frescoes of Sant’Angelo in Formis and in numerous 11th–12th-C. bronze doors on churches throughout Italy.

At the time of the Crusades, Byz. artistic influence in the West increased. This new and substantial phase is represented by and emanated from the monuments of the Norman kings of Sicily at Cefalù, Palermo, and Monreale; at S. Marco in Venice; and nearby at Torcello. Transmitted from Italy, with Venice as an esp. important intermediary, awareness of Byz. art spread widely through Europe at various levels of impact and understanding (A. Cutler, Mediaevalia 7 [1981] 41–77): in Spain in the now-destroyed chapter house at Sigena; in England in a major series of MSS, including the St. Albans Psalter and a series of giant Bibles, and frescoes at Canterbury; in France in MS illumination at Cluny and the frescoes of the chapel at Berzé-la-Ville nearby; and in Austria, Germany, and the Meuse valley in the work of goldsmiths such as Nicholas of Verdun.

The nature of the artistic relationship changed greatly in the 13th C. as a result of the Latin conquest of Constantinople, the Frankish presence in Greece during the Latin Empire (1204–61), and the strengthened contacts between Byz. and the merchant cities of Venice, Genoa, and Pisa. The two cultures interacted in a way that affected both Byz. art in the 13th and 14th C. and the development of the manière grecque in Duecento Italian panel painting. This manière, expressed early in the Kahn and Mellon Madonnas (Washington, D.C., National Gallery), evolved into the individual styles of Cimabue and Duccio; the prolongation of Byz.-influenced painting in Germany; the spread of panel painting to northern Europe; and even the provision of certain components of the developing Gothic style in France, seen, for example, in the Ingeborg Psalter (Chantilly, Musée Condé 1695, ca.1200).

The impact of Byz. art on the West in the 14th–15th C. is less clear, but one major change is apparent. Whereas until the 13th C. Byz. art had influenced the West without—except in the 4th–5th C.—the reverse being true, instances of Western artistic influence on Byz. became marked. Examples range from Italian-influenced sculpture in the Church of the Virgin Paregoritissa at Arta, through Western elements in the iconography of frescoes at Bojana, to the dedication pages of two 14th-C. Hippokrates MSS (Vat. Palat. gr. 199; Paris, B.N. gr. 2144), and a MS of the Alexander Romance (Nelson, Preface & Miniature 42f, 52f). A very late example is the fresco (ca.1450) decorating Tomb G in the Chora, "the first painting found in Constantinople in which clear-cut and precise evidence of direct Renaissance influence can be observed" (Underwood, Kariye Djami 1:292–95).

Although the interrelationship of Byz. art and medieval art in western Europe is clearly a complex phenomenon, the asymmetry of artistic flow, mainly westward from Constantinople and its empire, can be explained by a variety of factors. These include the strength and stability of the Byz. artistic tradition, the authority of imperial patronage, the high artistic quality maintained at Constantinople and consequent renown of Byz. art, the direct or indirect dissemination of objects, and the growing familiarity of Westerners with Byz. art and artists through travel and specific commissions. Only after the Crusades and expanded exploitation of the Mediterranean trade routes brought the West into direct contact with Byz. could the former begin to affect the art of Byz. Ironically, the very catastrophe that definitively sundered the Greek and Latin cultures, the
sack of Constantinople in 1204, provided the decisive turning point when western Europe saw a major infusion of Byz. works. This and the implantation of Franks on Greek soil sowed the seeds of artistic interpenetration. The role of the Latins in Frankish Greece and the Holy Land, and the resultant Crusader art and architecture, remain to be fully studied; similarly, the means of artistic transmission and interchange must be further clarified. Clearly the importance of the Crusaders’ intermediary role is one of the most significant new contributions to the understanding of artistic relations between Byz. and the West.

ARTAŞAT (Ἀρτασάτα), early Armenian capital on the north bank of the mid-Araxes River, founded by Artašēs (Artaxias) in the 2nd C. B.C. It was also the capital of the later Armenian ARŞAIDS. Recent excavations reveal that it was a major urban center, but rulers rarely resided there and it never recovered from its sack by the Persians in 363. Nearby DUN replaced it, probably in the second half of the 5th C. The main importance of Artaşat apparently lay in its position on the commercial transit route through Armenia; it was officially designated one of the three customs posts between Byz. and the Sasanians in the 5th C. (Cod. Just. IV 63.4), a position apparently reconfirmed at the Peace of 562, even though the clause did not specifically mention Artaşat (Menander Protector, fr.6, ed. Blockley 70.323–26). The city slowly declined to the level of a village, but was still known to 9th-C. Arab sources as a center for the production of red dye (kirmiz).

ARTEMIOS (Ἀρτέμιος), saint; died Antioch ca.362; feastday 20 Oct. Born to a noble family, Artemios was governor of Egypt in 360. An Arian supporter of Constantius II, Artemios persecuted both pagans and Orthodox Christians (PLRE 1:112). After Emp. Julian had him executed for his Christian beliefs, the deaconess Ariste brought his body to Constantinople, where it was later deposited in the Church of John Prodromos in Oxeia. The healing power of his relics became famous: a series of miracles is described in an anonymous collection of legends compiled in 660–68. Artemios mainly cured diseased testicles by means of incubation inside the church. The legend emphasizes the miraculous nature of Artemios’ cures: for instance, a certain George had a vision in which Artemios appeared as a butcher and performed an operation with a butcher’s implements. Artemios’s miracles attracted patients from Amastris, Phrygia, Chios, Rhodes, Alexandria, and Africa. It is questionable whether the Church of Prodromos was renamed in honor of Artemios.

PHILOSTORGIOS eulogized Artemios’s martyrdom, and on this basis a passio was produced: Bidez (infra, xliiv–lxviii) ascribes it to John of Rhodes (otherwise unknown); Beck (Kirche 482f) attributes it to JOHN OF DAMASCUS, although this is unlikely, since the passio is referred to in the 7th-C. Miracles. SYMEON METAPHRASTES included it in his collection of saints’ Lives.

Representation in Art. The somewhat confused historical tradition is reflected in art. In miniatures of the menologion of Metaphrastes, and in the Theodore Psalter (fol.75r), Artemios appears as a noble martyr with a short dark beard like that of Christ. In wall-painting, however, his military role is emphasized: he is dressed in armor and paired with other military saints, esp. MERVOUROS and Niketas the Goth. Scenes of his martyrdom apparently once adorned the temple of his shrine in Constantinople. His beheading is depicted in the Menologion of Basil II (p.126), and there is a Passion cycle of eight episodes in an 11th-C. MS on Mt. Athos (Esphig. 14, fols. 90r-v, Treasures 2.21f).

ARTEMIS, female deity of pre-Hellenic origin, whose cult survived in the late Roman Empire until the 5th–6th C. Artemis Ephesia, a variant who was popular in Asia Minor, was venerated as a helper of women in childbirth, as fertility goddess, and as city-protector. Her statue represents her with a dozen or more breasts exposed beneath a wide brooch and the mural crown. Sixth-C. poets also refer to Artemis as protector of women in childbirth. Her temple at Ephesus was closed only at the beginning of the 5th C. An inscription, probably of the 5th C. (M. Guarducci, Epigrafia greca, vol. 4 [Rome 1978] 400f), records a certain Demeas who "tore down the beguiling image of the daimon Artemis" and substituted a cross. At Sardis her temple was abandoned by the mid-4th C., and a small church was built at the eastern end.

The vita of St. Hypatios of Roupheianai records in the 5th C. a festival in the Bithynian uplands called the "Basket" (kalathos) of Artemis, which the rural population celebrated annually. Hypatios allegedly saw her appear in the form of a giantess swineherd. In the 6th C. Theodore of Sykeon heard a rumor about a place in Galatia, possibly a sacred grove, where it was popularly believed that Artemis resided with many demons and killed people. In the Byz. polemic against paganism Artemis was represented as extremely cruel; although she was a chaste virgin, she enjoyed bloody sacrifices and killed strangers and thus did not fit the ideal of Christian morality.

Radically transformed from her Antique image of athletic huntress, Artemis, represented as a kindly, hooded woman, presides with Oppian over the introductory miniature of the 11th-C. Venice Kynegetika.

ARTILLERY AND SIEGE MACHINERY. The Byz. employed catapults (petrobole) and other stone- or arrow-shooting devices (cheiroballistra, cheiro-
mangana) in siege operations. Although torsion catapults had been developed in antiquity, the Byz. normally used the less complicated and more easily maintained rope-pulled trebuchets favored by the Arabs, Avars, and steppe peoples (D.R. Hill, Viator 4 [1973] 99–116). A beam was fixed unevenly over a crossbar and a stone placed in a sling at the end of the longer arm; several men then pulled down the rope(s) attached to the shorter arm, flinging the longer arm upward and propelling the stone. The Miracles of St. Demetrios provide an excellent description of rope-pulled catapults (Lemerle, Miracles 1:154.9–22).

The cheiroballistron resembled a crossbow (see Weaponry). An arrow or stone was laid in a channel along the stock, while the string, fastened to the ends of the two arms, was wound back, locked, and released to fire the projectile. These weapons, usually mounted on stands, were used by defenders and attackers; Prokopios (Wars 5.21.14–18) describes Belisarios's men operating this weapon from a siege tower.

Remains of late 4th-C. catapults were discovered on the sites of some Dacian strongholds (N. Gudea, D. Baatz, Saalburg Jahrbuch 31 [1974] 50–72). P. Brennan (Chiron 10 [1980] 553–67) suggests that in the Danubian provinces of Scythia, Pannonia I and II, composite detachments of ballistarii were formed from both legions of each province; they operated catapults and other missile-wielding weaponry at permanent bridgeheads to assist expeditionary armies.

Siege machinery included wooden towers (helepolis) built or rolled next to the wall. They often had a platform from which to shoot Greek fire (as depicted in the 11th-C. Vat. gr. 1605, fol.185) and were covered with soaked hides to guard against similar incendiary weapons. Soldiers also used battering rams (krion) to break down gates; rams were also suspended from a frame to be swung back and forth against the target. Nikephoros Ouranos recommended tunneling above all other methods to collapse the wall (ed. J.-A. de Foucault, TM 5 [1973] 295–303). The soldiers made hutlike shelters (laiais) from branches and vines to protect themselves while undermining the base of the wall. Most artillery and siege machinery was built in situ during sieges instead of being transported. Engineers (technitai) accompanied the besiegers to construct the necessary equipment (Leo Diacon 16.11–21).
ARTISAN. There was no special Byz. term for the artisan and, contrary to B. Malich (BBA 51 [1983] 47–59), there was no clear distinction between the artisan and the MERCHANT. Of course, there were professional traders not involved in production as well as craftsmen who worked for an employer (or a rearranged customer) rather than for the market; but both Egyptian papyri and the Book of the Eparch note various artisans (e.g., candlemakers, soapmakers, silk weavers) who sold their own goods. The major branches of Byz. craftsmanship were metallurgy; production of weapons; manufacture of jewelry, pottery, and glass; production of textiles and clothing; the leather industry; carpentry and masonry; the building industry; baking of bread; and production of vegetable oil and other victuals. Late Roman texts present a diversified pattern of artisan professions (H. von Petrikovits, ZPapEpig 43 [1981] 285–306) that presupposes a very consistent division of labor, although the list of names is longer than the number of actual professions because various terms are used to refer to the same profession. The terminology of the Book of the Eparch seems to be less varied, and probably only silk production and the leather industry reflect any significant division of labor.

Craftsmanship was divided into several categories: state fabriceae or ergasteria basilika (see Factories, Imperial), guilds, and craftsmen outside state or guild organizations. Artisans were concentrated in towns; according to M. Ja. Sjuzjumov (VizVrem 11 [1956] 66f), they worked primarily in suburban areas—a thesis that is not supported by archaeological data. Monasteries (for example, the Studios) had their own workshops and monk-artisans. In praktika, the most frequently named rural artisans are smiths, tailors, and shoemakers.

Artisans appear more common in Late Antique than in Byz. art. An ivory fragment at Princeton (Age of Spirit, no. 254) shows a carpenter planing a board; masons lay up a wall in a fresco in the Via Latina catacomb, Rome (ibid., no. 253). In Byz. their role is as peripheral figures in compositions honoring a ktetor, as in the Vienna Dioskorides (fol. 6v; Weitzmann, Late Antique Ill., pl. 15), or as illustrations to biblical scenes such as the construction of Noah's Ark or the tower of Babel (see Genesis).

ARTISTS. No precise equivalent existed in Byz. Greek for this generic modern term: practitioners of the arts and crafts are variously referred to in texts and inscriptions as zographos or historiographos (painter), maistor, and kiskes used in the sense of an executant of a commissioned work (cf. ktetor). No clearly defined social or economic boundary separated ARTISANS from artists, some of whom achieved eminence. Lazaros was a member of two diplomatic missions to Rome, and Panteleon was on equal terms with a hegoumenos of the Constantinopolitan monastery of the Pana-giou. Some artists were rich enough to act as ketores themselves. A 1oth-C. goldsmith named Gregory paid for the construction of a church at Trani; Michael Proelusis (see list below), an early 14th-C. painter, rebuilt and restored a monastery on land that he had rented near Halmuros.

Unlike in ancient Rome, the practice of art in Byz. was not considered demeaning. Artists might be as lowly as the "poor widow woman" in mid-6th-C. Syria "who had been taught the art of drawing and used to . . . labor at it for her necessities" (John of Ephesus—PO 17.1:15); at the other end of the social scale its most celebrated exponent was CONSTANTINE VII PORPHYROGENETOS. Icon-painting was by definition an acceptable enterprise for a Christian, on the model of St. Luke who was supposed to have plded this trade. Painters are frequently described in hagiographic texts as "inspired" or "skilled," and many painters are credited with privileged, supernatural aid that enabled them to finish their commissions. A great master like Eulalios was celebrated by numerous writers of his time. Amateurs, lay and monastic and often of high rank, aspired
to such talents (N. Oikonomides in AAPA 1:45–51).

Artists were not narrowly specialized, which helps to explain consistencies in both style and subject matter across different media. While legal documents such as the Codex Theodosianus (Cod. Theod. XIII 4.2) and the Book of the Eparch distinguish, for administrative purposes, craftsmen by their trades, panel painters like Pantoleon also illustrated books, and muralists produced icons. At sites such as the Chora in Constantinople, mosaicists were probably also responsible for the frescoed decoration.

Of the training of artists almost nothing is known. The above-mentioned Syrian woman used to teach pupils for a fee; there is no later evidence for such instruction or for art schools in the narrow sense of the term. As is made clear in the will of the Cretan painter Angelos Akotantos (see list below), both skills and equipment, including drawings (skias mata), were transmitted from father to son. The transmission of technical skills from one generation to another is already implied in Constantine I's legislation of 334 (Cod. Theod. XIII 4.2, repeated in the Codex Justinianus—Cod. Just. X 66.1). Parents also placed their children as apprentices. One must suppose some sort of on-the-job training like that of Alimpijs, "given by his parents to study icon-painting" and employed as an assistant to the Byz. mosaicists at work in the monastery of the Caves at Kiev. Training would have been particularly necessary in mosaic, a craft demanding both individual expertise and a quasi-industrial organization.

Painters on a smaller scale and other craftsmen worked at home or, at least in the 4th–6th C., in small ateliers. A law of the emperor Valentinian of the year 374 (Cod. Theod. XIII 4.4) mentions painters' studios (pergulae) and workshops in public places. One such may be the room equipped with an easel used by a portrait-painter depicted in the Vienna Dioskuroides. Although it is often supposed that monasteries maintained painters' workshops in addition to their scriptoria, there is no documentary proof for such a notion. Most tasks would have been farmed out, by monks and laymen alike, to professionals.

In the 5th C. there is unequivocal evidence that painters worked directly from life (Theodoret of Cyrus, Histoire des moines de Syrie, ed. P. Canivet, A. Leroy-Molingen [Paris 1979] 2.248.11–16). A legend in the Life of Nikon II "Métaneiâte" has it that an artist could not paint the saint's likeness because he had no model. Artists probably knew the majority of the themes they were called upon to paint and used techniques that enabled them to work quickly. D.C. Winfield ("Painting Methods" 132f) estimated that fresco painters covered 6–7 sq. m daily. The team working with Theophanes "The Greek" finished painting the Annunciation Church in the Moscow Kremlin in one season. Yet, while employing well-established formulas and perhaps model-books, they were not externally controlled. There is no reason to suppose them regulated in aesthetic matters and almost as great a variety obtains in details of iconography as in the areas of style and composition. Conventional models and schemes of decoration were modified to suit the dimensions and layout of a building and, presumably, the financial size of a commission. Such factors, equally affecting portable artifacts, determined the mode of production.

The exercise of an artist's taste is not an identifiable characteristic of Byz. art. While artists were not limited to biblical subjects—both monumental painters (as in the patriarchal apartments at Hagia Sophia, Constantinople) and illuminators (as in marginal Psalter illustration) "commented" on current and recent events—interventions of this sort seem to have lain in the domain of the patron rather than with those hired to execute his wishes. Nonetheless, major painters could exercise considerable freedom in their choice of models: Pantoleon is known to have reproduced a picture he had just painted while, in the second half of the 14th C., Gastreas (see list below) traveled in Arkadia seeking "ancient icons" to copy.

With the exception of the team that decorated the Menologion of Basil II, artists' "signatures" do not appear in any numbers before the 12th C. The rare self-portrait of the scribe and/or painter Theophanes in a MS of ca. 1100 coincides with other individualistic trends in monumental painting of the period. By the 14th C., artists such as Kallierges were legends in their own time; others, like Panselinos, may be no more than legends. Artists' inscriptions are usually laconic; where longer, they constitute proof of literacy.

Proud boasts claiming the presence of Byz. artists abound in Latin and Slavic literature. While
Byz. artists had long been active abroad—a diaspora to Rome during Iconoclasm is often asserted, but Damascus, Montecassino, and Dubrovnik offer better-documented examples—named individuals are not found before the 13th C. Rather than venturing overseas alone, artists seem to have gone abroad in clusters. A succession of Greeks painted churches in Macedonia and Serbia after the fall of Constantinople in 1204; in the early 14th C. Byz. wall-painters were active in Venice, Sicily, Genoa, and Russia. A second spate returned or was summoned to Russia and Georgia in the 1370s. Preserved monuments show that they adapted themselves quickly to the local concerns and requirements of their new hosts.

Wall-painters and mosaicists such as Eualios are more widely celebrated in chronicles than illuminators and other craftsmen, a fame reflecting quite literally the size of their achievement; hagiography more often yields the names of icon-painters. Generally, artists appear in literature for achievements other than their artistry. This fact, the absence of documentation regarding patrons’ wishes, and the impersonal nature of much Byz. craftsmanship make it hard to define artistic personality. Yet the notion that art was always an anonymous activity is contradicted by the following selection of documented names. Many craftsmen, esp. painters, gem-cutters, and goldsmiths of the 4th–7th C., are known only by their names on funerary and other inscriptions. They have been collected by Mentzou (infra) and are not included here.

[A]etios, monk, signed a wall-painting in the Church of the Forty Martyrs at Suves (Cappadocia) in 1216/17 (Jerphanion, Églises rupestres 2:1:156–74).

Akotantanis, Angelos, icon-painter and proto psaites in Chandax 1407–13. His will (M. Manoussakas, DChAE 2 [1960–61] 146–48) was drawn up in 1436 before he sailed for Constantinople. Recently, several icons, signed by or attributed to Akotantanis, have come to light (M. Vasilake-Maurakake, Thesaurismata 18 [1981] 290–98; PLP, no.13318; cf. 13319, 13320).

[Anastasi]os, priest and painter of the Church of St. George at Apodoulous, Crete, 14th/15th C. (Kalokyris, Crete 3; PLP, no.90088).

Andrea[s], sculptor named in an inscription on the upper cornice of Hagia Sophia, Constantinople (unpublished; notice courtesy of L.E. Butler).

Apokaukos, Alexios, painter on Crete, fl. 1402–1421, executor of the will of Joseph Bryenios (PLP, no.1194).

Apsheude, Theodore.

Arsenios, monk and painter who, together with his son Theophylaktos, decorated a chapel of St. Michael in the Hasan Dağ in the reign of Constantine VIII (?) (N. Thierry, JSav [1968] 45–61).

Asbestos, Gregory.

Atzemos, Basil, also called Berges, 11th-C. (?) painter who signed a supplication to Symeon the Stylite beside the saint’s image in a Chicago MS, Univ. Lib. 947, fol.151v (Spatharakis, Corpus, no.919).

Bardas, Ioannitzes, painter, second founder of the “white church” at Selas in Chalkidike, and in 1285, hieromonk of the Great Lavra on Mt. Athos (PLP, no.2205).

Barlaam, early 14th-C. wall-painter whose name appears, together with the date 6827 ( = 1319/20), over the door of a room in the western part of the church at Gracanica (P. Mijovic, Studia slavico-byzantina et mediaevalia europea, vol. 1 [Sofia 1989] 1949–54).

Basilius Pictor.

Byzagios, Andronikos, wall-painter who worked in the chapel of St. George in the Athotine monastery of St. Paul, 1423 (PLP, no.3266).

Constantine and his son, John, named in inscriptions at Hagia Sophia, Ohrid, ca.1550 (G. Subotic, Zograf 5 [1974] 44–47; PLP, nos. 8593, 14166).

Daniel, painter of the cave church of S. Biagio at S. Vito dei Normanni (Apulia), named in an inscription of 1197 (Medea, Cripte 1:95).

Demetrios of Monemvasia, painter named in an inscription of 1095 or 1100 in the Church of St. Demetrios near Pourko on Kythera (Skwran, Development 162, no.28).
Elpidios, 5th-C. mosaicist known from an inscription in the basilica of the Virgin at Palaiopolis on Kerkýra (M. Guarducci, Epigrafia greca 4 [Rome 1978] 348f).

Euphram.

Eulalios.

Eugenikos, Manuel.

Eustathios, wall-painter named in an inscription of March 1020 in the Chapel of Sts. Marina e Cristina at Carpignano, Apulia (Medea, Cripte 1:114).

Euticius (Eutychios) of Naissos, mid-4th-C. silversmith. His name appears on a silver plate found at Augst (Kaiserauget, no.60).

Flavius Nicanus, early 4th-C. silversmith whose name is inscribed on ingots found at Šabac, south of Sirmium, and on two plates from Červenbreg (Bulgaria) prepared for the decennalia of Licinius (F. Baratte, JSav [1975] 198).

Gabriel, monk and painter in 1322, addressed in a letter by Michael Gabras for whom he painted an icon of the Virgin (PLP, no.3408).

George mastora, stone-carver (marmarar) named in an inscription of 1395 in the Church of the Phaneromene in the Mani (N.B. Dranakes, ArchEph [1967] 139-41).

George, painter and monk who witnessed the typikon of John I Tzimiskes (972); founder of the Zographou Monastery (Docheiaiv. 99, n.1; Prot., no.7.167).

“Georgius Grecus,” painter mentioned in the archives of Dubrovnik between 6 Aug. 1377 and 2 Apr. 1386 (Krekić, Dubrovnik, nos. 326, 373, 384).

Gerontios, wood-carver of the second quarter of the 5th C., recommended to the sophist Isokasios by Theodoret of Cyrhhus (ep.38, ed. Y. Azéma, 1:102.22-103.2).

“Hemanuel Grecus,” painter who became a citizen of Dubrovnik on 28 June 1367 (Krekić, Dubrovnik, no.268).

Isaías “the Greek,” wall-painter commissioned on 4 May 1338 to paint the Church of the Entry into Jerusalem in Novgorod (Novgorod-

Iveropoulos, John, identified in a Greek inscription in the crypt at Petrítzós (Bačkovo) as the painter of the upper and lower stories of the church (E. Bakalova, Bačkovskata kostnica [Sofia 1977] 133).

John, a monk and disciple of St. Symeon the Stylite the Younger who, according to the latter's vita (ed. van den Ven, 88f), even though untrained, carved the columns and capitals of a church at Sykeon.

John, deacon and founder in 1266 of the Monastery of St. George at Struga, near Ohrid, to which he gave an icon of the saint which he had painted. John supervised the decoration of the Church of St. Nicholas at Manastir in Macedonia in 1270/1 (Djuric, Byz. Fresken 20-22).

John, wall-painter who signed his name in Greek in the apse of the Church of St. Demetrius at Peć (V.R. Petković in Mél. Diehl 2:133-36; PLP, no.8591).

John of Athens, wall-painter named in an inscription of 1244 in the Church of the Trinity at Kranidi, Argolis, and, a year later, in the Church of St. John Kalybites at Psachra, Euboia (S. Kalopissi-Verti, Die Kirche der Hagia Triada bei Kranidi in der Argolis (1244) [Munich 1975] 2, 4).

Karkinélas, 8th-C. (?) silversmith mentioned in a fanciful tale in the Patria of Constantinople (Parastaseis 100.5-6).

Lazaros.

Leontios, deacon and painter on Cyprus, 1333.

Leontios, marmararios from Antioch, said in the vita of St. Thékla (ed. Dagron, 334-37) to have decorated the saint's church with both murals and an opus sectile pavement.

Libanios and Prokopios, mosaicists named in a pavement in a 5th-C. church at Heit, Syria (P. Mouterde, Syria 6 [1925] 360f, no.41).

Makarios, early 14th-C. painter, named by Manuel Philes (Carmina, ed. Miller, 1:131) as creator of an icon of Christ (PLP, no.16249).

Manasses, Constantine, wall-painter, decorated the Church of the Monastery of Paliapangia, near Sparta, 1304/5 (PLP, no.16599).
Maria, 14th–15th-C. painter, working in Georgia, who made an image of the Virgin (PLP, no.16894).

Marianos, mosaicist, who, with his son Aninas, worked at the synagogue of Beth-Alpha (C. Balmelle, J.-P. Darmon in AAPA 1:244).

Markos, 7th-C. (?), silversmith, who prepared a cross for the doux Neanias (Papadopoulos-Kerameus, Analekta 5:5f).

Maximus, early 4th-C. vascularius whose name appears on two silver ingots found near Philippopolis. F. Baratte (JSav [1975] 198) suggested that Maximus's workshop was possibly responsible for six silver plates inscribed for the decennalia of Licinius and found at the same site.

Methodios, monk and painter said by Theophanes Continuatus (TheophCont 164.3) to have painted a Last Judgment that caused the conversion of Boris I.

Michael (Astrapas) and Eutychchios.

Modestos, painter in the Monastery of Magoulion in Constantinople, 1265/6 (PLP, no.19202).

Morphopoulos, Theodore, painter, hegoumenos of the monastery of St. Lawrence in Thessalonike in 1405/6 (PLP, no.19333).

Moses, a monk and painter on Mt. Athos in 1344. A Bogomil, he was anathematized by a synod at Karyes and expelled (PLP, no.19926).

Myron, 11th-C. painter addressed as a contemporary in a poem by Christopher of Mytilene (ed. Kurtz, no.112), possibly responsible for a portrait of the emperor Michael IV.

Naouma, Kyriakos, and Thomas, mosaicists whose names are recorded in a 6th-C. pavement at Mt. Nebo (C. Balmelle, J.-P. Darmon in AAPA 1:238, n.20).

Nicholas, anagnostes and painter in 1290/1 of the Church of St. George at Sklavopoula, near Selinos in western Crete (Kalokyris, Crete 31; PLP, no.20482).

Nicholas, a painter and paraikos of the Great Lavra ca.1300 (Lavra 2, no.91.122).

Nicholas the droungarios who, with his brothers, according to an inscription of 1074/5 in St. Merkouriou on Keryra, built and decorated the church (P.L. Vocotopoulos, CahArch 21 [1971] 152f).

Nikodemos, painter and hieromonk known by an inscription of 1310/11 at the Monastery of St. George at Karditsa in Boeotia (PLP, no.20353).

Pagomenos, John, wall-painter named in inscriptions of 1313–47 in eight churches in the districts of Apokoronas and Selinos, Crete (Kalokyris, Crete 31f; cf. PLP, no.8363).

Panselinos.

Pantoleon.

Paul, painter of the second half of the 12th C. who, according to Antony of Novgorod (ed. Loparev, PPSb 51 [1899] 17.3–11) was responsible for the fresco of the Baptism of Christ in the baptistery of Hagia Sophia, Constantinople.

Pausylpos of Thessalonike, silversmith, who signed the Achilles plate (Kaiseraugst, no.63) buried at Augst before 353.

Peter, early 13th-C. painter whose name appears on two icons at Mt. Sinai and to whom D. Mouriki (in Studemica et l'art byzantin autour de l'année 1200, ed. V. Korać [Belgrade 1988] 326–47) attributes two other panels.

Petrović "the Greek," who painted the interior

Phrangopoulos, Kyriakos, wall painter, fl. ca.1300. His name appears in a dedicatory inscription in the apse of the Church of St. Nicholas at Agoriane, Lakonia (M. Emmanuel, DChAE 14 [1987-88] 110). His connection, if any, with the Phrangopoulos family is unknown.

Riz(z)o (Ritzos), family of 15th-C. Cretan painters. Francesco Rizzo is first mentioned in a notarial document of 13 Feb. 1420, Nicholas Rizzo in the same year, and Andreas Rizzo in 1450 (M. Cattapan, Thesaurismata 10 [1973] 238-82).

Romulus, Flavius, early-5th-C. engraver whose name appears on a sardonyx in Leningrad carved with a scene of imperial investiture (Delbrück, Spälate Kaiserport. 211-14).

Scolopulus, Musocolus, goldsmith of Chandax mentioned in deeds of 1366 and 1377 (Krekić, Dubrovnik, nos. 256, 266).

Staurakios of Ebous, and his colleague Euremios, floor mosaicists named in a pavement in the Church of St. Stephen at Um er-Rasas (Jordan) in an inscription of March 756 (M. Piccirillo, Lib.am. 37 [1987] 180-82).

Stephen, icon-painter of the late 12th C., who signed two large icons at the Monastery of St. Catherine, Sinai (Soteriou, Eikones, nos. 74-75).

Theodore, mid-6th C., formerly a kastrensis (see KASTRESIOS) who gave up his position to be a carpenter, builder, and carver (John of Ephesus, tr. and ed. E.W. Brooks in PO 19:200f). Theodore, mid-11th-C. painter whose house is mentioned among the possessions of a monastery at Neokastron near Reggio-Calabria (A. Guillou, Le brébion de la métropole byzantine de Région [Vatican 1974] 201-535).

Theodore, painter of the 11th–12th C., named in an inscription on the Deesis in the cave chapel of Hagia Sophia on Kythera (Skawran, Development 163, no.30).

Theoktistos, 13th-C. painter who made a miniature of John Chrysostom and wrote the accompanying verses (PLP, no.7491).

Theophanes "the Greek.

Theophylaktos, wall-painter, who signed an image of Christ in the Chapel of Sts. Marina and Cristina at Carpignano, Apulia (Medea, Crïpte 1:115).

Theorianos, John, fresco- and possibly icon-painter, fl. 1346-50. His Greek signature appears on the sword of the Archangel Michael in the exonarthex of St. Sophia at Ohrid (Djurić, Byz. Fresken 88f).

Thomas, 7th or 8th C., monk and painter of Damascus known from an entry in the psalter, Leningrad, Pub. Lib. gr. 216, fol.349v (Iksusstvo Vizantij 2, no.479). A. Frolow (BEO 11 [1945-46] 121-30) hypothesized that Thomas was a mosaicist who had worked in the Church of the Holy Sepulchre at Jerusalem.

Tzykandeles, Manuel, mid-14th C. scribe, illuminator (and fresco painter?), who decorated a commentary on Job, Paris, B.N. gr. 335 (Byzance et la France médiévale [Paris 1958] no.87).

Veneris, Daniel, who, with his nephew Michael, painted the Church of Christ at Meskla (Kydonia), Crete, in 1303. In 1318 Michael painted the Church of the Virgin in the province of Rethymnon (Kalokyris, Crete 32f; M. Cattapan, Thesaurismata 9 [1972] 203; cf. PLP, nos. 2601, 5151, 91999).

ARTUKIDS, Turkoman dynasty, 11th–15th C. Artuk (Αρτουκ) (died ca. 1091) appears in 1074/5, aiding Michael VII against Roussel de Bail­leul, whom Artuk captured and subsequently released for ransom. In 1086 Artuk became governor of Jerusalem; his descendants succeeded him there until expelled by the Fatimids in 1098. Thereafter, the family secured possession of Amid, Mardin, Martyropolis, and even, briefly, Aleppo. Artuk’s son Sukmân fought the First Crusade at Antioch; his brother İlghazi was temporarily allied (1115) with Roger, prince of Antioch, but subsequently defeated and killed him (1119). In 1120 İlghazi’s cousin Balak aided Ghażal against Constantine Gabras of Trebizond. Initially rivals of Zangi, the Artukids became followers of Nur al-Din and joined his display of force against Manuel I in 1159. The dynasty continued to serve successive rulers of northern Syria. Artukid copper coins imitated early Byz. coinage.

LIT. C. Cahen, EL2 1:662–67. –C.M.B.

ARTZE (Ἀρτζή), trade settlement (komopolis) near Theodosiopolis. According to an 11th-C. historian (Skyl. 451.28–30) it was rich and densely populated, attracting many local, Syrian, Armenian, and other merchants. In 1049 the Seljuks captured and burned the town. Skylitzes’s statement that 150,000 inhabitants were killed by the flames and arrows is evidently an exaggeration.

The name survived in the Turkish toponym for Theodosiopolis, Erze­rum (Erzurum). –A.K.

ASAN (Ἄσανος, fem. Ἀσανία), or Asen, Bulgarian royal dynasty founded by Asen I in 1186. The evidence about the Asans’ ethnic origin is vague; theories have been advanced of the family’s Vlach, Cuman, or even Rus’ origin, none of which has proved valid. The family produced several Bulgarian tsars (up to John III, r. 1279–80; died as despotes before 1302); Ivan Alexander may have been related to the Asans. Some princesses of the house were married to Byz. emperors (Helene to Theodore II, Keratsa to Andronikos IV) or other rulers of the region (Maria to Henry of Hainault, emperor of Constantinople). The descendants of John III and Irene Palaiologina were active at the Byz. court and as generals and governors in the 14th C., but less in the 15th C.; these included, for example, Paul Asan, governor of Constantinople (1438–40), and Demetrios Asan, governor of Corinth (1444) and Nauplion (1448–53). (See genealogical table.)

ASBESTAS, GREGORY, archbishop of Syracuse. An ally of Patr. Methodios I, Asbestas (Ἀσβεστᾶς) was deposed in 853 by Ignatios.
His appeal to Pope Leo IV (847–55) gave the latter a pretext to intervene in the internal struggle of the Byz. church. In 858 Ignatios was deposed and Asbestas consecrated Photios as patriarch; the Council of 861 formally rehabilitated Asbestas and his supporters while condemning Ignatios. Asbestas's political leanings shaped his literary and artistic activity: he wrote a vita of his patron Methodios (J. Guillard, Byzantium 31 [1961] 374–80) and created (or ordered?) a series of caricatures ridiculing Ignatios; both are lost. Asbestas's miniatures are described by Niketas David Paphlagon as depicting Ignatios scourged, chained, banished, and perhaps executed, while captions identified the patriarch as the Devil, the Antichrist, and Simon Magus (PG 105:540D–541A). In disgrace during Ignatios's second patriarchy, Photios wrote to Asbestas, urging him to continue to erect churches with figural decoration (ep.112, ed. Westerink, 1:1150f).

Lit. P. Karlin-Hayter in Iconoclasm 141–45. A.C., A.K.

ASCENSION (ἀνάληψις), feast of Jesus' ascent into heaven (Lk 24:50–53, Acts 1:9–12), celebrated on the Thursday that comes 40 days after Easter. Originally celebrated together with Pentecost, the Ascension was first assigned its own feastday in the 4th C., a usage begun in the environs of Antioch ca.380. The evidence for Jerusalem provided by Egeria remains problematic (P. Devos, AB 86 [1968] 87–108), though the 5th-C. Armenian Lectionary of Jerusalem already puts Ascension on the 40th day (A. Renoux, PO 35:72f).

The Ascension was one of the dominical Great Feasts; it had a week-long afterfeast, but no forefeast. A series of 13 receptions took place in Constantinople on this day, during which the emperor was honored by the factions; he celebrated the feast in the Church of the Virgin at Pæge, where he took communion and dined (Philothoeus, Kletor. 213.1–10; De cer., bk.1, chs. 8, 18).

Representation in Art. Initially shown in a form derived from imperial Apotheosis scenes, with Christ striding upward grasping the Hand of God (Milan ivory: Volbach, Early Christian Art, pl.93), the Ascension assumed in the 6th C. the form that characterized it thereafter (Monza and Bobbio Ampullae): Christ, bearded and enthroned in a mandorla surrounded by angels, rises over the 12 Apostles with Mary at their center. The presence of Mary, the inclusion of Paul, and the use of 12 apostles rather than the 11 disciples of Scripture are references to the Church, showing the Ascension as a major event in its history. In the Rabbula Gospels (fol.13v) elements from Ezekiel's prophetic Vision are added to underline the scene's eschatological connotations (cf. Lk 1:11). In the 9th C., the Ascension was represented in the domes of the Nea Ekklesia (Constantinople) and Hagia Sophia (Thessalonike), a situation so apt in form and in significance that it was repeated in all periods. By the 11th C. (St. Sophia, Ohrid), the Ascension was also standard in bema vaults, reflecting its eucharistic significance as the apotheosis of Christ's sacrificed flesh. The Ascension appears on icons, in mural cycles, in evangelia and Gospel books at Mark 16:19, and occasionally before Acts (Codex Ebnerianus, fol.231v).

ASCETICISM (ἀσκησις, "exercise, training"), the practice of austerity and self-discipline; an ideal for all Christians, but esp. associated with monks and hermits. Askesis was sometimes used as a synonym for monastic life; asketerion for a monastery or hermitage; and asketes for a monk, nun (asketria), or solitary. Asceticism was a characteristic of monasticism from the earliest hermits in the Egyptian desert (e.g., Antony the Great) to the hesuchasts and kelliotai of the last centuries of Byz. All monks were expected to follow an ascetic regime, but the degree of severity varied. It was practiced in a most extreme form by hermits, enkleistoi, stylites, and holy fools, but a number of celebrated ascetics lived in cenobitic monasteries. Although there were some noted female ascetics in the earlier centuries, rigorous mortification of the body was not expected of the aristocratic nuns of the late Byz. period (V. Laurent, REB 8 [1950] 78f). The chief forms of this discipline were celibacy, fasting, standing vigils, and sleeping on the floor; ascetics went barefoot, wore only a single tunic, even in bitter cold, mortified the flesh with hair shirts or chains and fetters, prayed continuously, and often lived in isolation. Basil the Great urged moderation so that monks
would not become arrogant on account of their ascetic achievements. He stressed, rather, obedience to the *hegoumenos*, requiring that a monk receive permission from his superior before embarking on an extraordinary fast.

An ascetic monk sought to gain control over his body and attain *apateia* or impassibility. Through such rigor a monk might be granted miraculous or prophetic powers; an ascetic way of life became a prerequisite for sanctity, replacing the martyrdom of the early Christian period. In the 12th C. some intellectuals criticized or even ridiculed excessive asceticism; Eustathios of Thessalonike suggested that one etymology for asceticism was *askos*, "wineskin," and the vita of Cyril Phileotes by Nicholas Kataskepenos rejected the immoderate practice of asceticism (A. Kazhdan, *GORThR* 30 [1985] 482–86).

—A.M.T.

ASEKRETIS (ἀσηκρήτις, an invariable form, from Lat. a secretis, in full "asekretis of the court") imperial secretary. The term seems to have appeared in the 6th C.; Prokopios found it necessary to explain its meaning (SH 14:4; Wars 2.7.15). Many scholars believe that the term originated in the 4th C., since Beronikianos, an AGENS IN REBUS, is called *asekretis* in the acts of the Council of Chalcedon; this term only appears, however, in the 6th-C. translation of Vigilius (A. Kraus, *RQ* 55 [1960] 45). The *asekretis* replaced the refer­ endarii and formed the upper echelon of imperial secretaries positioned higher than imperial notaries. Some *asekretis* were officials of the Praet­ torian prefect. The seals of *asekretis* are known from the 6th/7th C. (Laurent, *Corpus* 2, nos. 9–13). The offices of the *asekretis* were located in the Kathisma of the Hippodrome (Guillard, *Topographie* 1:185). At the Third Council of Constantinople (680–81), a functionary called *asekretis* held the title of gloriosus, suggesting that he was probably head of the college of *asekretis*—the office later known as Protaskekretis. *Asekretis* disappear from the sources after the 12th C., the term being replaced by Grammatikos.

—A.K.

ASEN I (Άσαν), otherwise called Belgun (S. Mladenov, *Spisanie na BAN* 45 [1933] 49–66), co-founder (with his older brother Peter of Bul­ garia) of the Second Bulgarian Empire; died Tarnovo 1196. Both his names are Turkic; his ethnic affiliation has been much discussed. Byz. and Crusader sources call the brothers Vlachs, but Bulgarian, Cuman, and Rus’ origins have been suggested (N. S. Tanašoća, *Revista de istorie* 34 [1981] 1297–1312). As G. Litavrin (*VizVrem* 41 [1980] 109) declares, the brothers were closely connected with local elements in Paristrian. When, ca.1185–86, according to Niketas Choniates, Peter and Asen requested entry into Byz. military service and a village as reward, they were refused. Exploiting discontent over taxation, they raised a rebellion. Isaac II (ca.1187) drove them beyond the Danube, where Asen recruited Cumans. With their aid, the brothers reoccupied Bulgaria and ravaged Thessaly; in 1190 they severely defeated Isaac. When (ca.1192/3) Peter allied himself with the Byz., Asen became the leader of the new state. He conquered Sofia, Melnik, and other strongholds. After a victory at Serres in 1196, Asen was murdered by Ivanko.

—C.M.B., A.K.

ASHLAR, cut stone masonry. Used throughout the Byz. period, ashlar was esp. characteristic of the architecture of Syria-Palestine, much of Asia Minor, Armenia, and Georgia. In Constantinople, this type of masonry was used particularly for foundations and piers that carried heavy loads, such as those supporting the dome of Hagia Sophia. Bands of ashlar alternate with bands of brick in the city walls of Constantinople, a technique found occasionally in later buildings such as the parekklesion of the Chora Monastery. In cloisonné technique (see Brickwork Techniques and Patterns), individual ashlar blocks are framed with bricks on all four sides.

ASHMUNEIN. See Hermopolis Magna.
ASHOT. See AŠOT.

ASIA MINOR, or Anatolia, the peninsula that forms the westernmost extension of Asia. It stretches from the Aegean to the Euphrates River and Antitaurus Mountains, a maximum distance of about 1,200 km, and from the Black Sea to the Mediterranean, about 600 km. Its topography is determined by its mountain ranges. In the east they rise in sheer peaks. In the center they occupy the north and south regions of the peninsula, surrounding the relatively arid central plateau, and in the west break up into parallel chains separated by the broad and fertile plains of the Aegean region. The configuration of mountains and plains has influenced patterns of settlement and communication. Wealth and population have historically been concentrated in the western coastal plains, which support extensive agriculture of the Mediterranean type and are well connected by natural land routes that also lead into the interior; the region has many good harbors.

The broken country between the Aegean and the plateau contained many sites strategically located on roads, while habitation on the plateau was scattered along the routes that followed the edges of the central steppe. The adjacent parts of Cappadocia contained several populous valleys, but settlement diminished in the mountainous country to the east, where arable land is confined to narrow and often isolated valleys. The relatively unpopulated mountainous regions, which occupy much of the country, were valuable for their pastures and mineral deposits, as well as for defense of the routes that passed through them.

Asia Minor prospered in late antiquity, when it was divided into two dioceses and 24 provinces. Urban life flourished in the coastal regions and along the roads leading to the frontier; villages enjoyed the benefits of a long period of peace. The population was largely Christian by the 4th C. and thoroughly hellenized by the 6th C. Asia Minor was, however, the home of numerous heresies. Peace was rarely interrupted: the revolts of Prokopios and Tribigild in the 4th C., like the irruptions of the Huns in the 5th–6th C., passed rapidly; the revolts of Isaurians in the 5th C. were a more persistent source of trouble. The reign of Justinian I brought extensive construction of buildings and roads, but the financial demands of his wars drained local resources. Large areas, from Pisidia to Pontos, were afflicted by endemic brigandage and revolt, provoking administrative reforms whose failure was usually due to corruption. The plague of 542 reduced the population, but some cities and the southern coastal region continued to prosper.

The 7th C. brought fundamental change aggravated by Persian attacks that devastated the country, provoking the ruin of the network of cities upon which social and economic life had been based (C. Foss, EHR 90 [1975] 721–47). The Persians were immediately followed by the Arabs, who failed to achieve any permanent conquest of the peninsula but, through their incessant attacks over two centuries, precluded any possibility of recovery. The loss of Syria, Palestine, and Egypt to the Arabs meant that Asia Minor became the heartland of the medieval empire and its main bulwark against threats from the east. In order to survive, therefore, it received an extensive network of fortifications and its administration was militarized in the system of themes. Arab raids nevertheless struck through the country, culminating in the sieges of Constantinople from 674 to 678 and 716/17 and the capture of Amorion in 898.

During the 8th C., Asia Minor was a center of Iconoclasm and became ethnically diverse as Slavs were brought in to settle regions devastated by the Arabs or recurrence of the plague. At this time, the army dominated the country; in the 9th C., the themes of Asia Minor had a total force of about 70,000. Strategoi and their subordinates ruled provinces and cities; cities were often under the joint administration of a strategos and a bishop. Most large ancient cities had disappeared, replaced by smaller fortified towns and castles; eventually, new cities rose to prominence on account of their strategic locations. Most of the population lived in villages, with a fortress for refuge nearby. Some commerce still continued, esp. to serve the need of capital and army; regional fairs, often celebrated on the feast day of a saint, provided local stimulus.

Byz. moved on the offensive in the mid-9th C., gradually pushing back the frontier and establishing a peace and security that prevailed to the mid-11th C. Expansion eastward brought significant ethnic and economic change as immigrants from Syria and Armenia settled previously desolate re-
regions and as magnates, whose families played an ever-increasing role in politics, took over extensive tracts of land. Civil wars precipitated by their rivalries caused widespread disturbance in the late 10th C.

The Turks, whose raids began striking into Anatolia in the mid-11th C., brought the next fundamental change, in which the region, previously united, was divided between two or more powers. After the battle of Mantzikert in 1071, the Byz. permanently lost control of the east and center; thereafter they were precariously confined to the coastal region, where their position was seriously threatened by the Seljuk Turks. Although the First Crusade pushed the Turks back onto the plateau and allowed Alexios I to mark further gains, no part of the country was free from attack during his reign. John II frequently fought in Asia Minor, consolidating Byz. control by building strategic fortresses and establishing a foothold on the edge of the plateau. Under Manuel I, who restored security to many regions, the frontier was threatened by the immigration of Turkoman nomads. In an effort to solve the problem by striking directly at the Seljuks, Manuel met disaster at Myriokephalon in 1176. In the 1180s and 90s, major frontier forts fell and the Turks advanced westward, helped by the troubles attendant upon the Fourth Crusade.

After the fall of Constantinople in 1204 the Laskarids of the empire of Nicaea established an equilibrium with the Seljuks and secured their territories (the Aegean region and Bithynia) by extensive fortification. The prosperity they brought is reflected in their restoration of towns and foundation of monasteries. The Byz. recapture of Constantinople in 1261 was a disaster for Asia Minor: imperial attention shifted to the west and frontier defenses were neglected just as the weakening of the Seljuk state before Mongol attack left the Turkomans free to move westward. The Byz. position in Asia Minor crumbled rapidly; the southwestern coastal region was lost by 1270, the Meander valley by 1284, and most of the interior by the end of the century. In 1300 Byz. controlled only the northwestern coasts and a few fortresses that were islands surrounded by the Turkomans, who by now were establishing their own independent principalities of Aydin, Mentesh, Saruhan, and Karasi. Despite major campaigns, the Aegean region was lost by 1315, and Bithynia fell to the Ottomans by 1337. Subsequently, Byz. maintained only a few ports until 1360, and afterward only the virtually independent enclave of Philadelphia, whose fall in 1390 marked the end of Byz. Asia Minor.

ASIDENOS, SABAS, sometimes Sabbas, local ruler in Anatolia (fl.1204–14). Of unknown origin, Asidenos (Ἀσίδηνος) assumed power at Sampson (ancient Priene) and the lower Meander River valley when the Fourth Crusade conquered Constantinople. Possibly as early as 1205 his territory was added to the Nicene state by Theodore I Laskaris. He remained locally powerful, and in 1214 Theodore addressed him as sympenteros (relative-in-law) and sebastokrator (N. Wilson, J. Darrouzès, REB 26 [1968] 14f).

ASINOU, located in the foothills of the Troodos mountains, Cyprus, site of the Church of the Panagia Phorbiotissa, founded 1105/6, according to dedicatory inscriptions by Nikephoros the magistros (died 1115). This small, single-naved church of three barrel-vaulted bays is built of mortared rubble. The plastered exterior was incised in imitation of ashlar and painted with red zigzags. The laterally apsed narthex, partly of ashlar, was added later in the 12th C. Scenes from the Passion in the west end of the nave are well preserved; Christ’s Infancy cycle and the donor’s portrait in the central bay were repainted in the post-Byz. period. The votive images in the narthex date from the end of the 12th C. and later. The style of the paintings of the first phase of decoration is related to the more refined frescoes of the parekklesion of Hagios Chrysostomos near Koutsoudenis, donated by Eumathios Philokales. Paintings by the Asinou workshop are also found in Panagia Theotokos at Trikomo, Sts. Ioakeim and Anna at Kaliana, and the Panagia Amasgou at Monagri. Also associated stylistically with the frescoes at Asinou are several icons at the monastery of St. Catherine at Sinai (K. Weitzmann in Studies in Memory of D.T. Rice [Edinburgh 1975] 47–63).
AŞIQPAŞAZADE, great-grandson of the poet Aşıq Pasha (died 1333), dervish, ghazi warrior, and author of a Tevarih-i a/-i Osman, a history of the Ottoman dynasty from its origins to 1485; born in Elvan Çelebi (near Amasya) 1400, died Istanbul? after 1484. Aşıqpaşazade's Tevarih is a fundamental source for early Ottoman history. For events prior to 1420, Aşıqpaşazade depended chiefly on a collection of stories and legends about the Osmanoğulları (now lost, but used in the earliest anonymous Tevarih-i al-i Osman, and Uruc Beg), and materials derived from Yahşi Fakih. The subsequent account embodies more of Aşıqpaşazade's experiences and research among contemporaries. Intending his work for a wide audience, Aşıqpaşazade wrote in simple and lively Turkish. In form his Tevarih varies from straightforward narrative to poetry to extended dialogue.

Throughout his work Aşıqpaşazade treats Byz. themes as an aspect of the wider Ottoman struggle with the unbelievers. His information about Constantinople, and even major Byz. figures and events, tends to be generalized.

ASKALON (Aşkâlûn), on the southern coast of Palestine, was one of the most significant cities of the region, according to Ammianus Marcellinus (Amm. Marc. 14.8.11). The MADABA MOSAIC MAP shows the city plan, but no religious buildings; the remains of a 7th/8th-C. church, fragments of a synagogue, and the city wall are known, however, as well as a late 6th-C. mosaic. Pilgrims were attracted to Askalon by remarkable wells allegedly dug by Abraham and by the tomb of Kosmas and Damianos. One of the last Palestinian cities to fall to the Arabs (in 640), Askalon remained in the hands of the Fâtimids after the Seljuk occupation of Palestine. In 1099 the Crusaders won a battle over the Egyptians at Askalon but were unable to take the city until 22 Aug. 1153. Although Saladin took Askalon briefly in 1187, the Crusaders regained control from 1191 to 1247.

ASKIDAS, THEODORE, theologian; died Constantinople, Jan. 588. Askidas ("Aşkıdas") was hégoumenos of the New Lavra in Palestine and from 537 onward metropolitan of Caesarea in Cappadocia. A supporter of the tenets of Origen, Askidas belonged to the sect of so-called Isochristoi who taught that in the final apokatastasis (restoration) the faithful will attain a complete union with Christ. He was also suspected of supporting Monophysitism. In 543, however, he was forced to sign a condemnation of Origen; he also signed a condemnation of the THREE CHAPTERS. Pope Vigilius anathematized him in 551, but in the following year Askidas made peace with the pope. Of his works only a fragment is preserved (in Evagrios Scholastikos).

ASKLEPIOS, regarded as the son of Apollo; the major god of healing in ancient Greece. His cult was widespread in the Greek-speaking world; of his numerous healing shrines the most famous were Epidaurus and Cos in Hellenistic times and Pergamon under the Roman Empire. Christianity adopted a belligerent stance toward Asklepios and deliberately promoted the figure of Christ the Physician in opposition to Asklepios the Savior; some temples of Asklepios (e.g., at Epidaurus and Athens) were converted to Christian use. In the 4th C. Julian the Apostle strongly supported the cult of Asklepios and attempted to place it at the center of paganism. Well into the 5th C. the god was actively worshiped by individual Neoplatonists such as Proklos, who believed that as a young man he had been healed by Asklepios (Marinos, Vita Procli in I Manuali, tr. C. Faraggiana di Sarzana [Milan 1985] 314f). Thereafter, when the name of Asklepios had practically been forgotten, the influence of his cult lived on in those Christian shrines where incubation was practiced. Miracle.
accounts such as those of Sts. Kosmas and Damianos, Kyros and John, and Artemios all give evidence of elements that could be called “Asclepians.” The name asklepiadai continued to be applied to Byz. physicians.

--J.D.

**Asmatike Akolouthia** (άκολουθία ἁσματική, lit. “sung office”), the cathedral hours of the rite of Constantinople, found in fully developed and unadulterated form in 8th–12th-C. MSS of the euchologion (Arranz, “Asmatikos Hesperinos” 109–16). The rite was at first distinct from, but gradually mingled with and was ultimately replaced by, that of the monasteries of Constantinople (see Σαβατικά Τυπικά). In Thessalonike, the asmatike akolouthia was still in use as late as the 15th C. (Symeon of Thessalonike, PG 155:553D, 624D–625B).

According to the Typikon of the Great Church, which contains the rules for the asmatike akolouthia, the office comprised only the hours of orthros and vespers, with the occasional addition of a paenychis or a paramone (see Vigil), and a combined terce-sixt in Lent. But MSS of the euchologion include the Little Hours as well.

The asmatike akolouthia had no separate book of hours—the horologion being originally a Palestinian monastic book—but was celebrated from the euchologion (for prayers and diaikonika), the antiphonarion or Constantinople psalter (for psalmody and refrains), and the prophetoilogion (for Old Testament lections). Despite its name, this office had very little hymnody.

Lit. Taft, “Bibl. of Hours” 358–70. --R.F.T.

**Asmatikon** (Ἀσματικόν), a music book containing the special chants and refrains for the liturgy and the hours, sung by the small group of psaltai (singers) at Hagia Sophia in Constantinople. Its repertory is set in a moderately ornate style. Eleven Greek and three Slavic Asmatika survive; each varies and none dates from before the 12th C., but there are substantial reasons for supposing that the Asmatikon was first compiled at Constantinople during the 11th C. or perhaps earlier. Nine of the MSS belonged to southern Italian religious houses of the Greek rite; the musical tradition they have adopted dates from 1225 at the latest. The remaining two Byz. MSS represent different, though not wholly dissimilar, melodic traditions. (For the solo items, see Psaltikon.)

--D.E.C.

**Asolik** (“singer”) or Stephen (Step’anos) of Tarôn, Armenian historian. Nothing is known of the life of Stephen, save that he came from the province of Tarôn and was appointed by the katholikos Sargis (992–1019) to supervise monasteries and churches. Sargis also commissioned Asolik to write a Universal History at the beginning of the 11th C. Although book 1 contains lists of biblical kings and rulers of ancient empires, and book 2 names Sasanian, Muslim, and Byz. rulers (down to Basil I), Asolik’s interest is primarily Armenia, esp. religious matters and Byz.-Armenian relations. Book 3 is thus a valuable source for the 10th-C. Byz. eastward expansion (from the establishment of the Bagratid dynasty in 885 until 1003).

--R.T.

**Asomatos** (ἄσωματος), incorporeal, term characterizing the intelligible world as opposed to the sensible one. In the strict sense the word could be applied only to God: according to John of Damascus (Exp.(ed. 26.5, ed. Kotter, Schriften 2:75), “only the godhead (hieion) is really incorporeal and immaterial.” John, however, distinguished two types of incorporeality: that of substance or nature, possessed by God only, and that of grace, possessed by angels, demons, and souls (ibid. 26.55–57, ed. Kotter, 2:77). In contrast, Gregory of Nyssa (PG 44:1165B) classified angels among incorporeal beings: “All rational creatures are divided into incorporeal and corporeal; the angelic category is asomatos, the other category is man-kind.”
The Synaxis ton Asomaton, the feast honoring the incorporeal beings, was celebrated 8 Nov. and illustrated from the 11th C. onward (S. Gabelač, *Zograf* 7 [1977] 58–64). The homilies and liturgical poetry accompanying this feast were important sources for illustrated cycles of the angels and archangels. —A.K., N.P.S.

AŠOT I THE GREAT (’Arovōtos), founder of the Bagratid kingdom of Armenia; died 890. Succeeding his father as commander-in-chief (*sparapet*) of Armenia after the devastating Muslim punitive expeditions of the mid-9th C., Ašot consolidated the position of his house by expanding his domains at the expense of other feudal families and by dynastic marriages with the principalities of Siunik’ and Vaspurakan. In 858, his continuation of the generally pro-Arab policy of the earlier Bagratid house earned him the title of Prince of Princes (*bat'rig al-batāriqa*) and the suzerainty of the Arab emirates in Armenia. To maintain equilibrium on Armenia’s borders, Ašot assured Byz. of his continuing loyalty and encouraged the Armenian *katholikos* Zacharias to correspond with *photios*, although the Council of Širakawan (ca.862) failed to achieve a reunion with the Byz. church. By 884 (rather than 886 as formerly believed), Ašot felt powerful enough to have himself crowned king with a crown sent by the Arab governor in Azerbaijan; recognition by Byz. followed, endowing him with the title of *archon ton archonton*. Although Ašot was the master and arbiter of Armenia and Georgia, where he had his kinsman Adernarse crowned in 888, he continued to pay tribute to the Arabs. His authority over the Armenian magnates derived more from the power of his personality than from any formal base.

AŠOT II ERKAT (Iron King), grandson of AŠOT I THE GREAT; third Bagratid king of Armenia (914/15–928/9). Ašot reestablished Bagratid control over northern Armenia after the defeat and martyrdom of his father, Smbat I. His early success resulted in part from his recognition of Constantinople, where he was invited in 914 (not 921) and granted the customary title of *archon ton archonton* as well as military support. Patr. NICHOLAS I MYSTIKOS initiated at this time a correspondence with the Armenian *katholikos*, John the Historian. These friendly relations were later compromised by Ašot’s increasingly autonomous policy, esp. after the Muslims recognized him as Šahanšah (“King of Kings”). As a result, Byz. directed a campaign commanded by John Kourkouas against Armenia in 922 and apparently transferred the title of *archon ton archonton* to the rival southern Armenian kingdom of Vaspurakan, but was not able to check Bagratid consolidation at this time.

AŠOT III OLORMAC’ (Merciful), son of Abas I; last Bagratid king of Armenia to rule over a united kingdom (953–77). His generally prosperous reign was marked by the complete exemption of Armenia from the payment of tribute to the caliphate, by the transfer of the capital to Ani, by close collaboration with the Armenian church (which he supported against Chalcedonian sympathizers and local separatists), and by the assertion of royal authority over the magnates. Ašot was successful in his war against the Caucasian mountaineers and the Šamāndī emirs. Moreover, supported by his vassals, he checked the advance of Emp. John I Tzimiskes at the Armenian border (974), whereupon the emperor declared him his ally and spiritual son (MATTHEW OF EDESSA, ed. Dulaquier 16–24). Ašot’s reign saw a great expansion of monasticism with the establishment of the future intellectual centers of Sanahin and Haβbat (976); his extensive philanthropic foundations earned him the epithet “Merciful.” Nevertheless, his grant of KARS (Vanand) to his brother Musel and of Lori (Tašir, Joraget) to his son Gurgen divided the realm and ultimately weakened Bagratid control of Armenia.

ASPAR (’Aσπαρ), more fully Flavius Ardaburius Aspar, an Alan; consul (434), *patrikios*, and *magister militum*; died Constantinople 471. Together with his father Ardabourios, Aspar suppressed the rebel Ioannes in 425 and secured the throne
for Valentinian III. Aspar led a fleet against the Vandals in 431, fought against the Huns in 441, constructed a large cistern in Constantinople (see under Constantinople, Monuments of) in 459, and led the inhabitants of the capital in combating a fire in 465. Representing the power of the Germanic soldiery, he dominated the Eastern court and, after the death of Marcian, secured the elevation of Leo I in 457; as an Arian, however, he could not hope to gain the throne for himself. Aspar had his son Patrikios crowned as caesar in 469/70, but his influence was undercut by Leo's alliance with Zeno and the Isaurians. Aspar supported the campaign of Basiliskos against the Vandals, perhaps hoping to see it fail, and by 469 there was open rupture between Aspar and Zeno (A. Kozlov, ADSV 20 [1983] 30f). Aspar may have sought the support of Ricimer, but he and his son Ardabourios were captured and executed. Together with other members of Aspar's family, they are represented on a missorium in Florence (Delbrück, Consulardiptycchen, no. 35).

**ASPARUCH** ('Аспару́къ), Bulgar khan (ca.650–ca.700); third son of Kuvrat. Around 660 Asparuch led a Bulgar horde westward, crossing the Dnieper and Dniester before ultimately establishing a fortified camp in the northern part of the Danube delta; its precise location is much disputed (N. Bănescu, Byzantion 28 [1958] 433–40). From here the Bulgars raided Byz. territory across the Danube, perhaps exploiting Byz. preoccupation with Arab attacks in the 670s. Constantine IV responded by campaigning personally in 680/1, with disastrous results: the army was routed and the Bulgars crossed the Danube in pursuit, reaching Varna. Renewed attacks on Byz. towns compelled Constantine to recognize the Bulgars' occupation of Byz. land (apparently Scythia Minor and Moesia Inferior) and to pay them annual tribute (paktos), an agreement likely concluded in 681 but broken in 687/8 by Justinian II. Asparuch also subjected the local Slavic tribes to tribute payments and even resettlements, probably using them as bulwarks against the Avars to the west and the Byz. to the south. Nothing else is known of Asparuch's rule. A dubious tradition credits him with founding Pliska. An 11th-C. Bulgarian source records a legend of his death in battle with the Khazars (I. Dujčev, BZ 53 [1960] 207).

**ASPER** (ἀσπέρ) was a Latin word meaning basically "rough" but by extension "fresh" and (of silver) "white," a sense it had already acquired in early Roman imperial times. It first came into common use for a coin in the 12th C., mainly as a qualification of the billon trachy (τό νόμισμα τραχύ ἀσπέρ "the rough, white nomisma"), which to us is a dirty gray in color but was no doubt issued in a blanched state. It was sometimes also applied to the electrum trachy. In the 14th–15th C. the term was used of various nonconcave silver coins, mainly the small ones also known as doukatoportoú and their Turkish counterparts (ağçe, also from a word meaning "white") but occasionally, as at Trebizond, for large silver coins also. There are many contemporary Western parallels to the use of such a name for coins: blanc, witten, albus, etc.

**ASPIETES** (Ἀσπιέτης, fem. Ἀσπιετίνα, Ἀσπιετισσά), an Armenian lineage in Byz. service from at least the late 11th C. (etym. Arm. aspet, "rider, knight"). Prokopios (Wars 2.3.12) mentions the "great and numerous lineage of the so-called Aspetianoi," but no evidence connects the Byz. Aspetai and 6th-C. Aspetianoi. The first known Aspietes, Alexios I's general, boasted of his royal origin from the Arsacids (An.Komm. 3:58.28–29); he served as governor of Tarsos ca.1107/8 and stratopedarches of the Orient. There is no reason to identify Aspietes with Osin, son of Chetum, prince of Lambron (see correctly J. Laurent in Mélanges offerts à m. Gustave Schlumberger, vol. 1 [Paris 1924] 164f). Several Aspetianoi (Michael, Constantine, etc.) were military commanders under Manuel I; (another?) Constantine Aspietes commanded a troop in 1190; Alexios Aspietes, commander in Serres shortly after 1195, was captured by the Bulgarians and proclaimed emperor in Philippopolis after 1204 but was soon seized
and executed by KALOJAN. The chronicle of Magnus Presbyter (MGH SS 17:512), under the year 1189, mentions a Byz. embassy to Saladin, whose members were “Sovestat, Aspion, and old Constantin, a translator from Arabic”; the envoy may have been the sebastos Aspietis. The cultural role of the Aspietis is unknown: a monk John Aspiotes corresponded with Michael Glykas. Aspiotai of the 14th and 15th C. were landowners intermarried with sundry noble families, including Palaiologoi (PLP, nos. 1567–79), but did not occupy high positions; Maria Choumnaina Aspietisswa was the wife of a megas papias in 1324.

ASPROKASTRON (Ἀσπρόκαστρον, or Maurokastron; Ital. Moncastro; Turk. Akkerman; Rum. Cetatea Alba; Russ. Belgorod Dnestrovskij—four of its names mean “White Fort”; Maurokastron and the corrupted form Moncastro mean “Black Fort”), city and port situated at the mouth of the Dniester, close to the site of ancient Tiras. It was probably a late Roman or early Byz. fortress but passed out of imperial control in the 7th–9th C. The information on “Maurokastron” in the 10th C. given by the Toparcha Gothicus is entirely fictitious. In the 13th C. Asprokastro belonged to the Polovzian khanate (see Cumans). From ca.1290 Asprokastro was frequented by Genoese ships that loaded grain and wax. For some years in the early 14th C. it was in Bulgarian hands, but by midcentury it had become a Genoese colony. From 1410 Asprokastro was subject to the princes of Moldavia, and in 1437 Venice opened commercial relations with the city. In the 15th C. it was a regular point of embarkation for travelers between Constantinople and central Europe, including Emp. John VIII Palaiologos. After 1453 Mehmed II brought colonists from Asprokastro to settle in Constantinople. For a time after 1457 Stephen the Great, Prince of Moldavia, resided there, but in 1485 Sultan Bayezid II captured Asprokastros and Chilia.

ASSARION (ασσαριον, from early Lat. assarius), used in the New Testament for the smallest coin in circulation (Mt 10:29: “Are not two sparrows sold for an assarion?”). It is used by Nicholas Rhabdas (in P. Tannery, Mémoires scientifiques 4 [Toulouse-Paris 1920] 158) in formulating a mathematical problem that has a contemporary setting—the author was writing in 1341—and it had apparently been revived as the name of the flat copper coin of approximately 2 g introduced under Andronikos II (1282–1328). Assaria were struck in great quantities during the first half of the 14th C.

LIT. Grierson, Byz. Coins 278. – Ph.G.

ASSEMBLIES. In addition to the senate, Byz. was familiar with other forms of assemblies with claims to political power. The most organized were the church councils (H. Gelzer, Ausgewählte kleine Schriften [Leipzig 1907] 142–55). Provincial assemblies of the late Roman Empire consisted of honorati (former imperial officials) and curiales; in contrast to the members of ancient assemblies, these were not elected and there was no representation in proportion to population (J. Larsen, CIlPh 29 [1934] 209–20). Despite Leo VI’s abolition of municipal bouleis, they continued to exist in provincial towns from the 11th to the 15th C., although they tended to be assemblies of local nobles rather than regular representations of constituencies.

Throughout the centuries Constantinople witnessed two kinds of assemblies: those convoked by usurpers or demagogues in protest against unpopular measures (which had no legal basis or regular organization) and those convened by the state in cases of emergency (for confiscation of church property in 1094, to raise funds to meet the demands of Henry VI in 1197, to discuss the imperial response to the Bulgarian tsar in 1341, etc.). Assemblies were esp. active during the civil War of 1341–47 (Weiss, Kantakuzenos 74–76). The assemblies were called ekklesiai, syllogoi, or syneleuseis; even though they were not representative of the electorate, they could include people outside the bureaucratic and ecclesiastical nobility. The assemblies or parliaments that functioned in the Crusader states (J. Colson, REB 12 [1954] 114–27) may have influenced Byz. assemblies.

and Taxation in the Byzantine Empire between 1204 and
1341,” XVe Congrés International des sciences historiques 31

ASSEROS. See Beasts of Burden.

ASTERIOS OF AMASEIA, Cappadocian churchman and writer, overshadowed by his more famous contemporaries, the Cappadocian Fathers; born between 330 and 335, died between 420 and 425 (according to Datema, infra [1970] xxiv). Asterios (Ἀστέριος) was perhaps a lawyer before his appointment to the see of Amaseia in Pontos, sometime between 380 and 390. Of his oeuvre 16 homilies survive, and Photios (Bibl., cod. 271) lists four more. Some of these speeches have survived in Latin, Georgian, and Church Slavonic translations. Two homilies are of particular interest to modern scholars, the fourth (delivered 1 Jan. 400), which systematically refutes Libanius’s defense of the pagan New Year feast, and the eleventh, which contains an ekphrasis of a painting of some scenes from the vita of St. Euphemia of Chalcedon (W. Speyer, JbAchr 14 [1971] 39–47). The latter oration is a landmark of Byz. art criticism and is also informative about Asterios’s tastes in classical literature, notably for the writings of Demosthenes. The eleventh homily was translated into Latin by Anastasius Bibliothecarius and was cited in toto during the Second Council of Nicaea, 787, to justify the veneration of icons.

B.B.

ASTERIOS SOPHISTES, rhetorician; died after 341. He was a pupil of Lucian of Antioch and a supporter of Arianism. Photios (Quaest. Amph. 312, ed. L. Westerink, 6.1 [1987] 112f) distinguishes him from the Orthodox Asterios of Amaseia. He wrote the Syntagmatarion (ed. Bardy, infra), an exposé of Arian views (preserved in fragmentary quotations in Athanasios of Alexandria), and homilies on Psalms and on Easter that have survived in catenae often under the names of Asterios of Amaseia or John Chrysostom. Asterios was probably a Jew who had converted to Christianity, and his works show some knowledge of Rabbinic teaching. His homilies are important as a source for the study of Jewish-Christian relations in the early 4th C.: Asterios views the Jews as an incarnation of evil and warns Christians against Jewish penetration into the church.

–A.K.

ASTERISKOS. See Paten and Asteriskos.

ASTRAMPYCHOS, a Persian magus of the 4th C. B.C. (Diogenes Laertius, 1.2). Various works of the Byz. era were ascribed to him, the most important being a dream book written in accented trimeters, datable between the 6th and 9th C. (S.M. Oberhelman, Byzantium 50 [1980] 489). This treatise formed the basis for later dream books falsely ascribed to Patr. Nikephoros I, Patr. Germanos I or II (the attribution is unclear), Gregory of Nazianzos, and Athanasios of Alexandria (the last two are replicas of the Nikephorean dream book). Other works assigned to Astrapychos deal with oracles (A.J. Hoogendijk, W. Clarysse, Kleio 11 [1981] 54–97; G. M. Browne, The Papyri of the Sorta Astrapychi [Meisenheim am Glan 1974]); geomancy (P. Tannery, ReGr 11 [1898] 96–105); love charms (P. Lond. 1 122); healing of asses (Souda, s.v. Astrapychos); and astronomy (E. Riess, RE 2 [1896] 1796f).

S.M.O.

ASTRAPAS, JOHN. See Michael (Astrapas) and Eutychios.

ASTROLABE (αστρολάβος), an astronomical instrument used to measure altitudes of the stars and to tell time. Ptolemy described the principles of the astrolabe in his Projection of the Surface of a
Astrology, a "science" of making predictions concerning the future or interpretation of the past based on the positions of the planets relative to each other, to the signs of the zodiac and their subdivisions, and to the 12 astrological places, and on the positions of the zodiacal signs relative to those places. The basic forms of astrology are: (1) genethlialogy, in which the positions at the moment of a person's birth or of his computed conception are the determining factors, dependent on which are various forms of continuous horoscope including transits, prorogations, and anniversary horoscopes (these permit updatings of the predictions made from the base horoscope); (2) catarchic astrology, in which the most favorable moment for commencing an enterprise is chosen in accordance with astrological rules, the main subordinate parts of which are iatromathematics (the application of astrology to medicine) and military astrology; (3) interrogational astrology, in which the horoscope of the moment at which a query is put to the astrologer is interpreted to provide its answer; and (4) political astrology, in which predictions of the future events within a nation or among several, or reconstructions of their histories, are based on various cycles as well as on horoscopes cast for significant times.

In antiquity only the first three types appear in texts; political astrology was developed in Sasanian Iran and early Islam and transmitted to Byz. between 800 and 1000 with other Arabic works. Byz. astrological literature, then, falls into three periods: summaries and compendia of classical astrology in the 4th–7th C., the translations from the Arabic in the 10th–11th C. (some translations were made later), and the compilation of vast compendia and the editing of earlier texts in the 11th–14th C.

The earliest known Byz. astrological authors were Pancharios, whose iatromathematical Epitome Concerning Bed-Illnesses was probably composed in the early 4th C., and Maximos, who wrote a poem on catarchic astrology, On Beginnings, in the 4th or 5th C. The second edition of the Introduction of Paul of Alexandria was apparently issued in 378. It is a work on genethlialogy in the tradition of Antiochus of Athens (fl. before 300) and Porphyry. Part of a work by Paul's contemporary, the so-called "Anonymous of 379," is preserved in the late 14th-C. compendium ascribed falsely to a certain Paicho (al-Balkhi).

In ca.415 Hephaistion of Thebes wrote an Astrological Effects based on Ptolemy and Dorotheos of Sidon (1st/2nd C.) for its genethlialogy and primarily on Dorotheos for its catarchic astrology. Also in the 5th C. the Anthologies of Vettius Valens (2nd C.), another text on genethlialogy, was edited and expanded, while probably in the same century was written the Treatment of Ptolemy's Astrological Effects attributed to Proklos. Circa 500 Julian of Laodikeia wrote a work on catarchic (including military) astrology, of which several chapters are preserved in Rhetorios of Egypt, who also includes in his collection a large number of 5th- and early 6th-C. horoscopes. Both the On Omens and On the Months of John Lydios
contain some astrological material. The only other extant 6th-C. work on astrology is the commentary of OLYMPIODOROS on Paul of Alexandria, based on a course of lectures given at Alexandria in 564.

In the early 7th C. Rhetorios of Egypt compiled the richest surviving collection of classical and early Byz. astrological texts. It is primarily devoted to genethliography but contains some material on catarchic astrology. After Rhetorios there was a gap in the astrological tradition in Byz. until the end of the 8th C., although in Arab-controlled Syria THEOPHILOS OF EDESSA wrote in Greek on genethliography, catarchic and interrogational astrology, and astrological history; he used not only such sources as Petosirios, Ptolemy, Hephastion, and Rhetorios, but also Islamic and Indian material. In 775 an astrologer pretending to be STEPHEN OF ALEXANDRIA wrote a “prediction” of the course of history of the caliphs based on the horoscope of the beginning of the year (1 Sept. 621) of the Hijra. The author is probably Stephen the Philosopher, who studied in Persia and wrote a defense of astrology, On the Mathematical Art, in the late 8th or early 9th C.

In the 9th C. LEO THE MATHEMATICIAN wrote a few trivial pieces on genethliography, and from the 10th C. survive a number of horoscopes cast by astrologers such as Demophilos. These astrologers, and probably others, were responsible for the first minuscule MSS of the older astrological literature, of which the surviving examples are the 9th-C. Florence, Laur. 28, 27, and the 10th-C. Laur. 28, 34 and Vat. gr. 1453. Demophilos was also the editor and compiler of astrological collections; he evidently made substantial revisions in the texts of Porphyry’s Introduction and of Rhetorios.

Shortly before the year 1000 began the extensive Greek translations of Arabic astrological works by such authors as Abū Ma’shar and his pupil Shâdhân; the Kitâb al-Thamara (Karpos or Fruit) ascribed to Ptolemy with its commentary by Ahmad ibn Yûsuf; and an enormous compendium ascribed to Ahmad the Persian and entitled Introduction to and Foundation of Astrology. Excerpts from most of these translations begin to appear in 11th- and 12th-C. compendia preserved in MSS such as Paris, B.N. gr. 2506; Vat. gr. 1056; and Vienna, ÖNB phil. gr. 115. Some translations served as the basis of translations into Latin in the 13th C.

The Byz. church took a firm stance against astrology. The astrological concept that human fate is determined by the position of stars at man’s birth contradicts the idea of FREE WILL and introduces necessity—ananke or heimarmene—in place of Providence. The decisive role of stars in human life and in the forecast of political events appeared to the church fathers (including JOHN OF DAMASCUS) as a reminder of the pagan identification of gods with celestial bodies. The church fathers, however, had to face an exegetical problem, since Holy Scripture itself dealt with celestial phenomena in their capacity to influence or predict earthly events of great importance, e.g., the appearance of a star (interpreted sometimes as a comet) to the Magi. Astrology seems to have been rejected by the patrician authorities, but in the 12th C. the discussion was revived and often acquired a political significance.

Manuel I was a promoter of astrological interests, and it was in the court milieu of the 12th C. that the astrological poetry of John KAMATEROs and Theodore PRODROMOS originated. In the 1180s Byz. astrologers were involved in active correspondence with their Arab and Western colleagues predicting disaster on the basis of the impending conjunction of planets on 16 Sept. 1186. Niketas CHONIATES ridiculed the extraordinary efforts designed to preserve the palace during the expected calamity. Manuel’s pro-astrological position prompted both disguised and overt criticism: while earlier in the century Anna Komnene restricted herself to a general disapproval of astrological views, Michael GLYKAS directly attacked Manuel and was subsequently thrown into prison and blinded.

During the Latin occupation of Constantinople (1204–61) little of an astrological nature seems to have been composed in Greek, except for the translation made by Alexios of Constantinople in 1245 of an Arabic version of the Apocalypse of Daniel, a work on celestial omens. In the Palaiologan period, however, the study of astrology revived with vigor. A dialogue entitled Hermippos, which offers a Christian defense of astrology, was composed in the early 14th C., probably by John Katrones (PLP, no.11551). But the most important Palaiologan astrologers were John ABRAMIOS and his pupil Eleutherios Zebelenos, also called Elias. Between 1370 and 1400 they revised many of the major classical and early Byz. astrological
treatises—Ptolemy, Hephaistion, Olympiodorus, and the beginning of Rhetorios—and the Greek translations of Shādhān and of Ahmad the Persian. Eleutherios was apparently responsible for the vast compilation of Greek and Arabic astrology which he falsely attributed to Palchos. The labors of these scholars have served to obscure and pervert the true history of ancient and Byz. astrology, although they did preserve many fragments that would have otherwise been lost. Their work was to some extent carried on in the 15th C. by men like John Chortasmenos and Isidore of Kiev.

D.P., A.K.

ASTRONOMY in Byz. began with commentaries on Ptolemy. In the 11th C. this activity was supplemented by an infusion of short texts based on Arabic astronomy. Finally, in the Palaiologan period, two contrasting schools developed, one based on the Ptolemaic tradition and the other on Islamic astronomy presented in translations either from Persian and Arabic or from Latin.

From the 4th to the early 7th C. were produced the commentaries on the Almagest by Pappos and Theon, the summary of that work in the Outline of Proklos, and the introduction to it by Eutokios; the two commentaries of the Handy Tables by Theon and that by Stephen of Alexandria; and a large number of scholia connected with both of these works of Ptolemy. There was also collected together, perhaps already in the 4th C., a group of early treatises on spheres by Autolycos, Euclid, and Theodosios, which formed a sort of corpus throughout the Byz. period. Other signs of astronomical activity in this period include the observations made by Heliodoros and Ammonios between 475 and 510; perhaps the planetary tables based on Babylonian goal-year periods that al-Zarqalī in the late 11th C. associated with Ammonios’s name; and some papyrus fragments of ephemerides (tables of true longitudes of the sun, moon, and planets) based on the Handy Tables. In this early period elementary astronomical knowl-
edge was necessary for the church—both for its practical needs such as establishing the calendar, esp. the date of Easter, and for outlining the image and the history of the cosmos. George of Pisidia in his Hexaemeron was able to draw upon a good astronomical textbook (G. Bianchi, Aevum 49 (1966) 35–42).

The study of astronomy lapsed in Byz. after Stephen’s commentary on the Handy Tables of ca.620 but continued to flourish outside the empire in Egypt, Syria, and Armenia. Its restoration in Constantinople in the 9th C. is attested to by the brief discussion of Greek and Islamic tables given by Stephen the Philosopher, probably in ca.800, and by the career of Leo the Mathematician. Further witness to the revival of interest in astronomy is the production of a number of deluxe MSS with astronomical contents during the 8th–9th C.; Vat. gr. 1291, which has a sun-table accurate only for 826–35, was dated by I. Spatharakis (BZ 71 [1978] 41–47) to the reign of Theophilos, but redated by D. Wright (BZ 78 [1985] 355–62) to ca.753, on a palaeographical basis. It was brought up to date until 866 and was in use possibly as late as the 12th C. A primitive text on computing the longitudes of the planets based on Vettius Valens (I 18) was written in 906 and was still being used in the Palaiologan period (Vettii Valentinis Antiocheni Anthologiae libri novem, ed. D. Pingree [Leipzig 1986] 398–406). In addition an elementary Quadrivium with instructions and examples for using the Handy Tables was produced in 1007/8.

In the 11th C. Islamic astronomy began to be familiar to the Byz., as can be seen from some translations of Arabic star catalogs; from the writings of Symeon Seth (which may include the scholium of 1032 to the Prolegomena to the Almagest); and from an anonymous astronomical treatise written between 1072 and 1088 (A. Jones, An Eleventh-Century Manual of Arabo-Byzantine Astronomy (Amsterdam 1987)). From the 12th C., however, nothing survives. From the 13th C. survive mainly uninspired texts by Nikephoros Blemydes, George Akropolites, George Pachymeres, and John Pediasimos.

In the early Palaiologan period, however, a knowledge of Ptolemaic astronomy was restored by Manuel Bryennios, Theodore Metochites, and Nikephoros Gregoras and was continued into the later 14th C. by Nicholas Kabasilas and
Isaac Argyros, and into the 15th by John Chortasmenos and Bessarion. The interpenetration of theology, celestial mechanics, geography, and harmony is clear in the early 14th-C. miniatures inserted into Venice, Bib. Marc. gr. 516. Furlan (Marciana 4:40–48) related many of these diagrams to the thought of Manuel Bryennios and Pachymeres. Followers of the so-called Islamic school included Gregory Choniaedes, who by 1300 had translated into Greek a number of Persian and Arabic astronomical tables; this tradition was followed by George Chrysokokkes and several anonymous treatises of the later 14th C. One work that encompasses both Ptolemaic and Islamic astronomy is the Three Books written by Theodore Melitenioties in ca.1361; also drawing upon both traditions were the pupils of John Abramios. Other Byz. discussions of Persian astronomy were composed on Cyprus in ca.1347 and on Rhodes in ca.1393.

The Latin texts translated into Greek include the Toledan Tables prepared on Cyprus in the 1330s, perhaps by George Lapidhes, and again by Demetrios Chrysoloras with an epoch of 1377; and the tables of Jacob ben David Yom-tob by Mark Eugenikos in 1444. Immanuel ben Jacob Bonfils’s Seven Wings was translated from Hebrew by Michael Chryssokokkes in 1435.

Classical Greek astronomical texts mention a number of observational instruments: meridional and equinoctial armillaries, a plinth, an armillary sphere, a parallactic instrument, and a dioptric are all described in the Almagest of Ptolemy. The Byz. also knew about the construction of these instruments through commentaries on the Almagest by Pappos and Theon, and through the summary of it in Proklos’s Outline. Ptolemy also described the principles of the two main time-keeping devices, the astrolabe and the sundial, in other treatises.

ED. Corpus des astronomes byzantins, ed. A. Tihon (Amsterdam 1983–).

ASYLUM (ἀσύλια), the refuge given by the church to all Orthodox Christians seeking protection from the threat of imprisonment or physical harm. Sources refer to asylum as the “privilege” of the church; it was evidently established by custom. The earliest mention, in canon 7 of Serdica (a.342/3) (Rhallets-Potles, Syntagma 3:248–52), takes it for granted, and there are no ecclesiastical laws establishing it, only civil legislation from the late 4th C. onward, acknowledging and regulating it. In 431 (Cod.Theod. IX 45.4) the boundaries of ecclesiastical sanctuary were extended from the nave and altar to include the entire precinct of the church building and severe sanctions were introduced against the transgressors of the rights of refugees (J. Herrmann in Beiträge zur Rechtsgeschichte, Gedachtschrift für Hermann Conrad [Paderborn 1979] 271–82). In many cases, nevertheless, fugitives (e.g., political) were forcefully dragged from the church. The church punished such violations by the imposition of excommunication and even excommunication (cf. vita of Tarasios, ed. Heikel, 407.11–37, 408.1–18).

Although Justinian I excluded asylum the perpetrators of the crimes of rape, robbery, adultery, and murder (novs. 17.7 and 37), a significant change occurred in the 10th C. with the novel of Constantine VII, which allowed murderers the protection of asylum. By the 12th C. Hagia Sophia in Constantinople had become famous as a place of asylum, esp. for killers (Nik.Chon. 342.9–15). It had a tribunal for such cases, headed by the protektikos, and certain parts of the church were known as the “Refuge” (R.J. Macrides, Speculum 63 [1988] 509–38). The right of asylum for murderers was again abolished by Manuel I (R.J. Macrides, “Justice” 190–204). In 1343 John V prescribed that those who sought protection in Hagia Sophia should head for a special room without disturbing the divine service (Reg 5, no.2886). Although there is less evidence for it, Hagia Sophia appears also to have offered protection to insolvent debtors (MM 2:448f, a.1400).

ATALANTA. See Meleager.

ATHANASIOS, archbishop of Alexandria, theologian, philosopher, and saint; born Alexandria 295, died Alexandria 2 May 373; feastdays 18 Jan., 2 May. After a fierce struggle (L. Barnard, OrchrP 41 [1975] 344–52), Athanasios was elected archbishop of Alexandria on 8 June 328. He
succeeded Alexander, whom he had served as secretary and accompanied to the Council of Nicaea in 325. Continuing Arian influence at the imperial court caused Athanasios to be deposed and exiled five times (335, 339, 356, 362, 365); his removal in 362 was due to his refusal to be maneuvered by Emp. Julian into fomenting Christian infighting. Two early tracts (ca.318), Against the Hellenes and the Incarnation of the Logos, attack pagan mythology and defend the Christian faith against Jewish and pagan criticism, respectively. His major work was the refutation of Arianism in four books: the authenticity of the final volume has long been suspect, and recently C. Kannengiesser (Athanase d’Alexandrie évêque et écrivain [Paris 1983]) tried to attribute the third book to Apollinaris.

The focal point of Athanasian theology is the concept of salvation, which Athanasios understood as the deification of man: “All are named sons and gods both on earth and in heaven.” This deification is possible because the incarnate Logos who assumed human flesh was—in contradiction to Arian dogma—the genuine God, of the same nature as the Father. “He was not a man who later became God, but God who later became man in order to deify us” (PG 26:92C–93A). Athanasios explains the mystery of the generation of the Son-Logos by the Father by using the metaphor of the sun, which is constantly emitting its rays. Athanasios, however, did not elaborate a refined terminology to describe the Trinity, nor did he draw a strict line between nature and hypostasis, nor between homousios and plain “likeness” (homoioi). Athanasios acknowledged the consubstantiality of the Holy Spirit.

The fragments of his biblical exegesis show some allegorizing tendencies. His 39th Festal Letter (367) contains an important list of Old and New Testament books, with distinctions between genuine and apocryphal works. His Life of St. Antony the Great, a landmark in Christian literature and model for later hagiography, is a valuable source for early monasticism as well as for Egyptian social history and popular beliefs, esp. demonology.

**Representation in Art.** Athanasios was included in almost every painted group of church fathers as a balding white-haired bishop with a somewhat squared beard. His funeral is mentioned in the Homilies of Gregory of Nazianzos, and there are numerous representations of this scene in illustrated MSS of these Homilies; the scene takes the form of a funeral around the bier, attended by bishops and other clergy (Galavaris, Liturgical Homilies 49f). He is often paired with his fellow citizen Cyril of Alexandria, whose feast is celebrated the same day.

**ATHANASIOS I,** patriarch of Constantinople (Oct. 1289–Oct. 1293; June 1303–Sept. 1309) and saint; born Adrianople ca.1235, died Constantinople ca.1315; feastday 28 Oct. From his youth Athanasios was an ascetic monk who moved frequently from one monastery to another: he resided in turn on the holy mountains of Athos, Auxentios, Latros, Galesios, and Ganos, and made a pilgrimage to the Holy Land. Soon after 1282 Andronikos II installed him in a monastery on the Xerolophos hill in Constantinople and eventually made him patriarch. Athanasios was deposed from his first patriarchate because of his unpopular insistence on strict monastic discipline and the requirement that bishops reside in their sees. After ten years in retirement, he returned to the patriarchal throne but was again deposed to bring an end to the Arsenite schism.

His letters and sermons reveal a rigid and fervently pious individual who hoped to check the Turkish advance by urging repentance on emperor and people alike. Under his guidance the synod issued a new law (meara) in 1304 (*RegPatr*, fasc. 4, no.1607), confirmed by the emperor in 1306 (*Reg 4*, no.2293), which was designed to rectify injustices and raise moral standards; it covered such topics as inheritance, opening hours of taverns and bath houses, prostitution, and adultery. Athanasios sought to alleviate the sufferings of the poor and personally supervised distributions of food and clothing. He also organized a commission to control the supply and price of grain in Constantinople. At times he had considerable influence on the emperor; nonetheless his petitions were frequently ignored. After
his death his popularity led to the development of a local cult at his tomb where numerous miracles were attested. His sanctity was recognized sometime before 1368. Two vitae are preserved, both by Palamite authors, Joseph Kalothetos and Theoktistos the Stoudite (BHG 194, 194c).

ATHANASIOS II, Melkite patriarch of Alexandria (ca.1275-ca.1315). He was a former Sinaite monk who, because of the Mamluk occupation of Egypt, spent most of his tenure in exile. In 1275 or 1276 Athanasios went to Constantinople, where Michael VIII and his son Andronikos (II) granted him monasteries, to provide him with both a residence and income. He rapidly became involved in ecclesiastical controversies and found himself in opposition to his contemporary patriarchs of Constantinople, Gregory II and esp. Athanasios I, who confiscated Athanasios’s monasteries and forced him into exile on Rhodes ca.1289. Athanasios returned to Constantinople during the interval between the two patriarchates of Athanasios I (1293-1303). In 1294 he was entrusted with an embassy to Cilician Armenia that was aborted. After a series of narrow escapes in Greece, he presumably made his way to the metochion of Sinai on Crete. The place and date of his death are unknown.

Athanassios was bilingual in Greek and Arabic and a cultured bibliophile who acquired several MSS in Constantinople for the see of Alexandria. His most notable acquisition was the 5th-C. Codex Alexandrinus (London, B.L. Royal 1.D.v-viii).

ATHANASIOS OF METEORA, saint; baptismal name Andronikos; born Neopatras 1205, died Meteora 20 Apr. 1383. Born to a noble family, Athanasios was orphaned at an early age and entrusted to the care of his paternal uncle. He eagerly pursued both secular and religious studies in Thessalonike and Constantinople, where he met Gregory Sinaites, Isidore (I) Boucheiras,
and Gregory Akindynos. After a period on Crete as a hesychast, he became a monk on Mt. Athos in 1335 and took the name Antony (later changed to Athanasios). After a Turkish attack on Athos, Athanasios left the Holy Mountain ca.1340 with his spiritual master, a hesychast named Gregory. The two sought refuge and tranquillity among the rocky spires of the Meteora in Thessaly. For years Athanasios lived in solitude; eventually he settled on a pinnacle called Platylithos (“broad rock”), which he named Meteoron (“suspended in midair”). Here he established a cenobitic community of 14 monks for whom he drafted a short rule (vita, 251f) and built a church dedicated to the Theotokos (later reconstructed and rededicated to the Metamorphosis). His anonymous Life (BIHG 195) was written sometime after 1388 by a monk who had lived on Athos and had known Athanasios briefly at Meteoron.

—A.M.T.

ATHANATOI (ἠθανατοί, “immortals”), a tagma of noble youth. Created by John I Tzimiskes in 970 (Leo Diac. 107,11–12), they were armed and preceded the emperor on campaign (132,17–18). They camped, together with the hetaireia, next to the emperor’s tent (Dennis, Military Treatises 250,100). The 10th-C. taktikon of Escurial first mentions the domestikos of the thanatatoi. John I’s thanatatoi probably did not endure; they are not mentioned again until the end of the 11th C. when, according to Nikephoros Bryennios (Bryn. 265–67), Nikephoritzes revived the corps of thanatatoi and supplied them with armor, shields, helmets, and spears. Some chrysobulls of the end of the 11th C. (e.g., Lavra 1, no.48,28) place the thanatatoi together with the ethnic contingents, but S. Kyriakides (Makedonika 2 [1953] 722–24) strongly insists on their autochthonous origin. There is no evidence that the thanatatoi survived the 12th C.

—A.K.

ATHENA, in Greek mythology, daughter of Zeus, virgin goddess of wisdom, and eponymous patron of Athens. Myths about Athena, drawn from the standard classical curriculum of Byz. education, continued to furnish literary material down to the time of Tzetzes, who reproduced them in his Histories. The Iliad passage (5,837–39) describing Athena’s chariot creaking under her weight was often discussed by Christian apologists, who were concerned to reject the old embodiment of virginity and its power in Athena in favor of the new figure of the Virgin Mary. They ridiculed Homer’s description: a weightless deity could not have caused that phenomenon (Eust. Comm. II. 2:213,5–7). A 12th-C. historian (Nik.Chron. 158,70–72) used the same Homeric image to describe Manuel I’s bringing of an icon of the Virgin into Constantinople on a chariot: in the triumphal procession, the vehicle did not creak under the true Virgin. In Gnosticism, on the other hand, the figure of Athena was used positively to represent the divine Sophia.

An antique bronze statue of Athena, 30 feet high, stood in the Forum of Constantine in Constantinople until just before 1204, when the mob, interpreting the hand’s gesture as inviting the Latin army, tore it down (Nik.Chron. 558f). In Byz. art Athena appears in depictions of the judgment of Paris (J. Trilling, The Roman Heritage [Washington, D.C., 1982] 46, no.25; H. Zaloscer, Die Kunst im christlichen Ägypten [Vienna 1974] pl. 48). Clad as a Byz. empress, she is shown born from Zeus’s head in illustrations of the scholia of pseudo-Nonnos of Panopolis on the homilies of Gregory of Nazianzos. George Gemistos Pléthon addressed a hymn to Athena in his Laws, hailing her as the power presiding over form (eidos) and impelled movement (kinéma gignomene), who rejects the superfluous (Alexandre, Pléthon 210).

The Byz. Tzetzes (Historiae, 1.176–77, 5,671–72) and Kosmas the Hymnographer (PG 38: 487,27–28) were also acquainted with the ancient myth that Athena, though a virgin, had borne to Hephastos a son called Erichthonios: how the perpetuation of this legend is related to the contrast between Athena and the Virgin Mary is unclear.

—L.S.B.MacC., A.C.

ATHENAIS-EUDOKIA, wife of Theodosios II, Augusta (from 2 Jan. 423); born Athens ca.400, died Jerusalem 20 Oct. 460. The daughter of
Leontios, a pagan philosopher in Athens, Athenais (Ἀθηναία) came to Constantinople where she was baptized, taking the Christian name Eudokia. She soon attracted the attention of powers at court, possibly those in opposition to Pulcheria, the emperor's sister. Athenais married Theodosios on 7 June 421 and bore him three children. The oldest, Licinia Eudoxia (born 422), was to become the wife of Valentinian III. In these years Athenais enjoyed considerable power and may have been the center of a faction of "traditionalists"—men such as her uncle Asklepiodotos and the prefect Kyros—who urged policies of religious moderation and supported classical culture. Athenais was, however, gradually eclipsed by Pulcheria, who gained increasing control over her brother. In 438 Athenais departed with Melania the Younger for the Holy Land, where she encountered Cyril of Alexandria and Barsama. She returned to Constantinople the next year and reached the height of her power. By 443, however, she again fell from favor as a result of allegations of adultery. She went to Jerusalem in voluntary exile, but apparently retained her imperial title. She sided with anti-Chalcedonian monks in Jerusalem in 452. Although she was ultimately reconciled to Chalcedon, she was nonetheless revered in Monophysite tradition (H. Drake, *GRBS* 20 [1979] 381–92). Athenais was highly educated and obviously independent-minded; some fragments of her poetry survive. Her story was romantically enhanced by later Byz. tradition.

—T.E.G.

**ATHENS** (Ἀθῆναι), city in central Greece, in late antiquity part of the province of Achaia, listed by Hierokles as the "metropolis of Attica." Sacked by the Heruli in 267 and Alaric in 396, the city lost much of its ancient splendor and was surrounded by a fortification embracing only a fraction of its former area: at the end of the 4th C. Synesios of Cyrene described Athens in disparaging terms, as a place famous only for its production of honey. From the 4th to early 6th C., however, Athens maintained its place as an academic center and home of Neoplatonism, centered in the revived Academy of Athens and independent philosophical schools; among the students there were Basil the Great of Caesarea, Gregory of Nazianzos, and the future emperor Julian. Paganism apparently remained strong in Athens in the late Roman period, and Christian symbols did not become common on lamps until the early 5th C. (A. Frantz, *DOP* 19 [1965] 187–205). The empress Athenais-Eudokia, an Athenian, was noted for her learning. The effect of Justinian I's closing of the Schools of Athens in 529 remains controversial (Al. Cameron, *Literature*, pt.XIII [1965], 7–29).

The city was apparently sacked by the Slavs in 582 but remained in Byz. hands; in the 7th C. there was some political recovery, highlighted by the visit of Constans II in 662/3. From the late 7th C. Athens was part of the theme of Hellas. The city was threatened by Arab pirates but more peaceful relations are suggested by the probable existence of an Arab mosque (G. Miles, *Hesperia* 25 [1956] 329–44). It is usually assumed that during the Iconoclast crisis Athens supported icon worship; at any rate, Empress Irene, born in Athens, played a decisive role in the restoration of the cult of icons. In the early 9th C. another woman from Athens, Theophano, a relative of Irene, married the future emperor Staurakios (Theoph. 483.18). In 1018 Basil II visited Athens and gave thanks in the Church of the Virgin in the Parthenon for his victory over the Bulgarians. The letters of Michael Choniates, who was metropolitan of Athens 1182–1204, complain of the poverty of the city, the ignorance of the inhabitants, and the incapacity of imperial officials (J. Herrin, *DOP* 29 [1976] 253–84).

In 1204 the city withstood a siege by Leo Scouros, but by the end of the year it fell to Boniface of Montferrat, who appointed Guy de la Roche as the first duke of Athens. The duchy of Athens controlled all of central Greece and had interests in the Peloponnesos and as far north as Boudonitza; the dukes, however, had their primary residence at Thbes. In 1311 the city came under the control of the Catalan Grand Company, who surrendered it to Nerio I Acciajuoli in 1385 (K.M. Setton, *The Catalan Domination of Athens* 1311–1388 [London 1975]). In 1394 it passed briefly to Venice and then to Antonio Acciajuoli.
after 1403. In 1446 the future Constantine XI took Athens for Byz. but in 1456 it fell to the Turks.

The bishop of Athens was under the authority of the bishop of Thessalonike; he was raised to metropolitan status, probably in the 9th C. (V. Laurent, REB 1 [1943] 58–72); his suffragans included the bishops of Euboëa, central Greece, and the nearby islands (Notitiæ CP 7.496–506, etc.). A Latin archbishop, who replaced the Orthodox bishop after 1204, played an important role in the papacy’s plan to control the Greek church (J. Koder, JÖB 26 [1977] 129–41). Under the Acciaiuoli the Orthodox bishopric was re-established.

Monuments of Athens. Athens preserves many standing Byz. monuments and more have been brought to light by excavation, esp. in the Agora. In the courtyard of the Library of Hadrian a large quatrefoil structure of the 5th C. has been uncovered, probably a church rather than a lecture hall or audience hall as previously believed. On the slopes of the Areopagos and the south side of the Acropolis have been found houses associated with the philosophical schools. Basilican churches (e.g., the so-called Ilissos Basilica) were constructed on the periphery, but most of the pagan temples were not converted to Christian use until the late 6th C. or even later. From the 5th C. onward small-scale industrial activity was introduced into the former city center, as the ancient urban pattern was abandoned. The extensive ancient enceinte, repaired by Justinian I, was soon thereafter allowed to fall into decay; coin finds after the mid-7th C. are infrequent (F. Kleiner, Medieval and Modern Coins in the Athenian Agora [Princeton 1978] 12), and certain areas—the region of the Odeion (H.A. Thompson, Hesperia 19 [1950] 137) and the Pnyx (H.A. Thompson, R.L. Scarrton, Hesperia 12 [1943] 376)—were deserted. Recovery began in the 9th C. and reached its peak in the 11th–12th C. This period of prosperity ended, as far as the archaeological evidence shows, ca.1180 (Ch. Bouras, JÖB 31.2 [1981] 626f).

Beginning ca.975 with the katholikon of Mone Petake, there is an unbroken string of surviving churches, nearly all of the Constantinopolitan cross-in-square type; many have pseudo-Kufic decoration. The Church of the Holy Apostles in the Agora is a domed quatrefoil of considerable sophistication (A. Frantz, The Church of the Holy Apostles [The Athenian Agora 20] [Princeton 1971]);
the Church of Sts. Theodore is dated by an inscription to 1065, while the Kapnikarea (1060-70) has an exonarthex, as well as a parekklesia perhaps added during the Frankish period. The Panagia Gorgoeipikoos/St. Eleutherios (Little Metropolis) is made entirely of marble, mostly reused blocks, many of them sculptured; it dates probably to the period shortly after 1200. Most of the Athenian churches are small and are grouped in the area immediately to the north of the Acropolis. The poorly restored Panagia Lykodemou (11th C.) was a large domed octagon, presumably representing influence from the capital. None of these churches retains its original painted decoration. Fresco programs have survived, however, in several churches on the outskirts of Athens, notably the cave chapels on Mt. Pentele of the early 13th C., similar in style to that of the late Komnenian period, which preserve a hallowed portrait of Michael Choniates (D. Mouri, DChAE 4 7 [1974] 79-119), and the Omorfe Ekklesia of the late 13th C. which already reflects the latest stylistic developments in the contemporary painting of Macedonia (A. Basile-Karakatsane, Hoi toucho-graffies tes Omorphes Ekklesias sten Athena [Athens 1971]. The Parthenon was the cathedral church and the other buildings of the Acropolis were used as churches, while the Propylaia was converted by the Frankish dukes into a palace with a large tower.

ATHINGANOI (Ἀθηγανοί, lit. “Untouchables”), judaizing heretics in Phrygia and Lykaonia first mentioned as favored by Emp. Nikephoros I, who, according to the hostile report of Theophanes the Confessor, invited them in 810 to sacrifice a bull to quell a revolt. Emp. Michael I condemned them to death and massacred many but later relented. Theophanes Continatus defined them as Sabbath observers who were baptized and followed the laws of Moses except for circumcision, while each Athinganos was under the spiritual and material influence of a Jew. Constantin VII apparently disputed with them. An 11th-C. (?) abjuration formula accused them of practicing magic, astrology, and a ritual purity characterized by Levitical ablutions. The name was later attached to other groups, e.g., Adsina-noi (GYPSIES).

ATHOS, ACTS OF. The monasteries of Mt. Athos possess numerous charters of the Byz. (and post-Byz.) period, both in original and in copies. In its totality the collection is by far the richest Byz. archive of documentary material, providing abundant data on political, economic, and ecclesiastical history, the history of institutions and law, ethnic composition, literacy, etc. The oldest extant documents date to the late 9th C. The richest collections belong to the LA VRA, IVERON, HILANDAR, and VATOPEDI monasteries; in addition are preserved the acts of DIONYSIOU, DOCHEIARIIOU, ESPHIGMENOU, KASTAMONITOU, KOUTLOUMOUSIOU, PANTOKRATOR, St. PAUL, PANTELEEMON, PHILOTHEO, XENOPHONTOS, XOROPAMOU, and ZOGRAFHO, as well as those of the PROTATON and of several minor archives (Karakalou and Simopetra).

Attempts at systematization of the archives were begun at the end of the 18th C. by the monks themselves: Cyril of Lavra compiled a list of acts in his monastery’s archive (A. Guillou, BCH 82 [1958] 610-34). In the 19th C. some travelers to Athos copied and later photographed selected charters; an important collection of photographs was assembled by P.I. Sevast’janov (E. Granstrem, I. Medvedev, REB 33 [1975] 277-93). Russian scholars began the systematic publication of the acts of Athos—first of Panteleemon (Kiev 1873), then Vatopedi (St. Petersburg 1898), then in appendices to Vizantijskij Vremennik—while Greek scholars published individual acts in various periodicals. A systematic survey, started by G. Millet and continued by P. Lemerle, has resulted in the publication of many Athonite documents in Paris (now in progress); V. Mošin and F. Dölder also made important contributions. The Acts contain some of the most important surviving inventories of icons and liturgical equipment.
ED. Archives de l'Arles, ed. P. Lemerle, N. Oikonomides, J. Lefort et al. (Paris 1937—). (See entries on individual monasteries for editions of specific volumes.)

—A.K., A.C.

ATHOS, MOUNT, also called the HOLY MOUNTAIN (Hagion Oros), from the late 10th C., the most important center of Eastern Orthodox monasticism. Athos ("Aths") is the name given to the northermmost projection of the CHALKIDIKE peninsula, 45 km long, 5—10 km wide, as well as to the peak (2,033 m) that dominates this rocky finger of land. Its is linked to the mainland by a narrow isthmus 2 km in width. The peninsula has forests, meadows for pasturage, and small plots of land suitable for vineyards, orchards, olive groves, and gardens.

Athos was virtually deserted when monks first began to settle there, probably in the late 8th or early 9th C.; according to the 10th-C. historian GENESIOS (58.22), in 843 Athos was already a major monastic community, but his evidence must be treated with caution. The theories that the earliest monks of Athos were refugees from the Arab conquests of the eastern provinces of Byz., or Iconodules fleeing the persecutions of the Iconoclast emperors, have now lost favor. The first arrivals seem to have come from nearby regions, and to have been attracted by the unsullied solitude of the peninsula. Monasticism developed slowly on the Holy Mountain, however, because of its isolation, its rugged terrain, and the danger from Arab pirates. The early monks lived as solitary hermits or in small groups; the pioneers on Athos included Peter the Athonite (D. Papachrysanthou, AB 92 [1974] 19—61)—a semilegendary figure—and EUTHYMIOS THE YOUNGER, who arrived in 859. The first cenobitic monastery in the vicinity of Athos was KOLOBOS, founded near HIERISSOS sometime before 889. A fragmentary sigillum of Basil I (Prot., no. 1, s.883) is the earliest preserved imperial act concerning the Holy Mountain; it protected the Athonite monks from the intrusion of local shepherds.

The date of the first appearance of cenobitic monasticism on Athos proper is impossible to ascertain, but by the mid-10th C. some koinobia (e.g., XEROPOTAMOU) are attested. In 963 ATHANASIOS OF ATHOS, with the support of Nikephoros II Phokas, founded the Great LAVRA, which would soon hold first place in the Athonite hierarchy, a position it would maintain in perpetuity. By the end of the 10th C., many of the most important Athonite monasteries (e.g., IVERON, HILANDAR, ESPHIGMENOU, PANTHELEON, VATOPEDI, XENOPHONTOS, and possibly ZOGRAPHOU) had been founded; by 1001 46 monasteries were in existence (Papachrysanthou in Prot. 86—93).

Monks from non-Greek lands began to come to the Holy Mountain in the 10th C.: the Georgian monastery of Iveron was established in 979/80, soon followed by the Italian monastery of the Amalfitans (see AMALFI). Orthodox Armenians (Chalcedonians) were numerous at Espigmenou. In the 12th C. the peninsula began to attract more Slavic monks: Panteleemon was taken over by monks from Rus', and Hilandar was restored as a Serbian monastery. In the 13th C. Zographou came to be inhabited primarily by Bulgarian monks.

The organization of Athos in the 10th C. was relatively simple: the monks attended three annual assemblies at the PROTATON in KARYES and elected a PROTON who represented the community in its relations with ecclesiastical and secular authorities. By the end of the 10th C. (?) this assem-
bly was replaced by an irregular "council" that attracted on the average 15 participants, but occasionally as many as 40. The larger monasteries became independent of the Protaton, with the *hegoumenos* of the Great Lavra acquiring a more prestigious position in the local hierarchy than the *protos*.

In the 10th and 11th C. Athos attracted considerable imperial attention. Romanos I Lekapenos initiated an annual stipend (*roga*) for the Athonite monks and ordered the demarcation of a frontier boundary, probably in 941/2 (D. Papachryssanthou in *Prot.* 55). The rapid growth of the Lavra under the patronage of Nikephoros Phokas prompted the resentment of many Athonite monks, esp. the anchorites who feared for their way of life. John I Tzimiskes' issuance of a *typikon* for Athos, the *Tragos*, between 970 and 972, attempted a compromise, recognizing the rights of *hegoumenoi*, *kelliotai* (the spiritual leaders of anachoretic groups), and solitary hermits to attend the assemblies at Karyes. Both Nikephoros II and John I envisaged Athos as a stronghold of "poor monasticism," but under Basil II some monasteries began to acquire lands beyond the boundaries of the Holy Mountain and were gradually transformed into great landowners. Cenobitism became predominant, to the detriment of hermitages. In the 11th-12th C. new monasteries continued to be founded (*Kastamonitou*, *Dochiariou*, *Koutloumousiou*), and the older ones expanded their possessions. Economic activities on Athos increased, such as the sale of wood from Athonite forests and surplus agricultural products (fruits, vegetables, wine) cultivated on monastic estates. Many monasteries owned boats for the transport of these goods and the importation of necessary provisions; these boats often were granted exemptions from customs duties. Despite John I's prohibition of the presence of eunuchs, beardless youths, women, and even female animals on the peninsula, in the 11th C. substantial groups of *Vlach* shepherds settled with their families on Athos and supplied the monks with dairy products. The "Vlach question" caused such a scandal that ca.1100 Alexios I was forced to expel the herdsmen from Athos.

Constantine IX Monomachos's chrysobull of 1045 sheds light on the administrative development of Athos. The independence of individual *koinobia* increased; Lavra, Vatopedi, and Iveron were the top-ranking monasteries, taking precedence over the central administration of the *protos*. The growth of landownership incited conflicts among monasteries over estates as well as clashes with local landowners, esp. in Hierissos; with the Cumans who had settled in southern Macedonia; and with imperial functionaries. On the other hand, the patriarchate tried to establish its jurisdiction (at least partial) over Athos, which had been considered as subordinate only to the emperor.

The fall of Constantinople to the Fourth Crusade in 1204 and the establishment of the Latin Empire led to a period of difficulty for Athos, as Macedonia was troubled by the Latin occupation, the rising power of the Bulgarians, and rivalry between the empire of Nicaea and Epirus. Athos came under the rule of the Frankish Kingdom of Thessalonike from 1204 to 1224, and the monasteries lost some of their properties outside the peninsula, which they sought to recover after the Greek reconquest of Constantinople in 1261. The reign of Michael VIII Palaiologos was, however, extremely unpopular on Athos, because of the persecution of monks who refused to accept the Union of Lyons of 1274 (G. Rouillard, *REB* 1 [1943] 73-84; J. Koder, *JÖB* 18 [1969] 79-88).

In the early 14th C. Athos suffered from the raids of the Catalan Grand Company, but then enjoyed a period of prosperity during which several new monasteries were founded (Gregoriou, *Dionysiou*, *Pantokrator*, Simopetra). Documents recording various privileges conferred by the emperors on Athonite monasteries (a practice which goes back to the 9th C.) are esp. copious from the first half of the 14th C. Whereas the privileges granted by the government in the 10th C. were primarily *solemnia* (stipends from the state treasury) and the chrysobulls of the 11th C. mostly established monastic *exkousia* (immunity from taxes), the documents of the 14th C. were first of all donations of lands and *paroikoi*.

The properties of Athos took the form of fields, vineyards, pastures, mills, fishponds, entire villages, urban rental properties, and workshops. These possessions were concentrated in Macedonia (including Thessalonike), esp. on the Chalkidike peninsula and in the Strymon valley, but extended to Thrace, Thasos, Lemnos, Serbia, and...
Wallachia. The bulk of the acts of Athos (see Athos, Acts of) concern these estates, and include *praktika*, charters of sale, exchange, and donation, in addition to imperial chrysobulls confirming the monasteries' titles to their property and guaranteeing fiscal immunity. All ranks of people, from humble peasant to emperor, were anxious to make pious donations to Athomite monasteries; in addition to the emperors at Constantinople, the benefactors of Athos included the Grand Komnenoi of Trebizond, the rulers of Serbia and Bulgaria, and voivodes of Wallachia.

In the 14th C. *Idiorrhythmic Monasticism* developed on Athos, and the *koinobion* declined. By mid-century Turkish pirates were attacking the peninsula, forcing some of the monks to flee to Paroria or to Meteora. The Ottoman threat led to government restriction on the growth of monastic properties and the confiscation of some Athomite estates in the second half of the 14th C.; thus, after the Turkish victory at Marica in 1371 half of the *metochia* belonging to Athos were transformed into *pronoiai* and transferred to soldiers. This policy was continued in the 15th C. (Ostrogorsky, *Feodalité* 161–76). After briefly occupying Athos in 1387 and from 1493 to 1496, the Ottomans established permanent control over the Holy Mountain in 1490. The Turks recognized the autonomy of Athos in return for the payment of annual tribute, but the monasteries lost their immunities and their estates in Thrace and Macedonia.

Attitudes toward the intellectual life were varied. *Kelliotai* and hermits, who placed an emphasis on spirituality and asceticism, had little use for books. As N. Oikonomides (*DOP* 42 [1988] 167–78) has shown, many of the Athomite monks came from a rustic background and were illiterate. Nonetheless in the *koinobia*, founded on the Stoudite model, there was more emphasis on intellectual pursuits, esp. from the 13th C. onward. The monasteries amassed important collections of MSS (B. Fonkić, *PSb* 17 [1967] 167–75), some produced in their own scriptoria (e.g., at Philotheou, Hilandar, and Iveron). Among Athomite monks could be found composers (John Koukouzeles), hagiographers (Joseph Kalothetos), theologians (Gregory Palamas), and ecclesiastical writers (Theoleptos of Philadelphia). With its international assemblage of monks, cultural interchange was inevitable: Hilandar, Zographou, Pan-teleemon, and Iveron became centers for the transmission of Byz. religious literature to Serbia, Bulgaria, Russia, and Georgia, respectively.

As the Holy Mountain par excellence from the 10th C. onward, Athos attracted Byz. monks for six centuries. Many holy men, whose custom it was to wander from one monastery to holy mountain to another, spent time on Athos before moving on, thus reducing the cultural isolation of the Athomite monasteries. Because of its geographical proximity, Thessalonike, rather than Constantinople, had the closest links with the Holy Mountain. For some monks, like Palamas, a hegoumenate on Athos was the springboard to a bishopric; for others it might lead to the patriarchate of Constantinople as it did for Niphon, Kallistos, and Philotheos Kokkinos (R. Guillard, *EEBS* 32 [1963] 50–59).

It was one of the wandering holy men, Gregory Sinaius, who introduced to Athos in the 14th C. the "Jesus prayer," which was adopted by a small number of monks. From this new method of prayer developed a form of mystical spirituality, a renewed emphasis on *hesychasm* that was championed by Palamas (J. Meyendorff, *DOP* 42 [1988] 157–65). After many vicissitudes Palamism spread all over the Byz. world and was eventually declared Orthodox by the local council of Constantinople of 1351 (see under Constantinople, Councils of).

Art and Architecture of Athos. Little survives of the 10th–12th-C. architecture of the Holy Mountain except for the principal churches of a few monasteries and portions of the perimeter walls. The earliest Athomite churches generally had an inscribed-cross plan with a central dome, triconch apse, a double narthex, and lateral chapels to the west (P.M. Mylonas, *Thesaurismata* 2 [1963] suppl., 18–48). Instituted at the Lavra, this scheme was adopted at Iveron and Vatopedi and remained essentially unchanged until the double narthex was replaced by a unified rectangular space (sometimes called a *lite*) for singers at Hilandar. This scheme, in turn, was widely adopted, for example, at Koutloumousiou ca.1400. The
14th C. saw an expansion of the older monasteries, the addition of towers (pyrgoi) and other fortifications, and the creation of new institutions that tended to follow the established “Athonite type.” Most of the chapels and living and service quarters now to be seen on Athos date from the 15th C. or later.

In the churches mosaic decoration survives only at Vatopedi and Xenophonoton (now detached and kept in the “new katholikon”). The oldest preserved frescoes are at the katholikon of Rhabdouchou (P. Mylonas in 14 CEB, vol. 2B [Bucharest 1971] 552–54); frescoes of 1312 survive at Vatopedi but are much overpainted. The well-preserved program at the Protaton is of similar date. Thereafter, however, with the exception of fragments in the monastery of St. Paul, almost no wall painting survives from the period between the mid-14th and the early 16th C.

From the 10th C. onward, Athonite monasteries received gifts of liturgical silver, crosses, textiles, sometimes richly covered books, and esp. icons (of which the Lavra has 3,000, mostly post-Byz.), which form the nuclei of their treasures today. A few objects are the donations of generous rulers and other patrons from the period before 1453 but, like the physical fabric of the monasteries, the vast majority of the treasures date well after the foundation of the institutions that now house them. Despite the arguments of V.N. Lazarev (DChAE 4 [1964] 117–43), there is little evidence for resident ateliers of mural painters on Athos in the Byz. period; A. Xynogopoulos (CorsiRav 11 [1964] 419–30) suggested that at least in the 14th C. fresco painters came from Thessalonike and possibly Constantinople. The name or epithet zographos of a 10th-C. monk (see Zographou) suggests, however, that some artists took up residence; a 14th-C. workshop that made ICON FRAMES has also been hypothesized. Certainly masons were called in from the outside world in the 10th C. (Prot., no.7.141–42). Many of the illuminated MSS in the monasteries’ libraries reached Athos long after their creation elsewhere, just as many books with Athonite provenances are today to be found in libraries and museums outside the Holy Mountain.

—A.C.

ATRAMYTTION (Ἄτραμύττιον, l’Andremite of the Crusaders, now Edremit), city on the north-west coast of Asia Minor. Although obscure in late antiquity, Atramyttion was an important naval base when the Opsikian fleet stopped there during its revolt in 714, seized Theodosios (III), a native tax collector of Atramyttion, and made him emperor. Atramyttion was the northernmost city of the Thrakesion theme; in the 10th C., it was a tourma of Samos. The Turkish pirate Tzachas completely destroyed Atramyttion ca.1090; Eumathios Philokales rebuilt and repopulated it in 1109. It became a base for defense against Italian and Turkish attacks. Manuel I made it a center of Neokastria; by 1185 it was the headquarters of a separate theme (D. Zakythenos, EEBS 19 [1949] 8). Plundered by the Genoese in 1197, it was briefly seized by the Latins in 1205 and ruled by them in 1213–24. In 1268, the Venetians had a concession in Atramyttion, but dangers from the Turks made the Genoese of Phokaia take control of it in 1304. It fell to the Turks of Karasi before 1334. Atramyttion was a suffragan bishopric of Ephesos; its site contains no significant remains.

—C.F.

ATRIKLINES (ἄτρικλίνης), courtier in charge of imperial banquets. The term is of Latin origin, from triclinium, dining hall, but it has often been distorted as artoklines, from Greek artos, bread. In his Kleirologion, Philotheos, who was himself atriklines, describes his function as maintaining order at banquets by positioning dignitaries according to their titles and offices (Oikonomides, Listes 83.15–24). This presupposed a clear knowledge of titulature. Although Philotheos was titled protospatharios, the atriklines held a relatively modest place in the hierarchy. The atriklines was mentioned in the mid-9th-C. taktikon of Uspenskij; the seal of the imperial atriklines Smaragdos (Zacos, Seals 1, no.16068) is dated in the 8th C. Some seals of atriklinai belong to the 11th C.; thereafter the fate of this functionary is unknown.

—A.K.
**ATRIUM** (ἀτρώα, αἰθριον) an open court directly preceding a church, usually enclosed by four colonnaded porticoes (a quadrripotrius) or, in churches possessing a narthex, by the narthex and three porticoes. Occasionally, as in Constantine I’s church at Mamre, simple wall enclosures replaced the porticoes. The form of the atrium was probably derived from that of the peristyle courtyards that often preceded Roman buildings. The conventional term atrium was apparently derived from the Greek aithron, meaning an area under the open sky, rather than from the Latin atrium, the main room of an Italic house. The open court is also called a louter, a term derived from the ritual ablutions of hands and feet at the kantharos, or fountain, located therein. The atrium was not a requisite feature of church architecture in any period, though it was common in many regions in the 4th–6th C. When present, atriums served not only as places for washing but also for the separation of catechumens and for starting entrance ceremonies, as local customs dictated. Churches with atriums are extremely rare after the 6th C., perhaps because of changes in the entrance rite. The atrium reappears in the 9th C. in two notable examples in Constantinople, the Pharos (?) in the Great Palace and the Nea Ekklesia as well as in the 11th-C. Church of St. George of Mangana.

**ATTALEIA** (Ἀτταλεία, mod. Antalya), city and bishopric of Pamphylia. Although inscriptions and remains indicate some prosperity in late antiquity, Attaleia became most important in the 9th–11th C. as a naval and military center. A special force of Mardaites under a katepano attested in the 10th C. may have been installed in Attaleia as early as 689. Attaleia was apparently capital of the Kibyrhiaotai theme; it was certainly a main base of the Byz. navy and a major entrepôt for trade with Cyprus and the Levant. According to Ibn Hawqal (10th C.), Attaleia was the center for collecting taxes on goods brought by trade or piracy from Muslim lands; the revenue from this amounted to 300 pounds of gold. He also states that the city was directly subject to the emperor and paid no taxes. Attaleia was a base of the imperial post that connected it with Constantinople in eight days by land and 15 by sea (Vasiliev, Byz. Arabes 2:2:414–19). Powerful Roman walls, rebuilt and extended by Leo VI, kept Attaleia from capture by the Arabs; it maintained its ancient size throughout the Byz. period. By the 11th C., Attaleia had a substantial Jewish community. Attaleia survived the turmoil after the battle of Mantzikert in 1071, remaining a center of imperial and Venetian trade, but by 1148 it was a Byz. island in territory overrun by the Turks. It was taken by the Italian Aldobrandini family ca.1204 and by the Seljuks in 1207. Attaleia, a suffragan bishopric of Perge, was elevated to a metropolis by Alexios I. Attaleia preserves the circuit of its walls, much of them Byz., and a large Justinianic cruciform church with a central tower, later transformed into a basilica.
ATTALEIATES, MICHAEL, historian; born Constantinople or Attaleia between ca. 1020 and 1030, died after 1085 (according to Gautier, after 1079). A man of modest origins, Attaleiates (Ἀτταλειάτης) had a brilliant career: a senator and judge, he had the title of proedros; he also acquired properties both in Constantinople and Rhaistaton which he described in his Diataxis of 1077. Lemerle (infra 111) estimates Attaleiates' properties at approximately 150 litrai. In the Diataxis Attaleiates incorporated the history of his acquisitions into his autobiography, established rules for the monastery of Christ Panoitirion in Constantinople and the xenodochion (in Rhaistaton), which he founded, and listed icons and liturgical objects belonging to the monastery. In 1073/4 Attaleiates issued a legal textbook, introduced by a survey of the development of Roman law from the Republic to the Basilika.

His major work is the History, encompassing the period 1034–79/80. Written primarily on the basis of firsthand observations, the book is less personal than the contemporary Chronography of Psellus, although in some cases Attaleiates describes his own role in events. The History is a rhetorical panegyric of Nikephoros III: Attaleiates not only ascribed to him conventional imperial virtues, but emphasized his noble origin and military prowess—qualities absent from earlier Mirrors of Princes. At the same time Attaleiates demonstrated an unusual interest in the fate of cities and in urban movements and stressed the links between his hero and urban populations. According to E.Th. Tsolakis (Byzantion 2 [1970] 258), the final version of the History was completed after Nikephoros's deposition in 1081, and thus is not the work of a sycophant, but a sincere expression of political views. Less talented than Psellus in exposing the clash of human passions, Attaleiates sought the causes of events. Also an acute observer of nature, he described the elephant and giraffe with naturalistic details.

ATTICA (Ἀττική), the territory of Athens. In late antiquity there is evidence of considerable prosperity, and settlements existed at many places: early Christian basilicas have been discovered at Brauron, Glyphada, Anabyssos, Koubaras, and Kalamos, among other sites. The silver mines at Laurion and Thorikos were apparently worked again and caves, such as that at Bari, were inhabited. G. Fowden (JHS 108 [1988] 48–59) suggests that increased production of silver was only partly responsible for this phenomenon, since pagans may have fled to more remote areas, and mountain passes were utilized in response to the barbarian danger. Along with the rest of the empire, Attica suffered from barbarian invasions in the late 6th through the 8th C.; although Attica certainly remained in Byz. hands, most of the settlements seem to have been abandoned: none of the Early Christian basilicas survived into later times.

Prosperity returned beginning in the 9th C., and many churches date to the 11th through 13th C.; most of these are simple cross-in-square structures, such as the katholikon at Kaisariane. Several fresco programs of the 13th C. survive (e.g., N. Comnendarakis-Panselinaou, Saint-Pierre de Kalvienia-Kovara et la chapelle de la Vierge à Merventa [Thesalonike 1976]); the former has a portrait of Michael Choniates. Porto Raphiti on the east coast seems to have developed as a major port. After the Fourth Crusade a series of towers was constructed, linking Athens with the hinterland of Attica and the east coast. The soil of Attica is rather poor and, as in antiquity, the area specialized in the production of honey, olives, and wine.

ATTICISM, the use in literature of an arcaizing and artificial form of Greek, based on imitation of the language of Athenian writers of the 5th–
4th C. B.C. Perpetuated by teachers of rhetoric and codified in lexika and textbooks, Atticism dominated the literature of the Roman Empire. Addressing an educated pagan public, Christian apologists such as Clement of Alexandria naturally used the Atticizing literary Greek their readers knew and accepted. As Christianity spread among the urban upper classes, Atticizing Greek, rather than New Testament Koine, became the normal ecclesiastical language esp. of the 4th- and 5th-C. church fathers. For the Byz., the works of these church fathers became models of language and style no less worthy of imitation than those of the writers of classical Athens. Every Byz. revival of education and culture was accompanied by a reassertion of Atticism, often marked more by the avoidance of features of the spoken language than by imitation of ancient models; Homer, Gregory of Nazianzos, and George of Pisidia were as “Attic” as Demosthenes. Throughout the Byz. period education perpetuated and institutionalized a distinction between spoken and literary Greek, which later widened and hindered the development of an expressive vernacular literature. Thus Photios praised the simplicity of New Testament language but did not practice it himself. Symeon Metaphrastes rewrote in inflated language and style some early saints’ Lives composed in a relatively popular language. Nikiphoros Choumnos declared that literary excellence required the imitation of classical and patristic models. While rhetoric, history, and theology were the domain of Atticism, technical writing, ascetic writing, and chronicles such as those of John Malalas and Theophanes the Confessor were often couched in simpler language.

ATTIKOS, bishop of Constantinople (Mar. 406–10 Oct. 425); born Sebasteia in Armenia, died Constantinople. After taking the monastic habit at an early age, Attikos joined the Pneumatoma-choi; he recanted their teaching when he moved to Constantinople and became priest there. Poorly educated, he was not popular as a preacher (Sokr. HE 7.23). This was probably one of the reasons for his hatred of John Chrysostom: Attikos was Chrysostom’s major accuser at the Synod of the Oak (403), and even after Chrysostom’s death Attikos was slow and reluctant to restore his name to the diptychs. More politician than theologian, Attikos left little in writing (Bardenhewer, Literatur 3:361f.), but he did much to strengthen the position of the bishop of the capital: Attikos was on good terms with the court, dedicated to Empress Pulcheria and her sisters a now-lost tract entitled On Faith and Virginity, and received from Theodosios II a personal privilege prohibiting the election of a bishop in the neighboring area without notifying the bishop of Constantinople (Sokr. HE 7.28). Attikos was active in fighting heresies (e.g., Messalianism and Pelagianism) and gained the support of Pope Celestine and approval of Pope Leo I. Cyril of Alexandria was more cautious but found in Attikos an ally in his anti-Nestorianism (PG 77:97B). The traditional assertion, however, that Cyril quoted Attikos as using the term theotokos in a homily (PG 76:1213BC) is wrong; the term appears in the next quotation, from a certain bishop Antiochos.

LIT. RegPair, fasc. 1, nos. 35–48. C. Verschaffel, DTC 1.2 (1937) 2220f. A. Bigelmair, LThK 3:1016ff. –A.K.

ATTILA (‘Attilao), ruler (dominus in Jordanes) of the Huns (434–53). He was the son of Mundius and successor of his uncle Rua (Rugila). At first he ruled with his older brother Bleda, but assassinated him in 445. The center of his realm was in the basin of the Tissa and Timos rivers, tributaries of the Danube; various peoples such as the Gepids, Goths, and Alans were under his power. Attila led several attacks against the northern Balkans, urging the emperors in Constantinople to sign peace treaties. In 434/5 (B. Croke, GRBS 18 [1977] 355–58) or after Feb. 438, he concluded a favorable treaty at Horreum Margi calling for an annual tribute of 350 (or 700?) pounds of gold. In 442 he reached Thrace; the
embassy of Nomos achieved a peace that lasted to 447 (B. Croke, *BS* 42 [1981] 159–70). In 447 the Huns advanced as far as the Chersonese and Thermopylae; when peace was arranged the tribute was increased to 6,000 pounds of gold. When Attila seized the territory from Pannonia to Navae, an embassy led by Anatolios and Nomos demanded and achieved the withdrawal of the Huns from this area. In 450 Marcian refused to pay tribute; surprisingly, however, Attila turned his attention westward, demanding marriage with Justa Grata Honoria (Valentinian III’s sister) and a substantial portion of the Western Empire. His invasion of Gaul ended in defeat at the Catalaunian Fields in 451. The following year Attila attacked Italy, capturing Aquileia, Milan, and other cities. He retreated after negotiations with Pope Leo I, probably fearing an attack of the Eastern army. He died of a hemorrhage in his camp on the night of his wedding with a Gothic woman named Ildico.

Jordanes describes Attila as a short man, broad-chested, with a large head, small eyes, and sparse beard. It has been debated whether Attila was only a cruel plunderer (O. Maenchen-Helfen, *BZ* 61 [1968] 270–76) or the founder of a new barbarian imperium, a forerunner of medieval steppe-states (G. Wirth, *BZ* 60 [1967] 41–69).

**ATUMANO, SIMON,** Greek humanist and Catholic prelate; born Constantinople early 14th C., died between 1383 and 1387. Born to an Orthodox Greek mother and Turkish father, his name, Atumano (Ἀτουμάνος), is probably derived from “Ottoman.” He became a monk at the Studios monastery and in 1348 was named as successor to Barlaam in the see of Gerace (Calabria). He converted to Catholicism and was Latin archbishop of Thebes from 1366 until his death. He made periodic trips to the West and taught Greek at the papal court in Avignon. After the conquest of Thebes by the Navarrese Company in 1379, Atumano retired to Rome, where he taught Greek, Latin, and Hebrew.

His knowledge of Hebrew, unusual at the time, enabled him to prepare a trilingual version of the Old Testament dedicated to Pope Urban VI (1378–89). He also translated into Latin Plutarch’s *On the Control of Anger*, composed a poem on John VI Kantakouzenos, and wrote scholia on Eupides.

identified by archaeologists in elite residences of the 4th–6th C.

AUGUOSTALIOS (αὐγοστάλιος, Lat. augustalis), from the 2nd half of the 4th C. the title of the prefect of Egypt (K.J. Neumann, RE 2 [1896] 2961). The term reappears at the end of the 10th C. but its meaning is unclear; in the Taktikon of Escurial (of 971–75) the title is placed between the epi ton deeseon and thesmophylax. A letter of Nikephoros Ouranos is addressed “To the protospatharios Pothis, the former augustalis” (Darrouzès, Epistoliers 222, no.11). A late 12th-C. (?) text is directed to a certain Katasamps as “diktator and archistrategos of our school of fish and of other sea animals, the doux and augustalis” (S. Lampros, NE 7 [1910] 356.25–27), although the use of the term here may be ironic. Oikonomides suggests that the Latin augustalis-augustalis could be translated into Greek as sebastophoros.

AUGUSTA. See Empress.

AUGUSTAION, enclosed open space in Constantinople, situated south of Hagia Sophia. Probably carved out of a preexisting agora called the Tetraostoon, the Augustaion is ascribed to Constantine I, who is said to have placed in it a statue of his mother Helena on a column (Hesychius in Preger, Scriptores 17). Remodeled in 459 (Chron. Pasch. 593.4) and again by Justinian I, the Augustaion served not as a public forum but as a courtyard of restricted access. It survived as an open space until the end of the empire.

Monuments. Several sculptural and architectural monuments were prominent features of the Augustaion.

1. Justinian’s column was surmounted by his equestrian statue. The shaft of the column was of brick, reveted with brass plaques. The bronze statue appears to have been remodeled from one of Theodosios I or II. It represented the emperor wearing a toupha, raising his right arm and holding an orb in his left hand (Prokopios, Buildings 1:2.11–12). The statue, delineated in a 15th-C. drawing emanating from the circle of Cyriacus of Ancona and now at the University Library, Budapest, was removed by Mehmed II. P. Gyllius (1544–50) saw and measured parts of it in the grounds of the Seraglio before they were melted down (De topographia Constantinopolis [Lyons 1561; rp. Athens 1967] bk.2, ch.17). The column itself was toppled ca.1515.

2. Statues of three barbarian kings offering tribute stood in front of Justinian’s column and probably formed part of the same triumphal ensemble. These are known only from the accounts of Russian pilgrims (Majeska, Russian Travelers 194–37, 184f, 240).

3. The Senate House was situated on the east side of the Augustaion. Built by either Constantine I or Julian, damaged by fire in 404, and burnt down in 532, it was rebuilt by Justinian I with a porch of six huge marble columns (Prokopios, Buildings 1:10.6–9). (See Senate House.)

AUGUSTINE, more fully Aurelius Augustinus, Latin theologian, bishop of Hippo Regius in Africa (from ca.396), and saint; born Tagaste, Numidia, 13 Nov. 354, died Hippo 28 Aug. 430. The son of a Christian mother and a pagan father, Augustine experienced a remarkable spiritual odyssey before converting to Christianity in 387. His major works were the Confessions, a sort of autobiography, and the City of God (De civitate Dei), contemplations on human conditions and goals, written after the sack of Rome by Alaric in 410. The desire for salvation is at the center of Augustine’s theology. Even though he wrote on subjects important in Byz. theology (Manichaeanism, Arianism), his major concerns were in other directions: for him the ideas of sin, free will (in his polemics against Pelagianism), and redemption stood in the forefront, while the Eastern church was involved in the Trinitarian and Christological controversies. Augustine’s command of Greek was shaky, but he probably knew some works of contemporary Greek theologians, for example, Theodore of Mopsuestia (J. McWilliam Dewart, Augustinian Studies 10 [1979] 113–32). His anti-Pelagian stand was known in the East,
Aurelius's work is to be distinguished from the *Epitome de Caesaribus*, which ends in 395.

AUSTRIA, from 976 an eastern borderland, or *Ostmark*, of the German kingdom. In 1148, as part of an effort to maintain alliance with *Conrad III*, Manuel I married his niece Theodora to Henry II of Babenberg (1141–77), Conrad's half-brother and the first duke of Austria. Walter von der Vogelweide praised her wedding. Theodora died in Vienna on 3 Jan. 1183. Two more Austrian dukes took Byz. princesses as their wives: Leopold VI (1198–1290) married Theodora, granddaughter of Alexios III Angelos, and the last Babenberg, Frederick II (1230–46), married Sophia, daughter of Theodore I Laskaris.

Rudolf IV of Habsburg was the first Austrian duke to be crowned Roman emperor (as Rudolf I, in 1273), but it was only later, with Frederick V Habsburg (as Holy Roman Emperor, Frederick III, 1443–93), that imperial ideology was clearly linked with Austria (*Austriae est imperare orbis universo*), a claim enhanced by the fall of Constantinople in 1453, making Frederick the sole emperor. The Austrian Habsburgs' claim to the Byz. imperial legacy was manifest in Frederick's wife, Eleanor, who offered to change her name to Helen and tried unsuccessfully to have her son Maximilian I named Constantine. The search for imperial legitimacy continued into the 15th C. with the emergence of legends linking the Habsburgs with the family of Julius Caesar and later with the Merovingians and ancient Trojans. The latter theory of descent contributed to an interest in Greek antiquity and ultimately to the cultural and political inheritance of Byz.

AUTHOR. The self-perception of the Byz. author ranged from cloaking himself in complete anonymity to devoting profound attention to his own personality, the difference being determined by both genre and epoch. The author does not appear at all in such genres as rhetorical exercises, romance, and epic, whereas historiography, epistolography, poetry, epideictic oratory, and even sermons permitted more opportunity for overt self-expression. In hagiography, the author sometimes presents himself through the topos of modesty; at other times he appears as the hero’s relative or disciple. The author-disciple assumes an esp. elaborate role in the vita of Basil the Younger; in some saints’ lives, however, like that of Andrew the Fool, the author-disciple is a fictitious figure introduced to give the impression of a truthful and authoritative account.

In the late Roman period the author often revealed himself, at least in the proemion, or in autobiographical pieces (cf. Gregory of Nazianzos), but in the 7th–9th C. the trend toward anonymity prevailed. In the 11th–15th C. the individuality of the author became more apparent: epistolography flourished, and certain historical works (Psellus, Niketas Choniates, John Kantakouzenos) came close to the genre of autobiography; in poetry, personal references are evident in Prodromos and Tzetzes, and some centuries later in Sachlikes. In poetry, as in hagiography, real personality is often mixed with clichés: thus the topos of the author’s imprisonment (e.g., Glykas, Della Porta) or poverty is frequent. The “ego” of the verses of Ptochoprodromos (a young monk, a henpecked husband) is obviously different from that of the actual author. The author’s self-expression takes various forms, from direct defense of his views (as in Gregoras) to a clever apology disguised as objectivity and sincerity (Kantakouzenos).

AUTOCEPHALOUS (αὐτοκέφαλος), the term used in Byz. canon law and in the Notitiae episcopatum to designate each diocese possessing the right to elect its own primate or kephale.
"head." These dioceses were completely self-governing, that is, independent of the five ancient patriarchates. The practice and the term itself were already established by the 6th C. (cf. Theodoret Lector 121.21). As Balsamon emphasizes, before the patriarchal centralization of the 4th C. all provincial primates or metropolitans were, in fact, autocephalous and were ordained by their own synods (PG 137:317D). Autocephaly was determined either by an ecumenical council (431, Cyprus), imperial decision (10th C., Bulgaria) or, as in the case of Georgia, by a disposition of the mother-church in the 8th C. (Balsamon, PG 137:320A). The autocephalic churches of Cyprus and Bulgaria followed the five patriarchates in order of rank (cf. Hierocles Synecdemus et Notitiae Graecae Episcopatum. Accedunt Nili Doxapatrii Notitia Patriarchatum et Locorum Nomina Immutata, ed. G. Parthey [Berlin 1866] 284–86). The primate usually carried the title of metropolitan, archbishop, or, occasionally, patriarch.

Apart from its primary meaning, the term was also used to define a distinct group of bishops without suffragans ("autocephalous archbishops") whose immediate superior was the patriarch (Laurent, Corpus 5.1, nos. 817–70). These bishops were not subject to any metropolitan, although in terms of precedence they followed the metropolitan.

AUTOKRATOR (αὐτοκράτωρ), official Greek translation of imperator, or emperor, until 629; used alongside basileus and other titles thereafter. The Greek term autokrator lacked the Latin’s military connotations, emphasizing rather autonomous power and monarchy. Christians had used the Roman monarchy to argue monotheism’s superiority over polytheism, but after Constantine I’s conversion monotheism buttressed the legitimacy of monarchy, which was already advocated by Hellenistic political philosophy and justified by analogies with the animal kingdom, for example, the “king” bee (F. Dvornik, Early Christian and Byzantine Political Philosophy, vol. 2 [Washington 1966] 611–723). The title autokrator appears on coins from 912, in chrysobulls from the 11th C., and in contemporary paintings depicting emperors. Outside of institutio and acclamations, the term developed a specialized meaning no later than the early 9th C. that, like megas basileus (cf. P. Schreiner, Byzantina 3 [1971] 173–92), distinguished the main emperor from co-emperors. Thus, autokratoria referred to the anniversary ceremonies of an emperor’s assumption of actual power as opposed to his coronation (e.g., Oikonomides, Listes 225:10–11; De cer., bk.2, ch.33, ed. Reiske 692.4–11). The Palaeologoi extended the use of the title to mark one of several co-emperors as designated heir (cf. pseudo-Kod. 252:24–253:3).

LIT. Dölger, Diplomatik 102–51. – M. McC.

AUTOMATA, devices powered by compressed air from bellows or by water, were displayed in the Magnaura and testified to in the 10th C. by Constantine VII and Liutprand of Cremona. Their existence in the 9th C. is surrounded with legends: they are said to have been constructed during the reign of Theophilos (Glykas names Leo the Mathematician as their engineer) and then destroyed by Michael III, who was in need of money (presumably they were melted down to extract their precious metals). The Magnaura automata included the throne of Solomon, which could be lifted high in the air; mechanical singing birds, perched in a gold tree, that fluttered their wings; and roaring golden lions. Writers in China report on a gold human figure that marked the hours by striking bells. Mechanical singing birds are also mentioned in romances (e.g., the Achilleis). The origin of the automata is unclear: Graba (Fin Ant. 1:286) argued that the machines at Theophilos’s court were imported from Baghdad, but related contrivances, such as organs and Greek fire, suggest that automata may have been native inventions based ultimately on the work of Heron of Alexandria.

AUTOREIANOS (Ἀυτοτριαῖον, fem. Ἀυτωτριαία), a family of state and church officials. The etymology of the name is unclear; it may be of Western origin. Autoreianoi are known from
the 1080s onward as judges (Michael in 1094 and perhaps 1082—see Gautier, "Blachernes" 258; John in 1196—see Labra 1, nos. 67.2, 68.2) and notaries (Theodosios in 1088—Palmou Engrapha 1, no. 48A.205). One family member became patriarch as Michael IV, another as Arsenios. Circa 1902—07 Phokas Autoreianos, grammaticos, served as doux of Thrakesion (Ahrweiler, "Smyrne" 151—54).

They were apparently a family of intellectuals: Theodosios Autoreianos (mid-12th C.) corresponded with John Tzetzes; the future patriarch Michael was a friend of Eustathios of Thessalonike and Michael Choniates; and some Autoreianoi were among the correspondents of Nikephoros Choumnos and Maximos Planoudes.

Lit. PIP, nos. 1691—96. —A.K.

AUTOURGION (αὐτούργιον, lit. "operated without assistance"), a property producing maximum revenue, euprosodon (Zonaras in Rhalles-Potles, Syntagma 2:595.19—20). Balsamon (ibid. 595.4—7) includes in this category salt pans, olive groves, vineyards, meadowland, water mills, brickyards, etc. The term is infrequent in later acts, in which it also refers to vineyards, vivaria, aulakia (canals? cf. Labra 2, no. 104.177—79), and water mills (no. 112.24). Autourgia are usually contrasted with peasants' allotments and juxtaposed with such items of income as fairs, taxes, tolls, etc. (Zepos, Jus 1:382.22—25). Such capital-intensive assets could be exploited as demesne property and thus did not need to be rented out to peasants; they were conceived as the most valuable part of the estate. The term autourgion was also applied to any property that earned a profit.

AUXENTIOS (Αὐξέντιος), saint; born Syria ca.420, died Bithynia 14 Feb. ca.470. He came to Constantinople during the reign of Theodosios II and served as a soldier of the fourth schola. Circa 442 he resigned and left for Mt. Oxeia to live in solitude. His Life states that Emp. Marcian invited Auxentios to the Council of Chalcedon in 451, but the council acts do not mention him. During his second stay in Constantinople, Auxentios was closely connected with the Rouphinianai monastery. Suspected of disagreeing with the decisions of the Council of Chalcedon, he cleared himself before Marcian. He left Constantinople again, for a cave on Mt. Skopas in Bithynia, where he lived as a hermit. A monastery that took the Saint's name was later founded on this mountain (see Auxentios, Mount). A noble lady Eleuthera (Stephanis in Psellos), the chambermaid of Empress Pulcheria, urged Auxentios to support the foundation of a nunnery in a nearby proasteion, Gyreta; Auxentios was buried in its chapel. Auxentios is said to have compiled "pleasant and useful troparia of two or three stanzas with plain and artless melody" (PG 114:1416A). His Life is known from the collection of Symeon Metaphrastes; this late version was reworked by Psellos, who emphasized Auxentios's role as imperial councilor and courageous market reformer and noted that he suffered from depression; Psellos also ascribed to Auxentios some features of his own biography (A. Kazhdan, Byzantion 55 [1983] 546—56).

Representation in Art. In the Menologion of Basil II (p.399), Auxentios appears as an orant monk; in the Theodore Psalter (fols. 38v, 96v) he appears once as a bishop bearing witness before Christ to the defeat of two armed men by an angel and once as a monk bearing witness to the defeat of two demons.

Lit. BHO 199—203C. —A.K., N.P.S.

AUXENTIOS, MOUNT, a holy mountain dotted with hermitages and monasteries, present-day Kayışdağ, located near Constantinople, 12 km southeast of Chalcedon. Called Skopa or Skopos in antiquity, the mountain took its name from the 5th-C. Syrian St. Auxentios, who spent the last 20 years of his life in a cave near the summit. Both men and women flocked to the mountain to live as solitaries under Auxentios's spiritual leadership. Circa 460 a certain Eleuthera built the convent of Trichinarea (sometimes called Trichinarai) at the base of the mountain for 70 of these pious women. It survived until at least the end of the 12th C.

No male monastery was built until the 8th C., when Stephen the Younger constructed a com-
plex for about 20 monks. Shortly thereafter he and his companions were exiled and the monastery destroyed during the Iconoclastic persecution of Constantine V. Sources of the 11th–13th C. report a number of monasteries under different names, including St. Stephen, Holy Apostles, the Archangel Michael, and the Holy Five (five Armenian martyrs of the early 4th C.), where Maximos Planoudes was hegoumenos. Some of these names may refer to the same institution, restored with a new dedication. The monastery of the Archangel Michael was renovated by Michael VIII, who composed a typikon limiting the number of monks to 40.

AUXILIARY DISCIPLINES (from Lat. auxilium, “help, assistance”), designation of certain branches of knowledge that apply general and concrete approaches (methodology and technique) to the analysis (primarily the external analysis) of historical sources. Traditionally, auxiliary disciplines include palaeography, epigraphy, papyrology, diplomatics, numismatics, sigillography, metrology, prosopography, chronology, genealogy, historical geography, toponymics, and heraldry. Source analysis (Germ. Quellenkunde) can also be described as an auxiliary discipline. The analysis of archaeological objects, elaborated in recent decades, requires the application of various scientific disciplines, such as geology, palaeobotany and palaeozoology, archaeometry, aerial photography, dendrochronology, physics, etc. Statistics employed for analysis of mass data has emerged as an auxiliary discipline as well. All of these disciplines have methods of their own, but their common goal is to provide the scholar with means of control and categorization of source material, of discarding false “information,” of placing historical events within the framework of space and time. From the use of auxiliary disciplines we must distinguish the application of interdisciplinary methodology, for example, the utilization of literary and archaeological evidence to resolve common problems.

–T.E.G., A.K.

AVARS ("Авары"), a nomadic people that appeared in the mid-6th C. in the steppe north of the Black Sea. Their previous history can be established only hypothetically, on the basis of identifications in Chinese and Byz. sources. Their language is thought to be Altaic.

The first Avar embassy appeared in Constantinople in 558. Justinian I concluded an alliance with the Avars and used them to alleviate the pressure of Pontic barbarians on the Byz. frontier. The Avars were able to control both Cotrigurs and Antae, but they then invaded Scythia Minor and occupied Pannonia after having destroyed the Gepids. The growth of Avar power created frictions in their relations with Byz.; under the command of Baian, the Avars, acting in alliance with the Slavs, conquered a part of the northern Balkans, including Sirmium (582). The emperor Maurice's attempts to stop the Avars were unsuccessful; in 626 their offensive reached its peak when, together with the Persians, they besieged Constantinople. Thereafter, the first signs of disintegration of the Avar confederation (khaganate) became visible: the Croatians and Serbs joined Emp. Herakleios in his struggle against the Avars and ca.635 Kuvrat acquired independence from the Avars. We know nothing about the Avars from 680 to 780. At the end of the 8th C., they reappeared in the West but were defeated by Charlemagne. In 805 Krum subjugated a group of Avars; survivors of the group were mentioned for the last time ca.950.

The Avars were mounted warriors and used the iron stirrup, saber, long lance, and reflex-bow that gave them tactical advantages in battle. Excavated Avar hoards contain luxurious objects of Byz. origin as well as Avar arms and complex belt sets that must have indicated the social status of their owners. Familiarity of the Avars with the forms of Byz. metalwork and jewelry is suggested by the objects in the Malaja Perešepina and other treasures. By the end of the 7th C. wealthy tombs disappear; luxurious booty is replaced by ordinary bronze and bone objects. The Avars became more sedentary, but they remained pagan.

AVLON, a harbor in Epiros mentioned in the Tabula Peutingeriana and the Cosmographer of Ravenna. It was known during the late Roman period as a "polis on the Ionian gulf" (Prokopios, Wars 5.4.21) connected with Italy and as a bishopric (first mentioned in 458). It played an important role during the wars against the Normans in the 1080s, and at the end of the 11th C. the Venetians obtained trading privileges there, probably as a reward for their assistance in the Anti-Norman war. It was assigned to the Venetians after 1204 but recovered by Michael I Komnenos Doukas of Epiros. In 1259 Michael II of Epiros surrendered Avlon to Manfred of Sicily who appointed Philip Chinardo to administer the area; in 1273 the Angevins established their power in Valona, but after 1284 the Byz. managed to occupy it. Valona, called civitas imperatoris Graecorum in Latin documents, served as a center of trade with Dubrovnik and Venice. The Angevins claimed Avlon until ca.1332, when the Albanians attacked it; in 1345/6 it fell to Stefan Uroš IV Dušan. After his death it formed a part of the dominions of the Serbian family of Baša; by 21 July 1418 it was in Turkish hands. Avlon should be distinguished from other centers of the same name, such as a suffragan bishopric of Athens (TIB 1:130f) or a valley in Palestine.

AVRAAMIIJ OF SMOLENSK, saint; fl. early 13th C.; feastday 21 Aug. Avraamij was a popular and controversial preacher and painter of icons on eschatological themes. The vita by his pupil Efrem presents Avraamij as a learned and ascetic monk—physically "a likeness of St. Basil"—who attracted a large lay following and aroused the hostility of the Smolensk clergy. Accused of heresy, of using secret or forbidden books (gō)ubinnyja knigi), of prophesy, and of taking others' (spiritual?) children, he was acquitted by the secular authorities and eventually made peace with his bishop. Avraamij's rhetoric and images, as reported by Efrem, as well as an extant sermon titled On the Celestial Powers sometimes attributed to Avraamij, concentrate on two topics: the fate of the soul after death, esp. its passage through the "customs houses" (mytarstva, telomiai) as described in the Life of Basil the Younger, and the Last Judgment, for whose depiction Avraamij was inspired by Ephrem the Syrian. Historians have tried, with little success, to specify Avraamij's alleged "heretical" interests, linking his enigmatic and perhaps imaginary (gō)ubinnyja knigi with both the Bogomils (G. Fedotov, Pravoslavnaja myśl' 2 [1930] 127–47) and the 14th-C. strigol'nik (B. Rybakov, SovArch [1964] no. 2, 179–87).

ÂWĀŠIM AND THUGHÛR, the Muslim regions and their defenses and fortifications along the Syrian-Anatolian border of Byz. from the time of 'Umar to the late 10th C. The 'Âwāšim were the inner regions of the frontier zone; the outer ones were the Thughûr. They included towns located at entrances to the Taurus Mountains or intersections of roads. The 'Âwāšim became a distinct entity after caliph Hârûn al-Rashid separated the area in 786 from the jund ("military district") of Qinnasrin (Chalkis) as the jund al-'Âwāšim. Hierapolis and Antioch were the major centers of the 'Âwāšim. The Thughûr were divided into Syrian and Mesopotamian sections. The former included passes between Syria and Cilicia and such towns as Adana, Tarsos, Mopsuestia, and Germanikeia (Marash). East of it lay the Mesopotamian portion, of which Melitene was the most important town.

These districts witnessed heavy fighting since they were bases for Muslim raids into Byz. As the 'Abbâsid Caliphate weakened, the 'Âwāšim and Thughûr had to rely more on themselves and nearby Muslim leaders in their unsuccessful struggle against Byz.

LIT. M. Canard, EI 2: 761f. Honigmann, Ostgrenze 42, 72. —W.E.K.

AXIOMATIKOS (αξιοματικός), a term that in the late Roman Empire had a vague meaning of military officer, as opposed to a recruit (Makarios of Egypt, PG 34:832B). According to the Chroni-
con Paschale (Chron.Pasch. 579.1). Empress Athenais-Eudokia promoted her brothers to the rank of axiomaticos. Malalas (Malal. 382.17) employs the word in a more specific sense when he speaks of an axiomaticos of Caesarea. In the 9th C. the word reappears in the Kletorologion of Philotheos where it designates some subaltern officers of the domestikos ton scholon. The De ceremoniis employs this term in its general sense—a person having an axioma, a post or title.

LIT. Guillard, Institutions 1:161. -A.K.

AXIOPOLIS ('Αξιοπόλις; in Prokopios, Axiopa; mod. Cernavodă in Rumania), a Roman port on the Danube and a fortress. A stone wall approximately 50 km long connected Axiopolis with Tomis on the Black Sea. The fortress and wall were reconstructed under Constantine I. In addition to fortifications, Christian inscriptions of the late 3rd–6th C. in Greek and Latin, naming some officials (e.g., dux and comites), as well as ceramics through the late 6th C. have been found in excavations at Axiopolis. The city then disappears. In the 10th C. a new fort was built, south of the Roman stronghold; among the remains are ordinary ceramics of the 10th–11th C. and an inscription (ca.9th–10th C.) with the Slavic name Vojislav, possibly of Kriusa. The last mention of the fort seems to be in al-Idrisi.

AXOUCH ("Αξουχ", "Αξούχος), a Byz. noble family of "Persian" (Turkish?) origin. The founder of the family, John Axouch, a captive of the Crusaders in 1097, became a servant at the court of Alexios I Komnenos and a playmate of John (II), the heir apparent. John II gave Axouch the title of sebastes and appointed him megas domestikos (or domestikos of the West and East); he died ca.1150 and was eulogized by Nikephoros Basilakes. Axouch’s daughter Eudokia married Stephen Komnenos; his son Alexios took as his wife Maria, daughter of Alexios Komnenos, the oldest son of John II. Alexios Axouch, a protostrator, commanded several military expeditions—to Italy in 1158, Cilicia in 1165, and perhaps Hungary in 1166. One of the wealthiest magnates, he lost the favor of Manuel I ca.1167 and was confined in a monastery. Alexios was criticized by contemporaries (Kinn. 267.13–16) for decorating one of his suburban houses with pictures of the campaigns of Kilic Arslan II, sultan of Konya, rather than those of the emperor as was customary (see History Painting). Alexios left two sons, one of whom, John Komnenos or John the Fat, fomented a riot against Alexios III on 31 July 1200 but was murdered in the struggle. The Axouch family is not attested in the Palaiologan period.

AXUM or Aksum ("Ախում), the kingdom that takes its name from its capital city located in the northern highlands of modern ETHIOPIA. Although Byz. considered Axum part of its sphere of influence, the Axumite rulers viewed themselves the equals of the Byz. emperors and maintained their independence. Its chief port, ADULIS on the Red Sea, served as both a way station on the trade route to India and a conduit for goods from the east African interior. The kingdom officially converted to Christianity in the mid-4th C. and was a suffragan of the archbishop of Alexandria. Aramaic-speaking monks were instrumental in the spread of a distinctively Semitic Christianity. Axum’s ties with Byz. were closest during the Byzantine Wars in South Arabia (517–37), esp. in 525 when Emp. Kaleb ’Ella ’Ashbēhā (Elesboa) conquered South Arabia at the behest of Justin I, who supplied ships but not troops. Justin’s desire to block Persian designs on South Arabia was ultimately thwarted when the Persians occupied the region in 599. Following the Arab conquests, Axum was cut off from Byz. and eventually lost its ports on the Red Sea to the Arabs. By the 8th C., Axum was in decline.

AYDIN (Alexander), a Turkish emirate in Anatolia that emerged in the late 13th C. from the breakup of the Seljuk sultanate of Rûm. It was most probably named after its founder, Aydin, about whom very little is known. It occupied the territories around the river Kaystros; its main ports were Ephesus (Theologos) and Smyrna, its capital
being Pyrgion. The emirate became powerful during the time of ʻUmur Beg (died 1348). His fleet repeatedly raided the Aegean islands, the Morea, Negroponte, and the littoral from Thessaly up to Constantinople, finally reducing the lords of these territories to the status of tribute-paying vassals. ʻUmur provoked two Crusades organized against Aydin in 1334 and in 1344, the latter known as the Crusade of Smyrna. He was a devoted ally of John VI Kantakouzenos during the Byz. Civil War of 1341–47. Western merchants frequented the territories of Aydin and purchased large quantities of agricultural produce (mainly cereals), livestock and related items from the nomads (cattle, horses, skins, cheese, etc.), and slaves. Consuls from Venice, Genoa, Rhodes, and Cyprus were established in Theologos. Aydin was annexed to the Ottoman state temporarily from 1390 to 1402 and permanently after Murad II defeated the rebel lord of Smyrna, Junayd (1424).

AYYÜBIDS, a Muslim dynasty that dominated Egypt, Syria and Palestine, Upper Mesopotamia, and the Yemen from the late 12th to the mid-13th C. They originated from a Kurdish tribe that lived near Duin in Armenia. Two brothers, Ayyūb and Shirkūh, served Zangī and Nūr al-Dīn as governors and generals. After Shirkūh conquered Egypt, he was proclaimed the vizier in 1169 but died almost immediately. He was succeeded by Ayyūb’s son Saladin, the actual founder of the dynasty, who defeated the Crusaders in 1187 and recovered Jerusalem for the Muslims. He engaged in diplomatic negotiations with the Byz. rulers Andronikos I Komnenos and Isaac II Angelos.

After Saladin’s death in 1193, his vast domain was divided between his three sons, brothers, and other relations; nonetheless his immediate successors al-ʿĀdil (died 1218) and the latter’s eldest son al-Kāmil (died 1238) were able to maintain the family unity that was required to withstand constant warfare with the Crusader states: in 1218–19 the Franks besieged Damietta and in 1227 Frederick II disembarked at Acre leading a new Crusade. During the week of 11–18 Feb. 1229 al-Kāmil was forced to sign a treaty with Frederick yielding to the Franks the control of Jerusalem, on condition that its fortifications would not be rebuilt and freedom of religion would be preserved in the city. Ayyūbid relations with the Seljuk rulers of Asia Minor were hostile: the expedition of united Ayyūbid forces against them in 1233 turned into a disaster, and in 1241 the Seljuks took Amida from the successors of al-Kāmil. The subsequent decentralization of power, the Turkish and Mongol pressure on the northeast border, and the new Crusade of Louis IX (his flotilla captured Damietta in 1249) weakened Ayyūbid Egypt, and in 1250 Mamlūk rule was established there. The northern Ayyūbids remained in power longer, but in 1258 the Mamluks took Baghdad and in 1260 they conquered Aleppo (Beroia) and Damascus.

The Ayyūbids supported commercial relations with the cities of Italy, southern France, and Catalonia; Egypt sold to Europe products imported from India but prevented the Westerners from entering the Red Sea. Regular trade connections with the Franks contributed to the penetration of Christian motifs in Ayyūbid minor arts.

AZDĪ, AL-, more fully, Abū ʻIsāmāl Muhammad ibn ʻAbd Allāh, al-Azdī, Arab historian; fl. ca.800–10. On al-Azdī’s life, our only source is his history, The Conquest of Syria. Clearly he was a narrator of Azdite and other Yemenite tribal accounts, gathering his information primarily from northern Syria, esp. Ḥims. His floruit can be ascertained from the archaism of his narratives and the death dates of the later authorities transmitting his work.

The Conquest of Syria is the earliest extant account of the Arab conquest. Proceeding from the summons to the tribes by Abū Bakr until the siege of Caesarea Maritima, it views these events as divinely ordained to reward Arab faith and punish Greek polytheism and misrule. Beneath this overarching doctrinal theme, the work is extraordinarily informative. Azdī reveals a sophisticated knowledge of developments on the Byz. side and
esp. of the activities and attitudes of the Christian and pagan populations in Syria. He deals with townspeople, peasants, and Bedouins as distinct groups; his account is unique for its detail on the shifting loyalties and complex maneuvering that characterized the conquest period.

ED. The Futooh al-Shâm, Being an Account of the Muslim Conquests in Syria, ed. W.N. Lees (Calcutta 1854), with Eng. summary.

AZOV SEA (Μακωρίς), an extension of the northeastern part of the BLACK SEA, reached via the straits of the Cimmerian Bosphorus. Trade routes went from the Sea of Azov north to Rus’ via the Don (Tanais) River and eastward to China. The Azov Sea was located in an area important for its salt and naphtha, and associated in Byz. convention with Cimmerians, Sarmatians, and Tauroscythians (see, e.g., Tzetzes, Hist. 12:835–36). Prokopios (Wars 8:4.7–7.12) asserts that the peoples of the Azov region were a continual threat to the borders of the empire. The northern Azov region was controlled in the 7th C. by Great Bulgaria (Theoph. 356.20–357.11) and in the 8th–10th C. by the Khazars (who built there the fortress of Sarkel). The peoples of the area (including Zicha) in the 10th C. are described by Constantine VII (De adm. imp. 42, 53). The possession of Tmutarakan by the Rus’ lasted at least until the end of the 11th C., though both a Rus’ and a Byz. administrative presence in the Azov region (e.g., in Rhosia) is postulated even for the late 12th C. From the mid-13th C. the Mongols dominated the area, while the trade routes between the Azov Sea and Constantinople came under the control of the Genoese from their settlement at Tana. Ignatij of Smolensk describes the route in detail, while Nikephoros Gregorias (Greg. 3:199.11–12) confirms its use for travel to and from Moscow. -S.G.F.

AZYMES (ἄγυμα “without yeast, leaven”), unleavened BREAD used by the Armenian and Latin churches in the eucharistic sacrifice based on the tradition that such bread was used at the Last Supper, at which Jesus instituted the Eucharist. The Byz. used leavened bread. Controversy on the issue occurred first between Greeks and Monophysite Armenians. Invited in 591 by Emp. Maurice to participate in a council of union, the Armenian katholikos Moses II uttered a famous rebuttal: “I shall not cross the Azat River to eat the baked bread of the Greeks” (Narratio de rebus Armeniis, ed. G. Garitte [Louvain 1952] 226f). Between Greeks and Latins, controversy began on this subject only in the 11th C. Responding to Greek criticism of the Latin practice, in 1054 Cardinal Humbert excommunicated Patr. Michael I Keroularios and his followers as “prozymite heretics.” The Greek theologian Niketas Stethatos responded.

Arguments used in the abundant Byz. polemical literature on the subject refer to the New Testament accounts of the Last Supper, which all describe the bread used by Jesus as artos—the standard Greek term for leavened bread—and not azymon. This historical argument, however, was less popular among the Greeks than references to the symbolic meaning of “leaven” (“The Kingdom of God is like unto leaven,” Mt 13:33), and also to a Christological argument: leaven gives “life” to bread, just as the soul gives life to the body. Consequently, Armenians and Latins were seen as denying the existence in Christ of a human soul, and therefore, shared the heresy of Apollinaris of Laodikeia.

BAALBEK. See Heliopolis.

BABYLAS (Βαβυλάς), saint; died Antioch ca. 250; feast day 4 Sept. Eusebios of Caesarea (Eusebios, HE 6.39.4) mentions in passing that Babylas died under Decius (249–51) in a prison in Antioch. The story was subsequently developed; Leontios of Antioch (died 357/8) says that Decius murdered Babylas because he forbade Emp. Philip the Arab (244–49) to enter the church; John Chrysostom (PG 50:533–72), in two polemical sermons against Julian, praises Babylas’s resistance to an emperor, but his information about Babylas is vague. Unlike Eusebios, Chrysostom stresses that Babylas was murdered. Hagiological texts transfer Babylas’s martyrdom to the reign of Numerianus (283–84) and sometimes provide Babylas with companions in martyrdom: a Greek text associates three children with him, while a Georgian legend describes a certain Basil of Epiphaneia, who was executed for his support of Babylas. Another stage in the development of the legend was the creation of St. Babylas of Nikomedea, who was venerated on the same day.

Representation in Art. Miniatures illustrating the vita of Babylas written by Symeon Metaphrastes depict the saint as an elderly bishop, and often show him being beheaded along with his little disciples. One of these MSS includes a cycle of four scenes showing him sitting in prison with his disciples, and being interrogated, scourged, and beheaded (London, B.L. Add. 11870, fol. 52r).

—A.K., N.P.S.

BACKGROUND, the farthest surface of an image, behind its chief objects of contemplation, was sometimes enlivened with architectural constructions and/or landscape. These elements are, however, usually uninhabited and treated ever more frequently as independent elements and conventional tokens of cities, mountains, etc., inserted behind figures. Buildings read as backcloths dropped behind a scene rather than as enclosures for the event depicted: in the Menologion of Basil II, for example, such sets often open out in inverse perspective. Likewise, portions of structures facing different directions are placed in the same plane. While this remains generally true, in 10th- and early 14th-C. art attempts were made, sometimes with success, to integrate figures into the setting so that the factitious distinction between the protagonists’ zone of operation and their background tends to disappear. Progressively from the 6th C. onward, settings are replaced with a blue or shimmering gold screen that denies space and depth, supernaturally focusing all attention on the main figures. —A.C.

BAČKOVO. See Petritzos Monastery.

BADÓER, GIACOMO, Venetian merchant who operated in Constantinople in 1436–40. His account books, kept in double-entry form, are one of the few sources to describe Constantinopolitan commerce in this period. Badoer’s books show that this merchant, whose activities were of medium size, had an annual turnover of merchandise valued at approximately 126,000 hyperpyra. They reveal Constantinople as an active trade center functioning primarily as an entrepôt. They illuminate the flow of merchandise (raw materials, wax to the West, silk cloth from the West), the activities of Byz. bankers, and the participation of Byz. merchants in trade. This was large in terms of the number of merchants and sea captains, but small in terms of capital engaged; it is seen also to have been a deficit trade with Western merchants. The account books show that the Byz. who traded with Badoer were engaged primarily in retail trade and were only tangentially concerned with foreign trade. The source has also been used to extrapolate the value of total Venetian trade in Constantinople, the importance of
Genoese merchants (seen as paramount), and the types of ships used to transport merchandise.

—A.L.

BAGHDAD (Baq̄īdā, Εἰρηνόπολις), capital of the caliphate for most of the ‘ABBĀSID dynasty. The name Baghdad was Persian; officially it was called Dār al-Salām ("City of Peace"). Caliph al-Manṣūr founded Baghdad as a circular city on a modestly inhabited site. He intended it as a camp for his troops from Khurāsān, using ruins from the nearby abandoned Sasanian capital of Ctesiphon. Baghdad's great prosperity lasted from 775 to 893. The ‘Abbāsid court briefly transferred its residence to Samarra from 896 to 892, when Caliph al-Mu’tamid returned to Baghdad. It remained the capital until the Mongols terminated the dynasty there in 1258.

The replacement of Damascus by Baghdad as the capital benefited Byz. by moving the center of Islamic power further from the borders of the Byz. Empire. The same move also made the Islamic capital more secure. Byz. embassies to ‘Abbāsid caliphs visited Baghdad and became means for cultural influences and some goods to cross otherwise closed frontiers. Such embassies to the Islamic capital were esp. notable in the 9th and 10th C.

—W.E.K.

BAGRATIDS (Παγκρατούνῆς; Arm. Bagratuni; Georg. Bagrationi), Armenian feudal family that gave royal dynasties to ARMENIA, GEORGIA, and Caucasian ALBANIA. The origin of the Bagratids was probably Iranian, but a late tradition, known even to Constantine VII (De adm. imp. 45,1–8), traces them back to the Old Testament King David and to the Virgin Mary. The original Bagratid domain lay in Sper in northwestern Armenia. Their hereditary office was that of "coronant" (t'agadir) of the ARSACID kings and perhaps of commander-of-the-cavalry (aspet), although the latter may be a family name rather than a title, since Prokopios (Wars 2.3.12–18) refers to them as Aspetianoi.

The power of the Bagratids grew in the 7th–8th C. when they served Byz., the Persians, and esp. the caliphate. Benefitting from the elimination of rival houses, the Bagratids extended their domains into central and southern Armenia (Tarkōn) and acquired the hereditary title Prince of Princes by the 9th C. In 884, Ašot I the Great was crowned king with the agreement of both the caliphate and Byz. The Bagratids ruled over Armenia until 1045, a senior branch residing at Ani, where the ruler styled himself King of Kings, and junior ones at Kars (Vanand) from 961 onward and at Lori (Tašir, Joraget) from 972 onward. Nevertheless they did not hold the Arsacid capital of Dūn and their control of Armenia was challenged by the establishment of a separate kingdom of Vaspurakan in 908. By the mid-11th C., Bagratid power had dwindled so far that Byz. annexed their kingdoms, except for Lori, which survived into the 15th C.

Secondary branches of the Bagratid house settled in Iberia and Taḵ’/Tao early in the 9th C. Ašot the Great (813–30) was named Prince of Iberia by the caliph and kouropalates by Byz., and in 888 Adarnarse IV was crowned king. The Georgian branch prospered as that in Armenia declined. Taḵ’ reached its apogee under DAVID of Taḵ’/Tao at the end of the 10th C. In 1008, Bagrat III united Abchasia and Georgia to form a single kingdom, which reached its zenith under David II/IV THE RESTORER and Queen T’amar, who supported the empire of Trebizond and ruled Armenia through her Zak’arid viceroyos. The Mongol invasions of the 1230s abruptly halted Bagratid prosperity, but the Bagratids continued to rule over a reduced and divided Georgia.

—N.C.G.

BAHĀ’ AL-DĪN, also called Ibn Shaddād, Arab historian, educator, jurist, and authority on Islamic traditions (hadith); born Mosul 1145, died Aleppo 1235. In July 1188, Bahā’ al-Dīn joined
the staff of Saladin to serve as the “judge of the army” and “judge of Jerusalem.” In this capacity he accompanied Saladin everywhere on his travels and campaigns, including the bitter fight against the Third Crusade. After Saladin died (1193), Bahāʾ al-Dīn remained active in Egyptian and Syrian politics.

Bahāʾ al-Dīn wrote several works, among them a treatise on the Holy War (jihād), dedicated to Saladin. The most important is his biography of Saladin, which, with the works by ʿĪmād al-Dīn, constitutes the most authentic source for Saladin’s life. Whereas for the account of the years prior to his entering Saladin’s service Bahāʾ al-Dīn depended on trustworthy friends, for the subsequent period he relied on his own observations. Although his work mainly concerns Saladin’s military and political accomplishments, the book contains important documents illustrating the relations of the Sultan, the Crusaders, and the Byz. In addition to brief references to Byz. participation in the 1169 attack against Damietta (Wilson, infra 57) and to Muslim capture of a ship that “came from Constantinople” to Acre on 12 June 1190 (p.182), Bahāʾ al-Dīn treats diplomatic exchanges between ISAAC II and Saladin, some of them affecting religious practices of the Greeks in Jerusalem and of the Muslims in Constantinople (pp. 198–201, 334f). He also quotes the Arabic translation of an Armenian letter from Katholikos Basil on the impact of Frederick Barbarossa’s Crusade on the Byz. Empire (pp. 185–89).

BAHNASA. See OXYRHYNCHUS.

BAIAN (Baiaνος), Avar khan (ca.562–582/4) who led his people to the lower Danube by 562. Perhaps it was Baian who in 558 sent envoys to Constantinople to conclude an alliance: Theophanes the Confessor (232.6–10) gives no name. Menander Protector is the only historian to name Baian while recounting the attempts of the Avars to cross the Danube and seize Sirmium. Even though the negotiations of Baian’s ambassador Targitaj brought no result, emperors tried to use the Avars against the Gepids and Slavs. Finally, with the help of Greek engineers, Baian built a bridge over the Sava, besieged Sirmium, and impelled the Byz. to yield the starving city in 582. Kollauzt and Miyakawa’s statement (infra 249) that in 586 Baian beleaguered Thessalonike is mistaken; even more erroneous is M. Artamonov (Istorija Chazar [Leningrad 1962] 160), who gave his date of death as 630.

BAILO (μπαιούλος), “bailiff,” the head of the Venetian colony in Constantinople in the Palaiologan period and simultaneously the Venetian ambassador at the court of the emperor. Gregoras (Greg. 1:97.21–25) translates the term bailo into Greek as epitropos or ephoros. In this capacity the bailo replaced the Venetian podestà whose functions were more limited. The office of bailo was introduced after the Byz. reconquest of Constantinople by the agreement of 4 Apr.–30 June 1268. The bailo was elected by the Great Council in Venice for a short term (about two years or less); his salary was set at 100 librae a month. The bailo had two assistants (consiliarii) who were also sent from Venice. His duties were to administer the trade activity of the colony, sit in judgment, and supervise the four Venetian churches in the Byz. capital. There was a Venetian bailo in Euboea as well as in Constantinople, whereas Venetian administrators elsewhere bore different titles (dux of Crete, castellani of Methone).

BAIOULOS (βαίουλος, from Lat. baiulus, “bearer”) in Byz. signified a preceptor or mentor. Balsamon (Pg 119:1213D) derives the word from baion, palm leaf, allegedly because teachers had the responsibility to develop and supervise the growth of young minds. Probably not earlier than Theophanes the Confessor, the term was applied to the emperor’s preceptor, and in the 10th C. the honorific title of megas baiulos was created for Basil Lekapenos. Pseudo-Kodinos remarks (140.8–
g) that the place of the megas baiullos in the 14th-C. hierarchy is unknown; some contemporary lists locate him above the kouropalates.

**BAKCHEIOS, GERON** (Βάκχειος, Γέρων), Greek music theorist of the age of Constantine the Great; fl. late 3rd–early 4th C. He is known only for his *Introduction to the Art of Music* (Eisagoge technes mousikes), written in the form of a catechism. It is an eclectic production, mostly following the school of Aristoxenos (4th C. BC.). The short treatise, not in dialogue form, published under his name by F. Bellerman in 1841, is by Dionysios, Bakcheios's contemporary.

**BAKER** (μάγκυψ), also artopoioi, artokopos, artopoioi. These terms are already found in Egyptian papyri and refer specifically to those who made bread. In the 10th C. the bakers formed an important guild, whose members were exempted from public service, as were the animals they used to grind the grain. Their activities and profit (4 1/6 percent) were regulated by the state, and when grain prices varied, they were allowed to change the weight of the loaf, but not its price (*Bk. of Eparch*, ch.18). The quaestor of Constantinople could force beggars to work for bakers (*Epanagoge* 5.5). Bakers' shops could not be located beneath dwellings, or very close to them, for fear of fire (*Bk. of Eparch* 18.3; Harm. 2.4.14).

The question arises whether bakers who made the bread sold it in a retail fashion. The *De ceremoniis* (1.96) states that in the early months of the reign of Nikephoros II, the rebel Joseph Bringas went from the patriarchate past the Milion and ordered the bakers (*artopoioi*) to neither bake bread nor sell it on the market. The bakers in question may be identical to those who sold bread in the main bread market of Constantinople, the Artopolia, located just beyond the Forum of Constantine (*Parastaseis*, ch.40). If this is the case, then breadmakers and bread sellers are identical; it could well be, however, that the *artopoioi* who presumably worked in the Artopolia sold wholesale. Other texts (e.g., Theoph. 234.23) distinguish between *artopolia*, where bread was sold, and *mankipeia*, where it was made. It seems likely that in other parts of Constantinople outside the main bread market, as well as in smaller cities, those who made bread also sold it to the consumer. This is suggested by monastic documents that show (e.g., in Serres) *mankipeia* (Koutouloum. nos. 8.13, 18.42), but make no mention of *artopolia*, probably because the two were identical.

**BALĀDHURI, AL-**, more fully Abūl-'Abbās Abūmād ibn Yabāy al-Baladhuri, Arab historian; died ca.892. Little is known about al-Baladhuri. Clearly he was born into a well-connected family. He studied under or knew many of the great Iraqi scholars of his day, pursued his researches in several Syrian cities, and enjoyed patronage and favor at the 'Abbāsid court in Baghdad. A profoundly learned scholar, he was also a traditionist, poet, and Arabic translator of the *Testament of Ardashir*.

Two of Baladhuri's Arabic histories survive, both based on extensive oral and written sources. His *Conquests of the Provinces* relates to the conquests of the Arabs. It is arranged by province and describes many nonmilitary developments. The incomplete enlarged version is lost. The later *Genealogies of the Notables* (also unfinished and still largely unedited) is a voluminous history, organized genealogically, down to the early 'Abbāсидs. Baladhuri often deals with Byz. He relates the conquests of Syria, Egypt, and Cyprus in detail; discusses the campaigns for Rhodes, Crete, and Sicily; and describes frontier defenses and expeditions (by both sides). Also considered are diplomatic relations, preconquest conditions, the attitudes of the indigenous populations and later demographic changes, the continuing use of the Greek language and Byz. coinage, and commercial contacts between the two sides.

BALDWIN OF FLANDERS

BALDWIN OF FLANDERS (Βαλδοβίος), Latin emperor of Constantinople (1240–61); born Constantinople 1217, died 1273. It was his fate to preside over the dissolution of the Latin Empire of Constantinople. The youngest son of Peter of Courtenay, he was only ten when his brother Robert of Courtenay died in 1228. John of Brienne took over the reins of government on the understanding that Baldwin would eventually succeed. This agreement was sealed by Baldwin’s marriage to John’s daughter Marie. When John died in 1237, Baldwin was in the West, seeking help for Constantinople. To this end he mortgaged his county of Namur to Louis IX of France for 50,000 livres parisis. Late in 1239, Baldwin finally reached Constantinople by the overland route through Hungary and was crowned emperor in 1240.

He soon returned to the West and was given a place of honor at the First Council of Lyons in 1245. His presence insured that help for Constantinople was placed high on the agenda, but there was to be little effective aid because of Louis IX’s plans for a crusade. The help promised by the Spanish order of Santiago in 1246 failed to materialize (J. Longnon, Byzantion 22 [1952] 297–99). Baldwin was reduced to pledging his son Philip in order to raise money (R. L. Wolff, Speculum 29 [1954] 45–84). It was only a matter of time before Constantinople fell. After its conquest by the Nicaeans in 1261, Baldwin made his way to the West, seeking supporters who might help him win back his empire. The most promising was Charles I of Anjou. A treaty was concluded at Viterbo in 1267, whereby Baldwin surrendered suzerainty over the Frankish principality of Achaia against the promise of an expedition to recover Constantinople.

—M.J.A.

BALDWIN III, king of Jerusalem (1143–63); born 1129, died Beirut 10 Feb. 1163. In 1157, threatened by Nur al-Din, Baldwin began to seek Byz. aid and a bride from Constantinople. Theodora Kommene, Manuel I’s niece, married Baldwin in 1158. Shortly after Renaud of Antioch’s abject surrender to Manuel at Mopsuestia, Baldwin was ceremonially welcomed by the emperor. When Manuel entered Antioch in triumph (Apr. 1159), Baldwin rode in the procession. The threat of joint Crusader-Byz. action caused Nūr al-Din to make concessions, and Manuel unexpectedly returned to Constantinople. During 1160–61, Baldwin’s efforts to induce Manuel to wed Melisende of Tripoli instead of Maria of Antioch were unsuccessful. After Baldwin’s death, Theodora received Acre as her portion, but in 1167 she fled with the future Andronikos I.

—C.M.B.

BALDWIN OF FLANDERS, count Baldwin IX of Flanders, Baldwin VI of Hainault, then Baldwin I of the Latin Empire; born Valenciennes 1172, died Tūrnovo 1205 or 1206. He joined the Fourth Crusade and set out in Apr. 1202 at the head of the expedition’s largest contingent. To sustain the Crusade he supported Boniface of Montferrat and Enrico Dandolo in welcoming the offers of Philip of Swabia and the future Alexios IV. Baldwin and his troops played leading roles in fighting Alexios III and Alexios V. After the capture of Constantinople, he was elected emperor on 9 May 1204, probably through the votes of the Venetians; he was crowned 16 May.
Baldwin employed traditional Byz. titles but had a feudal concept of government. Despite his agreement that Boniface should have Thessalonike, he wished to occupy the city. Boniface reacted violently; peace was made only in Aug. 1204. Early in 1205 the Byz. of Thrace, alienated by Baldwin’s contemptuous attitude, revolted and summoned Kalojan to their assistance. On 14 Apr. Kalojan defeated and captured Baldwin outside Adrianople. He perished mysteriously in prison. In July 1206 news of his death was reliably reported to the Crusaders.

-C.M.B.

BALKANS (medieval *Açmos), the modern (19th-C.) name of the mountain range that extends about 550 km from the Timok Valley eastward to the Black Sea. The word Balkan (balqan) is Ottoman Turkish, meaning “thickly wooded mountain”; the Bulgarians called it in Slavonic *Stara Planina. The Balkans form the major divide between the Danube (north) and Marica (south) rivers, and are traversed by some 20 passes, of which the most important are Trajan’s Gate; Via Succorum (now Ichtimanski Prohod), a link on the Via Egnatia; and Siderophageyon.

In antiquity the Haimos mountains formed the ethnic frontier of the Thracians. During the Great Migrations it remained a natural border of the Byz. Empire against the Goths and later the Avars; its passes were well fortified. In the 6th and 7th C. the romanized Thraco-Illrian population was forced to settle in the mountains; they reappear in the 11th C. as the Vlachs. In the second half of the 7th C. the leading role was assumed by a Sklaven group called the “Seven Tribes,” but as early as 680 these Sklavenoi had become associates of the newly arrived Bulgars of Asparuch. A year later the Byz. acknowledged Bulgar occupation as a fait accompli and concluded a peace with the newcomers; Haimos became the Byz. frontier. In Omurtag’s treaty (816-17) the Byz.-Bulgarian frontier was defined by a line that ran westward from Devletos to Makroivada. The Bulgarians were allowed to fortify this line with ramparts and trenches; it became known as the “Great Fence” (herkesia).

REGIONS OF THE BALKANS

MOESIA Late Roman Province
ISTRIA Region
BOSNIA Late Byzantine and Non-Byzantine Area
BALSAMON, THEODORE, canonist; born Constantinople between ca.1130 and 1140, died after 1195. Balsamon (Βαλσαμών) occupied high positions in the church hierarchy: first as patriarchal nomophylax and chartophylax, then (from ca.1185–90) as patriarch of Antioch (although he remained in Constantinople). Isaac II considered the possibility of Balsamon’s election as patriarch of Constantinople but preferred Dositheos of Jerusalem (1189–91). Balsamon acted also as hegoumenos of Blachernai (PG 104:975A) and of the monastery ton Zipon. His major work is the Commentary (Exegesis) on the Nomokanon of Fourteen Titles, begun in the 1170s; Balsamon’s aim was not only an explanation, but also a critical revision of contradictory and obsolete statements. Unlike his predecessors, Aristenos and Zonaras, Balsamon included in his commentary many legal texts now lost. He differs from Zonaras also in his political program; Balsamon staunchly supported strong imperial power and imperial political aspirations. He defended the privileges of the patriarchate of Constantinople and in this connection critically studied the Donation of Constantine (A. Pavlov, VizVrem 3 [1896] 21–29). His other canonical works included a treatise defending third-marriage, which were important for the aristocracy’s attempt to strengthen clan linkages (A. Pavlov, VizVrem 2 [1895] 503–11). Balsamon defended the role of the chartophylax against the protodikos. In 1195 he issued answers to canonical questions of Mark III, patriarch of Alexandria (ca.1195). He also wrote letters and epigrams that throw light on Byz. cultural life. As a canonist Balsamon was criticized by Neilos Kabasilas (A. Failler, REB 32 [1974] 211–23).

BANALITY in Western medieval law designated an economic monopoly imposed by landlords on their peasants; it included primarily the obligations to grind grain at their lord’s water mill, to bake bread at his oven, and to press grapes at his wine press. Banalities are known in Frankish Morea as jus linobrosis in quo actatur linum, “where the flax was worked on” (Longnon-Topping, Documents 38.13) or labotaga ubi fit oleum, “where olive oil was produced” (p.62.1). It is unclear whether these rights were of Greek origin or introduced by the Crusaders. The Greek term linobrocheion is frequently used in Byz. practika, for instance, together with opsonion and vivarium (Dölger, Sechs Praktika 36, A30) or with ennomion (Xenoph., no.15.24), that is, as one of the rents paid by peasants to their lord. A linobrocheion—as a work site—had to be located next to water, near a water mill (Lavra 2, no.105.23). A payment for using a mill, exagion, is mentioned in an act of 1089 (Xenoph., no.1.161). The existing sources do not, however, say that the use of these mills, olive presses, or places for soaking flax was coercive; it is plausible that former coercive rights were supplemented by regular payments imposed on the village as a whole or, indeed, that the use was not coercive but de facto unavoidable, since often mills belonged to the landlord.

BANDON (βάνδον), ensign or banner, eventually came to signify a small military detachment. As defined in the Strategikon of Maurice (86.21–22), “A bandophoros was a man who carried the ensign of a bandon.” The earliest evidence often refers to Persian banda. Malalas (Mal. 461.11–12) speaks of the “royal bandon” of the Persians, and Theophanes (Theoph. 319.5) reports that Herakleios took captive 28 Persian banda. Hagiographers of the 7th C. mention banda (W. Kaegi, Byzantina 7 [1975] 65–67), usually with ethnic designations. In the 10th C. a tourma was composed of five to seven banda, each bandon consisting of 50–100 mounted soldiers or 200–400 infantrymen. The commander of a bandon was called komes. Constantine VII equated bandon and topoteresa, considering the bandon as a territorial unit (De adm. imp. 50.94–110). Unlike other terms for territorial units, such as kleisoura or tourma, the bandon enjoyed longevity and survived at least in the empire of Trebizond (F. Usenski, V. Benešević, Vazelonski akty [Leningrad 1927] lx). LIT. Haldon, Praetorians 172ff, 276f. S. Kyriakides, Byzantinai meletai 5 (Thessalonike 1937) 537f. -A.K.

BANJANI. See Nikita, Monastery of Saint.

BANKER (πραπεζιτής). In the late Roman Empire the term trapezites was used synonymously with argyroprates, a moneylender (E. Hanton, Byzantion 4 [1927–29] 132f). Frequently cited in papyri, a trapezites was primarily an administrator of a trapeza or bank (F. Preisigke, Griewesen im griechischen Egypten 2 [Hildesheim—New York 1971] 59); in the 3rd–4th C. trapezitai were sometimes called demosioi or politikoi trapezitai—probably to distinguish them from private money changers. In the 5th and 6th C., these qualifying epithets seem to have disappeared; references are to plain trapezitai or to a lamprotatos trapezites (Preisigke, Wörterbuch 3:173f). Many, but not all, trapezitai were associated with propertied families, such as the Apions in Egypt, and served them as cashiers. Another term for the “banker”—money changer in the 5th–8th C. was kollekktarios (R. Bogaert, Chronique d’Egypte 60 [1985] 5–16).

The trapezitai of the 10th-C. Book of the Eparch (ch.3) formed a guild separate from the argyropra­tai, at that time the dealers in gold and silver. Their principal function was to exchange money; their responsibilities also included assaying coins of poor alloy and denouncing the sakkoullarioi (“bag bearers”), probably unauthorized coin dealers operating “on the market squares and in public streets.” There is no evidence that the trapezitai of this period served as moneylenders. Great emphasis was placed on the necessity for trapezitai to prove their honesty. They were also supposed to carry out certain imperial assignments, the character of which is not defined in the Book of the Eparch.

In late documents as well as in the Book of the Eparch, money changers are also called hatalaktais. In 15th-C. Thessalonike a katalaktes named Platyskalites had a sister who was married to another katalaktes, called Chalazas (S. Kougeas, BZ 23 [1920] 153–16). The term trapezites continued to be used, as in the case of Iannes Androuses, a money changer of the late 14th C. (PLP, no.901111). The shops of money changers were small; thus, in the mid-14th C. the Lavra monastery owned in Constantinople a katalakttika trapezia that it had acquired from different people, some of them noble (Lavra 3, no.123.105–110). In 1400 a certain Samaminthes rented from the monastery of Hodegetria in Thessalonike two trapezia that he made from katalakttika in a perfumer’s shop (MM 2:526.17–23). Ecclesiastical institutions thus avoided the prohibition on engaging in the money-changing business.

BANQUET (συμπόσιον), feast held in private households during religious and public festivities or to celebrate a wedding or birth of a child. The guests sat in the dining room (triklinon) around the best table in the house. They either reclined on couches or mattresses (see beds) or sat on chairs and benches. At a banquet sponsored by Philaretos the Merciful the imperial guests sat at a round ivory table that accommodated 36 people (Vita, 137.31). Guests were seated according to their social position; usually ecclesiastics occupied the place of honor to the right of the host. Women and children sat apart in another room and were rarely introduced to the guests (Vita, 139.32–35). The host provided food, wine, and entertainment—music, song, and dancing. The clergy stayed only for dinner and had to leave when the entertainment began. Kekaume-
nos recommended avoiding banquets in order to be spared their intrigues and idle talk (Kek. 124.14–20).

Imperial banquets were held at the palace to mark the emperor's birthday, coronation, marriage, or birth of a child. They were also held on religious feasts and public holidays. On such occasions the emperor invited high officials along with the church hierarchy. The guests wore their insignia and regalia. The emperor sat at a separate "golden" or "honorable" table, joined only by the six most important state officials. The banquets were held in various palace rooms with different seating capacities. Therefore, each banquet had a different group of participants. The seating was arranged according to a strict protocol. Such occasions were both solemn and festive, including the distribution of imperial gifts to courtiers and songs and dances. A Westerner like Liuterand of Cremona criticized these imperial banquets as obscene and too lengthy, with food reeking of garlic, onions, and leeks. By the 14th C. such banquets were given only five times a year, on religious feast days (pseudo-Kod. 219.27–220.7).

In a typological illustration in Athens, Nat. Lib. 211 (G. Galavaris, Bread and the Liturgy [Madison, Wisc., 1970], fig.94), a table being heaped with food by attendants is compared to John Chrysostom serving the faithful at an altar.

BAPHEUS (βαψεύς, often incorrectly called Baphaion), site in Bithynia of a crucial battle in which Osman defeated the Byz. army under George Mouzalon on 27 July 1302. By this time, the Ottoman Turks had penetrated to the region of Nikomedea and threatened famine by blocking its communications. Mouzalon, with a force of 2,000, hoped to relieve the city and allow the inhabitants, who had taken refuge within its walls, to harvest their crops. Instead, the Turkish cavalry charge broke the ranks of the Byz., whose Alan contingent failed to participate, and Mouzalon withdrew ignominiously into the citadel of Nikomedea (Pachym., ed. Bekker 2:333–35). The battle produced a fatal weakening of the Byz. position in Bithynia, provoked a wave of westward-bound refugees, and left the defensible fortified towns as islands in a region soon overrun by the Turks. The exact site of the battle has not been determined; it was in view of Nikomedea, probably to the east.

BAPTISM (βαπτισμα, βαπτισμός), the sacrament of initiation into Christian life via ritual lustration in the name of the Trinity for the remission of sin. Baptism performed but once and never repeated was interpreted in the New Testament by metaphors of new beginning, esp. rebirth in the Spirit, dying and rising in Christ, restoration of sight and illumination, and with Old Testament types such as the Flood, the CROSSING OF THE RED SEA, and circumcision on the eighth day. Byz. authors like John of Damascus (Expositio fidei, ed. Kotter, Schriften 2:181–86, 231.23–35) develop these traditional themes.

In the early church an elaborate initiation process, including a lengthy catechumenate, preceded baptism, which took place in the Baptistery, principally at Easter Vigil, but also, in Constantinople, on EPIPHANY, LAZARUS SATURDAY, and PENTECOST because of the baptismal and resurrectional symbolism associated with these days. With the decline of the adult catechumenate and the shift to infant baptism (by ca.600), the ritual elements that marked the principal stages of this three-year process of initiation were concentrated within the last weeks of Lent. Finally, on Holy Saturday evening, while the congregation kept vigil in Hagia Sophia with lections recounting biblical types of baptism, the patriarch in the Great Baptistry blessed the font, presbyters and deacons anointed the candidates, and the patriarch himself baptized them and anointed them with chrism. Then the neophytes, vested in the white robes of sinlessness, made their solemn ritual entrance into the church to the chant of Psalm 31 with the baptismal troparion (Gal 3:27 plus alleluia) as refrain, to join the waiting congregation in the final rite of initiation, COMMUNION in the paschal Eucharist (Mateos, Typicon 2:84–89). (For the feast of the Baptism of Christ, see EPIPHANY.)

BAPTISTERY (βαπτιστήριον), a building or room containing the font and used for rites of baptism. The earliest known baptistery was a room within the Christian domus at Dura Europos. Beginning with Constantine I's baptistery at the Lateran Basilica in Rome and continuing into the 6th C., baptisteries were often distinct constructions with a variety of forms—circular, octagonal, square, rectangular, cruciform, or triconch. No rules determined the position of the baptistery relative to its church. It could be located in front of, to either side of, or behind the church building and sometimes lacked any direct connection with the church. Some baptisteries were provided with vestibules and subsidiary rooms, though the font was usually located in the center of the main space, often beneath a dome. After the 6th C. and probably as the result of changing baptismal customs, the detached baptistery disappears. The font was moved into the church, occupying a position in the narthex or in a room set aside for that purpose. In monastic settings, the function of the baptistery was frequently superseded by that of the phiale.

BARBARA, AL-. See Kaper Pera.

BARBARA (Βαρβάρα), saint; feastday 4 Dec. The different versions of her legend disagree as to her birthplace and the date of her martyrdom. Barbara was supposedly a daughter of Dioskoros, a rich and noble pagan in Heliopolis (or Nikomedes or Antioch), who placed Barbara in a tower (pyrgos) to prevent her from marrying. Ironically, she had no intention of marrying. She soon converted to Christianity and, during her father's absence, ordered a third window installed in the bath to symbolize the Trinity. When Dioskoros learned this, he tried to kill Barbara, but a supernatural force brought her to a mountain-top; helped by a shepherd who was at once transformed into a rock, her father discovered her and dragged her off to trial and execution. The execution is variously ascribed to the reign of Maximinus the Thracian (235–38), of MAXIMIAN, or of another emperor.

The legend was probably created by the 6th or 7th C. JOHN OF DAMASCUS praised Barbara (Schrif-
terms of culture rather than creed: not only wild nomads but also Christian Latins and even Orthodox Bulgarians could be regarded as barbarians. The distinction between the “Romans” and barbarians (the embodiment of vanity, cruelty, greed, bad manners, illiteracy, and so forth) survived and was still applied to all peoples outside the empire.

As a conventional image of imperial triumph, statues of defeated barbarians were set up on the spina of the Hippodrome in Constantinople and were frequently represented in Late Antique art (e.g., Volbach, Elfenbeinarbeiten, no. 54) and on coins.

BARBARICARII, gold-weavers, embroiderers in gold, probably of Germanic origin; the 4th-C. grammarian Donatus described them as working “with gold and colored threads.” Under Constantine I they were still private laborers, but later in the 4th C. state “factories” were founded in which they worked under the supervision of three praepositis branbaricariorum [sic] sive argentariaorum, who were posted in the West—Arles, Rheims, and Trier; in the West they were under the jurisdiction of the Comes sacrarum largitionum. In the East their function included the decoration of armor (helmets) and they were under command of the magister officiorum. By 374 their factories were known in Constantinople and Antioch, but the 5th-C. Notitia dignitatum locates them in every eastern diocese except for Thrace and Illyricum, which shared one workshop.

LIT. O. Seeck, RE 2 (1896) 2856ff. –A.K.

BARBARO, NICOLÒ, Venetian doctor attached to the fleet of Venice and eyewitness to the fall of Constantinople to the Turks; born ca. 1400, died after 1453. Barbaro kept a detailed diary of the siege from 2 Mar. 1451 to 29 May 1453. Back in Venice and nearly a year (at least) after the event, he reworked his record into an account that survives in the Venetian dialect autograph MS. His perspective on the siege is favorable to the Byz., highlights the Venetian contribution (e.g., he identifies leading Venetian participants, ed. Cor-

net, pp. 16–18), and accuses the Genoese of undermining the city’s defense, thereby complementing the accounts of Leonard of Chios and Jacopo Tedaldi.

LIT. Karayannopoulos-Weiss, Quellenkunde 2:527. A. Carille, LMA 1:1439. –M. McC.

BARBARUS SCALIGERI, conventional name of the author of a chronicle entitled (also conventionally) Excerpta latina barbari. The Greek original was produced in Alexandria after 412 (the end of the patriarchate of Theophilos of Alexandria is the last event mentioned). While from the Greek original only a parchment leaf of the early 5th C. survives (P. Berol. 13296), an awkward Latin translation of ca. 700 is preserved in a single MS (Paris B.N. lat. 4884). The name Barbarus Scaligeri was given for its first editor, the humanist Joseph Justus Scaliger (1540–1609).

The chronicle consists of three sections: a world history from Adam to the fall of Cleopatra; a list of rulers (Assyrian, Egyptian, Greek, Persian, etc.) to which lists of Jewish high priests and Roman emperors have been added; and a list of Roman consuls from Caesar to 387. The list of emperors, which extends to Anastasios I, is considered an interpolation. The chronicle of Barbarus Scaligeri was based on older chronicles by Hippolytos, Sextus Julius Africanus, and Eusebios.

The Greek parchment leaf contains colored, strip illustrations paralleling the papyrus Goleniščev of the so-called Alexandrian World Chronicle: it has busts of saints, a scene of martyrdom, and one of the earliest representations of the walls of Constantinople (H. Lietmann in Quantalacumque Studies Presented to Kir sopf Lake [London 1937] 339–48).

BARBER (κουρέας). Information on barbers is scanty, despite the important role hair-cutting played in Byz. (e.g., through the monastic tonsure, or as a form of punishment, or as an expres-
sion of social attitudes through growing a beard. In late antiquity there were professional barbers, and Diocletian established the price of a haircut as 2 denaria. According to the Miracles of Kosmas and Damianos, a butcher could become a barber; he needed only special tools, kourika ergaleia, and some funds (around 50 nomismata) to set up a shop (H.J. Magoulias, BS 37 [1976] 28f). Some barbers worked in the precincts of churches; in the 14th C. Matthew Blastares mentioned barbershops operating at Hagia Sophia alongside the shops of perfume sellers (Rhalles-Potles, Syntagma 2:483,6–7). There were also barbers at the imperial palace; according to a legend, Emp. Julian dismissed all of them but one (Theoph. 47.12). Law codes (e.g., Basil. 60.11.1) mention barbers working near playgrounds.

BARBERINI IVORY (Paris, Louvre, inv. no. OA 9063), carved ivory panel that takes its name from the cardinal-legate whose collection it entered in 1625. The ivory is often assumed, with insufficient reason, to be one leaf of the so-called five-part diptychs. The mounted emperor is usually said to be Anastasios I; the suggestion that he represents Justinian I (D.H. Wright, 3rd BSC Abstracts [1977] 6f) is more likely to be correct. The right panel is now missing, but the military figure to the emperor’s left, presenting a wreath-bearing Nike, lends some support to the notion that ivories such as this were presented to the emperor rather than by him. The personification of Terra (Earth) at his feet and the Indians and other barbarians making offerings in the lower panel complete a selection of figures deriving from Roman imperial iconography. The pagan themes of tribute to majesty, of victory, and of prosperity are, however, christened by the beardless Lord set axially above the earthly ruler among cosmological symbols. The thesis that the central panel is a replacement (P. Speck, Varia II [Berlin 1987] 348–53) is unlikely, given that all four preserved panels bear liturgical notations written on the back, indicating that they were in Gaul as early as ca.613 (E. Hlawitschka, Rheinishe Vierteljahrsblätter 43 [1979] 1–99).

Lit.: Delbrück, Consulardiptychen, no.48. —A.C.

BARDANES, GEORGE, church official and metropolitan; born Athens second half of 12th C., died ca.1240. Bardanes (Βαρδάνης) was a central figure and spokesman, along with John Apokaukos and Demetrios Chomatenos, for the ecclesiastical independence of Epirus from the patriarch at Nicaea in the period of the Latin occupation of Constantinople. He began his career studying in Athens with Archbp. Michael Choniates; when Choniates went into exile on Keos after 1205, Bardanes served him as hypomnematographos and chartophylax (J. Herrin, DOP 29 [1975] 262f). He represented Choniates in Constantinople in 1214 in the discussions with Cardinal Pelagius of Albano and by 1218 was serving in the bishopric of Grevena, still with the title of chartophylax. Strongly recommended by Apokaukos, his friend and correspondent on matters of canon law (M.Th. Fögen in Cupido Legum 47–71), Bardanes was appointed metropolitan of Keryra in 1219 by Theodore Komnenos Doukas, without consulting the patriarch at Nicaea. He contributed much to the schism between the churches, officially declared in a letter to Patri. Germanos II, written by
Bardanes in 1228 on behalf of the Epirot clergy (R.-J. Loenertz, EEBS 33 [1964] 87–118), and ended in 1233 by another letter of Bardanes. In 1235/6 Manuel Angelos sent him on an embassy to Frederick II and Pope Gregory IX, but illness prevented him from fulfilling his mission. While convalescing at the monastery of St. Nicholas of Casole at Otranto, Bardanes took part in a discussion with a Franciscan, Fra Bartolomeo, on purgatory, of which Bardanes has left an account.

—R.J.M.

BARDANES TOURKOS (Bαρδάνης ο έπικλημ Τοῦρκος), unsuccessful rebel in 803. Of Armenian origin, Bardanes was a patrikios and strategos of the Anatolikon under Nikephoros I (Toumanoff, “Caucasia” 150); he is probably to be identified with the patriarch Bardanios who, as domestikos ton scholon under Constantine VI, arrested Plato of Sakkoudion and, as strategos of the Thrakesion, supported Irene against Constantine in 797 (Guillard, Titres, pt.IX [1970] 339f). In 803 Emp. Nikephoros I appointed Bardanes “manostrategos of the five eastern themes” (TheophCont 6.14–16), probably anticipating an offensive against the Arabs. On 18 July Bardanes was proclaimed emperor reportedly for economic reasons: Nikephoros may not have paid the troops, Bardanes had equitably distributed booty from Arab campaigns, or Bardanes may have opposed the high taxes of Nikephoros. His supporters included Michael (II), Leo (V), and Thomas the Slav.

According to several Byz. sources (Genes. 6.4–7.36; TheophCont 7), before his revolt Bardanes visited a holy man who prophesied that his rebellion would fail, Michael and Leo would each reign, and Thomas would himself instigate a revolt. The Armeniakon troops refused to join Bardanes, who unsuccessfully besieged Chrysopolis for eight days. Michael and Leo deserted him, and Bar- danes withdrew to Malagina to negotiate with Nikephoros, who apparently used Joseph of Kathara as an intermediary (see Moechian Controversy). Receiving a written guarantee of safety confirmed by Patr. Tarasios, in Sept. Bardanes took refuge in the monastery of Herakleon in the port of Kios (in Bithynia), where he became a monk under the name Sabbas. He moved to a monastery that he had built on Prote, but Nikephoros confiscated his property, arrested his supporters, and blinded him.

—P.A.H.

BARDAS (Βάρδας), caesar; died 21 Apr. 866 (TheophCont 206.13). An Armenian from Paphlagonia (Toumanoff, “Caucasia” 136) and brother of Empress Theodora and Petronas, Bardas began his career in the military. In 837 Emp. Theophilos, who entitled him patrikios, sent him with Theophobos into Abchasia, where he was defeated. He may have played a small role during Theodora’s regency for Michael III, but after helping Michael dethrone her by assassinating Theoktistos, he was named chartoularios tou ka-nikeleou, magistros, and then domestikos ton scholon. In 859 Michael entitled his uncle kouropalates and on 26 Apr. 862 crowned him as caesar.

An outstanding administrator, Bardas was responsible for many achievements of Michael’s reign, including the baptism of Boris I of Bulgaria, the mission of Constantine the Philosopher and Methodios to Moravia, and the election of Patr. Photios. Bardas contributed to the revival of secular learning by organizing a school in the Magnaura and patronizing scholars such as Leo the Mathematician (Lemerle, Humanism 185f). From his first marriage he had two sons—one he named domestikos ton scholon, another a strategos—and one daughter. He married his second wife, Theodosia, ca.855 and divorced her ca.862, but probably continued to live with his daughter-in-law Eudokia Ingerina, who had joined his household after the death of his eldest son, apparently ca.857. According to Niketas David Paphlagon (PG 105.504C), Bardas deposed Patr. Ignatios for condemning his relationship with Eudokia as
incestuous. Bardas was assassinated by Basil (I) while campaigning with Michael in Asia Minor. Following other numerous scenes from his life, this last event is depicted in the Madrid Skylitzes MS (Grabar-Manoussac, Skylitzés, no. 195) in a manner suggesting that Michael III was responsible for Bardas's death.

BAR HEBRAEUS. See Gregory Abū'l-Faraj.

BAR HEBRAEUS. See Gregory Abū'l-Faraj.

BARLI (Bápo), Adriatic port in Apulia, occupied by the Byz. in 875/6 and used as a military base during their recovery of southern Italy under Basil I. In 893 Bari became the residence of the strategos of Longobardia and later of the Katepano of Italy. The Normans conquered the city in 1071. The population of Bari was predominantly Lombard, the local language was Latin, and the ecclesiastical rite was and remained Roman Catholic throughout the Byz. period. As the capital of Byz. Italy for almost 200 years, however, Bari experienced the presence of a conspicuous number of non-Italian officials, the immigration of new inhabitants from all parts of the empire (Greeks, Armenians, and Jews), and frequent contacts between the local upper class and Constantinople. In fact, 11th-C. documentation shows that many members of the upper class of Bari were bilingual and acquired Byz. tastes in art and literature. According to the local annals (MGH SS 5:51–63), Bari was also the center of Italian opposition to the Byz. government. There is some evidence of trade between Bari and the empire. In 1087, local merchants brought the relics of St. Nicholas of Myra to Bari. The church of the city's new patron saint, Nicholas, was built on the site of the Byz. governor's residence (praetorium), which was given by Duke Roger to the archbishop of Bari in the same year. Schettini (infra) argued that the extant church is actually the remodeled shell of the Katepano's palace, but his thesis has been generally rejected, not least because a document attests the destruction of the palace in a revolt of 1079. Many fragments of Byz. sculpture are still preserved in the town.

BARLAAM AND IOASAPH, prose romance of uncertain date and authorship. "A story beneficial for the soul," it describes the conversion to Christianity of the Indian prince Ioasaph by the hermit Barlaam and the subsequent conversion of King Abenner by his son Ioasaph. The plot provides the opportunity to develop the principles of the Christian creed and its advantages over paganism. One of the most widely read Greek texts of the Middle Ages, Barlaam and Ioasaph survives in over 140 MSS, some probably of the 10th C.; the earliest dated MS is from 1021 (B. Fonkic, AB 91 [1973] 13–20). The story is of Oriental origin, reflecting to some extent the life of Buddha, but the path of transmission of the legend from India to Byz. is unclear. The date of composition and the authorship of the Greek Barlaam and Ioasaph are also under discussion. Scholarly tradition clings primarily to two names: John of Damascus and Euthymios the Iberian, who allegedly translated the work from Georgian. Probably neither is to be credited with this achievement, and the work should instead be assigned to an unknown John of Mar Saba of the 9th C. (?), whose name appears on dozens of MSS. Barlaam and Ioasaph was translated into various languages, Latin, Slavic, etc.

Five densely illustrated Byz. MSS of Barlaam and Ioasaph survive, dating from the 11th C. (Jerusalem, Gr. Patr. Stavrou 42) and later. The earliest have purely narrative illustration that closely follows the text, much like that of the Madrid MS of John Skylitzes. Examples of the 13th to 14th C. include miniatures of the Flood, the Crossing of the Red Sea, and other Old Testament scenes. Paris, B.N. gr. 1128 (14th C.) adds a notable Creation cycle, as well as scenes of the Infancy of Christ, Miracles of Christ, and Passion of Christ. It also depicts Barlaam as a monk in its frontispiece and includes scenes and figures, such as carpenters, drawn from everyday life. In all versions, Indian buildings, boats, beds, and other realia are represented as if they were Byz. Only the occasional turban suggests the tale's exotic
The name Ioasaph was adopted by John VI Kantakouzenos and several members of the Nemanjid dynasty, who had themselves represented as the monastic hero of the story at Studenica and Gračanica (V.J. Djurić, CahArch 33 [1985] 99-109).

E.M.J., M.J.J., A.K., A.C.

BARLAAM OF CALABRIA, theologian; born Seminara, Calabria, ca.1290, died Avignon? June 1348 (A. Pertusi, ItMedUm 3 [1960] 108 n.1). Born in southern Italy to an Orthodox family, he became a monk in his youth. In 1330 he moved to Constantinople, where he was Jegoumenos of the Aka­taletos monastery until 1341. A protégé of Andronikos III, he served as an Orthodox spokesman in Union negotiations in Constantinople, and, in 1339, as imperial emissary to the courts of Naples and Paris. A brilliant but arrogant and contentious scholar, in the mid-1330s he began to attack Hesychasm for both its theology and manner of prayer. He accused Gregory Palamas of Messalianism, and argued that the light on Mt. Tabor at the Transfiguration was created and not eternal. His intemperate criticism of the mystical exercises of the monks of Mt. Athos (whom he called omphalopsychoi, “with souls in their navels”) triggered the controversy over Palamism that was to divide the Byz. church for over a decade. The local council of Constantinople of 1341 (see under CONSTANTINOPLE, COUNCILS OF) condemned Barlaam and ordered his anti-hesychast writings burned. He returned to the West, converted to Catholicism at Avignon in 1342, and became bishop of Gerace in Calabria (1342-48). At Avignon Barlaam met Petrarch, who was later to study Greek with him. Barlaam was anathematized by the Orthodox church in 1351.

Bilingual, Barlaam left writings in both Latin and Greek. Most of his anti-Palamite works (except for his letters and an unedited disputation with Gregory Akindynos) were destroyed, so his views are known primarily from the rebuttals of his opponents. His 21 anti-Latin treatises on the Procession of the Holy Spirit and papal primacy do survive (in Latin), but are mostly unpublished. Barlaam was also interested in astronomy and wrote treatises on solar eclipses and the astrolabe.

BARLEY. See GRAIN.

BARNABAS (Barvâbœ), apostle and saint; feast-day (together with St. Bartholomew) 11 June. Originally from Cyprus, he taught with Paul in Antioch and Cyprus and thereafter with Mark. He is considered the founder of the Cypriot church. Eusebius of Caesarea (HE 1.12.1) states that some people listed Barnabas among the 70 disciples of Christ. The epistle of Barnabas was seen as authentic by Origen and was included in some MSS of the Bible (e.g., Codex Sinaiticus), but Eusebius and Jerome considered it apocryphal. The New Testament Epistle to the Hebrews was attributed to Barnabas in the 2nd and 3rd C., but Eusebius rejected his authorship. Although the so-called Gospel According to Barnabas, a piece of pro-Islamic polemic, has survived only in Italian and Spanish, Cirillo (infra) considered it to have descended from an apocryphal work compiled in the Judaean-Christian milieu before the 5th C.

Byz. legend usually connects Barnabas with Cyprus. His relics, together with a copy of the Gospel of Matthew allegedly copied by Barnabas himself, were discovered under a tree in Cyprus (488?); this tradition was used by the Cypriots as an argument against their dependence on Antioch (Theodore Lector 121.19-23). The Cypriot legend was developed by Alexander the Monk in his
eulogy of Barnabas. Another legend, accepted in the *Synaxarion of Constantinople*, stressed the connection of Barnabas with Peter—Barnabas was Peter’s companion and Peter ordained him; the memory of Barnabas was celebrated in Constantinople in the Church of St. Peter, near Hagia Sophia.

**BARSANOUCHIOS** (Βαρσανουχίος), monastic writer; died ca.545. An Egyptian by birth, Barsanouchios took up the vocation of a recluse at the *koimesion* of Abba Seridos at Thavatha, near Gaza. Together with another recluse at the same monastery, John “the Prophet,” Barsanouchios issued opinions, presumably in Greek, on a wide range of problems presented to him as questions coming from other monks, bishops, and lay people. The responses of the two holy men, called “the Great Old Man” and “the Other Old Man,” respectively, were gathered by a now anonymous monk of the monastery into a collection of some 850 questions and answers. As recluses, Barsanouchios and John corresponded with others only through intermediaries. Abba Seridos performed this service for Barsanouchios; the young Dorotheos of Gaza was intermediary for John. The texts of the responses of the two recluses furnish abundant evidence for many of the practical problems churchmen and others encountered in 5th- and 6th-C. Palestine. They approved the ascetical counsels of Evagrios Pontikos, while rejecting his “Origenism.” Their teaching was extremely influential in monastic circles. The kernel of their ascetical advice is the constant admonition to cultivate an attitude of freedom from and reliance on God.

**BARSAMA**, or Barsumas, metropolitan of Nisibis (from ca.470); born in northern Persia (as a slave?) between about 415 and 420, died 496. Educated in Edessa by Ibas of Edessa, he eagerly joined the Nestorians, stirring up such a hatred of the Monophysites that the “Robber” Council of Ephesus (449) demanded his expulsion from Ephesus. After the death of Ibas in 457, Barsama left Edessa and settled in Nisibis, where he was elected bishop. He successfully contested the authority of Babaway, metropolitan of Ktesiphon-Seleucia, and with the help of the Persian king Peroz (459–84) brought about the deposition of the metropolitan and a flogging that proved fatal; Barsama’s friend Akakios was appointed as Babaway’s successor. Barsama opposed the requirement of celibacy for the clergy and was himself married to a former nun. He founded the academy of Nisibis and invited Narsai of Edessa to teach there. A Syriac catalog of *Abû Ishî‘ Bar Berikâ* lists his sermons, hymns, and other works, of which six short letters (in Syriac) to Akakios of Ktesiphon have survived. At the end of his life Barsama opposed the *Henotikon* and the increasing influence of the Monophysites.

**BARTER ECONOMY.** Alongside the Byz. monetary economy there existed an element of barter that took various forms. First, small-scale producers may have exchanged their products in local markets, as did the 9th-C. peasant Metrios at a fair; but there he met a merchant who conducted his business in large amounts of cash (*Synax.CP* 721.30–34). Barter could be a first stage in transactions that eventually became monetized, as is evident by the development of Athonite trade (a clear case of barter is found in the vita of Athanasios of Athos [vita A, ed. Noret, par.38.9–30]; see also *Prot. nos. 7.99–100, 8.99–100*). Second, some taxes were paid in kind, not in the Byz. Empire proper but rather in outlying provinces. The Bulgarians, after the conquests of Basil II, were allowed to pay their taxes in kind. The conversion of these taxes into payments in cash, during the reign Michael IV, caused a revolt. Third, foreign trade occasionally took the form of an exchange of commodities. The *Book of the Eparch* (9.6) describes a classic barter situation:
Bulgarians or other non-Byz. go to Constantinople to exchange their goods; the linen merchants, acting as brokers, find the [Byz.] merchants who have the appropriate commodities and receive a commission, in cash, for their services. It is important to note the juxtaposition of a barter economy, resulting from the needs of outsiders, and the cash economy in which the Byz. merchants themselves operated. There is, finally, another type of barter, involving services. Professionals of one sort or another might receive their salary partly in cash and partly in kind; these include, for example, the bishops and priests of rural areas and the doctors of the hospital of the Pantokrator Monastery in Constantinople.

Given the fact that taxes were collected overwhelmingly in cash and cash transactions were commonplace, the role of barter must not be exaggerated. The importance of barter may have increased somewhat in the 7th–8th C., but in general its role was secondary to the dominant cash economy.

BARTHOLOMEW (βαρθολομαίος), apostle, treated as one of the Twelve, and saint; feastday in Constantinople (together with St. Barnabas) 11 June. Byz. legends present Bartholomew as teaching in Asia Minor where, together with Philip, he suffered a martyr’s death in Hierapolis. Already Eusebius of Caesarea (HE 5.10.3) was aware of Bartholomew’s journey to “India” (Ethiopia or Arabia?), whither Bartholomew brought the Gospel of Matthew written in Hebrew. Eventually, the legend developed that he was crucified in Arbanopolis in Armenia, whence his relics were brought in a lead casket first to Benevento and then to Lipari. Armenian texts from the 7th C. onward claimed that Bartholomew died and was buried in “Urbanopolis of Great Armenia,” which, according to van Esbroeck, was a new name for Nikopolis of Pontos. The presence in Armenia of one of the Twelve Apostles (not merely that of Thaddeus, one of the 70) served as a justification for Armenian ecclesiastical autonomy. In Byz. the veneration of Bartholomew was probably connected with Thessalonike: there, Joseph the Hymnographer received the relics of “the great apostle” and soon after built (in Thessalonike?) the Church of Bartholomew (PG 105:964A). Several eulogies of Bartholomew were compiled (e.g., by Theodore of Studios).

BARUCH (Βαρούχ), legendary friend and companion of Jeremias; pseudonymous author of several Hebrew and Judaeo-Christian apocalyptic books. The Book of Baruch or Baruch I, which develops the theme of sin and repentance, became popular with Christian theologians; it was commented on by Theodoret of Cyrus, Olympiodorus of Alexandria, and (in the 7th C?) John the Droungarios. Theodoret (PG 81:761A) juxtaposed Baruch with Paul (“the divine apostle”) and stressed the concordance between Old Testament and New Testament. Baruch II is a Syriac Apocalypse, probably of the early 2nd C. Baruch III, which may also date to the 2nd C., has survived in only two Greek MSS of the 15th–16th C. and—in different forms—in Slavic versions. It is accepted that Origen knew Baruch III and that it was written before 231, even though Origen (First Principles 2.3.6) found “clear indication of the seven worlds or heavens,” where Baruch III speaks of Baruch’s ascent to the five heavens: the first two of these house sinners; the third a dragon, a sea, primal rivers, the garden of Eden (?), the sun with the Phoenix, and the moon; the fourth, the souls of the righteous; the fifth, the angels.

BASIL (βασιλεύς), personal name (meaning “imperial, royal”). Unknown in antiquity and in the New Testament, the name first appeared in the 4th C. (O. Seeck, RE 3 [1899] 48; PLRE 1:1148f). Relatively rare in the early centuries (Theophranes the Confessor lists only four Basils), it became more popular in the 10th and 11th C. when, for example, Skylitzes mentions 25 Basils, almost as many as Theodore (26); it is perhaps no coincidence that the two emperors named Basil ruled in the 9th–11th C. In the later acts of Lavra, vols. 2–3 (13th–15th C.), however, Basil occupies
only the eighth place among male names. The puns based on the etymology of the name are self-evident: thus Photios (Epistulae 3:42:1346) called Basil the Great “the imperial (basileios) attire of the church.”

—A.K.

BASIL, archbishop of Seleukeia (from ca. 440); ecclesiastical writer; died after 468. Basil vacillated publicly and dramatically in his attitude toward Eutyches and Monophysitism—either from opportunism or genuine changes of heart. He first opposed the Monophysites at Constantinople in 448, supported them the next year at the “Robber” Council of Ephesus, and finally subscribed to their condemnation at Chalcedon in 451 (M. van Parys, Irenikon 44 [1971] 493–514).

Forty-one biblical sermons survive under his name, though at least two (nos. 38–39) are spurious; six pseudo-Athanasian sermons (PG 28:1047–61, 1073–1108) are now, however, attributed to him. Photios (Bibl., cod.168) read 15 of Basil’s homilies, noting the exegetical influence of Basil the Great and John Chrysostom; he approved their content but found the style too pretentious. Basil’s taste for dramatic form has led to his being credited with an influence on the kontakia of Romanos the Melode (P. Maas, BZ 19 [1910] 285–306). G. Dagron (Vie et miracles de sainte Thècle [Brussels 1978] 13–19) has argued that Basil is not the author of the vita and Miracles of Thécla, as is usually thought. According to Photios, however, he did write a poetical version of her Acta, which has not survived.

—B.B., A.M.T.

BASIL I, emperor (867–86) and founder of the Macedonian dynasty; born Thrace or Macedonia 830 or 835 (E.W. Brooks, BZ 20 [1911] 486–91) or on 25 May 836 (Adontz, Etudes 67), died Constantinople 29 Aug. 886. Of peasant origin, Basil had a brilliant career under Michael III, was crowned co-emperor in 866, and became emperor after Michael’s murder 23/4 Sept. 867.

In the Vita Basili Constantine VII described Basil (his grandfather) as an ideal ruler concerned with fiscal administration, justice, and protecting the poor and catalogued the many structures, including the Nea Ekklesia and the Kainourgion in the Great Palace, that he built or restored. Basil’s known reforms reveal his tendency to strengthen state control over economic life: he prohibited the exaction of interest and tried (but failed) to require peasants to pay taxes for abandoned neighboring lands. He stimulated the restoration of Roman law and promulgated the Procheiron and the Epangogé.

Basil faced resistance of various sorts: the rebellion of slaves of his cousin Asylaion was crushed; in 872 Basil’s general Christopher routed the Paulicians; John Kourkouas organized an aristocratic plot in 883–85. There were also troubles within the family: Leo, Basil’s son and heir, was imprisoned, allegedly slandered by Santabarrenos, and reconciliation was achieved only just before Basil’s death. Basil fought the Arabs both in the East and in Italy. He seized Zapetra and Samosata in 873 but suffered defeat at Mellite; in 878 Andrew the Scythian won a victory at Podandos but retreated from Tarsos. The successes of Nasar and Nikephoros Phokas in southern Italy only partly compensated for the Byz. loss of Syracuse. In Italy Basil sought an alliance with both Louis II and the papacy; he had to yield to Pope Nicholas I and replace Photios with Ignatios. Basil succeeded in occupying Cyprus for seven years. He died after a hunting accident. Together with members of his family, he is portrayed at the start of the Paris Gregory MS.

—A.K., A.C.

BASIL I, grand duke of Moscow and Vladimir (1389–1425); born 1371, died Moscow 28 Feb. 1425. Son of Dimitrij Donskoj, he was sent in his youth as a hostage to the Golden Horde. Soon after Basil succeeded his father as grand duke,
he married the Lithuanian princess Sophia (1391). He annexed Nižni Novgorod and withstood the incursion of Timur in 1395. In 1393 Basil objected to the commemoration of Emp. Manuel II in the diptychs by the pro-Byz. metropolitan Kiprian, reportedly saying, “We have a church but no emperor.” It was in response to this incident that Patr. Antony IV sent his letter defending the universal sovereignty of the Byz. emperor. Good relations were soon restored, however, between Basil and Constantinople, for in 1398 Basil sent the Byz. emperor funds to assist in defending the capital against the Ottoman siege. In 1413 (P. Schreiner, BZ 63 [1970] 294) or 1414 (Barker, Manuel II 345) Basil’s young daughter Anna was married to the Byz. crown prince John (VIII) Palaiologos; she died in 1417 of the plague. Basil, his Lithuanian wife, his daughter Anna, and her Byz. husband are all depicted on the so-called “Large Sakkos” of Metr. Photios (1408–31), probably made between 1414 and 1417 (D. Obolensky, ECHR 4 [1972] 141–46).

—A.M.T.

BASIL I, ANONYMOUS POEM ABOUT, a work in 12–syllable verses, probably written before 872, since the author prays for the emperor’s victory over “the friends of Mani,” i.e., the Paulicians. The beginning is lost. The author praises Basil I as a megas basilicus whose deeds surpass those of all other emperors and who has succeeded in subjugating “false tribes.” At the same time he emphasizes that Basil is a peacemaker (eirenopoios), “the lord of tranquility,” far removed from “impious struggles,” who pursues justice and treats archontes and the poor alike. The panegyric is strikingly similar to the epitaph of Leo VI for his father, as well as the Vita Basili and Genesios; the anonymous poet stressed more emphatically than these writers the humble origin of his hero, and compared Basil with David. This theme was apparently an element of official propaganda, since on a mosaic in the Kainourgion palace Basil’s children were depicted as praising God who raised their father up “from Davidian poverty” (TheophCont 335.2–3).

—A.K.

BASIL II, emperor (976–1025); born 958, died Constantinople 15 Dec. 1025. Crowned in 960, Basil and his brother Constantine VIII succeeded on the death of John I Tzimiskes. Until his exile in 985, the parakoimomenos Basil Lekefenos exercised power; thereafter, Basil II governed. The rebellions of Bardas Skleros and Bardas Phokas were overcome with aid from Vladimir I of Kiev, to whom Basil married his sister Anna. The revolts convinced him to curb the wealthy landholders. His law of 996 limited their rights to acquire their poor neighbors’ properties; monastic lands were restricted. Basil forced landlords to pay the allelenygon of their poor neighbors. Nevertheless, the magnates remained powerful; numerous families that later became prominent originated in Basil’s reign (Kazhdan, Gosp. klas. 255–58). He fought to destroy the Bulgarian state led by Samuel of Bulgaria. His first campaign (986) ended in disaster at Trajan’s Gate. Rebellions and the need to oppose the Fatimids in northern Syria delayed further action.

From 1001, when he made a durable peace with the Fatimid caliph, Basil campaigned repeatedly against the Bulgarians. In 1014 at Kleidion (Slavic Belasica, near the river Struma) he captured a large Bulgarian force; allegedly, he blinded 14,000, allowing one man in 100 to retain one eye. Stunned by this catastrophe, Samuel died. Bulgarian resistance continued until 1018. Basil’s conquests were organized into the themes of Paestrion and Bulgaria. By the late 12th C., he was called “Bulgar-Slayer” (Boulgaroktonos). Croatia and Serbia became Byz. dependencies.

Basil forced David of Tayk/Tao to promise his lands to Byz. upon his death, and in 1000 Basil acquired most of them. In 1021–22 he defeated a Georgian effort to recover David’s territories, which became the theme of Iberia (V. Stepanenko, VizVrem 44 [1983] 211–14). In 1022 the king of Vaspurakan ceded his realm, which also became a theme. Around 1001 Basil had offered a marriage alliance to Otto III. Late in life, he planned aggressive expansion against Sicily and even the Western Empire.

Despite his wars, Basil’s prudent government
Basil II. Image of the emperor; prefatory miniature to a Psalter (Venice, Marciana gr. 17, fol.1r). The triumphant emperor is crowned by both the archangel Gabriel and Christ and is given a lance by the archangel Michael. At his feet, his defeated enemies; to his left and right, framed busts of military saints.

enriched the treasury. Devoted to military life, he refused to marry. Basil is depicted crowned by Christ, with his enemies in PROSKYNEISIS, in a psalter in Venice (Marc. Z.17—A. Cutler, ArtVen 31 [1977] 9–15). He was the recipient of the MENLOGION OF BASIL II.

—C.M.B., A.C.

BASIL II KAMATEROS, patriarch of Constantinople (Aug. 1183–Feb. 1186 [V. Grumel, REB 1 (1943) 261–63]). His career before the patriarchate is described in two unpublished speeches, by Gregory Antiochus and Leo Balianites, also a contemporary. A member of the Kamateros family, Basil served Manuel I primarily as a diplomat, but his mission to Rome (in 1169?) ended in a fiasco, and he was (temporarily?) banished. As a

man out of favor with Manuel, Basil was welcomed by Andronicus I, who had troubles with Pат. Theodosios Boradiotes; compelled to abdicate, Theodosios was replaced by Basil. Immediately Basil nullified Theodosios’s prohibition of the marriage between the illegitimate imperial offspring Irene and Alexios (despite their being close relatives) and freed the murderers of Alexios II from their solemn vow to be his guardians. The speech of Antiochos contains vague allusions to Basil’s ecclesiastical reforms: “The all-encompassing house of the church has been swept clean,” he says; no longer decked out in superficial ornament, the church stood now in all its natural beauty. The execution of Andronicus meant the end of Basil’s success. Even though he tried to gain the favor of the new ruler, Isaac II Angelos, by crowning him and by promulgating a synodal declaration that noblewomen forced by Andronicus to enter convents could return to secular status, Isaac did not want to retain a staunch supporter of his predecessor on the patriarchal throne; Basil had to abdicate and was condemned by the synod for permitting the marriage of Alexios and Irene. His subsequent fate is unknown.

—A.K.

BASILAKES (Βασιλάκης, fem. Βασιλάκινα), a family of Armenian or Paphlagonian origin. According to Matthew of Edessa, the noble Armenian Vasilak fell at the battle of Mantzikert in 1071. Nikephoros Basilakes made an unsuccessful attempt to usurp the throne in 1078 (see Basilakes, Nikephoros). George Basilakes was protopodros in 1094/5; he or his homonym participated in a plot against Alexios I. The will of Kale (Maria) Basilakina, produced between 1098 and 1113 (G. Litavrin, Starinar n.s. 20 [1970] 185–90; ViOč 2 [1971] 164–68), provides some data concerning the family’s affiliations and estates: they intermarried with the Dabatenoi and Pakouri­anoi and had high titles, including that of kouro­palates; Kale-Maria owned the village of Radolios granted her by Alexios I. By the mid-12th C. the position of the Basilakes family declined and they entered civil service. Constantine was envoy and treasurer “of foreign expenses” (ton ep’allo-

BASILEOPATOR

BASILEOPATOR (βασιλ(ε)οπάτωρ, lit. the "emperor’s father"), the office of protector or tutor of a young emperor. According to the Kletorologia of Philotheos (Oikonomides, Listes 101.1–2), this office was created by Leo VI and occupied the highest rung on the ladder of offices; Philotheos listed it among the "special" axiai (ibid. 109.1–2). The title was invented in the late 9th C. for Stylianos Zaoutzes, the father of Zoe, second wife of Leo VI; a few years later Romanos Lekapenos was granted the same title (Aik. Christophopolou, Symmeikta 2 [1970] 60) before he became caesar. According to Liutprand of Cremona, Leo Phokas ardently desired to become pater vasillaeos. There is no evidence that the title was in use after the 10th C. It was employed without a technical meaning in some texts anterior to the 9th C. and by some 10th-C. authors referring to the earlier period; thus, Symeon Metaphrastes, in the Life of Arsenios (died ca. 445), said that the saint was the tutor of the emperor’s

BASILEOPATOR | 263

BASILEOPATOR—Regel, Fontes 2:235, 21; both warrior and intellectual, he perished in the war against the Sicilian Normans. Other known members of the family were insignificant provincial officials: John was nephew of John Tzetzes, Michael acted as logaristes in the Miletos region in the early 13th C.; Basilakes, nomikos (?) in Mistra ca. 1296, was a scribe and poet.

Lit. Kazhdan, Arm. 103–06; PLP, nos. 2967–68. —A.K.

BASILAKES, NIKEPHOROS, theologian and writer; born ca. 1115, died after 1182 (cf. A. Garzya, BZ 64 [1971] 301f). Born to a noble family (that was, however, losing its preeminent position), Basilakes served as imperial notary and then as didaskalos of the Apostle at Hagia Sophia in Constantinople (ca. 1140). According to his own testimony, he was very popular because he introduced new techniques of teaching. He belonged to the circle of John II and delivered panegyrics of both the emperor and his supporters, such as John Axouch and John Komnenos, archbishop of Bulgaria. Involved in a dogmatic dispute begun by Soterichos Panteugenos, Basilakes was condemned in 1156/7 and exiled to Philippiopolis (P. Wirth, ByzF 1 [1966] 389–92). His subsequent career is unknown, although some letters from this period survive. He probably dedicated his time to writing; ca. 1160 he produced a collection of his works with an introduction, in which he described his education, teaching, and literary activity, mentioning among other works four comedies or satires now lost. Basilakes produced both Progymnasmata and panegyrics and monodies, dedicated to his contemporaries (e.g., the monody on his brother Constantine). Conventional in style, these works abound in antique imagery. A unique speech of indictment against a certain Bagoas presents the biography of an average man, son of a fisherman from Constantinople and a Scythian (Cuman?) woman from Cimmerian Bosporos. Bagoas, who was a catamite according to Basilakes, received a good education, pretended to be pious, and with the help of some monks wormed his way into the Palace. He also committed a sacrilege by inciting a certain Hierotheos to smear honey on icons in a church.

BASIL ELACHISTOS ("the least"), archbishop of Caesarea in Cappadocia (mid-10th C.); according to R. Cantarella (BZ 25 [1925] 293), he was born in Seleukeia. Basil wrote a commentary on the speeches of Gregory of Nazianzos, dedicating the work to Constantine VII. In the text he calls fortunate those cities which have philosophers as emperors (p. 6.3–4); in his commentary on the epitaph of Basil the Great (p. 25.3–18), the hero’s upbringing is strikingly like that of Basil I in the biography written by Constantine VII. Basil’s commentary encompasses ancient mythology and philosophy (e.g., refutation of Democritus’s concept of the existence of manifold worlds), rhetoric, painting, and sculpture; references to contemporary events are rare. J. Sajdak (Historia critica scholiastarum et commentatorum Gregorii Nazianzeni [Krakow 1914] 59–61) wrongly identified Basil with St. Basil the Younger.

Lit. Beck, Kirche 597. —A.K.
sons and was called *basileopator*. L. Rydén (*AB* 100 [1982] 494f) finds a reflection of this title also in the revised version of the vita of Philaretos the Merciful. After 1259, Michael VIII’s supporters tried to reintroduce the *basileopatoria* (Pachym., ed. Failsier, 1:105.13–16), which they found appropriate for the regent of the young emperor, John IV Laskaris.

**BASILEUS** (*βασιλεύς*), the main title of the Byz. emperor. Roman antiroyalism had camouflage[d] imperial monarchy behind the titles of *imperator-, autokrator* and *augustus*. In the Greek East’s literature and everyday speech, however, the Hellenistic royal title *basileus* (king) predominated for the emperors by the time of Constantine I (A. Wifstrand in *Dragna Martino P. Nilsson a.d. IV Id.* *Itul MCMXXXIX dedicatum* [Lund-Leipzig 1939] 529–39) and prevailed outside of 4th–6th-c. official documents. The emergence of barbarian kingdoms in the West imposed a distinction between universal monarchy—official documents in Constantinople seem to have used the term *basileus* for only the Persian shah—and these lesser rulers, whose Latin title *rex* was transliterated into Greek, while *basileus* increasingly was understood as "emperor" in unofficial usage. Common parlance, biblical example, and Hellenistic theories of kingship probably combined with Persia’s final collapse to encourage Herakleios to replace the traditional title *autokrator* with *pistos en Christo basileus* in an edict issued in 629, which symbolized the empire’s progressive hellenization (cf. I. Shahid, *Byzantion* 51 [1981] 288–96). A century later, the title began to appear on silver coins of Leo III and on gold coinage under Constantine VI.

The additional qualifier “of the Romans” (*basileus Rhomaion*) also goes far back in popular usage, but first appears on imperial seals in 654–68 (Zacos, *Seals* 1:19, no.18) and, for example, on Constantine IV’s subscription to the Third Council of Constantinople (680). An imperial document’s *institutio* uses it in connection with the Second Council of Nicaea (24 Sept. 787; *Reg* 1, no.346), but the combination first gained wide publicity on miliaria of Emp. Michael I Rangabe, in obvious response to Charlemagne’s imperial dignity (*DOC* 3.1:178). This Byz. assertion of Roman legitimacy sparked numerous disputes in diplomacy with Western rulers; the qualifier became the rule in chrysobulls and diplomatic letters down to 1453 (Döger, *Diplomatik* 141–48), but disappeared from coinage after Nikephoros III Botaneiates, except for a brief reappearance under the Palaiologoi (V. Laurent, *Cronica numismatica et archeologica* 15 [1940] 198–217). From the 9th c. onward, *megas basileus* is sometimes equivalent to the contemporary meaning of *autokrator*.

**Use for Foreign Rulers.** The applicability of the term *basileus* to foreign rulers started to cause problems for Byz. when its Christian neighbors began to challenge the Greek monopoly on the imperial status. As for the German emperor, the Byz. accorded him the title *basileus* of the Franks (but not *Rhomaioi*, Romans); a greater threat was the claim of the Bulgarian ruler to the title “*basileus* of the Rhomaioi and Bulgarians.” By the end of the 12th c. the nonofficial usage of the term *basileus* for foreigners became common: Niketas Choniates calls Roger of Sicily, Frederick Barbarossa, and Henry VII *basileus*; for George Akropolites, Kalojan was *basileus* of the Bulgarians; the Latin emperors of Constantinople and the Greek rulers of Trebizond were officially titled *basileis*. In the 14th c. the Serbian king assumed the title “*basileus* of the Rhomaioi and Serbs” in his official Greek documents. From the 13th c. onward, some authors used the title as a designation of some non-Christian Eastern rulers, for example, Timur, “*basileus* of Scythians and Massagetes” (*Sphr*. 204.24), or *megas basileus* Mehmed II (*Kritob*. 13.19), while other authors, like Doukas, avoided this title and gave to Eastern rulers the name of *tyrannoi*, *hegomenoi*, or *archegoi* (S.K. Krasavina, *VizVrem* 34 [1973] 102).

**BASILICA** (*βασιλική*), a type of church building. In Roman architecture, a basilica was a hall or building used for large assemblies and serving as a market, law court, or palace audience hall. The term is used by Eusebius of Caesarea to denote a church; thereafter, in Byz. Greek, it generally refers only to profane structures, with rare exceptions (cf. D. Feissel, *Recueil des inscriptions chrétiennes de Macédoine du IIIe au VIe siècle* [Paris 1983])
Most commonly, the basilican church is characterized by an oblong plan consisting of a nave (NAOS) usually with two or more aisles and terminating in an APSE or tribunal. Generally, basilicas were covered with wooden trussed roofs and illuminated by clerestory windows. As a church type, the basilica displayed many regional variations with respect to proportions, number of aisles, and presence of a NARTHEX (or vestibule), ATRIUM, transept, GALLERIES, PASTORPHIA, etc. Typically, the nave was used for processions by the clergy, with lay persons occupying the aisles and galleries, if the latter existed. The basilica served as the standard church type until the 6th C. By this time, a variant employing vaulting throughout the building had come into being in areas such as Cyprus (A.H.S. Megaw, JHS 66 [1946] 48–56). A related development was the basilica with a dome or a tower over the nave. Although not as common after the 6th C., basilicas continued to be built. Beginning in the 9th C., a major revival of the basilica occurred, represented in Greece and the Balkans at Pliska and the Anargyroi at Kastoria as well as in Asia Minor (Hagia Sophia at Nicaea), though apparently not in Constantinople. Small-scale basilicas, however, constitute the most common church type until the 15th C. (For ground plan, see illustration in CHURCH PLAN TYPES.)

BASILICA DISCOPERTA, or "hypaethral basilica," a type of basilica in which the aisles and apse are roofed but the nave left open to the sky. The existence of this type is based on tenuous evidence. Only two ruined buildings—at Marusinac near Salona (426) and at Pécs—and a confused description by the PIACENZA PILGRIM of a monument in Hebron, "a basilica built with a quadrirporticus, with the middle atrium uncovered," suggest the type. The interpretation of the buildings at Salona and Pécs is debated, though they appear to have been roofless basilicas or open courtyards with exedrae along one of the short sides. E. Dyggve (ZKIRCH 59 [1940] 103–13) argued that this type represented the link between the classical heroon and the Christian MARTYRION, and that the type was also adopted for use in Late Antique PALACES (IDEM, Ravennatum Palatium Sacrum [Copenhagen 1941] 30f). Both theories have been largely discounted.

BASILICA (τὰ Βασιλικα, "the imperial [laws]"), or the Basilics, the term used from the 11th C. onward to designate an extensive collection of laws divided into six volumes or 60 books, begun under Emp. Basil I and completed in the first years of the reign of Leo VI (probably Christmas 888, A. Schminck, SubGr 3 [1989] 90–93). According to the preface composed by Leo, the work was to be a clearly arranged compilation of the legal material contained in the Corpus Juris Civilis, eliminating everything superfluous. The collection is based on all four parts of the Justinianic corpus, though there is little from the Institutes. The Latin texts, esp. those of the Digest and the Codex Justinianus, are presented in Greek translations (mainly of the 6th C.). The books are subdivided into titles, which are arranged according to subject and are always structured so that pertinent chapters from the Digest precede those from the Codex, which in turn precede those from the Novels. Many books of the Basilica have been handed down in only one MS; others can be reconstructed only partially through the indirect evidence provided esp. by the Epanagoge Aucta, the Synopsis Basilicorum, the Peira, the Tipoukeitos, and the commentary of Balsamon. Presumably in the middle of the 11th C. a catena commentary was appended to the work, composed mainly of excerpts from the writings of the 6th-C. Antecessores (the so-called "old scholia"); compared with these, the "newer scholia" (from the 11th and 12th C.) are fewer in number. –A.S.

The Basilika as a Source. The Basilika was considered the official collection of actual law, and the Book of the Eparch (1.2) prescribes that a notary be thoroughly familiar with the "60 books of the Basilika." The Basilika contains some precepts, however, esp. in the sphere of administrative and social regulations, that were definitely obsolete by
the 9th C., and its terminology is sometimes out of date and misleading (A. Kazhdan, *JOB* 39 [1989] 7–10). Some jurists, for example, the author of the *Meditatio de nudis pactis*, argued for the higher merit of Justinianic law over the *Basilika*.

—A.K.

**BASILIKE** (Βασιλική), a public building in Constantinople, located on the Mese, not far from the Milion. It formed a vast square courtyard, surrounded by colonnades inside and porticoes outside. Its relationship with the TETRASTOON is unclear. In the centuries immediately following the foundation of Constantinople it served as a legal and cultural center of the city: rhetoricians and lawyers assembled there, and in the 5th C. it housed the university and a library. A law of Theodosios II of 440 prohibited the establishment of shops and boutiques in the Basilike, bringing in horses, or celebrating marriages there. The building was burned down in 476 but immediately restored. Justinian I constructed a cistern nearby, probably the one now called Yerebatansaray (see under CONSTANTINOPLE, MONUMENTS OF). Justin II placed in the Basilike a HORIZON (perhaps a sundial). After the 6th C. the Basilike lost its position as an intellectual center and was considered primarily as a repository of old statues, including those of the emperors Herakleios and Justinian II. In such a connection “the golden-roofed Basilike” is cited several times in the *Parastaseis Syntomoi Chronikai*. After the 10th C. it is no longer mentioned.

—A.K.

**BASILIKON** (βασιλικόν), a small silver coin weighing 2.2 g introduced by Andronikos II shortly before 1304 and modeled in weight, fineness, and general appearance on the Venetian grosso or silver ducat. Both coins have on one side a seated figure of Christ, and on the other two standing figures, but on the Byz. coins these are Andronikos II and Michael IX instead of St. Mark and the doge. By analogy with its prototype of the ducy (*ducatus*) of Venice, it was called a basilikon (from *basileus*), but Byz. sources of the early 14th C. often made no distinction between the two and called both doukatoi. The basilikon was worth 1/12th of a hyperpyron, so that it corresponded to the old milliareion, which had become no more than a money of account as two keratia. The value of the actual coins, however, fluctuated with the price of silver and was usually less, as
ratios of between 12.5 and 15 to the hyperpyron were common. Half basilika were also minted. The introduction of the basilikon marked a revival in the empire of the large-scale use of silver for coinage, but in the 1330s and 1340s its weight was reduced in response to a general silver shortage that affected Western Europe and the Mediterranean world. In the 1340s the basilikon weighed no more than 1.25 g and after the 1350s it ceased to be struck.

---

BASILIKOS LOGOS (βασιλικός λόγος), a variety of enkomion addressed to an emperor on some notable occasion. Menander Rhetor (pp.76–94) set out the form and the sentiments considered appropriate; the major points were the emperor's origin, physical appearance (esp. his handsomeness), upbringing, habits, deeds in peace and war, four virtues (courage, righteousness, prudence or moderation, and good sense), philanthropy, and good fortune (tyche). The term is rare: Michael Italikos devoted basilikoi logos to both John II and Manuel I, but the regular title of an imperial enkomion was logos eis ton autokrаторα, "speech to the emperor"; such an enkomion was delivered on special occasions and regularly on the feast of Epiphany. Eusebios of Caesarea, in his panegyric of Constantine I, established the principle of encomiastic oratory as depicting the ideal emperor rather than giving a factual account.

Hunger (Lit. 1:157) distinguishes between a conventional panegyric-enkomion and a more individualized Mirror of Princes. The structure of the basilikos logos varied: Italikos's panegyric of Manuel I contains many conventional elements (origin, prophecy, portrait), whereas his enkomion of John II is primarily historical. The Byz. basilikos logos became "Christian" with an emphasis on piety, and the concept of tyche disappeared. As a specific kind of basilikos logos, Menander (p.180) distinguished the presbeutikos, a speech to the emperor on behalf of a city in difficulty. In Byz. this subgenre disappeared, and the term presbeutikos designated the report of an ambassador (e.g., Theodore Metochites) on his mission.

---

BASILISKOS (Βασιλισκός), more fully Flavius Basiliskos, usurper (Jan. 475–summer 476); died Limnae in Cappadocia after Aug. 476. Brother of the empress Verina. Basiliskos was consul in 465 and magister militum from 468. His expedition against the Vandal king Gaiseric in 468 ended in disaster, but Verina saved him from punishment. He helped to overthrow Aspar for which he received the title of first senator in 474. When Leo I and soon after him Leo II died, the anti-Isaurian faction in Constantinople urged Emp. Zeno to flee. Basiliskos was acclaimed Augustus. Basiliskos wanted to gain the support of the Monophysites. He published an edict (enkykliion) abolishing the decisions of the Council of Chalcedon. This policy met with broad resistance from the people of Constantinople, led by Patr. Akakios and Daniel the Stylite. An enormous fire in the capital, which destroyed many books and works of art, was interpreted as a sign of divine wrath against Basiliskos. The army commanders, such as Basiliskos's former allies Illos and Armatus, joined Zeno who returned to the capital welcomed by the faction of the Greens. Basiliskos sought asylum in a church. He was promised that he would not be executed, was exiled with his wife and child, and was starved to death. Zeno crowned the son of Armatius, also named Basiliskos, as Caesar and heir to the throne, but soon thereafter executed Armatus and enrolled the younger Basiliskos among the clergy; the latter probably lived until the reign of Justinian I.

---

BASILIUS PICTOR, mosaicist whose name is given in both Latin and Syriac at the bottom of a frieze of angels set up ca.1169 in the Church of the Nativity, Bethlehem, where Ephraim also worked. Kühnel (infra) suggested that an abbreviation in the Syriac inscription yields the toponym Moschem and that this northern Syrian village was the painter's place of origin. There is no necessary reason to connect Basilius with the inscription Basil[ius] me fecit in the Melisende Psalter (see Crusader Art and Architecture) said to have been made in Jerusalem.
BASIL OF ANKYRA, bishop (336–43, 350–60); died Illyria ca.364. An erudite and eloquent former physician, Basil was appointed in 336 to replace Markellos as bishop of Ankyra by the synod of Constantinople. He was deposed in 343, restored after 350, and finally deposed in 360 and exiled to Illyria. As a moderate Arian, he was caught between the Scylla of his own extremists and the Charybdis of Orthodox opposition. Athanasios of Alexandria (De synodis 41) confirms his role as leader of the Homoiousians. He played a prominent role in the arianizing synods of Sirmium (351), Ankyra (358), and Seleukeia (359). Eiphanius of Salamis preserves (Panarion 73.12–22) a Trinitarian treatise (Hypomnematismos), which Basil co-authored with George of Laodikea. Many scholars ascribe to Basil the essay On Virginity that is included among the spuri of Basil the Great (F. Cavallera, RHE 6 [1905] 5–14). Other works such as a polemic called Against Markellos mentioned by Jerome are lost.

BASIL OF IALIMBANA. See George of Cyprus.

BASIL OF OHRID, metropolitan of Thessaloniki, rhetorician; died ca.1169. In 1154 Basil had a debate with Anselm of Havelberg, yielding on many points. Pope Adrian IV (1154–59) sent Basil a letter asking for help in bringing about the Union of the Churches. Basil participated in the council at Constantinople in 1157 against Soterichos Panteugenos (see under Constantine, Councils of). In 1160 Basil delivered a funeral oration on Bertha of Sulzbach, wife of Manuel I, with conventional praise of both the emperor and the late empress. Basil corresponded with Tzetzes.

BASIL THE BOGOMIL, leader of the Bogomils of Constantinople; died Constantinople ca.1111. Nearly all we know about him comes from Anna Komnene (An.Komn. 3:218–28), who describes his arrest, trial, and execution. A monk and a doctor, he appears to have become a teacher in the Bogomil sect ca.1070. According to Anna, he was tall, clean-shaven with a withered countenance, and went about with 12 disciples whom he called apostles. One of them betrayed him under torture. Emp. Alexios I invited Basil to the palace and persuaded him to expound his teaching; if Anna can be believed, her father then dramatically drew back a curtain, revealing a secretary who had secretly written down Basil’s confession. Verbal persuasion having failed, and on the advice of Patr. Nicholas III Grammatikos and the synod, the emperor ordered Basil to be publicly burned in the Hippodrome. Anna’s account of the execution is uncommonly vivid. Her horror at Basil’s beliefs cannot wholly conceal a grudging admiration for “an inflexible and very brave Bogomil.” About these beliefs she says very little, referring the reader to the relevant section of the Panoplia dogmatike of Euthymios Zigenbos, who presumably used Basil’s palace confession as his main source.

BASIL THE COPPER HAND, leader of an uprising against Romanos I; born in Macedonia, died Constantinople ca.932. According to the chronicle of Symeon Logothete (TheophCont 912.6–7), Basil was an impostor who falsely assumed the name of Constantine Doukas (killed in 913) and collected a following of “many people.” Arrested by Elephantinos, tourmarches of Opsikion, he was brought to Constantinople and condemned by the eparch of the city to have his hand cut off. Basil returned to Opsikion and had manufactured for himself a copper hand holding an enormous sword. He then gathered a “crowd
of the poor" and started "the great rebellion" against the empire. The rebels seized the stronghold of Plateia Petra, where various kinds of victuals were collected and, according to Symeon Logothete, looted at random. Defeated by imperial troops, Basil was transferred to Constantinople, where he accused many magnates of involvement in his rebellion. After an investigation proved his charges false, he was burned at the stake on the Forum Amastrianum.

The major problem concerning Basil's revolt is whether it can be considered a popular uprising; besides the direct evidence of Symeon Logothete, this hypothesis finds support in Constantine Doukas's popularity among the common people. The chronology of the revolt (before Theophylaktos was elected patriarch) suggests dating the event between the famine of 928 and Romanos's novel of 934 and treating it hypothetically as a reflection of peasants' wrath and an incentive for the emperor's agrarian legislation.

Lit. A. Kazhdan, "'Velikoe vosstanie' Vasilija Mednoj Ruki," VizVrem n.s. 4 (1951) 73–83, with criticism by H. Grégoire, Byzantion 21 (1951) 500–02. – A.K.

BASIL THE GREAT, bishop of Caesarea (from 370/1), writer and saint; born Caesarea in Cappadocia ca.329, died probably in Caesarea 1 Jan. 379; feastdays 1 and 2 Jan. His two brothers, Gregory of Nyssa and Peter of Sebaste, also became bishops, while his sister, St. Makrina the Younger, was a model ascetic. Education in Constantinople and Athens grounded Basil in both Christian and classical culture. During the course of his studies he met Gregory of Nazianzos, who became his lifelong friend; his student friendship with the future emperor Julian, however, was doomed by circumstances. He soon abandoned rhetoric, an early interest, for the monastic life. After travels to monasteries in Egypt and Syria, he settled near Neokaisarea in Asia Minor.

As one of the Cappadocian Fathers, Basil contributed much to the development of the concept of the Trinity as based on the principle of homousios. In so doing he became involved in political and ideological struggles, esp. in combating Eunomios. Basil encouraged an active economic, social, and cultural role for monks; he preferred the koinobion to the eremitic life and viewed the monastery as a community of brethren who had to live and work together. Basil wrote sets of Rules for monks and nuns that are preserved in a short and a long version; they greatly influenced the development of monasticism both in Byz. and outside the empire and are characterized by a tone of moderation and common sense. Of his homilies, those on the Hexaëmeron are most noteworthy for their content and style.

The letters of Basil furnish much geographical and secular information about the Roman Empire in the 4th C. A work of special interest and importance is the essay (written for his nephews) on deriving Christian benefit from pagan literature. Basil argues that pagan works, both prose and poetry, should be read eclectically, not uniformly censored or condemned; classical literature can be morally beneficial to Christians and, since pagan morality sometimes approaches Christian ethics, may serve as a propaedeutic to the true faith. Of the many authors cited, Homer and Plato (not surprisingly) stand out. His authorship of the Liturgy ascribed to him is questionable, even though attested as early as the 6th C.

Representation in Art. Basil, as a purported author of a liturgy, is regularly depicted at the head of one line of the procession of bishops adorning a church apse; John Chrysostom leads the other. Basil has a distinctive pointed black beard and narrow face, evident already on a Sinai icon of about the 7th C. (Weitzmann, Sinai Icons, no.B.24). Episodes from his vita by pseudo-Amphlochos of Ikonion were illustrated as early as the 9th–10th C. in churches in Rome (J. Lafontaine, Peintures médiévales dans le temple dit de la Fortune Virile à Rome [Brussels-Rome 1959] 77f), while the 9th-C. Paris Gregory MS contains a variety of scenes relating to the saint in conjunction with Gregory's Homily 43 on Basil (fol.104r). Some of these scenes recur in 11th-C. MSS of the homilies as well (Galavaris, Liturgical Homilies 46–52). Among the frescoes in the Church of Hagia Sophia in Ohrid is one showing the saint first performing the liturgy (R. Hamann-MacLean, H. Hallensleben, Die Monumentalmalerie in Serbien und Makedonien, vol. 1 [Giessen 1963] fig.25); this theme also appears at the beginning of those liturgical rolls that contain the text of the liturgy of Basil. Narrative compositions from later periods are rare,
though there is a vita icon of Basil of the 13th C., now in the De Menil collection, Houston (Splendeur de Byz. 36, I.c.2).

-B.B., A.K., N.P.S.

BASIL THE NOTHOS (“bastard”), parakoimomenos; born ca.925, died after 985. The son of Romanos I by a bondwoman of “Scythian” (Slav?) origin, Basil was a eunuch from his boyhood. In 944—47 he was megas baioulous. Basil supported Constantine VII against Romanos I’s sons Stephen and Constantine and was rewarded with the titles of patrikios and parakoimomenos. In 958 he participated in the campaign of John I Tzimiskes against Sayf al-Dawla and was granted a triumphal procession at the Hippodrome (TheophCont 462.4). Romanos II pushed Basil into the background and replaced him with Joseph Bringas, thus inciting Basil’s hatred of Bringas; siding with Nikephoros II Phokas in his struggle against Bringas, Basil received from Nikephoros the highest title of proedros. Basil’s alliance with Nikephoros was brief: he joined Tzimiskes against Nikephoros, but again changed sides; he reportedly poisoned Tzimiskes (Skyl. 312.15—20). Basil administered the empire while Basil II was a child and used his power to accumulate enormous wealth. In 985, however, Basil II dispensed with his tutelage, exiled him to the shores of the Bosporos, and confiscated his property. In his Novel of 996 Emp. Basil annulled all the ordinances promulgated by Basil the Nothos.

Basil was one of the most lavish Byz. art patrons. Psellus (Chron. 1:13.11—22) comments on Basil’s concern for the monastery of St. Basil that he built in Constantinople. To this or some other house, he presented two reliquaries of a Symeon the Stylist, including one that allegedly contained the saint’s skull and is now at Camaldoli di Arezzo. The Treasury of St. Mark’s in Venice contains a splendid yellow jasper paten and chalice, the latter inscribed with the supplication of “Basil, proedros and parakoimomenos,” and thus datable after 963 (H. Belting, CorriRav 29 [1982] 52—57). The well-known enamel cross-reliquary now at Limburg—der-Lahn was commissioned by Basil in 964/5. He also ordered three very large books written on parchment of high quality: a collection of Taktika, including his own work on naval battles (Milan, Ambros. B 119 Sup.); a copy of the homilies of John Chrysostom (Athos, Dion. 70) dated to 955; and a Gospel book with the Pauline epistles in Leningrad (Publ. Lib. gr. 55).

-B.B., A.K., N.P.S.

BASIL THE YOUNGER, saint; died in Constantinople 26 Mar. 944 (less probably 952). His origins and early career are unknown. According to his vita he was brought by imperial officials from Asia Minor to Constantinople, where he was interrogated by Samonas, flogged, and thrown into the sea, but miraculously saved by dolphins. Angelide (infra) dates Basil’s arrival in Constantinople in 896, but the chronology of the vita is not reliable. Basil did not belong to any monastic community but lived in private homes (first with a certain John and his wife Helene, thereafter in the houses of the primikieros Constantine and of the Gongylas brothers), preaching morality and performing miracles.

Basil’s vita was written by his contemporary, the layman Gregory, a disciple of the eunuch Epiphanios; Gregory was a modest landowner possessing a proasteion near Rhaidentos. Although Gregory depicts some ordinary people, he focuses on Emp. Romanos I, his family, and courtiers such as Romanos Sarone and the patrikiaste Anastasia. The hagiographer describes important political events: the revolt of Constantine Doukas in 913, the death of Christopher Lekapenos, the Rus’ attack of 941, the fall of Romanos I. While some of these episodes took place outside, most of the action occurred indoors (Mango, Byzantium 82). A salient episode of the vita is the vision of the pious Theodora who served Basil for many years: during its journey to heaven Theodora’s soul passed customs houses (teloneia), and there-
BATHS (sing. βαλανείον, λουτρόν) remained an important element of urban culture during the late Roman period, functioning as centers of leisure and social intercourse. In Constantinople the most famous were the Baths of Zeuxippos. The Notitia urbis Constantinopolitanae indicates that 5th-C. Constantinople contained as many as nine public and 153 private baths (see also Constantinople, Monuments of). Separate facilities were provided for men and women, and the interiors were sumptuously decorated with marbles and statuary; they were heated by hypocausts. Gregory of Nyssa (PG 46:449C) ridiculed a miserly money-lender in a Cappadocian town who did not go to the public bath because he was reluctant to pay the price of three obols. Even clergy and monks used public baths, which were occasionally decorated with subjects from Christian iconography. The church, however, regarded public baths as centers of immorality, issued regulations prohibiting mixed bathing, and condemned frequent visits to the baths by clergy.

After the 6th C. a profound change occurred: most of the huge public baths fell into disuse either because of the decline in population or simply because they proved too costly to maintain. Some establishments were destroyed, others transformed into churches or army barracks. Some public baths continued to operate in major cities, but the overall attitude of the public toward baths and bathing had gradually changed. Attendance at the baths was no longer a normal part of everyday life but had become a luxury or hygienic necessity. The new attitude toward bathing, shaped by teachings of the church, is reflected in monastic typika; those of the 11th and 12th C., for example, vary as to the frequency of bathing they prescribe: from twice a month to three times a year, with the norm being once a month. Kekaumenos testified without astonishment that the Macedonian town of Servia at the beginning of the 11th C. had only one bath, located outside the city walls. Michael Choniates described a provincial bath as a smoky and drafty hut heated by an open hearth. An extraordinary exception to this trend is the sumptuously decorated bathhouse of Leo VI, which is the subject of an ekphrasis by Leo Chorosphaktes (P. Magdalino, DOP 42 [1988] 97–118).

Baths came to be associated with healing: sick monks or nuns and patients in monastic hospitals were permitted more frequent or even unlimited baths. This connotation entered Christian symbolism so that the church building was sometimes called a spiritual balaneion, and God might be designated balaneus, or bathkeeper (Germanos II, Homily 2, ed. S. Lagopates, 225.7–11).

Relatively few baths of post-6th-C. date have been uncovered by archaeological excavations, for example, at Sparta (Ch. Bouras, ArchEph 121 [1982] 99–112) and Trikkala (A. Tziaphalas, ArchDelt 31.2.1 [1976] 178–81). The evidence suggests that they continued the Roman principles of planning and construction, generally being divided into a series of vaulted or domed rooms for dressing, exercise, and cold, warm, or hot bathing. Monastic baths, which constitute a distinctive and important category, continued to be built throughout the Byz. era (Orlandos, Monast. Arch. 95–108).
BATOPEDI. See VATOPEDI MONASTERY.

**Battle Standard and Flag** (σημεῖον, βάσιν, φλάμμου). Battle standards such as the Roman eagle or dragon were used by late Roman infantry units until the 6th C., while cavalry units were identified by the vexillum, a square banner on a pole. The raising of the standards was the traditional signal to begin battle, and since they often served as rallying points, the rank of standard-bearer (bandophoros) was assigned to an exceptionally brave soldier (Prokopios, Wars 4.10.4). Armies of the 9th and 10th C. carried standards bearing relics or icons (McCormick, *Eternal Victory* 247f), and banners suspended from a cross are also mentioned (Vasiliev, *Byz. Arabes* 2.2:59). The labarum, the cross itself, and cross-like standards were used from Constantine I onward, esp. by Iconoclastic emperors, and later by Nikephoros II Phokas (Leo Diac. 8.5–7). Regimenal standards were commonly used in imperial ceremonies and processions (Haldon, *Praetorians* 287f) and the imperial units or tagmata kept their ceremonial standards (psychia, kippetra) both in the Churches of St. Stephen of Daphne, and in the Church of the Lord (De cer. 640.16–641.5).

Battle flags (banda) in the shape of a square field (kephale) with trailing streamers (phlammula, from Lat. flammulae, "small flames") appeared as early as the 6th C. and were used for signalling and identification. The *Strategikon of Maurice* (Strat. Maurik. 1.2, p.82.75–80) notes that each unit (meros) had a flag whose field was of one color with variously colored streamers attached to identify the division (moira). The *Strategikon* warns that too many flags might be a hindrance and source of confusion in battle (2.10). The units of the baggage train (touldos) were also designated by separate flags (1.9, p.102.9–12). The 10th-C. *Praecepta militaria* (Praecepta Milit. 14.27–34) records that separate flags identified each 50-man cavalry unit (bandos) and its spare horses in battle; flags were also used to mark the places of each unit when preparing the camp (18.30–33). Battle flags are often depicted in illustrations (S. Dufrenne,

_Byzantium* 43 [1978] 51–60), and the Madrid MS of John Skylitzes offers a rich repertoire of standards and flags without, however, assigning them to specific nations. Under Michael II (Grabar-Manoussas, *Skylitzes*, no.60, fig.18), for instance, both Byz. and Arab armies carried dragon streamers. Wall paintings in Cappadocia depict several types of standard featuring the cross (D. Wood, *Archaeology* 12 [1959] 38–46).

Flags for signaling and identification were also important in naval warfare. A special dark-colored banner (kamelliaukion) was hoisted on the flagship as the signal to begin battle (TAKTIKA OF LEO VI 19.41).

_B. A. C._

.BADWIT, village in Upper Egypt, site of the monastery of Apa Apollo, probably founded in the late 4th C. The two churches (north and south) are both of basilican plan and are richly outfitted with columns, pilasters, and various carved friezes, most being spolia of the 4th–6th C. There are several monastic complexes; some contain small chapels, as well as large transverse halls, probably prayer-halls, which are furnished with painted niches. The niche in hall no.6 of the northernmost complex represents the Virgin Mary flanked by Apostles. Some complexes have kitchens. The large complex (1–XV) southwest of the two churches probably housed the monks. There are also several tombs nearby.

_Bawit's_ history resembles that of the monastery of Apa Jeremias at SAQQARA. The two churches of Bawit evolved from structures which were not originally ecclesiastical in purpose. The surviving wall paintings, though simple and provincial in character, use Byz. themes of decoration (e.g., MAJESTAS DOMINI, Virgin "Galaktotrophousa" [see VIRGIN MARY: Types of the Virgin Mary]). The monastic community continued to flourish in the 9th C., as seen from papyri.

_B. A. C._

-A.K., A.K., R.B.
BAZEFID I (Παϊαζίτης and similar forms), Ot-
oman sultan (1389–1402); born 1354, died Ak-
şehir 8 Mar. 1403. The successor of Murad I, he
was the first of the sultans to attempt the conquest
of Constantinople. From 1389 to 1394 Bayezid
maintained his authority over the Palaiologoi
through established tributary alliances and by ma-
ipulating their dynastic struggles to his advan-
tage. As of 1389, his key Palaiologan vassals were
John V and Manuel II in Constantinople, Theo-
dore I in Mistra, and John VII in Selymbria. It
is unlikely that Manuel and John VII partici-
pated in his first Anatolian campaign, which included
the conquest of PHILADELPHIA (1389–90). Early
in 1390, however, Bayezid probably sanctioned
John VII’s plans for a coup in Constantinople. By
March 1390 John was besieging the city with
Turkish troops. Although John VII seized Con-
stantinople (15–14 Apr.), afterward he made no
major concessions to Bayezid, who was then cam-
paigning in KARAMAN. Following Manuel’s recov­
ery for Constantinople for John V and himself (17
Sept. 1390), John VII took refuge with Bayezid,
then returned to Selymbria and remained the sultan’s loyal vassal until 1399. Likewise, John V
dispatched Manuel to Bursa (see PROUSA) to re-
affirm their tributary alliance with Bayezid, at
which time Bayezid pressured John V to disman-
tle recently built fortifications outside the GOLDEN
GATE in Constantinople. When John V died (16
Feb. 1391) Manuel returned to Constantinople
and established his rule—doubtless with Bayezid’s
consent. Bayezid then summoned Manuel and
John VII to join his campaign against Suleyman
Pasha of Kastamonu (see KASTAMON) and Kadi
Ahmed Bürhaneddin of Sivas (June–Dec. 1391).
In spring 1392, Bayezid appointed Manuel to pre-
pare a naval expedition to Sinope, but then
aborted the enterprise.
Bayezid’s rapport with Manuel and Theodore
deteriorated in 1393. Manuel’s efforts to achieve
reconciliation with John VII were betrayed by the
latter himself to Bayezid, and Theodore’s seizure
of Monemvasia from Paul Mamonas (another of
Bayezid’s dependents) also angered the sultan.
Late in 1393 or early in 1394 Bayezid summoned
Manuel, Theodore, John VII, and other vassals
to his court at Serres. Amid acrimonious confron-
tations, Bayezid allegedly resolved at one point to
execute Manuel and additionally pressured Theo-
dore to surrender control of Monemvasia and
Argos. Shortly thereafter both Manuel and Theo-
dore renounced their pacts with Bayezid, and he
assaulted them as rebels. By summer 1394 Baye-
zd had begun the siege of Constantinople, which
lasted eight years. Meanwhile, devastating raids
were launched into the Morea in late 1394 or
1395, and again in 1397. In 1399 John VII was
reconciled with Manuel and governed Constanti-
ople during Manuel’s journey to the West. By
1401 the morale of the citizens was low, and John
VII was negotiating with Bayezid for surrender.
The city was saved, however, when Timur de-
feated and captured Bayezid at Ankara (see An-
kara, BATTLE OF) on 28 July 1402. Eight months
later, Bayezid purportedly committed suicide, still
a captive of Timur.

Many Byz. perceived Bayezid archtypically as
a neo-Pharaoh or Sennacherib, whose blasphemo-
ous attack on the people of God and their holy
city inevitably evoked God’s saving wrath. In this
vein, Bayezid’s epithet yıldırım (“lightning bolt”)
was usually interpreted as an allusion to all-
consuming violence and destruction, and not
merely acarly or impetuous daring.

“Manuel II Palaeologos on the Strife Between Bayezid I
81.

BEACON (φαυός). In the 9th C., Byz. created a
series of beacons across Asia Minor to give ad-
ance warning of Arab attack. Signals were flashed
from Loulon north of the CILICIAN GATES, where
the Arabs would be first observed, to Argos on the
Hasan Dağ in Cappadocia, and thence by a
series of unidentified stations to Mokilos above
PYLAI, then to Mt. AUXENTIOS and the imperial
palace, a distance of about 450 miles. The system
was reportedly created by LEO THE MATHEMATI-
cian, who devised a code for the interpretation
of signals, and had two identical water clocks (see
HOROLOGION) made for the terminal stations. His
work took account of the difference in longitude
and of the time the signal needed for transmis-
sion. Modern experiments suggest that one hour
would suffice for the entire distance. The beacons
consisted of huge bonfires on platforms or towers
within fortifications on isolated hills; two have
been identified at Loulon and Argos (TIB 2:135–
37, 223). In the open country of central Anatolia,
BEARD (γένος). In late antiquity the norm for men was to be clean-shaven, and imperial portraits of the 4th–6th C. present predominantly beardless rulers; after that date bearded images on coins came to symbolize imperial power or imperial seniority, although some exceptions can be found, such as Constantine V. On coins, a beard and moustache are often not portrait elements but conventions to distinguish a senior from a junior emperor. Later images of Constantine I, who was historically clean-shaven, show him with a beard, the shape of which was often changed to conform to the type worn by the current emperor. The huge beard of Constans II, added as an afterthought to the dies of his coins, gave rise to his nickname, Pogonatos (P. Grierson, NC 70 [1962] 159f).

The defense of beards originated not only within Christian circles, but also among pagans "philosophers" who saw, as Julian did, in the shaggy beard a symbolic rejection of effeminacy and a return to the classical fashion; Julian's satiric treatise Misopagón is addressed to those who criticized his beard. Beards served in the Byz. view as an indication of manliness, contrasted with beardless eunuchs; the deprivation of one's beard was considered a severe punishment. Monks were normally bearded.

After the schism of 1054 the beard became a symbol of national pride that differentiated Byz. from clean-shaven Latins. The cult of the beard was ridiculed, however, by satirists such as Theodore Prodromos (Boissonade, Anecd. 4:430–35). On the other hand, many 12th-C. authors (esp. Zonaras) relate that youths preferred to shave off their beard, evidently following the Latin style; the same fashion was mentioned by a 14th-C. historian (Greg. 1:396.17). Social prejudices against the beardless are reflected, to some extent, in proverbs and satiric texts, such as Španos. Touching the beard was an important element of body language.

—Ap.K., A.C.

BEASTS OF BURDEN (sing. ὑποζυγίον). To transport loads, the Byz. used animals, since in mountainous areas the cart could not always be employed. Horses were rarely used for transport or cartage; the main pack animals were asses (ονίκη) and mules (χειρινόι). Cattle and esp. donkeys are depicted as beasts of burden in illustrations of Old Testament narratives (Uspenskij, Seral'skij kodeks, nos. 260, 302), while, as in illustrations of Barlaam and Ioasaph, the ass remained the primary form of humble transportation. Camels and their drivers, kamelearioi, are usually mentioned in connection with Syria or Egypt. John VI Kantakouzenos, however, kept a number of camels in Thrace.

It is difficult to calculate the weight of a load; in the vita of Philaretos the Merciful (ed. A. Vasiliev, IRAIK 5 [1900] 724) a hypozugion carried 6 modii of grain. The load was sometimes put (or poured) into ceramic vessels attached on both sides of an animal. The rural population, unless exempt from this fiscal burden, was required to provide so-called parangaria—the duty of supplying military contingents or imperial officials with pack animals.

—J.W.N., A.K., A.C.

BEAUTY (καλλος). Physical beauty was not perceived by Christian apologists as a virtue—our bodies, according to Augustine, are defective, and will be improved by the Creator after our resurrection (V. Byčkov in Eikon und Logos [Halle 1981] 23f); Christ, in his Incarnation, assumed not a handsome body, but a plain and undistinguished one. Emphasis was placed on spiritual beauty, which might be accentuated by external ugliness,
esp. if the body was distorted and mutilated during a martyrdom or in ascetic exercises. Pseudo-Dionysios the Areopagite developed a hierarchy of beauty: the absolute beauty of God—an efficient and final cause, radiating into the world and attracting everything to itself; the beauty of heavenly beings; and the visible beauty of corporeal objects and beings. This visible beauty was understood as moral goodness rather than external handsomeness.

Beauty was also an aesthetic category. The beauty of nature and that of the Holy Writ, having been created by God, stood on a higher level of aesthetic values than the work of painters and writers (Gregory of Nyssa, PG 44:1197B). Although in theory beauty was linked to simplicity, Byz. ideologists discarded the early apologists' contempt for sumptuous ornamentation of the body and of buildings; external "beauty" came to occupy a significant place in both court ceremonial and liturgy. Ekphræsis praised the visible beauty of churches, icons, palaces, gardens, etc.; female beauty was described in romances and verses, and noted in funeral orations; and preambles to historical works named beauty of speech as one of the highest qualities.

BEBAIAS ELPIDOS NUNNERY, located in Constantinople, dedicated to the Theotokos Bebaia Elpidos ("of sure hope"). It was founded in the 1320s or 1330s by Theodora Synadene, niece of Michael VIII and wife of the megas stratopedarches John Komnenos Doukas Synadenos. When widowed, Theodora Synadene retired to her new foundation, taking the monastic name of Theodoule; her daughter Euphrasone, the "second founder" of the convent, accompanied her. The monastery is known only from its lengthy rule, written by Theodora between 1327 and 1342 and preserved in a deluxe parchment MS (Oxford, Lincoln College gr. 35), known as the "Lincoln College Typikon." It includes ten pages of double portraits, showing the founder's family as married couples in court and/or monastic costume. The sequence closes with images of the Mother of God, inscribed "he bebaia elpis," in the pose of the Virgin Hodegetria, gesturing toward Theodora and

Euphrasone on the facing recto. The final miniature (fol.12r) depicts nuns and novices gathered about their superior.

The convent, in the Heptakalon region, first housed 30 nuns, then 50. It followed the typikon of St. Sabas with regard to liturgy and dietary regulations. The convent possessed considerable property in Constantinople, its environs, and Thrace. It also received valuable donations of money and liturgical objects from relatives and descendants of Theodora who wished to assure their posthumous commemoration at the convent.

BEDE, called “the Venerable,” English Benedictine monk, polymath, historian, and theologian; born near Wearmouth (Northumberland) ca. 672/3, died Jarrow (Durham) 25/6 May 735. The Latin church fathers were major sources for him, but Bede also knew some Greek and possibly some Hebrew. His works on spelling, metrics, and computus, for instance, contain a little Greek (M.C. Boddin in Sources of Anglo-Saxon Culture, ed. P.E. Szarmach, V.D. Oginnis [Kalamazoo, Mich., 1986] 55, 62, n.16). W.F. Bolton considered Bede’s use of Greek “passive,” based on earlier writers such as Jerome and Isidore of Seville and on interlinear Greek-Latin texts, but K.M. Lynch (Tradtitio 39 [1983] 432–39) argues that, by the late 720s when Bede wrote his second commentary on Acts, he read biblical Greek. L.T. Martin (American Benedictine Review 35 [1984] 211–16) and A.C. Dionisotti (Revue Bénédiction 92 [1982] 123–29) show that in this work and in On Spelling, respectively, Bede systematically compares variants, both Greek and Latin. Where his Ecclesiastical History of the English People touches on events at Constantinople, he seems generally to draw on preserved sources (e.g., bk. 1, ch. 13 on a 5th-C. famine, plague, and earthquake; bk. 5, ch. 15 on the pilgrim Arculf’s trip to the Levant and Constantinople; see ADOMNAN), but he supplies independent testimony on Theodore of Tarsus, archbishop of Canterbury, who supported the Lateran Council of 649 and glorified “the Holy Spirit inefably proceeding from the Father and the Son” (bk. 4, ch. 17). Bede’s Anglo-Saxon connections with Rome presumably explain his revision of the Latin translation of the Passion of St. Anastasius (cf. C. Vircillo Franklin and P. Meyvaert, AB 100 [1982] 373–400) as well as the independent testimony on contemporary events in Constantinople supplied in the chronicle appended to his De temporum ratione, such as Justinian II’s career (chs. 567 and 577–78, pp. 529 and 531), Philippikos’s destruction of conciliar images (ch. 581, p. 523), and the Arab siege of Constantinople and attack on the Bulgars in 717–18 (ch. 592, pp. 534f).

BEEKEEPING. See APICULTURE.

BEER. See BEVERAGES.

BEG (mod. Turk. bey), a Turkish title of unknown origin appearing on the oldest monument of the Turkish language, the 8th-C. Orkhon inscriptions, meaning “nobility” and opposed to bodun, i.e., “the mass of the people”; later it acquired the meaning “lord” and was widely used in the Islamic world as the equivalent of the Arabic title ‘amir (see EMIR). The Karakhanids and the founders of the Seljuk dynasty used it. The 14th-C. Turkish emirates or beyliks were ruled by a senior lord known as the  ula (big) beg, whose territory was
divided into provinces governed by members of his family, simple begs. The title was also used in the Ottoman Empire and was introduced into Greek as a loanword (παίκης, πέγη, etc.).

—E.A.Z.

BEH G A R (ἐπαίτης). Assistance to beggars was consistent with Byz. PHILANTHROPY toward the unfortunate. The texts rarely distinguish “professional” beggars from the poor, who are described as ptochoi, penetes, aktemones, or aporoi. Scenes of begging are, however, abundant in the sources: thus, a 14th-C. historian (Greg. 3:225,14–16) describes indigents in the streets who were stretching out their hands to the crowd, pleading for a small coin to buy some bread; Ptochoprodromos tells of a rich woman who fed her husband less well than the beggars who came to her house. Palladios in the Lausiac History (164.7–10) writes of indigent people who lived in the stoa of a church and were in constant search of food; a woman even gave birth to a child in this stoa. The beggars were either naked or wore clothes specific to the beggar’s cloak, himatia epaitika (PG 65:228B). Anna Komnene (An.Komn., bk.12,3; 3:63,19–20) relates that her mother Irene distributed money among epaitai, who were either naked or sisyrophoroii, clad in goat-hair cloaks. Some beggars are described as insolent: when one of them was given a loaf of bread, he demanded a cloak instead (Moschos, PG 87:2860A). The Homeric Iros (Odyssey, bk.18) was for the Byz. an archetypal image of the insolent beggar. The vita of Andrew the Fool (PG 111:708C) speaks of the “poor robbers” who stole Andrew’s cloak; the hagiographer comments that citizens called them “children of the archierewa,” a term probably indicating an institutionalized organization of Constantinopolitan beggars. It is not clear whether “the poor brethren in Christ” who were fed at the ptochotropheion of Attaleiates (Typikon, ed. Gautier, 47:495–501) and the poor people who were annually chosen to have their feet washed by the emperor (Treibinger, Kaiseridee 126f) were genuine beggars or poor people able to sustain themselves. The government tried to restrict the number of beggars in Constantinople by prescribing that the quaestor employ able-bodied beggars or expel them from the city.

—A.K.

BEH A V I O R. The Byz. developed several images of ideal behavior. One of them was the eremitic ideal, with its tendency to mortification of the flesh in forms such as flight to the desert or wilderness, stylite life on a pillar, seclusion, and fasting. This ideal was contrasted with the communal life of the koinobion: both were based on the principle of tapeimata, “humility” (see MODesty, TOPos OF), but the cenobitic ideal placed more emphasis on discipline and activity than on individual abnegation. Attitudes toward philanthropy also varied; usually treated as a virtue, it was questioned by people such as Symeon the Theologian. Another criticism of asceticism (esp. in the 12th C.) came from clerical and lay intellectuals (such as Eustathios of Thessalonike) who contrasted hermits with virtuous married people living in the world.

The secular ideal of behavior was construed in several forms: individualistic behavior concentrated on the interests of the nuclear family, emphasizing obedience to the law and fealty to the ruling emperor (Kekaumenos); behavior based on tolerance and oikonomia, with developed bonds of friendship and values such as education and moderate enjoyment of life (Psellos); the knightly ideal, with stress on military prowess and personal fealty (Eustathios of Thessalonike). The ideal of women’s behavior slowly shifted from that of extreme piety (the prostitute transformed into an ascetic, a woman in male disguise eagerly searching for salvation) to the model housewife; in the 12th C. a new image appeared—the woman actively involved in political affairs, a patron of art, a faithful mistress

Byz. ideals of behavior were developed particularly in hagiography and in special moralistic treatises, such as those by Kekaumenos or Sapa­neas, in Mirrors of Princes, and in rhetorical writings (panegyrics, monodies, etc.). (See also ETHICS; Body Language.)

—A.K.
BEIRUT. See BERYTUS.

BÉLA III (Alexios to the Byz.), king of Hungary (from 1172); born ca.1148, died 23 Apr. 1196. Second son of Géza II (ruled 1141–61/2), by agreement with his brother István III Béla went to Constantinople ca.1163 to be betrothed to Maria Komnene, heiress apparent of Manuel I; Béla may have been named despotes (but see I. Stiernon, REB 21 (1963) 292). Manuel envisaged an eventual union of Hungary and Byz. In 1166 Béla helped fight Hungary to regain Croatia and Dalmatia, his promised inheritance. After the birth of Alexios II, the engagement to Maria was terminated; Béla (now caesar) wedded Anne of Châtillon, half-sister of Manuel’s empress. Upon the death of István III, Béla occupied Hungary with Byz. assistance. In 1181, he seized Croatia and Dalmatia; ca.1182–84 he took the Morava valley and Niš (Naissus). Following Anne’s death (1184), he sought the hand of Manuel’s relative Theodora, which would have given him a claim to the throne. When this marriage was denied, Béla’s daughter Margaret married ISAAC II ANGELOS. In 1192 he and Isaac met at Belgrade, but only in 1195 were they able to agree on joint action against Bulgaria. Isaac’s overthrow frustrated their cooperation.

—C.M.B.

BELGRADE. See SINGIDUNUM.

BELISARIOS (Βελισαρίως), general; born Germany on borders of Thrace and Illyricum ca.505, died Constantinople March 565. Belisarios became guard officer of Justinian I (who was then magister militum), doux of Mesopotamia (526), and then magister militum of the East (529). He defeated the Persians near Dara in 530, but Justinian recalled him because these operations ultimately failed. In 532 Belisarios suppressed the Nika Revolt. Belisarios commanded the successful expeditionary force that reconquered Africa in late 533, decisively defeated the Vandals, destroyed their kingdom in 533–34, and celebrated a triumph at Constantinople in 534. He occupied Sicily, then entered Rome on 9/10 Dec. 536. His victories were represented in mosaic on the Chalke Gate. Belisarios was recalled to Constantinople because of Justinian’s mistrust and fear of Persia. The emperor again sent Belisarios to Italy in 544, but recalled him in 548. Despite internal dissension and inadequate resources, he skillfully directed the reconquest of much of Italy from the Ostrogoths. In 559–60 he led an emergency defense against Cotrigur Huns who threatened Thrace and Constantinople. Justinian removed him as comes domesticorum in 562 but restored him to favor on 19 July 563. Belisarios was greatly influenced by his wife, Antonina, but was apparently indifferent to politics. He possessed many (possibly 7,000) bucellarii (private guardsmen). Master of strategy, operations, and tactics, with a swift and instinctive grasp of the potential in a situation, Belisarios was probably the best Byz. general. Prokopios of Caesarea, Belisarios’s assessor, described many of Belisarios’s campaigns and contributed to his high reputation.

—W.E.K., A.C.

BELISARIOS, ROMANCE OF, an anonymous verse text composed probably in the late 14th C. (cf. ROMANCE). The fate of the hero, blinded and reduced to begging at the central crossroads of Constantinople, exemplifies the workings of Envy. He has little connection with the historical Belisarios. Justinian I’s general, though both Prokopios and Theophanes the Confessor comment that envy destroyed Belisarios’s career. The legend first appears in a 12th-C. MS of the Patria of Constantinople and the Chiliades of Tzetzes, while the developed story reflects episodes from the 12th C. (the Petraliphas brothers and the siege of Kerkyra, 1149) and the 14th C. (the career of Alexios Philanthropenos). An underlying theme, unusual in Byz. literature, is a class-based tension between aristocrats and populace, which may account for the poem’s continued popularity in the post-Byz. period, when it circulated in two rhymed versions.

—E.M.J., M.J.J.
BELL (κώδων). Bells were used by the Romans for various purposes, for example, as children's toys (bells of this kind were found in catacombs) and as devices to signal the opening of public baths and help keep track of livestock. A bas-relief discovered in Galata and dated to the reign of Justin II shows a bell, struck by two men, that was apparently used to announce the beginning of circus games (H. Leclercq, DACL 3.2:1970).

Small bells for animals survive from the 4th C. onward; one is inscribed “St. Theodore help the horse (alogon)” (unpublished; Oxford, Ashmolean Museum, inv. 1980.26). Small bells were also among the silver horse fittings (see CHARIOT MOUNTS AND HORSE FITTINGS) excavated in Nubia (W.B. Emery, L.P. Kirwan, The Royal Tombs of Ballana and Qustul [Cairo 1938] 262–71, pls. 55–56). A pavement mosaic at Umm Harreyin in Syria, dated 499/500, shows a bull with three bells hanging from its neck (J. Balny, Mosaiques antiques de Syrie [Brussels 1977], fig.61). The Farmer's Law (ch.30) establishes the punishment for a thief who removed a kodon from a cow or sheep.

The metal content of two 6th- or 7th-C. small bronze bells in the Ashmolean Museum has been analyzed and found to conform to the traditional high-tin formula for bells, a formula imported into the western world from southeast Asia where it originated in the Iron Age (P. Craddock in Application of Science in Examination of Works of Art, ed. P.A. England, L. van Zelst [Boston 1985] 64).

Theodore of Studios (PG 99:841A), when describing the persecution of the faithful in Constantinople, exclaims that the tolling of bells (kodonismos) was heard throughout the whole city—Theodore's hostile attitude toward the kodonismos suggests that he meant secular rather than ecclesiastical bells, since Byz. churches at that time used a gong or semantron for signaling the hour.

In the West, however, bells were widely used from the 6th C. to summon the faithful to church services. The sophistication of the Latin West in bell-founding is amply demonstrated by Theophilus Presbyter's extensive description (11th C.? of the techniques involved (Schedula diversarum artium, ed. A. Ilg [Vienna 1874; rp. Osnabrück 1970] 319–31). Such experience may have led Basil I to seek bells in the West: according to the CHRONICON VENETUM (ed. G. Monticolo, 126.13–16), the Venetian doge Orso II (864–81) sent to Constantinople 12 bells “and from this time onward the Greeks started having campanae.” LIUTPRAND OF CREMONA (Antapodosis 3:34) describes a machina in the NEA EKKLESIA that struck (sonat) ecclesiastical hours—it may have been an automaton equipped with a bell.

Some monasteries used kodones instead of semantra to summon monks: one is mentioned in the hypotyposis of Athanasios of Athos (Meyer, Haupttukenden 136.22–23), another in the bypikon of the KECHARITOMENE NUNNERY (P. Gautier, REB 49 [1985] 77.1035). Balsamon (Rhalles-Potles, Syntagma 4:521.32–522.5), however, considers the semantron as typical of Byz. and stressed that the Latins used the “brass-tongued” kampana. Another 12th-C. writer (Eust. Thess., Capture, pp. 134.23–136.14) also describes the animosity of the Normans toward wooden gongs and asks in astonishment why they were not hostile to “the large semantikoi kodones” in the Church of St. Demetrios. Texts of the 14th and 15th C. more frequently mention church bells that also rang at times of danger. After 1453 the Turks prohibited the tolling of bells. Allatios, in the first half of the 17th C., wrote that bells of brass and copper were rare in Greece, although many very old bells were preserved on Mt. Athos.

—M.M.M., A.C., A.K.

BELL TOWER, a multistoried structure built as an integral part of, or adjacent to, a church with the purpose of hanging Bells. Though at times functionally and formally related to monastic PYRGI, bell towers are invariably distinct from them. Belfries are made of masonry-bearing walls, perforated on all four sides. The top floor, where the bells are hung, usually has the largest openings. Relatively few Byz. churches with bell towers have been preserved (e.g., at the Omorphoklistis near Kastoria; Zoodochos Pege near Samara, Messenia; Aphentiko, Brontochein monastery, Mistra); several others survive in Serbia (e.g., Bogorodica Ljeviška in PRIZREN; main church of Žiča monastery) and Bulgaria (Pantokrator church at MESEMBRIA). No surviving example appears to antedate 1200. This led earlier scholars (G. Millet, L'école grecque dans l'architecture byzantine [Paris 1916; rp. London 1974] 137f) to assume that the form was imported from the West during the Latin
BELT (ζώνη, Lat. cingulum), in the early Roman Empire an element of military costume. During the reforms of Diocletian and Constantine I, a zone became part of the dress of every official, with the exception of the empress, who did not wear a belt since she was not considered a true officeholder. The fashion for belts spread, and in 382 the state tried to restrict the use of belts by civilians. Monks and priests followed the trend, viewing the belt as a symbol of purity, temperance, and manliness.

Byz. belts were made of leather or cloth, with buckles of bronze. Luxurious specimens could be purple or gilded. Constantine VII Porphyrogenetos (De cer. 470.10–12) mentions purple and quasi-purple zostriai (the price of which ranged from 8 to 16 miliareis apiece). As official insignia, belts of court functionaries differed in form and color; some were studded with precious stones. Higher orders of the clergy (from priests on up) wore belts, made of silk, over the sticharion and the epitetrachelion; the epigonation was attached to the belt. All-metal belts are unknown, except for gold marriage belts. Numerous belt fittings have been found, primarily on the frontiers of the empire, in civilian as well as in military contexts.

The Virgin's girdle was one of the most important relics in Constantinople. Brought to the capital perhaps in the 5th C. and contained in a special reliquary box or Soros, it was housed in the Church of the Chalkoprateia, and ultimately at the Church of Blachernai. Its deposit at the Chalkoprateia was celebrated annually on 31 Aug.

BELTHANDROS AND CHRYSANTZA (Βέλθανδρος καὶ Χρυσάντζα), an anonymous romance in 1,348 unrhymed political verses, written probably during the 14th C. in a language that shows the confusion of vernacular and learned

BELT FITTINGS. Until recently most excavated belt fittings of the 5th–7th C. were from barbarian graves and it was assumed that those found on Byz. soil were imports (Davidson, Minor Objects 287); recent finds from Constantinople and Asia Minor, however, suggest that the Byz. appropriated and diffused barbarian fittings. Most surviving specimens may be assigned to the 6th–7th C.; they are primarily bronze, with rare examples in gold, lead, iron, or silver. The discovery of bronze stamping molds in Cherson testifies to the existence of the local production of belt fittings of Byz. type in the 7th C. (A.I. Ajababin, SovArch 3 [1982] 190–98). A fairly limited range of design types is replicated in various media. A few deluxe fittings even bear gemstones.

Byz. belt fittings assumed a variety of forms: those with hinged buckles versus those on which only the tongue is hinged; those secured to the belt strap with pierced studs versus those with a slit through which the end of the strap could be looped. Examples of the latter type, with rigid buckle and strap loop, tend to be of the 8th–10th C. and most bear zoomorphic decoration. Earlier (6th–7th C.) specimens boast a greater variety of shapes (hearts, triangles, lozenges) and often bear highly stylized floral or zoomorphic motifs. Iconic images (Christ, the Virgin Hodegetria) occasionally appear, as do simple biblical scenes (e.g., the Annunciation), pagan heroes (e.g., Herakles), invocations, and expressions of good luck. Most common, however, are personal monograms, which suggests that personalized belt fittings may have facilitated the retrieval of one's clothing at the baths. (See also BELT; Marriage Belt.)

BELTHANDROS AND CHRYSANTZA (Βέλθανδρος καὶ Χρυσάντζα), an anonymous romance in 1,348 unrhymed political verses, written probably during the 14th C. in a language that shows the confusion of vernacular and learned
elements characteristic of this genre. A striking feature of the plot is the elaborate Erotokastron (Castle of Love) in which, in a dreamlike atmosphere, Belthandros selects from a bride show the girl destined to be his wife. He eventually finds her in Antioch and, after many hazards including a false marriage with her maid, they live happily ever after. The romance is familiar with some of the vocabulary (e.g., LIZIOS, “liege”) and habits (e.g., HAWKING) of westernized feudal society. Antecedents for the plot have thus been sought in Western literature, for example, in the (admittedly rare) château d’amour of Provençal poetry or in the Tristan story (for a marriage with the beloved’s maid). Equally likely, however, are precedents within the Byz. learned tradition itself, in chroniclers’ accounts of bride shows (C. Cukane, JÖB 33 [1983] 221–48) and in the EKPHRASEIS of gardens and buildings in the 12th-C. romances. The mixture of motifs reflects the Western penetration of Byz. society following the Fourth Crusade.

-BENEVENTO (Beneventonas), city in Campania, capital of the province of Samnium in the late Roman Empire. In the late 530s Benevento was contested between Justinian I’s general Belisarios and the Goths. Circa 545 Totila conquered the city and destroyed its walls. The Lombards occupied Benevento ca.570; various Byz. attempts at reconquest (e.g., Constans II’s siege of 663) failed, and the city and the duchy of Benevento remained under the nominal suzerainty of Lombard kings.

Much construction occurred during this period. Theoderata, wife of the duke Romuald, built the monastery of S. Pietro outside Benevento (680s). Duke Arechis II (758–87) is credited with building a palace (perhaps an addition to the existing ducal palace), extending the city walls, constructing the palace-church of S. Sofia, and granting the monastery connected with S. Sofia a water pipe to supply its bath as well as a yearly supply of wood for heating. The chapel of S. Sofia is described in 8th-C. documents as a likeness of Hagia Sophia in Constantinople. Excavations in 1950 revealed that the church originally was star-shaped, with two inner rings of supports and a low dome. It had marble and mosaic decoration that does not survive.

When the Lombard state was crushed by the Franks in 774. Benevento gained full independence. After its political surge in the 8th C., Benevento experienced internal strife (Salerno detached itself from the duchy in 849) and hostile attacks on its territory: the Carolingian king Louis II managed to repel the Arabs in 872, but only temporarily. Emp. Basil I sought an alliance with Lombard principalities, and in 876 a Byz. ambassador was sent to Benevento, Salerno, and Capua but had no success (Reg 1, no.495). In Oct. 891 the Byz. captured Benevento and the Byz. strategos remained there until 895, when he was forced to leave the city and its territory. Benevento was still politically dependent upon the empire, however, until the Norman invasion. With the help of the Normans, Atenuf III, prince of Benevento, defeated in 1041 the Byz. army of the katepano
Boioannes the Younger, but soon thereafter the Normans left the service of Atenulf and supported Salerno against him. The subsequent events are obscure; George Maniakes seems to have retaken Benevento from the Normans in 1042 (Skyl. 427.52–56), but the Byz. could not retain the city; in 1051 Benevento, in the face of a Norman attack, accepted the suzerainty of the pope.

— A.K., R.B.H., D.K.

BENJAMIN I, patriarch of Alexandria (626–65); born ca. 590, died 3 Jan. 665; feast day (Coptic church) 3 Jan. Born to a wealthy and apparently hellenized Egyptian family, Benjamin became a monk ca. 621 but soon entered the service of the Monophysite patriarch Andronikos, who later named him as his successor. The Byz. reconquest of Egypt from the Persians and esp. the arrival in 631 of Patr. Kyros compelled Benjamin to take refuge in Upper Egypt from Kyros’s persecutions. He returned only in 644 after the Muslims had captured Alexandria, reportedly following a decree by ‘Amr recalling him. Ibn ‘Abd al-Hakam (died 871) claims that ‘Amr sought and received from Benjamin specific advice on administering Egypt. Benjamin probably left Alexandria during the temporary Byz. reoccupation (645) and may have offered ‘Amr support in exchange for leniency toward the local populace. The Coptic church revered Benjamin for having encouraged and organized the Egyptian Monophysites during and after the persecutions of the 630s and for rebuilding churches and monasteries. An account, preserved only in Coptic and Arabic versions but probably composed in Greek by Benjamin’s synkellos and successor Agathon, records Benjamin’s consecration of a church at Dair Macarius (Livre de la consécration du sanctuaire de Benjamin, ed. R.-G. Coquim [Cairo 1975]). Of Benjamin’s writings, only a “Homily on the Wedding at Cana” is extant in toto; written in Coptic, its vocabulary reveals strong Greek influences.

— P.A.H.

BENJAMIN OF TUDELA, or Bar Yonah, the most important and informative medieval Jewish traveler; fl. mid-12th-C. Spain. His Itinerary (Sefer Masoath), apparently unedited notes, outlines his travels during the 1160s from Spain along the Mediterranean coast to Byz. It also includes data on the Islamic world, Ethiopia, and Europe. Benjamin recorded unique censuses of Jewish congregations, economic observations, local pronunciation of Greek, and folklore. Our main source for 12th-C. Byz. Jewish history, the Itinerary also contains early descriptions of Vlachs, Oghuz Turks, Druses, and Assassins. His description of Constantinople is among the best extant. He mentioned guilds of Jewish silkworke in Thebes, Thessalonike, and Pera; tanners in Pera; and even an agricultural settlement near Delphi. He visited about 25 Byz. cities and recorded some 9,000 Jews.

BERA (Bjora), identified with modern Pherrai in western Thrace, site of the monastery of the Theotokos Kosmosoteira, founded before 1152 by the Sebastokrator Isaac Komnenos, son of Alexios I. Isaac built the cenobitic monastery as his residence and final resting place; he requested that his tomb be transferred to this new foundation from the church of the Chora Monastery in Constantinople, which he had restored earlier (N.P. Ševčenko, GOrThR 29 [1984] 135–39). The complex, surrounded by a wall, included a cistern, mill, and library. The monastery also had a gero komeion with 36 beds and a bathhouse for the use of monks and villagers. The monastery continued in use until the mid-14th C.

The typikon, drafted by Isaac starting in 1152, was closely modeled, for its liturgical sections, on the typikon of the Euergetis monastery in Constantinople. It provided for 74 monks, of whom 50 were to be choir brothers, the rest serving brothers. All the monks were to be over 30 years of age, and no eunuchs were permitted. Isaac
emphasized the independent status of the monastery and endowed it with substantial properties in Thrace. The *typikon* is an important source for local toponyms, esp. since it contains numerous Slavic place names (V. Túpkova-Zaimova, *Bal­kan­sko esizkeznanie* 2 [1960] 123–27) and for social and economic relations: as the former estate of a secular owner, the estates of the Kosmosoteira housed certain “vassals” who were given land in exchange for their service to the master (V. Arutjunova-Fidanjan, *Ti̇pt Grigor˘ıja Pakuriana* [Erevan 1978] 32–34).

The church at Pherrai, which is presumed to be the *katholikon* of the Kosmosoteira monastery, is a large modified cross-square structure with frescoes of the 12th C. By 1433 it had been reconsecrated into a mosque; it was restored and reconsecrated in 1940.

*Source.* L. Petit, “*Typikon du monastère de la Kosmo­soteira près d’Aenos* (1152),” *IRAIK* 13 (1908) 17–75.

BERBERS. See MAURI.

BERROIA (Βηρροία), name of cities in Syria and Macedonia.

**BERROIA in Syria** (Ar. Halab, Aleppo in mod. Syria), city and bishopric of Syria I; it stood on the road leading east from Antioch, about halfway to Hierapolis to the northeast and to the Tigris River to the east. It was raised to a metropolitan bishopric in 536. In 540, the citizens of Berroia gave only half of the 4,000 pounds of silver demanded by Chosroes I, who burned the city; the local military garrison then deserted to the Persians, complaining of a lack of pay (Prokopios, *Wars* 2.7). By the 580s, the Legio IV Parthica was stationed at Berroia (Theoph.Simok. 2.6.9). The city was under Persian rule from 604 to 628 and Arab rule after 636; after Nikephoros II Phokas took and sacked it in 692, Berroia was again Byz. between 905 and 1017. Among the few Byz. vestiges at Berroia is part of an aisled tetraconch (cathedral?) church (in the Madrasah al-Ḥalā­wiyya) with sculpture characteristic of the early 6th C.

---

**BERROIA in Macedonia**, city at the west end of the central Macedonian plain, sometimes confused in the sources with Beroe-Stara Zagora in Thrace. In late antiquity Berroia belonged to the province of Macedonia I. In the 7th C. Drougou­bitat settled in the plain below the city. In the late 8th C. the empress Irene is said to have rebuilt Berroia and named it Eirenopolis; some texts, including Theophanes (Theoph. 457.8–10), place Berroia-Eirenopolis in Thrace (Chionides, *Hist­oria* [1970] 2:14–18). The 10th-C. *Taktikon of Escurial* (Okonomistes, *Listes* 265,32) mentions a *stratages of Berroia* alongside that of Strymon, and an act of 1196 specifically names the theme of Berroia (*Lavra* 1, no.69.3). A letter of Theophy­laktos of Ohrid (ep.123, ed. Gautier 563.1) is addressed to a *doux* of Berroia. For a short time Samuel of Bulgaria held the city, but in 1001 Dobromir, its *katarchon* (i.e., governor or master), surrendered Berroia to Basil II. The city does not appear again in the sources until the end of the 12th C. It is questionable whether Peter and Asen conquered Berroia, since the evidence on this may refer to Thracian Beroe (Chionides, *infra* [1970] 2:27; n.3).

After 1204 Berroia was assigned to Boniface of Montferrat. In 1224 it was taken by Theodore I Komnenos Doukas of Epirus, then in 1246 by John III Vatatzes. John VI Kantakouzenos took an interest in Berroia, but in 1343/4 it was surrendered to Stefan Uros IV Dušan; Kanta­kouzenos retook the city in 1350, but it soon fell again into Serbian hands and was administered from 1358 by the Serbian noble Radoslav Chlapen. Berroia was once more Byz. ca.1375, but Ottoman attacks began at just that time. The Turks seized the city several times, definitively ca.1430.

The bishopric of Berroia, suffragan of Thessalonike, is known from 347. After 1261 Michael VIII promoted Berroia to an archbishopric, and by 1300 it had become a metropolis.

A considerable number of the monuments of the Byz. city have survived, and some of the many post-Byz. churches may have been built on Byz. foundations. An Early Christian cemetery with
more than 50 tombs has been excavated (ArchDelt 33.2 [1978] 264–66, 268, 273–82). Some churches with frescoes of the 12th and 13th C. are still standing, but the most significant monument is the Church of the Anastasis, an unpretentious, single-aisled basilica with spectacular frescoes dated by inscription to the year 1315 (S. Pelekanides, Kallierges: Holes Thetallakes aristas zagraphos [Athens 1973]). The artist is named Kallierges, the donors a certain Psalidas and his wife Euphrosyne. The paintings bear comparison with the mosaics of the Pammakaristos in Constantinople and the Holy Apostles in Thessalonike, and esp. with the frescoes of St. Nicholas Orphanos, also in Thessalonike. The program of the Anastasis church includes “panels” of the Crucifixion and the Anastasis in niches opposite each other. On the north and south walls are a Feast cycle with an expanded Passion sequence and the portrait of a monk in proskynesis before St. Artemios. The church may have been the katholikon of a patriarchal monastery (RegPatr, fasc. 5, no. 2018). The old cathedral is a Byz. construction using spolia from some Early Christian basilica (Ph.A. Drosogianne, ArchDelt 18.2 [1963] 249f).

BERTHA OF SULZBACH, sister-in-law of Conrad III and first wife of Manuel I; she was given the name Irene after her marriage; died Constantinople ca.1160. To confirm the alliance of 1140 with John II, Conrad sent Bertha to marry Manuel in 1142, but the wedding occurred only in Jan. 1146. She is said to have been just, charitable, pious, opposed to cosmetics, stubborn, and narrow-minded. She acted as a patron, and Tzetzes dedicated some of his works to her. Manuel soon neglected her in favor of other women, partly because she failed to bear a male heir; allegedly, Patr. Kosmas II Attikos, on being deposed (Feb. 1147), cursed her womb. In 1152 she bore Maria Komnenos and ca.1156 Anna, who died ca.1160. Bertha warned the emperor about the conspiracies of Andronikos Komnenos and Stypeiotes.

She was commemorated in an epitaphios by Basil of Ohrid (Regel, Fontes 1.2:311–30).

BERTRANDON DE LA BROQUIÈRE, Burgundian pilgrim to the Holy Land; died Lille 1459. Bertrandon, who was a knight of Philip III the Good of Burgundy, described his journey in a book entitled Voyage d'outremer. He set off in Feb. 1432 from Ghent to Palestine and visited Jerusalem, Damascus, Antioch, and many other places in the area; then, in a caravan, he traversed Asia Minor as far as Pera and Constantinople (which he left on 23 Jan. 1433). Bertrandon describes the city walls of Constantinople, its churches (Hagia Sophia, St. George, the Pantokrator, the Holy Apostles, Balchernai), and squares. The city seemed to him smaller than Rome, and he described it as having more open space than built-up areas. He saw Emp. John VIII and his brother Demetrios Palaiologos, despotes of the Morea, as well as the empress Maria Komnene, daughter of the emperor of Trebizond; Bertrandon writes how Maria mounted—“like a man”—a horse with a magnificent saddle; she wore a mantle and a tall pointed hat. Bertrandon also attended a solemn church service and a wedding of one of the emperor's relatives. From Constantinople Bertrandon traveled across Macedonia, observing that the countryside was completely devastated and, except for Selymbria, was in the hands of the Turks. The description is sober and concise but tinged with animosity toward the Greeks: he finds them less honest than the Turks and deceitful in their submission to the Roman church. It is worth noting that the court of Constantinople sought information from Bertrandon about Joan of Arc.

BERYTUS (Бърот, now Beirut [Ar. Bayrūt] in mod. Lebanon), city in the province of Phoenicia Maritima under Tyre and independent metropolitan bishopric under the patriarch of Antioch. Berytus was damaged by earthquakes in 347/8, 501/2, and 550/1; after the last, the city was re-
stored by Justinian I (Theoph. 227.21–228.4), epigraphic and other vestiges of which work (including a bath) have been found in the forum. Berytus was still noted in the 6th C. for its famous law school and for its state silk factories (Prokopios, SH, ch.25) as well as its private purple-dyeing industry. The Arabs took Berytus in 855; it was held briefly by John I Tzimiskes in 975.

BESSARION (Βεσσαριών), Greek expatriate scholar and theologian in Italy, cardinal (1439–72), and titular Latin patriarch of Constantinople from 1469; baptismal name John; born Trebi­zond 1499/1400?, died Ravenna 18 Nov. 1472. Educated in Constantinople and Mistra, Bessarion studied with John Chortasmenos, George Chrys­kokkes, and Gemistos Plethon. He became a monk in 1423 and subsequently deacon, priest, and hegoumenos of the monastery of St. Basil in Constantinople. Appointed metropolitan of Ni­caea in 1437, he attended the Council of Ferrara­Florence as a leader of the pro-Unionists. In 1439 he converted to Catholicism and was made a cardinal. After a brief return to Constantinople, he spent the rest of his career in Italy. He was appointed to numerous high ecclesiastical posi­tions, including that of papal legate, and was twice a candidate for the papacy (1455 and 1471). Ever mindful of his Greek origins, he lobbied unsuccess­fully for a crusade against the Turks.

It was as a scholar that Bessarion made his greatest impact. He wrote prolifically in Greek and in Latin, of which he acquired an excellent knowledge. During the Byz. portion of his career, he composed pro-Unionist theological treatises, refuting the views of Orthodox scholars such as Mark Eugenikos. He was also the author of nu­merous orations and enkomia, including a panegyric of his native Trebizond (ed. O. Lampides, ArchPont 39 [1984] 3–75). Probably written in 1436–37, he emphasized its seapower, military preparedness, and strong fortifications. The oration also described the layout of Trebizond, esp. the imperial palace and the thriving commercial and manufacturing quarter of this emporion tes oikoumenes or "marketplace of the world."

In Rome Bessarion headed an academy that produced new and/or more accurate translations of ancient Greek authors. To this end he was an energetic collector of Greek MSS, which he eventu­ally (1468) bequeathed to Venice, where they became the nucleus of the Biblioteca Marciana. He himself also copied some MSS (H.D. Saffrey, ST 233 [1964] 263–97). Bessarion took a moder­ate position in the mid-15th-C. debate over Plato and Aristotle; he did, however, write (in Greek) a lengthy work, Against the Calumniator of Plato, attacking the extreme Aristotelian views of George Trapezountios. He was the patron of Greek émigrés such as Theodore Gazes and Michael Apostoles, who wrote his funeral oration (PG 161:cxvii–cxl).

—A.M.T.

BESSARION RELIQUARY, a wooden stauro­theke, that is, a container for fragments of the True Cross, composed of several parts, now in the Accademia in Venice; it took its name from the 15th-C. cardinal who presented it to the Scu­ola della Carità in that city. Bessarion may have obtained it from "Gregory Pneumatikos," as he is called on the cross within the reliquary, perhaps Patr. Gregory III (1443–50/1). A second inscrip­tion speaks of "Irene Palaiologina, daughter of the emperor's brother," whom Frolov (infra) be­lieved to be the niece of John VIII rather than of Michael IX. The sliding lid of the stauro­theke is painted with seven scenes of the Passion of Christ surrounding the Crucifixion. Beneath this cover, a silver-gilt cross with the crucified Christ, flanked by Constantine and Helena in niello, is sur­rounded by eight framed enamel panels; four of these have windows for relics. This part of the reliquary may be Western, but the cross itself carries Byz. enamel with Greek letters, which Fro­low reads as the initials of such phrases as "The place of Calvary has become Paradise." Similar medallions are found on the back.
BESTIALITY, human intercourse with animals, was prohibited by the Old Testament, which associated it with homosexuality (Lev 18:22–23). This connection dominated Byz. canon law, which often imposed the same epiminthion for both sins (Nomokanon of Fourteen Titles 13.2). The Ecloga (17.39) imposed the penalty of castration and ranked bestiality after incest and consanguineous intercourse as the third sexual sin, before homosexuality. The condemnation of bestiality continued throughout Byz. history, from Basil the Great in the 4th C. to Demetrios Chomateneos and John Apokaukos in the 13th C., always stressing the perversity of this form of intercourse. In the Penitential attributed to John IV Nesteutes, both men and women were condemned for bestiality (PG 88:1893D). Some monastic communities, such as Mt. Athos, prohibited the residence of children, eunuchs, women, and female animals in or near monasteries to deter fornication, homosexuality, and bestiality. The τύπικον of the Phoberou Monastery (pp. 75.14–77.10, 82.9–25) denied access to female animals specifically to prevent bestiality; at other monasteries their prohibition seems to reflect a general repudiation of the female sex (C. Galatariotou, REB 45 [1987] 121).

Ancient myths with their elements of totemistic bestiality endured in literature and art, for example, in epigrams about Ζέους’s transformation into a bull or swan to seduce Ευρώπη or Leda (AnthGr, bk.5, nos. 65, 125, 307) and on the Europa casket. Pasiphaë, who disguised herself as a heifer to have intercourse with a bull and thus conceive the Minotaur, was interpreted as the embodiment of female initiative and its terrible consequences.

BESTIARY. See PHYSIOLOGOS.

BETHANY (Βηθανία, Ar. al-‘Azariya or ʿAyariyyah), located 3 km east of Jerusalem, is the site associated with the Raising of Lazarus. Eusebios of Caesarea (Onomastikon 58:15) speaks of Bethany’s Lazarion or “Place of Lazarus”—evidently a rock tomb. Egeria (ca.380) implies the existence of a church there, which was used in the stational liturgy on Palm Sunday. Its proximity to Jerusalem made it part of that city’s “pilgrimage circuit.” The early church, which had guest rooms, was rebuilt in the 5th C. A monastery existed there as well, and a second church, dedicated to Mary Magdalene, was erected during the time of the Latin Kingdom.

BETHLEHEM (Βηθλεήμ), village in the Judaean hills, 9 km south of Jerusalem, that was revered from the 4th C. as Jesus’ birthplace. The first church on the site of the traditional cave of the Nativity was built by Constantine I, probably on the initiative of Helena. It was a five-aisled basilica with an octagonal martyron, preceded by an atrium. This church was destroyed at the time of the Samaritan revolt of 529. Justinian I replaced it with another basilica, larger and more ornate: a narthex was added, a trefoil apse constructed, and two entrances cut leading to the cave of the Nativity. Much later, under Manuel I, the east end of the church received lavish mosaic decoration at the hands of Ephraim. Other points of pilgrimage were the shrine of the Holy Innocents; the Well of the Star; and the tomb of St. Jerome, who, with a group of matrons, had established two monasteries at Bethlehem.

After the Arab conquest of Palestine, Bethlehem was venerated by Muslims as the birthplace of “Īsā ibn Maryam” (Jesus, son of Mary) but never developed into an important center. The Crusaders occupied Bethlehem in 1199 and tried to create a bishopric there but lost it to Saladin in 1187.

BETH MISONA, dated to the 6th or 7th C., four liturgical vessels in silver acquired by the Cleveland Museum of Art in 1950. None of the objects has silver stamps but two bear
dedicatory inscriptions: the paten was offered by a certain Domnos to the Church of St. Sergios in the village (chorion) of Beth Misona, possibly to be identified with the modern village of Mshbine, southwest of Aleppo (Beeroia) in northern Syria; one of the three nearly identical chalices, with repoussé decoration, was presented to the same church by Kyriakos, son of Domnos. Because of the dedication to St. Sergios, a misreading of the village name, and confusion over modern provenance, the Beth Misona Treasure has mistakenly been called the Rusāfa Treasure (see Sergio-polis); instead it is one of several silver treasures given to village churches in the 4th–7th C.

Lit. Mango, Silver 228–31. —M.M.M.

BETROTHAL (μνηστεία, Lat. sponsalia). Roman law had no specific form of contract preceding marriage; no penalty for breach of promise existed. The legislation of Constantine I (Cod. Theod. III 5.2, etc.) introduced the concept of arrhaim sponsalia, the prenuptial gift, and by so doing transformed the informal agreement into a formal contract. Ensuing developments led to the reinforcement of the ties of the betrothal and a gradual disappearance of the clear distinction between it and marriage: the Council in Trullo (canon 98) equated marrying another person's betrothed to adultery, and the Ecloga prescribed the punishment of cutting off the nose for one who engaged in intercourse with another's betrothed. In 1066 a synod under Patr. John VIII Xiphilinos proclaimed the legal equality of the two institutions, and in 1084 Alexios I confirmed their identity (Reg. 2, no. 11.116). The celebration of the betrothal continued, nevertheless, after Alexios's novel, and Demetrios Chomatenos (Laiou, infra 2.95) strongly contrasts mnesteia and marriage, defining the former as "the prearrangement and preagreement of a marriage."

Despite the lack of consistency in the Byz. treatment of betrothal the following features seem to have characterized mnesteia, distinguishing it from gamos: (1) the type of priestly benediction—even in the later period "incomplete" betrothal, without priestly benediction, was possible; (2) the age of the partners, the betrothed being allowed to be of five to seven years (and older); (3) the lack of economic ties, the dowry not yet being transmitted to the family of the groom; (4) the tendency to avoid (if not legally prohibit) sexual relations between the betrothed; (5) a broader range of valid grounds for dissolution of the betrothal, for example, madness, religious differences—in the 11th C. it was debated whether the reduced means (aporia) of one of the parties could cause the termination of a betrothal (Peira 49.26); (6) certain betrothals (those not blessed by a priest) could be terminated, but under the penalty of a pro-stimon.

BEVERAGES (ποτά). Water was the basic beverage, closely followed by wine (often mixed with water), which was consumed in large quantities and considered a staple of the diet. An acidic wine, phouwska (really a mixture of vinegar and water), was served in cheap taverns called phouskaría (E. Kislinger, JÖB 34 [1984] 49–53). In monasteries, during the fasting periods, monks and nuns substituted for wine a hot drink made of boiling water mixed with spices such as pepper, cumin, and anise (eukraton or kyminotheron). Liqours were prepared from fruits such as dates, pears, and prunes. Neither dairy drinks nor beer seem to have been very popular. Eustathios of Thessalonike relates that "semibarbarians" prepared an intoxicating winelike drink from barley; he denotes this drink with an old Russian word, olovina or "beer" (A. Kazhdan in Okeanos 355). The housekon ("drink payment") was a reward given to laborers for their work (M. McCormick, AJPh 102 [1981] 160f).

BEZANT (Lat. bizantius aureus, OF besant), the name given in western Europe to the Byz. gold nomisma. The word is mainly found in documents of the 10th–13th C., and its use subsequently is literary or heraldic, the coins themselves being known to merchants as hyperpyra or perperi. —Ph.G.
BIBLE (Βιβλία, lit. "books"), also graphe (scripture) usually with the epithet "holy," the collection of books that constitute the foundation of the Christian creed. Even though the Bible consists of two sections, the OLD TESTAMENT and the NEW TESTAMENT, written in different languages and in different historical situations, the church fathers emphasized its unity and the concordance of Old Testament and New Testament that derives from divine inspiration, the Bible being a work of the Holy Spirit. However, some heretics (e.g., the Bogomils) contrasted the Old Testament and New Testament, rejecting the former (wholly or in part) as inspired by Satan.

The Bible presents to the human mind various difficulties and alleged contradictions, the solution of which can lead to a profounder understanding of the text. A special discipline, exegesis, arose, aimed at the interpretation of the Bible, while homiletics sought to explain biblical situations in sermons, the material of which was set out as scenes, dialogues, and rhetorical imagery. Two major branches of exegesis were founded: the Alexandrian School, which stressed the allegorical interpretation, and the Antiochene School, which stressed "historical" interpretation. The "true" exegesis of the Bible was the focal point of doctrinal discussions, beginning with the Arian controversy. Each faction of the theologians tried to find in the Bible appropriate references or to interpret biblical citations in a sense that accorded with their views; consequently the idea of biblical "obsccurity" requiring interpretation became important.

After the 5th C., the church assumed the exclusive right to interpret the Bible; tradition (paradosis) based on the sanctified church fathers imposed limits on previously free understanding. Dispute then centered on interpretation of the Fathers, rather than of the Bible itself.

---

BIBLIOTHECA, also Myriobiblon (Μυριώβιβλον, "thousand books"), conventional titles of a work of Photios. In the oldest MS (Venice, Marc. gr. 450) the heading of the work is "List and Description of Books We Have Read." The Bibliotheca contains 280 chapters ("codices") that describe 386 books according to Treadgold (infra 5). It also has a preface and epilogue, both addressed to Photios's brother Tarasios. If we take them at face value, Photios compiled the Bibliotheca before leaving on an embassy to the "Assyrians," i.e., Arabs; this embassy has been variously identified with those of 838, 845, or 855. F. Halkin (AB 81 [1963] 414–17), however, suggested a much later date of composition (after 875). Most recently A. Markopoulos (Symmetria 7 [1987] 165–82) proposed that the bulk of the Bibliotheca represents a revised version written in Photios's old age. B. Hemmerdinger hypothesized that Photios worked in Greek libraries in Baghdad (REGr 69 [1956] 101–09). N. Wilson surmised that Photios was working from memory (infra 95–99).

The Bibliotheca surveys both pagan and Christian authors, sometimes very extensively, sometimes briefly. Photios evidently avoids school texts (poets, Plato, Aristotle), is very interested in historical works, and devotes more attention to historians than to natural science; very indicative is his concern for lexika since he himself wrote one. The composition is not systematic, although several "codices" are organized in thematic groups. Photios sometimes provides biographical data on the author, summarizes the contents, and in some cases presents a theological and stylistic evaluation. Although Photios preferred a simple style, the Bibliotheca demonstrates that he could appreciate diverse stylistic approaches. Since his compilation includes many texts now lost, historians of ancient literature have studied it closely. Less attention has been paid to the Bibliotheca as reflecting the Byz. worldview. It is significant, for example, that Photios understood Herodotus as a historian of the Persian basileis and of an illegitimate revolt against them (cod. 60), and not as one who described the victory of the Greek city-states over a monarchy.

---

BILLETING. See MITATON.

BINBIRKILISE (Turk., lit. "thousand and one churches"), ecclesiastical site in Lykaonia, apparently medieval Barata (Bâparrà), attested as a bishopric from the 4th to the 12th C. The area contains the remains of over 40 churches, in two main groups. The majority stand in the lower town (Madenşehir) and consist primarily of vaulted basilicas with horseshoe-shaped apses of a massive ashlar construction, together with an octagonal church that strikingly corresponds to the description of a "martyrium" by GREGORY OF NYSSA (ep. 25). Those of the upper town (Değle) include cross-in-square churches of less regular masonry with decorative brickwork. Dating is difficult and disputed; it appears that the lower town flourished from the 4th to the 7th C. and was reoccupied in the 9th, while the upper town was a refuge during the Arab invasions.

BIOGRAPHY, a literary genre created in antiquity that flourished during the Roman Empire. It was considered an intermediate form lying somewhere between enkomion and historiography and having as its purpose the presentation of the hero's character (ethos) and/or actions (praxis) in logical rather than chronological sequence. The material was presented in anecdotes, maxims (sayings), catalogs of works, etc. Biographies were often combined in series, as by Plutarch. Late Roman biography included emperors (HISTORIA AUGUSTA), philosophers (Diogenes Laertius in the 3rd C.), and rhetoricians (the Lives of the Sophists by EUNAPIOS OF SARDIS). There was a tendency to transform the wise man into a "godlike" holy man like Pythagoras and Plotinos in their biographies by PORPHYRY, Origen in his Life written by EUSEBIOS OF CAESAREA (bk.6 of the ECClesiastical History), and esp. APOLLONIOS OF TYANA. Works of this kind, along with the books of the Maccabees and the Acts of the Martyrs, contributed to the development of HAGIOGRAPHY, the vita of ANTONY THE GREAT by Athanasios of Alexandria being the model for the new genre. The late Roman biography of the holy man was based on a preconceived ideal of behavior, presented the hero's life as a continual acme from cradle to grave, and had the purpose of defending the principles of particular philosophical and religious schools.

In Byz., secular biographies were not very common, nor were they produced in series (unlike the Historia Augusta and Eunapios). The demarcation of the genre from both hagiography and historiography was vague: the Life of Basil I (Vita Basili) commissioned by Constantine VII was included in a historical compilation; Anna Komnéne's panegyric on her father, the Alexiad, was construed as a book on history; the biographies of some emperors (John III VATATZES) or empresses (Theodora, wife of Theophilos) who became revered as saints were couched in the form of vitae. The Byz. elaborated the genre of pejorative biography (inventive) such as the anonymous dialogue Anacharsis, and the pamphlets of Nikephoros Basilakes on a certain Bagoas, and of John Argyropoulos (?) on Katablattas (N. Oikonomides, P. Canivet, Diptycha 3 [1982–83] 5–97).

BIRDS (ovskyes). The Byz. raised birds for food and for use in sport and hunting. Book 14 of the GEOPONIKA is dedicated to rearing domestic fowl, primarily pigeons and hens. Ornithology fascinated Byz. artists and sportsmen, much as it had earlier Greek and Roman naturalists and bird-catchers. Aristotle's study of birds (esp. in Parts of Animals) left a heavy imprint on later ornithologists, but additional data were included by Alexander of Myndos (fl. 1st C. B.C.?) and elaborated by a certain Dionysios (fl. 1st C. A.D.?) in a tract called Ornithiaka or Ixeutikon. Dionysios's original text is lost, but a paraphrase with magnificent illuminations of 48 birds is part of the Vienna Dioskorides. The illustrations in this MS (esp. fol.48v) with 24 birds in a grid) suggest observations in the field of varied species such as the ostrich, various ducks, the moor hen, bustard, partridge, and many others. Later tracts on ornithology include an excellent work on HAWKING by Demetrios PEPAKOMENOS, who apparently used sources different from those of FREDERICK II in his On the Art of Hunting with Birds (De arte venandi

The mosaics of the Acheiropoietos Church in Thessalonike depict ducks and other birds, used in Roman fashion apparently without the symbolic content that had earlier been attached to the peacock; at the mausoleum of Galla Placidia in Ravenna, birds drinking from a chalice are depicted as attending a Fountain of Life. This interpretation persisted in the veritable aviaries that adorn the Canon Tables and headpieces of illuminated MSS. On the other hand, birds were sometimes seen as part of the natural world inappropriate to Christian decoration. The author of the Life of Stephen the Younger (PG 100:1120C) objected to the Iconoclastic mosaic program of the church at Blachernai in Constantinople, which included “cranes, crows, and peacocks, thus making the church, if I may say so, altogether unadorned.” Yet, as winged creatures free of earthly bonds, birds were widely represented in sacred settings and were a favorite motif in relief sculpture, as on the drum cornice of the Church of Constantine Lips. Bird-filled trees figured among the Automata of the Magnaura witnessed by Liutprand of Cremona.

In Byz. mythology birds played a lesser role than animals or snakes; a deep significance was ascribed to the dove, however, as a symbol of the Holy Spirit, and to the peacock and pelican. The theme of the eagle fighting the serpent was popular in art. Birds are dramatis personae in the Poulologos.

—J.S., A.C.

BIRTH (γέννησις). Women usually gave birth at home with the assistance of relatives and/or a midwife. There were, however, some lying-in hospitals, such as the institutions established in Alexandria by St. John Elefemon, according to one version of his vita (H. Delehaye, AB 45 [1927] 22.17–27). Paramedical and magical means were commonly used to achieve an easier delivery, for example, Anna, the mother of the future empress Theophano, was given, during her labor, a girdle from a monastery of the Virgin (E. Kurtz, Zwei griechische Texte über die heilige Theophano [St. Petersburg 1898] 2.28–34). The newborn baby was washed and swaddled in woolen wrappings. The placenta was sometimes retained as a talisman.

After childbirth the mother and those who assisted her were considered unclean and a priest was summoned to exorcise the evil spirits, yet the mother could not partake of communion until 40 days had passed. The wet-nurse was common, even though some moralists disapproved of this practice (J. Beaucamp, JÖB 32.2 [1982] 549–58). Male babies were preferred (e.g., Prodomos, Hist. Gedichte, no.44.6–7), but in general the birth of a child was a panegyris that provided an occasion for a banquet, visits, and gifts; if the baby was an heir to the throne, special festivities were held throughout the empire. The gross birth rate
in 14th-C. rural Macedonia is estimated as 44 per 1,000, but because of high mortality the net birth rate was 22 (Laiou, Peasant Society 292–94).

Birth scenes, with mothers shown frontally seated with raised skirts, are treated particularly candidly in the Vatican Book of Kings (Lassus, Livre des Rois, figs. 3, 6). Childbirth and the washing of the newborn infant are also depicted in images of the Nativity of Christ and John the Baptist. LIT. Kourkoules, Βίος 4:9–42. –Α.P.K., A.K., A.C.

BIRTH OF THE VIRGIN (γεννήσει τῆς Θεοτό­κου), one of the five Marian GREAT FEASTS, celebrated 8 Sept. with both a forefeast and a four- day afterfeast. The feast originated in Jerusalem with the dedication of a 5th-C. church at the Probatic Pool (Jn 5:2–9), where tradition placed the house of Mary’s parents Ioakeim and Anna (H. Vincent, F.-M. Abel, Jérusalem, vol. 2 [Paris 1926] 669–76). From the 6th C. onward, it was celebrated at this spot with a reading from the Protoevangelion of James (G. Garitte, Le calendrier palestino-géorgien du Sinaiac 34 (Xe siècle) [Brussels 1958] 324f). The earliest evidence for the existence of the feast in Constantinople, a kontakion by Romanos the Melode (no.35, ed. Maas-Trypanis, 276–80), is a paraphrase of this apocryphal narration, which was also incorporated into Byz. Menologion and panegyrica for use on the feast (Ehrhard, Uberlieferung 1:57, 204).

The feast opened in the evening with a pannychis (see Vigil) at Hagia Sophia, in which the patriarch took part. After the orthros service there was a procession, with a station (lithos) at the Forum (Mateos, Typicon 1:18–21), in which “the sovereigns and the whole senate proceed with great pomp” to the Church of the Chalkoprateia (Philothoe, Kletor. 293.10–11). Once the liturgy was over, the emperor offered a banquet in the Triklinos of Justinian.

In art the standard composition is first seen in the Menologion of Basil II (p.22) with Anna reclining on a bed, three gift-bearing women approaching, and midwives bathing the child. Used in narratives of the Life of the Virgin Mary, the scene also occurs among Christological feasts, as in the naos at Daphni. Versions from the 12th C. onward stress the wealth of the Virgin’s parents, adding a peacock fan (Daphni), richly carved cradle (MSS of James of Kokkinobaphos), palatial setting (King’s Church, Studenica), and numerous attendants (Chora). Ioakeim joins the scene in the 14th C. (Chora).

BİRÜNİ, AL-, more fully Abü'l-Rayhân Muham- mad ibn Âhmad al-Biruni, Muslim scientist, historian, and observer of cultures; born Kâth (in Khwârizm) 4 Sept. 973, died Ghazna? 11 Dec. 1048 (E. Kennedy, LMA 2:226) or after 1050 (D. Boilot, EI² 1:129). Under royal patronage in Khwârizm, al-Birûnî studied the sciences. After the Ghaznavid conquest (1017), he was lavishly maintained in Ghazna until his death. He visited India, but journeyed westward only to Iran.

Birûnî ranks among the greatest scholars of medieval Islam and wrote almost 150 works on science, geography, chronology, and history. He considers Byz. in his Vestiges of the Past (Chronology of Ancient Nations), written in 1000, incorporating much cultural information within discussions of calendars and eras. Major topics for Birûnî are doctrine, hagiography, customs concerning Lent, and MELCHITE festivals. Birûnî disregards at length on the Greek ecclesiastical hierarchy and the organization of the Byz. administration and army. Though sometimes offering secondhand information from Melchites in Khwârizm, Birûnî refers to The Learning of the Greeks, a book (now lost) by a certain Abû'l-Husayn (or Hasan) al-Ahwâzî (9th C.) based on his experiences in Constantinople.

BISHOP (ἐπίσκοπος), the highest ranking minis­ ter among the major orders of the Byz. CLERGY, supreme in all matters concerning the discipline (cf. Episcopalis Audientia), doctrine, and administration of the bishopric (episkope). As a generic term the title also included metropolitanas, pa-
triarchs, etc. St. Ignatius of Antioch (ca. 100) is the earliest witness of the monarchic episcopate and describes the bishop as the source and center of church unity. Although the exclusive focus of unity and authority in his district—as PROEDROS and archiereus of his flock and of his CHOREPIS-KOROS—a bishop was still subordinate to the metropolitain of the province of which his bishopric was a part. His nomination was in fact confirmed by the provincial metropolitian, from whom he also received consecration (Nicaea II, canon 3). Normally he was restricted for life to the see for which he was ordained, although translations were not unknown.

All ecclesiastical properties, charitable institutions, and hospitals of the bishopric were under the bishop’s disposition but were actually managed and administered by various officials, such as the OIKONOMOS. The revenues of the see were derived from property, voluntary offerings, and donations, and, from the 11th C., from ecclesiastical taxes as well, such as the KANONIKON and KANISKION. The income was used for the upkeep of the bishop and his clergy but also for the sick, poor, the redemption of war prisoners, and the maintenance of churches. Despite their considerable privileges and authority, Byz. bishops (with some exceptions) did not play the role of feudal magnates, unlike their counterparts in the West, although they often enjoyed considerable political influence. Their vestments were similar to those worn by PRIESTS except (later) for the episcopal Sakkos and Omophorion. (For list of bishops, see NOTITIAE EPISCOPATUM.)

BITHYNIA (Bithuния), a region of northwest Asia Minor, opposite Constantinople. Bithynia became a separate province in the early 4th C. Besides its capital, NIKOMEDA, Bithynia contained a few important cities (Nicaea, Chalcedon, Prousa) and rich agricultural land. Although its cities were eclipsed by the growth of Constantinople, Bithynia prospered from its location on the trade and military routes between Constantinople and Anatolia. The suburban coastal region east of Constantinople flourished particularly as the seat of many rich villas. Bithynia became part of the OPSIKION theme in the 7th C., then was divided between that theme and the OPTIMATOI. The civil province of Bithynia continued to exist into the 8th C., when Slav captives were settled there (Zacos, Seals 11:90f). Frequent later references are to the geographical region. Texts of the 13th C. mention a district called Mesothynia, which apparently denotes the peninsula of Nikomedia (D. Zakythenos, EEBS 19 [1949] 3). Bithynia preserves the remains of numerous fortifications but is esp. noted for its churches (Sige, Médikon, Pelekete, Nicaea). It was also a monastic center that grew in importance in the Iconoclastic period (Mt. Auxentios, Mt. Ólympos). Ecclesiastically, Bithynia was divided into three provinces after 451: Nikomedia, Nicaea, and Chalcedon.

BIZYE (Βίζη, mod. Vize), city in Thrace, northeast of ARKADIOPOLIS. A polis in the late antique province of Europe, Bizye appears in Byz. texts as kastron (Beševliev, Inschriften 184, no. 27), polisima (TheophChant 68.6–7), or polichnion (Zen. 3:346.15). The vita of MARY THE YOUNGER refers to Bizye as a polis, but describes the town’s inhabitants as engaging in agricultural work (AASS Nov. 4:699BC, 700F); in the eyes of the chronicler Geoffrey Villehardouin (par. 428), Vizoi (Bizye) was “good and strong.”

As a fortress Bizye played an important role during the 9th-C. revolt of THOMAS THE SLAV, whose son fled there but then surrendered to the emperor. Symeon of Bulgaria captured Bizye, demolished it, and later rebuilt the city walls. In the 13th C. Bizye was one of the larger ASTEIS (Akrop. 15414–15) and the base of many military operations; the city was one of the focal points during the CIVIL WAR OF 1341–47, and its demos actively participated in the political struggle (Weiss, Kantiakuzenos 75f). Bizye was finally taken by the Turks in 1453.

A bishopric by 431, then autocephalous archbishopric, Bizye became metropolis in the 14th C. It served as the place of exile for several impor-
tant ecclesiastical dissidents such as Maximos the Confessor (PG 90:160C).

The remains of ramparts still survive in the city. A.M. Mansel (Trakyanin kültür ve tarihi [Istanbul 1938] 45) suggests that their upper part was constructed in the 6th C. On the other hand, D. Dirimtekin (Ayasofya müzesi yılı [1963] 15-25) dates this section to the time of the Palaiologoi. The large Church of Hagia Sophia in Bizye combines the floor plan of a basilica with the elements of a cross-in-square church; its plan is similar to that of Dere Ağızı. C. Mango (ZRV 11 [1968] 9-19) suggests, on the basis of a painted inscription, now lost, that the church was built in the late 8th or 9th C. and housed the tomb of St. Mary the Younger in the 10th C. However, S. Eyice argues that the church dates to the 13th or 14th C., and may have replaced the earlier church where St. Mary was venerated (18 CorsiRav [1971] 293-97).

- T.E.G.

BLACHERNAI, CHURCH AND PALACE OF.
The name Blachernai (Βλαχέρναι) designates an area possessing a spring of water in the northwestern corner of Constantinople. A basilica of the Virgin Mary, which became the most famous Marian shrine of the city, is said to have been built there by Empress Pulcheria (ca.450). Leo I added a circular reliquary chapel (soros) after the "honorable robe" (see Maphorion) of the Virgin had been brought from Palestine. Situated a short distance outside the walls, the church was miraculously spared during the Avar siege of 626, after which Emp. Herakleios extended the walls to enclose it. A New Testament cycle in mosaic was destroyed by Constantine V and replaced by vegetal ornament and pictures of birds (Vita S. Stephani Junioris, PG 100:1120C). The church was burned down in 1070 and rebuilt. Fire destroyed it completely in 1434. Next to it was a bathhouse (Louma) in which the spring flowed. The latter is now enclosed in a modern Greek church.

South of the church complex and on higher ground, an imperial palace was set up by ca.500. It is known to us from protocols described in Decr. (bk.1, chs. 27, 34; bk.2, chs. 9, 12) and included one hall named Anastasiakos, another called Okeanos, and a third called Danoubios, the last communicating with the church complex by means of staircases. Under the Komnenoi the Blachernai palace became the customary residence of the emperor and was so strongly fortified as to resemble a castle. Alexios I and Manuel I built additional halls of great splendor. The Palaiologoi also lived in the Blachernai palace. Its approximate situation is marked by the mosque of Iyaz Efendi, but the evidence is too slight to allow even an approximate reconstruction (see also Tekfur Saray).

BLACK SEA. See Plague.

BLACK SEA (Πόντος Εὔξεινος, Μαύρη Θάλασσα). Throughout its history Byz. sought to maintain control of the Black Sea, in part to preclude foreign powers from establishing a foothold there and threatening Constantinople. Justinian I prevented the Sasanian Persians from gaining permanent access to the coast of Lazika; from the 7th C. Byz. policy in the area focused on diplomatic efforts and control of Cherson. Herakleios made a treaty with Kuvrat in hope of hindering Khazar access to the Azov Sea and the Crimea, and the Khazars were afterward the focus of Byz. diplomatic and missionary activity in the area. The Arabs never established a presence on the coast of the Black Sea, but the Rus' of Kiev repeatedly sailed through the Black Sea to attack Constantinople, beginning in 860. The city and naval arsenal of Cherson remained a Byz. possession (apart from a brief occupation by Vladmir I of Kiev in 988) until the Fourth Crusade, after which it passed into the hands of the empire of Trebizond. Only in 1215/16 did the Seljuk Turks establish a temporary naval base at Sinope; the
The southeastern coast of the Black Sea remained under the control of Trebizond until 1460.

Byzantine naval control was not matched by similar commercial success. The Black Sea was important as a source of food for Constantinople; fish came from its waters, and grain from the Dobrudja and Crimea. It was also a crossroads of long-distance trade, linking Byzantium with central Europe, Russia, the Caucasus, Central Asia, and China. This trade attracted Italian merchants, particularly Venetians and Genoese, from the 11th C. Manuel I, seeking an ally against Venice, granted Genoa the right to trade in the Black Sea. In 1261 Michael VIII granted the Genoese exclusive access to the Black Sea, together with tax exemptions, by the Treaty of Nympaion. Thereafter they dominated the Black Sea trade from their colonies of Galata, Vicina, Kaffa, Tana, Amastris, and Samsun (Amisos), and the profits of this trade were lost to Byz.

---

**BLASIOS OF AMORION**, saint; secular name Basil; born in village of Apatianai near Amorion, died Constantinople ca.912; feastday 20 Dec. After elementary schooling in his village, Blasios (Blàdós) came to Constantinople and chose an ecclesiastical career; Patr. Ignatios consecrated him deacon of Hagia Sophia. En route to Rome he had various adventures: he was sold into slavery to the “Scythians” (Pechenegs rather than Bulgarians), freed, robbed by pirates on the Danube, and saved by an angel; he returned to Bulgaria, met the local bishop and the “first archon” of the barbarians, and eventually reached Rome.
There he took the monastic habit and stayed for 18 years, mostly in the monastery of St. Caesarius, where he was consecrated priest. To escape his increasing fame, Blasios returned to Constantinople, joining the monastery of Stoudios ca.897. Around 900 he retreated to Athos, which he was forced to leave 12 years later because of a controversy. He returned to Constantinople but died soon after he had received a chrysobull from Leo VI. He was buried at the Stoudios monastery.

The anonymous author of his Life (written in the 920s or 940s and preserved in a single 10th- C. MS) claimed to have received his information from Blasios's disciple Loukas; it is plausible that the Life was produced in the Stoudios. The hagiographer praises Blasios's sociability and intellectual qualities (e.g., his work as a calligrapher) and defends moderation: the 

eganomenos who flogged the young monk Euphrosynos for having a filthy garment was condemned in a vision.

BLASTARES, MATTHEW, canonist and theologian, monk and priest in the monastery of Kyr Isaac in Thessalonike; died Thessalonike after 1346. In 1335 Blastares (variously spelled Blàstares, Blàsta ràs, Blàstàres) completed his principal work, Syntagma kata stoicheion (lit. Alphabetical Treatise) in 24 sections, most of them subdivided into chapters. Each chapter is devoted to a separate legal topic (e.g., 1.12 on robbers) and contains first the statements of CANON LAW and then those of civil law, the nomoi politikoi. In the preamble, Blastares defines his goal as gathering “all the canons” as well as interpreting and paraphrasing them (5.7–39). This attempt at reconciling canon and civil law differentiates the work of Blastares both from previous NOMOKANONES in which civil legislation is but an insignificant appendix and from previous synopses that ignore canon law (A. Soloviev, SBN 5 [1939] 700). As sources Blastares used not only the Basilika and other Byz. compendia but the Codex and Digest of Justinian I as well as the novels of various emperors (e.g., the novel of Andronikos II of 1306); he also used the Nomokanon of Fourteen Titles and the commentary of Theodore Balsamon. The Syn-
tagma became popular beyond the borders of the empire and was translated into Serbian during the reign of Stefan Uroš IV Dušan. Blastares also wrote several short synopses of canon law, an index of Latin legal terms, theological works, hymns, etc.

PLP, no.2868.

BLATADON MONASTERY, established ca.1355 on the north edge of Thessalonike, next to the acropolis. Blatadon (Blastadon, Blàstòdow, Blàstæow, Blàstéow) was founded by Dorotheos Bates, metropolitan of Thessalonike (1371–79), and his brother Mark, a hagnographer and hieromonk from the Great Lavra (PLP, nos. 2818–19). Both were discipiles of Gregory Palamas and accompanied him to Thessalonike in 1352 after the triumph of Palamism. The monastery was dedicated to Christ Pantokrator and the Transfiguration. Ignatij of Smolensk visited it in 1405. The monks of Blatadon were anti-Unionist and opposed the Venetian occupation of Thessalonike (1423–30); Stoglioglyou (infra 162–73), however, rejects the tradition that they betrayed the city to the Turks in 1430 by suggesting to Murad II that he cut off the water supply. During the Turkish occupation, Blatadon was sometimes called Çavus Manastir.

Blatadon is the sole monastery of Byz. origin still functioning in Thessalonike; its much-restored 14th-C. church, on an inscribed-cross plan, is the only surviving Palaiologan building at the monastery. Frescoes dated between 1360 and 1380 by Ch. Mauropoulou-Tsioumi (He Thessalonike 1 [1985] 231–54) are preserved in the south chapel, and the library contains a number of Byz. MSS. Today the stauropegeic monastery houses the Patriarchal Institute of Patristic Studies (founded 1965), which owns an important collection of microfilms of MSS from Mt. Athos.

–A.M.T., A.C.
BLATTION (βλαττίων), a term that originally meant the color purple, and, by extension, the cloths, both silk and wool, dyed in the highest quality purple. By the 10th C., however, the term *blattion* had come to mean silk in general, regardless of shade. Silk curtains and festive hangings such as those in the Great Palace (*De cer.* 12.20, 572.2); hangings covering icons (Patmos inventory, ed. C. Astruc, *TM* 8 [1981] 21.33); and silk garments were all referred to as *blattia*. The meaning of the terms *diblattia* and *triblattia* is obscure. They have been thought to refer to the number of times the silk cloth was dipped in the dye, or to the number of colors used in weaving it. Guillaud has suggested that these may be double or triple bands of silk attached or applied to the basic piece of silk cloth, a proposal that neither the extant silks nor the depictions of court costume can readily substantiate. The term *blatopoles* (Prodromos in PG 133.11265B) designates a vendor of *blattia*.

A.G.

BLEMMYDES, NIKEPHOROS, teacher and writer in the empire of Nicaea; born 1197, died Ephesus ca.1269. Son of a doctor, Blemmydes (Βλεμμύδης, Βλεμμύδης) moved with his parents ca.1204 from Latin-occupied Constantinople to Bithynia where he pursued studies, including seven years of medicine, until his 26th year. His subsequent career in the church was initiated by Patr. GERMANOS II, who ordained him *anagnostes*, deacon, and *logothetes* in quick succession (1224–25). Ten years later Blemmydes took monastic vows, keeping his name, and ca.1237 was appointed *hegoumenos* of the monastery of Gregory Thau­matourgos in Ephesus. In 1241 he founded his own monastery near Ephesus. His attempts to ensure its independence failed, however, for it became a metochion of the Galesios monastery ca.1273.

Famous in his time for his learning, Blemmydes’ most important role was as a teacher. His best known students were George AKROPOLITES, whom he instructed in philosophy, and THEODORE II LASKARIS. In connection with his teaching duties he traveled to Athos, Thessalonike, Larissa, and Ohrid in search of books (1239–40) and wrote epitomes of logic and physics (PG 142:685–1320). A difficult man by most accounts, Blemmydes left a remarkable two-part autobiography, the *Partial Account* (1264, 1265), a defense of his life that contains elements of a hagiographical work (J.A. Munitiz in *Byz. Saint*, 164–68). His other surviving works include the *Imperial Statue*, a *Mirror of Princes* for Theodore II (which George GALESIOTES and George OINAIOTES paraphrased in the 14th C.), occasional verses, ascetic works, and fragments of a *typikon* (J.A. Munitiz, *REB* 44 [1986] 199–207).

R.J.M.

BLEMMYES (Βλέμμυες), a tribe of perhaps Libyan Berber origins that inhabited the eastern desert between the Nile and Red Sea in Upper Egypt. A 4th-C. historian (Amm.Marc. 14:4:3) describes them as half-naked warriors, all of equal rank, riding swift horses and camels. Diocletian in 297 ended the raids of the Blemmyes in Egypt by handing over to them the territory south of the First Cataract and by fortifying the island of Philae. The Blemmyes were concentrated in this area. Their embassies to the imperial court in the 320s and 330s are reported by Eusebius (*Vita of Constantine*) and in the *Abinnaeus Archive*. They resumed attacks in 373 (J. Desanges, *Meroitic Newsletter* 10 [1972] 33f); *Palladios* of Helens­polis met crowds of refugees from the Blemmyes at Tabennesi in the early 5th C. OLIMPIDOROS of THEBES, who visited the Blemmyes ca.423, reported that they possessed several cities and emerald mines and had developed a rudimentary form of administration headed by a “king.” An uprising of the Blemmyes was quelled ca.452 when Maximinos, the military commander of the THEBAID, defeated them and negotiated a hundred-year peace; at that time the Blemmyes were acting in concert with the Noubades (Nobatae), a neigh-
boring tribe, but soon a conflict arose between the two, and Silko, king of the Noubades, conquered the Blemmyes, as he boasted in an inscription. Probably to the 6th C. belong documents from the island of Gebelein (Greek and Coptic texts on leather from gazelle and crocodile skins) that record the names of some chieftains of the Blemmyes and indicate the penetration of Christianity into their predominantly pagan society. Justinian I reportedly destroyed their sanctuaries at Philae dedicated to Isis, Osiris, and Priapus. Greek papyri of the 6th C. often mention the Blemmyes, and in the early 7th C. a certain Dioskoros is known who, as a scribe of the Blemmyes, dealt with kommerkia. Kosmas Indikopleustes (11.21:2–5) indicates that the Blemmyes sold emeralds to the Axumites in Nubia, who then sent them to India. The numerous Coptic papyri of the 7th and 8th C. contain only two references to the Blemmyes.

**BLINDING** (*νυφλωσις*) as a punishment did not exist in the law of Justinian I; the evidence concerning the blinding of Christian martyrs during the persecution is probably legendary. The first certain case of punitive blinding is that of Patr. Kallinikos in 705 by Justinian II (Theoph. 375–13). The *Ecloga* mentions blinding only once (17.15)—as a punishment for stealing from the altar. The *Farmer's Law* (pars. 68–69) prescribes blinding for the thief of grain or wine who had been caught for the third time. Blinding became the major means of punishing political rivals; among the victims of blinding were Artabasdos, Constantine VI, Michael V, Romanos IV, and John IV. Michael VIII was probably the last emperor to resort to total blinding, although in 1373 John V, under pressure from Murad I, was compelled to order the partial blinding of Andronikos IV and his son, the future John VII (R. Loenertz, *EO* 38 [1939] 335). Blinding was a penalty for heretics, magicians, and traitors. Basil II employed mass blinding of prisoners to terrorize the Bulgarians with whom he was at war. Blinding was carried out by pouring boiling vinegar, gouging out the eyes, or applying a red-hot iron. The degree of blindness achieved could be of varying severity,
so that some generals continued to command armies after this operation. An attempt to introduce blinding in Kievan Rus' in 1097 failed because of general indignation.

A.K.

BLIND MAN, HEALING OF THE. The Gospels record several blind men healed by Christ: two who followed Jesus in Jericho (Mt 9:27-34); two who sat by the way in Jericho (Mk 10:46-52, Lk 18:35-43); one healed at Bethesda (Mk 8:23-26); and the man born blind, healed at Siloam (Jn 9:1-12). Gaining sight was an apt metaphor for gaining faith, and Early Christian art abounds in generic vignettes of Christ healing a blind person. Byz. art uses fewer such images, though no miracle cycle lacks some scene of blindness cured. Most frequently distinguished from the others is the healing at Siloam, usually depicted in at least two phases: Jesus placing mud on the man's eyes, and the man washing them. This is the most fully narrated of all healings: the Paris FRIEZE GOSPEL (fol.186r) uses eight vignettes. This healing is also distinctive in being one of the three water miracles recounted in the Gospel of John (also Christ and the Samaritan woman, Jn 4:5-30; paralytic at Bethesda, Jn 5:2-9) that are often joined in exegesis (E. Hoskyns, *The Fourth Gospel* [London 1947] 363-65) and art (Sopocani, exornathex of Chora) to convey the healing power of faith.

A.W.C.

BLOOD (αἷμα) was understood in Byz. as the biblical "life of the living body" (Lev 17:11) and was consequently surrounded by taboos. The Book of the EPARCH (8.4) prohibited the use of blood for dyeing raw silk; the penalty for ignoring this prohibition was having one's hands cut off. Some blood taboos, such as the prohibition of eating blood, were imposed only on the clergy (APOTOLIC CANONS 62), whereas the cooking of blood broth (aimatia) was widespread among laymen. Bloodshed, as in military actions, was completely forbidden to the clergy. The precious Blood of Christ was regarded as the price of human redemption. The Church repeated the sacrifice of Jesus in the EUCHARIST, when the wine was thought to become the true Blood of Christ. Since blood was identified with life and redemption, the color purple, symbolizing blood, assumed an important role in the imperial cult. For Niketas Choniates, however, the imperial purple symbolized the shedding of blood and murder. Blood that left the body was identified with death, and a constant bloodthirstiness was ascribed to demons. Blood was also the symbol of union, as of family ties and particularly aristocratic lineages.

A.K.

BLOOD VENGEANCE. Killings in revenge are not well attested in Byz. sources. A. Mirambel (Byzantion 16 [1944] 381-92) mistakenly saw evidence for it in the term PHONIKON (but see P. Charanis, *Speculum* 20 [1945] 331-33). There are examples, however, of compensating the family of the deceased by handing over the person responsible for the MURDER: in the Peira (66.27; also 66.28) a slave who murdered a soldier at his master's order was given by the judges to the widow "to serve her." Neilos of Rossano advised the princess of Capua to give, as a form of penitence, one of her sons to the family of the man murdered by her sons at her instigation "for them to do with him whatever they wish" (AASS Sept. 7:308D-F).

The sources also preserve measures taken to prevent blood vengeance. Constantine VII legislated that the person guilty of a willful killing was to be subjected to lifelong exile far from the scene of the crime, thus protecting the victim's relations from the painful reminder of the crime and also helping to prevent a killing in retaliation (Zepos, *Jus* 1:233). Other factors that may have helped to check blood vengeance were the private settlement, which could be arranged between the murderer and the victim's family and which provided a form of compensation (*Basil. 11.1.1*; 60.53; 1; Peira 66.25 and 66.27), and the "warning" attached to documents issued by the church, addressed to civil officials and members of the deceased's family, admonishing them not to harm the killer, on penalty of excommunication (R.J. Macrides, *Speculum* 63 [1988] 509-38).

BODRUM CAMII. See Myrelaion, Monastery of.

BODY (σώμα), sometimes distinguished from flesh (σάρξ), was considered in Byz. anthropology as one of the two "natures" that constituted man: unlike the soul, the body was construed as three-dimensional, visible, and corruptible (mortal). It consisted of four elements (stoicheia): earth, dry and cold; water, cold and wet; air, wet and warm; fire, warm and dry. It had four humors (chymoi): black bile, analogous to earth; phlegm—to water; blood—to air; light bile—to fire. The main somatic qualities were divisibility, qualitative change (warming, cooling, etc.), and mutability in response to voiding (kenosis) that created physical desires (hunger, thirst, etc.). A peculiar definition of the body is to be found in Anastasios I, patriarch of Antioch, and Anastasios of Sinai: the body is all that "was not uncreated" or "what originates from nothingness." The concept of a double creation—of the inner man and of the unity of the soul and body—had no chance of survival after the condemnation of Origenism. The body distinguishes man from both the angels and demons, even though sometimes the concept of angelic ( demonic) finer flesh was maintained. Thus, Psellos, in his demonology, insisted that the astral bodies of demons (pneumata) were vehicles to transfer false images, fantasies, and hallucinations, and to deceive mankind.

A major problem for Byz. theology was determining an appropriate moral or soteriological role for the body. The Byz. rejected the Stoic image of the body as the cage or prison of the soul as well as the Manichaean vision of the body as the embodiment of evil. The body, created by God himself, was conceived of as ethically irrelevant, an instrument through which the soul could sin. Corruptible as it was, the body was to expect resurrection.

BODYGUARD (σωματοφύλαξ). In addition to guards entrusted with the defense of the palace (hetaireia), there were small units designed to protect the person of the emperor; when the emperor traveled, the palatine somatophylakes guarded him (e.g., Attal. 9.20). Belisarios, while removed from supreme command, served as archon of the emperor's somatophylakes (Prokopios, Wars 8.21.1). In the 14th C. the corps of bodyguards was under the command of the primikieros of the court (aule) and consisted of several units, each of which had its own station: the Varangians stood watch at the doors of the emperor's chamber, the so-called paramonai in the palace court. There were also Tsakones and other mounted and foot soldiers (pseudo-Kod. 179f). The distinction between bodyguards, palace guards, and imperial retinue was blurred, and Niketas Choniates (Nik.Chon. 184.11, 322.49) defined somatophylakes and doryphoroi ( retainers) together as the contingents closest to the emperor.

Bodyguards were often recruited from foreigners in West and East. Protection of the emperor was also assigned to some courtiers, one of whom, the parakoukomenos, slept at the threshold of the emperor's chamber. In the 5th- or 6th-C. romance The Tale of the Persian Affairs, it is said that King Kyros had female bodyguards, somatophylakesissai (E. Bradtke, Das sogenannte Religionsgespräch am Hof des Sasaniden [Leipzig 1899] 20.1–2)—but it is questionable whether this evidence reflects the existence of a corps of female bodyguards (of the empress?) at the late Roman or Byz. court. High-ranking military officers and influential private individuals might also have bodyguards (sometimes called boukellarios).

—A.K.

BODY LANGUAGE. The ideal of late Roman and Byz. behavior was "statuary": one should imitate the statue (agalma), avoiding unnecessary movements and appearing solemn and quiet. Early medieval attitudes condemned passionate emotions, including lamentations, and art and literature rarely present dramatic gesturing (M. Barasch, Gestures of Despair [New York 1976] 34f). Symeon the Theologian (Catéchêses, no.26.28–31) prescribed strict discipline for the body during prayer, and Psellos followed the same vein when he censured a priest for excessively moving his lips, shoulders, and hands (Ljubarskij, Psel 238).
Nevertheless, body movement was a significant component of state ceremonial (with proskynesis the extreme physical expression of self-submission), liturgy (the gestures of the priest), funerals (tearing of hair, beating of breasts), or marriage rites. It was also a part of everyday behavior—embraces and kissing signified greeting and respect (e.g., vita of Basil the Younger, ed. Vilinskij 1:398.14–16); a movement of a finger could denote a charitable attitude (vita of Basil the Younger, ed. Veselovskij 2:106.34–107.1); pulling out the hair of the beard expressed dismay (PG 111:797A); touching the beard indicated pleading for mercy (Athanasiou I of Constantinople, ep.94.19–22).

Some gestures—in reality or in fiction?—stressed a tragic situation, as in a description of the execution of Andronikos I (Nik.Chon. 351.53–54): the maimed emperor, whose hand had been amputated, in pain extended the stump to his mouth as if trying to suck out the dripping blood. On the other hand, the strange and indecent body language of a holy fool (such as Symeon of Emesa) was interpreted metaphorically as an expression of the saint's utmost humility.

---

**BOEOTIA** (Bou toutia), a region in central Greece; Thebes was still considered its metropolis in the 6th C. Prokopios (Buildings 4.2.24) stresses that the city walls of Boeotian towns were neglected before the reign of Justinian I, and Zosimos (5.5.7; ed. Paschoud 3:11.25–30) describes how “all Boeotia” was destroyed by the invasion of Alaric in 395/6. On the other hand, an inscription shows that in 401/2 Boeotia was able to provide the state with a significant amount of grain (F. Cauer, RE 3 [1899] 663), and U. Kahrstedt (Das wirtschaftliche Gesicht Griechenlands in der Kaiserzeit [Bern 1954] 86f) suggested that substantial areas of the region were turned over to large estates. Archaeological investigation demonstrates that in the 4th–6th C. Boeotia retained, in general outline, the classical urban pattern, the territory of Thebais showing even a remarkable resettlement. From the 7th C. Boeotia was in decline, and O. Rackham (BSA 78 [1983] 346f) concludes that this period was bad for men and goats, but good for trees, so that the woodland expanded. Some revival can be observed in the 9th–11th C. when the massive stone church at Skripou near Orchomenos (dated 873/4) and Hosios Loukas were constructed. The area seems to have been densely populated after 1204. Boeotia formed a part of the theme of Hellas, although the ancient name of Boeotia appears frequently in various authors; for instance, Skylitzes (Skyl. 341.28–29) lists Thessaly, Boeotia, and Attica; Nikephoros Gregorios (Greg. 2:239.7 and 17–18) speaks of Boeotia and Thebes as an administrative unit.

---

**BOETHIUS**, more fully Anicius Manlius Severinus Boethius, Latin philosopher and writer; born ca.480, died Ticinum ca.524. Of a rich and consular family, he was cared for by the family of Quintus Aurelius Memmius Symmachus upon his father's death. Boethius may have studied in Alexandria. Boethius served Theodorik the Great as consul (510) and magister officiorum (ca.522–23), until his intervention in a treason trial resulted in his own condemnation, imprisonment, and execution on the same charge.

While in prison he wrote On the Consolation of Philosophy, a five-book dialogue in prose and verse between himself and Philosophy, neoplatonically showing how the soul may achieve a vision of God. His authorship, now generally accepted, of five theological treatises, including one on the Trinity and anti-Nestorian polemic (J.R.S. Mair in Maistor 149–58), demonstrates that Boethius was indeed a Christian. An expert in Greek as well as Latin and a practitioner of many genres including poetry, his main interests were philosophy and translation. His scheme to latinize all of Aristotle and Plato was never completed, although he did manage to translate some of the former. The above works, along with writings on logic, mathematics, and music, helped to consolidate the medieval educational concept of the seven liberal arts (quadrivium and trivium). Some of his work was later translated into Greek by Maximos Planoudes and Manuel kalekas (A. Pertusi, Aphos 11 [1951] 301–22) as well as by Prochoros Kydones (D.Z. Niketas, Hellenika 35 [1984] 275–315).

Ed. PL 63–64. Philosophiae consolatio, ed. L. Bieler (Tournhout 1957). Gr. tr. by Planoude—Boëce: De la consolation...
BOGOMIL, POP, the presumed founder of the sect of the BOGOMILS; fl. 10th C. Our information about him comes mainly from KOSMAS THE PRIEST, who states that Bogomil was a priest (pop) and that he began to teach his heresy in Bulgaria in the reign of Tsar Peter of Bulgaria (927–69). A Russian index of forbidden books, preserved in a 16th-C. MS, states that Bogomil wrote heretical books. His name is probably the Slavic equivalent of the Greek Theophilos. His dualist followers in 10th-C. Bulgaria, named after him, are described by Kosmas as “lamb-like, gentle, modest, and silent, and pale from hypocritical fasting. They do not talk idly, nor laugh loudly, nor give themselves airs. They keep away from the sight of men, and outwardly they do everything so as not to be distinguished from Orthodox Christians.”

BOGOMILS, a dualist, neo-MANICHAEAN sect, founded in 10th-C. Bulgaria, presumably by Pop Bogomil. It subsequently spread over the entire Balkan peninsula and parts of Asia Minor, exerted a formative influence over the CATHAR movement in Italy and France, and proved for five centuries a determined enemy of the Byz. church. Holding the material world to be the creation and realm of the Devil, the Bogomils denied most of the basic doctrines of the Orthodox church, including the Incarnation. They imposed, at least on a minority of “elect” initiates, an ascetic life that required abstinance from sexual intercourse, meat, and wine, and—at least in 10th-C. Bulgaria—preached civil disobedience. Most evidence of their teaching and behavior is in the works of their enemies, esp. KOSMAS THE PRIEST, Anna Komnene, and Euthymios Ziga-BOGOMIL, though some valuable information is also found in the Interrogatio Johannis (or Liber Secretus, i.e., “Secret Book”), the only undeniably authentic product of Bogomil APOCRYPHA.

Originally the Bogomil doctrines owed much to the teaching of the PAULICIANS, who lived alongside them in the Balkans, and, unlike the Bogomils, were warlike in spirit and frequently rose up in arms against their Byz. overlords. MESSALIANISM, with which Bogomilism was frequently identified in the later Middle Ages, was probably used by Orthodox writers of the time as little more than a label for suspect or heretical mystical currents.

In the 11th C. the sect gained ground in Constantinople where, under its leader BASIL THE BOGOMIL, it found converts in aristocratic circles. At the behest of Alexios I Komnenos, Euthymios Zigabenos described its doctrines, rules, and ceremonies at considerable length. In the 12th C. Bogomilism spread in the empire’s Slavic provinces (notably in Macedonia), and also in Asia Minor, where in the 13th C. the Nicaean patriarch GERMANOS II wrote a treatise against them. Despite continued persecution, notaries of Bogomilism scored notable successes in Serbia, Dalmatia, and esp. Bosnia, where under the name of Patarenes they later became the dominant religious group. After the Turkish conquest they disappeared from the Balkans.

BOHEMUND (Βαϊμούντος), son of ROBERT GUESCARD; born between ca.1050 and 1058, died Bari? 5 or 7 Mar. 1109 (A. Gadolin, Byzantium 52 [1982] 125–31) or 1111. In 1081 he accompanied his father in attacking Alexios I, but was forced to withdraw in 1084. He joined the First Crusade in 1096 and reached Constantinople ca.9 Apr. 1097. There he swore fealty to Alexios, but Alexios put off his request to be named domestikos of the East. During the siege of Antioch, Bohemund helped induce TATIKIOS to depart, then obtained the city in violation of his oath to Alexios. Bohemund fought against the Byz. at Laodikeia until he was captured by Danismend ca. July 1100. Following his ransom in 1103, he again fought the Byz. Late in 1104 he returned to Italy; with papal support,
he called for a new Crusade, then, in France (1106), proclaimed his intention of directing it against Alexios, whom he denounced for treachery to the Crusaders. His expedition to Dyrrahchion (Oct. 1107) became trapped between the Byzantine fleet and army. Bohemund was forced to accept a treaty at Devol (Sept. 1108) whereby he became an imperial vassal and received Antioch as a fief from Alexios (J.A.N. Ljubarskij, M.M. Frejdenberg, VzVrem 21 [1969] 260–74). Anna Komnene depicts him as valiant, clever, an outstanding and farsighted commander, but treacherous, deceitful, a natural liar, and chameleon. His goal, in her opinion, was to win for himself land and power, and ultimately to seize Byz.

—C.M.B.

BOILAS (Boīlas), name of Bulgarian origin; it designated a high Bulgarian title. The first known Boilas in Byz. was the patrikios Constantine, a contemporary of the 8th-C. empress Irene. St. Ioannikios is said to have been related to the Boilas family. In the 10th C. members of the Boilas family were military commanders: Bardas Boilas, strategos of Chaldia, inspired a revolt in Armenia ca.922; Petronas Boilas served as katepano of Nikopolis (on the Pontos?) during the reign of Constantine VII. Judging from the names, one might infer that these two Boilades were Armenians. Some members of the family were courtiers: the chamberlain Constantine Boilas was involved in 925 in an unsuccessful plot against Romanos I and was compelled to take the monastic habit. The status of the family declined by the 11th C.: historians of this period call Romanos Boilas, the favorite of Constantine IX, a man of humble origin (Psello, Chron. 2:38, par.140.10); he was in charge of the imperial guard. Convicted of plotting against the emperor ca.1051, he was exiled but soon returned to the court. The traditional image of Romanos Boilas as a buffoon accounts for the biased judgment of him in Psello and other sources. His contemporary, Eustathios Boilas, is known from his will of 1059 (see BOILAS, WILL OF EUSTATHIOS). Even though the name of Boilas was common in the later period (PLP, nos. 2933–41), the Boilades did not occupy significant posts at that time. George Boilas (ca.1400) wrote a now-lost treatise Against the Latins to refute the teaching of Thomas Aquinas (Beck, Kirche 745).

Lit. Winkelmann, Quellenstudien 150f., 181f. —A.K.

BOILAS, WILL OF EUSTATHIOS. In Apr. 1059, Eustathios Boilas, protospatharios, epi tou chrysotriklinou, and hypatos, wrote his will; it was then copied on the last blank folios of a MS of St. John Klimax (Paris, B.N. Coisl. 263). Boilas was writing in an unknown place (probably near Edessa in Syria) where he had taken refuge after leaving his native Cappadocia. He had previously served for 15 years under the late dux Michael Apokapes and was still attached to members of his family. Reasonably wealthy in 1059, he had many slaves and real estate that he distributed among his two married daughters and Theotokos tou Salem, his pious foundation, which was scheduled to remain their property. This testament is important because of its early date and because it provides an insight into a poorly known region and society.

BOIOANNES (Boiōhannēs), a family name, probably of Slavic origin. According to M. Mathieu (Nouvelle Chî 4 [1952] 299–301), the name was connected with the Slavic name Boian; it is also recorded in the form of Boinos, Baianos (Dujčev, Proučvanija 11, n.1; V. Beševliev, Byzantion 35 [1965] 3); one of Leo VI’s wives was Eudokia Biaina. The first known Boioannes was Basil, katepano of Italy in 1017–28 (see BOIOANNES, BASIL). It is questionable whether a rebellious magnate called Baianos (Skyl. 396.26), whose fortune was confiscated in 1094, belonged to the same family. Another Boioannes, exaugustus of Italian sources, was katepano of Italy in 1041; the Normans captured him. Skylitzes (Skyl. 426.38–41) considered him a descendant of Basil Boioannes. Constantine Boioannes, a member of the local nobility in Dyrhachion, is mentioned in a synodal decision of 1199 (RegPatr, fasc. 3, no.1193): a certain Alexios Kapandrites, backed by an armed band, forced Constantine’s sister, Eudokia, to marry him; in
retaliation Constantine seized his undesirable brother-in-law, fettered him, and gave Eudokia in marriage to another man.

- A.K.

**BOIOANNES, BASIL, protospotharios and KATEPANO of Italy (1017-summer 1028); whether the name derives from Slavic or Greek is uncertain (M. Mathieu, Nouvelle Clio 4 [1952] 299-301). The career of Boioannes before his appointment as katepano by Basil II and after his recall by Constantine VIII is unknown. In Oct. 1018, at Cannae, Boioannes defeated the rebel Melo of Bari. He fortified northern Apulia, where he founded Troia (1019). Cooperating with Pandolf IV of Capua, Boioannes's army campaigned successfully on the Garigliano (1021). In response, Pope Benedict VIII summoned Henry II of Germany, who in 1022 captured Pandolf and vainly besieged Troia. After Henry's death (1024), Boioannes helped restore Pandolf (1026); Salerno, Capua, and Naples acknowledged Byz. overlordship. Boioannes secured papal recognition of Bari as a metropolis and of Troia and other places in the capitanate as bishoprics (W. Holtzmann, NachGött [1960] no.2:19-39). In 1024 Boioannes raided Croatia and in 1025 joined in an unsuccessful expedition sent by Basil II against Sicily. In May-Sept. 1041, another Boioannes, a son or relative, was katepano, but was captured by Lombards and Normans.

- C.M.B.

**BOJANA, a settlement in Bulgaria, southwest of Sofia, the site of a double church dedicated to Sts. Nicholas and Panteleemon. The smaller, east church has been dated on the basis of style to the 12th C. It has a square exterior enlivened by blind arches and a cruciform interior. The later church is a two-story funerary structure adjoining the older church at the west and serving as its narthex. The lower story is a barrel-vaulted hall with arcossola; the chapel above it is cruciform, with shortened cross arms and a central dome. Frescoes dated by inscription to 1259 cover the entire interior of both churches. The scenes follow the usual Byz. arrangement, and certain iconographic details (the fresco icons of Christ Euergetes and Christ Chalkites, the cityscapes) link the paintings to Constantinople. Despite the presence of some up-to-date details (such as the intricate armor), the tall, slim proportions of the figures and landscape in the compositions reflect Byz. models of the 11th and 12th C., and give the ensemble an archaic look. The lower church contains a cycle of scenes from the life of St. Nicholas of Myra; though Byz. in origin, the cycle is unusually long and displays many Western features. The captions to all the frescoes are in Slavonic; the artists may have come from TÜRNOVO. The donor portraits of the sebastokrator Kalojan (otherwise unknown) and his wife in the lower church are surprisingly individualized.

- E.C.S.

**BOLDENSELE, WILHELM VON** (originally named Otto of Nygenhusen), German traveler to Mt. Sinai; born in Westphalia-Saxony, died in Cologne? after 1337. A Dominican friar, Otto left his priory, changed his name to Wilhelm, and, in 1332-36, on assignment from the papal curia, traveled to the Levant. His purpose was probably not just a simple pilgrimage but also a reconnaissance with an eye to planning a new Crusade. At any rate, he paid serious attention to strategic points in Palestine and to the places where the Mamlûk sultan allegedly kept his treasures. On his way to Sinai Wilhelm stopped at Constantinople, Chios, Rhodes, and Cyprus; whether he visited Athens is unclear. In Constantinople he was received by Andronikos III, who gave him a letter to deliver to the sultan of Egypt. In his Itinerary, Wilhelm describes the marvelous churches and palaces of Constantinople and says that Hagia Sophia surpassed any other building in the world. He dwells particularly on the equestrian statue of Justinian I, which, to Wilhelm, seemed to threaten potential rebels and enemies of the empire. The Itinerary of Wilhelm was used by his contemporary Ludolf of Sudheim, who traveled to the East in 1336-41; in some cases Ludolf corrected and added to the work of his predecessor.
BOLERON (Βολερόν), region in Thrace between the Rhodope mountains and the sea, bounded by the Nestos River on the west and the defile of Korpiles on the east. First mentioned in the vita of Gregory of Dekapolis (as a geographical location), it became an administrative unit in the first half of the 11th C.: an act of 1047 refers to a “new dioikesis” of Boleron (Ioiv., no.29.77). By 1083 Boleron was considered a separate theme, containing at least two banda, Mosynopolis and Pertheorion (Typikon of Gregory Pakourianos, ed. P. Gautier, REB 42 [1984] 37.288). Most commonly it appears as part of the joint theme of Boleron, Strymon, and Thessalonike—the first known reference is the hypommnema of its judge Constantine Kamateros of 1037 (Docheiari., no.1.35). After 1204 the region was part of the Latin Kingdom of Thessalonike. It was probably reconstituted ca.1246 by John III Vatatzes and called the theme of Boleron-Mosynopolis. In the early 14th C. it was united with Mosynopolis, Serres, and Strymon under a kephale (Guillou, Méneète, nos. 7.25–26, 11.1–2). A document of 1344 (Docheiari., no.22.1–3), however, considers Boleron, Popolia, Serres, Strymon, and Melnik as kastra, in contrast to the themes of Thessalonike and Berroia.

BONE CARVING, a perennial industry, based on the slaughter of cattle and pack animals. Bone was used for buttons, knobs, and struts as well as for tools, esp. in the weaving trade. Bone gaming-pieces, containers, and bird-rings as well as ornamental handles for fans or fly-switches from many different periods have been found in Constantinople (M.V. Gill in R.M. Harrison, Excavations at Sarazhane in Istanbul, vol. 1 [Princeton 1986] 226–33, 251–53, 258–63); bone’s range of application thus exceeded that of ivory, although it was probably worked by the same craftsmen. Numerous plaques attached to caskets and boxes, often said to be of ivory, are in fact of bone.

A.C.

BONIFACE OF MONTFERRAT (Βουνφαίτιος ο Μόντιτς Φεράνττις), marquis of Thessalonike (1204–07); born early 1150s, died near Mosynopolis 4 Sept. 1207. In 1179–80 Boniface served as guardian of the captive Christian of Mainz while his brother Conrad of Montferrat traveled to Constantinople (D. Brader, Historische Studien: Bonifaz von Montferrat bis zum Antritt der Kreuzfahrt [1202] [Berlin 1907; rp. Vaduz 1965] 23–25). In June 1201, possibly influenced by his cousin King Philip II of France, Boniface accepted the leadership of the Fourth Crusade (E. Kittel, Byzantion 51 [1981] 562–65). At Christmas 1201, at Hagenau, he met another cousin, Philip of Swabia, and the future Alexios IV; they probably discussed the use of the Crusade to enthrone Alexios. Boniface avoided participating in the capture of Zara, but early in 1203 enthusiastically supported the proposal of Alexios and Philip of Swabia to turn the Crusade against Constantinople. After Alexios III fled, Boniface joined Alexios IV in an expedition through Thrace. In late 1203, he took a leading role in the discussions with Alexios IV.

During the sack of Constantinople, Boniface occupied the Great Palace, where his captives included the widow of Isaac II, Margaret of Hungary, whom he subsequently married. Because he had commanded the Crusaders, the populace of Constantinople anticipated his choice as emperor and hailed him as Ayos vasileas machio (“the holy emperor, the marquess”), but Baldwin of Flanders was elected. Boniface received Thessalonike as a kingdom, but a quarrel over it with Baldwin (mid-1204) was resolved with difficulty. Initially the populace of Thessalonike welcomed him warmly; later he appropriated the dwellings of the wealthiest inhabitants for his knights. In late 1204, using Margaret and Isaac’s son Manuel (clad in imperial robes) to smooth his advance, Boniface drove Leo Sgouros from Thessaly and occupied central Greece, where he captured Alexios III. The inhabitants of Thebes received Boniface enthusiastically, but he rejected the support of the Byz. aristocracy who then turned to Kalojan. In
1205–07 he fought Kalojan and allied himself with Henry of Hainault, then perished in a Bulgarian ambush.

—C.M.B.

BOOK (βιβλιον, βιβλα, δέλτος). The written word was of great importance in Byz., for the transmission of the Bible (the biblos par excellence) and patristic literature, and for the preservation of the heritage of classical antiquity. The number of preserved Greek MSS is about 55,000 (A. Dain, Les manuscrits [Paris 1964] 77), of which perhaps 40,000 are Byz. They are mainly in the form of a codex, but the roll survived in the transmission of liturgical texts and in the imperial chancery. Few pre-10th-C. MSS survive; the numbers of MSS produced increased dramatically with the introduction of minuscule script. Most MSS were liturgical or theological; these books predominate both in modern collections and in medieval inventories of monastic libraries. Literary, scientific, and historical books were generally found in the private collections of literati. Books were a rare and expensive commodity in Byz., because of the shortage of writing materials (parchment and paper) and the length of time it took a scribe to copy a MS (see Book Trade). N. Wilson has shown that in the 9th C. a MS of about 400 folios cost 15–20 nomismata, a sum reckoned by C. Mango as equivalent to half the annual salary of a civil servant (Books & Bookmen, 3f, 38f).

Private libraries rarely exceeded 25 volumes. Booksellers are scarcely ever mentioned; books were obtained by borrowing from friends, commissioning the copying of a MS at a scriptorium, or using a library. Hence books were highly valued by clergy and intellectuals; MSS from libraries frequently contain an imprecation against anyone who would dare steal the book. The designation of a book for a certain use might change in the course of the centuries; thus the Vienna Dioskorides (Vienna, ÖNB med.gr.1) was originally dedicated to the princess Anicia Juliana in the 6th C. but served as a herbal for a hospital in Constantinople in the 14th and 15th C. Many monasteries such as Studios, Hodegon, and Galesios housed important scriptoria; at others, however, esp. in the early Christian centuries, books were scorned. Antony the Great reportedly memorized the Scriptures so that he had no need for books (PG 26:845A, 945A); an abbot criticized a monk for spending money on codices instead of the poor (PG 65:416C).

—A.M.T., E.G.

BOOKBINDING (στάχωμα, ἄψισμα). The codex was protected by a binding, usually of leather or parchment, more rarely of silk or precious metals. Normally two leather-covered wooden boards held together and protected the quires, which the bookbinder stitched together. The dimensions of the quires and of the boards that form the binding are identical. In contrast to Western bookbinding, Byz. bindings did not have raised bands but were distinguished by a smooth spine. Sumptuous bindings sometimes took the form of metal book covers, occasionally adorned with precious stones or enamels. Technical names for elements of the decoration are known from the description of books in the inventories of monastic libraries (such as Patmos). Owing to the custom of storing MSS horizontally, the leather of the binding was protected by bosses (amygdalia, lit. “almonds”). Preserved examples of Byz. bookbinding permit the analysis of the stamps used for decoration; further research of this sort could enable us to investigate centers for bookbinding. Among the motifs used for blind-tooling on bindings from the late Byz. period are the monogram of the Palaiologos family (P. Hoffmann, Scriptorium 39 [1985] 274–81) and metal representations of patron saints.

—E.G.

BOOK COVER. Some ancient codices still have their original bookbinding of wooden boards, sometimes covered in leather; metal and silk and other textiles were also used for covers. A number of preserved metal and ivory plaques, which cor-
BOOK ILLUSTRATION AND ILLUMINATION

Gospel lectionaries, intended mainly for display, either on the altar or during the Little Entrance. The Crucifixion is the dominant subject of medieval Gospel covers, though Deesis compositions and Nativity scenes are also recorded. By the 14th C., Crucifixion scenes on the front cover are accompanied by Anastasis scenes on the back. Both images are surrounded by busts of angels, prophets, bishops, or saints and Christological scenes closely resembling contemporary icon frames (Treasury S. Marco 176–78).

M.M.M., L.Ph.B.

BOOK ILLUSTRATION AND ILLUMINATION. Conventionally the terms are used synonymously, or the former may refer to figural and the latter to ornamental decoration. MS illumination—a topic of study inaugurated by N.P. Kondakov in 1876—provides the most comprehensive evidence for the history of Byz. painting and is the oldest and best-studied area of Byz. art history. MSS were decorated by scribes and/or illuminators. Some were painted at the same time as they were written, but generally the text of the entire book was first copied and then it was illustrated; miniatures were either added in spaces left by the scribe or painted on separate leaves. A rare example of the illustration preceding the writing is the Menologion of Basil II. In the latter the unit of work was the single folio, but more commonly an illuminator, working sometimes in a scriptorium, executed the entire quire. A scribe might illuminate his own work or collaborate with someone else. The basic composition of a miniature was first established by a preliminary sketch, which then was typically covered with opaque pigments. Colored washes sufficed for simpler ornament and became popular for figural illustration in the Palaiologan period. Miniatures, esp. those of the Decorative Style, often cracked and flaked and were repainted during and after the Middle Ages.

The overwhelming number of decorated MSS are religious, with the Psalter and Gospel book predominating. Certain liturgical texts were dec-

respond to the general sizes of Byz. books, are thought to have served originally as covers; examples are the 6th-C. sets of silver plaques in the Kaper Koraon Treasure and the Sion Treasure, decorated with standing figures or a cross under an arch. The colophon of a Syriac MS of 633/4 written near Damascus refers to its cover composed of metal plates and gems (J. Leroy, Les manuscrits syriaques à peintures [Paris 1964] 118). Elaborate fittings for book covers are described in church inventories in and after the 11th C.: cross-shaped panels (stauroi) at the center and L-shaped corners (gammata); hinged straps (kompothelika); roundels (boulai); nailheads (karphia); and almond-shaped bosses (amygdalia) (Pantel., no.7.6–8; C. Astruc, TM 8 [1981] 22f).

The most elaborate covers were reserved for
BOOK ILLUSTRATION AND ILLUMINATION  307

orrhate, esp. lectionaries and liturgical rolls (see rolls, liturgical), but illustrated versions of the oktoechos and the sticharion are rare. A special edition of the homilies of Gregory of Nazianzos was created for liturgical use. Many MSS of the menologion are illustrated with images of saints and their martyrdom. Accounts of church councils, theological treatises, and monastic texts, such as the Typikon, the Heavenly Ladder of John Climax, or the romance of Barlaam and Ioasaph, were illustrated with varying frequencies.

Secular texts were decorated less often. A few imperial rolls open with imperial portraits or frame the text with decorated borders. The only Greek historical text with narrative illustration, the MS of John Skylitzes in Madrid, was produced in Norman Sicily. Various scientific manuscripts are accompanied by essential pictures and diagrams (Dioskorides, Nikander). Decorated literary texts are very rare, but fragments of a 5th-C. Iliad with later Byz. marginalia are preserved in Milan. Other decorated texts range from an Alexander Romance in Venice to an Epitaphalamion in the Vatican.

Illuminated MSS are more common in some periods than others. The rare and well-studied books from the pre-Iconoclastic period (Rossano Gospels, Rabbula Gospels, Genesis MSS in Vienna and London) are painted in a soft painterly manner of ancient origin. Little survives from the period of Iconoclasm, except a Ptolemy MS in the Vatican. From the latter half of the 9th C., the most important MSS are the Khlovd Psalter, the Paris Gregory, and the Sacra Parallela. The 10th C.—the height of Byz. illumination according to some—includes the classicizing Paris Psalter, Bible of Leo Sarellarios, Joshua Roll, and Stavronikitii Gospels. The style and iconography of 11th- and 12th-C. MSS (Menologion of Basil II, the Theodore Psalter, and the Codex Ebnerianus) are more innovative, however, and in this period, the ornament of headpieces, initials, and canon tables reaches its apogee. The many MSS of the Decorative Style testify to major provincial production during the late 12th and early 13th C. Palaiologan MSS feature pear-shaped figures, painted in pastel colors, and intricate ornament imitative of the Islamic arabesque. While some Palaiologan MSS were made for the emperor and his family, ecclesiastical patronage was more important. During the later 14th C., the production of deluxe Greek MSS declined; it all but ceased in the 15th C. but resumed in Renaissance Italy.

The reasons why decorated MSS were created are probably as numerous as the MSS themselves. For the many illustrated MSS that were donations to religious institutions, the principal motivation expressed in dedication notes is the hope of eternal salvation. Miniatures of the patron, offering the book to an intercessory saint, document the gift and proclaim the donor’s piety and association with saintly patrons. Images of contemporary persons affirm or legitimize political and social status, for example, Christ blessing the emperor or investing the hegoumenos of a monastery. Illustrations establish the context in which the text was used, as when the liturgical roll opens with a scene at the altar, an herbal adds to a plant picture an illustration of its medicinal use, or a lectionary depicts not the text’s content, but the religious occasion on which it was read. Even the most literal illustration calls attention to certain passages and not others. Some miniatures provide sophisticated commentary, while others serve as devotional images no different from other icons.

The contemporary significance of the illuminated MS in Byz. is attested by the language of inventories, wills, and notices of later owners and by the considerable impact that Byz. MS illustration had on Armenian, Syriac, and Coptic illumination. Byz. illuminators painted Gospel books in Georgian and Arabic, and Slavic artists adapted Byz. illustration and ornament for local contexts. Even Muslim artists copied illustrated scientific MSS. Few illuminated Byz. MSS are documented in western Europe before 1204, but many were imported afterwards. In the 15th C., humanists collected secular texts, which were seldom decorated, but their secondary interest in theological literature brought many illuminated MSS to European libraries. The appreciation of Byz. MSS as art objects is a product of the later 14th and 20th C. and had varied consequences. Miniatures were excised from MSS, forged by modern painters, and divorced from textual and cultural contexts in art historical studies. Yet the high artistic value accorded them gained a wider modern audience for Byz. culture in general.

BOOK OF THE EPARCH ('Επαρχικόν Βιβλίον), a collection of regulations of the activity of the Constantinopolitan guilds, which came under the supervision of the eparch of the city. The complete text survives in a 14th-C. MS (Geneva, Bibliothèque de Genève, no.23); the title and preambles are also preserved in an Istanbul MS (Metochion Taphou, no.25). In several MSS can be found the first three paragraphs of chapter 1 of the Book of the Eparch excerpted, as it is said, from "the decrees on city guilds (somateia)" (P. Noailles, A. Dain, Les novelles de Léon VI le Sage [Paris 1944] 376f). The MS of Metochion Taphou gives the name of the legislator—Leo VI (as do the fragments from ch.1)—and the date, 911/12 (D. Gkines, EEBS 13 [1937] 186). However, the mention in four paragraphs of tetartera (coins that were not introduced until the mid-10th C.) permits the hypothesis that the treatise was compiled (or interpolated) under Nikephoros II Phokas. This opinion is rejected by A. Schminck (Rechtsbücher 27, n.26) who identifies the tetarteron cited in the Book of the Eparch as the tremissis or semissis known through the reign of Basil I.

The Book of the Eparch is a collection in 22 chapters of rules devoted to separate guilds—notaries; argyropratai; money changers; various dealers in clothing and perfume; candlemakers; soapmakers; purveyors of groceries, meat, bread, fish, and wine—as well as to some assistants of the eparch (legatarii) and the so-called bothroi and technital. Some chapters repeat the same statements and probably were compiled separately. Certain important professions and trades (e.g., potters, ironmongers, tailors, dyers, shoemakers, barbers, physicians) are not included.

P. Pieler (in Hunger, Lit. 2:471) considers the Book of the Eparch a document that "belongs completely to the sphere of the late antique system of guilds." P. Schreiner (in LMA 3:2043), on the other hand, emphasizes the differences between the commercial organization described in the Book of the Eparch and that of late antiquity, since the 10th-C. treatise reflects neither coercive nor hereditary membership in guilds. Sjuzjumov views the regulations as representing the economic ideas of Leo VI.

BOOK OF THE HIMYARITES, a Syriac text preserved (in fragments) in a MS of the 15th C. with some remnants in another, 10th-C. codex. The Book describes the persecutions by Masruq (Dhu-Nuwas) in Najran and the invasion of Kaleb (Eleboam), the king of Axum, in 525. The Book was written by a Monophysite author immediately after the events described, probably on the basis of oral information from eyewitnesses. Moberg (infra) tentatively identified the author as a certain Sergios (or George) of Rusařah, of whom nothing is known save his participation in an embassy sent by Justin I to the Lakhmid Alamundar of Hira. Shahid (infra), however, identified him with Symeon, bishop of Beth-Arsham, the author of a letter detailing the same events.

BOOK TRADE in the strict sense hardly ever existed in Byz., in contrast to the flourishing book production and distribution of late antiquity. There was a certain market for old and rare books, while new books were always produced on commission for the public library of the commissioner or the library of a public or ecclesiastical institution. Some MSS contain indications about the price, the charges for the copying and those for the material (i.e., the parchment) being calculated separately. Arethas of Caesarea paid around 15–20 nomismata on the average for a MS, about a third of this amount being for the parchment. In other cases the data concerning book prices are much less clear. Because the size and format of the books in question are often unknown, the average price of a Byz. book cannot be determined, much less related to the purchasing power of the currency during the period in question. Writing material remained expensive even after...
the introduction of oriental paper, and only in the last centuries of the empire were costs reduced by the importation of western paper. Under these circumstances acquiring and collecting books was a privilege of institutions and of a very few wealthy individuals. Owing to the high prices, intellectuals rarely could satisfy their need for books through purchase; as a result, scholars often borrowed books from one another and copied them personally.

W.H.

BOOTY (σκόπλας). The spoils of war included the enemy’s baggage, equipment, animals, money, and even their persons, which could be sold into slavery or held for ransom (see Prisoners of War). The military treaties laid down strict regulations against soldiers’ plundering during battle (for which the penalty was death) and assigned second-rank men or soldiers’ attendants to follow the combatants and collect booty or prisoners for distribution afterwards (Strat. Maurik. 2.g. pp. 126-28; Praecepta Milit. 7.14-21, 16.32-35). According to the rules on division of spoils set out in the Ecologa (18.1) and the 10th-C. Sylloge Tacti-corum, ch.50 (ed. A. Dain [Paris 1938] 98f), one-sixth of the collected booty was reserved for the imperial treasury and the remainder given out to the soldiery. Interestingly, officers did not receive booty in addition to their wages unless they had distinguished themselves in battle; their reward came out of the imperial share. The Ecologa 16.1-2 states that booty and gratuities granted to soldiers counted among peculium castrense.

Details from historical sources show practice at variance with theory in the distribution of booty and revenues derived therefrom. Ibn Hawqal describes the efforts of Nikephoros II Phokas to tax or appropriate revenues generated from the sale of prisoners or booty to finance his military expeditions (Configuration de la terre, tr. J.H. Kramers, G. Wiet, vol. 1 [Paris 1964] 192-94). Basil II divided prisoners taken at Longas (1016) three ways between himself, his allies from Rus’ and his own troops (Skyl. 355.22-24), and in 1018 simply paid his army’s wages out of money seized at Ohrid (Skyl. 358.14-359.18).

BORIL (Bopilas), Bulgarian tsar (1207-18); died after 1218. Boril seized the Bulgarian throne after the murder of his uncle Kaloja; to strengthen his position he married his uncle’s Cuman widow. He invaded the Latin Empire, but was completely defeated on 31 July 1208 outside Philippopolis, and was defeated again by the Latins in 1211, this time near Thessalonike. His hold over Bulgaria was always tenuous, with members of his family establishing themselves as semi-independent rulers. His brother Strej controlled Prosek with the support of the Serbian ruler Stefan I the First-Crowned. Using the good offices of the papacy, Boril turned to Henry of Hainault for help against this pair. In 1213 they concluded an alliance, sealed by Henry’s marriage to Maria (probably Boril’s daughter). The next year they launched a joint expedition against Serbia, but were repulsed. In 1211 Boril convoked a synod of the Bulgarian church at Turnovo, which condemned the Bogomil heresy. Though the synod conformed to the practices of the Orthodox church (J. Gouillard, TM 4 [1970] 361-74), Boril’s dealings with the papacy suggest that he may have been prompted by papal concern about the Albigenian heresy, which was believed to originate in Bulgaria (I. Dujčev, BBulg 6 [1980] 115-24). In 1218 Boril was overthrown by John Asen II and blinded.

BORIL, SYNODIKON OF, conventional name of a Bulgarian compilation of various anathemas of heretics. Its initial form was a translation from a Greek compilation of ecclesiastical bans similar to the Synodikon of Orthodoxy, including some anathemas of the 12th C. To this translated part an original section was added containing the decisions of the Bulgarian synod of 1211 convoked by Tsar Boril. Later on, complementary entries
were introduced dealing with ecclesiastical discussions of the 14th C. The text has survived in two major Bulgarian redactions (those of Palauzov and of Drinov) as well as in Serbian and Russian versions. The Bulgarian redactions probably reveal traces of the editorial work of Evtimij of Tūrnovo.

BORIS I (Búrgyovis), Bulgarian khan (852-89); died 2 May 907; commemorated in Orthodox calendars on 2 May. Byz. sources commonly use his baptismal name Michael. Soon after his accession Boris contemplated attacking Byz. but reportedly was dissuaded by a personal threat from Empress Theodora (Genes. 61.89-99); a treaty may have been concluded in 853 (G. Cankova-Petkova, BBulg 4 [1973] 25). During the early years of Boris's reign rivalry between Byz. and Western clergy over missionary activity in Bulgaria sharply increased in close connection with political maneuvering by Rome, Aachen, and Constantinople (J.-M. Santerre, Byzantion 52 [1982] 375-88; H.-D. Döppmann, Die slawischen Sprachen 5 [1987] 21-40). Boris's treaty with Louis the German in 862 provoked a campaign by Caesar Bardas in 863/4 that compelled the Bulgarian ruler to reject a Frankish alliance and be baptized in exchange for Byz. recognition of Bulgarian settlement in Zagorje south of the Balkans (P. Petrov, BBulg 2 [1966] 41-52). One legend says that Boris received religious instruction from his sister, who had converted to Christianity while a captive in Constantinople; another relates how a Greek monk painted an Icon of the Last Judgment that terrified Boris into becoming baptized (TheophCont 162.13-165.10). Patr. Photios baptized him in 864 (A. Vaillant, M. Lascaris, RES 13 [1933] 5-15) or perhaps 865/6 (S. Mihajlov, BHR 5.3 [1977] 63-71).

The conversion of Boris provoked a revolt by conservative Bulgarian nobles, which he cruelly suppressed. A letter from Photios in 865 to "the God-sent archon" Boris described the duties of a Christian ruler (Photii Epistulae et Amphilochia, ed. B. Laourdas, L. Westerink, vol. 1 [Leipzig 1983] 2-39). Byz. intentions to subordinate the Bulgarian church to Constantinople prompted Boris to seek local control over ecclesiastical jurisdiction in 866 from Pope Nicholas I; the pope answered Boris's questions about the consequences of conversion for Bulgarian customs (see Responsa Nicolai Papae) and indicated that he would send a bishop (R. Sullivan in Studies in Medieval and Renaissance History 3 [1966] 53-139). Yet Hadrian II delayed in appointing a bishop, and in 869 Boris sent ambassadors to Basil I; their meeting was recorded by Anastasius Bibliothecarius (Lib. PONT. 2:182-84). In March 870 a church council placed Bulgaria under the patriarchate of Constantinople. Boris expelled Western missionaries from Bulgaria, and Patr. Ignatios appointed clerics to staff the Bulgarian church (V. Svoboda, BBulg 2 [1966] 67-81).

Boris was not hostile to Byz. but realized the dangers of hellenization posed by Constantinople's religious dominance. In 885/6 he welcomed the disciples of Constantine the Philosopher and Methodios, including Kliment of Ohrid, who laid the foundation of a Slavic Christian culture in Bulgaria. Boris actively patronized the church: a later tradition reports that he built seven cathedrals (ed. A. Milev, Grückte zitija na Kliment Ochridski [Sofia 1966] ch.67). He built at least one court chapel at Pliska. In 889 he retired to his monastic foundation of St. Panteleimon at Preslav, but emerged temporarily in 893 to depose his son Vladimir, who favored a pro-Frankish alliance and reportedly persecuted Byz. clerics. A local church council that summer approved the accession of Boris's son Symeon and officially adopted Church Slavonic for Bulgarian liturgical use.

— P.A.H.

BORIS II, tsar of Bulgaria (969-71); son of Peter of Bulgaria and Maria (Irene) Lekapena; born probably Preslav ca.930, died near Ikhtimian between ca.976 and 985. At their mother's death (ca.969), Boris and his brother Romanos went as hostages to Constantinople. Returning to Bulgaria perhaps as early as 967, Boris was recognized as tsar at Peter's death. Bulgaria was already involved in the struggle between Svjatoslav of Kiev and the Byz. On his second invasion, Svjatoslav took Preslav (969), apparently peacefully; Boris continued to rule. John I Tzimiskes
captured Boris in Preslav (971, before Apr.). Once eastern Bulgaria was subdued, Boris was stripped of his crown, taken to Constantinople, and given the title magistros; Romanos was castrated. After the outbreak of the rebellion of the KOMETOPOLloi, Boris and Romanos escaped, but on his entry into Bulgaria in disguise Boris was slain by a Bulgarian guard. Romanos reached Vidin and served SAMUEL OF BULGARIA. According to an 11th-C. historian (Skyl. 346.64–69), he surrendered Skopje to Basil II (between 1002 and 1004).

BORIS AND GLEB, saints; baptismal names Roman and David; Boris died 24 July 1015 at L'eto River, Gleb died 5 Sept. 1015 near Smolensk; feastday 24 July. Sons of VLADIMIR I, Boris and Gleb were murdered by their elder half-brother (or cousin) Svjatopolk and later widely venerated as martyrs. Several Byz. metropolitans of Kiev participated in translating the saints' relics at their shrine in Vyshhorod (north of Kiev): John I (before 1039), George (May 1072), and Niképhoros I (2 May 1115). A 12th-C. MS attributes the saints' first office to "metropolitan John of Rus,'" that is, John I or possibly John II, leading to conjecture that the extant Slavonic text was originally composed in Greek; portions apparently stem from Byz. offices for Sts. Prokopios and Kyros and John (F. Keller, Slavica Helvetica 7 [1973] 65–74). The cult's many hagiographic works, including a vita by Nestor of Kiev and the 1015 entry in the POVEST' VREMENNYYKH LET, also draw heavily on Byz. literary traditions (F. von Lilienfeld, BBA 5 [1957] 237–71; L. Müller, ZSlovPhil 25 [1956] 329–63, 27 [1959] 274–322, 30 [1962] 14–44). So too the saints' depiction on seals, icons, frescoes, enamel jewelry, and pectoral crosses and in MS illuminations reflects Byz. artistic models. Armenian synaxaria of the 13th C. contain a vita often thought (probably incorrectly) to be translated from a lost Greek Life (Ya. Dachkevytch, REArn n.s. 11 [1975–76] 323–75). In 1200 Antony of Novgorod reported a church of Boris and Gleb in Constantinople (Janin, Églises CP 65) and their icon in Hagia Sophia.

BORIS KALAMANOVIC, general; born Kiev ca.1113, died near the Danube River ca.1155/6. Son of Kalmán, king of Hungary (1095–1116), and Euphemia, daughter of VLADIMIR MONOMACH, he was born after her repudiation by Kálman. Between 1128 and 1130 Boris came to Constantinople, where he possibly married Anna Botaneiataina Doukaina Komnene (as a nun, Arête), a descendant of Isaac Komnenos and thus a cousin of John II (Barzos, Genealogia 2:33–43). As a pretender to the Hungarian throne, Boris was supported by several neighboring states. Around 1151, encouraged by Manuel I, he invaded Hungary. He was killed fighting Cumans south of the Danube. In Sept. 1157 the "kralaina" (i.e., the wife of the kral) Arete Doukaina donated fields and paroikoi to the monastery of Hiero-Xerorchaphion (V. Laurent, BZ 65 [1972] 35–39). (See also KALAMANOS.)

BORROWING, LINGUISTIC. Greek, like other languages, frequently borrowed foreign words for new objects or concepts. Where there was widespread bilingualism, whether regional or typical of a professional or other group (e.g., lawyers or soldiers), foreign words or expressions might also be used for convenience or prestige, even when a Greek equivalent existed. Up to the end of the 6th C. the principal source of loanwords was LATIN, the official language of the Roman Empire, and the main semantic fields involved were military affairs and public administration. Among early Greek loan words from Latin were hospitium, membrana or membranum, armation,fabrica, officiarios, aplikeuvo, rogeuvo. Literary Greek avoided these Latin loan words, replacing them by Greek synonyms or by circumlocations. After the 12th C.
most loanwords were from the Romance languages. Commercial and maritime terms were largely borrowed from Italian, terms of feudal law and administration from French; examples are phrountzato, φλουντζατο, kouherta, skouderes, printzes, phlamboulon, lizios, exomplon, kabolikevo, tenta. Turkish loan words, numerous in Greek from the mid-15th C., are rare in the Byz. period. Middle Persian, Proto-Bulgarian, Old Slavonic, Arabic, Khazar, Spanish, Catalan, Provençal, and Albanian also contributed occasional loanwords. To survive, loanwords had to be adapted to Greek phonological and morphological patterns. The gender of a loanword is often uncertain, and masculine or feminine words in Latin or Romance are often represented by neuter diminutives in Greek. Nouns were more easily borrowed than verbs. The frequency of borrowing from Latin led to the adoption of certain Latin suffixes, for example, -arios, -arion, -ianos, which were used to form derivatives from Greek stems. Romance suffixes such as -ella, -ello, -inos on the other hand, were scarcely used except in Romance loanwords; the principal exception is the Italian verbal suffix -aro (aorist -aris), which became extremely productive in late medieval Greek.

BOSNIA (Βοσνία), part of the Roman province of Dalmatia. Excavations in the territory of Bosnia (D. Basler, Architektura kasnoantičkog doba u Bosni i Hercegovini [Sarajevo 1972]) have shown that urban life and building activity survived there during late antiquity. The Slav invasion coincided with the ruralization of the area, even though the newcomers often settled in old church buildings or fortresses (N. Miletic, Balcanoslovica 1 [1972] 121-27). The name Bosnia (probably of Illyrian origin) first appears in the 10th C. in Constantine VII Porphyrogennetos (De adm. temp. 32.151) as “Bosona”; according to Constantine, Bosona was a territory (chorion) parallel to “baptized Serbia” and included two kastra—Katera and Desnik. Traditional interpretation of this passage (e.g., B. Ferjanic in VizIzvori 2:59, n.202), that is, that Constantine envisaged Bosna as a part of Serbia, contradicts the Greek text. A 12th-C. Byz. historian (Kinn. 131.22-23) considered Bosnia part of Croatia and contrasted it (p.104.8-10) with the land of the archizoupan (prince) of the Serbs. Later tradition ascribed to Basil II the conquest of “all Bulgaria, Raška and Bosnia” (Ferluga, Byzantium 201).

In the 12th C. Byz. claimed that the Croatian and “Bosnaios” acknowledged their allegiance to the emperor (Browning, Studies, pt.IV [1961], 203.568-69), and Manuel I Komnenos accepted the epithet “ruler of Bosna” in his titulature (Reg 2, no.1469). At the end of the 12th C. the king of Hungary became the lord of Bosnia, but Kulin, the ban (prince) of Bosnia, managed to find support from Pope Innocent III ca.1203. Bosnia reached its peak in the 14th C. under King Tvrtko (died 1391), who in 1377 assumed the title “King of Serbia” and in 1389 participated in the battle at Kosovo Polje. The teaching of the Bogomils penetrated to Bosnia no later than the 12th C. and became the official creed of the land.

BOSPOROS (Βοσπόρος, Turk. Boğaziçi), the strait linking the Black Sea with the Propontis, usually called Stenon by the Byz. It is 28.5 km long (in a straight line) and barely 660 m wide at its narrowest. Both shores were studded with small settlements; the more important are listed below.

The European Side (south to north). Argyropolis was the area to the east of Galata.

St. Mamas (corresponding to Turk. Dolmabâche rather than Beşiktaş) included a harbor, built in 469, and an imperial villa equipped with a hippodrome. Leo I, Constantine V and VI, and Empress Irene occasionally resided there. The villa was burnt by Krum in 813 and robbed of its ornaments, but was soon rebuilt. Michael III, who used to race chariots there with his couriers, was murdered there (867). The harbor sheltered the ships of Anastasios II in 715 and the Kibyrrhaion fleet of Constantine V in 742. By the terms of the treaties of 907 and 945, the St. Mamas quarter was assigned as the compulsory dwelling place of visiting merchants from Rus’ (J. Pargoire, EO 11 [1908] 203-10).
St. Phokas (Ortaköy) was the site of a palace built by the patrician Arsaber, brother of Patr. John VII Grammatikos; Basil I transformed it into a monastery.

Hestai or Michaelion (Arnaoutköy) was the site of a famous shrine of St. Michael, attributed to Constantine I, in which cures were effected by incubation.

Phoneus was the site of the castle of Rumeli, built by Mehmed II in 1452.

Anaplous or Sosthenion (Istinye) is a small natural bay next to which was another Church of St. Michael, transformed into an important monastery by Basil II. One mile inland stood the pillar of Daniel the Stylite. Nearby was the Georgian monastery ta Rhomanou, founded in the 9th C.

The Asiatic Side (north to south). Hieron was a fortress. Not far from Hieron stood the monastery of St. John Prodromos tou Phoberou, residence of the painter Lazaros who was persecuted under Emp. Theophilos.

Eirenaion (Çubuklu) was the site of the monastery of the Akoimetoi, established soon after 439.

Ta Anthemiu (near Anadoluhisari), was the site of a monastery founded by Alexios Mosele, son-in-law of the Theophilos.

Sophianaii (usually placed at Çengelköy), a palace built by Justin II and named after his wife Sophia, was the birthplace of Herakleios Constantine (612).

Bithynian Chrysopolis was a village, not a town. Its most famous Byz. feature was a lavish monastery built in 594 by Philippikos, brother-in-law of Maurice. Maximos the Confessor is claimed to have been its hegoumenos; so was the future patriarch Pyrrhos. The body of the murdered emperor Michael III was temporarily buried here in 867. The point south of the harbor of Chrysopolis was called Damalis (lit. “heifer”) after an antique statue of a cow. Manuel I had a palace there.

- C.M.

BOSPOROS, CIMMERIAN (Crimean), ancient name of the Straits of Kerch, the passage leading from the Black Sea to the Azov Sea, as well as the name of the ancient city of Pantikapaion at the extreme eastern tip of Crimea; until the end of the 4th C. Pantikapaion was the capital of the kingdom of Cimmerian Bosporos, an ally of Rome. Excavations give evidence of a slow decline in the 4th C.; local coins ceased to be issued in 336/7. Nonetheless, the site has yielded important LARGITIO DISHES and other 4th- and 5th-C. Byz. silver (Iskusstvo Vizantii 1, nos. 34, 35, 44, 48). Occupation by the Goths ca. 370 aggravated the economic situation of the people of Bosporos. According to Gajdukević (infra 498), ca. 400 Bosporos occupied barely one-tenth of its former territory, yet it remained an important commercial center connected with lands as distant as Egypt and Syria. Christianity penetrated Bosporos in the 3rd C., and its bishops attended the ecumenical councils of 325 and 431.

Under Hunnic rule in the 5th C., Bosporos offered allegiance to the Byz. Empire ca. 530; Justinian I tried to make it a center of resistance to the Huns. As early as 576 the Old Turks occupied Bosporos. From the 7th C.—when the main city received the name “Kerch”—until the 10th C. Bosporos was a province of the Khazar realm. It was governed by a tarchan, but the population remained in part Christian: in the 8th C. a large Church of John the Baptist was built in Bosporos. In the 11th C. it was a part of the Rus’ principedom of Tmutorokan and received the name of Korchë. Archaeological excavation has revealed Byz. ceramics of the 10th and 11th C. Bosporos was probably under the direct control of Byz. in the 12th C. and can tentatively be identified as the port of Rhosia (Rusiya), named in some Greek and Arab sources. After 1223 and before 1240 the Mongols became its suzerains. With the Mongols’ permission, the Genoese soon established there a colony called Vesporo that, in 1332, was granted the rank of metropolis. Vesporo was conquered by the Ottomans in 1475.

O.F., A.C.

BOSTRA (Bóstra, now Buşra [Bosra] in Syria), capital city and metropolitan bishopric of province of Arabia and seat of its doux. Titus of
Bostra was bishop of the city in the 4th C. Bostra was an important trading center (in wine and grain) on the Via Trajana, esp. for caravans coming via Aila from Mecca. Extensive remains (civic, religious, and private) of the 4th–7th C. include ten inscriptions of Justinian I dated 539/40 and referring to the restoration of an aqueduct, wall construction, a Church of St. Job, and some unidentified buildings. Unusually large in scope, the extent of the construction seems to conflict with Prokopios’s account of Justinianic work at Bostra, which is limited to a poorhouse (πτολεχεῖον; Buildings 5.9.22). Although the aisled-tetraconch Church of Sts. Sergios, Bakchos, and Leontios (R. Farioli in Studien Deichmann 1:133–42), finished in 512/13, has been called the cathedral of Bostra, the latter should perhaps be identified with an even larger church discovered in 1985, of which the nave is on a scale with that of Hagia Sophia, Constantinople (Dentzer, infra 138, fig.5). Theodore, the “bishop of Bostra (?)” a companion of JACOB BARAœUS and leader of the Monophysites of Arabia from the 540s, was not, apparently, resident in the city, whose list of known ChalcEdonian bishops is extensive. Under the Arabs, Bostra was a prosperous pilgrimage stop between Damascus and Mecca.

BOTA (Bótα, from Lat. vota publica), a festival celebrated on 3 Jan., dating from 44 B.C. The Bota was celebrated in the traditional manner with sacrifices and public prayers at banquets and in the Hippodrome until the end of the 4th C., when Emps. Arkadios and Honorius proscribed the sacrifices. The Council in Trullo forbade Christians to celebrate the Bota, probably because the sacrifices were still being performed (Trombly, “Trullo” 5). A variant of the Bota called the Foot-race Boton (boton pezdromion) existed in Constantinople in the 9th and 10th C. The Bota remained on the official calendar of court ceremonial until the time of Constantine VII Porphyrogennetos, though by then the ritual was entirely christianized. Memory of the Bota had died out by the time of Balsamon (12th C.), who, using a false etymology for Bota (he confused it with the Greek word for “grazing beasts”), speaks of it as a festival of “the falsely named god Pan, the overseer, as the pagans blather, of beasts, cattle, and other animals” (Rhalles-Potles, Syntagma 2:450.11–15).

BOTANEIATES (Botaneiàtēs), a noble lineage first mentioned in an inscription of 571 from the Synada region (G. Buckler, Byzantium 6 [1931] 405–10); Artemon Botaneiates, surnamed Kroubbeles, was however from a place called Botania or Botane rather than a member of the family. Attaleiates praised the family’s nobility and established an evidently forged pedigree from the Roman Family; in contrast, Psellos (Chron. 2:183, par.18.21–25) asserted that Michael VII elevated the family from a modest status to high rank. Other than Andrew Botaneiates, spatharios (?) and anthypatos, whose seal is dated tentatively to the 9th C., the Botaneiatai became prominent only in the 10th C. According to Attaleiates, Nikephoros Botaneiates was Basil II’s archistrategos. Gregory Abūl-Faraj preserves the (legendary?) information that Nikephoros “Votanik” was a peasant who attained high positions in Cyprus and Antioch, fell into disgrace, and ended in penury. His son Michael was also Basil II’s general who served in Thessalonike and against Abchasia. Theophylactos was governor of Thessalonike in the early 11th C. His son Michael participated in the battle of 1014 against the Bulgarians. With no reason Zlatarski (ist. 1.2:732 and n.3) identified him with the first Michael, whose father was not Theophylaktos, but Nikephoros; the son of the first Michael was the emperor Nikephoros III Botaneiates. An unnamed grandson of Nikephoros III (Michael, according to P. Gautier, REB 27 [1969] 342) was betrothed to the daughter of Manuel Komnenos, Alexios I’s brother. The relationship of other Botaneiatai to Nikephoros cannot be established; until the first half of the 12th C. they were military commanders (e.g., Eustatios, strategos of Byblos) and landowners, related to both Komnenoi and Doukai; the death of George Botanaietes was lamented byProdromos. By the end of the 12th C. their role declined: John Botaneiates served ca.1197 as taboularios on Crete. The later Botaneiatai (PLP, nos. 3001–03) held insignificant positions.
In Byz., botany was a sum of dispersed observations, mostly derived from ancient texts, rather than a discipline in its own right. Byz. botany stood in the context of a rich lore, standardized in Greco-Roman times by the widely circulated handbooks of Theophrastos, Cato, Varro, Columella, and Pliny the Elder. The 10th-C. Geoponika compacts much data from earlier farmers' manuals, popular knowledge, and botanical tracts drawn from both Greek and Latin sources. Some botanical MSS seem to be dry lists of names and synonyms, but other texts indicate how Byz. botanists and herbalists improved on their predecessors' work. Study of Byz. scholia to Dioskorides reveals observations taken directly from nature, and vivid proof of Byz. botanical art is in the illuminated scientific manuscripts, particularly the Vienna Dioskorides. Later MSS also show detailed care, and Byz. texts of Dioskorides, Nikander, and similar authors suggest botanical skills throughout the Byz. millennium. The polymathic curiosity of Psellos encompassed botanical lore deemed extraordinary or marvelous, and Manuel Philes displayed expert knowledge of gardening in several of his poems on domesticated plants. Botany explicated plants in agriculture, dietetics, the compounding of drugs for pharmacology (J. Scarborough, DOP 38 [1984] 229–32), and occasionally in magical texts specifying herbs—for instance, the Geoponika and its sources, the Properties of Foods by Symeon Seth, and the scholia to Dioskorides.

appointed governor of Genoa, a new French dependency. Manuel and Boucicaut met again near Modon (Methone) in 1403, and Boucicaut provided four Genoese galleys to transport Manuel on the final leg of his return to Constantinople.

---

**BOUDONITZA** (Μουτσίντσα, also Mountinitza, Lat. Bodoniza, and other forms), Latin marquisate in the area of Thermopylae; its name is of Slavic origin (Vasmer, Slaven 106, no.36). The pass of Thermopylae was fortified by Justinian I and then by Basil II, but there was no population center until the 13th C., when Boniface of Montferrat entrusted the region to an Italian adventurer Guido (Guy) Pallavicini, the first marquis (1204 to sometime after 1237). The castle on a hill was constructed on ancient foundations and controlled the pass of Thermopylae. Nearby was a monastery where Michael Choniates sought refuge after 1204. Originally under the authority of the prince of Achaia, the marquisate extended its territory as far north as Lamia and emerged as a major rival to Theodore Komnenos Doukas of Epiros. Later it fell under the control of the duke of Athens. It survived a Catalan attack in 1311 but in 1332 the region was plundered by the Turks. In the second half of the 14th C. Boudonitza prospered under the rule of Marquis Francesco, who was supported by the Venetians, but the Ottomans continued their attacks; in 1408 some of its inhabitants moved, with their livestock, to southern Euboea; the castle fell to the Turks on 20 June 1414.

---

**BOUKELLARION** (Βουκελλάριον) were soldiers in the personal service of military and, occasionally, civil authorities from the beginning of the 5th C. onward (H.-J. Diesner, Klio 54 [1972] 321–24); the term *boukellarios* allegedly derives from the higher quality bread (Lat. *bucellatum*) they received. Drawn from all classes and many nationalities, these private retainers were chiefly concerned with their employer’s security and the coercion (or elimination) of his rivals. They formed their commander’s bodyguard while on campaign and were often assigned important tasks because of their superior equipment and fighting abilities. Many rose to prominence, including Belisarios, who later, as supreme commander, raised a force of 7,000 *boukellarios* on which he relied heavily during his campaigns (Prokopios, Wars 7.1.18–20).

During the 6th C. the state recruited *boukellarios* (usually through private citizens) as police and tax-collectors and for local defense; the case of Egypt is particularly well documented (J. Gascou, BIFAQ 76 [1976] 143–56). Other terms denoting privately hired soldiers (*hypsaspistai, spatharioi*) gradually replaced *boukellarios*, which by the 7th C. had come to designate one of the elite units comprised in the * Opsikon* field force.

---

**BOUKELLARION** (Βουκελλάριον), a theme of central Asia Minor, detached from the *Opsikon* in the 8th C. and named for the privately hired soldiers, BOKELLARION. Its *strategos* is first attested in 767. Boukellaron comprised Galatia, Hono- rias, Paphlagonia, and parts of Phrygia and was commanded by a *strategos* with 8,000 troops and headquarters at Ankyra; he was paid 30 pounds of gold. In the 9th C. Boukellaron included two towns and 13 fortresses. Circa 842 *Paphlagonia* was detached; under Leo VI Boukellaron lost the region east of the Halys to Charsianon and its southern districts around the Salt Lake to Cap-
PADOCIA. The reduced theme subsisted into the 11th C.; the region was lost to the Turks after the battle of Mantzikert in 1071.

BOUKOLEON (Βουκολέων, lit. “bull lion”), a quarter of Constantinople on the shore of the Sea of Marmara, south of the GREAT PALACE. It took its name from an ancient statue depicting colossal figures of a lion and a bull. It is not known when the statue was brought to the site; it survived the fall of Constantinople in 1453 and was described by western visitors in the 16th C. On the shore was a palace, or probably two palaces, one called the “palation of Leo Makellos,” another the “house of Justinian.” Their precise location has not yet been determined; the buildings probably adjoined the sea walls. The palace harbor, located in the same area, was called the limen of Boukoleon.

BOULGAROPHYGON (Βούλγαροφυγόν), now Baba Eski, near Adrianople, a battlefield where Symeon of Bulgaria routed the Byz. army in 896. The war against Bulgaria had been stabilized after Symeon’s first successes, thanks to the activity of Nikephoros Phokas and the employment of Hungarian contingents. Then, however, Stylianos ZAOUTZES, fearful of Nikephoros’s influence, managed to replace him with Leo Katakalon, who allowed Symeon to defeat the Hungarians with the help of the Pechenegs; thus when Katakalon met Symeon at Boulgarophygon, the rear of the Bulgarian army was no longer threatened. Symeon won the battle, Katakalon barely escaped, and his lieutenant, the protovestarios Theodoreos, was killed. Al-Ṭabarī preserves the story that Leo VI, in despair, ordered the arming of Arab captives to be sent against Symeon, but the Bulgarian prince did not wait for a new confrontation and signed a treaty: he returned to Byz. 30 strongholds seized in the theme of Dyrachion, whereas Byz. was obliged to pay an annual tribute. R. Nasledova suggests that the peace treaty was signed only in 904, after Leo of Tripoli attacked Thessalonike (Dve vīzantijskie chroniki X veka [Moscow 1959] 221f.). Whether Symeon marched against Constantinople before or immediately after the battle at Boulgarophygon remains unclear.

- A.K.

BOULLOTERION. See Sealing Implements.

BOULLOTES (Βουλλωτής), an assistant of the eparch mentioned in the Klerotologion of Philotheos. The Book of the Eparch imposed corporal punishment on a silk weaver who prevented a boullotes or milotes from entering his workshop. Both officials evidently performed the function of inspector, controlling the quality of products and certifying quality by affixing a seal (boulla).

- A.K.

BOURTZES (Βούρτζης, fem. Βούρτζανα), a lineage of military aristocracy probably originating from the Euphrates region. The name could derive either from Arabic burj, “tower,” or from the toponym Bourtzo-Soterioupolis (near Trebizond). They were considered Armenians by P. Charanis, Arabs by V. Laurent (see Kazhdan, infra). The family first appears in the second half of the 10th C. Michael Bourtzes was doux of Antioch under Nikephoros II Phokas; he supported the rebel Bardas Skleros but later went over to Basil II; he was again governor of Antioch ca.990–96. Three of Michael’s descendants—the brothers Michael, Theognostos, and Samuel—were involved in a plot against Constantine VIII, who blinded Constantin Bourtzes, Michael’s son, in 1025/6. To the same time should be dated a case of Peira (60.1): a certain Bourtzes bequeathed his land to his three sons, one of whom became rebellious and forfeited his estates. Nonetheless the family was among the noblest of the mid-11th C.; an 11th-C. historian (Skyl. 488.63–66) calls a Bourtzes (along with Skleros, Botanletes, and Argyros) a most influential archon of the Anatolikon theme. Samuel Bourtzes commanded the
infantry in 1050; Michael Bourztes was a military commander during the reign of Michael VI; and Theognostos was strategos of Devol in the 1070s. Under Alexios I a certain Bourztes became toparches of Cappadocia and Choma. In the early 12th C. several members of the family possessed lands next to Mt. Athos; a forged chrysobull of Emp. John V (Kastam., p.84.11) mentions the church of "our holy father Nicholas surnamed Bourztes." The family was closely related to the Melissenoi. From the 12th C. the family's position declined; they appear in the provinces: for example, Constantine, an official on Crete in 1117/18 (MM 6:96.29–30), and George, metropolitan of Athens (died 1160—J. Darrouzès, REB 20 [1962] 190). John Tzetzes wrote to an unknown Bourztes. The name is very infrequent in later texts (PLP, nos. 3110–11).

BOURTZES, MICHAEL, general (died after 996). In 968 Nikephoros II Phokas bestowed upon him the title of patricios and appointed him strategos of the Black Mountain, with the special task of watching Antioch. Disobeying imperial orders, Bourztes and the eunuch Peter (former slave of a Phokas) attacked Antioch and in late 969 took it from the Arabs. Bourztes, however, was not rewarded for his success; this injustice incited his support of John (I) Tzimiskes, whom Bourztes helped to murder Nikephoros II. Basil II appointed Bourztes doux of Antioch, and, with Peter, Bourztes participated in the battle of Lapara in 976 against Bardas Skleros; Bourztes was, however, the first to take flight. Soon after this defeat he deserted to Skleros and fought against the emperor, but was again defeated. Skylitzes (Skyl. 321.58–59) stresses that those who fell at this battle were primarily Armenians. Soon Bourztes joined Basil II's army and together with Bardas Phokas fought against Skleros. In 990–96 he served again as governor of Antioch.

BOUTHROTON (Βούθρωτον, mod. Butrinti in Albania), located on the mainland opposite Kerkyra, in late antiquity a city of Old Epiros (Hierokl. 652.4); it was a suffragan bishopric (attested from the mid-5th C.) of Nikopolis, later of Naupaktos. It was probably ruralized thereafter: Arsenios, metropolitan of Kerkyra, praised its richness in fish and oysters, as well as the fertility of its territory. In the 12th C. al-Idrissi described Bouthroton as a small town with markets. In 1081 and 1084 Bouthroton was captured by the Normans. After 1204 it was first controlled by the despotate of Epiros, but from the mid-13th C. Bouthroton was contested between Manfred of Sicily, Michael VIII, and Charles I of Anjou, being temporarily returned to the Epirots. In 1386 it was ceded to Venice.

The surviving fortifications of Bouthroton are mainly post-Byz., but they contain masonry from as early as the 10th C. Remains of several Early Christian basilicas and a triconch building have been found; east of the ancient theater is an elaborate baptistery renovated in the 6th C., with mosaics probably of the 4th C. On the acropolis are ruins of a large three-aisled basilica with transept, probably constructed in the 5th–6th C., rebuilt in the 11th–12th C. In the northeast corner of the walls are remains of a small single-aisled church, probably of the 13th–14th C.

BOOUTOUMITES (Βουτουμίτης), a family name of unclear origin: J.A. Ljubarskij (in Anna Komnina, Aleskia) [Moscow 1965] 524. n.688) derives it from the toponym Boutouma-Budva in Serbia. A certain Boutoumites (died 1077), presumably a local landowner, was a donor to the pious institution of Michael Attaleiates (P. Gautier, REB 39 [1981] 127.171). In the 1070s Michael Boutoumites was in charge of the private militia of Michael Maurex in Herakleia Pontike (Bryen. 199.8–10). His later contemporary, Manuel Boutoumites, was a "warlike and noble man," according to Anna Komnene (An.Komm. 2:160.25–26); he was doux of the fleet ca.1090, doux of Nicaea after its recapture in 1097, commander in Cilicia in 1105, and envoy to Jerusalem in 1111/12. He may have been governor of Cyprus, as Laurent suggested (Coll. Orghidan, p.215). The family eventually lost its status, but a certain Boutoumites
is known as a kepále in a Thessalian town in the early 14th C. (PLP, no.3128).

BRÁBEION (βραβείον), properly "prize" or "reward," the term used in the Klerorologion of Philothéos to designate insignia by which a dignity was conferred upon its holder. It might take the form of a crown without cross (given to the caesar), tunics, ivory tablets, gold chains, special diplomas, etc.

BRACELET (βραχιάλιον or βραχιόλιον, lit. "armband," κλάνιον). Said in Justinian's Digest (34.2.25.10) to be worn by women, a bracelet is often shown in depictions of jewelry as part of a matching set, together with earrings, necklace, and belt. No such complete sets have survived, however. Bracelets preserved in collections are usually of gold and silver, although examples in ivory are also known. Specimens excavated usually from graves are more often bronze with traces of gilding, or simple glass bangles. These generally seem to be locally produced, although specimens found in Kiev were imported from Byz. (Ju. Ščapova, Steklo Kievs'koj Rusi [Moscow 1972] 107–13). The Roman form of a plain ring made of twisted gold or silver wires continued until the 4th C. In the 4th–5th C., tubular hoops had low relief decorative and figurative elements. In the 6th–7th C. the form became more complex, with medallions or coins, modeled animal forms, and gems in decorative claw settings added. In the 7th–11th C. wide bands with relief figures and sometimes Christian iconography predominate. These bracelets are fairly heavy, with hinged fasteners, as opposed to the ring types that slip over the hand or incomplete rings that relied on the metal's flexibility. Examples of less elaborate bracelets from the 7th–11th C. tend to be narrower, not hinged, and with punched decoration.

BRACHAMIOS (Βραχάμιος, fem. Βραχαμίνα, Βραχαμίνη), noble family with a name of Armenian origin, meaning "descendant of Vahram."

The family flourished in the mid-10th C. when the Arab poet Abu Firâs mentioned "the family of Bahrâm" among Byz. fighting against the Arabs (N. Adontz, M. Canard, Byzantion 11 [1936] 454, v.11). Sachakios (Arm. Sahak, Ishâq ibn Bahrâm of Arabic sources) was a general by 969 and later supported the revolt of Bardas Skleros. Eleventh-century seals attest several strategoi named Brachamios (George, Demetrios, Michael) as well as Kale Brachamina, wife of a strategos, and Epi­dios, doux of Cyprus.

Philaretos Brachamios (Varazhnuni), Romanos IV's strategos, doux and, according to Anna Komnene (An. Komn. 2:64.5–8), domestikos, was—if we believe Michael I the Syrian (Chronique, tr. Chatot 3:173)—an Armenian robber from the village of Shurbaz; thus his identification as a Byz. general is questionable. After Romanos IV's blinding, Philaretos became independent ruler of Tarsos, Antioch, Edessa, Melitene, and some other eastern centers. Greek, Syriac, and Armenian traditions all charge Philaretos with cruelty and greed: he allegedly confiscated the riches of Antiochene magnates and distributed them among his supporters. After Nikephoros III's accession to the throne, Philaretos acknowledged his allegiance to the Byz. and was proclaimed kouropalates and domestikos ton scholon of the East; in 1084 he surrendered Antioch to the Turks. He disappeared thereafter from the scene, but an anonymous Syriac chronicle mentions the sons of Philaretos domestikos, "Christians" (i.e., Orthodox) who ruled over Maraş and Black Mountain (A.S. Tritton, H.A.R. Gibb, JRAS [Jan. 1933] 72f.). The family is not known after the 11th C., except in 1171 when Brachamíoi served as messengers in negotiations between Manuel I and the Armenians.

BRAD. See KAPER BARADA.

BRANAS (Βρανάς, fem. Βράναυα), a noble lineage, its name apparently of Slavic origin (I. Duječev, Izvulstvüllüst 6 [1956] 348, n.3), although S. Lampros considered it Albanian and Ph. Koukoules Latino-Greek. In Serbia the name of Branos (Vran,
BRANAS, ALEXIOS, sebastos ca. 1166, general of Alexios II; partisan of Andronikos I; died Constantinople 1187. In a seal attributed to him (Laurent, Méd. Vat., no. 64), Branias is called protosebastos and his mother described as a Kомненoi; the continuator of William of Tyre named him "cosin de l'empereur Manuel" (PL 201:899C). In 1185 Branias routed the Normans, who had captured Thessalonike and were moving toward Constantino-ple; soon after, perhaps in 1186 (Dujčev, Med. 1:346f), but more probably in 1187, Branias revolted against Isaac II but was defeated by Con- rad of Montferrat and killed in battle at the walls of Constantinople. M. Sjiuzunov (Viz.Vrem 12 [1957] 69-72), emphasizing that the inhabi-tants of suburban Constantinople, esp. fishermen, supported Branias's rebellion, suggests that his defeat was a factor in the ruin of Constantinople's trade and handicrafts.

BRANIČEVO (Παντικόβα), a fortress and bish-opric on the river Pek, a right tributary of the Danube, not far from the site of Roman Viminacium, which was deserted soon after 600 (B. Saria, RE a.R. 8 [1958] 217-67). Near Viminacium, remains of fortifications (probably of Justinian I's time) were discovered: walls, towers, and an underground passage, 21 m long and 1.6-1.8 m high, that led to the river (M. Pindić in Limes u Jugosloviji, vol. 1 [Belgrade 1961] 127). Basil II's list of sees in the Bulgarian archbishop-opic of OHRID (H. Gelzer, BZ 2 [1893] 43-7) places the bishopric of Branitza between Niš and Belgrade. Branicevo was a station on the strategic road from Belgrade to Niš, en route to Constan-tinople (G. Škrivanić, Putevi u srednjovekovnoj Srbiji [Belgrade 1974] 83f). In the 12th C. the city belonged to the doukaton of Branicevo and Belgrade and was a focal point in the Byz.-Hungarian conflict. During the war of 1127-29, the Hun-garians razed Branicevo; the Byz. restored and colonized it in 1166. In 1182, while Constantino-ple was distracted by domestic strife, Běla III temporarily occupied Branicevo (Gy. Moravcsik, Studia Byzantina [Budapest 1967] 309) but returned to it as his daughter's dowry. The empire, however, was unable to retain the stronghold after about 1198; from the end of the 12th C., it was an object of contention between the Bulgarians, Serbs, and Hungarians. The Serbian prince Lazar took Branicevo in 1378/9, and the Turks conquered it in 1459.

- A.K.
BREAD (ἄρτος, also ψωμίoν in papyri [Preisigke, Wörterbuch 2:774] and narrative texts [e.g., PG 65:196C]) was the basic food in the popular diet. It was produced from wheat, barley, and infrequently millet; rye and oats were deemed unsuitable for baking. Wheat loaves were considered the finest, barley bread of lower quality. A 13th-C. historian (Ἀκτός 1:123.7–9) writes of bread made from barley and bran (which a man of his status could barely swallow) as typical of peasant food. Bread was made either at home or by professional bakers. Ἀθανάσιος of Ἀθός reportedly invented a device powered by oxen to mix the dough. Bread was produced in the form of loaves, sometimes flat ones; soldiers on campaign ate paximadion, bread baked twice and dried in the sun (T. Koliak in Byzantios 197–99). Bread was baked in furnaces or special ovens; in peasant households loaves might be baked in ashes, as Gregoras (Greg. 1:379.6–8) complains.

The daily bread consumption in the late Roman Empire was 3 to 6 pounds, according to Patlagean (Panwresé 46, 52); by the 11th–12th C. the average daily ration was reduced to 1.5 pounds, probably due to the loss of the grain-producing areas of Egypt and North Africa (A. Kazhdan, ByzF 8 [1982] 118). In the 10th–11th C. the price of bread was 1 nomisma for 8–18 modii; according to G. Ostrogorsky (BZ 32 [1932] 320–22) the price remained at the 4th-C. level. Byz. had periodic shortages in bread supply, and the state tried several times to introduce a monopoly on the grain trade and to regulate bread prices.

Constantine I transferred to Constantinople the Roman custom of distributing bread among the citizens. The first distribution took place on 18 May 332. The custom was abolished in 618, when the grain delivery from Egypt stopped. Despite this, the Basilika retained some imperial regulations concerning the panis civilis. The Codex Theodosianus (Cod.Theod. XIV) preserves 15 imperial ordinances of 364–408 that determine the right of citizens (house owners) to get the "state bread." It was baked in imperial bakeries (pistmatia publica) and distributed from special high counters (gradus). Each person entitled to panis civilis had to be entered on a list and assigned to a particular gradus; these people were given special tokens.

Gradually, the church took over the bread dole, transforming it from a citizen's right into an act of charity for the poor. The church had fed the poor long before 618 and retained this function after the state divested itself from the burden; the distribution of bread during a famine is a topos of many saints' lives.

Leavened bread as prosphora (in contrast to the azymes of the West) was one of the two elements of the eucharist, and accordingly played an important part in ecclesiastical symbolism (Christ as bread) and iconography.

—A.K., A.K.

BREBION (βρεβίον, from Lat. brevis), a term known from the 4th C. onward that designated an inventory or list of persons, officers, crafts, taxes, confiscated lands, etc. (O. Seeck, RE 3 [1899] 832). In the 10th C. properties of imperial monasteries were registered in the brebia of the sakellion (Ivir., no.9.30, Lavra 1, no.33.39). In later acts (e.g., Doshcar., no.58.5–6, Dionys., no.19.27) "the sacred brebion of a monastery" meant the list of persons to be commemorated: in an act of 1364 the word is employed synonymously with psychochartion (Xénonh., nos. 30.8, 35). On the other hand, the authors of monastic typika employed the term brebion for a document listing precious objects that belonged to the monastery. Michael Attaleiates used brebion to designate the appendix to his diatass that listed new acquisitions of movable and immovable properties (P. Gautier, REB 39 [1981] 83.1078–79). According to the typikon of the Euergetis monastery (P. Gautier, REB 40 [1982] 17.54–59), its brebion (now lost) included an inventory of cells, books, vessels, icons, liturgical garments and fabrics; the typikon of the Kecharitomene nunnery (P. Gautier, REB 43 [1985] 133.2007–23) states that typika and brebia should be placed in the skeupophylakia of both the Great Church and the Kecharitomene. In Slavic languages the word brenno acquired the meaning of an inventory of lands (D. Angelov, Agrarnite ot­nošenija v Severna i Sredna Makedonija prez XIV vek [Sofia 1958] 12, n.3).

Lit. Kalavrezou, Steatite 73–79. —A.K.
BRESCIA CASKET. See Lipsanothek; Reliquary.

BREVIAIRUM. See Festus.

BREVIAIRIUM (Lat. "summary"), a "brief," simple Latin guidebook to the holy sites of Jerusalem composed as "publicity material" for Western pilgrims. Likely of early 6th-C. date, it survives in two independent traditions derived from a single original. Additions probably reflect annotations of various users. Seemingly written to be carried around the city’s Loca Sancta, it gives numerous topographical indications and provides important evidence not only for the standard "Jerusalem tour" of the time, but also for structural details of such buildings as the Holy Sepulchre and the Golgotha Shrine, and for the existence and veneration of specific relics.

Lit. Wilkinson, Pilgrims 41, 182f, with Eng. tr. 50–61.

BRICKS (sing. πλίνθος). The production of brick was highly developed in the Roman Empire and continued in Byz., where both baked and sun-dried mud bricks as well as tiles were used. Houses "built of brick" (sing. plinthokistos) and roofed with tiles (enkeramos) are attested in documents (e.g., Lawra 2, no. 102.7). Workshops for brick production are also mentioned, such as an ergasterion to make keramoï (bricks and/or tiles) in an act of 952 (Lavra 1, no. 4.4). It is more difficult to decide whether the term keramarion (Ivir. 1, nos. 4.68, 12.14; Xerop., no. 9.A.26) meant a brick factory or a water pipe made of tiles. Workers in brick and tiles were called ostrakarios and kerama­poioi, and Constantine V is said (Theoph. 440.21–22) to have brought hundreds of them to Constantinople from Hellas and Thrace.

Bricks and tiles were often stamped with signs or inscriptions bearing names of craftsmen or emperors. Most Byz. brick stamps come from Constantinople and its environs—probably supplied from the same kilns—and from Thessalonike. The provinces (even Nicaea) have yielded few stamps, and in Dalmatia, for instance, late Roman bricks and tiles were produced without stamps (J. Wilkes in Roman Brick and Tile [Oxford 1979] 69f). Stamps from Constantinople are numerous for the late Roman period, but it is difficult to tell exactly when the practice of stamping bricks disappeared in the capital: there are stamps of the 10th–11th C., but probably no Palaiologan examples. On the other hand, stamped bricks and tiles of around the 10th C. are known from Cherson, the lower Danube, and Bulgaria.

The biblical plinthēia was a metaphor for bondage and the sinful state from which baptism liberates man.

– A.K.

BRICKWORK TECHNIQUES AND PATTERNS. From the 5th C. onward, Byz. architecture depended heavily on brick as a structural and decorative material. The most common building techniques involving this material were (1) alternating bands of several courses of brick and stone (related to the Roman opus vittatum), used from the 5th to 14th C. in Constantinople and its vicinity and less consistently elsewhere; (2) solid brick construction, used sporadically in the 5th to 12th C.; (3) the recessed-brick technique, an all-brick construction method in which every alternate course was set back from the wall plane with the recess filled in with mortar, producing seemingly thick mortar joints. This was commonly employed in Constantinople and vicinity from the 11th C. onward; from Constantinople the technique was exported to areas under Byz. influence (e.g., Kiev, central Balkans). A fourth method, the cloisonné technique, involved framing individual stone ashlars with brick on all four sides; it was widespread in Greece and the Balkans from the 10th C. onward. These basic building techniques were often combined with decorative patterns, executed in brick, that were used to highlight architectural features (e.g., apses, domes, tympanums, eaves) and to conceal structural timbers imbedded within walls. Some of these ornaments appear as early as the 10th C., but most became popular in the 13th–14th C. The most typical were reticulate revetments; diaper and checkerboard patterns; dogtooth friezes; and chevron, herringbone, and meander patterns as well as inscriptions executed in brick or specially cut tiles. Following the Roman practice, Byz. bricks were occasionally stamped in the course of production. The general significance of Byz. brick stamps has not yet been properly understood (C. Mango, AJA 54 [1950] 19–27).

– S.C.

BRIDE SHOWS are reported to have been organized on several occasions at the initiative of the empress-mother to select suitable wives for imperial princes. Commissioners were sent throughout the empire to find candidates who resembled an imperial ideal, which was enshrined in a picture (lavraton), and met specific measurements. Usually three candidates became finalists in this Byz. "Judgment of Paris," held in the imperial palace, when the young emperor-elect presented a golden apple or ring to his chosen lady. In 788 Empress Irene persuaded Constantine VI to select Maria of Amnia, the granddaughter of Philaretos the Merciful; in 807 Theophano, already married and hurriedly divorced, was chosen for Staurakios; in 830 Theophilos encountered Kassia and chose Theodora; in 855 the same Theodora, as empress, imposed Eudokia of Dekapolis on Michael III; and in 881 Basil I selected pious Theophano for his son Leo VI. An otherwise unattested bride show is recorded in the vita of St. Irene of Chrysovalanton. It has been argued that bride shows, in contrast with the foreign marriage alliances of the 8th C., helped to bind powerful regional families to Constantinople. Recently, however, scholars such as P. Speck (Kaiser Konstantin VI, 1 [Mun-
ich 1978) 203–08) and L. Rydén (Eratos 83 [1985] 175–91) have cast doubts on the historicity of the bride show; Rydén suggests that it is a literary topos of the 9th or 10th C., which reappears in the 14th-C. romance of Belthandros and Chrysantas. The custom of the bride show is also found in the medieval West and in 17th-C. Russia.

BRIDGES (sing. γέφυρα). Crossing rivers, esp. those that were wide or had rapid currents, created difficulties for travelers and military expeditions. In cases of urgent necessity pontoon bridges (of boats bound together) were constructed; long logs laid over the boats provided flooring for the roadway (An.Komm. 2:137.17–19). In 636 Herakleios built this sort of bridge over the Bosporos (Stratos, Byzantium, 2:139).

The Byz. inherited the technique of bridge construction from the Romans. They erected bridges of stone, brick, and/or timber set in concrete; the arches rested on piers (the same technique as used for aqueducts). The bridge near Limyra in Lycia, 360 m long, consists of 28 arches and seems to be lower than regular Roman bridges (W. Wurster, J. Ganzert, AA [1978] 288–304). The approach to bridges was sometimes fortified with towers. During the late Roman period several grandiose projects were executed: the bridge over the Danube constructed by Constantine I between Oescus and Susicava was 2,437 m long. Many bridges are named in the Tabula Peutingeriana. Prokopios mentions some bridges built by Justinian I; that over the Sangarios is still standing. Later sources mention various bridges (Zompe over the river Sangarios, one near Kosmidion, a bridge in Adrianople passing over three streams, etc.) as well as smaller gephyra (Lavra 3, no.146.40); it is, however, not clear which of these bridges were actually of Roman construction. Bridgelike con-

BRIDGES. Justinianic bridge. Built over the Sangarios River in Bithynia; 6th C.
traptions were used to assault the walls of besieged towns (e.g., An.Komn. 1:153.20–22; Nik.Chon. 623.61–62). A special tax called gephyrosis was imposed in the 11th C. (Lavra 1, nos. 38.38, 48.36) for the maintenance and repair of bridges. In the 12th C. the Kosmosoteira monastery (see Bera) was obliged to maintain two local stone bridges; in this connection the typikon of Kosmosoteira stresses that bridges are useful to many people.

In Christian metaphor gephyra served as an epithet for any person, action, or institution bridging this world and heaven: for example, the Mother of God (e.g., pseudo-Sophronios, PG 87.3.396B), Christ’s descent into Hell, John’s baptism, and prayer.

BRIGANDAGE (ληστεία), robbery carried out usually by members of lawless bands, often accompanied class struggle and military operations; Bartusis (infra) hypothesized that in the 14th C. brig­ands were primarily soldiers. Revolts of military contingents, such as the Catalan Grand Company, often led to looting, arson, rape, and so forth, as did urban riots and political upheavals, as for instance Alexios I Komnenos’s capture of Constantinople in 1081. Feuds of local lords (e.g., those described in the Peira) led to grave damage of peasants’ property. In turn, brigandage could be used by peasants for self-defense in their struggle with the dynatoi for land; in some cases the peasants were supported by ethnic groups (the Vlachs, Cumans, etc.) settled in the area. Byz. historical tradition described other ethnic groups (e.g., the Isaurians) as particularly inclined toward brigandage, but such statements were often ex­aggerated. The poeticized image of the brigand (apelates) penetrated into folklore and thence into the epic of Digenes Akritas, who was described as victorious over the apelatai. Church fathers and hagiographers equated brigands with demons (G.J.M. Bartelink, VigChr 21 [1967] 12–24), but at the same time hagiography described some reformed robbers as living in extreme piety.

Piracy, another form of brigandage, was a real scourge for maritime commerce and the inhabi­tants of coastal areas.

BRINDISI (Βρεντίσιον), city in southern Apulia with a splendid harbor; terminus of the ancient Via Appia, a primary point of departure for the East, and a center of trade with Dalmatia and the eastern Mediterranean. During the war against Totila in the mid-6th C., the Byz. general John (nephew of Vitalic) conquered Brindisi and used it as a center of operations in southern Italy. The Lombards took Brindisi in the second half of the 7th C.; it formed the southernmost point of the duchy of Benevento. Brindisi suffered from Arab attacks and was destroyed in 838. At the end of the 10th C. Byz. reestablished its administration in Brindisi and ca.1000 the patriarch of Constantinople elevated it to an archbishopric.

The Norman Robert Guiscard occupied Brindisi in 1071, but the Byz. continued trying to recapture it until the 1150s. Brindisi was the port of departure for Norman expeditions against Byz. and for the Crusades. The church of Brindisi was under the patronage of the papacy—in 1089 Pope Urban II dedicated the city’s cathedral—but the Greek rite and Orthodox communities remained in the city, as did the Jews. Brindisi was a primary center for the manufacture of proto-Maiolica pottery.

BRINGAS, JOSEPH, high official under Con­stantine VII and Romanos II; died 965 in mon­astery of the Asekretis, in Pythia (Bithynia). Eunuch, patrikios, and praetorius, Bringas (βηγγας) was promoted by Constantine to the posts of sa­kellarios and droungarios of the fleet (TheophCont 445.6–10); as paraokonomomenos he administered the empire under Romanos. An adversary of the mil­itary aristocracy, he quashed the scheme of the nobles to give the throne to the magistros Basil
Peteinos (Skyl. 250f) and zealously opposed Nikephoros (II) Phokas. Romanos left Bringas at the head of the state (15 Mar.–15 Aug. 963), but Theophano sided with Nikephoros Phokas, and Basil the Notos supported their alliance. Nikephoros pretended to obey orders and left Constantinople to join his army, but his soldiers proclaimed him emperor (2 July 963) and he marched against the capital. An addition to De cer. (p.435–37) described in detail the battle for Constantinople. The population of the capital supported the military aristocracy and defended Bardas Phokas, who sought asylum in Hagia Sophia; at the same time Bringas gained the assistance of the influential guild of bakers who stopped selling bread in order to compel the poor to cease their resistance (9 Aug. 963). At this time Basil the Notos armed 3,000 servants and sent them to pillage the houses of Bringas’s partisans; he also ordered warships to sail to Abydos and join Nikephoros. Bringas had no choice but to surrender. Nikephoros entered the capital and banished Bringas to Paphlagonia and subsequently to the monastery of the Asekretis near Nikomedea (Janin, Églises centres 86).

BRONTOLOGION (βροντολόγιον), a manual on divination by thunder. The Byz. attributed their brontologia to famous figures of the past, such as King David or Hermes Trismegistos, or to obscure Roman writers, such as Nigidius Figulus (W. and H.G. Gundel, Astrologumena [Wiesbaden 1966] 137–39). In his On Portents, John Lydos lists four brontologia that he allegedly used: three are concerned primarily with political predictions, the fourth (ascribed to Labeon) with agrarian events. The church condemned brontologia as based on astrology, and the Souda stated that divination by thunder was “diabolical property.” Nonetheless, the custom was well entrenched; several brontologia are known both in Greek and in Old Slavonic translation (Gromnik), and a brontologion was among the books taken along on the imperial baggage train (De cer. 467,11). Brontologia were structured on the position of the sun (or the moon) in the zodiac and on the calendar. The strength and the direction of the thunder also had to be considered. A brontologion preserved in a 16th-C. MS (Milan, Ambros. A 56 sup.) describes a series of political events, imagined or real: a revolt “in Egypt and among the Arabs,” the devastation of Cyprus, a barbarian expedition as far as Chalcedon (perhaps a reference to Igor’s expedition of 941), the absence of any king in “Comania” and Alania, the Crusade of 1147. This brontologion is attributed to “Leo the Wise” (i.e., Emp. Leo VI) but should be dated to the 12th C. As late as the 15th C. Kritoboulos observed that many people believed that thunder, lightning, and the wandering orbits of stars revealed the future.

BRONZE (χαλκός), the term used in Byz. as in classical Greece to designate both pure copper and its alloys with tin or with zinc (brass). The location and exploitation of copper mines from the 4th to the 15th C. is somewhat a matter of speculation. Bronze could be considered a semi-precious metal: Eusebios of Caesarea (Eusebios, VC 3.50.2) praises a church ornamented with gold, bronze, and “other very expensive materials,” while Prokopios (Buildings 1.2.4) speaks of the best bronze as being softer in color than pure gold and in quality not much inferior to silver.

Colossal monuments of bronze included the Anemodoulion at Constantinople (set up between 379 and 395) and the 6,000-pound cross erected by Eudocia at Jerusalem (Jean Rufus, Plérophories, PO 8 [1912], ch.11). Bronze statues of emperors, charioteers, etc. are recorded as late as the 7th C. (AnthGr 16.46–47), but only that of Leo I (?) (= Colossus of Barletta: U. Peschlow in Studien Deichmann 1:21–33) survives relatively intact. A medi eval deployment of bronze on a large scale was the revetment of an obelisk in the Hippodrome in Constantinople by Constantine VII. Among the few other monumental uses of bronze after the 9th C. were cast church doors, with incised decoration and silver inlay or chrysography, as well as doors of sheet metal with repoussé decoration. The doors of S. Paolo fuori le mura, Rome, bear the names of the founder (chymes) and the artist who manufactured and decorated them. The se bastokrator Isaac Komnenos transferred a bronze
grill (kangellon) from the Chora monastery to his Church of the Virgin Kosmosoteria at Bera to separate his tomb from the rest of the narthex. Rare decorative bronzes of the 10th and 11th C. include the water-spouting troughs of fountains (L. Bouras, DChAE 8 [1975–76] 88f).

In addition to their use on monuments and for decoration, copper and bronze were employed for functional purposes, for example, for coins, surgical instruments, liturgical vessels, roof tiles, armor, and esp. for lamps. Numerous bronze objects were used in the household (see Tools and Household Fittings). An inventory of 1142 lists (in addition to iron tools) bronze bells, vessels, caldrons, etc. (Pantel., no.7:28–29). Domestic bronzes (chalkomata), some of them tinned, include ewers, basins, pans, and various cooking wares (Koukoules, Bios 2:99–101, 105). Byz. inventories from the 11th C. often refer to various lighting devices of cast bronze, such as candelabra (manoula), candlesticks, polykandela, lamps, lanterns, lamnai (bronze beams with candleholders), and chorai (polygonal frames for the suspension of lights) as well as censers; some such devices of the 4th to 14th C. survive to this day. Bronze was also employed for icons, cast or in sheet metal, votive crowns, pectoral crosses, amulets, belt fittings, cone seals, and stamps as well as for ordinary jewelry. Keys, locks, and fittings for caskets were often cast in bronze as were steelyards, various weights and measures, and astrological instruments such as the astrolabe.

Large numbers of cast bronze household objects (ewers, caldrons, etc.) made in Byz., and mistakenly called “Coptic,” have been found outside the empire, in 6th- and 7th-C. burials throughout western Europe.

The scientific work that has been carried out on Byz. bronze (that is, copper alloy) objects has been largely restricted to those made between the 4th and 7th C. The results reveal a varying of alloys to suit manufacturing techniques. Some cast items from this period excavated at Sardis (e.g., censers, crosses, buckles, chains, etc.), which have been analyzed for their metallic composition, were found to be of a four-part (quaternary) alloy of copper, tin, zinc, and lead; other objects, such as cooking vessels made of sheet metal, were of nearly pure copper (J.C. Waldbaum, Metalwork from Sardis [Cambridge, Mass., 1983] 175–77). Other hammered objects, such as a group of 6th-C. ornamented sithulas found elsewhere, are made of brass, that is, copper and zinc (M.M. Mango et al., Antiquity 63 [1989] 308). The shift from the manufacture of bronze (copper and tin) to that of brass, which started in the Roman period and increased by the 7th C., has been explained in terms of the loss of the Spanish and British tin mines by the 5th C. (R. Bruce-Mitford, The Sutton Hoo Ship Burial, vol. 3 [London 1983] 945–61). But tin may still have been available in the Taurus Mountain mines, and 10th- and 11th-C. tinned copper polykandela, lamps, patens, chalices, and other objects, made apparently in imitation of silver, have been found in Asia Minor and the vicinity of Antioch.

-M.M.M., L.Ph.B.

BRUMALIA (Βρυμάλια), the festival of Dionysos, which was celebrated from 24 Nov. to the winter solstice. The Brumalia marked the end of the wine cycle, when the liquid from the grapes crushed during the September harvest had fermented and was ready to be poured into jars for consumption. Carousing and merriment accompanied the rituals, which included the invocation of Dionysos. In his treatise On the Months (ed. Wuensch, 172.41–51), John Lydos notes the survival of the cult in the 6th C.: the viticulturalists would sacrifice a goat to Dionysos because the animal ate and destroyed vines. Canon 62 of the Council in Trullo imposed a six-year excommunication on Christians who celebrated the Brumalia. The canon also condemned mumming and the donning of comic, satyric, and tragic masks, another Brumalian feature (Trombley, “Trullo” 5). Nevertheless, the imperial court celebrated the Brumalia. Stephen, the author of the vita of Stephen the Younger, condemns Constantine V as a “friend of demons” for his participation in the festival. In the time of Constantine VII Porphyrogenetos the Brumalia consisted of acclamations for the emperor and a ceremony wishing him a long reign; on these occasions the emperor handed out аркодемия, bags of gold, to various officials (De cer. 601.6–20, 606.4–607.14). The popular celebration of the Brumalia persisted until at least the 12th C. (I. Rochow, Klio 60 [1978]
BRYAS. Ruins at Küçükýahli. These ruins are thought to be those of the 9th-C. palace at Bryas.

487f). Christopher of Mytilene notes the sending of small cakes (pemmata) as gifts at the Brumalia, and Theodore Prodromos mentions festivities on the day of cosmic joy of the Brumalia, but the religious character of these acts is unknown.

-F.R.T.

BRYAS (Brýas, mod. Maltepe). Asiatic suburb of Constantinople, opposite the Princés' Islands. It was the site of a palace built by Emp. Theophilos ca.837 in imitation of Arab palaces described to him by JOHN VII GRAMMATIKOS on the latter's return from his embassy to Baghdad. The only modification of the Arab model consisted in the addition of two chapels, one next to the emperor's bedchamber, the other, of triconch form, in the forecourt. The palace has been plausibly identified with a standing ruin at Küçükýahli, between Bostanci and Maltepe, that recalls the layout of princely Arab residences.

BRYENNIOΣ (Brýennios, fem. Brýenniσσa), a noble Byz. lineage. Etymology of the name remains unclear; according to E. Trapp, it derived from bryo, "to abound" (JÖB 19 [1970] 293). Bryennioi are known from the 9th C. onward: Theoktistos was sent by Michael III as strategos of Peloponnese (De adm. imp. 50.9-12); another Bryennios, strategos of Dalmatia, is attested from a 9th-C. seal (Schlumberger, Sig. 205f). Throughout the 10th C. they are not known. When the Bryennioi reappear in the mid-11th C., their relation to the 9th-C. Bryennioi is unclear: Attaleiates considered them a family of lower origin than the Botaneiatai. Like their predecessors,
the 11th-C. Bryennios were military commanders: Nikephoros, from Adrianople, served as ethnarch, commander of foreign mercenaries; he participated in a rebellion against Empress Theodora and was exiled; in 1057 he joined another aristocratic revolt and was captured and blinded. His son (also Nikephoros) Bryennios unsuccessfully tried to usurp the throne in 1077 (see Bryennios, Nikephoros); another son, John, supported his brother’s revolt and was appointed domestikos ton scholon; after the revolt, however, the Varangians arrested and murdered him. Nikephoros’s son (according to Zonaras) or grandson (according to Anna Komnene), the caesar Nikephoros Bryennios, was a general and historian (see Bryennios, Nikephoros). Another Bryennios served ca.1100 as dux of Thebes.

Caesar Nikephoros married Anna Komnene; some of their descendants bore the patronyms Komnenos and Doukas. They were primarily military commanders: John Doukas commanded both in Italy and against the Seljuks; his brother Alexios Bryennios, megas dux in 1156, was called the anthypatos of Hellas by Michael Choniates and praised as protector of the poor (Mich.Akom. 1:337.8–9). He is probably distinct from another Alexios Bryennios, dux of Dyrrachion and Ohrid, an addressee of George Tornikios in the 1150s (Darrouzès, Tornikès 162–66). Andronikos, son of the megas dux Alexios, served as governor of Thessalonike; involved in a plot against Isaac I, he was arrested and blinded; his son attempted a revolt but was also blinded. Joseph Bryennios, sebastos and the emperor’s gambros, was a general in the 1160s. Only Nikephoros Komnenos, John Doukas’s son, held a civil position: he was temporarily the functionary in charge of petitions (epiton deeseon).

Several Bryennios occupied important posts in the later period: George was megas droungarios in 1328, and Michael was commandant of Pamphilion in Thrace (1342). At this time the Bryennios were also active in the church, diplomatic service, and intellectual life: besides the philosopher Joseph Bryennios and writer Manuel Bryennios, a scribe Gregory Bryennios from Thessalonike copied translations of Thomas Aquinas in 1432 (PLP, nos. 3241–62). (See Bryennios, Joseph, and Bryennios, Manuel; see also genealogical table.)

Lit. Winkelmann, Quellenstudien 165f. – A.K.
BRYENNIOS, JOSEPH, monk, writer, and teacher; born ca. 1350, died before 1438, probably 1430/1. A fervent supporter of Orthodoxy, Bryennios lived for 20 years (ca. 1382–1402) in Venetian-occupied Crete as preacher and missionary. He spent most of his remaining years in Constantinople at the monasteries of Stoudios (ca. 1402–06) and Charsianites (1416–27). In 1406 Patriarch Matthew I sent him to Cyprus as topotereis to try to negotiate the administrative union of the Cypriot church with that of Constantinople, but his mission proved fruitless. In his later years he served as court preacher and official spokesman against Union of the Churches with Rome, playing an important role in 1422 in discussions with a Latin delegation to Constantinople (G. Patacsi, Kleronomia 5 [1973] 73–96).

Bryennios composed a considerable number of theological treatises defending Orthodox doctrine on the Holy Trinity and Procession of the Holy Spirit. He supported the Palamite argument that the light of Tabor was uncreated. Other works include a dialogue with a Muslim (A. Argyriou, EEBS 35 [1966/7] 141–95), in which Bryennios praised the tolerance of Islam and the virtue of some Muslims; he argued that the decline of Byz. was divine punishment for the sins of the Byz. He corresponded with John Chortasmenos, Nicholas Kabasilas, Demetrios Kydones, and Emp. Manuel II, among others. Mark Eugenikos wrote his epitaph.

A.M.T.

BRYENNIOS, MANUEL, Byz. scholar and possibly a music theorist; fl. Constantinople ca. 1300. Although academically eccentric, he instructed the statesman Theodore Metochites in mathematics, astronomy, and probably music (a didactic poem by Theodore reflects Bryennios’s teaching). His doctrines on mathematics and astronomy are to be found in a letter to Maximos Planoudes and in scholia to MSS of Ptolemy’s Almagest.

The only surviving work attributed to Bryennios is the three-volume Harmonika, based on ancient Greek tradition. The author treats his material more independently and carries his conclusions further than his sources, however. The neo-Pythagorean numerological theory of music is Bryennios’s most important source (more for facts than for metaphysical speculation). Other sources are Nicomachus of Gerasa, Aristides Quintilianus, Theon of Smyrna, and, above all, Claudius Ptolemy for his theory of the eight tonoi, the “shadings” of the tetrachords, and the monochord and its division.

Bryennios also drew extensively on the empiricist school of Aristoxyenos (4th C. B.C.). The first section of the treatise is based largely on this school; the second, however, is founded on neo-Pythagorean tradition and concludes with a comparison of the divisions of the tetrachords. The third section unites the Pythagorean and Aristoxenian traditions and culminates in a theory for constructing melodies. One section deals with the Byz. ecclesiastical modes and associates them with the ancient systems of transposition (tonoi, tropoi); this section is illustrated by the musical practice of Bryennios’s own time.

Bryennios’s treatise is the most comprehensive surviving codification of Byz. musical scholarship. Associated with the growing interest in mathematics in the early Palaiologan period, it contributed to the rediscovery of ancient music theory. The late Byz. Empire and the Italian Renaissance valued it highly: 46 MSS from before 1600 and two early Latin translations (1497 and 1555) survive.

A. M. T.

BRYENNIOS, NIKEPHOROS, 11th-C. usurper. Bryennios was a general and magistros who fought at the battle of Mantzikert (1071), served as a dux of Bulgaria in 1072–73, and was later governor of Dyrachion. In 1077 he headed a revolt against Michael VII, the center of which was located in Adrianople, but lost to Nikephoros III Botaneiates in the competition for the throne. Bryennios refused to accept the title of caesar and continued his rebellion, but he was then defeated by Alexios Komnenos (the future Alexios I) and...
blinded. Zonaras accused Alexios of this deed, but other historians do not support his version. Nikephoros III returned to Bryennios all his properties and granted him new honors and lands (Bryen. 285.1–3). Despite his blindness, in 1094/5 Bryennios was in charge of defending Adrianople against the Cumans and a rebel who claimed to be a member of the Diogenes family (Leo or Constantine?) and a son of Romanos IV; even though Bryennios belonged to an aristocratic family inclined to rebellion, he declined Diogenes’ proposal of an alliance.

—A.K.

BRYENNIOS, NIKEPHOROS THE YOUNGER, historian and general; born Adrianople? ca.1064 (A. Carile, Aevum 42 [1968] 436) or ca.1080, died Constantinople ca.1136/7. He was either the son (A. Carile, Aevum 38 [1964] 74–83) or grandson (S. Wittek-De Jongh, Byzantion 23 [1953] 463–65; P. Gautier, infra 20–24) of his namesake, the rebel of 1077/8. Bryennios married Anna Komnene ca.1097, participated in Alexios I’s campaigns, and became caesar ca.1111. In 1118 Irene Doupkaina and Anna Komnene unsuccessfully tried to proclaim him Alexios’s successor. Although in disfavor with John II, Bryennios still participated in the emperor’s expedition to Antioch, after which he died.

His unfinished memoirs, the so-called Historical Material (Hyle historias), were written after 1118 and describe the period 1070–79. He presents events not as a history of emperors, but as the power struggle of the mightiest families (the Komnenoi, Doukai, and Bryennioci); under the screen of a polite eulogy of Alexios is veiled criticism, whereas Nikephoros Bryennios the Elder is an unquestionable hero. Aristocratic traits (noble origin, wealth, martial prowess) are presented as positive values. In their structure, Bryennios’s memoirs are a forerunner of the romance, with the core of the tale being the marriage of Alexios and Irene after they overcame obstacles.

—A.K.

BUDGET. Evaluations of the Byz. budget are speculative and arbitrary because of lack of evidence. Yet in recent publications one finds figures that are not too contradictory: 900,000 solidi in the 6th C. (Hendy); 1,700,000 nomismata by the end of the 8th; 3,300,000 nomismata in the middle of the 9th (Treadgold); 1,000,000 half-pure hyperpyra in the 14th (Hendy). Fiscal revenue derived mainly from taxation on land (70–95 percent) and commerce and trade; voluntary contributions of wealthy citizens ceased after the 7th C. Regular major expenditures were salaries for members of the armed forces, the administration (less important), and dignitaries (largely self-financed) and cash outlays for philanthropic institutions. Public works were also self-financed through corvées; largess, such as the consulship, became occasional. Extraordinary expenditures, such as major campaigns or tributes, were dealt with either by spending accumulated reserves or by imposing extraordinary taxes and levies. Part of the payments were made in silk textiles, mainly those produced by the imperial workshops.

—N.O.

BUILDING INDUSTRY. Builders formed teams or companies. According to the vita of Symeon the Stylist the Younger, Isaurian masons lived in communities, caring for those team members who had lost their health while working. The Book of the Eparch does not consider the technitai or artisans a guild but a temporary association that included craftsmen of various professions: carpenters, masons, workers in gypsum, etc. Such a team of technitai is described in the vita of Germanos of Kosinitza: they were hired to build a church and signed a contract (homologia) according to which they were to be paid 100 gold coins upon completion of the work (AASS May 3:9*). In Basil. 15.1.39 (and schol. 1 to this passage) an ergolabos, or manager, served as intermediary between the owner and the workers. He was paid by the owner and erected the building using his own materials. In the Book of the Eparch, on the other hand, there is no distinction between ergolaboi and technitai and the owner is to supply the materials. The terms are also used synonymously
BULGARIA, state in the northern Balkans. Founded in 681 by Asparuch, Bulgaria included former Roman territory between the Danube, the Black Sea, the Balkan range, and the river Iskūr. It was populated by Slavs, Bulgars, Vlachs, and some remaining Greek inhabitants. The capital was established at Pliska. The Slav and Bulgar occupation led to the deurbanization of the region and the expulsion of the Christian church with its hierarchy built upon urban foundations. The focal point of domestic development in the late 7th–9th C. was the union of Slavs and Bulgars into a single ethnus that used the Slavic language, a Bulgar administrative system, and the Greek alphabet for the Proto-Bulgarian Inscriptions. This unity was reinforced by the christianization of the country by 864/5.

Even though Bulgaria profited from the defeat of the Avars by Charlemagne and extended its power to as far as the river Theiss, Bulgarian northern policy was primarily defensive: Bulgaria had to protect its northern frontier from the Germans, Hungarians, Pechenegs and other steppe tribes, the Rus’, and later the Tatars. Bulgaria’s policy in the south was more active, and Bulgarians were often involved in Byz. affairs, sometimes as allies (Tervel supported Justinian II), sometimes as dangerous adversaries (esp. under Krum and Symeon of Bulgaria). The periods of war were interrupted by peace treaties (the 30-year treaty under Omurtag), and sometimes Byz. managed to exercise considerable influence on Bulgaria, as happened in the reign of Boris I.

Despite the arrival in 885 of pupils of Constantine the Philosopher and Methodios who brought both the Slavic alphabet and incipient Slavic literature and liturgy, Byz. administrative and cultural influence on Bulgaria increased from the end of the 9th C. onward. Bulgarian rulers accepted Byz. imperial and ceremonial titulature (basileus for the former khan, patriarch for the archbishop, etc.); the new capital, Preslav, harbored a significant artisan population; and a substantial selection of Greek theological literature was translated into Church Slavonic. Trade and intermarriage (e.g., Tsar Peter and Maria, Romanos I’s granddaughter) helped consolidate Bulgar-Byz. links.

From the second half of the 10th C. Byz. began to gain the upper hand in the Balkans. After the plan to subjugate Bulgaria with the assistance of Svjatoslav of Kiev had miscarried, John I Tzimiskes evicted Svjatoslav from Bulgaria, annexed a substantial part of the country, and abolished the autocephalous Bulgarian patriarchate. The struggle of the KOMETOPOULOU and SAMUEL OF BULGARIA against Basil II, despite temporary success, was lost; by 1018 the whole of Bulgaria had been incorporated into Byz. and formed several themes—Bulgaria, Paradounavon, Dyrachion, etc.

The imposition of the “Byz. yoke” strengthened the Byz. impact on Bulgaria. The Byz. system of taxation was extended to the new themes, along with Byz. secular and ecclesiastical administration and Byz. forms of peasant dependence (pāroikoi, etc.). Intensified trade and the mass penetration of Byz. coinage accompanied the development of urban life. On the other hand, the Bulgarian aristocracy entered the ranks of the Byz. ruling class; Bulgarian topics were treated in Byz. liter-
CITIES OF BULGARIA, SERBIA, AND NEIGHBORING REGIONS
more, and specific Bulgarian forms of ideology, such as the Bogomil heresy, gained a strong hold in Byz. The Byz. domination over Bulgaria was several times challenged in the 11th C. (revolts of Deljan and George Votetch, the Bogomil rebellion in 1086). In 1185 a new revolt broke out, and by 1188 the weakened Byz. government had recognized the independence of Bulgaria north of the Balkan range, with its capital in Túrnovo. The Bulgarian victory at Arkadiopolis in 1193 led to the annexation of much of central Thrace. A new Bulgaria emerged, usually called the Second Bulgarian Empire.

At first (under Kaloyan, Boril, and John Asen II) Bulgaria profited from the disarray resulting from the Fourth Crusade to occupy more of Thrace and most of Macedonia, and after the Bulgarian victory over Epíros at Klokotnica in 1230 extended its rule to the Adriatic at Dyrrachion. The marriage of John Asen’s daughter to Theodore II Laskaris of Nicaea and the creation of a Bulgarian patriarchate in 1235 mark the apogee of Bulgarian power. This zenith was of short duration: the state faced serious domestic and international problems. The country lacked economic unity. The towns on the Danube, such as Vidin, were more connected with central Europe, those on the Black Sea were involved in Italian trade, and western Bulgaria tended toward Dubrovnik. While ca. 1200 Bulgaria profited from alliance with the Cumans, later the Tatar settlement in the steppe created a serious menace, heightened by constant conflicts with Byz. and Serbia and esp. by the Ottoman invasion of the 14th C. The internal instability found its expression in revolts, such as the mutiny of Ivailo. By the end of the 13th C. only northeastern Bulgaria recognized Tsar Georgij Terter I. For a short period Theodore Svetoslav, Michael III Síšman, and Ivan Alexander reunited Bulgaria, and the country, despite certain military losses, enjoyed relative peace and prosperity. From 1370 onward, however, the increasing encroachment of the Ottomans on the Balkans threatened the very existence of Bulgaria. In 1373 Bulgaria became a virtual Ottoman vassal, and in 1395 Murad I invaded and annexed it.

Of all the Slavic countries Bulgaria was the closest to Byz. Their interrelationship was very complex, ranging from military rivalry to trade connections (Bulgaria exporting to Constantinopolitan livestock and cattle) to religious and cultural exchange; some Greek regions were absorbed by Bulgaria and for almost two centuries Bulgaria was incorporated by Byz. The Bulgarian state was formed both under Byz. impact and in a constant resistance to the threat of “hellenization.” The material interpenetration did not abolish mutual mistrust, and political alliance was sporadic and short-lived. On the other hand, Bulgaria transmitted Byz. civilization to other Orthodox peoples, particularly Rumanians and Muscovite Russia (in the 14th C.). The absorption of Byz. culture was selective. The literature and ideology of Byz. Christianity, both in its learned and its popular form, were taken over (see Bulgarian Literature), as were the Byz. chroniclers’ picture of world history, a simplified version of Byz. civil and canon law, and some popular nonreligious literature such as the Alexander Romance. What was rejected was learned and classicizing literature and thought, including philosophy and science, which Bulgarian society neither needed nor understood. It was this filtered Byz. culture that was passed on to the non-Greek Orthodox world.

BULGARIAN ART AND ARCHITECTURE. The First Bulgarian Empire was founded on territory rich in Roman and Byz. remains. These and other sources were used to create an art designed to serve the national and religious needs of the new state. The earliest administrative center, Pliska, was laid out as a double fortress, an architectural solution also adopted at the second capital, Great Preslav. The most unusual monument from this period is the large relief of a horseman carved in the cliff above the religious center of Madara. Most likely carved in 705 and probably representing Khan Tervel, the relief is surrounded by contemporary and later Greek inscriptions of rulers’ names. The iconography—a horseman holding aloft a cup, with a lion below
and a dog running behind—bears close resemblance to rock-cut reliefs of Sasanian Persia. But the bold, monumental style, with the figure and the background rendered as two parallel planes, is typical of Bulgarian sculpture from this period and continues into the 1oth C. at nearby Preslav and Abtradaka.

Bulgarian ceramic tile decoration may also be Near Eastern in influence. Tiles—both flat tiles and semicircular cornice pieces, large and small—were specially made for use as wall revetment. Some tile images, such as a 20-tile icon of St. Theodore from Sofia and a group of smaller, single-tile icons from Tuzlalik, depict saints, though the majority are decorated with floral and geometric motifs. Many have been found in situ, adorning the floors and dado zones of small monastery churches around Preslav (the earliest datable example comes from the Round Church of Preslav, probably built before 907). Similar tile decoration is found in Constantinople as well, and probably derives from Arabic antecedents. It is possible that ceramic decoration was used in large quantities in and around Preslav even before its widespread use in Constantinople.

The Round Church at Preslav is a good example of the eclectic use of sources typical of much Bulgarian art of the early empire. The form of the church—a domed rotunda with an interior two-tiered colonnade preceded by an atrium that is enclosed by walls with niches and columns—has been likened to Armenian architecture, while the use of mosaic decoration shows Byz. influence. The structure may in fact reflect late Roman baptistery forms, underscoring one of the main functions of the church in the newly converted realm. Its round form may also indicate it was intended to serve as a palace chapel.

Byz. culture was to be the decisive influence on Bulgarian art during the 11th and 12th C., when the territory came under Byz. hegemony (cf. the frescoes of the ossuary of the monastery of Pelitza). By the time Bulgarian independence was won, Byz. culture had become the single major source for artistic creation.

The art of the Second Bulgarian Empire shows a resurgence of architecture and painting: Donations by nobles include the churches on Trapezitsa Hill in Tūrnovo and the Tower of Hreljo in the Rila monastery. Two-story churches, which were used for burial and whose structure served to level uneven terrain, may have derived from Byz. or Caucasian prototypes but became a popular local type of church plan. Other churches are elaborate variants of Palaiologan architectural forms: in the 14th-C. churches of Mesembria, for example, stone, brick, and ceramic inserts combine to produce a rich, textilelike patterning of the exterior quite unrelated to the internal divisions of the church (e.g., St. John Aleitourgetus).

Painting of the Second Empire shows two tendencies. Many monuments rely on Byz. models of the 11th and 12th C., introduced during the period of Byz. rule (e.g., Bojana). Other fresco ensembles and icons show more awareness of contemporary art in Constantinople. This is especially true of the royal commissions by Tsar Ivan Alexander. The rock-cut "Čurkva" at Ivanovo was decorated by Bulgarian artists in the most up-to-date Palaiologan style; bottom-heavy figures in twisted postures are placed in front of elaborate architectural façades. The flat ceiling of this humble church, which served a hesychast monastic community, is given an unusual treatment: copying the wall decoration, the ceiling is laid out with small scenes in square frames. Manuscript painting also tended to copy Byz. models, both contemporary and older; the Gospels of Ivan Alexander (London, B.L. Add. 39627, dated 1355/6) has the format of a frieze Gospel, and the portraits it contains of the tsar and his family are clad in Byz.-style imperial costume. The Chronicle of Constantine Manasses (Vat. slav. 2, ca.1345) copies a Byz. illustrated chronicle, adapting traditional scenes to illustrate the passages on Bulgarian history written expressly for this book. Icon painting (e.g., the late 13th-C. St. George, Plovdiv State Gallery no.486) also reflects contemporary Byz. Palaiologan style.

BULGARIAN LITERATURE. Although a number of inscriptions in Greek and a few Proto-Bulgarian inscriptions written in Greek characters survive from before the conversion of Bulgaria, and there is evidence that both the Proto-
Bulgarians (Bulgars) and the Slavs were acquainted with writing. Bulgarian literature is a product of the christianization of the country. When the pupils of CONSTANTINE THE PHILOSOPHER and Methodios, expelled from Moravia, reached Bulgaria in 885, bringing with them translations of the Scriptures and of the liturgy, they found the ground prepared for the development of literature in CHURCH SLAVONIC. There had already been 20 years of missionary activity by Greek and Roman clergy. Tsar Boris I was anxious to avoid too close dependence of the Bulgarian church on Byz. Furthermore, a generation of young Bulgarians, including the future Tsar SYMEON OF BULGARIA, had studied in Constantinople and brought some familiarity with Byz. literary culture back with them.

From their first arrival, the newcomers received royal patronage and encouragement on a grand scale. Schools were established in monasteries in Preslav and Ohrid for the training of Slavonic clergy and the translation or composition of the literature necessary for a Christian and civilized society. The beginning of Bulgarian literature can be dated with great precision to the second half of the 880s. Translation was the first priority. Among the earliest works translated by Konstantin of Preslav and others were select homilies of Athanasios of Alexandria, Gregory of Nazianzos, Basil the Great, John Chrysostom, and John of Damascus, which provided an introduction to theology. Translations of the chronicles of Malalas, Patr. Nikephoros I, and George Hamartolos familiarized Bulgarians with a historical process which was at the same time a process of salvation. The Christian Topography of Kosmas Indikopleustes furnished geographical information in a theological framework. The practice of translation provided a laboratory of language and style, in which experimentation with different genres flourished and the flexibility and expressiveness of Slavonic developed. With this end in mind, the short treatise of George Choiroboskos, On Figures of Speech, was translated in the late 9th or early 10th C.

Original writing went hand in hand with translation. Unknown authors wrote Lives, panegyrics, and akolouthiai on Constantine the Philosopher and Methodios, Kliment of Ohrid and Naum of Ohrid. John the Exarch and Konstantin of Preslav combined material translated or adapted from Greek with much original matter. Kosmas the Priest applied Byz. theological concepts to the elucidation of specifically Bulgarian problems arising out of the spread of the Bogomils and displayed a capacity for sharp social criticism. Poetry was written, both in Byz. 12-syllable meter, such as the anonymous enkomion of Tsar Symeon, and in the complex accentual rhythms of the Byz. liturgy, as in the kanon on St. Demetrios. A treatise on church music surviving in a single Glagolitic MS may well be connected with the development of liturgical hymns in the late 9th C.; it was written in Preslav or Ohrid.

Along with the “official” literature of the Byz. church, the Bulgarians took over and translated apocryphal and apocalyptic texts, such as the Vision of Isaiah. These provided a model for original compositions expressing Bulgarian aspirations and fears, such as the Story of the Cross by Jeremiah the Priest (10th C.) or the Thessalonican legend of the baptism of the Bulgarians. Both the Orthodox and sectarians, esp. the Bogomils, used such texts extensively; 25 apocryphal texts figure in the Izbornik of 1073.

What was not translated, adapted, or imitated in this period of the development of Bulgarian literature was the classicizing secular literature of the Byz., which must have seemed irrelevant and incomprehensible to Bulgarian readers and listeners. Thus Byz. literature and culture was filtered in its transmission to Bulgaria in the 9th and 10th C.

The piecemeal conquest of Bulgaria by the Byz. between 971 and 1018 destroyed the social and political structure that had fostered Bulgarian literature. Royal patronage, which had been necessary for the origin and rapid growth of Bulgarian literature, ceased. Monasteries, however, provided both a demand for and a supply of saints’ Lives, such as the earliest Life of St. John of Rila, written before 1183. A number of apocryphal writings, sometimes of Bogomil inspiration, probably date from the period of Byz. rule.

Now Bulgarian literature began to have some influence on Byz. hagiography. Theophylaktos of Ohrid wrote a Life of his predecessor Kliment that evidently drew on Slavonic sources. The protokouropalates George Skylitzes, who had served as strategos of a Bulgarian province, wrote a Greek
Life of St. John of Rila, which survives only in a 13th- or 14th-C. Slavonic translation. It may have been intended as a response to the pro-Bulgarian tone of the earlier Slavonic Life.

The restoration of Bulgarian independence in 1186 did not at once lead to a revival of Bulgarian literature. Feuding between ruling groups, threats from the Latin Empire of the Crusaders, and the general social and political instability of the country in the 13th C. were not conducive to literary production. Little literature survives from the period, apart from minor hagiographical texts and the Synodikon of Tsar Boris, which contains, along with traditional Byz. material, accounts of the Bulgarian church council of 1211 and of the restoration of the Bulgarian patriarchate, as well as panegyrics on Bulgarian rulers and churchmen.

In the 14th C. the encouragement of literature by successive church leaders, in particular Teodosije, superior of Klifitarevo monastery (died 1369), and Evtimij of Tarnovo, together with the patronage of Tsar Ivan Alexander, stimulated a remarkable literary and cultural revival, centered in monasteries in the Tarnovo region. Many new translations were made from Greek, including the Kephalaia (Chapters) of the hesychast Gregory Sinaiotes, an anthology of sermons of John Chrysostom, and the Chronicle of Constantine Manasses. Evtimij of Tarnovo composed Lives of Bulgarian saints, liturgical texts, and dogmatic treatises. His close friend Kiprian, an ecclesiastical diplomat of wide experience and for 17 years metropolitan of Moscow, wrote Lives of Russian saints, letters on dogma and church discipline, a synaxarion for the Russian church that included many Bulgarian and Serbian saints, and perhaps the first index of prohibited books. More than any other of his time he furthered the spread of southern Slavic and Byz. literary models and techniques in Serbia and Russia. Konstantin Kostenecki, who migrated to Serbia in 1410, wrote a Life of Stefan Lazarevic and translated Greek patristic texts. Grigorij Camblak, who migrated first to Serbia and then to Kiev, wrote many hagiographical works, liturgical compositions, and sermons. Ioasaf of Vidin included in his panegyric of St. Philothea much information on the Bulgaria of his time. Among the many minor and often anonymous works surviving from the 14th and early 15th C. are a short Bulgarian chronicle, letters on religious problems addressed to Evtimij of Tarnovo, and a verse panegyric on Tsar Ivan Alexander.

The literature of this period is marked by the influence, both in matter and in form, of contemporary Byz. literature. Hesychasm won strong and immediate support among most Bulgarian clergy and monks. A rhetorical, poetic, and often pompously inflated style was reflective of contemporary Byz. taste. At the same time, we sometimes find lively descriptions of Bulgarian society and life. Had not the Turkish conquest destroyed the structures of Bulgarian society, Bulgarian literature might well have flourished. As things were, it provided a stimulus and a model for the literature of Serbia, Rumania, and above all Russia.

BULGARIAN TREATY, ANONYMOUS TREATISE ON THE, conventional title of a speech preserved in a single MS (Vat. gr. 483 of the 13th or 14th C.) and dedicated to the signing of the peace treaty with the Bulgarians in October 927. The speech contains a survey of historical events: Leo VI is highly praised; then the author mentions a revolt (apostasia); the assault of the archon (Symeon of Bulgaria), who was crowned by the "helmet of darkness" (Nicholas I Mystikos); and the elevation of the new Moses (Romanois I), raised up out of the water to extinguish the flames of war. The text is full of classical references and obscure allusions, some of which are explained in red ink in the margins by the hand of the same scribe. Various scholars have suggested the following possible authors of the treatise: Nicholas Mystikos (F. Uspenskij in Letopis' 2 [1894] 121), Arethas of Caesarea (M. Šangin, Istorik-Marksist [1939] no.3, 177), Ngetas Magistros (J. Darrouzes, Reb 18 [1960] 126), and Theodore Daphnopates (I. Dujcev, DOP 32 [1978] 252f).
However, the most recent editor, Stauridou-Zaphraka, rejects all these identifications (infra 351–55).

---

**BULGARS, TURKIC, also Proto-Bulgarians, Pra-Bulgarians, a pastoral people, originally living in Central Asia. Swept westward in the great movement of steppe peoples that brought the Huns and later the Avars to Europe, some Bulgar tribes settled in Pannonia, where they were dominated by the Avars and took part in their campaigns against the Franks, Lombards, and Byz. In the 7th C. many of these Pannonian Bulgars settled in Italy, in Lombardy, the Rimini-Osimo area, and the region of Benevento. The main body of the Bulgar tribes, dwelling north of the Azov Sea and the river Kuban, were dominated by the Western Turkic khaganate from the mid-6th C. onward. In 632, profiting from divisions among their Turkic rulers, these Bulgars revolted successfully and formed a powerful confederation of Bulgar and related tribes known as Great Bulgaria, led by Kuvrat. Herakleios, seeking a reliable ally to block the Khazar advance westward, concluded a treaty with Kuvrat. After Kuvrat died, Great Bulgaria broke up under Khazar pressure. Some tribes migrated to the Volga-Kama region, some probably joined their kinsmen in Pannonia, some remained under Khazar rule, and some, led by Asparuch, migrated westward to the area between the Dnieper and the Danube delta. In 681 Asparuch and his followers invaded Byz. territory south of the Danube and established the First Bulgarian Empire. About the same time a group of Pannonian Bulgars and their Slav and Greek subjects led by Kouber migrated to northern Macedonia; Byz. authorities recognized their presence there. Both Bulgar groups had long been in contact with agricultural peoples and had largely given up their pastoral way of life. They quickly mingled with the Slavs among whom they settled, becoming a single people called Bulgarians. By the end of the 9th C. the Bulgars had probably ceased to exist as a separate ethnic and linguistic group. (See also Proto-Bulgarian Inscriptions.)

---

**BUREAUCRACY.** Byz. was governed by the emperor and administered by a corps of officials. The Byz. did not restrict the ruling class to a Greek version of the Western oratores and bellatores, clergy and knights, but regularly regarded officials as a separate category of the elite, often described as synkletikoi, senators (Kazhdan, *Gosp.klass. 66–70*). In the broad sense of the term, bureaucracy also encompassed military commanders and ecclesiastical functionaries. We do not have figures to determine the size of the bureaucracy, although the number of officials was larger than in any other medieval European society. Very approximate data can be drawn from the early 5th-C. Notitia Dignitatum and the Kletorologion of Philotheos. Around 400, there were 103 main offices of the central and provincial administration of the eastern part of the empire, both military and civil, and more than 260 subalter offices (the number of officials should be larger since many offices presupposed several functionaries simultaneously); ca.900, there were 59 main and about 500 subaltern offices, despite a drastic contraction of imperial territory.

The main spheres of administrative activity, besides ecclesiastical, were military, fiscal, and judicial—this categorization provided by chrysobulls from the end of the 11th C. Provincial administration was in the hands of either military commanders or judges, while diplomacy was not consistently separated from the general administration. A significant role was assigned to various imperial chanceries whose function was the composition of documents and the handling of correspondence addressed to the basileus. After the abolition of the office of the praetorian prefect no functionary presided over the whole executive activity; the mesazon of Paradynasteuon who tended to assume this role remained a semi-official imperial favorite.

There were neither social nor educational requirements for recruitment of civil servants—even
illiterate officials are known. Education, however, did provide one avenue of entrance, while children of officials had a better chance of obtaining administrative positions. By the 12th C. a pattern emerges in which military commanders or fiscal or judicial functionaries predominate in certain families, despite the absence of a hereditary system of titles or offices. The combination of land ownership and imperial service was typical, esp. among the military elite, even though the government tried to prohibit the strategoi from acquiring lands within their districts. Civil administrators originated more often than military commanders from families engaged in commerce; they were more likely to be connected with an intellectual milieu and the higher clergy.

A typical trait of Byz. bureaucracy was a close connection between the state government and the emperor's household. The difference between the two was ill defined, and the spheres of authority of the emperor's treasury and of the state financial bureau were barely distinguishable. Accordingly, the personnel of the imperial household, including eunuchs, was often assigned state functions, both civil and military. Until the end of the 11th C., the imperial household was considered to be a section of the state administration, and courtiers were included in the state hierarchy of the takta. The Komnenoi tried to reverse the system and treated the state as the patrimony of the ruling dynasty; relatives of the emperor not only actually obtained high positions in the bureaucracy but also assumed the highest titles by right of consanguinity. A patrimonial element became entrenched in the Palaiologan period. The 14th-C. bureaucracy described by pseudo-Kodinos is based on the principle of consanguinity/affinity and on a post at court rather than on state service.

A position in the bureaucracy was seen as prestigious; it was characterized, esp. from the 12th C. onward, by terms of dependence (on the emperor) such as doulos or oikeios; it was strictly contrasted with private service (A. Kazhdan, RE-SEE 7 [1969] 469–73). Public service was rewarded by salary (in a direct form or as a part of a province's revenues), by gifts from the emperor on feastdays, by donations of land or incorporeal rights (pronoia, charistikion, etc.), and, finally, by sportulae (see synetheia).

Texts preserve manifold complaints concerning malpractice of officials, esp. tax collectors (corruption, bribery, theft, biased judgment). It is important to remember, however, that historians and hagiographers record primarily exceptional cases, and that the administrative machine could function effectively, although centralization had its negative features—the apparatus was expensive and clumsy, decision making took place in Constantinople, competition between officials could easily grow into intrigues and cabals, and bureaucratic omnipotence opened broad opportunities for personal gain.

Modern scholars, particularly J.B. Bury and F. Dölger, have considered the Byz. bureaucracy as a coherent system with a well-defined division of functions, which drew upon the late Roman administration so that new offices smoothly replaced the old ones. This picture is idealized and simplified; the bureaucracy was often in a state of confusion with the result that the same term might designate various offices, different departments might fulfill identical functions, sekreta might combine responsibilities of completely different kinds, and rivalry penetrated the whole state machinery. Direct connection with the Roman system is illusory and based primarily on the deceptive similarity of terms. It is quite probable that around the 7th C. the bureaucracy underwent a profound transformation that cannot, however, be explained by reform or a series of reforms; the main features of the gradual change were replacement of the prefecture by the system of logothesia, introduction of themes, and the decline of municipal administration. The struggle for centralization was won by the emperors of the 9th and 10th C. The resistance of themes was crushed, the army of tagmata created, and an orderly hierarchy established. The 11th C. witnessed the triumph of the centralized administration of the civil bureaucracy that soon revealed its negative features. The Komnenoi tried to rebuild the bureaucracy on the patrimonial basis that, after a reaction under Andronikos I and the Angeloi, was revived by the Laskarids. The small state of the Palaiologoi yielded to decentralizing tendencies; the administration in Constantinople merged with the court, and in the provinces local forces achieved administrative independence.

BURGUNDIANS (Βουργούζιωνες), a Germanic tribe that crossed the Rhine in 406 and settled in the middle Rhineland. In 443, following their defeat by the Huns, AETIUS resettled them in the Rhone-Saône valleys (Burgundy) and eastern Switzerland. The kingdom of Burgundy, by virtue of its rich Roman heritage, well-entrenched Gallo-Roman aristocracy, and proximity to Italy, was the most romanized of all the barbarian states. Although the Burgundians were Arian, relations with the orthodox Gallo-Roman clergy were such that Avitus, bishop of Vienna, was permitted by King Gundobad to convert his son and successor Sigismund to orthodoxy in 516. At least three Burgundian kings were granted an official title by Eastern emperors, perhaps magister utriusque militiae per Gallias. Eastern influence in Burgundy is evident in the presence of 5th-C. churches dedicated to Sts. Kosmas and Damianos, Christopher, and George. The Greek TRISAGION was also introduced into the Western Mass by way of Burgundy in the early 6th C. Burgundy was overrun by the FRANKS under Clovis in 534. The Franks sent a contingent of Burgundians to support the Ostrogoths in their struggle against Justinian I’s forces in Italy. Tiberios I tried to intervene in Burgundian politics in order to secure Burgundian support against the LOMBARDS, but failed.

BURGUNDIO OF PISA, jurist, diplomat, Latin translator of Greek texts; born ca.1110, died 30 Oct. 1193. On 10 Apr. 1136 Burgundio appeared at Constantinople as an interpreter (along with MOSES OF BERGAMO) at the theological disputation of ANSELM of Havelberg, Lothar III's ambassador to Emp. John II Komnenos, with Niketas, metropolitan of Nikomedea. His career as a Pisan jurist (1140–74) is well documented. From 7 Nov. 1168 to 9 Nov. 1171 he helped head an embassy to Emp. Manuel I intended to restore Pisa's competitive position with her commercial rivals at Constantinople (Reg 1, no.1499). Burgundio's theological translations comprise Chrysostom's Homilies on Matthew (finished on 29 Nov. 1151 for Pope Eugenius III from a MS supplied by the Latin patriarch of Antioch); part of John of Damascus's Fountain of Knowledge, or Pege gnoseos (1153 or 1154); Nemesios (ca.1164 or 1165; dedicated to Frederick I); and Chrysostom's Homilies on John (begun during the embassy from two MSS loaned by Byz. monasteries; finished 1179). He also translated Galen's On the Sects (1185; dedicated probably to Henry VI), Greek passages of the Digest of Justinian, and the Geoponika. His annotations occur in Greek MSS Florence, Laur. 74.5, 74.18, 74.25, 74.30, and Paris, B.N. gr. 1849. Burgundio reproduced the Greek as closely as possible but shows semantic flexibility for individual words; his versions shed light on the Byz. transmission of these works.

ED. See R. Durling, LMA 2:1097ff, for list of ed.

BURIAL (ząφη). Although practices varied in different areas, it was common in warm countries to bury the deceased on the first day after death. Following FUNERAL preparations, the ceremony at the tomb—including prayers, incense, and the epitaphios oration—centered on saying farewell to the departed and praying for his salvation and the pardon of his sins. The majority of people were buried in CEMETERIES, which were located outside of a city, town, or village. Some corpses were buried with valuables, which made their tombs liable to GRAVE-ROBBING.

Although a law of 381 (Cod.Theod. IX 17.6) prohibited the practice of burials in churches, it continued for clerics, distinguished monks, emperors, and influential laymen and their families. MAUSOLEUMS and MARTYRIA were erected to commemorate some imperial family members or the most venerated martyrs. Three distinct types of burials are to be found in BYZ. churches from early Christian times on: ARCO SOLA, tombs in the pavement, and SARCOPHAGI. All these types are
found in church porches, narthexes, naves, chapels, parekklesia, burial chambers, and crypts. The burial sites were frequently reserved by individuals during their lifetime; for example, in the 13th-C. typikon for the Lips Monastery in Constantinople, Empress Theodora prescribed the placement of her tomb as well as those of her family in various locations in the narthex and the nave of the church.

After the burial relatives of the deceased observed a period of mourning, during which, on the third, ninth, and fortieth day, they commemorated and prayed for the soul of the departed and prepared kolymba.

BURNING BUSH, a theophany to Moses on Mt. Sinai (Ex 3:1–6). Pilgrims such as Egeria (1.2–2.7) visited the site, and the monastery of St. Catherine reportedly was built there. The miracle was depicted early, for example, at the synagogue at Dura Europos, at S. Maria Maggiore at Rome (432–40), and at S. Vitale at Ravenna (ca. 540). In and after the 9th C. it is often included with the scene of Moses receiving the Law, since both accounts are connected with Mt. Sinai. In the Paris Psalter and the Bible of Leo Sakkarios, for example, the burning bush is represented halfway up the mountain. The Exodus account was read both at vespers and in the liturgy of the feast of the Annunciation, and the burning bush was already treated as a type of the Virgin by Gregory of Nyssa (PG 44:332D), a theme developed in later homilies and prayers. Images of the Virgin or Virgin and Child within the burning bush are found in Palaeologan art, for example, in a cycle of such prefigurations in the parekklesion of the Chora Monastery.

BUSTA GALLORUM (Bouostagallarios, lit. "tombs of the Gauls"), site on the via Flaminia, between Rome and Ravenna, near Tadinae (H.N. Roisle, RE supp. 14 [1974] 749–58, 799–809). Here, at the end of June/early July 552, Narses crushed Totila and thereby decisively broke the resistance of the Ostrogoths, marking the beginning of the end of their organized fighting ability. The Byz. enjoyed two-to-one numerical superiority, using Lombards, Herulians, and other barbarian infantry. The battle began with a single combat won by Anzalas, a retainer of Narses. Waiting for a troop of 2,000 mounted soldiers, Totila started a display of riding skill aimed at delaying the fight. Narses deployed his army in the shape of a crescent with foederati in the center and archers on the flanks. The Ostrogoths tried to smash the center but met a storm of arrows from the flanks. Prokopios, the only source for the battle, ascribes to Totila the order to use not bows but spears only (Wars 8:32.6). The unexpected counterattack of Roman cavalry finally compelled the Ostrogoths to retreat; 6,000 of them fell in battle, and many others who had surrendered were massacred. Totila, mortally wounded, fled.

BUTCHER. In the late Roman and Byz. eras a distinct terminology was used for dealers in and butchers of swine and merchants/butchers of other kinds of livestock (primarily cattle and sheep). A law of 419 (Cod.Theod. XIV 4.10), for example, united the separate guilds of swine merchants (suarii) and cattle merchants (pecuarii). In Egypt the pork butcher (choiromageiros) was often a separate tradesman (e.g., P.Cair.Masp. II 67164-3). The term makellarios (cattle butcher) appears several times in late Roman inscriptions from Korykos (MAMA 3, nos. 280, 538, and possibly 388); one of these inscriptions commemorates George makellarios logarites, perhaps a treasurer of the butchers’ guild.

The 10th-C. Book of the Eparche (chs. 15–16) divides the butchers/merchants into two guilds, the makellarioi and the choiremperoi (swine merchants); the makellarioi were strictly prohibited from buying swine and storing pork. At this time the makellarioi and choiremperoi served numerous functions, purchasing the animals, slaughtering them, and cutting up and selling their meat; in contrast the late Roman suarii and pecuarii were middlemen who bought animals from stockbreed-
ers and sold them to the actual butchers (lanii). Theophranthes the Confessor (Theoph. 225.8–9) used the term kreopoles for the tradesman who both slaughtered animals and sold the meat.

Butchers in Constantinople were required to operate in authorized markets—Stratégion and Tauros. They were forbidden to go to Nikomedea or other nearby towns to receive delivery of sheep or to buy swine outside these markets; makellarioi were, however, allowed to travel beyond the Sangarios River in order to purchase animals for a lower price. Makellarioi had to set prices under the supervision of the eparch; they received the heads, feet, and entrails of the butchered animals as their profit but had to sell the remainder according to the fixed price.

A few seals of butchers survive. An 8th-C. seal of the makellarios Anastasios (Zacos, Seals 1, no. 755) implies that butchers could have administrative functions. There is also a 10th-C. seal of the makellarios Leo (Zacos, Seals 2, no. 933). A guild of butchers probably existed in 15th-C. Thessalonike; in any case, a protomakellarios is attested there (S. Kougeas, BZ 23 [1920] 145.10, 146.39). The functions of the guild at this time, however, seem to have expanded, so that a protomakellarios in Constantinople also dealt in wool (Oikonomides, Hommes d’affaires 111). There is evidence of a struggle in Constantinople in the Palaiologan period over market privileges: in 1320 a Venetian bale protested the prohibition on Venetian meat and fish dealers in the capital’s meat market (Matschke, Fortschrift 96).

**BYTHOS (Βυθός)**, personification of the Depths of the Sea, occurring most commonly in representations of the Crossing of the Red Sea. Bythos is usually shown as a powerful naked male pulling Pharaoh from his horse into the water. Unknown in Early Christian imagery, he appears from the 10th C. in Psalter illustration and the Octateuchs. In the Bible of Leo Sakkellarios this figure is identified as Pontos, the Sea. (See also Thalassa.)

**BYZACENA** (Βυζακένα in antiquity). Under Diocletian, southern Africa Proconsularis was formed into a new province known as Valeria Byzacena. Byzacena was a major producer of agricultural goods from imperial and private domains situated on the eastern coast (Sahel) and near important inland towns such as Sufetula (Sbeita) and Thelepeta. In 442 Valentinian III ceded Byzacena to the Vandals. In the late 5th and early 6th C. much of southern Byzacena fell under the control of Mauri tribes. Following the Justinianic reconquest, Byzacena was ruled by both civil and military governors. The province was the scene of frequent warfare between the Byz. and Mauri until ca. 571. Byzacena continued, however, to export oil to Constantinople and other parts of the Mediterranean, although in evidently reduced volume. Surveys conducted around Sufetula and Cilium (Kasserine) show a decline in rural settlement in the 6th and 7th C. Byzacena was invaded by the Arabs in 647 and again in 665 and 669. In 670 a permanent Arab presence was established at Qayrawan. By the 680s the province was considered lost by Byz. authorities.

The ecclesiastical province of Byzacena did not emerge before the mid-4th C. Donatists predominated in the mountainous regions, Orthodox in the plains and coast; unlike Numidia, Byzacena was not torn by conflicts between the two sects. Byzacena was, however, a center of Orthodox resistance to the Arian Vandals and at the forefront of African opposition in the Three Chapters controversy. Byzacena was also involved in opposition to Monotheletism, which crystallized in the brief revolt (646–47) of the exarch Gregory.

**BYZANTINE ERA**, a system of computation of world chronology devised by the 7th C. Its elements are noticeable in the Chronicon Paschale written in the 630s. In 638/9 the monk and priest George elaborated its principles in a treatise on the computation of Easter (F. Diekamp, BZ 9 [1900] 24–32); it is difficult to decide whether he was the same priest and hegoumenos George to whom Maximos the Confessor dispatched a letter (PG 91:56–61) at approximately the same time. George’s point of departure was the observation...
that according to the Alexandrian Era the sun had to be created on the fourth day of its course and the moon in its full phase, already on the fifteenth day of its course. To eliminate this contradiction George made a shift of 16 years and concluded that the Creation took place not 5,492 but 5,508 years before the birth of Christ. Only by the end of the 10th C. did this system of dating become prevalent, although sporadic use of it in ecclesiastical documents can be found earlier, e.g., in 691 (V. Benešević, Syntaxa XIV titulorum [St. Petersburg 1906; 2d. Leipzig 1974] 145,17–19).

The era began originally on 21 Mar., but later (9th/10th C.) was shifted to 1 Sept.

To convert a Byz. Era date to an A.D. date, where commencement of year is 21 Mar., subtract 5,507 for dates between 1 Jan. and 20 Mar., but 5,508 for dates between 21 Mar. and 31 Dec.; where commencement of year is 1 Sept., subtract 5,508 for dates between 1 Jan. and 31 Aug., but 5,509 for dates between 1 Sept. and 31 Dec.

BYZANTINE RITE, the liturgical system of the Byz. Orthodox church, comprising the sacraments; the hours and vigils; the liturgical year with its calendar of feasts, fasts, and saints' days; and a variety of lesser akolouthai (blessings, enkainia, exorcisms, monastic investiture, etc.), all codified in liturgical books.

Renowned for the sumptuousness of its ceremonial and for its rich liturgical symbolism, the Byz. rite—in part the heritage of the imperial splendors of Constantinople—is actually a hybrid of Constantinopolitan and Palestinian rites gradually synthesized over the course of the 9th–14th C. Its history can be divided into four phases: "palaeo-Byz." (late Roman), imperial, Stoudite, and neo-Sabaitic. Antioch was the major center of liturgical diffusion in the prefecture of Orients, and with several early bishops of Byzantium coming from Antioch or its environs, the early Constantinopolitan asmatike akolouthia and liturgy of the Eucharist, esp. the anaphora, bear Antiochene traits. In the 6th–7th C., esp. under Justinian I with the construction of Hagia Sophia, the Byz. rite became "imperial," acquiring great ritual splendor and theological explicitation, the latter the result of the contemporary Christological controversies; new feasts, the creed, and several new chants (Trisagion, Monogenes, Chekroubikon) were added at this time.

By the 9th–10th C. the church of Constantinople had evolved its complete liturgical system, codified in the typikon of the great church. The monastic victory over Iconoclasm resulted in the gradual monasticization of the liturgy, esp. the adoption by Theodore of Studios of Palestinian monastic usages for the hours, which initiated an eventual fusion of Constantinopolitan and Palestinian liturgical books. The monks of Studios gradually combined the horologion of the imported Palestinian office of St. Sabas with the euchologion of the Great Church to create the hybrid "Stoudite" office: Palestinian monastic psalmody and hymns merged with the litanies and prayers of the Constantinopolitan asmatike akolouthia. This period is characterized by a massive infusion of new liturgical poetry into the offices, monastic compositions from both Palestine and Constantinople, and their gathering into new anthologies (Oktoechos, Triodion, PenteKostari-on, Menaion). It is in this period that the first Stoudite typika appear to regulate the use of these new "propers."

Meanwhile, the Byz. rite was spreading to the patriarchates of Alexandria, Antioch, and Jerusalem, as these churches, weakened successively by the Monophysite schism, the Islamic conquests, and later the Crusades, gradually abandoned their own liturgies in favor of the Byz. rite. This process, already observable in MSS of the 9th C., was fostered esp. by Theodor Balsamon and was more or less complete in Alexandria and Antioch by the end of the 13th C., though the Liturgy of St. James remained in use longer in the patriarchate of Jerusalem (C. Charon [Korolevskij] in Chrysostomika [Rome 1908] 473–718; J. Nasrallah, OrChr 71 [1987] 156–81).

The Stoudite office, adopted throughout the Byz. monastic world, underwent further Sabaitic influence in Palestine. The result, codified in the Sabaitic typika, was adopted on Mt. Athos, where it received its final form under Patr. Philotheos Kokinos. This "neo-Sabaitic" rite was to spread further in the wake of the reform movement under the patriarchate of Philotheos, even replacing the asmatike akolouthia everywhere but Thessalonike. By the end of the empire the Byz. rite was in use throughout the Orthodox world and Sabaitic typika in force everywhere except south-
ern Italy and Rus’, which still retained Stoudite usages.

BYZANTION (Βυζάντιον, also Βυζάντιον), name of a Megarian colony at the southern mouth of the Bosporos, reportedly founded ca.660 B.C. The word is of Thracian origin; cf. the town of Byzye, the river Barbyses, etc. Ancient and Byz. legends considered a certain Byzas (the son of the nymph Semestre or a legendary Thracian king) as the founder of the city, sometimes together with the mythical Antes. The Parastaseis symtomoi chronikai often refers to “the days of Byzas and Antes” (e.g., Parastaseis 100.17); a combination of these two names must explain the toponym Byz-ant-ion. 

Constantine I chose Byzantium as the site of his residence, transformed gradually into a new capital. Byz. authors through the 15th C. (e.g., Douk. 43.9) used the name Byzantion for their capital, although the official designation was Constantinople (Gr. Konstantinopolis, “the city of Constantine”). The Byz. never extended the name Byzantium to their empire, which was termed “of the Rhomaioi”; for them the Byzantioi were the inhabitants of the capital. The term Byzantine Empire was coined by 16th-C. humanists.

Layout and Monuments. Seeing that Byzantium was absorbed into Constantinople without any radical replanning, its layout influenced that of the new city and many of its buildings survived into the Byz. period. The ancient city walls, renowned for their strength, described an arc from the Golden Horn to the Propontis, passing a short distance east of what was to be Constantine’s Forum. Demolished by Septimius Severus in 195–96, they were rebuilt in the second half of the 3rd C., probably along the same line. The acropolis of Byzantium, on the site of the present Seraglio, contained the main temples, which were still standing in the 6th C. Two fortified harbors lay within the walls on the shore of the Golden Horn. Next to them was an agora (later the Strategion). A second agora, called Tetrastoon, is represented by the open space south of Hagia Sophia, later the Augustaion. From there a colonnaded street, ascribed to Severus, led westward to the city gate. The theater, amphitheater (in the region of Mangana), the baths of Achilles and Zeuxippos, the aqueduct of Hadrian, and possibly the Hippodrome were further features of the ancient city that survived into the Middle Ages. The cemetery of Byzantium lay west of the city walls. The archaeological remains of Byzantium are very meager except for a good number of inscriptions.

BYZANTIUM, or Byzantine Empire, conventional name of a medieval state that existed for more than one thousand years. It can be viewed as a continuation of the Roman Empire inasmuch as its legal and administrative systems retained numerous Roman features; at the same time, it underwent significant transformations, evolving into a Christian and primarily Greek-speaking state centered on the Balkans and eastern Mediterranean. The Byz. themselves called their state the Roman Empire (basileia ton Rhomaios) rather than Byzantium, applying the name Byzantium only to their capital, renamed Constantinople. Byzantium as a term for the state was introduced into scholarship only in the 16th C. by Hieronymus Wolf (1516–80).

Since there is no act formally proclaiming the inauguration of Byz., no revolution abolishing the “ancient regime,” the date of its beginning remains under discussion; most scholars prefer the date of 324 (or 390), when Constantinople was founded by Constantine the Great, or 395, when the Roman Empire was divided between the sons of Theodosios I. It is easier to set a precise date for the end of Byz.; it ceased to exist in 1453 when Constantinople was captured by the Ottomans, although some remnants of the empire (the despotate of Morea, the empire of Trebizond) retained their independence until 1460 and 1461, respectively.

The population was multinational; after the loss of the eastern provinces to the Arabs in the 7th C., it was composed primarily of Greeks, Armenians, and Slavs. Its size is hard to estimate: J.C.
Russell (TAPhS 48.3 [1958] 93) proposed about 10.7 million inhabitants for Asia Minor and the Balkans ca.600 (see Demography). Greek was the official language from the 7th C. onward, although many ethnic minorities kept their own languages. The principal religion was Orthodox Christianity, but Armenians, Jews, and Muslims observed their own rites. Constantinople, which was founded as the emperor’s residence, became the capital by the 5th C. and remained the center of administration, culture, and cult until the end of the empire except for a short period of Latin occupation (1204–61), when the capital was moved to Nicea.

Geography of the Empire. Byz. territory was constantly in flux: originally encircling the entire Mediterranean Sea (extending over an area of more than 1,000,000 sq km in 560), it shrank first to a state occupying only the Balkans and northeastern Mediterranean, then to a state surrounding the Aegean Sea, and finally to a tiny domain on the Bosporos. For much of its history the Balkan peninsula and Asia Minor were its nucleus, supplying basic foodstuffs and manpower. This region is characterized by mountainous terrain (major ranges are the Haimos or Balkans, Rhodope, Taygetos, Pontic and Armenian ranges, the Taurus) with vast plateaus (e.g., Cappadocia) and relatively few valleys; the rivers, save for the Danube and Euphrates on its frontiers, are not major waterways, and are open to navigation only in their lower reaches. This landscape, tending to separate one region from another, strongly contrasts with the politically unified structure of the empire. Indented coastlines and numerous islands provided harbors and formed convenient “stepping stones” from Constantinople to Crete and from the western Balkans to Italy; however, as the empire’s political authority over the Mediterranean region diminished, its merchants lost their monopoly on commerce and yielded first to the Arabs and then to the Italians.

The empire possessed a variety of climatic and agricultural zones: regions with hot weather, suitable for growing cotton and palm trees; typically moderate Mediterranean areas producing olives and grapes; northern valleys rich in grain; mountainous plateaus providing pasture for flocks. This diversity of climate contributed to the development of transhumance on varying scales. There is no evidence for climatic change in the Byz. period. The issue of erosion has been much debated: there is no doubt that many harbors silted up and coastlines changed with the deposit of alluvium, but this may have been the result of commercial negligence rather than the cause of decreasing economic activity.

--A.K.

BYZANTIUM, HISTORY OF. This article is composed of an introductory overview of periodization, followed by six essays on the major divisions of Byz. history.

AN OVERVIEW. The separation of Byz. history into periods, like any historical periodization, is one artificially imposed by scholars. The most broadly used periodization is the tripartite division into early, middle, and late periods. This system has, however, two substantial shortcomings: first of all, it is based not on actual historical developments, but on the dubious philosophical premise that three is a magical figure; second, there is no common consensus concerning the borderlines between particular periods. The conventional system of periodization places the beginning of Byz. history either in the early 4th C. with the foundation of Constantinople by Constantine I the Great or at the end of that century with the division of the empire into Eastern and Western halves under the sons of Theodosios I, Arkadios and Honorius. There is much less agreement about what marks the end of the “early Byzantine” period (and, accordingly, the beginning of the “middle Byzantine” period); it has been variously dated to 505 (death of Justinian 1), 610 (accession of Heraclios), 717 (beginning of the Isaurian dynasty), and 843 (defeat of Iconoclasm and the Triumph of Orthodoxy). For the end of the middle Byzantine period scholars have usually chosen either 1071 (battle of Mantzikert) or 1204 (capture of Constantinople by the Latins). The “late Byzantine” period is traditionally dated from 1204 (or 1261, the recovery of Constantinople by the Byz.) to 1453, when Constantinople fell to the Turks.
The following historical survey does not attempt to establish precise boundaries between periods based upon specific political events; instead, this scheme for the most part uses vaguer, approximate dates corresponding to internal developments rather than to changes imposed from without. Thus, the proposed framework represents a more elaborate periodization than the traditional tripartite division while carrying the acknowledgment that it, too, represents an artificial scheme.

**Period of the Late Roman Empire (4th–mid-7th C.),** dubbed “Proto Byzantine” by Lemerle (Agr. Hist. 1–26). The application of the term “Byzantine” to this period is debatable, since the empire of this time preserved the main features of ancient urban society and remained a Mediterranean state par excellence. The issue is further confused by the fact that some scholars refer to papyri of the 6th and 7th C. as “late Byzantine,” and that likewise the final period of Byz. rule in Syria and Palestine (6th–7th C.) may be termed “late Byzantine.”

**Period of the “Dark Ages”** (mid-7th C. to ca.800/850) is characterized by the crisis of ancient city life, aggravated by serious territorial losses and cultural decline. Sometimes it is called the “period of Iconoclasm,” even though the two phenomena do not fully coincide chronologically; moreover, the concept of Iconoclasm does not cover all the changes that Byz. society underwent during this time. No more fortunate is the attempt to describe this period as one of Slavic penetration into the empire, which allegedly caused an essential restructuring of the Byz. economy and administration. In the first half of the 9th C. occurred the first stages of the process of recovery and consolidation that was to characterize the next period.

**Age of Recovery and Consolidation (ca.800/850–1000),** sometimes called the period of the “Macedonian renaissance” or of Encyclopedism. The latter term is more appropriate, although it refers only to cultural developments. During this period the “classic” form of the Byz. centralized and “totalitarian” state was established, and ideological and cultural uniformity was superimposed upon society. At the end of this period Byz. launched a series of offensive wars and managed to recover some of its territory in the east and the Balkans.

**Period of “Westernization” and the Empire of Nicaea (ca.1000–1261),** divided into two unequal parts by the fall of Constantinople to the Fourth Crusade in 1204. Characteristic traits of this period are the rise of provincial towns and of a semifeudal nobility, developments that were accompanied by a cultural flowering that is here called “pre-Renaissance” (the traditional term is “Komnenian renaissance”). Byz. took substantial steps toward “westernizing” its economy, social structure, and government, and despite religious friction was close to becoming a member of the European community of feudal states. The catastrophe of 1204 seems to have had no radical impact on the economic and social development of Byz.; the political pattern changed, however, and the centralized empire was replaced by a group of independent entities (the empires of Nicaea and Trebizond, the despotate of Epirus, the Latin Empire with its vassal states).

**“Empire of the Straits” (1261–1453).** Under the Palaiologan dynasty Byz. was a minor state whose territory continued to shrink under the blows inflicted by the Latins (esp. the Catalan Grand Company), Serbs, and Ottomans. The desperate situation was aggravated by socioeconomic factors—the growth of semifeudal forces, the increasing urbanization of western Europe, and the growing economic dependence of Byz. on the Italian republics of Venice, Genoa, and Pisa. The Byz. retained nevertheless the illusion of being a universal empire, while in the West national states were emerging as the dominant political form. The government and esp. the church could not reconcile their universal claims with the political realities. Byz. was unable to normalize relations with either the Turks or the West, nor could it unite the divided powers of eastern Europe to resist the Turkish onslaught.

Late Roman Empire (4th–mid-7th C.). The beginning of the late Roman Empire can be placed ca. 300. By that time Diocletian, through a series of administrative and economic reforms, managed to quell the so-called crisis of the 3rd C., during which the empire was beset by internal problems such as impoverishment of the populace, decline of military power, economic and monetary instability, and frequent rebellions and depositions of the emperor, as well as the increasing external threat from Germanic tribes and Sasanian Persia. The system of the tetrarchy established by Diocletian was effective during his 20-year rule but upon his retirement disintegrated. After long power struggles Constantine I the Great emerged victorious in 324. Constan-
tine’s policy of toleration of Christianity and his foundation of a new imperial residence in the East, Constantinople, were both significant events that began the process of transformation of the Roman Empire into the Byz. Empire.

For a century and a half, until 476, there continued to be emperors in both the Eastern and Western halves of the empire. The rulers in Constantinople managed to avert the threat of the Germanic tribes by diplomacy and accommodation (settling some Germans as foederati) but observed cold-bloodedly (and perhaps even instigated) the barbarian advance into the territory of the Western Empire: Alaric sacked Rome in 410, and later in the 5th C. the Ostrogoths overran Italy, the Visigoths took Spain, and the Vandals North Africa. In 476 the power of the last Western emperor in Italy, Romulus Augustulus, was abolished, although Julius Nepos continued for
a few more years (until 480) as claimant to the Western throne. Nevertheless, the first Germanic kingdoms on Roman territory were Roman-oriented and, with certain exceptions, ready to acknowledge the theoretical sovereignty of Constantinople. Moreover, in the 6th C. the generals of Justinian I were able to recover some of the Western lands lost to the barbarians, reestablishing Constantinople’s control over Italy, North Africa, and southeastern Spain.

By the end of the 6th C., however, much of Italy was again lost to the empire, when it was overrun by the Lombards. Also at the end of the 6th C. the Avars and Slavs began to break through Roman defense lines in the Balkans and to penetrate as far south as the Peloponnesos. The threat of the rival Sasanian Empire was contained until the early 7th C., when the Persians briefly took Egypt, Palestine, and Syria. Herakleios’s recovery of the Holy Land for the Byz. (629) was short-lived; within a decade, the Arabs, newly converted to Islam, had emerged as the dominant power in the Near East, and Byzantium lost its eastern provinces permanently.

The emperors of this period, who originated primarily from the northern Balkans (Thrace and Illyricum), were sometimes of humble background (Justin I was a peasant, Anastasios I an official, Valens and Leo I were military commanders of mid-rank, Phokas a soldier) or questionable descent (Constantine I was the son of a concubine, Zeno of an Isaurian chieftain). They rarely served as active generals, Julian, Theodosios I, and Herakleios being evident exceptions. Most rulers remained in Constantinople (Theodosios II, Anastasios I, Justinian I); their policies were open to the influence of strong empresses (e.g., Pulcheria, Ariadne, Theodora, Martina) as well as of eunuchs and lawyers. Emperors tried to stabilize the throne in two ways: on the one hand, there were attempts to establish a collegiality of power (the tetrarchy, the institution of co-emperors, the system of equal rulers in Rome and Constantinople); on the other hand, an effort was made to build up hereditary power (Constantine I—Constantius II—Julian from 324 to 363, Theodosios I—Arkadios—Theodosios II from 379 to 450). The establishment of dynasties was thwarted, however, by the failure of some of the most successful emperors to produce heirs or by the rivalry
of their sons by different wives; thus, Constantius II, Julian, Theodosios II, Marcian, Zeno, Anastasios I, and Justinian I all died childless, and the deaths of Constantine and Herakleios were followed by power struggles among relatives. In some cases successors to the throne were adopted sons (Tiberios I), nephews (Justinian I, Justin II), sons-in-law (Maurice), or husbands of the late emperor's widow (Anastasios) or sister (Marcian).

In the 4th and 5th C. the empire retained the major features of antiquity: it was still a Mediterranean state bound together not only by political but also by economic, cultural, and linguistic unity. The city and villa formed the cornerstones of the late Roman economy; trade flourished throughout the Mediterranean, and commercial routes over land and sea connected the empire with the remote areas of Ethiopia, India, and the territories beyond the Danube. However, from the 6th C. onward, an economic decline of the potius can be traced, primarily in cities of small and medium size. Larger cities (such as Alexandria, Antioch, and Carthage) continued to flourish; their role as administrative centers contributed much to the urban prosperity. Imperial residences played a special role: in the West, Rome preserved the place of honor as the former capital of the empire, but the court moved away—to Milan and then to Ravenna. In the East, Constantinople, inaugurated in 330, became the capital by the mid-5th C., superseding all its administrative, economic, and ecclesiastical rivals, such as Nikomedia, Naisos, Ephesus, and Alexandria.

By the mid-5th C., however, the urban system was in a state of crisis, both in the areas vulnerable to enemy invasions and in the regions that remained relatively safe from hostile attack. Changes in the countryside are difficult to interpret, since the evidence is contradictory. On the one hand, it is thought that from the 4th C. onward, the colonate (see coloni) began to assume the traits of personal dependency; by certain scholars this trend is even equated with medieval serfdom. On the other hand, both archaeological data and documentary material indicate that villagers (at least in certain regions) became more prosperous and independent. The aristocracy also changed in character: both the municipal and senatorial aristocracies (basically hereditary) were replaced (esp. in the East) by a new type of officialdom, seeking and depending on imperial favor.

The administrative structure of the empire was a substantial concern of the authorities; various emperors, esp. Diocletian, Constantine I, and Justinian I, tried to organize and reorganize central and provincial administration, the army, the system of taxation, and court life. Reforms were introduced and abolished, laws promulgated, and voluminous law books (Codex Theodosianus, Corpus Juris Civilis) compiled. The main directions of change were as follows: the reinforcement of the central bureaucracy, whose leaders, such as the praetorian prefect and magister officiorum, played a decisive part in the administration; the increasing impact of court ceremonial on all aspects of life; the restructuring of the army so that the defensive forces (including the limes and the troops of the foederati) acquired a predominant role; the gradual replacement of municipal bodies by provincial governors (duces, prefects) and their staves. Of momentous importance were the shifts in provincial organization: initial attempts to combine military and civil power in the same hands were succeeded by the separation of power; finally, by the end of the 6th C., exarchates were created, and the way was paved for the introduction of the theme organization.

The period of the 4th–7th C. saw the firm establishment of Chalcedonian Christianity as the official religion of the empire. Major patriarchates were organized at Alexandria, Antioch, Jerusalem, and Constantinople, and a series of ecumenical councils sought to define Christian doctrine. Monasticism, which had its beginnings in the desert, became an urban phenomenon as well; the accumulation of property by monasteries meant that these institutions began to play an increasing role in the economy.

Ancient scholarship and oratory, education, and forms of entertainment continued in the late Roman period. Many intellectuals spoke both Greek and Latin; rhetorical skill reached its peak in works of writers such as Libanius and John Chrysostom; libraries, universities, and theaters still functioned; and philosophers commented on and developed ancient doctrines. Nevertheless, profound changes took place in the sphere of culture: local ethnic traditions (Egyptian, Thracian, etc.) were revived; local literatures (e.g., Syriac, Coptic) emerged; the role of urban professionals (teachers, medical doctors) diminished; and by the mid-6th C. in the East, Greek became the pre-
dominant language of law and administration as well as of literature. The most important feature of late Roman culture was the increasing influence of Christianity. Although pagan scholarship and literature had their exponents up to the 6th C., Christianity dominated both institutionally, through its churches, monasteries, and philanthropic organizations, and ideologically, attracting the traditional intelligentsia and implanting its values and ideals of behavior. With the triumph of Christianity, new literary forms, such as the homily, hymn, and saint’s vita emerged, as did new genres of art and architecture.

By the end of this period, society and culture were far from being uniform. The Germanic conquests in the West in the 5th C. led not only to political division but also to a widening economic and cultural breach: the West became more and more latinized, while the East preserved a multilingual pattern with Greek as the language of administration. The pre-feudal landed aristocracy in the West, based on a system of estates and lineage, became increasingly independent, while in the East both the bureaucracy and nuclear family were more significant factors. The crisis of urbanism affected the West more strongly, and in the 6th C. the decline of ancient civilization was more evident there than in the eastern portion of the empire, which was gradually being transformed into Byzantium. In the East disputes took place between pagans and Christians, between numerous groups within Christianity (Arians, Monophysites, Nestorians, Neo-Chalcedonians), and between ethnic communities (attacks were launched against the Germanic foederati, the Sasanians, Samaritans, etc.). Scholarly issues were hotly debated, among others Aristotelian and Platonic world views as well as such religio-cultural topics as the legitimacy of the theater, the hippodrome, and divorce. Circus factions, which were normally the mouthpiece of the fans of the hippodrome, could proclaim political slogans at moments of crisis and thus produced an illusion of bipartisan political structure. The involvement of the state in theological discussions, esp. in church councils, however, prepared the climate for the medieval concept of “one state, one dogma.”

—A.K., A.M.T., T.E.G.

**“DARK AGES” (mid-7th C. to ca.800/850).**

During this period, which includes the ISaurian and Amorian dynasties, the empire suffered great territorial losses but eventually restructured its administration and stabilized its borders. The period witnessed far-reaching societal transformations and, near its close, the beginnings of a sustained economic and cultural revival.

During the 7th and 8th C. the ARABS (Umayyad Caliphate, ‘Abbāsid Caliphate) permanently occupied Byz. territory from Syria to Spain, ended Byz. naval hegemony in the eastern Mediterranean, and twice besieged Constantinople (Mu‘āwiya, Maslama). Although the caliphs Hārūn al-Rashīd and Mu’tasim invaded Byz. territory, by the 9th C. the empire had retained Asia Minor and stabilized a no man’s land running between Syria and Armenia. At the same time Byz. cultural influence on the Arabs was considerable, esp. under caliph Ma‘mūn. In the 7th C. the Bulgars under Asparuch established themselves south of the Danube, but through skillful diplomacy and military campaigns (e.g., Constantine V’s defeat of Telerig at Lithosoria) Byz. held on to Thrace and occasionally used the Bulgars as allies (Tervel). Krum attacked Constantinople in 811, but Omurtag made peace and accelerated the Bulgars’ entry into the Byz. cultural sphere, which culminated in the conversion of Boris I and the reign of his son Symeon of Bulgaria. In Italy Byz. could not prevent the advance of the Lombards, who took Ravenna in 751, nor of the Franks, who ultimately laid claim to the imperial title itself (Charlemagne, Louis I) and became the new secular protectors of the Papacy.

External pressures on Byz. accelerated significant internal political, economic, and social changes that definitively transformed late antique civilization into the medieval Greek world. Many scholars (esp. Sjuzumov and, most recently, Weiss) believe that the transition from late antiquity to the so-called middle Byzantine period was marked by a continuity of ideas and institutions. Yet mounting archaeological and numismatic evidence supports the view (advocated by Kazhdan as well as by Foss and Ch. Bouras) that during the 7th and 8th C.
the Eastern Roman *polis* underwent a severe crisis that disrupted the traditions of urban life. Many cities in Thrace, Greece, and Asia Minor ceased to exist or survived only as bishoprics (e.g., NAZIANZOS). Those that did survive were often drastically reduced in size or relocated altogether (EPHESUS). Most commonly, the population abandoned the traditional urban site to cluster in or around a fortified KASTRON on a nearby hill.

The breakdown of late antique urban life had a harmful effect on Byz. culture and also transformed everyday life by producing a shift from “open” to “closed” modes of social expression. Tertiary schools (universities) disappeared by the end of the 7th C. Original literary production in the 7th and 8th C. was apparently negligible. Ecclesiastical disputes stimulated theology, but the greatest Christian writer of the age, JOHN OF DAMASCUS, lived in Arab territory. Few artistic works—icons, mosaics, churches—can be attributed to the period. In architecture, the ancient house with its interior courtyards, galleries, and fountains now became a tight maze of small functional rooms. In town planning, broad boulevards and open squares disappeared in favor of small streets with limited open space. Churches replaced traditional urban assembly spaces such as BATHS and THEATERS.

Great changes were also underway in economic and social relations, although the scantiness of literary evidence leaves many details unclear. The tradition of private property ownership in cities appears to have yielded to a notion of supreme state ownership of property (see STATE PROPERTY). The BARTER ECONOMY became more important, although it still remained secondary to the monetary economy. Traditional late Roman social categories such as the hereditary nobility, urban aristocracy, dependent peasantry, and slaves declined significantly and were largely replaced by the nobility of the main urban centers (esp. Constantinople), provincial civil and military administrators, and an increasingly uniform rural population, although the appearance of powerful families (e.g., SKLÉROS) in the 9th C. signaled the revival of a hereditary aristocracy. The THEMÉ system contributed to this development by increasing the body of moderate landholders and free peasants. Legal texts such as the Farmer’s Law and hagiographical sources reveal the decline of large landed estates and the rise of free-holders, along with an increasing reliance on communal landownership, the abolition of compulsory peasant service, and the introduction of free movement.

The loss to the Arabs of rival cities like Alexandria and Antioch made Constantinople the center of the empire, and successive emperors instituted reforms aimed at strengthening the capital’s often precarious hold on the periphery. The Arab and Bulgar attacks stimulated a radical restructuring of PROVINCIAL ADMINISTRATION. The themes became the foundation of efforts to retain Byz. territory and then to reassert control over recaptured lands. By the mid-9th c. there were more than 20 themes in Asia Minor, Greece, the Aegean, and the Balkans as well as KLEISOURAI along the Arab frontier and KLIMATA in Crimea. This marked a decisive break with late Roman administration by transferring civil authority to military representatives, although the thematic system was also a source of instability, since it put powerful armies under individual commanders. Serious revolts originated in the themes (SABORIOS, BARDANES TÖRKOS, THOMAS THE SLAV), and more than one STRATEGOS became emperor (Leoníotos, Philippíkos, Leo III, ARTABASDOUS, Michael II). Efforts to reform the military, including reliance on small units like the DROUNGOS and the BANDON and increases in soldiers’ landholdings and wages, made the army more flexible and professional.

Changes in central civil administration made the court bureaucracy increasingly important in running state affairs. Several bureaucrats became emperor (Anastasios II, Theodosios III, Nikephoros I) or were proclaimed emperor in coup attempts (ARSABER). A key development was the emergence of chief bureaus—there were 13 by 842—and the growing influence of the post of LOGOTHETES. The most important official became the LOGOTHETES TOU DROMOU, many of whom (STAUARAKIOS, AEITOS, THEOKTISTOS) exercised great authority under weak rulers and during regencies (IRENE, THEODORA).

The primary legislative aim of the emperors was to maintain order in a turbulent world (NO-MOS STRATIOTIKOS, ECLOGA). This imperial insistence on unity and uniformity extended to religious affairs. Constans II tried to quell disputes over MONOTHELETISM by promulgating his TYPOS and punishing proponents of Orthodoxy (Pope MARTIN I, MAXIMOS THE CONFESSOR), and Justi-
nian II convened the Council in Trullo to establish religious uniformity and eliminate pagan customs. In the 8th and 9th C. the attempt by several emperors to impose Iconoclasm on a reluctant population ultimately failed. The court instituted numerous fiscal reforms aimed at revitalizing the economy and increasing the state’s tax revenues. Many are attributed to Nikephoros I, but on the whole he merely formally systematized already existing measures. Most notably, the earthy tax (kapnikon) was extended to paroikoi belonging to the growing number of ecclesiastical establishments; the village community became collectively responsible for its members’ taxes (allelengyon); and the poll tax may have been separated from the land tax and applied to all taxpayers. Such reforms allowed Constantinople to benefit from an economic recovery that is discernible from the late 8th C.; state revenues apparently doubled between 780 and 850.

By the early 9th C. a cultural revival was also underway, stimulated by a growing economy and the reemergence of wealthy patrons. Historiography reappears with the works of Theophanes the Confessor and Patr. Nikephoros I. Kassia was a famous poet of the period. The emperor Theophilos launched an ambitious building program in the capital. The breadth of knowledge displayed by scholars such as Leo the Mathematician and the foundation of the school in the Magnaura (Theoktistos, Bardas) testify to the reinvigoration of Byz. secular learning. By this time Byz. culture was primarily Greek: Latin was little known or used.

AGE OF RECOVERY AND CONSOLIDATION (ca.800/850–1000). This period approximately coincides with that of the Macedonian dynasty. The intense desire to perpetuate the dynasty is seen in Leo VI’s series of four marriages in the attempt to produce a male heir (Tetrarogy of Leo VI) and in the eventual accession to sole power of Constantine VII Porphyrogenetos and Basil II after the throne was usurped by strong civilian and military figures during the period of their minority (Romanos I Lekapenos, Nikephoros II Phokas, John I Tzimiskes).

The centralization achieved through Constantinople’s economic revival, the predominance of the civilian aristocracy, and the slow development of a new “knightslike” army permitted Byz. to stop the Arab invasions in the mid-9th C. and to go on the offensive from the mid-10th C. The successes of John Kourkouas, Nikephoros II Phokas, and John I Tzimiskes led to the Byz. reconquest of Syria and Crete; Bulgaria, a mighty rival ca.900, had to surrender to John I and was eventually annexed in 1018 under Basil II; Rus’ became an ally. Although Byz. recognized Otto I only as “emperor of the Franks,” the Byzantino-German alliance was strengthened by Byz. political and cultural influence. The economic revival that had begun in the first half of the 9th C., primarily in Constantinople and the Aegean coastlands, expanded farther: numismatic and archaeological evidence shows a gradual recovery in the 10th C. throughout Greece and Asia Minor at sites that had lain wholly or partially devastated in the previous period. Constantinople, however, remained the central point of trade and manufacture, its position unrivaled even by large cities such as Thessalonike and Ephesus.

Nor did the growth of private and ecclesiastical landownership yet challenge the state; although some stable clans (Skleros, Doukas, Phokas, Kourkouas) appeared by the 10th C., the state managed to check them and restrict their wealth, partly by bestowing upon the rural community the right of protimesis. Most aristocratic families served the government loyally, and aristocratic generals were primarily responsible for winning the glorious victories of the period. Another factor in Byz. military success was the restructuring of the army, whereby the heavily armed professional kathakartoi replaced the irregular contingents of thematic troops. Even when rebellious, the military aristocrats sought the support of Constantinople and strove to acquire the throne, not to create independent princehoods.

In 843 the government of Theodora restored the veneration of icons, but the monks who had led the resistance to Iconoclasm did not gain much. Strong monastic communities of working brethren—the ideal of Theodore of Studios—gave way to individualistically structured lavras and small monasteries dependent on state grants in kind and money (solemnia); the ideal of the poor brotherhood became very popular, and Nikephoros II Phokas supported it by restricting monastic landownership and by rewarding recently founded...
communities on Mt. Athos, which in their early stages renounced property. The role of monasteries in intellectual life declined: Byz. culture, which was controlled by monks in the first half of the 9th C., became increasingly secular after 850: after George Hamartolos, not one significant Byz. writer was a monk until Symeon the Theologian.

Arguably, the state (personified in the emperor) benefited most from Iconoclasm and its aftermath. The Byz. church was made subject to imperial power. Michael III disparaged the patriarchal office in Constantinople: the patriarchs, regardless of their personal qualities, became puppets in the hands of the emperor (among the deposed patriarchs of the period were Ignatios, Photios, Nicholas I Mystikos, and Euthymios). Twice the patriarchate was awarded to members of the imperial family (Stephen, brother of Leo VI; Theophylaktos, son of Romans I). Only in the second half of the 10th C. was the patriarchate, under Polyeuktos, strong and independent enough to influence imperial policy.

The imperial court and the officials of the capital assumed a fundamental role in the consolidation and reorganization of the empire. The concept of order (taxis) prevailed in the administrative and ideological activity of the time: the taktika (a literary genre typical of the period from the mid-9th C. to the late 10th C.) aimed at shaping the imperial administrative machine, mostly in its ceremonial functions; two surviving treatises on taxation, although not precisely dated, may best be assigned to the 10th or early 11th C. Writers from Leo VI to Nikephoros Ouranos produced a number of military textbooks (strategika); this genre also disappears after 1000. The outlines of an ideal imperial system were drafted in the milieu of Constantine VII in books on the themes (De thematibus), the goals of diplomacy (De administrando imperio), and the ceremonies of the imperial court (De cerimoninis). The law underwent "purification" as well: Basil I and Leo VI drafted or promulgated a series of legal books based on the formulas of Roman law (Prochiron, Epanagoge, Basilika).

Imperial regulations were extended throughout the empire: not only did imperial estates increase, but the state proclaimed its supreme right over all the lands of the empire; taxpayers were divided into several special categories according to their rents and services—stratiotai of different sorts, exkousaatoi of the dromos, Ordinary peasants. The government attempted to stabilize the categories it imposed on the population: 10th-C. legislation, from Romans I onward, aimed at preserving the village community, making a peasant responsible for his neighbor's taxes and prohibiting him from "fleeing" his village; the members of the community were also obliged to arm a soldier, if he lacked the means to buy a horse or weapons. The state developed the principle of just price, prohibiting the unfair pricing of land. The state even attempted to abolish usury, but when Basil I's measures failed, Leo VI was compelled to rescind them. The state also tended to regulate trade activity, promulgating the Book of the Eparch.

Regulation also encompassed ecclesiastical ritual and cultural life. Church architecture acquired a greater homogeneity in form and scale ca.900, the liturgy became more uniform, and Symeon Metaphrastes produced a monumental collection of saints' Lives for ecclesiastical feasts. The task of collecting the ancient heritage was emphasized: the Greek classics were transmitted, collections of the most important fragments were compiled (including the Geoponika), and Photios in the Bibliotheca surveyed significant works of ancient and early Byz. authors. Several lexika were published, among them the Souda.

The period was doubtless one of political success and expansion. Its accompanying cultural upsurge is often called the Macedonian renaissance, though a more proper term would be encyclopedism, meaning here the tendency to collect and set in order both Greek and Roman traditions. Little that is original is to be found in the numerous works produced during the period.

Period of "Westernization" (ca.1000-1204). This era began with the victories of Basil II, witnessed a collapse before the Turks and Normans in 1071, a partial revival under the Komnenian dynasty, a weakening under the Angeloi, and concluded with a seemingly fatal blow from the Fourth Crusade.

From Basil II's reign onward, the system of
great estates everywhere expanded. By the 12th C. most peasants were apparently dependent paroikoi on government, ecclesiastical, or private property. Cities grew: Constantinople was still in the forefront in the 11th C., but such provincial centers as Thessalonike, Trebizond, Artze, Corinth, and Thbes competed successfully; 12th C. Theban silk was superior to that of Constantinople. In the capital, a vigorous middle class appeared; it overthrew Michael V. The military crises of the late 11th C. forced Alexios I Komnenos to give extensive privileges—similar to those received by the Rus’ in the 10th C.—to Venice and Pisa in return for naval assistance; Genoa later obtained similar grants. Using their exemptions from customs dues, Italian merchants exploited the Byz. economy in the 12th C., arousing imperial and popular opposition in Constantinople. While magnates increased their properties where possible, they also sought lucrative government appointments in Constantinople. The Komnenoi secured the support of military-magnate families (Doukai, Palaiologoi, Kontostephanoi, and dozens more) through intermarriage, and an aristocracy based on ties of kinship developed. Whether this social structure (depen-
dent peasantry, militarized aristocracy) constitutes a “feudal” society remains debatable.

The emperors, esp. Alexios I Komnenos and his successors, zealously defended Orthodoxy against popular and intellectual heretics, including the Bogomils, John Italos, and Demetrios of Lampe. The rulers selected and supplant patriarchs and members of the higher clergy; Michael I Keroularios, Kosmas I, and Dositheos were among those deposed. Yet the ability of the secular clergy to oppose the emperor increased: Patr. Alexios Stoudites helped overthrow Michael V. Keroularios contrived the downfall of Michael VI, clerics such as Leo of Chalcedon seriously embarrassed Alexios I by opposing his appropriation of church treasures, and the metropolitans of Manuel I resisted his effort to ease the conversion of Muslims to Christianity. Above all, in 1054 Keroularios overthrew Constantine IX and forced a schism with the Western church.

Under Turkish pressure, the focus of monasticism shifted westward, although centers in Cappadocia continued to flourish. Christodoulos founded the monastery of St. John on Patmos; John II Komnenos and his wife Irene established
the Pantokrator monastery in Constantinople. As the empire became more open to foreigners, ethnic monasteries developed within its boundaries: Gregory Pakourianos founded Petritzos for Georgians in Byz. Bulgaria; Stefan Nemanja established Hilandar for Serbs on Mt. Athos. Latin monasteries included an Amalfitan one on Mt. Athos and a Venetian one in Constantinople. Cenobitic life within monasteries declined in favor of individual monks' rights to own property and support themselves. In Constantinople "holy men," practicing eccentric forms of asceticism, were patronized by wealthy ladies and criticized by intellectuals. While monasteries expanded their landed wealth, many, mismanaged, fell into decay; a solution was sought in the charistikion.

In the 11th C., bureaucrats such as John the Orphanotrophos and Nikephoritzes dominated weak emperors; many of these officials were eunuchs. Scholars such as Michael Psellus and Patr. Constantine III Lechouides also achieved influential positions. The 11th C. allegedly witnessed a conflict between the bureaucrats, with their candidates for the throne (Romanos III, Constantine IX, Michael VII), and the landed-magnate generals with their candidates (Leo Tor-

BYZANTINE EMPIRE UNDER THE KOMNENOI

BYZANTIUM, HISTORY OF: Period of "Westernization" | 355

Nikios, Isaac I Komnenos, Alexios I). Psellus, an acute observer, was aware of the conflict between bureaucrats and military officers, but neither group seems solid or cohesive: the bureaucrats formed factions around personalities and policies, while the army was split into rival Anatolian and European wings. Emperors such as Isaac I Komnenos and Constantine X Doukas, who came from military backgrounds, were unable to free themselves from the traditional policies of the bureaucrats. With the accession of Alexios I, the government became dominated by imperial relatives; eunuchs lost importance.

Recruitment and leadership of the army posed difficulties. Military service formerly required of landholders was frequently converted into taxation. From the 1040s, foreign mercenaries filled the ranks; sources specify Turks of various sorts, Varangians, Normans, and other Westerners, including Anglo-Saxon refugees. Under John II and Manuel, exkousselai was conferred upon certain landowners, and some of them were granted charistikion and pronoia; Westerners could become liziotai and receive grants similar to Western fiefs. In the 11th C., mercenaries such as Roussel de Bailleul attained leadership, but after 1081
commanders of this sort were few. In the 11th C., officers were either court eunuchs or landed magnates; in the 12th, usually aristocrats linked to the Komnenoi or Angeloi. Despite periodic revivals, the navy could not be maintained; the effort to use Venetian, Pisan, and Genoese fleets ultimately failed. In 1204, Danes and Anglo-Saxons led the defense of Constantinople.

In the 11th C., Constantinople witnessed an intellectual flowering, chiefly among representatives of the middle class. Psellos revived interest in Plato, Neoplatonism, and their application to Christianity; in the 12th C., Tzetzes and Eustathios of Thessalonike enhanced the study of classical philology. Constantine IX established a law school for John Xiphilinos, while making Psellos "chief of the philosophers" (hypatos ton philosophon), a position that gave him some supervision over secular instruction in Constantinople. The application of formal logic to theology by John Italos and Eustathios of Nicaea alarmed Alexios I; instruction was placed under the patriarch's control. Later, the hypatos ton philosophon was ordered to exercise an academic censorship. In the writing of history (Psellos, Anna Komnene, Niketas Choniates) and literature (Theodore Prodromos, Eustathios of Thessalonike), conventional ways of depicting people and objects gave way to some elements of "naturalism" and attempts to show the complexity of human character.

Basil II's victories over Arabs and Bulgarians brought the empire a period of relative external peace, which permitted such rulers as Constantine IX to rely on the bureaucrats and repress the magnates and army. The fall of Bar to the Normans and the Turkish triumph at the battle of Mantzikert (1071) discredited the regime of the civilians, allowing independent Armenian states to appear in Cilicia and ultimately permitting Alexios I to seize the throne. The first three Komnenian emperors provided a century of stability; the army was rebuilt and the new aristocracy strengthened the throne, but concessions to the Italians undermined the economy. Alexios I repelled Norman and Pecheneg invasions of the Balkans; with the help of the First Crusade, he recovered coastal Anatolia. John II and Manuel fought with mixed success against Crusaders, Hungarians, Serbs, and Turks. Manuel's defeat at Myriokephalon (1176) and weak rulers after 1180 stopped the Byz. drive into Anatolia. Andronikos I sought to establish his power by bloodily suppressing the aristocracy, but he failed to reinvigorate the Byz. state. Cyprus, occupied by the rebel Isaac Komnenos, was later taken by Richard I Lionheart. The Angeloi emperors, Isaac II and Alexios III, failed to meet the many challenges that confronted them. Civilian aristocrats, displacing the military aristocracy of the Komnenoi, dissipated the empire's resources. Circa 1186, the Bulgarians and Vlachs established the Second Bulgarian Empire, while the Serbs gained their independence. In addition to these ethnic movements, rebels appeared, striving for separatist regimes: Theodore Mankaphas at Philadelphia, Leo Sgouros of Nauplia, Alexios and David Komnenos in Pontos. When the Fourth Crusade conquered Constantinople in 1204 and established the Latin Empire, the Byz. empire was already partially dismembered. That Byz. recovered was due to its regional strength in the successor states at Trebizond, Nicaea, and Epirus.

EMPIRE OF NICAEA (1204—61). The most successful of the three Greek successor states that emerged after the fall of Constantinople to the Fourth Crusade in 1204, the Nicaean Empire was founded by Theodore I Laskaris. Its core comprised the coastlands of western Asia Minor, stretching in an arc from the Paphlagonian coast to the southwestern tip of Asia Minor, where the river Indos (Dalaman Çay) formed the frontier with the Turks. Despite Turkish pressure along these frontiers, the Nicaean akritai were more than able to hold their own. The Nicaean lands in Asia Minor formed two distinct blocks: a northern region around Nicaea, the official capital, and the western coastlands, where in the hills behind Smyrna John III Vatatzes established his residence at Nymphaion. This area formed the hub of the Nicaean Empire. The treasury was housed at Magnesia, while Smyrna became the main naval base. Nicaea remained the residence of the patriarchs, but the emperors rarely visited
it except for their coronations. The choice of Nymphaion as a residence brought the emperors of Nicaea clear advantages. It provided a good vantage point for surveying the Turkish frontier, and it was in the heart of a very fertile region, where imperial and aristocratic estates were concentrated. Once Nicaean armies began campaigning regularly in Europe it was better placed than Nicaea, for it was situated on a shorter and more direct route to the straits of Kallipolis.

At one level, the history of the Nicaean Empire revolves around the ultimately successful struggle to restore the seat of empire to Constantinople. Recognizing the Greeks of the despotate of Epirus and the Bulgarians as serious competitors, the emperors of Nicaea realized that they must establish their authority in Thrace and Macedonia if they were to have a real chance of recovering Constantinople from the Latins. John III outmaneuvered his rivals and was able to gain control over northern Greece because his authority was based on an effective system of government and he had at his disposal a greater range of resources than any of his opponents. He built up the imperial domains and by careful management increased their profits. The incubus of a bloated and inefficient bureaucracy was swept away with the loss of Constantinople. In its place the Nicaean emperors created an inexpensive and efficient administration centered on the imperial household, in which the aristocracy had an acknowledged place. John III carefully supervised the fiscal administration. The fiscal surveys, always one of the strengths of Byz. government, were continued. The administrative and financial strength of the Nicaean Empire was reflected in the substantial armies it kept in the field and in its navy, which secured the islands along the Asia Minor coast.

Another source of strength was the presence of the ecumenical patriarch at Nicaea. The period was by and large one of cooperation between emperor and patriarch. The emperors could normally rely on the patriarchs for moral support. The patriarchal presence also gave the Nicaean rulers a role on the international stage that none of their rivals could match: there were a number of rounds of negotiations with papal representatives over the Union of the Churches; an alliance was concluded with Frederick II Hohenstaufen; and Nicaea became the acknowledged center of the Orthodox world. In 1220 the Serbian church turned for recognition of its autonomy to Nicaea. In 1235 Patr. Germanos II con-
ferred patriarchal rank on the head of the Bulgarian church. In both cases a primacy of honor was reserved for the Nicaean emperor and patriarch.

At another level, these examples show how changes long underway in Byz. crystallized during the period of exile. The recognition of the autonomy of the Orthodox church in Serbia and Bulgaria set the seal on their political independence. Although the Nicaeans were unwilling to make similar concessions to the Greeks of Epiros, the princes of the house of Komnenos Doukas were granted the rank of DESPOTES, thus reconciling their autonomous status with Nicaean claims to overlordship. Devolution of authority also occurred within the Nicaean Empire. The policy of granting EKKOUSSEIA to the great monastic and aristocratic estates was continued and extended into regions where they had been rare before 1204; the same is true of the PRONOIA. In the European provinces the Nicaean emperors issued a series of chrysobulls to the towns and cities, thus officially conferring upon them a measure of autonomy. The period of exile saw a significant growth of local and aristocratic privilege, but relations between emperor and aristocracy remained good until the reign of THEODORE II LASKARIS, whose attack upon the aristocracy, motivated by his desire to assert imperial autocracy, was doomed to failure.

The loss of Constantinople to the Latins dealt a severe blow to Byz. culture. The emperors of Nicaea sought to revive Byz. education by creating a palace school. A concerted effort was made to collect and copy manuscripts. Byzantium’s “Hellenic” past was increasingly appreciated in intellectual circles, which added a new dimension to the Byz. sense of identity. It contributed to the way that Byzantium’s universalist claims began to yield to a more strongly “nationalist” feeling, best caught in the growing hatred of what the Latins stood for. When, at last, the seat of empire was restored to Constantinople in July 1261 by MICHAEL VIII PALAILOGOS, a radical change in the structure and outlook of Byzantium had been completed.

“Empire of the Straits” (1261–1453). The restored “empire” of the 1260s was scarcely large enough to justify its name, limited as it was to the western coast of Asia Minor, northern Greece, and the southeastern Peloponnesos (with the Latin principality of ACHAIA in control of the rest of the peninsula). The despotate of EPIROS and the empire of TREBIZOND maintained their autonomous status. Despite the recovery of its capital, the empire continued to shrink during the remaining two centuries of its history. Although the diplomacy of MICHAEL VIII thwarted the plans of CHARLES I OF ANJOU for conquest, later Byz. emperors were less successful in containing the expansionist policy of their northern and eastern neighbors. By 1340 the OTTOMAN Turks had conquered most of Asia Minor; by 1355 the Serbs, under STEFAN UROŠ IV DUŠAN, controlled most of northern Greece, and the Turks had gained a foothold in Europe. Didymoteichon and Adrianople, the principal towns of Thrace, fell to the Ottomans in the 1360s, Thessalonike in 1387 (and again in 1430, after a brief period of Byz. and Venetian recovery). The independence of Epiros also ended in 1430 with the fall of IOANNINA. Only in the Peloponnesos did the Byz. despotate of MOREA prosper and expand (at the expense of the principality of Achaia); by 1430 it encompassed virtually the entire peninsula. Shortly thereafter, however, in 1453, MEHMED II took Constantinople by siege (see CONSTANTINOPLE, SIEGE AND FALL OF), and the Morea was able to hold out against Ottoman conquest only until 1460. The next year Trebizond, the last Greek stronghold, fell.

Numerous factors contributed to the final demise of the empire, which had already been seriously weakened by the Latin conquest of 1204. First of all, the restored Byz. state had to face the rising power of a vigorous new empire, that of the Ottomans, which steadily conquered Byz. territory and reduced Byz. to vassal status after 1371. The Ottomans besieged Constantinople from 1394 to 1402; the capital was saved only by TIMUR’S defeat of the Ottoman sultan BAYEZID I at the battle of ANKARA in 1402. This setback to the Ottoman fortunes, and the ensuing civil war among Ottoman princes, gave the Byz. Empire a reprieve and enabled it to resist until 1453, although MEHMED II did besiege the capital in 1422.

Second, the states of western Europe provided
little or no assistance to Byz., even though their very existence was threatened by the Turks. The papacy and Western rulers continued to demand that the Byz. emperor agree to Union of the Churches in exchange for military assistance. Twice the Byz. agreed to these conditions, at the Council of Lyons in 1274 and at the Council of Ferrara-Florence in 1439; the promised Western aid either never materialized or was ineffective. The Western crusading movement had almost died out by the late 13th C.; the two crusades of the 14th and 15th C., the Crusade of Nikopolis (1396) and the Crusade of Varna (1444), both met defeat at the hands of the Turks.

Internal problems also weakened the Byz. state in the 13th–15th C. Although only one dynasty, that of the Palaiologoi, held sway throughout the final period, it was not as stable as might appear. It is true that only eight emperors (discounting the brief usurpation of Andronikos IV and John VII) ruled during a period of 195 years, for an average 24-year reign (Andronikos II was em-

peror for 46 years, John V for 50). These figures are misleading, however, because the reigns of both emperors were severely shaken by usurpers and civil war. Andronikos II fought for seven years (1321–28) against his grandson ANDRONIKOS III before abdicating; the youthful JOHN V PALAIOLOGOS was challenged by JOHN VI KANTAKOZENOS, who gained power for seven years after the CIVIL WAR OF 1341–47. These civil wars sapped the strength of the empire, as a result of the devastation of agricultural land and the Byz. use of declining resources to fight each other instead of the common enemy. The Civil War of 1341–47 esp. revealed the hostility of the lower classes toward the landed aristocracy, as manifested in a series of popular urban rebellions, most notably that of the ZEALOTS in Thessalonike; it should be noted that all of these urban movements were ultimately unsuccessful. As rival factions invited Serbs and Turks to take sides in the civil wars as allies or mercenaries, they enabled these dangerous foes to encroach upon Byz. territory. Even after forcing the abdication of Kantakouzenos, John V faced a series of rebellions by his son Andronikos IV and grandson John VII. Another sign of imperial weakness was an increasing tendency for the emperor to divide his territory among his sons, assigning them APPANAGES, which they ruled as autonomous princedoms.

The state treasury was impoverished as revenues declined on account of the decrease in Byz. territory, the immunity from taxes of many large landholders and monastic estates, and the frequent inability of the local population to pay taxes as a result of civil war or foreign invasion. Instead of drawing on the military obligations of PRONOIA holders, the state was forced to pay for an army composed largely of mercenaries. On occasion the use of mercenaries backfired, as when the CATALAN GRAND COMPANY turned against the empire when the emperor was unable to pay them. Under Andronikos II, the fleet was temporarily dismantled as an economy measure. Gold currency, the HYPERPYRON, steadily depreciated in value. Most COMMERCE was in the control of the Italian republics (see VENICE, GENOA), so that the Byz. state received few customs revenues. ANNA OF SAVOY had to pawn the crown jewels to Venice for a desperately needed loan. The empire’s remaining wealth lay in the hands of the great landowners.

The empire became further divided by a number of ecclesiastical controversies. Michael VIII’s usurpation of the throne from the Laskarid dynasty at Nicaea precipitated the schism (1265–1310) between ARSENITES, who defended the Laskarid cause, and Josephites, who supported the new Palaiologan emperor. Simultaneously Michael alienated most of his subjects, esp. the monks, by his decision to agree to Union of the Churches at the Council of Lyons. Although he was motivated by the hope of checking Angevin aggression and of securing Western military aid against the growing power of the Turks, his policy was soon repudiated by his son Andronikos II. The middle years of the 14th C. were torn by the debate over HESYCHASM, which was condemned at first but later accepted by the church as orthodox doctrine. This dispute had ramifications in the political arena, as supporters of Gregory PALAMAS and hesychasm tended to favor Kantakouzenos in the Civil War of 1341–47, while the regency for John V opposed the new doctrines of PALAMISM. Disagreement over Union of the Churches continued until 1453, as the Byz. agonized over whether to acknowledge the primacy of the pope in the perhaps vain hope that they would be rewarded with a Western crusade against the Turks. John V personally converted to Catholicism, but not until the reign of John VIII did an emperor again dare to follow the policy of Michael VIII. The Union concluded at Florence in 1439 was rejected, however, by the populace of Constantinople. Loukas NOTARAS reportedly stated that he would rather be conquered by the Turks than submit to the pope.

This era of declining imperial power saw an increase in the prestige and authority of the Byz. church. The patriarchal throne was graced with distinguished scholars such as GREGORY II OF CYPRUS and GENNADIOS II SCHOLARIOS and reformers like the ascetic ATHANASIOS I. In 1312 jurisdiction over the monasteries of Mt. ATOS was transferred to the patriarch from the emperor. While the empire shrank, the sway of the patriarch of Constantinople was recognized in those lands of Asia Minor and the Balkans no longer under Byz. rule, as well as in Russia, and was even extended to LITHUANIA. MONASTICISM prospered, too, in the Palaiologan era; numerous monasteries were built or restored in Constantinople, Thessalonike, and Mistra. METEORA was colonized by monks from Athos and soon became a new holy
mountain, while Athos, revitalized by the mysticism of the hesychast movement, continued to be a major monastic center even though the peninsula suffered from the raids of Catalans and Turks.

Letters as well as the arts flourished; a sense of Hellenic national identity emerged, accompanied by a new intensification of interest in antiquity. In the major cities, a small but influential elite of intellectuals pursued studies in classical philology, astronomy, and medicine; they also commissioned the copying of numerous MSS. Among those scholars most inspired by the classical tradition were Theodore Metochites and George Gemistos Plethon. The 14th C. saw a revival of the genre of hagiography, as monks and secular literati alike composed Lives of contemporary holy men, or rewrote the Lives of older saints. Vernacular literature also gained greater importance, and there was particular interest in the genre of romance. Greater contact with the scholasticism and humanism of Italy provided a stimulus for scholars such as Demetrios Kydones and Bessarion. Although Constantinople remained depopulated and wheatfields and vineyards still could be found within its walls, the restoration or new construction of churches and monasteries in the capital and at Thessalonike and Mistra after 1261 attests to the artistic vitality of the declining empire, esp. in the first century of the Palaiologan era (see under Monumental Painting).

CADASTER, land registry for the purpose of tax assessment. Some early cadasters are preserved on papyri (J. Gasco, L. MacCoul, *TM* 10 [1987] 103−58). Knowledge of the Byz. cadaster in the 10th−12th C. is based on rules presented in the treatises on taxation (see Taxation, Treatises on), on four original folios preserved in Vat. gr. 215, and on some excerpts copied in documents of the archives of Iviron, Lavra, and St. Panteleimon. At least after 995 (maybe earlier) a census (anagraphe and later apagraphe) was conducted periodically (probably every 30 years), following a geographical pattern defined by the administrative circumscriptions of the provinces from the larger to the smaller (theme, dioikesis, enoria or archontia, hypotage). The results were inscribed in the kodikes of the province (the “boxes,” arklai) and duplicates were kept in the appropriate bureau in Constantinople (genikon, stratiotikon [see Logothetes tou Stratiotikou]). Each identifiable piece of land occupied a separate line (stichos) in the cadaster with the name of its owner (and taxpayer) or its successive owners added piecemeal, sometimes between the lines; there was also an indication of any temporary modifications of the land’s fiscal burden and the amount of the tax payable at the right end of the line (akrostichon). A copy of the kodix (isokodikion; registers with that name were created by Basil II) was seen as a necessary proof of ownership. The taxpayer received a praktikon, i.e., an act signed and sealed by the official enumerating his (eventually scattered) properties and their fiscal obligations. The geographical cadaster does not reappear in the 13th−15th C.; it seems to have been replaced by the thesis or megale apographike thesis, which included copies of the praktika delivered by every surveyor (apographeus) of the province. (See Land Survey.)

LIT. Svoronos, *Cadastre*. N. Oikonomides in *Dioms*. 141f. N.O.

CAESAR (καῖσαρ), a dignity formerly applied to the emperor himself, was used under Diocletian to designate a junior emperor who stood under an augustus and did not possess charismatic qualities (A. Arnaldi, *Rivista italiana di numismatica* 83 [1981] 75–86). Until the 11th C. caesar remained the highest title reserved primarily for the emperor’s sons, albeit with several exceptions: Bardas was caesar under his nephew Michael III. Nikephoros II made his father Bardas Phokas a caesar, Michael IV did the same for his namesake and nephew. The assertion of Patr. Nikephoros I (Nikeph. 42.22−23) that Justinian II granted Terkel the emperor’s cloak and the title of caesar is proved by the evidence of seals (Zacos, Seals 1, no. 2672). The ceremony of elevation of a caesar is described in the *De ceremoniis* (De cer. bk.1, ch.43). The insignia of the caesar was a crown without a cross. Alexios I lowered the rank of caesar, placing it below sebastokrator. In pseudo-Kodinos the caesar occupies the rank between sebastokrator and megas domestikos; from the 14th C., however, the title was conferred primarily on foreign princes, such as caesars of Vlachia, of Thessaly, or of Serbia.

According to Gy. Moravcsik (*ZRVI* 8.1 [1963] 229−36), the Slavic word *tsar* was derived not from the Byz. title but from the Latin designation for the emperor, probably in the 6th/7th C.

A.K.

CAESAREA (Καισαρεία, mod. Kayseri), metropolis of CAPPADOCIA. When its enthusiastic Christians destroyed pagan temples, Empr. Julian deprived Caesarea of municipal status, but it soon recovered to flourish under St. Basil the Great. Caesarea was a great military base with imperial factories of weapons and textiles to supply the frontier. Justinian I replaced its ancient walls, which included fields, gardens, and pasture within their circuit, with a shorter, more defensible rampart. Although Caesarea resisted Chosroes I in 575, Chosroes II took and burned it in 611. Nevertheless, its size and wealth impressed the
Arabs when they first attacked it in 646; they captured it temporarily in 726. Caesarea was first part of the ARMENIAKON theme, then of CAPPADOCIA, and finally, under Leo VI, of CHARSIANON. Caesarea was an important military base in the 10th–11th C.; John KOURKOUAS was stationed there, and NIKEPHOROS II PHOKAS and Bardas PHOKAS, whose revolt the city supported, were proclaimed emperor in Caesarea. Turkish bands attacked it in 1067 and 1073; the Danişmendis conquered Caesarea in 1092; at the time of the First Crusade it was a ruin. Except for some sections of its city walls, which may be Justinianic, the Byz. remains of Caesarea have perished. Caesarea was an ecclesiastical metropolis in the 4th C. Before 431 it won precedence over Ephesus, and when the patriarchate of Constantinople was definitively established, Caesarea became its second see, its archbishop entitled PROTHONOTAROS.

CAESAREA MARITIMA, port in Palestine and the capital city of Palestina I. Until 451 the archbishopric of Caesarea (Καίσαρεια) stood higher in the ecclesiastical hierarchy than Jerusalem, but the Council of Chalcedon subjugated it to Jerusalem. Extensive archaeological excavations have revealed an expansion of the city from the 4th to 6th C. Two aqueducts were restored in 385 and ca. 526, and the main harbor was revitalized between 501 and 518. In the 6th C. streets were refurbished, including a north-south thoroughfare perhaps 17.5 m wide (R. Wiemken, K. Holum, BASOR 244 [1981] 27–41). Interregional trade prospered at Caesarea: whereas in the 2nd C. 80 percent of the fine pottery found at the site came from northern Syria, in the 5th–6th C. 36 percent originated in Asia Minor, 32 percent in Cyprus, and 17 percent in North Africa (J. Riley, BASOR 218 [1975] 52f).

From literary sources we know that a hippodrome functioned at Caesarea in the mid-4th C. and probably into the 6th C. (J. Humphrey, BASOR 213 [1974] 44). The city was a major cultural center: EUSEBIOS OF CAESAREA organized a theological school there; according to Isidore of Seville, its library contained 30,000 books. Many churches are mentioned in the sources: ca. 484 Zeno rebuilt the Church of St. Prokopios; the vita of Anastasios the Persian (died 628) describes several churches that continued to function under the Persian occupation of 604–28 (W. Kaegi, IEJ 28 [1978] 177–81).

The city fell to the Arabs in 640 or 641/2. Its capture was regarded in Muslim sources as the zenith of Arab military success in Palestine. Legend has it that Caesarea had 930,000 defenders against 17,000 Arab besiegers (M. Sharon in EJ 2:4:841). Under the Arabs, Caesarea ceased to be a major port and became the center of an agricultural area. The traditional opinion that the campaign of John I Tzimiskes in 975 reached Caesarea was refuted by J. Starr (Archiv orientalmi 8 [1936] 94f). On 17 May 1101 it was taken by the Crusaders, who retained it until 1187; thereafter the city was the target of countless raids, frequently changed hands, and soon declined.

CAESAROPAPISM, conventional term for the allegedly unlimited power of the Byz. emperor over the church, including unilateral intervention in doctrinal questions ordinarily reserved to ecclesiastical authority. By passively submitting to this system of imperial protective tutelage, the Church—it has been suggested—lost its own sphere of competence and essential independence; it became, in effect, an adjunct of the state bureaucracy.

The term has been rejected by most scholars as a misleading and inaccurate interpretation of Byz. political reality. First, not a single Byz. emperor tried to act as “pope” or patriarch, whereas the bishop of Rome did on occasion assume the role of caesar. Second, the actual relationship between the imperium and sacerdotium cannot be characterized as a simple subordination of the latter. On the one hand, some emperors described themselves as episkopoi ton etos, “supervisors (bishops) of external [things of the church],” and indeed they controlled the material resources of the church (lands, incomes, dependent peasantry); they even confiscated holy vessels in cases of state emergency. Emperors controlled the staffing of the
higher levels of the church hierarchy, including appointment and deposition of patriarchs and bishops. They enjoyed limited liturgical privileges. Their intervention in internal church affairs was less significant: only a few emperors (Justinian I, Manuel I) attempted to impose their theological views on the church, although others were active during the disputes over Iconoclasm or the debate over the Union of the Churches; the emperors or their representatives, however, usually presided over ecumenical councils. On the other hand, the church insistently defended its ideological independence, including canon law; developed (in the Epanagoge) the theory of two correlated powers (the emperor's and the patriarch's); and even proclaimed, in some ecclesiological treatises, that the power of the bishop is higher than that of the emperor. In certain situations the church administration controlled and judged secular functionaries. Finally, the clergy and monks possessed enormous economic wealth and wielded ideological influence over broad strata of the population, so that the church was capable of blocking governmental decisions. In sum, the term caesaropapism altogether exaggerates the degree of actual control of the church by the state.

Caffaro. See Annales Iauenses.

Cain and Abel (Kâïw, “Adam”), the sons of Adam and Eve. Their offerings (Gen 4:3–5) and Abel’s death at the hands of his brother acquired Christological and eucharistic undertones already apparent in the New Testament (e.g., Heb 12:24) and explored in great detail by exegetes such as Cyril of Alexandria (PG 69:33B–44D), who juxtaposed the righteous Abel with Christ. John Chrysostom, quoting Hebrews 12:1, discusses Abel as a martyr (Sur la providence de Dieu, ed. A.-M. Malingrey [Paris 1961] 236, ch.19.5). Abel’s gifts are cited in the Proskomide prayer of the liturgy attributed to St. Basil (Brightman, Liturgies 320; Taft, Great Entrance 365).

Representation in Art. At S. Vitale at Ravenna, a mosaic pairs Melchizedek’s offering with Abel’s, with clear eucharistic significance (DAICL 1.1:62). More extensive pre-Iconoclastic representations are implied by the mosaics of S. Marco in Venice, based on the Cotton Genesis, and by the Octateuchs. Cain and Abel also appear with Adam and Eve on a group of ivory caskets and occasionally in such contexts as the illustrated homilies of James of Kokkinobaphos. Abel often appears in the Anastasis.

Calabria (Kakaoebi), region in southern Italy. Under Diocletian Calabria and Apulia formed a single province administered by a corrector. Until ca.680 the name Calabria was applied to all of southern Italy, including Apulia and Bruttium but, after a significant part of this region had been conquered by the Lombards, Calabria came to designate the former province of Bruttium in the toe of Italy (M. Schipa, Archivio Storico per le province Napoletane 20 [1895] 23–47). The capital of Calabria was Reggio-Calabria.

Originally under the jurisdiction of the exarchate of Ravenna, ca.700 Calabria formed part of the duchy of Sicily (cf. Taktikon of Uspenskij). After Sicily fell to the Arabs (by 902), Calabria became a theme: Falkenhausen (Dominazione 30) maintains that this occurred between 938 and 956, whereas A. Pertusi (Byzantino-Sicula 2 [1975] 427f), referring to a series of Calabrian strategoi beginning with Eustathios ca.917 (Skyl. 263.47–48), suggests an earlier date. Possibly the Byz. did not acknowledge the loss of Sicily and considered Calabria as "Sicily." Sigillography provides evidence about the Byz. administration of Calabria: in the 8th C. it had a Rhaiktor (Zacos, Seals 1, no.1477); in the 9th C. a doux; and a seal of the 10th C. belonged to a certain Pothos, “tourmarches of Calabria and strategos of Sicily.”

In the late 9th and 10th C. Calabria was contested between Byz. and the Arabs. Nikephoros Phokas the Elder (died ca.900) secured Byz. power in the area, but at the end of the 10th C. the Arab threat again became serious. Otto II’s expedition against the Arabs in 982 was a failure, but Byz.
generals retained control over Calabria. Finally in 1060 the Normans occupied the region.

Calabria was strongly influenced by eastern (Greek) customs, culture, and dialect. The Greek ecclesiastical and cultural impact increased in the 10th C., after the Arab occupation of Sicily, when many Greeks, esp. monks, emigrated from there to southern Italy. In the ecclesiastical notation of 920–80 the “eparchia Kalabrias” is listed, with SANTA SEVERINA as its metropolitan see (Notitiae CP, no.8.51). Several monasteries are known from the documents of the 11th C.: St. Nikodemos near Mammola, St. Leontios of STILO (S. Borsari, Il monachesimo bizantino nella Sicilia e nell'Italia meridionale prenormanne [Naples 1963] 65). The Greek Orthodox population in the region was sizable: several saints of the Greek church (NEILOS OF ROSSANO, ELIAS SPELEOTES, ELIAS THE YOUNGER, PHANTINOS THE YOUNGER) were born or settled in Calabria, and Greek books were copied by local scribes. Greek saints’ Lives reflect a Byz. cultural world in the region (Wickham, Italy 157). Silk manufacture developed in Calabria under the Byz. impact. Greek language and culture survived there even after the Norman conquest; in the 14th C. an eminent Byz. theologian, BARLAAM, originated from Seminara in Calabria.

-A.K., R.B.H.

CALENDAR. See Chronology.

CALENDAR, CHURCH, a codification of the liturgical year in two lists, both arranged chronologically. One, the kanonarion, lists the feasts of the lunar or paschal cycle, the mobile feasts that vary in date depending on when Easter falls. The other, the synaxarion, is a list of the fixed feasts and saints’ days. The calendar was based on the 365 dates of the Julian solar calendar, but with the days of the month numbered continuously, rather than according to the Roman system involving Nones, Ides, and Kalends.

From 313 to 462, the cycle of fixed feasts began on 23 Sept. with the feast of the Conception of John the Baptist, the first Gospel mystery preparing for the Nativity of Jesus. After 462 it followed the civil year and began 1 Sept., the start of the INDICATION. By the 8th C., the 1 Sept. New Year’s day had acquired liturgical status with its own lections, and the feast of the BIRTH OF THE VIRGIN, celebrated on 8 Sept., gradually diminished the importance of the Baptist feast as the start of the fixed cycle (Grumel, Chronologie 192–203), though the latter is still called “the new year [day]” in the TYPikon of the GREAT CHURCH (Mateos, TYPikon 1:42, 54f).

Church calendars began to develop in the 4th C. from primitive lists of MARTYRS (saints’ days originate in the general custom of venerating the dead on the anniversary of their death), of commemorations and lections. Though the earliest developed calendars are the Jerusalem LECTIONARIES of the 4th–8th C., and there was much borrowing of feasts from church to church, the Constantinopolitan cathedral calendar is basically an independent tradition. It was not just a local usage that later spread far afield: this calendar was conceived from the start as a calendar for the whole of Byz. Fixed between 650 and 750, most likely before 700, it was used in all quarters of the empire by the 9th C., probably owing to the liturgical legislation of the Council in TRULLO (Ehrhard, Überlieferung 1:28–33).

Ehrhard divides extant calendar MSS of the 9th–15th C. into four types, according to their relative completeness. The final cathedral form of the calendar is transmitted to us in the TYPikon of the GREAT CHURCH. Its history, however, still remains to be written; it will have to be traced on the basis of liturgical books, feasts, saints’ days, and sermon collections.

- R.F.T.

CALENDAR CYCLES. This genre of HAGIOGRAPHICAL ILLUSTRATION depicted either the portrait or the martyrdom of one saint after another, arranged according to the date of his celebration in the church CALENDAR. The cycle could also include representations of the GREAT FEASTS on the appropriate day of the year.

Martyrological cycles may have existed already by the 8th C. (Life of TARASIOS by Ignatios, ed.
PHOTIOS, hom. 17, ed. Laourdas, 170.17–21). Basil I is known to have included scenes of martyrdom in the decoration of a por­ tico of the NEA EKKLESIA BASILII (Vita Basili­ lii 328.2–8). But there is no indication whether either of these lost examples actually followed the sequence of the church calendar.

The earliest and most important surviving cycle of this kind is the MENOLOGION OF BASIL II. Its miniatures were copied in the mid-11th C., this time to accompany a true MENOLOGION, the texts in this particular group of MSS being modified versions of the lives of the saints composed by SYMEON METAPHRASTES (F. Halkin, Le ménologue impérial de Baltimore [Brussels 1985]). Each of these texts concludes with a prayer for the well-being of the emperor, perhaps (but by no means surely) Michael IV.

A set of 11th-C. icons from Sinai preserves a calendar cycle of this type, and literary equivalents can be found in the contemporary metrical calendars, sets of jingles listing each saint and his manner of death composed by CHRISTOPHER OF MYTILENE and Theodore PRODROMOS (cf. E. Fohli­ eri, 1 calendari in metro innografico di Cristo­ foro Mitileneo [Brussels 1980]). Fresco versions appear first in the 13th C., and then only in churches in Thessalonike, Serbia, and Bulgaria, most of them royal foundations. The only other MS calendar cycle is a princely commission of the early 14th C. (Oxford, Bodl. gr. th. 1.1, Hutter, CBM, vol. 2, no.1); here as with the frescoes, no text, other than verse captions, accompanies the miniatures. The context in which these various martyrological cycles are found suggests that they may have originated in monumental painting; the significance of their imperial connections remains to be explored.

Though many Gospel LECTIONARY MSS include calendar notices, only very rarely are these notices accompanied by images (cf. Vat. gr. 1156 and Athos, Dion. 587, both MSS of the 11th C.). Where they do exist, the images are as laconic as the notices themselves, consisting mainly of a series of saintly portraits. This type of “portrait” calendar cycle apparently represents a separate tradition from the martyrrological one of the Basil Menologion and its successors; it recurs on another set of Sinai icons, but never in monumental painting.

CALENDAR OF 354, also referred to as the Chronographer of 354, an almanac drawn up from a large variety of both Christian and pagan documents, including consular fasti, tables of Roman festivals, a secular chronicle of Roman history, the regionaries of the city of Rome, Easter tables, and lists of bishops and martyrs. The various fragmented MSS, when collated, recreate what seems to be the oldest extant Roman Christian calendar; Mommsen (unaware of an unillustrated MS at St. Gall, not pointed out until 1953) derived them all from the lost Carolingian Codex Luxem­ bergiensis. The calendar throws together all manner of information, from key religious and secular items to such trivia as famous Roman gluttons.

The greatest interest and value comported by this calendar derives from the illustrations, made for his patron Valentine by the artist Furius Dionysius Filocalus, who also was calligrapher of the poems of Pope Damascus (366–84). The 26 illustrations, preserved in 17th-C. drawings based on the Carolingian copy, form a gallery of astro­ logical and political emblems appropriated for Christian purposes: no other visual document provides so immediate or broad an impression of mid-4th-C. beliefs and official imagery. The utility and accuracy of the pictures is assured by comparison with other Late Antique works. The large­ ness of Constans II and the personifications of great cities are subjects found on silver; those of the MONTHS are repeated in floor mosaics and represent the tradition inherited by Byz. artists.

CALEENDS (Καλάντωναι), a calendar custom marking the Roman new year; it was celebrated during the first four days of January. Libanios and John Chrysostom describe the Calends in detail (e.g., the decoration of house doors with laurel wreaths). Gregory of Nazianzos condemned this custom,
and a law of 395 prohibited the pagan celebration of holidays (Cod. Theod. II 8.22). The Calends gave rise to festive processions where participants got drunk, wore animal costumes, distributed gifts in specie (halandika), and banged on doors in the middle of the night. Chrysostom refers to this as “a procession of demons in the agorai” (PG 48:954.4–5). Christian clerics viewed the Calends, which fell during the 12 days between Christmas and Epiphany, as a continuation of the ethos of the Brumalia and the pagan cult practices associated with it. The mummers of the Calends gave rise to popular tales about demons called kalikan-tzaro. The Council in Trullo prescribed a six-year excommunication for participation in the Calends, but the practices went on at least until the time of Balsamon, who describes the mummary.

CALENDŽIČHA. See Eugenikos, Manuel.

CAMBLAK, GRIGORIJ, Bulgarian churchman and writer; born Tūrnovo ca.1365, died Kiev 1419. Although a member of an aristocratic Bulgarian family of Byz. origin (see TZAMBLAKON), it is now considered doubtful that he was the nephew of Metr. Kiprian of Kiev and Moscow (D. Obolensky, DOP 32 [1978] 80f). He was educated in Tūrnovo, where he studied with Patr. Evtimij (whose panegyric he later wrote), on Mt. Athos, and in Constantinople. Patr. Matthew I of Constantinople sent him on a mission to Suceava in Moldavia ca.1402–03. He then served as superior of the Dečani monastery in Serbia ca.1403–06. In 1406 Kiprian summoned Camblak to Moscow, but he turned back on news of the latter’s death. He moved to Kiev ca.1409, and in 1415 local bishops elected Camblak metropolitan as the result of Lithuanian pressure; he was, however, excommunicated by Constantinople and Moscow. In Feb. 1418, shortly before his death, he attended the Council of Constance, where he allegedly made a speech in favor of church unity under the pope.

Camblak wrote a wide range of hagiographical, homiletic, and liturgical works in Slavonic; many are still unpublished. His Razkaz (ed. in Kalužni-

CAMELS (sing. κάμηλος), common beasts of burden and a source of meat and of bone for carving throughout much of Syria and Egypt. In North Africa they were also used for plowing and pulling carts. Camels were envisaged as pack animals for the army in the Strategikon of Maurice. A workshop of camel saddles in Damascus is mentioned in the vita of Elias of Heliopolis (ed. A. Papadopoulos-Kerameus, PPSh 19:3 [1907] 48.2–5). Camels are also attested in 14th-C. Greece: John VI Kantakouzenos had them on his estates (Kantak. 2:1185.8). Camel drivers (kamelarioi) were considered persons of the lowest standing: the De administrando imperio attributes such a station to Muhammad. To be paraded through the streets on the back of a camel was a form of humiliation in Constantinople: under Justinian I, persecuted astrologers suffered this punishment (Prokopios, SH 11:37); in a similar fashion the deposed Andronikos I Komnenos was led through the capital on a “mangy camel” in the 12th C.

In art, the camel frequently denotes an Egyptian setting: an attribute of St. Menas or of the Joseph story, as on the cathedra of Maximian. Attesting to their ordinariness, camels normally appear in Creation scenes and in images of Adam naming the animals. A mosaic in the Great Palace depicts two boys riding on a camel.

—A.M.T., A.C.
CAMEO, ornament made from a precious or semiprecious stone, usually with two or more layers of different colors. The subject is carved in relief on the often translucent upper layer, while the lower layer forms the base. This distinguishes cameos from stones carved in intaglio. The quality of carving in Byz. cameos is not as high, generally, as in Roman examples. Stones favored in Byz. were carnelian, chalcedony, heliotrope, haematite, jasper, lapis lazuli, sardonyx, and rock crystal. Secular cameos often displayed portraits. Christian examples may depict the Virgin, Jesus, a scene from his life, or the bust of a saint. Although some Byz. cameos bear an inscription, it is usually not contemporary with the scene or figure. For this reason as well as the stone’s portability and intrinsic value, it is difficult to determine the date and provenance of cameos, although comparison with coins and seals can be helpful. One firmly dated 11th-C. example in London is of serpentine or green jasper, with a contemporary inscription that names Nikephoros (III) Botaneiates (Rice, Art of Byz., pl. 150). Cameos were often mounted to be worn around the neck as enkolpia or amulets. Glass paste cameos were made in imitation of hardstone cameos.

-S.D.C., A.C.

CAMP (ἀπληκτον, from Lat. applicatum). The location, construction, and security of the marching camp were of vital concern to Byz. campaign armies, and nearly every strategikon contains a section on encampments. The most thorough description of a temporary camp is given by the 10th-C. De re militari (ed. Dennis, Military Trea- tises 246–75), which instructs the surveyors preceding the army to locate campsites on level terrain with sufficient water supply nearby. The army camped in a square, keeping the infantry around the outside, the cavalry and supply train within. The commander’s tent and his retinue were in the center. Roads, entered by gates set up in the outer defenses, bisected the camp from north to south and from east to west. The distinctly Byz. plan of a square camp crossed by intersecting roads thus differs from the earlier Roman rectangular plan based on the T-shaped intersection of the via praetoria/praetorialis and is first attested in the 6th C.

To protect the camp, the strategika recommended digging a trench with the earth heaped up along the inner lip to form a rampart; the infantry might then fix their spears in the earth and hang or lean their shields upon them to make a shield-cover or palisade. John I Tzimisces’ army fortified their camp in this manner before Doro- stolon in 971 (Leo Diaec. 142.1–143.6); Yahyā of Antioch states that the ditch and shield palisade around the camp of Romanos III Argyros during the Syrian campaign of 1030 reflected “the usual practice of the Greeks in their camps” (M. Canard, REB 19 [1961] 305f). A well-protected camp enabled an army to resist attack and organize a counterattack, as when in 1068 Romanos IV Diogenes’ men first held off and then defeated an Arab army that had attacked their encampment (Attal. 113.8–114.22).

-C.M.

CAMPANIA (Καμπανία), a region south of Rome comprising the cities of Capua, Naples, Nola, and Benevento. The Garigliano is one of the important rivers in the area. From the reign of Diocletian onward, Campania was considered to encompass Latium as well, and according toProcopios (Wars 5.15.22) Campania stretched to the city of Tarracina. In Western terminology the name Campania was applied to two districts: Neapolitan Campania, forming a part of the duchy of Benevento, and the section included in the territory of the papacy. Campania was administered by a corrector, who from 333 had the high title of consularis. With rich land close to Rome, Campania played a important role during Justinian I’s reconquest of Italy in the 6th C.; when Totila captured Rome, he resettled Roman senators in Campania. Campania had many senatorial estates. The presence of senators accounts, in part, for the continued spending (moribus in most other parts of Italy) by patroni on secular construction in the province
during the 4th and early 5th C. Statues to governors and patroni also continued to be erected. Governors promoted secular building activity in Campania in the same period. The military and financial crisis precipitated by the Visigothic invasions, more than Christianity, is the probable cause for the decline in construction of secular monuments in the 5th C. On the other hand, Paulinus of Nola's construction of a church at Fondi in Campania is possible evidence of a redirection from secular to ecclesiastical building by the senatorial aristocracy residing in Campania.

In 553/4 the Franks penetrated the province (Agath. 40.16). After the 6th C. the name Campania rarely appears in Greek sources, but in the 12th C. the Timarion (53.19) still mentions Kampanoi and Italian merchants visiting the fair in Thessalonike. Because of Arab raids a complex trading pattern emerged between Byz., the Arabs, and the West, with Campania serving as a western apex.

CANA (Κανά), town in Galilee where Christ is said to have worked his first miracle, turning water into wine during a wedding feast (see CANA, MARRIAGE AT). Near Nazareth, its precise location has not been established. According to Jerome (Eusebios, Onomastikon 117:7) it was a "town of Gentiles" (oppidum gentium). Two sites preserve the ancient name: Kafir Kanna east of Nazareth, where remains of a Byz. synagogue were discovered, and Khirbat Kanna north of Nazareth. Many early pilgrims (Piacenza Pilgrim, Willibald [see HUGEBURG], Epiphanius Hagiopolites) mention Cana. The objects of veneration were the couch on which Christ reclined, a waterpot, and the spring at which the pot was filled. In the 12th C. only a small castellion existed at Cana (John Phokas in PPS6 8.2 [1889] 6.29–30), but pilgrims, such as Danil Igumen, continued to mention it.

CANDYMAKER (κηρούλλαρος). There was no Roman guild of candlemakers. The role of this profession evidently increased around the 7th C., when the ancient ceramic lamp was replaced by the candle. The word keroullarios appears in the 7th-C. Miracles of St. Artemios (ed. A. Papadopoulos-Kerameus, 27.1); in the 9th C. Theophanes (Theoph. 487,31) speaks of a well-to-do keroullarios who worked in the Forum; a severe fire in the Forum in 931 destroyed the shops of furriers and candlemakers, keropoleia (TheophCont 420.13–16).

According to the Book of the Eparch, keroullarioi bought wax and olive oil (in part from churches) and sold candles in their shops, which, because of precautions against fire, had to be separated from each other by a prescribed distance (30 orgyalai); only for the workshops near Hagia Sophia was an exception made. The production of candles, esp. for great festivities, required elaborate skill: a 14th-C. source (pseudo-Kod. 191.9–16) describes a Christmas procession candle (lampas), the top of which was colored with cinnabar and the middle
CANDLES (sing. κηρυάς, κηρός) were used extensively in both everyday and ecclesiastical lighting in Byz. The ancient Greeks did not make much use of candles, but the Romans employed them, as well as torches, for festive processions and funeral services; their houses were illuminated with lamps made of clay or metal. There are reasons to suppose that in the 7th C. the practice changed and that candles began to replace lamps: first of all, very few clay lamps are found in excavations of post-7th-C. strata, although literary texts continue to speak of oil lamps; secondly, the profession of candlemaker (keroularius) is known from the 7th C. onward; finally, the term kerion, which in classical texts means honeycomb, acquired the meaning of candle and is used to form compound words such as keroprates (candle merchant) or keropoleion (candle workshop). Another word, lampas, which in classical vocabulary had designated torch or lamp, was used for larger candles (Clugnet, Dictionnaire 81, 89f). Late Roman candles were produced of both tallow and wax (F. Cabrol, DACL 3.2:1613); the Book of the Eparch (11:3–4) stipulates that the candlemaker could use wax and olive oil but not fat. Candles of inferior quality had no wicks (pimai). Sources mention the use of candles for processions (e.g., the vita of Eusebius of Alexandria, PG 86:309A), imperial ceremonies, and liturgy, but there is no information on candles in everyday life, save for the prohibition on light in individual cells of some monasteries; nor do we have any data on the price of candles.
Liturgical Candles. In worship, candles were used, with oil lamps, for both practical and symbolic purposes. Christians, who saw Jesus and his salvation as light and the candle as the image of the eternal light (PG 87:3985C), used candles from the 4th C. onward at funerals, at vespers, in processions, at epiphany and the Easter vigil, and eventually also at baptism,unction, etc.

Typical of Byz. ritual and private devotion was the honorific use of candles. Candles of varying sizes were kept burning on the iconostasis, by tombs, and before icons and other venerated images inside churches (see, e.g., P. Gautier, REB 32 [1974] 37-152, 39-165, 47-282). The patriarch was accompanied in procession by candles, a practice borrowed from court ceremonial, and emperor and patriarch offered obeisance with candles and incense at the opening of services. Liturgical candles evolved into the two episcopal candelabra: the triple-branch trikerion in honor of the Trinity and the double-branched dikerion for the two natures of Christ, with which the bishop bestowed solemn blessings.

CANICATTINI BAGNI TREASURE. See Plate, Domestic Silver and Gold.

CANON. For legal term, see Canon Law; Canons. For hymnographic term, see Kanon.

CANONIZATION (αναγνώρισης), official ecclesiastical acknowledgment and proclamation of the sanctity of an individual by the patriarch and synod of Constantinople. Although the term is sometimes loosely used by scholars for the period prior to the 13th C., canonization in Byz. appears to have been a development of the Palaiologan period. From the earliest centuries of Christianity, holy men and women were popularly revered as saints, commemorated on their feastdays, celebrated in hagiography, and represented in sacred images; the faithful prayed to them for intercession and sought healing from the relics at their shrines. This recognition of a person’s sanctity is properly termed anagnorisis. In the West, official papal canonization began in the late 10th C.; the earliest example in Byz. seems to be that of Patr. Arsenios in the late 13th C. In the 14th C. at least eight cases of canonization are attested, including Patr. Athanasios I, Meletios the Confessor (died 1286), and Gregory Palamas (cf. Reg. Patr., fasc. 5, nos. 2132, 2540; 6, no.2681a). Among the prerequisites for canonization were popular veneration, evidence of miracles, and creation of an iconic and hagiographic tradition.

CANON LAW, in a broad sense, is the totality of legal regulations concerning church life. In its narrow (formal) sense, it is the totality of the rules that derive from church authorities. Because of the great importance of the church, canon law in Byz. was of an importance equal to secular law (see Law, Civil). There did not develop a strict separation of the two spheres of law as in the Latin West.

Byz. canon law, static and adverse to all innovations, did not undergo any significant development. The history of Byz. canon law (in its narrow sense) falls into three periods: that of the councils (4th C.-second half of the 9th C.), that of the patriarchs (second half of the 9th C.-11th C.), and that of the canonists (12th-15th C.).

From the 4th C. come the most important sources by far: the canons issued by church councils. The canons of some councils were being assembled and arranged in chronological order by the 5th C. at the latest; these collections were supplemented and partly replaced—by the 6th C.—with “systematic” collections (organized according to subject matter) such as the Synagoges of Fifty Titles and the Nomokanones. Excerpts from the writings of church fathers (including the so-called Apostolic Canons) were also introduced into these collections. The bulk of the sources that became the recognized basis for ecclesiastical law was already established in the 6th C. and given the authority of an ecumenical council in 691 by the Council in Trullo (canon 2), which repudi­ated in particular the Apostolic Constitutions. These canons (which form the basis of canon law in its narrow sense) were considered to be, in principle, immutable.

The Constantinople council of 879-80 led by
Patr. Photios was the last council that issued generally recognized canons; from then on the corpus of canons was supplemented by occasional prescriptions of individual patriarchs, mostly with the participation of their enodemousa synodos. In the MSS these prescriptions constitute variously composed appendices to the collections of canons. Only certain prescriptions, in particular those dealing with marriage law, acquired an authority comparable to that of the canons.

The chronologically arranged canons were provided with continuous commentaries in the 12th C. by Alexios Aristenos, John Zonaras, and Theodore Balsamon; these commentaries, esp. those of Balsamon, took certain other sources into account as well. Byz. canon law studies—which originated in the 11th C., peaked in the 12th C., and flourished once more in the 14th C.—produced compendia, in particular the Syntagma kata stoicheion of Matthew Blastares and the Epitome canonum of Constantine Harmenopoulos as well as works on particular problems in the form of treatises and Erotaipokriseis (Niketas of Herakleia, John IV (V) Oxites of Antioch, Michael Choumnos, Niketas of Ankyra, Niketas "of Marionela," Basil of Ohrid). Finally, the judicial decisions of ecclesiastical authorities such as John Apokaukos, Demetrios Chomatenos, and the endemousa synodos of the patriarchs of Constantinople, whose register for the 14th C. is almost completely preserved, belong to the sources of canonical law in its narrow sense.

Sources of canonical law in its broad sense are the imperial laws regarding church life; these are of great importance because individual emperors, in particular, Constantine the Great, Justinian I, and Leo VI, issued large numbers of legal prescriptions involving ecclesiastical matters, which, on the whole, were respected by the church. Laws derived from the Corpus Juris Civilis were compiled in special collections (see, e.g., Collectio tripartita) or integrated into works based on the canons (the nomokanones, the commentary of Balsamon, the Syntagma kata stoicheion of Blastares).

Even if some collections of canon law are not arranged either chronologically or alphabetically, but according to content (esp. the Nomokanon of Fourteen Titles), it is impossible to assert that a "system" of canon law was ever developed in Byz. This was done only in modern times and one can now (following Christophilopoulos) divide church law into five sections according to content: a general section, constitution, administration, penalties, and judicial procedure.

1. To the general section belong the concept of canon law (including its distinction from secular law, ethics, and theology); the relationship of the church to the state as well as to dissenters (Jews, Muslims, Latins, and heretics, like Manichaeans and Paulicians); and the sources of canon law and their interpretation (see Oikonomia).

2. To the constitution of the church belong the regulations concerning its members (who have been received into it through baptism): the laity, clergy, and monks as well as the prescriptions concerning the organs of ecclesiastical administration—the councils, enodemousa synodos, patriarchs, metropolitans, bishops, and monasteries.

3. The administration of the church includes the rules for the sacraments, esp. marriage, and for religious education as well as the laws regarding church property (see Property, Sacred), including the income of the clergy.

4. Ecclesiastical penal law deals—both generally and in particular—with ecclesiastical offenses such as apostasy, heresy, schism, simony, and sacred law as well as with ecclesiastical penalties such as excommunication, deposition and anathema (see also Epitomion, Penance).

5. Finally, the ecclesiastical judicial process (see Trial, Criminal Procedure) before the ecclesiastical courts (see Court, Law) forms a part of canon law.

Byz. canon law was not "law" in the modern sense of the term: neither in substance nor in procedure was the uniformity of the handling of norms ever vouchedsafe, because there was never an institutionalized legal education of the clerics concerned with the application of "law" and because the notion of an ubiquitous validity of legal norms (the "concept of the legal state") was completely absent. In several areas (e.g., that of penance) canon law was not clearly divided from ethics or theology; this is due to the fact that the most important producers of the norms of canon law, namely the councils and the church fathers, also determined the codes of ethics and the theological dogmas.

Research into Byz. canon law began in the West in the 16th C.; in the 16th and 17th C., Bonifidius, Voellus, Justellus, and Beveregius in particular produced a series of notable editions of canon
law sources. These studies were taken up again in the second half of the 19th C. by J.B. Pitra and at the beginning of the 20th C. by V.N. Benešević. The documents of the *endemousa synodos* of the patriarchs of Constantinople (*RegPatr*) have been the subject of research since ca.1930 by the French Assumptionists.

Systematic studies on canon law have been pursued since the second half of the 19th C., mainly in Orthodox lands (above all in Greece and, until the revolution of 1917, in Russia) where Byz. canon law was still largely valid. While this so-called inner legal history has received considerable attention, the area of the sources (so-called outer legal history) is still insufficiently researched: most texts still lack a classification of the MS tradition and a critical edition.

**CANONS** (κανώνες), term that in Roman law was used synonymously with *regulae*, rules, but that eventually acquired a technical meaning as the body of ecclesiastical law or of its individual regulations. As canonical were recognized the rulings of several councils, both ecumenical (Nicaea of 325, Constantinople of 381, Ephesus, Chalcedon, Trullo, Nicaea of 787) and local (esp. Ankyra, Gangra, Serdica) as well as the precepts of several authoritative church fathers (Basil the Great, Gregory of Nyssa, Gregory of Nazianzos, Ambro­chios of Ikonion, Cyril of Alexandria, Tarasios, and others).

Canons covered broad areas of *canon law*—ecclesiastical structure, church discipline, norms of morality and behavior, liturgy, etc. Zonaras (PG 137:509D) distinguishes “the investigation of dogma and decisions (*psephoi*)” from formal canons that should, according to Balsamon, bear the signatures of emperors and “fathers” (PG 137:509A). In theory, canons had to be approved “by the common volition and unanimous desire” (Mansi 11:933D) of the council participants. Canons were considered to be “divine,” “saintly,” or “holy.” Justinian I emphasized the importance of canons: thus, in his novel 131 of 545 he endowed the canons of the first four ecumenical councils with the validity of imperial legislation.

**CANON TABLES**, a system of concordance to the Gospels devised by *Eusebios of Caesarea*. His letter to Karpianos, often included with the ten tables, explained their use. Numbered sections of Gospels were accompanied by a red number, corresponding to one of the tables, in which similar passages in other Gospels were listed. Eusebios's original design, preserved in certain 10th-­C. MSS, spread the ten tables over seven pages. In the 10th C., Constantinopolitan illuminators extended the series to ten pages and framed the matrix of numbers in elaborate arches. Canon tables enjoyed their greatest popularity and artistic success in the 11th and 12th C. Menageries of exotic animals and mythological creatures play on top of arcades, and personifications of the labors of the months and virtues are incorporated into the bases and capitals. The same themes appear in Georgian MSS decorated in Constantinople by Byz. painters. At the end of the 12th C. even more elaborate profusions of ornament embellish the tables of *Decorative Style MSS*. In the Palaiologan period, decorated canon tables are neither as common nor elaborate as before.

**CANOSCIO TREASURE**, 5th(?)-C. hoard of 24 silver objects (nine plates, four cups, nine spoons, a strainer, and a ladle) discovered in 1934 at Canoscio in Umbria and now in the cathedral treasury of Città di Castello. Although the Canoscio Treasure is often described as a church treasure, Engemann (infra) convincingly demonstrated that it was for domestic use and belonged to a couple whose names, Aelianus and Felicitas, are inscribed on at least one of its objects. Most of the plates have small crosses at their center, but the lack of dedicatory inscriptions and the flat
profiles of the plates argue against their being patins. The two largest plates, decorated with a cross flanked by two lambs, represent the introduction of Christian themes into household silver. Although usually attributed to the 6th C., individual objects are related to those in the 4th- or 5th-C. Carthage Treasure. Both these collections offer evidence for the intermediary stages of development in the types of domestic silver plate manufactured in the period between the better-known silver treasures of the 4th C. and those of the 6th and 7th C.

**CANTICLES.** See Psalter.

**CAPERNAUM** (Καφαρναούμ), a site in Galilee, identified as Tell Hum. Although Capernaum was the center of Jesus’ ministry in Galilee, it remained only slightly touched by Christianity. Eusebius of Caesarea (*Onomastikon* 120.2–4) described it as a village of “pagans,” and Epiphanius of Salamis (*Panarion* 30.11.9–10) listed it among those Jewish sites where no church had been constructed and no Christians dwelled. Excavations discovered there the remains of a synagogue with buildings of the 1st and the 4th–5th C. Pilgrims to Capernaum (Egeria, Piacenza Pilgrim) were shown the house of the apostle Peter transformed into a church. This holy site is identified as a room in a 1st-C. private house, whose plastered walls bore Christian graffiti. Its hall became a place of worship (*domus ecclesiae*) in the 4th C., and in the 5th C. an octagonal church was erected above it.
After the Arab conquest of Palestine the church is no longer mentioned, but pilgrims could see the house of John the Evangelist and the place where the paralytic was lowered through the roof. DANIIL IGUMEN confuses two Capernaums: one at the Lake of Tiberias, another near Caesarea. He says that Capernaum used to be a large and populated city but was deserted by his time; he reports a prophecy that the Antichrist would emerge from Capernaum (PPSb 3–9 [1885] 88f).

–G.V., A.K., Z.U.M.

CAPIDAVA (Καπίδαβα), a Roman military fort in the Dobrudja at a ford of the Danube, on the route leading to Histria and Tomis. Excavations have revealed two layers of settlement: a Roman castrum (or locus) existed to the early 7th C. (a coin of Maurice was found) and was restored several times, the last time probably by Anastasios I. The 6th-C. fort was smaller than the earlier one, and among numerous Latin inscriptions only a few can be dated later than the 3rd C. The second settlement was founded in the time of John I Tzimiskes and can be dated by coins that reach the reign of Theodora. The settlement was surrounded by a wall 2 m thick and the habitations were semisubterranean. The objects found in the second layer are of poor quality, primarily ceramics that show some influence of Slavic ware (the potters' stamps resemble those in Bulgaria); on the other hand, large clay caldrons indicate Pecheneg connections. The city name is mentioned by Constantine VII Porphyrogenetus (De Them. 1.60, ed. Pertusi p.86).

–A.K.

CAPITAL (κιόκρανον, κιονοκράνον), the crowning element of a column, a critical block that marks the junction of a load (e.g., of an epistyle) and its support (the column shaft). A capital is also used with pilasters and piers, where it marks the springing of an arch or vault. During the 4th–5th C. most Ionic and Corinthian capitals relied on Roman models (J.-P. Sodini, 10 IntCongChr-Arc, vol. 1 [Thessalonike 1984] 207–78). Corinthian, with acanthus decoration, was the dominant form and the source of inspiration for most other types: the Composite capital; the "Theodosian" with its characteristic fine-toothed acanthus; the windblown acanthus capital; and the two-zone capital in which animal or bird protomes surmount a zone with acanthus leaves or basket pattern.

Byz. arcades, however, demanded more compact capitals. Adopting the impost block, the impost capital had fully emerged by ca.530, followed by two variants: the kettle and fold capitals, marked by a preference for stylized floral ornament and undercutting (Orlandos, Palaiocrh. basilike 2:325–37).

Already ca.550 the production of new capitals dropped dramatically and the use of spolia became a common practice. Rare new forms after the 9th C. include the Corinthian-impost capitals in the Church of the Theotokos at Hosios Loukas (H. Buchwald, ArtB 48 [1966] 152), impost capi-
tals with busts of angels, and the Palaiologan impost capitals with busts of saints as at the church of the Chora monastery.

-L.Ph.B., W.L.

CAPITANATA, territory in northern Apulia that comprises, roughly, the modern Italian province of Foggia. The name, which appears first in the 11th-C. Chronicle of Leo Marsicanus (MGH SS 34:261), derives from katepano. In fact, during the first quarter of the 11th C. the katepano had reorganized the area, repopulating it with people from neighboring Lombard counties, and founding and fortifying new cities such as Civitate, Dragonara, Torre Fiorentina, and Troia. Troia’s act of foundation, by Basil Bosoannes (1019), has been preserved. The population and the local officials were predominantly Latin-speaking Lombards; the bishop of Troia was directly subject to the Holy See. The territory was intended as a line of defense against invaders from the north; the Normans occupied it in the mid-11th C.

-V.v.F.

CAPITATIO-JUGATIO (κατακόφαλον ή κεφαλάζιγγον), fiscal system related to Diocletian’s reforms; its exact nature is unclear, in spite of long and heated discussions. It ensured a fair distribution among individual taxpayers of the annona, the total amount of which was fixed by the authorities at various levels, from the praetorian prefect down to the provincial governor. The distribution was made by taking into account some established shares of tax liability, called jugum (for land) and caput (for humans, animals, etc.).

Capital. Byzantine Capitals. (a) Corinthian with acanthus decoration; (b) Composite; (c) Windblown acanthus; (d) Two-zone.
which were estimated as having equal value. Some scholars (Piganiol, Ostrogorsky) saw in the system a combination of poll tax and land tax, concluding that a jugum could not be taxed unless it had a corresponding caput and vice versa; consequently they related the system to the state's effort to bind peasants by law to the land that they cultivated. This theory has been broadly criticized.

- N.O.

CAPPADOCIA (Καππαδοκία), the hilly and mountainous region of central Asia Minor stretching from the Pontic mountains to the Taurus and from the Salt Lake to the Euphrates. Except for a few fertile plains (the best around Melitene), Cappadocia is not very productive and never supported a large population or extensive urban life. In antiquity, it had only three cities—Caesarea, Melitene, and Tyana; the emperor owned most of the land and its population was his tenants. Cappadocia is rich in minerals and was famed for cattle, sheep, and esp. horses. It gained importance from its command of the main highways across Anatolia and from its proximity to the frontier.

The wars of the 3rd C. depleted the population. Diocletian reduced the area of Cappadocia by forming the provinces of Armenia from its eastern regions. The remaining area, with its capital at Caesarea, was assigned to the diocese of Pontos. Hannibalianus, nephew of Constantine I, however, was briefly king (rex regum) of Cappadocia, Pontos, and Armenia (335–37). When Constantine confiscated the treasures of the temples, the imperial estates grew. They became the domus divina per Cappadociam; their revenues supported the imperial bedchamber. In 371, Valens detached the southern half, making a new province, Cappadocia II, with its capital at Tyana.

The writings of the Cappadocian Fathers provide considerable information about Cappadocia in the late 4th C., a time of great prosperity. After 363, when the region east of the Euphrates was ceded to Persia, Cappadocia gained in strategic importance and became more exposed. Tzannoi, Isaurians, and Huns ravaged Cappadocia in the 5th C., provoking a program of fortification continued by Justinian I, who rebuilt Caesarea and established a new fortified center at Morissos. Vainly hoping to repress widespread civil disturbance and revolts by imperial tenants, he appointed a proconsul with full civil and military powers in 535, but the old system was restored by 553. The Persians destroyed Sebastea in 575 and Caesarea in 611, introducing a period of great turmoil.

Arab attacks began with the temporary capture of Caesarea in 646 and intensified after they gained control of the Cilician Gates and Tyana in 708. The long wars led to major changes: the country was covered with strong, usually remote fortresses; large areas, esp. in the east, were depopulated; and Slavs were transported from the Balkans to strengthen the defenses.

In the regime of themes, Cappadocia was divided between Anatolikon and Armeniakon. When these were reduced in the early 9th C., the two new themes of Charshianon and Cappadocia occupied the ancient geographical area, which continued to bear the name Cappadocia for unofficial and ecclesiastical purposes. In Byz. administrative parlance, however, Cappadocia came to denote a smaller area, the highly exposed southern region. First mentioned (by Ibn Khurdadhbeh) as a kleisoura of Anatolikon, it became a separate theme by ca. 890. It extended from the Taurus to the Halys and had its headquarters at Korone in the mountains above the main invasion route of the Arabs. Its strategos, who drew a salary of 20 pounds of gold, commanded 4,000 men and numerous fortresses. Leo VI extended Cappadocia to the northwest by adding the region adjacent to the Salt Lake.

In the mid-9th C., the Paulicians attacked from their base of Tephrike just east of the frontier. That threat was removed in 878, but Arab raids continued until the capture of Melitene by the Byz. in 934 and the displacement of the frontier eastward brought renewed security. Major problems remained, however: notably depopulation from the long wars and the concomitant growth of the estates of the military aristocracy, many of whom were Cappadocian. Syrian and Armenian settlers helped to repopulate the country. The increasing power of the magnates sparked a series
of revolts led by Bardas Phokas and Bardas Skleros that spread from Cappadocia to afflict most of Anatolia from 963 to 989. After finally gaining control, Basil II moved against the Cappadocian aristocracy, confiscating the wealth of such families as the Maleinoi. He gained victories in the east and then annexed much of Armenia; in compensation, Armenian princes and their followers received lands and offices in Cappadocia. Large parts of the country became Armenian, and hostility between the newcomers and the native population grew. In 1057, the deteriorating military situation produced by increasing Turkish attacks provoked Bryennios, general of Cappadocia, to revolt. In the same year the Turks destroyed Melitene and in 1059 Sebastia; defense of such cities had long been neglected. After the devastation of Caesaarea in 1067, Romanos IV strove to restore the military situation in Cappadocia and the east. In 1071, he passed through Cappadocia en route to the fatal battle of Mantzikert, after which Cappadocia was permanently lost to the empire. A province of Cappadocia is last mentioned in 1081, when Alexios I summoned the toparches of "Cappadocia and Choma" to Constantinople (An.Komm. 1:131.16–17). This probably indicates either that imperial authority had survived in the westernmost parts of Cappadocia or that the name, perhaps together with troops, had been moved into Phrygia.

Monuments of Cappadocia. Few churches built during the 4th–7th C. have survived in the province (M. Restle, Studien zur frühbyzantinischen Architektur Kappadokiens [Vienna 1979]). The region is best known for the rock-cut churches and dwellings carved into its soft volcanic tuff hills. Large 6th–7th-C. congregational basilicas in the cliffs at Çavuşin and Avçilar survive, but most of the datable rock-cut monuments are small monastic chapels, often associated with cells, mills, winepresses, and refectories. Chapels that have been ascribed dates before 843—and sometimes much earlier—include Iaokeim and Anna and Niketas the Stylist in Kızıl Çukur and St. Basil at Sinassos (N. Thierry, RSBS 1 [1981] 205–28). The greatest period of artistic productivity, however, occurred between the cessation of major Arab attacks on Anatolia and the Seljuk conquest, reflecting the popularity of the region as a monastic center in the 10th and first half of the 11th C. Among the most important datable fresco cycles from this period are those found in Ayvalı Kilise or the Church of St. John (913–20), GÜLLÜ DERE; Tavşanlı Kilise (913–20); the Old Church of Tokatlı Kilise and Kilçlar Kilise in Göreme, each associated with a series inappropriately named the "Archaic Group"; the Great Pigeon House of Çavuşin (963–69) and the New Church of Tokatlı Kilise (mid-10th C.) in Göreme; Direkli Kilise (976–1025) and St. Michael (1025–28) near the HASAN ĐAĞ; ESŞI GÜMÜŞ near Niğde; St. Barbara (1006 or 1021) and Karabaş Kilise (1060–61) in SOĞANLI; and the COLUMN CHURCHES (mid-11th C.). In their architectural form, programs, and painting style, these chapels reflect the tension between metropolitan cultural hegemony and local artistic tradition.

CAPPADOCIAN FATHERS, BASIL THE GREAT, GREGORY OF NAZIANZOS, and GREGORY OF NYSSA, the three church fathers who combatted Arianism in the 4th C. and were later considered the highest ecclesiastical authority. AMPHILOCHIOS OF IKONION is sometimes included in this group. Basil was the great organizer of men and institutions, Gregory of Nazianzos the great orator and poet, and Gregory of Nyssa the profound and subtle philosopher. Together they are best regarded as masters of compromise and synthesis in their adaptations of Plato and ORIGEN to the Orthodoxy of ATHANASIOS of Alexandria. Their trinitarian definitions paved the way for the Council of CHALCEDON. Basil established and clarified the distinction between the one ousia (see SUBSTANCE) and three HYPOSTASES in support of the concept of HOMOOUSIOS. Gregory of Nazianzos developed the properties and mutual relationships of the three divine persons within the TRINITY. Gregory of Nyssa emphasized the divinity and consubstantiality of the Holy Spirit.

The Cappadocians also departed from Origenist notions of SIN, SALVATION, and TIME. In their view, sin is more a product of human weakness and succumbing to temptation than the result of
original sin. Salvation is attained by penitence, confession, the contemplation and understanding of the divine, and the final reconciliation of sinners with God after the temporary punishment of hell. Much of this comports their efforts to define and distinguish time from eternity, another major departure from Origen; the concept of diastema was developed to separate divine from created time (B. Otis, *StP* 12 [Berlin 1976] 327–57), a notion put forth to substantiate their theories of man's fall and redemption. Apart from theological matters, the Cappadocians responded directly to the social issues of their day, with all three denouncing chariot racing, a particular obsession of Cappadocia, as a source of unrest and riot (J. H. Humphrey, *Roman Circuses* [London 1986] 528).

CAPUA (Κάπυα), city in Campania. Some remains of late Roman Capua survive: an amphitheater (converted to a fortress in the late 9th C.), bath, and Mithraeum. The Vandal Gaiseric sacked and destroyed Capua in 456. In 594 it was taken by the Lombards. Thereafter Capua was at first under the rule of the duchy of Benevento, and Duke Arechis II (758–87) may have constructed a church there (CHRONICON SALERNITATUM 17.11; Ward-Perkins, *From Classical Antiquity* 84). Capua gained independence in the 9th C. sometime before 808, abbot Josue of S. Vincenzo al Volturino received permission from King Louis (later Emp. Louis the Pious) to destroy a “very ancient temple.” Ward-Perkins (ibid. 206) thinks this proves continued government control (presumably Carolingian) over ruined secular buildings in Italy after 800. The rulers of Capua acquired the title of princes ca.900. At this time the city had to struggle against the Arabs, but the Muslim danger was eliminated at the battle of Garigliano in 915. The Byz. impact on Capua was less significant than on neighboring Benevento; a Byz. attempt to seize Capua ca.891 failed; the Byz. expedition of 934 was but an armed embassy; the expedition of 956 ended with a token submission; and the activity of the katepano Basil Boioannes in Capua in 1026 was short-lived. German influence in the 10th C. was exerted through their vassal Paldolf I Cadofiltero (Ironhead) of Salerno (961–81), who succeeded in unifying the vast Lombard lands in southern Italy around Capua. In 966 Pope John XIII elevated the church of Capua to the rank of metropolis. Capua still flourished in the first half of the 11th C., when Paldolf IV managed temporarily to annex Naples, Gaeta, and Mon-tecassino, but the Normans captured the stronghold of Capua after a long siege (1058–62), and the principality became part of the Norman state.

CAPUT (Lat. “head”), technical term introduced in the fiscal system with Diocletian's reforms and having three possible meanings: an individual “heading” in the tax register; an unsecured (because it did not consist of land) share of tax assessment, equivalent to the jugum; a human or animal component in the formula of assessment. Basically, the caput seems to be a unit of account used within the system of capitatio-jugatio for taxing humans or animals working on land. According to Goffart (infra 35), the concept of caput dropped out of the codes; the SYRO-ROMAN LAW-BOOK is silent about it, while the jugum continued to figure in the laws, at least until the 6th C. As the assessment was gradually considered to be based on land alone, the caput disintegrated and the tenant of land was eventually bound to the soil, so as to be kept on the roll of taxpayers.

Lit. W. Goffart, *Caput and Colonate* (Toronto 1974).—N.O.

CARBONE, Italian monastery dedicated to St. Elias and St. Anastasios the Persian; founded at the end of the 10th C. by Loukas Karbounes in a wild mountain region of the Basilicata, probably under the influence of St. Sabas the Younger. While Loukas was active primarily in Armentum, his successors, seeking a refuge from the Arabs, retired to Carbone; nonetheless, one of its superiors, Menas, was captured by them. After the Norman conquest of southern Italy Carbone flourished under the patronage of the feudal fam-
ily of Chiaromonte. Greek monks continued to reside in Carbone until the 16th C.

Despite two fires (in 1174 and 1432) part of the monastic archive survives, including eight Greek documents of 1007–61. Among them are wills containing descriptions of their possessions drafted by Basil (Blasios) in 1041; Loukas II, a superior of Carbone (1059); and Gemma, widow of Nikesphoros, chartoularios and topopoteres of Taranto; also preserved is a sigilium of Argyros, son of Melo, of 1053, which describes a mutiny against the emperor led by “the impious archbishop [of Taranto] and his accomplices.”

CARIA (Kâpia), district of southwestern Asia Minor, south of the Meander River. Caria has a long indented coastline with many harbors, chains of forested mountains, and fertile interior valleys. It became a separate province ca.305, with Aphrodisias as its capital; the governor was a praeses until the 6th C., then a consularis (I. Ševčenko in Synthronon [Paris 1968] 29–41). In 536 Justinian I assigned Caria to the quaestura exercitus, together with Scythia, Moesia, the Aegean islands, and Cyprus; its purpose was evidently to assure supplies, esp. timber, to the Danube armies. John of Ephesus, in his mission to the pagans of Caria and neighboring provinces in 542, claimed to have made 80,000 converts; paganism was still strong in the mountain regions. Caria became part of the theme of Kibyrhiaiotai, but is mentioned as a province as late as 722, when it appears as belonging to the apotheke of Asia, Caria, the islands, and the Hellespont organized to supply the army (Hendy, Economy 656–60). Later uses of the term refer to the geographic area or to the ecclesiastical province, which lasted until the end of Byz. rule (late 13th C.). Caria is also the Byz. name for Aphrodisias.

LIT. Jones, LRE 43, 482f. 999. —C.F.

CARICATURE, a deliberately distorted picture of individuals or groups created for satirical purposes. In late antiquity and Byz. it was directed at both domestic and foreign enemies. Eunapios of Sardis (fr.78, FHG 4:49) relates how an eparch of Rome set up in the middle of the “Stadium” a picture on panels mocking the barbarians who flee the threatening Hand of God; the picture was accompanied by a written commentary. Legends again accompanied the best-known incident of caricature in Byz. history: according to Niketas David Paphlagon, minutes of a council opposed to Pati. Ignatios were illustrated by Gregory Asbestas with colored images identifying Ignatios as “the devil,” “the abomination of desolation” (cf. Mt 24:15), etc. Some contemporary marginal psalters had illustrations that caricatured the enemies of Israel. The Ziphites of Psalms 53 and 72:9 are depicted almost literally with their “mouths set against heaven” while their “tongues go through the earth.” The Hebrews who reproached Moses are represented with Silenus-heads and exaggerated Semitic features (Dufrenne, L’illustration I, fol.106v), while Iconoclasts such as John VII Grammatikos are shown with the wild hair normally associated with the Devil (Śękpina, Miniatjory, fols. 51v, 67r). In the 12th C., Eustathios of Thessalonike was ridiculed in a sketch that circulated in the city (Eust. Thess., Opuscula 98.42–64). Gregorios (Greg. 1:258.24–259.4) again describes the use of caricature in politics: enemies of Patr. Athanasios I painted on the base of the patriarchal throne a picture of Christ and behind him Andronikos II bridled and led by the patriarch “as a charioteer leads a horse.” —A.C., A.K.

CARIĆIN GRAD. See Justiniana Prima.

CARMEN CONTRA PAGANOS, 4th- or 5th-C. work, also known as Carmen adversus Flavianum, that survives only in one copy attached to a MS of Prudentius and consists of 122 hexameters written in difficult Latin, often ungrammatical and unmetrical. Its target is an unnamed prefect who restored paganism at Rome, offended God, and duly perished miserably. The equation of this villain by T. Mommsen with Virius Nicomachus Flavianus (died Sept. 394) still remains the most plausible; a rival theory, however, offers Gabinius Barbarus Pompeianus, prefect at Rome in 408/9 when besieged by Alaric, who after permitting pagan ceremonies was lynched in a food riot. Either way, the poem can be connected with the last attempts at a pagan revival in the West. Its theme and biting tone recall the pseudo-Cyprian
Carnival against a renegade Christian senator and the Carmen ad Antonium contained in two MSS of Paulinus of Nola and thought by some to be his. A recent theory (F. Dolbeau, REAug 27 (1981) 38–43) suggests that Pope Damasus (366–84) might have written the Carmen Contra Paganos.

-B.B.

CARNIVAL, in the strict sense of the three-day festivity preceding Lent, left no trace in Byz. sources; on the contrary, Lent was preceded by weeks of partial abstinence (those of apokreas and tyrophagos) that, according to Theodore of Studios (PG 99:1700B), were established to remind Christians of monastic order (laxis) or of "the new and spotless society." The Byz. did celebrate carnivals in the broader sense, however, as semipagan feasts that embodied sensual festivities; they expressed themselves primarily in masked processions and coarse jokes, often with sexual overtones. The elements of carnival were reflected in pagan festivities such as Lupercalia and Brumalia. Christopher of Mytilene describes a procession of masked students of the school of notaries on the feast of St. Markianos and Martyrios; one of them was disguised as the emperor. Carnival entertainment sometimes had a parodic character, as at the court of Michael III: there, fake liturgies were performed to the accompaniment of lyres (kitharai) and a certain Grillos was installed as a bogus patriarch surrounded by eleven "metropolitans," all in gilded holy vestments; Michael himself played the part of the "proedros of Koloneia" (TheophCont 200.15–201.17). Canon law discouraged acting in costume, prohibited laymen from masquerading as monks and clerics, and clerics from disguising themselves as soldiers or animals (PG 137:729D). Canonists lamented that on some saints’ days pious women had to stay away from church for fear of being accosted by excessively boisterous merrymakers (PG 138:245D–248B).

-A.K.

CARLODO, GIAN GIACOMO, Venetian official and historian; born ca.1480, died 3 June 1538. Caroldo’s numerous and delicate diplomatic missions included one to the sultan in Constantinople (relazione of 30 Sept. 1503 in Marino Sanudo the Younger’s Diari 5 [Venice 1881] 449–68); from 1520 he occupied a key position in the Venetian chancellery. From that date until 1532 Caroldo worked on a Historia Veneta, whose initial part (to 1280) derives chiefly from Andrea DandoLo. The independent final section (1280–1382), however, makes extensive use of archival records available to Caroldo and sheds valuable light, for example, on Byz.-Venetian relations, connections with Russia, the conflict between John V and John VI, the cession of Tenedos, and the pawning of the Byz. crown jewels. The Historia is largely unpublished and survives in three different redactions, two of which exist in partially autograph MSS.

-CARPENTER (τέκτων, λεπτορυγός, ξυλουργός). The terms for artisans working in wood, including the combined form tektos leptourgos, are common in papyri (Fikhman, Egipt 28f). Palladios (Hist.Laws., ed. Butler, 94.7–9) saw in a monastery in Panos 15 tailors, 14 fullers, 7 smiths, and only 4 tektos, which shows a relatively unimportant role for carpentry in this monastery. In his opinion (100.6–7) tektosniké or carpentry was a profession that should be learned in boyhood. Various carpenters—tektos, leptomorphoi, and, distinct from them, builders or oikodomoi—worked in the Studios monastery in Constantinople (Dobroklonskij, Feodor 413). It seems that by the 10th C. the distinction between the carpenter, mason, and builder became vague. SOUDA (ed. Adler, 4:517, 4:520).
no. 251) equates tekton with technites and conceives of him as a craftsman working on both stone and wood. In the Book of the Eparch, leptourgai appear in the chapter on technitai together with masons (marmaroi) and workers in gypsum. In the vita of Ioannikios the Great (AASS Nov. 2.1:407C), tektonema is the designing of the building to be constructed by technitai. Tektones do not appear in later acts of Athos, but the term xyloargos is known (e.g., Launa 1, no. 63.5, App. 1. 12).

Because of the disappearance of most artifacts of wood, carpenters are better known to philology than to archaeology, yet it is self-evident that woodworkers supplied the framework, joists, and tie beams of public and private buildings; ceilings such as that in the church of St. Catherine’s monastery at Sinai; and enemas, ambos, and benches. Their role in shipbuilding and the construction of vehicles was even larger. Various carpenters’ tools are named by Theodore of Studios, the Geoponika, and Eustathios of Thessalonike (Kazhdan, Derewija i gorod 234): one-edged ax, adze, saw, auger, plumbline, plane, square, even a wood-turning lathe (dinos).

The word leptourgia meant skillful craftsmanship and was applied to the Creation (George of Pisidia, Hexaem. 1270, 1505), whereas Anastasios of Sinai (ed. J. Pitra, Iuris ecclesiastici graecorum historia, vol. 2 [Rome 1868] 259.15) speaks of the demon’s “tektones and followers,” and Niketas Choniates (Nik.Chon. 258.14, 301.23) uses the term tekton only metaphorically as schemer or contriver.

CARPETS (sing. τάπητις) or rugs designated in antiquity any kind of woven material used to cover floors, beds, walls, or apertures of doors (H. Schralf in Re 2. R. 4 [1932] 2251). This broad range of functions was preserved in Byz., and various carpetlike hangings (bela) played an important role in court ceremonial, concealing the emperor from the eyes of laymen (Tretinger, Kaiseridea 55f). In the opinion of Basil the Great (PG 31:288C), covering walls with carpets was a sign of excessive luxury; likewise John Chrysostom (PG 55:510.47) considered that carpets on the floor were as typical of the rich house as throns of slaves and tables glittering with gold. According to Asterios of Amaseia (PG 40:168A), wall carpets were sometimes covered with images of hunters, animals, and rocks. In the 9th C. the rich widow Danelis sent to Constantinople woolen carpets to cover the whole floor of the Nea Ekklesia; precious stones were woven into the carpets so that they resembled a mosaic (Theophant Cont 319.14–20). More modest was the carpet on which Epiphanius, friend of St. Andrew the Fool, slept on the floor (PG 111:705AB). Since pious people used carpets for kneeling in prayer, a new term, epeuchion (“prayer rug”), was created by the 12th C. for carpets.

Some carpets were produced in Constantinople or the Peloponneseos; Demetrios Chomateno (ed. pitra, 6:542.29) mentions a type of carpet that the local people called tserga. Some carpets were brought from Alexandria or Armenia; esp. famous for carpet production was Persia, and Herakleios seized precious carpets in Dastagerd.

CARPIGNANO SALENTINO (Καρπιγνάνοο), city in southern Apulia, Italy; site of the cave-church of St. Marina and Cristina, famous for its dated frescoes. According to A. Jacob (AttLinc Rendiconti, 37 [1983] 41–64), inscriptions identify the painters as Theophylaktos (959) and Eustathios (1020). H. Belting (DOP 28 [1974] 12–14) argues that the style of the earlier artist derives from late 9th C. Constantinople, while that of Eustathios is a copy of Theophylaktos’s work rather than a reflection of Byz. painting in the early 11th C. The church, long in use as a funeral chapel, also contains a long Greek metrical inscription on the death of a child and his father, a spatharios (between 1055 and 1075—A. Jacob, RSBN 20–21 [1983–84] 103–22).

Lit. C.D. Fonseca et al., Gli insediamenti rupestri medievali nel Basso Salento (Galatina 1979) 59–75. —V.v.F., A.C.

CART (ἀμαξα). Unlike the light chariot pulled by horses that was employed for chariot races and solemn processions, the cart was a heavy vehicle dragged by oxen and used for everyday business; grain and other foodstuffs were transported in carts (vita of Eustratios, 9th-C. hegoumenos of the Agbas monastery, ed. Papadopoulos-Kerameus, Analekta 4:387.6–9), and a peasant might visit a fair in a cart (Synax.CP 720.34). The
Codex Theodosianus (Cod. Theod. VIII 5.48) established the maximum weight permitted to be carried in a cart (raeda) of four wheels—98–164 kg of gold and 164–327 kg of silver—but these figures do not represent the real capacity of the cart (J. Béranger, MusHelv 28 [1971] 125). The ancient system of harnessing was based on traction at the neck of the animal, with a soft collar and a flexible yoke to which a long pole was strapped; this harnessing prevented the animal from hauling big loads. Lefebvre de Noettes (infra) hypothesized that in the 9th–10th C. the Byz. introduced some innovations in the ancient system of harnessing, releasing the neck and transferring the force of traction from the neck to the chest; this invention allowed the partial replacement of the ox by the horse.

The Byz. were acquainted with the so-called Wagenburg tactic (i.e., surrounding a military camp with a line of carts), which was used by some of their neighbors, such as the Cumans.

CARTAGENA. A Punic foundation on the southeastern coast of Spain, it later became the site of the Roman colony of Nova Carthago. In 425 it was destroyed by the Vandals. An inscription recording the repair of the city gates by the Byz. magister militum of Spain, Komentios, has led to the assumption that Cartagena was the capital of Byz. Spain, but the inscription provides no indication of the town’s status. Cartagena was seized by the Visigothic king Suinthila in 642.

Lit. Thompson, Goths 320f. 329f.

CARTHAGENE (Καρχηδών), port in North Africa near modern Tunis, the largest city in the western Mediterranean after Rome. Under Diocletian, Carthage became the seat of the African diocese. It contained numerous churches and monasteries, and was the focal point of many religious disputes, such as Donatism, Arianism, the Three Chapters controversy, and Monotheletism. The city mirrored Rome in its administration, monuments, wealth, and spectacles. Its aristocracy formed the core of the landed elite of Africa and retained close links with Roman senatorial circles. Carthage was the main port for African grain and oil exported to Rome as part of the Annona. It was also a major producer and exporter of amphorae, lamps, and tableware, esp. African Red Slip ware (see Ceramics). Under the Vandals, there is evidence of an increase in imports of amphorae and other pottery forms, suggesting that the economy was increasingly dependent on supplies brought from outside Africa. Nevertheless Carthage continued to export African agricultural products to Spain, Gaul, and the eastern Mediterranean.

Literary sources emphasize the continued flourishing of Roman culture, including a certain degree of civic patronage on the part of the later Vandal kings. Continuity is also evident in the archaeological record; a number of urban villas, for example, show evidence of remodeling and refurbishment. At the same time, there is evidence that the late Roman walls, Antonine Baths, Via Coelestis, theater, Odeum, and the enigmatic circular monument or rotunda near the theater were allowed to fall into a state of disrepair, and some churches belonging to the Orthodox community are known to have been closed.

Following the Byz. reconquest (533), Carthage, renamed Carthago Justiniana, became the civil and military capital of the prefecture of Africa and later the seat of the Exarch. Justinian I refurbished the walls, the circular and rectangular harbors, and a number of churches. He also constructed a fortified monastery called Mandracium, perhaps on the site of the civic basilica on the Byrsa. A mint was also established (a carryover from the Vandals, who minted in bronze and silver) to serve the monetary needs of the city, prefecture, and army. Justinian’s efforts at urban renewal were short-lived (ca. 533–60) and probably more cosmetic than substantive, as recent archaeological evidence shows little change in the character and quality of domestic life in Carthage from the Vandal to Byz. periods. There is also numismatic evidence for continuous inflation of the base bronze coinage throughout the 6th–7th C., possibly initiated by the building program and costly wars against the Maures, a condition that no doubt drained the resources of the city.

While clearly the center of Byz. influence in Africa, Carthage was also the focal point of frequent resistance to Constantinople. In 608 Heraclius, exarch of Africa, rebelled against Emp. Phokas, and his son, the future emperor Hera-
KLEIOS, led the fleet of Carthage against Constantinople. Another exarch, GREGORY, proclaimed himself emperor, with the support of the “Romans” (Roman Africans) and African tribes. Urban life at Carthage declined over the course of the 7th C., the conditions of habitation worsened, and intramural burials became widespread. Trade, now largely with the eastern Mediterranean, was also decreasing (both the circular and rectangular harbors were out of use by ca.650). By the mid-7th C. production of African Red Slip ware ceased altogether, and mint emissions were erratic and small. Arab invasions after 647 contributed significantly to Carthage’s decline, particularly after the founding of Qayrawān in 670. After 645/6, no bishop of Carthage can be certainly identified and a number of churches ceased to function. The city was conquered by the Arabs, after several attempts, in 698.

—R.B.H.

CARThAGNE TREASURE, dated to the 4th or 5th C. and found at Carthage before 1897, is composed of 24 objects of domestic silver plate (19 in the British Museum and five in the Louvre) and seven pieces of jewelry (four gold, three carved gems). One plate is inscribed with the name of the Cresconius family, known from a comes metal·lorum in 365 up to the poet Fl. Cresconius Корippus in the 6th C. The treasure itself, which is usually attributed to ca.400, was thought to have been buried at the time of the campaign against the adherents of DONATISM from 393 onward, or when the Vandal king GAISERIC took Carthage in 439. The display of a family name in the center of a plate occurs also in the CANOSCIO TREASURE and compares with the use of personal monograms in the 4th-C. Esquiline Treasure (Sheraton, Esquiline 80f) and on a long series of 6th- or 7th-C. plates. The beaded bowl and dolphin-handled ladles of the Carthage Treasure resemble those in the MILDENHALL TREASURE, while the covered bowls on raised foot find parallels on silver plate discovered in Italy.

CARTOGRAPHY. Ancient mapmaking reached its highest development with PTOLEMY. The ancient cartographic tradition, based on mathematics and practical observation, was continued by Arab cartographers, whereas the major goal of Christian mapmakers was to reconcile practical knowledge with biblical data. This concern is reflected in Kosmas Indikopoleustes’ drawings, which though preserved only in later MSS probably derive from his original sketches. The only surviving late antique map is the Tabula Peutingeriana based on ancient traditions; some maps are preserved in later MSS of such late antique writers as Isidore of Seville and Macrobius. Local maps certainly continued to exist and were even reproduced on mosaics, for example, the decorative MADABA MOSAIC MAP. Comparing the Madaba map with the itinerary of a certain Theodosios to the Holy Land (in the first half of the 6th C.), Y. Tsafir (DOP 40 [1986] 129–45) comes to the conclusion that at that time there was a variety of pilgrim maps all differing from each other.

Medieval Western maps of the world, the so-called mappae mundi, are known from the 8th C. on, revealing the geographic knowledge of Latin-speaking authors. No Byz. maps have survived, however, even though various texts (e.g., The Concise Measurement of the Entire Oikoumenē, of uncertain date) allow one to hypothesize the existence of maps, which were eventually used in PORTULANS. Three extant MSS with maps of Ptolemy’s Geography and one MS of STRABO belong to the 13th C. and were probably compiled under the direction of Maximos Planoudes (A. Diller, Studies in Greek Manuscript Tradition [Amsterdam 1983] 109). A 14th-C. illustrated MS of Ptolemy, complete with maps, is preserved in Venice, Marc. gr. 516 (Furlan, Marciana 4:31–34). In the 15th C.
Italian maps, representing parts of the (former) Byz. Empire, were available: for example, a (military?) map of 1430–53 (probably of 1444) illustrating the northern Balkans, from the left bank of the Danube to Constantinople (M. Nikolić, *Istorijički časopis* 29–30 [1982/3] 63–75), and a map of Cyprus of 1480 (A. & J. Stylianou, *KyprSph* 34 [1970] 145–58).

**CASAUX DE PARÇON** ("shared households"), medieval French term designating properties held in co-seigneurie by a Byz. archon and a Frankish knight. This type of fiscal arrangement is attested on Frankish territory in the Morea during the late 13th and 14th C. The co-seigneurs shared the telos paid in cash by the dependent peasants of one or more villages and the right to their pastures. As for the demesne lands, the lords held them privately, unaffected by the co-seigneurial arrangement. *Casaux de parçon* is an example of compromise and temporarily peaceful coexistence between Franks and Greeks in the border areas of the Morea motivated by political and economic considerations and facilitated by the Franks’ adoption of Byz. fiscal practices.

**CASKETS AND BOXES** (θήκαι, κιβωτίδεα) in late antiquity were normally made of wood; metals and ivory were used for pyxides and more pretentious specimens in a variety of shapes—oblong, cubical, or spherical, with flat, domed, or pyramidal lids. One of the two large silver caskets in the Esquiline Treasure, decorated with domestic and mythological scenes and figures, contained lotion bottles while the other probably held bath linen. The internal arrangements and the iconography (Asklepios, Hygieia, Christ’s Healing of the Blind) suggest that some early ivory boxes were used for medications. Hasty construction of bone- and metal-clad examples as well as prolonged use mean that many have survived only as panels. Important examples such as the Brescia Lipsanokhe, made of ivory cornerposts into which panels with Old and New Testament scenes are

CASKETS AND BOXES. Lid of the Veroli Casket; ivory, 10th C. Victoria and Albert Museum, London. Decorated with mythological scenes (l. to r., the Rape of Europa, Herakles playing the lyre, erotes, centaurs and dancing maenads).
slotted, have been reconstructed. As in the case of metal caskets made as late as the 14th–15th C. (W.D. Wixon in *Treasury S. Marco* 201–03), the original function of the lipsanothek is unknown; suggested contents include sacred bread, incense, and monetary offerings.

Equally uncertain is the function of numerous wooden boxes of the 10th–12th C., with ivory panels depicting scenes from Genesis, Joshua, and Kings (Goldschmidt-Weitzmann, *Elfenbeinskulpt.* vol. 1, nos. 1–5, 67–98). Others, with bone panels representing warriors, fantastic animals, and puttilike manikins, framed with rosette bands, seem to parody classical mythology. There being no evidence to suggest their function, these are commonly supposed to have been ladies’ jewel boxes. This may have been true of the minority originally equipped with locks.

— M.M.M., A.C., L.Ph.B.

**CASOLE**, Italian town about 2 km south of *Otranto*. The Greek monastery of S. Nicola di Casole (στὸν Κασσόλων) was founded at Casole in 1098/9 by the monk Joseph under Norman patronage. During the later Middle Ages the abbey was one of the most prosperous ecclesiastical institutions in Apulia. The monastery’s reputation as a center of Greek learning is mostly due to its important library and to the presence of Nicholas of Otranto. Turks destroyed the monastery in 1480. Its archives and most of the MSS are lost; the *typikon* (1173) survives but has been only partly edited (Dimitrievskij, *Opisanie* 1:795–896).

— V.v.F.

**CASOLAN**, a founder of early monasteries in southern Gallia and a Latin ecclesiastical writer; born ca.560, natione Scytha, according to *Genesis* of Marseilles, that is, probably in Scythia Minor, died Marseilles after 432. Cassian (Κασσίανος) spent his youth in a monastery at Bethlehem, then in Egypt (in Sketis). After leaving Egypt suddenly, ca.399, he came to Constancia where John Chrysostom ordained him deacon. After Chrysostom’s deposition, Cassian moved westward in 405; in Rome he formed a friendship with the future pope Leo I and ca.410 settled in Provence, where he founded twin monasteries—one for men (named after the local saint, Victor) and another for women.

Here Cassian wrote three books in Latin. The first section of the *Institutions* describes monastic life in Egypt and Palestine, including monastic dress; in the second part of the treatise he presents the theory of *vices* that monks had to avoid; since four of them bear Greek names (gastriamargia, philargyria, acedia, and cedonoxia), it is quite plausible that Cassian used Greek sources, such as Evagrius Pontikos. The second book, *Collationes* (Conferences), consists of fictitious conversations with hermits (in the style of the *Aphthegmata Patrum*) and is concerned with the superiority of the way of salvation: the *Institutions* were intended to prepare the flesh for a virtuous life, while the *Conferences* dealt with the journey of the soul to the heavenly abode. Though very popular, the *Conferences* were suspected of Pela-
gianistic formulations and proclaimed apocryphal by the Western church. At the instigation of Pope Leo I, Cassian also compiled a refutation of Nestorius entitled On the Incarnation of the Lord.

CASSIODORUS, more fully, Flavius Magnus Aurelius Cassiodorus Senator, statesman and scholar; prefect of Italy (533–37) under Theodoric the Great; born Brutium ca.487, died Vivarium monastery ca.580. He was in Constantinople ca.550 for unknown reasons. Returning to Italy after Justinian I's reconquest, he founded and lived in the Calabrian Vivarium monastery until his death. As an official, Cassiodorus was instrumental in romanizing his Gothic masters both administratively and culturally. Vivarium, though physically short-lived, paved the way for medieval preservation of ancient texts and the Benedictine monastic tradition.

Cassiodorus was as tireless a writer as organizer. The Institutes are a blueprint for the union of secular and theological study. A commentary on the Psalms, drawing upon Augustine, emphasizes allegorical interpretation, while the De anima dwells upon the spirituality of the soul. The Historia Tripartita is a 12-book arrangement of the church historians Sokrates, Sozomenos, and Theodoret of Cyrhrus translated into Latin by Cassiodorus’s pupil Epiphanios. Principal secular works are the Variae, 12 books of his official correspondence preserving the imperial edicts that he had drawn up, a model for later chanceries; a Chronicle summarizing Roman history within a universal context from the time of Adam to 519; and a treatise on orthography. His History of the Goths is preserved only in an abridged version by Jordanes (B. Croke, CPhil 82 [1987] 117–34).

CASTELSEPPIO. Mural paintings discovered in 1944 in the unprepossessing Church of S. Maria foris portas, outside the Roman, Byz., and Lombard fortress (castellum) of Seprio, northwest of Milan, have figured prominently in the attempt to reconstruct the history of pre-Iconoclastic mural art in Constantinople. The paintings, very similar in style to MSS such as the Paris Psalter and Joshua Roll, are apparently the work of an itinerant Byz. master. Their remarkable naturalism first suggested a date in the 6th–7th C., though Weitzmann argued for the 10th. The later dating has been vindicated by radiocarbon analysis of the original roof beams, which suggests a range between 778 (or 808?) and 952 (P. Leveto-Jabr, Gesta 26 [1987] 17f). The murals covered the upper wall of the eastern apse with at least 11 scenes of the life of the Virgin, of which 8 survive, making Castelseprio an important witness to narrative iconographies rarely encountered in Byz. monumental painting before the 13th C.

CASTLES. See Crusader Castles; Fortifications; Kastron.

CATACOMBS, the usual term for rock-hewn burial grounds, which were in widespread use until the 6th C. Although catacombs were not the prerogative of any one religious group, or limited to a single region (witness Naples, Syracuse, and Alexandria), they are commonly associated with Christianity, under whose aegis they flourished, and the city of Rome, where the largest body of them has been discovered. From the 3rd C. Roman Christians largely buried their dead in extra-mural subterranean tombs composed of networks of corridors and cubicles that ranged in size from the small and presumably private (e.g., catacomb
of Vibia), single-family complex to the large, multi-storied structure housing thousands of tombs, administered by the church (e.g., catacombs of Calixtus, Domitilla). In the Roman catacombs all classes and ages were buried in loculi and arcosolia. Tombs were often marked with a carved or painted inscription identifying the occupant. Images expressing Christian hopes of salvation (Commendatio animae; the Good Shepherd), painted on the walls of the catacombs and carved on contemporary sarcophagi, are among the earliest Christian art known. After Christianity was granted toleration ca.311–13, the architecture and decoration of the catacombs became quite elaborate, drawing upon forms commonly used for above-ground tombs. The catacombs of Rome ceased to be used for burials in the 6th C.; they continued to be visited, however, and indeed even embellished with works of art (e.g., catacombs of S. Ermete, Calixtus), though sporadically, throughout the Middle Ages.

CATALAN GRAND COMPANY, band of Spanish mercenaries hired by Andronikos II to fight the Turks in Anatolia. The Catalans were able to recover some Byz. territory in 1304, but after the assassination of their leader Roger de Flor (1305) they turned against the Byz. Using the Kallipolis peninsula as their base, they raided the surrounding countryside for two years (1305–07). In 1307 they moved west, plundering Thrace, Macedonia, and even the monasteries of Athos. In 1309 they ventured further south into Thessaly; in 1311 they defeated Gautier de Brienne, duke of Athens, at the battle of Kephissos near Thebes. Having thus ended Burgundian rule over Athens and Thebes, the Catalan mercenaries established themselves in the duchy of Athens. They requested the protection of the Aragonese king Frederick II of Sicily (1296–1337), three of whose sons were in turn named dukes of Athens. Thebes, which served as the political and commercial center of the duchy, was captured by the Navarrese Company in 1379. Catalan rule over Athens lasted until 1388, when the city fell to the Florentine Nerio I Acciajuoli.

CATALAN GRAND COMPANY was established in Sicily after the Sicilian Vespers (1282), the revolt that expelled the Angevin dynasty hostile to Byz. In 1315 Ferrando of Majorca landed in the western Peloponnese, while his cousin Frederick, Aragonese ruler of Sicily, was at war with the Angevins of Naples. Ferrando was able, however, to keep only a part of the Morea for a year; he was defeated by Louis of Burgundy and beheaded. In the 14th C. the mercenary Catalan Grand Company had considerable impact on Byz., eventually establishing Catalan rule over Athens and Thebes. In 1351 Aragon-Catalonia allied with Byz. and Venice against Genoa; this coalition led in the following year to a successful but costly allied naval victory over the Genoese fleet in the Bosphorus. The Catalan chronicler, Ramon Muntaner (1265–1336), provides a valuable source for the history of relations between the Catalan Grand Company and Byz.

CATALAUNIAN FIELDS (Campi Catalaunici), site of a battle that occurred in 451, probably on 20 June. The battle of the Catalaunian Fields is also known as the battle of Châlons or of Maurica. After Emp. Marcian refused to pay the customary
tribute to the Huns in 450, Attila turned his attention to the West and invaded Gaul with a force of Huns and subject Germans. The magister militum Aetius organized the resistance and the future emperor Epaucharus Avitus arranged an alliance with Theodoric, king of the Visigoths. The Romans and their allies prevented Attila from reaching Orléans and pursued the Huns into eastern Gaul. The two armies met somewhere in what is now Champagne. The exact site has been subject to considerable but futile scholarly debate. The battle was long contested and ended in a draw, although this represented a moral victory for the Romans; Attila reportedly prepared a funeral pyre rather than fall into the hands of his enemies. Thorismund, son of Theodoric (who had died in the battle), wished to pursue the advantage and attack the Huns. Aetius, however, did not want the total destruction of Hunnic power and persuaded the new Visigothic king to return home to forestall the ambitions of his brothers. Attila was thus allowed to slip away and to plan his invasion of Italy in 452. The importance of the battle has generally been exaggerated in historical accounts.

CATANIA (Kaláta), city on the east coast of Sicily; together with the rest of the island, Catania belonged to the Ostrogothic state from 491. While Catania was under the Ostrogoths, royal permission was given to the town to repair its walls with blocks fallen from the ruined amphitheater (Casiodorus, Variae 111.49). In 535, general Belisarios recovered the town for the Byz. without encountering serious resistance. It was temporarily recaptured by Totila in 550; Prokopios (Wars 7.49.21) indicates that at this time the city was unwalled. The town was gradually hellenized: the seal of the 7th-C. bishop George has a Latin inscription, whereas the inscriptions of 8th- and 9th-C. seals are in Greek.

In the 9th C. the Arabs repeatedly plundered the environs of Catania. In 900 they besieged it unsuccessfully, but soon thereafter they conquered the city. A legend reports that George Maniates seized Catania in 1042 and took to Constantinople the relics of St. Agatha, who had supposedly been martyred at Catania; her bones were returned in 1126. The Normans occupied the city sometime in the second half of the 11th C.

The first known bishop of Catania was Fortunatus in the early 6th C. The see appears as an archbishopric under the authority of Constantinople in the notitia compiled between 787 and 869. In the mid-9th C. the bishop of Catania Euthymios was ordained by Patr. Ignatios but then joined the party of Patr. Photios and was probably rewarded by promotion to the rank of metropolitan by 869. After the fall of Sicily to the Arabs (by 902) the title of the metropolitan of Catania survived: Leo of Catania participated in the meeting convoked by Patr. Sisinnios in Feb., 997 (PG 119:741A), and “Katane of Sicily” is still listed in the notitia of the 13th C. (Notitiae CP, no.15.44). A Latin bishopric, however, was established in the city in 1086–89. The legendary vita of an earlier Leo of Catania describes frequent travel between Catania and Constantinople as well as the horse races in Catania; both the date and validity of this evidence remain disputable.

CATECHUMENATE (from κατηχούμενον, “those who receive instruction”), period and discipline of preparation for baptism. Characterized already ca.150 as a period of fasting, prayer, and instruction, the catechumenate reached classic expression ca.215 as a well-defined institution of candidates called catechumeni (Tertullian, De praescriptione Haereticorum 41.2, ed. R.F. Refoulé [= CChr, ser. lat. 1:221.4–7]). During the catechumenate, which normally lasted three years, the candidates were presented to the church leaders by Christian sponsors, tested, exhorted, and prayed over at common sessions with a teacher; they attended services in a special place reserved for them, but were dismissed before the Prayer of the Faithful, in which they could have no part. From the 7th C., church galleries are often called katechumenae, but by then the catechumenate was no longer a living institution in Byz. (R. Taft, OrChrP 42 [1976] 301ff).

Lent brought a second, final stage, when the photizomenoi (“enlightened”), those destined for baptism at Easter, were prepared, in a crescendo of initiatory rites that included renunciation of
Satan, profession of faith, stripping, blessing of the water, prebaptismal anointing, the bath of baptism by triple immersion, clothing, chrismation or sealing, entrance into the waiting community, kiss of peace, eucharistic offering, and communion, usually at the Easter Vigil. The dramatization of the ritual for maximum effect is revealed in the classic 4th-C. catechetical homilies of Cyril of Jerusalem, John Chrysostom, Theodore of Mopsuestia, and Ambrose of Milan (E. Yarnold, *The Awe-Inspiring Rites of Initiation* [Slough 1972]; H. Riley, *Christian Initiation* [Washington, D.C., 1974]).

After the 4th C., with the enrollment of infants in the catechumenate and of adults with no intention of seeking baptism in the immediate future, the two-stage system declined. In Constantinople, parents first presented their infants for admission to the “first catechumenate” 40 days after birth. Then on Monday of the fourth week of Lent, those to be baptized at the Easter Vigil were brought to the church for the prayers and exorcisms that began the “second catechumenate” (Mateos, *Typicon 2:39f*). These *photizomenoi* were prayed for in a special *litany* at all services for the rest of Lent. On Good Friday the patriarch held a catechesis for them at St. Irene, followed by the solemn renunciation of Satan and adherence to Christ (ibid. 78f). From at least the 8th C. onward, however, Byz. usage compresses all of this into a service immediately preceding baptism.

**CATENAE** (Lat. “chains”), scholarly term used from the 15th C. onward to designate the genre that the Byz. called “collection of exegetical fragments.” The genre was created by Prokopios of Gaza and survived the fall of Byz.; it expanded to some neighboring countries as well. Catenae consisted of quotations from theologians (both church fathers and heretical writers) attached to a particular verse of the Bible and following the sequence of the text itself. On the basis of the catenae to the Psalms, Dorival (infra) divided the genre into two groups: the Palestinian and the Constantinopolitan, the latter originating between 650 and 700. The first type of the Palestinian group is the Prokopian model, consisting of quotations from the commentaries or homilies of Palestinian authors. The second Palestinian type is the chain-scholia, characterized by their brevity and format: they were set forth in a column parallel to the biblical text so that every scholion stood side by side with the verse commented on; sometimes the scribe left empty space between two scholia. Constantinopolitan catenae often consisted of citations from one authority—primarily John Chrysostom, sometimes Theodoret of Cyrrhus; another Constantinopolitan type contained citations from the two authors and offered the integrated commentary of particular theologians, rather than quotations out of context. The third Constantinopolitan model combined Chrysostom and Theodoret with Palestinian authorities. Byz. exegetes produced catenae to the books of both Old Testament and New Testament (Octateuch, Psalter, Gospels, etc.). Catenae also exist in Christian Oriental languages (Coptic and Syriac).

**CATEPANATE.** See KATEPANATE.

**CATHARS** (from Gr. καθαροί, “the pure”), medieval dualist sect that flourished in Germany, southern France, and northern Italy. From the mid-12th C. onward, Byz. dualism exerted a formative influence on the Cathar movement, as several reliable Western documents attest. Contact between dualists of eastern and western Europe were facilitated by trade relations and by the Crusades (C. Thouzellici, *RHE* 49 [1954] 859–72). In the second half of the 12th C. dualist missionaries from the Balkans frequently visited Italy and France to propagate either the “absolute” or the “moderate” form of dualism in the local heretical communities. (The “absolute” dualists believed in two coeternal principles of good and evil, while the “moderate” dualists held that the evil di munio, creator of this world, was himself the creature of the one God.) The most prestigious of these visitors was Niketas, the leader of the
dualists of Constantinople, who came to preside over the heretical council of St. Félix de Caraman near Toulouse (which met probably between 1174 and 1177), and persuaded the French Cathars to adopt "absolute" dualism (D. Obolensky in Okeanos 489–500). The Cathars seem generally to have believed that their faith came from the Balkans. Thus, a group of them, condemned to the stake in Cologne ca.1143, declared that their religion had its home "in Greece and certain other lands" (the latter expression is generally taken to refer to Bulgaria). The Balkan origin of Catharism is confirmed by terminology: their name is Greek, and the Cathars were often known in the West as Bulgari, Bogri, or Bugres (hence bougre).

The teaching of the Cathars shows striking similarities with the doctrines of the Bogomils: these include denial of the reality of the Incarnation, repudiation of marriage, total opposition to the established church, and the belief (held by the "moderate" dualists) that the Devil was the son of God. The ritual of the Cathars was certainly influenced by that of the Bogomils.

---

CATHERINA (καθέδρα), term for a bishop's throne. Such seats were made of stone, wood, or, as in the case of the cathedra of MAXIMIAN, ivory. The cathedra stood in the center of the apse, at the top of the synthonon. It was used by the bishop during the liturgy and, in the early period, while he pronounced homilies. The bishop in his cathedra flanked by priests was likened to Christ among the Apostles. Certain cathedrae served strictly symbolic functions, as was the case with the "Sedia di S. Marco," a 6th-C. alabaster throne-reliquary now in Venice (Treasury S. Marco, no.7).

---

CATHERINE, MONASTERY OF SAINT. The site of the Burning Bush at the foot of Mt. SINAI (Djebel Mousa) was inhabited by the 4th C. A church marked the locus sanctus, and monks lived nearby in cells, as attested by the pilgrim EGERIA who visited the area in 381–84. Sometime between 548 and 565 Justinian I constructed a heavily fortified monastery around the shrine to protect the monks from Bedouin raids and for the defense of Palestine (Prokopios, Buildings 5.8.9). The monastery, which was and still is under the jurisdiction of the patriarch of Jerusalem, has been continuously inhabited ever since. It also has strong ties with Cyprus and Crete, where it possesses metochia.

The monastery was originally called tou Batou (of the Burning Bush); it took the name of St. CATHERINE in the 10th or 11th C. after acquiring the relics of the Alexandrian martyr. Because of the monastery's remote location, its artistic treasures escaped destruction during the period of Iconoclasm; hence its collection of over 2,000 icons includes extremely rare examples of encaustic painting of the 6th and 7th C. The library contains more than 3,000 MSS in a variety of languages (Greek, Arabic, Georgian, Syriac, and Slavic) that reflect the diversity of the monks who have lived at Sinai.

Much of the 6th-C. architecture survives, including the fortification walls and the basilica, which preserves some of its original decoration such as the mosaic of the Transfiguration in the conch of the apse and fine wood carving on the entrance doors and ceiling beams.

---

CATHERINE OF ALEXANDRIA, saint; feast-days 24 and 25 Nov. Her passiones present Catherine, or Aikaterina (Αἰκατερίνα), as a young virgin of imperial stock who successfully debated with pagan philosophers in Alexandria in the presence of Emp. MAXENTIUS. The emperor ordered Catherine to be stripped of her "imperial purple garb" and flogged. Although Catherine succeeded in converting both the empress and the stratopedarches Porphyroton to Christianity, Maxentius ordered her decapitation; instead of blood, milk gushed from the wound, and angels carried
her body to Sinai. The monastery founded on Sinai at the site of the Burning Bush eventually took her name (see Catherine, Monastery of Saint). Viteau (infra) hypothesized, despite the legendary character of the passiones, that a Christian virgin Catherine had in fact been beheaded on 24 Nov. 305; he surmised also that the prototype of the passiones dates from the 6th C. or the first half of the 7th C. (see sharp criticism, AB 18 [1899] 69f). The evidence for Catherine’s cult is late: the monk Epiphanius who visited Sinai ca. 820 knew nothing of Catherine. The interconnection between the preserved passiones is unclear; one of them, an obvious forgery, names as its author Athanasios, tachygraphos (stenographer) and servant of the saint. The description of Catherine’s debate with the Alexandrian philosophers has passages in common with Barlam and Joasaph. The passiones were slightly reworked by Symeon Metaphrastes and also translated into Latin, Arabic, and other languages.

Representation in Art. Catherine is invariably clad in imperial vestments (loros with thorakion, and crown) and holds a martyr’s cross. Her beheading and the fiery death of her inquisitors appear in the Menologion of Basil II (p.207), and her dispute with the rhetors in the Theodore Psalter (fol.167r); there is a cycle of 12 scenes surrounding her portrait on a 12th-13th-C. icon on Mt. Sinai (K. Weitzmann, DChAE 4 12 [1984] 95f).

CATTLE. See Beasts of Burden; Livestock.

CAUCASUS (Kaukásos), major mountain range stretching some 1,200 km northwest to southeast from the Black Sea to the Caspian Sea, traditionally held to have been the natural frontier between Europe and Asia. Because many descendants of various nomadic tribes survived in high mountain valleys, Plutarch claimed that Pompey needed 120 interpreters on his Caucasian campaign, and medieval Arab geographers called it “The Mountain of Languages.” Historically the Caucasus served as a barrier protecting the settled kingdoms to the south from northern nomads, and measures were repeatedly taken to control its two main passes: the Darial (Dār-i Alan, “Gate of the Alans”) near the center of the chain on the “Georgian Military Highway” descending to Tbilisi, and the “Caspian Gates” on the seashore near Derbent. The Peace of 562 between Byz. and Persia stipulated that the Sasanians would garrison the passes, while the empire contributed a subsidy. Justin II abrogated this agreement, leading to the resumption of the Persian war at the end of the 6th C.

Though relatively impenetrable, the Caucasus remained a channel for both military and commercial purposes. Justinian I sought to evade the Persian monopoly over the silk trade by creating a route running north of the Caucasus to the Caspian and eventually the Far East. Nevertheless, fragments of silk have also been found in the mountains, and the later south-north trade between the caliphate and the Rus’ was carried on through the passes. These same passes allowed Byz.’s allies, the Khazars, to attack the Arabs in the 8th–9th C., while in the 12th–13th C. the Georgian kings drew support for the unification of their country from the Kipchak Turkish tribes north of the mountains. (For map, see next page.)

CAVALRY (ιππικον, καβαλλαρικόν) provided the offensive force in the Byz. army, and their tactics and equipment were thoroughly discussed in the military treatises. Their skills and tactics reflect the influence of the empire’s eastern enemies, most notably in the acquisition of the stirrup, possibly from the Avars (first mentioned in the 7th C.), and the use of mounted archers. Books 1–3 of the Strategikon of Maurice describe the techniques of cavalry warfare developed in the late Roman period, stressing mobility, the importance of reserves, and the need for individual skill...
with both lance and bow. Cavalry tactics sought to combine encirclement with shock by deploying three units forward in an attack line and four behind in support, with other units on both flanks detailed to outflank the enemy on the right and prevent enemy encirclement from the left. To this basic pattern of cavalry deployment the 10th-C. Strategika show the addition of heavy kataphraktoi for increased shock against enemy infantry, and a third line of reserves for protection against Arab skirmishers (Praecepta Milit. 3-4, pp. 10.15-18.15).

Cavalry warfare in the later period was influenced by Latin mercenaries, best illustrated by Manuel I Komnenos’s eager imitation of knightly tournaments (Nik.Chon. 108.53-109.88). These mercenaries provided the bulk of cavalrymen, esp. heavy cavalrymen, in Nicaean and Palaiologan armies.

CAVE CHURCHES AND DWELLINGS. See Rock-cut Churches and Dwellings.
ÇAVUŞIN. Near this village in CAPPADOCIA are two important rock-cut churches. The large, finely carved three-aisled Basilica of St. John the Baptist (probably 6th C.) until recently retained part of its impressive façade of massive rock-cut Ionic columns. Along with the Basilica of Dumaş Kadir Kilisesi in the village of Avşarlar, St. John the Baptist is prominent among a small group of early rock-cut monuments surviving in the province. The second historically significant structure is the Great Pigeon House, dated to 963–69 by the portraits of Nikephoros II Phokas and his family in the prothesis apse. With a figure on horseback at the front of a row of military saints is an invocation on behalf of Melias the magistros. Portraits (presumably of donors) at the feet of a colossal St. Michael at the east end of the north wall are almost entirely obliterated. The church was decorated with an elaborate Christological cycle largely dependent on the program of Tokali Kilise in GÖREMÉ Valley.

CEFALÙ, village on the north coast of Sicily. The cathedral of Sts. Peter and Paul is a T-shaped basilica of largely French design, decorated in the apse and presbytery with mosaics. It was founded in 1131 as the burial church of King Roger II, but he seems to have lost interest in it; his porphyry sarcophagus eventually was transferred to Palermo cathedral and concomitantly the mosaic decoration was abandoned after the completion of the program in the presbytery. The mosaics in the apse (bust of the Pantokrator in the conch, Virgin with archangels and apostles on the wall below) are dated to 1148 by inscription. Because the craft had no local tradition in Sicily, it is assumed that these first mosaics were executed by Byz. artisans. Those in the presbytery (angels in the vault, and standing prophets and saints) are ascribed to Sicilian pupils.

CEIONIUS, a Roman aristocratic family that the Historia Augusta credits with royal descent. Actually, the founder of the family's fortune, Ceionius Rufius Volusianus, was not noble but rose through his own political achievements and a good marriage (T.D. Barnes, JRS 65 [1975] 46f). He prospered under Diocletian and Maxentius and retained a high position after Constantine I's victory; he was prefect of Rome in 313–15, but thereafter fell into disgrace. Nonetheless, his son, Ceionius Rufius Albinus, was prefect of Rome in 335–37; Ceionius Rufius Volusianus, named also Lampadius, prefect of Rome in 365, may well have been Albinus's son. His building activity proved burdensome for the local population and caused a riot in Rome, during which his house was destroyed. The family was still influential in the first half of the 5th C., when its representatives occupied posts such as comes rerum privatarum, quaestor, and prefect of Rome. The family owned estates in Italy and Africa and, unlike the Anicii, supported paganism; Publius Ceionius Julianus was a maternal uncle of Emp. Julian; under his nephew he served as comes Orientis and zealously persecuted Christians in Antioch. Another member of the family, Rufius Antonius Agrypnus Volusianus, loyal to paganism, discussed the doctrine of the Incarnation with Augustine (Matthews, Aristocracies 353). Some Ceionii, however, married Christian women, and St. Melania the Younger was related to the family. The Ceionii disappeared soon after 440.

CELIBACY (σελεβασία) was extolled by St. Paul and the church fathers, but was not considered as prescribed by God (John Chrysostom, PG 63:602.11–12). Only some radical dissidents/dualists (Chron. Pasch. 486.6–8) insisted on mandatory celibacy for laymen. Clerical celibacy was viewed as a matter of personal choice rather than a prerequisite for ordination. Except in the case of monks and nuns, no universal law excluded clerics from marriage. In the West, the Council of Elvira (beginning of the 4th C.) required, for the first time, the obligatory celibacy of the higher clergy, whereas the East remained reluctant to take this step: the First Council of Nicaea, under the pressure of the monk Paphnoutios, a victim of Dioce-
tian's persecutions and a strict ascetic, repudiated a proposal that would have made celibacy compulsory for all clergy. The development in the East was not uniform: in 4th-C. Asia Minor even a bishop could be a married man, whereas in North Africa, Synesios of Cyrene as a special privilege received a dispensation from abandoning his wife when he became a bishop; in Thessaly, at the time of Sokrates (HE 5:22.50), an ordinary cleric was forbidden to sleep with his wife after ordination. In 528 Justinian I prohibited marriages of bishops, having particularly stressed the significance of this regulation—bishops should not bequeath their property to their relatives, but to the church and the poor (Cod. Just. 1 3.41).

The Council in Trullo defined the rules that remained in effect throughout the entire Byz. period: the lower clergy could marry after ordination; priests, deacons, and subdeacons could retain their wives if they had married before ordination; married men elevated to the bishopric had to sever their marital bonds and their wives had to go to convents. The marital status of Byz. middle clergy was one of the serious points in the conflict between the Western and Eastern churches from the 11th C. onward, esp. after the Latin conquest of Orthodox territories, since the Greek priests were not required to be celibate.

—A.P., A.K.

CEMETERY (κοιμητήριον, lit. "sleeping place [for the dead]"). John Chrysostom, in his homily On the Name of the Cemetery (PG 49:393.33–36), declares that the place was named koimeterion to show that buried persons are not dead but asleep. Tombstones of the 4th–6th C. regularly refer to an individual burial as koimeterion. Christian cemeteries were both subterranean (catacombs) and above ground (areae). Even though some apotropaic symbols have been discovered in mid-4th-C. Christian cemeteries (N. Hamparjumian in Hommages à Maarten J. Vermaseren, vol. 1 [Leiden 1978] 473–77), pagans were refused burial there. Areae were located outside city walls; basilicas began to be erected there from the late 4th C. onward, as did mausoleums and martyria.

Tombs were commonly built of tiles or rubble masonry, often with vaults. Simple graves were often covered with plastered pseudo-vaults that were visible above the ground. Lamps were left burning at graves, and relatives and friends apparently gathered at tombs for memorial meals and celebrations. In the 6th–7th C. cemeteries began to invade the central areas of cities, including the ancient marketplaces. The Byz. also buried their dead in hypogaea, or subterranean vaulted chambers, esp. in Constantinople (Müller-Wiener, Bildlexikon 219–22). These varied from single rooms to multilevel structures where sarcophagi were separated by walls decorated with frescoes.

Most cemeteries were made up of simple interments with burials regularly oriented so that heads were at the west. In many areas simple tile-lined graves were covered with mounded dirt that was then sealed with a coat of plaster. Even though an edict of 381 (Cod/Theod. IX 17.6) prohibited burial in churches, the custom was well established, esp. for saints, emperors, and influential persons. Even in monastic cemeteries no equality obtained: the typikon of the 12th-C. Kecharitomene Nunneri (117.1727–31) provides that separate burial plots (stataria) be assigned to superiors, nuns of the higher rank (megaloschema), regular nuns, and servants.

The inscriptions from late Roman necropoles constitute a highly important source of social information: those from Korykos, for example, suggest flourishing mercantile activity in the 5th–6th-C. city (A. Gurevič, VDI [1955] no.1, 127–35); inscriptions from the so-called cemetery of Sts. Markus, Marcellianus, and Damosus in Rome (ca.331–406) show that this was the graveyard of ordinary people with an average life expectancy of 20.75 years (P. Saint-Roch, RACr 59 [1983] 411–23). Cemeteries can also elucidate the history of barbarian invasions (e.g., Avar necropoles in Pannonia); in the Balkans, Slavs were frequently interred in the ruins of earlier churches. Despite a common misconception, and although to a lesser extent than in classical burials, Byz. cemeteries commonly contained grave goods, including jewelry and vessels for wine and oil presumably used to prepare the body for interment.

**CENOBITIC MONASTICISM.** See Koinobion; Monasticism.

**CENSER** (θυματήριον, θυματός), a vessel designed to contain glowing coals on which incense was strewn; they were meant either to be set on a horizontal surface (standing censers) or to be swung by chains (hanging censers). Even though the *Liber pontificalis* ascribes to Constantine I the donation of gold censers to the Lateran basilica and St. Peter’s, it is doubtful that they came into ecclesiastical use before the very end of the 4th C. They were used (mainly by deacons) for censing the altar, the Gospel, and the elements of the Eucharist. Censers were also employed in a secular context to show honor to a great person and in private devotions (e.g., censing a site after an earthquake). It is hypothesized that incense burners found at Sardis were used to deodorize dye shops (J.S. Crawford, *The Byzantine Shops at Sardis* [Cambridge, Mass., 1990] 15). Although the vast majority of surviving examples are in cast bronze, several examples in hammered silver are known, including those in the Ston and the Cyprus Treasures, and another in the Metropolitan Museum (Mango, *Silver*, no. 85). Until the 8th C., hanging censers consisted of a cubical, polygonal, or cylindrical cup, sometimes accompanied by an openwork cover (*DOCat* 1, nos. 45–49). The most popular type is chalice-shaped with a low foot and decorated with Gospel scenes in relief. This type, with more than 50 surviving examples, appears to have remained in use well after Iconoclasm (*Age of Spirit*, nos. 563–64). After the 9th C., a new type of standing censer (*katzen, katzi(on)*) appears, with a shallow bowl and long flat handle, often decorated with the representation of the patron saint of a church (*Isskastv Vizantiti* 2, no. 570). Such objects are recorded in church inventories from the 11th C. onward (e.g., *Pantel.,* nos. 7, 12, 49), most of gilded or plain silver, but also of bronze. The *katzi* may have been used esp. in a funerary context. Censers often appear in representations of deacon saints, images of the Dormition, the Myrophoroi, and in scenes of the procession of venerated icons (A. Grabar, *CahArch* 25 [1976] 145, figs. 1–2).

Symbolically censers were perceived as images of Christ’s humanity and accordingly the epithet “womb of the censer” was applied to the Virgin (pseudo-Basil, *Hist. mystagog.*, ch. 42, ed. F.E. Brightman, *JThSt* 9 [1908] 388–93). Metaphorically, the tongue of a person praising a martyr could be called a censer (John Chrysostom, *PG* 50:583:39).

**CENSUS RECORD.** See Cadaster.

Youthful and aged centaurs playing musical instruments appear, along with erotes, as images of abandon—often in their traditional role of molesting Lapith women—on numerous caskets and boxes (Goldschmidt-Weitzmann, *Elfenbeinskulpt.* I, nos. 21, 24, 26, 27). Purely decoratively, they
adorn the headpieces of 11th- and 12th-C. Gospel books.

P.A.A., A.C.

CENTO (Lat. for "garment made of patchwork," Gr. κέντρων), also Homerozentron (Anth. Gr. 9:381), a pastiche composed of borrowed lines (primarily from Homer). The composition of centos was a sort of literary game aimed at the creation of new associations, often parodical and even obscene. The practice originated in antiquity (both Greek and Roman) and is mentioned by Epiphanius of Salamis. Eustathios of Thessalonike (Eust. Comm. Il. 4:757f) explains that the term was derived from a word designating a young shoot grafted onto another plant and was applied to a cloth of many colors (kentonion as a kind of garment appears in Apophthegmata patrum, PG 65:412D). Latin centos were based on Vergil: in the 4th C. Proba, a noble Roman lady, produced centos "to the glory of Christ." Greek centos were esp. popular in the 5th C.: a certain Leo the Philosopher compiled a 12-line cento on Hero and Leander, another cento on Echo, etc. The empress ATHENAIAS-EUDOKIA tried to use these techniques for religious poetry and composed the Life of Christ in borrowed Homeric hexameters, probably in imitation of Proba. Compilation was not restricted to Homer's verses, however; the CHRESTOS PASCHON is actually a cento, one third of which consists of lines taken from ancient tragedians; a similar technique was used for CATENAE and FLORILEGIA.

A.K.

CENTRAL ASIA, a somewhat vague geographical-historical term, here defined as the extensive region north and east of the Amu Darya (Oxus) River, consisting of the inhospitable steppes of Turkestan and Mongolia that lead to northern China. It was the great domain of the Altaic nomadic peoples and at the same time a part of the great caravan SILK ROUTE between Chinese and Islamic civilization. Here Buddhism, Manichaeanism, Shamanism, and Christianity often followed the great merchant caravans from the southwest to the east. After the great empires of the Gök Turks, the Uighurs, and finally the Kirghiz Turks in Mongolia, they were displaced there by the Mongols in the 10th C. To the west various Turkic groups (at least five identifiable groups) pressed ultimately onto the borders of Islam in Khurasan and Transoxiana. It was here that by the 10th C. they began to convert to Islam and to enter fully into the scene of political chaos and decline in the classical Islamic world. Certainly the most spectacular description of this steppe society is that preserved by the Arab, Ibn Faḍlān, who traversed frigid Turkestan in a great caravan in 922.

Relations with Byzantium. Material objects found in Central Asia indicate that there were (indirect?) connections between the late Roman Empire and this area. Thus in Old Merv was excavated a building, oval in plan, that evidently housed a Christian community (G. Dresvjańska in Trudy Jużno-Turkmeniistanskoi archeologičeskoj kompleksnoj ekspedicii 15 [Ash'habad 1974] 155–81); ampullae of St. Menas produced near Alexandria penetrated into Central Asia (B. Stavskij in Drevnij Vostok 1 [Moscow 1975] 299–307); Roman coins of the 6th C. as well as their imitations and a medallion with the portrait of Justinian I (M. Masson in Obščestvennye nauki v Uzbekistane 16.7 [1972] 29–38) have also been found. One of the routes from the late Roman Empire to China went through Central Asia; in the 6th–7th C. imperial envoys visited it, trying to engage its population in an alliance against IRAN. After the Arab conquest of Iran, Byz. links with Central Asia were severed.

CERAMIC ARCHITECTURAL DECORATION. Polychrome ceramic ornament with vitreous glazes was widely used on façades and interior walls as well as on templon screens and icon frames from the late 9th to the 14th C. Though normally set between courses of brick, shallow bowls, plates, and TILES could be inserted at focal points in elaborate brick patterns, around window frames, or even inserted into ashlar blocks. Among pieces specifically made for architectural use (for example, at Tekfur Sarayi) were small tubes, their mouths pinched to form a cross, tapering to a long stem to facilitate bonding in the wall.
CERAMICS. The Greek word κεράμια (pl.) designated all kinds of vessels and pots. John Chrysostom (PG 62:349.28–29) speaks of golden κεράμια; usually, however, the term and related ones referred to earthenware products, both pottery and tiles. Potters were called kerameis; they were evidently professionals, although the Book of the Eparch does not list a potters' guild and in general they are infrequently mentioned in written sources. The word was applied metaphorically to God as demiurge, and Romanos the Melode (Hymns, vol. 4, no. 33.10.6) speaks of "the potter of the world" who washes clean the foot of the clay vessel.

Earthenware dishes were considered of lower quality than golden and silver vessels: Rabbula of Edessa is said to have ordered his clergy to dispose of their silver dishes and replace them with ceramic ones. Byz. pottery was manufactured on potter’s wheels (trochoi) and fired in kilns. The vessels varied in size and shape and were used for transport, storage, cooking, and eating. The principal functional types of Byz. ceramics in the 10th–13th C. were pithoi (usually embedded into the earth) for storage; amphoras for transport and storage; flat-bottomed pots with globular bodies and long-necked jugs usually with one or two handles; chafing dishes—deep bowls set on a ventilated stand with a compartment containing live coals to keep food warm; table dishes—bowls and broad shallow plates; small, usually two-handled cups; stemmed goblets; and flasks (including pilgrim flasks). Vessels ranged from elaborately decorated luxury products of fine clay, well-turned and glazed and painted, to crudely manufactured utilitarian wares.

Ceramics were produced in both towns and villages: the author of the Geoponika (85.20) describes the potter as the most necessary craftsman in the countryside; in 952 the Lavra monastery acquired for three gold coins a potter’s workshop located near the seashore (Lavra 1, no. 4.4); by 982 the Iveron monastery was served by a pottery workshop (? keramarion), also situated by the sea (Ivirl. 1, no. 4.68); Balsamon (PG 137:929C) lists potters’ shops (kerameia) among various agricultural properties. Excavations in Carthage, Cyprus, Asia Minor, and Egypt have revealed many centers of ceramic production in the late antique period; 10th–13th-C. ceramics from Corinth, Athens, and Cherson are relatively well studied, but Anatolian wares are not as well known. Constantinople is considered to have been a great center for the manufacture of pottery; R. Stevenson (in Great Palace, 1st Report 47f) concluded that pottery production in Constantinople declined by the 12th C. (at the end of the 12th C. 70 percent of the finds were ordinary mugs of coarse fabric). Ceramic production in Corinth, however, flourished in the 11th and 12th C.; in temporary decline after the Norman invasion of 1147, it recovered by the end of the 12th C. and prospered in the 13th C.

Ceramics were produced for both local use and export: North African pottery (mostly from Carthage) has been found in many areas, including the Crimea. It is quite plausible that some of the glazed pottery discovered in Cherson was imported from Constantinople (esp. in the 9th and
10th C.) and provincial centers such as Corinth and Thessalonike (in the 11th and 12th C.); after the 12th C. Byzantine exports to Cherson ceased (A. Jakobson, Srednecvovur Chersones [Moscow-Leningrad 1950] 229f).

Byzantine pottery developed in an unbroken tradition from the wares of late antiquity. In the 4th to 6th C. fine pottery was generally covered with red slip and often stamped, sometimes with figural decoration or Christian motifs; African Red Slip Ware (manufactured at Carthage) and Phocaian Ware (Asia Minor) were apparently the most prominent and were imitated at many local kilns. Large storage/transport amphorae were manufactured throughout the empire.

In the course of the 7th C. important changes took place in pottery manufacture and use, as local wares, frequently of inferior quality, took the place of imported wares, while vitreous glazed wares replaced the red-slipped fabrics of late antiquity. Constantinople and its vicinity seem to have been the major source of these new glazed wares. The earliest of these had a monochrome lead glaze (usually yellow or greenish-yellow) applied directly over the fabric, which was either white (producing a light-colored finished product) or reddish-brown (producing a darker color). By the 9th C. at least, some of these vessels were stamped (Impressed Ware), producing a design in low relief on the center of the interior; a shallow bowl on a high foot (so-called “fruit stand”) is a common form of this ware. Another luxury product of the 9th–12th C. was Polychrome Ware, in which designs (usually abstract but occasionally figural) were painted in various colors of glaze on a white fabric.

Beginning in the 11th C. a considerable number of different fine wares were produced, in part to satisfy the desires of the new Byzantine officialdom; most of these were inspired by the techniques and methods of contemporary Islamic pottery: Green and Brown Painted Ware, Slip-Painted Ware, Imitation Luster Ware, Sgraffito Ware, and Incised Ware. Most of these used simple geometric designs, but motifs derived from classical repertoires (e.g., rinceaux and running spirals) were not uncommon and several wares had figural decorations, sometimes people but more commonly fish, animals, and birds. Oriental motifs, esp. pseudo-Kufic, were common on several wares. Most of these fine wares continued into the 13th C. and beyond, as represented by Zeuxippos Ware and so-called Aegean Ware. Otherwise, political fragmentation and greater foreign influence led to a localization of ceramic production. Italian pottery, esp. Proto-Maiolica, came to replace Byzantine wares as the preferred luxury pottery, although locally produced Byzantine pottery continued to be made.

Coarse wares, including cooking ware, jugs, and other kitchen vessels, present a continuous line of development from antiquity to the end of the Byzantine period; most of these were locally produced. Many coarse wares were partially or fully covered with a yellow glaze, giving them a characteristic brown color (usually called Brown Glazed Ware); this was often used for cooking pots and small vessels as well as chafing dishes and was sometimes decorated with molded figures, occasionally of an obscene character. Most of these cannot be precisely dated. In addition to cocciopesto and tiles, clay was also used to produce bricks, lamps, children’s toys, censers, and simple icons with images of saints (J. Ebersolt, Byzantion 6 [1931] 559f).

Despite the pioneering work of D. Talbot Rice and others earlier in the century, the study of Byzantine pottery is still well behind that of other periods in the history of the Mediterranean, in part because of a lack of interest and in part because of the paucity of stratigraphically excavated Byzantine sites necessary to the elucidation of ceramic chronologies. Pottery from critical periods, such as the “dark age” of the 7th–8th C. and the 14th–15th C., is poorly known and little studied. Megaw and Jones (infra) have made an important beginning in the identification of individual wares and their distribution.

CEREMONY (κατάστασις, τάξις). Symbolic gestures, usually public and assembled into rituals,
marked important moments in Byz. life. Ceremony flourished at all social levels, from the Byz. infant’s baptismal liturgy and procession, to the promotion of the patrikios. It was, however, the ceremony that shaped the public life of the emperor, projected his power and legitimacy, and defined his relations to the church, army, senate, and people that concretized the imperial idea in a way essential to Byz. Roman imperial cult contributed to the content of ceremony, which took the Hippodrome, Hagia Sophia, and palaces and monuments of Constantinople as its main theaters. The high officials who stage-managed ceremonies—successively, the magistros, the praepositus assisted by the epi tes katastaseos, the protovestiariates assisted by the primikerios tes aules—relied on specialized treatises to design ceremonial traditional in appearance yet flexible in its details and adhering to the ideal of taxis. Peter Patrikios, the Klerorologion of Philotheos, Deceremonies, and pseudo-Kodinos suggest that ceremonial innovation and recording peaked in the 6th, 9th—10th, and 14th c.

Depending on the period, acclamation, coronation, shield-raising, and anointing inaugurated a reign; a procession, audience, or proskynesis manifested the emperor in the purple and with insignia; he was adored with proskynesis. Profectio and adventus heralded his departure from and return to the capital, while triumphs signaled his victorious return from battle; all allowed or forced Byz. citizens to display their loyalty and patriotism. The pervasive and spectacular propaganda of imperial ceremony captured the Byz. imagination, leaving manifold traces in art and literature, and fascinated foreigners like Liutprand of Cremona.

-M.McC.

Representation in Art. In their representations of these ceremonies the Byz. placed the same emphasis on the majesty of the imperial power. Thus, depictions of historical ceremonial events such as military triumphs, coronations, marriages, official receptions, etc., focus on imperial ideology in preference to fuller historical detail; these images have a specific and limited visual language that conveys the most significant act of the ceremony without reference to time or, in most cases, to place. The ceremonial events were commemorated in wall paintings and mosaics in public places and palace buildings as well as on more private objects such as MSS, ivory plaques, and silver vessels.

The formal or compositional principles are generally the same as those governing the performance of these ceremonies: symmetry, hierarchy, and frontality. These principles are used to focus attention on the emperor and to define the status of others in relation to him. In the images, this system of presentation is made immediately apparent by limiting secondary figures and eliminating the audience, as well as, for example, by marking hierarchy through color or through variations in the sizes of figures.

Little survives of all these representations, particularly of the monumental images. The types of ceremony commonly depicted in Roman art (profectio, adlocutio, largess, etc.), still found in some of the early monuments such as the Arch of Constantine in Rome, do not survive much beyond the Justinianic period. A notable example from the 6th c. is to be found in the mosaics of San Vitale, Ravenna, which show Justinian I and Theodora participating in a liturgical ceremony. Although a specific emperor, Justinian, is shown with a specific bishop, Maximian, the procession remains generic enough to be any liturgical procession requiring the presence of the emperor, such as the later ceremonial entry of the emperor and patriarch into Hagia Sophia on the great feast days.

Another ceremony, which can be inferred from the silver Missorium of Theodosios I (for ill., see plates, display), is the distribution of offices by the emperor, a ceremony that took place in the palace. In this depiction, Theodosios is enthroned in the center under an arch, just as he would have been seated in the palace under the arch of the apse in the throne room. He is flanked by his two co-emperors, who are placed in secondary positions. The emperor hands to an official of much smaller size the diptych listing the duties of his office. Although the emperor is handing out the tablets, his action is hardly noticeable. The emphasis is on his person and his successful rule, implied by the personification of Abundance at the emperor's feet.

In an 11th-c. miniature (Paris, B.N. Coisl. 79, fol.2r—for ill., see Emperor) there is a represen-
tation of an enthroned emperor with his administrators. He is in the center of the composition. Two officials, again much smaller in size, stand on each side. The hierarchy and symmetrical relationship of the figures to each other express the ceremonial configurations of official meetings of the emperor. The figure standing on the emperor's right side and closest to him wears fancier dress than others in attendance; the fact, too, that his hands are not covered, as are those of the others, is a sign of his more privileged position vis-à-vis the emperor.

These representations, although based on court protocol, are removed from the specificity of one historical moment. This has been achieved in different ways: sometimes, as in the Missorium, through the addition of another, allegorical dimension; sometimes through the lack of any reference to a spatial setting, as in the miniature. The presence of Christ in such images works in a similar way. In the representation of Romanos (IV?) and Eudokia on an ivory plaque in Paris in the Cabinet des Médailles, for example, Christ is crowning the imperial couple. It is not clear from the composition alone if this is a depiction of their wedding, coronation, both, or of the idea of investiture. It appears that such representations were meant to be more encompassing by containing all three and possibly even more readings, and did not limit their meaning or message to one historical moment.

Another such example is the representation of Basil II in a Venice psalter MS. The image shows Basil in military dress being presented with a crown by Christ and a lance by an angel. His defeated enemies are at his feet. This scene may have been created after a particular military triumph. The accompanying poem, however, does not mention a specific victory, instead stressing Basil's triumphant divine rule and power.

A second category of depictions of ceremonies is found within a narrative context. These images show events from the past rather than contemporary times. They are found in MSS like the Menologion of Basil II or the Madrid MS of John Skylitzes. In the Menologion the painters depict ecclesiastical ceremonies in which the emperor is participating; in the Skylitzes they illustrate imperial ceremonies described in the Chronicle. The compositions of these representations are also different. The narrative moves from left to right like a written text and does not follow the compositional principles outlined above. For example, in the Menologion on 26 Jan., a day commemorating an earthquake, the patriarch and the emperor, accompanied by clergy and citizens carrying candles, walk through the city in a penitential procession. The barefooted and simply dressed emperor, the candles, and the censer refer to a specific ceremony that must have taken place on that day. The depiction of the translation of the relics of John Chrysostom is another such example. Theodosios II and Patr. Proklos, who holds a candle and the Gospels, are shown receiving the body in front of the Church of the Holy Apostles. A representation of a similar event, the translation of the relics of St. Stephen on the ivory plaque in Trier, shows Theodosios II at the head of the procession and Pulcheria receiving them in front of the newly built church.

In the Madrid Skylitzes a number of ceremonies are depicted: receptions of ambassadors, baptisms, coronations, marriages, proclamations of emperors, and triumphal processions. Grabar-Manoussacas, Skylitzés, no.368, for example, shows the triumphal entry of Nikephoros II Phokas on horseback into Constantinople. A large group of musicians playing cymbals and trumpets is welcoming him. The ceremony of shield-raising is represented twice. These are the only two illustrations of this ceremony in Byz. art that represent Byz. historical figures; all others show Old Testament kings. Leo Tornikios (ibid., no.561) is proclaimed emperor by his rebel supporters, an event that we know took place as depicted. Another page (ibid., no.2) shows Michael I and Leo V raised together on the shield, with Michael placing his hand on the head of Leo, whom he has chosen as co-emperor. This depiction is not historically correct, since the coronation and raising on the shield never occurred simultaneously, but was presumably chosen to emphasize the new order of imperial rule.

ČERNJACHOVO, the name of a culture in the Ukraine (2nd C. A.D.–ca.400), known from ar-
archaeological excavations, first discovered and studied in 1899. The designation is derived from the agricultural settlement excavated in the village of Černjachiv (Kaharlyk region, Kiev district) on the middle South Bug River. This culture was spread over an area extending in a north-south direction from the sources of the Dniester and South Bug to the Danube delta (including Moldavia) and the Dnieper estuary. To the north it extended along a line that went from the upper West Bug (a tributary of the Vistula), across the region that later became Kiev, to the upper Sivers'kyj Donec', and traversed the Dnieper river bend, but it did not reach the Crimea.

The Černjachovo settlements, of which over 2,500 are known at present, are scattered along the rivers. Two groups are distinguishable, the larger settlements (2–3 km long, covering 35–45 hectares), and the smaller ones (300–400 m long, covering 3–4 hectares); in both groups semisubterranean dwellings coexist with subterranean. More than 350 burial grounds have been excavated, showing evidence of mixed burial rites, though inhumation seems to have prevailed. Characteristic is the production of gray and black pottery of high quality, iron tools, and metal ornaments; amphorae, terra sigillata, small lamps, buckles, and coins were exported to the Romans.

By A.D. 400 life in all Černjachovo settlements came to an abrupt end, which scholars at present connect with the Hunnic invasion. Animated debate still continues concerning the ethnic composition of the Černjachovo culture. The Slavic hypothesis (until recently highly favored) is gradually being abandoned. There is good reason to identify some bearers of this culture with the Ostrogoths in the Ukrainian "Mesopotamia" (Gothic Osium) described by Jordanes.

ČERNOMEN, BATTLE OF. See Marica, Battle of.

CEYLON (Σαρκαδών, mod. Sri Lanka), called Sinhala by its inhabitants during the Middle Ages. Archaeological investigations of the island have not been extensive and are of limited value; some hoards of 5th–6th-C. Byz. bronze coins and imitations have been found. Kosmas Indikopleustes, who describes the island's location correctly as being east of southern India, claims that Byz. merchants traded there and that a Christian community lived on the island. Its noteworthy export was the hyakinthos, a blue gem, perhaps the sapphire. Ceylon may have been involved in the spice trade and perhaps served as a clearinghouse for products from Southeast Asia. Byz. merchants participated in the trade directly, but not exclusively: Axumite, South Arabian, and South Asian ships are also known to have sailed to and from Ceylon. The preferred transit points inside the Byz. Empire were the Red Sea ports, esp. Klyisma. Partly to protect the Red Sea shipping lanes from Persian interference, Justin I forged an alliance with Axum. The Persian occupation of South Arabia in 599 and the subsequent conquest of the Red Sea littoral by the Arabs effectively closed this route to direct participation in Far East trade by Byz. merchants.

CHAIRS. See Furniture.

CHALCEDON (Χαλκηδών, now Kadiköy), city of Bithynia, located directly across the Bosporos from Constantinople. Chalcedon was permanently overshadowed by the nearby capital, but it did benefit in the 4th and 5th C. from the generosity of imperial dignitaries who enlarged its harbor and built palaces and churches in the vicinity. Chalcedon was taken by the Persians in 615 and 626 and by the Arabs during their attacks on Constantinople. It was the main camp for the First, Second, and Fourth Crusades before their further advances. Chalcedon fell to the Ottomans in 1350.

The Byz. remains of Chalcedon have disappeared: they consisted of a palace, a hippodrome, and numerous churches. Most notable was that of St. Euphemia, built outside the walls in the 4th C. and seat of the Council of 451 (see Chalcedon, Council of). It contained the circular domed shrine of the saint, from whose tomb was said to issue a miraculous flow of blood, and was decorated with paintings showing scenes from her life.
It was destroyed by the Persians. The suburbs of Chalcedon contained the important monastic centers of Roupheinianai and Mt. Auxentios. Originally a suffragan bishopric of Nikomedea, Chalcedon became an independent metropolis in 451.

**CHALCEDON, COUNCIL OF**, the fourth ecumenical council, held in the Church of St. Euphemia of Chalcedon (8–31 Oct. 451). About 350 bishops attended its sessions, primarily those from the East. The leading roles at the council were played by the representatives of the imperial couple (Marcian and Pulcheria) as well as Paschinas, the legate of Pope Leo I, to whom the Egyptian bishops stood in opposition. The council intended to answer the Christological question raised by Eutyches after the Council of Ephesus (431). Chalcedon defined Christ’s two natures as inviolably united without confusion, division, separation, or change, in one person or hypostasis. This negative formula, distinguishing precisely between nature and person, was clearly aimed at the teaching of Nestorios and Eutyches. Doctrinally, it rejected neither the Council of 431 at Ephesus nor Cyril of Alexandria. Still, the definition acknowledging Christ “in two natures”—grounded on the Nicene faith, Cyril, and the Tome of Pope Leo I—was viewed by Egypt as a betrayal of strict Cyrillian Christology. This conviction, along with the council’s condemnation of Dioskoros and Eutyches and cancellation of the “Robber” Council of Ephesus of 449 (see under Ephesus, Councils of)—decisive blows to Alexandria’s ecclesiastical and theological hegemony—were to cause the Monophysite schism.

Chalcedon also granted patriarchal status to Constantinople by enlarging its territorial jurisdiction to include the dioceses of Asia, Pontus, and Thrace and by confirming its existing honorary primacy after Rome (canon 28). Constantinople also received the right to hear appeals from regional metropolitans (canons 9, 17) and to consecrate the metropolitans of the three dioceses under its jurisdiction. Finally, because monasticism had become a serious urban problem by expanding into the cities, it was decided (for the first time in the history of Christian asceticism) to bring every monastery under the direct jurisdiction of its local bishop (canon 4).

**CHALDEAN ORACLES** (Χαλδαικά λόγια), a work that has been lost and is now known only in fragments, written in bad hexameters. The oracles purport to be revelations from the gods. The Souda ascribes the authorship of the oracles to two Julians—the father, surnamed the Chaldean, and his son “the Theurge,” who allegedly were active at the end of the 2nd C. The philosophical system of the Chaldean Oracles is dualistic, contrasting the world of the Intelligibles with evil Matter. The Chaldean deity is triune: it comprises the Paternal Intellect, an impenetrable monad; the Second Intellect, dyadic, since it unites the physical world created by it with the intelligible monad; and the Cosmic Soul that is identified as Hekate of Greek mythology. The human mind, a spark of the divine Intellect, must “empty” itself, that is, purge itself of evil Matter, in order to ascend to the god.

**CHALDIA** (Χαλδία), a theme of northeastern Asia Minor. It appears as a tourma of the Armeniae ca. 800, then as a separate ducatus in 824 and as a theme by ca. 840. Its status at that time is unclear: strategoi are known from the 9th–11th C., and doukes from the 8th to 10th (Oikonomides, Listes 349, 354). According to Arab geographers, Chaldia had an army of 10,000 and
six fortresses; its strategos had a salary of 10 pounds of gold and an equivalent amount from the local kommerkion. Chaldia comprised the eastern part of Pontos with the interior valleys; its capital was Trebizond. Its strategic but remote location gave it importance for trade and the military—it was a base of support for Thomas the Slav, but was virtually independent under the Gabrades in 1075–1140. As part of the empire of Trebizond, Chaldia denoted a more restricted area south of the watershed of the Pontic mountains, astride the major routes to the interior. Chaldia was dominated by local families and only loosely controlled by Trebizond. Its defensible location enabled Chaldia to maintain its independence until 1479. The area is rich in remains of Byz. churches and fortresses, among them the oldest church in the Pontos, at Leri (probably 6th C.).

-C.F.

CHALICE (ποτήριον), a liturgical vessel for holding the wine of the Eucharist, which in the so-called church history ascribed to Patr. Germanos I (ed. N. Borgia ch.39, p.31.17–29) is compared with the vessel used to collect Christ’s blood at the Crucifixion and the crater used at the Last Supper. Attested from at least the 4th C., the earliest form of the chalice is uncertain: the 4th-C. Durobrivae Treasure has two types of cup: one with two handles and resting on a foot and two others without feet. Silver chalices surviving from the 6th C. onward have a large cup on a flared foot usually with a knob; occasionally they have two handles. The cup usually has a dedicatory inscription around the rim and sometimes figural decoration below. Although elaborate chalices of gold, or studded with or carved from precious stones, are known from literary sources of the 4th–7th C., none survives. The chalice often forms a set with the paten (diskopotermion) in written sources.

Many important post-9th-C. chalices continue to have a tall, flared foot with a knob; others are made with a low foot and a pair of handles (krateres). Elaborate examples incorporate cups of semiprecious stone, rock crystal, or glass, mounted in gilded silver, occasionally with repoussé decoration (MM 2:566.19). Some display a Deesis composition (Pantel., no.7.13), others crosses and stars (P. Gautier, REB 39 [1981] 91.1209; REB 45 [1985] 155-103). Ordinary chalices were of beaten bronze, usually tinned. A 14th-C. chalice with monograms of Manuel Kantakouzenos consists of a cup of jasper mounted in gilded silver but lacks the enamels, stones, and pearls of earlier examples (Bréhier, Sculpture, pl.LXXI).

-M.M.M., L.Ph.B.

CHALKE (Χαλκή), main entrance vestibule of the Great Palace of Constantinople, so named either for the gilded bronze tiles of its roof or for its bronze portals. The earliest attested building was put up by the architect Aitherios under Anastasios I (AnthGr 9:656). Burned down in the
NIKA REVOLT, it was rebuilt by Justinian I as a rectangular structure with four engaged piers supporting a central dome. The ceiling was decorated with mosaics representing the emperor’s victories over the Goths and Vandals, with the imperial couple surrounded by a cortège of senators placed in the center (Prokopios, Buildings 1.10.12–19). The Chalke or its dependencies became a prison in the 7th–8th C. Basil I repaired the building and turned it into a law court (TheophCont 259f).

On the façade of the Chalke, above the main door, was an icon of Christ Chalkites, shown standing full-length on a footstool. Its origins are obscure. Its removal by Leo III in 726 or 730 was the first public act of imperial ICONoclASM. Restored by Irene ca.787, it was once again removed by Leo V and replaced by a cross. Soon after 843 the icon, in mosaic, was set up again by the painter Lazaros.

When the palace was enclosed by a less extensive circuit wall by Nikephoros II Phokas, the Chalke lost its importance as a vestibule. A small chapel dedicated to Christ Chalkites, built next to it by Romanos I, was reconstructed on a larger scale by John I Tzimiskes, who endowed it with relics and was himself buried there. The chapel, situated on an elevated platform, survived until 1804. Drawings and plans of the 18th C. help to place the chapel about 100 m south of the southeast corner of Hagia Sophia. The Chalke itself, robbed of its bronze doors by Isaac II, is not mentioned after 1200.

CHALKE, ISLAND OF. See PRINCES’ ISLANDS.

CHALKIDIKE (Χαλκιδική), peninsula in the northwestern Aegean, terminating to the south with the three promontories of (west to east) Kas­sandra (Pallene), Longos, and Athos. The area is among the best known from the Byz world because of the surviving documents from the monasteries of Mt. Athos (see ATHO, ACTS of), which owned many of the villages in the peninsula. The territory is hilly and wooded with a moderate climate suitable for growing grapes, grain, and fruit trees. Excavation at various sites has revealed a period of prosperity during late antiquity, followed by violent destruction in the 7th C. (e.g., O. Alexandre, ArchDelt 29.2 [1973–74] 674–77). Part of the theme of THessalonike, the Chalkidike was divided into several katepanates; there were cities at OLYNTHOS, KASSANDREA, and HIERISSOS. The CATALAN GRAND COMPANY ravaged the Chalkidike in 1307–09; excavation near Torone may show destruction from this period (N. Niko­nanos, ArchDelt 29.2 [1973–74] 770f, 776).

—T.E.G.

CHALKIS (Χάλκης). Several cities in the ancient and medieval Mediterranean world bore this name, most notably two cities in Syria and Greece.

CHALKIS AD BELUM (Syr. Qenensrin, Ar. Qinнasrīn), a city in northern SYRIA I, lying in a fertile plain surrounded by the limestone massif of Belus. It should be distinguished from the monastery of Qenneshre at EUROPOS. A caravan stop on roads from ANTIOCH and BERROIA, Chalkis was also strategically situated as part of the TIMES to which it gave its name. After Chosroes I extorted 200 pounds of gold from Chalkis in 540 (Prok­pios, Wars 2.12.1–5), Justinian I had its city walls rebuilt (Prokopios, Buildings 2.11.8–9) in 550 by ISIDORE THE YOUNGER, as confirmed by two extant inscriptions (IGSyR 2, nos. 348–49). Nearby, in 554, the Ghassānids won a decisive victory over the Lakhmid ALAMUNDURUS. Chalkis was under Persian rule ca.608/9–28 and taken by the Arabs in 636–37 after an unsuccessful resistance (Don­ner, Conquests 149f). The Umayyads made Chalkis a military headquarters and capital of the district (jund) of Qinnasrin. Chalkis was attacked and sacked by the Byz. in 966, 998, and 1030. It never recovered from Seljuk destruction at the end of the 11th C., after which it served merely as an arsenal and caravansary. Today Chalkis is in ruins. Chalkis ad Belum should be distinguished from Chalkis under Lebanon (now Anjar in Lebanon), a Hellénistic settlement that did not become a Roman or Byz. city.

—M.M.M.
CHALKIS IN GREECE, city founded in antiquity on the west coast of Euboea, where the island comes closest to the mainland. In the 6th C. a movable bridge (zeugma) linked the shores of the strait of Euripos (Prokopios, Buildings 4.3.18–19). Termed a city in the Synedra of Hierokles (Hierokl. 645.6), it reappears in Constantine VII Porphyrogennetos (De them. 5.13–14, ed. Pertusi 90) as an island, and as an alternative name for Euboea. The name Chalkis, however, was preserved in the ecclesiastical hierarchy at least to the 9th C.; a seal of a droungarios of Chalkis also survives (Zacos, Seals 1, no.2587). It was assumed (e.g., by J. Koder in TIB) that the name of Chalkis was replaced by that of Euripos and of Chirios/Chrepos; the latter identification was rejected by Svoronos (Cadastre 72, n.2); the bishop of Euripos appears in notitiaia along with the bishop of Chalkis. It is not impossible that the settlement of Euripos was founded in the 9th C., after Chalkis had lost its urban character.

The kastron of Euripos was attacked by the Arabs in the 870s (TheophCont 298.8–12); when Skylitzes relates this episode he calls Euripos a polis (Skyl. 151.32). A bishop of Euripos participated in the council of 869/70. An inscription of the protospatharios Theophylaktos of the end of the 9th C. mentions the restoration of a road from Chalkis (E. Oberhummer, RE 3 [1899] 2086). In the 12th C. Euripos had a Venetian trading colony and a large Jewish population. At the beginning of the 13th C. a phourion was built there to defend the straits (Nik.Cron. 610.92). Euripos was attacked by a Venetian fleet in 1171 and seized by Venice in 1209. In the 13th–14th C. the city of Chalkis, which was called Negroponte by the Westerners, was the object of various attacks: by knights from Achaia in 1257/8, by Catalans in 1317, by Turks in 1350/1. The Turks took the city in 1470.

A figural floor mosaic found in the city is dated to the 5th C. The Church of St. Paraskeve, originally dedicated to the Virgin, is a wooden-roofed three-aisled basilica. Probably constructed in the 5th C., it was rebuilt in the 12th C. and connected with a monastery of the Virgin (Th. Theocharis, Archeion Euboikon Meleton 7 [1960] 1–23; D. Triantaphyllopoulos, ibid. 16 [1970] 186–91). It was one of the major churches of the Frankish period. The surviving fortifications of the city and the bridge-fortress are Venetian in date; although they presumably have Byz. antecedents, all trace of these has vanished.

—T.E.G.

CHALKOKONDYLES, LAONIKOS, historian; born Athens ca.1423 or 1430, died ca.1490. Little is known of the life of Chalkokondyles (Χαλκοκονδύλης); his father George fled to the Morea in 1435 after an unsuccessful coup attempt against the Acciajuoli. In 1447 Chalkokondyles was a student of PLETHON at the court of Mistra. He evidently spent his life somewhere in the Aegean region.

His history in ten books was written in the 1480s and covers the period 1298–1463. His purpose was to show "the downfall of the great empire of the Hellenes" and the growing power of the Turks; his emphasis on the rise of the Ottoman Empire is unusual for a Byz. historian. He had direct access to Turkish sources (e.g., the secretaries of the sultan) and provides some important information on early Ottoman institutions (S. Vryonis, International Journal of Middle East Studies 7 [1976] 423–32). For Chalkokondyles the basileus is the Turkish sultan; the Byz. emperor is designated as "basileus Hellenon." His account of the Byz.-Ottoman conflict is clearly modeled on the confrontation of Greeks and Persians described by Herodotus. The work also owes much to Thucydides in its use of direct speeches and Attic vocabulary. Chalkokondyles inserted lengthy excurses on various peoples and countries, notably the Muslims, Germans, Russians, South Slavs, and Spaniards. Chalkokondyles had a superstitious belief in omens and oracles and recognized Tyche as a force affecting historical events (C.J.G. Turner, BZ 57 [1964] 358–61). The weakest aspect of his history is the relative lack of chronological data.

—A.M.T.

CHALKOPRATEIA (Χαλκοπρατεία, lit. "Copper Market"), quarter of Constantinople, west of
HAGIA SOPHIA. It is said to have been originally inhabited by Jews, who had a synagogue there; these were allegedly expelled by Theodosios II and the synagogue replaced by a Church of the Theotokos, which is variously attributed to Empress Pulcheria or to Verina. The church, of basilical form, was repaired by Justin II and Basil I. Among its relics were the Virgin's girdle (zone), housed in a special chapel (soros), and a miraculous image of Christ Antiphonetes. The apse and parts of the north and south walls of the church are preserved, as is the undercroft of an octagonal structure north of the atrium.

CHANCEL BARRIER. See Templon.

CHANCERY. Officials in Byz. corresponded either personally or by using an official scribe (notarios and, after the 12th C., grammatikoi). One can speak of organized chanceries—i.e., bodies of secretaries, scribes, and other officials responsible for correspondence—only when dealing with the large central administrations of the emperor and the patriarch, and, possibly, the semi-independent despotai (which are very poorly known). Private deeds could be made legally by anyone who could write. There were also the specialized notaries, laymen or ecclesiastics. Formularies were often used for drafting all kinds of documents.

Imperial Chancery. Constantine I the Great created the corps of secretaries (schola notarius) under the command of a primikerios. Some notarii, called referendarii, were attached to the emperor's private service; in the 5th C. appeared the upper category of confidential notarii, the asekretis, who replaced the referendarii before the end of the 6th C. The role of the quaestor was important. Reports of individuals were examined and eventually answered by the four scrinia (memoriae, epistolarium, epistolarium graecarum, libellorum).

From the 8th C. onward, the chancery was directed by the protasekretis. Assisted by the asekretis, some imperial notarii, and the dekanos (?), he was responsible for the final drafting and preparation of original imperial acts (the draft was undoubtedly prepared by the office competent in the matter). The verification of the contents (recognitio) of the documents seems to have been the work of the kanikleios, who also probably added in some documents the words traditionally written in purple (except for the emperor's autograph subscription). Drafting imperial documents also required the help of other officials, esp. those with judicial competence: the quaestor (laws), the epitotheon, the mystikos, the mystagogos.

Some time after 1106 the protasekretis abandoned the chancery. It was then manned by grammaticoi and later (13th C.) by imperial notarii (who sometimes also acted as taboullarii) and translators (diemeneutai), mostly of Latin. The direction of the chancery, esp. as far as foreign relations were concerned, fell to the logothetes tou dromou and his protonotarios, and, in the 13th C., to the megas logothetes, while the protonotarios remained at the head of the notarioi or grammaticoi and controlled the everyday functions of the chancery. The real chancellor, with extended powers, was now and until 1453 the mesazon, the "intermediary" between the emperor and all the others.

Patriarchal Chancery. Initially placed under the guidance of the primikerios of the notarii, who was an archdeacon, this chancery and its activities in time were related to the office of the chartophylax, who was seen as the mesazon of the patriarch. The primikerios would draft the documents, register and authenticate outgoing acts as well as the minutes of the synod, issue certified copies or duplicate originals, and cancel previous documents. In his secretarial functions, he was in competition with the protonotarios, who became the head of the chancery. Also having direct access to the patriarch, the protonotarios, among others, added to outgoing patriarchal acts some secret authenticity marks. The primikerios remained the simple dean of the patriarchal notarii. Other important personnel, attested from the 10th C. onward, included the hypomnematomatographos, who assisted the chartophylax, and the hieromnemon, responsible for ordinations. Some secrets and procedures of the 14th C. patriarchal chancery are described in the Ekthesis Nea. Certain patriarchal documents were approved by the synod and
were thus qualified as synodikon (gramma, se-
meion, etc.).

CHANDAX (Χάνδαξ, from Arabic al-Khandaq “moat,” via Candica to Candia, which became the name of the whole island of Crete), mod. Hera-
kleion on the north central coast of Crete. Founded by Andalusian Muslims under Abū Hafs ca. 827 on a site identified for the conquerors by a Christian monk (Genes. 33.11–17), Chandax replaced the nearby ancient settlement at Knossos, which had prospered through the 7th C. It was the base from which the Arabs completed their conquest of Crete; its walls were famous for their size and strength (e.g., Leo Diaconus 11.4–10). Nikephoros II Phokas besieged the city (shown in the Madrid Skylitzes), which capitulated on 7 Mar. 961; thereafter the Byz. recovered all of Crete. The emperor built a new fortress called Temenos near the Arab citadel, although the Arab walls continued in use (N. Platon, KretChron 6 [1952] 439–59). After the Fourth Crusade Chandax was first assigned to Boniface of Montferrat, but it quickly passed to Venice, which held it until 1669.

The bishop of Knossos continued to be recorded in the episcopal lists instead of Chandax (e.g., Notitiae CP 3.241, 10.467); the bishop of Chandax, separate from that of Knossos, is attested only in the 12th C. (13.484). In an act of 1206 (MM 6:151.17) the bishopric bears the double name “Knossos or Chandax.”

Aside from the fortifications, there are no Byz. remains at Chandax. The Church of St. Titos, originally of Byz. date, was destroyed in an earth-
quake.

CHANSON D’ANTIOCHE, Old French Cru-
sader epic on the conquest and defense of Antioch (1098). It is generally believed to have been composed by Richard le Pèlerin, a participant in the First Crusade, and has survived only in the exten-
sively revised form established before ca. 1177–81 by one Graindor d’Arras as part of a larger Cru-
sader epic cycle. A few scholars maintain that Richard, Graindor, and the early version are merely literary fictions; that Graindor was patron, not author of the work. Others have detected apparent traces of its use in contemporary Latin histo-
rians, for example, Albert of Aachen, Raymond of Aguilera, or Fulcher of Chartres. The Chanson treats Byz. directly and in some detail only during the Crusaders’ stay at Constantinople (vol. 1, pp. 56–67) and the siege of Nicaea (vol. 1, pp. 67–112).

LIT. C. Cahen, “Le premier cycle de la croisade (Antioche-

CHANT (ψαλμοθεία), the general term for litur-
gical music similar to plainsong, that is, monophonic, unaccompanied, and in free rhythm. Al-
though the language of the Byz. church was Greek, Byz. chant was not a continuation of ancient Greek music, but constituted a new departure based to some extent on Eastern models. The Byz. system of modes differs sharply from that of the ancient tonoi, but is quite similar to that of the medieval Western church.

Byz. chant differs from Western, however, in its textual basis. Whereas psalmic and other scrip-
tural texts prevail in Latin chant, the texts of Byz. chant are mostly nonscriptural, although often modeled after the psalms or cantries. Most are hymns, written in metrical arrangements that often employ an isosyllabic principle. Furthermore, in the Byz. tradition, unlike the Western, music for the liturgical HOURS is more important than that for the Eucharistic liturgy.

Chants in the early period were largely syllabic and were meant to be sung by the entire congrega-
tion. After ca. 850 the repertory was enriched by florid, melismatic chants (having more than one note per syllable) written for professional choirs.

CHAPEL, in Byz. terminology usually eu-
kterion, any space equipped with a consecrated altar table
and used for the celebration of the mass. A chapel is normally located within a larger complex to which it is related functionally, that is, as a palace church or a parekklesion (generally within a monastic compound). Chapels are usually small-scale, though this is not always a distinguishing criterion. Chapels accompanying larger churches appear in the earliest Christian monumental architecture and remain a common ingredient throughout Byzantine church architecture. Chapels vary considerably according to their function (burial, commemoration, private worship), their relative position (ground-level or elevated; accessible from the narthex, naos, or sanctuary), their plans (rectangular, polygonal, trefoil, quatrefoil, cruciform, cross-in-square), and their structural makeup (roofed in wood, barrel- or groin-vaulted, domed). When physically connected to a larger church, chapels become important ingredients in articulating new church plan types.

-SC, W.L.

**CHAPTERS (κεφαλαία)**, collections of sayings (aphorisms), usually combined in centuria that contained about 100 aphorisms each, although collections of 150 chapters are also known (as in Palamas). The genre of chapters existed throughout the entire Byzantine period, the last example being compiled by a certain Kallistos Kataphrygiotes ca.1400. Some centuria were written by well-known theologians such as Maximos the Confessor, Symeon the Theologian, Niketas Stethatos, and Gregory Palamas; other authors of chapters (John of Karpathos, Elias Ekdikos) are less famous. Unlike florilegia, chapters are the works of individuals; they often reflect not only traditional wisdom but also personal views. We do not know how they were created—whether as a spiritual testament or as part of an educational process. The aphorisms are assembled thematically, the topics being sometimes more general as, for example, the theological, "gnostic," and practical chapters of Symeon the Theologian, or more or less specific, such as On Being Unborn by John of Karpathos or On the Unity with God and On Contemplative Life by Kataphrygiotes.

- A.K.

**CHARAGE (χαραγή)**, term designating minting, in both narrative texts (Theoph. 365.15–16; An.Komm. 3:136.22, 137.9) and documents (Pantel., no.2.12–13, a. 1039/3). This meaning was preserved in Trebizond in the 14th–15th C. (Dionys., nos. 4:53, 27:20), as well as in a forged chrysobull of Romanos I (Xerop., no.B42); a post-Byzantine charter of donation of 1471 applies the term to "florins" (Lavra 5, no.173.21). A more complicated case is Manuel I's chrysobull of 1153 (Reg. 2, no.1390) in which charagai (pl.) are not "minting" but rather a sort of obligation: the legislator speaks of various tax alleviations—klasmata, sympatheiai, "humble" stichoai, and "stichoi liable to charagai." Svoronos (Cadastre 111) identifies charage with charagma and thinks that the tax in this case was calculated in gold coins. The archon tes charages is mentioned in the Kleitorologion of Philotheos as a functionary of the vestiarion, which led Dölger (Beiträge 28) to conclude that the vestiarion dealt not only with goods but also with minting money. The precise duties of the archon tes charages are not defined.

- A.K.

**CHARAGMA (χάραγμα)** initially meant the operation of a mint, then the coined money, then the gold nomisma seen as a real coin and not as an accounting unit. In fiscal context, the term was used to specify that whenever the tax (kanon plus some parakolouthemata) owed by a taxpayer amounted to a fraction of a nomisma (2/3 or more), he was obliged to give a (hard to come by) gold coin and receive his due change in silver or copper. In the early 12th C. and in a context of monetary instability, Alexios I's fiscal reform transformed the charagma into a means of establishing the real amount of the tax, calculated on the basis of the kanon. The word survives in documents until the end of the empire with a less clear meaning, indicating perhaps a secondary tax, or a tax on a special category of lands, or a term indicating the coinage in which part of the tax was paid.

-N.O.
CHARIDEMOS (Χαριδημός), also called Peri kal-
lous (On Beauty), a dialogue preserved under
the name of LUCIAN in several MSS of the 14th–15th
C. It consists of a conversation between two friends
taking a stroll in the suburbs of Athens, during
which Charidemos reports on three speeches
praising beauty; the first two were delivered by
men whose names are reminiscent of earlier phi-
losophers, PHILO and Aristippos (a companion of
Socrates), the third by Charidemos. The work
borrows extensively from the Helena of Isocrates,
but the material is rearranged. Unlike pseudo-
Lucian's TIMARION and PHILOPATRIS, the Char-
demos does not contain contemporary allusions
and polemics, unless we read in this way Aristipp-
pos's emphasis on the dangers caused by the beauty
of Helena and Hippodameia; the themes are pri-
marily mythological and philosophical.

The date of composition is impossible to estab-
lish. Although the dialogue was traditionally dated
to the 3rd C., Anastasi (infra, p.11) relocates it to
"a much later time" on the very shaky basis of the
similarity between the mythological tradition in the
Charidemos and inTZETZES. Anastasi evidently
intended thereby to propose a date in the Kom-
enian or Palaiologan period, but Hunger (Lit.
2:149 and n.178) erroneously inferred that the
editor dated Charidemos to the period of the "Ma-
cedonian Renaissance."

(1993) 259–89.

CHARIOTEERS (sing. auriga, ἡρίοχος; later
φακτιονάριος, μικροπανής), popular profes-
sional racing drivers who competed in chariot
races for the victory of their factions, usually in
light, four-horse chariots. Charioteers enjoyed
good geographic mobility, sometimes changed factional
loyalties, and bore frequently recurring stage names
that are well attested in circus curse tablets (defixi-
ones) intended to jinx opponents. Their career
began in their teens and sometimes lasted 30 years
or more. In the 6th C., the heyday of the circus,
statues to champions were raised in the Hip-
podrome and their portraits adorned the KATHISMA;
in the provinces their renown is recorded in floor
mosaics sometimes bearing a driver's name (K.M.D.
Dunbabin, A/ A 86 [1982] 65–89). Epigrams con-
cerning these monuments survive in the GREEK
ANTHOLOGY.

Despite their popularity, early charioteers had
a low social status. After the 7th C., charioteering
seems to have been confined to Constantinople
and its environs. Phaktiomerios (usually interpreted
as charioteers of the Blues or Greens), heniochoi,
and mikropamitai (those of the Reds or Whites)
were integrated into the imperial precedence hier-
archy, since they appear in the Kletorologion of
Philotheos (Oikonomides, Listes, p.161.3, 8, 14; cf.
p.125.5) and this presumably denotes an en-
hanced social status. DE CEREMONIIS (bk.1, ch.69,
ed. Vogt 2:131–42) describes several circus cere-
monies and procedures involving charioteers.
Theophilos and Michael III as well as ranking
members of their courts are themselves reported
to have raced as charioteers.

CHARIOT MOUNTS AND HORSE FITTINGS.

Bronze chariot mounts, formed of an orna-
mented double ring mounted on a socket, have
been described as rein guides or "shock absorber"
supports; several examples attributed to the 4th
C. have been found in Thrace, Pannonia, and
Spain (Age of Spirit., no.331). Some chariot orna-
ments of 6th-C. provincial governors (Theoph.
244.28–29) were covered with gold leaf.

Horse fittings, known from Byz. representa-
tions in various media (e.g., 4th–8th C.—Age of
Spirit., nos. 28, 41, 44, 80–81; 8th–11th C.—J.
figs. 73, 126; 14th C.—Lazarov, Storia, fig.494),
include bridle, collar, saddle, and stirrups as well
as decorative pendants in the form of small BILLS
and phalera (medallions and crescents, originally
indicating military distinction), attached to leather
straps or to a wood or leather saddle. Imported
Byz. silver horse fittings (4th–5th C.) found with
skeletons of horses in tombs at Qustul in Nubia
include three complete bridles featuring lion-
headed medallions, saddle pommels, and trapp-
ings composed of disks and pendants (Emery,
infra, pls. 26–31). Similar trappings are in the
4th-C. Esquiline Treasure from Rome (Shelton,
Esquiline 89–91). Other horse fittings, esp. in
bronze, have been found, for example, in the CONCEȘTI TREASURE, and three 4th-C. nosepieces,
incised with various scenes, originate from Italy (Age of Spirit., nos. 195, 215; Byzantinische Kostbarkeiten aus Museen, Kirchenschützen und Bibliotheken der DDR [Berlin 1977], no.92).

CHARIOT RACES (ἱπποδρομία, θέατρια ιππικα, τὰ ιππικά). Roman-style chariot racing was Byz.‘s most popular spectator sport from the 4th to the 7th C. Held at Hippodromes, races were divided into morning and afternoon sessions. Four teams of four horses competed. A charioteer, sporting the color of his faction (Blue, Green, White, or Red), drove each team. Women and religious were discouraged from attending.

The considerable expense of mounting chariot races may have been borne by the city in the 4th C. As circuses spread through the empire, perhaps along with Roman municipal institutions, the imperial treasury seems to have provided increasing support; this reflected general economic conditions and growing connections between the emperor and the circus, as the ideology of military victory came to pervade and fuse with the notion of sporting victory. Annual races commemorated imperial accessions, visits, and victories. Special races attracted large audiences for ceremonies connected with emperors’ coronations, marriages, and triumphs. The races sometimes exploded into riots, such as the Nika Revolt of 532 and others that shook Byz. cities and the throne into the 7th C.

After the 7th C., chariot races disappeared except in Constantinople; they survived there in diminished form as a traditional and indispensable prop of the monarchy, which continued to use them to celebrate important political events. Whereas the 4th- and 5th-C. state calendars of Philocalus (see Calendar of 354) and Polemius Silvius reveal as many as 66 annual racing holidays, each often comprising 24 daily races, De ceremoniis records fewer than a dozen annual racing holidays and only eight daily races in the 10th C. Though the popularity of chariot races in the 11th C. is reflected in a poetic account of a day spent watching them (Christopher of Mytilene, poem 90, ed. Kurtz, 56–60), by the 12th C. they were losing ground to the new Western spectacles of jousts and tournaments (see Sports); chariot races disappeared entirely after 1204.

The church was hostile to chariot races, which had once had pagan religious overtones; gambling connected with the races and their unpredictable result stood in sharp contradiction to the concept of Providence (see Pronoia). Preachers like John Chrysostom inveighed against the sport as a powerful rival that lured audiences away from church services. Nonetheless, ecclesiastical rhetoricians and hagiographers often employed literary imagery drawn from the hippodrome and its races.

CHARISTIKION (χαριστική ὀφειλα), lit. “gift of grace”), a system of giving monasteries to private persons or institutions on a conditional basis for a restricted period, usually a lifetime or three generations. The origin of charistikon is unclear. P. Charanis (DOP 4 [1948] 74f) found its roots in the 49th canon of the Council in Trullo; M. Sjuzjumov (Učenye zapiski Sverdlovskogo pedagogitcheskogo instituta 4 [1948] 90f) traced it to the leasing of temple allotments in antiquity; Beck (Kirche 136) said it originated with Iconoclasm. The earliest mention of the charistikes typos is in an act of Leo VI of 908 (Prot., no.2.12); the main evidence comes from the 11th and 12th C.

The beneficiary was called charistikarios as well as pronoetes, prostates, and ephoros, all terms emphasizing his function as supervisor and not as full proprietor. The beneficiary was supposed to wield administrative power over the monastic lands without interfering in ecclesiastical affairs. The right of granting charistikia belonged to emperors, patriarchs, metropolitan, founders of monasteries (including peasants), and high-ranking state officials. While some scholars suggest that during the 11th C. and earlier charistikion and pronoia were synonymous, others distinguish the two types of grants by the obligation the grantee bore (with the charistikion, toward the object granted; with the pronoia, toward the grantor). Grants of charistikion provoked a serious controversy; John IV (V) Oxites censured the practice of giving monasteries to lay persons, while Eustathios of Thessalonike argued that it freed monks from temporal concerns and troubles. Charistikion be-
came rare after 1204, though a synodal decision of 1317/18 deals with donations of monasteries kата skopon tov epimeleinav axiousthai to clerics of the diocese of Attaleia (Hunger-Kresten, PatKP 1, no. 53.8).

-M.B.

CHARITON (Χαρίτων), born in Aphrodiasia; author of Chaireas and Callirhoe, a romance in eight books written probably in the 2nd C. Chariton is thus the earliest of the extant Greek novelists, rather than the latest as was once thought. The novel is given an ostensibly historical background at the end of the Peloponnesian War (Callirhoe's father is the Sicilian general Hermocrates). Written in a clear straightforward style, it describes the meeting and marriage of the hero and heroine and the trials (false death, capture by tomb robbers, shipwrecks, etc.) that befell them after their separation and before they can be reunited. There is little evidence that the novel was widely read in the Greek Middle Ages, but the novelists of the 12th C. were clearly aware of Chariton's work, which influenced their choice of plot motifs.

CHARITY. See Almsgiving; Philanthropy.

CHARLEMAGNE (Kάροπολος), Frankish ruler (768-814); born 742, died Aachen 28 Jan. 814. The son of Pippin III, Charlemagne became sole king of the Franks in 771. After conquering the Lombards in 774 he came into direct conflict with Byz. interests in Italy. Ohnsorge (Konstantinopel und der Okädeni [Darmstadt 1966] 1-28) interprets his assumption of the title patriarchos in 775 as a statement of anti-Byz. intentions. Perhaps to counter the revolt of ELPIDIOS, in 781 Charlemagne sealed an alliance with Empress Irene by engaging his daughter Rotrud to Irene's son Constans. Charlemagne invaded Italy as far as Capua and apparently refused to send Rotrud to Constantinople, although Theophanes the Confessor (Theoph. 463.21-22) accuses Irene of breaking the engagement. The Frankish ruler further strained relations with Byz. by refusing to endorse the acts of the Second Council of Nicaea in 788 and later by adding his name to the Libri Carolini.

Charlemagne's destruction of the Avars in 796 extended his territory into central Europe. In 797 he negotiated a treaty with Irene that affirmed his sway in Istria and Benevento and recognized Byz. rights in Croatia. Relations were aggravated again by Pope Leo III's coronation of Charlemagne as imperator Romanorum on 25 Dec. 800, an act that reflected increasing Frankish appropriation of Byz. imperial language, symbols, and notions. Despite the coronation's long-term significance, Charlemagne did not intend to create a Western Roman Empire: the Frankish court argued that Irene's dethronement of Constantine VI had left the throne vacant and a woman in charge. The Byz. court considered the coronation an affront but not a threat to imperial unity (J. Arvites, GOrThR 20 [1975] 53-70; C. Tsirpanlis, Byzantina 6 [1974] 345-60). Charlemagne might eliminate the awkward situation by marrying Irene, but negotiations in Constantinople in late 802 were thwarted by AETIOS and the coup of Nikephoros I. In 810 Nikephoros sent an embassy to the Franks requesting naval help against Dalmatia; Charlemagne apparently agreed to return Byz. possessions along the Adriatic coast in exchange for recognition as emperor (ed. MGH, Epist. Karolini aevi 2: 546-48). The treaty was finalized in 812 by Michael I: Byz. ambassadors in Aachen acclaimed Charlemagne basileus and began negotiations for a marriage between Michael's son Theophylaktos and a Frankish princess. The Byz. evidently considered Charlemagne as emperor solely of the Franks and after 812 emphasized the point by designating their ruler basileus of the Rhomaioi.

CHARLES I OF ANJOU, king of Naples and Sicily (1265–85); born Mar. 1226, died Foggia, Italy, 7 Jan. 1285. Brother of Louis IX of France, Charles was an ambitious ruler who sought to create a Mediterranean empire and restore Latin domination over Byz. territory. With papal support he defeated Manfred of Sicily in 1266 at Benevento and gained control of Hohenstaufen possessions in southern Italy and Sicily. In 1267, by the Treaty of Viterbo, he joined Baldwin II, William II Villehardouin of Achaia, and Pope Clement IV (1265–68) in an anti-Byz. coalition. In 1273 Charles married his daughter to Baldwin's son, Philip of Courtenay, titular Latin emperor of Constantinople. His plans for a Crusade against the Byz. capital were thwarted in 1274, however, by Michael VIII's agreement to the Union of Churches at the Council of Lyons (L. Dujčev, Studi in memoria di p. Adiuto Putignani [Taranto 1975] 111–25). After the accession of the pro-Angevin Pope Martin IV (1281–85), who excommunicated Michael, Charles again prepared for an expedition against Constantinople. In 1281 he cemented his alliance with Venice and Philip of Courtenay at Orvieto. Again his plans were foiled by the diplomacy of Michael, who helped instigate the rebellion of the Sicilian Vespers in 1282. Michael's ally, Peter III of Aragon (1276–85), drove Charles from Sicily. The final three years of the French ruler's life were absorbed in the attempt to regain his Sicilian kingdom, and he had to renounce his projected attack on Constantinople.

CHARLES OF VALOIS, titular Latin emperor of Constantinople (1301–13); born 12 Mar. 1270, died 16 Dec. 1325. Son of Philip III of France and Isabelle of Aragon, Charles acquired titular rights to the Latin Empire of Constantinople through his marriage to Catherine of Courtenay in 1301. After serving as mediator in the Angevin-Sicilian war and bringing about the peace of Calabellotta (1302), Charles was free to pursue his ambitions for conquest of the Byz. Empire. Between 1306 and 1308, he negotiated alliances with the Venetians, Serbs, and Catalans and secured papal support for his "crusade." He was in a position to mount a formidable expedition against Constantinople. His plans were frustrated, however, by the need to remain in France to help his brother, Philip IV, and by the Catalans' neglect of their oath of fealty. After his wife's death (1307 or 1308) and the marriage of his daughter Catherine to Philip I of Taranto, prince of Achaia, in 1313, Charles renounced his ambitions in the East, allowing his son-in-law to press the family's imperial claims. Despite the significant threat that Charles posed for Byz., contemporary Byz. sources scarcely mention his plans for conquest.

CHARON (also Charos and Charontas), ancient ferryman of the dead across the River Styx or Acheron. He emerges in Byz. texts from the 10th C. onward as "night-thief of souls" (John Geometres, PG 106:949A; Achilleis, ed. D.C. Hesselung, 85–87), an idea that may be biblical in origin (Mt 24:43, 1 Th 5:2, 2 Pet 3:10). He is also described as black and fierce, holding the cup of death and a long, curved sword with which to sever the thread of life, a motif that connects him with Moira, or Fate (G. Moravcsik, SBN 3 [1931] 45–68). From the 12th C. onward Charon is addressed directly, sometimes engaging in dialogue with the bereaved; as violent bridegroom of young girls, despoiling their beauty; as premature culler of grapes or reaper of corn, esp. in the learned romances of the 12th C. (Niketas Eugeneians, Droisila and Charikles 2.173–85). Thus he is not merely a continuation of the ancient ferryman but an active agent of death, more concretely personified in later Byz. texts than Hades or Thanatos, with clear delineation of attributes: black looks, cruelty, use of sword, premature reaper of marriage in death.

CHARPETE (Χάρπετε, now Harput), a major fortress of the Byz. frontier situated above the Arsanas River (Murad Su), east of the Euphrates. Under its ancient name Ziata, Charpete formed part of the territory conquered by Diocletian from the Persians in 297. It was briefly recaptured by the Persians in 359. At that time it was a castellum of sufficient size to serve as a refuge for the country population (Amm.Marc. 19:6.1). It became a major fortress (called Ziyād) under the Arabs, who controlled it from the 640s until 937, when Romanos I Lekapenos conquered the area and incorporated it into Mesopotamia. Charpete was the base of the revolt of Bardas Skleros in 976 and remained until the battle of Manzikert (1071). It had great strategic importance as the main stronghold of the district of Anizitene; it was apparently never a bishopric. The site contains a powerful fortress that represents the reduction of the late antique settlement. Enlarged after the Byz. reconquest, it shows seven undated phases of construction.

CHARPEZIKION (Χαρπεζίκιον), probably to be identified with Çarpizek Kalesi (TİB 2:86, n.260), center of a dwarf theme east of the Euphrates, first mentioned in 949 (Oikonomides, Listes 241ff). It had an army of only 905 men and probably ceased to exist soon after the compilation of the Taktikon of Escurial (971–75), which lists the strategos of Charpezikion between those of Tephrike and Romanoupolis.

CHARSIAEITES MONASTERY, founded in Constantinople in the mid-14th C. by John (monastic name: Job) Charsiaeites (Χαρσιαϊτίς), a supporter of John VI Kantakouzenos. It was dedicated to the Virgin Nea Peribleptos. Its precise location is unknown but was probably within the city walls. The monastery had close ties to Kantakouzenos, who granted it a chrysobull, and spent part of his retirement there as the monk Ioasaph. Two of the monastery’s superiors became patriarchs (Neilos Kerameus and Matthew I); a third patriarch, Gennadios II Scholarios, took the habit there. Patr. Matthew composed a testament in 1407 that describes the origins of the monastery and includes a typikon as well as a hypotyposis drafted by his two predecessors as hegoumenos, Mark and Neilos. Makarios Makres wrote a description of the icon of the Nativity in the monastic church (H. Hunger, JÖB 7 [1958] 125–49).

CHARSIAON (Χαρσιανόν), fortress of Cappadocia between Caesarea and the Halys, supposedly named for a general Charsios who fought the Persians under Justinian I. Its site has not been located. First mentioned in 638, it was captured by the Arabs in 730 and was the scene of considerable fighting during the next two centuries. The fortress was the center of a district of the same name that became a kleisoura in the early 9th C. and a separate theme, created from parts of Boukellarion, Armeniakon, and Cappadocia, after 863. According to Arab geographers, Charsianon had four fortresses and an army of 4,000 men; the salary of the strategos was 20 pounds of gold. Charsianon was a base of the landed aristocracy in the 10th C.; the Argyroi had their homes there and the Maleinon their vast estates. In 1057, Charsianon supported the revolt of Isaac (I) Komnenos. The resettlement of Gagik II there in 1045 and influx of Armenians led to conflicts with the local Greek nobility. Charsianon was lost to the Turks after the battle of Mantzikert in 1071.

CHARTOPHYLAX (χαρτοφύλαξ), an ecclesiastical official of Constantinople and the provinces, usually a deacon, attested from the 6th C., with archival and notarial duties that grew in extent and significance with the growth of synodal trans-
actions. By the 10th C. the chartophylax was head of the sekreton of the chartophylakeion and principal assistant to the patriarch. The importance of his functions far exceeded his rank in the hierarchy which, by the 11th C., was fourth among the exokatakoiloi. In addition to archival and chancery-related duties he acted as intermediary between the patriarch and clergy, introducing clerics before the patriarch and conciliar gatherings, and receiving letters sent to the patriarch. He examined candidates to the priesthood and prepared testimonials for them (Rhalles-Potles, Syntagma 3:440–44; 2:587). The chartophylax also wrote Erotapokriseis on canonical matters and released them in his own name. He represented the patriarch and, in his absence, presided over the synod. A prostagma (1094) of Alexios I Komnenos, confirming the chartophylax’s right to this position, indicates that it was not a new privilege but a controversial one disputed by the bishops of the synod (Zepos, Jus 1:549f). Theodore Balsamon asserted, in his treatise on the functions and rights of the protekdikos and chartophylax, that the latter had judicial competence and presided over a court (Rhalles-Potles, Syntagma 4:530–41); this claim appears to have more to do with Balsamon’s need to bolster the office that he held than with the actual functions of the chartophylax. From the reign of Andronikos I, megas was added to the title of chartophylax.

Some monasteries included among their officials a chartophylax or chartophylakissa, a monk or nun responsible for the security and conservation of monastic records, and keeping track of borrowed documents.

CHARTOULARIOS (χαρτουλάριος, from χάρτης, official document), a generic term designating subaltern officials in various bureaus. Late Roman chartoularioi were known from 326 in the chanceries of the praetorian prefect, magister militum, etc. (O. Seeck, RE 3 [1899] 2193). The first known chartoularioi of the “divine logothetion” was mentioned in the 7th-C. Miracula of St. Artemios (ed. Papadopoulos-Kerameus, 23,29). In the 9th–10th C. chartoularioi were functionaries with fiscal and archival duties in both central and provincial administration, such as the chartoularioi of the genikon, stratitiotikon, and dromos. Similar functions in the ecclesiastical hierarchy were performed by the chartophylax, and the two terms could be confused (Dartouzès, Offikia 20); the seal of a chartophylax of the genikon (Laurent, Corpus 2, no.358) is also known. A chartoularioi could be the head of an entire sekreton, such as chartoularios of the sakella (see sakellion) or vestiarion. According to seals, the chartoularioi of the genikon and stratitiotikon acquired the epithet megas from the end of the 10th C. Chartoularioi could be commanders on the battlefield (Dennis, Military Treatises 252.138); Theophanes (Theoph. 398.13–14) relates that Leo III appointed “his personal chartoularioi” Paul as strategos of Sicily. In the 12th C. some chartoularioi (e.g., Theodore Choummnos) exercised military functions. From the 15th C. onward, the megas chartoularioi was a high-ranking courtier whose duty, like that of the protostrator, was to lead the horse of the emperor. I. Medvedev (PSb 23 [1971] 63–67) rejected B. Pančenko’s hypothesis concerning the existence of a guild of chartoularioi.

CHARTRES NOTATION. See NEUMATA.

CHEESE (τυρός), an important food source, mentioned along with wine, olive oil, beans, and bread as a major component of the diet (Laura 1, no.27.19–21); it was commonly added as a relish (prophagion) to bread. The Geoponika (bk.18:19) gives a recipe for making cheese and says that the best type was made from goat milk. The Diegesis ton tetrapodon zoon praises cheese made from the milk of water buffalo. Some cheeses were pungent and used as appetizers with wine. The Vlachs were famous as cheese makers, providing the monks of Mt. Athos with their product. Cheese could be used for payment of rent in kind: thus, in 1382, the monastery of Nea Petra on Mt. Athos received from revenues in Lemnos 16 modia politika of grain, 4 modia politika of legumes, and 3 kantaria (a measure of approximately 40–48 kg) of cheese (Dionys. no.5.11–12). Imperial privileges exempted various monasteries from mandatory sales of grain, wine, meat, cheese, “and all other kinds of food” (e.g., Patmou Engrapha 1, no.6.53–
thus enumerating cheese among the most basic foodstuffs.

CHEILAS (Χειλάς), also Prinkips Cheilas, a family of Peloponnesian origin, known from the 13th—15th C. The Cheilades produced several ecclesiastical leaders and intellectuals: Theodosios Prinkips Cheilas was sent by Michael VIII as envoy to the Mongol khan Hülegü; ca. 1278–83 he was patriarch of Antioch. His contemporary John Cheilas, metropolitan of Ephesus, wrote against the ARSENITES and Patr. GREGORY II OF CYPRUS; the collection of letters in Paris, B.N. gr. 2022, was erroneously ascribed to John. John’s brother Constantine was a military judge (*krites tou phos-satou*) in 1293–94; two of his seals have survived (Laurent, *Corpus* 2, nos. 1193–94). Nikephoros Prinkips Cheilas, a rhetorician of the first half of the 15th C., wrote a monody on the death of Kleope Malatesta (died 1493), spouse of the despot Theodore II PALAILOGOS, and was closely connected with many intellectuals of his time, such as John EUGENIKOS, BRESSARION, PLETHON, and GENNADIOS II SCHOLIAROS.

CHEIROTHESIA (χειροθεσία), “the laying on of hands,” esp. by the bishop in the rite of ordination. Initially it referred specifically to the central part of the ordination process—the imposition of hands—rather than to the sacrament of ordination proper and the conferring of ecclesiastical dignity. Still, this distinction was not always maintained. Indeed the term became interchangeable with CHEIROTONIA and the whole liturgical act of ordination (cf. Nicaea I, canon 19; Council of Chalcedon, canon 15). By the 8th C., however, cheirothesia came to be used for the ecclesiastical ceremony conferring minor orders of SUBDEACON, ANAGNOSTES, etc., through the sign of the Cross (*sphragis*), while cheirotonia was reserved for the ordination of the major orders of DEACON, PRIEST, and BISHOP. According to SYMEON of Thessalonike (PG 155:361D), the first took place “away from the altar” (*exo tou bemaatos*), whereas the second was performed “at the altar” (*en tou bema-tos*). In general, of course, cheirothesia was also a common element in a number of other rites, such as baptism, in which the laying on of the hands in benediction took place.

CHEIROTONIA (χειροτονία). In its primitive etymological sense the term, meaning “stretching forth the hands,” signified primarily appointment or election to office. In Christian canonical and sacramental usage, the word came to designate the liturgical rite by which a candidate was ordained into one of the three major orders of the Christian CLERGY. Specifically, the sacrament included both the appointment and the laying on of the bishop’s hands on the ordinand in the rite of CHEIROTHESIA. Zonaras described cheirotonia as the liturgical act in which the invocation of the Holy Spirit by the bishop is accompanied by the laying on of hands on the candidate for ordination (PG 137:37A; cf. John Chrysostom, PG 60:116.15–20). The same canonist was nevertheless aware of the ancient distinction between simple nomination and the actual rite of consecration, for he observes that the election (*pséphos*) eventually came to be called ordination (*cheirotonia*) by the church fathers (cf. C. Vogel, *Irénikon* 45 [1972] 7). The bishop alone had the right to perform the ceremony.

CHELANDION (χελάνδιον) was sometimes used synonymously with DROMON to refer to oar- and sail-powered warships of varying sizes and speeds (A. Dain, *Naumachica* [Paris 1943] 66), but other sources indicate that chelandion generally meant a transport ship, such as the type used by Constantine V to ferry horses to Bulgaria in 762 (Theoph. 432.29–433.1) or by Basil II to transport men and supplies during his siege of Tripolis in 999 (Yahyā of Antioch, PO 23 [1932] 459). Another term, *pamphyllos*, refers to round-hulled vessels that served to carry war machines and horses; smaller transport ships were called *sagenai, saktourai*, and *katenai*, names that indicate an Arabic origin.
CHEMISTRY. See Alchemy.

CHENOLAKKOS MONASTERY, a Bithynian monastery of uncertain location. Chenolakkos \((Χηνολάκκος, \text{"Goose Pond"})\) was founded in the early 8th C. by a St. Stephen, who is known only from his liturgical notice in the \textit{Synaxarion of Constantinople} for 14 Jan. \((\text{Synax.CP, 392–94})\). He established the monastery at Chenolakkos, on land given him by Patr. Germanos I. The monks of Chenolakkos supported the restoration of images by the Second Council of Nicaea in 787; the monk Thomas signed the \textit{Horos} (decree) as a delegate of the \textit{hegoumenos} John.

In the 9th C. Chenolakkos is known as the monastery where the iconodule \textit{Methodios}, the future patriarch, first adopted the habit and worked as a scribe. The monastery disappears from the sources between the 10th and 12th C.; it reappears in the second half of the 15th C. as an insignificant \textit{metochion} of the Constantinopolitan monastery of St. Demetrios of the Palaiologoi, housing only two monks.

\textit{LIT.} Janin, \textit{Églises centrales} 189ff. —A.M.T.

CHERUBIKON \((χερουβικόν)\), the Cherubic Hymn, important \textit{troparion} that accompanies the transfer of gifts in the \textit{Great Entrance} and introduces the eucharistic half of the \textit{liturgy} with its references to the preanaphoral dialogue ("let us lay aside all worldly care"), \textit{Trisagion} ("sing the thrice-holy hymn"), and \textit{communion} ("to receive the King of All"). Its name derives from its opening words, in which the singers are assimilated to the \textit{cherubim} around the throne of God. The other Great Entrance hymns that replace this hymn in the Liturgy of Basil on Holy Thursday (\textit{Toú deípnoú}), Holy Saturday (\textit{Sígesato pasa sarx}), and at \textit{Presanctified} (\textit{Nun hai dynametis}) are by extension also called \textit{cheroubika}. The \textit{cheroubikon} and \textit{Toú deípnoú} were introduced under Justin II in 573–74 (\textit{Cedr. 1:685.3–4}), perhaps replacing earlier psalmody (Ps 23 with alleluia). The Holy Saturday chant comes from the Jerusalem Liturgy of James; it appears in Constantinople by the 11th–12th C. but is only an optional replacement for the \textit{cheroubikon} until the end of Byz.

\textit{LIT.} Taft, \textit{Great Entrance} 53–118. —R.F.T.

CHERNIBOXESTON \((χερνιβόξεστον, \text{from } χερνιβείον + ἔξοςτος \text{"wash basin [and] ewer"})\), term attested from the 6th C. in papyri and in an inscription of 582–602 on a silver vessel, for a washing set, either domestic or liturgical. The basin often took the form of a long-handled \textit{trulla}, while the ewer was a handled jug. In a series of long-handled pans with dated \textit{silver stamps}, the three latest (of 582–651) apparently still have matching ewers (Dodd, \textit{Byz. Silver Stamps}, nos. 30–31, 48–49, 75, 77). While none of the complete sets displays Christian motifs, other ewers with a church dedication (\textit{Kaper Koraon Treasure}) or New Testament iconography may bear witness to the early ecclesiastical use of washing sets mentioned in the \textit{Euchologion} and described in the \textit{Liber Pontificalis} by the Latin terms \textit{urceus} and \textit{agmanile}. In the 10th C. Constantine VII Porphyrogennetos described the use of \textit{cherniboxeston} decorated in low relief and of "precious towels" for the washing of hands during palace ceremonies (\textit{De cer.} 586.3–5).

\textit{LIT.} Mango, \textit{Silver} 106ff. —M.M.M.

CHERSON \((Χερσόν\), a Greek colony in the immediate vicinity of modern Sebastopol on the Crimean peninsula, was from the 2nd C. a part of Roman Lower Moesia. Christianity was firmly established there by the beginning of the 4th C. The altar of a cruciform church discovered in 1897 contained a silver reliquary, with reliefs intact, bearing a monogram, bust, and control stamps of Justinian I (\textit{Iskussto Vizantii 1, no.151}). Cherson was the most significant city of Crimea in the 5th–6th C.; excavations have shown, however, that large-scale production of salted fish and wine stopped during this period. The economic situation in Cherson in the 7th–8th C. is still disputed: Jakobson \((infra)\) stresses decline and desertion, whereas A. Romanèuk (in \textit{From Late Antiquity to Early Byzantium} \textit{[Prague 1985]} 123–35) emphasizes the continuity of urban life. At this time Cherson was a place of exile for Pope Martin I and Emp. Justinian II. In the 8th C. it was under
the rule of a Khazar governor (tudun). According to a later legend, it offered shelter to Iconodule refugees from Byz.

Byz. rule was reestablished by Emp. Theophilos who, ca. 832, created the theme of Klimata (see Klima). From the 10th to the 12th C. Cherson enjoyed great prosperity. The minting of autonomous coins of municipal character was resumed by Michael III (DO 3.1:91f) at this time, and abundant seals survive of Byz. officials in Cherson, primarily those of strategoi and kommerkiarioi. The colony assumed pivotal importance in relations between Byz. and the Khazars (the starting point for the missionary activity of Constantin the Philosopher), Pechenegs, and Kievan Rus'. It played an essential role in the conversion of Kievan Rus' in 988/9: according to a legend, Vladimir I of Kiev was baptized in Cherson. Many inscriptions and graffiti (both Greek and Latin) have been recovered in Cherson through archaeological excavations.

After 1204 Cherson accepted the suzerainty of Trebizond. It began to lose its Greek character, mainly because of Alan impact and economic ties to the northern Caucasus and the Near East. By the end of the 14th C. it was destroyed by the armies of the Golden Horde.

O.P., A.C.

CHERUBIM (χερουβ(ε)μι), celestial beings who held an important place in the Old Testament as supporters of God; God was enthroned upon them and they moved his chariot. Pseudo-Dionysios the Areopagite describes them as the second order of the first triad of heavenly beings, between the SERAPHIM and the thrones (thronoi), another order of angels. In contrast, Gregory of Nyssa (PG 45:348A) eliminates the distinction between cherubim and thronoi, since God was enthroned upon the cherubim. Greek authors represented the cherubim as fiery, with four faces and many eyes (poluomnata), although Origen warned against literal interpretation of these features. Their usual functions included driving the heavenly chariot, praising God, defending the church, and assisting at the Last Judgment, but pseudo-Dionysios emphasized the spiritual qualities of the cherubim—their ability to receive the gift of light, to contemplate the primordial might of thearchic splendor, and to see and comprehend God (Celestial Hierarchy 7.1.32-34). Accordingly, the name cherubim was interpreted as meaning “full knowledge” (John Chrysostom, PG 48:724.55), even though they were unable to comprehend God as he comprehended himself.

Images of two cherubim were placed on the Ark of the Covenant (Ex 25:18-22) and in the Temple of Solomon (1 Kgs 6:23-29). The Chronicon paschale (Chron. Pasch. 462.9-13) states that the latter were seized by the Roman emperor Titus and affixed by Vespasian to the gates of Antioch. These Old Testament images of cherubim were cited by John of Damascus and others in polemics against the Iconoclasts: although made by human hands, they were nonetheless the object of divine cult and could thus be used to justify the Christian veneration of icons.

The cherubim were first depicted as regular ANGELS; later, under the combined influence of Ezekiel’s visions (Ez 1:4-25, 10:1-22) and of Revelations 4:6-9, they took the form of composite creatures having at least four “many-eyed” wings, the top pair usually crossed, with a human face in the very center of the wings, and the heads of the four apocalyptic beasts at the sides (man and ox to the left, lion and eagle to the right; see EVANGELIST SYMBOLS). Their feet are human but winged, and they may have a pair of hands coming out the sides, to hold a sword or spear. The fiery wheels of Ezekiel’s vision are often included either directly below them or nearby. The cherubim were sometimes given six wings, a feature borrowed from Revelations or from the closely related seraphim.

Cherubim appear in the pendentives of churches to support visually the image of the cross or of Christ Pantokrator in the dome (e.g., 9th-C. mosaics in Hagia Sophia, Constantinople); they also guard the gates of Paradise (e.g., in OCTATEUCH illustration [Gen 3:24] or in scenes of the Last Judgment). On the Limburg an-der-Lahn reliquary they are labeled archai. Their liturgical connection (the Cherubikon hymn describes how they support the throne of God) led to their being depicted on RHIPEDIA.

CHESS (ξετρίκων), a game of Eastern origin, unknown in the later Roman Empire. The date of its penetration into Byz. is not established. When Anna Komnene (An.Komn. 3:71.11–16) described Alexios I playing chess with some of his relatives, she added that the game "came to us from the Assyrians." A 15th-C. historian (Douk. 99.17–18) depicts Timur as playing zatrikion with his son; by that time, the game was also known among the Latins, under the name of skakon. The Diegesis ton tetrapodon zoon (vv. 918–27) distinguishes between skakoi, zatrikia, and tablia, and states that bishops, archontes, and merchants played these games using pieces of gold and silver; skakoi and tablia, according to the same text (vv. 615–21), were made also of bull’s horn. Wood and bone pieces were used as well. The game of chess was interpreted in the so-called oneirokritikon of Patr. Germanos I (F. Drexl, Laographia 7 [1923] 437–70) as foretelling a fight. More explicit is the Oneirokritikon of Achmet ben Sirin (pp. 192.3–193.9): victory at zatrikion foreshadowed profit, good luck, or military success.

CHILANDAR. See Hilandar Monastery.

CHILDHOOD. The Greek terms for child, teknon (το τέκνον) and pais (ὁ ή παῖς), were applied to boys and girls alike, while pais could also designate a slave, and teknon had a connotation of spiritual relationship. Even though some Byz. practiced abortion and contraception, procreation was considered the primary goal of a married couple and infertility was viewed as a disaster; the birth of a child, esp. a boy (Prodromos, Historische Gedichte, ed. W. Hörandner, no.44.1–7), was a cause for rejoicing and celebration. The number of children varied considerably; Laiou (Peasantry 310) calculates that the household coefficient in the domain of Iveron in the first half of the 14th C. was 2.9 to 4.9 and in that of Lavra 4.1 to 4.9.

The infant (brehos, in prakita also called pais hypomazios—Estphg., no.7.3–4) was weaned at about two or three years of age. Babies were swaddled at birth and nursed either by their mother or a wet-nurse; the attitude of Byz. society toward wet-nursing was equivocal (J. Beaucamp, JÖB 32.2 [1982] 546–59). Breastfeeding was depicted in the image of the Virgin Galaktotrophousa and of some saintly children shown suckling; hagiography tells of some future saints who as infants refused to suckle on fastdays. Infant mortality was high, the case of Maria the Younger probably being typical: she bore four children of whom two died in infancy. Children were esp. susceptible to disease after weaning (D. and P. Brothwell, Food in Antiquity [London 1969] 186–89).

Formal education began at age six or seven, either at school (for boys) or with a tutor or literate parents; rote memorization, esp. of the Psalms, was emphasized. Only a small number of children went on to secondary schooling. Despite John Chrysostomos’s warnings against indulgence (Sur la vaine gloire, ed. A.-M. Maline (Paris 1972) 96.239–100.266, 196.1058–1064), children, even boys, wore gold jewelry and gems (e.g., the gold belt, bracelet, and necklace renounced by Theodore of Sykeon, Vita, ch.12). Children played with toys and games and pets.

Parents were prohibited from selling or abandoning their children, although Constantine I, in a law of 329, permitted the sale of children “in the case of extreme poverty” (Cod.Just. IV 34.2) with the right of a later repurchase. Some children were abandoned, often at the thresholds of churches or houses of the wealthy. Some orphans, even of substance, faced problems: the vita of Lazaros of Mt. Galesios (AASS, Nov. 3:529D) describes how their neighbors expelled orphans from their father’s house and seized their belongings. Orphans directed by the state and church tried to alleviate the problems of orphans and abandoned children.

Even though the concept of patria potestas (the father’s rights over his children) diminished during the Roman Empire, Byz. parents retained substantial rights (often customary) with regard to their sons and daughters: parents could inflict corporal punishment on their children, albeit some moralists (like Kekaumenos) criticized whipping; they could castrate boys to make them eunuchs (Rudakov, Kul'tura 187); they used children’s labor in the household (esp. as shepherds and swineherds), and sent them out to work as ap-
prentices, servants, and prostitutes, retaining their earnings. Parents controlled their children’s future by arranging their betrothal and marriage. After reaching adulthood children usually resided outside the parents’ household, but sometimes (at least, in the case of peasant families) remained in their parents’ homes after their own marriage and the birth of first grandchildren. Conflicts between fathers and sons as described in hagiography (A. Kazhdan, *Byzantion* 54 [1984] 188–90) refer primarily to the attempts of children to leave the family and take monastic vows. Despite the paternal authority over children, Byz. literature reveals the affection of both parents and grandparents for their offspring and of children for their mothers and fathers. Thus Psellos was very fond of both his mother and of his daughter who died in childhood (G. Vergari, *Studi di filologia bizantina*, vol. 3 [Catania 1985] 69–76), and Anna Komnene remained devoted to her parents, although secretly critical of her nephew, Manuel I.

The principle of Roman law that considered children as legally subordinate to the father (*persona alieni turis, Gr. hypoxousioi*) was accepted by the law of Justinian, albeit with some modification, and preserved in the terminology of the *Ecloga*. The *Proceiron* still required the formal emancipation of the son from his father’s power (Zachariá, *Geschichte* 113, n.327), but Leo VI, in novel 25 (ed. P. Noailles, A. Dain, pp. 99.26–101.5), ruled that the son who established an independent household should be granted legal independence (*autexousion*) regardless of any formal procedure of emancipation; the child also had full rights to objects received from his/her mother or a third person. Byz. law retained the Roman principle of equal division of inheritance between the children.

There was no transitional period from childhood to maturity corresponding to the *ephebeia* (youth) of antiquity, even though the term, in a nontechnical meaning, appears in some authors (e.g., Synesios, ed. N. Terzagli, 2:289.20). Legally adulthood began at 25, but in fact the borderline between childhood and maturity was not sharply defined: marriage, taking monastic vows (after the 7th C. the minimum age for entry into a monastery was ten years), entering military or civil service, the opening of one’s own workshop meant the end of childhood. In reality it occurred about the age of 16 or 18, although precocious cases are known, mostly in a legendary form, as in the epic of *Digenes Akritas* or in saints’ Lives.

Images of the *Presentation of the Virgin* and cycles depicting her infancy invariably show the child as a miniature adult; the emphasis on the youthfulness of Christ Emmanuel is almost unique in iconography.

---

**CHILIA (Келлия, Келлио), mod. Kiliya**, city and port at the northernmost mouth of the Danube 50 km northeast of Ismail. Probably ceded, with nearby Vicina, to Michael VIII by the Mongols after 1261, it returned to Mongol control later in the century. In the early 14th C. it belonged to the Second Bulgarian Empire and was a port of call for Venetian ships trading with Bulgaria. Later in the century, as Vicina declined and Genoa ousted Venice from the Black Sea trade, Genoese influence grew, and a Genoese colony and garrison were established in Chilia. After 1370 it seems to have passed to the control of the princes of Moldavia; in the 15th C. the Wallachian port of Braila eclipsed Chilia, and in 1484 the Ottoman Turks captured it. Its principal exports were grain, wax, honey, and slaves. Emp. John VIII Palaiologos passed through Chilia on his return journey from Italy and Hungary in 1428. It is doubtful whether the Byzantine toponym *Chele* ever referred to Chilia. Some scholars identify Chilia with *Lykostomion*.

1. In agriculture, a *chilias* is a measure of vineyards indicating 1,000 vines. Depending on the quality of the soil, the region, and the customs of
viticulture, the area of 1 chilias ranged between 1 and nearly 4 modioi (= approx. 878 to 3,512 sq.m). According to the metrological sources, in the Balkans a chilias could be an area of 1,000 sq. orgyia.

2. As a measure of fields, 1 chilias is equal to 1,000 modioi.

3. When measuring the tonnage of ships, chilias indicates a capacity of 1,000 thalassioi modioi.

4. In the trade of the Levant, esp. among the Italians, the chilias (It. migliaio) is a quantity of 1,000 pounds (litrai, libbre) and differs according to the pound used. Migliaio can also, however, be a larger measure of calculation for oil, for example, of 646 liters in Venice or 713 liters in Negroponte.

LIT. Schilbach, Metrologie 83-89, 117. — E. Sch.

CHINA. The enormous distance between Byz. and China makes direct contact between the two doubtful. Byz. coins and precious objects, however, penetrated to China. A golden necklace, part of it possibly Byz., was found in the tomb of Princess Li Jingxun (600–08; see A. Kiss, Acta Orientalia Academiae Scientiarum Hungaricae 38 [1984] 33–40), and Chinese archaeologists have found various Byz. coins of the 6th and the first half of the 7th C. If Shiao Nai (VizVrem 21 [1962] 178–82) is correct and a solidus of Justin II was found in a tomb dated between 595 and 599, then coins could move from Byz. to China in less than 20 years. The discovery of Sasanian silver dirhems in the same localities suggests that they came through the intermediary of the Persian Empire. In light of these discoveries, the romancelike legend, preserved by Prokopios of Caesarea and Theophanes of Byzantium, about smuggling the silkworm (see SILK) from the land of Serinda becomes less incredible, although the location of Serinda remains questionable.

Chinese reports about Da Qin and its apparent successor Fulin have been identified as referring to the Roman Empire and Byz., although some scholars consider them descriptions of a Taoist utopia (K. Shiratori, Memoirs of the Research Department of the Toyo Bunko 15 [1956] 25–72). The chronicle of the Tang period (618–907) depicts the capital of Fulin as having a large gate ornamented with gold; a palace adorned with gold, fragrant wood, and ivory; and an automaton indicating the hours. Twelve ministers administer the country, the emperor has a crown resembling a bird with wings, and the people use chariots and wear garish apparel (H. Wada, 14 CEB [Bucharest 1975] 2:445–50). This picture is perhaps a distorted reflection of Byz. reality.

Nestorian monks reached China in 635 and the Nestorian communities there were known to 13th-C. western European travelers; the history of these communities between the late 9th and the 12th C. is obscure. Nestorian monks from China occasionally visited the West. In 1278 two Nestorians, Patr. YAH ALLAH III and Sauma, set out from Beijing for Jerusalem. Sauma arrived at Constantinople where Andronikos II received him; in 1287 he reached Naples, then visited France and England, negotiated with Pope Nicholas IV and by 1291 returned to China (The Monks of Kūblái Khan, Emperor of China, tr. E.A. Wallis Budge [London 1928]).

—D.W.J., A.K.

CHIONIADES, GREGORY, astronomer, physician, teacher, and bishop; born Constantinople between 1240 and 1250, died Trebizond ca.1320; baptismal name George. After becoming a monk, Chioniades (Χιωναδῆς) went from Constantinople to Trebizond, where he probably composed his notes on John of Damascus's Dialectics and On the Orthodox Faith. In the early 1290s he traveled on to the court of the İl-Khāns at Tabrīz, where he began studying astronomy under Shams Bukhārī. Between Nov. 1295 and Nov. 1296 Shams dictated to him in Persian the rules for using the 'Alā'ī Tables of al-Fahhad, which Chioniades rendered into barbaric Greek as the Persian Astronomical Composition. The conventionally titled Revised Canons, which he wrote in the spring and fall of 1296 in order to express some of these rules in a better style, indicate that he was then already becoming familiar with the shorter Arabic version of al-Khāzini's Sanjārī Tables and with the Persian İl-Khānī Tables of al-Ţūsī, both of which he sub-
Among the Persians and for his writ a confession of faith. REB. He of Tabriz in 1305, at which his name to He re-ru. He then retired as a monk to Trebizond. At his death he left part of his library to Constantine Loukites.

CHIOS (Kios), island in the eastern Aegean Sea, near the coast of Asia Minor, in late antiquity part of the province of the islands. Excavations have revealed building activity through the 6th C. Thus, the third construction phase of the Basilica of St. Isidore is assigned to the mid-6th C. (C.I. Pennas in Chios, ed. J. Boardman [Oxford 1986] 332). Late Roman buildings at Pendakas were abandoned by the beginning of the 7th C. when the inhabitants probably retired to the relative security of the fortress south of the harbor (J. Boardman, BSA 53–54 [1958–59] 303). Emborio continued to be inhabited into the 7th C. (J. Boardman, Greek Emborio [London 1967]); the fortress seems to have been destroyed by fire soon after 660 (M. Hood, J. Boardman, JHS 75 supp. [1955] 23).

Archaeological evidence from the following centuries is obscure.

Chios was included in the theme of the Aegean Sea and ruled in the 9th C. by an archon (Laurent, Coll. Orhidjan, no.204); some seals indicate the role of Chios as a customs station: in 690/1 a certain George was general komeymiarios of the combined apotheke of Asia, Chios, and Lesbos (Zacos, Seals 1, no.168); in the 9th C. a dioiketes of Samos and Chios (no. 2216) is known. In the 11th C. Chios stood under the command of its own strategos distinct from that of Samos (Skyl. 373.12–13).

Chios was attacked by Tzachas ca.1083 and was later a Byz. base against him. The island was sacked by the Venetians in retaliation for the Latin massacre of 1171, and in 1204 it was granted to Baldwin of Flanders; it passed effectively to the Genoese in 1261 as a result of the Treaty of Nymphaiion. From 1304 to 1329 Chios was occupied by the Zaccaria, from 1329 to 1346 governed by a Greek administrator in the name of the emperor; on 15 June 1346 the Genoese fleet besieged Chios and in eight days conquered the entire island. Kantakouzenos relates that the inhabitants resisted the Genoese, and Tzybos, a former governor of the island, attacked them but was killed; a later chronicle described a plot organized by the local metropolitan who wanted to hand Chios over to the emperor but failed. In a chrysobull of 1355 (Reg. 5, no.3042) John V Palaiologos considered Chios a Genoese possession (the similar privilege of 1367 [Reg 5, no.3117] is probably a forgery).

A Genoese record of 1395 lists 2,142 Greek households on Chios (about 10,000 people). The land belonged to secular nobles (Schilizzi, Coreis, etc.) and to the monastery of Nea Mone that in the 14th C. complained of the shortage of grain and the small number of douloparoikoi. The Genoese administration abolished the angareiai of peasants and replaced them with the kapnikon of two hyperpeta; indirect taxes were also increased. Chios remained in Genoese hands until 1556, when it fell to the Turks. Chios was a suffragan bishopric of Rhodes and from the 14th C. a metropolis without suffragans.

Aside from Nea Mone, an imperial foundation of the 11th C., Chios preserves the remains of many Byz. buildings and sites. The Church of the Panagia Krina is a smaller copy of the katholikon.
of Nea Mone with frescoes of the 13th C. and later (Ch. Bouras, *DChAE* 4 10 [1980–81] 165–80), while the Holy Apostles at Pyrgoi is of similar shape, with well-preserved exterior architectural detail. The general outline of the castle above the modern town is probably Byz., although it has undergone rebuilding in many periods; in the castle, the Church of St. George may originally have been built in 993.

CHLAMYS (χλαμύς, also χλανίς), a long cloak fastened on the right shoulder by means of a fibula so as to leave the right arm free. In antiquity, a short chlamys was worn by soldiers, hunters, and riders. Diocletian’s Price Edict refers to various kinds of chlamys, including a military type, a simple and a double chlamys, the latter being mentioned for the first time in this document. The two pointed sections hanging down over the legs were called “Thessalian wings” by later lexicographers (Hesychios of Alexandria, Photios, *Souda*, Eustathios of Thessalonike). By about the 6th C. the chlamys had lost its military character and in its longer form became a crucial element of court costume. The presence of a tablion generally differentiates the civilian chlamys from military cloaks such as the paludamentum or sagion. The chlamys was made in different colors, including white, each office being associated with a specific color. It was bordered with rows of gems or pearls, and on certain occasions it was fastened in front, under the throat. A purple chlamys with a gold tablion was the prerogative of the emperor and was laid upon his shoulders in a special section of the imperial coronation rite (*De cer.* 192.23–193.1); he wore the chlamys over the divetesion, but not generally over the loros. Members of his family might wear chlamydes adorned with eagles.

Representations of the chlamys abound, in imperial portraits and images of Old Testament kings such as David or Solomon, in portraits of courtiers, or of princely martyrs. These chlamydes are all evidently made of silk woven with a great variety of gold floral, circular, or spade-shaped designs.

Seeing a chlamys in dreams had a broad range of meanings. If the chlamys was frayed and dirty, this meant the downfall of a regime, if new and splendid, it foretold happiness and the birth of a male heir (Achmet Ben Sirin, *Oniocrates*, ed. Drexel, p.116.1–7).

—A.K., N.P.S.

CHLEMOUTSI (Χλημούτσι or Χλουμούτσι, Fr. Clermont, Ital. Castel Tornese), castle in Elis in the northwestern Peloponnesos. It was the primary fortification of the principality of Achia, constructed on a hill with a panoramic view westward to the Ionian Sea and controlling passage into the interior of the Peloponnesos. It was built between 1220 and 1223 by Geoffrey I Villehardouin who used the wealth of the Moreot church for its construction, and was consequently excommunicated. Despite the castle’s formidable size and position, it seems to have witnessed no memorable sieges or battles; it was frequently used as a prison, and the Greeks captured at the battle of Makryplage in 1264 were held there. Chlemoutsi is frequently confused with the port of Clarence (Clarentia, Clarenza, mod. Kyllene) some distance to the northwest, which was the site of the mint of the principality until its destruction in 1429. Chlemoutsi remained in Frankish hands until 1429 when it was taken by Constantine (XI) Palaiologos, then despotes of the Morea, and used by him as a base for his attack on Patras. The despotes Thomas Palaiologos kept John Asen prisoner at Chlemoutsi. It was taken by the Turks in 1460.

The surviving fortress is almost entirely Frankish. It consists of a large polygonal circuit wall and, at the summit of the hill, a powerful keep—an irregular hexagon, with sides 60–90 m long—and an interior court. The walls are in fact enormous halls, over 7 m wide with two stories, the upper supported either on vaults or with wooden beams. Living quarters were on the upper stories. Elaborate arrangements brought water from the roofs to huge cisterns under the floors.
CHLIRARA (Χλιάρα), settlement on the road from Pergamon to Philadelphia, known from the 11th C. onward. It is mentioned several times by Anna Komnene, who states that the semibarbarian Monastras controlled Pergamon, Chliara, and neighboring towns (polichnia) (An.Komm. 3:155.1). In the mid-12th C. Chliara was already a polis; it was fortified by a city wall ca.1162–73 (Nik.Chon. 150.35–40). The bishopric of Chliara, a suffragan of Ephesus, is listed in a notitia (Notitiae CP 10.47), the date of which is variously placed between the 10th and the 13th C. The Partitio Romanae mentions the “province” of Atramytton, Chliara, and Pergamon, but the Crusaders could not retain this region and Chliara fell to the Nicene emperor Theodore I Laskaris. It suffered from a severe earthquake in 1296 and from Turkish invasions. A 15th-C. historian (Douk. 221.13–14) is the last Byz. source to mention “Chliara, on the borders of Lydia,” but it had long ago been lost by the empire to the Turks.

Recent excavations in the valley of Lykos have revealed the remains of Chliara on the rocks of Gordikale. The find includes a city wall of stone and brick with traces of towers and a settlement that, as Rheidt hypothesizes, housed about 200 families.

CHNOUBIS (Χνούβις). The deity or damon engraved on popular medical gem amulets, the Chnoubis takes the form of a coiled serpent with a lion’s head and a nimbus and rays, surrounded by the seven planets or 12 houses of the zodiac. This pagan amuletic device, believed to prevent abdominal ailments, was christianized in late antiquity when the image of Chnoubis evolved into a dominating Gorgon head, often accompanied by the inscription, “Lord, help the wearer.”

The Chnoubis also appears on Christian uterine or Medusa amulets, which derive directly from pagan uterine amulets (hysterika phylakteria). The Christian versions have the lion-snake Chnoubis on the obverse inscribed with the Trisagion or invocations of the Virgin, and, on the reverse, the command to the womb to lie down quietly as well as various symbols such as the pentalpha star, lunar crescents, “Z”s, and eight-pointed stars. The purpose of both pagan and Christian womb amulets was to ensure childbirth without complications.

LIT. Vikan, “Art, Medicine, and Magic” 75–78. Bonner, Studies 56–60, nos. 81–86.

CHOIROBOSKOS, GEORGE, grammarian, deacon, and chartophylax of Hagia Sophia in Constantinople; fl. early 9th C. Choiroboskos (Χιροβοσκός) was above all active as a teacher and is described in the titles of some of his works as oikoumenikos didaskalos (see Didaskalos). His principal writings are an extensive commentary on the Rules (Canon) of declension and conjugation by Theodosios of Alexandria (4th–5th C.); commentaries on the grammarians Apollonios Dysulos (2nd C.); Herodian, and Dionysios Thrax, which survive only in fragments; a treatise on orthography, also fragmentary; a commentary on the Encheiridion by Hephaestion of Alexandria (2nd C.); epitomes or grammatical analyses of the Psalms; and a treatise on poetical figures. The dry and detailed treatises of Choiroboskos played a major part in transmitting ancient grammatical doctrine to the Byz. world. The work on poetical figures was translated into Old Slavonic, probably in Preslav ca.900, and the translation was included in the Izbornik of 1073, copied for Prince Svjatoslav Jaroslavitch of Kiev. The Epimerisms on the Psalms were used in schools in the mid-10th C. Eustathios of Thessalonike quotes Choiroboskos frequently as an authority. Renaissance grammarians found in his works a mine of information on literary Greek.

CHOIROSPHAKTES, LEO, diplomat and writer; died after 919; Koliás (p.15) dates his birth between 845 and 850, Beck (Kirche 594) ca.824. Choirosphtikes (Χιροσφάκτης) was a high-ranking official (mystikos and kanikleios under Basil I, magistros from 896) and a relative of Zoe Karbo-
Nopsina. Leo VI sent him on three embassies to Symeon of Bulgaria and in 905 to Baghdad. Probably involved in the rebellion of Andronikos Doukas (Jenkins, Studies, pt.XI [1963], 171), he was arrested probably in 907, but eventually returned to Constantinople and participated in the unsuccessful attempt of Constantine Doukas to seize the throne. In 913 Choirousphaktes was tonsured and confined in Studios.

Choirousphaktes’ letters are an important source for the history of Byz.-Bulgarian relations. He also wrote epigrams, hymns, and theological works, including Theology in a Thousand Lines, dedicated to Michael III. The attribution of some of his works remains problematic since the MS tradition is often obscure. Mercati (CollByz 1:271—309) ascribed to Choirousphaktes an ekphrasis in verse, On the Bath-house in Pythia, which he dates to 911; R. Anastasi (SicGymn 17 [1964] 1—7) rejects the attribution. Choirousphaktes was the object of severe and vitriolic accusations by Arethas of Caesarea and probably Constantine of Rhodes. M. Sangin (VizSb [1945] 228—48) interpreted this criticism as a reaction against Choirousphaktes’ intellectual activity; on the other hand, Karlin-Hayter treats Choirousphaktes as a “sniveller” in comparison with Arethas, “a fighter” (Studies, pt.IX [1965], 456).

CHOMA (Xώμα, now Homa), fortress of Phrygia in the upper Meander valley, became important as a frontier post in the 11th—12th C. Its troops, Chomatenois, were in the service of Nikephoros III and Alexios I; at that time, Choma was isolated in an area overrun by the Turks. It was then center of a district called Choma and Cappadocia, under a toparches. Choma’s location on a major road to the interior made it a base for the campaigns of Alexios I and Manuel I. Continually threatened by Turkish armies and nomads, Choma was refortified in 1193 by Isaac II and given the name Angelokastron. It fell to the Turks soon after 1204; it was never a bishopric. Choma was formerly identified with Soublaino (Ramsay, Cities 1:221—26), a fortress rebuilt by Manuel I in 1175 and dismantled by him the following year according to the treaty after the battle of Myriokephalon; its site was apparently in the vicinity of Choma.

CHOMATENOS, DEMETRIOS, a central ecclesiastical figure in the independent state of Epirus; born mid-12th C., died ca. 1256. In the late 12th C. Chomatenos (Χωματηνός) or Chomatianos (Χωματιανός) served as apokrisearios from the archbishopric of Ohrid to the patriarch in Constantinople; he was also chartophylax in Ohrid and in 1216/17 was appointed archbishop of the autocephalous see at Ohrid by Theodore Komnenos Doukas. In 1225 or 1227/8 Chomatenos crowned Theodore emperor in Thessalonike, thus inviting the censure of Patr. Germanos II at Nicea and causing the schism (1228—33) between the Epirot and Nicaean churches (G. Prinzing, RSBS 3 [1984] 21—64).

That Chomatenos claimed and enjoyed a quasi-patriarchal position can be seen not only from his coronation of Theodore but also from the protocol of documents issued by his chancery even after Theodore’s defeat in 1230. The collection of Chomatenos’s acts and letters, approximately 150 pieces, constitutes the main source of the administrative and ecclesiastical history of Epiros, Serbia, and Bulgaria in the first half of the 13th C. (G. Prinzing, EpChron 24 [1982] 73—120; 25 [1983] 37—112; B. Baršić, B. Ferjančič, ZRVI 20 [1981] 41—58). His acts, mainly decisions on marriage law, inheritance, and cases of killing, like those of his colleague John Apokaukos, are major sources for the social and legal history of the period; they indicate the level of legal knowledge, methods of argumentation, and range of cases that came before a bishop’s court. Chomatenos’s statements on the limitations of imperial power are unprecedented (D. Simon in Gedächtnisschrift für Wolfgang Kunkel [Frankfurt 1984] 449—92). Probably between 1230 and 1234, he wrote a brief vita of Kliment of Ohrid, a Bulgarian saint (P. Koledarov, Literaturna misil 27 [1983] no.3, 89—100).

CHONAI (Xövæt, now Honaz), city of Phrygia. The inhabitants of Kolossai, an ancient city of the plain long in decline, moved to the nearby defensible mountain site of Chonai in the 8th C. An important highway fortress, Chonai was a bastion of the theme of Thraakesion and may have been its capital (C. Foss, Ephesus after Antiquity [Cambridge 1979] 1951). It was devastated by Turkish raids in 1070 and after the battle of Mantzikert (1071) became a major frontier defense. Chonai was attacked in 1144, 1189, and 1191, and taken by the Turks after 1204. The great Church of St. Michael in Chonai was a center of pilgrimage and location of great trade fairs, on the ancient site of Kolossai. This was a large basilica decorated with mosaics; nothing of it survives. Chonai was the birthplace of Michael and Niketas Choniates. It became an autocephalous bishopric ca. 860 and a metropolis (without suffragans) ca. 950. The remains of its Byz. fortress have not been studied.

LIT. Ramsay, Cities 1:208–16.

CHONAI, MIRACLE AT. A miracle performed by Michael the Archangel at Chonai was celebrated 6 Sept. As told by Symeon Metaphrastes, the miracle occurred shortly after the deaths of the apostles John and Philip. Next to a healing spring of sweet water, in an oratory dedicated to St. Michael, lived a hermit Archippus. The devil and local unbelievers conspired to dam the river, whose two branches ran on either side of the spring, in order to flood both the spring and the oratory with brackish water. Michael appeared just in time to cleave the rocks in an earthquake, thus diverting the river and preserving hermit, spring, and cult.

Images of the miraculous event show Archippus and the chapel on the right and the Archangel driving his staff into the earth on the left, while the river, descending in two streams from above the figures, plunges down the center of the scene into the cleft created by Michael’s staff (e.g., Sinai icon, K. Weitzmann, The Icon: Holy Images, Sixth to Fourteenth Century [New York 1978] pl.22). Sometimes devils with pickaxes appear (Venice, Marc. Zg86). Known first from the Menologion of Basil II (fol.17), the image is one of the rare examples of a miracle of a saint illustrated with the degree of consistency characteristic of feast icons. Michael wears the pallium, though independent images of him in armor are sometimes labeled “Choniates” (e.g., at Karahük Kilise, Göreme).

A.W.C., N.P.S.

CHONIATES, MICHAEL, writer and metropolitan of Athens (1182–1204), brother of Niketas Choniates; born Chonai ca.1138, died Boudonitza ca.1222; the name Akominatos often assigned to him is incorrect. Choniates (Χωνιάτης) was a pupil of Eustathios of Thessalonike. As metropolitan he was an energetic defender of Athens’ interests, esp. during the city’s siege by Leo Sgouros. After the Latin conquest, Choniates left Athens, lived on Keos in 1205–17, and via Euboea went to the monastery of Prodromos in Boudonitza (B. Katsaros, Byzantina 1 [1981] 99–137). Politically Choniates was a strong opponent of the civilian aristocracy, which he criticized for its indifference to the provinces; he was esp. critical of those who came from peasant and artisan families (Lampros, infra 1:337.16–22). He welcomed Andronikos I at first but then withdrew support, frightened by his reign of terror “that put the whole world in fear” (1:210.12–15).

Choniates was one of the rare writers who escaped from convention and produced lively vignettes, such as a description of a dirty and drafty bathhouse on Keos (A. Berger, Das Bad in der byzantinischen Zeit [Munich 1982] 71). He often developed his similes and metaphors into full-blown images. In one of his treatises Choniates discussed the question of the relationship of the artist and his audience, defending the thesis of the creator’s independence from the crowd’s appraisal, even though in actual rhetorical practice he had to take into consideration the desires of his audience (I. Cițuțov, 14 CEB 3 [Bucharest 1976] 68ff).

In frescoes in the Church of St. Peter at Kalynia Kouvara and in the south chapel of the cave of Penteli, dated 1239/4 by inscription, Choniates is depicted as a nimbed bishop, thus suggesting that in Attica he was regarded as a saint shortly after his death (A.K. Orlando, EEBS 21 [1951] 210–14; D. Mouriki, DChAE 7 [1973–74] 96–98, fig.1).
CHONIATES, NIKETAS, government official, historian, and theologian; younger brother of Michael Choniates; born Chonai, Phrygia, between 1155 and 1157, died Nicaea, spring/summer 1217 (V. Katsaras, Ἄρθρα 32.3 [1982] 83–91). After studies probably in Constantinople, Choniates (Χαρίατης) began his career before 1182 as a provincial functionary in the Black Sea region; he returned to Constantinople, retired while Andronikos I reigned, but resumed service after Isaac II ascended the throne, eventually becoming λογοθέτης τον σκέτρον. In 1204 he fled to Nicaea but failed to receive any position of influence there.

Choniates’ History [Chronikē diegesis] is the most important source for 1118–1206, although the author’s personal (sometimes biased) opinions color it. A major example of Byz. prose, it reveals a new approach to human beings. They are presented as having contradictory, good and evil qualities and as being the active forces in history, while God functions as the highest moral principle. In a period of disaster, terror (esp. under Andronikos), and moral decline, Choniates defended the values of human life and property as well as culture. The History is permeated with a foreboding of catastrophe, also reflected in the imaginative system of metaphors and similes, taken from motifs of storm, shipwreck, fire, disease, and beasts of prey. Traditional clichés are interwoven with irony, psychological observations, crude jokes, obscenities: Choniates is concerned with the human body and its excretory and sexual functions, but shies away from his own curiosity. His speeches (panegyrics of Isaac II, Alexios III, Theodore I, address to the bishop of Philippopolis, monodies) and letters are more conventional than the History; factual inconsistencies between them and the History can be explained by the differing purposes of the two genres. He also wrote the Thesaurus of Orthodoxy (Panoplia Dogmatike), a refutation of heresies up to his time (published only partially).

CHORA MONASTERY (Turk. Kariye Camii), located in the northwestern region of Constantinople near Edirne Kapı. The early history of Chora (Χώρα, lit. “dwelling place”) is obscure. A legendary tradition attributes the foundation to the 6th-c. saint Theodore (BHG 1743), supposed uncle of Justinian I’s wife Theodora; a more reliable source identifies the founder as Krispos, son-in-law of the 7th-c. emperor Phokas. In the 9th C. Chora was a center of resistance to Iconoclasm; the iconodule saints Theophanes Grafftos and Michael Synkellos were associated with the monastery and buried there. Restored in the 11th C. by Maria Doukaina, mother-in-law of Alexios I, Chora was again renovated in the 12th C. by her grandson, Isaac Komnenos the Sebastokrator. Like its predecessor, Isaac’s church was a domed basilica built of recessed-brick masonry on a cross-in-square plan with, however, a larger, single apse. Traces of its mosaic decoration remain in the south window of the nave.

The church deteriorated during the Latin occupation of Constantinople, but Theodore Metochites restored it magnificently (1316–21). He rebuilt the dome over the nave and replaced the narthexes and parekklesion, decorating them with resplendent mosaics and frescoes. Of the mosaics in the nave, only panels of Christ, the Virgin, and the Dormition remain. The well-preserved mosaics of the narthexes and the frescoes of the parekklesion are critical for our understanding of the style of monumental painting of this period. In the outer narthex esp. notable are the image of Christ, identified as he chora ton zonton, “the dwelling place of the living,” on axis with the entrance; the cycle of his Infancy with long sequences on the Magi and the Massacre of the Innocents; and that of his Ministry in the domical.
CHORA MONASTERY. Frescoes in the eastern end of the parekklesion of the church; early 14th C. Below: church fathers, the bishops (l. to r., unidentified, Athanasios of Alexandria, John Chrysostom, Basil the Great, Gregory of Nazianzos, Cyril of Alexandria). In the arch: Anastasis. In the arch: two miracles of Christ with the archangel Michael in the center.

vaults. The focus of the inner narthex is the donor portrait of Metochites offering his foundation to the Lord. In this area are mosaics of the Deesis with Christ Chalkites, but without the Prodromos, accompanied by images of Isaac Komnenos and “Melania the Nun”; 17 scenes of the life of the Virgin; and an unusually full complement of 70 ancestors of Christ. The eastern half of the parekklesion, used as a mortuary chapel, is fittingly devoted to the Last Judgment and culminates in the Anastasis, abnormally placed in the conch of the apse. On the chapel walls are frescoes of military saints, some partly covered or destroyed by the finely carved hoods of sepulchral monuments. Along the south walls are Old Testament prefigurations of the Virgin.

Metochites also endowed the monastery with substantial estates, added a hospital and public kitchen, and donated his important collection of books. During the Palaiologan period, Chora housed Constantinople’s most comprehensive library and was frequented by scholars such as Maximos Planoudes and Nikephoros Gregoras, as well as Metochites himself. Sultan Bayezid II (1481-1512) transformed the church into a mosque.
CHORAPHION (χωράφιον, “cultivated field”). The word, rare in classical and patristic texts—Neilos of Ankyra (PG 79:456D) speaks of those who diligently plow their choraphia—was used four times in the FARMER’S LAW and became the term for field in documents of the 10th–15th C. The Treatise on Taxation (ed. Döhlger, Beiträge 113.16–17), like the Farmer’s Law (pars. 25, 83) and later documents, distinguishes choraphia from vineyards, and there is direct evidence concerning plowing and sowing choraphia. Choraphia are also contrasted with pastures (e.g., MM 4:30.19–20). A choraphion was normally under 10 modioi in area, whereas the more general term ge, “arable land,” was commonly applied to much larger tracts, although the combined expression choraphia ge is used as well.

The terms esochoraphia (e.g., Lavra 3, no.164.8, 13), esothyrochoraphia (Pantel., no.17.21), choraphion esotheron (Chil., no.q2.123), and the infrequent exchoraphia (Vazelon, no.144.12; Dionys., no.25.118 app.), that is, inner and outer fields, probably designated the location of a choraphion closer to or farther from the house. Choraphia could have common borders with vineyards (e.g., Lavra 1, no.18.29–32); the cadaster of 1264 for the bisho- pric of Kephalonia (ed. Th. Tzannetatos [Athens 1965]) registers choraphia bordering a garden (p.31.31) or vineyard (p.44.204–06) as well as roads or buildings; the cadaster of 1235 for the monastery of Lambiotissa includes a choraphion bordering an olive groove (MM 4:8.10–11). A choraphion could be surrounded by a ditch (MM 4:7.33–34) or boundary marks (MM 4:189.8–9). Olive trees and nut trees grew on some choraphia. All this indicates that choraphia were not peasant “shares” in a particular field, thereby providing evidence against the existence of an “open field” agricultural system.

CHORIKIOS OF GAZA, 6th-C. Christian rhetorician. Chorikios (Χορικιος) was pupil and eulogist of PROKOPIOS OF GAZA. Forty-six declamations of various types survive. Apart from the historical value of his panegyric on Prokopios, his descriptions of the churches of Sts. Sergios and Stephen at Gaza present invaluable evidence for the variety of CHURCH PLAN TYPES, construction techniques, and figural imagery employed in the 530s and 540s. These accounts are characteristically Justinianic in their emphasis on splendor for its own sake; compared to Corippus, realistic description in Chorikios still bulks larger than symbolic interpretation. Chorikios is also an excellent source for accounts of festivals celebrated in Gaza (F.K. Litsas, 1982 JÖB 32.3 [1982] 427–36).

Also important for its material on mime and theater is his Apology for the Mimes, last in a series of such defenses (reaching back to Libanius and Lucian) against the attacks, Christian and pagan, of John Chrysostom and Ailios Aristides. Theater, esp. mime, was controversial, persisting as it did in the face of the Christian onslaught, both legislative and ecclesiastical. Chorikios himself had to reckon with both Justinian’s theater closures and the notorious thespian past of the empress Theodora.
CHORTASMENOS, JOHN, writer, teacher, and bibliophile; born ca.1370, died before June 1439. Chortasmenos (Χορτάσμηνος) was a man of diverse interests, whose career was shaped by his love of books and literature. He first appears in 1391 as a notary in the patriarchal chancellery, a position he held until ca.1415. At an unknown date he became the monk (and then hieromonk) Ignatios; by 1431 he had been made metropolitan of Selymbria.

Chortasmenos included among his pupils Bes-sarion, Mark Eugenikos, and Gennadios (II) Scholarios. He wrote a variety of works: 56 letters, some of which are addressed to other authors, such as Joseph Bryennios and Demetrios and Manuel Chrysoloras, as well as to Emp. Manuel II; poems, including iambic verses on the palace of Theodore Kantakouzenos and epigrams on the recently deceased scribe Ioasaph; orations; a vita of Constantine I and Helena; scholia on John Chrysostom; prolegomena to the Logic of Aristotle; and a short treatise on hyphenation. Particularly interesting are two detailed descriptions of serious illnesses he suffered (H. Hunger in Polychronion 244–52). D. Nastase has suggested
that Chortasmenos was the author of a (lost) chronicle that covered the period between the Histories of John VI Kantakouzenos and the historians of the fall of Constantinople (cf. Hunger, Lit. 1:482). An anonymous account of the Ottoman siege of Constantinople in 1394–1402 was attributed by Hunger to Chortasmenos, a hypothesis rejected by P. Gautier (REB 23 [1965] 100f).

At least 24 MSS have been attributed to the private library of Chortasmenos: they include codices of Euripides, Aristotle, Plutarch, Lucian, Libanius, Byz. historians, and the Introduction to Astronomy of Theodore Metochites. Chortasmenos is also remembered for reissuing the famous 6th-C. herbal of Dioscorides (Vienna, ÖNB, med. gr. 1). Chortasmenos copied several MSS, including menaia that he donated to his diocese and astronomical texts for his own use (E. Gamillscheg, Codices Manuscriti 7 [1981] 52–56).

- A.M.T.

CHOSROES I (Χοσροής), called Anūshirwān ("of the Immortal Soul"), Persian "great king" (531–78/9). Under his father Kavad, Chosroes participated in suppressing the social movement of supporters of Mazdak. As king he introduced several fiscal and administrative reforms and achieved a certain centralization of the state. He used Justinian I's domestic problems and involvement in Western politics to continue the war. The first war (527–32), inherited from his father, was ended by the so-called "Eternal Peace" that preserved the frontier of 502. In 540 Chosroes invaded Mesopotamia and Syria and seized Antioch; simultaneously the Persians were active in Lazica. For this invasion he found an ally in Vitiges. New activities in Lazica interrupted the truce of 545, but in 561 the parties signed a 50-year treaty preserving the status quo. War broke out again in 572, originating in the Armenian revolt against Chosroes, Justin II's suspension of tribute, and Byz.-Persian contest in southern Arabia and Ethiopia for the control of the sea routes to the East. Despite some success, the Byz. general Justinian could not retain Armenia.

Probably in 592 (Cameron, Literature, pt. XII [1969], 13, 21) Chosroes offered asylum to Neoplatonist philosophers persecuted in Byz. In Arabo-Persian historiography he is presented as an ideal monarch. Cruel, hard, but worthy of respect, he failed, however, to rectify serious institutional defects. Modern scholarship often exaggerates the influence of Chosroes' reforms on Byz. (E. Stein, Opera Minora Selecta [Amsterdam 1968] 65–70; Ostrogorsky, History 97, n.2).

- W.E.K.

CHOSROES II, or Khusrau II Parvēz ("the victorious"), the last of the "great kings" (from 590) of Sassanian Iran; died Cesiphon 29 Feb. 628. Chosroes came to power after crushing the rebellion of Bahram Chobān against Chosroes' father, Huzram IV. According to L. Gumilev (Problemy vostokovedenija 1960) no.3:228–41), Bahram revolted after he had defeated the Turks who, with the Khazars and Arabs, had invaded Iran in concert with the Byz. plan for the Persian war. Chosroes had to flee to Byz. territory; Maurice and Domitianos helped restore him to the throne in 591. The Byz. generals Komentiolo and (eventually) John Mystakon were sent to support Chosroes. The treaty with Byz. provided for the surrender of Dara and Martyropolis. Chosroes remained Maurice's ally, and rumors circulated that he converted to Christianity.

The overthrow of Maurice by Phokas gave Chosroes a pretext for invading Byz. in 604 and reoccupying lost regions. Chosroes' generals Shahh-Bārāz and Shahīn were successful, but at last Herakleios organized a counter offensive and in 617 won a decisive victory near Nineveh. Chosroes was deposed and his son Kavad-Shibīya and, after a trial, murdered in prison.

CHOUMNAINA, IRENE, anti-Palamite nun and bibliophile; born 1291, died Constantinople.
ca. 1355. Daughter of Nikephoros Choumnos, Irene married the despotes John Palaiologos, son of Andronikos II, in 1303. Widowed in 1307 at age 16, she sought solace in monastic life as the nun Eulogia. Despite her father's opposition, she gave much of her fortune to the poor and spent the remainder on the restoration of the monastery of Christ Philanthropos Soter. She became superior of this double monastery, to which her parents later retired. The convent, which housed 100 nuns, was one of the largest in 14th-C. Constantinople. Only a few ruins of the monastery have been uncovered, between the Mangana palace and the sea walls. The typikon for the monastery is extremely fragmentary; its surviving chapters stress the importance of the cenobitic life (P. Meyer, BZ 4 [1895] 48f).

Choumnina's first spiritual director was Theoleptos, metropolitan of Philadelphia; in the 1330s she also conducted extensive correspondence with a monk whose identity cannot be established. She was an ardent supporter of Gregory Akindynos and was harshly criticized by Gregory Palamas for meddling in theological controversy. Although errors in spelling and syntax reveal Choumnina's lack of formal education, she was praised by her contemporaries for her erudition, possessed a substantial library, and commissioned the copying of MSS.

ED. A.C. Hero, A Woman's Quest for Spiritual Guidance: The Correspondence of Princess Irene Eulogia Choumnina Palaiologina (Brookline, Mass., 1986).

CHOUMNOS (Χούμνος, fem. Χούμναινα), a family of predominantly civil functionaries attested from the mid-11th C. The first known Choumnos was Michael, deacon and chartophylax of Hagia Sophia in Constantinople in 1049 (MM 4:317.11-12). John "Soumn..." (read "Choumnos"). served as chief of the koiton in 1087 (Patmou Engraphe 1, no. 47.24). Another Michael (died ca.1133) was nomophylax and chartophylax of Hagia Sophia and later metropolitan of Thessalonike. Several 11th- and 12th-C. Choumnos are known only from their seals. The sebastos and char toutarios Theodore Choumnos, an important official of Andronikos I, is probably to be identified with the Choumnos who served as tax collector in Athens. Theodore was also entrusted with a military command. A chrysobull of 1192 mentions the "late sebastos Choumnos" (J. Verpeaux [in Nicéphore Choumnos (Paris 1959) 28] mistakenly named him "grand logothète"—see R. Guillard, REB 29 [1971] 82) who inflicted damage on the Genoese; his identification with Theodore is not probable. Nikephoros Choumnos (died 1234) also served as a tax collector in the Thrakesian theme. A later Nikephoros Choumnos was an important politician and writer (see Choumnos, Nikephoros); his brother Theodore was also a courtier. Several letters survive of Nikephoros's son John, the parakoimomenos and general (Boissonade, AeneNova 203-22); another son George was chief of the imperial table and megas stratopedarches. His daughter Irene-Eulogia Choumnina played an important role in 14th-C. religious life. Several other Choumnos were influential courtiers: the stratopedarches John received a pronoia in 1344; Nikephoros was megas hetairestarches in 1355. Makarios Choumnos founded Nea Mone in Thessalonike in the 1360s and was hegoumenos of Stoudios in the 1370s.

CHOUMNOS, NIKEPHOROS, statesman and intellectual; monastic name Nathanael; born between 1250 and 1255, died Constantinople 16 Jan. 1327. Choumnos studied rhetoric and philosophy with Gregory (II) of Cyprus in preparation for a government career. He first appears in the sources ca.1275 as a quaestor entrusted with an embassy to the Mongol khan in Persia. Under Andronikos II, he was promoted to mystikos in 1293, and ca.1295 became eti tou kanikleiou. Circa 1293-1305 he was also megasazoun and one of the most loyal ministers of Andronikos. He secured an alliance with the Palaiologan dynasty in 1303 through the marriage of his daughter Irene Choumnina to the despotes John Palaiologos. In 1309-10 Choumnos served as governor of Thessalonike; thereafter he gradually withdrew from public service, after being supplanted in influence by his political and literary rival, Theodore Metochites. In the 1320s the two men engaged in bitter polemics over questions of literary style, Choumnos attacking the writings of Metochites for their lack of clarity. Metochites in
turn criticized his rival for his devotion to physics and his ignorance of astronomy, the highest form of science. Circa 1326 Choumnos retired to the monastery of Christ Philanthropos. His writings include rhetorical pieces; treatises on philosophy, cosmology, and theology; and 172 letters. He possessed a great fortune, based primarily on land in Macedonia, and founded the monastery of the Theotokos Gorgoepekoos in Constantinople (V. Laurent, *REB* 12 [1954] 32–44).

**CHRESIS** (χρησ). In a broad sense, *chresis* implied the principles (e.g., *orthe chresis*, “proper use”) by which church fathers integrated Graeco-Roman culture within the Christian worldview (Gnilka, *infra*). In documents, *chresis* meant “use” (e.g., *Lavra* 1, no. 59.27) and was the usual word for *usufruct*. In accordance with the principles of Roman law, a scholium to the *Basilika* (Basil. 16.1.7) defines the *chresis* of a field as working the field and enjoying everything produced on it. Legislation of the 10th C. employs *chresis* in a different sense: a novel of *Roman* II (Zepos, *Jus* 3:289.31–32) orders that, while a peasant in debt may hand over the *chresis* of his allotments (*topoi*) temporarily to a *dynatos*, he is not to be deprived of ownership of the property. Thus, the individual who received the *chresis* of a property (i.e., the *usufructuarios*) was not necessarily the one who worked the property. The word appears with this particular meaning occasionally in the 12th C.: in a document from 1153 (Lavra 1, no. 62.7), a monk’s *chresis* of a property owned (and worked) by a monastery provided him with an annual income (*siteresion*). In an extended use of the word a *praktikon* from 1181 (Lavra 1, no. 65.26) distinguishes between a monastery’s rights of *despoleia* (ownership) over some *paroikoi* and a group of *pronoiai*’s *lifetime chresis* and *nome* (possession) over the same *paroikoi*. *Chresis* appears only rarely in documents thereafter (e.g., from 1315: *Espig*, Appendix B.71).

**CHRISM.** See ANOINTING.

**CHRISMON.** See CHRISTOGRAM.

**CHRIST.** [This article is divided into three sections that treat the theology of Christ (Christology) that developed in Byz., the literary image of Christ, and the types of Christ used in artistic representations. For depictions of Christ in narrative scenes, see the following entries: AGONY IN THE GARDEN; Anastasias; Appearances of Christ after the Passion; Ascension; Blind Man, Healing of the; Cana, Marriage at; Crucifixion; Deposition from the Cross; Epiphany; Feeding of the Multitudes; Flight into Egypt; Galilee, Storm on the Sea of; Infancy of Christ; Lazarus Saturday; Lord’s Supper; Miracles of Christ; Mission to the Apostles; Nativity; Passion of Christ; Temptation of Christ; Traditio Legis; Washing of the Feet.]

**Byzantine Christology.** The image of Christ encountered in the Byz. church and in its theology is not so much that of the Synoptic Gospels, although Orthodoxy confesses the human nature (substance) of Christ and expresses it in the iconographic program of the Great Feasts, but rather the Johanneine Christ (Logos), the Pantokrator, the Transfigured or Resurrected One who is enveloped by the MANDORLA. The church fathers of the 4th C. in particular exerted a lasting influence on liturgical texts, and their Christ is the Logos who is “of one essence with the Father” (homooousios). Against *Arius* and *Eunomios*, they emphasized Christ’s divine status, thereby initiating the Christology “from above” so characteristic of Byz. and of the *Antiochene School* as well: the Logos “became flesh” (John 1:14), the Preexistent One “became man” (cf. Gal 4:4).

According to Grillmeier there are two distinctive types of Christology: the Logos-sarx (cf. *sarkosis*, Incarnation) and the Logos-anthropos (enanthroposis) models. Representatives of the first type are inclined to attach no theological relevance to the human soul, or human freedom, of Christ. At the very least, they ignore it (e.g., *Athanasiou* of Alexandria); or, they deny its existence altogether so that in the union the Logos
assumes the function of the soul (e.g., Apollinaris of Laodikeia); or, they subordinate the soul of Christ (and his human personality) to the pre-eminence of the Logos. Accordingly, the divine activity of the Logos concerning the human reality of Christ is often vitalistically interpreted (theokinesis), as in all Christologies of Monophysitic tendency since the Council of Ephesus (431); this tendency is seen above all in Cyril of Alexandria, if one excludes the compromise formula that he offered in 433 to the Antiochenes and that the Council of Chalcedon (451) accepted as his belief. Emphasizing Christ as a “man with a body and soul” runs the risk of conceiving the union of the divine and human in the “God-Man,” in the most extreme instance, as a relationship of two persons, that is, in the juxtaposition of two beings, as in the Nestorian “Christology of separation.”

Increasingly, a tendency developed to deny the “God-Man” certain human experiences believed to be “merely human.” From the beginning the fact of Christ’s sinlessness, a doctrine derived from Hebrews 4:15, was evident to the faithful and soon became a principle of interpretation. Athanasios, for instance, could still accept the ignorance (to agnoein) of Jesus as a characteristic of his human nature (PG 26:624A); but later, certain statements in the Gospels were seen only as an accommodation (oikonomia) to the audience: “I told you that I do not know, when in truth I do know” (Didymos the Blind, PG 39:920B). The height of this tendency is shown in the Monothelite controversy when Maximos the Confessor denied the possibility of a gnomic will in Christ, that is, the freedom of choice or free will.

After the acceptance of dyophysitism at the Council of Chalcedon, theology was occupied with an explanation of the union, kept within the scope of the Chalcedonian definition (Neo-Chalcedonism), as taking place in the Person of the Logos (hypostatic union). This view came to fruition in the 6th C. in the anathemas of the Fifth Ecumenical Council (553) and in so-called Theopascitism under Justinian I. This made it possible to accord prominence to the Christology of Cyril of Alexandria and to offer the Monophysites a formula that drew from both traditions (e.g., “Known in two natures; united, without commingling, of two natures”).

Emphasizing the hypostatic union gives prominence to the Logos as the basis of the union so that he is the existential foundation of the one Christ. Thus, emphasis on the predominance of the Logos, in an Alexandrian context, brings prominently into view the deifying “energy.” Man as a union of two natures, body and soul, was a Christological model before Chalcedon and was used by Pope Leo I as well as the Monophysites. Not until Neo-Chalcedonism, however, does it become the focus for clarifying the hypostatic union and for distinguishing between varying degrees of individuation, in particular the differentiation of the individuality of nature or substance and of person of hypostasis. The individuality of body and soul, both of which are conceived within a Platonic framework, are united in a particular man, in his person or hypostasis, on which basis the individual “exists in himself” as an independent being; yet, he is more than a particular instance of a common nature, or species.

The consequence of this model is shown in the Christology of Patr. Anastasios I of Antioch with his emphasis on the deification of man: “Many times have our holy fathers made use of the paradigm of man when reflecting on the union of natures [in Christ]. As man is constituted of different activities (energeiai), some of which belong to the rational soul, some to the body, in the same way we understand the union that took place in our Saviour; just as we see one hypostasis constituted of different natures, so also we see it constituted of different energies,” the divine and human (Doctrina Patrum, ed. F. Diekamp, 13.1, pp. 79.13–80.3).

If, as in Theodore of Raithou, the energies are expressly connected with the hypostasis, or together form a prosopon derived from a prosopon, then Neo-Chalcedonism is able to promote a single, hypostatic energy of Christ. In other words, there is created a Chalcedonian monoenergism (or Monothelitism) as, for example, in the anthropological paradigm to which Patr. Sergios I refers Pope Honorius (Mansi 11:536AB). By emphasizing that the subject of the activity and will is one, both Nestorianism and the possibility of conflict between the divine and the human in Christ were excluded, while Christ’s sinlessness, and its accompanying mode of freedom, was firmly established.

It is noteworthy that Maximos the Confessor sought to understand the uniqueness of Christ’s
hypostatic union by altering this paradigm, after a phase in which he avoided or even rejected it, and thereby provided anthropology with a significantly different model of man. The human hypostasis is never absolutely independent, never autonomously free; in its worldly and communal existence it is precisely defined as a union of natures, bound by necessity and impotence to arise and disappear, together with its elements, and to be so constituted until the end of the world. Christ alone is a pure hypostatic union standing above the laws of unions in the natural order. Consequently, he is an absolutely unique hypostasis and is not like man, who is unique only in a relative sense, existing as one particular among many other particulars of the same species. The autonomous character of Christ's hypostasis differs from that of the hypostases in the natural order, for there the independence of the hypostasis is conditioned by the essential elements that constitute the species.

Maximos's concept of "person," therefore, is not concerned with its precise content, but rather its ontological structure. Since Christ is a unique synthesis established in divine freedom, he is not subject to anything in or of the world. For Maximos, as soon as one defines the content of the hypostasis, its activity and will, one falls into Monophysitism, for one's thought moves within the framework of the natural synthesis characterizing man.

This Christological model was, however, unique and had little impact on the history of Byz. theological thought, where distinguishing marks are the predominance of the Logos, the notion of the mutual interpenetration (perichoresis) of the divine and human natures, and the communication of idioms produced by the hypostatic union. As a result, theological scholarship acquired the religious flavor peculiar to the tradition of Alexandrian Monophysitism, and this became normative for Byz. thought. The divine Logos is the one whom the believer encounters in the icon of Christ, and in the life, suffering, and resurrection of Jesus. It is God who in Jesus has assumed all mankind and whose presence extends in an aesthetic experience.

This experience is in no apparent conflict with God's transcendence, with respect to his essence. The argument of the Iconoclasts—which maintained that the iconographic representation of Christ, to the extent that it claims to depict God and man, either separates his two natures (falling, therefore, into Nestorianism) or fuses them into one (thereby falling into Monophysitism)—reflects not the experience or consciousness of the faithful, but rather competing pseudo-rational Christological formulas. An example of an alternative view is the simple statement of Patr. Nikephoros I that in the icon of Christ the Logos is made visible if it represents his body and therefore refers to him. At issue is the role of perceptible symbols in conveying spiritual understanding: "We do not err when we depict Christ crucified at all times, for if what we see mentally, while absent, is not also seen with the senses in painting, then even what we see mentally will be lost" (Theodore of Studios, PG 99:436A).

In spite of this spirituality, the dogmatic formula of Monophysitism remained unacceptable to Byz. thought and theologians were constantly involved in its refutation, esp. when the conquests in Armenia and on the borders of the Euphrates confronted them again with the Monophysite church. Christology also played a role in the polemic against Islam in that Monophysite, and even Nestorian, influences are discernible in the Qur'an, thereby indicating the milieu in which it originated.

—K.-H.U.

**LITERARY DESCRIPTIONS OF CHRIST.** Although the New Testament provides no information on the physical characteristics of Christ, gradually the church fathers developed verbal descriptions of Christ in his human manifestation. Using Isaiah 52:13–53:12 as their source, some early fathers (Clement of Alexandria, Basil the Great, Cyril of Alexandria) imagined Christ as an unattractive man of short stature and ordinary features (A. Michel, DTC 8 [1947] 1153). Others (Jerome and Augustine in the West, John Chrysostom in the East) provided a different literary portrait, based on the description of the Messiah in Psalm 44:3 as "the most beautiful of the sons of men." Chrysostom (PG 57:346.19–26) states that Christ's countenance was surely comparable
to the glorious face of Moses and to Stephen the Protomartyr, who resembled an angel.

By the 9th C. detailed descriptions of Christ were developed: the Letter of the Three Patriarchs (ed. Duchesne 277.15–18) refers to the church tradition that presented Christ as being "of good build, three cubits tall, with eyebrows that meet, beautiful eyes and long nose, curly haired, bent over, of healthy appearance, with a black beard, a complexion the color of wheat, and long fingers." The same features are listed in the letter to Emp. Theophilos falsely ascribed to John of Damascus (PG 95:349C) and by Oulpios (ed. Chatzidakos, EEBS 14 [1938] 411.39–43).

Types of Christ. The iconographical tradition of representing Christ was slow to develop. Once established, however, images of Christ remained remarkably consistent, because of the emphasis, from the 6th C. onward, on "authentic" likenesses of Christ that were all supposed to derive from acheiropoietos fashioned during his lifetime.

Early images of Christ showed him together with the apostles, or in other contexts, such as performing miracles; if depicted alone, he at first took the form of the Good Shepherd. In these cases he was generally depicted young and beardless.

Other images of Christ alone are documented only from the 6th C. onward (the lost acheiropoietos icons from KAMOULIANAI and PANIAS, in the Praetorium of Pilate in Jerusalem, and at Memphis). Two of these, the miraculous images of Christ's face known respectively as the MANDYLION and the KERAMION, survived longer; both were transferred to Constantinople during the 10th C. These two icons have also been lost, but versions of them made during the 11th C. show a bearded Zeus-like head of Christ, which suggests that these early lost images all used the same type later known as

CHRIST: Types of Christ. Christ Emmanuel in a medallion on the breast of the Virgin; mosaic, early 14th C. Church of the Chora monastery, Istanbul.
the Pantokrator. This is confirmed by the earliest surviving panel portrait of Christ, an icon at St. Catherine's monastery, Sinai (Weitzmann, Sinai Icons, B1), and by the image on the solidus of Justinian II, the first figure of Christ to appear on coins (J.D. Breckenridge, The Numismatic Iconography of Justinian II [New York 1959]).

**Christ Pantokrator.** The concepts that separate the types of Christ are theological, having to do with the various manifestations of Christ in his relation to God the Father; the images themselves are based on the prophetic visions of God as well as on traditional representations of antique divinities. The Pantokrator, or "all-sovereign," designates the best-known type: Christ is represented frontally as a severe dark-bearded figure, clad in a tunic and dark blue himation, blessing with his right hand raised before his chest and holding a Gospel book in his left. His hair is parted in the middle, and two strands of hair may fall left or right from the center of his forehead. His halo is inscribed with a cross. The features do not change but can be subtly altered to convey a more strongly ascetic, merciful, or judgmental impression, depending on the taste of the period. The image is generally accompanied merely by the abbreviation IC XC, the monogram of Christ; the word Pantokrator begins to accompany this image only in the 12th C. Variations in the image are legion: Christ may be holding the book open or closed, from beneath or with his fingers stretched out over its binding. He may bless with the first two fingers raised and the last two touching the thumb or with all raised but the fourth finger. Instead of blessing, he may point to the book.

In monumental painting, this Pantokrator figure, in the form of a bust, was deemed particularly appropriate for dome decoration, where it could appear that Christ the ruler was coming from the heavenly world into the earthly through the center of the dome; it was also frequently placed over the entrance to a church, esp. the door between narthex and naos. Christ Pantokrator could be represented seated on a throne, as in the coins of Basil I (DOG, ed. Grierson, 3.1:154–60), but most often appears as a bust.

**Christ Emmanuel.** Christ as the preexistent Logos, the incarnate Word, the flesh immortal, was depicted in the form of a frontal beardless youth with curly locks pushed behind his ears, a high forehead and a cross-halo; he was known as the Emmanuel (Is 7:14). Though images of the youthful Christ were common in the 4th–5th C., separate images of Christ Emmanuel labeled as such appear with any frequency only from the 11th C. onward. Images of the MAJESTAS DOMINI in the frontispieces to Gospel MSS of the Decorative Style group replace the mature Christ with the figure of the young Emmanuel. Manuel I Komnenos used the image of Christ Emmanuel on his coins, evidently a reference to his own name. The Virgin Blachernitissa is shown with the Emmanuel enclosed in a medallion on her chest, and the features of the Emmanuel were borrowed for images of Christ Anapason, for the sacrificed child in the Amnos, for Christ in the Burning Bush, etc.

**Ancient of Days.** God the Father was never represented, but Christ's oneness with the Father (see Trinity) was conveyed through the image of Christ as the Ancient of Days (ho palaios ton hemeron), an elderly figure with white hair and beard, bearing a cross-halo. His robes and gestures are those of the Pantokrator. The image itself, rarely inscribed, is based on the description in Daniel 7:9 (cf. Rev. 1:14); it grew in popularity from the 12th C. onward.

The relation between the three aspects of Christ (Pantokrator, Emmanuel, Ancient of Days) is explored esp. in the 11th and 12th C., when all three may appear together on a single MS page (as three figures seated on three thrones in Paris, B.N. gr. 74; S. Tsuji, DOP 29 [1975] fig.4) or in a single church, each in a separate dome (NEREZI), or in three medallions down the barrel vault of the nave (St. Stephen, KASTORIA).

**Christ as Angel.** The rare image of the Christ-angel is based on Isaiah 9:6, which speaks of the Messiah as the angel of the Great Council (S. Der Nersessian, CahArch 13 [1962] 209–16). This and other Old Testament passages were adopted by Gregory of Nazianzos in his Second Homily on Easter (PG 36:624AB) to describe the vision of Habbakuk, and illustrated MSS of his homilies from the Paris Gregory on illustrate his homily with the image of an angel in a mandorla. Later versions stress the relation of the angel figure to Christ by giving the angel the cross-nimbus. Christ as SOPHIA was also depicted as the Christ-angel.

Only a couple of Christ images are clearly related to famous icons in Constantinople: CHRIST CHALKITES and CHRIST ANTIPHONETES. Both are
essentially Pantokrator images. Images in which Christ’s eyes look off to the viewer’s left, the direction followed by his “forelock,” has been associated by A. Cutler with Christ Euergetes (DOP 37 [1983] 35–45). Other epithets accompanying figures of Christ, such as soter (savior), eleemos (merciful), philanthropos (lover of mankind), hyperagathos (supremely good), and zoodotes (giver of life), while they correspond to the dedications of famous monasteries, do not necessarily represent distinct types or famous originals. The image of Christ Anapason derives from a popular literary allegory, rather than from any theological tenet or special icon original. The MAn of Sorrows and the Helkomenos (“the one dragged along”), which shows Christ being dragged to the cross and is known from at least the early 12th C. onward, are both illustrations of narrative Passion scenes.

CHRIST, GENEALOGY OF. See Genealogy of Christ.

CHRIST ANAPESON (ἀναπεσόν, lit. “the reclining one”), the image of Christ asleep, awaiting resurrection. The image depends ultimately on the description of the lion in Physiologos as a beast who sleeps with his eyes open and whose offspring, born dead, are wakened to life by their father on the third day. References in the Bible to the unsleeping lion of Judah (esp. Gen 49:9; cf. Ps 121:4) led to the incorporation of the Physiologos description into biblical commentaries and to the development by the mid-14th C. of the image of Christ as a youth reclining on a bed, legs crossed, his head resting on his right hand, his eyes open. In his left hand he holds a scroll. In monumental painting the image is most often placed in or at the entrance to the pastophoria (A. Grabar, La peinture religieuse en Bulgarie [Paris 1928] 257–62). The figure of Christ may be flanked by two angels carrying the symbols of the Passion (e.g., at Peribleptos church, Mistra); the instruments of the Passion serve to emphasize Christ’s sacrifice, as does the location near the sanctuary (in the case of the Peribleptos, the conch of the diakonikon) (S. Dufrenne, Les programmes iconographiques des églises de Mistra [Paris 1970] 33, 54). The recumbent pose is occasionally assumed by the Christ child in images of the Virgin of the Passion.

CHRIST ANTIPHONETES (ἀντιφωνητής, lit. “the one who responds,” also “the guarantor”). An icon of Christ Antiphonetes famous for its miracles was kept in Constantinople in an unidentified “domed tetrastyle” building thought to go back to the time of Constantine I the Great; it was probably in the neighborhood of the Church of the Virgin at Chalkoprateia, where the icon is known to have been housed from at least the 9th C. onward. Its best-known miracle (7th C.) involved a merchant and the Jewish creditor to whom he gave the icon as surety, and it may explain the meaning of the epithet “the giver of surety.” According to Psellus (Chron. 1:149, ch.66.1–10), the empress Zoe owned an icon of Christ Antiphonetes through which she foretold the future, as the complexion of Christ on the icon was capable of responding to questions by changing color. According to a 13th-C. chronicler, she also founded a Church of Christ Antiphonetes in which she was buried (Sathas, MB 7:163.3–5). An icon of Christ Antiphonetes appears, inscribed as such, on her coins and on other coins of the 11th C. (DOC, 3.1, ed. Grierson, 162f). The image is that of a standing, three-quarter length Christ. arms held close to his sides, with the palm of his right hand held up so as to face the viewer. It appeared again in the now destroyed 11th-C. mosaic on a bema pier in the Koniessis church in Nicaea (C. Mango, DOP 13 [1959] 252), but rarely thereafter. There was a 12th-C. monastery of Christ Antiphonetes on Cyprus.

CHRIST CHALKITES (Χαλκίτης), Christ of the CHALK Gate. The site and historical associations of this image of Christ assured its fame, yet its exact appearance remains unclear and may in fact have changed with the repeated restorations to which it was subject. Leo III's order to remove (or destroy) the image in 726 or 730 initiated ICONOCLASM. The 9th-C. version, installed under Patr. Methodios after the TRIUMPH OF ORTHODOXY, was executed by the artist LAZAROS in mosaic. Frolow construed Methodios's epigram on this image to mean that Christ was depicted as a bust of the Pantokrator type, with the arms of the cross as three separate spikes—that is, not inscribed in a halo—behind his head. Coins of John III Vatatzes that bear a standing figure of Christ are labeled as is a similar one in the Deesis mosaic in the narthex of the Church of the CHORA in Constantinople. But the gesture of Christ's right hand varies, and P. Grierson has suggested that the 13th—14th C. any standing figure of Christ was called Chalkites (DOC 3.1:160—62).

CHRISTIANOUPOLIS (Χριστιανούπολις), city of the Peloponnese, probably to be identified with the modern village of Christianou in western Messenia (N.A. Bees, *OrChr* n.s. 4 [1915] 265—67), although connection with ancient Megalopolis in Arkadia has also been suggested. The city probably did not exist in antiquity but was briefly important in the 12th C. The bishop of Christianoupolis, unknown previously, held metropolitan status from the end of the 11th C. (*Notitiae CP* 11.79). By the 13th C. the city had declined and in 1222 Pope Honorius III divided its territory between the bishops of Korone and Methone (*Regesta Honorii Papae III*, ed. P. Pressutti, vol. 2 [Rome 1895] 50). Christianoupolis is perhaps to be identified with C(h)ristiana of Latin documents of the 13th—14th C., which mention a tower (Bon, *Morée franque* 348). The Greek see was restored before 1278 and is mentioned thereafter (V. Gruvel, *AOC* 1 [1948] 166).

Preserved at the site is the large Church of the Transfiguration (restored), a domed octagon similar to the *katholikon* of Hosios Loukas and Daphni, dated to the 3rd or 4th quarter of the 11th C. It was apparently an episcopal church; its construction may be associated with the elevation of Christianoupolis to metropolitan rank.

CHRISTODOLOS OF KOPTOS (in Egypt), poet of 5th—6th C. Two of his epigrams in the *Greek Anthology* (bk.7, nos. 697—98) commemorate the death of John of Epidamnos, consul (467) and prefect (479). Christodoros's hexameters on the statues standing in the Zeuxippos baths at Constantinople comprise book 2 of the *Greek Anthology*.

These verses, filled with the favorite Roman praise of the statues' lifelike qualities, tell us much about the cultural taste of the times; the presence of statues of the Latin authors Vergil and Apuleius is particularly striking. JOHN LYDOS (*De magistratibus* 3.26) quotes one line from Christodoros's poem *On the Disciples of the Great Proklos*. Possibly Christodoros wrote the fragmentary poems in P. Gr. Vindob. 29788B-C (R.C. McCall, *JHS* 98 [1978] 98—63). The Souda credits him with an epic on the Isaurian war of Emp. ANASTASIOS I as well as patria on Constantinople, Thessalonike, and other cities, but none survives.

CHRISTODOLOUS OF PATMOS, saint; baptismal name John; born Bithynia first half 11th C., died Euripos in Euboea 16 Mar. 1093. After elementary education in his native village, Christodoulos (Χριστόδουλος) became a monk on Mt. Olympos in Bithynia. When his spiritual father died, Christodoulos visited Rome, Bethlehem, and Jerusalem. Forced by Turkish invasions to leave Palestine, he headed for Latros, where he was protos from 1076 to 1079. The Turkish threat then compelled him to seek refuge in Strobilos, Kos, and Patmos. On Patmos Christodoulos
founded a monastery dedicated to John the Theologian and eagerly contributed to the economic regeneration of the island, which had been devastated by invasions. In 1092 a Turkish attack made Christodouloos flee to Euripos, where he soon died.

For his monastery on Patmos, Christodouloos received privileges from Alexios I, including a chrysobull of April 1088; he composed three sets of Rules: the Hypotyposis (1091), the Diatheke (Testament) (1093), and the Kodikellos (1093). John, metropolitan of Rhodes, wrote the Life of Christodouloos, probably ca.1140; Athanasios, a monk on Patmos and later patriarch of Antioch (1156–70), wrote an enkomion of Christodouloos based on the Life. After 1191 Theodosios, a monk from Constantinople, compiled another enkomion containing a description of Christodouloos’s posthumous miracles and substantial information about political events of the late 12th C.

ED. MM 6:59–90.

CHRISTOGRAM (also Chrismon) and Christ’s monogram are terms for various monogrammatic abbreviations of the name of Christ that began to appear during the 3rd C. and became popular in the 4th C. as a result of their use by Constantine I the Great and his sons. The two most common types are (1) the combination of Chi (X) and Rho (P), the first two letters of the Greek name Christos, and (2) a starlike figure consisting of the initials of Iesous Christos, Iota (I) and Chi (X), the horizontal beam of the cross being often added to each of these figures. A third type of Christogram consists only of the combination of Rho and the cross beam. The programmatic intention can be stressed by the addition of the letters Alpha (A) and Omega (Ω) or of attendant figures like apostles, angels, putti, etc.

The Christian meaning of the abbreviations in question is not always demonstrable, the combination Chi-Rho and similar figures (crux ansata) having been used in non-Christian milieus much earlier. Therefore the original aim of Constantine when placing a symbol of this kind on Labarum and shield cannot be established with certainty (transfer from Mithraic cult?). From the 4th C. into the 6th, the Christogram was used as an apotropaic device on imperial armor and as a sign of imperial triumph. It quickly became a sign of Christ’s triumph as well, appearing already on early 4th-C. “Passion” sarcophagi, atop the cross, as it had stood atop Constantine’s labarum. Its Christian use hereafter was varied and extensive. Occasionally ornamental, it was a widespread sign of Christian affiliation; it often symbolized Christ’s triumph, and sometimes symbolized Christ himself. From the 5th C. onward, it was replaced more and more by the Cross; it remained in use, however, in special functions, e.g., on doors (apotropaic), on documents and letters (inocvative), or as a pattern of versus intexti. Its monumental use ceases after the 6th C. in Byz.

CHRISTOPHER, general; dates of birth and death unknown. He was domestikos ton scholwn under Basil I and also was the emperor’s gambros; according to C. Mango (ZRVI 14–15 [1973] 22, n.35), he married Basil’s eldest daughter, Anastasia. R. Guillard identifies him with the magistros Chris-
topher of the same reign. In 872 Christopher led the army against the Paulicians; he seized Tephrike and thereafter sent the strategoi of Armeniakon and Charsianon to meet Chrysocheir at Bathyrax: an attack in the dead of night compelled the Paulicians to flee, and Chrysocheir was killed during the pursuit (P. Lemerle, *TM* 5 (1973) 103).

CHRISTOPHER, bishop of Ankyra; fl. first half of the 13th C. After being elected exarch of the West on 6 Aug. 1232 at Nicaea, Christopher was sent to the despotate of Epirus as legate of Patr. Germanos II to end the schism between the churches of Nicaea and Epirus. Upon arrival in Epirus in 1233, he convened a synod where the termination of the schism was declared. He was well received by most of the Epirot clergy, who provided him with financial support during his stay. He met with leaders of the schism, like George Bardanes, and investigated the status of certain stauropegial monasteries (G. Prinzing, *RSBS* 3 (1983) 24, 52, 57).

CHRISTOPHER LEKAPONES, eldest son of Romanos I; co-emperor (921–31); died Constantinople? 931. Christopher replaced his father as megas hetairiarches ca.919 and was crowned co-emperor on 20 May 921. The patrikios Niketas, father of Christopher’s wife Sophia, tried unsuccessfully to incite him to rebel against Romanos and in 928 was removed from the palace. Maria Irene, Christopher’s daughter, was married to Peter of Bulgaria.

LIT. Runciman, *Romanus* 64f, 71f. – A.K.

CHRISTOFOR PASCHON (Χρυστός πάσχων), anonymous drama presenting the story of Christ’s crucifixion and resurrection. Although the *persona dramatis* are derived from the Gospels (Virgin, Mary, John, Joseph of Arimathea, Mary Magdalene, and others), the author has them express their feelings and attitudes in words borrowed from ancient writers, primarily Euripides. He structures his drama, however, on different aesthetic principles, replacing action with a narrative account of the action (both the chorus and heralds play a substantial part) and emphasizing the sudden shifts in emotion (S. Averincev in *Problemata poetiki i literatury* [Saransk 1973] 255–70); the author accordingly changes the lexical pattern of his sources (I.G. Rizzo, *SicGymn* 30 (1977) 1–63). The problem of authorship remains un-
solved; the MS tradition ascribes the work to Gregory of Nazianzos, and A. Tuillier accepted this traditional point of view, but the majority of scholars prefer to date Christos Paschon in the 12th C. Among possible authors mentioned are Prodomos, Tzetzes, and Manasses, none of them unquestionably proven. R. Dostalova (JÔB 32/3 [1982] 80) hypothesized that the work could have been produced in the circle of Eustathios of Thessalonike, while L. MacCoull (BSAC 27 [1985] 45–51) returned to late antiquity by hypothesizing an origin in 5th- to 6th-C. Egypt.

-A.K.

CHRISTOUPOLIS (Χρυστούπολις, mod. Kavala), seaport in northern Greece located on the site of ancient Neapolis; it was the harbor of Philippi. Prokopios (Buildings 4.4. p.118.50) mentions Neapolis in the list of Macedonian phouria fortified by Justinian I; it is still named among Macedonian bishoprics in a notitia compiled after 787 (Notitiae CP 3.274), and is listed by Constantine VII Porphyrogennetos (De them. 2.36, ed. Pertusi 88) among Macedonian poleis. The name of Christopolis had probably replaced that of Neapolis by the second half of the 9th C.; seals of several kommerkiarioi and an archon of Christopolis have been published (Schlumberger, Sig. 114; Zacos, Seals 1, no.2404). Its walls were rebuilt by the strategos Basil Kladon in 926 (S. Reinach, BCH 6 [1882] 267–75).

Located on an important mainland route from Thessalonike to Constantinople, Christopolis was the object of many attacks; it was burned by the Normans in 1185, captured by Baldwin of Flanders, and seized by semi-independent Lombard barons. In the 13th C. the area was contested among Latins, Bulgarians, the despote of Epirus, and the empire of Nicaea, with John III Vatatzes the ultimate victor. In the early 14th C. it was a part of the theme of Boleron-Mosynopolis (Guillou, Ménécée, no.16.1), in 1335–38 an independent theme (Xénoph., nos. 23.23, 25.1). Be-

cause of the strength of its fortifications (G. Mpakalakes, Hellenika 10 [1938] 307–18), it withstood the attack of the Catalan Grand Company in the early 14th C., but Stefan Uroš IV Dušan later conquered it. The Byz. retook Christopolis in 1357–58, after Dušan’s death, and John V gave it to two brothers, the stratopedarches Alexios and the megas primikerios John, who had commanded the army that seized Christopolis (Ostrogorsky, Serbska oblast 147–54). The city surrendered to the Turks in 1387.

The bishop of Christopolis, first attested in the early 10th C., was suffragan of Philippi; he became autonomous archbishop before 1260 and metropolitan without suffragans by 1310. The traditional view that Christopolis also had the Slavic name Moruvac was rejected by G. Theocharides (Makelonia 6 [1964–65] 75–89).

CHRIST PHILANTHROPOS MONASTERY. See Kecharittomene Nunnery.

CHRONICLE (χρονικά, also χρονογραφικά, χρονογραφεῖα, rarely χρονογραφία), the term that the Byz. applied, without a strict distinction, to various types of historiography, and that has acquired, in modern scholarship, several specific meanings. The concept of the monastic chronicle as opposed to the secular “history” created by high state officials was rejected by Beck (infra), who demonstrated that among 21 so-called chronicles only one-third were written by monks, one of whom (George the Synkellos) was a man of high education. As a conventional term, chronicle can designate any one of the following types of works: (1) historical works describing world history from Creation (John Malalas, George Synkellos, George Hamartolos, Glykas) or large sections of past history (as in Theophanes the Confessor, Patr. Nikephoros I) that for the most part were not based on the author’s personal observation; the sections on ancient history were derived primarily from Josephus Flavius, Sextus Julius Africanus, and Eusebius of Caesarea; Zonaras, however, used more sophisticated
sources; (2) short chronicles that narrated in an annalistic form political events within a limited chronological period; esp. abundant are short chronicles dealing with the Turkish invasions (see Chronicles, Short); (3) short lists of dated events (ancient empires, emperors’ reigns, patriarchs, popes, etc.) beginning with the ancient past (e.g., the Chronographikon of Patr. Nikephoros I, the chronicle of Peter of Alexandria), attested in Byz. from c.800 onward, that, according to Z. Samodurova (VizVrem 36 [1974] 139–44), were contained in MSS alongside short works on grammar, geography, rhetoric, philosophy, metrology, etc., and probably served educational ends (VizVrem 21 [1962] 146f); and (4) private notes with chronological dates, such as the list of the children of Alexios I in Moscow, Hist. Mus. 53/147 (A. Kazhdan in Festschrift F. Altheim, vol. 2 [Berlin 1970] 233–37).

—A.K.

CHRONICLE OF 819, a short, annotated chronological table of events and notable persons from the birth of Christ to 819, written in Syriac. The author, a Monophysite, and probably a monk at Qartamín, a monastery near Mardin, listed those persons and events that were of interest to members of the Syrian Orthodox church. Of particular interest are the references to military encounters between the Muslims and “Romans” in the 8th and 9th C. The chronicle was later integrated almost completely into the so-called Chronicle of 846.

—S.H.G.

CHRONICLE OF 1234, conventional title for the universal history in Syriac, composed by a now anonymous Edessan author ca.1240. The work covers roughly the same ground as does the Chronicle of Michael I the Syrian, which is earlier by almost a half-century and with which the Chronicle of 1234 often disagrees in details. The latter chronicle is composed of two major parts, a narrative of civil affairs and a record of ecclesiastical events. The two parts are conflated up to the time of Constantine I; thereafter they are in separate books. In the Chronicle’s present state of preservation, a unique and incomplete 14th-C. MS, the civil history reaches the year 1234 (hence the conventional title) while the ecclesiastical record ends in 1207. The importance of the Chronicle of 1234 lies in the fact that it preserves excerpts from earlier works that are now lost. Examples of works surviving only in quotations are writings attributed to John of Asia, Dionysiou of Tell Mahre, and a history of Edessa by Basil bar Shúmana (died 1171). Other now unknown sources used by the author appear to be the same as those used by Theophanes the Confessor (A.S. Proudfoot, Byzantion 44 [1974] 367–439).

—S.H.G.

CHRONICLE OF CAMBRIDGE, conventional and incorrect title of an anonymous chronicle preserved in two Greek versions (Vat. gr. 1912 and Paris, B.N. suppl. gr. 620 of the 11th C.) and in an Arabic translation (MS of Cambridge, of the 13th C.). It consists of brief notes with chronological indications, encompassing 827–965 and relating primarily to Greco-Arab wars in Sicily; it was apparently the continuation of a general chronicle, from Adam to 825/6. G. Cozza-Luzi suggested that it was written in 998/9, with the Arabic text produced in the beginning of the 11th C.

—A.K.

CHRONICLE OF EDESSA, or Histories of Events in Brief, as the work is called in Syriac, is essentially a list of notable events and noteworthy churchmen associated with the history of the city of Edessa from the 3rd to 6th C. The now anonymous Chronicle, which was compiled in the 6th C., survives in a unique MS (Vat. Syr. 163). It pre-
serves excerpts from the archives of Edessa as well as other sources, and is important for the history of the establishment of Christianity in the Syriac-speaking world. In its present form the Chronicle is probably an abbreviation of a longer recension of the same material. In turn, it became a source for later chronicles.

-S.H.G.

CHRONICLE OF GALAXEIDI, a brief chronicle composed ca.1703 by Euthymios, a monk of the monastery of the Savior in Galaxeidi (a port on the Gulf of Corinth). Drawing on apparently authentic documents preserved in the monastery and adding a liberal dash of epic imagination and religious credulity, the chronicle provides some interesting sidelights on late Byz. resistance movements in the southern Balkans as well as on earlier events, such as the Bulgarian invasion of the Peloponneseos under Romanos I (Jenkins, Studies, pt.XX [1955], 205–09; Bon, Peloponnese, 80 and n.4).

-E.M.J.

CHRONICLE OF IOANNNINA, name given by Vranoussis to an anonymous 15th-C. prose chronicle, originally wrongly attributed to the nonexistent “Komnenos and Proklos.” The chronicle, written ca.1440, is the longest and most informative of the surviving texts on medieval Epirus and describes the tyrannical reign over Ioannina of Thomas Preljubovic (1366/7–84). The author is very hostile to Thomas and emphasizes his cruelty. The second portion of the chronicle concerns Thomas’s pious widow, Maria Angelina (died 1394), and her marriage in 1385 to the Florentine Esau Buondelmonti, who ruled benevolently until 1408 or 1411. The chronicle also contains information about the settlement in Epiros of Serbs and Albanians. It concludes with the year 1399; however, an Oxford MS of the chronicle contains additional entries up to 1417/18 (L. Vranoussis, Historiika kai topographika tou mesaionikou kastrou ton Ioannimon [Athens 1968] 78f). There is also a vernacular version of the chronicle, written in the 18th C., that ends with the death of Thomas.

-AM.T.

CHRONICLE OF MONEMVASIA, conventional and perhaps incorrect title of a local anonymous chronicle preserved in four late MSS (of the 16th C.) that differ from each other in content. Lemerle argued that the original chronicle (reproduced in Ivir. 329) should be called the “Chronicle of the Peloponneseos”: it describes events in the Peloponneseos from Justinian to Nikephoros I. The additional section deals with later events, some of which can be dated from 1082 to 1339. Lemerle argued that the chronicle was written before 932, when it was used in a scholion by Arethas of Caesarea; J. Koder even hypothesized that it was Arethas who compiled the chronicle (JÖB 25 [1976] 75–80). I. Dujićev (in Charteris Studies 54) rejected these conclusions on the basis of the allusion to Nikephoros II who lived after Arethas; he dated the chronicle to 963–1018. The chronicle’s statement that the Slavs dominated the Peloponneseos for 218 years has provoked heated discussion: S. Kyrkiakides (Byzantinai meletai, vol. 6 [Thessalonike 1947]) considered the chronicle as a nonauthentic text, whereas P. Charteris (DOP 5 [1950] 39–66) insisted on its historicity.

-AM.T.

CHRONICLE OF THE MOREA (Χρονικόν τοῦ Μόρεως), an anonymous account of the Frankish conquest of the Morea, from the First Crusade to 1292, which survives in four versions (Greek, French, Italian, and Aragonese, while extracts appear in the chronicle of Dorotheos of Monemvasia); debate continues whether the original was in Greek or French. The main MS of the Greek text (which is composed of over 9,000 lines of political verse) dates from the late 14th C., not long after the time of its composition in the first
decades of that century. Including many Frankish loanwords and written in the mixed Greek found also in the late Byz. verse romances, this work contains a large number of repeated lines, a feature which usually indicates a close connection with traditional oral poetry (M.J. Jeffreys, *DOP* 27 [1973] 163–95). The *Chronicle* is a major witness to the forms of vernacular Greek at this time. The unknown author shows good knowledge of the legal niceties of Moreot feudal procedure and is more familiar with the council chamber than the battlefield; on events outside the Morea he is totally unreliable. Taking a Frankish standpoint and at times showing a vehemently anti-Byz. and anti-Orthodox bias, his account reflects vividly the cultural mix of the Frankish-Greek Peloponnesos of the late 14th C.

**CHRONICLE OF THE TOCCO**

**CHRONICLE OF THE TURKISH SULTANS**

(Χρονικὸν περὶ τῶν Τούρκων σουλτάνων), conventional title of an anonymous chronicle of the Ottoman sultans, compiled at the end of the 16th C. It is preserved in a unique MS (Vat. Barb. gr. 111), which lacks both opening and closing folios; another MS (Vat. Barb. gr. 598) contains some fragments of the text (E. Zachariadou, *Hellenika* 20 [1967] 166). In its present form the *Chronicle* runs from 1373 to 1513. Zoras (infra) and Moravský (Byzantinoturcica 1:296) suggested that the chronicler used CHALKOKONDYLES and LEONARD OF CHIOS as well as some sources now lost; Zachariadou (infra) demonstrated that its major source was the Italian chronicle of Francesco Sansovin (in its second edition of 1573), which the chronicler translated with slight changes and additions; he used also pseudo-DOROTHHEOS OF MONEMVASIA and an independent story of SKANDERBEG. The *Chronicle’s* significance for Byz. events is minimal.

**CHRONICLES, CITY.** Local chronicles form a subdivision of the genre of chronicles; few are known (e.g., CHRONICLE OF MONEMVASIA). One can hypothesize that some kind of annalistic records were kept in Antioc and Constantinople, but the traces are very indistinct. A chronicle of Antioch seems to have been the main source for MALALAS (bks. 1–17); Theophanes and some other historians also rely on local materials. PARASTASEIS SYNTOMOI CHRONIKAI drew its detailed knowledge of the late 6th-C. emperors from a written source that might be a lost chronicle (Parastaseis 45), and some information concerning natural phenomena (solar eclipse, comets) in the second part of the
chronicle of SYMEON LOGOTETE might be drawn from a city record (A. Kazhdan, *VizVrem* 15 [1959] 140f). Schreiner (*Kleinchroniken* 1:24) listed annalistic notes from Thessalonike, Argos and Nauplion, Thebes, Mytilene, and Mesembria as well as those of Groc-Venetian provenance; they belong primarily to the 14th and 15th C.

**CHRONICLES, SHORT (Βραχέα Χρονικά),** a name imposed by S. Lambros (the first editor of these texts) on a series of unrelated brief notices found scattered in the margins and on blank folios of MSS from the 10th C. onward. A major characteristic of these notices is a precise date by indication, year, month, and day (after the *Chronographia of Theophanes the Confessor*, 9th C., this annalistic form ceased to be used for major works). The Short Chronicles vary in type and can include extracts from longer works, lists of imperial reigns, records of events in a particular locality, and notes of births and deaths within an individual family. Though often scrappy, the Short Chronicles, which cover all periods from the 4th C. to the Turkish conquest of the Aegean in the 16th and 17th C., frequently contain information unattested elsewhere; they provide an invaluable web of references that corroborate and complement the narrative historians.

ED. *Die byzantinischen Kleinchroniken*, ed. P. Schreiner, 3 vols. (Vienna 1977–79), with partial Germ. tr. – E.M.J.

**CHRONICON ALTINATE,** a complicated Venetian compilation that survives in 13th-C. MSS and whose legendary early history of Venice and its relations with Byz. comprises catalogs of rulers and bishops. It preserves an essential document on the circumstances of the deaths of Byz. emperors and descriptions of their tombs that was compiled in the 10th C. and continued from the 11th to 15th C. The 10th-C. section is a Latin translation of a lost memorandum of the emperors' reigns that once figured as the hitherto lost chapter 42 of *De cer.* book 2 (C. Mango, I. Ševčenko, *DOP* 16 [1962] 61–69) and sheds considerable light on problems of imperial chronology.

ED. R. Cessi, *Origo civitatum Italie seu Venetiarnum [= FSI 73]* (Rome 1933) 102–19.

**CHRONICON PASCHALE,** conventional title for a Byz. universal chronicle, probably written in the 630s. It was so named by its first editor DuCange because it presents methods of determining the date of Easter. It has sometimes been called the Alexandrian Chronicle, although in fact the work does not follow the Alexandrian chronographic tradition. The *Chronicon Paschale* originally covered the period from Adam to 629/30, but the preserved text breaks off in 628. It is the first extant chronicle to use the reckoning of 21 March b.C. 5509 for the date of Creation. Though largely a compilation of *Sexius Julius Africanus*, *Eusebios of Caesarea*, *Kosmas Indikopleustes*, and other sources, it does provide documentary and contemporary evidence for the 6th and early 7th C., esp. the reigns of Phokas and Herakleios. From the prominence accorded to *Sergios I*, patriarch of Constantinople, it has been conjectured that the author was a member of his circle.

**CHRONICON SALERNITANUM,** essential source on Byz. Italy and its relations with neighboring principalities by an anonymous 10th-C. monk of Salerno (perhaps Radoald, abbot of St. Benedetto—H. Taviani, *Annales de Bretagne et des pays de l'Ouest* 87 [1980] 175–89). The chronicle draws on the *Liber pontificalis*. Paul the Deacon, *Erchempert*, and lost archival materials, which are sometimes incorporated into the account (e.g., the letter of Louis II to Basil I and the spurious epistolary exchange between Charlemagne and the *basileus*), as well as oral tradition; it also narrates in lively—and sometimes inventive—fashion the deeds of the princes of Benevento and Salerno from the 8th C. to 974. It is particularly valuable for the later period.

CHRONICON VENETUM, the oldest surviving Venetian history, which narrates events from the sixth C. to 1008. The prominent role the anonymous work gives to the diplomat John, deacon, chaplain, and confidant of Doge Pietro II Orseolo (976–78, 991–1008), suggests that John may have written it. Most material on Byz. for the first two centuries comes from the 8th-C. chronicler Paul the Deacon. From ca.800 the Chronicon has independent value, although its sources are unclear and its chronology imprecise. It downplays Venice’s formal links to Byz. but documents relations in the conferral of dignities like spatharios, hypatos, etc., on dogs (e.g., 103.12–13, 104.1–2, 106.16–17); the defense of Byz. Italy (109.4–12, 113.11–115.4); the dispatch of Venetian bells to Constantinople for a church built by Basil I (126.13–16); and the purchase of artwork in Constantinople (143.1–2). It also treats Eastern events like the revolt of Bardanes Tourkos (100.14–19), the Bulgarian victory over Michael I (106.6–14), the attack of the Rus’ on Constantinople in 860 (117.14–118.5), Romanos I’s coup and Constantine VII’s restoration (134.23–136.13), and the marriage at Constantinople of the doge’s son with Basil II’s “niece,” Maria Argyropoulina (167.27–169.11), who was actually a sister of Romanos III (Vannier, Argyrop 43).

—M.McC.

CHRONOGRAPHER OF 354. See Calendar of 354.

CHRONOLOGY. Byz. inherited from the ancient world its wide variety of systems for ordering events at proportioned intervals on a fixed scale and for measuring the time between them, and it proceeded to construct new systems of its own. Nature’s way of ordering the passage of time is twofold: the monthly cycle of the moon and the annual seasonal cycle of the sun. Following Ro-

man usage, the Byz. calendar comprised a week of seven days, with each day divided into hours of light and dark which varied in length depending on latitude and the seasons; and a year of 365 days divided into 12 months of uneven duration with a bissextile or leap year every four years. At Constantinople and throughout most of the Byz. world each new year began on 1 Sept. (before 462, on 23 Sept.). This day traditionally signified the beginning of the indiction, the official administrative year, which became compulsory for legal purposes in 537 (Justinian I, nov.47). The indiction was originally a cycle of years used in Egypt for the purpose of assessing land tax and in 312/13 a regular indiction of 15 years was instituted. Although the successive indiction cycles were themselves never numbered, each year within the cycle was, and the indiction became the usual way for the Byz. to distinguish recent and forthcoming years. When a document is dated only by an indiction, the exact year must be established by some other means. The date of Easter was the other recurring chronological yardstick for Byz.; it required the provision of paschal tables setting out successive years with each year’s Easter date. Sometimes events were dated in or from a year of cataclysmic or portentous events such as earthquakes, eclipses, and comets.

The passing of time was ordered in a number of short-term and long-term ways. In the short term an event might be ascribed to a particular indiction or eponymous year. There was a variety of eponymous years that could begin and end at any point in a solar year: regnal years of Byz. emperors and foreign rulers (regnal years of Byz. emperors might also be used outside the empire, e.g., in Italy); years of the patriarchs of Constantinople, Alexandria, Antioch, and Jerusalem; years of the popes of Rome; and years of leading imperial officials such as praetorian prefects. Until the 7th C., following Roman practice, each year beginning on Jan. 1 was a consulship named after one or two consuls designated for that year. This was the usual way of dating years in chronicles and in public and legal documents. Lists of consuls were maintained for chronological reference.

The ordering of time over longer spans was much more complex and controversial. Some traditional measures were utilized: Olympiads (each year being the 1st, 2nd, 3rd, or 4th of a successively numbered Olympiad beginning in 776 B.C.);
local eras used in different cities and regions such as the Antiochene Era or the Diocletianic Era originating in Egypt and beginning on Thoth 1 (Aug. 29). The years of Diocletian were used initially for Easter tables but were later employed to date events and documents. More significant were the chronological measures developed by the Byz. themselves: lunar/solar cycles and world eras. Lunar cycles (19 years) and solar cycles (28 years) were employed to establish recurring synchronism and were compounded into larger cycles of 532 (= 28 × 19) years for fixing paschal dates (see Computus). The cycles also formed the basis for calculating eras from Creation, on the suppositions that the age of the world could be discovered precisely by chronographical methods and that the death and resurrection of Christ were epochal dates of special cosmic significance. All Byz. era calculations were based on the lunar cycle of Anatolios of Laodikeia, which began in 258, and the world era of Julius Africanus (Incarcarnation in 5500, or 5501 by George the Synkellos’s reckoning). Consequently, the Alexandrian Era was constructed by changing the commencement of the year to 29 Aug., and the Byzantine Era was constructed by adjusting the cycle of Anatolios first to the equinoctial new moon (21 Mar.), then to the indiction. There were other eras such as that of Malalas (Incarcarnation in 5967, Crucifixion 6000) and the eras of the Incarnation (date dependent on world era) and the Ascension (beginning in 31). The official era became the Byzantine Era, while the civil year corresponded to the liturgical year, reflecting the way Byz. had come to sacralize chronology and the calendar.

The multiplicity of dating systems used by Byz. up to the 9th C. meant that historians and annalistic chroniclers always needed to reconcile and combine overlapping systems. The chronicle of Malalas, for instance, dates events by consulsships and indications, by the Antiochene Era, and by years from Adam. It was not easy to maintain perfect synchronism over a long period, as evidenced by the miscalculation of Theophanes the Confessor for the events of the 7th/8th C. After Theophanes a unified system of chronology was used, and the date of the Creation as 5,508 years before the Incarnation was generally accepted.

To establish the chronology of events, modern scholars rely primarily on direct indications of dates. The sources, however, present various difficulties in chronology: (1) many Byz. historians do not date every event; thus, Byzantinists can place undated episodes in time only by inference, assuming that events were presented in strict chronological sequence (not always true); (2) some events or documents are dated by indication only, and the scholar needs additional information to establish an absolute date; (3) in some cases, when there is a discrepancy between the date by indication and the date from Creation, the scholar must decide which date is correct (or if both are wrong); (4) a similar problem arises when events are assigned different dates in Byz. and non-Byz. sources. If a source has no date whatever, the event can sometimes be dated on the basis of astronomical data (mention of eclipses and comets), of natural phenomena (earthquakes, plagues, etc.), or of feasts (e.g., by the occasional coincidence of Easter or a Sunday with a day and month of the solar year).

Auxiliary disciplines have elaborated complicated methods to date MSS, inscriptions, coins, seals, ceramics, and other objects; to establish the chronology of archaeological material, not only the discovery of relatively well-dated objects (esp. coins) is necessary, but also stratigraphy, that is, the sequence of inhabited levels. Particularly important and difficult is the dating of literary texts, esp. anonymous ones, that can be based only on the mention of persons and events and, to a far lesser degree, on stylistic and linguistic criteria.

—B.C., A.K.
as the time of the sensible world and aion (eternity) as the time of the everlasting cosmos (Basil the Great, PG 29:596B; Gregory of Nazianzos, PG 36:320B).

LIT. O. Waser, RE 3 (1899) 2481f. —A.K.

CHRYSAPHEs, MANUEL, musician; fl. ca. 1440–69. Although little is known about his life and growth as a musician, apparently Chrysaphes (Χρυσάφης) was the most prolific and distinguished composer, singer, scribe, and theoretician of the late Byz. period. At least two of his dated autographs survive: Athens, Iveron 1120 (July 1458) and Istanbul, Topkapi 15 (July 1463). Numerous sources reveal that he held the office of lampadarios (see SINGERS) at the imperial palace, and, as John VIII and Constantine XI commissioned certain of his compositions, his association with the imperial court is confirmed.

Chrysaphes’ compositions appear with great frequency in musical collections written after the mid-15th C. In this he compares favorably with the prolific 13th- and 14th-C. writers Glykys, Koukouzeles, Korones, and Kladas. All adhere to the new stylistic trends of the Palaiologan period, characterized in musical composition by the dominant kalophonic idiom. Chrysaphes—like his predecessors, acutely aware of the need to refurbish older chants, which were no longer suitable for the new, expanded liturgy, and to enrich the repertory with fresh vocal settings—composed a variety of musical offerings in diverse styles to suit the new requirements: solo and choral hymnody and psalmody; embellished chants; kratemata (see Teretismata); etc.

Chrysaphes was one of the few Byz. composers to write about theoretical and practical matters that he considered essential for a true understanding of Byz. chant. His treatise, entitled On the Theory of the Art of Chanting and On Certain Erroneous Views That Some Hold about It, is of great value in that it clarifies hitherto unexplained aspects of modal theory and musical practice and provides much important information about the development of Byz. singing in the 14th–15th C.

CHRYSARGYRON (ξρυσάργυρον, collatio australis), tax in gold and silver levied every five years, originally designed to pay the quinquennial do-natives to the army. The tax was instituted by Constantine I and collected from negotiatores, a term primarily denoting merchants, but also including moneylenders and prostitutes; doctors and teachers were exempt. The tax was assessed on the capital assets of the negotiatores, along with their tools and families. Officials elected in each city by those liable for the tax collected the chrysargyron; it was esp. burdensome for city dwellers and those of small means. In the 5th C. it was collected every four years. In 498 Emp. Anastasios I abolished the tax, making up the difference from his own estate.

—T.E.G.

CHRYSOBALANTES, THEOPHANES, physician; fl. probably 10th C. Recent research has demonstrated that the name of Theophanes Nonnos, previously ascribed to this physician, derives from a Renaissance forgery. No biographical data are known. At the orders of an emperor “Constantine Porphyrogennetos,” probably Constantine VII, Chrysobalantes (Χρυσοβαλάντης) compiled a therapeutic manual composed of abstracts from the writings of Oribasios, Aetios of Amida, Alexander of Tralles, and Paul of Aegina. This compendium survives as the Epitome de curatione morborum in 297 chapters. He also wrote a pharmaceutical tract, the De remediis (as yet unpublished). A third treatise, De alimentis, describes the nutritive values of various foods.

—J.S.

CHRYSOBERGES (Χρυσοβέργης, “golden wand”), a family known from the late 10th C. Some family members were judges or fiscal officials, such as “Krysobourgiou,” judge of Melitene under Rómanos III (Michael I the Syrian, Chronique 3:140f); Peter Chrysoberges, patrikios and
judge of the *velum* and Charsianon (Schlumberger, Sig. 285; the editor's date—10th C.—does not seem acceptable: at that time Patrikios was too elevated a title for a provincial judge); Peter, *megas chartularios* of the genikon (Laurent, Corpus 2, no.335) in the 11th C.; John, *megas chartularios* of the soldiers' *logothesion* in 1088; Michael, *logariastes* on Crete in 1193.

Other members of the Chrysoberes family were high ecclesiastical functionaries: two patriarchs of Constantinople, Nicholas II and Loukas Chrysoberes; Theodosios, patriarch of Antioch in the mid-11th C. (Laurent, Corpus 5,2, nos. 1521–24); Chrysoberes, metropolitan of Naupaktos, an addressee of Theophylaktos of Ohrid; another Chrysoberes, archbishop of Corinth ca.1170 (V. Laurent, REB 20 [1962] 214–18); Stephen, *char-tophilax* of Hagia Sophia in Constantinople in the mid-12th C. (Laurent, Corpus 5,1, no.101; he was, according to Laurent, identical with the archbishop of Corinth); Nikephoros Chrysoberes, metropolitan of Sardis and a writer (see Chrysoberes, Nikephoros). The family possessed lands and held modest posts in the Smyrna region from the 12th C. onward (Ahrweiler, "Smyrne" 109f). While they still participated in administration in the 14th C.—a Leo signed a charter of 1322 as imperial *doulos* (Chil. 1, no.85,98–99), and a John was an imperial envoy ca.1343—by that time they were mostly peasants, artisans, and scribes.

**CHRYSOBERGES, MAXIMOS**, theologian; died Lesbos? between 1410 and 1429. He was the elder of three brothers, all of whom became Dominicans; both Theodore and Andrew rose to be vicar-general of the order. Maximos was a student of Demetrios Kydones and studied Aquinas in his teacher's translation. After his conversion to Catholicism, he entered a Dominican monastery in Pera ca.1390. A few years later he went to Venice to study philosophy and (in 1396) to Pavia to study theology. In 1398 he traveled to Rome, where he received permission from Pope Boniface IX (1389–1404) to celebrate the Dominican rite in Greek. Circa 1399/1400 he went to Crete, where he participated in a public disputation with Joseph Bryennios and wrote his *Discourse to the Cretans on the Procession of the Holy Spirit*. He also engaged in polemics with Neilos Damilas. Maximos believed that the decline of the Byz. was a result of their disobedience to the pope.

---

**CHRYSOBERGES, NIKEPHOROS**, rhetorician; born probably ca.1160 (not 1142), died after 1213?. Promoted with the patronage of Constantine Mesopotamites to the post of didaskalos ca.1186, Chrysoberes probably fell into disgrace in the 1190s but was then appointed *magistros ton rhetoron* (1200–04) and produced speeches to Alexios III, Alexios IV, and Patr. John X Kamateros. Circa 1204 he succeeded his uncle as metropolitan of Sardis. Both his political views and literary principles were traditional and conventional. He praised imperial power but unlike Eustathios of Thessalonike remained unimpressed by military prowess. The Italian problem occupied an important place in Chrysoberes' works. In 1202 he criticized the Italians for their arrogance and vanity but was more cautious in 1204, trying to present them as loyal servants of Alexios IV.

---

**CHRYSOBULL** (χρυσόβουλλον), generic name for several types of documents bearing the emperor's gold bulla; later, used to indicate solemn documents, even those without such a bulla. Chrysobulls were also issued by the emperors of Trebizond and by Slavic rulers, esp. by Stefan Uroš IV Dušan.

Types of chrysobull included the *chrysoboullos logos*, the *chrysoboullon sigillion*, the *chrysoboullon*, and the *chrysoboullos horismos*. The *chrysoboullos logos* (preserved originals from 11th to 15th C.) was a solemn document for granting privileges (including unilateral confirmations of treaties with
countries of western Europe), sometimes also for communicating important administrative decisions or for publishing new laws. The word *logos* (usually three times), part of the date, the word *legimus* (until the 12th C.), and the full imperial autograph signature were written with red ink. The *chrysobullon sigillion* (origins from 11th to mid-14th C.) was for lesser privileges, often related to real estate. Words written in purple ink were *sigillion, legimus* (until 1119), and the emperor’s autograph *menologem*. In some early *sigilla*, the gold seal was accompanied by the emperor’s wax seal. The *chrysobullon*, sometimes defined as *horkomotikon* (when confirming an oath) or *prokuratorikon* (when it served as a procuratio), was a document for confirmation of treaties, safe-conducts, appointment of representatives (13th–15th C.), signed either with full signature, or with *menologem*. The *chrysoboullos horismos* (middle of the 14th C.) was a less-solemn document in which only the emperor’s full signature was written in purple.

The gold bulla and the emperor’s autograph full signature in purple (exception: *menologems* 1341, 1342) were also used to confirm treaties (*trevae, symbolation, symphonia*) with Venice and Genoa (1341 and after) as well as the *litterae patentes* (Gr. *aneagmenai graphai*) issued in Paris by Manuel II (1400, 1402), although the word *chrysobull* was not used of them.

---

**CHRYSOCEIR** (Χρυσοχείρ, lit. “Golden Hand”), last leader of the Paulicians (ca.863–ca.878/9). Chrysoceir may have served in his youth as an officer in the imperial army, but his career is known primarily after his succession to his uncle, Karbeas. Chrysoceir sided with the Muslims and fought vigorously against Emp. Basil I, raiding as far as Nicaea, Nikomedea, and even Ephesus, but the capture of Tephrike and his own murder by a renegade named Poullades (ca.878/9) brought about the end of the Paulician principality. The memory of his career must have survived in popular tradition, for in the *Digenes*

AKRITAS he seems to have been turned into Di-
gen's Muslim paternal grandfather.

CHRYSOKEPHALOS, MAKARIOS, metropolitan
of Philadelphia (1336–82); baptismal name
1382. Born to a noble family, Chrysokephalos
(Χρυσοκέφαλος) is first attested, as a scribe, in
1327. By 1328 he was a monk and was later
ordained hieromonk. After becoming metropolitan
of Philadelphia, he traveled frequently to
Constantinople to participate in the permanent
synod (enemousa synodos); he remained a moderate
on the questions of Union of the Churches and
Palamism. In 1345 he was praised by Akin-
dynos (ep.48) for his opposition to Palamas, but
switched sides by the following year and signed
the Tomas of the local council of Constantinople
of 1341 five years after it had been issued. By
1350 he had the title of exarch of Lydia, and in
1351 he was called "universal judge" (see KRITAI
KATHOLIKOI). He was a candidate for the patriarc-
chate in 1353 but was defeated by PHILOTHEOS
KOKKINOS.

Chrysokephalos was celebrated by his contemporaries as an orator and writer. In his youth he compiled the Rhodonia (Rose Garden), an anthology of PROVERBS and GNOMAI. Later he wrote CATENAE on Matthew and Luke, homilies, and a vita of St. Meletios of Galesios (BHG 1246a). Passarelli (infra) argues that he was responsible for the resto-
rati on of the basilica of St. John at Philadelphia and delivered his Homily on the Feast of Orthodoxy at its inauguration. His correspondents included Sophianos, Makarios Paradeissas, and Theodore MéLITENIOTES (cf. R. Walther, JÖB 22 [1973] 219–

CHRYSOKOKKES, GEORGE, astronomer and
physician; fl. Trebizond and Constantinople
c.1335–50. Chrysokokkes (Χρυσοκόκκης) is first
noted as a scribe who copied the BATRACHOMYOMA-
chia and Odyssey in 1336 (Vat. Palat. gr. 7). Frag-
ments of his works on medicine, perhaps influ-
enced by contemporary Persian practice, survive
in some MSS. He studied astronomy in Trebi-
zond under a priest named Manuel, who owned
MSS containing astronomical tables and their can-
ons translated by Gregory CHIONIATES from Per-
sian and Arabic into Greek. Taking his geograph-
ical table and one of his three star-catalogs from
Chioniates' version of the Zij al-Sanjari of al-
Khâzînî, his calendaric tables from the Zij al-'Alâ'i
of al-Fahhad, and most of his planetary tables and
their canons from the Zij-i Ikhâni of al-Ṭûsî,
Chrysokokkes produced ca.1346 an Introduction to
the Syntaxis of the Persians (Exegesi eis ten Syntaxin
ton Person), dedicated to his "brother," John Char-
sanites (perhaps identical with John Charsianites,
the founder of the CHSARIANITES MONASTERY—
H. Hunger, JÖB 7 [1958] 137). Some 30 MS
copies survive of this extremely popular work,
which influenced several anonymous sets of astro-
nomical tables and canons written in the second
half of the 14th and the beginning of the 15th C.
as well as the Tribilos of Theodore Meliteniotes.
Shelomo ben Eliyahu of Thessalonike (fl.1374–
86) translated Chrysokokkes' Exegesi into Hebrew
(B. Goldstein, Journal for the History of Arabic Scie-
ence 3 [Aleppo 1979] 56f). Chrysokokkes himself
made no significant contribution to astronomy (D.
Pingree, DOP 18 [1964] 144f). His authorship of
the brief list of equivalent ancient and modern
toponyms (published by U. Lampsides, BZ 38
[1938] 320–22) is extremely doubtful.

A later George Chrysokokkes, active in Con-
stantinople ca.1420–30, was an important hu-
manist. counting among his students BESBARI
and among his Italian patrons FILEFO, Aurispa,
and Cristoforo Garatone (Wilson, Scholars 271f).
Another astronomer, Michael Chrysokokkes, a
notary of the Great Church in Constantinople,
translated the astronomical tables of Immanuel
ben Jacob Bonfils from Hebrew into Greek in
1435 under the title Hexapterygon (P. Solon, Cen-

ED. Tables and one star-catalog—Astronomia philolaica,
Canons (partial)—Ad historam astronomiae symbola, ed. H.
CHRYSLORAS, DEMETRIOS, writer and government official; born before 1360, died after April/May 1416. Little is known of his biography; his relationship to Manuel CHRYSLORAS (Χρυσολόρας) is unclear. He was an intimate of MANUEL II PALAIOLOS, who addressed eight letters to Chrysoloras between 1397 and ca. 1417. About 1384/5 he went on an embassy to a “barbarian” ruler, probably the Ottoman sultan Murad I. Despite his friendship with Manuel, he served as mesazon for JOHN VII PALAIOLOS in Thessalonike from 1403 to 1408.

Chrysoloras wrote a variety of works: anti-Latin polemics (including a dialogue among Thomas Aquinas, Neilos Karasillas, Demetrios Kydones, and himself), a eulogy of St. Demetrios, and discourses on the Annunciation and Dormition. His enkomion of a flea is still unpublished. In 1403 he composed an oration of Thanksgiving on the first anniversary of the defeat of BAYEZID I at Ankara (P. Gautier, REB 19 [1961] 340–57). His description of the ideal emperor (Comparison of Old Rulers and the Present New Ruler) was the source of a closely related work, his “Hundred Letters” to Manuel, a collection of very short letters praising the emperor.

CHRYSLORAS, MANUEL, diplomat and teacher of Italian humanists; born ca. 1350, died Constance 15 Apr. 1415. About the same age as MANUEL II, Chrysoloras was the emperor’s friend and was entrusted with numerous European missions. During embassies to Venice in the 1390s he first came into contact with Italian scholars. From 1397 to 1400 he taught Greek in Florence; his most prominent student was Guarino of Verona (1374–1460). After his return to Constantinople in 1403, he continued his teaching and prepared a textbook on grammar. Chrysoloras made periodic trips to the West to seek assistance against the Turks; in 1406 he was in Venice and Padua, from 1407 to 1410 in Paris, London, Spain, and Bologna. Chrysoloras converted to Catholicism and spent two years in Rome (1411–13) attempting to negotiate the convocation of a church council. He then attended the Council at Constance, where he died.

His relatively small literary output included a Comparison of the Old and New Rome, in the form of a letter to Emp. JOHN VIII PALAIOLOS. In this work Chrysoloras shows his appreciation of the naturalism of antique art and marvels at the ancient ruins and Christian shrines of Rome, but concludes that Constantinople is the superior city because of its incomparable location and wondrous monuments such as Hagia Sophia. An autograph MS (Meteora, Metamorph. 154) preserves a lengthy and important discourse to Manuel, written in 1414, eulogizing the deceased despotes THEODORE I PALAIOLOS, and urging the promotion of education and study of the past (C.G. Patrinelis, GRBS 13 [1972] 497–502).

CHRYSOPOLES (Χρυσόπολις, lit. “Golden City”), the name of at least two Byz. cities, one in Macedonia, the other in Bithynia.

CHRYSOPOLES IN MACEDONIA, a kastron at the mouth of the STRYMON River; it was located near ancient AMPHIPOLES which disappeared in the 7th C., although some archaizing authors (from Bryennios through Kantakouzenos) continued to use the name Amphipolis. Chrysopolis is first attested in an act of 984 transferring from Lavra to Iveron 25 exempted households there (Iviri, no.6.32–35). An act of the mid-11th C. (ibid., no.30.2) places Chrysopolis in the district (dioikesis) of Boleron and Strymon. Chrysopolis was a harbor on “the sea of Chrysopolis” (Solovjev-Mošin, Grčke povelje, no.9.43–44); in 1347 Stefan Uroš IV Dušan conferred upon Lavra an annual reve-
nue of 300 hyperpera from the salt pan and mooring stations in Chrysopolis (ibid, no.16, 48–51). The town is also mentioned in Greek portulans of the 15th–16th C.

Surviving walls represent several phases ranging from the original settlement in the west to a vast extension in the east during the 14th C., probably under Andronikos III, and later repairs.

CHRYSOPOLIS IN BITHYNIA (Scutari, mod. Üsküdar), a harbor on the eastern shore of the Bosporos, and a suburb of Chalcidon. It was one of the principal places to cross the strait to Constantinople. In antiquity it was a simple home (W. Ruge, RE 3 (1899) 2518). In the 9th C. Patr. Nikephoros I described it as a coastal churon opposite Constantinople (Nikeph. 44.10–11) and as a port, epineion (60.25).

Licinius was captured in Chrysopolis after his defeat in 324 and delivered to Constantine I. The town gained significance in the 7th and 8th C., when both the Arabs attacking Constantinople and armies from rebellious themes headed toward the Bosporos: thus in 668 the soldiers of Anatolikon assembled in Chrysopolis to demand that Emp. Constantine IV accept his brothers as co-rulers; in 715 the town served as a base for the Opsikionoi who mutinied against Anastasios II; in 717 the future Leo III moved against Theodosis III from Chrysopolis. The town also played a crucial role in the revolt of Artabasdos against Constantine V. In 803 Bardanes Tourkos arrived there and waited in vain for the citizens of Constantinople to invite him into the city. In 988 Basil II defeated Bardas Phokas at Chrysopolis, and in 1055 the rebellious Bryennios went to Chrysopolis. Around 1050 Chrysopolis formed a theme under the command of a strategos (Skyl. 467.2–3). Its role evidently diminished after the Turkish conquest of Asia Minor, where these uprisings had originated. In 1200 Alexios III moved to Chrysopolis when there was a rebellion in Constantinople. Under its new name, Scutari, Chrysopolis is mentioned by Latin authors in the 13th C.

Chrysopolis was an important monastic center.

The most renowned of its monasteries was built by Philippikos.

- A.K.

CHRYSOTELEIA (χρυσοτέλεια, lit. “tribute in gold”), a tax introduced by Anastasios I. It is described by a 6th-C. chronicler (Malal. 394,8–10) as a tax imposed upon Juga, collected in money instead of in kind, and used “to feed the stratiotai.” Evagrios Scholastikos (HE 3:42) criticizes Anastasios for levying the chrysoteleia, since the emperor “sold the soldiers’ expense” and placed a heavy burden on taxpayers; according to John of Antioch, Anastasios’s measures left the provinces (eparchiai) empty of military contingents (FHG 4:621, fr.215). This evidence has been variously interpreted: as a new tax replacing the chrysargyron that Anastasios had abolished; as a commutation of the annonae; and finally as an adae-ratio tironum (see Secondary Taxes) that was effective only temporarily. The vernacular expression chrysoteles eispraxis (exaction in gold) used by the hagiographer of Nikon ho “Mete-noeite” (ed. Sullivan, ch.58.13) was understood by N. Svoronos (Cadastre 85, n.1) as synonymous with charagma.

- A.K.

CHRYSOTRIKLINOS (Χρυσοτρικλινος, “golden hall”), a hall in the GREAT PALACE, probably constructed at the end of the 6th C. A domed octagon lit by 16 windows, the Chrysotriklinos was the place of ceremonial receptions, esp. at Easter. Its principal table (of gold or rather gilded silver) accommodated 30 high-ranking state and church functionaries; there were 2 to 4 additional tables for 18 persons each, where subordinate officials were seated. Literary sources sometimes mention a small table for the emperor who sat apart from his guests. The imperial throne, decorated with a mosaic representing the enthroned Christ, was placed in the apse of the Chrysotriklinos. The hall contained exquisite furniture, of which the most renowned piece was the so-called Pentaptychion, a large cupboard displaying vases, crowns, and other precious objects. The Chrysotriklinos was surrounded by numerous halls: Tripeton (a ves-
tibule of Chrysotriklinos). Horologion (possibly containing a sundial), Kainourgion (adorned with 16 columns and with mosaics depicting imperial expeditions), Lausiakos, and the Triklinos of Justinian (II), from which one could reach the Hippodrome through the Gate of Skyla. The official in charge of the Chrysotriklinos (also called the protospatharios of Chrysotriklinos) was an important court dignitary, but his functions are not yet clear.

-A.K.

CHURCH (ἐκκλησία, lit. “assembly”). The Byz. did not develop a systematic ecclesiology. Instead, for them the church was a sacramental communion that included not only the earthly oikoumenē but the Kingdom of Heaven as well, with angels, saints, and God himself: in the words of Isidore of Pelousion (PG 78:685A), a “union of saints hammered out of true faith and perfect behavior.” In general, however, the Byz. church rejected the claims of Donatism and Montanism, whose followers sought to exclude sinners from membership in the church. Sanctity and unity were considered basic features of the church, contrasted with the multiplicity and falsity of paganism and heresy. The unity of the church was underlined by such epithets as katholike (general) and oikoumenike (universal), and its dogmatic correctness by the epithet orthodoxos (of right belief).

Administration of the church was based on patristic texts and the canons of ecumenical and local councils, codified beginning in the 6th C. and regularized in the Nomokanon of Fifty Titles. The Byz. church did not have a single head, rejecting the idea of papal primacy, but embraced the concept of pentarchy in which patriarchs and the pope maintained administrative control of their individual territory. In fact, the loss of the East to the Arabs in the 7th C. and the separation of the West made the patriarch of Constantinople the de facto head of the Byz. church. The Byz. defended the concept that the authority of the council was superior to the power of the patriarch; in an extreme form, an anonymous treatise of the 10th C. tried to justify the superiority of an assembly of metropolitans over the patriarch of Constantinople (Darrouzès, infra 24–29). On the contrary, Niketas of Amaseia defended the thesis that the patriarch was the supreme arbiter in the ecclesiastical sphere. With regard to the state, theoreticians insisted that the church was superior to the civil administration (e.g., John Chrysostom, PG 61:507.42–43), in contrast to the attempt of the state to treat the emperor as the supervisor (“bishop”) of the church’s external affairs. The author of the Epanagoge presented the theory of two equal powers, that of the emperor, who deals with material matters, and that of the patriarch, responsible for mankind’s spiritual health and salvation. In practice, however, civil administration usually had the upper hand over the church.

As an institution, the church possessed an established organization based on a hierarchy of rank (bishop, priest, deacon, etc.), on administrative gradations (patriarchate-metropolis-bishopric, etc.), on regular assemblies (councils), and on the system of ecclesiastical officials. Its privileges included a special canon law distinct from civil law, and various exemptions for the clergy. The church obtained jurisdiction over the clergy and in some matters over the laity. Its material basis consisted of the ownership of land, imperial grants (solemnia), movable property (esp. liturgical vessels and vestments), and voluntary donations and bequests; the mandatory tithe was a relatively late innovation. Ecclesiastical property was in theory inalienable, and attempts to confiscate it aroused serious conflicts (e.g., the case of Leo of Chalcedon).

Being a holy body, the church could expel sinful members, both temporarily and permanently (by means of excommunication). Missions expanded the church’s influence by spreading Christianity to new territories, baptizing heathens and heretics, and converting Jews and Muslims. The Byz. church had no monopoly on education, but it obtained supervision over teaching and offered episcopal posts to many outstanding scholars. Its means of salvation were challenged by some mystics who, like Symeon the Theologian, considered the individual path of vision of the divine light as superior to the activity of the institutionalized church. The political role of individual bishops was significant in secular affairs, but the influence of episcopal organization had to compete with monasteries (see monasticism) that
often managed to obtain independence from local bishops (stauroregion) and even from the patriarch.

source. Darrouzès, Ecclés.

CHURCHES, CAVE AND ROCK-CUT. See Rock-cut Churches and Dwellings.

CHURCHES, IMPERIAL, were of three main types, all more or less exempt from patriarchal and episcopal jurisdiction, although this exemption was contested in the early 11th C. by Patr. Alexios Stoudites (cf. Rhalles-Potles, Syntagma 5:29) and no doubt at other times. 1. One group included the churches and chapels of the imperial palaces and provincial governors’ residences (praitoria). Their exemption is authorized in a real or spurious piece of imperial legislation whose administrative terminology reflects the realities of the 6th–7th C. (L. Burgmann in Cupido Legum 20).

2. Another group included those founded by emperors, in association either with the Palace (Nea Ekklesia, Chalke) or, more commonly, with monastic and philanthropic institutions in Constantinople (e.g., Myrelaion, Mangana, Pantokrator). Such foundations, officially designated as “pious houses” (eugeis oikoi) or, by the 11th C., “pious bureaux” (euge sekreta), constituted, with their large endowments, a special crown domain (N. Oikonomides, TM 6 [1976] 138–40).

3. Finally, there were monasteries whose founders, often highly respected, influential ascetics, put them under the direct protection of the emperor, in order to make them independent (autoxoustos or autodeskota) of other earthly authorities (Meester, De monachico statu 104; I. Konidares, To dikaios tes monasteriales periousias [Athens 1979] 173–79). Such foundations were registered in the imperial sakellion (Lavra 1, no.33) and put under the care of particular government ministers (P. Magdalino, REB 42 [1984] 235f).

CHURCHES, PRIVATE, were characterized, in canonical terms, by “oratory” (eukterion) status, and, for practical purposes, by dependence on a “proprietor” (ketor) able to determine how and by whom the foundation was used. Although the rights and requirements of ketores varied considerably and were sure to lapse sooner or later, it is useful to draw a conceptual distinction between churches founded on this basis and churches founded for purposes of public worship. The institution of the private church was already well established by the 6th C., and became even more popular later, accounting for the vast majority of churches built after the slump of the 7th–8th C. From this time the existing public churches were, except in newly reoccupied and reorganized provincial areas, generally more than adequate, while the urge to found one’s own church was widespread among all who had the means, which, to judge from many surviving structures, did not have to be very great.

A private church was the expression of all that the founder held most dear. It provided an intimate venue for his regular religious observances; it embodied his personal devotion to the heavenly figure to whom it was dedicated; it was a spiritual investment for his own salvation, and, as sacred property, a financial investment that was relatively secure from fiscal erosion and partial inheritance. Whether it served as a funerary chapel or merely commemorated the ketor and his family in its prayers, it was a monument to him and the unity of his kin. The significance of the private church is very well illustrated by the will of Eustathios Boilas (1059), who with his late sister’s grandchildren had joint responsibility for a church that his mother had founded, while he himself was founder of two churches, one a burial chapel, and, close to his house, another which clearly meant more to him than either of his two daughters to whose hands he reluctantly entrusted its fate (Lemerle, Cinq études 23–29).

The relationship between private churches and the authorities was ambivalent. Local bishops, who were often ketores in their own right, cannot have objected to modest foundations whose properties were registered in an inventory in the episcopal archives and might be added to the episcopal estates after the founder’s death—a practice that Basil II tried to prevent (Zepos, Jus 1:268). On the other hand, churches founded by rich and powerful ketores threatened to take business away
from the bishop's church, esp. from the 9th–10th C., when legal restrictions on the liturgical functions of domestic eukteria lapsed and founders were able to evade episcopal control by placing their foundations under the jurisdiction of the patriarch. The possibility that private services in domestic chapels were a cover for clandestine gatherings concerned the state as well as the church. William Adam (pseudo-Brocardus), a Western writer of the 14th C., saw the private churches as a politically subversive institution peculiar to Byz. (RHC Arm. 2:475).

The proliferation of private churches, whether urban or rural, domestic or monastic, undoubtedly affected the development of liturgy and church architecture from the 6th C. The exclusion of the laity from entrance processions, the confinement of these within the church, the elevation of the sanctuary barrier, and the disappearance of the synthonon and soleá may all be related to the saying of private masses in private chapels. The intimate scale of the Byz. church of the 10th–12th C. and its standardization as a hierarchy of inner surfaces peopled with icons had much to do with the ktetor's desire for communion with his own personal “heaven on earth.”

The diversity of plans, masonry types, and forms of decoration in private churches is evident in such regions as have been investigated in detail (Göreme, Kastoria, and the Mani), although local traditions tended to dictate norms in these respects. More idiosyncratic were the oratories that existed in monasteries such as St. Catherine's on Mt. Sinai and that of Constantine Lips, and in katholikai ekklésiai, for example, in the galleries of Hagia Sophia in Constantinople. After the 8th C., private chapels are found in the residences of both lay persons and ecclesiastics.

CHURCH FATHERS (ἐκκλησιαστικοί πατέρες in Eusebios of Caesarea, Against Markellos 1.4.3), the most authoritative ancient Christian writers, second in their significance only to the Apostles. The totality of their oeuvre is called patristics or patrology. In the first centuries of Christianity the title “father” was given to spiritual teachers in general and esp. to bishops; pateres was also the term for the desert fathers whose sayings were collected in the Apophthegmata Patrum and for the participants in the First Council of Nicaea. The concept of the church fathers as guardians of Christian tradition was developed from the 4th C. onward, when their opinions were frequently used during Trinitarian and Christological discussions and were, for this purpose, gathered in florilegia; one of these florilegia was the so-called Doctrina patrum de incarnatione Verbi (The Doctrine of the Fathers on the Incarnation of the Logos), a collection of Orthodox and “heretical” statements concerning Monophysitism and Monothelitism, produced between 660 and 685 (Beck, Kirche 446). In the West, a (partial) list of “holy fathers” was established, probably in the 6th C., and is found in the so-called Decretum Gelasianum, the apocryphal decree of Pope Gelasius I.

The early Christian theologians are divided into the earlier Apologists (Justin, Hippolytos, etc.) and later “fathers” in a narrow sense of the word, while such authors as Origens, Tertullian, and Lactantius occupy an intermediate place. Among the Western fathers Augustine was considered supreme; after him patristics declined, and theological thought revived only in the 11th C., in the form of scholasticism. In the East, patristics flourished from the 4th to the 6th C., with pride of place being given to the Cappadocian Fathers and pseudo-Dionysios the Areopagite in the theological field, while John Chrysostom marks the apogee of Christian ethics. John of Damascus summarized the whole development of Christian doctrine up to his time and can be called the last of the church fathers. The great theologians of the post-patristic period (Symeon the Theologian, Nicholas of Methone, Gregory Palamas, etc.) are not considered church fathers.

CHURCH PLAN TYPES. The classification of religious architecture by type was first established around the turn of the 20th C. and served as a chronological taxonomy. Although this method of dating has largely been superseded, the identification and study of these types remains a useful system of basic classification. The most common plan types are the following: basilica (e.g., St. Achilleos, Mikra Prespa); domed basilica (St. Irene, Constantinople); cross-domed church (Hagia Sophia, Thessalonike); cross-in-square (North Church of Lips Monastery, Constantinople); domed octagon (Nea Moni, Chios); Greek cross, or domed octagon (katholikon, Daphni); ambulatory church (Pammakaristos, Constantinople); triconch, or trefoil (large-scale: katholikon, Great Lavra, Mt. Athos; small-scale: Koubelidike, Kastoria); tetraconch, or quatrefoil (large-scale: martyrion [?], Seleukeia Pieria; small-scale: Veljusa). (For ill., see next page.)

Many other church plan types existed, but they were less commonly employed. Most could be enlarged by the addition of enveloping spaces—exedrae, ambulatories, aisles, porches, or chapels—resulting in new compound plans and more elaborate exterior massing. Multiplication of domes (St. Sophia, Kiev) is one of the most important architectural by-products of this phenomenon.

CHURCH PROGRAMS OF DECORATION. From the earliest surviving remains it is evident that Christian edifices were adorned with figural images selected and positioned according to their religious significance. Already in the mid-3rd-C. baptistery in Dura Europos both symbolic depictions such as the Good Shepherd and representations derived from biblical narratives such as the Healing of the Cripple were used to reinforce visually the beholder’s ritual experience.

From the 4th to 7th C. elaborate narrative cycles from both the New and Old Testaments appeared on the interior walls of Christian monuments (S. Maria Maggiore, Rome; S. Apollinare Nuovo, Ravenna). Other monuments displayed votive panels (St. Demetrius, Thessalonike). On the triumphal arch and in the apse of the bema a variety of themes occurred, including Christ in Majesty among saints, apostles, and/or donors (S. Vitale, Ravenna), the prophetic vision (Hosios David, Thessalonike), the Virgin with accompanying figures (Kitti, Lythrakomi), and even narrative images, like the Transfiguration (St. Catherine, Sinai; S. Apollinare in Classe, Ravenna).

Ephrases of churches in Constantinople and surviving provincial monuments suggest that in the period from the 9th through the 10th C. programming was flexible. Scenes such as the Ascension and Pentecost as well as the Pantokrator might appear in the central vault. The Virgin was the most popular but certainly not the only subject for the conch of the apse. The nave might be adorned with elaborate Christological narratives or with single figures. Particularly in the provinces, votive programs seem to have maintained their pre-Iconoclastic popularity.

The so-called “Middle Byz. Program” appeared as a dominant formula only at the end of the 10th and beginning of the 11th C., coincident with the political consolidation of the empire. This scheme is typified by a Pantokrator in the central dome and the Virgin, most often holding the Child, in the conch of the bema. The heavenly court—angels, prophets, apostles, and saints—are ranked on the walls and vaults below along with icons of the Great Feast cycle. The hierarchical nature of this program complements the pyramidal ordering of space in the relatively small, centralized churches constructed during this period. With the collapse of the empire in 1204, narrative programming with the multiplication of framed, quadratic images replaced the more iconic and architeconic forms of the earlier period.

CHURCH SLAVONIC, in its broadest sense, the liturgical and literary language of the Orthodox (and Catholic Croatian) Slavs. The term Old Church Slavonic (OCS) is normally reserved for the language of the earliest translations by Sts. Constantine the Philosopher and Methodios and their immediate successors, as preserved in Glagolitic and Cyrillic MSS of the 10th–11th C.
Subsequently, distinct local recensions of Church Slavonic emerged through its interaction with the Slavonic vernacular languages (Russian Church Slavonic, Bulgarian Church Slavonic, etc.).

-S.C.F.

**CIBORIUM** (κυβόριον), a domed or pyramidal structure on four or six columns (K. Wessel, *RBK* 1:1055). In Roman times ciboria were erected over tombs both to protect them and to enhance their importance, hence their use over the altar symbolizing the tomb of Christ. Similarly, the silver ciborium at St. **DEMETRIOS** in Thessalonike was thought to mark the site of the saint’s tomb (Lemerle, *Miracles* 1:114f). A pyramidal ciborium rose over the sarcophagus containing the saint’s relics in the church of **HOSIOS LOUKAS** (R.W. Schultz, S.H. Barnsley, *The Monastery of Saint Luke* [London 1901] 29, pl.46). Circular, hexagonal, or rectangular in plan, ciboria survive mostly in fragments; exceptionally complete examples are the restored ciborium of the Katopoliane in Paros and that of the Metropolis church at Kalambaka (see STAGOI). Some ciboria display columns with spiral fluting and Corinthian or protome capitals, their pyramidal or domed canopy terminating in a cross (Orlandos, *Palaiochr. basilike* 2:471–81). Painted representations of ciboria suggest that they were furnished with curtains, though this point has been contested (Mathews, *Early Churches* 165–68).

Ciboria sometimes combined colored and white marble, while those of St. Polyuektos and St. Euphemia in Constantinople displayed inlaid glass decoration. They were cast in bronze and gilded, or dressed in silver like that in Hagia Sophia, Constantinople, as described by PAUL STENTARIOS.

-L.Ph.B.

**CILICIA** (Καλκία), Roman province of southeastern Asia Minor consisting of two districts: Cilicia Pedias, a well-watered fertile plain bounded by the Taurus, Antitaurus and Mediterranean, and Cilicia Tracheia, the rugged region of the southern Taurus stretching west to **PAMPHYLIA**.

Under Diocletian, Cilicia Trachea became part of **ISAURIA**. Cilicia Pedias was divided ca.400 into Cilicia I (metropolis TARSOS) and Cilicia II (metropolis ANAZARBUS); their churches were under the patriarchate of Antioch. Located on the highway from Constantinople to northern Syria via the CILICIAN GATES, Cilicia prospered; it was a densely populated center of agriculture, trade, and manufacture (esp. of linen) through the 6th C. In 646, however, Mu’AWIYA found the area virtually deserted, and by the early 8th C. it was occupied by the Arabs, for whom it became a bulwark against Byz. attacks. These achieved their goal with the reconquest of Cilicia by Nikephoros II Phokas in 965. The district did not then form an administrative unit, but was ruled by strategoi of separate fortresses (N. Oikonomides in *CEB*, vol. 1 [Bucharest 1974] 288f). After 1071 Byz. lost Cilicia to Philaretos Brachamios; thereafter, it constantly changed hands between Byz., Crusaders, Seljuks, and Armenians. John II Komne-
nos took it in 1137; Manuel I Komnenos had to reconquer it in 1159; it was definitively lost to the Armenians after 1176 (see CILICIA, ARMENIAN). Cilicia contains the remains of numerous late antique churches and medieval fortifications.

—C.F.

CILICIA, ARMENIAN (also known as Lesser Armenia), principality (1073–1099) and subsequently kingdom (1099–1375) under the Armenian RUBENID and Het’umID, and the Latin LUSIGNAN dynasties. Armenians fleeing from Seljuk invasions after the Byz. defeat at Mantzikert (1071) took refuge in Rubenid strongholds such as Vahka and Gobidar (Kopitar) in the Antitaurus mountains, and the Het’umid Lambron near the Cilician Gates. By the end of the 12th C. the Rubenids had established a kingdom that encompassed at its peak the coastal plain of Cilicia as well as the surrounding mountains. Its capital was located at Sis, in the foothills.

The princes of Armenian Cilicia, although occasionally supported by the Crusaders, were forced to recognize the suzerainty of Byz. (reaffirmed by the campaigns of the emperors John II Komnenos in 1138 and Manuel I Komnenos in 1158) and negotiations were opened between the Armenian church and the Byz. Empire. The Third Crusade enabled the Rubenid prince Leo II to be crowned king as Leo I (see Leo II/I). Officially, Byz. sanctioned this action, but Armenian Cilicia turned thereafter increasingly toward the Latins.

The kingdom prospered from the trade passing from the West to the Far East through its port of Ayas (It. Lajazzo), esp. during the period of Mongol protection in the second half of the 13th C. Its international culture reached its apogee in the same period.

The recognition of Mongol suzerainty by the Het’umids in 1253 bolstered Armenian Cilicia for a time, but its political situation between the Seljuks of Rûm, the Mamlûks of Egypt, and the Mongols remained precarious, esp. after the conversion of the latter to Islam at the end of the 13th C. By 1292 the Armenian patriarchs were forced to abandon their seat at Hromkla on the Euphrates overrun by the Muslims and to seek refuge at Sis. Internal struggles between pro- and anti-Latin parties, fueled by the growing influence of Western institutions and by the negotiations for an ecclesiastical union with Rome, sapped the strength of the kingdom still further. The hostility of the Armenian nobility toward the Latin Lusignans led to the murder of King Guy in 1344. In 1375, an Egyptian force overran Cilicia, sacked the capital, and carried away the last king as a prisoner to Cairo.

—N.G.G.

Art of Armenian Cilicia. The many ruins of fortified towns in Cilicia include both palaces and churches, some with traces of monumental painting. Some silverwork survives—a reliquary and bookbindings—but it is MS illumination that best reveals the brilliant art of the Cilician court. The traditions of great scriptoria (in both monasteries and towns) and the contributions of individual artists and aristocratic patrons can be traced for decades at a time: for example, MSS are known from Hromkla from just after the founding of the patriarchal see there in 1151 until the Mamlûk sack of 1292; among them are seven signed from 1256 to 1269 by the artist T’oros Roslin.

Although Armenian workshop traditions survived the emigration to Cilicia, Byz. styles and images are found throughout Cilician painting. A 13th-C. Gospel (Erevan, Mat. 7651) copies almost all the miniatures of the 11th-C. Frieze Gospel in Florence. Ornate inscriptions and arabesque arches on Canon Table pages, however, reflect Islamic art, while the Lectionary of Het’um II (Mat. 979) contains Chinese elements. Cilician royalty are shown wearing oriental textiles. Latin influence was particularly strong after the Council of Sis (1252), as the affinity of T’oros Roslin’s figure style to that of the Arsenal Bible (Paris, Arsenal 5211) or the adoption of the Madonna della Misericordia type for Cilician donor portraits demonstrates.

—A.T.
CILICIAN GATES (Πύλαι Κιλκίς), the narrow pass, 1,050 m high, that offers the easiest crossing of the Taurus Mountains between central Anatolia and the plain of Cilicia, and thus always the route of a major highway. It was esp. important during the wars with the Arabs after they gained control of Cilicia in 709. The term strictly denotes the narrow pass but is also applied to the whole stretch of road through the mountains. The main center of this district was Podandos, a city and bishopric and later kleisoura of Cappadocia, which was the constant goal of (often successful) Arab attacks in the 8th–10th C. Lulon, on a steep peak at the west end of the pass, provided a final defense and served as the first in the chain of beacons that rapidly transmitted news of attack to the capital. The pass contains the remains of several fortresses.

CISTERNs. See CONSTANTINOPLE, MONUMENTS OF: Cisterns.

CITATION was an important stylistic device closely connected with the tendency toward archaism and imitation (mimesis). On the one hand, citation was a sort of game between the author and reader, the former avoiding any direct indication of the origin of the citation and the latter challenged to guess the source (Hunger, Lit. 2:7). On the other hand, citation could be a powerful vehicle to convey direct information; e.g., Christian apologists (imitating their Jewish predecessors) quoted ancient poets for their propaganda, and during theological discussions citation was the major argument that time and again led to forgery or deletion of crucial passages. The most commonly quoted texts were the Bible, Homer, and the ancient tragedians. Often citations originated not from original texts but from florilegia and lexika; quoting from memory was common and frequently caused distortions. The frequency of citation differs from work to work: some texts (Christos Paschon, Anacharsis, Barlaam and Ioasaph) are consciously composed of borrowed lines, while other works used citations to a limited degree. Since the concept of plagiarism did not exist, the use of quotations could grow into a copying of entire passages. Even though there was an element of showing off the author’s knowledge (D. Christides, EEpSPTh 22 [1984] 689), citation also performed specific aesthetic functions. It connected the present with the past, depicted objects and events from an alien point of view, and introduced the element of unexpectedness and strangeness (esp. by combination of biblical and pagan quotations); a new image was often constructed from borrowed words and sentences.

CITIES (πόλεις), the cornerstone of classical civilization, were centers of population, culture, trade, manufacture, and administration. By the 6th C., the East contained more than 900 cities, of which the greatest were CONSTANTINOPLE, ALEXANDRIA, and ANTIOCH. A large provincial city might extend 2 km in its greatest dimension and have a population of 50,000, but most were much smaller. Urban wealth was based on agriculture, but trade and manufacture were significant. These were usually on a small scale in which the artisan would sell the goods he made, but many cities, esp. ports, had extensive trade in essential or luxury goods. Major classes of the urban population were the curiales, bureaucrats and state officials, ecclesiastics, landowners, and the members of guilds, the craftsmen and shopkeepers.

The city differed from rural areas by its provision of public works and services. Most were maintained until the 6th C.: cities provided free bread, aqueducts, clean and lighted streets, baths, markets, theaters, hippodromes, and latrines. Diocletian instituted municipal higher education to supply trained civil servants. The church, whose revenues were increasing, offered public welfare, with hospitals, poorhouses (ptochotropheia),
homes for the aged (gerokomeia), and inns (xenodocheia). As cities found public works more difficult to support, governors came to build or restore them. Such activity was concentrated in provincial capitals, which often prospered at the expense of lesser cities. Urban prosperity varied considerably, from Constantinople, which could draw on the revenues of the empire, to cities in exposed regions like North Africa (e.g., Carthage in the 7th C.) and the Balkans, where ruin and contraction were common.

Cities were administered by councils or curiae, which relied on rents, endowments, local taxes, and contributions from their members (curiales or decurions) to support their expenses: supplying bread and water to the population, higher education, police, and esp. maintenance of baths and other public facilities. The confiscations of Constantine I and Constantius II deprived the cities of their territories and taxes; the resulting financial distress was only partially relieved when Valens remitted one-third of these revenues. The history of late antique cities is thus marked by shortage of money, weakening of the councils, and growing interference from Constantinople. As the decurions became increasingly reluctant to serve, the government tried a series of expedients to maintain the councils, install responsible administrators (defensor civitatis), and restrain the influence of rapacious governors. Finally, Anastasios I entrusted the cities to their bishops and landowners, replacing the councils with the collective responsibility of the church and properties.

Many cities suffered serious demographic decline from the bubonic plague of 542 and later years; however, Constantinople, provincial capitals, pilgrimage centers, and cities along main highways and trade routes continued to prosper.

Excavations have revealed the physical aspect of the late Roman city. The broad boulevards, numerous open squares, and massive palaces and churches of Constantinople represented the planning of the age but could not be duplicated elsewhere. New districts of cities like Antioch, however, show a regular plan featuring orthogonal streets with monumental arches at their intersections. Most cities followed existing and often irregular plans, but in all cases colonnaded streets (emboloi) were an essential element for communication and commerce, as rows of shops laid out behind their mosaic-paved colonnades became the chief markets. In general, the ancient urban fabric survived: theaters, odeons, baths with gymnasia, marketplaces, and civic centers were all maintained, while the villas and luxurious apartments of the rich were frequently expanded, and monumental fountains adorned the streets. Major changes reflected religion and style. Pagan temples were abandoned and demolished for building materials; churches took their place. In some cases, temples were turned into churches, but more often the churches grew up on the periphery and only gradually invaded the city center. Late antique cities looked very different from their predecessors: buildings universally employed reused material, often covered on the outside with plaster, and were decorated inside with frescoes, cut marble, and mosaics. Color was manifest everywhere. Ancient urban regularity tended to disappear as open spaces and streets became cluttered with shoddy commercial construction (shops were typically extended into streets, and booths set up in colonnades), and abandoned buildings were left in ruins. Deterioration of open space was esp. marked in the 6th C. Cities like Justiniana Prima, or some in Lycia, have virtually no civic buildings of the traditional type but contain houses and shops closely packed along regular streets and dominated by one or more large churches, thus illustrating the decline of public works and growth in the power of the church.

In the 7th C., cities underwent fundamental and permanent transformations as they reduced in size and population; their public works and services came to an end. They generally became ruralized, differing from fortresses or villages only in their size, occasional preservation of ancient buildings, and continuing role as seats of the ecclesiastical hierarchy. Merchants and craftsmen became rare; the curiales disappeared; cities were commonly under the command of military officials, subordinates of the strategos. External blows—Persian, Arab, Slav, and Avar attacks—contributed to the crisis.

A typical city of the Dark Ages consisted of a fortified center, often with a separate acropolis, which occupied a small part of the former urban area. The walls, built from ruined buildings, typically incorporated or obliterated former public structures and ignored previous streets. Within them, civic buildings were almost universally
abandoned: most became quarries for building material; others were occupied by squatters who built poor dwellings within them, often in connection with burning their marble for lime to make mortar. Churches, however, survived, often as increasingly dilapidated basilicas that came to tower over the small and crowded industrial installations (for pottery, glass, lime, and iron working) and houses. Monasteries and cemeteries, formerly alien to urban areas, came within the walls. Houses were small and poorly built, usually containing courtyards with large pithoi for storage of grain and liquids. With the abandonment or destruction of aqueducts, cisterns were constructed everywhere. Many settlements clustered behind the walls of a hilltop fortress, while others were scattered around the ancient ruins, often as separate settlements resembling villages, each with its own water supply and limited facilities for production. Even Constantinople was affected: large parts of the city fell into ruin, public services were abandoned, and the population declined drastically.

Recovery began in the 9th C. and continued in Asia Minor through the 11th, in Greece through the 12th C. The cities never regained their ancient roles, but conditions within them improved as peace and trade brought growth. New larger circuits of walls were built, but cities continued to expand outside them. Small neighborhood churches were erected and an occasional open marketplace appeared, but cities remained crowded and poorly built, with small houses along narrow winding streets which had no relation to earlier planning. In this, new foundations hardly differed from the old; fortresses and churches were the dominant elements, other structures found room beside them. The 13th C. brought some prosperity to the cities of Asia Minor, which often received new walls and churches, while in Greece the Frankish period brought a growth of city-fortresses on hilltops. The last period of Byz. rule, when the central government was weak, allowed the cities to gain some independence, often recognized with concessions when they were re-integrated into the empire. In some places a local aristocracy assumed considerable authority. Cities of the splinter states grew and flourished. They often consisted of a citadel (kastron), an upper enclosure where the ruler, magnates, and bishop had their palaces; and a lower town (emporion) devoted to commerce, with the homes of the common people and foreigners (who sometimes had their separate castle). By the 14th C. houses were large and spacious, aqueducts were again in use, and the standard of living was higher than it had been since the 7th C. Even such places, however, were small compared with their late antique predecessors, offered few if any public services, and showed no sign of systematic planning.

The normal artistic representation of a city was as a walled enceinte, studded with towers and rendered in bird's-eye perspective. Entered via a single portal, cities shown as models in the hands of a benefactor or as elements of background are customarily filled with elaborate architecture including a domed church. Only rarely, as in the Madaba mosaic map, do they contain structures that allow specific identification of the site. A unique planimetric view of Constantinople appears on the hyperpers of Michael VIII and Andronikos II.

CITIZENS (πολίται). Byz. law preserved the Roman concept of citizenship, as granted to all free inhabitants of the empire in 212. Byz. citizens were distinguished from slaves, whose acts of manumission recognized them as citizens (e.g., Sathas, MB 6:618.13–14). Changes in citizenship to take advantage of commercial privileges could cause problems (e.g., MM 3:189.11–19 of 30 Oct. 1436) and dual citizenship is attested after 1204. It is unclear how Byz. proceeded juridically toward the numerous foreigners (e.g., Armenians, Latins) who entered imperial service, but many were successfully assimilated. Externally, Byz. citizens were usually recognizable by a national costume and particular traits of grooming; for example, in 787 the Beneventans offered to enter the Byz. Empire and adopt the Byz. national dress and haircut (Codex Carolinus 83, p.617.5–31). Shared cultural traditions, patriotism, loyalty to the emperor, Orthodoxy, and, from the 7th C. onward,
the Greek language helped shape Byz. citizens' distinctive identity.

CITY TAXES. Until the 7th-C. crisis, Byz. cities, important demographically as well as economically, had their own municipal administrations and finances, based mainly on rents of city land (astika), on contributions (voluntary or not) of wealthy citizens (esp. civic magistrates), and on city taxes, the vectigalia, collected on local economic activities. City taxes were taken over by the Comes sacrarum largitionum, partially returned by Julian, then confiscated again by Valentinian and Valens, the latter being obliged to return part of them to the city administrations. In the meantime, urban economic activities had started to decline. After the 7th C., when the smaller and less economically active "medieval" cities appeared, administered directly by state officials and financed by the government, city taxes disappeared.

LIT. Jones, LRE 732–54. –N.O.

CIVIL PROCEDURE (χρηματική δίκη). The Justinianic civil lawsuit began with the plaintiff's (enagon) submission of the writ (libellos) at the court of law; from there it was served, together with a summons, on the defendant (enagomenos). On the first day fixed for trial the formal conditions were clarified (esp. the question of the competency of the court), an oath was taken by the participants in the proceedings, and surety was arranged by the plaintiff and defendant or by their representatives. The first part (prooimion) of the procedure was concluded with the formal statement of dispute (prokatatxis). The next step was the examination of evidence that could be undertaken by the assessors. The most important types of evidence were the testimony of witnesses and documents. Witnesses did not necessarily have to appear in person, but they did have to confirm their recorded testimony under oath. Where other proofs were lacking an oath could be imposed on one party by the other or by the judge. After a maximum of three years, a trial concluded with a final judgment (apophasis), which had to be drawn up in writing and read aloud. If the losing party neither complied with the decision nor appealed within ten days, the victorious party could file for the legal execution of the judgment four months after the court's announcement of the decision.

Later Developments. In post-Justinianic law, witnesses, documents, and oaths continued to play the chief role in litigation. Although late Roman procedure tended to give more weight to documents than to oral testimony, the Peira 30.17 reversed this principle: while acknowledging the preeminence of written evidence in cases such as marriage or sale of property and other business affairs, Eustathios Rhomaios proclaimed that oral testimony was generally the most reliable. Byz. law thus paid much attention to exposing false documents (S. Troianos, EEBS 39–40 [1972–73] 181–200). The use of oaths contradicted the injunction of Matthew 5:33, and commentators on Basil. 22.5 tried to reconcile their practice with the Gospel ruling by quoting John Chrysostom. Byz. legal practice also accepted certain paralegal means of decision-making: rhetorical arguments that could be more convincing than legal ones, the principle that the emperor's word is beyond law (this could be extended to those to whom the emperor delegated his authority), and mob pressure. The use of various ordeals as a means of establishing the truth emerged despite some strong resistance. Literary texts (e.g., hagiography) could be submitted as evidence, and references to Homer or Aristotle could be used to establish precedent.

CIVIL WAR OF 1341–47. Following shortly after the conflict between Andronikos II and Andronikos III (1321–28), this war further divided and weakened the remnants of the Byz. Empire. When Andronikos III died in 1341, leaving his nine-year-old son John V Palaiologos as heir to the throne, a struggle for the regency developed between John (VI) Kantakouzenos, the megas domestikos, on one side, and the empress Anna of Savoy, Patr. John XIV Kalekas, and the megas...
doux Alexios Apokaukos, on the other. Taking advantage of the absence of Kantakouzenos from Constantinople on military campaign, John XIV declared his own regency and confiscated Kantakouzenos’s property in the capital. In Oct. 1341 Kantakouzenos was proclaimed emperor in Didymoteichon, triggering war. Kantakouzenos was generally supported by the provincial landed aristocracy and proponents of hesychasm, but there were numerous exceptions. At first Kantakouzenos fared poorly in the war as the result of anti-aristocratic rebellions in the towns of Macedonia and Thrace, notably the revolt of the Zealots in Thessalonike. But after receiving assistance from Umur Beg, emir of Aydın, and Stefan Uroš IV Dušan, king of Serbia, his fortunes improved and he gained control of Thessaly, Epiros, and parts of Thrace and Macedonia, despite Dušan’s switch of allegiance to John V. The murder of Apokaukos in 1345 was a severe blow to the regency. After 1345 Umur was forced to withdraw his troops, but Kantakouzenos replaced them with Ottoman soldiers supplied by the emir Orhan (E. Werner, BS 26 [1965] 255–76). In 1346 Kantakouzenos was crowned emperor at Adrianople, and the following year he entered Constantinople. An agreement that he and John V should rule as co-emperors ended the civil war. The prolonged struggle was disastrous for Byz., as it brought anarchy to the cities and devastation to the countryside. In Didymoteichon, for example, soldiers turned to brigandage in order to secure the necessary provisions (C. Asdracha, Etip 7,3 [1971] 118–20). The war also permitted Dušan to expand his empire into Thrace and Macedonia. The victory of Kantakouzenos significantly affected the church, since it enabled the triumph of hesychasm.

CLARENZA. See CHLEMOUTSI.

CLARISSIMUS (λαμπρότατος), honorific epithet applied to senators that became an official title during the early Roman Empire. According to the Excerpta Valesiana (ed. Moreau-Velkor 9.3), when Constantine I created the senatus in Constantinople he granted new senators the title of clari to distinguish them from the clarissimi of Rome. When the titles of illustris and spectabilis were introduced in the second half of the 4th C., clarissimus began to designate the lowest category of senators. Between 450 and 530 use of the title clarissimus (as well as spectabilis) declined and ceased to be applied to senators at all. Jones (LRE 2:529) considers it still as hereditary, but Guillaud (Institutions 1:681) denies it. The title was not part of the Byz. bureaucratic hierarchy.

—A.K.

CLASSE. See RAVENNA.

CLASS STRUCTURE. Class is a conventional sociological term designating extensive groups of people who have common characteristics with regard to their place in the system of production, their wealth, power, and prestige. The difficulty in defining Byz. class structure originates in the difference between Byz. stratification and the contemporary scholarly models (which in turn, vary according to schools of thought, Marxist or non-Marxist), from the lack of clear-cut boundaries between various classes, and from cases of social mobility. The Byz. resorted to several methods of social categorization: (1) slaves and free men, (2) “great” and “small,” or “powerful” (dynatoi) and “poor,” with a third category of men of moderate means (mesoi) introduced on occasion; (3) classification by profession, as in Psellos—senators, monks, the urban masses, and those involved in agriculture and trade; (4) a tripartite classification of Western type—soldiers, clergy, and ordinary people (Kazhdan-Franklin, Studies 142–44).

Four factors were taken into account by the Byz. in defining the elite or ruling class: good family background (this principle seems to have been reestablished by the 10th C.); wealth (including salaries, rewards, extortions, etc., in addition to property); hierarchical rank; and prestige or high moral reputation. The shift from an elite based on rank and position to an elite determined by family background and ownership of land was a crucial development of the Byz. class structure. Merchants probably emerged as an independent class by the 11th C. but were never legally defined
as a distinct category. The lower class encompassed various groups of rural and urban population: common soldiers, state and private peasants, craftsmen and peddlers, misthioi, slaves, beggars. The lower clergy (paroikoi-priests, working monks) in a certain sense belonged to this class. Intellectuals did not form a separate group until the 12th C.; before then they were part of the secular and ecclesiastical administration.

CLAVIJO, RUY GONZÁLEZ DE, a high-ranking official of Henry III, king of Castile; died 2 Apr. 1412. With an embassy he journeyed to the court of Timur in Samarkand, which he described in detail. The embassy left Seville on 22 May 1403 and returned to Castile on 24 March 1406. Clavijo describes several islands of the Aegean Sea (Rhodes, Chios, Lesbos (“Metelin”), mentions Mt. Athos (“Monteston”), and dwells at length on Constantinople and Pera. He was most interested in churches and monasteries (Hagia Sophia, St. John the Baptist, Blachernai [“de la Cherne”], etc.) and their treasures, relics, and ornaments; among others, Clavijo describes the Church of Mary “Peribleuco” (PERIBLEPTOS), at whose entrance were represented 90 castles and towns allegedly granted to the church by an emperor Romanos; privileges listing the rights of the church to these castles and confirmed by wax and lead seals were displayed nearby. Clavijo also reports on the Hippodrome, the city walls, wells of sweet water, the money-changers’ street, warehouses, and the fetters used to punish those who sold meat or bread with false weights. He noticed that many buildings were in a state of ruin. Clavijo visited Trebizon as well. He devotes considerable attention to relations within the imperial family and to the war between Venice and Genoa.

CLAVUS, a vertical stripe decorating the Roman tunic; the wide ones (clavi lati) were originally an indication of the senatorial rank of the wearer. The clavi were usually purple or gold and were woven into the tunic in pairs; they were visible on the shoulder even when the tunic was covered by another mantle. In Byz. art, clavi are primarily found decorating the tunics of Christ, the angels, and the apostles, figures who are regularly shown clad in ancient garb. Clavi embroidered with rows of flowers adorn the tunics of the female members of the imperial entourage and those of female martyrs in the 6th-C. mosaic processions of S. Vitale and S. Apollinare Nuovo, Ravenna, and David’s tunic in the 10th-C. Bible of Leo Sake-
LARIOS (fol.263). In Egypt, tapestry bands have been found decorated with comparable floral and figural designs; these were probably clavi for tunics. Simple, dark-colored clavi adorn the Byz. liturgical vestment called sticharion, in which case they are called potamoi ("rivers").

—A.K.

CLEMENT V (Bertrand de Got), pope (from 5 June 1305); born in the Bordelais ca.1260, died Roquemaure, Comtat Venaissin, 20 Apr. 1314. Forced to leave Italy, Clement settled in southern France, residing from 1309 in Avignon. He advocated the idea of a new Crusade with limited objectives. While proclaiming the liberation of the Holy Land as the ultimate goal, the Crusaders' armies were directed to specific areas: Clement supported the attack of the Hospitallers on Rhodes, the official purpose of which was to protect Armenia and Cyprus from the infidel, to hinder trade with the Saracens and to prepare a universal crusade. Also under the banner of a crusade, Clement organized a war against Venice and managed to regain FERRARA for the papacy.

CLEMENT OF ALEXANDRIA, more fully T. Flavius Clemens, early Christian philosopher; born Athens? ca.150, died Cappadocia before 215. Educated in Alexandria, he worked there as a teacher from ca.200 until he was forced to leave the city because of anti-Christian persecutions. Like ORIGEN, Clement belonged to a group of well-educated Christians who sought a certain reconciliation with pagan ideas and were influenced by Platonism. Clement's aim was the struggle against Gnosticism and radical extremists within Christianity: he argued that the rich could be saved, defended marriage, praised education, and took the concept of Logos (Reason), not Theos (God), as the basis of his doctrine. Clement laid the foundations for the ALEXANDRIAN SCHOOL and paved the way for the incorporation of pagan learning within Christianity; he was a foremost
Clement was not one of the more popular church fathers in Byz.: Prodromos (PG 193:1265AB), for example, criticized him for treating language as an immaterial and rejecting the search for beauty and nobility of expression. Aretas of Caesarea and Caesarea was interested in Clement: at his instigation, a certain Baanes prepared in 914 a MS of two of Clement’s works (Protreptikos and Paedagogus), which was provided with scholia by Baanes and Aretas (Paris, B.N. gr. 451). Some other writings have survived in MSS of the 11th and 12th C.

CLEMENT OF OHRID. See Kliment of Ohrid.

CLEMENT SMOLJATIĆ. See Klim Smoljatić.

CLERGY (καλῆς), term that initially designated the entire Christian community, the people of God (laos, laity) chosen to participate in God’s inheritance or kleronomia (1 Pet 5:3). By the 3rd C. the term was restricted to those appointed as ministers of worship within the Christian community. Below the major orders (hieromenoi) of bishop, priest, and deacon were the minor orders (klerikoi) of subdeacon and anagnostes. Besides differences in functions, the two orders were distinguished by the method of ordination (chierotonia)—the ritual act that also served to separate clergy from laity. Their lives and responsibilities were fixed by ecclesiastical law. Ordination to the priesthood and episcopate was forbidden before age 30, whereas deacons and subdeacons could be consecrated at ages 25 and 20, respectively (Council in Trullo, canons 13, 14). Once appointed to a city or church they could not transfer elsewhere (Nicaea I, canon 15). Equally, all were subject to episcopal jurisdiction and could sue each other only in episcopal courts (Council of Chalcedon, canon 9). Admitted to the office of deaconess, women were forbidden entry to both the priesthood and episcopate.

Generally, clergy were forbidden to participate in secular occupations such as trade, usury, or banking; nor were they allowed to become civil servants, although they could perform manual and agricultural labor (Nicaea II, canon 15) and serve as imperial advisers (like the monk Ioannikios in the court of Alexios I). In practice, however, these restrictions were not always observed, as several 12th-C. synodal and patriarchal decrees illustrate (RegPatr, fasc. 3, nos. 1048, 1092, 1100, 1119). Clerical privileges included exemption from certain taxes, military service, and other municipal duties (Cod.Theod. XVI 2.1–47, 5.1; Council of Chalcedon, canon 7). Despite their social, judicial, and pecuniary exemptions, Byz. clergy never constituted a rigid sociological entity—a self-conscious antithesis of the laity—as in the West. Significantly, they rarely held high state office and were never the exclusive bearers of high culture. Except for bishops, they were also not separated from the laity by celibacy.

CLICHÉ, in modern terminology, a trite or repeated phrase or idea. In Byz. literature two types of cliché can be distinguished. (1) In works written at a learned level of the language at all periods, the conventions of rhetoric (which, learned in the schoolroom, underlay virtually every literary genre) imposed structures and sequences of ideas that most writers and audiences accepted as appropriate and followed. (2) In many works written in the political verse at a popular level of the language in the 14th–15th C., large numbers of lines and half-lines were repeated virtually unchanged, both within a given poem and in others (see Romance). Debate continues as to whether this is the result of plagiarism and quotation, or whether these “clichés” (phrases like mikroi te kai megaloi, “great and small”) represent in written form the style of a traditional literature, originally disseminated orally.
CLIMATE in Byz. was determined by the situation of the Mediterranean Sea, which is enclosed to the south and southeast by a band of deserts and to the north and northeast by mountain ridges (Pyrenees, Alps, and Caucasus). Winds, dry in summer and bringing rain in winter, blow primarily north to south; the strong winter winds, esp. dangerous along the southern Mediterranean shore, could bring navigation to a halt. The combination of rainy winters (from approximately Oct. to Apr.) and summer drought is typical of the Mediterranean. Summers were hot, but winters mild, except on elevated plateaus where considerable snow accumulated; permanent snow cover is found only on mountains at high elevations. The diverse climate was due partly to latitudinal situation (the hottest areas—North Africa, Egypt, and Palestine—were lost to the Arabs in the 7th C.) but also to elevation, with sharp contrasts between the coastal lowlands and interior highlands.

The coast was sufficiently warm for the cultivation of olives, mulberry, and, in some areas (Sicily, Crete), cotton. Vineyards and many fruit orchards could be found at higher elevations and farther to the north (including Thrace), but Bulgaria was considered by the Byz. to be a region that produced little fruit. Grain grew everywhere; the predominance of wheat in Asia Minor and of barley in the Balkans depended more on soil than on temperature. The plateaus (esp. Anatolia), with their cold winter nights and shortage of water, were best for cattle and flocks of sheep and goats, while the contrasts between lowland and highland contributed to the development of transhumance. Special climatic regions were the hinterland of the Black Sea, the Caucasus and the Armenian highlands, the Anatolian plateau, Egypt, and the valley of the Po—a transitional region between the Mediterranean and Central European climate.

The question of changes in the Mediterranean climate in historical times has been variously approached by historians, some of whom attribute the decline of the Roman Empire to climatic changes; climatologists, however, deny radical changes, even though some warming and desiccation ca. 1500 can be observed (F. Braudel, La Méditerranée 1 [Paris 1966] 247). It is plausible that deforestation also took place over time, but neither its scale nor chronology can be established.

CLOCK. See HOROLOGION.

CLOISONNÉ. See ASHLAR; BRICKWORK TECHNIQUES AND PATTERNS; ENAMELS.

CLOSED DOOR or gate (πύλη κεκλεισμένη) of the sanctuary of the Temple, seen by Ezekiel (44:1–3) in a vision. This was not to be opened or traversed by any man, for God had entered in by it. The image was taken, for example, by Theodoret of Cyrhrh (PG 81:1233B), to symbolize the Virgin’s womb. ROMANOS THE MELODE (Hymnes 2, ed. J. Grosdidier de Matons [Paris 1965] 103:4–10) describes Mary as the Closed Gate (aparanoiktos pyle) who opened the door to the Magi that they might see the Door (thyra), the infant Christ. In the context of increased interest in prefigurations of the Virgin, the Door is represented at the CHORA (S. Der Nersessian in Underwood, Kariye Djamii 4:346) and other Palaiologan churches.

—C.B.T., J.H.L.

COATS OF ARMS. The use of heraldic INsignia as a symbolic representation of families did not develop in Byz. The broad range of images (Christ, the Virgin, the cross, various saints) found on seals are personal rather than familial emblems. Certain "blazons" have, however, been interpreted by some scholars as official imperial or familial coats of arms. Soloviev (infra) considered the double-headed eagle as an emblem of the Komnenoi and the tetragrammatic cross with four Bs as the blazon (from ca. 1297) of the Palaiologoi. G. Vikan (ArtB 63 [1981] 326) has connected other emblems (including a multipetal flower, a swastika, and four overlapping bars) with the Palaiologos family. Some of these symbols—whether blazons or not—were placed on imperial standards; thus, a 14th-C. ceremonial book (pseudo-Kod. 167.17–23) states that on ordinary warships the customary imperial banner (phlamoulon) was displayed, that is, the cross with pyrekhole (flints?)—
probably the tetragrammatic cross—whereas the ship of the *megas doux* displayed the image of the mounted emperor. In Aug. 1439 John VIII Palaiologos conferred upon Giacomo de Morellis, a citizen of Florence, the right to place on his banner the imperial “blazon” (*semeion*); on the chrysobull, beneath the text, is pictured a double-headed eagle (*Reg* 5, no. 3489).

**CODEX** (*déltos, πυκτίων, τεύχως, κόδιξ*), the preponderant form of the Byz.—and modern—book. It consists of *quire* made of sheets of *papyrus*, *parchment*, or, later, *paper*, which were prepared for copying by the application of *ruling patterns* in order to guide the writing; the written quires were stitched, usually one to another, to form the smooth spine characteristic of Byz. *bookbinding*. Unlike the earlier roll, the codex fitted more text into less space because each sheet was written on both sides. Moreover, since the codex could be immediately opened to any page, it allowed random consultation. In appearance, Byz. codices range from sumptuous illuminated MSS (see *Book Illustration and Illumination*) to lavish editions of the classics to tax registers or heavily annotated working texts produced by scholars for their personal use.

The codex probably derived from the Roman businessman’s parchment notebook, itself inspired by the bound and waxed wooden tablets (*codices*) used as notepads in antiquity and Byz. Travelers seem to have been among the first to favor the new format, and the codex enjoyed unique prestige among Christians from the 2nd C., esp. for Scripture. Eusebius of Caesarea mentions the order issued by Constantine I that fifty codices of the Bible should be copied for liturgical use in Constantinople. From 300 onward, the codex replaced the roll as the chief vehicle for literary texts. The physical transformation of the book encouraged intellectual change as well. The capacity of and the ease of access within the codex now made practical the creation—and quick consultation—of vast works of reference, such as the codification of Roman law at Constantinople in the 5th and 6th C. For artists the invention of the codex made possible the painting of full-page miniatures.

**CODEX CAROLINUS**, collection of letters sent by popes (Gregory III through Hadrian I) and from the Byz. Empire to Charles Martel, Pippin, and Charlemagne, compiled at Charlemagne's command in 791. Only the papal letters survive. They constitute the chief source on Frankish involvement in Italy. Because the papacy acted as an intermediary between Byz. and the Franks, these letters shed valuable light on Byz. relations with the Carolingians (eps. 11, 25, 28–29, 36–37 on the negotiations of Constantine V with Pippin, and ep. 45 on the planned marriage of Leo IV with the king’s daughter) and, above all, on Constantinople’s projects to recapture its Italian holdings (eps. 15, 17, 30–31, 38, 57, 61, 64–65, 80, 82–84) and subdue the Iconodule papacy (eps. 20, 32). They also transmit general information deemed relevant to the Frankish court, for instance the Eastern patriarchs’ attitude toward Iconoclasm (ep. 99), Constantine V’s death (ep. 58), an Arab invasion of Asia Minor (ep. 74), news from Byz. Istria (ep. 69), and the activities of Byz. or Venetian merchants (eps. 59, 86).

**CODEX EBNERIANUS**, a 12th-C. illustrated New Testament in Oxford, Bodl. Auct. T. inf. 1. 10, named after its 18th-C. owner. Bound in a silver cover with a 10th-C. ivory fragment, the MS is decorated with ornate *canon tables* and *headpieces*, a double portrait of Eusebius of Caesarea and Karpiano, and ten portraits of New Testament authors. Accompanying most portraits are liturgically inspired narrative scenes. The MS was copied by the same scribe as Escorial X IV 17, but illuminated in the different style of the MSS of James of Kokkinobaphos. It is the product of
the preeminent school of Constantinopolitan illuminators during the second quarter of the 12th C. In 1391 the scribe Ioasaph of the Hodegon monastery added liturgical notations to the MS, and its evangelist portraits served as the model for the Palaiologan miniatures inserted into Venice, Marc. gr. 1, 8. The MS is marked with Georgian quire signatures, but was still in Constantinople in the 16th C.

**CODEX GREGORIANUS**, a collection of imperial rescripts issued sometime between 291 and 294 by a certain Gregory, who is otherwise unknown. It is impossible to determine whether it was prepared in the East (Berytus?) or elsewhere, or whether it was a private tool or an official document, for purposes of instruction or for practical use. It contains edicts from the year 196 to Diocletian; the latest law (of 295) is often considered a later addition. The material is organized, according to subject matter, in books and titles. It is possible that the original text of the edicts has here been contracted and paraphrased (N. van der Wal, Bollettino dell’Istituto di diritto romano 22 [1980] 7). The text has survived only in fragments—in the **CODEX JUSTINIANUS** and in various legal compilations, such as the Fragmenta Vaticana, scholia of the Sinai Library, and the lex Romana Visigothorum.

Ed. P. Krüger, Collectio librorum iuris anteustiniani 3 (Berlin 1890) 224–33, 236–42.

**CODEX HERMOGENIANUS**, a collection of imperial rescripts published after the **CODEX GREGORIANUS** by a certain Hermogenianus, usually identified as a praetorian prefect of 304. The text has survived in fragmentary form in the same sources as the **CODEX GREGORIANUS** (with the exception of the appendices to the lex Romana Visigothorum), but it differs from the latter in several respects: the **CODEX HERMOGENIANUS** is shorter, divided only into titles (not books), and contains primarily the edicts of Diocletian. The 5th-C. Christian author Sedulius notes that Hermogenianus had his work published three times; accordingly, Rotondi (infra) postulates that the first edition appeared in 295, the second in 305, and the third included three constitutions of 314–24. Seven rescripts of 364/5 are considered later additions.

Ed. P. Krüger, Collectio librorum iuris anteustiniani 3 (Berlin 1890) 234f, 242–45.

**CODEX JUSTINIANUS**, a collection of imperial constitutions (in the form of leges, rescripta, sanctiones pragmaticae) from Hadrian to Justinian I, that, along with the Digest, the Institutes, and the Novels of Justinian I, constitutes the Corpus Juris Civilis. Executed at Justinian’s request, the collection was intended to take the place of the **CODEX GREGORIANUS**, the **CODEX HERMOGENIANUS**, and the **CODEX THEODOSIANUS** and to provide a compilation of imperial law arranged according to subject and freed from contradictions and repetitions. To this end Justinian appointed a commission of ten lawyers under the direction of Tribonian. The original collection, the so-called **Codex vetus**, which has been transmitted only in short fragments, was made public on 7 Apr. 529 through the introductory constitution “Summa.” It soon stood in need of revision—not least because of Justinian’s own legislative activity.

With the constitution “Cordii” of 16 Nov. 534 the so-called **Codex repetitae praelectionis** was promulgated and made authoritative. It contains 12 books that, in contrast to the Institutes and the Digest, reflect the socioeconomic and ecclesiastical problems of the time in the form of numerous administrative, penal, civil, and ecclesiastical regulations. The language of the constitutions is predominantly Latin. The regulations of the **Codex Justinianus** were introduced into the Basilika, esp. in the Greek version of Thalelaios; treatments of the **Codex Justinianus** by the jurists Isidore, Anatolios, and Theodore Scholastikos are also preserved. Revisions in the sequence of the laws of the **Codex Justinianus** are transmitted only in fragments. With a view to the integration of the **Codex Justinianus** into the Basilika, the individual titles were divided up according to subject and, where appropriate, attached to the Basilika chapters originating in the Digest.
ED. CIC, vol. 2.

M. Th. F.

CODEX SUPRASLIENSI S, the largest surviving Old Church Slavonic MS (found in 1823 in the Suprasi monastery in Poland), is a menologion for the month of March that contains saints’ Lives and sermons for Holy Week and Easter. It was probably copied in central or eastern Bulgaria between 900 and 1050 on the basis of an original created in the circle of Tsar Symeon of Bulgaria.

More than half of its 285 folia were lost during World War II; the other portions are in Ljubljana and Leningrad. Margulié’s (infra) and some other scholars hypothesize that the original of the Codex was in Glagolitic. The Codex was translated from a Greek pre-Metaphrastic menologion and contains 48 hagiographical texts; for some of them the Greek sources have not yet been identified. The work of the translator (or translators?) was difficult, since the original also contained the writings of some experienced rhetoricians (Basil the Great, John Chrysostom, Epiphanius of Salamis), and in some cases their language was misunderstood. The compiler of the Codex probably introduced stylistic alterations. The Codex is an important monument of Byz. intellectual influence upon Bulgaria ca. 900.

A.S.

CODEX THEODOSIANUS, a Latin law book named after the emperor Theodosius II. By a constitution of 26 Mar. 429, Theodosios, together with his co-emperor Valentinian III, established a nine-member commission to produce a collection of all of the imperial constitutions published since Constantine I (following the model of the Codex Gregorianus and the Codex Hermogeni-

ANUS), integrating into the collection appropriate passages from the writings of the jurists. By a constitution of 20 Dec. 435, the same emperors set up a new commission of 15 people that was to collect all general imperial constitutions since Constantine I and, if necessary, to improve them by changing the text or dividing them into several titles. The work came to fruition and was published by a constitution of 15 Feb. 438. On 1 Jan. 439 the Codex Theodosianus went into force for the entire Roman Empire. The Codex contains more than 2,500 constitutions (from the years 311–437) and is divided into 16 books; the books are subdivided into titles within which the constitutions are arranged in chronological order. The MS transmission of the Codex Theodosianus is poor, esp. for books 1–5, which are only indirectly preserved, in the Lex Romana Visigothorum. For this Lex as well as for the Codex Justinianus, the Codex Theodosianus was the most important source. The Codex Theodosianus was provided with commentaries (F. Wieacker in Symbolae Friburgenses in honorem Ottonis Lenel [Leipzig 1935] 259–356). After approximately a century it was superseded by the Corpus juris civilis, esp. the Codex Justinianus.

A.S.

CODICIL. In classical Roman law, the codicil was at first a document strictly connected to a will, in which the testator addressed the heir of the will and requested that he execute a fideicommissum. The codicil had no required form; it had to be announced in the will or be authorized by a (later) will. When codicils independent of the will came into use, they began to compete with wills. A will was distinguished from a codicil in that it had a required form and by the circumstance that only in wills could heirs be appointed and disinheriting effects be added. The difference was weakened by the testator instructing that his will be maintained as a codicil in the case of invalidation. Justinian I further reduced the differences by his
regulation that a codicil must be drawn up in the presence of five witnesses (it was seven for wills). In the post-Justinianic period, the required number of witnesses for a will was reduced even further (Nov. Leo VI 41): five witnesses in the city, three in the country and while on journeys. Since already in late antiquity the significance of the appointment of heirs diminished with the decline of the Roman household structure, the codicil should have disappeared. If it is still mentioned in the legislation of the Macedonian period and in the legal literature that follows it until Har- menopoulos, this appears to be—as the lack of evidence from practice allows one to surmise—only a traditional reminiscence. — D.S.

Codicils in Administrative Terminology. Codicil (Lat. codicillus, Gr. κοδικελλος) designated in Roman terminology the emperor's brief writing and particularly the diploma of appointment to a high office or the conferring of a high title. They are known from literary and legal texts of the 4th C. onward. At that time they were usually accompanied by ivory diptychs and probably put inside the diptych's sealed wings. Texts of the 8th–10th C. sometimes mention separately granting either the codicils or ivory plakes (tablets). The preparation of codicils in the late Roman Empire was the duty of the primicerius notariorum (the chief of the notaries), while in the 10th C. it was the responsibility of the kanikleios, who was paid by the grantee 16 nomismata per piece (Oikonomides, Listes 95.8).

— A.K.

CODICOLOGY (lit. "the study of the codex"), the scholarly term coined by A. Dain (Les manuscrits [Paris 1949] 71–86) as an equivalent of the German Handschriftenkunde ("the study of manuscripts"). Dain conceived of codicology as a discipline dealing with the history of MSS and their collections, research on their present location, and the compilation of catalogs and repertories of catalogs (Les manuscrits [Paris 1964] 77); that is, with the history of books after their completion. The term, however, gradually has acquired a different meaning—the study of ancient écrits in contrast to that of écriture (F. Masai, Scriptorium 10 [1956] 286–92), that is, study of the hand-produced book as an archaeological object rather than of its script. Thus it has become identical with the German Buchwesen ("the structure of the book"), one of the two divisions of palaeography.

Codicology examines the book's size, material (papyrus, parchment, paper), physical properties of inks and pigments, preparation for writing (ruling patterns and systems), structure (quires, their signatures, sewing, bookbinding and rebindings), ownership markings, and so forth, all of which changed over time and place. In so doing, it often determines characteristics specific to various production centers (scriptoria) and libraries. The use of the neologism codicology can be justified by the fact that recent study puts more and more emphasis on the book as a material vector of culture, unlike traditional palaeography, which tended to study the book in a cultural vacuum.

— M.McC., E.G.

COERCION, NONECONOMIC, an application of moral or physical compulsion to force people to work. It was based primarily on political, social, and personal relations (esp. dependency) and only secondarily on market values. The tendency of the landlord was to exact the maximum benefit from the laborer without ruining the existence of the slave/serf or his dependent household; the tendency of the laborer was to perpetuate his household. Accordingly, rent was established in Byz.—in practice, not in theoretical calculations—not only on the basis of the actual quantity and quality of the soil (arable land, vineyards, olive trees, gardens), livestock, yokes of oxen, number of family members, but primarily on the basis of intangible factors of social status and personal relations. Thus a curious phenomenon arose: poorer peasants could be compelled to pay a proportionately higher rent than their wealthier counterparts (in another or even in the same village) and, on the average, the poorer tenants would fulfill heavier obligations than the wealthier householders—in contrast with the modern system of progressive taxation. The numerous tax exemptions granted to churches and monasteries, officials and courtiers, originated from the same
principle. This principle was extended to land prices, variations in which went beyond the usual market conditions. Noneconomic coercion in Byz. was shaped not only through landlord-tenant relations reflected in local customs but also through the state with its elements of state ownership of property (see STATE PROPERTY, MONOPOLY, and the concept of the "enslavement" of the entire population to "the father and the lord," that is, the emperor.

COINAGE, FOREIGN. The circulation of foreign coinage played no role in the Byz. Empire during the greater part of its existence. During the early centuries the only coin-producing state with which Byz. was in contact was Persia, and although there is literary evidence for Sasanian silver drachmae circulating on the frontier (e.g., at Nisibis) hoard evidence shows that such coins did not penetrate into the interior. The thin, broad fabric of Umayyad dirhems certainly determined the appearance of the silver MILIARESION introduced by Leo III, and miliareia later in the 8th C. are sometimes found overstruck on 'Abbasid dirhems (G.C. Miles, MN 9 [1960] 189–218). Only in the last two centuries of the empire, after the Fourth Crusade and the occupation of most of the former imperial territories in the Aegean by Westerners, did foreign coins come to be used on a large scale in the empire and to influence the designs of Byz. coins. The most important of the intruders were initially the Venetian silver ducat, copied as the BASILIKON, and the Frankish TORNASE. Later the Venetian gold ducat, imitated at Chios and at Fogliavecchia on the neighboring mainland and by the Genoese at Pera in the suburbs of Constantinople itself, replaced the Byz. gold HYPERPYRON, which ceased to be minted in the 1350s. From ca.1380 onward the small change of Constantinople seems to have largely consisted of Turkish akçe, minted mainly at Bursa, which supplemented the locally produced ASPERS and were of about the same value.

Lit. T. Bertelé, "Moneta veneziana e moneta bizantina," in Venezia e il Levante fino al secolo XV (Florence 1975) 9–146. — Ph.G.

COIN FINDS are customarily classed into three categories: hoards, site finds, and casual or isolated finds. These categories are not exclusive, however; most hoards come to light by chance. A hoard is defined as a group of coins concealed or lost as a unit. Site finds are those brought to light by archaeologists in the course of excavation. Isolated finds are those turned up by chance in digging a field, preparing a road surface, or as the result of some similar activity.

HoardS. Finds of this type are valuable partly as sources of material, partly because of their size. In addition, sometimes the presence of a container tends to ensure the survival of their contents in good condition. They are also useful because they show what coins were in circulation or at least were available at the time of concealment or loss. Their interpretation is often delicate: a savings hoard will differ in composition from one buried in an emergency. Also, although coins have been hoarded at all periods, usually they were recovered by their original owners except in times of unrest. Then too, since a single hoard may have belonged to a traveler from outside the area where it was found, its contents are not necessarily a reliable guide to the local circulating medium. Comparing several hoards whose contents overlap is the surest means of determining the order of issue of undated coins. In many periods hoards are virtually limited to gold and silver coins of substantial inherent value, but in the Byz. world, as in Roman times, there are also many hoards of low-value coins. Much of Hendy's work on the coinage of the 12th–13th C. was made possible by the great number of (mainly) Bulgarian hoards of billon and trachea of the period. Unfortunately the reporting of hoards in most former Byz. lands is inadequate, and the only comprehensive bibliography (Mosser, infra) is long since out of date. Byz. coin hoards in the USSR throw much light on trade routes (see Kropotkin, infra), while inside former imperial territories they have been helpful in documenting Slavic penetration of the Balkans (J. Juroukova, BBulg 3 [1969] 255–63) and the military situation in the Aegean area under Herakleios (D.M. Metcalf, ABSA 57 [1962] 14–23).

Site finds. These consist mainly of low-value coins that were easily lost and not worth their owners' trouble to recover. The older excavation reports often neglected to take proper note of them, and in particular failed to find the great numbers of tiny 5th- and 6th-C. copper NUMMI
that require systematic sieving of the soil. A new standard in this respect was set by the American excavations at Athens, Corinth, Antioch, and other sites, mainly from the 1930s onward. The reports of these have made possible the study of fluctuations in coin use between different periods, though their interpretation presents many problems. Simple comparisons between the numbers found for different rulers, as was common in the older reports and historical works based on them, can only mislead, for coins will normally have remained in circulation many years after they were struck, and denominations of different sizes and values are not equally likely to be lost. The coins themselves are usually in poor condition as a result of prolonged burial. They are so corroded or worn as to be of little use for the study of types and inscriptions and of no use at all for metrological purposes. They are, on the other hand, essential to archaeologists for dating associated objects and the buildings or excavation strata in which they were found.

**Casual Finds.** This type of find generally occurs in the countryside and is usually of single coins. In most former Byz. lands these tend to be inadequately reported. The scholarly value of such finds comes mainly from the light they throw on the areas over which coins circulated, esp. outside the cities, and occasionally for the identification of local mints.

---

**COINS.** Byz. coinage derived from that of the later Roman Empire, and there is no sharp division between them. Nevertheless, in many respects they are very different. It has long been customary to start the Byz. series with Anastasios I, since a separate line of emperors in the West had come to an end with *Julius Nepos* (died 480) and because Anastasios's creation of the copper follis in 498 determined much of the pattern of minting for the future, but the older books begin with Arkadios, since from 395 there were separate lines of emperors in East and West.

**Metals.** Metals for coins were mainly the three standard ones used in the ancient world—gold, silver, and copper—but the proportion and form of coins in each metal has varied greatly over the centuries. Heavy copper coins were not struck in the 5th C. (their place being taken by tiny nummi), nor were they struck after the late 11th C. A coinage in silver barely existed in the 5th–6th C., and between the late 11th and the late 13th C. the traditional silver miliareia were replaced by *tri kep hala* of electrum (a gold-silver alloy) for higher values and *trach eia* of billon (that is, a silver-copper alloy containing less than 50 percent silver) for lower ones. The trach eia also substituted for the heavy folles of copper no longer minted. The gold remained of high quality until the 1030s, when a half century of progressive debasement began. *Nomisma ta* of good quality were revived by *Alexios I* in 1092 as part of a general coinage reform which reestablished a currency on whose quality users could rely, but these *hyperpyra* were only 20.5 carats fine (85.4 percent) instead of 24 carats as previously. The use of good quality silver coins was revived only with the creation of the *basilikon* in the first years of the 14th C. Gold hyperpyra were no longer struck after the mid-14th C. *Lead* was occasionally used, e.g., for ten-nummus pieces in 6th-C. Italy (C. Morrisson, *Rivista italiana di numismatica* 83 [1981] 119–30).
and for Alexios I’s first tetartera or half-tetartera of 1092.

**Thematic Content.** The thematic content of Byz. coins differed markedly from that of Roman ones, as did the way the emperor was represented. Beginning with the reign of Constantine I all coin types of a positively pagan character disappeared, although for the next two-and-a-half centuries representations of Victory and of Roma and Constantinople (see also Personification) continued to be tolerated because it was possible to regard them as symbolic and not as objects of worship. The cross began to be used as a main type in the mid-5th C., though only on a few denominations; only under Tiberios I did it become the main reverse type of the gold coins. A bust of Christ, first shown on coins of Justinian II, became a regular feature of the coinage only after the restoration of images under Michael III (843), but from then on representations of Christ, of the Virgin (first under Leo VI), and of the saints (first under Michael IV) are normal. A bust or standing figure of the emperor was almost always present, except on the so-called Anonymous Folles (970–1092), which have religious types and inscriptions only. But the personality of the emperor was eclipsed by the greatness of his office. Characterized portraits in high relief, a distinctive feature of Roman coinage during the Principate, were replaced by formalized frontal effigies in low relief, usually with no attempt at reproducing an individual likeness. Instead, the status of the emperor was shown by his costume (chlamys, fibula, crown) and insignia (scepter, globus cruciger, akakia).

**Language.** The language of the coin inscriptions was initially Latin, as were the elements of the emperor’s style (DN for dominus noster, PE or PF for perpetuos or pius felix, AVG for augustus), but Greek legends began to be used in the 7th C. (EN TOVTO NIKAN on folles of Constans II) and Greek titles such as basileus, despotes, and so forth in the 8th. After a long period in which Greek and Latin characters were used indiscriminately and might even appear together in the same word, the use of letters in a specifically Latin sense disappeared in the 11th C., so the C was henceforward invariably a sigma and H an eta.

**Collections.** Byz. coins are found by the thousand every year, some in regular excavations, in which case they are preserved as part of the record, but the majority pass through dealers’ hands to collectors and some in due course to museums. The major collections are those of Paris (Bibliothèque Nationale), London (British Museum), Berlin (Staatliche Museen), Leningrad (Hermitage), and the Dumbarton Oaks Center of Byzantine Studies in Washington, D.C. The British Museum catalog of 1908 was for a half century the standard work of reference on the subject, but it has now been largely superseded, other than as a collection of material, by the catalogs of the Paris collections (to 1204) and of Dumbarton Oaks, three volumes (to 1081) out of a projected five having been published to date. Much Heritage material is available in the unfinished work of Tolstoy (to 886). For the period 491–720 these have been supplemented by a synoptic survey published under the auspices of the Numismatic Commission of the Austrian National Academy of Sciences. For coins of the 4th C., from the accession of Diocletian (284) to the death of Theodosios I (395), the standard reference work is vol. 6–9 of Roman Imperial Coinage; since vol. 10 has not yet appeared, there is no satisfactory work covering the century from 395 to 491.

---

**COIN SCALES,** conventional name for small bronze implements for weighing coins or small amounts of precious material in granulated or powdered forms. Invented by the Romans, a coin scale is a lever balance with fixed fulcrum at midpoint; it is supported from above either by a hinged bracket or by a cord or wire (Davidson, Minor Objects, no. 1466). The coin is placed in a small pan at the end of one arm, and balance is achieved either by the predetermined weight of the other arm, through a counterpoise placed in
a corresponding pan, or by a tiny weight that may be slid across a scale in an open channel along the other end.

COISLIN NOTATION. See Neumata.

**COLLECTIO 25 CAPITULORUM**, a 6th-C. collection of canon law prescriptions, mainly those of Justinian I, divided into 25 chapters. The work consists of 21 Greek constitutions reproduced verbatim from titles 1–4 of the first book of the *Codex Justinianus* as well as from the Justinianic novels 120, 131 (chs. 13–14), 133, and 137. The most recent piece in the collection is novel 137 of March 565. However, since the work is sometimes transmitted without the four novel chapters, these may represent a later addition. This was the opinion of Zachariā von Lingenthal, who also conjectured that the original compilation was composed soon after the completion of the *Codex Justinianus* (a.534) as an appendix to the *Synagoge of Sixty Titles*.

-A.S.

**COLLECTIO 87 CAPITULORUM**, a 6th-C. collection of canon law prescriptions of Justinian I, divided into 87 chapters. The work consists of excerpts, most of them verbatim, from 12 Justinianic novels that were published between 535 and 546. Since Justinian I is referred to as deceased in the rubric and in the short note between the *pinax* (table of contents) and the main text, the work cannot have been produced before 11 Nov. 565. The sporadic attribution in MSS of the collection to Patr. JOHN III SCHOLASTIKOS is perhaps plausible; on the other hand, the hypothesis that the work (in its “first edition”) was composed soon after 546 as an appendix to the *Synagoge of Fifty Titles* is insufficiently substantiated.

-A.S.

**COLLECTIO AVELLANA** (6th C.), a dossier of 243 letters and edicts of emperors, popes, bishops, and magistrates, spanning the years 367–553. Many of them belong to Pope Hormisdas (514–23). This collection derives its name from Fonte Avellana, Italy, where a MS of it was found. Its documents are often valuable sources for both ecclesiastical and secular affairs, esp. when the two come together: a dispute of 384 about Lucifer of Cagliari (died between 364 and 375), a supporter of Athanasios of Alexandria; allegations by Pope Gelasius I of a pagan revival at Rome; and controversy over the *Theopaschitism* involving Justinian and Severos of Antioch are three such examples. A Latin translation of the treatise of *Epiphanius of Salamis, On the Twelve Precious Stones*, is appended to the end of the collection.

-B.B.

**COLLECTIO TRIPARTITA**, a collection of canon law prescriptions taken from the *Corpus Juris Civilis*, divided into three parts. The work, which aims at a comprehensive coverage of the relevant material, consists of (Greek) résumés of norms originally written in Latin or Greek. The first part is taken from the *Codex Justinianus* (I, 1–13), the second from the *Digest* and the *Institutes* (regulations on the *res sacrae*, etc.), and the third from the *Novels of Justinian* (in the paraphrase of Athanasios of Emesa, titles 1–3). The latest prescription (reproduced in paraphrase) is novel 144 of Justin II from the year 572 (3.3.3). According to Zachariā von Lingenthal, the collection was produced shortly thereafter (ca.580) as an appendix to a *Syntagma of Fourteen Titles* (see *Nomokanon of Fourteen Titles*). Stolte has suggested the younger Anonymous, “Enantiophanes” as the author of the *Collectio Tripartita*.

ED. PG 138.1077–1336.

-A.S.

**COLOBIUM (κολόβιον)**, a form of *tunic*, ampler than the *chiton*, and either sleeveless or short-sleeved. Its use is particularly associated with the monks of Egypt, where it was sometimes adorned with colored stripes (DOROTHEOS OF GAZA, ed.
Regnault-Préville, 168.28–170.24; see also Clavus. It is the garment in which Christ is clad in early representations of the Crucifixion (e.g., the Rabbula Gospels of 586).

Lit. Oppenheim, Mönchskleid 95–103. — N.P.S.

**COLONUS** (κολωνός). The Latin term *colonus*, like the Greek *γεωργός* (peasant), literally means “tiller of the soil,” in contrast to the *pastor*, herdsman. In late Roman legislation the term became the designation of a perpetual tenant. The term covers various categories of peasants, primarily *liberi coloni*, free tenants, and *adscripticii*. The status of *coloni* differed in different provinces, and different sources stress different aspects of their condition, legislation emphasizing their fiscal bonds to the soil, while in documents (e.g., the correspondence of Symmachus, the Albertini Tablets) they appear relatively independent. The term *colomatus* is used in legislative acts (e.g., Cod. Theod. XII 1.33) to denote the condition of the rural population.

The origin of the colonate is debatable. The institution probably developed from various roots and was assimilated under the pressure of the economic and fiscal conditions of the late Roman Empire, although it never attained real homogeneity. In the East it may have been drawn from Hellenistic (and even pre-Hellenistic) forms of dependency and at any rate was determined by the state fiscal requirements; in the West the increasing role of landed magnates contributed to the strengthening of bonds between the *colonus* and his master.

On the one hand, the *coloni* were construed as free people and Roman citizens; at the same time they were liable to service or serfdom—*servitute dediti* (Cod. Just. XI 50.2 pr.). They possessed some property, but it was treated as a *peculium*; they could not give anything away without their master’s permission. They could marry both free people and slaves and were able to litigate, even against their own master. They were not allowed to leave their *origo*, the land they lived on—but their master was also prevented from evicting them from this land. One became a *colonus* by birth (if both parents were *coloni* or the mother alone), or by a long residence as a tenant on a lord’s land (in the East); barbarians could be settled as *coloni*, as could *beggars*, if healthy. Free peasants under the *patrocinium vicorum* could be transformed into *coloni*. The colonate could be terminated by emancipation, by long service in a different status (e.g., as a *decurion*) in another province, or by entering religious orders.

By the end of the 4th C. the *coloni* were often mentioned together with slaves (e.g., Cod. Just. XI 48.12 of 396), but it is improbable that the colonate originated from the mass settlement of slaves on the land. The evolution of the colonate after the 6th C. is far from clear. There is no evidence of dependent peasants in the East in the late 7th–9th C., and it is impossible to prove that the later *paroikoi* were descendants of Roman *coloni*. In the West the term *coloni* continued to designate dependent peasants (e.g., in the correspondence of Pope Gregory I the Great). The Western *coloni* were probably of various conditions: in Visigothic Spain they seem to have merged with servile tenants, while in France they maintained a status between freemen and *servi*.

**COLOPHON** (κολοφών, lit. “summit, finishing touch”), or subscription, a note on a MS (usually at the end) with information on its date, the place where it was written, and sometimes the *scribe*. Colophons are not only the main source of information about copyists but also are important for social and political history, prosopography, the economics and technology of book production and *book trade* (prices, wages, length of time needed to copy a MS), and the history of copying centers (scriptoria). Dates and places mentioned in colophons are basic to the study of the development of the Greek script (mostly *minuscule*) and of regional MS production. As a genre, Greek colophons are less informative than Syriac or Armenian ones.

COLOR, a functional and aesthetic element associated with earthly and heavenly splendor and therefore central to Byz. CEREMONY, both courtly and ecclesiastical. Brilliance of color was prized for its own sake, but varieties of hue also underlay hierarchical distinctions in costume. Primary colors are specified in De ceremoniis and the pseudo-Kodinos, although some names of colors, such as atrabatika, are unidentifiable. The color of the emperor’s garb was sometimes left to his pleasure (De cer. 187.13).

No equivalents to Western treatises on the making of colors (Roosen-Runge, infra) are known, but a passion for polychrome brilliance shines through the taste for jewelry, enamels, and colored mortar. In monumental painting, islands of brilliant color, set in fields of gold, green, or white are juxtaposed from the 6th C. onward. Landscapes and architectural backgrounds employed secondary hues—purples, greens, ochres. In and after the 10th C. complementary colors were used, such as blue to highlight a purple area or red for the shadows of a green garment. Generally, carbon-black was used for shadows, and chalk or gypsum for white highlights. Blacks and whites were mixed with pigments to darken or lighten them. By the 12th C., a “three-tone” scheme had been evolved in Fresco technique. At the same time, hard, opaque colors, esp. in book illustration, aspired to the effect of enamel. The late 13th and 14th C. saw the introduction of unusual pinks and a great variety of greens.

No thorough analysis of the palette of Byz. painters has been made, but it is known that they relied more heavily on organic pigments than did Armenian artists. Mineral sources used included ultramarine and vermilion; cochineal seems to have been a source of red (M.V. Orna et al., Archeological Chemistry 4 [1989] 265–88). Vegetable sources yielded red-lake as well as orpiment and saffron for yellows. Colors were rarely blended; the separation of hues helps to explain the predominance of Line and contour in painting.

The palette of Byz. writers, with some exceptions (e.g., Eustathios of Thessalonike in his commentary on Homer), is relatively poor, limited to black, white, gold, and purple. Some authors, however, masterfully used colors for their political and moral purposes. Thus Niketas Choniates applied “multicolored” characterizations to Andronikos I, whose instability he wanted to stress; Niketas violates the chromatic convention when he construes the gold of imperial garb as “the color of bile” predicting defeat and the purple of the emperor’s ink as the color of the blood of innocent victims (Kazhdan-Franklin, Studies 257–63).

Symbolism and Significance of Color. Throughout the Byz. period, color choice remained among the most powerful expressions of symbolism, affecting the palettes of painters, the choice of ink, parchment, seals, and costume. The color of imperial garments and crowns varied according to the occasion on which they were worn; sometimes, as in the case of the divetesion worn in Holy Week, it was clearly symbolic. The highest state ranks were connected with particular colors: with rare exceptions gold and purple were exclusive to the emperor, blue was typical of the sebastokrator, green of the caesar. Pseudo-Kodinos carefully indicates the color of the footwear, dress, and hats assigned to each rank of officials on special occasions. Occasionally, symbolic color yielded to practical considerations. Though all emperors down to Marcian had had purple sepulchres, Justin I and Theophilus were buried in green marble tombs, Michael III in white, perhaps because supplies of porphyry were exhausted.

Conventions rather than rigid rules governed choices of color in painting. In the Transfiguration, Christ’s robe is usually white, as are the tunics of martyrs; in Miracle and Passion scenes, he often wears imperial purple. The Virgin’s garments are usually purple or blue but in the Nativity, where the Child receives “courtly” gifts, it may be gold (e.g., at the Cappella Palatina, Palermo). Angels frequently have haloes of celestial blue; Hades and demons often have gray flesh while personifications such as Slander in Klimax MSS display this tonality as well as bluish-gray clothing.

(not *kion*) was often used to designate a moral pillar or support; the word was employed for the apostles and Christ, for saints (esp. Peter and Paul), for the church. According to John Chrysostom (PG 62:554.30–37), the church is the *stylis* of the *oioumenē* and truth is the *stylis* of the church. The biblical image of “the pillar of fire” (Ex 13:21) was combined with the concept of support. Christ, says Epiphanius of Cyprus (*Panarion* 66.35.2, ed. Holl 5:183.23–26), is the way that we follow, the *stylis* as the support of the truth, the cloud sheltering the children of Israel, and (again) the *stylis* as the fiery pillar in the desert. (See also *Columns, Honorific*.)

—W.L., T.E.G., A.C.

**Columns, Churches.** The term is used for three closely related **rock-cut churches**, Karanlık Kilise (Dark Church), Elmali Kilise (Apple Church), and Çarıklı Kilise (Sandal Church) clustered in Göreme. All three imitate the **cross-in-square** plan of built churches, although the western corner bays in Çarıklı were never excavated. Each was ornamented with a *deesis* in the apse and a conventional feast cycle (see *Church Programs of Decoration*) in the nave, augmented by images derived from earlier churches in the valley, for example, Tokali Kilise’s Ascension/Blessing appears in the barrel vault of Karanlık’s narthex. Four donor portraits are preserved in Karanlık (Basil and the priest Nikephoros in the apse and Genethleos and John *entalmatikos* [a patriarchal functionary?] over the entrance) and three in Çarıklı (Theognostos, Leo, and Michael on the west wall). The paintings have been dated to the mid-11th C. (Jerphanion, Epstein) and to ca.1200 (Restle). (For ill., see next page.)

—A.J.W.

**Columns, Honorific,** large freestanding columns erected for commemorative purposes. The practice of erecting such columns was a continuation of Roman custom and esp. common in the capital in the 4th–5th C. (see *Constantinople, Monuments of*). Honorific columns were of two basic types. The first consisted of a monolithic shaft standing on a base and supporting a capital

—A.C.

**Column** (*κίον, στόλος*). The chief and definitive support in trabeate architecture from ancient to modern times, the classical column consists of a base with horizontal moldings, a cylindrical shaft (monolithic or in segments called drums), and a capital, carved to articulate the juncture of weight (superstructure) and support (the column’s shaft). In the columnar basilicas, stoa, colonnades flanking streets, and open courts of the Hellenistic, Roman, and Byz. city, the column, by its size and spacing, determined the scale of the structure and the urban character of the city. In the arcuate, domical architecture of Rome and Byz., heavy piers carried the principal loads of the building; in these structures columns formed a secondary support system, screening side aisles from central naves, or became decorative additions to the piers themselves (Early Christian and Byz. baptisteries; vaulted chambers in imperial palaces; domed basilicas like St. John’s, Ephesus; Hagia Sophia, Constantinople; San Marco, Venice).

Stone columns have great compressive strength and can carry heavy loads; hence they remain useful after the building has fallen into disuse. Reused ancient columns (*spolia*) have been identified in Early Christian and Byz. structures, for example, S. Sabina and S. Maria in Trastevere, Rome, and St. Demetrios, Thessalonike. Byz. builders, particularly under Justinian I, exploited quarries of varied colored marble (unlike their ancient Greek predecessors); they also developed a new form of capital (*impost capital, impost block*) to provide a better juncture between heavy masonry arches and the column shaft than that offered by the traditional Ionic or Corinthian capital. The shafts were normally undecorated, although spirally fluted columns were esp. popular in the 6th C. (J.L. Benson, *Hesperia* 28 [1959] 254–72). In all periods inscriptions might be carved upon them or votives attached. Columns were represented on sarcophagi, in MS illumination, on ivories, and in other media where they served to frame figures of importance who are often shown standing beneath an arch. A few ascetics (called *stylites*) chose to take up residence on the top of large column shafts.

In metaphorical and symbolic vocabulary *stylis*
that in turn held a statue of the honoree. Among such monuments erected in Constantinople were the so-called Porphyry Column of Constantine I and the Column of Marcian, both of which remain standing, as well as others known only from literary accounts and drawings. The second type was derived from the Column of Trajan in Rome and consisted of a shaft composed of drums resting on a base and supporting a capital and statue. Both base and shaft were carved in relief, and the figures on the shaft were set in a spiral frieze. Two such columns existed in Constantinople: the Column of Theodosios I, fragments of which survive, and that of Arkadios, its shaft and carvings known only from drawings. Although the practice of erecting honorific columns was abandoned after the 6th C., it was revived in a fashion by Michael VIII, who erected a column near the Church of the Holy Apostles. It was topped by a bronze statue of the archangel Michael and the emperor offering him a model of the city (Pachym., ed. Bekker, 2:234.17). Whether such columns influenced the cult of stiltite saints appears not to have been investigated.

COMES (κόμης, lit. “companion”), Lat. designation for the personal adviser or retainer of an emperor or barbarian king. Constantine I gave the term a technical sense (first mentioned in
early terminology, *comes domini nostri* or *comes Augustorum nostrorum*, emphasized the personal link to the emperor or his family. The term was employed for officials of different ranks or *ordines* (of which there were three at the time of Constantine); it presupposed a special assignment and encompassed various meanings. As an honorary title it was bestowed on some of the highest state functionaries, such as the *magister officiorum* or *quaesitor*; it became part of bureaucratic denominations, such as the *comes sacrarum largitionum* or *comes rerum privatarum*. Besides this upper echelon of the *comites consistorii* there were other *comites* who were not members of the *consistorium*. Some *comites*, such as the *comes Africæ* (B. H. Warrington, *BZ* 49 [1956] 55–64) or *comes Aegypti*, were provincial administrators, while others fulfilled fiscal or economic functions or acted as guardians and overseers. In later times *komes*, the Greek form of the term, continued to be used for officials with various functions such as the *komes hydaton*, *komes tes kortes*, and others; *komites* were also subaltern officers of the army and navy units. The office or function of a *comes* was termed a *comitiva*.

---

**COMES RERUM PRIVATARUM** (*κόμης τῆς ἱδικῆς παρουσίας*, lit. “of the private fortune”), high-ranking official of the later Roman Empire who administered the imperial estates. The office—like that of the *comes sacrarum largitionum*—was created ca. 318 and first mentioned ca. 342–45. The responsibility of this *comes* was to control income from the land of the emperor as opposed to that of the state; this distinction, however, was not consistently applied. The functions of the *comes* encompassed collecting rents and accepting land grants given to the emperor as well as forfeitures and escheats, and protection of the fisc from the intrusion of private owners. The *comes* also handled the sale of movable and immovable imperial properties and was a member.

of the consistorium. His officers were called palatini rerum privatuarum; in 399 their number was 300 (Cod.Theod. VI 30.16). By the end of the 4th C. the Cappadocian estates were transferred from the control of the comes to that of the praepositus sacri cubiculi. Anastasios I created, before 509, a separate office of the comes patrimonii to manage the imperial estates, while the comes rerum privatuarum preserved functions connected with grants and forfeitures. Thus he was transformed from a financial into a judicial official; he acquired duties that went far beyond his former obligations, for example, serving as a judge in cases involving grave-robbing and marriage. The office disappeared in the 7th C., some of its functions assumed by the sakellarios.

COMES SACRARUM LARGITIONUM (κόμης τῶν βείων θησαυρῶν, lit. “of the sacred largess, of the sacred treasuries”), high-ranking financial official of the late Roman Empire, created probably ca.318 and first mentioned between ca.342 and 345. The comes sacrarum largitionum replaced the former rationalis and obtained administration of those taxes that did not come to the department of the praetorian prefect, that is, chrysargyron, taxes on senators, customs duties, and the so-called “voluntary payments.” Income from the emperor’s private land passed from this comes to the comes rerum privatuarum as early as 379. The comes sacrarum largitionum also controlled mines, the production of state mills and dyeworks, and minting. The comes had a central office divided into several scriinia (bureaus) and a large staff in the dioceses and provinces. He enjoyed some judicial rights in cases related to taxation and after 425 also had jurisdiction over the officials of his staff. He was a member of the consistorium. From the end of the 5th C. the role of the comes sacrarum largitionum decreased, esp. after the abolition of the chrysargyron; the last comes is mentioned under Emp. Phokas. In the 7th C. the office was replaced by the sakellarios. Insignia of the comes sacrarum largitionum are shown in the Notitia dignitatum, while his control stamps are found on numerous silver objects (see Silver Stamps).

COMETS (sing. κομήτης, lit. “with long hair,” ἀστήρ). Byz. records refer frequently to indefinable astronomical phenomena, thereby making it difficult to be certain that it is a comet that is being described because, except for Halley’s Comet, the observation cannot be verified astronomically. Generally, a comet was called a semeion and sometimes it was qualified by a particular shape, such as that of a swordfish. Although some Byz. scholars followed Aristotle in stressing a natural scientific explanation for comets, the majority of the Byz. population understood a comet to be an omen predicting disaster. As a result an elaborate ritual of prognostication for comets was developed (John Lydos, On Omens 10–15). Some comets, however, such as the one used to foretell the Arab irruption of 632 (Theoph. 336.21–24), were merely invented. Like earthquakes, eclipses, and fires, the appearance of some comets was commemorated by an annual liturgy (Synax. CP 154.24–26). The most reliably attested Byz. sighting of comets were in 389, 418, 422, 442, 466, 518, 734, 744, 974, 1042, and 1345. Halley’s Comet was sighted in 451, 530, 837, 912, 989, 1066, 1145, 1222, 1301, and 1456.

LIT. Grumel, Chronologie 469–75. –B.C.

COMIC, THE, a mode intended to excite laughter, is rare in preserved Byz. art. Excluded almost by definition from Christian representation, comic elements do appear in the peristyle mosaics of the Great Palace at Constantinople that show, for example, a man thrown from a donkey. If their content is correctly read, it survives on some late glazed ceramics. Otherwise humor as we know it is hard to trace in art after the 6th C. A possible exception is the antics of the children in some 14th-C. representations of the Baptism of Christ (D. Mouriki in Okeanos 460–62). The caricature found in psalter illustration and the parody of classical and mythological images evident on bone caskets and boxes are functionally different from the comic mode.

–A.C.
COMITATENSES (from comitatus, military retinue), late Roman field army or mobile troops as opposed to the limitanei or border troops. The creation of the body of comitataenses was attributed to Diocletian by T. Mommsen (Hermes 24 [1889] 195–279) and O. Seeck (RE 4 [1901] 619f), despite the direct evidence of Zosimos (Zosim. bk.2, ch.34), who ascribed the innovation to Constantine I. It is likely that before Constantine the comitatus was only a body of imperial guards (W. Seston, Historia 4 [1955] 295). In the 4th C. the comitataenses consisted of about 110,000–120,000 men (Hoffmann, infra 1:304) including infantry (legiones), cavalry (vexillationes), auxiliary troops of foreign soldiers, and scholae palatinae. The infantry and cavalry stood in theory under the command of different magistri militum. In 364 each unit of comitataenses was divided into two parts: those called seniores served primarily in the West, juniores in the East. After 373 some units of limitanei were assigned to serve with comitataenses; Theodosios I restructured the comitataenses, uniting cavalry and infantry regiments under individual magistri urbis militiae. Circa 395 eastern contingents consisted of five armies, two attached to the court and three stationed in Orients, Thrace, and Illyricum. Comitataenses were considered more privileged troops than limitanei. R. MacMullen (Klio 62 [1980] 459) suggests that the number of well-trained comitataenses declined in the second half of the 4th C., and later the difference between comitataenses and limitanei disappeared.

COMITIVA. See CODES.

COMMANDERS, MILITARY. In theory, the emperor was supreme commander of the army, but only a few (such as Constantine V, Nikephoros II Phokas, Basil II, or the Komnenoi) personally led armies in the field. Magistri militum were supreme commanders of the empire’s armies until the 7th C. By the early 8th C. the domestikos ton scholon had become chief commander, seconded by the strategos of the Anatolikon; after the 11th C. the rank of megas domestikos desinged supreme military commander. Despite the high number of mercenaries in the Byz. army, supreme command was rarely given to a foreigner.

High military command was not necessarily entrusted to capable soldiers. The assignment, duration, and independence of military command was subject to considerations other than proven ability, and emperors were careful to bestow command on a temporary basis to loyal courtiers or family members, regardless of their actual military experience or ability. During the 10th and 11th C., when practically every successful general (Bardas Skleros, George Maniakes) made a bid for the throne, command assigned on the basis of loyalty was particularly evident, as was the ensuing deleterious effect of loyal but incompetent commanders on the army’s performance. Eunuchs, automatically precluded from the throne, frequently received command of armies; while some were effective generals (e.g., the 6th-C. Narses), many brought disaster on their men. Constantine Gongyles, for example, led the impressive expeditionary army to Crete in 949, which was annihilated as a result of his carelessness (Skyl. 245.35–246.52).

COMMANDS, MILITARY. The Strategikon of Maurice (Strat.Maurik. 3.5, pp.152–54) provides a detailed description of commands issued by a MANDATOR during the army’s training exercises. The soldiers began to march upon hearing the blast of a trumpet (boukinon or touda) or seeing an ensign wave a banner (plamoulon); the striking of a shield or hand signals brought them to a stop. The Strategikon lists all oral commands in Latin; a 9th-C. chronicler (Theoph. 258.15–19) records an order given by Komentiolo “in the ancestral language” (i.e., Latin), “torna, torna, fratres,” during an expedition against the Avars in 586, but by the end of the 9th C. Latin commands had apparently been discarded, as Leo VI lists the same commands in a Greek version in his Taktika (e.g., 7.65–69). The 10th-C. Praecepta militaria indicates that battle commands were taught in training, and that most were signaled by trumpet (4.1–2; 15.22–23).

Daily orders were issued to officers in writing
(De re militari 32.4–12). The emperor, in theory the supreme military commander, likewise transmitted written commands to his generals. A 12th-C. historian (Nik.Chon. 154.43–48) relates that Manuel I sent a letter (grammata or biblon) to Andronikos Kontostephanos on the eve of a battle with the Hungarians (8 July 1167) forbidding him to engage the enemy because he found the day unpropitious. Kontostephanos, however, disregarded the command, hid the letter under his cloak, gave battle, and won the day. (See also Battle Standard and Flag.)

A.K., E.M.

COMMENDATIO ANIMAE (Lat., lit. “commending of a soul”), popular prayer for the dead in Western ritual, known from the 3rd C. onward and influential in art and hagiography. It contains 13 petitions on the model of “Free his soul, Lord, as you freed Daniel from the lions’ den.” The Old Testament events cited include Noah and the Flood, Job’s sufferings, the sacrifice of Isaac, Jonah and the whale, and the rescue narratives of the Book of Daniel: Daniel in the Lions’ Den, the Three Hebrews in the Fiery Furnace, and Susanna and the Elders. St. Thekla is the only non-biblical figure included. A. Baumstark (OrChr. n.s. 4 [1914–15] 298–305) identified early Byz. analogues to the Commendatio in the Great Euchologion.

Scenes referred to in the Commendatio recur in the catacombs and elsewhere. For instance, a 3rd-C. cup from Diokleia includes the three Daniel scenes (with all figures orant), Jonah and Isaac, with quotations from the Commendatio (H. Leclercq, DACL 3:3009–11, fig.3396). Frescoes in the necropolis at El-Bagawat include the three Daniel scenes, Noah, and Thekla (Idem, DACL 4:439f). The Brescia casket (Volbach, Elfenbeinarbeiten, no.107) juxtaposes images of Jonah and of the rescue narratives of Daniel. Often hagiographers ascribe a version of the Commendatio to saints about to face torture (e.g., Lukillanos—ed. F. Halkin, AB 84 [1966] 16f, 26), esp. if the approaching torture is by fire (e.g., Juliana—PG 114:1444D, 1448f).

-C.B.T.

Differing methods of interpretation were inherited from the two schools of patristic exegesis, Alexandrian and Antiochene. For the more spiritualizing ALEXANDRIAN SCHOOL (Dionysios, Maximos, Symeon to some extent), the contemplation (theoria) of liturgical rites raises the soul to the realities of the invisible world. Here analogy takes precedence over biblical typology, and the liturgy becomes an allegory of the soul’s progress from sin to divine communion via a process of purification symbolized in the rites. This Alexandrian system left little room for the saving mediation of Jesus’ earthly life, death, and resurrection. By contrast, the exegesis and mystagogy of the ANTIQUEHENE SCHOOL, more attentive to historia than to theoria, emphasized the relationship between liturgical rites and the historic saving actions of Christ, of which the sacramental rites are an “imitation” (mimesis: Cyril) and “memorial” (anamnesis: Chrysostom), as well as being an initiation and foretaste of the heavenly worship.

Patr. Germanos I, joining both methods, added the more literal Antiochene mystagogy to the Alexandrian heritage of pseudo-Dionysios transmitted to Byz. via Maximos. Thus for Germanos the church is not only, as for Maximos, “Heaven on earth, where the God of heaven dwells and moves.” It also “images forth the crucifixion and burial
and resurrection of Christ" (Germanos, Liturgy, par.1). The Great Entrance not only shows "the entrance of all the saints and righteous ahead of the cherubic powers and the angelic hosts. . . . It is also in imitation of the burial of Christ" (par.37). This synthesis reached classical expression in the more extensive and complete commentary of Kabasilas, which represented a return to the balanced method of Germanos after the exaggerated allegorical historicism of the Pro- theoria.

—R.F.T.

COMMERCE AND TRADE. The role of trade in Byz. changed over time, depending on political circumstances and on general economic development. In the period through the 6th C., among the factors facilitating economic exchange within the empire were the existence of cities, a common currency, the low internal duties of 2 to 2.5 percent, and the relative openness of the Mediterranean, even after the creation of a Vandal fleet. Among the factors inhibiting exchange were state exactions, the fact that the needs of the army and the provisioning of Constantinople were met by levies or payments in kind thus obviating trade, the difficulties of transportation, and a certain degree of self-sufficiency on the large estates. Modern scholars tend to stress these inhibiting factors; nevertheless, the evidence for the existence of internal trade is clear: wine and oil (commodities for mass consumption) were objects of relatively long-distance trade, as were wool, metals, marble, timber, and manufactured goods, esp. cloth and luxury products, the last having a market that was diffused geographically but restricted in size. Great periodic markets (fairs), such as those of Aigai (in Cilicia) and Edessa, catered to this internal long-distance trade. At the local level, markets were small and so was the radius of activity. The fairs outside Antioch served the needs of local villages; small towns exchanged products with the countryside, forming local networks of exchange within a system of relative self-sufficiency. Trading activity was greater in the eastern part of the empire, while in the West the process toward self-sufficiency was more advanced. It is impossible to quantify the importance of trade in the economy of this period; Jones's statement (LRE 2:872) that the collatio bustralis, a tax on trade and manufacturing, accounted for 5 percent of imperial revenue, is a fiscal, not an economic calculation.

In terms of international trade, its most important expression was the importation of spices, silks, jewelry, and other luxury products from China, Persia, and India; these commodities arrived at the stations of the Persian frontier, the Syrian cities, or Clysm and Aila, and then were transported to both the eastern and the western part of the empire. Foreign trade appears to have been particularly active in the 5th–6th C. It was somewhat hampered by the fact that trade in the most important item of exchange, silk, was highly regulated.

The political, demographic, and military troubles that afflicted Byz. in the 7th C. brought about economic changes that affected trade. The tendency toward self-sufficiency became much stronger than in the previous period, while urban decline reduced the level of exchange between town and countryside. Land routes became very difficult and communications along the Mediterranean, although they never completely stopped, were disrupted by piracy. Trade declined but did not cease, the provisioning of big cities, esp. Constantinople, acting as an impetus to it. Large fairs, like that of Ephesus, continued to exist. The Rhodian Sea Law testifies to the survival of maritime trade. It was probably in order to stimulate such trade that Emp. Nikephoros I imposed a forced loan on the large shipowners of Constantinople. Locally, exchange took place in small markets where an element of barter was also to be found. International trade was reoriented to some extent toward the north and to the Black Sea. In the 8th C. the Byz. had trade relations with Bulgaria and in the 10th C. with the Rus'. The silk trade, now taking place primarily within the empire, may have been considerable. Quantifiable information is, once again, lacking.

By the 10th C., there is evidence of a strong revival of trade. The Book of the Eparch, along with other sources, shows a large number of different trades and crafts in Constantinople. The state regulated and circumscribed, to some extent, the activities of the various guilds. At the same time, Constantinople appeared as a center of international trade, with Syrian, Italian, Rus', and
Bulgarian merchants, whose contact with Byz. merchants was also regulated. The market of Constantinople stocked spices, which arrived by way of Trebizond, cloth from Syria (also mentioned in Thessalonike), and linen cloth from Bulgaria and the Pontus. Trade relations with the Muslims became very active in the middle of the 10th C. The internal market also appeared active. The size of mercantile enterprises remained small.

In the 11th-12th C. a number of general changes combined to activate the economy of exchange. Urban growth acted as a stimulant, as did the rise of an important Italian market and, possibly, the general quickening of economic activity in the Mediterranean, partly the result of the activities of Italian merchants. Byz. traders from Constantinople appear in the documents of the Cairo Geniza, importing into Egypt brocades and luxury textiles as well as furniture: chests, cupboards, and bedsteads of Rûm. Constantinople and Thessalonike were still the most important trade centers. The Timarion attests to the vitality of the commerce of Thessalonike, while Benjamin of Tudela (p.20) says of Constantinople, “It is a busy city, and merchants come to it from every country by sea or land, and there is none like it in the world except Baghdad.” A number of smaller centers of exchange developed: Halmyros, Demetrias, Preveza, and others. Michael Choniates speaks of the dependence of Athens on trade. The Black Sea witnessed important commercial activity throughout the period. Byz. aristocrats still shied away from commerce, at least in their normative statements; and large economic units (e.g., the Kosmosoteira monastery at Bera) tried to buy necessities such as oil directly from the producer, rather than through middlemen. At the same time, monks themselves participated in trade, primarily, perhaps, by selling their produce, but also, it seems, by sometimes acting as middlemen.

The acquisition of trade privileges first by Venice (at the end of the 11th C.) and then by Pisa and Genoa played an important role in these developments. The chrysobulls to the Venetians gave them access to an increasing number of markets, both in Constantinople and in provincial cities. Venetian merchants were interested not only in trade with the East, but also in the internal trade of the Byz. Empire; this is also evident in the chrysobull of 1198 (the date is under discussion), which greatly expanded the markets acces-
sible to the Venetians. Venetian involvement in domestic trade was facilitated by the fact that, after 1126, the Byz. paid no kommerkion on their transactions with the Venetians. This may have acted as a stimulant to trade and may even have profited some Byz. merchants; in the long term, however, it subsidized the Venetian middleman to the detriment of the Byz.

During the Palaiologan period, the trade of the Byz. Empire functioned under very different conditions from the past. The dominant factor in the eastern Mediterranean in this period was the presence of Western merchants, primarily the Italians, who had turned the terms of trade in their favor. By the late 13th C., they had created a network of exchange that resembled an international trade network; within it they were dominant, since they controlled communications, information, exclusive access to Western markets, and privileges in the marketplaces of the Levant, including the Byz. Empire. Through their colonies and trade stations, Western merchants exercised overwhelming influence on trade. Byz. trade formed part of this complex and served the needs of Western markets. Food and raw materials were exported to the West, from which manufactured products, primarily Italian and French cloth, were imported. Constantinople was a particularly important pivot in this system when the Pax Mongolica (mid-13th-mid-14th C.) made it easier for merchandise from the Far East to reach the Mediterranean by way of the Black Sea. By contrast, after the mid-14th C. the relative importance of Constantinople declined, to the advantage of Cyprus, Ayas (Lajazzo in Lesser Armenia), and eventually Alexandria and Berytus.

Throughout this period trade was active, esp. along the coasts of the Aegean and the Black Sea, the islands, the inland route from Thessalonike to Prizren and other Serbian towns, and the Danube delta. Monemvasia, Thessalonike, and Trebizond were major commercial centers. Indeed, it may be said that commercial activity was greater in this period than ever before. Byz. merchants and sailors participated in this activity quite substantially, as did members of the aristocracy. They were primarily active in local or interregional trade, however, rarely gaining access to international trade, which was the most lucrative. Only in the late 1340s did the Byz. try to capture the profitable Black Sea trade for themselves. It was an
abortive effort, which came to an end in 1350. For the rest, their activities remained important, extensive but subsidiary, until the establishment of the Ottoman Empire changed the terms of trade once again.

COMMODATUM (τὸ εἰς χρόνιν διδόμενον), a loan for use free of charge. As a type of contract commodatum was already under Justinian I (Digest 13.6) manifestly an artificial term that can be distinguished from loan and misthôsis only with difficulty because of the unclear terminology of the Byz. with regard to ownership. Even so, it is treated in detail in the Basilika (13.1) and is still found in Harmenopoulos (Harm. 2.10). In practice it was confused with a wide variety of other types of transmission for use: in Peira 46.5 it is characterized as "polymorphic." In fact, chresis is also readily used as a term for rights of use (usufruct), for example, the rights of a widow over the property of her deceased husband (Nov. Just. 22) or for longi temporis praescription (cf. Harm. 1.16.5). D.S.

COMMUNION (μετάληψις), the eating and drinking in common of the consecrated bread and wine (Jesus’ body and blood), climax of the rite of the Eucharist, as sign of the spiritual communion (κοίνωνία) of Christians with one another in Christ, and, through him, with the Father in the Holy Spirit. The fraction and distribution of one loaf (1 Cor 10:16–17) and the drinking from one cup, as well as the old requirement that each receive the consecrated elements from the hand of another, symbolized the fellowship involved. Communion in both Eucharist and prayer was restricted to the baptized who had not been excluded by excommunication or grave sin. Communion among churches was symbolized by inviting visiting bishops to join in celebrating the Eucharist.

Originally all church members in good standing communicated at every Eucharist, but by the end of the 4th C. the church fathers complained of a decline in the reception of communion, though they themselves were scaring people away by calling communion a "dread" mystery to be received only by those worthy, in fear and trembling. By the Middle Ages, laity communicated at most a few times a year, on the Great Feasts, esp. Easter. Monks, however, continued to receive communion more often: daily communion was a rarity in Byz. monasteries, but weekly communion, though not universal, remained common.

COMMUNION OF THE APOSTLES. See LORD’S SUPPER.

COMMUTATION (Lat. adaeratio). Following the monetary reform of Constantine I, Byz. constantly favored the commutation of fees or contributions in kind and of services and corvées into monetary payments. In the early centuries, the annona as well as the caput or the levies of animals (horses, pigs) or weapons were commuted into cash contributions at such a variety of rates (often arbitrarily established) that the fiscal burden of contributors and the illicit gains of some tax collectors could also vary considerably. In the fiscal system of the Macedonian period, the adaeratio of services due to the state as well as of sportulae (see Synethia) in kind due to officials was common: for example, the military obligation (strateia) of a farmer-soldier for one year could be replaced, in the 10th–11th C., by a cash payment of 4–6 nomismata; similar arrangements were possible for peasants attached to the dromos and for most secondary taxes in kind, some of which were claimed in cash so often that new names had to be invented (antikaniskon, antimitatkion, etc.). In the late 11th C. and afterward, in times of monetary instability tax collectors increased their revenues by playing with the ex-
change rates of the various coins. In the 14th C. the kaniskion was commuted to 6 keratia per year.

son, “Logariké” 419–64. Kazhdan, Agrarnye otnošenija 120.
-N.O.

COMPUTUS. The date of Easter in Byz. was
determined by a set of simple rules and a variety
of cycles, collectively called the computus. The
rules are essentially that Easter falls on the first
Sunday that follows both the 14th day of the
Paschal lunar month (Passover) and 21 March in
the Julian calendar. The two cycles in common
use were of 19 years (19 solar years = 235 months;
the years of intercalation [embolismic years] were
numbers 3, 6, 8, 11, 14, 17, and 19 of the cycle)
and, from the 5th C. onward, 532 years (= 19 ×
28). The 28-year solar cycle is the product of a
four-year leap-year cycle and seven weekdays.
The combination of the 19-year lunar cycle and the
28-year solar cycle results in the precise recur-
rence of the sequence of Julian calendar dates of
Easter in each 532-year cycle. The so-called “re-
forms” of the computus in general consisted sim-
ply of changing the epoch at which the 19-year
or 532-year cycles begin, or of changing the one
year in each cycle in which the saltus lunae or “leap
of the moon” (an ephemeris of 12 instead of 11 days)
occurs. It is true that, following the Islamic value
for the length of a solar year that had been known
in Byz. since the 11th C., Nikephorus Gregoras
proposed a reform of the calendar (Pingree,
“Chionia & Astronomy” 138f), but this propo-
sal was not accepted. The immense Byz. litera-
ture on computus includes treatises by Isaac Ar-
cyros and Nicholas Rhadas.

Ready-made computus tables (or paschal tables)
indicating the dates of Easter for the observable
future survive in many MSS. Usually compiled
by the readers/owners, their earliest date gives the
terminus ante quem for the completion of the MS.

CONCEȘTI TREASURE, dated to ca.400?, found
at Concesti in Moldavia in 1812 and now in the
Hermitage Museum, Leningrad. It includes six
Byz. silver objects, Hunnish gold jewelry, and
horse fittings (see Chariot Mounts and Horse
Fittings). Three silver objects have decorations
from classical mythology: the amphora, one of the
most elaborate silver vessels of the late an-
tique period, has relief decoration of a hunt, a
battle between Greeks and Amazons, and a ma-
rine thiasos (Dionysiac revelry); the situla has a
frieze incorporating Hylas, Leda, Apollo, and
Daphne; and the plate, one of the largest known
(diam. 55 cm), is decorated on its rim with gilded
and niello-inlaid portrait medallions and hunt
scenes, comparable in technique to the Sutton
Hoo Treasure plate and a trulla in the Mytilene
Treasure. The other silver objects in the treasure
include a ewer, of a well-known type; a folding
stool that resembles others from Ostia and the
Lampsakos Treasure; and a helmet of a type
introduced by Constantine I (see Armor). It has
been suggested that the treasure belonged to a
Hunnish prince who may have acquired the silver
objects as booty during a campaign in the Danube
region and that the burial took place between 400
and 410.

Wealth 138f.
-M.M.M.

CONCH (κόχχη, lit. “mussel shell”), a half-dome
covering a niche or apse. Its shell-like or ribbed
form, which appeared behind and above the seats
of magistrates in Roman basilicas, was taken over
into Christian iconography (Volbach, Eifenbeinar-
beiten, nos. 137, 150, 153f). In Byz. churches a
conch was usually decorated with mosaic or fresco
as a focus for the interior decoration. In early
basilican churches the conch of the apse normally
contained an image of Christ; in later, domed
churches the conch of the apse became, after the
dome, the most conspicuous location in the build-
ing and was reserved for the image of the Virgin.
Conches were also used for other visually and
structurally prominent roles—for example, in the
supporting system for the dome in certain domed
octagon churches (as at the Nea Moni on Chios),
for the covering of subsidiary apses in triconch
and tetrachon churches, and for covering eves-
drae of polygonal churches and other buildings
(e.g., triklinia and refectories). Smaller-scale conches
were also used in conjunction with niches as exterior decorative devices (H. Buchwald, JÖB 26 [1977] 265f, 290–95).

-M.J.

CONCUBINAGE (παλακεία, ἀγραφὸς γάμος in Ecloga 2.6), a stable sexual relationship, frequently of a married man with a woman of lower status, was considered legal in Roman law (Ph.J. Thomas in Huldigungsbundel P. van Warmelo [Pretoria 1984] 290–36). Church fathers attacked concubinage, equating it with prostitution. In 326 Constantine I prohibited married men from keeping concubines (Cod. Just. V 26.1) and in 336 he threatened with infamy and deprivation of Roman citizenship any men of high rank who tried to treat as legitimate their children by bond-maids, freedwomen, actresses, or tavern keepers (Cod. Theod. IV 6.3 pr.). Anastasios I and Justinian I were more tolerant toward concubines and their offspring, and the Ecloga still protected concubines against the arbitrariness of their "husbands." Leo VI abolished this institution (nov.91); the previous opinion that this action was initiated by Basil I was questioned by N. Oikonomides (DOP 30 [1976] 173–93) who interpreted Procheiron 4.26 as an interpolation of a section of Leo VI's novel of 907. Concubinage evidently survived this abolition, and in the 13th C. Demetrios Chomatemos mentions pallaika and concubines (pallakai) kept by men of various status and in various areas of Epiros.

The status of the children of concubines, filii naturales, posed a problem for legislators who tried to distinguish them from offspring resulting from casual intercourse (with prostitutes, etc.); their attitude toward these children kept shifting, as they sometimes granted and sometimes withdrew their rights to the property of their fathers. In reality many illegitimate children of emperors and noblemen by their concubines assumed high ranks and social importance.

-J.H., A.K.

CONFESSION (έξωμολόγησις), the solemn act of acknowledgment of one's sins, was considered by the church fathers as indispensable in the search for salvation. As Athanasios of Alexandria (PG 27.481 A) states, "Confession is the beginning of salvation." John Chrysostom (PG 57.426.35–37) asserts that sin is such a stain that even thousands of springs of water cannot remove it, only tears and confession. The early church encouraged public confession, but from the end of the 4th C. this practice declined, and the right of hearing confession and imposing penance was entrusted to the church as an institution and individually to priests. The Byz. church, however, placed less emphasis on the institutional and legalistic approach to confession than did its Western counterpart: confession was not included in the list of sacraments established by Theodore of Studios. John Chrysostom (PG 49.292.34–44) stresses that there are many different ways of repentance (metanoia) and none are difficult: "Are you a sinner? Enter a church, confess your sins, and receive absolution." The informal character of Byz. confession is evident from a text ascribed to Anastasios of Sinai (PG 89:372 A): "If you find a spiritual man, experienced and capable of curing you, confess before him without shame and full of faith, as if before God and not a human being."

In the monastic milieu confession to a pater pneumatikos, a spiritual father, was a regular practice. At the Bebaias Epipodionos nunnery daily confession was prescribed (Typikon, chs. 105–11). But in the secular world it was not common, except during Lent or as acknowledgment of serious sins. Byz. penitentials do not suggest a rigid format for absolution or a strict scale of penances (epitimia); absolution was expressed mostly in the form of prayer and the remission of sins was attributed to God rather than to the priest.

-A.K.

CONFESSOR (όμολογητής), an honorific title designating primarily those who, during the persecutions of the 3rd–4th C., overtly proclaimed themselves Christians; the feminine form, homem-
logetria, is rare—for example, Epiphanius of Salamis (PG 42:192B) mentions an anchorite, Paphnutius, who was the son of a homologeta. The difference between the confessor and martyr was still vague in the 3rd C.; Origen applied the term martyr to all who witnessed to the truth, although he knew that the term was generally reserved for those who proved their faith by shedding their blood. After the victory of Christianity, the term acquired the metaphorical sense of “pious Christian,” as in the 5th-C. inscription of “Domnos homologetes” (W. Ramsay, JHS 25 [1905] 172). It was also specifically applied to some ardent defenders of Orthodoxy, such as Maximos the Confessor and Theophanes the Confessor, who suffered exile or imprisonment, but not death, for their beliefs. (For confessor as one who hears confession, see Pater Pneumatikos.)

A.K.

CONFISCATION. Legislation of the 4th–6th C. prescribed confiscation as punishment for traitors, heretics, pagans, and parties contracting illegal marriages; in addition, the property of pagan temples, certain municipal estates, and individuals who died intestate without legally recognized heirs, was subject to confiscation. While several of these categories ultimately fell into disuse, confiscation for both treachery and treason persisted in modified forms throughout later periods: the Ecloga (6.2) stipulates that the fisc could recover half the estate of a husband who died intestate and was survived only by his wife (see Abytikion); the Peira (60.1) documents a complicated division of property between the fisc and the heirs of a proscribed member of the Bourztes family; Manuel StrabomanoS (P. Gauthier, REB 23 [1965] 183.30–31) describes how his father was punished with confiscation under Alexios I, adding that the victims were allowed to retain a portion of their property and that many subsequently received aid from the emperor himself. Confiscated lands became state property, administered until the 7th C. by the comes rerum privataram.

Alongside such practices sanctioned in civil law, confiscation also developed certain extrajudicial forms based largely upon administrative regulations of the army and fisc. In the 10th C., military officers were permitted during foreign invasions to seize private cash to purchase supplies (De obsidione toleranda 49.20–22), and several emperors appropriated ecclesiastical treasure to meet urgent military expenses. Lands abandoned for 30 years might become classified as klasma and revert to the fisc, while stratiotika ktemata could be withdrawn from their original possessors for transfer to more reliable soldiers. Theophylaktos of Ohrid (ep. 26, ed. Gautier, Lettres 215–17) mentions widespread confiscation by imperial officials in Bulgaria. In addition, emperors progressively obtained the right to confiscate any landholding in exchange for its just price or the equivalent in land (vita of John Chrysostom, PG 114:1156A), and both Nikephoros I (Theoph. 487.27–488.1) and Basil II (Skyl. 340.88–95) appear to have appropriated private property without any compensation. Such widespread application rendered confiscation a continual threat in Byz. society, and a number of writers (e.g., Skylitzes, Kekaumenos, and esp. Niketas Choniates) express disapproval and fear of its frequently unjust or arbitrary nature.

A.J.C.

CONFRATERNITY (ἄδελφότης, “brotherhood,” or διακονία, “diaconate”), a private association of laymen and clergy, men and women, established for devotional purposes (e.g., the veneration of a particular icon) and for mutual assistance among members (e.g., in cases of sickness, for funeral or memorial services). One function of a confraternity was to hold a procession with cult icons on feastdays, a scene depicted in the Blachernai monastery at Arta. Such lay confraternities had charters, strict regulations for members, and other similarities to the confraternities found in the medieval West. There is evidence for Byz. confraternities from the 6th C. until the end of the empire, with perhaps a discontinuity during the Iconoclastic era. A late 11th- or early 12th-C. typikon exists for a confraternity at Thebes.

M.B., A.C.
CONRAD III (Κορράδος) of Hohenstaufen, king of Germany (1138–52), never crowned Western Emperor; born 1093, died Bamberg 15 Feb. 1152. Begun in 1140, negotiations with John II Komnenos for an alliance against Roger II of Sicily culminated in 1142 with the dispatch of Bertha of Sulzbach to Constantinople as bride for Manuel I. Conrad led the German contingent on the Second Crusade in 1147. Because of clashes with Byz. forces, he feared to enter Constantinople, but crossed the Bosphorus with his army. Defeated in Anatolia by the Turks, Conrad joined Louis VII, leader of the French Crusaders. From Ephesus, ill and exhausted, Conrad sailed to Constantinople (ca. Jan. 1148), where Manuel entertained him; he continued by sea to the Holy Land. Returning after the Crusade's failure, Conrad landed at Thessalonike, where, at Christmas 1148, he and Manuel agreed on a joint attack on Roger. Manuel was to receive Apulia and Calabria as Bertha's dowry. Because of ill health and preoccupations in Germany, Conrad failed to execute these plans.

CONRAD OF MONTFERRAT, claimant king of Jerusalem (1190–92); died Tyre 28 Apr. 1192. Son of the marquess William VI of Montferrat, Conrad and his brothers Boniface of Montferrat and Renier of Montferrat allied with Emp. Manuel I against Frederick I Barbarossa in 1179. Conrad captured Frederick's representative, Archbp. Christian of Mainz (Sept. 1179), then went to Constantinople to confer with Manuel; he was there at Manuel's death. In 1186 Isaac II offered the hand of his sister Theodora and Conrad accepted. He reached Constantinople about Apr. 1187, and the marriage occurred immediately. Conrad became caesar. During the subsequent revolt of Alexios Branias, Conrad enlisted Western cavalry and infantry as well as Turkish and Georgian merchants; his generalship was crucial in defeating Branias. Conrad soon became discontented, however, and perhaps learned of the threats posed by Saladin in the Holy Land. Around late June 1187 (or Sept., according to R.-J. Lilio in Varría 1 [Bonn 1984] 163–74), he abandoned Theodora and sailed to Tyre. There he helped organize the defense of the city and preserve the remnants of the kingdom of Jerusalem. In 1190 he married Isabel (daughter of Amalric I and Maria Komnene) and claimed the kingdom.

CONSAWGUINITY. See RELATIONSHIP, DEGREES OF.

CONSCIENCE (συνείδησις), a term rarely found in ancient philosophy. Taken literally, synedesis originally meant personal knowledge or understanding shared with another; eventually it came to mean self-awareness. From the 1st C. B.C. the term appears more frequently, often with a negative connotation, in reference to an attitude that approaches our notion of conscience. In the New Testament, while the term does not occur in the Gospels, it appears 30 times throughout the remaining books, but only in the Pauline epistles is it understood in an ethical sense as the stage at which the self feels either justified or condemned.

In Christian sources synedesis primarily denotes either self-justification or self-condemnation, even though its alternative meanings are not wholly absent. For example, in Ignatius of Antioch and Clement of Rome conscience becomes more authoritarian, emphasizing faithful obedience to the authority of the church. The Philonic or Pauline notion is evident in John Chrysostom, for whom conscience is the highest authority next to the command of God, an understanding that unites him with John of Damascus, for whom the law of God is embedded in human conscience, called the law of the mind (Exp. fidei 95, 8–10, ed. Kotter, Schriften 2:222). It is the impulse, the tension that maintains the life of ascetic spirituality, for the conscience demands satisfaction. The ascetic life of the saints shows conscience as a form of martyrdom, while it may also refer to the monastic life: “Let conscience serve as a reflection of your obedience” (John Klimax, PG 88:712B). In this tradition, the formation of conscience requires certain spiritual qualities, “vigilance of the heart” and “sobriety” (nepsis).

---

**CONSTORIUM (τεῖον συνεδρίου),** the body of imperial advisers that replaced the former consilium in the late Roman Empire. The term *consistorium* was derived from the hall in which the meeting was convened; W. Kunkel (ZSavRom 85 [1968] 295, n.96) rejects the traditional derivation of the name from the obligation of participants to stand during its sessions. The mention of the *consistorium* in a decree of Diocletian (*Cod. Just. IX* 47.12) is probably a later “correction” of the scribe, and the first secure evidence comes only from 347, although it is plausible that the *consistorium* was a creation of Constantine I. Membership in the *consistorium* was never fully regularized, but by the end of the 4th C. the *consistorium* was composed of two groups of members or *comites consistoriani*: (1) the chiefs of the central administration (magister officiorum, quaestor sacri palatii [see Quaestor], comes sacrarum larcitionum, and comes rerum privatarum), and in some cases the praetorian prefect and certain military commanders, and (2) advisory officials with minor rights. The functions of the *consistorium* included promulgation of imperial laws, reception of foreign ambassadors, and discussion of high policy (although sometimes this was discussed within a narrower and less formal circle of the emperor’s proximi, including the empress) and high justice. A session of the *consistorium* was called a silentium. The *consistorium* never developed into an independent institution, remaining a consultative and ceremonial body. By the end of the 4th C. emperors rarely participated in the *consistorium*, as the emperor’s “inner cabinet” came to play a growing role as the advisory board. Senators actively participated in the judicial work of the *consistorium* from the 5th C.; in the 6th C. Justinian I essentially abolished the distinction between the consistorium and the senate.

---

**CONSTANS II,** emperor (641–68); son of HERAKLEIOS CONSTANTINE and grandson of Heraclius; born Constantinople 7 Nov. 630, died Syracuse 15 July 668 (Grierson, “Tombs and Obits” 49f). Christened Flavios Herakleios, Constans was crowned co-emperor as Constantine (Constantine III, according to Stratos) by his uncle, HERAKLONAS, in Sept. 641. He became sole emperor after Heraklonas and MARTINA were deposed in winter 641/2, ruling officially as Constantine (his coins bear the name) but popularly known as Constans. His thick beard earned him the nickname “Pogonatos.” With his wife Fausta, daughter of VALENTINOS ARŞAKUNI, he had three sons: Constantine (IV), Herakleios, and Tiberios. Throughout his reign, Constans was occupied by the empire’s external enemies. Against the Arabs he probably organized the themes of ANATOLIKON and OPSIKION and personally campaigned in Asia Minor and Armenia. The first Greek inscriptions on Byz. coins (“In this conquer”) are found, together with Constans holding a cross, on folles of his reign. Evoking the success of Constantine I at the Milvian Bridge, this slogan was intended to urge the army to victory over the Muslims. He suffered defeats, however, esp. at the naval battle of Phoenix (mod. Finike in Turkey) in 655, and twice (651, 659) accepted peace treaties (see Muṣawwa). He had more success against the Slavs, personally invading SKLAVINIA in 658 and resettling captives in Asia Minor. He also probably organized the theme of HELLAS. Anxiety over external threats led him to leave Constantinople for the West ca.660. Arriving in
Italy in 663, he campaigned against the Lombards before settling in Sicily, where he created a theme and raised a navy and army. Constans's measures to finance his military activities were unpopular, esp. in Italy, where high taxes and confiscations of church vessels antagonized the local nobility and clergy. He faced numerous rebellions (e.g., those of Saborios, Olympos, and Gregory, exarch of Carthage). His religious policy attempted to end Christological arguments, but his Typos only angered Western bishops, partly resulting in the trials of Pope Martin I and Maximos the Confessor. He also infuriated Pope Vitalian in March 668 by decreeing the independence of the archbishop of Ravenna. Constans was murdered while bathing, either struck in the head by a servant or stabbed by the conspirators who proclaimed Mezzi dos emperor. His body was returned to Constantinople, perhaps personally by Constantine IV, and buried in the Church of the Holy Apostles.

CONSTANTIA (Κωνσταντία), Constantiana, and other variants, name of several sites (towns and/or strongholds), primarily in the northern Balkans.

CONSTANTIA in the Rhodope Mountains, a town destroyed by Kalojan in 1201 (Nik.Chon. 532.22–23). It is probably the Constantia listed in a notitia of Patr. Nicholas I Mystikos as a suffragan of Philippopolis (Notitiae CP, no. 7.592). Excavations at Assara (near Marica in Bulgaria) have revealed the remains of a late Roman and medieval town (coins of Anastasios I, Phokas, and Leo VI were found) that has been identified as Rhodopian Constantia.

CONSTANTIA on the Danube, 5th-C. fortress (phouririon) mentioned by Priskos (FHG 4:72.16), probably to be identified with the 11th-C. phouririon of Constantia, referred to by Skylitzes (Skyl. 301.2–3). It was near modern Belgrade, at the juncture of the Morava and the Danube.

CONSTANTIA on the Black Sea. See Tomis.

CONSTANTIA near Ohrid, a phouririon erected by Basil II (Skyl. 359.40–42).

OTHER CONSTANTIAS. Cities also possessing this name existed in Calabria, Cyprus (anc. Salamis), and Phoenicia, and infrequently this name was given to Constantinople. Constantina (now Viranşehir in Turkey) in northern Mesopotamia was called Konstanta by Theophanes the Confessor. – A.K.

CONSTANTIANA. See Constantia.

CONSTANTINA (Κωνσταντίνα, Syr. Tell), city in northern Mesopotamia, now Viranşehir in eastern Turkey. Constantina was the headquarters of the doux of Mesopotamia in 363–527 and 532–40 and a bishopric of Osroene subject to Edessa (L. Dillemann, Haute Mésopotamie orientale et pays adjacents [Paris 1962] 75, 107f.). Malalas (Malal. 323.14–19) states that Constantina was rebuilt by Constantine I on the site of ancient Maximianopolis, which had been destroyed by a Persian attack and an earthquake. Constantina, also called Konstanta by Theophanes, should be distinguished from the Konstantia in Phoenicia, previously called Antarados, that was rebuilt by Constantius II (Theoph. 98.8–9). In the 6th C. Constantia was headquarters of General Priskos and an important point of contention during the Persian wars. Jacob Baradaeus was born near Constantin and was a monk at the monastery of Phesiltha outside the city. Constantin fell to the Arabs in 639.

Parts of city walls, a large-aisled, centralized church (the “Octagon”), and an entire (?) warehouse of 543 were still standing in 1972; other remains of the 4th–6th C., including Greek inscriptions, are recorded by travelers. A tetrapylon disappeared in this century.

Lit. Bell-Mango, Tur ‘Abdin 154–57. – M.M.M.
CONSTANTINE (Κωνστάντιος), personal name. It is uncertain whether the name was used before Constantine I the Great; a certain Aurelius Constantine is named in an undated inscription (CIL 3294). The name may have been coined on the basis of Constantius, Constantine the Great’s father; at any rate, in the 4th C. Constantius was more popular than Constantine (PLRE 1:223–28). The relative frequency seems to have changed in the 5th C.: PLRE 2:311–25 lists 24 Constantines and 20 Constantii. Prokopios mentions only four Constantines, but thereafter the frequency increased: 28 in Theophanes, 60 in Skylitzes, 15 in Anna Komnene (in the last two cases Constantine is the most popular name). Niketas Choniates has 22 Constantines, third after John (35) and Alexios (24). In Lauro, vol. 1, encompassing the period of the 10th–12th C., 37 Constantines are listed, third only to John (90) and Nicholas (42), but in the later Lauro, vols. 2–3 (13th–15th C.), Constantine occupies only the seventh place. Constantius seems to have almost disappeared after Theophanes, but the vernacular form Konstras, rare in Lauro 1, occurs 30 times in Lauro 2–3. Constantine was the most popular name for emperors; 11 bore the name between the 4th and 15th C. and it should be noted that Leo V changed the name of his son Symbatios to Constantine (E. Patlagean in Byz. Aristocracy 27). Four patriarchs had this name but there are very few saints named Constantine in the Byz. calendar.

CONSTANTINE, co-emperor; eldest son of Basil I by his first wife Maria, although some sources name Eudokia Ingerina as his mother (see G. Ostrogorsky, SemKond 5 [1932] 28); born ca.859 (Vogt, infra) or 863/4 (E. Kislinger, JOb 33 [1983] 129), died 3 Sept. 879 (P. Karlin-Hayter, Byzantium 36 [1966] 624–26). Constantine was proclaimed co-emperor in 867/8, and his name is included with Basil’s in the title of the Procheiron. Basil planned his betrothal to a daughter of Louis II, and the question was discussed with Frankish envoys in 869 (A. Gasquet, L’empire byzantin et la monarchie franque [Paris 1888] 412). Constantine accompanied Basil in his expedition against the Arabs in 879 (Vasiliev, Byz. Arabes 2.1:88–91, 93–94).

Constantine always appears beardless on his father’s coins (Grierson, DOC 3.2:474 and nos. 1–4.8, 10–11). Spatharakis’s view (CahArch 23 [1974] 97–105) that Constantine was depicted in the well-known Paris MS of the Homilies of Gregory of Nazianzos (Paris B.N. gr. 510, fol.8v) was corrected by I. Kalavrezou-Maxeiner (JOb 27 [1978] 19–24).

Lit. Vogt, Basile Ier 58f.

CONSTANTINE. See also Konstantin.

CONSTANTINE I THE GREAT, Augustus (from 25 July 306); born Naissos 273/4, died Nikomedea 22 May 337; feastday 21 May. Son of Constantius Chlorus and Helena, he was proclaimed as Augustus in Britain upon the death of his father. He was subsequently acknowledged as Caesar by Galerius and as Augustus by Maximian,

and his imperial position was confirmed at the Conference of Carnuntum in 308. He defeated Maxentius at the battle of the Milvian Bridge in 312, thus becoming sole ruler of the West. Alliance with Licinius turned to hostility, and after victory over his rival at Chrysopolis in 324 Constantine became ruler of the whole empire. He associated his sons with him as caesars—Crispus (317), Constantius II (317), Constantius II (324), and Constans I (333)—but he remained sole Augustus until his death. He had two consorts, Minervina (perhaps a concubine) and Fausta (see genealogical table).

Constantine carried out important administrative and military reforms, completing and/or reversing those of Diocletian. He organized the entire empire into three or four prefectures, each under its own praetorian prefect, below whom were provinces and the cities. At court, officials such as the comes rei privatae, comes sacrarum larcionum, and magister officiiorum, wielded great power as heads of large amorphous bureaus, while magistri militum commanded the army, increasingly dominated by the comitatenses. Constantine reformed the coinage, issuing a gold solidus that remained the standard coin through the 11th C. To celebrate his victory over Licinius he founded a new city on the site of ancient Byz.; Constantinople was inaugurated on 11 May 330, not so much a “new capital” as an imperial residence and monument to the emperor’s greatness. According to the Chronicon Paschale (1:527–29), his huge building program consisted almost entirely of secular structures, whereas Eusebius of Caesarea emphasizes the churches and martyria that Constantine built in the capital and at Nikomedia, Antioch, and Jerusalem.

Like most of his predecessors, Constantine sought divine support for his rule and ultimately came to base his power on a special connection with the Christian God. This concept developed slowly, augmented by the emperor’s victories, and culminating in the image of Constantine in the works of Eusebius of Caesarea, esp. the Vita Constantini. In the latter work (VC 4.15) Eusebius interprets the upward gaze exhibited by Constantine on his coins as a gesture of piety. In fact, his numismatic portraits exhibit a remarkable range of types (D.H. Wright, DOP 41 [1987] 493–507). It is still debated whether Constantine actually issued the so-called Edict of Milan. Constantine became involved in the controversies surrounding Donatism and Arianism, convoked the first ecumenical council at Nicaea, and approved its decisions, although he later came to support Arianism. He was baptized on his deathbed by Eusebius of Nikomedia. The so-called Donation of Constantine is a forgery, probably of the 8th C.

As the first Christian emperor and the founder of Constantinople, Constantine set the style that was followed by nearly all Byz. emperors. Despite his very real human failings, Constantine was very quickly heroized as founder of the new politico-religious order and regarded as a saint; he was commonly pictured, frequently along with his mother, in figural representations of rulers in church decoration.
CONSTANTINE II, caesar (from 1 Mar. 317) and augustus (from 9 Sept. 337); born Arles, Feb. 317, died Aquileia 340. He was the son of Constantine I, perhaps illegitimate. In the arrangements made after his father's death Constantine II ruled Britain, Gaul, and Spain. He was, however, apparently regarded as the senior emperor. A strong opponent of ARIANISM, he returned ATHANASIUS of Alexandria from exile in Gaul despite the opposition of CONSTANTIUS II. In 340 Constantine responded to a perceived slight from CONSTANS I by invading Italy, where he was killed.

LIT. Jones, LRE 112–14. PLRE 1:223. Barnes, New Empire 8, 44f. -T.E.G.

CONSTANTINE III, usurper in Britain and Gaul (407–11). He is described as a common soldier but was a man of ability who was proclaimed emperor in Britain in 407. He made himself master of much of Gaul, being able to mint coins extensively at Trier, Lyons, and Arles. In September 411 he surrendered to Honorius's army and was put to death. He is not to be confused with either HERAKLEIOS CONSTANTINE, son and successor of HERAKLEIOS, or with CONSTANS II, both of whom have been called Constantine III by some historians.

LIT. E. Demougeot, "Constantin III, l'empereur d'Arles," in Hommage à André Dupont (Montpellier 1974) 89–125. -Ph.G.

CONSTANTINE III LEICHOUSES (Λειχοῦδης), patriarch of Constantinople (2 Feb. 1059–9/10 Aug. 1063); born Kouzenas (Psellos in Sathas, MB 5:300.10) or Constantinople (Sathas, MB 4:390.18–19 ca.1000, died Constantinople. The statement of later chroniclers that he was a eunuch is probably incorrect. Together with John MAUROPOUS, Leichouses was the leader of the young intellectuals who came to power under Constantine IX; he became MASEZON (Beck, Ideen, pt.XIII [1955], 329) but had to retire ca.1050. The question of the prononai that Constantine IX granted to Leichouses over the MANGANA monastery is under discussion; it was apparently an administrative function (A. Hohlweg, BZ 60 [1967] 291–94), rather than a semi-feudal property (K. Juzbašan, VizVrem 16 [1959] 24–28). He returned to political activity only when Michael VI sent him and Psellos as envoys to the rebellious Isaac I Komnenos, who eventually chose Leichouses to replace MICHAEL I KEROUARIOS on the patriarchal throne.

The policy of Leichouses as patriarch is little known: he evidently resumed negotiations with Pope Alexander II (1061–73) concerning the filioque (PL 145:633B). His hostility toward the Monophysites was relentless: MICHAEL I THE SYRIAN mentions the patriarchal decree of 1063 to burn all the sacred books "of the Syrians" (tr. Chabot, 3:166). Leichouses regulated the right of asylum in such a way that a priest involved in a murder was proclaimed free, whereas a slave (oikeites) Demetrios, guilty of murder, was extradited to his owner in exchange for the payment of 24 nomismata (PG 119:853–56). On his seals Leichouses retained the title of ecumenical patriarch (Laurent, Corpus 5.1, no.17). Psellos devoted to him an enkomion praising his friend as a talented administrator and even military commander.

CONSTANTINE IV, emperor (668–85); born ca.650, died Constantinople 10 July (?) 685. In the 19th C. many scholars identified Constantine IV with "Constantine Pogonatos," who in reality was his father, CONSTANS II (E.W. Brooks, BZ 17 [1908] 460–62). Proclaimed co-emperor in April 654 by Constans II, Constantine avenged his father's murder by going to Sicily in early 669 and defeating Mezizios (E.W. Brooks, BZ 17 [1908] 455–59, rejects Constantine's personal participation). Constantine ruled with his younger brothers Herakleios and Tiberios until 681, when he disposed and mutilated them, probably because of a
CONSTANCE VI | 501

conspiracy (E.W. Brooks, EHR 30 [1915] 42–51). With them and his son Justinian (II) he is shown in an apse mosaic in S. Apollinare in Classe, presenting privileges to that church (Beckwith, ECBA, fig.96). Throughout his reign Constantine faced external pressures but preferred diplomatic to military responses. The Arabs raided Byz. territory yearly and in 674–78 besieged Constantinople itself, but their defeat compelled Mu‘awiya to sign a 30-year truce on terms favorable to Byz. Shortly thereafter Constantine signed treaties with the Lombards, who had captured Brindisi and Taranto (after 671), and the Avars (Reg, nos. 241, 240). In the Balkans Constantine unsuccessfully campaigned against Asparuch and formally recognized the Bulgars’ settlement south of the Danube, in response to which he created the theme of Thrace. He hoped to end the empire’s religious disputes by summoning the Council in Trullo and personally presided at 12 of its 18 meetings. He also attempted to revalue the bronze coinage by minting an 18-gram follis. He died of dysentery and was survived by his wife Anastasia and their sons Justinian and Heraclius.

CONSTANTINE V, emperor (741–75): born Constantinople 718, died Strongylon 14 Sept. 775. Leo III crowned his son Constantine as co-emperor in 720 and in 732 married him to the Khazar khagan’s daughter, who took the name Irene and bore him Leo (IV). Constantine’s second wife, Maria, died shortly after their marriage ca.750. By a third wife, Eudokia, whom he crowned in 769, Constantine had five sons (including Caesar Nikephoros) and a daughter. After succeeding Leo in 741, Constantine was briefly driven from Constantinople by Artabasdos, but regained the throne in Nov. 743. Byz. sources displayed their hostility toward his zealous support of Iconoclasm by nicknaming him “Kaballinos” (“groom”) and “Kopronymos” (“dung-named”) for supposedly having defecated while being baptized. Constantine convened a church council at Hieria in 754 and thereafter persecuted Iconophiles in the bureaucracy, army, and church; his attacks on monks evolved into a campaign against monasticism as an institution. He also rejected the cult of saints, including the intercessory power of the Theotokos, and was hostile to relics, except those of the True Cross. In the Life of St. Stephen the Younger (PG 100:1120C), Constantine is indicted for scraping the holy pictures off the walls of the Church of the Virgin at Blachernai. In the provinces he relied on strategoi like Michael Lachanodrakon to execute his iconoclastic and fiscal policies. Constantine wrote treatises on Iconoclasm that survive as his fragmentary Questions (Peuseis, ed. Ostrogorsky, Bilderstr. 7–45).

An outstanding general, Constantine served in 740 with his father at Akroinon. He campaigned frequently against the Slavs and Bulgarians, winning decisive victories at Anchialos in 763 and over Telerig at Lithosoria in 773. He also campaigned successfully against the Arabs, capturing Germanikeia in 746 and Theodosioupolis and Melentine in 752. For resettling captives from Armenia in Thrace, he was blamed for introducing Paulicians into the empire (Theoph. 429.19–22). He repopulated Constantinople with families from Greece after a plague in 747. Constantine transferred Sicily, Calabria, and Illyricum from papal to Byz. ecclesiastical jurisdiction, but, by neglecting northern Italy and the Lombards’ seizure of Ravenna, he drove the papacy closer to the Franks. He created the Boukellarion theme and restored the aqueduct of Valens during a drought in Constantinople in 767. He financed his campaigns and enriched the treasury by raising taxes and selling confiscated monastic properties. Constantine was buried in the Church of the Holy Apostles, but in the 9th C. his bones were exhumed, burned, and cast into the sea (Grierson, “Tombs and Obits” 53f).

CONSTANTINE VI, emperor (780–97); son of Leo IV and Irene; born Constantinople 14 Jan. 771, died before 805 (E.W. Brooks, BZ 9 [1900] 655). Leo crowned Constantine VI as co-emperor
in 776, but after Leo's death Irene ruled as Constantine's regent with Staurakios. In 782 she betrothed Constantine to Rotrud, the daughter of Charlemagne, but broke the engagement in 788 and married Constantine to Maria from Amnia in the Armeniakon. This reportedly upset Constantine (Theoph. 463.24-27) and likely contributed to his growing animosity toward his mother. He signed the acts of the Second Council of Nicaea (787) condemning Iconoclasm, but his close association with Michael Lachanodrakon, with whose help he deposed Irene in Dec. 790, may indicate Iconoclastic leanings. He was an ineffectual ruler, fruitlessly campaigning against the Bulgarians and Arabs in 791 and being severely defeated by the Bulgarians at Markeleiai in 792. His restoration of Irene in 792 disappointed his supporters. In 792-93 he thwarted a conspiracy in favor of his uncle, Caesars Nikephoros, and at Irene's urging blinded Alexios Mospel, thereby aggravating an uprising in the Armeniakon, which he cruelly suppressed. He instigated the Moechian Controversy in 795 by divorcing Maria, who had given him two daughters, and marrying his mistress Theodote. Undermined by Irene and Staurakios, he was dethroned and blinded on 19 Apr. 797 (S. Petrides, EO 4 [1900-01] 72-75). He died in exile and was buried in Irene's monastery of St. Euphrosyne (Grierson, "Tombs and Obits" 54f). Constantine's only recorded monumental portrait was a mosaic at the Church of the Virgin of Pege, together with one of his mother.

CONSTANTINE VII PORPHYROGENNETOS, emperor of the Macedonian dynasty (945-59); born 17 or 18 May 905, died Constantinople 9 Nov. 959. His birth to Leo VI and Zoe Karbonopisina provoked the conflict over the Tetrarchy of Leo VI. Crowned co-emperor probably on 15 May 908 (P. Grierson-R. Jenkins, Byzantium 32 [1962] 133-38), he was excluded from power for almost four decades, successively dominated by Alexander, Nicholas I Mystikos and Zoe, and Romanos I, whose daughter Helen married Constantine in May 919. His independent rule began only after Romanos's sons were deposed on 27 Jan. 945. Dismissing Romanos's supporters, Constantine sought the assistance of aristocratic families such as Phokas. A contemporary source (TheophCont 456.14-16) asserts that Constantine surrounded himself with noblemen (eugeineis) on whom he bestowed titles and gifts, while another (Skyl. 237.14) reports that the emperor chose his functionaries regardless of their noble merits (ouk aristidenti).

In his legislation Constantine proclaimed a complete rupture with his predecessor's policy: he called Romanos's officials and generals venal and unwarlike (Zepos, Jus 1:226.5) and tried to alleviate (kouphisa) the tax burden that his father-in-law had required the peasantry to bear.
(TheophCont 443.13–18). In fact, however, Constantine’s novels, written predominantly by Theodoret of Dekapolis, retained principles of Romanos I’s legislation, such as the concept of the protection of the poor from the dynatoi; he made, however, certain concessions to small archontes and small monasteries. Especially important in this respect was a novel (now lost) mentioned in Theodoret’s decision of 960/1: in it, Constantine, responding to the request of the military archontes (Zepos, Jus 1:239.19), obliged even the poorest peasants to compensate the illegal buyers of their allotments; they were allowed, however, five years for this repayment.

Constantine fought against the Arabs without great success. The expedition to Crete in 949 was a failure, and although his armies seized Germa- nika in 949 and crossed the Euphrates in 952, they were subsequently defeated by Sayf al-Dawla. Nikephoros (II) Phokas led the offensive from 954 and in 957 captured Ḥadat; in 958 John (I) Tzimiskes conquered Samosata. Despite the baptism of O’la, princess of Kiev, and her visit to Constantinople, Constantine was unable to establish a strong alliance with the Rus’.

Constantine contributed much to the systemization of knowledge and encouraged the compilation of encyclopedic works such as Excerpta de legationibus (see EXCEPTRA) and Geoponika; he also encouraged historical writing intended to eulogize Basil I and thereby present Basil’s predecessors as inept villains. This aim was achieved by the anonymous author of the Imperial Histories, ascribed to a certain Genesios, and by a collection conventionally called Theophanes Continuatus. Constantine collaborated in several works on the empire’s administrative system and foreign relations that are preserved under his name: De administrando imperio, De thematibus, and De ceremoniis. To his literary heritage also belong several speeches, letters (e.g., correspondence with Theodore of Kyzikos), and specimens of liturgical poetry.

Constantine’s reputation as guiding spirit of the so-called Macedonian Renaissance is based on the prooimion of the continuators of Theophanes (TheophCont 3.15–4.1), who declare that the emperor brought a palinsozia (“new life”) and palingenasia (“rebirth”) to what had been lost in the course of time. The same source (450.12–20) tells of Constantine’s “accurate” painting and his role as “corrector” of stonemasons, carpenters, goldsmiths, silversmiths, etc., and attributes numerous works to his hand (447.1–450.11). Liutprand of Cremona (Anatopodosis 3.37) confirms also that Constantine engaged in zographia, that is, that he worked as a painter. Constantine’s portrait is found on an ivory plaque in Moscow (Goldschmidt-Weitzmann, Elfenbeinskulpt. II, no.35) and perhaps on a Mandylion icon at Sinai.

A.K., A.C.

CONSTANTINE VIII, emperor (1025–28); born 960/1, died Constantinople 12 Nov. 1028, according to YAHYA. Son of Romanos II, Constantine was crowned co-emperor probably 30 Mar. 962 (Oikonomides, Documents, pt.XIII [1965], 73–76). During the reign of his elder brother Basil II, he lived in idleness. He married Helena, daughter of Alypios, who bore him three daughters: Eudokia (who became a nun), Zoe, and Theodora. Upon succeeding his brother, Constantine continued his devotion to chariot racing and theatrical spectacles, although he did enjoy the imperial duty of receiving embassies. He was strongly influenced by his household eunuchs, capricious, and prone to inflict blinding on the slightest excuse. Among his apparently innocent victims were Constantine Bourtzes, Nikephoros Komnenos, and Basil Skleros. Because Basil II had allowed two years of tax arrears to accrue, Constantine collected the taxes for five years in three. He considered annulling the allelygyon that Basil had imposed but did not live to do this. His general Constantine Diogenes repelled an attack by Pechenegus, and George Theodorakanos defeated a Muslim naval incursion. On his deathbed, Constantine married Zoe to the future Romanos III.

Generally accepted as portraits of Constantine and Basil II are the co-emperors in the Bari Exultet Roll (Archivio della Cattedrale 1). If this is so, it is, apart from his coins, the only portrait known of Constantine.

CONSTANTINE IX MONOMACHOS (Movomáxos), emperor (1042–1055); born ca.1000, died Constantinople 7/8 Jan. (Kleinhchroniken 1:159, 167) or 11 Jan. (Grumel, Chronologie 358; Ostrogorsky, History 337) 1055. From a distinguished family, Constantine was exiled to Mytilene by Michael IV. He was recalled to wed Zoe (11 June 1042) and crowned the next day; their mosaic portraits survive in Hagia Sophia, Constantinople. He enjoyed the support of the commercial classes of Constantinople; leading merchants became senators. He also gathered around him such intellectuals as future Patri. Constantine (III) Leichoudes, future Patri. John (VIII) Xiphilinos, Michael Psellos, and John Mauropous, whose epigrams describe two images of Constantine. A law school was established under Xiphilinos, and Psellos became hypatos ton philosophon.

Constantine extravagantly maintained his mistress, Skleraina, and her successor, an “Alan” (Georgian) princess. He converted into taxpayers peasants in “Iberia” who had owed military service and substituted mercenaries. A moderately adulterated nomisma perhaps facilitated commerce (Morrison, "Dévaluation" 6f). These policies alienated the military aristocracy. The revolts of George Maniates and Leo Tornikios were overcome with great difficulty.

Constantine experienced some successes over foreigners: the Rus’ of Jaroslav of Kiev were defeated (Shepard, "Russians Attack" 147–212), and Gagik II yielded Ani. Nonetheless, the frontiers proved porous: the Turks of Tughrul Beg devastated eastern Anatolia, the Pechenegs occupied the Danubian plain and ravaged Thrace, and the Normans advanced in southern Italy. Late in his reign, these disasters caused Constantine to dismiss Xiphilinos and other intellectuals. He turned to the eunuch John, who instituted harsh taxation. In his final year, Constantine could not control Patri. Michael I Keroularios.

Psellos’ Chronographia vividly depicts Constantine’s personality; later Byz. writers blamed his extravagant policies for the ensuing collapse of Byz. Among his lavish foundations were the monastery of the Nea Mone on Chios and the monastery at Mangana, built near the house where Skleraina lived. MSS presumably commissioned by Constantine include a rich copy of the homilies of John Chrysostom (Sinai gr. 364) that contains a frontispiece showing the emperor between Zoe and Theodora (Spatharakis, Portrait, fig.66).

CONSTANTINE X DOUKAS, emperor (1059–67); born ca.1006, died Constantinople 22/3 May 1067. An Anatolian magnate, Constantine was briefly imprisoned, then retired to his estates when his father-in-law Constantine Dalassenos was arrested (1034). In 1057 Constantine supported the rebellion of the future Isaac I Komnenos. Through his second wife, Eudokia Makrembolitissa, a niece of Patri. Michael I Keroularios, he was allied to the opponents of Michael VI Stratios-tikos within Constantinople. During Isaac’s reign, Constantine supported those hostile to Isaac’s reforms (E. Stânescu, RESÉE 4 [1966] 55–69). Nevertheless, through the influence of Michael Psellos, Constantine was designated emperor by the dying Isaac and crowned on 23/4 Nov. 1059. He undid Isaac’s reforms, restoring many to office and promoting leading guild members to the senate. Soldiers who felt neglected sought to enter the civil hierarchy (Attal. 76.10–12). He avoided a plot (Apr. 1061) led by the epharch of Constantinople (D. Polemis, BZ 58 [1965] 61f). His generosity to monasteries and individuals required heavy taxation, which inspired rebellion (1066) in northern Greece (G. Litavrin, VizVrem 11 [1956] 123–34). Constantine could barely rally 150 soldiers to oppose an incursion of Uzes across the Danube (1064–65). Turkish raiders overran the eastern boundaries, and Alp Arslan seized Ani. Constantine’s reign was deemed disastrous by Ataleiates; even Psellos was critical. At his death, the augusta Eudokia took power on behalf of her sons (N. Oikonomides, Documents, pt.III [1963], 102). She had already held the place of honor (the spectator’s left) on folklis of Constantine’s reign. Their joint portraits appear in a badly damaged miniature in a copy of the Sacra Parallela (Spatharakis, Portrait, fig.68). Constantine’s best–preserved likeness, again with Eudokia, is on a reliquary of St. Demetrios in Moscow (Iskusstvo Vizantij 2, no.547).
CONSTANTINE XI PALAILOGOS, emperor (12 Mar. 1449–29 May 1453); born Constantinople 8 Feb. 1405, died Constantinople 29 May 1453. Last member of the Palaiologan dynasty and final ruler of the Byz. Empire, Constantine was the fourth son of MANUEL II and Helena Dragas. He is sometimes called Constantine XII because of the erroneous supposition that Constantine Laskaris was crowned emperor in Apr. 1204 (cf. Brand, Byzantium 258 and 381, n.58). Constantine came to the Morea in 1428 to share the despotate with his brothers THEODORE II and THOMAS PALAILOGOS; he ruled as despotes for 20 years. He significantly strengthened the Byz. position by the restoration of the Hexamilion (1444) and the conquest of Patras (1429), Athens, and Thebes (1444). His dream of reasserting control over Greece, however, was destroyed by the Ottoman campaign of 1446. Since both of Constantine's older brothers, Theodore and Andronikos, predeceased him, he inherited the throne upon the death of the childless John VIII. He was crowned at Mistra on 6 Jan. 1449 and began his reign in March when he reached Constantinople. He did not receive a second coronation in Hagia Sophia.

As a pragmatist Constantine accepted the Union of Florence, in the hope of gaining military assistance from the West. During his short reign he made several desperate appeals to European rulers (R. Guiland, EEBS 22 [1952] 60–74 and BS 14 [1953] 226–44). He did not implement the Union, however, until 12 Dec. 1452. Constantine fought bravely during the Ottoman siege of Constantinople and was killed on the ramparts during the final Turkish assault. He died without heir, since his two marriages were childless.

CONSTANTINE DRAGAŠ (Δραγάš), Serbian nobleman and autonomous ruler; died 17 May 1395. Together with his brother John Dragas (died 1378/9), he ruled a large region of northeastern Macedonia, inherited from their father the sebastokrator and despotes Dejan (Ferjančić, Despoti 168–70). He was called gospodin (lord) in Serbian documents, kyr (Koutloum., no.40.15) or authentes (MM 2:260.8) in Greek texts. It is a matter of dispute whether he was ever given the title “despotes of Serbia” (cf. J. Darrouzès, REB 27 [1969] 62.72–73 and n.; Ostrogorsky, infra 288f). With their mother Theodora-Eudokia, sister of Stefan Uroš IV Dušan, the Dragas brothers generously endowed monasteries on Mt. Athos, esp. Hilindar, Panteleem, and Vatopedi (S. Novaković, Zakonski spomenici [Belgrade 1912] 446–48, 452–57, 510–15, 676, 738–40). After the battle of Marica in 1371, Constantine and John were forced to become vassals of Murad I; Constantine was fighting on the side of the Turks when he fell in battle at Rovine. His lands were subsequently annexed by the Ottoman Empire.

Despite their Ottoman vassalage, the Dragas brothers maintained close relations with Byz. Probably after 1386, Constantine took as his second wife Eudokia Kommene, daughter of Alexios III of Trebizond (I. Djurić, ZRVI 22 [1983] 259–72), and in 1392 he gave Helena, his daughter by his first wife, in marriage to Manuel II Palaiologos. Their son Constantine XI bore the family
name Dragases in addition to Palaiologos. Helena died on 13 Mar. 1450 as the nun Hypomone; several Byz. rhetoricians wrote funeral orations in her memory.

CONSTANTINE LASKARIS. See under Constantine XI Palaiologos.

CONSTANTINE OF KERKYRA, theologian condemned in Jan. and Feb. 1170 for his heretical interpretation of John 14:28, “The Father is greater than I.” Stressing the hypostatical unity of the Father and the Son, Constantine denied that the Son was inferior on account of the real and concrete humanity which he assumed in the incarnation (RegPař, fasc. 3, no.1119). According to V. Grumel (EO 28 [1929] 283–94), Constantine wrote the treatise On the Orthodox Creed (Napisanie o pravoj vere) preserved in Old Church Slavonic and ascribed to Constantine the Philosopher; S. Kos (De actuore expositionis verae fidei S. Constantino Cyrillo adscriptae [Ljubljana 1942]; cf. B. Schultze, OriChP 9 [1943] 229–31) rejects this identification and considers the author a disciple of Methodios, perhaps Kliment of Ohrid. Even more questionable is the identification of Constantine with Constantine Bykinator, an official (kanstrisios) of Hagia Sophia and archbishop of Bulgaria mentioned by Michael Gazes in 1203 (C. Giannelli, EEBs 23 [1953] 224–32).

LIT. J. Gouillard, “Synodikon” 221f. –A.K.

CONSTANTINE OF RHODES, poet; born ca.870 or 880 at Lindos, Rhodes, died after 931. Constantine began his civil career as secretary of Samonas and his literary career as a satiric poet, accusing Leo Choriothaktos of paganism and mocking a eunuch called Theodore the Paphlagonian. Later, as Constantine VII’s asekretis, he produced an ekphrasis (surviving perhaps in an unfinished form) consisting of two sections: descriptions of the Seven Wonders of Constantinople and of the Church of the Holy Apostles. In full conformity with the encyclopedic tendencies of 10th-C. literature, his descriptions are a catalog of elements rather than an emotional perception of the achievements of architects and painters (A. Epstein, GRBS 23 [1982] 81f). Constantine’s description of the Seven Wonders was used by Ke-drenos, probably through an intermediary source. His satiric poems are inelegant, being essentially lists of the base qualities of his opponents.

LIT. G. Downey, “Constantine the Rhodian: His Life and Writings,” LCMS 212–21. –A.K.

CONSTANTINE OF SICILY, 9th-C. poet, named also grammaticos and philosopher. He wrote Anacreontic verses to which Krumbacher (GBL 723) ascribes a vivid naturalness. Constantine mentions Arab attacks on Sicily. Lemerle (Humanism 199–200, n.95) attributes to him, although reluctantly, a poem in which the author regards Photios as his teacher. Constantine was also involved in a polemic against his teacher, Leo the Philosopher; his vitriolic verses charge Leo with paganism and threaten him with Hell, where he will meet his friends, ancient poets and scholars. The identification of both Constantine and Leo is difﬁcult: Lipsic (Ocherki 355) is inclined to see in Leo the Philosopher Leo Choriothaktos and to connect Constantine’s invectives with the polemic of Arethas and Constantine of Rhodes against the latter; Lemerle identifies Constantine’s teacher with Leo the Mathematician. M.D. Spadarolo (infra 183–92) hypothesizes that the author of the polemical verses was Constantine the Philosopher.

CONSTANTINE THE JEW, saint; born Synada, Phrygia, died on Bithynian Mt. Olympus 26 Dec., after 886. Born to a Jewish family, Constantine adopted Christianity. His conversion began when he spontaneously imitated a merchant who crossed
his mouth while yawning; "the power of the sign" was such that Constantine without baptism acquired a fervent belief in Christ (cols. 629F–630A). Constantine's relatives forced him to marry, but on his wedding night he fled to the Phlouboute monastery near Nicaea, where he was baptized, became a monk, and stayed 12 years. He was ordained a priest and tried to convert Jews living in Nicaea. When Constantine attempted to move to Olympos, he was brought back as a fugitive and put in chains. Prompted by St. Spyridon in a vision, Constantine traveled via Attaleia to Cyprus and returned with a relic, the right hand of Palamon (an otherwise unknown martyr), which he gave to the monastery of St. Hyakinthos at Nicaea. Although he settled on Olympos (at Atroa, later at Bolion-Balaios), he still attempted to influence affairs in Constantinople: he supposedly reconciled the emperors Basil I and Leo VI.

His anonymous Life, apparently written during Leo's reign, eulogizes the emperor (648F); since the author, in describing the region of Nicaea, speaks of "our desert" (645C), he must have belonged to a Nicaean monastic community. He sympathizes with the upper stratum of the provincial population and stresses that Constantine found support first of all among "those who were noble by nature and fortune and earthly distinction" (644A–B). The hagiographer avoids vivid detail, but the miracles are unusual—a girl who tried to seduce Constantine fainted at the sign of the cross; some books fell from Constantine's pouch into a torrent, but were brought to his feet undamaged. No mere humble compiler, the author incessantly comments upon his story, asserts that his hero deserves an exquisite logos, not a mediocre composition (628C), and boasts that no one could have done the job much better than himself (651C).

CONSTANTINE THE PHILOSOPHER (monastic name Cyril), missionary to the Slavs and saint; born Thessalonike 826/7, died Rome 14 Feb. 869; feastday 14 Feb. Constantine and his brother Methodios were the sons of the droungarios Leo and Maria, who may have been a Slav. Displaying remarkable intelligence as a youth (he reputedly memorized the works of Gregory of Nazianzos), ca.842 Constantine journeyed to Constantinople, where he gained the favor of the eunuch Theoktistos and received an advanced education; the tradition that he studied philosophy under Leo the Mathematician and Photios, however, is disputed (Lemerle, Humanismus 185–91). He was ordained priest and became chartophylax of Hagia Sophia under Patr. Ignatios, but was later appointed a teacher of philosophy at the school of the Magnaura. His legendary erudition brought him prominence: he reportedly defined philosophy in secular terms for Theoktistos (I. Ševčenko in For Roman Jakobson [The Hague 1956] 449–57), bested John VII Grammatikos in a debate over Iconoclasm, learned Hebrew, disputed Muslim theologians at the caliph's court at Samarra, and debated Jewish spokesmen before the khagan of the Khazars.

In 863 Michael sent him and his brother Methodios to Moravia to comply with the request of Rastislav for missionaries. In preparation, Constantine devised the Glagolitic alphabet and a literary language, Church Slavonic, into which he translated numerous Greek works, including the so-called liturgy of John Chrysostom, selected daily offices, the Psalter, the New Testament, and perhaps Leo III's Ecloga. In Moravia, Constantine and Methodios organized a native church using the local Slavic tongue, but under pressure from the Frankish clergy they journeyed to Rome in 867, where Constantine died, having been tonsured shortly before his death. He was buried in the Church of St. Clement, whose relics he had discovered in Cherson in 860 and brought to Rome. His 9th-C. Church Slavonic vita, perhaps composed by Methodios, draws heavily on Greek sources (I. Ševčenko in To Honor Roman Jakobson, vol. 3 [The Hague 1967] 1817). The existence of Constantine's original Greek works, esp. concerned with St. Clement's relics, can only be deduced from references or surviving fragments in Church Slavonic sources.

CONSTANTINE TICH, Bulgarian monarch (1257–77), whose reign coincided with a period of bitter internal feuding and repeated foreign invasions. After the murder of Tsar Michael Asen and the brief reign of Sebastokrator Koloman (probably murdered), Constantine was proclaimed tsar by a group of boyars. No sooner had he suppressed a revolt by a certain Mico, son-in-law of John Asen II, than he was faced by a Hungarian invasion, in which he lost much of northwestern Bulgaria to the Hungarians. By dynastic marriages, successively to Irene, daughter of Theodore II Laskaris, and to Maria, niece of Michael VIII, Constantine sought in vain to assure himself of Byz. support. In 1263 the Byz. invaded Thrace, took Philippopolis, and advanced toward Sofia, but the Hungarians drove them back. In desperation Constantine made an alliance with the Mongol Golden Horde in southern Russia. Their combined forces advanced nearly to Constantinople, but when the Mongols withdrew with their booty, Constantine had to fall back empty-handed. Exploiting Bulgarian weakness, the Hungarians extended their rule and that of their Bulgarian puppet Svetoslav. All that was left to Constantine was the territory between the Danube and the Balkan range east of the river Iskur, and from 1271 even that was regularly raided by the Mongols, with whom Michael VIII had allied. By the end of his reign Constantine was a virtual vassal of the Mongols.
