JOHN IV LASKARIS, emperor in Nicaea (1258–61); born Nymphaion? 25 Dec. 1250, died ca.1305. He was the only son and heir of Theodore II Laskaris, whom he succeeded in Aug. 1258. The boy's rights were progressively set aside by Michael VIII Palaiologos. Once the latter had recovered Constantinople, he felt secure enough to have John blinded on Christmas Day 1261 and confined in the fortress of Dakibye on the south shore of the Sea of Marmara. Patr. Arsenios Autoreianos excommunicated Michael in protest. This prompted the people around Nicaea to rise up in support of apretender claiming to be John. The rebellion was quickly crushed, but a strong current of support for the Laskarid cause endured, esp. in Asia Minor. When Andronikos II Palaiologos visited Asia Minor in 1284, he found it politic to placate those with Laskarid sympathies by visiting John in his dungeon and begging forgiveness for what his father had done. With John's death, the Laskarid cause withered.

(“Anna”), an illegitimate daughter of Frederick II Hohenstaufen. His succession was opposed by Theodore's brothers, who had Latin backing. John defeated them at the battle of Poimanein in 1224 and was able to drive the Latins out of northwestern Asia Minor, thus rounding off the Nicaean territories in Asia Minor. His bid to secure control of Adrianople, the key to Thrace, was thwarted by Theodore Komnenos Doukas. Only in 1234 was John able to establish a permanent bridgehead in Thrace, thanks to an alliance concluded with John Asen II. The latter's death left a power vacuum in the southern Balkans, which John was quick to exploit. An astute campaign made him master of the region in 1246 and brought him his greatest prize—the city of Thessalonike. His remaining years were devoted to protecting and extending his European territories and seeking ways of recovering Constantinople.

When alliance with Frederick II Hohenstaufen brought him little material reward, he turned to the papacy in 1248. He was willing to make unprecedented concessions over papal claims to primacy in the hope that the papacy would withdraw its backing for the Latin Empire of Constantinople, but these plans came to nothing. Still, John had created the conditions that made the eventual recovery of Constantinople possible and had turned the Nicaean Empire into the strongest power of the region, with territories stretching from the Turkish frontier to Albania. At the end of his reign his relations with the aristocracy were soured by the need to secure the succession of his son Theodore II Laskaris. In 1252 he had the leader of potential aristocratic opposition, Michael (VIII) Palaiologos, arraigned on a charge of high treason.

John III was a ruler of the highest ability and of great tenacity of purpose. Remembered as “a kind and gentle soul” (Akrop. 1:103.19–20), he was revered after his death as a saint by the Greeks of Asia Minor (D. Constantelos, Kleronomia 4 [1972] 92–104). He was buried in the monastery of Sosandra near Nymphaion.

—M.J.A.
away. A cult seems to have grown up around John; the Russian pilgrim Stefan of Novgorod recorded that in the mid-14th C. it was centered on the monastery of St. Demetrios at Constantinople, where his body was to be seen (I. Ševčenko, *SüdostF* 12 [1953] 173–75).

Lit. Polemis, *Doukai* 111, no.76. —M.J.A.

**JOHN IV NESTEUTES** (Νηστεύτης, "Faster"), patriarch of Constantinople (12 Apr. 582–2 Sept. 595); born and died Constantinople. According to the *Synaxarion of Constantinople* (*Synax.C.P.* col. 7.22), he was a coiner by profession, then joined the clergy and was elected patriarch. The legend preserved by Theophylaktos Simokattes (Theoph.Simok., bk.7,6,4) described him as living in extreme poverty, owning only a wooden pallet, thin blanket, and plain cloak. John was very close to Emp. Maurice, whose son Theodosios was crowned at the age of four and a half by the patriarch. John fought against heresies and, despite Maurice’s resistance, introduced capital punishment for magicians. His claims to the title of ecumenical patriarch led to a conflict with Pope Pelagius II (579–90) and Gregory I.

Little of his writing is preserved; his long speech on penitence, temperance, and chastity (PG 88:1937–78) is a collection of citations from John Chrysostom. Several penitentials are preserved under John’s name (a *Kanonarion, the Akolouthia and Order for Penitents* [PG 88:1889–1918], and the *Indoctrination of Nuns* [PG 88:1889–1918]), but all three are spurious, having been written several centuries later.

**JOHN IV (V) OXITES**, Chalcedonian patriarch of Antioch (ca.1089–1100); died after 1100. All we know about John before his patriarchate is that he was a monk; the conclusions of Ch. Papadopoulos (*EEBS* 12 [1936] 361–78) should be treated with caution. Appointed patriarch before Sept. 1089, he remained in Constantinople until 1091. John’s situation in Antioch under Seljuk rule was miserable, esp. during the Crusaders’ siege of the city; after their victory he had under his jurisdiction both the Greek and Latin clergy of Antioch. Eventually he was charged with plotting to surrender the city to the emperor, left for Constantinople, and in Oct. 1100 officially renounced his patriarchate. John retired to the Hodegon monastery but incited the hatred of the monks and probably moved to the island of Oxeia (Princes’ Islands), where he was later buried.

John’s works had a clear political imprint. In 1085 or 1092 he issued a treatise on *Charistikia*, which he blamed for the decline of monasticism. He also wrote a diatribe accusing Alexios I of responsibility for all the internal and international problems of Byz. His invectives were addressed also against those who possessed “cities within the cities” (P. Gautier, *infra*) and esp. against tax collectors, whereas he lamented the plight of poor peasants, merchants, and craftsmen (p.33.19–22). John also wrote a treatise on *azymes*, possibly in connection with the Byz. dispute against Peter Grossolano in 1112.

**JOHN V KATHOLIKOS**, patriarch of Armenia (897–925) and historian; born Drasxanakert mid-9th C., died Vaspurakan soon after 925. As katholikos, John (Arm. Yovhannes) played a role in diplomacy both between the Bagratid Armenian kings and their Armenian rivals, and between Armenia and both Byz. and Muslim rulers.

The first third of his *History* is primarily a résumé of earlier sources. John developed the concept of the strong royal power of the Bagratid dynasty and justified it by reference to the Bagratids’ succession from previous royal houses (M.O. Darbinian-Melikian, *IFŻ* [1982] no.2, 119–25). The *History* contains the earliest Armenian reference to Bagratid descent from King David of Israel, although earlier Moses Xorenac’i had claimed a Jewish origin for that family. The main part is an eyewitness account of John’s own times and of his role in Armenian politics. It includes a letter to him from Nicholas I Mystikos, patriarch of Constantinople, and one from John himself to
Constantine VII Porphyrogennetos, written in 914. The History is the most important source for the reigns of Smbat I and his son Ašot II.

JOHN V PALAIIOLOGOS, emperor (1341–91); born Didymoteichon 18 June 1332, died Constantinople 16 Feb. 1391 (cf. Barker, Manuel II 8of, n. 214). During his 50-year reign John faced numerous rebellions and a civil war; he actually ruled only about 30 years. Nine years old at the death of his father ANDRONIKOS III (1341), John came under the control of his empress-mother ANNA OF SAVOY, Patr. JOHN XIV KALEKAS, and Alexios Apokaukos. The same year John VI KANTAKOUZENOS was proclaimed emperor at Didymoteichon and began the Civil War of 1341–47. After the victory of Kantakouzenos, John married the usurper’s daughter Helena and remained in the background until he forced Kantakouzenos’s abdication in 1354. Shortly thereafter his mosaic portrait was set up in Hagia Sophia, Constantinople (Mango, Materials 74–76, fig. 97).

During the 1350s and 1360s John attempted to gain Western assistance against the Turks. To this end he journeyed in 1366 to Hungary (J. Gill, BS 38 [1977] 31–38) and in 1369 to Rome, where he declared his personal conversion to Catholicism. On his way home he was detained in Venice because of his debts and was forced to promise the cession of Tenedos to the Venetians (R.-J. Loenertz, REB 16 [1958] 217–32). After the Serbian defeat at MARICA (1371), John realized the necessity of seeking an accommodation with the Turks and became an Ottoman vassal. His remaining years were troubled by the rebellions of his son ANDRONIKOS IV (1373, 1376–79) and grandson JOHN VII (1390). To conciliate his heirs, John had to allocate to them appanages and divide the empire into semi-independent principalities, while he retained rule in the capital.

JOHN VI KANTAKOUZENOS, emperor (8 Feb. 1347–3 Dec. 1354 [A. Failler, REB 29 (1971) 293–302]); born ca.1295, died Mistra 15 June 1383. The son, probably posthumous, of a Peloponesian governor of the aristocratic KANTAKOUZENOS lineage, John Kantakouzenos was about the same age as ANDRONIKOS (III) PALAIIOLOGOS and was his close friend until the emperor’s death in 1341. His first known title was that of megas papias (1320); he became megas domestikos ca.1325. He supported Andronikos’s rebellion against his grandfather (1321–28) and was his principal general and adviser during his reign.

After Andronikos died, leaving a nine-year-old heir, JOHN V PALAIIOLOGOS, Kantakouzenos failed to secure the regency. His power struggle with ANNA OF SAVOY, Alexios Apokaukos, and Patr. JOHN XIV KALEKAS ended in the Civil War of 1341–47, and Kantakouzenos was proclaimed co-emperor at Didymoteichon (26 Oct. 1341). Thanks to his extraordinary wealth (in land and livestock), the support of landed magnates in Thrace and Thessaly, and military aid from Serbs and Turks, Kantakouzenos eventually emerged victorious. On 21 May 1346 he was crowned at Adrianople and in Feb. 1347 entered Constantinople. He was crowned a second time (21 May) and married his daughter Helena to John V.

During his brief reign Kantakouzenos crushed the Zealots in Thessalonike (1349) and supported PALAMISM at the local council of Constantinople of 1351 (see under CONSTANTINOPLE, COUNCILS OF). The relatively peaceful relations between John V and John VI lasted until 1351; in 1352 a new civil war broke out. Although Kantakouzenos used Ottoman troops (who established themselves at KALLIPOULIS, their first European foothold), he was defeated by John V, who assumed sole power (M. Živojinović, ZRVI 21 [1982] 127–41). After his abdication Kantakouzenos became the monk Ioasaph, retiring first to the MANAGA monastery, then to CHARISIANES. He made at least two trips to MISTRA, where his son MANUEL KANTAKOUZENOS was despotes (1347–80). He continued to influence both political and religious affairs until his death (cf. Lj. Maksimović, ZRVI 9 [1966] 119–93; J. Meyendorff, DOP 14 [1960] 147–77).

He also devoted himself to the preparation of his lengthy memoirs, the Historiae, one of the
John VI Kantakouzenos. Portrait of the emperor at the Council of 1351. Miniature in a manuscript of his works (Paris gr. 1242, fol. 5v); 14th C. Bibliothèque Nationale, Paris.

Principal sources for the first half of the 14th C. in four books he treated events from 1320 to 1356, drawing on personal reminiscences and perhaps on a diary. The remarkable homogeneity of composition is a result of the subordination of the historical material to an overall structural theme. He used this very subjective work to justify his own actions and policies and to present himself as a tragic hero and as the central figure of events. At the same time his history is a useful complement to the account of Nikephoros Gregoras. The bias of Kantakouzenos is offset by the author's first-hand knowledge of events, his precise chronology, and citation of original documents. His work is characterized by a belief in ananke (necessity) and tyche (fate or fortune); he believed that his eventual defeat was not caused solely by human factors, but by transcendent and cosmic forces. Kantakouzenos wrote in a simple style marked by the absence of rhetoric. His work was influenced by Thucydides (T. Miller, GRBS 17 [1976] 385–95, and H. Hunger, JÖB 25 [1976] 181–93) and includes an unusual number of speeches.

Kantakouzenos also wrote treatises attacking Islam and Judaism, and pro-Palamite theological works, refuting John Kyparissiotes and Prochoros Kydones. Portraits of Kantakouzenos as emperor and monk survive in a deluxe MS of his theological writings, Paris, B.N. gr. 1242, fols. 5v and 123v.

—A.M.T.

John VII, pope (1 Mar. 705–18 Oct. 707). Greek by birth, he was the son of a curator sacri palatii named Plato who moved to Rome from Constantinople. John inherited from his predecessors the problems of the canons of the Council in Trullo, which Pope Sergius I had refused to sign. Emp. Justinian II took up the issue, sending copies of the canons to the pope and urging him to approve those that were acceptable and reject those that were not. John returned them without emendation or signature, causing the author of the Liber pontificalis to accuse him of cowardice. A fresco in the Church of S. Maria Antiqua in Rome, commissioned by John, may reflect his acceptance of the canons, however; instead of the Adoration of the Lamb of God, it represents Christ in human form. The canons of Trullo were not formally accepted in Rome until the pontificate of Constantine I (708–15). Both the frescoes in S. Maria Antiqua and the mosaics of John’s oratory in Old St. Peter’s are generally attributed to Byz. artists (M. Andaloro, RIASA 19–20 [1972–73] 185f). The latter program included John’s portrait, today preserved in the Vatican grottoes, offering his foundation to the Virgin clad as a Byz. empress.

JOHN VII GRAMMATIKOS (the Grammarians), patriarch of Constantinople (21 Jan. 837?–4 Mar. 843 [V. Grumel, *EO* 34 (1935) 162–66, 506]); born Constantinople late 8th C., died western shore of Bosporos before 867. John was born to a family (perhaps of Armenian origin) whose name is variously given as Morokardanos, Morocharymios, and Morocharyanos. He began his clerical career ca. 811–13 as an anagostes in the Hodegon monastery; according to Photios (hormily 15, ed. Laourdas, 140.25–27) he was also an icon painter. Three letters addressed to him by Theodore of Studios are further proof of his original Iconodule position (V. Grumel, *EO* 36 [1937] 186). The epithet grammatikos indicates that he was respected for his learning. By 814 he had become an Iconoclast and was chosen by Emp. Leo V to head a committee to collect a florilegium of patristic texts in support of Iconoclasm, in preparation for the local council of 815 in Constantinople (see under CONSTANTINOPLE, COUNCILS OF), which again condemned the veneration of images. He was rewarded with the post of hegoumenos of the Sergios and Bakchos monastery, which served as a center where recalcitrant Iconodules were “rehabilitated.”

John had a reputation for persuasive rhetorical skills, and debates with him became a hagiographical *topos* of the second Iconoclastic period. Under Michael II, John tutored the crown prince Theophilos and is usually credited with inculcating strong Iconoclastic sympathies in his pupil. Upon Theophilos’s accession to the throne, John became synkellos, and went on an embassy to the Arab caliph al-Ma’mun, probably in 829/30. Little is known of his actual patriarchate; he was deposed in 843 as a preamble to the restoration of images, excommunicated, and exiled from Constantinople. In some of the marginal Psalters, John is depicted as the principal adversary of the Orthodox patriarch Nikephoros I who, as a pendant to St. Peter crushing Simon Magus, tramples John underfoot (Grabar, *Iconoclasm* 226–28, 287f., figs. 150, 155). John was probably the compiler of a collection of Gnomai that served as the major source for the *Gnomologia* of John Georgides (A. Kambylis, *JÖB* 37 [1987] 95, n.1).

-A.M.T., A.C.

JOHN VII PALAILOGOS, emperor (1390); born ca. 1370, died Thessalonike 22 (23?) Sept. 1408. According to E. Zachariadou (*DOP* 31 [1977] 339–42), he was also called Andronikos. Eldest son of Andronikos IV, as a small child he developed a grudge against his grandfather John V, who partially blinded him and his father after the latter’s rebellion. John viewed himself as rightful heir to the throne and opposed his uncle Manuel II, who had “usurped” his claim to the empire. Upon Andronikos’s death in 1385, John inherited his appanage in Selymbria. In April 1390 he seized Constantinople with Genoese and Turkish support and reigned briefly until his deposition in September. After a reconciliation with Manuel, John served as his regent from 1399 to 1403 and was entrusted with the defense of Constantinople against the siege of Bayezid I. The capital was saved by Bayezid’s defeat at Ankara in 1402; the next year (3 June 1403) John signed a treaty with the Turks whereby the Byz. regained Thessalonike. His triumphal entry into the city and his family may well appear on a tiny ivory at Dumbarton Oaks. Shortly after Manuel’s return from the West, John was made “basileus of all Thessaly” and despotes of Thessalonike, where he spent his final years quietly.

John was married to Irene Gattilusio, daughter of Francesco II of Lesbos. The union produced one son, Andronikos V, who predeceased his father. John thus died without an heir, leaving the lineage of Manuel unchallenged in its claim to the throne.

-A.M.T., A.C.

JOHN VIII, pope (14 Dec. 872–16 Dec. 882); of Roman origin. John was elected despite the future pope Formosus’s opposition, which continued during the first years of John’s pontificate. John faced the Arab invasions of southern Italy, often
supported by the rulers of Gaeta and other small Lombard principedoms; the pope built a navy to deter the Arabs, and until the death of Louis II the anti-Arab war proceeded successfully. After 875, however, Emp. Basil I was the most effective ally. The situation was complicated since John actively tried to establish papal control over Moravia (by supporting Methodios), Croatia, and Bulgaria. At a council in Constantinople in 879/80, the pope's legates were coerced into yielding: they joined the rehabilitation of Photios (the legend of the "second Photian schism" under John is a forgery—F. Dvornik, Byzantion 8 [1933] 425–36) and also had to accept Byz. claims over Bulgaria, although the pope still tried to influence the Bulgarian khan Boris I. Defeats by the Arabs, who gained a stronghold at Garigliano and burned Monte Cassino, as well as failures in Bulgaria and Moravia, gave new impetus to the opposition to the pope. The Annals of Fulda preserve a rumor that John was murdered.

John VIII Chrysostomites (Χρυσοστομίτης), or Merkouropolos (Μερκούριόπωλος), patriarch in Jerusalem (ca.1098–1106/7; on the name see B. Englezakis, Byzantion 43 [1973] 506–08). Although his personality and patriarchy remain obscure, John must be identified with the anonymous metropolitan of Tyre who fled his own see to Jerusalem and was subsequently elevated to patriarch succeeding Symeon II (cf. Xanthopoulos in PG 146:1196D). Despite the Crusaders' election of a Latin patriarch, John continued in his office. In 1107/8 he went to Constantinople, where he was recognized as the legitimate patriarch of Jerusalem (RegPatr, fasc. 3, no.986). Grumel suggests that his patriarchate ended before 1122.

Of the three treatises on azymes attributed to him, only the last two are from his pen; the first is probably by Eustratios of Nicaea. An unpublished work on the origins of the schism of 1054 may be his, although this seems rather doubtful (cf. J. Darrouzès, REB 21 [1963] 54).

John is sometimes confused with John IX of Jerusalem, who was present at the local council of Constantinople of 1156–57—the only known evidence of his patriarchate (I. Sakkelion, Palaioke bibliotheke [Athens 1890] 327). Englezakis has tentatively suggested that it was John IX who was actually John Chrysostomites, the monk mentioned in the tytikon of the monastery at Koutzovente in Cyprus. One of these two Johns wrote the "dual" vita of John of Damascus and Kosmas the Hymnographer, which includes a rare attempt to evaluate Kosmas's literary activity.

John VIII Palaiologos, emperor (1425–48); born 17/18 Dec. 1392 (cf. Barker, Manuel II 104 n.28), died Constantinople 31 Oct. 1448. Eldest son of Manuel II and Helena Dragash, he was made co-emperor before 1408 (Oikonomides, "Ivory Pyxis" 332–34) and became autokrator on 19 Jan. 1421 (F. Dölger, BZ 36 [1936] 318f). He was the effective ruler during the final four years of Manuel's life and succeeded him in mid-1425. John took active part in two successful campaigns in the Peloponnese. During his reign the Byz. regained control of most of the Morea and began to expand into Attica and Boeotia. Nonetheless, Thessalonike fell to the Turks in 1430 and, after the Turkish campaign of 1446, the Morea had to pay tribute to the sultan.

John pursued a policy of seeking rapprochement with the West in order to stave off further Ottoman advances. He was eager to achieve Union of the Churches and personally participated in the Council of Ferrara-Florence, where he signed the decree of Union. After his return to Constantinople in 1440, however, he found much popular opposition to the decisions of the council. Moreover, the Crusade of 1444, a reward for the Union of Florence, never reached Constantinople, but was crushed by the Turks at Varna. John died without ever implementing the Union. Despite three marriages, he was childless and was succeeded by his brother, Constantine XI.

John appears as co-emperor with his father in the Louvre MS of the works of pseudo-Dionysios the Areopagite (Spatarakis, Portrait, fig.93) and,
again identified as *basileus*, with his first wife, Anna of Moscow, on the so-called Large Sakkos, probably sent to Moscow between 1411 and 1417. A number of portraits by Western artists (miniatures and bronzes) commemorate John's visit to Italy (ibid., figs. 21–22, 178–79).

**John VIII Xiphilinos,** patriarch of Constantinople (1 Jan. 1064–2 Aug. 1075); born Trebizond ca.1010, died Constantinople. John was born to the Xiphilinos family, which was reportedly of humble origin. After an education in Constantinople, he joined the circle of John Mauropoulos and Psello and was granted the post of nomophylax of the law school in the capital. J. Cvetler's hypothesis (Eos 48.2 [1956] 297–328) that Xiphilinos composed the novel on the foundation of the law school does not prove valid. In the late 1040s Xiphilinos fell out of favor with Constantine IX and was attacked by a certain Ophydas who accused him of "freethinking." Psello defended Xiphilinos and praised his love of knowledge. When Constantine (III) Leichoudes was replaced as mesazon by the eunuch John ca.1050, Xiphilinos and friends were forced to leave Constantinople. Xiphilinos took the monastic habit and was—unlike Psello—content with his new situation; he soon began to retreat from the "emancipated" ideals of his youth. This created a tension in his relations with Psello, who, even in his enkomion of Xiphilinos (Sathas, MB 4:421–62), was unable to refrain from criticism, conventional though it may be.

After the death of Leichoudes, who had become patriarch (1059–1063), Emp. Constantine X (allegedly at the recommendation of Psello) summoned Xiphilinos from Mt. Olympos and appointed him patriarch. Under the difficult conditions of the growing Seljuk menace, Xiphilinos tried to establish union with the Armenian church. He also abolished a decision of Patr. Michael I Kerouarios prohibiting metropolitans who resided in Constantinople from electing in the capital new bishops for vacant sees (N. Oikonomides, *REB* 18 [1960] 55–78). Xiphilinos wrote a number of legal works—according to W. Wolska-Conus (*TM* 7 [1979] 13–53), scholia to the Basilika, Tractatus de creditis, de peculius, and Meditatio de nudis pactis. He also wrote the *Miracles of St. Eugenios.*

**John X,** pope (Mar./April 914–June 928); born Tossignano in the Romagna, died Rome 929. He owed his elevation to the noble Roman family of Theophylact. The major problem he had to face was the Arab threat; to fight them John advocated an alliance of Rome, Lombard princeoms in Italy, and Byz. In Aug. 915 the allies captured the Arab stronghold of Garigliano. In 920 John's legates attended the council in Constantinople where the Tomos of Union was signed; the next year, the envoys of Romans I Lekapenos and Patr. Nicholas I Mystikos were sent to the pope to suggest that contacts between Rome and Constantinople be reestablished (Nicholas, ep.53). John, however, taking advantage of the tense situation in the Balkans resulting from the war with Symeon of Bulgaria, tried to force papal influence on both Dalmatia and Bulgaria: in 925 Tomislav convened a synod in Split under John's direction (F. Šišić, *Pregled povijesti Hrvatskoga naroda* [Zagreb 1962] 123); Zlatarski (*Ist.* 1.2:507) surmised that the pope had promised to recognize Symeon's imperial title and the autocephaly of the Bulgarian church. John was deposed and imprisoned by Marozia, Theophylact's daughter.

**John X Kamateros,** patriarch of Constantinople (5 Aug. 1198–Apr./May 1206); died Dydimotheichon June 1206. A member of the Kamateros family, John was related to the empress Euphrosyne Doukaina Kamatera, wife of Alexios III Angelos. Well versed in classical literature, his training included rhetoric and philosophy. After holding a series of ecclesiastical positions, he was chartophylax when chosen as patriarch to succeed George II Xiphilinos. Between 1198 and 1200 he exchanged letters with Innocent III on the question of papal primacy; he attacked the filioque clause and asserted that Rome held first place in the pentarchy not on account of the
apostle Peter but because it was the imperial capital in the early Christian centuries. John intervened with Alexios III to gain the release of the banker Kalomodos. After Alexios's flight in July 1203, and the accession of Isaac II and Alexios IV, John continued to serve as patriarch. According to Western sources, he and Alexios IV submitted to the authority of Innocent III that same year. When Constantinople fell to the Crusaders in 1204, John took refuge at Didymoteichon. Theodore I Laskaris invited him to Nicaea to join the government-in-exile but John refused, perhaps because of old age.

-A.M.T.

JOHN XI BEKKOS, patriarch of Constantinople (26 May 1275–26 Dec. 1282); born Nicaea? between 1230 and 1240, died in fortress of St. Gregory on the Gulf of Nikomedea, March 1297 (V. Laurent, EO 25 [1926] 316–19). First mentioned as chartophylax of Hagia Sophia (1263–75), John twice served as Michael VIII's ambassador: to Stefan Uroš I in Serbia in 1268 and to Louis IX in Tunis in 1270 (L. Bréhier in Mélanges offerts à M. Nicolas Iorga [Paris 1933] 139f). At first John opposed plans for the Union of the Churches and in 1273 was imprisoned; after further study of the Latin fathers, he changed his views and was released from prison. He became head of the Unionist party and was soon chosen patriarch. Throughout his patriarchate John supported Michael VIII, but he urged the emperor to be more lenient toward his opponents. As a result of this dispute John temporarily withdrew from the patriarchate between March and August 1279. He was deposed after Michael's death and thereafter bore the brunt of attacks from the anti-Unionist party that then came to power: in Jan. 1283 a synod at Constantinople formally charged him with heresy and banished him to Prousia. He was again condemned at the Council of Blachernai in 1285 (see under Constantinople, Councils of), by the tomos of Gregory II of Cyprus and imprisoned, together with Constantine Meliteniotes and George Metochites.
denied Barlaam of Calabria and exonerated Gregory Palamas.

After the rebellion of Kantakouzenos and his coronation at Didymoteichon, the patriarch excommunicated his former patron and became regent for John V Palaiologos, whom he crowned in Nov. 1341. He then turned against Palamas and threw his support to the anti-Palamite Gregory Akindynos. In 1344 he excommunicated Palamas and deposed Isidore (I) Bocheiras from the see of Monemvasia. By 1346 the tide began to turn against John, after the murder of Alexios Apokaukos and Kantakouzenist victories in the Civil War of 1341–47. On 2 Feb. 1347, just before Kantakouzenos entered Constantinople, John was deposed by Anna of Savoy and condemned by the synod (G. Dennis, JÖB 9 [1960] 51–55). He was briefly exiled to Didymoteichon but then returned to Constantinople, where he died.

Lit. RegPatr, fasc. 5, nos. 2168–2270. PLP, no. 10288.

-A.M.T.

JOHN AKTOUARIES, or John Zacharias, chief physician at court of Andronikos II Palaiologos; born ca. 1275, died after 1328. When first mentioned in 1299 in a letter from George Laka- penos, John was studying medicine in Constantinople; sometime between 1310 and 1323, he received the title of aktouarios. He corresponded with Michael Gabras and taught astronomy to George Oinaiotes (S.I. Kourouses, Athena 77 [1978–79] 291–386; 78 [1980–82] 237–76).

One of John's teachers was Joseph the Philosopher, to whom he dedicated his treatise On the Workings and Illnesses of the Spirit of the Soul. The last of the great Byz. physicians, John was well acquainted with the medical classics and Greek literature and philosophy. The Method of Medicine, written for his friend Alexios Apokaukos, is generally based on Galen, but the work is innovative on colics from lead poisoning, whipworm infestations, and the combination of several techniques of bloodletting. John's Urines, a masterpiece of Byz. diagnostics, is divided into four basic parts: various urines and their physiological characteristics; diagnostics; etiology; and prognosis (K. Dimitriadias, Byzantinische Urosekope [Bonn 1971] 55–64). John's meticulous gradations of colors, consistency, sediments, and floating substances in given levels of the urine flask (amis, Lat. matula) are in a MS diagram (Ideler, infra 2:22). Much of his work is still unpublished.

Ed. De spiritu animali, De urinis, and De diagnosi in PhysMedGr 1:312–86; 313–192; 358–469.

–J.S., A.M.T.

JOHN ALEXIOS III KOMNENOS. See Alexios III Komnenos.

JOHN ANAGNOSTES, early 15th-C. writer. Nothing is known of his biography; the name Anagnostes is probably not a family name but an indication of the clerical rank of reader. John lived in Thessalonike during the siege of Murad II in 1490, and composed a brief eyewitness account (Diegesis) of the failure of the city's Venetian occupiers to resist the Turkish onslaught. The most recent editor of the Diegesis, G. Tsras, believes that John's account breaks off suddenly with the entrance of the Turks into Thessalonike, and that it was completed ca. 1453 by an editor who also composed the Monody on the fall of Thessalonike that has been attributed to John. The narrative is presented in literary language, but in a simple, straightforward manner, with precise details. A. Kazhdan (BZ 71 [1978] 301–14) has pointed out similarities between the account of John and the narrative of John Kaminiates, which is traditionally assigned to the 10th C.

–A.M.T.

JOHN ASENII II, Bulgarian tsar (1218–41); born ca. 1195/6, died 1241. John was the eldest son of Asen I, one of the founders of the Second Bulgarian Empire. In 1207, when the Bulgarian throne was seized by his cousin Boril, John was forced to flee to Galicia (Galitza), but he overthrew his rival in 1218. He was married to a Hungarian
princess and was content to allow the Bulgarian church to remain under papal auspices. On the strength of his Western ties he put himself forward in 1228 as a regent for Baldwin II. The Latins of Constantinople rejected his offer, confident in the truce they had concluded with his erstwhile ally, Theodorus Komnenos Doukas. This was the prelude to the latter's invasion of Bulgaria in 1230, but John defeated and captured him at the battle of Klokotnitsa. An inscription John had erected at Tūnovo soon after recorded that his conquests stretched from Adrianople in the east to Dyrrhachion in the west and set out his claim to the lordship of Constantinople. He now styled himself tsar of the Bulgarians and the Greeks, reviving the claims of Symeon of Bulgaria.

Seeking patriarchal status for the Bulgarian church, John turned to John III Vatatzes. The Nicaean emperor was willing to arrange this in return for a joint undertaking against the Latins of Constantinople. This alliance was sealed by the marriage of John's daughter Helena to Theodorus II Laskaris, heir to the Nicaean throne. The head of the Bulgarian church was duly accorded patriarchal rank by a church council meeting at Kallipolis in 1235 (I. Tarmanidis, Cyrillicmethodianum 3 [1975] 28–52). The allies launched an assault on Constantinople. Such concrete gains as there were, however, went to the Nicaeans. John was therefore happy to come to an understanding with the Latins of Constantinople, until the sudden death of his Hungarian consort in 1237 convinced him that he was guilty of perjury; he hastened to make peace with the Nicaeans. In yet another turnabout he married Irene, daughter of Theodorus Komnenos Doukas, whom he allowed to return to Thessalonike. These vacillations were forced upon him by the large-scale settlement in his territories of Cumans, seeking refuge from the Mongols. They presaged the collapse of the Bulgarian state which followed his death.

-M.J.A.

JOHN CHRYSTOSM (Χρυσόστομος, "golden-mouth"), bishop of Constantinople (26 Feb. 398–20 June 404); saint; born Antioch between 340 and 350, died Komana 14 Sept. 407; feastday 13 Nov., translation of his relics 27 Jan. Born to a rich family, John received an excellent education, esp. under Libanius and Diodorus of Tarsos. He became a monk and retired briefly to the desert, then returned to Antioch, where he was ordained deacon (981) and priest (986) and became a popular preacher. Invited to Constantinople to succeed Nektarios as bishop, John became involved in a series of political struggles, acting in opposition to court favorites (Eutropios), the growing power of the Arian Goths mercenaries (Gainas), the increasing influence of Alexandria (Theophilos), and Empress Eudoxia. His invectives against the latter, whom he called "Jezebel" and "Herodias," proved fatal to his career; deposed at the Synod of the Oak at Chalcedon in Aug. 403, then briefly recalled after popular riots in the capital in his favor, he was banished in 404 to Koukousos in Armenia and died three years later during a move to a harsher exile.

John's reputation as orator was sustained throughout the Byz. millennium. Almost all of his voluminous writings have survived, in approximately 2,000 MSS; in addition a large number of spurious works bear his name. For example, the liturgy attributed to Chrysostom is not his work. The greater bulk of his oeuvre consists of exegetical homilies on particular books of the Old and New Testaments, the majority of them belonging to his Antiochene period. The preserved texts are often from his stenographers' notes rather than his own hand and are sometimes accompanied by a later polished version. John emphasized the historical and literal meaning of biblical texts, disdaining allegorical interpretations; he was also concerned to show how they could furnish spiritual guidance for everyday life. He used these homilies, esp. those on the New Testament (in particular the 90 on Matthew), as vehicles for attacks on Arianism, also combatting the Anomaean views of Eunomios in a series of sermons entitled On the Incomprehensible Nature of God. John was more distinguished as an orator than as a theologian. He used vague terms when discussing the hottest controversies of his time: thus he spoke of the unity of the natures in Christ without a clear definition of the union (henosis); he avoided the term theotokos although he stressed Christ's love of his mother; his attitude toward original
institution. His 21 homilies titled *On the Statues*, rebuking the Antiochene mob for overthrowing the imperial effigies in 387 in protest against a new tax, complement the account by Libanius and are of great value to secular and social historians (R. Browning, JRS 42 [1952] 13–20).

The first biography of John (by Palladius of Helenopolis?) appeared in 425, in the form of a fictitious dialogue in Rome between an anonymous Eastern bishop and the deacon Theodore (BHG 870). Several other vitae were also produced (F. Halkin, *Douze récits byzantins sur Saint Jean Chrysostome* [Brussels 1977]).

**Illustration of the Homilies of Chrysostom.** Unlike the homilies of Gregory of Nazianzos, those by John were never codified in a standard edition and reproduced in numerous illustrated versions. Consequently, illuminators approached their task independently. Illustrations may provide commentary (Athens, Nat. Lib. 211) but more often represent the subject of the sermon. As author, John is depicted in the pose of an evangelist and is sometimes represented as inspired by Paul or Luke, shown leaning over his shoulder. In a Palaiologan portrait added to a 12th-C. MS (Milan, Ambros. A 172 sup.), John’s scroll changes into a stream of water for the faithful, an example of the fountain of life used also for other church fathers in late frescoes and MSS. The characteristic features of John, his sunken cheeks and high forehead, became exaggerated in the Palaiologan period.

**JOHN ELEEMON** (ʼΕλεήμων, “the merciful”), Chalcedonian patriarch of Alexandria (from 610); saint; born Amathous, Cyprus, died Cyprus 619/
born to a noble family, but the traditional view that his father was the patrikios and strategos Theodore is the result of a misinterpretation. John received a good education and served in the army but retired and became a monk. His identification with John of Melitene, whose poem is in the chronicle of Skylitzes (Skyl. 282f), is wrong (M. Bibikov in Bulgarsko srednovkovie [Sofia 1980] 65f).

John's epigrams contain abundant material concerning Byz. wars against Bulgaria and the Rus', as well as internal revolts. His favorite hero is Nikephoros II. He describes John I, who murdered Nikephoros and destroyed images of him, as transformed by this crime from a lion into a hare, trembling before his subjects and frightened by false dreams. This "Macbethian" theme of retribution is accompanied by a Christian indifference to the material world: after a few unhappy years of rule the emperor found rest in a grave only three cubits long.

John's general outlook is pessimistic: he foresees a political crisis, onslaughts of barbarians, peasant poverty, earthquakes, and a menacing comet. He praises his father but is very critical of conjugal ties. In his enkomion of the oak, the theme of a mother's love for her offspring is strongly emphasized (A. Littlewood, JÖB 29 [1980] 133-44). An erotic theme is treated allegorically: the lover whom a girl asked for some water symbolized Christ assuaging a moral thirst. Besides epigrams and progymnasmata, John produced hymns and odes dedicated to the Virgin and speeches on Gregory of Nazianzos and St. Pantelemon. The so-called Paradeisos, a collection of monastic epigrams, was apparently by John (P. Speck, BZ 58 [1965] 333-36). C.A. Trypanis hypothesized that a fresco in Kalenderhane Camii presents John's portrait (in Meletetama ste mne me Basileiou Lauorda [Thessalonike 1975] 301f).

JOHN ITALOS (Ιταλός), philosopher; born southern Italy ca.1025, died after 1082. John moved to Constantinople ca.1049, attended the lectures of Psellos, and polemicized with him. Supported by Michael VII and some civilian
officials, he replaced Psellus as hypatos ton philosophon. He fell into disfavor under Alexios I, however, and was condemned at a trial in 1082. Although the anathemas of 1082 accuse John of heresy and paganism (Gouillard, “Synodikon” 57–61), his own works present a rather moderate philosophy; accordingly, some scholars (such as N. Kečkemédi) describe John as a radical reformer, whereas P. Joannou, P. Stephanou, and L. Clucas emphasize his Christian orthodoxy. Thus his condemnation may have been caused by John’s bad character (stressed by Anna Komnene), political considerations, or his attention to classical philosophers, above all Aristotle. Whatever John’s own views were, his works and his trial demonstrate that he and his contemporaries discussed key philosophical problems such as the eternity of the cosmos, the existence of universalia, the existence of matter and physis (“nature”). John apparently also refuted the Neoplatonic thesis concerning the dialectic emanation of the world from the One.

—A.K.

JOHN KLIMAX (or ὁ τῆς Κλίμακος, “of the Ladder”), also called Scholastikos or Sinaiotes, theologian and saint; born before 579, died ca.650 (F. Nau, BZ 11 [1902] 35–37); feastday 30 Mar. His biography is barely known. According to his encomiast Daniel of Raithou, John received a general (enkyklios) education (and possibly was a scholastikos), but at age 16 took monastic vows, lived as an anchorite at the foot of Mt. Sinai, and eventually became the hegoumenos of the Sinai monastery.

Klimax’s major work, The Ladder of Paradise, or The Heavenly Ladder, summarizes the experience of the desert fathers as reflected in the Apophthegmata patrum. It is an unsystematic presentation of vices and virtues, in scenes and more often in direct indoctrinations and definitions; they do not form a hierarchy of modes of behavior and are only superficially connected with the concept of the ladder. John ends by quoting 1 Corinthians 13:13, saying that the three greatest virtues are faith, hope, and agape (Christian love), of which agape is the worthiest. Even though the monastic status is considered as supreme, the layman is not excluded from salvation if he avoids theft, falsehood, hatred, etc. (PG 88:640C–641A). John refers to angels and demons and to biblical personages, but never mentions the Virgin (S. Rabois-Bousquet, S. Salaville, EO 22 [1923] 450).

John’s style ranges between enigmatic obscurity and aphoristic simplicity of presentation; almost hymnic is the cadence of his repetitive definitions (“Penitence is the revocation of baptism. Penitence is a contract with God concerning the second life,” etc.—PG 88:764B). Metaphors and similes are abundant, often borrowed from animal mythology (e.g., a snake struggling against a deer). The Ladder was extremely popular; the text was commented on by scholars including Photios (G. Hofmann, OrChrP 7 [1941] 461–79) and translated in the West and in the Slav countries.

thios Boilas, also contains his will in which he mentions that he owned two copies of the Ladder.

JOHN LYDOS, scholar, bureaucrat, and writer; born Philadelphia (Lydia) 490, died ca.565. Well versed in Latin in addition to his native Greek, John came to Constantinople in 511 in search of a post in the palace ministries; he attended philosophy lectures in the interim. He owed the first of several appointments to the praetorian prefect Zotikos, a fellow countryman. John served 40 years in the civil service, earning the admiration of Justinian I, which helped him acquire a professorial chair. After retirement (ca.551) he settled down to a literary life.

His major work is On the Magistracies, a history and description of late Roman bureaucracy. The treatise is both interestingly antiquarian and a mirror of the social and intellectual life of his day, characterized by John's scholarly confidence (esp. his Latin expertise) and vicious attacks on high officials, notably John of Cappadocia, whose infamy he helped to secure. Continuity between the Roman past and the Byz. present is a major theme. The work is enriched by many digressions on scholarly matters, esp. philological. Also extant are On the Months, a history of calendars and feasts, again stressing continuity from Rome to Byz., and On Omens, a historical survey of divination and related matters that has earned John the label of last astrologer of the old world (Bandy, infra, xxix). Panegyrics on Zotikos and Justinian, a history of the latter's Persian war, and some poetry are lost.

LIT. T.F. Carney, Bureaucracy in Traditional Society: Roman-Byzantine Bureaucracies Viewed from Within (Lawrence, Kansas, 1971), with Eng. tr. of Magistracies. C.N. Tsirpanlis, "John Lydos on the Imperial Administration," Byzantium 44

John’s Roman Republic material. John was also a source for the Epitome of Zonaras (M. diMaio, Byzantion 50 [1980] 158–85).

JOHN OF BICLAR, bishop of Gerona and historian of the Visigoths; born Santarem (Scallabis) in Lusitania, died Spain ca.621. John is said by Isidore of Seville to have been a Goth, but this is nowhere evident in his work. Having been educated in Greek and Latin at Constantinople, he returned ca.576 to Spain, where he fell foul of the Ariani persecution of the Visigothic king Leovigild (568–86), resulting in ten years of exile and harassment. John subsequently founded a monastery at the now unidentifiable site of Biclar in Spain, drawing up the house rules for the brothers it attracted. He wrote a Latin chronicle, covering the years 567–90. Its narrative of Visigothic history is relatively impartial; in addition the chronicle is a valuable source for such matters as the military objectives of Justin II and Tiberios I and the former’s religious policies (Av. Cameron, SchH 13 [1976] 53f).

JOHN OF BRIONNE, Latin emperor of Constantinople (1231–37); born ca.1170, died Constantinople March 1237 (J.M. Buckley, Speculum 32 [1957] 315–22). This scion of a great French noble family enjoyed enough experience for several lifetimes: king of Jerusalem (1210–25), a leader of the Fifth Crusade, papal marshal, father-in-law and enemy of Frederick II Hohenstaufen, and finally emperor of Constantinople. Contemporaries admired his prowess and the elegant figure he cut. It was almost a matter of course that the barons of the Latin Empire of Constantinople should turn to him in 1228 when they were seeking a regent for Baldwin II. John
agreed to take up the defense of Constantinople, on condition that he be made emperor, with Baldwin succeeding him on his death. Terms were duly ratified in April 1229 at Perugia; Venice provided him with transports for his expedition. He reached Constantinople in autumn 1231 and was crowned emperor. His arrival aroused extravagant hopes that he might be able to restore the fortunes of the Latin Empire. A strike into Asia Minor had some success, but it pushed John III Vatatzes into an alliance against him with John Asen II. John organized a successful defense of Constantinople over the years 1235–36, but died soon after.

M.J.A.

JOHN OF CAESAREA, or John the Grammarian, early 6th-C. priest and theologian. His biography is unknown, and it is not clear whether his Caesarea was located in Palestine or Cappadocia. John was the first Neo-Chalcedonian. In 514–18 he wrote an *Apology* for the Council of Chalcedon in which he tried to harmonize Chalcedonian doctrine with the ideas of Cyril of Alexandria. The book consists of three parts: John's conciliatory teaching; an analysis of Cyril's position; criticism of Severos of Antioch. John rejected the Monophysite argument against the idea of two natures of Christ that allegedly implied that the whole Trinity would have to have been incarnated and introduced the concept of the “characteristic hypostasis” of Christ in which these two natures were united. Severos responded in a long *Refutation* that is preserved only in Syriac. Other works include tracts against the Akephaloi and Aphthartodocetism, homilies against the Manichaean, exegetics of the Gospel of John. He is probably to be identified with John the Orthodox, the author of a *Dialogue with a Manichaean*.

-A.K.

JOHN OF CAPPADOCIA (Καππαδόκων), high-ranking official; born Caesarea (Cappadocia) probably before 500, died Constantinople after 548. When Justinian I first met him in 520, John was the clerk of a *magister militum praesentalis*. Named praetorian prefect before 30 Apr. 531, John held the position (except from 15 Jan. to mid-Oct. 532) until May 541. He was energetic, astute, and clever, yet critics denounced him as drunken, gluttonous, debauched, brutal, and unscrupulous. John was said to be corrupt and excessively powerful, esp. because he economized on the military budget by removing many soldiers from military registers; he largely suppressed Latin, reduced the *sportulae* (see Synethae) of bureaucrats, and allegedly supplied faulty provisions to a naval expedition against the Vandals. Nikau rioters forced John’s temporary removal on 14 Jan. 532. He was consul in 538. In May 541 Empress Theodora succeeded in deposing him and confiscating his fortune and palace. John was first banished to Kyzikos and ordained as a deacon, but was then accused of murdering Bp. Eusebios of Kyzikos. Ignominiously deported to Antinoopolis in Egypt, John was allowed to return to Constantinople after Theodora died in 548, but only as a priest. Despite his faults, John was a principal force in the smooth functioning of the bureaucracy, most notably the efficient collection of taxes and the imposition of fiscal control.

-W.E.K.

JOHN OF DAMASCUS, theologian and saint; born Damascus ca.675 (according to J. Hocke, ca.650), died Lavra of St. Sabas 4 Dec. 749 (S. Vailhé, *EO* 9 [1906] 28–30; this precise date is suspect) or more probably ca.753/4; feastday 27 March, with variations. His vita, written by John VIII Chrysostomites, patriarch of Jerusalem, or by John IX, describes him as a member of an influential Arabo-Christian family, the Manṣūr, who controlled the financial administration of the caliphate. John received an excellent education together with his adoptive brother Kosmas the Hymnographer. Both became monks of the Lavra of St. Sabas. Patr. John V of Jerusalem (705–35) ordained John priest.

John was the greatest Eastern systematizer of Christian dogma. His major work, *Pege gnosseos* (The Fountain of Knowledge), consists of a terminological introduction ("Philosophical chap-
John wrote many polemical works, esp. against the Iconoclasts: accordingly the Council of Hieria (754) anathematized him as a supporter of the Saracens and teacher of impiety. John developed the Orthodox theory of images by categorizing six types of icon: the natural image as originating from the prototype; the idea (ennoiá), preexisting in God, of things; man as imitation (mimesis) of God; visible objects aiming at the representation of the invisible; corporeal objects that symbolize and presage the future; and objects reminiscent of the past.

John also worked as moralist, exegete, hagiographer, author of sermons, and hymnographer. Some works ascribed to him are spurious, however, including a speech against Constantine V (actually by John of Jerusalem), the Sacra Parallelæ, and Barlaam and Ioasaph. John was very popular in the West (J. de Ghellinck, BZ 21 [1912] 448-57), in Slavic lands, and in the Near East, where Theodore Abu-Qurra continued his traditions. The Arabic vita of John was written at the end of the 11th C. by the monk and priest Michael; the oldest Greek Life, by John of Jerusalem, was probably produced in the first half of the 12th C., although B. Hemmerdinger dates it before 969 (OrChrP 28 [1962] 422f).

JOHN OF EPHESUS, Syriac historian, born near Amida ca.507, died Chalcedon 586 or 588 (P. Allen, Orientalia Lovaniensia Periodica 10 [1979] 251-54). John was a Monophysite leader in Constantinople in the time of Justinian I, under whose orders he was sent in 542 as a missionary to the Ephesus region. Around 558 he was ordained bishop in Syria by Jacob Baradaeus. John preached against Jews and Montanists in Asia Minor and in 545/6 upbraided pagans, aristocrats, and intellectuals in Constantinople. After Justinian's death John was jailed for anti-Chalcedonian activities.

John wrote an ascetical tract titled Lives of the Eastern Saints. It recounts the stories of 58 holy men and women who lived in the Syriac-speaking milieu in John's own day, affording a rare glimpse into the world of the religious life of the Monophysite community. Of his Church History, written from a Monophysite point of view, only the third part survives in its entirety, covering the years 571-86. Sections of the second part are recoverable from the excerpts quoted by pseudo-Dionysius of Tell Mahrë, Michael I the Syrian, and Elias bar Shinâya. The History contains important evidence, for instance, on Slav invasions (A. Djakonov, VDI [1946] no.1, 20-34).

JOHN OF EPIPHANEIA (Syria), 6th-7th-C. historian. John was a lawyer, apo eparchon, and an adviser to Gregory, patriarch of Antioch (570-93). John wrote a history in formal continuation of Agathias, its main theme being the long war (572-92) between Byz. and Persia, culminating in the flight of Chosroes II and his restoration by Maurice. Only one fragment of this history survives, containing the introduction and beginning of the first book. Evagrios Scholastikos, a kinsman (5.24), states that John's work was not yet available to him in the 590s when he was writing his own history; this may either mean

---

it was in progress or published but not yet physically accessible.

ED. FHG 4:273–76.
LIT. Hunger, Lit. 1:312f.

JOHN OF EUBOEA, mid-8th-C. writer. His biography is barely known; the only ascertained fact is that he wrote one of his sermons in 744 (PG 96:1504D). In the lemmata of his authentic works he is called “the monk and priest of Euboea (or Euoia),” whereas in some spurious texts he appears as a bishop of Euboea. Because no such bishopric existed, Dölger (infra 7–9) located John in Eupoia/Euaria, a bishopric near Damascus (or in Eupoia in Epiros), but probably he was not a bishop (Halkin, infra 227).

John’s œuvre is not clearly determined. Some works by John of Damascus have been ascribed to him (J.M. Hoeck, OrchrP 17 [1951] 98, n.2), and vice versa. He wrote some sermons on Gospel themes—Mary’s conception, the resurrection of Lazarus, the massacre of the innocents—the last perhaps inspired by contemporary events. He also wrote the earliest extant legend of Paraskeve. John’s authorship of the so-called Religious Dispute at the Court of the Sasanians was rejected by E. Bratke (TU 19.3a [1899] 97).

LIT. Beck, Kirche 502f.

JOHN OF KARPATHOS, theologian. His biography is unknown, his dates questionable. Because Photios’s Bibliotheca (cod. 201) mentions John’s work, we know John lived before the 9th C. Some MSS (including the 9th-C. Jerusalem, Gr. Patr. Sabait. 408) call him bishop of Karpathos (an island between Crete and Rhodes). He may be the “John of Karpathos” who signed the decisions of the Council of 680. John had high repute, was sometimes characterized as a saint, and his works were included in the Philokalia.

Besides spurious texts (some actually by Elias Ekdikos), two collections of admonitions (centuria) bear John’s name: Consolations to the Monks of India and Theological and Gnostic Chapters. John understood asceticism as a constant struggle against demons. Vices—such as vainglory, gluttony, avarice—dwell in the inferior parts of the soul, and the monk’s task is to purge them and to develop his intellect (logistikos or nous): while the imperial treasury contains gold, the monk’s treasure is his knowledge of the intelligible. Although he refers primarily to the Bible, John is familiar with Stoic terminology; he also quotes Plutarch and uses Pythagoras, “whom the Greeks admired more than any other philosopher,” as an example of the virtue of silence.

JOHN OF NAPLES, deacon and author of a continuation (762–872) of the Deeds of the Bishops of Naples. The Deeds mirrors the position of Naples between Byz. and the West as its focus shifts from events in southern Italy—particularly the Arab advance—to Constantinople. The Deeds’ anonymous first section, composed sometime between about 834 and 849 according to Achelis (but cf. B. Bischoff, Mittelalterliche Studien, vol. 3 [Stuttgart 1981] 29, n.124), treats bishops and buildings from the beginnings to 754 using jejune
local sources augmented by the Liber pontificalis, Paul the Deacon, Gregory of Tours, etc. Although this author favored icons, his mutilated account of the Iconoclast Constantine V as a lion hunter, dragon slayer, and victor over Artabasdos is quite positive (S. Gero, GRBS 19 [1978] 155–59). Only a fragment survives of a second continuation by subdeacon Peter.

John’s Translatio S. Severini (BHL 7658) and Acta S. Januarii, Sosii et aliorum (BHL 4134–35) describe the Arab depredations. He may also have written the Acta Maximi Cumani, and, with the help of an unknown Byz., he certainly adapted into Latin a number of Byz. hagiographical works, including the Vita of Euthymios by Cyril of Skythopolis (ed. F. Dolbeau, MEFRM 94.1 [1982] 315–36), a Life of Nicholas by Patr. Methodios I (ed. P. Corsi, Nicolaus 7 [1979] 359–80), and a Passion of the Forty Martyrs of Sebasteia, offering eloquent testimony on the cultural orientation of Naples in his lifetime.

—M. McC.

**JOHN OF NIKIU**, Egyptian bishop and chronicler; fl. late 7th C. Little is known of his life save that as bishop of Nikiu he was appointed overseer of all the monasteries, but was suspended from the priesthood because he caused the death of a monk whom he had disciplined. Probably after this incident John wrote a chronicle along conventional Byz. lines, beginning with Adam and ending with the immediate aftermath of the Arab conquest of Egypt. Thought to have been originally written in Greek with some sections in Coptic, it survives in two late Ethiopic MSS. The Ethiopic text, translated from Arabic in 1602, is in deplorable condition. Sections are missing, and some chapter headings are unrelated to the contents of the chapters. How faithful the Arabic and Ethiopic translations are to John’s original cannot be determined; the Ethiopic version indicates influence from traditional Arabic historiography. For the period of the Arab conquest, the *Chronicle* remains the earliest and only eyewitness account, antedating the earliest Arab accounts by almost 200 years.

—D.W.J.

**JOHN OF POUTZE** (ἐκ Πούτζης), tax collector; fl. 1120s-1157. John served John II and Manuel I as general superintendent of revenue collection (logistes megistos—Nik.Chon. 54.76, probably megas logariastes) and protonotarios of the dromos (Kresten, “Styppieotes” 84f). During John’s reign, he was scrupulously upright and an unrelenting collector of revenue; he convinced John II to divest the taxes raised for the navy into the general treasury and pay for ships only when needed. To preserve his position under Manuel, John totally changed his style, greedily enriching himself and his family. The stories of his glutony and avarice told by Choniates (56–58) reflect oral traditions that survived among the bureaucrats of Constantinople.

lit. Ahrweiler, Mer 230–33.

—C.M.B.

**JOHN OF RILA**, Bulgarian monk and saint; born near Kjustendil between ca.876 and 880, died 18 Aug. 946; feastdays 1 July, 18 Aug., 17 Oct. After leaving the monastery where he had taken his vows, he lived for many years as a hermit in the Struma (Strymon) valley and on Mt. Vitoša. He founded a monastery at Rila in the mountains east of the upper Struma ca.930–31. In 941 he returned to the eremitic life near his monastery. His reputation for holiness spread far and wide during his lifetime and after his death; as a result his remains were taken first to Sofia, then to Hungary, and finally to Tarnovo, before being returned to Rila. Many vitae of John were written, but none is contemporary. The oldest Slavonic vita was composed before 1183. A mid-12th-C. Greek Life by George Skylitzes survives only in Slavonic translation. The most widely copied Life is that by Patr. Evtimij of Tarnovo, which makes critical use of earlier material. John’s only surviving work was a spiritual testament establishing rules for his monastery (ed. Ivanov, 136–42). His cult is widespread in the Orthodox world, and he is represented in many Byz. and post-Byz. wall paintings and icons.

—R.B.

JOHN OF SARDIS, name of several metropolitans of the city. The first of them, a corresponding member of Theodore of Studios, participated in the Council of 815 (J. Pargoire, EO 5 [1901-02] 161). C. Foss (Byzantine and Turkish Sardis [Cambridge, Mass.-London 1976] 66) distinguishes him from John II, a victim of the Iconoclasts. In an unpublished text Demetrios of Kyzikos praises their homonym, who lived before 950, for his knowledge of divine and human sciences (Laurent, Corpus 5.1:263). Two seals of John are dated in the second half of the 11th C. Another John signed the minutes of the Council of 1147 (PG 147:500C).

It is unclear which of them, if any, can be identified with the author of the Commentary on the Progymnasmata of Aphthonios, which in the 14th-C. Vat. gr. 1408 is ascribed to John of Sardis. Beck (Kirche 510) sees in him the contemporary of Theodore. Foss identifies him with John II, whereas Rabe (Commentarium, xvi) places him in the second half of the 10th C. In any case this commentary was known to John DOXOPATRES (2nd half of the 11th C.), who also mentions John’s scholia on Hermogenes. In his commentary John used commentaries on Aristotle and progymnasmata produced in the 5th–6th C. According to Hunger (Lit. 1:78), this points to a survival rather than revival of the knowledge of antiquity; if, however, John lived ca.950, this thesis should be reconsidered. A John of Sardis also wrote hagiographical works (BHG 2151, 1334).

—A.K.

JOHN OF SKYTOPOLIS. See JOHN SCHOLASTIKOS.

JOHN PATRIKIOS, appointed by Emp. Leontios in 697 to lead a naval expedition against the Arabs in North Africa. John recaptured Carthage and several surrounding towns, but in 698 ‘Abd al-Malik sent a superior fleet, forcing him to retreat for supplies and reinforcements to Crete, where mutinous supporters of Tiberios II killed him.

—P.A.H.

JOHN PETRICI (of Petritzos), the most notable translator of Greek philosophical texts into Georgian; died Georgia soon after 1125. John was educated in Constantinople, a pupil of Psellus and John Italos. He spent approximately 20 years after 1083 at the Georgian monastery of Petritzos at Bačkovo. He then returned to Georgia, to the monastery and academy at Gelati founded by David II/IV the Restorer. His translations include works of history (Antiquities of Josephus Flavius), theology (John Klimax), and most importantly numerous philosophical texts (Aristotle, Topika and On Interpretation [which have not survived], Nemesios, On the Nature of Man, and Proklos Diadochus, Elements of Theology [with an original commentary]). These are slavishly literal. John’s desire to establish a Georgian tradition of philosophy, reconciling Aristotelian, Platonic, and Christian thought, ultimately failed because of the obscurity of his own writings and lack of interest among his countrymen, but his efforts had a significant impact on later Georgian philosophy. His translation and commentary on Proklos were rendered into Armenian in 1284.

—R.T.

JOHN ROGER. See Rogerios, John.

JOHN SCHOLASTIKOS, Neo-Chalcedonian theologian, bishop of Skytopolis (ca.536–50). John tried to reconcile the statements of the Council of Chalcedon with the teaching of Cyril of Alexandria but was attacked by a strictly dyophysite anonymous writer in a treatise with the title Against Nestorios that concealed its real purpose. Photios (Bibl., cod.95) suggests that the author was Basil of Cilicia; in a later passage (cod.107) Photios says that Basil was a Nestorian who borrowed from
Diodoros of Tarsos and Theodore of Mopsuestia but avoided a direct attack on Cyril. John answered the anonymous writer with a tract entitled Against Those Who Have Cut Themselves off from the Church, criticizing also Eutyches, Dioskoros, and other Monophysites. Since all of these works are known only in fragments, the real substance of the dispute is hard to establish (E. Honigmann, Évèques et évêchès monophysites d'Asie antérieure au VIe siècle [Louvain 1951] 80f). John was subsequently involved in Orthodox polemics against Severos of Antioch and the Orthodox Monophysites. He was also the first scholiast on the writings of pseudo-Dionysios the Areopagite (PG 4:15–432, 527–76), attempting to exploit him for Orthodox beliefs; his commentaries, translated into Syriac ca.800, were preserved along with those of Maximos the Confessor.

JOHN SIKELIOTES, orator; fl. ca.1000. At the order of Basil II, John Sikelioites delivered in the Pikridion monastery a speech (RhetGr, ed. Walz 6:447:24–26) that is now lost. His identification with John Doxopatres was rejected by H. Rabe (RhM 62 [1907] 581, n.1). John is known primarily as a commentator of Hermogenes; his scholia to Ailios Aristides have also been discovered (F.W. Lenz, Aristeidesstudien [Berlin 1964] 99, 114).

JOHN SIKELIOTES, purported chronicler. Krumbacher (GBL 386–88) admitted reluctantly the existence of John, identifying him with the "Sikelioites didaskalos" mentioned in the preface to Skylitzes (Skyl. 3.18). This second John Sikelioites is, however, a result of palaeographical "corrections" by Andrew Darmarios in the 16th C.: Darmarios introduced John’s name in the title of the chronicle by George Hamartolos and probably on the MS of the chronicle ascribed to Theodore Skoutariotes as well.

JOHN SMBAT ('Ioσβανέιτης, Arm. Yovhannēs Smbat), son of GAGIK I; BAGRATID king of Armenia (ca.1017/20–1040/1). His authority was challenged from the start by his brother Asot IV the Brave, with whom he was forced to divide the lands of the kingdom of Ani. Thanks to these quarrels, Giorgi I, the ruler of the newly united kingdom of Abchasia and Iberia, was able to capture John Smbat, whom he released only after the sack of Ani and the surrender of several border fortresses. When Emp. Basil II advanced in 1022 to complete the Byz. annexation of the lands of David of Taby/Tao and laced waste to Iberia, John Smbat tried to conciliate the emperor: the childless king sent the katholikos Peter Getadarj to Constantinople with his testament in which he willed his realm to Byz., keeping only a life tenure with the title of magistros. The death of Basil II delayed the implementation of this agreement, but when John Smbat died, Emp. Michael IV demanded the immediate fulfillment of the testament, which became the legal basis for the Byz. annexation of the kingdom of Ani in 1045.

JOHN THE ALMSGIVER. See John Eleemon.

JOHN THE BAPTIST, precursor (prodromos) of Christ, the son of Zacharias and Elizabeth, a relative of the Virgin Mary. Three episodes of his life were held to have a special significance: the appearance of an angel predicting John’s birth, his baptism of Jesus and prophecies concerning the role of Jesus, and his arrest by Herod and his beheading. In Christian tradition John occupies an exceptional place, his life being described in apocryphal gospels and acts, homilies, and hymns. In monastic literature John appears as an ideal type of monk. He was the object of great veneration. In Constantinople alone at least 36 churches and monasteries were dedicated to him, of which the most famous was the Stoudios; others were Lips, the Prodromos in Petra, in Sphorakion, etc. The monastery of Phoberou on the Asiatic shore of the Bosporus was also dedicated to the Prodromos. Various relics were connected with the
cult of John, esp. his head (of which several examples are mentioned in various texts) and hand. Among authors who wrote on John were Sophronios of Jerusalem, Leontios of Constantinople, Theodore of Studious, John Maurpous, Maximos Holobolos, Thomas Magistros, Neilos Kabasilas, and Manuel II.

Feasts of John the Baptist. The conception (syllepsis) of John (Lk 1:5–25), commemorated 23 Sept., was the original Byz. civil New Year and beginning of the church calendar until ca. 462 when the indiction was shifted to 1 Sept. Not found originally in Jerusalem, the conception feast may be of Constantinopolitan origin and is undoubtedly the original feast of John in the capital. It initiated the course-reading of Luke in the Evangelion. Neither this feast nor the Nativity (genethlion) of John on 24 June had any special liturgical solemnity.

More important was the 29 Aug. commemoration of his beheading (apotome tes timias kephales) described in Mark 6:14–29. Celebrated in Jerusalem ever since the 5th C. (Severos of Antioch, PO 36:358–66) and at the Studious monastery from the 10th C., this feast was to acquire greater solemnity than the other two with the gradual substitution of the Palestinian Sabaitic Typika for the Typikon of the Great Church after 1204. The beheading is one of but two Byz. feasts that are also days of fasting.

Representation in Art. Longhaired and progressively more haggard, John is generally represented in art wearing a prophet's pallium and often the fur mantle of Elijah since he was called a new Elijah (Mt 11:14). From the 11th C. onward, he manifests his role as ascetic exemplum by wearing the fur melote of the desert ascetic or the monastic mandyas. Depicted first in catacombs in scenes of the Baptism of Christ (see EPIPHANY), he appears independently by the 6th C. (Cathadera of MAXIMIAN, where he displays a lamb, recalling Jn 1:36). Stories of his life, death, and relics were being depicted by the 9th C. (e.g., an icon described by Theodore of Studious, PG 99:768AB). In post-Iconoclastic art, John is represented more frequently than anyone except Christ and Mary. Richly illustrated Gospel books depict his birth, naming, ministry, recognition, baptism of Christ, imprisonment, and death. Evangelia illustrate the discoveries (inventiones) of his relics; cycles of his ministry and baptisms accompany the homily on baptism of GREGORY OF NAZIANZOS and adorned the baptistery of HAGIA SOPHIA in Constantinople (ca. 1200); and semicannical cycles of his life and relics were depicted in churches (Babić, Chapelles annexes 121, 138, 140, 162, etc.). John appears as the classic third member of the DEESIS and in scenes of the Anastasis. In Palaiologan art, narrative cycles of John are further elaborated, and when John is shown in Paradise, he is given angels' wings (M. Tatić-Djuric, Zbornik Narodnog Muzeja 7 [1973] 39–51).

—J.I., A.K., R.F.T., A.W.C.

JOHN THE EVANGELIST, MONASTERY OF. See PATMOS.

JOHN THE EXARCH, Bulgarian writer and translator; died probably between 917 and 927. His fine knowledge of Greek and his familiarity with Byz. theology and philosophy suggest that he was educated in Constantinople, where he may have been sent by Tsar Boris I. From the late 9th C. he was a member of the circle of intellectuals at Preslav under the patronage of Tsar Symeon and held the office of exarch of the Bulgarian church; the functions of this office are unknown.

By 893 he had already translated substantial excerpts from John of Damascus's On the Orthodox Faith. This entailed the creation of a new technical vocabulary and a means of expressing abstract concepts in Old Church Slavonic, the difficulty of which he recognized and discussed perceptively. His Šestodnev, written somewhat later, was based on the Hexaemeron of Basil the Great and his Greek commentators, and the On the Constitution of Man of Meletios the Monk. By adding much material of his own, John made the Šestodnev a kind of encyclopedia of medieval Orthodox cosmology and culture. It contains interesting information on Bulgaria in the author's time, such as the long description of Symeon's palace in book 6. He also wrote a series of festal sermons.
John helped create medieval Slavonic literature. His wide knowledge, his command of classical rhetoric, and his occasional poetic lyricism gave him great influence both on southern Slavic literature and on the early literature of Rus'.

---

JOHN THE GRAMMARIAN. See JOHN VII Grammatikos.

JOHN THE ORPHANOTROPHOS, politician; died Lesbos 13 May 1043. He was a eunuch and belonged to a family of money-changers (G. Litavrin, VizVrem 33 [1972] 39). Psellos (Chron. 1:44 no.18.5–7) says John advised Basil II. He supported Romanos III even before the latter's coronation. Romanos made him senator and praspositos. He aided the emperor in his conflicts with nobles such as Constantine Diogenes and Constantine Dalassenos. John promoted his brother to the throne as Michael IV and thereby gained control of civil and military affairs, even though he was only orphanotrophos (Beck, Ideen, pt.XIII [1955] 329, n.1). Aristakes Lastivertc't declares that John was entrusted with pronoia and legal documents of the palace (K. Juzbašjan, VizVrem 16 [1959] 24–28); he probably became kourator of Mangana. During a famine, John purchased grain from the Peloponnesos and Hellas for Constantinople. In 1037 he vainly attempted to dismiss Alexios Stoudites and to become patriarch himself. Skylitzes (Skyl. 397:52–57) preserves a story of his healing by Nicholas of Myra. Because of Michael IV's advancing epilepsy, John arranged the succession of Michael V, but upon his accession Michael replaced John as imperial favorite by his brother Constantine, who then exiled John. The accession of Constantine IX finally ruined him. He was sent to Lesbos and blinded, and he soon died. The chroniclers emphasize John's greed and harsh taxation while Psellos depicted him vividly (Jenkins, Studies, pt.IV [1954] 15); closely following the text, the illustrated Madrid Skylitzes (Grabar-Manoussac, Skylitzès, nos. 504–51) pays elaborate attention to John's domestic intrigues.

---

JOHN UGLJEŠA (Ουγκλεσις in the Greek sources), Serbian despotes of Serres (from before 1366), called autokrator in a Greek act of 1369; died Černomir on the Marica River 26 Sept. 1371. The brother of Vukašin, he began his career at the court of Stefan Uroš IV Dušan, whom he probably served as hippokomos or groom. After Dušan's death in 1355, Uglješa served his widow Helena in Serres and became de facto ruler of the southeastern region of Dušan's empire, including Christopolis, Philippi, Drama, and Zichna. Drama was probably the inheritance of his wife Helena, the daughter of Caesar Vojhna, who was governor of Drama. It is not clear if John Uglješa is to be identified with the grand voivode Ouglesis, who signed an act that is probably to be dated to 1358 (Koukoumen, App. IIC, p.231).

Mt. Athos was also within the territory controlled by Uglješa and he made lavish donations to several monasteries, esp. Hilandar, Koutloumousiou, and Vatopedi. In 1371 he reached a reconciliation with the patriarchate of Constantinople by agreeing to condemn the policy of Dušan, "the alleged autokrator of Serbia and "Romania," who had unjustly seized cities belonging to the jurisdiction of the Byz. state and patriarchate (MM 1:562.11–25). In Jan. 1371, Sabas, protos of Mt. Athos, granted to Uglješa a small monastery (monydrion) called Makrou (or Makre) for the retirement of the despotes, bestowing upon this monydrion the rank of a great monastery (Xén.oph., no.31). Uglješa did not have the opportunity, however, to retire to Athos since he and his brother were defeated by the Turks that same year at the battle of MARICA, and both fell on the battlefield.

The Greek epitaph of his sister Helena, the spouse of the powerful Serbian lord Nicholas Radonja, survives in the chapel of St. Nicholas on Mt. Menoikeion (S. Suboćić, S. Kisas, ZRVI 16 [1975] 161–81). Uglješa's wife Helena became the nun Jefimija, the first Serbian poetess.

JOHN VLADISLAV, ruler of Bulgaria (1015–18); died near Dyrrhachion Feb. 1018. Son of Aaron, one of the Komitopouloi, he survived the massacre of that branch of the family by Samuil of Bulgaria on the intervention of Samuel’s son Gabriel Radomir. After Samuel’s death, Gabriel Radomir ruled what remained of Bulgaria, until he was killed by John, perhaps at the suggestion of Basil II. A truce between Basil and John was soon broken. John procured the murder of John Vladimir, ruler of Duklja (Dokleja), Samuel’s son-in-law. In a vain effort to seize Dyrrhachion, John was killed. His wife Maria surrendered Ohrid, herself, her sons (Traianos, Radomir, and Klement), and six daughters to Basil; three other sons, Prousianos, Alosianos, and Aaron, yielded later.

C.M.B.

JONAH (Iovan), one of the 12 Minor Prophets. The Book of Jonah recounts his stay “for three days and three nights” in the belly of a great fish rather than his prophecy of days to come. Exegesis of the Book of Jonah was very popular in the 3rd–5th C., Jerome’s commentary forming the peak of it; much later Theophylaktos of Ohrid interpreted the book of Jonah (PG 126:905–68). The explanation went two ways: an allegorical-anthropological approach explained the narrative as indicating the material wickedness of mankind (Jonah on his boat is the soul imprisoned in the body), the Christological approach emphasized the similarity of Jonah’s fate and the story of Christ, Jonah being a prefiguration of Christ and of his descent to Hades. Different authors ascribed to Jonah different attitudes toward the Ninevites: in the sermon of Pseudo-Athanasiyas, Jonah is full of sympathy for the sinners of Nineveh, whereas Basil of Seleukeia makes him hate them and expect their chastisement.

Representation in Art. Artistic depictions of Jonah appear very early, as in the late 3rd-C. sculpture group in Cleveland (Age of Spirit, nos. 365–68). Representations of Jonah were esp. popular in the catacombs and on sarcophagi because of his role in the Commendatio animae. The theme remained well known through its repetition in Psalters, as an illustration to the Ode of Jonah. The soteriological content of the book and the typological parallel drawn by Jesus himself (Mt 12:40) ensured its continuing popularity in MSS of the 10th–14th C., including the Menologion of Basil II (W. Nyssen, Frühchristliches Byzanz [Trier 1978] 75–79, 160), MSS of Kosmas Indikopleustes (Kosm. Ind. 1:152, figs. 25–26, 2:222–25), and the homilies of Gregory of Nazianzos (Omont, Miniatures, pl. 20). Jonah also appears on the Bresca casket. Frequently Jonah is depicted among the prophets in monumental art, usually portrayed as bald, often with a short gray beard.

A.K., J.H.L., C.B.T.

JORDAN (Iordan), river in Palestine; more specifically, a locus sanctus on the river about 8 km north of the Dead Sea, where two biblical events were commemorated: the Baptism of Christ (see Epiphany) and the assumption of Elijah into heaven. Pilgrim veneration at the site included baptism and immersion: the Piacenza pilgrim observed this ritual on Epiphany. A pillar marked the spot, and a church founded by Emp. Anastasios I was nearby. John Phokas (ch. 22), who calls Jordan “the holiest among rivers” in honor of the mystery of Christ’s baptism, lists three monasteries in the area: those of Kalamon, of Chrysostom, and of John the Baptist, the last rebuilt by Manuel I. In contrast to Phokas, Constantine Manasses (ed. K. Horna, BJ 13 [1904] 333.288–93) had a negative attitude toward the Jordan, criticizing its muddy and foul-tasting water.

Representation in Art. Male personifications of the river occur frequently in images of the Baptism of Christ and in the Joshua Roll and some Octateuchs containing scenes of Israelites carrying the Ark of the Covenant across the Jordan; more rarely the personification of the
river appears in the context of Elijah’s ascension. Like antique river-gods he often carries an urn; sometimes he is labeled merely potamos (“river”). Jordan assumes a variety of forms: on a 6th-C. medallion at Dumbarton Oaks he appears as two figures—his twin sources, Ior and Dan, emerging from shells. He may be represented as a youth, as on the cathedral of Maximian, or, as at Daphni, as a mature man. In the marginal Psalters Jordan is either a squatting, fully clothed individual or a half-naked divinity seen from the rear. In monumental painting of the 13th–15th C., he is more active, sometimes straddling one or more dolphins.

JORDANES, Latin historian; died June/July 552?, according to Wagner (infra 29). Of partly Gothic origins, Jordanes was notary to Gunthigis-Baza, chieftain of the Goths. His later resignation from this position was probably connected with his “conversion,” an event of debated significance: a switch from Arian to Orthodox views, taking of monastic vows, or simply retirement have all been suggested.

Circa 551 Jordanes produced a three-part history. The Romana is composed of two sections: the De summa temporum (now lost), a universal chronicle extending to the reign of Augustus; and a Roman history from Romulus to 550/1. It is dedicated to a certain Vigilius, probably not the pope of that name. Of much greater significance is the Getica, a history of the Goths up to 551, composed at the behest of a certain Castalius. Written in faltering Latin, the Getica is abridged from the lost Gothic Histories of Cassiodorus and derived from many first- and second-hand sources, including Priskos of Panion and Ammius Marcellinus (B. Baldwin, RBPH 59 [1981] 141–46). It is a fascinating source for barbarian history and society, including a notable portrait of Attila; it also offers (e.g., ch.143) brief but vivid glimpses of Constantinople. Jordanes writes with a clear pro-Byz. bias: for him Constantinople is the urb, the East is nostrae partes (“our regions”), and Jus-

—B.B.

JOSEPH, son of Jacob; biblical patriarch. In the Hellenistic apocryphal Testaments of the Twelve Patriarchs, he became the type of the “good man” who both loves (and fears) God and loves his neighbor. Byz. literature presented Joseph primarily as a paragon of chastity, emphasizing his behavior toward the wife of Potiphar, whose advances he rejected; this topic is developed, among others, in a homily of Basil of Seleukeia (PG 85:112–25) and another ascribed to John Chrysostom (PG 56:587–90). A second theme connected with Joseph is the apocryphal confession of Joseph’s wife, Asenath, the daughter of a different Potiphar (P. Batiffol, Studia Patristica [Paris 1889–90] 39–86).

Representation in Art. Depictions of Joseph arose from Byz. interest in the long narrative of his fluctuating fortunes (Gen 37:2–50:26), rather than his status as a patriarch. This is reflected in the uneven distribution of the material—extensive in 5th- and 6th-C. Genesis MSS and on the cathedral of Maximian (S. Tsuji in Synthronum, 43–51), but sparse after Iconodasm, with the exception of some cycles (as in the Octateuchs) or scenes (e.g., the Khudov Psalter’s illustrations to Ps 104:17, 21, 23) based on early sources. There are also some puzzling analogies, such as the full-page miniature with a lengthy Joseph cycle in five registers in the Paris Gregory and the Joseph cycle in the narthex frescoes at Sopočani. Joseph was esp. popular in Byz. Egypt.

JOSEPH, husband of the Virgin Mary. In New Testament apocrypha, such as the Protoevangelion of James, Joseph plays a limited number of marginal roles. The church fathers mention him occasionally in the context of his marriage, which they praised. The story of Joseph the Carpenter is told in a Coptic devotional text of probably the end of the 4th C.; the original Greek version is lost (S. Morenz, Die Geschichte von Joseph dem Zimmermann [Berlin 1951]). A feast of Joseph was unknown in the Greek church, but he was commemorated on the Sunday after Christmas.

Representation in Art. Generally absent from early Christian art, Joseph assumed his peripheral, but thereafter abiding, place as spectator in images of the Nativity on 5th-C. ivories (Vollbch, Elfenbeinarbeiten, no.119); the cathedra of Maximian enlarges this role to include his first dream and the Flight into Egypt. Based presumably on the Protoevangelion, scenes such as Joseph’s flowering rod and trial by water appear in 10th-C. Cappadocia. Joseph is represented, unusually, with his sons and the tools of his trade in the illustrations of the homilies of James of Kokkinobaphos, which dwelt on Joseph’s reproaches to the Virgin. Consistent with a passion for narrative detail, events involving Joseph in Mary’s life down to the Annunciation were favored in Palaiologan painting. The fullest such cycles are in St. Clement, Ohrid, and in the Chora (J. Lafontaine-Dosogne in Underwood, Kariye Djami 4:184–94).

JOSEPH I, patriarch of Constantinople (28 Dec. 1266–9 Jan. 1275; 31 Dec. 1282–Mar. 1283); died Constantinople 23 Mar. 1283. Joseph served as anagnostes for over 30 years (1222–54) and was married for eight. In 1295/60 he became superior of the Lazaro monastery on Mt. Galesios. He succeeded Arsenios Autoreianos as patriarch of Constantinople, after the latter refused to retract his excommunication of Michael VIII Palaiologos for the blinding of John IV Laskaris. Joseph, who was Michael’s spiritual confessor, pardoned Michael in 1267, thus aggravating the Arsenite schism. He crowned Andronikos II as co-emperor in 1272 but would not agree to Michael’s plans for Union of the Churches at the Council of Lyons. In 1273 he swore an oath never to accept Union under the conditions imposed by Rome (V. Laurent, EO 26 [1927] 396–407), and early in 1274 he retired to the Peribleptos monastery in Constantinople. He formally resigned the next year. After Michael’s death and the deposition of the Unionist patriarch John XI Bekkos, Joseph returned briefly to the patriarchate but was soon forced to abdicate because of poor health. R. Macrides (Byz. Saint 79–81) rejects Laurent’s claim that Joseph was “canonized” by Gregory II; he was recognized as “confessor” but never received popular veneration.

JOSEPH II, patriarch of Constantinople (21 May 1416–10 June 1439); born Bulgaria? ca.1360?, died Florence 10 June 1439. Of Bulgarian background, Joseph was allegedly John Asen, an illegitimate son of John II Šisman (1371–93), last tsar of Bulgaria (V. Laurent, REB 13 [1955] 131–34); I. Dujčev (REB 19 [1961] 333–39) suggests, however, that his father may have been Ivan Alexander. Because he restored the monastery of Christ Philanthropos in Constantinople, Laurent also hypothesizes that Joseph’s mother was a Greek of the Philanthropenos family. Nothing certain is known of his biography until he was appointed metropolitan of Ephesus ca.1393. Patriarch under Manuel II Palaiologos and John VIII, he was a supporter of Union of the Churches. J. Nikolov (BBulg 4 [1973] 202–12) hypothesizes that Joseph attended the Council of Constance in 1416–17. Despite ill health, the long-bearded octogenarian was a major figure at the Council of Ferrara-Florence (V. Laurent, REB 20 [1962] 5–60); his realistic portrait, possibly by an Italian artist, is attached to a list of patriarchs in Paris, B.N. gr. 1783 (Spatharakis, Portrait, fig.177). With regard to the controversial filioque clause and the Procession of the Holy Spirit, Joseph took the position that the prepositions δια and ἐκ were equivalent, and therefore the teachings of both churches were correct. He
died of dropsy before the end of the council and was buried in Florence at the Church of S. Maria Novella.

—A.M.T., A.C.

JOSEPH RHAKENDYTE (Ῥακένδυτης, "wearer of rags," one of the terms for a monk), also known as Joseph the Philosopher, learned monk and physician; born Ithaca ca.1260? (PLP) or ca.1280? (Stiernon), died Thessalonike ca.1330. Of modest background, he was a monk in Thessalonike and on Athos before coming to Constantinople ca.1307. In 1320 Joseph was an emissary from Andronikos III to Andronikos II. He was four times nominated as patriarch, but always declined. He belonged to a group of literati that flourished in Constantinople under Andronikos II and included among his friends and correspondents Nikephoros Choumnos, Nikephoros Gregoras, and Theodore Metochites, who wrote a funerary enkomion of him. Joseph was a man of wide-ranging concerns, including philosophy, rhetoric, physics, mathematics, astronomy, and theology. Like many 14th-C. intellectuals he was interested in medicine; he was the teacher of John Aktouarios and healed Michael Gabras of an eye affliction. About 1324 he retired to a mountain near Thessalonike, where he spent his final years.

Joseph is best known for his Encyclopedia, a compendium of knowledge that included rhetoric, mathematics, music, and theology; only the section on rhetoric has been published. He also wrote hymns (G. Pentogalos, Hellenika 23 [1970] 114–18) and prayers.

ED. RhetGr, ed. Walz, 3:467–569.

—A.M.T.

JOSEPH THE HYMNOGRAPHER, saint; born Sicily (Palermo, according to E. Tomadakes) between 812 and 818, died Constantinople ca.886 at age 70; feastday 3 Apr. The dates ca.810–83 have also been suggested, but Stiernon (infra 248–53) questions the traditional chronology of Joseph’s life. Brought by his parents to the Peloponnese, Joseph fled to Thessalonike, became a monk, then moved to Constantinople. Captured by Cretan Arabs on his way from Constantinople to Rome, he managed to return from Crete to Constantinople. In the capital he founded the monastery of the apostle Bartholomew. As a supporter of Patr. Ignatios, he was exiled by Photios to the Crimea; after his return, he was appointed patriarchal sketophylax.

Joseph belonged to the poetic school of Stouarios. He contributed much to the transformation of the kanon from loosely linked paraphrases of Old Testament canticles into a unity wherein a single thought is skillfully worked out and varied in all the odes. Joseph was among the first to reduce the number of stanzas in the kontakion compatible with acrostic poetry. Some of his hymns were dedicated to saints of his own time, such as his spiritual father Gregory of Dekapolis, Peter of Athos (D. Papachryssanthou, AB 88 [1970] 27–41), and Theodora of Thessalonike (Des Klerikers Gregorios Bericht über Leben, Wunderthaten and Translation der hl. Theodora von Thessalonich, ed. E. Kurtz [St. Petersburg 1902] 82–86). The authorship of the latter raises problems since Theodora died in 892, that is, after the traditional date of Joseph’s death. Tomadakes (infra 273–85) established a list of approximately 400 works by Joseph; their attribution, however, is not always certain. Vitae of Joseph were written by his contemporary, Theophanes (whose identification with Theophanes of Sicily has been disproved), and later by the deacon John; John’s attitude is more pro-Photian than that of Theophanes (G. da Costa-Louillet, Byzantion 25–27 [1957] 822). A puzzle with regard to Joseph’s biography is the silence about him in the Life of Gregory of Dekapolis, since Joseph’s hagiographers present him as Gregory’s closest friend.

Representation in Art. As a melode, Joseph appears at Lagoudera, a standing monk carrying a roll. In the parekklesion of the church of the Chora Monastery, he occupies a pendentive and writes at a desk like an Evangelist; his scroll bears the words of his kanon for the Akathistos Hymn.

—A.K., D.C., N.P.S.
JOSEPH THE PHILOSOPHER. See Joseph Rhaklndytes.

JOSEPHUS FLAVIUS ('Iωσητος), Jewish priest, historian, and apologist; fl. ca.38-after 100. His works written in Greek (Jewish War and esp. Jewish Antiquities) were among the most important sources for the Byz. interested in the ancient history of Palestine. They were designated authoritative by Eusebios of Caesarea and broadly used by chroniclers: for John Chrysostom, Josephus was, after Plato, his favorite pagan author (S. Krawczynski, U. Riedinger, BZ 57 [1964] 8); in the section of Constantine VII's Excerpta titled On Virtues and Vices Josephus is quoted 119 times, while the Souda preserves over 200 citations. Greek MSS are known from the 10th C. onward, but Photios had already read several of Josephus's works in the 9th C. Probably in the 9th or 10th C. an epitome was compiled, later used by Zonaras. Josephus was considered a stylistic model by Photios, Gregory Pardos, and Theodore Metochites, and was imitated by some Byz. authors (e.g., Niketas Choniates). Several works were falsely ascribed to Josephus by church fathers and Photios, among them the so-called 4th book of the Maccabees and On the Essence of the Whole (Photios, Bibl., cod.48).

Josephus was early translated into Latin; a translation of the War is ascribed to Rufinus, a translation of Antiquitates was arranged by Cassiodorus; an epitome of the War, the so-called Hecesippus (4th C.), has been wrongly attributed to Ambrose. Latin versions of Josephus have survived inter alia in a papyrus of the 6th–7th C. and a 9th-C. parchment MS. A recension of Josephus, the so-called Sepher Yosippon, was produced in Hebrew. Syriac, Slavic, Armenian, Georgian, and Arabic translations are also known.

Representation in Art. Joshua's encounter with an archangel (interpreted as the archistrategos Michael), his battles with the men of Ai, and his arrest of the sun's course at Jericho were all depicted in the Octateuch, while the first of these events is represented on a fresco surviving from the Theotokos church at Hosios Loukas. While the angel here is preserved only in fragments, the fully armed figure of Joshua parallels the emphasis on his generalship in the Joshua Roll and on ivories of the 10th C. An equestrian statue in the Forum Tauri in Constantinople was held by some to represent Joshua's miracle at Jericho (Nik.Chon. 649.58–64).

Lit. L. Rost, W. Werbeck in Die Religion in Geschichte und Gegenwart, vol. 3 (Tübingen 1959) 873f. —J.I. A.C.

JOSHUA ROLL (Vat. Palat. gr. 431), a unique 10th-C. example of a parchment roll (10.64 m long) with continuous horizontal illustration of episodes in the first 10 chapters of the Book of Joshua. The text, written along the bottom and often omitting words or phrases, is subservient to the miniatures. These are painted in a wash technique, unusual in Byz., that reserves much unpainted parchment. Against this neutral ground, landscape, personifications, and above all the exploits of Joshua, the archetypal Old Testament general, are depicted in pastel-like color against trees and rocks painted in a soft-edged, almost Pompeian manner. This style, like the Palestinian setting of the iconography, could fit the manner of painting in the reign of either Constantine VII Porphyrogennetos or Nikephoros II Phokas: the exploits of Joshua could allude to the exploits of Nikephoros II or John I Tzimiskes. Scenes of the Hebrew general's triumphs, including acts of proskynesis and calcatio required of the enemies of Israel, depict ceremonies imposed on Arab leaders in mid-10th-C. Constantinople (McCormick, Eternal Victory 160–62). C. Mango (ActaNorv 4 [1969] 126) and others suggest that the Joshua Roll is a copy of an original celebrating the victories of Herakleios. Previously believed to be a conscious imitation of a monument like the Column of Trajan, it has been interpreted by Mazal
JOSHUA THE STYLITE, an Edessan of unknown date who was a priest and a monk at the monastery of Zuqin near Amida. He is known only through a scribal note of uncertain date in the 9th-C. MS Vat. Syr. 162, which contains the unique copy of the Chronicle of pseudo-Dionysios of Tell Mahre. It has been suggested that Joshua is the author of a Syriac chronicle included en bloc in the Chronicle of pseudo-Dionysios of Tell Mahre that covers the years 495–506, with some earlier events being mentioned, such as the revolt of Illlos and Leontios in 484. The chronicler wrote as an eyewitness, probably before 518. The independent Chronicle of the Persian War, as some scholars call it, carries its own title, The History of the Time of Troubles in Edessa, Amida, and all Mesopotamia. The subject matter is largely an account of battles between the Roman and Persian empires under Anastasios I and Kaväd, and the work is an indispensable source for the history of Persia at this period. It is still unresolved whether Joshua was the author of the independent 6th-C. chronicle, or the author of the 8th-C. Chronicle of pseudo-Dionysios, or the scribe who copied the 9th-C. MS. It has been customary to adopt the first option and to speak of the Chronicle of Joshua the Stylite.

Jovian (Ioúbiavós), more fully Flavius Jovianus, Augustus (from 27 June 363); born near Singidunum 331, died Dadastana, Bithynia, 17 Feb. 364. Possibly of barbarian origin, he was commander of the protectores et domestici under Emp. Julian; he was well known among the soldiers as son of the comes domesticorum and son-in-law of the magister militum. After Julian died on his Persian campaign in 363 and the praetorian prefect Salutius refused the purple, Jovian was chosen emperor—according to Amnianus Marcellinus at the initiative of a small group of common soldiers. Although Jovian was able to repel Persian attacks, the situation of the army, suffering from hunger in the Tigris region, and the threat of political rivalry in Constantinople caused Jovian to sign a treaty with the Persians whereby

(infra) as an innovation intended to express in a classical manner the military ethos of the Macedonian era. On the verso of the MS are 13th-C. excerpts from church fathers and a later set of building accounts. The roll was in Padua by the early 15th C. and is today arbitrarily cut into 15 sheets.

A.C.
he surrendered Mesopotamia and the strategic cities of Nisibis and Singara. He died unexpectedly on his way back to Constantinople.

Jovian differed from the pagan Julian in both appearance and behavior: tall with blue eyes, he was a gourmand and enjoyed wine and women. His education was modest, although he tried to play the role of patron. He was a Christian but tolerant of pagan beliefs. The assertion of Christian writers that he abolished the anti-Christian legislation of Julian seems to be false. His peace treaty with the Persians was regarded as ignominious by pagan authors (e.g., Ammianus Marcellinus) and criticized by Christians in Antioch; more distant writers, however, from Gregory of Nazianzos to Augustine, considered it necessary or even a gift of Providence.

-J.E.G.

JUDAISM, the religion of the Jews, strictly monotheistic and primarily concerned with social justice, ethics, and family purity. Its liturgy at home and in the synagogue, based upon the Hebrew Bible and Jewish literature, taught a political redemption by a messiah. Dietary laws required a painless slaughtering of domesticated animals, health inspection, and complete removal of blood; use of unleavened bread at Passover; separation of meat and milk; no pork; and close supervision of wine, cheese, and clothing. Males were circumcised eight days after birth. Biblical tradition required ritual ablutions and postmenstrual bath. The Jewish calendar (soli-lunar) celebrates every Sabbath and New Moon with liturgical and Pentecostal readings. Annual holidays include New Year, Day of Atonement, Tabernacles, Passover, Pentecost, 9th of Ab (to mourn the destruction of the Temple), and Feasts of Maccabees and Esther. Byz. deplored the observance and practices of Judaism, yet it was necessary to practicing Jews to demonstrate that God rejected and abandoned them, and because their voluntary conversion was both a proof of the truth of Christianity and a prerequisite for Christ's return. The Bible was read in Hebrew and Aramaic until Justinian I responded to Jewish reformers (nov. 146) by mandating use of the Septuagint and vernacular translations. He also forbade deuterosis (oral commentary) and denial of Christian doctrines. Palestinian Jews responded by developing ppyut that poeticized oral laws and by muting potentially political expressions in the liturgy. Orthodox and heterodox Christians occasionally relied on the Jewish calendar to date Easter: Justinian legislated that Passover follow Easter (Prokopios, SH 28.16–18). Biblical and postbiblical Judaism influenced the symbolism (Temple as prefiguration of the Church), theology, ecclesiastical calendar, liturgy, and practice of Byz. Christianity through borrowings and converts. The tradition of magic, apocalyptic, and mysticism in Judaism paralleled that of contemporary Christian society.

-J.E.G.

JUDAS ISCARIOT (Ἰούδας ὁ Ἰσκαρίωτης), the apostle who betrayed Christ. Byz. tradition dealt with him primarily in commentaries on Acts. He came to represent the epitome of treachery and of monetary greed; his suicide by hanging, accompanied by bloating limbs and the gushing out of his bowels, became the typical death of the sinner. Orthodox authors compared the end of Arius (although he did not commit suicide) with Judas's foul death. Sermons devoted to Judas are rare (e.g., a short homily by pseudo-John Chrysostom, PG 61:687–90); ROMANOS THE MELODE, however, wrote an emotional poem permeated with horror at the false disciple's impious action. Some clauses in charters appoint "the fate of Judas" as the punishment for breach of contract.

Representation in Art. Judas figures throughout Byz. art in the Lord's Supper, the Betrayal of Christ, and scenes of his attempts to return the silver and of his suicide (Mt 27:3–5). The Betrayal appears already in the very earliest Passion cycles on 4th-C. Roman sarcophagi. Scenes of his remorse, first depicted in the 5th C., become frequent in the 6th; also in the 6th C., the standard composition of the Lord's Supper first appears. In none of these is Judas vilified and the same temperament extends into later periods, when Judas is portrayed as slender and young. In the Last Supper, he is distinguished—if at all—only by his
JUDEA, WILDERNESS OF, term for the rocky and sparsely inhabited region south of Jerusalem and Jericho and west of the Dead Sea as far as Arad and Elusa, which became the principal area of monastic settlement in late antique Palestine. The first monastic founder in the area was St. Chariton in the 4th C.; other lavras were founded in the 5th C. by monks such as St. Euthymios the Great, from whose settlement Christianity spread among the Arab tribes of the Parembole (the region of Palaestina I, northwest of the Dead Sea); St. Sabas, whose monastery housed a famous library and scriptorium; Sts. Gerasimos, Choziba, Kalamon, and others. These monastic houses were the centers of the Greek and later Arabic literary and spiritual life of the Chalcedonian patriarchate of Jerusalem, and several benefited from imperial patronage. In the 5th–7th C. these monasteries and their monks were visited by writers, such as Cyril of Scythopolis, John Moschos, and others. They maintained their integrity in the face of Arab raids while under Roman rule, but after the Arab conquest of Palestine some were destroyed, while others changed the language of their culture from Greek to Arabic.

JUDGE. In the Kletorologion of Philothoeus the generic term kritai designated several high-ranking officials who enjoyed judicial as well as administrative and financial rights: the eparch of the city, quaestor, and epiton deeseon, and their staffs. Some other functionaries had their own law courts and presided over litigation; since the archontes, as Balsamon puts it, were often incompetent in legislation, special assessors (symponoi), also called kritai, were attached to them. In 539 Justinian I tried to create a body of professional judges, diatetai of the agora (nov. 82.1). This institution seems to have fallen into desuetude; in the Ecloga the term krites appears only once, in a biblical quotation (164.74). The thematic judges of the 10th–11th C. were administrators of provinces, whereas politikoi and litoi kritai functioned as assessors. In the 10th-C. Taktikon of Escurial, however, the college of professional judges, the kritai tou Hippodromou and kritai of the velum, reappeared, and soon thereafter Constantine IX Monomachos reintroduced legal education. These judges probably had their tribunal at the Hippodrome. The judge of the velum remained active through the later period, when new categories of professional judges, such as kritai katholikoi and kritai tou phossatou, also appeared.

JUDICLUM QUINQUEVIRALE, a tribunal in the late Roman Empire consisting of the urban prefect and five senators chosen by lot; it was convened under special circumstances to determine whether senators were guilty of capital offenses. The judicium quinquevirale was still a living institution in Italy in 506, but did not exist in Constantinople, thus reflecting the greater social status of senators in the West.

JUGUM (ξύρων, lit. "yoke"), initially a unit for measuring land, supposedly according to the plowing capacity of a yoke of oxen (about 12,616 sq. m of first quality arable, about 15,104 sq. m of second quality). In the context of Diocletian’s reform of the fiscal system, the jugum was a unit
of account used for taxing land in the system of capitatio. As a measure of tax liability for equitably distributing the annona obligations among taxpayers, jugum could correspond to surfaces varying according to the land's quality or to the kind of cultivation: for example, one fiscal jugum could correspond to 6,300 sq. m of vines, about 25,000 sq. m of first quality arable, or 50,000 sq. m of second quality arable, etc. (See also Zeugariion.)

LIT. Schilbach, Metrologie 75, 78f. Goffart, Capit 32–35.

N.O.

JULIAN (Ἰουλιανός), sometimes called "the Apostate," emperor (from 361); born Constantinople May/June 332, died on campaign on the Persian frontier, 26 June 363. He was the son of Julius Constantius (half-brother of Constantine I) and the half-brother of Gallus. In 337 his father and many relatives were murdered, probably at the order of Constantius II. Julian was sent to Nikomedea and then to Cappadocia, where he grew up, entered minor Christian orders, and perhaps finally embraced paganism. As a young man he studied at Nikomedea and Athens. In 355 Julian was summoned to court and made caesar; he was put in charge of the western provinces that were threatened by revolt and pressure from the Alemanni and Franks, against whom he was remarkably successful.

When Constantius ordered Julian to dispatch his troops to the eastern frontier in 361, they revolted and proclaimed Julian as emperor. Negotiations failed but Julian became sole emperor when Constantius died on 3 Nov. 361. Julian then set about to restore traditional Roman society and undo the innovations he associated with the house of Constantine. The most famous aspect of this policy was his attempted revival of paganism. Julian's paganism was practical (it was to imitate the organization and social policies of contemporary Christianity), but also influenced by magic and charlatans like Maximos of Ephesus. Julian's law excluding Christians from the teaching profession was condemned even by pagans. Julian's Persian expedition was initially successful, but he was unexpectedly struck and killed by a spear from an unknown assailant and his policies died with him.

To contemporary and later Christian authors Julian was the personification of evil. Gregory of Nazianzos, Cyril of Alexandria, and Ephrem the Syrian all wrote against him. Sozomen records a thoroughly legendary account of his life, and Malalas, the Chronicon Paschale, and the Life of St. Basil (falsely attributed to Amphilochios of Ikion) build upon the story. Attention to the apostate remained keen in the 9th C., when an extended sequence of miniatures in the Paris Gregory (fols. 374v, 409v) culminates in the legend (based on the Chronicon Paschale) that Julian was slain by St. Merkourios.

Two statues in Paris and a head on Thasos, as well as ivory and bone statuettes and an engraved gem in Leningrad (H. von Heintze in Studien deschmann 2:31–41), have been identified as likenesses of Julian. Contemporary sources describe Julian as short and heavy, with a thick neck, animated eyes, and a philosopher's beard, features that are confirmed by sculpture and numismatic portraits (Volbach, Early Christian Art, pls. 48f, 52). He is usually shown wearing a priestly diadem and a philosopher's mantle. Julian was the author of voluminous correspondence, and tracts such as the Missopogon, Against the Galileans, and the satirical dialogue The Caesars.

JULIAN OF ASKALON, 6th-C. architect known only as the author of the treatise On the Laws or Customs in Palestine. It remains debatable whether Julian's treatise was an unofficial work or a collection of police prescriptions to regulate building activity. Julian defines the location of, and distances between, industrial buildings (bakeries, ceramic kilns, glass shops, etc.), bath houses, private buildings, stables, inns, etc.; regulates gutters and sewers and the planting of trees and vineyards. The main purpose of the tract was to preserve beauty and light in the city. The text is transmitted
in a Geneva MS, Bibliothèque publique et universitaire 23, in the appendix to the Book of the Eparch. A similar MS evidently served Harmeno-
poulos, because the chapters from Julian’s work incorporated into his Hexabiblos are inscribed—
wrongly—with the word eparchikon. Harmeno-
poulos incorporated all of Julian’s texts contained in Geneva 23, except for the prooimion (Harm. 2.4.13–25, 25–44, 47–51, 75–80, 82, 83, 85–88; all other chapters of title 2.4 are, contrary to prevailing opinion, excerpted from other sources). Individual chapters of Julian’s treatise show similarities with the pre-Justianianic Syro-Roman law-
book, which did not, however, serve as a direct model.

—M.Th.F.

JULIAN THE EGYPTIAN, 6th-C. poet. De-
scribed in the lemmata of his epigrams as apo hypaton and apo hyparchon (APO EPARCHON), he has been identified by Av. and Al. Cameron (JHS 86 [1966] 12–14) with the praetorian prefect of 530–
31. Julian may be the consul to whom Priscian dedicated his Institutiones grammaticae. The Greek Anthology preserves about 80 of his epigrams, thanks to their inclusion in the Cycle of Agathias; he may also have published a collection himself.
Most of his poems are anathematic, sepulchral, and ekphrastic, only rarely erotic. They are con-
ventional in subject and style but sometimes give tantalizing glimpses into contemporary events, notably the Nika Revolt of 532 and the attempted coup of Hypatios with whom Julian was somehow involved.

ion 47 (1977) 42–64.

—B.B.

JULIANUS “ARGENTARIUS,” banker in Ra-
venna and founder of the Church of S. Vitale; f. second quarter of 6th C. He may have come from the East: from the form of a monogram in the gallery of this church, Deichmann (infra) deduced that Julianus was Greek or Greek-speaking. The banker’s sponsorship is noted in several Latin inscriptions and Greek monograms in the church; Ecclesius, bishop of Ravenna (522–32), is named in these inscriptions as having ordered Julianus to construct and decorate S. Vitale. According to Agnellus of Ravenna (chs. 57–59), Julianus began this work after Ecclesius returned from an embassy to Constantinople (together with Pope John I) in 526. The same source reports that Julianus spent 26,000 solidi on the project, but also, improbably, relates that he founded the churches of S. Maria Maggiore and S. Stefano in Ravenna. Julianus was the patron of S. Apollinare in Classe, where an inscription records his spon-
oship, and the now-destroyed S. Africisco in Ravenna that he cosponsored with a certain Ba-
cauda, sometimes said to be his brother-in-law. The absence of any dignities attached to the bank-
er’s name in the inscription suggests that he acted as a private individual, not as an official of the church or state. For this reason he cannot be identified with the figure in court costume in the
bema mosaic of S. Vitale, standing between Justinian I and Archbp. Maximian, who dedicated the church in 546.

-A.C., A.K.

JULIUS NEPOS, the last Western emperor recognized by Constantinople (19 or 24 June 474–28 Aug. 475); died near Salona 9 May 480. Julius was the nephew of Marcellinus, the nearly independent ruler of Dalmatia. He was on good terms with Leo I and married a relative of the empress Verina. Julius apparently inherited his uncle’s power in 468 and was given the title of magister militum of Dalmatia. In 473/4 Leo I (or those acting for the minor Leo II) sent him to Ravenna to depose the usurper Glycerius, who had succeeded Anthemios. Glycerius was arrested near Rome or Ravenna. Overthrown by the magister militum Orestes, Julius fled to Dalmatia. Orestes then placed his young son Romulus Augustulus on the throne in Ravenna. Romulus was never recognized by the Eastern court, and Julius was therefore still the legitimate Western emperor. In 477 he tried to persuade Zeno to help him regain the throne, but the emperor was content with the rule of Odoacer in Italy and did not go beyond a symbolic gesture, being afraid of Julius’s connections with Verina and Basiliskos. There is a vague statement by Kandidos suggesting that after 476 Julius was accepted in Gaul as a legitimate ruler; at any rate he retained control of Dalmatia until his murder, which was probably arranged by Glycerius.

-T.E.G.

JURA IN RE ALIENA, concept of Roman law denoting limited rights of ownership. Roman law developed a system of these jura in re that encompassed servitudes (servitus), usufruct, superficies, emphyteusis, and several forms of limited dominium such as a husband’s right to dotal land, conditional rights of owners (as in the case of heirs appointed under certain conditions), a right to an object of litigation, a right of the pledgee (if the debt was not paid), etc. The jura in re were based on contract or (infrequently) on an administrative act.

In post-classical law, since the notion of ownership became confused, the concept of jura in re was lost (Kaser, Privatrecht 2, par.238 II), but the reality of a lesser degree of ownership evolved. Gorecki (infra) considers as jura in re five types of land (mostly abandoned) on which neighbors, the village community, or the state established temporary rights. Byz. documents mention the rights of neighbors to enter adjoining property to eat—but not remove—grapes and other fruit, to graze their livestock, to collect firewood, to fish, etc. Unlike Roman jura in re, these unsystematized Byz. rights were based not on contract but on custom—ethos or synethenia (A. Kazhdan, JÖB 39 [1989] 15-17).

-JURIJ DOLGORUKIJ, prince of Suzdal; son of Vladimir Monomach; born ca.1090, died Kiev 15 May 1157. Dolgorukij, or Long-Arm, is a sobriquet used only since the 16th C. Jurij (George) laid the foundations of the new principality between the Oka and Volga rivers. Byz., the princes of Galitza, and the Cumans supported his claim to the throne of Kiev. In a long struggle against his nephew, Izjaslav of Kiev, who was aided by Hungary, Jurij managed to reign in Kiev three times: 28 Aug. 1149–early summer 1150, Sept. 1150–March 1151, and from 20 March 1155. His second wife, whom he married in the 1150s, was possibly a Byz. Jurij rejected Metr. Klim Smoljatić, who backed his rival Izjaslav. When Klim was elected, the rights of the patriarch of Constantinople and endemousa synodos were ignored, and thus Jurij sought a new metropolitan in the Byz. capital. Constantin, an erudite theologian, was consecrated in fall 1155, arrived in Kiev in summer 1156, and, with Jurij’s support, started to purge the clergy. The church of Rus’ was effectively split until 1159 since some bishops did not recognize Constantine’s jurisdiction.
JURISTIC PERSONS, a conventional legal term, not found in Roman law, that applied the term persona (or caput) only to human beings. Nevertheless, both Roman and Byz. law had to deal with corporate bodies (microstructures) endowed with rights and liabilities: village communities, municiapia, and guilds. There are documents showing that the village community owned land and acted collectively in court; similar evidence concerning municiapia and guilds is vague and questionable. Churches, monasteries, and charitable institutions also acted as juristic persons: they owned properties, could inherit movable and immovable property, sue, and be summoned to trial. More complex is the question of whether the emperor’s patrimonium was considered a juristic person distinct from the state: the Byz. recognized a distinction between state (demosios) property and the emperor’s (basilikos) property, treasury, etc., but it is unclear whether this difference in terms had any significance in everyday practice.

JUSTIN I (Ἰουστῖνος), emperor (from 9 July 518); born Bederiana (province of Dardania) ca.450 or 452, died Constantinople 1 Aug. 527. The son of a poor peasant, Justin migrated to Constantinople ca.470, joined the army, and made a military career; he participated in wars against the Isaurians and Persians and helped to suppress the revolt of Vitalian. After Anastasios I died, Justin was proclaimed emperor by the army and factions; Prokopios suggests that Justin’s election was a result of his crafty use of money given to him to bribe soldiers to support another candidate, Theokritos. After his accession Justin executed a group of influential aristocrats, including Vitalian and Theokritos, deposed others, and brought back from exile those banished by Anastasios. Justin stopped Anastasios’s imbalanced religious policy, accepted the Chalcedonian course, and put an end to the Akkadian schism. Justin made an alliance with the papacy—Pope John I visited Constantinople—and gained authority in the West. Relations with the Ostrogoths became strained in the last years of Theodoric, however, and persecution of the Arians reached its peak in Byz. Justin enjoyed peaceful relations with the Persia of Kavad I but endeavored to surround Persia with Byz. allies such as Lazica, the Huns, the Arabs, and Ethiopia. In 526 he waged an unsuccessful war against Persia.

Prokopios presents Justin as dull, boorish, and illiterate (he allegedly used a stencil to sign documents); it is generally thought that Justin’s nephew Justinian (I) was the actual master of the empire. Justin’s wife was Lupicina Euphemia. The painter Marinos of Apameia depicted the story of Justin’s arrival in Constantinople on the walls of a public bath.

JUSTIN II, emperor (from 15 Nov. 565); nephew of Justinian I; died Constantinople 4/5 Oct. 578. As a young man, Justin became kouropalates; his marriage to Sophia, Theodora’s niece, strengthened his position. Justin’s elevation (described in detail by Corippus) was achieved by a narrow group of functionaries within the palace. After the election he probably authorized the execution of his rival Justin, son of Germanos. Justin’s international policy was unsuccessful: he attempted to surround Persia with his allies (Turks, Ethiopians), refused to pay the stipulated tribute (H. Tertulianus, BZ 76 [1983] 292–301), and waged a war against Chosroes II in 572 that led to territorial losses. In the West the victory of the Avars and Lombards over the Gepids opened the Lombard way to Italy in 568; the Avars under Baian invaded the territory south of the Danube; in Spain the Visigoths seized some cities. Domestically, Justin tried to emulate Justinian, but his legislation was on a small scale; his most important law was the reinstatement of divorce by consent. His artistic patronage suggests the coalescence of Christian ideology and the traditional imperial cult, a synthesis expressed in the much-restored silver cross that he sent to Rome, bearing portraits of the augusti flanking the Lamb (Rice, Art of Byz.,

LIT. A. Vasiliou, Justin the First (Cambridge, Mass., 1950).

JUSTINIAN (*Iouostuinianós*), general; son of Germanos and Passara; born Constantinople after 525, died Constantinople 582. Justinian fought the Slavs in Illyricum in 552. In 572, he supported an Armenian rebellion against Persia. Three years later, as supreme commander of the army against the Persians, he won a great victory over Chosroes I at Melitenes; he seized enormous booty but was unable to retain Armenia. Apparently Justinian hoped to succeed Justin II, but was frustrated by Tiberios (I). Justinian participated in the intrigues of Sophia against Tiberious late in the reign of Justin II (578), but failed and, after contritely giving Tiberios 1,500 pounds of gold, made peace with him. Between 579 and 581 another conspiracy of Justinian was discovered, in which Sophia hoped to raise him to the throne. Germanos, who married Tiberios’s daughter Charito, was raised to caesar by Tiberios, and may have been Justinian’s son. Justinian was less successful at court intrigue than warfare in the field. He was a competent military commander, but his ambitions were a destabilizing element in the reigns of Tiberios and Maurice.

JUSTINIAN I, emperor (from 1 Aug. 527); given name Flavius Peter Sabbatios; born Bederiana (province of Dardania) ca.482, died 14 Nov. 565 (*PLRE* 2:648). The nephew of Justin I, Justinian made a brilliant career under his uncle, who appointed him co-emperor on 1 Apr. 527. Prokopios of Caesarea describes Justinian as an individual of medium height, with a round face ruddy even after two days of fasting (*SH* 8.12), an approachable and gentle man who never showed his anger and who, in a quiet voice, would order the death of thousands of innocent men (*SH* 13.1–3). Justinian was simple in his tastes, indifferent to splendor, able to work day and night, and crafty in displaying sympathy and even tears.

A man of low origin, Justinian came into conflict with the aristocracy. He was surrounded by energetic, unscrupulous, but loyal people who did not belong to the upper crust of society—his wife Theodora, his nephew Germanos, the generals Belisarios and Narses, and the administrators John of Cappadocia and Tribonian. The aim of his policy was to create a strong empire, based on a unified administrative system and a single creed, encompassing the whole Mediterranean and ostensibly brilliant. To this end he promulgated the *Corpus Juris Civilis*. To increase the state’s income, he often guided reform of the tax system: he developed the emphyteusis, tried to eliminate the difference between *adscripticii* and slaves, and developed land ownership of the fisc. He also subsidized the development of trade and attempted to find new trade routes circumventing Persia. Among secrets acquired by the Byz. under Justinian was that of silk production.

Justinian was personally involved in theological disputes; he sponsored the fifth ecumenical council and pressured Pope Vigilius. Proclaiming the principle that the emperor’s will is law, Justinian suppressed political and ideological resistance, quashing the movement of the Samaritans and the Nika Revolt.

He built or reconstructed more than 30 churches in Constantinople alone (G. Downey, *ArtB* 32 [1950] 262–66) including that of the Virgin of Pege, at the site of a spring whose waters he believed had cured him of a kidney ailment, and above all Hagia Sophia, the altar cloth of which, according to Paul Silentiarios, both images of hospitals and other foundations of Justinian. Legends concerning his role in the construction of the Great Church, including the revelation of its plan to him by an angel, are collected in the *Patria of Constantinople*. Justinian’s equestrian statue stood in the Augustaion; extant contemporary portraits of the beardless emperor are preserved in S. Vitale and S. Apollinare in Classe in Ravenna. A 9th- or 10th-C. mosaic in Hagia Sophia shows him bearded, presenting his foundation to the Virgin.
Justinian's international policy was intended to restore authority over the western part of the Roman Empire: North Africa was occupied in 533–34, Italy only after a long and costly war in 535–56; in Spain his army was able to occupy only some coastal areas. The situation in the East was more dangerous, and Chosroes I managed to seize several regions; tactics on the Danube were defensive and the empire ensured peace by paying tribute and stationing troops on the frontiers to repel invading bands.

Justinian's evaluation has been contradictory since Prokopios, who sometimes debases Justinian and at other times praises him highly. The problem is whether Justinian attempted to retain obsolete institutions that wasted the resources of his country or established enduring values that laid the foundation for the long existence of a mighty empire. (See genealogical table.)

JUSTINIAN II, emperor (685–95 and 705–11); born Constantinople ca.668, died Damatrys 7 Nov. 711 (Grierson, “Tombs and Obits” 51). He was son of Constantine V and Anastasia; an improbable tradition places his birth in Cyprus (De adm. imp. 47). He had a daughter by his first wife Eudokia. Justinian became emperor on Constantine's death, but may have been crowned co-emperor as early 681/2. He soon sent Leontios against the Arabs in Armenia and encouraged the Mardaites to raid Lebanon, forcing 'Abd al-Malik to make peace in 688; in 693, however, the Byz. had to evacuate Armenia after being defeated in Asia Minor as a result of the desertion of the Slavic chief, neboulos, and his troops. After campaigning in Sklavinia in 688 he formed the kleisoura of the Strymon and probably the Hellas theme and resettled captives in the Op-sikon. A fresco in the Church of St. Demetrios in Thessalonike may commemorate his arrival (acc. to A.A. Vasiliev, OrChP 13 [1947] 355–68, but denied by J. Breckenridge, BZ 48 [1955] 116–22). His resettlement of Kyzikos with Cypriots in 690/1 was part of grander colonization schemes (Charanis, Demography, pt. III [1961], 143f).

Ardently Orthodox, Justinian convoked a synod in 686/7 that confirmed the rejection of monothelitism. He also persecuted the Paulicians, tried to subordinate Armenia to Constantinople's jurisdiction in 689/90, collaborated with Patr. Paul III (688–94) to introduce reforms at the Council in Trullo, and tried to arrest Pope Sergius I for rejecting the Trullan acts. Justinian introduced the first images of Christ on the coinage and moved the emperor's image to the reverse (J.D. Breckenridge, Numismatic Iconography of Justinian II [New York 1959]). His building projects included additions, such as the Triklinos, to the Great Palace. Heavy taxation and excesses by the eunuch Stephen the Persian prompted Leontios to dethrone and mutilate Justinian in 695; thereafter he was nicknamed rhinotmetos (“cut-nose”) and reportedly wore a gold nose. Exiled to Cherson, he sought help from the Khazar khagan, whose sister married him in 703 and took the name Theodora.
Justinian regained the throne with help from Tiberios in 705, and crowned Theodora (the first foreign-born Byz. empress) and their infant son Constantine I (708–15) at Nikomedes and supported him against a revolt in Ravenna by the local archbishop and nobility. In 711 Justinian met Pope John VII (J.D. Breckenridge, BZ 65 [1972] 364–74). In 711 Justinian met Pope Constantine I (708–15) at Nikomedes and supported him against a revolt in Ravenna by the local archbishop and nobility. In 711 he launched an expedition against Cherson, perhaps to punish the city for ill-treating him in exile but more likely to halt Khazar advances in the Crimea. The fleet revolted and proclaimed as emperor Philippikos, who forced Justinian to flee Constantinople for Asia Minor, where he was killed by Elías. His body was thrown into the sea, but his head was exhibited in Rome and Ravenna.

JUSTINIANA PRIMA (Ἰωστιωνωνὴ Πρίμα), city in the province of Dardania in Illyricum, founded by Justinian I near his birthplace of Tauresium. Although its location has been much discussed, it is now usually, identified as the site of Carin Grad, 45 km south of Niš. The city was deliberately chosen to become a great urban center; although it was off the major roads, its proximity to quarries facilitated large-scale construction. According to Prokopios (Buildings 4.1.17–27), Justiniana had an aqueduct, churches, great stoa, beautiful fountains, streets, baths, marketplaces, and shops. Justinian planned to transfer the seat of the praetorian prefect of Illyricum to his new city and promoted it to the ecclesiastical capital of western Illyricum. In 535 he made the archbishop of the city autocephalous, but in 545 he yielded to the protests of Pope Agapetus and accepted papal jurisdiction over his new foundation (B. Granić, Byzantium 2 [1925–26] 123–40). Justiniana was captured by the Avars and Slavs, who invaded the area in the early 7th C. The archbishopric of Justiniana is unknown after 602; in the 12th C. the bishops of Velbuđo and then the archbishops of Ohrid assumed the title of archbishop of Justiniana Prima (G. Prinzing, BBulg 5 [1978] 269–87).

The ruins at Carin Grad extend over several acres of land, including an acropolis and a lower town. The polygonal acropolis contained the cathedral, an adjoining baptistery, and perhaps the bishop's palace. On the slope below, the unfortified town had a colonnaded main street, a circular piazza, bathhouses, and more churches. Most of the construction dates from the reign of Justinian, the acropolis being built ca.530, the lower town somewhat later. Despite the city's grandiose plan, column capitals from the site are crudely carved and in a style that was out of date by the time the city was founded (Krautheimer, ECBArch 267). The latest coin hoard discovered at the site dates to 613, and the latest single coin to 615.

– A.K., I. Dj., A.C.

JUST PRICE (δικαίως τιμητί), Lat. justum pretium). The concept of just price, like that of monopolies, was derived from the general idea of state control of the economy: Diocletian introduced the term in a simplified form in a law of 285 (Cod. Just. IV 44.2) and established maximum prices of various goods in his Price Edict. Control over prices and measures formed a dominant characteristic of Byz. commerce, and the Book of the Eparch limited rates of profit and prohibited merchants and artisans from raising prices above "the necessary level" (e.g., Bk. of Eparch 10.2). Especially substantial was the control over the price of grain.

The Byz. did not develop the theory of just price to a point equivalent to that of Western teaching; nevertheless the concept permeated agrarian legislation of the Macedonian dynasty: the legislators indicate that many dynatoi, partly by coercion, partly owing to the unsettled conditions in the wake of the famine of 927–28, had acquired lands of the poor either by ignoring legal restrictions (e.g., Protimēsis) or by paying a price below the one that was standard or "just." In such cases, the poor might recover their property within 40 years from the date of sale, and Basil II even abolished this 40-year prescription; in some cases a refund was required as reimbursement for im-
provements made upon the restored lands. The just price could be set on the basis of an official estimate, as in the case of KLASMA (N. Oikonomides, FM 7 [1986] 162f), or reflect market conditions.

Lit. Kazhdan-Constable, Byzantium 44f. —A.J.C.

JUVENTAL (Ἰουβενάλιος), patriarch of Jerusalem (ca.422–58); saint; feastday 2 July. His lifelong ambition was to raise his suffragan diocese into a patriarchal see, independent of Antioch and the metropolitan of CAESAREA MARITIMA, to which Palestine was canonically subject. Juvenal's appointment of the Arab chief Aspebetos (Peter)—at the request of St. EUTHYMIOS THE GREAT—as the first bishop of an Arab camp (Parembolae), has sometimes been seen as a violation of the rights of Caesarea. Juvenal's claims for Jerusalem were rejected at the Council of Ephesus (431) despite his alliance with Cyril of Alexandria against the Antiochene Nestorios, patriarch of Constantinople. Although Cyril failed to support Juvenal strongly, Juvenal still sided with Egypt at the "Robber" Council of Ephesus (449) by voting with the Alexandrian Dioskoros to restore Eutyches. At the Council of Chalcedon (451), however, Juvenal sided with Constantinople by endorsing Dioskoros's deposition. As a result, the three PALESTINES were detached from Antioch to create the patriarchate of Jerusalem. When Monophysite monks faithful to Dioskoros and Eutyches rebelled on Juvenal's return to the holy city, he was forced to call in imperial troops before he could enjoy his new status as Jerusalem's first patriarch.

KABALLARIOS (Καβαλλάριος), a family of high-ranking officials and courtiers active ca.1250–1350. The name, meaning “cavalryman, knight,” must be of Latin origin. The connection of the Kaballarioi with Constantine Kaballourios, strategos of the Kibyrrhaioi in 1043 (Skyl. 432.13–14), and Maria (?), sister of Constantine Kabalouros (E. Branousse, EEBS 33 [1964] 61.14), founder of the Strobelos monastery, mentioned in a charter of 1079, is unclear. Circa 1258/9 Basil Kaballarios belonged to the higher echelon of society: his marriage to Theodora Tarchaneiotissa was approved by Theodore II but annulled by Michael VIII. Alexios Kaballarios (or Kaballares), domestikos of the imperial table and governor of Thessalonike (died 1279/4 in battle), was Michael VIII’s cousin; Michael Kaballarios was megas konostoulos ca.1277 when John I Doukas defeated him at Pharsala. Several Kaballarioi supported Andronikos II and were listed among his oikeioi: esp. Bardas Kaballarios, who participated in the proceedings against Andronikos III the Younger, and Bardas’s son Mark, who insulted Andronikos III at the walls of Constantinople in 1327. Later, in 1343, Theodore Kaballarios, a partisan of John VI, was captured by Momčilo. The Kaballarioi were related to the Tzamblakones. The Kaballarioi are distinct from the Kaballeropoulos, who throughout the 14th C. served as civil functionaries (Constantine, a judge; George, an interpreter) and clergymen.

KABALLAROPOULOS. See Kaballarios.

KABASILAS (Καβάσιλας; etym. unclear), a noble lineage known from the reign of Basil II onward. The founder, Constantine, was a foreigner and Basil’s servant. In 1042 Empress Theodora appointed him strategos. In the 11th C. several members of the family were governors: Nikephoros in Thessalonike ca.1022; Constantine (Theodora’s protégé?), doux of the West in 1042; another Kabasilas, doux of Vaspurakan under Michael IV; and Alexander, doux of Skopje ca.1080 (Seibt, Bletisiegel, no.125). Alexander supported Nikephoros III and in Alexios I’s reign was demoted to a low position. From ca.1200 some Kabasilai were prominent church leaders, including a metropolitan of Dyrachion, a bishop of Grebena, and an archbishop of Ohrid ca.1259, all of whom were named Constantine. In the 14th C. the Kabasilai occupied important court positions: Demetrios, megas papas in 1347–69; Theodore, logothetes tou stratiiotikou ca.1317; Alexios, megas konostoulos ca.1339. The family produced several writers: Neilos Kabasilas, his nephew Nicholas Chamaetos Kabasilas, a scribe Demetrios Kafikes Kabasilas. Intellectuals of this family often occupied ecclesiastical posts. The Kabasilai also served in provincial administration and possessed lands in Chalkidike, Thessalonike, and elsewhere.

—A.K.

KABASILAS, NEILOS, theological writer; born Thessalonike? ca.1300, died 1363. Because Kabasilas evidently bore the baptismal name of Nicholas, he has sometimes been confused with his nephew Nicholas Chamaetos Kabasilas. Kabasilas taught in Thessalonike, where Demetrios Kydonas was among his pupils; later he served in the government of John VI Kantakouzenos in Constantinople, and then became a hieromonk (after 1353). From 1361 to 1363 he was metropolitan of Thessalonike, but apparently never took up residence in his see.

Kabasilas wrote Palamite and anti-Latin theological treatises, including an Antigrama against Nikephoros Gregoras (ed. G. Papamichael, Ekkl-Phar 11 [1913] 66–75) and an essay titled On the Procession of the Holy Spirit. In the latter treatise

---

**KABASILAS, NICHOLAS CHAMAETOS**, writer and theologian; born Thessalonike ca.1322/3 (Loenertz, *intra* 226), died Constantinople? after 1391. Born to a noble family, he adopted his mother's name of Kabasilas in preference to his patronymic Chamaetos. After beginning his studies in Thessalonike with his uncle Neilos Kabasilas, he moved to Constantinople for further education. He was a Palamite and Kantakouzenist, who joined the entourage of John VI Kantakouzenos after the latter's victory in the Civil War of 1341–47. He may have been a candidate for the patriarchate in 1353. He never married; it is likely that he eventually became a monk (Angelopoulos, *intra* 69–74). His final years were devoted to theology and philosophy.

Kabasilas was a scholar of widely ranging interests, including rhetoric, astronomy, law, and theology. He had a fierce social conscience, as evidenced by his treatise titled *On Usury* addressed to Anna of Savoy (ed. R. Guillard in *Eis mnemen Spyridonos Lamprou* [Athens 1935] 269–77), in which he used moral arguments to criticize the practice of usury (M. Poljakovska, *ADVS* 13 [1976] 83–96). His ideal monarch is based on Plato's ruler: he should be strong, educated, and just. Kabasilas is esp. vocal in the defense of the right to property and in his condemnation of injustice (M. Poljakovska, *ADVS* 12 [1975] 104–16). His *Discourse Concerning Illegal Acts of Officials against Things Sacred* attacks unspecified laymen who confiscated monastic property for defense needs, such as restoration of fortifications, construction of naval vessels, and recruitment of soldiers. Most scholars now accept I. Ševčenko's thesis that the latter discourse was not directed against the Zealots in Thessalonike, as was earlier believed; the identity of Kabasilas's adversaries is, however, still under discussion. Kabasilas also wrote spiritual treatises, such as *Explanation of the Divine Liturgy* and *The Life of Christ*. He was a mystic who emphasized prayer (cf. G. Podskalsky, *OstkSt* 20 [1971] 17–42).

---

**KABBADION** (καββάδιον), a caftan, probably of oriental origin, called the "costume of the ethnokoi" by Philotheos in 899 (Oikonomides, *Listes* 177.32–179.1), but a standard article of imperial and court costume by the 14th C. Among the officeholders who wore the kabbadion were the despotes, the megas doux, the megas logothetes, and the megas myrtaiates (pseudo-Kod. 146.2, 153.18, 154.16–17, 166.13–14). To judge by the portrait at Chora of the megas logothetes Theodore Memochites, who is wearing a bluish-green caftan, the garment had long full sleeves, was belted, and had a gold-embroidered collar and borders along the sleeves and hem; unlike a tunic, the kabbadion apparently fastened down the front, and the twin front edges of the garment were also adorned with gold. The kabbadion of Alexios Apokaukos in Paris, B.N. gr. 2144, fol.11r (Spatharakis, *Portrait*, fig.96), has tight sleeves and is decorated with roundels containing heraldic lions. According to pseudo-Kodinos (pseudo-Kod. 146.2–3, 153.18, 274.13–14), a kabbadion could also be violet or red and adorned with pearls. The texts suggest that it was worn over the skaranikon.

---

**KAFFA** (Καφάς in *De adm. imp.* 53.170), ancient Theodosia, a strategic post on the southeastern
coast of Crimea along the passage from the Black Sea to the Azov Sea. Taken by the Huns in 380, it was ruled by the Alans in the 5th–6th C., by the Khazars in the 7th to 10th C., and then came under Cuman and (after 1229) Tatar rule. As a result of Genoa’s alliance with Byz. (treaty of Nymphaion, 1261) and with the approval of the Tatars (the allies of Byz.), ca.1266 the Genoese established a colony in Kaffa, which soon became the greatest trading center in eastern Europe, handling the traffic of Eastern and Western goods. By 1380 Kaffa had secured control over other Italian colonies in the region: Cembalo (Balaklava), Vosporo (Bosporos), Matraga (Tmuturokan), Lo Capa (on the estuary of the Kuban), and Sebastopolis.

The Genoese repelled the attempts of the empire of Trebizond to penetrate Kaffa: an attack of several Greek ships from Sinope and Trebizond in 1313 caused some damage to the merchants of Kaffa, and friction continued throughout the first half of the 15th C. The war with Venice (1350–56) was won by the Genoese who thus established their hegemony in the Black Sea. After the treaty of 1347 Kaffa enjoyed cooperation with the Tatar rulers of Crimea. Its prosperity decreased when Timur captured Tana, thus curtailing Kaffa’s trade with the Caucasus, Central Asia, India, and China. By 1475, when it was taken by the Ottomans, Kaffa was still a large city numbering 8,000 households, that is, about 40,000 inhabitants.

Kaffa was a customs point and a center trading in commodities such as slaves, grain, hides, furs, silk, and fish. Besides Italians its mixed population included Greeks (there were Greek churches and two Greek monasteries in Kaffa), Armenians, Rus’, Muslims, and Jews. Before 1437 an ecclesiastical metropolis subordinate to Constantinople was organized in Kaffa, but this soon passed into the hands of supporters of Union of the Churches (E. Zachariadou, ArchPont 29 [1968] 280–93).

KAINOTOMIA (κανονομία, lit. “innovation”). In the context of law the word usually means new buildings that might interfere with another’s rights or public interest. Already in classical Roman law various legal remedies were available to the neighbors of a person erecting a building to counter disturbances from building construction (cf. esp. Basil. 58.10). To these private legal remedies, which were intended for individuals, a constitution of the emperor Zeno (Cod.Just. VIII 10.12, Basil. 58.11.11) added a kind of general building regulation in the interest of public safety; it prescribed the distances between, and heights of, new buildings. Zeno’s constitution was confirmed by Justinian I and extended to all cities of the empire (Cod.Just. VIII 10.13, Nov.Just. 63 = Basil. 58.11.12,14). The regulations involving distances between buildings, esp. with reference to a sea view, remained in force, as the Peira 50.5 shows. The treatise of Julian of Askalon contains numerous other safety regulations to be observed with regard to kainotomia, affecting industrial premises as well. The most extensive compilation of all Byz. building regulations is given in the Hexabiblos of Harmenopoulos (2.4). The word was also used to designate theological, fiscal, or political innovations, usually with negative overtones.

—M. Th. F.

KAINOURGION. See Great Palace.

KAIOUMOS (Καιούμος), theologian; first half of the 7th C. He is known only from an anonymous brief edifying story preserved in several MSS from the 11th C. onward. Reportedly Kaioumos was an anchorite who lived at the “bay of St. Antony,” on the shore of the Red Sea near Klysmo; he moved from there to Ammochostos, Cyprus, where he stayed in seclusion. He was summoned as an arbiter in the case of a certain Philentolos, son of Olympios: a rich and generous man, he helped the poor and even founded a hospital, but had “the passion of fornication.” After his death, a local council was convened, presided by Archbp. Arkadios (before 625–641/2), to debate Philentolos’s posthumous condition. According to Kaioumos, Philentolos was saved from Hell by his charitable deeds but was not admitted to Paradise because of his sin; his soul had to remain with those of unbaptized children. The status of the pious sinner was not considered provisional, and
Kaioumos did not introduce the idea of Purgatory. Kyrris connects Kaioumos's explanation with some passages in the Qur'an.

source. F. Halkin, "La vision de Kaioumos et le sort éternel de Philentolos Olympiou," AB 69 (1945) 62–64.

-A.K.

KAISARIANE (Καίσαριανή), monastery on Mt. Hymettos near Athens. In antiquity probably a sanctuary of Aphrodite, the site was converted to Christian use in the 5th or 6th C. The monastery must date to ca. 1100, when the surviving church was built; it is mentioned in the correspondence of Pope Innocent III (T. Neroutsos, DÉE 3 [1889] 103–05) but apparently remained in Greek hands after the Fourth Crusade since in 1210 Michael Choniates addressed a letter to its Orthodox hekoumenos (Mich.Akom. 2:311). The katholikon is a cross-in-square with half-hexagonal apses; south of the church is a bath, apparently contemporary with the katholikon but later turned into an oil press. The narthex and frescoes in the katholikon, along with the other buildings of the monastery, are post-Byzantine. To the west are the remains of a large early Christian basilica with semicircular apses, over which a smaller domed church was built, apparently in the 10th–11th C. To the south of this are the ruins of a single-aisled church, probably built during the Frankish period.

-T.E.G.

KAISARIS, PSEUDO-, name given to the author of four dialogues (Erotapokriseis) masquerading as the work of Kaisarios (died 369), who was the younger brother of Gregory of Nazianzos, holder of various official positions and a court doctor. They are dated by both Dujčev and Duprey (infra) to the first half of the 6th C. Many of the questions are of a religious nature, seeking greater understanding of the Holy Trinity and Scriptures in order to combat heresy. Pseudo-Kaisarios, a Monophysite, polemizes against Jews, Arians, and Origenists and may be connected with Severos of Antioch. Perhaps a quarter of the questions are on scientific matters, such as queries about thunder and lightning, rainbows, the nature of fire, and the changing length of days and nights. Several passages on the Slavs and other inhabitants of the Danube region are of particular interest, as perhaps the earliest written testimony about the Slavs (Dujčev, Medioevo 1:23–43).

The dialogues owe palpable debts to such authors as Epiphanius of Salamis, Cyril of Alexandria, Basil the Great, and Gregory of Nyssa. They also exist in a 10th-C. Slavonic translation, which contains more questions than the extant Greek text but also lacks some passages that survive in Greek.

-B.B., A.M.T.

KAISERAUGST TREASURE, a group of silver objects and coins of the first half of the 4th C., unearthed in 1961–62 inside the fort of Castrum Rauracense at Augst (Augusta Raurica) near Basel. Now in the Römermuseum, Augst, it contains 64 domestic objects, one fragment (Hackensilber), three ingots with stamps of the usurper Magnentius applied at Trier after Jan. 350, and 186 coins and medallions dating between 294 and 350. Among the objects are 14 serving plates and bowls, four goblets, and 41 spoons and small implements (one with a Christogram). Other items include a gilt- and niello-inlaid extending lampstand, a statuette of Aphrodite, two plates with elaborately decorated central medallions and rims—one with an Achilles cycle in relief and the other with a seascape and hunting scenes in gilt and niello inlay; a rectangular plate with inlaid panels depicting Ariadne, Bacchus, and Erotes. According to inscriptions on their bases, the Achilles plate was made in Thessalonike and a fluted plate in Naissos. An association of this opulent and pagan imagery with the emperor Julian was once supposed. Yet, some objects bear graffiti mentioning a P. Romulus and a Marcellianus, both identified as officers serving Magnentius, who perished at the battle of Mursa on 28 Sept. 351; the treasure is therefore thought to have been buried between Jan. 350 and Sept. 351.
KALAMANOS (Καλαμάνος, Kalamanos), a noble family of Russo-Hungarian origin. The founder, Boris, was a son of the Hungarian king Coloman or Kálmán (1095–1116) of the house of Arpad and Evfimia, the daughter of Vladimir Monomach. He arrived in Byz. from Rus’ during the reign of John II and married a relative of the emperor (Arete Doukaina, according to V. Laurent). He died in battle in 1155. The sebastos Constantine Kalamanos, governor of Cilicia, was defeated and captured in 1164 by Nur Al-Din. Laurent (Bulles métr., no. 439) dated a seal of a Kalamanos, sebastos and doux, to the end of the 12th C. The family possessed a mansion in Constantinople, and ca. 1200 one of them was a lord of the Sampson district. Thereafter no Kalamanos occupied any prominent position.

-A.K.

KALAMATA (Καλαμάτα, name derived from ancient Kalama), city in Messenia with a fertile hinterland, near the Gulf of Messenia. It was located a little to the north of Kalami and was built on the site of ancient Pharai. Unimportant in antiquity, Kalama is generally ignored by the Byz. sources: only the vita of St. Nikon ηο Μετανοητή (ed. Sullivan, ch.31.7) mentions it. The 12th-C. geographer al-Idrīsī describes it as a large and populous city. At least five surviving churches dating to the 11th–12th C. suggest considerable activity in this period: among these the Church of the Holy Apostles and another known under the name of St. Charalambo have a cross-in-square plan. Kalama was conquered by William I of Champlite in 1205 and given to Geoffrey I Villehardouin; William II Villehardouin was born and died there. The city was taken by the neighboring Slavs in 1293 or 1295; in the 14th C. its territory included the castles of Nesi and Maina. It remained a possession of the principality of Achaia until the end of the principality in 1428, when it came briefly under Byz. control. In the second half of the 15th C. and later it was contested between the Ottomans and Venetians. Kalamata is mentioned as a bishopric only in post-Byz. times.

The castle of Kalama was the acropolis of ancient Pharai and was fortified sometime during the Byz. era; according to the Chronicle of the Morea (Greek version, ed. Schmitt, p.116.1711–14), it was not in a condition to withstand a siege in 1205. The Latins rebuilt the castle substantially, giving it a double circuit of walls.

-T.E.G.

KALAMBAKA. See Stagia.

KALAMAS (κάλαμος, “reed”), a measure of length equal to the late Roman akania (άκαινα) of 10 podes (see Pous). Later, the kalamos was used for measuring vineyards; originally one kalamos meant the simple distance between two vines, subsequently also the double or triple distance. According to the metrological treatises, vineyards were evaluated in two or three categories of quality: the worse the quality the greater the distances between two vines. From the time of Michael IV, 1/4 basilike spithame was added to the kalamos used in measuring vineyards of the best quality.

-E. Sch.

KALAPHATES (καλαφάτης), caulker, a craftsman who made ships watertight by filling in their joints and seams with pitch. The term is unknown in classical antiquity but appears in papyri of the 6th–8th C. (Preisigke, Wörterbuch 1:727). Liutprand of Cremona uses this Greek word and defines it as a navium compositor (lit. “arranger” of ships—Koder-Weber, Liutprand 44). Constantine VII Porphyrogenetos (De cer. 675.4–6) distinguishes naupegesis, shipbuilding proper, from kalaphatesis of the same boats. Emp. Michael V, surnamed Kalaphates, was the son of a caulker, according to Psellos, who provides a precise description of this craftsman’s work (Chron. bk.4, ch.26.12–15, vol. 1:65).

Lit. H. & R. Kahane, RB 1.4:410f.

-A.K.
KALAVRYTA (Greek: Καλάβρυτα, “beautiful spring”; Colovrate, etc., in Western texts), city in the borderland between Achaia and Arkadia, located in a high and nearly inaccessible plain near ancient Kynaitha, unknown after the 3rd C. (E. Pieske, RE 11 [1922] 2479–82). The name Kalobrata appears first in the Partitio Romanae (A. Carile, StVen 7 [1965] 219.47). In the mid-13th C. it formed a barony consisting of 12 fiefs; the baron of Kalavryta was in the list of 12 peers of the seigneur of Morea (Jacoby, Feodalitate 24f); the barony of Kalavryta was in the hands of the family of Durnay. In 1270–74 Greeks again held Kalavryta, and by the end of the 13th C. the Greek nobles Jacob Zassy (Tzausios?) and his cousin Photios dominated the city. Around 1400 the Hospitaliers attempted to seize Corinth, Kalavryta, and Mistra, but the expedition failed because of the resistance of the local population. In the 15th C. Kalavryta served as one of the residences of the despotai of the Morea, and in 1429 the marriage between Thomas Palaiologos and Caterina, daughter of Centurione Zaccaria, took place at the village of Kastikoi near Kalavryta.

The Frankish castle of Tremola, mentioned by numerous sources, stands in a ruinous condition above the modern town; there is a single gate, no trace of flanking towers, a keep, and a subterranean chapel of St. John. A false tradition attributes foundation of the monastery of Hagia Lavra at Kalavryta to the 10th C., but it is probably post-Byz.

-T.E.G.

KALE (Greek: Κάλη), feminine personal name (etym. probably “good”). The name is extremely rarely attested in early texts. A judicial decision of 952 mentions a woman “called Kale” (Lavra 1, no.4.11). A noble lady Kale, who as a nun took the name Maria, issued a will at the end of the 11th C. (FGBullg 7 [1967] 70–78). In later centuries the name became very popular, esp. in the peasant milieu: vols. 2–3 of Lavra list 57 Kales, second only to Maria (69); the acts of Xeropotamou mention 75 Kales (compared with 95 Marias); in the acts of Esphigmenou there are 50 Kales, compared with 66 Marias. Noblewomen with this name are also known (e.g., PLP, nos. 103/11–12).

-A.M.T.
KALENDERHANE CAMII, large church in Constantiople, situated near the east end of the so-called aqueduct of Valens. Built in part over a bath of the 4th/5th C., as revealed by archaeological investigation, it exhibits a complex structural history. Most of the standing structure (a cross-in-square covered by a dome) is of the late 12th C., but the east end is partly of the 6th and has yielded a wall mosaic of the Presentation of Christ in the Temple (6th/7th C.). An added chapel at the southeast corner is decorated in fresco and includes a fragmentary cycle of the life of St. Francis painted during the Latin Empire. Previous attempts to identify Kalenderhane with the Church of St. Mary Diaconissa or that of Christ Akateleptos have been abandoned. A fresco of the Virgin Kyriotissa over the central door between the two narthexes suggests a dedication to her.

KALLATIS (Καλλατίς), also Callatis, Greek city on the Black Sea, south of Tomis; mod. Mangalia, in the Rumanian district of Constanța. Excavations have revealed the city wall of the late 3rd C. that served probably to the early 7th C. (F. Preda, Universitatea București, Analele, seria Istorie 17 [1968] 27–36). The city seems to have flourished in the 4th–5th C. Near Kallatis, a necropolis was investigated: most of the tombs were of the 4th C. and more than 60 coins from the period of Constantine I through Theodosius I were found, whereas later finds were rare (one coin of Theodosius II and one of Justinian I). Ceramics, glass, belt buckles, and other objects were also primarily of the 4th C. There is no reason to date those burials without objects exclusively to the 6th C., as did C. Preda (A. Dierkens, Latomus 40 [1981] 466).

KALLIERGES, GEORGE, artist, called "the best painter in all Thessaly" in the dedicatory inscription (1315) of the Church of the Anastasis at Berroia in Macedonia. These frescoes suggest that Kallierges (Καλλιέργης) was familiar with the mosaics of the Church of the Holy Apostles at Thessalonike, where his presence is attested by a bill of sale (Chil., no.84,63) dated 9 Oct. 1322. The attribution to Kallierges of frescoes at St. Nicholas Orphanios in Thessalonike, and of others on Mt. Athos, is less secure. Kallierges' name also occurs in the title of an epigram by Manuel Philæs (Carmina, ed. Miller, 2:25, epigram 11).

KALLIKANTZAROI. See CALEND.

KALLIKLES, NICHOLAS, physician and poet; first half of the 12th C. Although Kallikles (Καλλικλῆς) is mentioned by several of his contemporaries (Theophylaktos of Ohrid, Prodomos, Gregory Pardos), all we know of his biography is the report of Anna Komnene that Kallikles attended Alexios I's deathbed in 1118. Kallikles' epitaph of John II was reportedly written before the emperor's demise, but probably close to 1142. Besides panegyrics of rulers (Alexios I, his wife Irene, John II), Kallikles produced epigrams praising various aristocrats: he stressed their wealth and noble origin, but eulogized martial prowess only in the epitaph of the sebastos Rogerios (no.19), who is explicitly said to have come "from the land of the Franks," i.e., Normans (M. Mathieu, Byzantion 23 [1953] 137–40). Kallikles' contemporary Prodomos fully developed the genre of aristocratic poetic eulogy. Some of Kallikles' epigrams are dedicated to various artifacts, such as no.2 on an icon of Christ deposited in the Pantokrat monastery; accordingly some inscriptions preserved on reliquaries have been ascribed to Kallikles (E. Voordeckers, L. Milis, Byzantion 39 [1969] 456–88). E. Lipšic and R. Romano consider Kallikles as the probable author of the Timarion.

ED. Carmi, ed. R. Romano (Naples 1980).

KALLIMACHOS AND CHRYSORRHOE (Καλλιμάχος καὶ Χρυσορρόη), romance in 2,807 unrhymed POLITICAL VERSES, written possibly in the early 14th C. by a nephew of Michael VIII,
Andronikos Palaiologos, who also wrote a *Dialogue against the Jews* (an epigram of Manuel Philes ascribes to Andronikos a romance very similar to *Kallimachos and Chrysorrhoe*). Though his language admits a number of loan words and vernacular features, the author is well grounded in learned rhetorical practice (e.g., the use of anaphora). Describing the tribulations besetting a pair of lovers, *Kallimachos and Chrysorrhoe* combines features from the romances of antiquity (particularly from the *Aithiopika of Heliodorus*) and those of the 12th-C. revival (elaborate *ekphrasis* of buildings and gardens) with elements of folk-tale: testing of three brothers, a *dracon* ("ogre"), a witch with a magic apple, etc. The author of *Kallimachos and Chrysorrhoe* has crafted a work of Byz. court ceremonial (*proskynesis*, court attendants, etc.) and official procedures onto a traditional fairy tale.

ED. Le Roman de Callimaque et de Chrysorrhoe, ed. M. Pichard (Paris 1956), with Fr. tr.

—E.M.J., M.J.J.

**KALLINIKOS** (Καλλίνικος, also Leontopolis, Ar. al-Raqqa in modern Syria), Byz. city in Osroene on the left bank of the Euphrates near the more ancient foundation of Nikephorion, which had declined by the 4th C. (Jones, *Cities* 221f). A well-fortified commercial city (Amm. Marc. 23.3.7), Kallinikos, together with Nisibis and Artaxata, became a legally designated trading post with the Persians (*Cod. Just.* IV 63.4). Kallinikos was rebuilt by Leo I and received his name in 466. The city played an important part in the Persian wars. In 542 Chosroes I took Kallinikos and led its citizens to Persia, having razed the city walls (Prokopios, *Wars* 2.21.30–33), which Justinian I later rebuilt (idem, *Buildings* 2.7.17). A local tradition maintains that Empress Theodora erected a monumental column there and rebuilt a Monophyseite monastery (*Michael I the Syrian, Chronicle* 2:419–20). On retreat from their march to Ctesiphon in 580, Maurice and his army checked a Persian attack at Kallinikos (Theoph.Simok. 3.17.8–11). The Arabs took Kallinikos in 636–37 (Donner, *Conquests* 150f); in 772 the ‘Abbasid caliph al-Manṣūr built nearby the new city of al-Rāfiqah, on a horseshoe-shaped plan; remains of its walls still stand.

—M.M.M.

**KALLINIKOS** (Καλλίνικος), traditionally but probably wrongly (H. Wada, *Orient* 11 [1975] 25–34) considered the inventor of *Greek fire*. According to Theophanes the Confessor (Theoph. 354.13–17), Kallinikos fled in 673/4 from Heliopolis in Syria (or perhaps Egypt) to Constantinople, where his use of "sea fire" was crucial in defending the city against the Arab siege of 674–78.

—P.A.H.

**KALLIPOLIS** (Καλλίπολις, mod. Gelibolu, Gallipoli), city on the European shore of the Sea of Marmara at the north end of the HELLESPONT. In late antiquity it was a suffragan bishopric of Thracian Herakleia. In 324 the caesar Crispus defeated the fleet of Licinius off Kallipolis. A 9th-C. historian (Theoph. 102.24–26) relates that in the 5th C. Attila reached Kallipolis and Sestos and conquered all of the cities and fortresses in the area.

Justinian I restored the walls of Kallipolis, but little is known about the city thereafter until the Crusaders began to use it as the starting point for their expeditions to the East (An.Komm. 3:159.12–16). The town was not large—a 12th-C. historian (Kinn. 201.21) describes it as a coastal *polisma*. From the 13th C. onward, the crossing from Kallipolis to Lampsakos became more common, replacing that of Abydos-Sestos. In 1205 the Venetians occupied Kallipolis, but in 1234/5 John III Vatatzes reconquered the Thracian coast.

In 1304 Kallipolis served as the headquarters of the Catalan Grand Company; later Kantakouzenos found the town a convenient base from which to repel "barbaric" invasions. In 1331/2 Umur Beg led an unsuccessful attack on Kallipolis. In 1352 the Ottomans took the fortress of Tzimpe, north of Kallipolis, and, after a violent earthquake on 2 March 1354, captured the city.
It was recovered in 1366 by Amadeo VI of Savoy who restored it to the Byz. on 17 June 1367; Andronikos IV returned it to the sultan, however, on 3 Sept. 1376. Kallipolis was the major Ottoman naval base crucial for their European operations; Venice endeavored on several occasions to capture it or to obtain free passage through the strait, but in vain.

-A.K.

KALLISTHENES, PSEUDO-. See Alexander Romance.

KALLISTOS I, patriarch of Constantinople (June 1350–14 Aug. 1353; 1355–63); died Serres Aug. 1363. Kallistos spent his early career as a monk on Athos; he was a disciple of Gregory Sinaiates and accompanied him on journeys to Constantinople and Paroria. In the 1330s he was a hieromonk at the Athonite skete of Magoula; in the 1340s he moved to Iveron, where he eventually became hegoumenos. Elected patriarch in 1350 under John VI Kantakouzenos, he presided over the local council of Constantinople of 1351 (see under Constantinople, Councils Of), which reaffirmed Palamite doctrine. In this capacity his portrait has been recognized in two MSS (Spatharakis, Portrait, figs. 90, 92). He remained loyal to John V Palaiologos; in spring 1353 he refused to perform the coronation of Matthew I Kantakouzenos and withdrew from the patriarchate. After his replacement by Philotheos Korkinos, he joined John V on Tenedos. When John V regained the throne, Kallistos also resumed his patriarchate. He died during a mission to the Serbs to seek military assistance against the Turks.

Kallistos was a staunch defender of the privileges of the patriarchate of Constantinople; he excommunicated the Serbian patriarch ca.1352/3 for being too independent (V. Mošin, Glasnik Srpske Pravoslavne Crkve 9 [27] [1946] 192–206) and also forced the Bulgarian patriarch to recognize the supremacy of Constantinople in 1361/2 (RegPatr, fasc. 5, no.2442). He wrote a number of works, including Lives of Gregory Sinaiates and St. Theodosios of Türovo; the latter survives only in a Bulgarian translation. He was also the author of homilies (64 according to Gones), among which is an enkomion for Patr. John IV Nesteutes. The homiliary attributed to Kallistos in Slavic translation is the work of Patr. John IX Agapetos (1111–134; D. Gones, Palaeobulgariaca 6 [1982] no.2, 41–55; C. Milovanović, ZRVI 22 [1985] 149–63).

Ed. MM 1:295–448. For list of other works, see Gones, infra.

KALOJAN (Lat. Calojoannes) or Ioannitza, younger brother of Asen I and Peter; ruler of Bulgaria (1197–1207); died near Thessalonike Oct. 1207. In 1188 Kalojan was sent as a hostage to Constantinople but escaped to Türovo ca.1190; after Peter's assassination he inherited power. Beginning in 1199, he launched attacks against Byz.; he found support among independent "princes" such as Ivano and Dobromir Chrysos as well as some rebellious Byz. magnates. Kalojan conquered Konstantia, Varna, and a major part of Macedonia. The treaty of 1202 with Alexios III confirmed his acquisitions. For support against Byz., Kalojan turned to Innocent III and, in 1204, the pope's envoy Leo crowned Kalojan as king; Kalojan, however, assumed the title of emperor of Bulgaria and Vlachia. The Bulgarian church accepted Rome's jurisdiction and the archbishop obtained the title of primate. The Fourth Crusade changed the balance of power in the Balkans and compelled Kalojan to seek an alliance with the Greek aristocracy against the Crusaders. On 14 Apr. 1205 the allies, with Cuman help, destroyed the Latin army and captured Emp. Baldwin of Flanders. To exploit his success, Kalojan invaded Thrace; after the death of Boniface of Montferrat, he besieged Thessalonike. The Cuman chieftain Manasras murdered Kalojan outside the city. The Byz. hated Kalojan, who called himself Rhomaiktonos or "killer of the Rhomaioi," for his cruelty in imperial territory (Akrop. 1:23.18–19). They gave him the name of Skylotoannes (John the dog) and claimed that Kalojan was slain by St. Demetrios himself. I. Dujčev (infra 180f), however, hypothesizes that Kalojan died of disease (pleurisy). His skeleton may be the one found in the Church of the Forty Martyrs, Türovo, with a signet ring inscribed in Cyrillic
“Kalojhan’s ring.” There is also a seal of “Kaloen” the tsar of the Bulgarians (N. Mušmov, BS 4 [1932] 135–38).

KALOMODIOS (Καλομοδίας), a money-changer or banker of Constantinople, also engaged in long-distance trade (Nik.Chon. 523f); fl. ca. 1200. Officials of Alexios III arrested Kalomodios to strip him of his wealth. Next morning a riotous crowd, presumably organized by his fellow bankers, forced Patr. JOHN X KAMATEROS to intercede for Kalomodios; he was released unharmed. –C.M.B.

KALOPHEROS, JOHN LASKARIS, rich merchant, landowner, and diplomat; a friend of Demetrios Kydones; born between 1325 and 1330, died in Cyprus 1392. The connection of Kalopheros (Καλόφερος) with the house of Laskaris is unclear. In contrast to Kydones, he sided with John V Palaiologos during the Civil War of 1341–47, but he later came into contact with the Kantakouzenos family and married Maria, daughter of Matthew I. The marriage so angered John V that Kalopheros was forced to flee from Constantinople in 1362/3. He had well-established links with Western courts and converted to Catholicism; his second marriage (1367?) to Maria de Mimars (died 1369/70), the widow of a noble Cypriot, John de Soissons, confirmed these ties. In concluding the nuptial agreement Kalopheros handed over to his wife the colossal sum of 243,567 besants of Cyprus (Jacoby, infra 191) and received in exchange the usufruct of her estates. Kalopheros served as political adviser and envoy in Rome and Venice and participated in military expeditions launched by the Cypriot king Peter I Lusignan, but he was arrested in Cyprus ca.1370 after Peter’s death. In 1371 Kalopheros left Cyprus and settled down in Avignon to serve the pope. Nevertheless he retained connections with Greece, having married in 1372/3 Lucie le Maure, daughter of Erard, seigneur of Arkadia; he traveled several times to Rhodes, Cyprus, and Peloponnesos and continued his correspondence with Kydones. He acquired first Genoese and later (in 1388) Venetian citizenship; soon thereafter he left Venice for Cyprus, where he died. His brother Maximos was protosynkellos in Constantinople in 1365 and hegoumenos of the Diomedes monastery in 1374.

KALOPHONIC CHANT. See Teretismata.

KALOPODIOS (Καλοπόδιος, lit. “beautiful foot” [Irmscher, infra] or “boot-tree” [Aerts, infra]), an enigmatic functionary in the reign of Justinian I. Theophanes the Confessor and the Chronicon Paschale relate the so-called Acta of Kalopodios (“Acclamations against Kalopodios”)—a dialogue in the Hippodrome between the imperial mandator and the Greens; the latter describe as their oppressor the koubikarians and spatharios Kalopodios “who is at the boot-maker’s shop (tangaria).” Both chroniclers consider this dialogue a prelude to the Nika revolt. P. Maas (BZ 21 [1912] 28–51), followed by Baldwin (infra), hypothesized, however, that the passage appeared in the wrong context in a source common to both chronicles and should be related to a later episode; A. Čekalova (ADSV 10 [1973] 225–28) linked it with the Nika revolt. Even though the name of Kalopodios appears in some contemporary texts (e.g., praiopositos Kalopodios in 558/9), the relationship of the Kalopodios of the Acta to his namesakes cannot be ascertained. Kalopodios could be a pseudonym concealing a better-known individual: Karlin-Hayter (Byzantion 43 [1975] 87f, 107) saw Narses in Kalopodios, Aerts recognized John of Cappadocia, but neither hypothesis can be proved.

KALOTHETOS, JOSEPH, Palamite apologist and hagiographer; died after 1355/6. Sometime before 1336 Kalothetos (Καλόθετος) became a monk at the Athone monastery of Ephigmenou, where he met Gregory Palamas and came under the
influence of his teachings. He lived later in Thessalonike and Constantinople, and became superior of an unspecified monastery. An ardent supporter of Palamas, he participated in the local council of Constantinople of 1341 (see under Constantinople, Councils of) against Barlaam of Calabria and wrote numerous treatises defending Palamite doctrine. His nine Antirrhetics were directed against Gregory Akindynos, Patr. John XIV Kalekas, Nikephoros Gregoras, and a member of the Gabras family. He also wrote vitae of Patr. Athanasios I of Constantinople and Gregory of Nikomedia as well as an enkomion of Andrew of Crete. Kalothetos emphasized the love of hesychia in these saints and portrayed them as forerunners of Palamas and the hesychastic movement. His writings abound with classical allusions; he even gave to Barlaam and Akindynos the names of characters from Plato’s Republic.

ED. Ioseph Kalothetou Syngrammata, ed. D.G. Tsames (Thessalonike 1980).

LIT. PLP, no. 10615. –A.M.T.

KALYMMATA (κάλυμμα, lit. “cover”), a small cloth used in the liturgy as a veil for covering the eucharistic elements: the diskokalymma covers the paten, the poterokalymma, the chalice; kalymmata are also known as little aeres. The liturgical function of the kalymma and its association in liturgical commentaries with the swaddling clothes and winding sheets of Christ determined its physical appearance. Extant Byz. kalymmata, all gold and silk EMBROIDERIES, depict the Communion of the Apostles (see LORD’S SUPPER) and related themes: the diskokalymmata in Halberstadt (of the sebastos Alexios Palaiologos, ca. 1185–95[?]) and Castell’ Arquato (early 14th C.) show Christ administering the bread, while their corresponding poterokalymmata show him administering the wine. The Divine Liturgy is shown on the kalymma in the Benaki Museum, Athens (14th C.), and the Melismos (see FRACTION) on the Hilandar kalymma (14th C.). Kalymmata are often recorded in wills (e.g., that of Eustathios Boylas and inventories (e.g., Patmos); gold-embroidered kalymmata (kalymmata chryssokladarika) are mentioned in the Acts of Lavra (Lavra 3, no. 147.10).

KAMACHA (Κάμαχα, sometimes Kamachon or Kamachos, mod. Kemah), a fortress of the upper Euphrates about 40 km west of Keltzene, was important during the border wars between Byz. and the Arabs. First taken by the Arabs in 679, it frequently changed hands until the mid-9th C., after which it remained Byz. until 1071. According to Constantine VII, Kamacha was a tourma of Koloneia that Leo VI united with Keltzene to create the theme of Mesopotamia. Although Kamacha thereafter disappears from secular texts, it remained metropolis of a diocese called Armenia until the 11th C. The site contains a sizable castle with walls of several undated periods.

KAMÁL AL-DÍN. See IBN AL-DÍM.

KAMARIOTES, MATTHEW, writer, scribe, and teacher; born Thessalonike, died Constantinople 1490. Kamariotes (Καμαριώτης) came to Constantinople during the final years of the Palaiologan dynasty and studied with Gennadios II (II) Scholarios, who dedicated to him a treatise on Aquinas. His father, who was a priest, and his brother were killed during the Turkish conquest of the capital. Kamariotes became megas rhetor at the patriarchal school, where he taught philosophy and rhetoric. He wrote a variety of works, including a monody on the fall of Constantinople and the death of his father. His interests included astronomy (treatise on a solar eclipse, a commentary on the treatise of Gregorius on the astrolabe), hagiography (enkomion of Sts. Basil, Gregory of Nazianzos, and John Chrysostom), and rhetoric (a summary of the Progymnasmata of Aphthonios and summary of Hermogenes). He also attacked Plethon. The commentary of Kamariotes on the letters of Synesios of Cyzene is unpublished. He copied MSS of Aristotle, Proklos, Hermes Trismegistos, and the Batrachomyomachia (C. Auc. Scriptorium 10 [1956] 100–02 and H. Saffrey, Scriptorium 14 [1960] 340–44).

KAMATEROS (Καματηρός, fem. Καματηρά; etym. “hard-working,” perhaps “a laboring ox”), a family of Constantinopolitan functionaries known from the 9th C., when the spatharokandidatos Petronas Kamateros supervised construction of the stronghold of Sarkel (ca.833). His identification with Petronas, the empress Theodora’s brother, cannot be assumed. The 10th- and 11th-C. Kamateroi were predominantly judges and fiscal officials. The rise of the Kamateroi begins with Gregory, who, according to Niketas Choniates (Nik.Chon. 9.16–22), was not of a noble or rich family but accumulated his wealth as a provincial tax collector. In 1094 he served Alexis I Komnenos as secretary; later he was logothetes ton sekreton. He married Irene Doukaina, a relative of the Komnenoi. The 12th-C. Kamateroi occupied topmost positions: John the sebastos and logothetes tou dromou was Manuel I’s favorite ca.1158; Andronikos the sebastos was eparch and droungarios tes viglas at least until 1176; his son Basil—logothetes tou dromou during Isaac II’s reign—was still influential at the court of Theodore I Laskaris; Basil’s sister Euphrasyn Doukaina Kamatera married Alexios III. Some Kamateroi were high ecclesiastical officials: Basil, patriarch of Constantinople (1183–86); John X Kamateros, patriarch of Constantinople (1198–1206); John, archbishop of Bulgaria after 1183. Several were literati: the above-mentioned sebastos Andronikos was a theologian who wrote Hiera Hoplotheke (Sacred Panopy), a refutation of heresies; John Kamateros (same as the patriarch of Bulgaria?) wrote astronomical treatises (see KAMATEROS, JOHN); another John was a rhetorician at Isaac II’s court. Many Kamateroi were literary patrons. An inscription mentions a certain Nikos (12th C. or later) as the founder of the monastery Tao-Pentele near Athens. Although loyal to the Komnenian dynasty, the Kamateroi became staunch supporters of Andronikos I. From the 13th C. onward, the Kamateroi played no political role.

KAMELAUKION. See Crown.

KAMINIADES, JOHN, author of the Capture of Thessalonike, a description of the Arab siege of the city in 904. Kaminiai (Καμηνιάδης) claims to have been a cleric and koukouleitios in Thessalonike and an eyewitness of the Arab attack. The book, preserved only in late MSS (15th-16th C.), consists of two sections: one on the city and its trade (R. Nasledova, VizVrem 8 [1956] 61–84) as well as the Slavic tribes in its vicinity (R. Nasledova, VizVrem 11 [1956] 82–97) and one on the
Arab attack. Vivid details and ironic presentation of his own behavior make Kaminiates' work unique among the literary compositions of the 10th C. (V. Christides, BZ 74 [1981] 7–10). Moreover, various inconsistencies in realia and chronology make Kaminiates' authenticity suspect: perhaps the Capture of Thessalonike was composed in the 15th C., on the eve of the Turkish capture of the city, or immediately after the Turks sacked it in 1430 when interest in the events of 904 must have been revived.

KAMION. See TUNIC.

KAMOLIANAI (Καμολιαναί), bishopric in Cappadocia (Notitiae CP 1.77); according to Kedrenos (Cedr. 1:685.2) a village in Cappadocia. A legend known from Zacharias of Mytilene and a sermon of pseudo-Gregory of Nyssa (probably ca.600–750) describes the appearance of an acheiropoietos image of Christ in Kamolianai. Zacharias says that it was found (at an unspecified date) floating in a fountain by a pagan woman named Hypatia; pseudo-Gregory reports that Christ himself, accompanied by all the heavenly powers, appeared to Bassa-Aquilina, wife of the toparches of Kamolianai (in the reign of Diocletian), washed and dried his face, and disappeared, leaving behind his image on a towel. Zacharias refers to two acheiropoietos copies of the image—one in Caesarea of Cappadocia, another in the village of Dioboulion, near Amaseia; in contrast, pseudo-Gregory relates that the image was transferred from Kamolianai to Caesarea under Theodosios I.

Kedrenos states that in 574 the image was brought from Kamolianai to Constantinople. Probably during the reign of Herakleios there appeared in Constantinople another acheiropoietos that had been brought from Melitene: according to a later legend, it was given to a widow, the paterikia Maria. One of these acheiropoietoi served as the imperial palladium and was carried into battle against the Persians by the generals Philippkos and Priskos.

KAMPAGIA. See Footwear.

KAMYTZES (Καμύτζης), a family name of unclear etymology: N. Bees (EkklPhar 3 [1909] 234f) derived the name from Gr. kammya, "close the eyes," but it could also be of Turkish origin. P. Gautier considered Kamyres, an envoy of the Seljuk sultan Süleyman to Alexios I in 1083, as a founder of the family (ReB 27 [1969] 256, and with a slight change in his "Blachernes" 259). The first incontestable Kamytses (according to Gautier, either Kamyres himself or his son or nephew) was Eustathios, chartularius of the stables in 1094 and later doux of Nicaea. Theodore Prodomos dedicated an epitaph to Constantine Kamyts, whose wife was Maria Komnene, daughter of Constantine Angelos and granddaughter of Alexios I. Manuel the protostrator, Maria's son, was a cousin of Isaac II and Alexios III; Andronikos I's general, Manuel eventually supported Isaac II with lavish donations and fought against Alexios Branas. In 1199 he was captured by Ivanko; rather than ransom Manuel, Alexios III used this opportunity to confiscate his wealth. Ransomed by Dobromir Chrysos, Manuel joined his revolt against the emperor. The Partitio Romaniae mentioned the estates of the Kamytsai, who were among the four greatest landowners. Pachymeres (Pachym., ed. Failler, 1:93.12) included the Kamytsai in his list of the noblest families of the 13th C., but no Kamytses is known to have held a high post at this time except for George Kamytsoboukes, doux of the Thracian theme in 1241. A Hilandar inventory (A. Soloviev, SemKond 10 [1938] 32) mentions an enigmatic Kamytses Komnenos (dates unknown).

The name was still in use in the 14th–15th C., but not in an aristocratic milieu: a certain Kamytses illegally received a considerable sum of money after the death of a megas oikonomos of Docheiariou; supposedly he was a citizen of Thes-
KANABOUTZES, JOHN, 15th-C. writer. Kanaboutzes (Kαβαβουτζης) was a teacher and corresponded with John Eugenios. In 1446 he guided Cyriacus of Ancona around Palaia Phokaia. He is best known for a commentary on Dionysios of Halicarnassus dedicated to Palamede Gattilusio, lord of Ainos and Samothrace (1431–55), and his brother Dorino, lord of Mytilene. Kanaboutzes emphasized the role played by Samothrace in the foundation of ancient Rome. He also compiled a table of the length of days throughout the year, calculated for the latitude of Palaia Phokaia (A. Diller, Byzantion 42 [1972] 257f).

ED. Ioannis Canabutzei magistr i ad principem Aeni et Sama thracies in Dionysium Halicarnasensem commentarius, ed. M. Lechnerdt (Leipzig 1890).

KANANOS, JOHN, known only as the author of a vivid eyewitness account of the siege of Constantinople in 1422 by the sultan Murad II. Kananos (Kανανος) begins with conventional apologies for his inadequate education and the deficiencies of his style; he notes that his narrative is not for scholars, but for ordinary people like himself. Indeed for the most part his account is couched in simple and colloquial language, including a number of Western military terms. Kananos provides a precise chronology of the assault as well as detailed descriptions of Ottoman techniques of siegecraft and Byz. methods of defense. He attributes to the intervention of the Virgin the failure of the major assault launched on 24 Aug., and claims that even the Turks saw her defending the ramparts.

LIT. Hunger, Lit. 1:482–84. PLP, no.10891.

KANANOS, LASKARIS, 15th-C. Byz. traveler who left a very brief vernacular account of his journey to northern Europe. The three pages preserved in a 16th-C. MS (Vienna, ÖNB, hist. gr. 113, fol. 174r–175r) may be a fragment of a larger work. Kananos’s trip probably took place in 1438/9, and may have had some connection with the Council of Ferrara-Florence. His particular interest in the silver coinage of Stockholm and the alleged barter economy of Bergen suggests that he may also have been a merchant.

Kananos traveled to major Baltic seaports, such as Danzig, Copenhagen, Stockholm, and Bergen, where he noted the continual daylight in summer. He also visited Livonia and Latvia. From England he sailed to Iceland, which he described as the “island of fish-eaters,” and suggested that it should be identified with Ptolemy’s land of Thule.

LIT. PLP, no.10892. Hunger, Lit. 1:519.

KANDIDATOS (κανδιδάτος, from Lat. candidus, “white”), a dignity. In the late Roman Empire the term denoted a member of a unit of imperial bodyguards who wore white uniforms—candida turba, a white band, as Corippus describes it (In Praise of Justin 3.161). The Chronicon Paschale attributes the origin of the term to Gordian III (238–44), but the first reliable mention comes from 350 (O. Seeck, RE 3 [1899] 1468). Justinian I began his career as a kandidatos. Patr. Nikephoros I (Nikeph. 8.3) spoke of kandidatos as a dignity (axia), and in the Kletterologion of Philotheos kandidatos occupies the place below the strator. On sealed the title of kandidatos is usually connected with subaltern offices both in the army and in the civil service. The title disappeared, according to Oikonomides (Listes 298), after the mid-11th C.; the title spatharakandidatos continued in use up to the 12th C.

KANDIDOS (Κάνδιδος), secretary (hypocratheus) to some leading Isaurians, historian; born Isauria “Trachia,” fl. 5th–6th C. He composed a History in three books of the period 457–91, of which only a summary by Photios (Bibl., cod.79) is pre-
served. It stressed Eastern events but no doubt contained an account of the expedition of 468 against the Vandals mentioned by the Souda. As is to be expected, Kandidos provides useful information on the Isaurian emperor Zeno (E.W. Brooks, EHR 8 [1893] 209–38). He emphasized intrigues and conspiracies at court. Some scholars assign to Kandidos a number of fragments in the Souda that are anonymous or credited to Macehos of Philadelphia. Photios lambasts Kandidos’s style for its linguistic and syntactical innovations, its complex sentences, wild etymologies, and overall harshness and dissonance but approves of his orthodox defense of the Council of Chalcedon.

KANIKLEIOS (κανικλείος), also epī tou kanikleioi or chartularius tou kanikleioi, one of the emperor’s private secretaries; the post is known from the 9th C. onward. Anastasius Bibliothecarius (see Dolger, infra 50) defines praepositus caniculi as warden of the imperial inkstand with purple ink. This seemingly menial duty gave the kanikleios the opportunity to intervene in the formulation of imperial chryseobulls and in actual decisions. Therefore the position was often held by important officials. Under Michael III, Theoktistos was kanikleios and logos tetes tou dromov; Nikephoros Ouranos held the post of kanikleios in the 10th C., as did Theodore Styppeiotes under Manuel I; Styppeiotes was a very influential official (O. Kresten, JOB 27 [1978] 49–103). The kanikleios Nikephoros Choumnos was characterized by Gregoras (Greg. 1:241.1–5) as mesazon. The last known kanikleios was Alexios Tzamplakon ca. 1438. It is generally assumed (Bury, Adm. System 117) that the kanikleios had no staff; Kresten (69f), however, notes that in the 12th C. Michael Glykas served as grammaticos of the kanikleios.

KANISKION (κανίσκιον, “small basket”), a “voluntary” donation by paroikoi to their lord, esp. to a monastic institution. Some 11th-C. docu-

ments identify a kaniskion as a round loaf of bread, a half-measure of wine, and a modios of barley (Pantel, no. 3.31, cf. Esphig., no. 5.32). By the late 13th C., Christmas, the day before Lent, and Easter were the recognized times of giving kaniskia (Esphig., no. 7.9). Ostrogorsky suggests that by this time kaniskion could be transformed into a payment in cash.

In ecclesiastical usage kaniskia were the various donations of money, grain, wax, and other items offered by the faithful on specific occasions such as requiems and festival days (Balsamon, PG 137:41C). These optional gifts had also become obligatory. The gift mentioned in a lost typikon of Constantine IX (Reg 1, no. 923) should probably be identified with kaniskia: on the occasion of their wedding, the groom had to pay the bishop one nomisma, and the bride had to give 12 pecheis or cubits (see Pechys) of cloth. Kaniskion differed markedly from the general binding tax known as kanonikon.

KANKELLARIOI (κανκελλάριοι, from Lat. cancellarius), a late Roman official, the assistant of a praetorian prefect. In existence probably from ca. 400 onward, by the 6th C. kankellarioi became the most influential officials in the prefect’s bureau (O. Seeck, RE 3 [1899] 1456–59). In the Kletorologion of Philotheos the kankellarioi as well as the protokankellarioi fulfill modest secretarial functions in various central departments—those of the eparch of the city and quaestor, in the genikon and sakellion. According to the De ceremoniis, kankellarioi used to recite Latin chants during the emperor’s procession to Hagia Sophia; Bury (Adm. System 77) suggests that this was because of their familiarity with Latin. The seals of kankellarioi are dated to the 6th–8th C., while in the 9th–11th C. protokankellarioi and basilikoi kankellarioi are known. A 12th-C. historian (Nik.Chon. 200.88–201.89) considered kankellarios a Western term and equated it with the Greek logothetes.

LIT. Laurent, Corpus 2:648–51.

KANNABOS, NICHOLAS, emperor for a few days in 1204. Chosen emperor by the populace
of Constantinople ca. 27 Jan. 1204, while Alexios IV ruled at Blachernai, Kannabos (Κανναβός)—an intelligent and warlike youth, says Niketas Choniates—held Hagia Sophia. After the fall of Alexios IV, popular favor swung to Alexios V. Around 2/3 Feb., the latter’s troops seized and imprisoned Kannabos.

-C.M.B.

KANON (κανών), a term with several meanings in Byz. Greek.

**Hymnographic Term.** The kanon was a set of verse paraphrases that during the 8th C. gradually replaced the nine biblical canticles previously chanted during the orthros; at the same time the kanon ousted the kontakion from its dominant position in that service. A kanon is theoretically made up of nine odes (or more usually eight, since the second ode is used only during Lent), each providing a poetic variation and meditation on the theme of the equivalent canticle (e.g., ode 1 reflects on Moses’ song of thanksgiving, Ex 15:1–19; ode 9, the Theotokia, reflects on the Theotokia’s hymn of praise [the Magnificat] in Lk 1:46–55, 68–79). Each ode is made up of an heirmos (see HEIRMOLIGION) and several additional stanzas (TROPARIA) that follow the melody and rhythmical pattern of the heirmos; a different heirmos is used for each ode. The odes are often linked together by an acrostic relevant to the day on which the kanon was to be sung. The kanon was sung in three sections (odes 1–3, 4–6, 7–9) with additional hymns, including the abbreviated kontakion, between the sections. Why the kanon with its elaborate and varied musical settings should have replaced the more straightforward kontakion is still not clear. Although Andrew of Crete (died 740) is often considered the originator of this form, several kanones can be attributed to Patr. Germanos I, an older contemporary. Other notable writers of kanones include John of Damascus, author of the Easter Kanon; Kosmas the Hymnographer; and Joseph the Hymnographer. Kanones continued to be written until the last years of Constantinople.

**Fiscal Term.** This type of kanon (δημοσιος κανών, δημοσίου) was the basic tax on land and on those who cultivated it (see DEMOSIOS). In order to calculate the kanon, officials first established the theoretical “value” of the land or person to be taxed and then determined the kanon, which was 1/24 (4.166 percent) of the value. Thus one gold nomisma was the demosion of 24 modii of land of first quality, or of 48 of second quality, or of one farmer owning a pair of oxen, a zeugaratos (Schilbach, Met. Quellen 59.22–60.7). To the kanon were added the appropriate PARAKOLOUTHEMATA and thus was calculated the final amount of the tax (aritmonion) to be paid in CHRAGMA. One-twelfth of the normal tax (libellikon demosion) was claimed for lands that, having been abandoned for 30 years, had become the property of the state (KLASMA) and were sold for development. Exemption from this basic tax was granted very rarely and only through a special procedure (involving the inscription of a special entry in the fiscal records, sometimes done with the red ink reserved to the emperor). In the 14th C. the basic tax on land (TELOS) was calculated at a flat rate of 1 hyperpyron for 50 modii of land (regardless of its quality, except for extreme cases) or for 6 modii of vines (Lemnos, 15th C.). Between 1404 and 1415 the telos was replaced in Chalkidike by the burdensome haraxe, a tax that survived in the region from the earlier Ottoman occupation (Oikonomides, “Ottoman Influence” 1–24).

(For kanon as a type of law, see CANON LAW and CANONS.)

-KANONIKON (κανονικόν), an ecclesiastical tax first mentioned in the 11th C., levied annually on all LAINY in the diocese for the bishop’s maintenance. Under Alexios I the amount of produce and money due from each village was determined by the number of hearths in it (Reg 1, no.1127). Although the tax due was precisely defined by imperial legislation, it was not always possible to collect it, as Balsamon indicates (PG 138:1005D). Resistance to the tax (in addition to hard times or famine) may have been the reason; for until then such tributes from the faithful—essentially the
offering of the first fruits—were largely voluntary. Previous imperial and canonical legislation had emphasized the spontaneous, noncompulsory nature of such contributions. The kanonikon was also imposed on priests (the levy was one nomisma annually) and eventually on all monasteries except stauropegic foundations (RegPatr, fasc. 3, nos. 1179, 1180, 1185). A consecration tax was a further source of episcopal revenue; in the 11th C. a precise scale of tariffs for each ordination was established (RegPatr, fasc. 2, no.851).

KANSTRESIOS. See Kastresios.

KANTAKOZENOS (Καντακουζηνός, fem. Καντακουζηνή), a noble lineage whose name derived from the toponym Kouzenas near Smyrna. The first known Kantakouzenos was Alexios I's general who campaigned against the Cumans in 1094. The 12th-C. Kantakouzenoi were predominantly military commanders endowed with high titles such as sebas (John, killed at Myriocephalon, 1176; Andronikos, doux of Mylassa and Melanoudion ca.1175) and caesar (John, married to Isaac II's sister Irene). None is known as a civil servant or church official. The Partitio Romaniae names the Kantakouzenoi among the greatest landowners. They flourished again after 1250: Michael, megas konostaulos (died 1264), was Michael VIII's general; the sebastokratorissa Irene Kantakouzena married Constantine, the emperor Michael's younger brother; another Kantakouzenos served as governor of the Peloponnesos ca.1286–94. His son became Emp. John VI. John's son Matthew (I) was also proclaimed emperor; Manuel Kantakouzenos, the second son, was granted the title of despotes and administered Constantinople in 1348–49 and the Peloponnesos from 1349 to 1380. Helena (1333–96), John VI's youngest (?) daughter, married John V Palaiologos and became empress. The despotes John and sebastokrator Demetrios, Matthew's sons, apparently succeeded Manuel as rulers of the Peloponnesos and disputed control over this region with the

Palaiologoi. John was childless, but the progeny of one of his brothers played an important role in the 15th C.: George (who also assumed the Turkish name Sachatali) served the despotes Constantine Palaiologos (the future Constantine XI) but eventually settled in Serbia; George’s brother Andronicus, the last megas domestikos, was killed soon after the capture of Constantinople in 1453; their sister Irene (died 1457) married George Branković, and the third brother, Thomas (died 1463), also served the ruler of Serbia; another sister, Helena (died 1463), was the second wife of David I Komnenos of Trebizond (1458–61); the third sister (name unknown) may have become queen of Georgia.

The Kantakouzenoi were related to many aristocratic families such as Palaiologoi, Asan,Philanthropenos, Raoul, Tarchaneiotes, and Phakrases. In the 14th–15th C. the Kantakouzenoi were active primarily as military commanders and landowners. Some are known as patrons of arts and letters, for example, the despotes Manuel Kantakouzenos (PLP, no.10981) who founded the Church of Christ Zoódotes at Mistra. (See genealogical table.)

**KAPER BARADA** (Brad in mod. Syria), large village (kome) in the province of Syria I under jurisdiction of Antioch. Situated northeast of Telalissos (Qal‘at Se‘man) in the Jabal Seman, part of the northern Syrian limestone massif that lies north of the Antioch-Chalkis-Berroia road, Kaper Barada stands on a principal north-south route crossing the Jabal. Olive presses and warehouses indicate the source of prosperity of this village (2 sq. km), which contained, in addition to craft workshops, urbanlike amenities of the 2nd–3rd C. (bath, inn, meeting house [andron], shops) and imposing buildings of the 4th–6th C. (three churches [one replacing a temple], two monasteries, a large residence). Although evidence cited by Tchalenko to suggest that Kaper Barada was a civil administrative center in the 5th–6th C. is ambiguous, the village undoubtedly dominated its region as a commercial center, comparable with Kaper Pera to the south.

LIT. Tchalenko, Villages 1:90, 296 f. 387 f. 398, 430; 2, pl. CXXXIII.

**KAPER KORAON TREASURE,** a group of 56 silver liturgical vessels of the 6th–7th C. that has been reconstructed from four separate treasures known by the names of Hamâh (29 objects), Stuma (five objects), Riha (five objects), and Antioch (17 objects including the Antioch “Chalice”), all found ca.1908 southwest of Aleppo in northern Syria. Several pieces are inscribed with dedications naming the Church of St. Sergios of the village of Kaper Koraon, which has been identified with the modern village of Kurin, 5 km from the well-attested find-spot at Stuma. Four objects now in the Istanbul Museum were confiscated by the Ottoman authorities; antiquities dealers at Aleppo acquired the rest of the hoard, which they divided. The Hama and Antioch Treasures were thus created for sale ca.1910 and the remaining items found separate buyers. Today the objects from Kaper Koraon are dispersed in museums in Baltimore, Washington, New York,

**KAPER KORAON TREASURE.** Silver paten (“Riha” paten) from the Kaper Koraon Treasure; between 565 and 578. Dumbarton Oaks, Washington, D.C. The paten is decorated with the scene of the Communion of the Apostles.
The dedicatory inscriptions name up to 50 donors, including a kourator of an imperial domain, an argyroprates, and a magistrianos (see Agentes in Rebus). Fifteen objects have silver stamps that date the majority of the donations to 540-640. Although some objects from Kaper Koran are well decorated, nearly all are very lightweight (hence relatively cheap) and therefore similar to contemporaneous silver treasures from other villages.

M.M.M.

KAPER PERA (Ar. al-Bāra in modern Syria), large village (kome) in Syria II under Apameia on the Orontes. Situated in the Jabal Zawiya, part of the northern Syrian limestone massif north of Apameia, Kaper Pera stood on an east-west route joining Seleukeia ad Belum, on the Mediterranea, and Arta, at the edge of the eastern Syrian plain. The expansion of Kaper Pera in two centuries to a populous site 1,000 by 500 m in size was explained by Tchalenko in terms not just of its varied agricultural yield (wheat, vines, olives) but of its success as a regional processor and international exporter of olive oil. Its 5th- and 6th-C. buildings include at least five churches and four monasteries, a large market, multistoried oil factories, oil reservoirs, well-decorated houses, and impressive tombs. Kaper Pera retained its importance until the end of the Crusades.

Lit. Tchalenko, Villages 1:889-90, 430f; 2, pl. CXXXVII.

M.M.M.

KAPNIKAROS (καπνικάρος, from kapnikon). This rare term, synonymous with aktemon, appears only in the 1073 praktikon for Andronikos Doukas (Patmou Engrapha 2, no.50.311-15) that distinguishes two groups of kapnikaroi: those with donkeys who, as exkoussatoi, paid 1/2 nomisma for the synone and kapnikon and those without donkeys who paid 1/4 nomisma (i.e., apparently they paid only the kapnikon). In an abbreviated form, nicarius, the term survived in 14th-C. Frankish Morea (A. Kazhdan, VizVrem 32 [1971] 258), where nicarius had a more precarious position than paroiroi.

M.B.

KAPNIKON (καπνικόν, from kapnos, “smoke”; in Malal. 246.18, “smoke-hole, hearth”); a tax that was identified by some scholars (e.g., Dölger, Beiträge 51) as late Roman capitation; this identification, however, does not prove valid. It is first mentioned by Theophanes (Theoph. 487.1) as a levy collected from the paroiroi of charitable institutions and monasteries. In the 9th C. the so-called kapnikon was paid in the insignificant amount of 2 miliaria, possibly from a household (Theoph. Cont 54.3-7). In some sources of the 10th-11th C. it appears together with synone, which itself is an obscure tax. The cadaster of 1073 establishes that well-off paroiroi had to pay 1 nomisma for their synone and kapnikon (Patmou Engrapha 2, no.50.312-13), but the poorer peasants seem to have paid 1/2 nomisma for kapnikon only (e.g., no.50.142-47). In the lists of exemptions, however, kapnikon appears with or without synone, but in the context of supplementary charges such as oikomodion, aerikon, kastroktisia, etc. (Lavra 1, nos. 38.37, 44.30). Manuel I’s chrysobull of 1153 exempted Hagia Sophia from kapnikon, metretikon (charge for measuring), and “other charges levied for the sake of tax collectors” (Zepos, Jus 1:379-44-46). Kapnikon is defined in the edict of 1158 (Zepos, Jus 1:384.29-31, 453.36-38) as a charge for anagrapheis and praktores. It is impossible to prove that the rare tax called kapnologion in later documents is the same tax as kapnikon. (See also HEARTH TAX.)

M.B.

KARABISIANOY (Καραβισιάνοι; from karabos, “ship”), name of the first regular and permanent fleet of Byz., probably established by Constantine IV after the Arab siege of Constantinople (672-78). It is first mentioned in the Miracles of St. Demetrios, ca.680, in a context that shows that it could be deployed rapidly in the Aegean. It was commanded by a strategos (also called strategos ton ploimaton) whose headquarters may have been on the island of Keos; his sphere of activity extended to the Mediterranean and the Black Sea and his
subordinates included the droungarios of the Kibyrrhaioi. The Karabianoi are last mentioned in 711; they apparently proved inadequate during the Arab siege of Constantinople in 716–17 and were replaced by a new naval organization, the Kibyrrhaioi theme. Karabianoi never constituted a theme.

KARAHISAR GOSPELS. See Gospel Book.

KARAHISAR SCRIPT. See Decorative Style.

KARAITES ("Scripturalists"), Jewish sect that emerged in Babylonia from the followers of Anan ben David, an alleged 8th-C. descendant of King David. In principle they rejected the Talmud of normative Jewry, resurrected prerabbinic customs and absorbed Islamic influence. Therefore Byz. Jews denigrated them as foreigners and condemned their differing rules for calculating holidays, for marriage and divorce, and for the ritual slaughter of animals. Karaites rejected until after 1453 the use of candles to light the Sabbath eve. Individual Karaites who immigrated to Byz. after the 10th-C. reconquest of Syria were generally treated as Jews by the Byz., who however recognized Karaite autonomy by allowing them to have separate neighborhoods. Tobias ben Moses (mid-11th C.) was the first intellectual leader of Byz. Karaites. Their literature, for example, Judah Haddasi’s *Eshkol Ha-Kopher*, polemicizes against rabbinic Jews and the Byz. government, which they identified with their ancestral enemy Edom (which Jewish tradition long equated with Rome). Karaite literature of the 12th C. shows a familiarity with Greek scholarship and contemporary philosophy and contains important glosses on Byz. society and language. Later leaders included Aaron ben Joseph (ca.1250–1320), a Crimean physician, biblical commentator, and editor of Karaite liturgy; Aaron ben Elijah of Nikomedea (ca.1328–56), philosopher, codifier, and biblical commentator; and Elijah ben Moses Bashyachi (ca.1420–90), whose law code *Addereth Eliahu* manifested a rapprochement with rabbinite Jews. Karaites maintained strong intellectual and economic ties with coreligionists in the Crimea.

--S.B.B.

KARAMAN, the oldest Turkish emirate in Asia Minor, named after its founder Karaman (Karaμανός), who emerged ca.1260 in Ermenek, when confusion prevailed in Anatolia after the Mongol invasion and the resulting internal strife in the Seljuk sultanate. During the war between the Mongols and the Mamlūks of Syria and Egypt, in which the former were defeated near Elbistan in 1277, the emir of Karaman, who had allied with the Mamlūks, conquered Ikonion, established a Seljuk prince there and became his vizier. For the first time Turkish was used as the official language in this short-lived state abolished by the Mongols. Despite persecution by the Mongols, the Karamanids were able to push back the Cypriot king Henry II "of Lusignan" (1285–1324), who tried to capture Alanya at the end of the 13th C. After the collapse of the Mongol regime in Anatolia, the Karamanids made Ikonion their capital and considered themselves heirs of the Seljuks. Most probably ca.1375 they put an end to the Armenian kingdom of Cilicia. At approximately the same time a struggle began between them and the Ottomans for supremacy over Anatolia, which brought the Karamanids into contact with the Ottomans' enemies, the Byz. and other Christians. In 1448 the Karamanids captured Korykos, a possession of the king of Cyprus. After repeated campaigns the Ottomans finally annexed Karaman in 1475.

--E.A.Z.

KARANTENOS, MANUEL, deacon and magistrates of philosophers; fl. ca.1200. In his treatise *On Philosophy and Rhetoric*, Karantenos (Karaμανός) restricted the role of rhetoric to the technical means for presentation of arguments and expressed doubts as to its moral value; he himself used his speech in memory of St. John the Evan-
gelist to praise the saint's homonym, Patr. John X Kamateros. The works of Karantenos, studded with banalities, show but superficial knowledge of ancient authors. He wrote letters (to Constantine Kaloethes, fables, poems (one ascribed in a different MS to Prodromos). It still remains questionable whether Karantenos can be identified with the grammaticos Manuel Sarantenos, the author of an oration delivered at the festival of Lazarus Saturday, and subsequently with Patr. Manuel I Sarantenos (1217–22), an identification accepted by Laurent and Criscuolo.

—A.K.

KARBEAS (Kαρβεάς), Paulician leader of the mid-9th C. died probably in 863 at the Byz. victory of Porrison. Karbeas began his career as a protomandator of Theodotos Melissenos, the strategos of Anatolikon, but fled to Asia Minor ca. 843 with some 5,000 followers from the persecution of the empress Theodora. He established himself on the upper Euphrates, probably collaborated with the Muslim emir of Melite, and founded a separate principality that comprised the centers of Amara, Argoous, and Tephrike as capital. The end of Karbeas's career is not recorded, and scholars have expressed doubts on the participation of Karbeas in the disastrous war of 863 with Byz., which destroyed the emirate. The epic of Digenes Akritas may have preserved his memory in the figure of the Muslim Karoes, the uncle of Digenes' father the emir, but this is impossible to prove.

—N.G.G.

KARÎM AL-DÎN, more fully Maḥmûd ibn Muḥammad Karîm Al-Dîn of Aksaray, Anatolia, high fiscal official in the late Seljuk divan and author of the history Musamarat-ı ahhar (Entertainment of the Chronicles); fl. 1300. This historical work, in Persian, of which only part four is original and important, continues the court chronicle of Ibn Bībî. As an eyewitness and high fiscal official he chronicled the series of events that led to the political and economic collapse of the Seljuks of Rûm in the early 14th C. The decline was accompanied by the rise of nomadism, the weakening of İlkhanid suzerainty, and the proliferation of "armies" of tax farmers. The upheaval was frequently accompanied by physical destruction and the flight of urban and rural populations. Though all segments of sedentary society in Anatolia suffered, the damage to the Christian communities was irreparable; their consequent decline as reflected in the patriarchal synodal acts is explained in this very perceptive Muslim source. He notes that the rapacious tax farmers who destroyed the Seljuk fiscal system did not even know what the jizya (poll tax on non-Muslims) was, even though it had been the single largest source of revenue in the land. He also speaks extensively of the Greek element in the court of İzz al-Dîn Kaikâus II in the mid-13th C.

Lit. Vryonis, Decline 183, 224f, 243–48, 464ff. —S.V.

KARIN. See Theodosiopolis.

KARIYE CAMII. See Chora Monastery.

KARS (Käposé), Armenian fortress and town in the district of Vanand in northeast Anatolia. It was founded in antiquity, but first became important as one of the successive Bagratid capitals (928–61). Conflict over its control first arose in 937 when the prince of Archasia attempted unsuccessfully to have its new cathedral consecrated according to the Orthodox rather than the Armenian rite (Asolik, 3:7). In 962 Ašot III granted Vanand to his brother Mušel, who established a secondary Bagratid dynasty with Kars as its capital. The city grew rich on trade between Ani and Karin (Theodosiopolis) and became an important cultural center under its last king, Gagik-Abas (1029–65), whose portrait has been preserved in the Gospel illustrated for him (Jerusalem, Arm. Patr. 2556; S. Der Nersessian, Armenian Art [London 1982] pl.75) The Seljuk threat, however, caused Gagik-Abas to cede the city to Byz. in 1064/5 in exchange for estates in Cappadocia, and the kingdom of Vanand was added to the theme of Iberia. The Turks retook Kars, however, before the empire could establish control over it.

K'ART'LI'S CXOVREBA. See Georgian Chronicles.

KARYESES (Karpes, Kapea, lit. "nut trees"), now a small village in the center of the peninsula of Mt. Athos; it was the site of the Protaton and served from the 10th C. as center of the monastic federation. In the vicinity of Karyes were a large number of kellia, some belonging to the Protaton, others to Athonite monasteries. This ensemble of kellia was called the laura ton Kareon, with its central church being a 10th-c. basilica dedicated to the Virgin.

Among the kellia was a group founded by St. Sava of Serbia to house monks coming from Hilandar to Karyes on official business. One kelliōn, dedicated to the Palestinian St. Sabas, was designated for two or three monks. In a typikon of 1197 or 1199 (ed. Meyer, Hauptturkunden 184–87) Sava of Serbia specifically exempted the kelliōn from the jurisdiction of the protos of Athos or hegoumenos of Hilandar to assure the security of its sacred furnishings. The typikon also provided that the hegoumenos and monks at Hilandar were to elect the epistates or supervisor of the kelliōn. Although brief, the typikon includes dietary and liturgical regulations, with emphasis on recitation of the Psalter.

Lit. Prot. 116f, 120f. —A.M.T.

KARYTAINA (Karpitaina, name either of Slavic origin or derived from Arkadian Gortyna), city and powerful fortification above the Alphais River commanding the major routes through the interior of the Peloponnesos. There is little evidence of Karytaina before the 13th C.; reused architectural material has led Moutsopoulos (infra) to suggest a 12th-C. church inside the castle. Under Frankish domination, however, Karytaina was the major center of Skorta, one of the great baronies of the principality of Achaia. The first baron was probably Renaud de Briel, followed by his brother Hugues, whose son Geoffrey was the lord of Karytaina featured prominently in the Chronicle of the Morea, and whose possession of Karytaina allowed him to defy the prince of Achaia. The castle fell to the Byz. of Mistra by 1320 and lost its military importance thereafter, although the city on the hillside flourished in later centuries.

The castle crowning the impressive hilltop is completely Frankish in date. Above an extensive circuit wall the fortress itself forms a large triangle; it has a single entrance with barbican, flanked by a tower. On the interior is the palace, a rather simple structure of three rooms built over an enormous cistern. A fortified tower-habitation south of the fortress has been dated to the mid-15th C. The surviving bridge across the Alphais below Karytaina was probably built by the Franks
but revered by a certain Raoul Manouel Melikes (PLP, no.17788) in 1439/40.

KASANDRENOI, or Kassandrenos (Κασσανδρανοι), a family name that probably originated from the toponym KASSANDREIA; the name is frequent among peasants of the region (Lavra 4:284). The landowner Kasandrenos in Chalkidike is attested in a charter of Iveron ca.1094; a charter of 1112 (Docheiari., no.3:13–14) mentions two Kasan-
drenoi, evidently members of the local administration in Thessalonike: the proedros Leo and mag-
istros Theodore. The family was still connected with Thessalonike in the 14th C.; a rich Thessa-
lonian, Alexios Kasandrenos, corresponded with Demetrios Kydones ca.1355; another Kasan-
drenos, logariastes of the court in 1317–20, pos-
sessed lands in the vicinity; Demetrios Kasan-
drenos, a native of the region (died 1362 or a little later), supported John VI and Matthew I Kan
takouzenos; in 1359 he moved to Mistra. He and his daughter, Maria Kanabina Kasandrense, were active patrons of literature and art; Demeti-
arios ordered a Plutarck MS (Milan, Ambros. D 538 inf.), and Maria was a patron of the Bronto-
cheion monastery in Mistra and the Mangana monas-
tery in Constantinople (D. Bassi, Rivista di filo-
logia e d’istrazione classica 26 [1898] 394–96). An
archon Manuel Kasandrenos was active ca.1381, and Kasandrenos Palaiologos (died 1439 on Eu-
boca) participated in the Council of Ferrara-Flor-
ence.

Lit. PLP, nos. 11309–21. —A.K.

KASSANDREIA (Κασσανδρεια). In the late
Roman period Kassandria was a polis and bish-
opric on the site of ancient Potidaia in the Mac-
edonian CHALKIDIKE at the neck of the Kassandra/ Pallene peninsula. It was sacked and destroyed by the Huns in 539/40. Justinian I built a cross-wall at the entrance to the peninsula as the bulwark of the region (Prokopios, Buildings 4:3.21–25). By the 10th C. it reappears in the sources as a town (polichnion—Itiv., no.10.9, later kastron—Dionys., p.118), probably under the command of an archon (Itiv., no.10.13–14) and a bishopric suffragan of
Thessalonike (Notitiae CP 7.301). The fertile land
of the peninsula attracted both the citizens of Thessalonike and the monks of Mt. Athos who
established estates there and exported grain and
other products by sea. A 14th-C. historian (Greg. 1:245.11–13) characterized Kassandrea as a polis
that used to be famous but at his time was aban-
donned. Kassandria was temporarily occupied by
the Catalan Grand Company and served as their
operational base in the winter of 1307/8. Before
1407 John VII built walls “over the old founda-
tions” to protect the peninsula (Lavra 3, no.159.15–
20) and conferred upon several monasteries a part of the state income from land there. In 1419
the kephale of Kassandria, Stephen Radenos, re-
turned to the monastery of St. Panteleemon a
village in the peninsula (Pantel., no.18). During
the Venetian occupation of Thessalonike, ambas-
sadors from Kassandria included among their
complaints to the Republic that the peninsula had
not been sufficiently fortified (N. Svoronos in
Lavra 4:59, no.272). It was probably seized by the
Turks ca.1430.

Lit. E. Oberhummer, RE supp. 4 (1924) 877f. N. Svor-
31–33. —T.E.G., A.K.

KASSIA (Κασσία), also Kassiane, Ekasia, and
other forms of the name, poet; born 800 or 805
(Rochow) or ca.810 (Beck, Kirche 519), probably
in Constantinople, died between 843 and 867.
According to a legend preserved in SYMEON LO-
GOTHETE she competed in the BRIDE SHOW to
select the wife of THEOPHilos but lost to Theo-
DORA. Rochow rejects this legend but believes
that the letters of THEODOROS DE STOUDIOS to “kandi-
datissa Kassia” were addressed to the poet; if this
identification is correct, then Kassia staunchly
supported icon veneration. She was a nun and
founder of a convent in Constantinople.

Various liturgical hymns are preserved under
Kassia’s name; it is not always clear whether they
belong to her or to other hymnographers such as
KOSMAS THE HYMNOGRAPHER (G. Schirò, Diptycha
1 [1979] 303–14). Her troparion To the Harlot
(included in the Triodion) is dedicated to the
A series of iambic gnoma deals with ethical
ideals and weaknesses (friendship, foolishness, etc.)
as well as with specific feminine qualities, includ-
ing beauty; they ignore the norms of ancient
prosody (P. Maas, *BZ* 10 [1901] 54–59) and stress personal antipathies. “I hate,” Kassia reiterates; she hated particularly the illiterate fool who claimed to be knowledgeable, esp. if this fool were “a youth of royal house” (perhaps alluding to her rejection by the young Theophilos).

-A.K.

**KASTAMON** (Κασταμόν, mod. Kastamonu), a fortress commanding the upper Amnias valley in northern Paphlagonia; never a bishopric. The ancestral home of the Komnenoi (Alexios I’s grandfather Manuel Erotikos had his estates in the neighborhood), Kastamon first appears in history when Isaac I Komnenos was proclaimed emperor in 1057. When Alexios I visited Kastamon in 1075, however, the site was desolate from Turkish attacks. It fell to the ĐANIȘMENDIDS before 1101, when the Crusaders were defeated nearby. Kastamon was a frequent goal of the campaigns of John II Komnenos, which briefly restored Byz. rule, but it fell permanently to the Turks in the second half of the 12th C. The substantial castle of Kastamon contains stretches of Byz. walls.

-C.F.

**KASTAMONITES** (Κασταμονίτης), a family name. The name, and perhaps the family itself, originated from the town of KASTAMON. The first firmly dated Kastamonai lived during Alexios I’s reign, but certain family members known from 11th-C. seals (the protospatharios Theodore, the patrikios Nikeyphoros, the vestes Constantine) probably preceded Alexios. The Life of St. MELETTI S THE YOUNGER mentions Michael Kastamonites, an affluent late 11th-C. proprietor in Hellas, but is silent about his titles or offices. At least one Kastamonites, Niketas, was Alexios I’s general, doux of the fleet; involved in a plot against Alexios, he lost his position. His identification with the protoproidos Niketas Kastamonites of 1094 (Gautier, “Blachernes” 257) is not certain. Sometime in the 11th C. an unknown family member founded the KASTAMONITOU MONASTERY on Mt. Athos. Their position declined in the 12th C.: Leo was a dependent *anthropos* of Isaac Komnenos in 1152; John Kastamonites served as a patriarchal secretary; another Kastamonites participated in the embassy of 1170 to Pope ALEXANDER III and to Genoa. The Kastamonaitai reached their zenith in the late 12th C. because of their relationship with the Angeloi. Theodore Kastamonites, Isaac II’s uncle, served as *logothetes ton sekron*; Constantine was *parathalassites* ca. 1203 (*Patmou Engrapha* 2, no. 60.35–36); and Eustathios was imperial *vestiari* sometime between 1195 and 1199 (nos. 56.16, 59.13). They apparently possessed lands in the Smyrna region (Ahreweiler, “Smyrne” 170f), at least by 1234, and served in the local ecclesiastical hierarchy, for example, Stephen Kastamonites, *chartophylax* of Smyrna from 1257 to 1267 (*PLP*, no. 11374). Later Kastamonaitai are rare; some may have acquired their name from the Kastamonites monastery.

-A.K.

**KASTAMONITOU MONASTERY**, located in the interior of the peninsula of Mt. ATHOS, between the monasteries of Docheiariou and Zographou. Virtually no documents survive from the Byz. period, so little is known of its history. Dedicated to St. Stephen, Kastamonitou (*Kastamounitou*) was founded in the mid-11th C., probably by a native of Kastamon in Paphlagonia or a member of the Kastamonites family. Until the 14th C. it was a modest establishment, inhabited by Greek monks.

After a fire in the 1420s, Kastamonitou was restored through the generosity of the Serbian general Radić, attracted numerous slavophone monks, and remained prosperous until ca. 1500. The present monastery is of modern (18th or 19th C.) construction, and officially called *mone tou Konstaomonitou*. The library contains 40 MSS of Byz. date (Lampros, *Athos* 1:36–42). The dates of three supposedly Byz. wonder-working icons in the monastery’s church have not yet been established.

-A.M.T., A.C.

**KASTORIA** (Καστορία, “place of beavers,” orig. name of a lake), fortified polis (Skyl. 355.25) or *kastron* (An.Komn. 2:41.7–12) in western Mace-
donia or Thrace. Anna Komnene described it as located on the top of a hill, on a promontory projecting into the lake of the same name. The city appears first in the description of Bulgar-Byz. wars at the end of the 10th C. By 1018 it was occupied by Basil II. Kastoria was probably founded near late antique Diokletianopolis, built by Diocletian. According to Prokopios (Buildings 4.3.1–4), Diokletianopolis was situated near Lake Kastoria; since it was destroyed by barbarian assaults, Justinian I transferred the city to the mountainous and narrow promontory “and gave it an appropriate name.” Whether this name was Justinianopolis is not clear from Prokopios. As Diokletianopolis the city appears in Hierokles and (anachronistically) in Constantine Porphyrogenetos (De them. 2.38, ed. Pertusi 88).

In 1082/3 the Normans occupied Kastoria but in Dec. 1093 Alexios I recaptured the fortress. In the 13th–14th C. the “great polis” Kastoria (Kantak. 1.451.1–2) was at the center of political struggle in the Balkans. First, as a possession of the despotate of Epiros, Kastoria was attacked by the Nicaeans; John III Vatatzes took it temporarily in ca.1252 but Michael II Komnenos Doukas of Epiros reconquered it ca.1257. Michael VIII won a skirmish near Kastoria in 1259 and seized it after the battle of Pelagonia. In the beginning of the 14th C. Kastoria was in the hands of John II of Neopatras; he titled himself doux of “Great Vlachia and Kastoria.” Then (until 1332/3) Kastoria was within the “fief” of Gabrielepoulos. Andronikos III managed to annex the city but Syrgiannes in 1334 surrendered it to Stefan Uroš IV Dušan. It was finally taken by the Serbs in 1342/3 (Fine, Late Balkans 301), and the truce of 1350 (Reg 5, no.2967) lists Kastoria among the holdings of Dušan. After Dušan’s death Symeon Uroš made Kastoria the center of his principality. Thomas Preljubović and the Albanian family of Musachi claimed rights to Kastoria, but in the mid-1380s it was captured by the Ottomans.

Kastoria had a significant Jewish population; the Jewish scholar Tobia ben Elieser of Kastoria wrote a commentary on the Torah during the reign of Alexios I (J. Perles, BZ 2 [1893] 574ff). A. Epstein (Gesta 21 [1982] 21–29) surmises that the frescoes in the Mavriotissa monastery near Kastoria reflect anti-Semitic sentiment.

The bishopric of Kastoria is known from the 10th C. Its bishop was protothronos-suffragan of Ohrid.

Monuments of Kastoria. The relative wealth of this regional trading center is reflected in the number of medieval churches preserved from the late 9th/early 10th C. onward. No dated dedicatory inscriptions survive. The chronology of Kastoria’s monuments depends on masonry techniques and the style of the surviving frescoes; it must therefore remain tentative. The Koumpelidi, a domed triconch, Hagios Stephanos, and the Taxiarships, both minute basilicas, may be ascribed to ca.900. The Anargyroi, another basilica, appears to have been built and first decorated in the early 11th C. and then redecorated at the end of the 12th C. by a patron named Theodore Lemnites. One of the painters involved in phase two of the decoration apparently also worked at Kurbinovo. Nikephoros Kasnitzes, magistros, funded the construction and decoration of the single-naved church of St. Nicholas in the 3rd quarter of the 12th C. The nave has a cycle of the Great Feasts as well as a handsome proskynesis icon of the patron saint of the church with the portrait of the donor. A cycle of the life of St. Nicholas appears in the narthex. Shifts in painting style suggest that metropolitan trends were familiar to painters working in Kastoria. The particularities of the cloisonné brickwork used in the construction of all these churches, however, reflects the strength and continuity of the local building tradition.

KASTRESIOS (καστρεῖσιος, Gr. equivalent of Lat. comes et castrensis sacri palati), imperial courtier, usually a eunuch, in charge of the emperor’s quarters and provisioning. The post is mentioned first in 319 and last in 612. The vita of DANIHEL THE STYLITE (26.20–21) describes a certain Gela- nios, who was kastresios of the divine table (trapeza)
under Leo I; he possessed an estate near Constantinople. The *kastresios* of the imperial table reappears in the *De ceremoniis*. W. Seibt (BZ 72 [1979] 38) suggests that in the 7th C. the *epi tes traææes* assumed the main duties of the *kastresios*.

The *kastresios* should probably be distinguished from the *kastresios*; in the 10th-C. Taktikon of Benešević (Oikonomides, *Lisies* 251.23), he is listed as a patriarchal official between the *protonotarios* and *referendarios*. He occupies the same position in the synodal lists of the 12th C. (Darrouzès, *Offiæia* 100) and kept functioning as a member of the patriarchal chancery to the end of the empire.  

LIT. O. Seeck, *RE* 5 (1899) 1774f. — A.K.

**KASTROKTISIA** (*kastraktision*, lit. "construction of fortresses"), a fiscal charge, one of the *epeææai*, according to a chrysobull of 1349 (*Docheiar.,* no.25.10). It is first attested in the charter of John Chaldos of 995 (*Ivir.*, no.8.13) exempting the monks of Kolobou from *kastroktisia*, *mitaton*, providing forage and *prosodion* (?), and other *epeææai*. In chrysobulls of the late 11th C., *kastroktisia* is cited along with the construction of roads and bridges (e.g., *Patmou Engræpha* 1, no.3.96, *Laure* 1, no.39.38) and probably designated an actual state corvee. It is unknown when it replaced the late Roman *munera*, which were levied primarily in specie.

Although frequent in later chrysobulls, *kastroktisia* is rarely mentioned in *praktika*. A fragment of a *praktikon* from the end of the 13th C. (*Espig.*, no.7.8) mentions *kastroktisia* of 1.5 nomisma, that is, 1.7 percent of the *oikoumenon*. Forced labor was probably employed in the construction work: in describing Stefan Uroš IV Dušan’s refortification of Berroia in Macedonia in 1350, John Kantakouzenos (Kantak. 3:124.21–24) states that more than 10,000 men worked there; the historian adds that they were assembled from the entire country of the Serbian kral’. To what extent this Serbian episode can be applied to Byz. remains unclear. By the 14th C., however, *kastroktisia* probably began to lose its technical meaning: lists of privileges sometimes include it in a paramilitary context, together with shipbuilding, *mitaton*, and *aplektton* (e.g., *Laure* 3, no.1.18.90–92), sometimes with *psomozemias* and *angareias* (*Xrop.*, no.8.17–18), but sometimes it is associated with nonmilitary and nonconstruction charges such as *orike* and *ennomion* (*Espig.*, no.22.32). On the other hand, a different charge, the *phloriatikon*, known in the Peloponnese in the 15th C., was used for the reconstruction of fortresses (E. Vranoussi, *EiBalk* 14 [1978] no.4:81–83), and the revenue from the *abiotikion* could be used to repair a city (D. Bagiakakos, *Athena* 65 [1961] 199).

**KASTRON** (*kastrateon*), also *kastellion* and *phrou*ron, fortress or citadel. Since *fortifications* became the main external sign of cities, the term *kastron* came to denote the city as a whole. It was applied even to such relatively large places as Ephesus, but never to Constantinople. In the strict sense, *kastron* designated a fortified settlement, usually on a hilltop, distinct from the open lower town or *emporion*. *Kastron*, however small, played an important role in Byz. defense; the state paid particular attention to them, requiring the population to build and maintain them (*kastroktisia*). In the 11th C., when the need for defense against the Turks was paramount, *kastron* were assigned for life to individuals who assumed the obligation of maintaining and defending them. On the death of the concessionaire, the *kastron* returned to imperial control; normally it was put in the charge of a *kastrophylax*.

**KASTROPHYLAX** (*kastrôphylæc*), commander of a stronghold, appointed by the emperor; he was responsible for the maintenance and repair of a *kastron* and for preserving order (*apotibigisis*) within its walls (*Sathas, MB* 6:644.19–23). A 14th-C. ceremonial book (pseudo-Kod. 188.20–22) lists them, together with *prokatæmenoi*, as administrators of *poleis*. The office is attested from the second half of the 11th C. (N. Oikonomides in *Polychronion* 417, n.12), but is more frequently mentioned from the 13th C. onward. Some kastrophylakes presided over small *kastron* (e.g., *Patmou Engræpha* 2, no.70.20); others administered cities such as Smyrna, Thessalonike, and Serres. Their functions are poorly documented in available sources; in 1290 a kastrophylax of Smyrna assisted the *prokatæmenoi* in a civil trial. Their social po-
sition was not of a high rank, and even the kastro-
phylakes of Thessalonike (Demetrios Talapas—
Docheiar., no.48 verso, 5) and Serres (Leo Azan-
ites—Guilou, Ménetée, no.34.65—66; Demetrios
Arethas—Koutoul., no.33.90) did not come from
families of the high nobility. They were sometimes
landowners (Lavra 2, no.90.122).

—A.K.

KATAKALON (Κατακαλῶν, more rarely Κατα-
καλός), a noble lineage, known from ca.900, when
Leo Katakalon was domestikos of the scholae. In the
10th—11th C. some were governors: Katakalon, strategos of Thessalonike; Demetrios Katakalon,
katépano of Paradounavon. Probably some family
members assumed the name of Maurokatakalon
(the “Black Katakalon”); they were military com-
manders in the 11th C. and esp. in the reign of
Alexios I (e.g., Nicholas, his son Marianos, Greg-
ory). As a result of intermarriage with a number of
aristocratic families, many members of the Kaka-
kalon family bore double names: KATAKALON
KEKAUMENOS and Katakalon Klazomenites in the
11th C., Katakalon Bryennios and Katakalon Eup-
herbonos in the 12th C. An anonymous epitaph
praised John Bryennios Katakalon, a soldier re-
lated to the KOMNENOS and married to a daughter of
a sebastos of the lineage of PalaioLOGoi and
Doukal. Constantine Katakalon Eupherbonos,
among the most prominent of Alexios I’s gener-
als, was doux of Cyprus ca.1100. His son Nikepho-
ros married Maria, Alexios I’s daughter. Two of
their sons, Alexios and Andronikos, occupied high
posts in the mid-12th C.; ca.1162 Andronikos
became governor of Cilicia. Another Andronikos
Katakalon served as military commander of Al-
exios III. Later the family declined into obscurity
(PLP, nos. 11413—29).

KATAKALON KEKAUMENOS (Κατακαλῶν
Κεκαυμένος), general; died after 1057. He was
originally from Koloneia and was not an aristocrat
by birth (Skyl. 483.15f). His identification with
KEKAUMENOS, author of memoirs, is not estab-
lished. Apparently sent to Sicily with MANIAKES in

1038, he defended Messina. In 1042 Michael V
appointed Katakalon commander of troops com-
battling an uprising in Constantinople. He was
vestes and archon of the Danubian cities ca.1043,
governor of Ani and Iberia, stratelates of the East
can.1050, and doux of Antioch ca.1056. In 1043 he
defeated the remnants of the expedition of JA-
roslov of Kiev against Constantinople. Anony-
mous verses call him “the light of the Thessalians”
and praise him as victor over the Scythians and
Hungarians (K. Dyobouioniotes, NE 16 [1922] 53—
56). He eagerly supported the uprising of ISAAC
I in 1057 for which he received the title of kouro-
palates. G. Litavin (RESEE 7 [1969] 455—68) sur-
mises that Isaac appointed him strategos of Ko-
loinea. Katakalon is the hero of the last section of
Skytizes’ chronicle (Skyl. 406—500—A. Kazhdan,
IFZ [1975] no.1, 207f.; J. Shepard, REARM 11
[1975—76] 269—311), and Katakalon’s recollec-
tions may have served as a source for Skylizes.

a tumor Kekaumenos,” BSHA 1924 25—36. Kazhdan,
Arm. 31f.

—C.M.B., A.K.

KATAPETASMA (καταπέτασμα), a veil or cur-
tain separating the sanctuary from the nave. Use
of katapetasma is confirmed from the 6th C. in
Egypt and Syria (cf. G. Khouri-Sarkis, Orient syrien
20). The Byz. practice of suspending katapetasma
over the templon door developed from a monas-
tic custom attested from the 12th C. (Nicholas
of Andida, PG 140:445C); occasional references
to the katapetasma in the sources, esp. inventories,
indicate its slow acceptance. Except for some early
Coptic textiles, which might have served as katu-
petasma, all extant katapetasma date after 1453.
The decorative ciborium curtains represented in
the Menologion of Basil II and elsewhere can also be called katapetasma (Symeon of Thessalo-
nike, PG 155:341C).

KATAPHLORON (Καταφλώρον), a family name
that possibly originated from a monastery of St.
Phloros (Florus); the formerly accepted spelling
Kataphloros has been rejected by P. Wirth (BZ 56 [1963] 235f; idem, Eustathiana [Amsterdam 1980] 51), but is retained by V. Laurent in Corpus, vol. 2. The first known Kataphloron was probably John, protosphatharios and commander (archegetes) of the West, whose seal is usually dated to the epoch of the Komnenoi (Guillard, Institutions 1:394); the title of protosphatharios, however, died out by the early 12th C., and its application to the commander of the Western army indicates an earlier date, perhaps the 10th C. A certain Kataphloron was appointed governor of Mesopotamia in the late 1030s; Psellus’s information (Sathas, MB 5:459.18–20), however, does not indicate whether he was a judge or a strategos. John Kataphloron served in 1079 as anagraphheus of Smolena, Thessalonike, and Serres (Lavra 1, no.39.1); the editors considered him a strategos, an office that does not accord properly with his fiscal duties; Dolger (Diplomatik 348, n.4) read strateutes (soldier). Other known members of the Kataphloron family were not in the military: one was praktor in 1089 (Lavra 1, no.50.36–37); another, Nicholas, was magistros ton rhetoron (P. Wirth, CLMed 21 [1960] 213f); Mark was patriarch of Jerusalem ca.1190–95. John went to Venice in 1195 as Alexios III’s envoy; in 1199 he or his namesake served as grammatikos. Eustathios of Thessalonike was probably Nicholas Kataphloron’s nephew (V. Laurent, REB 20 [1962] 218–21). Seals of the 11th–12th C. record an aseketes (Laurant, Corpus 2, nos. 109, 115) and a mystolektes (no.156) of this family.

—A.K.

KATAPHRAKTOS (καταφράκτος, from καταφράσω, “cover up”), an armored horseman mounted on an armored horse. Cataphractarii or ciblanarii were created by the Romans during the 3rd–4th C. in response to their Sasanian enemies (J.W. Eadie, JRS 57 [1967] 161–73). The Strategikon of Maurice portrays 6th-C. heavy cavalrymen, equally adept with lance or bow, wearing knee-length coats and riding horses protected by thick felt coverings (Strat. Maurik. 1.1–2, pp. 74–84). Nothing is heard of them again until the 10th C. when Nikephoros II Phokas developed heavy cavalry anew. His Praecepta Militaria describes kataphraktoi wearing lamellar or mail coats bolstered by padded surcoats, gauntlets, leg- guards, and iron helmets, with an iron mace or a saber as their main weapon. Their horses were protected by carapaces made of felt or thick hides. The kataphraktoi were deployed in a wedge-like formation of 400–500 men with mounted archers in the middle. They identified the location of the enemy commander and aimed their charge at a steady pace directly at him, while regular cavalry units on their flanks followed up the attack. Al-Mutanabbi gives a vivid description of the kataphraktois in a poem about a battle of 954 (Vasiliev, Byz. Arabes 2.2:333) and Leo the Deacon (Leo Diac. 78.21) refers to Phokas’s preparation of “all-iron horsemen,” noting their effect at Tarso in 965 (59.2–22) and in the Balkan campaigns of John I Tzimiskes in 971 (140.10–13).

Heavy cavalry are not specifically attested during the 11th C. but in the 12th C. Manuel I Komnenos enthusiastically adopted the panoply and tactics of European knights (who charged in line with their lances leveled at the enemy) and staged Western-style tournaments (Nik.Chon. 108.53–110.94; cf. S. Lampos, NE 5 [1908] 15–18); the practical effect of these horsemen against the evasive Turks was minimal (R.P. Lindner, JÖB 32.2 [1982] 207–13). Byz. heavy cavalrymen continue to appear in the 13th–14th C., but Western mercenaries supplied the bulk of such cavalrymen in Nicaean and Palaiologan armies.

—E.M.

KATARTARIOS (καταρτάριος, from katarismos, “furnishing”), craftsmen involved in the manufacture of silk. According to the 10th-C. Book of the Eparch (ch.7), katartarioi prepared (katarizin) metaxa, but their precise function is unclear since the meaning of metaxa in this passage is uncertain: if it means cocoons, then the work of katartarioi was reeling, that is, bringing together the filaments from several cocoons to form uniform strands called “raw silk”; if it designates the raw silk itself, then the katartarioi were responsible for the next stage of silk production, forming the raw silk threads into more substantial yarn. Subsequent degumming or scouring gave the silk fibers a brilliant, pearly sheen. R.S. Lopez (Speculum 20

The functions of katartarioi overlapped to a certain extent with those of silk merchants (serikopratai), who sometimes permitted katartarioi to purchase metaxa directly from foreign merchants. This privilege was extended only to wealthy katartarioi; those who were poor (as well as metaxarios, whose status is unclear) had to buy their raw materials from silk merchants. The sale of metaxa was strictly controlled by the eparch: katartarioi had to be listed in the eparch’s register and provide the authorities with testimony concerning their status and moral rectitude. The guild of katartarioi occupied a lower rank than that of the silk merchants, and some katartarioi strove to gain admittance to the guild of silk merchants; to achieve this goal they had to promise to stop manufacturing silk.

KATECHOUMENA. See Gallery.

KATEPANO, or catepanate, a conventional scholarly term to designate the Byz. territories in Apulia that were placed under the administration of the katepano. The katepanate was established by Basil Boioannes after his victory over Melo in Oct. 1018 and existed until Feb. 1042, when Argyros, son of Melo, was proclaimed princeps and dux Italiæ. The Normans who began to penetrate this region in 1041 referred to it as Capitanata.

KATEPEANO (κατεπάνο, deriving from the Gk. adverb epano, “above” [A. Jannaris, BZ 10 (1901) 204–07]), a term used from the 9th C. to designate certain officials: the katepano of the basilikoi in the Klerotogion of Philotheos, the katepano of the marines on a 10th-C. seal (Laurent, Corpus 2, no.962), the katepano of imperial workshops, the katepano of imperial titles (axiomata) in the 11th C., etc. Constantine VII’s identification of the katepano as magister militum (De adm. imp. 27.69–70) is a mere anachronism. The term was often used to denote a commander of a military unit, such as Mardaëtes, and was identical with strategos. By the end of the 10th C., katepano became primarily the designation of governors of major provinces, esp. Italy (Falkenhausen, Dominazione 46–59) and Mesopotamia, in the 11th C. Bulgaria (Litavrin, Bulgaria i Vizantiya 264–73), Antioch, etc. The term in the sense of the governor-doux disappears after 1100, but it continued as a name for local officials, at least in Smyrna in the 12th C. and in Trebizond in the 14th. Accordingly, the term katepanikon, known in both Macedonia and Asia Minor, was used for small administrative units. The term katepanate, often employed in scholarly literature, is not found in Byz. sources, although the Normans created the word Capitana- ta as a designation for southern Italy.

KATHOLIKON, modern Greek term for the main church in a monastic complex; the term does not appear in Byz. sources, although the term *katholike ekklesia* is occasionally found (*Prot.*, no.14.17; *Iviron*, no.15.44). The Byz. normally referred to the principal church as the *naos* or *ekklesia*. Since the liturgy could be said only once a day in any given church, monasteries often contained several small churches and chapels in addition to the centrally located *katholikon*, which was usually dedicated to the patron of the monastery. The Council in *Trullo*, canon 59, required baptisms to be celebrated only in *katholikai ekklesiae*; here the term seems to mean the principal churches of a diocese, as it does in Eustathios of Thessalonike (*Eusth. Thess.*, *Capture* 116.35).

KATHOLIKOS (adj. *katholikós*, universal), Greek term that as noun designated in the 6th C. the archbishop of Persia (*Kosmas Indikopleustes* 2.2.14–15, ed. Wolska-Conus 1:307). In Syriac and Armenian the term appears already in the 5th C.: in the acts of the Council of Seleukeia-Ctesiphon of 410, the bishop of Seleukeia is named *katholikos*, as is the bishop of Arsacid Armenia in the vita of *Mesrop Maštoc*. The heads of the churches of Georgia, Caucasian Albania, and esp. Armenia as well as the Nestorian patriarch were called *katholikoi*. From the 12th C. onward, certain Armenian bishops (of *At’amar*, *Sis*) claimed this title.

The term was applied also to the superior ("the general abbot," *archimandrite*) of a group of monastic communities, e.g., in the region of Amaseia (Beck, *Kirche* 137); in the early 4th C. it was used to denote secular superintendents of finances of large territorial units, *dioeceses* (*Eusebios, VC* 4.36.3, ed. F. Winkelmann, p.134.12).

KATRARES, JOHN, writer and scribe from Thessalonike; fl. 1309–22. It can be deduced from his writings that Katrares (*Katrapros, Katraprios*) was interested in classical philology and was a member of the literary circle that flourished in the early 14th C. around Demetrios Triklinios and Thomas Magistros. He specialized in the copying of ancient works, such as Homer’s *Iliad*, Proklos’s commentary on the *Timaeus* of Plato, the
works of Strabo, and Theon’s commentary on the *Canons* of Ptolemy.

Katrarees composed a satirical poem of 222 ana-
creontic verses attacking the Bulgarian writer
Neophytos Momitzilas or Prodromenos (PLP, no.
19254). He called Neophytos a *Boulgar-albanito-
blachos* and criticized his ignorance of classical
literature, his greed, and his ambition to become
patriarch. The poem includes some Slavic and
perhaps also some Albanian words as examples of
the barbaric speech of Neophytos. Katrarees
also wrote a play in dodecasyllabic verse, of which
unfortunately only a short 37-line fragment sur-
vives; this literary effort, highly unusual in Byz.,
was clearly modeled on *Euripides*. F. Jürss
(BZ 59 [1966] 275–84) has established that Katrarees
was not the author of three dialogues (*Hermippus*,
*Hormodatos*, and *Mousokles*) that had been attri-
buted to him in the past.

KAUSSIYEH CHURCH. See Antioc.

KAVÁD (Καβάδης), king of Persia (488–531),
father of Chosroes I; born 449, died 13 Sept. 531.
He succeeded his uncle Valas as king, but from
496 to 498 lived in exile among the *Ephtalites*.
He fought a largely unsuccessful war against Byz.
(502–06), ended by a seven-year truce negotiated
by Keler. Kavád sought the support of Justin I
in securing the succession of Chosroes I by having
the emperor adopt him. After this plan failed,
relations with Byz. deteriorated in disputes con-
cerning Lazika and Iberia. War broke out in 527
and lasted until Kavád’s death. According to Pro-
koplos (Wars 1.6.19), he governed Persia well since
“in shrewdness and action he was second to none.”

KAVÁD-SHİRÚYA (Καβάδης Σιρόνης), Persian
king (Feb.–Sept./Oct. 628), died Ctesiphon from
poison or in an epidemic. The son of Chosroes
II, Kavád-Shirúya connived to imprison and mur-
der his father and immediately sent an ambas-
sador to Herakleios’s military camp in Ganzak
(arrived on 3 Apr.). The new king asked for
peace and promised to release the prisoners of
war and to send back the fragments of the True
Cross; some sources even present him as a crypto-
Christian (Mango, “La Perse Sassanide” 109f). His
premature death and the succession of his young
son, Ardashir III, weakened Byz. influence in
Persia and impelled Herakleios to use *Shahr-
baraz* as a tool of Byz. interests.

KAYALLA. See Christoupolis.

KAY-KHUSRAW I, Ghiyáth al-Dín (*Γεοβατίνης*),
Seljuk sultan of Ikonion (1194/5–97 and 1205–
11); died near Antioch on the Meander 1211.
Youngest son (by a Greek mother) of Kilic
Arslán II, Kay-Khusraw received *Souchopolis* ca.1188,
then briefly held Ikonion. In 1196 he ravaged the
Meander Valley and carried off about 5,000 cap-
tives. Driven from Ikonion, the sultan sought refu-
uge at the court of Alexios III. He married a
daughter of Manuel *Maurozmes* and resided with
him; Akropolites (Akrop. 1:14.14) says he
was baptized. Regaining his throne, he created a
principalty on the Meander for Maurozmes and
helped Theodore I Laskaris consolidate his rule
(Akrop. 1:11.2–4). Pressing toward the Medi-
terranean, he took Attaleia in Mar. 1207. Around
1209, Kay-Khusraw allied himself with Henry of
Hainault. Around 1210 he was joined by the
refugee Alexios III and used the latter’s claim to
the Nicaean throne as a pretext to attack The-
dore. Early in 1211, Kay-Khusraw pushed down
the Meander but was intercepted by Theodore I
with an army strengthened by 800 Latin knights.
While most of the Latins fell, Theodore slew the
sultan in a duel reported in a contemporary ora-
tion by Niketas Choniates (*Orationes* 172.1–10).

---

KAYSERI. See Caesarea.
KEBRA NAGAST ("Glory of the Kings"), an Ethiopic collection of legends compiled in the 14th C. by a certain Isaac of whom nothing is known. According to the colophon, Isaac translated this work from his Arabic copy, which, in turn, had been translated from Coptic. Budge (infra) assigns the composition of the Coptic original to the 6th C. The work summarizes many biblical books (with particular emphasis on the queen of Ethiopia and her marriage to Solomon) and contains some data concerning the events of the 6th C., for example, the Ethiopian alliance with Justin I, who allegedly met ELESBOM in Jerusalem; Shahid (infra) suggests that these events are presented in the Kebra Nagast in a manner similar to the version of the BOOK OF THE HIMMAYITES. Monophysite in its core, the Kebra Nagast preserves a hostile attitude toward "Rome" (Constantinople) for having deserted the right faith and prophesies that a Persian king will destroy Rome and carry away the apostate together with his horse.

TR. W. Budge, The Queen of Sheba and Her Only Son Menyelek (London 1922).

KECHARITOMENE NUNNERY, founded in Constantinople in the early 12th C. by the empress Irene Doukaina, wife of Alexios I Komnenos. Dedicated to the Theotokos Kecharitomene (Κεχαριτωμένη, "full of grace"), the convent was located in the northern section of Constantinople, adjacent to the male monastery of Christ Philanthropos, which Irene also founded (before 1107). The two institutions were separated by a wall but shared a common water system. The convent is known primarily from the lengthy and detailed typikon drafted ca. 1110 on the model of the typikon of the Euergetis Monastery. Kecharitomene was originally designed to house 24 nuns; the possibility of an expansion to 40 nuns was foreseen. The rule was strictly cenobitic; the nuns did not have separate cells, but slept in a common dormitory. Irene imposed a rigorous rule of enclosure; absolutely no men were permitted to enter the convent except for two priests, the oikonomos, and the spiritual confessor (all four of whom had to be eunuchs), and the physician, who had to be a eunuch or elderly. Adjacent to the nunnery Irene built comfortable apartments to serve as a residence for female members of the imperial family; they were permitted to have servants. It was here that Anna Komnenē retired after the death of her husband and wrote the Alexiad. The convent continued to function as late as the 15th C. when it was visited by the Russian deacon Zosima. No buildings survive.

KEDRENOS, GEORGE, 12th-C. historian; his biography is unknown. The chronicle of Kedrenos (Κεδρηνός), Synopsis historion, encompasses history from the creation of the world to 1057. It is a compilation based on pseudo-Symeon Magistros, Theophanes, and George Hamartolos; from 811 onward Kedrenos slavishly follows John Skylitzes; until the recent publication of Skylitzes, Kedrenos was used by scholars as a substitute.

KEGEN (Keyērēs), a Pecheneg ally of Byz.; died 1050. A tribal leader, he quarreled with Tychar, the Pecheneg chief. Around 1045 or 1046 Kegen became an ally of Constantine IX. He was baptized and made a patrikios. He and his supporters received three Danubian fortresses and used the opportunity to plunder Tychar's followers. After crossing the Danube (apparently 15 Dec. 1046–13 Jan. 1047), Tychar and his tribes were defeated and settled near Serdica (before Apr. 1047). His followers rebelled (1048) and occupied an area between the Danube, the Balkan range, and the Black Sea, while Kegen's people kept themselves separate. To deal with the crisis, Constantine summoned Kegen and his army to Constantinople. There three Pechenegs assaulted him. They later convinced Constantine that Kegen had intended to plunder the city, and the emperor had him
imprisoned. In 1050, after repeated Pecheneg victories over imperial forces, Constantine released Kegen and sent him to divide and conquer his compatriots. No sooner had he arrived than he was cut to pieces.

KEKAUMENOS (Κεκαυμένος), author of a book of advice; born southern Macedonia; between 1020 and 1024, died after 1070. His biography is little known. Kekaumenos’s identification with the general Katakalon Kekaumenos is now rejected by the majority of scholars. He was of mixed Armenian and Slavic origin. In 1041 he participated in an expedition against Peter Deljan, in 1042 he witnessed the deposition of Michael V, and eventually he held an administrative position in Greece. The thesis that he belonged to the military aristocracy, as recently emphasized by Litavrin (infra), cannot be proved.

Kekaumenos wrote a unique moralistic work known under the conventional titles Strategikon or Precepts and Aneides and sometimes considered to be composed of two independent pieces. It is an indoctrination in “proper” behavior, addressed both to his sons and to those in various positions in society: emperors, generals, civil functionaries, patriarchs, provincial magnates, toparchs. The social orientation of Kekaumenos’s advice remains under discussion. According to Litavrin, he expressed the views of the military aristocracy; according to Kazhdan, those of civil officials. The main tendency of his ethics is circumspection and apprehension: man lives in a dangerous and hostile world and cannot trust anyone; neither friends nor servants are reliable. Abstract admonitions are combined with vivid stories (often the experiences of Kekaumenos’s relatives) about military ruses (in their style very close to John Skylitzes) and everyday cunning. The work also contains abundant information on political events, esp. in the Balkans, Armenia, and on the Byz.-Arab frontier.

KELER (Κέλερ), or Celer, official of Illyrian origin, consul (508); died after 520. Magister officiorum (503–18), he was named commander in the East with Areobindus and Hypatios. He conducted several years of successful campaigning, freeing Roman cities and devastating Persian territory. He was the principal negotiator of a seven-year truce, signed in 506, the reward for which was undoubtedly the consulsiphip. In 511 he supported Anastasios I against Patr. Makedonios II (496–511) and put down crowds opposed to the emperor’s Monophysite policies. Keler reluctantly accepted the accession of Justin I in 518, did not attend the emperor’s elevation (A. Vasiliev, Justin the First [Cambridge, Mass., 1950] 82), and had to retire from the post of magister officiorum. In 519/20, however, he corresponded with Pope Hormisdas concerning the end of the Akarian Schism. He is an example of a talented and loyal official, competent in both civil and military matters, upon whom the emperor could depend (see John Lydos, De mag. 3.17).

KELIA (Κέλλια, lit. “cells”), the largest Early Christian monastic settlement in Egypt, near the western edge of the Nile Delta. Approximately 1,600 individual dwellings have been identified; most of them were built from the 6th to 8th C., and inhabited until about the 9th C. Each unit contains separate rooms for two monks, an oratory, a reception room, and a kitchen. Usually there is also a well and a garden, all surrounded by a wall. Many have their own defense tower (jawsaq), and some even a small church. In the two main settlements, two large complexes (Qasr Wakhāya and Kūm ʻĪsā South I) have been excavated, regular units which later served as community centers of the lavra. They have towers, refectories, and several churches. The earliest church, a single-aisled chapel of ca.400, stood in
Kūm Īsā South I. By the late 8th C. most of the monks had abandoned their little cells and moved into these larger units. The site of Kellia is rapidly disappearing, threatened by encroaching agriculture.

-F.G.

KELLION (κελλίον) or kella (κέλλα, κέλλη), interchangeable terms for several types of monastic cell. (1) A cell in a koinobion, housing one or two (Typikon of Euergetis Monastery, ed. P. Gautier, 67.917) monks. In their cells monks slept, prayed, and read; recited certain offices privately; and, where appropriate, did handwork. They were forbidden to eat or keep food in their cells. Aristocrats who retired to a monastery sometimes had a suite of kellia (Typikon of Kecharitomene Nunnery, ed. P. Gautier, 137.2102). (2) A monastic cell at a lavra; a monk who lived in a lavra (in contrast to a koinobion) was frequently called a kelliotes. (3) The cell of a hermit. (4) A small monastery, as on Mt. Athos, the kellia of the late Antony (Prot. 86, n.245).

Lit. Meester, De monachico statuto 70-72, 99f., 309f.

-A.M.T.

KELTZENE (Κελτζένη, mod. Erzincan), a fortress and region (anc. Keliseene) on the north branch of the Euphrates in eastern Anatolia. A tourma of Chaldia, Keltzene was combined with Kamacha by Leo VI to form the theme of Mesopotamia. Keltzene was a base of Romanos IV during his expedition against the Turks, to whom it fell after the battle of Mantzikert (1071). Its bishop, attested in the late 9th C. as "suffragan of Kamachos," became metropolitan by the end of the 10th C. (Notitiae CP. 8.60); his see contained 21 suffragans. In the 14th C., under an independent Muslim ruler whose subjects were mostly Armenian, Keltzene was in frequent relation with the empire of Trebizond.

-C.F.

KENARIOS (κενάριος), an official whom Seibt considered as a subaltern to the epi tes trapezes or a stage in the transformation of the kastresios to epi tes trapezes. The kenarios is mentioned in very few documents: a seal from ca.800, a letter of 896. According to Seibt, an Armenian David (Dawit), a translator of Greek in the first half of the 9th C., was also hypatos and kenarios of the imperial trapeza.

-A.K.

KENCHREALI (Κεκνχρεαί), eastern port of Corinthis on the Saronic Gulf. The site flourished in late antiquity, reflecting the volume of trade between Corinthis and the East. Particularly significant is a building identified as a temple of Isis on the southern harborworks; according to the excavators this building was being lavishly restored when the city was devastated by an earthquake, probably in 375. A series of Egyptian glass panels in opus sectile had been brought to the site, perhaps for decoration of the Isis temple, but the warehouse in which they were stored sank in the earthquake and the panels were never used. They depicted Nilotic scenes and two remarkable portraits of Homer and Plato. A passage in Claudian (In Rufinum 2.190) suggests that both the harbors of Corinthis were burned by Alaric. Later a Christian basilica was constructed near the former temple. Coin hoards found at Kenchreai have been taken as evidence of the Slavic invasions in the 580s (R.L. Hohlfelder, Hesperia 49 [1979] 89-101; East European Quarterly 9 [1975] 251-58). The so-called Iconoclast notitia seems to list Kenchreai as a bishopric (Notitiae CP. 7.36: Kiknipeos in the text, a correction suggested by N. Bees), but this is unlikely. Scattered references show that the harbor continued to be used as late as the early 15th C.; Manuel II used it as his base for reconstruction of the Hexamilion. Pottery from the excavations spans the entire Byz. period and the latest coin find is a Venetian issue of the doge Antonio Venerio (1382-1400).

-T.E.G.

KENTARCHOS (κένταρχος), subaltern officer in the army and fleet. The Taktika of Leo VI (4.11) defines the kentarchos, or hekatontarchos (Lat. centurio), as commander of a hundred men; the same
definition is given in the Naumachika of the para-
koimo.renos Basil (ed. A. Dain, 4.2, pp. 66f). The
first mention of the term is in an early 9th-C.
chronicler (Theoph. 287.7), who states that Pho-
kas was kentarchos in 602 when he revolted against
Maurice; the chronicler’s source, Theophylaktos
Simokattes (Theoph.Simok. 296.13), however,
called Phokas hekatontarchos. The term was in use
in the 9th and 10th C. The Kleitorologion of Philo-
theos mentions the kentarchos in various military
contingents and themes, under the command of the
droungarios tes viglas, as well as civil kent-
tarchoi in the vestiarion. They served also in the
fleet.Nikephoros Ouranos (Naumachika, ed. A.
Dain, 7, p.73) mentions the kentarchos of a drom-
on and a seal of the 10th C. belonged to Chris-
topher, spatharios and kentarchos of the imperial
fleet (Laurent, Corpus 2, no.988). The word ken-
tarchia (Taktika of Leo VI 16.4) designated a mili-
tary unit. Basil II, in his novel of 996 (Zepos, Jus
1:265.25), while accepting the definition of the
dynatoi suggested by Romanos I, added to their
number also the protokentarchoi—"as a matter of
fact, we recognize them as dynatoi."

LIT. Ahrweiler, Mer 169.

KENTENARION (κεντηνάριον), a weight of Ro-
man origin (centumpondium, centenarium) equal to
100 logarikai litrai [= 32 kg]. The term talanton
was used synonymously in some classicizing texts.
From the mid-6th C. kentenarion often meant a
quantity of 100 logarikai litrai of gold or gold coins.
Rarely, kentenarion was used as a unit of 100 mo-
doi or as a synonym with litra.

LIT. Schilbach, Metrologie 109.174. G. Dagron, C. Mor-
risson, "Le Kentenarion dans les sources byzantines," RN®

KEOS (Κέος, mod. Kea), island in the Aegae-
atic Sea southeast of Attica; in late antiquity it was
part of the province of Achaia. Mention of Keos
in Byz. times is rare. In 710/11 when Pope Con-
stantine I was journeying toward Constantinople,
Byz. officials gathered on the island quae dicetur
Caea to meet him; among them was Theophilos,
strategos of the fleet (Caravissani) (Lib.pont. 1:390).
Michael Choniates, who found refuge on Keos
after 1204, described resistance to the Venetians
by inhabitants of the island; Keos remained in-
dependent until 1211. Soon after 1261 the proto-
strator Alexios Philanthropenos attacked several
Aegaean islands, including Keos, and ca.1279/80
Licario of Karystos, a Byz. mercenary, captured
it (Jacoby, Φεόδαλτι 69). The Venetians retook
Keos by 1301, and the island was divided among
noble families (Giustiniani, Ghizzi, Sanudi) under
the suzerainty of Venice. They held Keos until
1566.

A three-aisled Early Christian basilica has been
discovered, probably constructed on the site of a
temple of Demeter (Pallas, Monuments paléochrétiens
202). The major settlement was at the ancient site
of Ioulis, where a fortress was constructed in the
13th C., and probably rebuilt in the 15th C.
(J.-C. Poutiers, ByzF 11 [1987] 389). The Church of
the Holy Apostles at Kato Meria has frescoes of
the 13th C. The bishop of Keos was a suffragan
of Athens (Notitia CP 3.689).

KEPHALAIOS. See Chapters.

KEPHALAION (κεφαλαίον, chapter, item, or ar-
ticle). In addition to referring to the literary genre
of Chapters, kephalaion was a fiscal term desig-
nating articles of taxation in general. Lexical simi-
ilarity with the Latin capitatio led some scholars
(e.g., G. Ostrogorsky, SemKond 5 [1932] 320) to
believe that kephalaion was the poll tax. Although
the term could be used for taxes in general ("no
new kephalaion must be introduced"—Xénoph.,
no.29.21) or for the description of the entire
amount of taxes paid by a monastery (Actes de
Philothee, ed. W. Regel, E. Kurztz, B. Korabev
[St. Petersburg 1913; rp. Amsterdam 1975] no.6.13-
15), there is no evidence of its use to mean poll
tax. Nor did its cognates such as kephaliographon
(MM 4:318.19) or kephaletion (a special tax im-
posed upon Jews?) have this meaning. Kephalaia
were also "chapters" of fiscal cadasters (kódidix)
in which a single tax unit was registered.

A.K.

KEPHALAS (Κεφαλάς, from κεφαλή, "head"), a
family known from the early 10th C., although
not in the elite: a priest Constantine Keph alas compiled an anthology (see KEPHALAS, CONSTANTINE). Nothing links later members of the Keph alas family to him. Leo Keph alas, son of Alexios I’s doulos, became a prominent military commander and ca.1086 katepano of Abydos. Alexios I endowed him with lands that were transmitted by a chrysobull of 1089 to Leo’s children. In 1115 Nikephoros, Leo’s son, donated his lands to the Lavra of St. Athanasios on Athos; Nikephoros’s relative, Theodore Keph alas, was hagoumenos of the Lavra. A certain Keph alas was an influential provincial functionary in the 1180s. The family was still active but not prominent in the 14th C.: a Keph alas was kommerkiarios in 1332; Gregory Keph alas was first ostiarios in 1285; Keph alas Laskaris is called imperial doulos in 1373. Charters connected with Leo Keph alas’s estates are published in Lavra 1, nos. 44–45, 48–49, 60. The reading of Keph[alas] on an 8th-C. seal of a certain Basil (Winkelmann, Quellenstudien 158) is questionable.

KEPHALAS, CONSTANTINE, compiler of a collection of epigrams; fl. ca.900. His biography is unknown; he is identified with protopapas (palace chaplain) Constantine Keph alas mentioned by chroniclers (e.g., TheophCont 388.24) as active in 917. For his collection Keph alas (Kefalas) used ancient anthologies, some epigrams (Agathonias), and texts that the magistros Gregory of Kampsia (in Macedonia) copied down from inscriptions during his travels in Greece and Macedonia. The work is typical of 10th-C. encyclopedism (Lemerle, Humanism 310). Keph alas’s collection was frequently used in the Souda and enlarged by the anonymous editor of the Anthologia Palatina (see Greek Anthology). The original version of Keph alas’s collection is not preserved.

KEPHALE (kefalή, lit. “head, chief”), from the second half of the 13th C. through the end of the empire, a term of colloquial origin denoting the highest functionary of provincial administration. From the middle of the 13th C. the office of kephele (kephalatikon) gradually replaced that of the doux. By the 14th C., the kephele was the combined civil and military administrator of the primary provincial administrative unit, no longer the theme but a much smaller area called a katepanion, usually no larger than the immediate environs of a kastron. The title kephele, found almost exclusively in documentary sources, remained an epithet of function—hence, the participial common forms, ho kepheleis(is)khemon and ho eis kepheleis heuriskomenos—and never became a courtly, hierarchical rank; thus, most kepheleis also possessed courtly ranks. While most kepheleis were governors of kastria, their jurisdictions varied, sometimes extending over islands or groups of villages. On the other hand, during the 14th C., perhaps as an attempt to maintain central control over the provinces, some kepheleis (katholikai [“general”] as distinguished from merikai [“local”] kepheleis) had jurisdiction over larger areas, sometimes entire provinces. These katholikai kepheleis were usually related to the emperor or were members of very prominent families. During the later 14th C. the katholikai kepheleis generally disappeared as the areas where they were found, the Morea, Thessaly, and Thessalonike, became appanages.

Lit. Maksimović, ByzProvAdm 117–66. —M.B.

KEPHALENIA (Kέφαλ(λ)εια, also Kephalonia), island in the Ionian Sea. In late antiquity it was part of the province of Achaia and metropolitan see of Epiros I. Its political significance increased after Byz. had lost northern Italy, since Kephalenia became the major base of communication with Sicily and southern Italy and a strategic center against Arab attempts to penetrate the Ionian Sea. Information about the administrative structure of Kephalenia is confused, Constantine VII Porphyrogenetos (De adm. imp. 50.85–87) asserting that Kephalenia was a tovra of Longobardia until Leo VI (?) transformed it into a strategos; he also affirmed (De them. 7.1–2, ed. Pertusi 91) that Kephalenia had never been a theme. On the other hand, all the taktika, beginning with that of Uspsenskij, list the strategos of Kephalenia, a Latin chronicler mentions its strategos Paulos in 809 (MGH SS 1:196f.), and various seals of its strategoi are preserved, some of which are dated to the 8th C. (Zacos, Seals 1, nos. 919, 2657, 3200). Other functionaries in Kephalenia
were the *kommeriarios* of Hellas, the Peloponnesos, and Kephallenia (no.1865); the *protonotarios* (no.1561); and the *tourmarches* (Laurent, Méd. Vat., no.96)—all attested in the 9th C. By that time a group of the *Mandartai* was resettled in Kephallenia (*De cer.* 668.8—10) and the island served as a place of exile for political prisoners (Theoph. 372.8).

The final Byz. retreat from Italy diminished the role of Kephallenia. The island was administered by a judge-*kritis* (*Zacos, Seals* 2, no.674). In 1085 the Normans unsuccessfully besieged the main city, in 1126 it was plundered by the Venetians, and in 1185 taken by William II of Sicily and lost to the empire. The Orsini held it as a fief from Venice, in 1357 it came definitively under the power of the Tocco. The Turks occupied Kephallenia in 1479, but in 1500 it was seized by Venice.

In antiquity there were four cities on the island and these survived into late antiquity: Samos presumably as capital and Panormos (mod. Phiskardo) with civic status. From circa the 8th C., the main settlement had moved to Hagios Georgios, a defensible site near the center of the island. A survey of the island drawn up for the Latin bishopric in 1264 provides many details of topography and agrarian relations (ed. Th.S. Tzanemetatos, *To praktikon tes Latinites episkopos Kephallenias tou 1264 kai he epitome autou* [Athens 1965]).

**KERAMION** (κεράμιον) or *keramidion* (κεραμίδιον), the Holy Tile, a relic that had the features of Christ impressed on it through contact with the *Mandylion*; it is a unique example of one *acheiropoietos* producing another. Legends about its origin vary, one deriving it from Edessa, the other from Hierapolis in Syria; in both cases the Mandylion was hidden away between tiles, which received the miraculous impression. According to various traditions, either Nikephoros II Phokas in 966 or John I Tzimiskes in 974 removed the Holy Tile from Hierapolis (N. Eliséeff, *Et* 2 6:379) and took it to Constantinople where it was housed in the Pharos chapel of the *Great Palace*. The Keramion, an early representation of which occurs at Lagoudera, was never a common theme; it generally serves as a pendant to the Mandylion, often between the pendentives of a church, or side by side with it, as in a 12th-C. MS of John Klimax (Martin, *Heavenly Ladder*, fig.231). It does not occur on icons, probably because it had no feast in the church calendar.

**KERASOUS** (Κερασούς, mod. Giresun), city of the Black Sea coast, west of Trebizond, important as a port and the terminus of a road to Koloneia and the interior of Asia Minor. Kerasous was seat of a *kommeriarios* (usually of Lazika, Kerasous, and Trebizond) in the late 7th C. (*Zacos, Seals* 1, nos. 164, 178f) and of the imperial *kommerkia* in the 730s (*Zacos, Seals* 1, no.250). In the 11th C. it may have had a local scriptorium that produced the Kerasous Gospels, whose illustrations show some Armenian characteristics. Under the empire of Trebizond, Kerasous was the headquarters of a *bandon* and the western bastion against the Turkomans. In Sept. 1301 the Trapezuntine emperor Alexios II Komnenos defeated them at Kerasous; his victory was eulogized by Stephen Sgouropoulos who also mentions the construction of the local fortress. The fortifications show two main periods, the first probably of 1301; they were maintained until the Turkish conquest in 1461.

Kerasous was a suffragan bishopric of *Neokaisareia*, first attested in 431; by 1079 it was a metropolis without suffragans. Its church was in close contact with that of Alania (N. Bees, *Arch-Pont* 16 [1951] 255—62).

**KERATION** (κεράτης, Lat. *siliqua*), lit. the seed (bean) of the carob or locust tree (*Ceratonia siliqua*). It was widely used in the Near East as a unit of weight, with slight variations of standard from one region to another. The Greco-Roman *keration* was 0.189 g and the pound (see *litra*) was reckoned at 1,728 keratia, that is, 12 oungi of 144 keratia each. The *solidus*, 1/72 of the pound
and 1/6 of the ounce, weighed 24 *kerattia* so that the *keration* became, as 1/24 of the solidus, a unit of account. It was also a unit of fineness for gold, that is, the English *carat* or 1/24 part, since the solidus was of pure gold and therefore 24 carats fine.

—Ph.G.

**KERČ.** See BOSPOROS, Cimmerian.

**KERIMADDIN OF AKSARAY.** See Karīm al-Dīn.

**KERKYRA (Κέρκυρα, Corfu, with many variants, archaistically known as Phaiakia, etc.), island (and its primary city) in the Ionian Sea. The ancient city, on the east central coast, was an important way-station in the journey between Constantinople and the West; it was destroyed by the Goths in the 6th C. but was probably resettled soon thereafter (I. Papademetriu, *StB* 6 [1940] 340). Constantine Porphyrogennetos (De them., 7.5, ed. Pertusi, p.92) mentions only Homeric Kerkyra, the kingdom of Alcinous. Some legendary data are preserved in the vita of St. Arsenios of Kerkyra, probably compiled by George Bardanes, which mentions a "Scythian" attack on Kerkyra in the mid-10th C. Skylitzes (Skyl. 385,57–58) relates that in 1093 the Saracens burned Kerkyra. According to Anna Komnene (An.Komm. 1:57,14–15), Robert Guiscard seized the "well-fortified polis of Korypho" in 1081, but the island resisted the Normans and probably remained semi-independent, under the command of its *dous*; at any rate, Bohemund, after his flight from the East, felt secure on Kerkyra. During the expedition of 1147 the Normans, supported by a local population irritated by heavy taxes, again captured Kerkyra. After a long siege Manuel I took Kerkyra in 1149, hoping to use it as a base for an attack on Sicily. In 1204 the Venetians seized the island. In 1214 Kerkyra fell under the control of the despotate of Epiros and in 1246 the *despotes* Michael II Komnenos Doukas renewed an earlier grant of considerable autonomy to a collegium of 33 priests, maintained by most of the island's Western rulers. In 1259 Michael II granted Kerkyra as dowry to MANFRED of Sicily and by 1272 the island was under the control of CHARLES I of Anjou. In 1382 Kerkyra was in Navarrese hands and in 1386 it was ceded to Venice. After the fall of Constantinople and the Morea many Byz. fled to Kerkyra.

According to legend (*Synax.*CP 633,6–18), the church of Kerkyra was founded by two disciples of St. Paul, Jason of Tarsos and Sospatros of Achaia, who erected there a shrine of Stephen the First Martyr; its bishops participated in councils from 325 to 787. They were suffragans of Nikopolis, then of Kephalenia. In the 11th C. Kerkyra was elevated to the rank of metropolis (Laurent, *Corpus* 5,1:618); the seals of several metropolitans from the 11th to 13th C. are preserved. A Latin archbishop is attested first in 1228; the Orthodox were meanwhile under the authority of a protopapas.

In the ancient city, about 2 km south of the modern center, are the remains of the five-aisled basilica of Jovian (Iobianos), dated to the 5th C., rebuilt in the 12th C. as a single-aisled church, and several other churches of various dates. The cross-in-square Church of Jason and Sospatros, *katholikon* of a monastery, was built ca.1000. Approximately 17 km northeast of the town is the Chapel of St. Merkourios, dated by an inscription of 1074/5 ascribing construction and decoration to the patronage of the *droungarios* Nicholas and his brothers. P. Vucotopoulos (CahArch 21 [1971] 151–80) saw in the frescoes of this and other churches on the island elements of the style of *Hosios Loukas*, reflections of Kerkyra's role as a station between Greece and Italy. Fortications at Angelokastron on the west coast have been dated to the 11th/12th C.

**KEROUARIOS (Κηρουλάριος), a family name meaning "candlemaker." P. Gautier (*REB* 27 [1969] 342) suggested that Keroularios was not a family name but merely the sobriquet of a single man; the name, however, was applied to several family members, and the patriarchal catalog (V. Laurent, *EO* 35 [1936] 76f) describes Patr. MIchael I as belonging to the Keroularioi—as Constantine III belonged to the Leichoudai. Psellos (Scripta min. 1:318f) praised the family (perhaps ironically) as an ancient lineage, the descendants of Herakles. The first known Keroularios was a high financial official in the early 11th C. Two of
his sons plotted against Emp. Michael IV in 1040 and were exiled; one eventually became Patr. Michael I. Peira 65:2 relates a litigation between a certain Keroularios and his brother's widow; since Peira is very unlikely to reflect a case after 1040, this Keroularios must not be the patriarch but rather an older relative (A. Kazhdan, ByzF 12 [1987] 711). Two of the patriarch's nephews were high-ranking civil officials. One of them, Constantine, Psellus's correspondent, was megas droungarios tes viglas and acquired the title of sebastos; Psellus knew him also as a land and slave owner. The case of his will was under investigation by Nikephoros III (Reg 2, no.1054). Constantine and his brother Nikephoros supported Isaac I Komnenos in 1057. Eudokia Makrembolitissa was the patriarch's niece, and her husband, Constantine Doukas, has also been called the patriarch's nephew. Michael, Constantine Keroularios's son, was like his father droungarios tes viglas; he was Alexios I's gambros (by a niece); he seized his father's fortune, to the detriment of his younger brothers, and Alexios sanctioned his actions in 1082. Several documents of the period, including a charter of 1109, mention Michael, sebastos and logothetes (Lavra 1, no.58.24); Tzetzes also mentions him. According to Tzetzes, Constantine's daughter married a tax collector named George, Tzetzes' own grandfather (P. Gautier, REB 28 [1970] 217-19). Although the Keroularioi appear to have been mostly civil functionaries, an epigram ridicules a strates Keroularios, son of a candle merchant (K. Dyobouniotes, NE 16 [1922] 45-13-14).

**KEtos.** See Jonaih.

**Keys.** Two kinds of key-lock systems, sliding and turning, were used in Byz. The sliding key-lock system was the earlier and mechanically more complex. Its distinguishing feature is a bit composed of raised teeth attached at right-angles to a rectangular shaft. The bit is passed in a rotating motion through the lower extremity of an L-shaped hole in the lock plate. It is then raised until its projecting teeth displace from the bolt a series of pins or tumblers held in place by a spring. Once engaged in the perforations, the key is used to draw the bolt along horizontally, out of its seating. A high level of security was afforded by the fact that only a bit with teeth precisely matching the perforations in the bolt could be raised into those holes and thereby force out the restraining pins. Such locks were esp. preferred and popularized by the Romans, with whom they are customarily associated. That they remained in use in Constantinople at least until the 6th C. is clear from the marble doors in the South Gallery of Hagia Sophia; their carefully sculpted lock plates reveal a sliding key mechanism of surprising accuracy and detail.

The turning key, simpler than the sliding key, was the more popular key-lock system in Byz.; in appearance and mechanics it resembled the old-fashioned skeleton key still in use today. The turning key is inserted through a narrow vertical slit in the lock plate and then rotated so that its panel or bit will lift, release, and ultimately advance or retract a bolt that is held in place by a spring. Only a bit of the proper height and depth will successfully engage the bolt; occasionally, restraining bars or "wards" are set within the lock chamber that further require that the bit have corresponding notches in order to rotate. Nearly all surviving turning keys are bronze, with a movable joint between barrel and hoop. Hoops vary in design (including quatrefoils, zoomorphic motifs, and beads), as do bits, although the technical simplicity of the latter presupposes the use of seals for additional security. Indeed, some turning key hoops bear ring bezels with incised sealing devices. (See also Locks and Padlocks.)

Lit. Vikan-Nesbitt, Security 2-5. —G.V.
KHAČATUR (Χαχάτουρος, Χαχάτουρος) in Greek sources, Arm. Խաչատուր, Byz. general, Armenian by birth, whom Romanos IV appointed doux or katepano of Antioch in 1069. After the deposition of Romanos, Khačatur sided with him against Michael VII but fought unsuccessfully, was taken captive by Andronikos Doukas, son of Caesar John, and probably perished in 1072. His identification with the Armenian Pekht or Bekht (doux of Antioch in 1065 according to Matthew of Edessa, in 1069/70 according to Ibn al-Aṣim) has not been proved. H. Grégoire (AIPHOS 2 [1934] pt.1, 459–63) suggested that reminiscences of Khačatur were reflected in the image of Asator in the fifth book of the Turkish epic Said Battal.

KHAĞAN (χαγάνος), title used by Central Asiatic peoples to designate the holder of supreme political authority. According to some scholars the word was borrowed by the Turkic peoples from the Juan-Juan (a group of Asian Avars) with this specific sense. Byz. authors use this title to refer to the rulers of the Avars, Turks, Khazars, and Bulgarians; in the Latin Annales Bertiniani, sub anno 839, the term is applied to the prince of the Rus'. It is also utilized in the corpus of the so-called Orkhon inscriptions of the Gök Turks. Mongols used a version of this word, and it was adopted by the Ottoman sultans as well.

KHÁLID (Χάλεδος), more fully Khálid ibn al-Walíd; a prominent early Muslim commander and conqueror of Byz. Syria who was known as "the Sword of God." An early opponent of Muḥammad, Khálid converted to Islam in 627 or 629. He participated in an expedition to Mu'ta in 629, where the Byz. commander Theodore defeated him. According to Arabic sources, Abū Bakr sent Khálid to conquer al-Hira in Iraq in 633, which he accomplished, but non-Muslim tradition knows nothing of this conquest. Khálid crossed the desert to assist beleaguered Muslim armies in Syria in 634. He surprised the Byz. defenses and conquered Bostra, contributing to the Muslim victory at Ajnādayn and the first Muslim conquests of Damascus and Emesa. He participated in the battle of the Yarmuk and in the second and final conquests of Damascus and Emesa. 'Umar removed him from supreme command, but he participated in other expeditions against the Byz. in northern Syria.

KHÁQANÍ, more fully Afdal al-Din Ibrāhīm Khāqānī, a panegyric poet who wrote in Persian; born Azerbaijan 1121/2 or 1126, died Tabrīz 1199. His mother was for a while an adherent of the Nestorian creed, and Khāqānī displayed an interest in and knowledge of Christianity that was unusual in the East. He lived in Shirwan, which was under the supreme rule of Georgian kings, and in an ode he praised the king of Georgia, Demetrios I (O. Vilčevskij in Issledovanija po istorii kul'tury narodov Vostoka [Moscow-Leningrad 1960] 56–60). He traveled much, but his career was not successful. In 1159 he was put in prison. In 1184 he fled from Shirwan, hoping to go to Khūrāsān, but was forced to return to Tabrīz, where he spent his remaining years.

In a poem addressed to Manuel I Komnenos, Khāqānī mentions his visit to Constantinople and describes the religious discussions that took place in the Byz. capital ca.1166 concerning the relationship of the Father and the Son. When Andronikos (I) Komnenos came as an exile to Georgia and participated in the battle of 1173 against the Rus', Khāqānī praised his high qualities and offered him his services.

KHAZARIA (Χαζαρία), the land of the Khazars. The term was applied to the Khazar khaganate, which Constantine VII Porphyrogennetos places near Rhosia, Zichia, Alania, Black Bulgaria, the land of the Uzes, and Lebeda where the Hungarians had dwelt. In the episcopal notitias the term designates a Khazar bishopric under either the metropolitan see of Gothia (see Notitiae CP,
no.3:777–79), or possibly under the guidance of the archbishop of Cherson; the latter is mentioned in a letter of Patr. Nicholas I Mystikos (ep.68.12–21). In Greek texts of the 14th and 15th C. Khazaria means the “Crimea” and, accordingly, Italian documents call the peninsula “Gazarie.” Skylitzes’ evidence (Skyl. 354.90–94) that in 1015/16 Basil II sent a fleet to Khazaria and, with the help of the Rus’, captured “the archon of the land,” George Tzoules, refers not to the Khazars (thus Moravci, Byzantinoturcica 1:82f), but to a revolt in Cherson (E. Skržinskaja, VizVrem 6 [1953] 266f).

-O.P.

KHALUDOV PSALTER. See Psalter.

KIBOTOS. See Noah’s Ark.

KIBYRRHAIOTAI (Ки́йрра́йотаї). First and most important of the naval themes, Kibyrhraithiotaı originally designated part of the fleet of the Karabianoi under a droungarios attested in 698. With the dissolution of that fleet, Kibyrhraithiotaı became a theme; its strategos is first mentioned in 734. Kibyrhraithiotaı comprised the coasts of Asia Minor from Miletos to Cilicia, together with the interior of Caria, Lycia, Pamphylia, and parts of Isauria. This region provided raw materials, supplies, and recruits for the thematic fleet, which protected the coast and was used for campaigns against the Arabs. The coast of Kibyrhraithiotaı was so devastated by Arab attacks that large areas became depopulated and only a few fortified cities and naval bases (Attaleia, Syllaion, Seleukeia) survived. The strategos of Kibyrhraithiotaı was a naval commander whose main subordinates were the katepano of the Mardaiotes, the ek prosopou of Syllaion, and the droungarios of Kos. He commanded 70 ships and about 9,000 men from his headquarters, which was apparently at Attaleia; his salary was 10 pounds of gold. The fleet of Kibyrhraithiotaı, which declined in importance with the expansion of the central fleet of Constantinople, is last mentioned in 1043. Subsequently Kibyrhraithiotaı denoted a civil province under a krites or, in the late 12th C., a doux. The theme of Mylasa and Melanoudion replaced it in the reign of Manuel I. Most of its territory (except Lycia) had fallen to the Turks after the battle of Mantzikert in 1071.

Lit. Ahreweiler, Μερ 81–85, 131–35. A. Pertusi in De them. 149–53.

-C.F.
KIEV (Κίοβα, Ківь, Κυ(γ)εβοβ, Киёбос, etc.), town on the middle Dnieper. Constantine VII mentions Kiev (which he also calls Sambatas in De adm. imp. 9.8–9; A. Archipov, Voprosy russkogo jazykoznaniya 5 [Moscow 1984] 220–49) as the main base for the expeditions of the Rus’ to Constantinople. Exports from Constantinople and the Crimea to and through Kiev included coins, glass, and amphorae with wine and oil. From the mid-10th to the mid-12th C. Kiev was in effect the capital of the Rus’ and the main channel for political, economic, and cultural contacts with Byz.: the metropolis of “Rhosia” was established at Kiev in 988–89; the seals of the princes and metropolitan men were inscribed in Greek; Greek builders constructed a number of churches (see below). Kievian writers also produced a substantial proportion of the extant literature of Rus’ (see Rus’, Literature of) during this period. From the mid-12th C. the political authority of Kiev was generally limited to its own principality: Izjaslav II (1146–54) was an ally of Géza II of Hungary against Manuel I, Galitza, and Suzdal’. Kiev retained its status as the ecclesiastical capital, however, even after its sack by the Mongols (1240) and the rise of Lithuania and Moscow.

Monuments of Kiev. Several churches in Kiev were the work of Greek builders: St. George, St. Irene, the Annunciation, and the Church of the Dormition (1073–76) in the monastery of the Caves. The Cathedral of St. Sophia was begun by Jaroslav in 1037 at an intersection in front of the city’s main public square. Poppe (infra) showed that the original mosaic and fresco decoration was completed by the time of its first consecration in 1046. An elaboration of a Byz. cross-in-square church plan, St. Sophia was a five-aisled building with 13 domes. Local features included the superimposed (and originally open) external galleries, the tall drums of the domes and two towers to the west, painted with unusual scenes of hunting and the hippodrome. The church was much enlarged in the 17th C. Without textual evidence, Lazarev (infra) ascribed St. Sophia’s iconographical scheme to Ilarion. The mosaic Pantokrator in the dome and the full-length Virgin above the Communion of the Apostles (see Lord’s Supper) in the apse are normal components of a Byz. church program of decoration, while the figure of Pope Clement I is due to relics obtained by Vladimir I. Lazarev suggested that the mosaic of Christ as a tonsured priest was included in response to a heresy that denied the authority of the ecclesiastical hierarchy of Rus’, but the same image is found at Nerezi. The frescoes include portraits of the founder and his family and scenes from the life of St. George, Jaroslav’s patron.

—S.C.F., A.C.

KILIC ARSLAN I, Seljuk sultan of Anatolia (ca.1092–1107); died on the Khabur River 5 June 1107. Son of Süleyman ibn Kutulmus, Kilic Arslan (Κατίζης του λαός) ruled Iznik (Nicaea) and other possessions of his father. He concentrated his efforts on the east, leaving II Khan and Tza-Chas to oppose the Byz. While Kilic Arslan was combatting Danışmend (see Danişmandids) in eastern Anatolia, the First Crusaders and Byz. took Nicaea. Kilic Arslan’s wife, a daughter of Tzachas, fell into Alexis I’s hands. The Crusaders defeated Kilic Arslan at Dorylaion. Alexios seized western Anatolia, and the sultan made Iconion his capital. Kilic Arslan joined with Danışmand to destroy the Crusade of 1101 as it marched through Anatolia. Hostility to Bohemund drew the sultan and Alexios together and, in 1106, Kilic Arslan sent Turkish troops to assist Alexios against the invading Normans. The death of Danişmand enticed Kilic Arslan to renew his aggression in eastern Anatolia, and he died fighting Sultan Muhammad, son of Malikshāh.

Lit. C. Cahen, EI2 5:109f.

—C.M.B.

KILIC ARSLAN II, Seljuk sultan of Iconion (1155–92); born ca.1115, died 1192. Son of Mas‘ûd I, Kilic Arslan and his Türkomans harassed the withdrawal of Manuel I from Antioch (1159). Manuel’s efforts at revenge (1159–60) proved ineffectual and in 1161 the rulers made peace. In 1161 or 1162 Kilic Arslan was magnificently entertained in Constantinople. After the Seljuk sultan acquired most of the Danişmandid territories, Manuel, urged by the refugees Dhu’l-Nūn (a Dan-
KINGS, BOOKS OF. The two Books of Kings that follow the two Books of Samuel are sometimes grouped together as the four Books of Kings. Thus, 1–2 Samuel of the RSV is 1–2 Kings of the Septuagint, and 1–2 Kings of the RSV is 3–4 Kings in the Septuagint. A single illustrated Byz. MS of all four Books of Kings survives—Vat. gr. 333, from the third quarter of the 11th C., with 104 images. (Only three other Byz. MSS devoted entirely to Kings survive—Rahlfs, Verzeichnis 382–85). The text of Kings includes the David narrative, illustrations of which are widespread in Byz. art at all dates, and certain other popular scenes, such as the Ascent of Elijah. Vat. gr. 333 may thus be the sole survivor of a once-flourishing genre of illustrated MSS of Kings, from which the popular scenes are derived (thus, Weitzmann, Studies 55–57), or a hapax, exploiting well-known scenes and stock formulas.

The fragments of a 5th-C. Latin MS of Kings, the Quedlinburg Itala, with full-page miniatures interspersed with the text, is often cited as a parallel. The interpretation of this MS, however, is also problematic, for it contains detailed instructions to the artist that may imply that its cycle was invented ad hoc. Further, most of the Itala cycle is unrelated iconographically to Vat. gr. 333. The system of illustration in Vat. gr. 333 is at first consistent, with one miniature per chapter, but

KILNS (κεραμεικοί φούρνοι) for the production of ceramics have been discovered at Byz. sites of all periods, both by chance and in controlled excavation (list in R.M. Cook, BSA 56 [1961] 67, supplemented by Megaw and Jones, infra 296, n.3). Most kilns were cylindrical structures made of clay and broken tiles, with a crude dome; the firepit was underneath the firing chamber, the two sections being separated by a floor pierced with numerous holes to allow the heat to rise and fire the pots. Excavated examples show that pottery was left to harden before being placed in the kiln, and it was commonly fired twice. Many pots contain marks that show how they were stacked in the kiln. From the 14th C. onward, tripod kiln (or stacking) supports were commonly used to separate pieces; they leave telltale marks on the bottom of the vessels.

KINDA, an Arab tribe that moved in the orbit of the Ḥimyarites in South Arabia and in the 5th–6th C. appeared as the dominant power in central and north Arabia. Although primarily an Arabian peninsular power, Kinda had strong connections with Byz. from ca.500 until the Muslim conquests. The tribe’s first recorded contact with Byz. occurred at the battle of Baradān (5th C.) between the Kindite Hujr and the Ṣalḥid chief Ziyād ibn-al-Habūla, who was a client of Byz. Around 500 the Kindite Arethas mounted an offensive against Byz. through his sons Ma‘di-Karib and Hujr, and in 502 he concluded a treaty or foedus with Byz. In the 520s the same Arethas appears as the phylarch of Palestine who, after quarreling with the doux Diomedes, was killed in north Arabia in 528. Ultimately Qays became phylarch of two of the three Palestines. Thus, the Kindites formed part of the Arab phylarchate of Oriens and maintained federate status until the Muslim conquests. The foremost poet of pre-Islamic Arabia was a Kindite prince, also named Qays, one of whose most famous odes records his journey through Oriens to Constantinople.

-/A.Sh.
KINNAMOS, JOHN, historian, *grammatikos* (secretary) of Manuel I, participant in several of Manuel’s campaigns; born before 1143, died after 1185. Niketas Choniates (Nik. Chon., p.331.1) mentions his involvement in theological discussions at the time of Andronikos I. The title of the book of Kinnamos (Κίνναμος) is corrupt (P. Wirth, *Byzantion* 41 [1971] 375–77): Kinnamos himself calls it *chronikai* (p.230.22); the ending is missing in the single 13th-C. MS (copied several times in the 16th–17th C.), which probably presents an impaired version of the original. Kinnamos’s history encompasses the period 1118–76; his portrait of John II’s reign closely resembles that of Choniates; later, however, the two historians diverge (A. Kazhdan, *BS* 24 [1963] 4–31). Kinnamos is Manuel’s panegyrist and supporter of the idea of the universal empire (M. Frejdenberg, *VizVrem* 16 [1959] 50); accordingly, he is more intolerant toward the Crusaders than Choniates. His philosophy of history is strictly deterministic. Nothing, he says, depends on men (p.24.2–4), and *tyche* (“necessity or providence”) appears in his narration as arbitrarily determining events. Kinnamos is strangely lukewarm toward aristocratic qualities (Kazhdan, *Gosp.klasc* 411) but very attentive to military technique, stressing that Manuel’s reforms in this area made “Roman warriors” better than the Germans or Italians (p.125.13). Kinnamos also wrote an *Ethiopinia*, probably under the influence of Nikephoros Basilakes.

KIRIK OF NOVGOROD, monk of St. Anthony’s monastery in Novgorod; born 1110. Kirik is the author of a tract on chronology dated 1136 and perhaps of the chronological data in the *Novgorod Chronicle*’s entry for the same year. The tract consists of a summary of the years since Adam, based on a Byz. short chronicle using the Alexan-
KITROS (Κητρος), fortress and bishopric in Macedonia, on the site of ancient Pydna. The original name was used by Byz. authors who wrote in an antiquarian vein: for example, Eustathios of Thessalonike (Eust. Thess., Opuscula 259.74) mentions the truffle (hydna) from Pydna (a play on words) as a delicacy for monks. Little is known of the secular history of Kitros; according to a 14th-C. historian (Kantak. 2:382.11), there was a pyrgos and a garrison in "Pydna."

Kitros was under the ecclesiastical jurisdiction of Thessalonike; although it was in last place ca.800 (Notitiae CP 3.276), by the 10th C. Kitros (or Pydna) was listed as the first suffragan of Thessalonike (ibid. 7.297). The earliest known bishop was Germanos in 879. An anonymous bishop of Kitros corresponded with Theophylak- tos of Ohrid. John of Kitros was a canonist of the late 12th or early 13th C. (Darrouzès, Offisia 172–74). The ecclesia Citerensis and its officials are men-

KITI, 7 miles southwest of Larnaka in Cyprus, site of the Church of Panagia Angeloktistos. The main body of the church is a domed, cruciform structure of the 11th C., built on the remains of an earlier basilica of which the apse is the main surviving part. The conch of the apse still houses the fragment of a 6th/7th-C. mosaic decoration, the best preserved of the three apse mosaics on the island (with the Panagia tes Kyiras near Livadia and Lythrakomi). The mosaic shows the standing Virgin holding the Christ child in her left arm, and flanked by the archangels Michael (on the left) and Gabriel (on the right) who appear to be walking towards her with orb and scepter in hand. The figures, all nimbed, stand against a gold ground framed at the edge of the apse with a border of fountains emerging from acanthus clusters flanked by ducks, parrots, and stags. Unusually, the Virgin is identified in an inscription as "Hagia Maria."

KITRILL (Cyril), bishop of Turov; died before 1182. Kirill is thought to be the author of didactic homilies in Slavonic on ecclesiastical and monastic life, a cycle of sermons for the period from Palm Sunday to the Sunday after Ascension Day, a weekly cycle of prayers, and a kanon. In his works Kirill amplifies, with florid and emotive rhetoric, themes from his Byz. reading. For example, for the Sunday after Easter he adapts allegories of spring from Gregory of Nazianzos (A. Vaillant, RES 26 [1950] 34–50; Ju. Begunov, Zbornik istorije književnosti 10 [1976] 69–76), while his allegories for monasticism in the homiletic Epistle to Basil are derived from Barlaam and Ioasaph (I.N. Lebedeva, Povest’ o Varlaame i Ioasafe [Leningrad 1985] 85–88). Most of Kirill’s identifiable sources can be traced to extant Slavonic translations, though there is disagreement as to whether he also knew and used Greek texts (Ju. Begunov, BS 35 [1974] 186f; F. Thomson, Slavica Gardensia 10 [1983] 66–69). Oblique allusions in Kirill’s homily On the Soul and the Body (an allegorical expansion on the theme of “the lame and the blind”) imply that Kirill took the side of Patr. LOUKAS CHYROSBERGES against the ecclesiastical initiatives of ANDREJ OF BOGOJUBOVO (ca.1165–69).

DRIAN ERA; a guide to paschal computation based on the Constantinopolitan era; a section on the division of hours, possibly a later accretion (but see E. Piotrovskaja, TODRL 40 [1985] 379–84); and an autobiographical colophon, which includes synchronic data from the year 1196 and in which the “Greek tsar” (JOHN II KOMNENOS) is mentioned before the local prince.

Kirik is probably also to be identified with the Kirik who, in the mid-12th C., recorded the responses of various bishops in RHOSIA on questions of canon law. The responses indicate the practical problems of applying Byz. precepts to local life. They chiefly concern ritual and behavior. The major source is the Bulgarian translation of the NOMOKANON OF 14 TITLES, with further material derived from pseudo-JOHN IV NESTUTES and other penitentials (F.J. Thomson, Palaeobulgariaca 11 [1987] 23–45).

KIRILL (Cyril), bishop of Turov; died before 1182. Kirill is thought to be the author of didactic homilies in Slavonic on ecclesiastical and monastic life, a cycle of sermons for the period from Palm Sunday to the Sunday after Ascension Day, a weekly cycle of prayers, and a kanon. In his works Kirill amplifies, with florid and emotive rhetoric, themes from his Byz. reading. For example, for the Sunday after Easter he adapts allegories of spring from Gregory of Nazianzos (A. Vaillant, RES 26 [1950] 34–50; Ju. Begunov, Zbornik istorije književnosti 10 [1976] 269–76), while his allegories for monasticism in the homiletic Epistle to Basil are derived from Barlaam and Ioasaph (I.N. Lebedeva, Povest’ o Varlaame i Ioasafe [Leningrad 1985] 85–88). Most of Kirill’s identifiable sources can be traced to extant Slavonic translations, though there is disagreement as to whether he also knew and used Greek texts (Ju. Begunov, BS 35 [1974] 186f; F. Thomson, Slavica Gardensia 10 [1983] 66–69). Oblique allusions in Kirill’s homily On the Soul and the Body (an allegorical expansion on the theme of “the lame and the blind”) imply that Kirill took the side of Patr. LOUKAS CHYROSBERGES against the ecclesiastical initiatives of ANDREJ OF BOGOJUBOVO (ca.1165–69).
tioned several times in the correspondence of Pope Innocent III.

—A.K.

KLADAS, JOHN, an important and prolific composer; fl. late 14th–early 15th C. He is frequently cited in MSS as either John the Lampadarios or simply the Lampadarios (see Singers). In his treatise, Manuel Chrysaphes mentions Kladas (Kladas) as the last of five major Byz. composers of kalophonic oikoi (see Teretismata). His chants first appear in musical anthologies (Akolouthiai) copied toward the end of the 14th C. and became even more numerous in MSS from the early 15th C. His compositions appear in almost all collections of music for the liturgy and hours. They are considerably longer and have a wider vocal range than do settings by earlier 14th-C. composers.

LIT. G.I. Papadopoulos, Symbolai eis ten historian tes par'heinem ekklésiasites mousikes (Athens 1890) 274f. Comos, Communion, 77f, 184-86. PLF, no. 11739. —D.E.C.

KLASSMA (kla-stma, lit. “fragment”), real property escheated to the fisc because of the disappearance of its taxpaying owner. The term appears in documents from the 10th C., when it was already a component of well-established fiscal procedures, through the early 12th C., after which it was superseded by the analogous term exalemma. Since in the 10th and 11th C. the state was interested in maintaining the integrity of the village community, property on which taxes had ceased to be paid did not immediately devolve to the fisc; rather, the land was granted a sympatheia for a 30-year period after which time, unless orthosis took place, the land became klasma, was fiscally separated from the village community, and was disposed of as the state wished, through sale, donation, lease, etc. The Klassma that had been granted to cultivators, while under sympatheia, was sold at its normal price and the new owner henceforth paid the tax on the property at 1/12 the normal assessment; klasmatata located in depopulated areas, lacking labor, or which needed to be recultivated before cultivation, sold at a reduced price, taxed at 1/24 the normal assessment for 15 years, then raised permanently to 1/12.

Even with these inducements, the significant capital outlay needed to acquire klasma meant that although peasants could invoke the right of protimesis in sales of klasma (Zepos, Jus 1:203-3-33; 4:18.12-14), there was a tendency for dynatoi and monasteries to acquire such land, thereby contributing to the decline of the village community and an independent peasantry. There are several documents on sales of klasma in the area of Thessaloniki in the 10th C.

—M.B.

KLEISOURA (klei-soora, lit. “defile”), a territorial unit, usually smaller than a theme, sometimes part of a theme, but preserving a certain independence; the commander of a kleisoura was a kleisourarches. Most kleisourai were located in the East (Seleukeia, Charsianon, Sozopolis, etc.)—in the West only Strymon was called a kleisoura. Normally the status of kleisoura was transitional and former kleisourai became themes. The first mention of kleisoura as an administrative unit is from 698/9: Tiberios II sent a monostrategos “to the area of Cappadocia and of the kleisoura” (Theoph. 371.11-12). They are not mentioned after the 10th C.

KLERIKATON (kler-ikato-n), defined in the late 12th C. as the liturgical office to which a cleric was ordained as priest, deacon, or anagnostes, as distinct from the administrative post (archonikion) to which he might also be appointed (Balsamon, ed. Rhalles-Potles, Syntagma 3:386.1). The term was commonly used in later centuries to designate a piece of church property (also called klerikostasion, klerikotopion), which such a cleric held, as klerikoparokhos, from the bishop in return for his liturgical services. The institution, if not the terminology, existed from at least as early as the beginning of the 11th C. and provided the basic living of the lower “parish” and cathedral clergy. Roughly analogous to the Western beneficium, the klerikaton differed in that its recipient paid a modest rent (telos) and might receive a salary. Since, moreover, he was likely to be married, there was
a constant tendency for *klērikata* to pass to non-
derclerical heirs and thus to become alienated from
the church’s estate.

---

**KLETORION** (κλητόριον, from *klesis*, “invitation”), term designating both a banquet (esp. in the imperial palace) and a hall where a banquet was to take place. The word *deipnokletorion* was occasionally used as a synonym.

LIT. Oikonomides, *Listes* 27, n.29.

---

**KLETOROLOGION OF PHILOTHEOS.** See PHILOTHEOS, KLETOROLOGION OF.

---

**KLIM SMOLJATIĆ,** monk; metropolitan of Kiev (27 July 1147–55, 1159); and a figure of controversy in Russo-Byz. ecclesiastical and cultural relations. In the ecclesiastical controversy Klim (Clement) was elected metropolitan, at the instigation of Izjaslav of Kiev, by a synod of local bishops and without confirmation by the patriarch of Constantinople. The rift with the patriarchate lasted until Jurij Dolgorukij took Kiev and Klim was replaced by the Greek Constantine. The cultural controversy concerns Klim’s *Epistle* to a certain Thomas, in which he refutes the charge that he had pursued vainglorious “philosophy” by citing Homer, Aristotle, and Plato rather than Scripture. The charge is probably a polemical *topos*, rather than evidence for any direct knowledge of the classics in Rus’ (apart from translated extracts in *florilegia*). His own exegetical demonstration draws chiefly on *Theodoret of Cyrhus* and other translated commentaries, though it has been suggested that Klim shows an awareness of Byz. *schêdocraphia* and that the label “philosopher” (cf. also *PSRL* 2:340) implies that he was educated in Constantinople. His *dubia* include homilies and some of the canonical responses recorded by *Kirk* of Novgorod.

---

**KLIMA** (κλίμα, “region”), a word that could designate a district in a city, a part of a province (GEORGE OF CYPRUS, for example speaks of four *klimata* in Isauria), or an ecclesiastical diocese. Specifically, the proper, plural form Klimata denoted the theme of Cherson: the 9th-C. Taktikon of Uspenskij explicitly refers to the “strategos of the Klimata,” and Constantine VII Porphyrogenetos speaks twice of the “kastra of the Klimata” near Cherson (*De adm. imp.* 42:8, 72). The Toparcha Gothicus, in an enigmatic passage, mentions the town of Klimata, the localization of which has been hotly debated (I. Ševčenko, *DOP* 25 [1971] 155–60).

From ancient geographers and astrologers the Byz. inherited the concept of seven *klimata*, or zones of the earth, each of which was dominated by a corresponding planet. The *Chronicon Paschale* gives an elaborate list of the *klimata*: (1) Libya; (2) Egypt; (3) Mauritania, Judaea, Arabia; (4) Syria, Mesopotamia, Medeia; (5) Italy, Greece, Asia Minor, Armenia; (6) Gallia, Dalmatia, Thrace, Trebizond; (7) the region around the Borysthenes (Dnieper). Kosmas Indikopleustes rejected the idea of seven *klimata* as contradicting Christianity, but attempts to reconcile astrology and Christian faith in questions pertaining to the *klimata* continued well into the 19th and 14th C. (Nikephoros Blemmydes, John Katrares).

---

**KLIMENT OF OHRID,** Bulgarian writer (probably a native of Macedonia); saint; fl. late 9th–early 10th C.; feastdays 27 July, 22 Nov. A pupil of CONSTANTINE THE PHILOSOPHER and METHODEIOS and thoroughly familiar with Byz. ecclesiastical literature, he accompanied them to Moravia where he spent some 20 years, perhaps interrupted by a visit to Rome in 867–69. Returning to Bulgaria in 885, he was sent by Tsar Boris I to Kutmičevica in Macedonia (exact location uncertain) as bishop and remained there until retiring
KLOKOTNICA, battle that took place on 9 March 1230 (Zlatarski, Ist. 3:349), close to the present-day town of Khaskovo in Bulgaria, on the main road from Adrianople to Philippopolis. Although THEODORE KOMENOS DOUKAS had made a treaty on oath with JOHN ASEN II, the Greek ruler invaded Bulgaria in order to secure his northern flank. The Bulgarian tsar opposed him with a scratch force of CUMANS, but spurred on by belief in his moral superiority—he reportedly hung Theodore’s written oath on his standard—he won a complete victory, capturing Theodore along with his chief men. He then made a triumphal progress through Theodore’s territories. John Asen II returned in April to Tūrnovo, where in gratitude for his victory he founded the Church of the Forty Martyrs of Sebastea, on whose feastday the battle occurred. He sent out governors and tax-collectors to administer his extensive conquests, but left the more distant parts in the hands of local lords. Although Thessalonike eluded him, for the time being Bulgaria was the dominant power in the Balkans.

—M.J.A.

KNEELING (γονυκλωσία), a posture of PRAYER. Kneeling was originally considered penitential, as distinct from standing (stasis), a sign of the Resurrection (anastasis). Kneeling was thus prohibited on Sunday, later on Saturday, and from Easter through the end of Pentecost vespers, at which time it recommences with the special gonyklisia rite. This rite, of Palestinian origin, goes back to the 5th C.; it is unknown to the Tyrikon of the Great Church, though found in the later Sabatic Typika.

Kneeling or prostration (proskynesis, melanoia) for prayer after psalmody, standard practice in cathedral vigils and monastic hours from the 4th C. onward, was also considered an important element in ascetic exploits: hagiographers describe their heroes prostrating innumerable times in succession. It was imposed as an epitimion; thus Theodore of Stoudios (PG 99:1661CD) requires laymen who communicate with heretics to kneel 50 times in a row—rated a minor epitimion.

—R.F.T., A.C.
KOCHLIAS. See Hippodromes.

KODINOS, PSEUDO-, conventional name of the anonymous author of the Treatise on the Dignities and Offices, compiled, according to Verpeaux (infra 27–30), between 1547 and 1568. The treatise presents the hierarchy (taxis) of functionaries' titles and offices, a description of their costumes and functions, of the feasts celebrated at the court and of the ceremony of coronation as well as the duties and the ceremony of promotion of certain dignitaries (domestikos, adnomiastes, sebастократor, etc.). The chapters on ecclesiastical offices were arbitrarily added by Andrew Damarinos in the 16th C. Along with official information pseudo-Kodinos included some personal recollections or those of his informants as well as passages derived from various chronicles. More complex is the question of several sections very close to the work of John VI Kantakouzenos; Verpeaux suggests the use of common sources. Two works of different centuries were also (falsely) attributed to Kodinos: the main version of the PATRIA OF CONSTANTINOPLE and a chronicle terminating in 1453 (Kleinchroniken 1:1:121–55)—all three of these works are often transmitted in the same MSS.

-A.K.

KODIX (kódx, from Lat. codex), cadastral register in book form drafted by the office of the GENikon. The term appears in Basil II's novel of 996 establishing the validity of only those land delimitations (periorismoi) that are based on the kodikoi (sic) of the genikon or on other appropriate documents (Zepos, Jud 1:267.11–14). They formed tax lists of particular regions (enoriai), divided into kephalai (chapters), each kephalasion dealing with a subregion (a village), itself divided into a succession of stichoi. They were revised at perhaps 30-year intervals. Individuals and institutions dispensed copies of kodikes, the so-called isokodika (e.g., Docheiar., no.1.18, 26). Some extracts from kodikes survive: the so-called cadaster of THEBES (Svoronos, Cadastre 11–19), fragments from a cadaster of Boleron and Strymon (Ivir., no.39; Dölger, Schatz., no.65), a quotation from a cadaster of Thessalonike (Lavra 1, no.39.5–8), an extract from a cadaster of Trebizond (Vazelon, no.106) from the end of the 13th C.

The term kodix disappeared after 1204, being replaced by praktikon, which was considered a copy "from the imperial book of the thesis compiled by the apographeis" (Zogrt., no.44.490, 66–67) or of the grand thesis (Dionys., no.21.2). The Chronicle of the Morea (ed. I. Schmitt, vv. 1908–10) also mentions a "book that listed everyone's tenures granted in ownership and possession."

Lit. Dölger, Beiträge 97–102.

KOIMESIS. See Dormition.

KOINE (κόινη διάλεκτος, "the common language"), the common Greek of the Hellenistic world, which displaced the old local dialects as the language of administration and of prose literature. In origin a variety of expanded Attic, with many Ionic and other elements, Koine was used as a lingua franca between city states in the 4th C. B.C. It became the current language of the cities founded by Alexander and his successors in Asia and Africa, and the normal vehicle for prose literature until the rise of Atticism in the late 1st C. B.C. and the 1st C. A.D. The Septuagint and the New Testament were written in Koine. Technical writing often continued to use Koine, which underwent progressive changes including restructuring of phonology (see Phonetics and Phonology) and morphology and extension of vocabulary by derivation, composition, and linguistic borrowing, esp. from Latin. In the Byz. world Koine continued to be used for subliterary writing: popular saints' Lives such as those of Cyril of Skythopolis (6th C.); anecdotes of ascetics such as The Spiritual Meadow of John Moschos (early 7th C.); chronicles such as those of John Malalas and Theophanes the Confessor; archival works such as the De administrando imperio and De ceremoniis of Constantine VII; and medical and other technical treatises. Koine represents one pole of Byz. diglossia, of which the other is represented by Atticism. The normal spo-
KINOBIOS (κοινοβιος, lit. "common life"). monastery housing a community of monks or nuns and emphasizing a communal and egalitarian way of life. Koinobioi in their earliest form were created by PACHOMIOS in Egypt, for example, at TABENNISI. Basil the Great greatly preferred cenobitic monasticism to eremitism, stressing the advantages of a mutual support system and the possibility of economic self-sufficiency. He required stricter discipline for the monks, and insisted on manual labor. Five novels of Justinian I established the koinobion as the norm but did permit eremitism for the chosen few. THEODOROS OF STUDIOS and ATHANASIUS OF ATHOS continued to emphasize the importance of the cenobitic tradition. In the later centuries of Byz., however, koinobia tended to develop into communities of landowners rather than of working brethren.

In a cenobitic monastery all of the monks theoretically followed the same schedule for working, praying, eating, and sleeping, with variations permitted only to accommodate the different types of work each performed. They slept in individual cells or (rarely) in a common dormitory but were all supposed to eat the same food in the refectory. Clothes, tools, and other items were owned in common and distributed as necessary. The cenobitic life stressed obedience to the superior or HEGOUHENO, and adherence to the rules of the TYPIKON, including regular attendance at services and avoiding contact with the outside world (esp. members of the opposite sex). The koinobion resembled a spiritual family, in which the monks or nuns were linked by a spirit of brotherhood or sisterhood.

Contemporary critics of Byz. monasticism, like Eustathios of Thessalonike, Balsamon, and Patr. Athanasios I, reveal the conflicts between individualism and the cenobitic ideal. Hegoumenoi in particular were accused of eating special food and living in luxury; Balsamon (PG 138:176CD) commented that monks surpassed their male brethren in "observing communal diet and habitation," and that true cenobitism was rare in male monasteries. Although virtually all monks and many monks did obey the principle of monastic STABILITY and remained in the same monastery for life, some holy (and not so holy) men in search of more rigorous ASCETICISM viewed their residence in a koinobion only as training and preparation for the more arduous life of a hermit. Throughout the Byz. era there continued to be discussion over which form of monastic life was superior; the typika, for example, strongly favored cenobitism.

KIMOHEI (κοιμωση), the chant that accompanies the rite of communion. Originally a responsorial psalm, it later acquired elements, such as the final DOXOLOGY and refrain, called apolytikion (Mateos, Typticron 2:285.313–4), of antiphonal psalmody. The entire cycle of koinika, 26 texts each assigned to one or more occasions in the liturgical year, was almost fully developed by the 9th C.: its scope and function are indicated in the Typticron of the Great Church. However, the music for these chants is documented only from the 12th C. onward, though there is reason to believe that the three Church Slavonic music books known as the Uspenskij, Blagoveščenskij, and Sinodal'nyj Kondakaria preserve Byz. melodies of a more archaic form than any transmitted in Byz. MSS.

KINSKONOH (κοιμωση), a collection of magical recipes compiled in the 3rd or 4th C. that remained in use throughout the Byz. era; in the 14th C., for example, their use was condemned by Patr. Athanasios I (ep.69.81) and by the synod of 1371 (MM 1:544.17–18); the synodal decision of 1371 also mentions a tetradon.
by an astrologer, Demetrios Chloros (RegPatr, fasc. 5, no.2572), compiled on the basis of the “Koitrannis” and containing invocations of demons, magical formulas, and magical names.

LIT. D. Kaimakis, Die Kyranident (Meisenheim am Glan 1976).

F.R.T.

KOITON (κουτών, Lat. cubiculum), bedchamber, esp. of the emperor. The “chief of the koon” became the designation of the chamberlain: thus Palladios of Galatia addressed his sponsor Lau- sos as “the praitposi of the most pious koon” (PG 34:1259A), the Greek translation of praepositus sacri cubiculi. Basil the Great (ep.79.11, ed. Y. Courtonne, vol.1 [Paris 1957] 181) speaks of two “great officials”—the eparch (praetorian prefect) and ho peri ton koiton, the latter probably to be identified as the castrensis sacri palatii Demosthenes (PLRE 1:249). Philostorgios (HE 10.6, ed. Bidez 1872) mentions servants “in the koiton,” a term synonymous with koitonitai. By the 9th C. the chief of the koiton was called the parakoiomomenos. Oikonomides (Listes 301) distinguishes hoi epi tou koitonos, the servants of the imperial bedchamber proper, and those of the cubiculum, the corps of eunuchs of the palace. Constantine VII (De adm. imp. 50.51–53) uses the phrase “the koon guarded by God” for the treasury in which the pakton of Slav tribes was deposited.

A.K.

KOITONITES (κοιτωνιτης), courtier whose function was to serve in the koiton, the emperor’s bedchamber. The distinction between the koitonites and the koubikoularios is not clear. Guillard (Institutions 1:269) asserts that the koitonites existed at least from the end of the 8th C.; he bases this on a 19th-C. scholar’s chronology for a seal (Schlumberger, Sig. 526) that is in reality of the 11th C. (Laurent, Corpus 2, no.780). The duty of the koitonites was to lock the door of the koiton (Leo Gramm. 250.22–23). Oikonomides (Listes 305) considers koitonitai as subalterns of the parakoiomomenos. On seals of the 11th C. one finds koitonites (e.g., Laurent, Corpus 2, no.217) and much more often epi tou koitonos; the latter combined his title with various court or civil offices (praitpositos [see Praepositus Sacri Cubiculi], logothetes, ephikos [see Eikon], judge, etc.). A 14th-C. ceremonial book (pseudo-Kod. 176.6–11) relates that the parakoiomomenos of the koiton was the chief of the servants of the imperial bedchamber and of the koitonarioi; probably the latter term replaced koitonites.

A.K.

KOKKINOBAPHOS, JAMES OF. See JAMES OF KOKKINOBAPHOS.

KOLLOUTHOS (Κολλουθος), poet; born Lykopoli, in Egypt, fl. 5th–6th C. According to the Souda he lived in the reign of Anastasios I (491–518), who may well have been the recipient of one of his lost verse panegyrics. Lost also are his epics, the Kalydoniaka in six books, and the Persika, the latter perhaps contemporary in theme. His surviving work is the Rape of Helen, 394 hemistichs influenced more by the language than the metrics of Nonnos of Panopolis. In the 15th C. one of its MSS (Milan, Ambros. Q 5 sup.) was rediscovered by Bessarion in the monastery of St. Nicola di Casole near Otranto (L. Labowsky, Bessarion’s Library and the Biblioteca Marciana [Rome 1979] 9, 11f). One matter of accidental interest is his presumed use of Latin poets, notably Catullus.

B.B.

KOLLYBA (κόλλυβα), boiled wheat, which, along with raw vegetables, constituted the diet of 5th-C. monks who refused to touch bread (pseudo-Palladios, Vita Chrysostomi, ed. P.R. Coleman-Norton, p.127.3–4). It was recommended that everyone eat kollyba on the first Saturday in Lent. The term also refers, as it did in antiquity, to special cakes made of boiled wheat with sugar, dried raisins, pomegranate seeds, nuts, herbs, etc.; these symbolized the human body and were distributed to the congregation, usually in remembrance of the dead (e.g., the typikon of the Kecharitomene nunnery, ed. P. Gautier, REB 43 [1985] 119.1767). The typikon of the Pantokrator monastery (ed. P. Gautier, REB 32 [1974] 43.241–42) indicates that three baskets of kollyba were required for a single distribution. In vernacular
KOLOBOU MONASTERY, founded by the monk John Kolobos (Κολόβος) between 866 and 883. It was situated near Hierissos, just outside the precinct of the Holy Mountain of Athos, on the isthmus that links the peninsula with the mainland, but its fortunes were closely linked with the development of Athonite monasticism. John Kolobos was one of the early anchorites on Athos and an associate of St. Euthymios the Younger. Circa 866, when the danger from Arab attacks increased, Kolobos led a group of disciples to refuge on the mainland, first to Siderokasua, and then near Hierissos. Here he founded the monastery that bore his name and was dedicated to St. John the Baptist. It was apparently the first koinobion in the immediate vicinity of Athos, anticipating by almost a century the advent of cenobitic monasticism to the Holy Mountain itself. The monastery of Kolobou is first mentioned in 883 in a sigillum of Basil I that guarantees the rights of its monks. The monastery owned substantial estates and was involved in frequent property disputes with the inhabitants of Hierissos and Athonite monks. Its prominence continued until 979/80, when it was absorbed by the newly founded Iviron Monastery.

KOLOSSAI. See Chonai.

KOLYBAS, SERGIOS, protonotarios and imperial secretary, rhetorician; fl. late 12th C. Kolybas (Κολυβᾶς) wrote two speeches addressed to Isaac II and delivered in 1193 (not in 1186 as they are dated by Dujčev), almost at the same time as the speech of George Tornikios. Kolybas's speeches concern the revolt of Asen I and Peter of Bulgaria; he stressed that Peter concluded a truce with Byz., whereas Asen was still fighting against the empire.

Ed. Regel, Fontes 280-300.
Lit. Dujčev, Proučavanja 77-81. —A.K.

KOLONEIA (Κολώνεια). There were two cities of this name in Anatolia.

1. Koloneia on the Lykos in interior Pontos. Now Şebinkarahisar, Koloneia was a stronghold on a main route to the east; rebuilt by Justinian I, it was attacked by the Arabs in 778 and 940. Koloneia appears as a military district commanded by a doux Kallistos ca.838 (A. Kazhdan, Byzantion 56 [1986] 155f) and a strategos by 863; a seal of the 9th/10th C. calls the commander of Koloneia archon. For Constantine VII Koloneia was a small theme, named for its powerful and steep fortress, the polisma of Koloneia. In 1057, the tagmata of Koloneia and Chaldia supported the revolt of Isaac I Komnenos, and in 1068 Koloneia was controlled by the rebel Crispin. It fell to the Turks after the battle of Mantzikert in 1071 but was briefly retaken by the Byz. in 1106. Koloneia was a bishopric under Sebastia; by 879 it became autocephalous and in the 11th C. was made a metropolis. The region was the center of the Paulicians in the 7th-9th C. The site contains an imposing fortress with citadel and keep of several periods from Roman through Ottoman.

2. Koloneia in Cappadocia. Located at the edge of the central Anatolian plateau, this Koloneia, now Aksaray, was important as a road junction and aplekton where armies gathered for expeditions to the south and east. Koloneia was a suffragan bishopric of Morissos through the 11th C.; it preserves no Byz. remains.

Lit. 2. TIB 2:207f. —C.F.
sent him against the Persians as a replacement for PHILIPPIKOS, and Komentiolos gained a decisive victory at Sisarbanon, near Nisibis; he captured the fortress of Akbas. When CHOSROES II fled to the empire, Komentiolos and DOMITIANOS were in charge of the king, and Komentiolos restored him to the throne. Recalled to the Balkans, Komentiolos was routed in 598 by the Avars and fled to Drizipetra (Thrace), where the citizens prevented his entry; thereafter the city succumbed to the barbarians. Together with Priskos he held command in the area of the Danube; they were unable to stop the Avar invasion. During the revolt of Phokas, Komentiolos was assigned to defend the walls of Constantinople but was seized and executed.

Theophylaktos Simokattes, the main source on Komentiolos, is hostile to him, describing the general as a coward and even a traitor: thus the battle near Drizipetra is presented as a treacherous act to punish unruly soldiers. To be distinguished from Komentiolos is another Komentiolos, a brother of Phokas; he revolted against Herakleios (Kaegi, “New Evidence” 311–23).

—W.E.K., A.K.

KOMES. See Comes.

KOMES HYDATON (κόμης ὑδάτων, lit. “count of the waters”), subaltern official of the GENIKON mentioned in the Kleorologion of Philothoeos. The komes hydaton was in charge of aqueducts, as is clear from the letter of Theodore of Kyziko to Constantine VII in which the bishop asked the komes to provide him with “wintry water” to satiate his “summery thirst” (NE 19 [1925] 276.18–29). Dölger (Beiträge 90, n.9) surmises that his duty was to collect the tax on canals and aqueducts, which is mentioned in the Basilika (Basil. 16.1.27). He is perhaps to be identified with the logothetes ton hydaton.

—A.K.

KOMES TES KORTESES (κόμης τῆς κόρτης), official on the staff of a strategos, probably a civil official with judicial and police duties. Constantine VII (De cer. 489.17–21) states that the name originates from the word korte (tent), since the duty of the komes was to pitch the imperial tent during a campaign. The author of the vita of GEORGE OF AMASTRIS (ed. Vasil’evskij, Trudy 3:45.5–16) calls him “the shield-bearer of the korte” and stresses the Italian origin of the term. Several seals of this komes are preserved, dated mostly to the 8th and 9th C. (Zacos, Seals 1, nos. 1422, 1495, 1530A); the legends on certain seals indicate the province in which the komes tes kortes served: Peloponnesos (Zacos, Seals 2, no.936), Macedonia, Chaldia, and so on. The earliest mention of the komes tes kortes in narrative sources is a letter of THEODORE OF STUDIOS (PG 99:1232A) of 817/18; the vita of Theodore reports that Leo V ordered the strategos of Anatolikon to send the komes tes kortes to flog the holy man (PG 99:296B). In the vita of George of Amastris the komes tes kortes has responsibility in a criminal case, and Constantine VII mentions the komes together with protonotarioi (De cer. 489.2–3). Komites tes kortes appear in the lists of provincial functionaries from 995 (Ivtr., no.8.10) to 1088 (Palmou Engrapha 1, no.6.61), usually after the chartoularioi of the dromos and of themes. The last references to komites tes kortes are in the 12th C. in the Alexiad of Anna Komnene and in a letter of 1116.

—A.K.

KOMES TES LAMIAS (κόμης τῆς λαμίας), an enigmatic functionary of the genikon mentioned in the Kleorologion of Philothoeos; the name has been connected with the Latin laminallamna, meaning, among other things, gold or other precious metals, and interpreted as one who “had to do with bullion and mines” (Bury, Adm. System 89). The usual opinion that the komes tes lamias is to be identified with the comes metallorum per Illyricum first mentioned in 365 and known to the Notitia dignitatum (O. Seeck, RE 4 [1901] 659) cannot be either proven or rejected. On seals of the 9th through the 11th C. the komes tes lamias bears the titles of spatharios, strator, or protospatharias, and sometimes combines his office with that of the epi ton oikeiakon (see Oikeiakos) or the megas chartoularios of the genikon (Laurent, Corpus 2, nos. 401–06; Zacos, Seals 2, no.829).

lit. Haldon, Praetorians 593, n.978.

—A.K.
KOMES TON TEICHEON (κόμης τῶν τείχων, τείχων, or τοῦ τείχους, lit. “count of the walls”), commander of a military body responsible for the defense of the Long Wall and the adjacent area. Bury (Adm. System 568) without convincing proof connects this office with the vicarius of the Long Wall who was introduced by Justinian I and soon replaced by the Justinianic praetor for Thrace. The first mentioned komes ton teichon (named archon tou teichiou by Theoph. 401.1 or ton teichon by Nikeph. 56.4–5) was Niketas Anthrax who was executed in 718/19. The term seems not yet established in the taktika of the 9th and 10th C.; in the late 9th C. the Kletorologion of Philotheos calls him sometimes domestikos and sometimes komes. A 10th-C. historian (Genes. 4.46–47) describes him as “one entrusted with the care of the Walls.” The functions of the komes ton teichon are not clearly defined: he belonged to the domestikoi and could even combine his post with that of the domestikos ton Noumeron. The komes ton teichon supervised the prison of Chalke and participated in guarding the palace. The office of domestikos ton teichon is mentioned by pseudo-Kodinos in the 14th C., but the last known komes ton teichon was probably the 11th-C. patriarchos Melias, whom Christopher of Mytilene (ed. Kritz, no.16.27) calls the archon of the walls. Oikonomides (Listes 337) surmises, contrary to Guillard, that the office is mentioned also in the Peira. The staff of the komes ton teichon was identical to that of the domestikos ton Noumeron.

KOMETOPOULOI (Κομητόπουλοι), the sons of the comes Nicholas and his wife Ripsime—David, Moses, Aaron, and Samuel of Bulgaria. Asolik plainly says that the Kometopouloi (“Komsajak”) were Armenians from the district of Derjans. They headed a revolt in Bulgaria against Byz. power. Where and when this revolt began are the subject of discussion. An 11th-C. historian (Skl. 255.73–80) says that the sons of Peter of Bulgaria, Boris II and Romans, left Constantinople ca.970 in order to oppose the revolt of the Kometopouloi; John Geometres in a poem titled On the Kometopouloi, playing on the word for comet and the name of Kometopouloi, connects the revolt with the appearance of a comet (perhaps in 968) and the death of Nikaphoros II Phokas in 969 (A. Leroy-Molingen, Byzantion 42 [1972–73] 410f). Nevertheless W. Seibt thinks it impossible that the revolt started in 969; he refers to another passage in Skylitzes (Skl. 328f) in which the revolt of the Kometopouloi is set at the time of the death of John I Tzimakes in 976. Also disputed is whether the revolt encompassed only Macedonia or took place in northeastern Bulgaria, eventually to be united with the movement in western Bulgaria. P. Petrov (B Bulg 1 [1962] 137–42) hypothesized that the account by the 15th-C. Polish historian...
Długosz about the revolt of Peter and Bojan in Bulgaria in 976 is to be connected with the activity of the Komotopouloi. David and Moses died soon after 976, and Aaron, probably, on 14 June 987 or 988. Samuel remained alone at the helm of the Bulgarian state.

-A.K.

KOMMERKIARIOS (κομμερκιάριος), a fiscal official, probably the successor of the late Roman comes commerciorum, the controller of trade on the frontier. The Notitia dignitatum mentions only three comes commerciorum: for Oriens, for the area on the Danube and the Black Sea, and for Illyricum (O. Seeck, RE 4 [1901] 643f). The first mention of kommerkiarioi is found in fragmentary inscriptions of a law promulgated by Anastasios 1. The seals of kommerkiarioi show that they were stationed in many places on the frontier, apparently supporting the statement of Prokopios (SH 25.5) that Justinian I installed customs stations “at each strait” and sent two archontes to each location to collect tolls. G. Millet’s attempt (Mélanges offerts à m. Gustave Schlumberger, vol. 2 [Paris 1924] 303–27) to consider the early kommerkiarioi as the emperor’s merchants is questionable.

The [genikos] kommerkiarioi farmed out his office at public auction for one or two years; his functions have been understood as those of a duty collector or of a quartermaster general of the army or of an entrepreneur (or association of entrepreneurs) who obtained the monopoly of silk trade and silk production, initially for all the empire, then for one or more provinces. The kommerkiarioi had special seals for their merchandise, displaying the image of the emperor(s), the indications for which each seal was valid (ranging from 673/4 to 832/3), and naming the warehouses (apothekai, concentration and redistribution points) of the province(s) under their jurisdiction. For a short period in 695–97 and permanently from 730/1 to 832/3, these special seals do not mention individual kommerkiarioi but rather bear the impersonal expression “of the imperial kommerkia,” presumably because these were offices run by state employees who may have exercised general control over the merchandise and collected duties.

After the mid-8th C. these offices appear only in Thrace and Macedonia. From the end of the 7th C. the significance of kommerkiarioi decreased; the late 9th-C. Kletorologion of Philothemos cites them only as subaltern officials in the genikon. These officials, called [imperial] kommerkiarioi, had jurisdiction over themes or ports as well as the function of controlling imports and exports and collecting some duties.

On seals of the 9th to 11th C., kommerkiarioi are seen to control larger territorial units, such as Chaldia or Cyprus, or to operate in trade centers such as Abydos, Erythrai, and Cherson; sometimes, like Joseph, abydikos and kommerkiarioi of Thessalonike and Kephalenia (Zacos, Seals 2, no.1075), they functioned simultaneously in towns far removed from each other. Some kommerkiarioi, such as the kommerkiarioi of the Bulgarians (ibid., no.910) and kommerkiarioi of Preslav (no.1043), were inspectors of trade in the northern Balkans.

They held court titles, such as mandator or protospatharios of the Chrysotriklinos, but could have specifically “commercial” offices such as metretes or “measurer” (no.627). A seal of a megas kommerkiarioi of the West, titled spatharokandidatos, is datable to the second half of the 10th C. (no.809).

At least until 1196 (Lavra 1, no.67.61), kommerkiarioi appear in chrysoobulls as collectors of kommerkion, but the author of the vita A of Athanasios of Athos (ed. Noret, par.10.13–15) already identified a kommerkiarioi as the Byz. equivalent of praktor.

-A.K. N.O.

KOMMERKION (κομμέρκιον), a term with two meanings in Byz.

1. Commercium was the late Roman name of some frontier cities where exchanges with foreign merchants were authorized; their activities were supervised by the comes commerciorum.

2. Kommerkion was a tax on merchandise that appears in the sources around the year 800. It has been understood as a circulation and sales tax, paid at the customs and a replacement of the octava; it was collected on all merchandise.
imported into the empire (including some prisoners of war destined to be sold as slaves) and, inside the empire, on merchandise reaching Constantinople by sea. Its rate was 10 percent ad valorem (thus also called dekate), until the mid-14th C., when John VI reduced it to 2 percent.

KOMNENE, ANNA, historian; born Constantinople 2 Dec. 1083, died ca. 1153/4. Eldest daughter of Alexios I, Anna Komnene (Κομνηνή) was betrothed to Constantine Doukas, son of Michael VII, who was regarded as the heir to the throne; after his premature death she married Nikephoros Bryennios. In 1118, with the support of Irene Doukaina, she schemed in order to obtain the throne for her husband, but the success of John II forced her to retire to the Kecharitomene Nunnery, although she became a nun only on her deathbed.

In the monastery Anna was a patron of scholarship and wrote (after 1148) the Alexiad, a long panegyric of her father, whose reign she contrasted to the rule of her nephew Manuel I. As in Bryennios’s history, Anna started with the background of Alexios’s victory; Bryennios, however, praised the leading noble families equally, while Anna concentrated on her father’s deeds. Proud of the ancient heritage of Byz., she was very conservative and disapproved of the radical ideas of both John Italos and the Bogomils. Although Anna’s chronology is inconsistent (Ja. Ljubarskij, VizVrem 23 [1963] 47–56), and the facts sometimes distorted, the Alexiad is an important source, esp. for the history of Alexios’s wars and international relations. A talented writer, Anna often created images (e.g., for Robert Guiscard) of depth and complexity; many scenes are emotionally vivid. The Alexiad was paraphrased in the vernacular. Anna’s eulogy by George Tornikios provides us not only with her moral characterization, but also with a physical portrait.

KOMNENE, IRENE, sebastokratorissa, wife of the sebastokratōr Andronikos Komnenos (Manuel I’s brother); born ca. 1110, died Constantinople soon after 1151/2. After her husband’s death in 1142, the ambitious Irene came into conflict with the young Manuel I. She was exiled to the Princes’ Islands, and her enormous fortune was confiscated. When she returned, she was then accused of being involved in a plot against Manuel I (in 1148) and after a short banishment was placed in the Pantokrator monastery. Irene was the patron of literati in the capital (Prodromos, Manganeios Prodromos, Tzetzes, Manasses) and corresponded with the monk Jacob. The poets praised her wealth, beauty, cleverness, and her courageous independence in opposition to Manuel I. Irene’s sons John and Alexios became Manuel’s favorites, and Alexios Komnenos controlled the government during Alexios II’s minority; her daughter Theodora was married to Henry of Babenberg, another daughter Eudokia was Andronikos I’s mistress.

KOMNENE, MARIA (the Porphyrogennete), daughter of Manuel I and Bertha of Sulzbach; born Constantinople Mar. 1152, died Constantinople July 1182/early 1183. She was heiress-presumptive until Alexios II was born. About 1163 she was betrothed to the future Béla III of Hungary. Despite the betrothal, in 1166 or 1167 Manuel offered her hand to William II of Sicily, whose regents declined the offer. After Alexios II’s birth, her engagement to Béla was terminated. In 1171 or 1172 Manuel betrothed her to William II, but she never left for Italy. In 1177 or 1178, Manuel offered her hand to confirm an alliance with the Montferrat family; early in 1180 Renier of Montferrat married her. She received the title kaisarissa (i.e., wife of the caesar); with her forceful personality, she easily dominated him. After Manuel’s death, dissatisfied by her lack of influence on the regency for Alexios II, Maria started a conspiracy (Feb. 1181). When it was detected in March, she and her husband fled to
Hagia Sophia, whence she waged war on the regency’ soldiers. She urged the future Andronikos I Komnenos to advance on Constantinople. In May the patriarch arranged peace and she and Renier returned to the palace. After Andronikos took Constantinople, she allegedly was poisoned.

KOMNENIAN DYNASTY, family that ruled from 1081 to 1185. The first of the Komnenoi to ascend the throne was Isaac I, but the dynasty really commenced with his nephew Alexios I. Exceptionally in the history of Byz. the first three members of the dynasty, Alexios, John II, and Manuel I, held power for a full century. The 12th C. was comparatively stable. Alexius quashed political and ideological resistance and, apart from the rivalry within the family of the Komnenoi, the century did not see serious rebellions or riots. The minority of Alexios II and the usurpation of Andronikos I, however, reopened political conflict. The Komnenoi stabilized the international position of the empire despite severe pressures from Seljuks, Normans, the Crusaders, and Venice. The economy revived; art and literature flowered even if the term Komnenian Renaissance cannot be used without qualification. Evaluation of the dynasty is contradictory. On the one hand, V. Vasilievskij propounded a theory (developed by G. Ostrogorsky and modified by P. Lemerle) that, by accepting Western feudalism, the Komnenian dynasty destroyed original Byz. institutions and caused the decline of the empire, while on the other, A. Kazhdan and R.-J. Lille emphasize the positive effect of Komnenian policy.

KOMNENODOUKAS. See Doukas.

KOMNENOS (Komnenos), name of a noble lineage, deriving from village of Komne (Psellos in Sathas, MB 4:407.20–21); K. Amantos (Thrakika 10 [1938] 232f) located it in Thrace despite the explicit evidence of Attaleiates (Attal. 58.11–13) that they were among those who were noble and famous in the East; in the mid-11th C. their estates were situated in the Kastamon region. The Komnenoi are known from the reign of Basil II onward: the protospatharios Nikephoros governed Vaspurakan, the patrikios Manuel Komnenos Erotaikos was strategos autokrator of the East. His son Isaac (I) became emperor in 1057. In the 11th C. Komnenoi were landowners (cf. Peira 44.1) and military commanders: John, Isaac I’s brother, was domestikos ton scholon, as was his son Isaac; another son Manuel was protostrator; the third son, Alexios (I), became emperor in 1081. The Komnenoi were intermarried with aristocratic families (Dassanou, Doukai) and foreign dynasties—Bulgarian and Georgian.

After the establishment of the Komnenian dynasty, the Komnenoi and families related to them by marriage acquired almost all of the highest military posts and were granted the highest dignities newly invented by Alexios I: according to a very approximative calculation, 90 percent of the topmost elite from 1118 to 1180 consisted of Komnenoi and their relatives (I. Sorlin, TM 6 [1976] 374). The Komnenoi were also active as provincial governors in Cilicia and the Balkans. Only rarely were they in the civil service: the parakoimomenos John reportedly administered “the state affairs” under John II; Stephen was megas droungarios; Alexios and Constantine served as imperial pinkernes. These civil servants were all distant relatives of the emperors. Only one relative was in the church hierarchy: Adrianos, Alexios I’s nephew, who after a career as ruler of the “Chalybes,” a tribe on the eastern frontier, became archbishop of Bulgaria in 1143 under the name of John; Hilarios, proto of Athos ca. 1110, who is called a relative of Alexios I, is a very obscure figure.

The role of the Komnenos family in cultural life was limited: Anna Komnene received her education against her parents’ will; the other writers in the family were a certain sebastokrator Isaac (or Isaac Porphyrogennetos—see Komninos, Isaac), who composed several theological works, and Alexios, who produced some poems. More important was the role of the Komnenoi as patrons, esp. certain women, such as Anna and the sebastokratorissa Irene Komnene. Great landowners, they founded several churches and monasteries: Kosmosoteira at Bera, Kecharitomene,
and Pantokrator in Constantinople. A 12th-C. epigram states that a John Komnenos, son of a sebastokratōr, built a monastery instead of a mansion (Lampros, "Mark. kod." [1911] nos. 50–51); the protostrator Alexios is called the founder of the Church of St. Nicholas in Manastir (F. Barišić, ZRVI 8.2 [1964] 20f).

The role of the Komnenos family declined in the late 12th C. due to the anti-aristocratic policy of ANDRONIKOS I; his contemporary, David Komnenos, governor of Thessalonike in 1185, was treated by Eustathios of Thessalonike and Niketas Choniates as a symbol of cowardice and lack of martial prowess (K. Barzos, Makedonika 20 [1980] 30–47). Nonetheless, the name of Komnenos retained its spell and was widely used as a sort of royal title by various dynasties from the late 12th C. onward: ANGELOI, VATATZES, and the rulers of Trebizond (GRAND KOMNENOS) who claimed affinity with the Komnenoi. In the second half of the 13th C. several members of the Komnenos family held relatively modest posts, for example, the megas domestikos Theodore Angelos Komnenos ca.1287 and a sebastos George Doukas Komnenos mentioned on a 13th-C. seal. A branch of the family was established at this time in Ikonion and is attested by an inscription (P. Wittek, Byzantion 10 [1935] 505–15). (See genealogical table.)

KOMNENOS, ISAAC, name of a writer or of two writers of the 12th C. (1) Under the name of Isaac Komnenos the Sebastokrator have survived three philosophical treatises. They are based on works of PROKLOS that are preserved only in the Latin translation of WILLIAM OF MOERBEKE. Proklos—and following him, Komnenos—studied problems of providence, evil, and necessity. (2) A certain Isaac Komnenos the Porphyrogennetos was the author of two short works on HOMER. In the first (The Omissions of Homer), Komnenos laments that Homer did not mention some episodes of the Trojan War; the second essay, On the Characters of the Hellenes and Trojans Who Were at Troy, characterizes the war’s heroes. Probably the author used the same sources as did Tzetzes, such as MALALAS.

Identification of these writers is difficult since in the 12th C. there were several men named Isaac Komnenos the sebastokrator, and some of them were born in the purple. Because the sebastokrator Isaac, brother of Alexios I (see preceding entry), commissioned a florilegium of patristic writings in refutation of LEO OF CHALCEDON (Beck, Kirche 612), authorship of the philosophical treatise has sometimes been attributed to him. Isaac, the son of Alexios I, has been proposed by F.
Uspenski (IRA1K 12 [1907] 29f), followed by O. Jurewicz (Andronikos I. Komnenos [Amsterdam 1970] 39f), as the author of the Homeric commentaries. This identification is based on the statement in Isaac’s typikon for Kosmosoteira that he composed (syntetaches) a book including verses and ekphrasis (see KOMNENOS, ISAAC THE PORPHYROGENNETOS), and the alleged stylistic similarities between the commentaries and the typikon, but neither Uspenski nor Jurewicz gives examples for comparison. The question remains open.

LIT. 1. Barzos, Genealogia 1:79, 255.

KOMNENOS, ISAAC THE PORPHYROGENNETOS, the third son of Alexios I; born Constantinople 16 Jan. 1093, died soon after 1152. Caesar during his father’s reign, Isaac was granted the title of sebastokrator by his brother John II whom he supported in the latter’s conflict with their mother Irene Doukaina and sister Anna Komnene in 1118. The alliance of the brothers, however, was of short duration: ca. 1130 (according to Kurtz, in 1132) Isaac, together with his sons Andronikos (the future emperor) and John, fled to Amîr Ghażâ, the Danîşmendid sultan of Ikonion (died 1134) and attempted to create a broad coalition against John II including the Turks, Constantine Gabras of Trebizond, Leo I of Cilician Armenia, and Foulques of Anjou, the king of Jerusalem (1131–43). Isaac also went to Palestine and visited some pilgrimage sites in the Holy Land. When the coalition failed, Isaac negotiated with John II and returned to Constantinople in 1138, but the peace was soon broken: in 1139 Isaac’s son John again fled to the Turks and Isaac was exiled to Herakleia Pontike. After John II’s death in 1143, Isaac supported his nephew, the sebastokrator Isaac, but this proved to be the wrong choice, and it was another nephew, Manuel I, who managed to seize the throne. Isaac (the son of Alexios I) continued, however, to dream of imperial power, and according to Kinnamos (Kinn. 53f) he tried to take advantage of Manuel’s difficulties and assume his place on the throne. After 1150 Manuel forced Isaac to go into retirement; in 1151/2 Isaac founded the monastery of Kosmosoteira at Bera for which he wrote a typikon.

Isaac is represented on a mosaic in the church of the Chora monastery (Underwood, Kariye Djamı 1:45–48, no.6): it is believed (R.G. Ousterhout, The Architecture of the Kariye Camii in Istanbul [Washington, D.C., 1987] 21) that he was the ktetor of Chora and had a tomb built there for himself before removing it to the church of the Kosmosoteira (N.P. Ševčenko, GORThR 29 [1984] 135–40). The date for Isaac’s reconstruction of Chora suggested by Ousterhout (ca.1120) is based on Kurtz’s date of his flight from Constantinople and is probably too early. Isaac also restored the Church of St. Stephen in Constantinople and made it into a hospice for the monks of the Kosmosoteira who visited the capital (Janin, Églises CP 473).

During the short period of peace between John II and Isaac, Theodore Prodromos addressed to Isaac an enkomion (E. Kurtz, BZ 16 [1907] 112–17) and a eulogy in hexameters (ed. Hörandner, no.42); some verses were written as if spoken by Isaac (Hörandner, nos. 40–41, cf. also E. Kurtz, BNJbb 5 [1926–27] 44–45). Isaac has been identified as the paraphraser of the Letter of Aristeas (a preface to the Old Testament) preserved in the Seraglio Octateuch, and as the patron of this deluxe MS (J. Anderson, DOP 36 [1982] 84–86). In his typikon (ed. L. Petit, IRA1K 13 [1908] 69,6–8) Isaac states that he “composed (syntetaches) a book with hexameter, iambic, and political verses, in addition to letters and ekphrasis,” a passage normally interpreted as alluding to his authorship of the book, although it could conceivably refer rather to a compilation. He may have been the author of commentaries on Homer ascribed to an enigmatic Isaac Komnenos the Porphyrogenetos (see the preceding entry on KOMNENOS, ISAAC).

KOMNENOS, JOHN, or John the Fat (Ilog ūs), usurper on 31 July 1200 (not 1201, as previously believed). He was the son of Alexios Axouch and Maria Komnene (Barzos, Genealogia 2:117–35), who was a granddaughter of John II. Contrary
to V. Laurent (EO 32 [1933] 52f), Pachys was John's sobriquet, not a family name; he had nothing in common with an undistinguished Pachys family known predominantly from 14th-C. sources. John was involved in a plot, probably organized by Alexios Mourtzophlos (the future Alexios V). Conspirators broke into Hagia Sophia, swore an oath to restore the empire to its former borders, and acclaimed John as emperor; thereafter the crowd pillaged the palace and churches. Alexios III Angelos, who at that time resided in the Blacknai Palace, sent troops under the command of Alexios Palaiologos; they sailed in boats to the Great Palace and easily cleared the Hippodrome of John's supporters. He surrendered and was executed on the spot. The unsuccessful usurpation served as the subject of several contemporary orations by Nicholas Mesarites, Nikephoros Chrysoberges, Euthymios Tornikios, and Niketas Choniates.

**Konstantin Kostenečki** (Constantine the Philosopher), Bulgaro-Serbian teacher and writer; born Kosteneč (on the Marica River) ca.1380, died after 1431. He studied at the Petritzos monastery under Evtimij of Tūrnovo and his pupil Andronikos. After the Turkish sack of Plovdiv (Philippopolis) in 1410, Konstantin migrated to Serbia, where the despotes Stefan Lazarević welcomed him. He devoted himself to teaching and writing, interrupted by a visit to the Holy Land and diplomatic missions to Timur and Ottoman sultans. Konstantin encouraged the reform of Serbian Slavonic in accordance with the principles established by Evtimij. He wrote a treatise on orthography, surviving in two redactions; a Life of Stefan Lazarević which is rich in historical, geographical, and ethnographical information (Dujčev, _Medieval_ 3:366–71); and a Pilgrimage to Palestine that is mainly derivative of _hodoiporiai_ to Edem, Greek travel guides for _pilgrimage_. Konstantin also translated Theodoret of Cyrrhus's _Commentary on the Song of Songs_ and possibly other Greek texts. Konstantin introduced to Serbia the rigorous philology and literary sophistication which his teachers had learned from 14th-C. Byz.

**Konstantin Mihaílović of Ostrovica**, a native of Serbia, captured by the Turks at Novo Brdo in July 1455 and forced into military service as a janissary until the Hungarians recaptured him in 1463. Konstantin also claims to have participated in the siege of Constantinople in 1453, as one of the Serbian contingent sent by the despotes George Branković. His _Memoirs_ were probably written in Serbian, though they survive only in Czech and Polish versions in MSS and printed editions dating from the 16th C. onward. The Czech version is probably closer to the original; the Polish is translated from the Czech (A. Danti, _RicSlav_ 16 [1968–69] 126–62). Chapter 26 treats the siege of 1453. Konstantin's account con-

**Konstantia.** See Constantia.
centrates on the Turkish maneuvers, particularly
the feats of engineering in conveying ships across
land and in breaching the walls. He stresses the
"treachery" of Mehmed II in breaking his truce
with Constantine XI.

Vienna-Cologne 1975).

-KONSTANTIN OF PRESLAV-

KONSTANTIN OF PRESLAV (Constantine of
Bulgaria), medieval Bulgarian writer and bishop of
Preslav; late 9th-early 10th C. A pupil of
Methodios and thoroughly familiar with the Greek
language and Byz. religious culture, he may have been
among the pupils of CONSTANTINE THE PHIL-
OSOPHER and Methodios sold into slavery and
ransomed by a Byz. official. Konstantin lived
in Bulgaria from before 893 to ca.910. His works
include a translation of Athanasios of Alexand-
ria's homilies against the Arians (906), a Gospel
commentary (Užitěl’no evangeliu) consisting mainly
of translations of homilies of John Chrysostom
and Cyril of Alexandria, a short explanation of
church organization and liturgy based largely on
the works attributed to Patr. Germanos I, a world
chronicle from Adam to 893 drawing entirely on
Byz. sources (Bulgaria is mentioned only in connection
with the death in battle of Emp. Nikepho-
ros I), an edifying acrostic poem, the earliest sur-
viving Old Church Slavonic poetic text, an Office
in honor of Constantine (Cyril) and Methodios,
and several liturgical hymns. Konstantin displays
little originality of thought, but considerable skill
in adapting Church Slavonic to the expression of
theological, philosophical, and other abstract ideas,
as well as some poetic feeling. His works were
influential in Serbia and later in Russia.

-KONTAKION (kontáko’s), a sermon in verse,
usually celebrating major feasts and saints. From
the late 5th to 7th C. it was chanted during the
Orthros by a preacher or psaltes (singer) and
choir. It consists of an introduction (the prooimion
or koukoulion), followed by a varying number of
oikoi (stanzas) connected to the prooimion by a
refrain; the oikoi are linked by an acrostic as well
as by their shared and complex metrical structure,
which is based on patterns of corresponding
stressed syllables. An heirmos (model stanza)
beings each kontakion and indicates its melody and
metrical pattern, which differ for the prooimion
and for the oikoi.

Though antecedents for several of the konta-
kion’s most striking features can be found in Greek
homiletic practice of the 3rd–4th C., the first authors of the kontakion were drawing on Syriac
forms of poetic sermon (the Memra, a metrical
sermon; the Madrasha, which used a refrain and
acrostic; and the Sugita, a sermon in dialogue
form), particularly as developed by Ephrem the
Syrian, whose work also existed in Greek
versions. The high point in the composition of the
kontakion was reached in the mid-6th C. by Ro-
manos the Meleode. The Akathistos Hymn may
also date from this period. Other writers of kon-
takia, older contemporaries of Romanos, include
Kyriakos and Domitios, of whom little is known
but their names.

The dominant form of hymn, the kontakion
was gradually superseded during the 8th C. by the
recently devised kanon. Kontakia continued to be
written until the 9th C. (e.g., by Joseph the Hym-
ographer), but the vigor had gone; eventually
the kontakion, reduced to its prooimion and first
oikos only, became simply a hymn to be inserted
after the sixth ode of the kanon. At their liveliest,
kontakia use bold imagery and vivid, almost the-
atrical dialogue that dramatically recreates the
scriptural texts set in the liturgical calendar.

-KONTOSTEPHANOS (Kontостефованос, "short
Stephen," fem. Kontостефованиа), a noble family
the first known member of which was Stephen,
domestikos of the West under Basil II, whose nick-
name was "due to his short stature" (Skyl. 331.33–34).
Involved in intrigues, Stephen fell victim to
Basil’s wrath and was beaten by the emperor. Nothing more of the Kontostephanos family is recorded until 1080, when the Turks captured Isaac, a military commander. The Kontostephanoi played an important role throughout the 12th C., predominantly as commanders of the fleet: admiral (thalassokrator) Isaac fought unsuccessfully in 1107/8; Stephen fell during the siege of Kerkyna (1149); Andronikos, megas doux of Manuel I, led the fleet against Egypt in 1169; John was the admiral (nauarchos) of Isaac II. They also served as governors of Crete (Alexios ca.1167, Stephen in 1193, Nikephoros in 1197) and of several other provinces. The Kontostephanoi intermarried with Komnenoi, Doukai, Angeloi, and other noble families and possessed large estates. There is no evidence of their participation in cultural life. Their position declined after 1204, although they are mentioned in the list of noble families in the poem on Belisarios. They owned property in Constantinople, on Lemnos, and elsewhere, were related to noble families such as Laskaris, and obtained some government positions: for example, a certain Kontostephanos was commandant of the fortress of Garell in Thrace in 1343. Among later Kontostephanoi were a teacher (John, ca.1358), a scribe (Philamoulis, ca.1413–16), and a monk (Dionysios, ca.1365).

KORMČAJA KNIGA (lit. “The Pilot’s Book” according to current etymological interpretation, cf. Gr. pedalion), a term attested from the 13th C. for Slavic collections of ecclesiastical and secular law of both Byz. and Slavic origin. Three or four “families” of Kormčaja are distinguished, named after their most important or most familiar MSS or after their place of origin (not in all cases undisputed).

1. The Old Slavonic (or “Bulgarian”) Kormčaja, the best MS of which is the Efremovskaja Kormčaja of the 12th C. (Drevneslavjanskaja kormčaja XIV titulov bez tolkovanij, ed. V.N. Benešević, vol. 1 [St. Petersburg 1906, rp. Leipzig 1924]; vol. 2 [Sofia 1887]). Its core is the Syntagma of Fourteen Titles without commentary.

2. The “Serbian” redaction, translated by Sava of Serbia ca.1219? (complete text—Raškijs MS of 1305), with variants in the Ržanska kormčaja of 1284, which includes the commented Synopsis canonum.

3. The “Russian” (Novgorodskaja or Sofijskaja) Kormčaja of the 13th C., which has the complete text of the canons with commentary.

As a fourth family some cite the Ustijuščaja (or “Moravian”) Kormčaja (Magnae Moraviae fontes historici, ed. J. Vašica et al., vol. 4 [Brno 1971] 147–98, 205–363), which contains selected passages from the Synagoge of Fifty Titles in translation. The Russian Kormčaja was widely disseminated in Russia and was supplemented by numerous original Slavic texts.

KORONE (Kopóyn, Coron, anc. Asine), city in the southeast corner of Messenia in the Peloponnesos. The city had civic status in late antiquity (Hierokl. 647.15), and a fragment of Diocletian’s Peace Edict was discovered there. By the time of the Slavic invasions the site was probably strongly fortified. At some undetermined date the people of ancient Korone (modern Petalidi) moved to Asine, and the name was changed. By the early 9th C. a bishop of Korone is attested as a suffragan of the archbishop of Patras (Reg 2, no.371), and Laurent (Corpus 5.1, no.646) dates to the 9th C. the seal of Prokopios, bishop of Korone. Like Methone, Korone profited from the pilgrimage traffic and the growth of east-west trade from the 11th C. onward. After the Fourth Crusade Korone was granted first to Geoffrey I Villehardouin, who ceded it to Venice in 1209; ca.1300 it was under the authority of Monemvasia. The Greek peasants of the hinterland of Korone seem to have had a favorable status in comparison with their counterparts in the Morea: they could hold land, in addition to their unfree tenure (stasia), and
could dispose of this land freely without recourse to the commune.

The imposing fortress on the sea, although substantially rebuilt by Venice, is essentially Byz., probably to be assigned to the 6th–7th C. Within the fortress are the remains of a basilica, presumably of the same date.

KORYKOS (Kórykos), coastal city of CILICIA whose rich architectural and epigraphical record compensates for the deficiencies of the late antique sources, which state only that Justinian I restored the local bath and poorhouse. Five major churches, richly decorated basilicas of varying style, reflect considerable activity ca.480–550, and 636 funerary inscriptions, of which 393 name occupations, allow the social and economic structure to be reconstructed. The population included manufacturers and sellers of a vast range of products. As an important port near the frontier, Korykos became headquarters of a droungarios of the KIBYRHALIOTAI; one such droungarios, Apsimar, became emperor as Tiberios II. The troops from Korykos were called Kourikiotai (Theoph. 370.24, Nikeph. 40.2). Korykos was later incorporated in the theme of SELEUKIA. Circa 1100, after a brief Turkish occupation, Alexios I rebuilt Korykos, which was described by his historian daughter (An.Komn. 3:45.22–30) as formerly well fortified but recently ruined. By that date the city consisted of a castle whose concentric walls occupied a small part of the ancient site. It was lost to the Armenians in the late 12th C. The castle manifests several stages of construction, some perhaps as early as the 7th C.

KOS (Kós), island in the Dodecanese north of RHODES. In late antiquity it was second city of the province of the Islands. The bishop of Kos was suffragan of Rhodes; bishops of Kos participated in various councils from that of NICAEA I (325) onward (R. Janin, DHGE 13 [1956] 927). An 8th-

KOSMAS I, Chalcedonian patriarch of Alexandria (from ca.727); died 768. After the Arab invasions, the Chalcedonian see of Alexandria remained vacant until the accession of Kosmas. He had the approval of both the emperor and the Muslim ruler. In 742/3, according to Theophanes (Theoph. 416.13–16), Kosmas abjured the doctrine of MONOHELETISM, which had held sway in Alexandria since the time of HERAKLEIOS. It is, however, doubtful that the patriarch himself had been a Monothelete. The chronicler's brief account may be a confused reference to the formal recognition of Alexandria as an Orthodox see by the other patriarchates.

KOSMAS AND DAMIANOS, also called the anargyroi, legendary saints. The cult of Kosmas and Damianos apparently developed by the 5th C. in Constantinople, where, according to local tradition, two churches (in Zeugma and Kosmidion) were dedicated to them ca.440 (Janin, Églises CP 284–89). According to certain sources (e.g., Synaxarion of Constantinople and John Xiphilinos the Younger, nephew of Patr. John VIII), there were three pairs of anargyroi doctors called Kosmas and Damianos: (1) the sons of a certain Theodote from Asia, who died natural deaths and were buried in Pherema (feastday 1 Nov.); (2) the saints executed by Carinus (283–85) in Rome (1 July); and (3) the saints who originated from Arabia and were martyred in Cilicia under Diocletian and Maximian (17 Oct.).

Numerous authors produced stories of miracles performed in Constantinople by Kosmas and Damianos that were used by Sophronios of Jerusalem, such as the sick being healed by incubation in the church atrium and porticoes. The patients included people whose piety and morals seemed questionable: a Jewess, an ardent fan of the Hippodrome, and a dissolute woman. The veneration of Kosmas and Damianos spread beyond Constantinople; their legends were rewritten by various writers such as Andrew of Crete, Peter of Argos, Theodore II Laskaris, and a certain Maximos ca.1300. The legends are preserved also in Syriac, Coptic, Georgian, Armenian, and Latin.

Representation in Art. Portraits of the two saints abound, standing side by side, often in the company of other anargyroi such as Panteleemon; they are mature men with spare dark beards, clad in tunics and phelonia and carrying the tools of their trade. One composition shows them facing each other and receiving the gift of healing in the form of a medical bag offered by the hand of Christ (Menologion of Basil II, p.152); at the Holy Anargyroi church at Kastoria, a similar composition depicts Christ extending them crowns. Few narrative cycles of their lives have survived, though there is a vita icon with 12 scenes that comes from their church at Kastoria, some frescoes in that church and at Mistra, and occasional miracle scenes in lectionaries or menologia. The Arabian pair celebrated Oct. 17 are shown with turbans or being beheaded (Menologion of Basil II, p.120).

KOSMAS AND DAMIANOS MONASTERY, also known as the Kosmidion. The original church, dedicated to the martyrs Kosmas and Damianos, was built during the reign of Theodosios II in the suburbs of Constantinople; numerous miracles were ascribed to this shrine. An attached monastery is first attested in the 6th C. Because of its vulnerable location outside the walls, in present-day Eyüp, the church was destroyed in the Avar attack of 626. It was, however, restored by the 8th C. In the 11th C. Emp. Michael IV Paphlabagon was responsible for major improvements at the monastery; he provided bathhouses, lawns, and fountains, in addition to commissioning the rebuilding of the church and its decoration with mosaics and marble revetment (Psellus, Chron. 1:72f). It was to this monastery that, suffering from terminal illness, he retired in Dec. 1041; he received the monastic habit on the day of his death. He was buried in the church he had restored. The monastery of Kosmas and Damianos is mentioned frequently in sources of the Palaiologan period and apparently survived until 1453. It should be distinguished from the contemporary nunnery dedicated to the same saints, which was restored in the late 13th C. by the Dowager Empress Theodora, widow of Michael VIII.

KOSMAS INDIKOPLEUSTES, Alexandrian merchant and (perhaps) later a monk, who traded in Ethiopia and the Red Sea, possibly also in India and Taprobana (Ceylon); fl. first half of 6th C. These travels are described in his Christian Topography, a work that provides much valuable information about Byz. trade with Africa and Asia, Christianity in Persia, and exotic flora and
fauna. His central purpose is to refute both Ptolemaic astronomy and the contemporary synthesis of Christianity and Aristotelianism in favor of a system that permitted the literal acceptance of the Bible, the world being shown to resemble the tabernacle of Moses. Kosmas wrote as a Nestorian follower of Theodoret of Mopsuestia at the apogee of the Three Chapters controversy, tilting primarily at John Philoponos. Given the involvement of Justinian I, the book comports a political undertone. Because Kosmas alludes in his text to illustration, a 6th-C. prototype is assumed for three richly illustrated MSS: Vat. gr. 699 (9th C., ed. Stornajolo), Sinai gr. 1186 (11th C., P. Huber, Heilige Berge [Zurich 1980] 56–115), and Florence, Laur. plur. 9.28 (11th C.). Although their pictorial content varies, each contains more than 50 miniatures invaluable for the study of cosmology, astronomy, and zoology. Biblical sequences emphasize the equipment of the Temple, the Exodus itinerary, and the prophets. Kosmas also wrote a commentary on the Song of Songs in four books, to which a few fragments on the Psalms might belong.

—B.B., A.C.

KOSMAS MAGISTROS, jurist; died after 946. Kosmas was the nephew of Photios and probably was the compiler of Romanos I's novel of 934. Two statements (ipsephoi) of Kosmas have survived as an appendix to the Synopsis Basilicorum. The first, a regulation pertaining to the division of land, has been erroneously interpreted as proving there were periodical distributions of peasants' allotments in Byz.; in fact, it deals with resolving litigation over land (Ostrogorsky, Steuergemeinde 40f). Some monastic acts (Prot., no.6.7–8, of 943; Ivoir., no.4.27, of 982) make reference to thisipsephoi of Kosmas. The second ipsephos is a definition of the rights of paraikoi who settled on the land of a bishopric: the paraikoi had no right to alienate or hand down the land granted to them and on their departure could claim only the construction materials of their houses. Weiss (infra) considers this definition proof of the continuity of the status of the late antique coloni liberi. Kosmas was in correspondence with Arethas and Niketas Magistros and was sent with John Kourkouas in 946 to negotiate with the Arabs of Tarsos for the return of prisoners (TheophCont 443.1–12).

ED. F. Uspeenskij, V. Beneševič, Vazelonskie akti (Leningrad 1927) xxxv–vi.

KOSMAS THE HYMNOGRAPHER, poet and saint; according to Detorakes, born Damascus ca.675, died Maiouma ca.752; feastday 15 Jan., later shifted to Oct. Adopted by the father of John of Damascus, he was educated together with John by a certain asekretis (also Kosmas by name?), a captive from Constantinople. A monk (in the Lavra of St. Sambas), Kosmas was elected bishop of Maiouma, near Gaza, ca.734/5. Together with John, Kosmas defended icon veneration.

Under the name of Kosmas are preserved various hymns on church festivals (PG 98:459–524), a kanon on the Elevation of the Cross (H. Tillyard, BZ 28 [1928] 29–32), a kanon on St. George (A. Papadopoulos-Kerameus, BZ 14 [1905] 520–25), as well as scholia on Gregory of Nazianzos (PG 38:341–680). Th. Detorakes (EEBS 44 [1979–80] 223–30) emphasizes that Kosmas was influenced not only by Gregory but also by Romanos the Melode. Kosmas liked to use cosmic images (abyss, fire, clouds) and sharp contrasts; his language teems with archaic words—all leading to an impression of lofty solemnity. Kosmas enjoyed a high reputation and was praised in various vitae (sometimes together with John of Damascus), akolouthia, and epigrams.

From the 14th C., the portrait of Kosmas, along with those of John and two other hymnographers, sometimes adorns one of the penedives of a dome. Seated in the pose of an Evangelist, writing his hymns into a book, Kosmas is clad as a monk, not a bishop, and often wears a sort of turban characteristic of images of Palestinians (e.g., Underwood, Karye Dyami, vol. 3, pl.225). He has a full, dark beard.

KOSMAS THE PRIEST, Bulgarian writer of the second half of the 10th C. Nothing is known of his life, but he probably lived and worked in Preslav. He wrote a treatise against the Bogomils. In the first book he sets out critically the religious and social views of the new heretics and seeks to refute them. In the second book he attacks the higher clergy, the monks, and the rich, whose neglect of their religious and social duties, he declares, encourages the spread of the heresy. Kosmas’s treatise is a priceless contemporary source on the early development of Bogomilism. It also contains valuable observations on the changing economic and social structure of Bulgaria at that time. He is an intelligent and observant critic, a sharp polemicist, and a vivid and colorful writer. His treatise was much read in medieval Rus’, where it provided a model for polemics against local heresies.

KOSMAS VESTITOR (Космас Веститор), writer. According to Beck, he lived between 730 and 850, but A. Wenger (REB 11 [1953] 299f) dates him in the mid-8th C. He wrote an enkomion of John Chrysostom (K. Dyobouniotes, EEBS 16 [1946] 151–55) and five enkomia on the translation of Chrysostom’s relics to Constantinople (K. Dyobouniotes, EEBS 2 [1925] 55–89). In the fourth of these enkomia Kosmas emphasized that Theodosios II was forced by Patr. Proklos to return Chrysostom’s body from exile and to apologize before the oikumenikos didaskalos (see Didaskalos) for the long delay. The Virgin was also of interest to Kosmas. He dedicated a discourse to her parents Ioakeim and Anna (PG 106:1005–12) and produced four homilies on the Dormition, preserved only in a 10th-C. Latin MS, probably of Italian provenance. Although Kosmas borrowed some passages from Patr. Germanos I, he differs from him in details and emphasizes the parallelism of the earthly lives of Mary and Christ; he includes later legends such as the translation of Mary’s robe, the famous talisman of Constantinople, to her church at Blachernai.

ED. A. Wenger, L’Assomption de la T.S. Vierge dans la tradition byzantine du VIe aux Xe siècle (Paris 1955) 315–33.

KOSMIDION. See Kosmas and Damianos Monastery.

KOSMOSOTEIRA MONASTERY. See Bera.

KOSOVO POLJE (Перине Косов), “Field of the Blackbirds,” a valley in southern Serbia between Priština and the Laba River; site of two battles, in 1389 and 1448.

On 15 June 1389 a coalition of Serbs, Bosnians, Albanians, and others under command of the Serbian prince Lazar fought a battle there against the Turkish army of Murad I that had invaded Raška; possibly some Greek vassals of the sultan were summoned. According to the contemporary Florentine Cronaca volgare, Murad’s army was 140,000 men strong while Lazar had only 70,000 soldiers. The actual course of the battle is shrouded in legend and contradictory historical narratives. A Russian traveler, the deacon Ignatij of Smolensk, in his diary written a few years after the battle noted only the rumors that both Lazar and Murad were killed. Demetrios Kydones, in a letter to Manuel II (ep.396), alluded to this event; S. Cirkočić (ZRVI 13 [1971] 213–19) hypothesized that in another letter (ep.398) Kydones celebrated this battle as a victory over the Turks. The Cronaca volgare gives a detailed description of the battle: the author says that Lazar together with some valiant men penetrated the Turkish camp; one of them wounded Murad, and the sultan died on the third day, after ordering the execution of Lazar and his companions. The chronicle presents the war as a defeat for the Turks who fled home after the battle. King Tvrtko of Bosnia, in his letters, described Kosovo as his victory and praised “twelve loyal lords” who assassinated the sultan. Serbian chroniclers and hagiographers concentrate on the heroic deeds of Lazar.

In contrast, the Turkish sources of the 15th C. (A. Olesnici, Glasnik srpskog naučnog društva 15 [1935] 59–98) characterize the battle as won by the Turks—either by Murad (they place the as-
sassination of Murad at the very end of the battle, with the assassin rising from among the corpses and taking the sultan by surprise) or by his son Bayezid after the father’s assassination. Only in the 15th-C. sources does the name Miloš Kobilić appear as the sultan’s assassin. Byz. historians of the 15th C. give disparate descriptions of Kosovo: Sphrantzes briefly presents the Turkish version, Doukas eulogizes the assassin of the “tyrant,” and Chalkokondyles analyzes the distinction between the Turkish and Greek views of Kosovo.

Although the battle is usually described as a Turkish victory, both armies suffered enormous losses, and scholars such as Fine (Late Balkans 408–11) and Emmert (infra) regard the battle as more of a draw. The immediate consequences of the battle were that Serbia became an Ottoman vassal state (by the end of 1389) and the Balkan peninsula was opened to further Ottoman expansion. Probably shortly after the battle the Serbian epic tradition began to take shape, praising and lamenting Lazar and Miloš, and transforming the events into a noble moral victory, the source of subsequent Serbian resistance against the Turks.

The second battle of Kosovo, on 17–19 Oct. 1448, resulted in a victory by Murad II over Hunyadi a few years after the defeat of the crusading expedition at Varna.

KOTYAION (Κοτγαίων, mod. Kütahya), city of Phrygia, at a strategic road junction; site of an exceptionally powerful fortress. A city of the Opiskion theme, Kotyaion occasionally appears in history as a place of refuge or exile; Romanos IV was blinded there in 1072. Byz. lost it ca.1082 but recovered it for a brief while. A suffragan bishopric of Synnada, Kotyaion was made metropolis in the early 9th C. It rose to greater prominence after its recapture by the Seljuks in 1182 or 1183. The extensive fortifications of Kotyaion, with more than 70 towers, are well preserved. Their first stage, of the early 9th C., consisted of a double wall that made extensive use of spolia. This was replaced by more massive structures of ashlar with bands of brick, apparently of the 12th C. No other Byz. remains survive.

KOUBIKOULARIOS (κουβικουλάριος, from Lat. cubicularius), a general term to designate palace eunuchs who waited upon the emperor, the servants of the sacrum cubiculum. Guillard (infra 269) distinguishes them from the kortonitai, suggesting that the koubikoularioi were noble personages. In the late Roman Empire they were emancipated slaves imported primarily from Persia or the Caucasus. They were very numerous. In the 6th C. Empress Theodora’s retinue consisting of patrikoi and koubikoularioi was estimated at 4,000 (Malal. 441.9–10). They stood under the command of the praepositus sacri cubiculi and primicerius (Jones, LRE 1:566–70).

Abundant seals of the 7th–9th C. present the koubikoularioi as fulfilling specific duties at court, those of parakaimomenos, primikerios, epites trapezes, and ostiarios. They were engaged in financial administration as sakellariori and charitous; especially indicative is the 8th-C. seal of an anonymous koubikoularios of the imperial bedchamber (koiton) and chartourios of the imperial vestiarion (Zacos, Seals 1, no.1093); koubikoularioi also served the orfanotrophoi, koukatores, and so on. They played an important role in imperial ceremony. At the same time koubikoularioi received posts as governors and army commanders as well as diplomatic assignments. Special koubikoularioi were attached to the empress (sometimes female koubikoulariai are mentioned) and co-emperors. It seems that Pope Leo I introduced the office of ecclesiastical cubicularius, in imitation of the imperial koubikoularios, to celebrate the cult of the apostles Peter and Paul (M.A. Cavallaro, Athenaeum 50 [1972] 158–75). Guillard (infra 280) thinks that the office of koubikoularios existed until the 13th C. but Oikonomides (Listes 301) asserts that it disappeared by the second half of the 11th C. The term spatharokoubikoularios was a combination of spatharios and koubikoularios; his function was to escort the emperor. Some seals of this dignity are dated to the 11th/12th C. (e.g., Seibt, Bleisiegel, no.44).

–A.K.
KOUBOUKLEISIOS (κούβουκλείσιος), imperial title conferred on patriarchal chamberlains. In the Kletorologion of Philotheos (151.19–21), they follow the emperor’s koubikouarios, thus forming an ecclesiastical parallel to the latter. The title is first mentioned in the minutes of the Second Council of Nicaea in 787 (Mansi 13:213E) and often appears on seals of the 9th–11th C.; it probably did not survive the 11th/12th C. The 10th-C. Taktikon of Benešević distinguishes two groups of kouboukleisi: priests and deacons. As an honorific title, kouboukleisios sometimes appears in combination with the offices of chartophylax, skewophylax, oikonomos, etc.; some kouboukleisi were monks. In the 9th C. the emperor granted the title; under Michael I Keroularios the patriarch bestowed it. Sometime between 1052 and 1056 Keroularios gave the title to a deacon of Antioch (RegPatr, fasc. 3, nos. 860–61).

—A.K.

KOUKOULION. See Costume.

KOUKOUZELANT, JOHN, composer, theoretician, singer, teacher, scribe, maistor, monk at the Lavra on Mt. Athos, and saint; born Durrachion late 13th/early 14th C., died before ca.1341; feast day 1 Oct. His vita has survived in various recensions, the earliest being Thessalonike, Blatadon 46 (1591). There is evidence that his last name was Papadopoulos, Koukouzelas (Κουκουζέλας) being a nickname, and that his mother was Bulgarian. Most frequently, however, he is referred to simply by the epithet, “the maistor.” Two copies of Koukouzelas’ edition of the Heirmologion, dated 1392 and 1399, survive. His famous didactic chant, “Ison, oligon . . . ,” is first recorded in Athens, Nat. Lib. 2458 (1336) and has been transcribed by G. Dévai; it exists also in many later MS versions.

Most of his music is transmitted in musical anthologies (Akoulouthai; see Papadike). His compositions demonstrate new and innovative features: melodic expansion, troping (textual and/or musical additions to a preexisting verse or verse-setting), textual expansion, and greater vocal ranges. Forming a bridge from the musical tradition of the 13th C., his work appears to have provided the impetus for a new repertory and for musical developments that were to be continued by his contemporaries and successors.

—D.E.C.

KOUPHISMOS (κουφήσμος, lit. “alleviation”), a temporary tax-relief on property owned by a member of a village community. The term appears in only two sources. The Treatise on Taxation (ed. Dölger, Beiträge 119.19–30) describes kouphismos as a well-established fiscal procedure, which a tax inspector could perform when a member of the village community abandoned his stichos. If the individual was known to be living nearby and was expected to return eventually to his property and if the tax inspector thought other villagers would simply abandon their stichoi if required to shoulder the tax burden of the member who had fled, the inspector could temporarily reduce the tax burden on the abandoned stichos until the original owner returned, at which time the property’s full tax liability was restored. The principal differences between kouphismos and sympatheia were that kouphismos involved only a partial reduction of the tax, and that, if the owner returned, the property’s full tax liability was immediately restored. Further, unlike sympatheia, kouphismos had no time limit for the owner’s return, nor does kouphismos appear to lead to klasia. As with sympatheia, property that had received kouphismos could not be sold or confiscated. The brief explanation of kouphismos in the 11th-C. (?) Zavorda Treatise on Taxation (J. Karayannopoulos in Polychronion 323.63–67) is unclear.

Lit. Ostrogorsky, Steuergemeinde 26f, 78f. Svoronos, Cadastre 120.

—M.B.

KOOURATOR (κουράτωρ), term that in the late Roman Empire was still applied to a city magistrate (curator civilitatis); it was eventually replaced by the defensor civitatis (E. Kornemann, RE 4 [1901] 1809–11). From the 6th C. the term acquired the meaning of the manager of imperial
estates (probably "kouratoreia"); the first known "kourator" was Anatolios in 557. This functionary seems to have administered imperial domains that were previously under the direction of the cames rerum privatuum. "Kourotares" of the late 6th C., esp. Magnos, who controlled the domain of Marina (near Attaleia) and of Hormisdas (near Antioch), seem to have been very influential people (D. Feissel, TM 9 [1985] 465–76). In the 9th C. the management of domains was divided among several independent kourotares: the taktika of the 9th and 10th C. mention the megas kourator and kourator of the Mangana. Eventually the megas kourator was replaced by the oikonomos of "pious houses" or euageis oikoi (Oikonomides, Listes 318), who is still known in the 10th C. (R. Browning, B. Laourdas, EEBS 27 [1957] 155–90).

In the 11th C. the epiphet megas was applied to the heads of individual kouratoreiai: 11th-C. seals belong to the megaloi kourotares of Eleutherion (Zacos, Seals 2, no. 1019), Myrelaion (no. 1017), or Kanikleon (no. 132). Imperial charters from the 11th C., however, mention simple kourotares "of the house of Eleutherion and of Mangana." A kourator of the palace of the lord Romanos is known from a seal (V. Laurent, BZ 33 [1933] 351f); also on a seal a kourator of the New Estate (Ktima) is named (Zacos, Seals 2, no. 184).

A seal (Zacos, Seals 2, no. 813) belonged to a megas kourator [of the properties?] of Antiochos, probably of one of two districts in Constantinople of this name or of local churches. Some kouratoreiai were connected not with pious institutions but with particular territories: an imperial kourator of Tzouroulon is mentioned in an inscription of 813 (I. Ševčenko, Byzantion 35 [1965] 564–74); a seal of the megas kourator of Mytilene (Mytilene) is dated in the first half of the 11th C. (Zacos, Seals 2, no. 252).

Kourotares of the domains of the augusta are also known (Seibt, Bleischiegel 193f). Some kourotares were in the logothetion of the dromos (Laurent, Corpus 2, nos. 485–88). Kourotares continued to exist in the 12th C., since Patr. Loukas Chrysoberges prohibited the clergy from holding kouratoreiai and overseeing the estates of the archontes (PG 138:89A). The staff of the megas kourator included clerks, simple kourotares of palaces and estates, xenodochoi, and episkeptitai.

The term kourator also designated the archontes ton ergodosion; kourotares of imperial ateliers, esp. those dealing with silk production, are known from seals of the 9th–11th C. Ecclesiastical kourotares are mentioned on seals (e.g., Laurent, Corpus 5, nos. 1620–22) and in charters, for example, Michael, "bishop's kourator" in 1071 (Lavra 1, no. 35–59).

KOURATOREIA (κουρατορεία), also kouratorikon, term used from the second half of the 6th C. to designate a particular group of imperial desmesnes. Probably the simplification of the administration of imperial desmesnes encouraged use of a term to refer to this administration as a whole. A 9th-C. historian (Theoph. 487.2–4) accuses Emp. Nikephoros I of confiscating the best lands of the euageis oikoi and transferring them to "the imperial kouratoreia" while the taxes remained on the pious institutions. The office of the megas kourator is known from the end of the 6th C. through the 10th C. (Oikonomides, Listes 318). From the mid-9th C. onward, the administration of the crown lands expanded and grew more complex. Basil I founded the office of the kourator ton Manganon, which was obliged to provide the emperor's household with necessary goods. In 934 a kouratoreia of Melitene was created; a kouratoreia of Trychina was located in Lydia (De cer. 462–7). Other 10th–11th-C. kouratoreiai were Eleutherion, Myrelaion (identical with that of the palace of the lord Romanos [1]), Kanikleon, New Estate. Probably other heads of imperial estates (provincial kourotares, eporphos of imperial kouratoreiai, episkepittai, ktematinos) were connected with this institution. On the other hand, the directors of certain imperial workshops were also called kourotares.

KOURION. See CYPRUS.

KOURKOUAS (Κουρκούας), a family name of Armenian origin (Arm. Gurgen). Theophanes Continuatus relates that a certain Kourkouas—first name, Romanos (Skyl. 140.44)—a wealthy
and arrogant man, plotted against Basil I. John Kourtoukas was domestikos ton Hikanaton (TheophCont 426.20); his grandson, also John, became domestikos ton scholon in 923 and successfully fought the Arabs: he captured Melitene on 19 May 934 and in 944 took Edessa. His brother Theophilos was also a general. John’s son Romanos was domestikos ton scholon in the West. Romanos’s son John, domestikos ton scholon in the East, fell in battle against the Rus’ in 971. Theophilos’s grandson, John (I) Tzimiskes, became emperor. Another John Kourtoukas was katepano in Italy in 1008. Intermarried with the Phokas and Skleros families, the Kourtoukas family belonged to the highest echelon of the military aristocracy. After Basil II their role declined: Romanos, who married the daughter of the last Bulgarian tsar, was accused of plotting against Constantine VIII and blinded. The family shifted to the civil service (Mich. Ital. 53–56) and in the 12th C. held important ecclesiastical posts: Michael (II) Kourtoukas became patriarch of Constantinople (1143–46).

KOURTOUKAS, JOHN, general, the closest supporter of Romanos I; died after 946. After serving as droungarios tes viglas, he was promoted ca. 921 to the post of domestikos ton scholon and sent to subdue the rebellion in Chaldia (Adontz, Études 217f). From 926 on Kourtoukas fought on the eastern frontier; despite several defeats, mostly by Sayf al-Dawla, he managed to seize Melitene (19 May 934). His invasion of Mesopotamia in 942/3 led to the siege of Edessa in 944. This siege had enormous political and religious significance, since Kourtoukas received the mandaion in Edessa and sent it to Constantinople. Kourtoukas was dismissed after Romanos I’s deposition. His military exploits were praised by a certain protospatharios and judge Manuel in a historical work (now lost) in eight books; Kourtoukas was considered “a second Trajan or Belisarius.”

KOUROPALATES (κουροπαλάτης), a high-ranking dignity. In late antiquity the cura palatii designated a subaltern official in charge of construction and order in the palace; his rank in the 5th C. was spectabilis, rarely iuveris. The situation changed when Justinian I appointed his nephew, the future emperor Justin II, to this post; thereafter kouropalates became a title conferred primarily on members of the imperial family and foreign princes (Armenian, Georgian, etc.). In the taktika of the 9th and 10th C. kouropalates follows the Caesar and nobilissimos; it retained its exceptional character in the 10th C. when Emp. Nikephoros II granted this title to his brother Leo Phokas. In the 11th C. it was conferred on several generals outside the imperial family, for example, Katakalon Kekaumenos. The significance of the title declined considerably in the 12th C. when the dignity of the protokouropalates was introduced. Although pseudo-Kodinos, himself a kouropalates, mentions the title, it was not widely used in later centuries. According to the Kletorologion of Philothoeos, the insignia of the kouropalates was a red chiton with a cloak and girdle; at the beginning of the 9th C. the color associated with this dignity seems to have been purple, by the end of the 11th C. green (Oikonomides, Lístes 96, n.49). A seal of the kouropalattissa Maria is dated by Seibt in the early 12th C.

KOURTIKIOS (Κουρτίκιος), also Kourtikes, a family name of Armenian origin (K’urdik). The family founder surrendered his town, Lokano, to Basil I and settled in Byz. territory; in 913 another Kourtikios, “the Armenian,” supported the revolt of Constantine Doukas. Michael Kourtikios, imperial admiral (nauarchos) in Attailea, participated in the rebellion of Bardas Skleros (976–79) and commanded the rebel fleet. Basil Kourtikios was among the oikei of another usurper, Nikephoros Bryennios, in 1077; later he became Alexios I’s general. The family belonged to the toponym aristocracy of the 11th C.: the Kourtikioi intermarried with Doukai, Palaiologoi, and Komnenoi. Constantine Kourtikios is said to have been betrothed to Theodora, Alexios I’s daughter. This union was dissolved, however, and ca. 1105 a certain Kourtikios was involved in the plot of Anemas against Alexios I. The family’s position declined
in the 12th C.: except for a seal devoid of information (Laurent, Bulles métr., no.64), only Nicholas Kourtikes is known, a modest functionary in the Mylassa theme (MM 4:329.20–21), active in 1143 (according to Ahrweiler, “Smyrne” 128f) or possibly at the end of the 12th C. In the 12th C. a branch of the family is attested in Armenian Cilicia. The Kourtikai recovered for a short period in the 13th C. John Doukas Kourtikes, a relative of John III, served as governor of the Thrakesian theme in the 1230s. The family possessed lands in the Smyrna region (Ahrweiler, supra 140f). In 1271 Nicholas Kourtikes was kas-trophylax on Kos (PLP, no.13597).

LIT. Kazhdan, Arm. 14–17, with add. in Laurent, Corpus 2, no.1179. PLP, nos. 13594–97. —A.K.

KOUTLOUMOUSIOU MONASTERY, located near Karyes on Mt. AThos and dedicated to Christ the Savior. Although a forged document in its archives claims that Alexios I founded Koutloumousiou (Koultoumousiou, Koutoumlousiou) in 1082 (P. Lemerle, BCH 58 [1934] 221–34), the monastery is first mentioned in a document of 1169, and appears to be a 12th-C. foundation. The monastery’s unusual name, derived from the Turkish patronymic Kutulmuş, suggests that a christianized descendant of the Seljuk prince Kutulmuş (died 1063) may have retired to Athos and established a monastic complex. The monastery was small and poor in resources until the 14th C. when it increased to 40 monks and acquired substantial properties in Macedonia (near Serres and on Chalkidike) and in Wallachia. It reached its peak under the hegoumenos Chariton (ca.1362–ca.1381), who attracted the patronage of Wallachian voivodes, which was to continue well into the period of Turkish rule. As a concession to the Wallachian monks who came to reside at Koutloumousiou, Chariton was forced ca.1371 to institute an idiorrhythmic regime that lasted until 1856. In 1393 Koutloumousiou became a patriarchal monastery. In 1428 the monks of Koutloumousiou took over the virtually abandoned buildings of the nearby monastery of Alopou (Alipiou). Thereafter, the two monasteries were united under one hegoumenos.

The archives preserve 47 documents of Byz. date (1012–1447?), mostly of the 14th C., while the library contains ca.187 MSS of the 15th C. or earlier (Lampros, Athos 1:270–318; Politis, Kat-aloi 1–71).

KRATEMA. See Teretismata.

KRITAI KATHOLIKOI (KRITAI KATHOLIKOI, lit. “universal judges”), a college of judges, secular and ecclesiastical, which served as a supreme court in the Palaiologan period. In 1296 Andronikos II created a tribunal of 12 members consisting of ecclesiastics and senators; its decisions could not be appealed. In 1329 Andronikos III replaced this tribunal with the college of four judges called kritai katholikoi; one of them was supposed to be a bishop (Greg. 1:437.23). The first four kritai katho- likoi are known by name: Joseph, bishop of Apros; the archdeacon and dikaiophylax Gregory Kleidas; the megas dioiketes Glabas; and the literatus (?) Nicholas Matarangos. In 1336/7 a scandal erupted, the kritai katholikoi were accused of corruption, and only Matarangos was acquitted; the scandal is reflected in a letter by the protasekretis Leo Bardales (Ševčenko, Soc. & Intell., pt.VIII [1949], 247–59) and in an apology of the condemned judges (G.J. Theocharides, BZ 56 [1963] 69–100).

In 1398 (?) Manuel II formulated the principles of their activity: all subjects and all cases came under their jurisdiction; the plaintiff was obliged to present his case in written form; after the hearing the judges had to deliberate in seclusion and to follow the opinion of the majority; if necessary, the judges could request the participation of experts. Under their authority were taboulari-oi, who were not allowed, however, to act independently (E. Schilbach, BZ 61 [1968] 44–70). Besides the imperial kritai katholikoi, provincial kritai eventually appeared, in the Morea (Zakythi- nos, Despotat 2:129–31), Lemnos, Thessalonike, Serbia (G. Ostrogorsky in Mélanges offerts à René Crozet, vol. 2 [Poitiers 1966] 1317–25), and Tre- bizond.

—A.K.

KRITES. See JUDGE.
KRITES TOU PHOSSATOU (κριτής τοῦ φωσ-
σατοῦ', lit. "judge of the moat"), a military judge,
an office known from the end of the 13th C. when
the sebastos Constantine Cheilas occupied this post
(MM 4:272.13–14); his seals are preserved (Lau-
rent, Corpus 2, nos. 1193–94). Guillard suggests
that the krites tou stratopedou (office held by Michael
Attaleiates) was the predecessor of the krites tou
phossatou. In pseudo-Kodinos the krites tou phos-
satou is a modest functionary following the akolou-
threnos on the hierarchical ladder; his duty was to
make decisions in cases of disputes of soldiers
over horses, weapons, or booty (pseudo-Kod.
184.25–31). In reality, this judge's functions were
broader: on the one hand, kriai such as Constan-
tine Cheilas presided over cases related to land,
while on the other, the krites could be a military
commander promoted, like Alexios Diplobatas-
tes, to the post of megas hetairiarches (PLP, no.5510).
A certain Maurophoros is identified in 1348 as
the krites tou phossatou of Stefan Uroš IV Dušan
(Soloviev-Mošin, Grčke povijesti, no.18.68–69). No
krites tou phossatou is known after the mid-14th C.

LIT. Guillard, Institutions 1:528f.  —A.K.

KRITOBoulos, MICHAEL, historian; died
Constantinople? ca.1470. Kritoboulos (Κριτό-
βουλο-
ς) first appears in the sources in 1444, when
Cyriacus of Ancona visited him on the island of
Imbros. Kritoboulos recognized the inevitability
of the Ottoman conquest of Byz. and sought an
accommodation with the new rulers of the Ae-
gean; in 1456 Mehmed II made him governor of
Imbros; he remained in this position until 1466,
when he fled to Constantinople after the Venetian
occupation of the island. He survived the plague
of the following year, but probably died soon
thereafter.

His History in five books covers the period 1451–
67 and focuses on the Turks; it begins with the
reign of Mehmed II and is dedicated to the sultan.
Kritoboulos gives a flattering portrait of Mehmed,
whose deeds he compares with those of Alexander
the Great. Kritoboulos regularly referred to the
sultan as basileus and autokratōr; he emphasized
Mehmed's interest in classical antiquity to make
him a worthy successor of the Byz. emperors.
Kritoboulos used Thucydides as a model for his
History (P.D. Mastrodemeters, Athena 65 [1961]
158–68), which is full of classical allusions and
archaizing language. It is possible that the his-
torian Kritoboulos is to be identified with the his-
torical writer Michael Kritopoulos, who composed
an unpublished homily on the Passion of Christ.

KROIA. See ALBANIANS; SKANDERBEG.

KRUM (Κρούμ), Bulgarian khan (ca.802–14);
died Pliska? 13 Apr. 814. Early in his reign Krum,
himself from a Pannonian clan, exploited Char-
lemagne's destruction of the Avars to consolidate
the northwestern region of BULGARIA. Hostilities
with Byz. flared in 807, when Emp. Nikephoros
I conducted an abortive campaign into Thrace;
in 808, when a Bulgar force ambushed a Byz.
army at the Strymon; and in 809, when Krum
captured Serdica. In 811 Nikephoros invaded
Bulgaria, despite Krum's entreaties for peace, and
on 20 July sacked Pliska, plundering Krum's own
palace. On 26 July, however, Krum trapped and
destroyed the Byz. army in a mountain pass; Ni-
kephoros was slain (Krum reportedly made his
skull into a drinking cup), and his son Staurakios
was mortally wounded. Krum soon captured De-
veltos and resettled its population in Bulgaria. In
the summer of 812, he seized numerous Mac-
donian and Thracian towns and forts, including
Anchialos, Berroia, and Philippopolis. Krum urged
Michael I to renew the treaty of 716 between
Tervel and Theodosios III and stormed Mesem-
bria upon the emperor's refusal. In 813 he re-
turned to Thrace, on 22 June routing the Byz.
army at Versinikia. Krum then marched on Con-
stantinople, where he was wounded in an assas-
ination attempt organized by Leo V. Enraged,
Krum devastated Constantinople's environs and
captured Adrianople, deporting its inhabitants to
Bulgaria; Byz. hagiographical and liturgical texts
commemorate the martyrdom of 377 captives (E.
Beševliev in Polychronion 90–104). Death from a
hemorrhage ended preparations by the "new Sennacherib" for an assault on Constantinople in 814.

-P.A.H.

KTEMATINOS (κτηματινός), a functionary probably responsible for management of imperial estates (ktetares). The evidence—in narrative sources of the 10th C. and on a seal (St. Maslev, Izu-InstBülgIst 20 [1955] 446, no.2)—is scanty. Perhaps the office was created when the megas kourator began to lose his significance and his department was divided into several independent bureaus.

-A.K.

KTETOR (κτήτωρ), founder (ktistes), patron, or owner of an ecclesiastical institution (a church, monastery, gerokomeion, ptochotropheion, etc.) and its properties. The ktetor's right (ktetorikon dikaios) could originate with the foundation itself (whether he built the institution from scratch or merely restored it), be inherited, or be acquired as a privilege; it could be held for a lifetime or for two or three generations. The ktetor (who under certain circumstances might also be called ephoros, pronoetes, epikouros, authentes, etc.) could be a layman, a clergyman, or an ecclesiastical institution. The conditions of the ktetorikon dikaios—drawn up in a "contract" called a typikon, diataxis, or diatyposis—included spiritual rights (the performance of memorial services, the name of the ktetor being included in the brevon of the church), administrative privileges (e.g., the right to appoint the hegoumenos), and revenues as well as obligations: maintenance and embellishment of the premises, providing oil for the lamps, care of the sacred vessels, etc.

Recognized in Justinianic law and papyri, the ktetorikon dikaios was popular in Byz. since it met both pious requirements and the need for a relatively stable form of investment, church property being less vulnerable to confiscation than secular estates. Nikephoros II Phokas in 964 tried unsuccessfully to limit the founding of new mon-

asteries, ordering that pious donations instead be channeled into the repair of older, run-down institutions. The system of charistikon, common in the 11th and 12th C., was an offshoot of the ktetorikon dikaios. KtetoD rights existed down through the 15th C., long after the term charistikon had fallen into disuse.

KUFIC, PSEUDO-. See ISLAMIC INFLUENCE ON BYZANTINE ART.

KUMLUCA TREASURE. See SION TREASURE.

KURBINOVO, site in Macedonia of the Church of St. George. Nothing is known about the patrons of this church, but an inscription on the back of the altar indicates that the decoration of the monument was begun on 25 April 1191. A wooden roof covers the single nave; there is an apse at the east and a narthex at the west. The mortared rubble fabric of the building was externally plastered and painted in imitation of the cipionne brickwork found, for example, at Kastoria. The interior is elaborately painted with the GREAT FEAST CYCLE. The Kurbinovo master was probably one of the artists who worked on the second phase of decoration in the Church of the Anargyroi in Kastoria. The style of the paintings conforms to the sinuous forms characteristic of late 12th-C. MONUMENTAL PAINTING, although the exaggerated features of the figures and the stark tonal contrasts of their flesh lend the images an expressive intensity lacking in painting of this period outside of Macedonia.

Lit. Hadermann-Misguich, Kurbinovo.

KÜTAHYA. See KOTYAIION.

KUVRAT (Koβrapos, according to Moravskik, Byzantinoturcica 2:161f), khan of the Onogur Bulgars; died after 642. Patr. Nikephoros I mentions his revolt against the Avars and alliance with HERAKLEIOS; Kuvrat was granted the title of pa-
trikos. John of Nikiu relates that Kuvrat was brought up and baptized in Constantinople, and staunchly supported MARTINA. V. Beševliev (BBulg 5 [1978] 229–36) tried to separate these pieces of evidence and saw in a second Kuvrat a commander of the troops in Cappadocia. Theophanes the Confessor calls Kuvrat the ruler of Great Bulgaria (occupying the steppe north of the Black Sea); Nikephoros lists his sons, one of whom was ASPARUCH. H. Grégoire (Byzantium 17 [1944–5] 88–118) identified Kuvrat with the Koubre (Lemerle, Miracles 2:143–60) who revolted against the Avars; this revolt, however, should be dated in 680–85 and does not fit Kuvrat’s chronology. It also remains unclear how Kuvrat could “revolt” against the Avars, whose territory lay farther to the west. Werner (infra) hypothesizes that Kuvrat was buried near Poltava and that the hoard of precious objects found at MALAJA PEROŠČEPINA belonged to him.

W.E.K., A.K.

KYDONES, DEMETRIOS, statesman, scholar, and translator; born Thessalonike ca.1324, died Crete ca.1398. Dispossessed of his family’s wealth by the uprising of the Zealots in his native city, Kydones (KYDÔN) entered the service of John VI Kantakouzenos in 1347 and held the position of mesa- zon until the emperor abdicated in 1354. After a brief retirement his political career continued during the reigns of John V and Manuel II, whose mentor he became. Kydones consistently supported a policy of resistance to the Ottoman Turks and sought a military alliance with the rulers of western Europe through the mediation of the papacy.

Kydones opposed the theology of Gregory PA- LAMAS and wrote several anti-Palamite treatises. He studied Latin and translated into Greek theological works by Augustine, Anselm of Canterbury, and Thomas Aquinas, as well as Ricoldo da Monte Croce’s Reftuation of the Koran. After studying and translating Aquinas’s Summa contra gentiles and parts of his Summa theologicae, Kydones became a defender of Thomism. His brother, the hiero- monk Prochoros KYDONES, also translated parts of the Summa theologicae and used Thomist arguments in his refutations of Palamas’s theology.

Kydones converted to Roman Catholicism ca.1357 and supported John V’s profession of faith made in Rome before Pope URBAN V in 1369. His pro-Latin and Thomist sympathies were shared by a number of younger followers, many of whom became DOMINICANS.

Despite his preference for a theology based on Aristotle, Kydones admired the works of PLATO. He successfully imitated the Platonic idiom, esp. in his coinrespondence, an important source containing over 450 letters. His other writings include several political speeches, apologies, sermons, and polemical works dealing with theology.

KYDONES, PROCHOROS, monk and anti- Palamite theologian; born Thessalonike ca.1333/4, died Constantinople 1369/70. Younger brother of Demetrios KYDONES, he went to Athos as a youth and took monastic vows at the Great Lavra. Circa 1364 he became a priest. After the return of PHILOTHEOS KOKKINOS to the patriarchate in 1364, Kydones became embroiled with the superior of the Lavra because of his opposition to PALAMISM and was expelled from the monastery in 1367. He went to Constantinople, where he was formally condemned by the permanent synod in 1368 (RegPatr. fasc. 5, no.2541), defrocked, and excommunicated. He died shortly thereafter.

Kydones knew Latin, and made accurate and elegant Greek translations of works of AUGUSTINE, BOETHIUS (D. Niketas, Hellenika 35 [1984] 275–315), and part of the Summa theologicae of Thomas AQUINAS (A. Glycofridou-Leontsini, Nicolaus 3 [1975] 429–32). His principal work, On Essence and Energy, was the first Byz. treatise to be strongly influenced by Aquinas; it was attacked by John (VI) Kantakouzenos in (his unedited) Antirrhetes. Kydones also wrote an Apologia, which was directed to Philotheos, and other anti-Palamite works.
KYNEGETIKA. See OPPIAN.

KYNOKEPHALOI (Κυνοκέφαλοι), men with dogs' heads, a fabulous tribe located by ancient geographers either in Libya or in India. A detailed description of Kynokephaloi was given in the Indika by Ktesias, a summary of which is preserved in Photios’s Bibliotheca (cod. 72). Following this account, they appear in MS illustration as associates of Hekate. Christian authors also used the legend of the Kynokephaloi—for example, the vita of Makarios of Rome, the Alexander Romance, and Tzetzes (Hist. 7:705–07), who directly refers to Ktesias and calls the Kynokephaloi righteous people. According to the vita of Makarios (ed. A. Vassiliev, p. 139, 22–30), they were gentle, wore no clothes, and lived with their children and wives in animal dens, under rocks. The Alexander Romance states only that the Kynokephaloi were able both to speak and to bark (thus differing from Ktesias who says they were unable to use human speech) and that Alexander killed several of them.

KYPARISSIOTES (Κυπαρισσιώτης), a family name probably derived from the toponym Kyparission, found in both Constantinople and the provinces. The earliest Kyparissiotes was apparently Leo, spatharios and strategos of Chios (Schlumberger, Sig., p. 196); the combination of the title of spatharios and the office of strategos does not permit a date later than the 10th C. In 1088 the protonotariats John and his son (also a protonotarius) served in the department of the genikon (Patmou Engraphe 1:49G. 305). The family is again attested in the 14th C.: John Kyparissiotes was a philosopher and writer (see KYPARISSIOTES, JOHN); another Kyparissiotes, an oiketes of Matthew I Kantakouzenos, is mentioned as a good-for-nothing soldier but an educated man. The family still belonged to the intelligentsia in the 15th C., when Kosmas Kyparissiotes was active as a hymnographer ca. 1493.

KYPARISSIOTES, JOHN, anti-Palamite theologian; born Kyparissia (Messenia) or Constantinople? ca. 1310, died 1378 or shortly thereafter. A supporter of Gregoras, Kyparissiotes became the principal theoretician of the opponents of Palamism. He was eventually forced to flee from Constantinople to Cyprus, where Demetrios Kydones sent him a letter (ep. 35) in 1371. He then moved to Rome; in 1376/7 he traveled from Avignon to Rome as a member of the entourage of Pope Gregory XI (1370–78) and received an average monthly stipend of ten florins (A. Mercati, BZ 30 [1929/30] 496–501). He may have converted to Catholicism at this time and came under the influence of Scholasticism. It is not clear whether Kyparissiotes is the “kalos Ioannes” described by Kydones (ep. 190) as returning to Constantinople in 1378/9; if not, he probably died in Rome.

Kyparissiotes wrote two major works: the Elementary Exposition of Theological Texts, preserved only in the 16th-C. Latin translation of Francisco Torres, and five books titled Against the Heresy of the Palamites. Nine hymns to the Divine Logos are also attributed to him.

KYPSELLA (τα Κύψελλα), ancient city in Thrace, mod. Ipsala, where the Via Egnatia met the Herson River, not far from the sea. A bishopric by 553, it became an autocephalous archbishopric in the 7th C. It appears in Byz. sources of the 12th C. as the “valley of Kypsell” (Kinn. 191.8), a place where nobles and the emperor went hunting (Nik.Chon. 30.31–33, 450.58–62) and stayed in tents (p. 369.60). A 14th-C. historian (Greg. 1:229.6–7) calls Kypsell a polichnion. It was prob.
ably the emperors' hunting residence where impor-ta-nt meetings could take place. Thus, in Ky-
pella occurred the refusal of the demands of Pe-
ter of Bulgar-ia and Aser I that led to the revol-
t of the Bulgarians and Vlachs at the end of the 12th C. Isaac II was deposed and blinded in Kyp-
sella.

The valley of Kypsel-la played a significant stra-
tegic role during the Pecheneg invasions (An.Komn. 2:107f) and esp. during the conflict with the Bulgarians and Vlachs at the end of the 12th C. In the winter of 1208/9 the army of the Latin emperor Henry of Constantinople crossed the frozen Hebros near Kypsel-la (Astracha, Rho-
dopes 46). Later writers barely men- tion the place.

Nevertheless, Kypsel-la preserved its position in the ecclesiastical hierarchy. Demoted to the status of simple bishopric during the Latin occupation and adjoined to the metropolis of Rosion in the late 13th C. (V. Laurent, EO 26 [1927] 146, no.18), it reappears as an archbishopric in the 14th C. In 1324 the archbishop of Kypsel-la was obliged to pay 16 hyperpera annually to the patriarchate of Con-

KYRANIDES. See KOIRANIDES.

KYRIAKOS (Κυριακός), author of a kontakion on the Raising of Lazarus; fl. 6th C.? Kyriakos was probably an older or younger contemporary of Romanos the Melode, whose hymns his resemble in style and treatment. S. Pétrides (EO 4 [1900] 282–84) identified him with the anachoretēs Kyri-
akos (448–556), an equation that has not found much support.

Ed. C.A. Trypanis, Fourteen Early Byzantine Can
tica (Vien-
na 1968) 79–85.

KYROS (Κύρος), poet and official; born Pan-
opolis, Egypt, died 457. When Kyros came to Con-
stantinople during the reign of Theodosios II, he was already well known for his literary accom-
plishments. Probably through the patronage of the empress Athenas-Eudokia he was appointed urban prefect ca.435 and praetorian prefect by Dec. 439, holding both prefectures simulta-
neously for two years. Kyros rebuilt much of the capital after a disastrous earthquake in 437, ar-
ranged for the illumination of major city streets and shops, and attended to the fortifications of the city; he built a church of the Theotokos in a region of the city called ta Kyrou after him (Janin, CP byz. 378f). Kyros also conducted negotiations with the Epithalites and Armenians. The reli-
gious belief of Kyros has been the subject of some dispute, but he apparently became a Christian and followed the religious orientation of Patr. Proklos. Circa 443 he earned the enmity of the eunuch Chryspahios. He was deposed and con-
secrated bishop of Kotyai-on. The sources are di-
vided about the later career of Kyros and whether he continued as bishop. He was a devotee of Da-
niel the Stylite. Kyros's poetry is highly clas-
sicizing; he laments in his verses that he was a

KYROS | 1163
man of affairs rather than a simple shepherd and
complains of the “harmful drones” who harassed him.
His fame as a poet and wise man survived in later
Byz. times.

Panopolites,” GRBS 16 (1975) 317–24. –T.E.G.

KYROS (Κύρος), patriarch of Alexandria (from
631); died Alexandria 21 Mar. 642. Bishop of
Phasis in Kolchos, he was one of the initiators of
MONOENERGISM. Herakleios and Patr. Sergios
promoted him, and in 631 he came to Alexandria as
Chalcedonian patriarch and dioiketes of Egypt. He
reached an accord with some Monophysites on the
basis of the formula of Monoenergism, despite
the resistance of SOPHRONIOS, the future patriarch
of Jerusalem (synod of Oct. 631—Butler, infra
185). This aroused discontent among both
Monophysites and Chalcedonians and even led a group
of the Gaianites (supporters of APHTHARDOCEO-
TISM) to attempt to assassinate Kyros. Theopanes
the Confessor accuses Kyros of paying annual
tribute to the Arabs (after the battle at Yarmuk?)
to preserve Egypt from invasion. When ‘Amr ad-
vanced against Egypt, Kyros fled to the island of
Rawda (Roda) and reluctantly agreed to submit to
the Muslims. Herakleios recalled him and re-
jected the treaty. Kyros returned to Alexandria
with a fleet on the orders of MARTINA (14 Sept.
641) and arranged a treaty with ‘Amr on 8 Nov.
641. The overthrow of Martina and the sufferings
of Egypt under the Muslims showed Kyros the failure
of his policy and may have contributed to his
death.

mann, “Agypten und Byzanz vor der arabischen Errobe-

KYROS AND JOHN, healing saints; feastday 30/
31 Jan. Supposedly Kyros was a physician in Al-
exandria, John a soldier attracted to Egypt by
Kyros’s fame; they were executed during Diocle-
tian’s reign. There is no evidence of them until
the 5th C., when CYRIL of Alexandria found their
relics, which he transferred from Alexandria to
Menuthis. SOPHRONIOS described their cures and
claimed to have been healed by the pair. Accord-
ing to him the local cult of Isis disappeared and
her temple sank into the sand, whereas Kyros and
John were successful. They worked their miracles
inside the church by INCUBATION; sometimes they
recommended the local bath. Some contemporar-
ies expressed doubts concerning their sanctity; a
certain Athanasia noted that their martyrdom was
not documented; the physician Gesios asserted
that their healings were not miraculous but con-
formed to the prescriptions of Hippocrates and
Galen. Sophronios made Kyros and John reject
both ancient values and ancient medicine; he rep-
resents them as more hostile to the medical profes-
sion than KOSMAS AND DAMIANOS (T. Nis-
ken, BZ 39 [1939] 355f.), and some of their rem-
edies are ostentatiously antimedical. After the Arab
conquest of Egypt in the 7th C., their cult shifted
to Constantinople and Rome; an Arabic legend
treats the saints’ healings in Monemvasia (P. Pee-
ters, AB 25 [1966] 233–40), unless the Monufasia
in the Arabic MS is a distorted form of Menuthis.

Representation in Art. Kyros is depicted some-
times middle-aged, as one of the ANARGYROI,
sometimes as an elderly monk holding a little
white jar; John is middle-aged, clad in court cos-
tume.

KYZIKOS (Κύζικος, now Balkiz near Erdek), city
on the southern coast of the Sea of Marmara, at
the head of routes leading into Asia Minor. Dio-
cletian made Kyzikos metropolis of the province of
Hellespont, headquarters of a legion, and site of
an imperial mint. The usurper Prokopios took
it in 365; an earthquake destroyed half the city in
539. The Arabs occupied Kyzikos from 671 to
678 during their attack on Constantinople. To
repair the devastation, Justinian II installed Cyp-
riot refugees there in 688 and named the settlement Nea Iouustinianopolis. In 1078, Kyzikos was base for the attack of Nikephoros Bryennios on Constantinople, and in 1090 and 1113 it briefly fell to the Turks. After ravaging the area in 1204, the Latins rebuilt Kyzikos in 1206; John III Vatatzes recaptured it around 1225. Kyzikos was headquarters of the Catalan Grand Company in 1303–04. Orhan captured it soon after 1335. Kyzikos was the metropolitan bishopric of Hellespont. Its region contained numerous monasteries, notably Megas Agros, the home of Theophanes the Confessor (C. Mango, I. Ševčenko, DOP 27 [1973] 248–67).

-C.F.
LABARUM (λάβαρον, perhaps derived from Celtic "llafar," "eloquent," or rather laureum [vexillum], laurel standard), Christian military standard first attested by Eusebius of Caesarea (Eusebius, VC 1.31) and characterized as a "cross-shaped sign." This may have been the standard devised by Constantine I prior to the battle of the Milvian Bridge, as ambiguously described by Lactantius (Lactant. De mort. pers. 44.4-5; see Barnes, Constantine & Eusebius 306, n.146). The colossal statue of Constantine in the Basilica of Maxentius may have held the labarum (Eusebius, HE 9.9.10 and VC 1.40.2; see A. Alfeldi, The Conversion of Constantine and Pagan Rome [Oxford 1948] 42). In later representations the labarum was generally shown as a standard with christogram, or, as held by Honorius on an ivory diptych (Delbrück, Consular-dipytchen, no.1), with an inscription alluding to Constantine's victory.

LABIS. See Spoons.

LABOR (πόνος, also ἐργάζεσθαι) was ambivalently viewed by the Byz. On the one hand, it was considered suffering or punishment for the original sin of their ancestors; on the other hand, those who labored were blessed by Christ. Two main perceptions of labor were developed in Byz.

1. Labor was considered an ascetic discipline, as a means of self-subjugation and as a path to spiritual enlightenment. Monastic communities—in the rules of Basil the Great and Theodore of Stoudios, in monastic typika, in hagiographical writings—praised labor from this viewpoint. We can question whether such an attitude toward labor was actually characteristic of monks—at any rate, criticism of monks for their idleness is not infrequent in Byz. literature (e.g., Eustathios of Thessalonike)—but such was the theoretical view.

2. A "rationalistic" perception was elaborated by such writers as Michael Choniates and Eustathios of Thessalonike. For Michael Choniates, labor is valuable not in itself but for its results; the beauty is in creation or in gain but not in the work itself. Eustathios speaks of labor as the natural condition of mankind, satisfying both bodily and spiritual needs; men work to avoid the hunger which is the reward of idleness, yet this same labor is pleasing to God. St. Philotheos of Opsi- kion, he stresses, happily worked with his own hands and considered "noble toil" as a worthy pursuit for man. In the aristocratic ideal of behavior, however, there was a place for war, hunting, games, and cultural pleasures, but not for work.

LABOR DISPUTES can be divided into two categories: (1) broadly, the collective actions of workers as a pressure group and (2) in a narrower sense, disagreements between an employer (ergodotes) and his contractors (ergolaboi), who in the 10th C. were equated with tekhnitai. Examples of pressure groups are the fabricenses of imperial factories in the 4th C. who were politically very active (L.C. Ruggini, SetStu 18 [1971] 169-76). In later centuries the workers in state factories were also sometimes used as a political force, as when imperial weavers helped to foil the usurpation of the kouropalates Leo Phokas in 971 (Leo Diac. 146.20-147.3).

The second kind of labor dispute involved arguments over the quality of the work performed (the worker was responsible for defects caused by his incompetence or negligence), work stoppages
(contractors had to pay a fine for the suspension of work), poor working conditions, and esp. wages. Since a portion of the wages could be advanced, some contracts (e.g., P. Grenf. II, 87, a. 602) required that the advance payment be returned with interest if the workers did not complete the given task. Conflicts were to be resolved through the expertise of arbitrators (Bk. of Eparch, ch. 22.2), but in case of a deadlock workers used strikes as their last resort. An inscription from Sardis of 459 testifies to such a strike of construction workers. An 11th-C. historian (Atal. 204.5-6) mentions that the misthioi in Rhaidestos demanded a salary increase during the inflationary period under Michael VII. An ordinance by Emp. Zeno of 483 prohibited contractors and workers in Constantinople from organizing a boycott of an employer; this law was extended by Justinian I to the provinces in 531 and later included in the Basilika; the 10th-C. Book of the Eparch also punishes work stoppages.

LACHANODRAKON, MICHAEL, general; died Markellai 20 July 792. Appointed strategos of the Thrakesion theme in 766/7 by Constantine V, Lachanodrakon (Λαχανοδράκων) actively supported Iconoclasm and esp. persecuted its monastic opponents. In 771, "imitating his teacher" Constantine (Theoph. 445.3-4), he summoned to Ephesus monks and nuns from his theme and threatened to blind and exile those who refused to marry. In 772 he confiscated all monastic property in the Thrakesion and gave proceeds from its sale to Constantine, punished those who possessed relics, and ultimately prohibited anyone in the theme from being tonsured. Lachanodrakon was a talented general. In 778 he commanded a multi-theme army (including the troops of Tatza-tes) that invaded Syria and besieged Germanikeia, although Theophanes the Confessor (Theoph. 451.19-20) says that Lachanodrakon was bribed by the Arabs to withdraw. In 780 he ambushed an Arab army in the Armeniakon and in 782 destroyed at Darenos in the Thrakesion one-third of the army of Harsun al-Rashid. His Iconoclastic sympathies may have led Irene to remove him as strategos (Bury, LRE 2:485). Lachanodrakon was a close adviser to Constantine VI and in Dec. 790 helped him depose Irene by securing the support of the Armeniakon army. As a magistros (Theoph. 468.1) Lachanodrakon died at the battle of Mar- kellai while campaigning with Constantine against the Bulgarians.

Lit. Gero, Constantine V 125f. 154. —P.A.H.

LACTANTIUS, more fully Lucius Caecilius Firmianus Lactantius, Latin Christian writer and teacher; born probably in Africa ca. 240, died ca. 325. A pupil of Arnobius, Lactantius was appointed by Diocletian to teach rhetoric at Nikomedea. Already a Christian when the persecution of 303 began, he lost his position, leaving ca. 305 to spend some years in Gaul or Africa. When very old he was asked by Constantine to tutor his son Crispus, a post that gave Lactantius some court influence. Of his two most important extant works the Divine Institutes seeks to persuade men of letters of the moral superiority of Christianity; it is the earliest systematic account of Christian morality in Latin. The other, On the Deaths of the Persecutors, covers the period from Nero to Galerius and Maximinus Daia. Its extreme celebration of divine vengeance is new to classical literature, while its combination of secular narrative and praise of God is reminiscent of 2 Maccabees (J. Rougé, StP 12 [Berlin 1975] 135-43). The work, chronologically sound and sometimes citing imperial edicts verbatim, is a particularly important source for the period 303-13. Lactantius's essays, The Workmanship of God and On the Wrath of God, also survive. Perhaps he wrote the poem Phoenix. Ten books of letters and some possibly pagan pieces—Symposium, Grammaticus, and a verse account of his trip from Africa to Niko- medea—are lost.

LAGOUDERA, in the Troodos mountains of CYPRUS, site of the Church of the Panagia tou Arakos. This structure of three bays, a central dome, and a single apse follows a plan common among the small mountain churches of the island. The pointed arches suggest a construction date in the second half of the 12th C.; the narthex and heavy protective roof are not part of the original structure. The first phase of the fresco decoration includes a Virgin and Child and two registers of frontal bishops in the apse and the lower fragments of a figure enthroned between angels on the south wall of the nave. The second phase includes the rest of the sanctuary and all of the nave (the group on the south wall was overpainted). Dedicatory inscriptions indicate that the second phase was completed in December 1192, through the patronage of Leo tou Authentou (or tou Authentos). Leo's special veneration for the Virgin is evident not only in the dedicatory verse accompanying the fresco icon of the Theotokos tou Arakos, but also in the emphasis on her life in the decoration of the nave. On the basis of a fragmentary inscription and stylistic traits, Winfield identified the painter of the second phase of decoration as Theodore APSEUDES. These frescoes exhibit the stylistic characteristics of late 12th-C. MONUMENTAL PAINTING.

LAITY (pl. λαίκοι from laos, people), term denoting the nonclerical element of the Christian community, in contrast to its CLERGY. Unknown in the New Testament, the term was used by Clement of Alexandria, and in the 3rd C. the laity was differentiated not only from the clergy but also from the ordinary faithful: they formed an elite of males married only once who were allowed to baptize and officiate in the absence of clergy. When the monastic movement started, the monks were at first considered laymen. Some ministerial functions (esp. those of ANAGNOSTES) were assigned to the laity. In the 4th–5th C. the distinction between the laity and clergy became sharper. First, the monks formed a special category separate from the laity; then the formal rite of ordination drew a stronger line of demarcation between the clergy and laymen: the latter received a special place in church and were prohibited from entering the sanctuary; they were forbidden to baptize and discouraged from teaching. Gradually, all groups of Christians except the clergy and monks were subsumed into the category of laity.

The differentiation between the laity and clergy in Byz. remained less sharp than it was in the West: CELIBACY was a requirement only for the higher clergy; the consecrated wine was never forbidden to the laity; country KLERIKOI were barely distinguishable from PASEIKOI in terms of their social status. The church prohibited the clergy from performing military service and from fulfilling state offices, but the ban was often ignored in practice. On the other hand, some imperial dignitaries held ecclesiastical offices, while laymen, as CHARISTIKARIOI and KTEORES, exercised authority over ecclesiastical institutions.

—A.F., A.K.

LAKAPENOS, GEORGE, writer and grammarian; fl. ca.1297–1310/11, died before 1315. Lakapenos (Ἀλακάπηνος) was probably a pupil of Maximos PLANOUDES and was active in literary circles in Constantinople under Andronikos II. About 20 of his letters survive, accompanied by EPIMERISMS and addressed to Andronikos and John Zarithes, Michael Gabras, and the physician JOHN AKTOUARIOS. This collection was preserved in a number of MSS because it was used for instructional purposes. He also prepared a selection of 264 of the letters of LIBANIOS, and wrote grammatical notes and commentary on books I and II of the IIiad and on the Encheiridion of Epictetus.

ED. Georgii Lacapeni Epistulae X priores cum epimerismis editae, ed. S. Lindstam (Uppsala 1910). Idem, Georgii Lacapeni et Andronici Zarithae epistulae XXXII, cum epimerismis Lacapeni (Göteborg 1924).

—A.M.T.

LAKEDAIMON (Λακεδαιμών), ancient name applied by Byz. authors to both the region of La-
konía (Lakonike) in the southern Peloponnesos and to its capital, ancient Sparta (A. Basilikopoulou-Ioannidou, *LakSp* 4 [1979] 4–6). The extensive expanse of Roman Sparta was contracted in late antiquity and a limited area (ca. 650 × 300 m) was fortified; the foundations of three churches of this period have been found (Ch. Bouras, *JÖB* 31.2 [1981] 621f.), as have various objects, including clay lamps of the 6th C. (A. Oikonomou, *LakSp* 9 [1988] 286–92). The Synedhemos of Hieroikles (Hierogl. 647.8) lists Lakedaimon as the “metropolis of Lakonike.”

The *Chronicle of Monemvasia* (ed. Dujčev, 12.95–96) is the only text that reports that the Lakones (variant Lakedaimonitai) left their city under pressure of the Slavic invasions and settled in Sicily; Nikephoros I rebuilt the polis of Lakedaimon and had a “mixed population”—Thrakessioi, Armenians, and the enigmatic Kapherioi (*ibid.*, 22.196–99)—settle there. The early history of the bishopric of Lakedaimon is puzzling: the first known bishop, Hosios, is attested in 458; then, in 681, when the city was supposedly abandoned, a bishop “of the polis of Lakedaimonii” is mentioned (Mansi 11:674C). In the notitia the bishopric of “Lakedeon” in the Peloponnesos (*Notitiae CP* 3:744) appears ca.800, and the later *Synodikon of Lakedaimon* begins probably ca.843 (R. Jenkins, C. Mango, *DOP* 15 [1961] 236).

The vita of the 10th-C. saint NIKON HO “METANOIEITE,” who lived in Lakedaimon, provides rich information about the city and its environs, including the existence of a Jewish community and pagan Slavs; it is, however, not certain whether the evidence of the vita can be taken at face value. At any rate, the identification of a church excavated in Sparta with one built by Nikon is probably incorrect (P. Vocotopoulos in *Praktika tou A’ Diethnous synedriou Peloponnesiouk spoudon* [Athens 1976] 273–85). The 12th-C. geographer al-Idrisi described the city as large and flourishing. A new bridge in the kastro of Lakedaimon is mentioned in an inscription of 1027 (D. Zakythenos, *Hellenika* 15 [1957] 99.4–5), a bath of the 11th–12th C. has been excavated in Sparta (Ch. Bouras, *ArchEph* [1982] 99–112), and coins of Constantine VII and polychrome ceramics have been found on the acropolis (A. Stauride, *Peloponnesiaka* 15 [1982–84] 186). Lakedaimon was elevated to the status of metropolis on or about 1 Jan. 1083 (V. Laurent, *REB* 21 [1963] 136–39).

In the early 13th C. the Franks took Lakedaimon, apparently without any difficulty, and it came under the control of the principality of Achaea; William II Villehardouin spent the winter of 1248–49 there and in 1249 began construction of the castle at Mistra, west of the city. Lakedaimon remained the urban center until warfare beginning in 1263 caused the inhabitants to flee to the greater safety of Mistra. Lakonian frescoed churches include St. George at Longani,

konía (Lakonike) in the southern Peloponnesos and to its capital, ancient Sparta (A. Basilikopoulou-Ioannidou, *LakSp* 4 [1979] 4–6). Lakedaimon was elevated to the status of metropolis on or about 1 Jan. 1083 (V. Laurent, *REB* 21 [1963] 136–39).

In the early 13th C. the Franks took Lakedaimon, apparently without any difficulty, and it came under the control of the principality of Achaea; William II Villehardouin spent the winter of 1248–49 there and in 1249 began construction of the castle at Mistra, west of the city. Lakedaimon remained the urban center until warfare beginning in 1263 caused the inhabitants to flee to the greater safety of Mistra. Lakonian frescoed churches include St. George at Longani, dated 1375 (A. Orlandos, *EEBS* 14 [1938] 461–81), and St. Nicholas at Agoriane, built ca.1300 (M. Emmanouel, *DChAE* 14 [1989] 107–50) and painted by Kyriakos Phrangopoulos (as attested by an inscription). According to the *Chronicle of the Morea*, Lakedaimonia was a large town with towers and a good city wall. Under the Franks there was a Catholic bishop, last attested in 1278, when he was forced to flee, just as the Orthodox bishop of Lakedaimon moved his residence to Mistra.

LAKHMIDS, the Arab dynasty that flourished in Hira on the lower Euphrates for three centuries before the rise of Islam. Through their clientship to Persia, the Lakhmids became involved in the Byz.-Persian wars and in those of the various Arab foederati who were clients of Byz. One of their 4th-C. kings, Imru’ al-Qays, went over to Byz. and was installed in the province of Arabia; another, al-Nu’mân, visited St. Symeon the Stylite the Elder in Syria ca.413–20. His son, Mundhir, fought against Byz. in the Persian war of 421–22. Toward the end of the 5th C. al-Nu’mân’s operations against Byz. served as a prelude to the Persian war (502–05) of Anastasios I. It was Alamundar, however, who posed the greatest threat to Byz. for some 50 years (503–54); ca.530 Justinian I centralized federate Ghassanid power in the Orient to rival him. Alamundar’s successors sent embassies to Justin II and Tiberius I in Constantinople. Originally pagans, by the end of the 6th C. the Lakhmids had become Nestorians. The dynasty ended ca.600, and Hira fell to Muslim arms in 633.

LAKONIA. See Lakedaimon.

LAMB OF GOD. Sheep and lambs figure among Christianity's earliest symbols. In 3rd-C. funerary art, they represent believers or believers' souls: pastoral images of Paradise inherited from antiquity and Christ's designation of his followers as sheep together served to make sheep a widespread image of the Christian's desire to be a lamb in Christ's celestial fold. Common symbols by the 4th C., sheep sometimes act out biblical scenes in works of the 4th–6th C. Because Christ himself had been likened by John the Baptist to the sacrificial "Lamb of God" that takes away the sins of the world (Jn 1:29) and was the Lamb of the Apocalypse (Rev 14–21), he, too, is shown as a lamb from the 4th C. onward. Signifying the eternal triumph achieved through his sacrifice, the image of Christ as the Lamb of God is first found below triumphal scenes like the Traditio legis or Christ acclaimed by the Apostles; the Lamb stands on the mount of Paradise flanked by apostle-lambs, forming a symbolic, celestial counterpart to the figural scene above. Slightly later, as the focus of larger cycles, the Lamb of God appears enclosed in the wreath of eternal triumph. In Western art from the 5th C. onward, Christ as lamb is incorporated into Apocalyptic imagery. In Byz. art, the Lamb of God is rarer and adheres to the passage in John. It vanishes after the 7th C., presumably because the council in Trullo explicitly proscribed it. (See also Amnos.)

LAMBOUSA TREASURE. See Cyprus Treasure.

LAMIA (Água), ancient city in southern Thessaly, whose name still survives in Constantine VII Porphyrogennetos (De them. 2.42, ed. Pertusi, p.88). Some remains of the late antique city (a basilica, coins, and an inscription of the 4th C., a marble slab of the 7th C., etc.) were found on the acropolis and in its vicinity; the remains of city walls on the acropolis are thought to be Justinianic. But already at that time Lamia was in decline, and the Tabula Peutingeriana does not mention it. The bishopric of Lamia, suffragan of Larissa, is known from 431 onward.

Occupied by the Slavs, Lamia reappears from the 9th C. under the name of Zetounion, probably of Slavic origin (from živo, "grain"): Vasmer, Slaven 105. Lamia-Zetounion was an important fortress guarding the approach to Thermopylae. Basil II chanced to observe there the traces of a bloody battle between Nikephoros Ouranos and Samuel of Bulgaria (Skyl. 364,76–78). In the 12th C. Benjamin of Tudela counted 50 Jewish families in Zetounion. After 1204 the Templars temporarily held the city and rebuilt its ramparts. By 1259 it was again in Greek hands, but in 1318 the city was seized by the Catalans, who seem to have retained it until 1391. The Acciauoli dominated Zetounion for several years, but Bayezid I demolished it in 1394. In 1403–26 the Byz. held the fortress, then the Turks recaptured it. A short chronicle (Kleinchroniken 1:251, no.49) says that in 1444 Constantine (XI) Palaiologos captured Thebes and attacked Zetounion.

LAMPS. Ceramic lamps of essentially ancient type are attested in considerable number from the 4th to 7th C. These were generally mold-made, of oval shape, with a filling hole for oil in the center top and a wick hole at one end opposite the handle. The surfaces of the lamps were commonly decorated, normally with simple motifs, but occasionally with Christian symbols and scenes: crosses, Christograms, David and Goliath, or Christ trampling the beasts (Age of Spirit., nos. 352, 471). Until the 7th or early 8th C. clay lamps represented the most common lighting device (C. Mango, JÖB 32.1 [1982] 254f) in both private houses and cemeteries, where they have been found in abundance. Lamps were often left on tombs, either as part of the burial ceremony or as votives that were left burning. They were widely exported, above all from North Africa (A. Ennabli, Lampes chrétiennes de Tunisie [Paris 1976]). Lamps from Asia Minor, Attica, Palestine, and Sicily did not travel as far, but all were imitated by local workshops; molds, too, were exported and also
LAMPSAKOS (Λάμπσακος), ancient city on the eastern shore of the HELLESPONT facing KALLIPOLIS. Constantine VII Porphyrogennetos (De them. 4:29, ed. Pertusi, p.69) names it among the notable poleis of OPSIKION, but this is evidently anachronistic. Lampsakos was a bishopric suffragan to KYZIKOS and perhaps an emperor’s epi-skepsis (Schlumberger, Sig. 198); it left no trace in secular history, however, until the 13th C., when John III Vatatzes, after reconquering this district from the Latins, constructed a harbor in Lampsakos. The Latins and the empire of Nicaea fought over the city, but in 1235 John III firmly established Greek authority there. The Turks seized it, but in 1359 the papal legate Peter Thomas destroyed the fortress of Lampsakos with Venetian and Rhodian galleys and Greek assistance.

A Latin survey of Lampsakos composed in 1218–19 gives a detailed description of the town, the categories of its inhabitants, and the taxes they paid to their Venetian lords. According to this survey there were 173 households in Lampsakos—60 urban and 113 peasant; the urban households paid only 24 percent of all land taxes; in addition they probably paid taxes for mills, salt pans, boats, and fishing nets. Nothing is known of manufacturing in Lampsakos; Islamic sources testify to its export of ceramics (Vryonis, Decline 13, n.60).

LAMPSAKOS TREASURE, dated to the 6th or 7th C. and found ca.1847 at LAMPSAKOS on the Dardanelles. Now divided among museums in Istanbul, London, and Paris, it is composed of 25 silver objects and two pieces of gold jewelry. The formation of this treasure of domestic silver plate over the period of a century is indicated by the six objects dated by silver stamps: a lampstand (527–65) similar to one in the MYTILENE TREASURE, a polykandelon (577), and four bowls (613–30) akin to the set in the SUTTON HOO TREASURE.

made from imported lamps. In addition to shapes, even the marks of foreign potters were reproduced (K.S. Garnett, Hesperia 44 [1975] 173–206).

In the 8th C. the ancient tradition of lamp-making died out and lamps of a different type became predominant. These were either hung by a cord or equipped with a stand, in which case the lamp was a simple open cup, pinched at one end for the wick, placed on a ceramic stand, usually conical or cylindrical, sometimes with a drip cup below; these lamps/lampstands were usually glazed.

Glass lamps were also popular but, being very fragile, have left little trace in the archaeological record. Lamps of bronze and silver were used in wealthy households and esp. in churches (see LIGHTING, ECCLESIASTICAL).

–A.C., T.E.G.
The bowls bear the monogram of a certain Menas, probably a late owner of the treasure. The find included silver furniture revetments (table rim and stool, the latter similar to one in the Concestři Treasure), a large niello-inlaid plate decorated with a personification usually said by scholars to be of India but probably that of Africa, and two sets of spoons: one with names of the Apostles and another, of elegant design, with quotations from Vergil inscribed in Latin as well as the “Sayings of the Seven Sages” and witticisms, in Greek.

**LAND ROUTES.** Both Asia Minor and the Balkans were traversed by a number of major routes that formed a communications network used by the army, the *demosios dromos* (public post), traders, and travelers. Smaller roads led to the major routes. In the Balkans, there were two major routes, one from Belgrade to Niš (Naissos) and then either through Sofia and Philippopolis to Constantinople or through Skopje to Thessalonike. The other major route was the Via Egnatia, running from Dyrrachion to Ohrid to Thessalonike and eventually to Constantinople. With minor variations, these were the routes taken by the Crusaders. According to al-Idrīsī, it took six days to travel from Dyrrachion to Ohrid and seven days from Ohrid to Thessalonike. In the 10th C., a leisurely journey from Thessalonike to Belgrade took eight days (De adm. imp. 42:15–18).

The major Asia Minor routes ran from northwest to southeast, while secondary roads ran from north to south. The most important military road led from Nicaea to Malagina to Dorylaion to Sani- ana, where it divided into three branches, eventually leading to Tarsos, Nikopolis and Koloniea, Theodosioupolis, and Meltene. The second traverse road went from Malagina to Dorylaion to Ikonion to the Cilician Gates. While these routes were of great military importance, those leading from north to south were also significant for travel and commerce. (See also Sea Routes and Silk Route.)

**LANDSCAPE AND BUCOLIC IMAGERY.** Compared to those of Roman wall paintings and floor mosaics, early Byz. landscapes present fragmented images of reality. On silver plates of
the 6th and 7th C. the countryside is divided into discrete planes, while the Great Palace pavement juxtaposes pastoral and urban scenes without division. From the 6th C. landscape no longer existed for its own sake, but as the context for sacred events; thereafter mountains are either terraced massifs or series of coulisses, and rivers are controlled by personifications or angels, as in the Miracle at Chonai, but not by gravity. Conventional rocks and trees serve as framing devices, while serrated ranks of improbable plants decorate rather than characterize a panorama. In the Menologion of Basil II identical caves represent the grotto of the Nativity and that of the Seven Sleepers of Ephesus. Even in such secular MSS as the pseudo-Opian in Venice, a quickly drawn tree and a serpentine groundline serve to indicate the setting of a hunt; vegetation tends to grow above or below but rarely out of the features of a landscape. The bucolic miniatures in illustrated copies of the homilies of John of Euboea and Gregory of Nazianzos likewise subscribe to these formulae and lack the paradisiacal connotations that such imagery had in the Catacomb or on sarcophagi. In late Byz. monumental and miniature painting, mountains become more precipitous and vegetation even more unearthly. Carrying such tendencies to the extreme, in the Pantanassa at Mistra the human presence is dwarfed by landscapes, just as in ritual and domestic settings it is overwhelmed by fantastic architecture.

LAND SURVEY (γεωδαισία). In the late Roman period the measurement (metresis) of land was the basis for imperial tax assessment and for the determination of land ownership and yield capacity. Professional geometrai, chiefly from Egypt whence comes most of our preserved evidence, are abundantly attested in papyri and ostraka (e.g., SB I 5174.19 [dated 512] and SPP III 83.2). They sometimes worked at public expense (demosios geometres) and in tandem with the tax assessor (gnoter: P. Cair. Pres. 8.3–4 [dated 323]); customary payments by surveyors to the tax collector (pagarches) are also attested (P. Ant. II 96.4–5). Surveyors measured with the same type of rope (schoinion) as had been noticed by Herodotus (bk.2, ch.6), and with a square quadruple-plumbbob device, an example of which survives in the London Science Museum (O.A.W. Dilke, The Roman Land Surveyors [Newton Abbot 1971] 49). They apparently worked less according to the theoretical treatises of the agrimensores than by rules of thumb for adding up measured fractions of an area to give a total area (U. Wilken, Griechische Ostraka [Munich 1899; rp. Amsterdam 1970] 1:774–80). Results survive in two papyrus cadastrers from the 4th C. and one from the 6th C. According to Justinianic law (Nov. Just. 128.4), the measurements (demosios apographe) determined the amount of tax liability, which was transferable with the land.

The Byz. did not continue to use the Roman system of precise measurement of land: even though Heron's treatise on geodesy was known in Byz., the work of John Pediasmios shows how poorly Heron was understood. To measure the borders of an allotment, the Byz. used either a rope (schoinion) made of hemp or a kalamos, an instrument of reed or wood. Neither had a standard size: the schoinion could be of 10 or 12 orgyia, while the kalamos varied in length from 6 to 14 imperial spithamai. The application of different measures depended on local traditions and, in theory, on the character of the land under survey (arable land, vineyard, etc.). Lefort calculates, on the basis of the survey of Radolibos in 1103, that correct estimates of the area of allotments occurred in only 16 percent of the cases. Two principal methods were used by Anagaphes. In the first system, called en kataomais, the land was divided into a series of smaller parcels, each of approximately regular form. The sides of each were calculated in schoinias, and the result was calculated by the formula (a + c)(b + d)/8 where a and c are upper and lower boundaries, called kephale (head) and pous (foot), respectively, and b and d side boundaries (pleurai). The individual results were then totaled, giving the area in modii. Another method was kata to hologyron, in which the entire length of the boundary was measured, and 1/10 was subtracted from the total; the remainder was divided by 4, and the quotient
multiplied by itself. Lefort’s observations show that only square parcels/allotments could be measured correctly.

-A.K., L.S.B.MacC.

LANGUAGE. The later Roman Empire was a multilingual society. Latin was both the vernacular and the official language in the West, though pockets of non-Latin speech survived in the Pyrenees and elsewhere. In the East the situation was more complex. The imperial administration and the army used Latin. Greek was the vernacular tongue in most regions and was, in general, the language of culture and civic administration. In Syria-Palestine and Mesopotamia, Syriac, Arabic, and Coptic were widely spoken, and in Egypt, apart from Alexandria, Coptic (see COPTIC LANGUAGE AND LITERATURE) was spoken by most people. On the fringes of the empire other languages such as Armenian, Arabic, and Berber were spoken. Bilingualism was common. With the loss of most of the Western Empire to Germanic states in the 5th C., the role of Latin steadily diminished in the East, until by the early 7th C. Greek had replaced it as the imperial language. A generation later the Arab conquests removed most of the Syriac, Arabic, and Coptic speakers, and eventually the Latin speakers of North Africa, from Byz. control and left Greek as the dominant language in all domains of public and private life. Byz. society was never monoglot, however. In Constantinople and other cities Latin, Armenian, Georgian, Syriac, Slavonic, and Arabic and, in the later period, Italian, French, and other western tongues were heard. Armenia, annexed in the 10th–11th C., retained its own language (see LANGUAGES, NON-GREEK).

Byz. Greek, like other languages of high culture, functioned at different levels. The language spoken by all classes in informal situations, and by the uneducated majority in all situations, was, like other spoken languages, subject to slow but continuous change. Many of the patterns of Modern Greek phonetics and phonology, morphology, and syntax were already established by the late 6th C., and most of them by the 10th. On the other hand, all official, public, or written com- munication, including LITERATURE, was in a archaising, imitative, and fossilized form of Greek, which owed its prestige to its classical and patristic models and was maintained by a highly conservative educational tradition. In principle literary Greek had two levels: one a version of the KOINE Greek of the Roman Empire, often used in technical writing, the other an imitation, successful to varying degrees, of either the language of Attic literature of the 5th/4th C. B.C. or of the ATTICISM of rhetoricians of the SECOND SOPHISTIC (the two models were not always clearly distinguished). A recent study (I. Ševčenko, JÖB 31.1 [1981] 289–312) proposes a threefold classification of Byz. literary language. Ability to use archaising Greek, esp. its articulating variety, was a mark of both intellectual and social distinction. Clearly the uneducated only partly understood much of this Byz. literary Greek, often because of the content and style as well as the linguistic form. However, the communication gap must not be exaggerated. VERNACULAR and literary Greek were varieties of the same language, not different languages.

The principal changes in spoken Greek during late antiquity and the early Middle Ages may be divided among four main categories.

1. PHONETICS AND PHONOLOGY: loss of many distinctions between vowel phonemes and of distinctions of vowel length; development of voiced and aspirate plosives into voiced and unvoiced fricatives; and supersession of tonal accent by stress accent. In addition traditional ORTHOGRAPHY, which ignored these changes, became historic rather than phonetic.

2. MORPHOLOGY: restructuring of consonant-stem noun paradigms as vowel-stem paradigms; restructuring of personal pronouns; fusion of middle and passive voices; loss of the optative mood and of the perfect and pluperfect tenses; replacement of the future tense by periphrastic constructions; some restructuring of personal endings of verbs; and loss of the dual number in nouns and verbs.

3. SYNTAX: replacement of the dependent infinitive by subordinate clauses; growth of parataxis as an alternative to subordination; construction of all prepositions with the accusative case; loss of the dative case; and development of a range of compound prepositions.

4. VOCABULARY: development of new derivational
suffixes and obsolescence of many in earlier use; proliferation of new compound nouns, adjectives, and verbs, including types of compound infrequent or absent in earlier Greek; loss of many older vocabulary items; adoption of many loanwords, initially from Latin and later from Italian and French as well as occasional borrowings from Arabic, Slavic, etc.

The conservative purpose of Byz. language teaching by Grammatikos and rhetor emerges from treatises on orthography and prosody, from the extensive commentaries on the Grammar of Dionysios Thrax, from the epimerisms on Homer and on the Psalms, and from prescriptive lexika of "Attic" words, as well as from the critical observations of Byz. writers. Photios in his Bibliotheca regularly censured writers who in his view were insufficiently "Attic." Constantine VII Porphyrogenetos criticized a work on court ceremony because the writer's knowledge of Greek was inadequate. Patr. Nicholas IV Mouzalon suppressed a Life of St. Paraskeve, arguing that it was written "in vulgar language by some peasant." Symeon Metaphrastes organized the rewriting of many earlier saints' Lives in archaizing language for liturgical use. Nikephoros Choumenos proclaimed imitation of ancient models—among which he included the works of the church fathers—as the only path to literary excellence. Writers who used a less than rigorously purist Greek often defended their choice on the ground that they were addressing uneducated readers, that their subject was not sufficiently elevated, that their work was for private use or that they themselves had not had a literary education. Examples are Leontios of Neapolis in his Life of St. John Eleemnon, Constantine VII Porphyrogenetos in his De administrando imperio, Theophanes Chrysobalantes in his medical encyclopedia, Michael Psellos in his introductory treatises in 15-syllable verse, Kekaumenos in his Strategikon, Philip Monotropos in his Diodotra, and John Kananos in his narrative of the siege of Constantinople in 1422.

From the 13th C. educators increasingly emphasized the importance of archaizing and imitative Greek. New textbooks and commentaries on classical authors and new prescriptive lexika were composed. A new and critical interest was displayed in the linguistic and literary heritage of ancient Greece. At the same time, however, some earlier literary texts, such as the Mirror of Princes of Agapetos and the Histories of Anna Komene and Niketas Choniates were paraphrased in a level of language closer to the spoken Greek of the period. More significantly, for the first time a body of literature, mostly anonymous, appeared in a language which eschewed archaism and reflected, though neither faithfully nor systematically, the speech of the urban society of the empire. It is mostly literature of entertainment—romances, pseudohistory, animal allegories, animal epics, popular moralizing and devotional works—and is almost exclusively in 15-syllable political verse, for which no classical model existed. All serious literature and most prose was the preserve of the archaizing literary tongue. A reading—or listening—public that no longer valued archaism must have existed, however. These two apparently contradictory tendencies, purism and the use of the vernacular, were part of the reaction of Byz. intellectuals and Byz. society to the dismemberment, impoverishment, and humiliation of the empire after the Fourth Crusade. They represent a new emphasis on Hellenic identity and culture in the face of the growing power of Westerners and Turks (see Hellenism).

Within the general framework of Byz. Greek diglossia, professional and other groups had their own special languages, sometimes marked by extensive lexical borrowing from other languages (see Borrowing, Linguistic). Thus, long after serious knowledge of Latin had become rare, lawyers used many fossilized words and phrases of legal Latin. Sailors in the late Byz. period evidently took over many Italian maritime terms and so laid the foundation of the post-Byz. lingua franca. Medical writers of the 14th–15th C. often interlarded their texts with Arabic and Persian loan words, thus reflecting the growing prestige of Muslim medicine. Local dialects existed, but little is known about them in the Byz. period.

In spite of the obsession with linguistic purism shown by teachers and writers from the 9th C. onward, inscriptions in churches and other public places and on the personal seals of lay and ecclesiastical officials, as well as both official and private documents, often display gross errors of orthography and grammar. Atticism was the concern of men of letters. Men of power could dispense with it.

—R.B.

LANGUAGES, NON-GREEK, were important in the polyethnic late Roman Empire. Latin was not only spoken throughout the western Mediterranean but remained the language of bureaucracy in Constantinople until the 6th C. and of the army even later. Syrian, Coptic, Armenian, and Georgian had their areas of indigenous population, and bilingualism remained a common phenomenon. In the 7th C., when the Syrian- and Coptic-speaking provinces were lost to the Arabs, and most Latin-speaking regions in the West passed from Byz. control, the use of Latin in administration was abandoned. At the same time Slavic settlers occupied most of the northern Balkans and much of mainland Greece. The Slavs in Greece were largely hellenized by the 10th C., but those further north retained their linguistic separate- ness even after these regions were reincorporated in the empire. Armenian immigration into Asia Minor and Constantinople became massive after the Arab conquest of Armenia in the mid-7th C. and continued for centuries. Yet the idea of the superiority of the Greek language remained dominant, and non-Greek languages were often treated as barbaric. Unlike western Europe, however, Byz. never embraced the concept of an exclusive language.

Literature in non-Greek languages was written in Byz. territory, and the Byz. church permitted the use of Slavonic, Georgian, Syrian, and other tongues in the liturgy. Certain ethnic and religious groups (Jews, Italians, and others) lived dispersed among the Greek populace but retained their languages within their communities. Knowledge of foreign languages by educated Greek speakers was more common in frontier zones, such as Cherson, Thessalonike, and Antioch, than in Constantinople; despite the boasting of John Tzetzes, his knowledge of Latin, Persian (Turkish), Scythian (perhaps Cuman), Alan, Arabic, Slavic, and Hebrew was very poor. Some revival of the knowledge of foreign languages is evident from the 11th C. Latin was studied in law schools and by diplomats. Several scholars studied and translated Arabic, Syriac, and Persian, and professional interpreters participated in embassies and in the receptions of foreign potentates at the court of Constantinople. (See also TRANSLATION: Other Languages into Greek.)

LANX. See PLATES, DISPLAY.

LAODIKEIA (Λαοδικεία), name of two cities in the eastern Mediterranean region, one in Anatolia, the other on the coast of Syria.

LAODIKEIA IN PHYRGIA, city at a strategic road junction near modern Denizli in Turkey, made capital of Phrygia Pacatiana in the early 4th C. Laodikeia was a major center of textile production and seat of a council in 380. Inscriptions and a sparse archaeological record suggest continuity through the late 6th C. Laodikeia, a city of the THRACESION theme, was taken by the Seljuks after the battle of Mantzikert in 1071. It became an important frontier post after its recapture by the Byz. in 1096 and was the goal of frequent, sometimes successful, Turkish attacks. John II Komnenos retook it in 1119 and built new walls; at the time of the Second Crusade in 1148 it was isolated in territory controlled by the Turks and administered by a doux. When Manuel I recaptured it in 1160, the city was not densely populated or well fortified, but spread out in villages (Nik.Chon. 124.13–15). The Third Crusade of 1190 found Laodikeia surrounded by the Turks; it was the last Byz. outpost on the road east or south. Laodikeia was apparently the capital of the ephemeral theme of Meander, mentioned in 1198 and 1209. In 1206 it was taken by Manuel Maurozomes, ally of the Seljuk sultan, and remained under Turkish control until 1256, when it was surrendered to Byz., which held it only a few years. Laodikeia was the ecclesiastical metropolis of Phrygia "Kapatiane" (Byz. form of Pacatiana).

LIT. Ramsay, Cities 1:15–25. Foss, "Twenty Cities" 484.

—C.F.
LAODIKEIA IN SYRIA (Ar. al-Lādhiqiyah [or Lattakia]), seaport in northern Syria; Ammianus Marcellinus (Amm.Marc. 14.8.8) lists Laodikeia, Apameia, and Seleukeia as the most prosperous cities in Syria. It was famous for its linen industry, book production, and the skill of its charioteers. Justinian I separated Laodikeia from Syria I and made it the capital of the province of THEODORIAS. Bishops of Laodikeia are known from the 3rd C. onward; by the 5th C. it was an autocephalous metropolis, but even after Justinianic reform it remained under the ecclesiastical administration of Antioch. Prokopios (Buildings 5.9.31) mentions the city's Church of John the Baptist, rebuilt under Justinian.

Laodikeia was taken ca.640 (?) by a lieutenant of Abū Ubayda al-Jarrah, sent from Emesa (Donner, Conquests 154). The inhabitants had to pay a fixed tax and retained their church. In 718/19 a Byz. fleet attacked Laodikeia and burned it. Nikephoros II Phokas seized the city in 968. Basil II appointed a certain "Karamuruk" governor of Laodikeia in 980, but he was captured by the Muslims and beheaded in Cairo. Michael Bourztes suppressed a Muslim revolt in the city. At the end of the 11th C. the Seljuks occupied Laodikeia, but in 1098 it fell to Raymond of Toulouse, who delivered it to Alexios I Komnenos (Ljubarskij, VizVrem 23 [1963] 49f). It changed hands several times thereafter; in the treaty of DEVOL (1108) TANCRED handed over Laodikeia to Byz. Throughout the 12th C. the city was the object of contention between Crusaders and Muslims. From 1197 to 1275 it remained in the hands of the Franks and then fell under Egyptian rule.

M.M.M.

LAPITHES, GEORGE, Cypriot writer and opponent of Gregory PALAMAS; fl. ca.1340–49. Lapithes (Δαπιθος), whose name was said to derive from the river Lapithos, was a wealthy property owner who used some of his personal fortune to ransom Christian prisoners from the Turks. He knew Latin and, seeking to refute Catholic doctrine, engaged in theological debate at the court of Huges IV de Lusignan (Greg. 3:27–38). He was a versatile writer, with interests in astronomy, theology, philosophy, and ethics. Among his few works that have survived is a lengthy poem in political verse on man's duty toward the state, society, and his family.

Although geographically separated from the protagonists in the Palamite controversy, Lapithes used the power of his pen to support Nikephoros GREGORAS, Gregory AKINDYNOS, and other anti-Palamites. He also corresponded with BARLAAM OF CALABRIA, to whom he addressed a series of philosophical questions or aforai (R.E. Sinkewicz, MedSt 43 [1981] 151–217).

LARGESS (λαργήτιον from Lat. largitio), the ceremonial distribution of gifts, esp. by the emperor. The term largitio designated every kind of generosity. A law of Constantine I of 321 (Cod Just. V 16.24) mentions an object received by a wife due to the largitio of her husband. The term was expanded to imperial philanthropy in general, and a special department of largess was created under the Comes sacrarum largetionum. This department dealt with the distribution of coins.
among the populace, and special coins with the legend liberalitas Augusti (on a coin of Constantius II and one of Magnentius the legend reads largitio) were minted. On the occasion of the emperor's succession to the throne, birthday, or triumph, the emperor or his officials distributed coins (the ceremony of sparsio) to the public; sometimes largess was tossed from a chariot to people in the streets or in the Hippodrome. Special silver largitio dishes might also be handed out by the emperor on special occasions; they are attested from the 4th to 7th C. At the new year, consuls distributed synethelai of ivory diptychs and silver vessels containing gold solidi. Gradually the church assumed the function of care for the needy, although some traces of state largess remained: thus, in the 11th C. Christopher of Mytilene (ed. E. Kurtz, no. 30.23–26) proclaims that the bronze phalara on an eparch's horse reflect the generosity of the man who hands out bronze and gold among the poor. Imperial largess was confined primarily to the palace and its officials, however; the patriarch, clergy, senate, and army were granted presents at coronations and other feasts.

**Representation in Art.** Depictions of ceremonies of largitio and sparsio have a long tradition in Roman imperial art and continued to be used from the 4th to 6th C. On the Arch of Constantine in Rome, in one of the contemporary frieze scenes facing the Forum Romanum, the emperor is shown handing out coins to senators assembled around him. The people receive their allotment from government officials. There are also two gold solidi, one of Constantius II (ca. 355) and the other of Valentinian I (364), that represent the sparsio: the emperor riding in a chariot scatters coins that are shown falling from his right hand. Consular distribution of largess to the populace is suggested by the sacks of gold coins shown on 5th-C. diptychs; on 6th-C. examples slaves pour such sacks into the arena where the consular games took place. Later Byz. art does not depict scenes of public largess but represents the emperors' gifts to God, that is, the church. On two mosaics in Hagia Sophia, Constantinople, for example, the emperors Constantine IX Monomachos and John II Komnenos appear holding a money bag and offering it to Christ and the Virgin, respectively (for ill., see John II Komnenos).

**LARGITIO DISHES, SILVER,** type of object manufactured by or for the state for distribution as largess by the emperor on certain state occasions. By law, at imperial accessions, from at least 360 until 527, each soldier received five solidi and one pound of silver, the latter being in the form of ingots or dishes, both of which could bear imperial silver stamps. Largitio dishes were decorated with the name and/or image of the emperor whose accession, anniversary, or victory was being celebrated. Surviving examples include several series of up to six identical plates or bowls made for Licinius in five different cities (see also Munich Treasure) as well as various dishes issued by Constantius II, Valentinian I, and Theodosios I. Among the two bearing the image of this last emperor is the "Missorium" (dated 388), now in Madrid, which is thought to have been made in Thessalonike. While no imperial largitio dishes survive from the 5th–6th C., their distribution—like that of medallions—continued, as

LARGITIO DISHES, SILVER. Missorium of Theodosios I (388); silver. Real Academia de la Historia, Madrid. Theodosios is shown handing a codicil to an official. To the emperor's right sits his son Valentinian II, to his left his son Arkadios.
is witnessed by Corippus (ed. Av. Cameron, 4.105–12, 142–47, 186–90) in connection with Justin II’s consulship of 566. Silver plates celebrating the consuls of Flavius Eusebius (347 or 359) and Ardabur Aspar (434) (PLRE 1:308; 2:135; DACL 4.1, fig.3784 [cols. 1189–90]) have also been found. The sizes and, to a certain extent, weights of the David Plates correspond to those of large dishes, and they may have been distributed by Herakleos ca.630 to celebrate his victory over the Persians in 628.

M.M.M.

LARISSA (Λαρίσσα), administrative and ecclesiastical center of Thessaly, located on the right bank of the Peneios River, at the junction of major Thessalian routes. The city suffered from an attack by the Ostrogoths at the end of the 5th C. but was rebuilt under Justinian I. Constantine VII Porphyrogennetos (De them. 2.41, ed. Pertusi, p.88) lists Larissa as one of 17 poleis in the eparchia of Thessaly; in the 8th–9th C. it functioned as the metropolis of Hellas (Notitiae CP 2.40). In the 10th C. it fell victim to Bulgarian attacks; in 986 Samuel captured Larissa and carried away to Prespa the relics of St. Achilleios (allegedly the first bishop of Larissa). An inscription of 1006/7 mentions the patrikios Gregory, strategos of Macedonia and Larissa; G. Litavrin (in Kek. 415) thinks that Gregory administered Hellas and Macedonia, whereas Oikonomides (Listes 358) relates this evidence to another Larissa, a tourma of Sebastia in Cappadocia. Larissa was involved in the rebellion of 1066; in 1082/3 Bohemund besieged Larissa but failed. After 1204 Boniface of Montferrat gave the city to the Lombards; a rebellion there in 1209 was quelled by Emp. Henry of Constantinople. After 1204 Larissa was seat of a Latin archbishop, but by 1222 a Greek, Kalospites by name, was elected Orthodox bishop; Patr. Manuel I Sarantenos, residing in Nicaea, did not acknowledge the election by the local clergy. In the 13th C. Larissa belonged to the despote of Epirus, but by 1393 it had fallen to the Turks.

Larissa on the Peneios should be distinguished from Larissa Kremaste in Phthiotis, near the sea, which became an episcopal see named Gardikon. A Byz. castle has survived on the ancient acropolis; nearby is Frankekklesia, with remains of a Latin church of the 13th C. (F. Stählin, RE 12 [1925] 840–45). (For Larissa in Syria, see Shayzar.)

LASKARIS (Λάσκαρις, fem. Λάσκαρινα), a family name known from the mid-11th C.; also called Tzamantouras (Pachym., ed. Failier 1:91.21). The most probable etymology of Laskaris is from a Persian word meaning “warrior” (F. Justi, Iranisches Namenbuch [Marburg 1895; rp. Hildesheim 1963] 183), but the first known members of the Laskaris family, mentioned in the will of Eustathios Boilas (1059), were simple peasants. In 1180 Michael Laskaris was one of the most influential inhabitants of Thessalonike (M. Goudas, EEBS 4 [1927] 215, no.88b.2); another Michael Laskaris, perhaps his descendant, conspired in 1246 in Thessalonike against Demetrios Angelos Doukas (Akrop. 1:79.26). The connection of these individuals, of both rural and urban background, with Theodore I Laskaris is unclear. The Laskarid dynasty reigned from 1208 to 1258 over the empire of Nicaea, but in fact John III Vatatzes was Theodore I’s son-in-law, not a direct heir. Naturally, Theodore I’s brothers played an important role: Constantine, who in 1204 was considered a candidate for the throne, probably perished in 1211; his brothers George, Alexios, and Isaac were granted the title of sebastokrator (B. Ferjančič, ZRVI 11 [1968] 171–74). Other brothers, Michael and Manuel, exiled by John III, regained their influence at the court of Theodore II; later the protosebastos Manuel was imprisoned by Michael VIII Palaiologos, but Michael Laskaris retained the new emperor’s favor and even received the nominal title of megas doux (Guilland, Institutions 1:548). In 1234 or 1249 a certain Constantine Laskaris was doux of Thrakesion (Ahrweiler, “Smyrne” 145).

In the 14th–15th C. their role diminished, although Manuel was domestikos of the Western scholae ca.1320 and Alexios megas hetairiarches in 1369/70; more frequently members of the Laskaris family appear as local governors, imperial courtiers, and great landowners. Neither their role in ecclesiastical administration nor their cultural contribution was significant: John Pegonites Laskaris was a composer (see Laskaris, John);
the writers John Ryndakenos Laskaris and Constantine Laskaris were active in Italy in the second half of the 15th C. The funerary portrait of a late member of the family, Manuel Laskaris Chatzikis, is found in an arcosolium in the narthex of the Pantanassa at Mistra, dated by inscription to 1445. He is shown full-length, wearing a skiaion (G. Millet, Monuments byzantins de Mistra [Paris 1910], pl.152.4; idem, BCH 23 [1899] 138–40, no.XXXV). (See genealogical table; see also Byzantium, History of: Empire of Nicaea.)

-A.K., A.C.

LASKARIS, JOHN, composer and musical theorist; fl. Crete first half 15th C. Venetian archives yield some biographical details about Laskaris: he was born possibly in Constantinople and trained there as a singer, but moved to Crete (probably between 1410 and 1420), where he maintained a school and taught singing to young boys. Laskaris also wrote a short theoretical treatise entitled The Interpretation and Parallelogram of the Art of Music, which discusses the Byz. modal system. Although he was not a prolific composer, his works were copied in MSS down to the 19th C.

-D.E.C.

LAST JUDGMENT (κρίσις), the main event of the Second Parousia or Second Coming of Christ. Although Byz. theology emphasized the theosis (deification) of redeemed man rather than reward for ethical behavior, it elaborated—in polemics against Stoicism and Gnosticism and their concept of self-salvation—the idea of cosmic judgment at the end of time. This idea, however, created problems of correlation with individual judgment after death, esp. from the 7th C. onward: thus, Andrew of Crete (PC 97:1289C) states that it is beyond our capacity to investigate the status of the soul after its separation from the body.

The Last Judgment presupposes the resurrection of all men in their body and their reward in accordance with their sins or virtues: those who have followed the divine way are united to God in their adopted sonship and will dwell in Paradise, whereas sinners are doomed to Hell. Some Greek authors (Romanos the Melode, Gregory
the hagiographer of Basil the Younger) depicted the second parousia as a dies irae, emphasizing the punishment and the suffering of sinners, whereas others expressed the expectation that God's mercy would forgive at least some of our sins: thus Anastasios of Sinai (PG 89:1112–16) believed that a sincere and tearful repentance on the deathbed could redeem even a robber. Gregory of Nazianzos stressed that a man was condemned not by an external authority but by his own sins (PG 35:944D–945A). Christ will be the judge whose terrifying visage will urge all to tell the truth; apostles will assist him; the judgment is to take place in the valley of Josaphat, between the Temple and the Mount of Olives in Jerusalem. Manifold portents will precede the judgment and when the dead are resurrected the angelic trumpets will summon them to the tribunal. Based on the heavenly ledgers, the deeds of each person will be evaluated, and souls will be weighed on the balance scales. Then the sheep will be separated from the goats, and the righteous will enjoy eternal bliss while sinners are condemned to eternal suffering. The image of the Last Judgment is evidently derived from real judiciary proceedings; its resemblance to public trials was adduced, for example, by John Chrysostom (PG 58:554.53).

In patristic and Byz literature the Last Judgment is sometimes represented as preceded by the Psychomachia, the struggle between the demons and angels for the soul of the deceased. According to Cyril of Alexandria (PG 77:1073C–1076A), the soul passes five teloneia (tollhouses) and gives account for its sins to the phorologoi (tax-collectors), that is, demons; at the same time, angels are supplicating for the man's exemption from trial and condemnation (pseudo-Athanasios, PG 27:665C). Accordingly, Gregory of Nyssa buried his parents next to the tombs of the Forty Martyrs, hoping that these saints would intervene with God on their behalf on the day of resurrection (PG 46:784B).

The artistic representation of the Second Coming and the Last Judgment was considered instrumental for conversion, since it prompted in viewers a fear of eternal damnation (TheophCont 164.8–16). A variety of routes and dates have been proposed for the development of this iconography in art. Its evolution was essentially complete by the 11th C., when it appears in the Paris Frieze Gospel (B.N. gr. 74, fol. 51v) as well as in mosaic and fresco decoration (Panagia ton Chalkeon, Thessalonike).

G.P., A.C.

LAST SUPPER. See Lord's Supper.

LÁSZLÓ I, also known as Ladislas (Blađíslav boś in Kinn. 9.24), king of Hungary (from 1077); Catholic saint; born Poland 1046/7, died Nitra 29 July 1095; feastday 27 June. Having acquired military laurels as a duke under his brother King Géza I, László was elected king and soon thereafter had to deal with the insurrection of his young cousin, Salamon. The latter found support first in Germany and then with the Cumans; defeated and forced to resign, Salamon participated in a Pecheneg expedition against Byz. in the spring of 1087. László fought successfully against the Cumans and acquired a popular image that was, in many aspects, influenced by that of Byz. military saints. His annexation of old Croatia (down to the Adriatic Coast) in 1089, after the death of the Croatian king, brought László into contact with Byz. Dalmatia was temporarily rescued from Hungarian expansion because, in 1091, Alexios I urged the Cumans to invade Hungary, so that László had to return from the south. In that same year an attack of the Norman fleet, encouraged by Alexios I and under the command of Gottfried of Melf, occupied Cetina and Krk in Dalmatia. Synods held under László strengthened Roman observances in the Hungarian church. Kinnamos mistakenly speaks of Álmos and István II as László's sons—Álmos was the brother and István the son of Kálmán (Coloman), László's nephew and successor. Kinnamos also relates that László's daughter Piroska (Irene) married John II and praises her virtue. She was regarded as the founder of the Pantokrator monastery in Constantinople.

J.B., A.K.
LATERNAN SYNOD, convened by Pope Martin I in Rome’s Lateran Basilica in October 649 to denounce MONOTHELETISM. The synod’s Latin acts bear the signatures of 106 bishops who condemned the Ἐκθεσις and the Typos of Constans II. Riedinger has shown, however, that the Latin acts were translated from the Greek original. This suggests the acts were essentially a fraud prepared in Rome, probably in the circle of the Greek-speaking pope Theodore I (642–49) and Maximos the Confessor; the Latin acts were presumably presented to the synod for ratification by Theodore’s successor Martin I as an attack on the patriarch of Constantinople and, indirectly, Constans II.

ED. R. Riedinger, ACO² 1.
—M.McC.

LATERCULUS. See POLEMION SILVIO.

LATIN was in late antiquity the language of the army, law, and central administration throughout the Roman Empire as well as the vernacular in the western provinces and in the Balkans north-west of a line running from the Adriatic near Dyrrachion to the Danube delta. The foundation of Constantinople as the new capital brought many Latin speakers to the East and made the study of Latin for a time an attractive alternative to a Greek literary education and a path to an official career. Theodosios II established public professorships of Latin in Constantinople. Refugees from Ostrogothic Italy and Vandal Africa strengthened the Latin element in Constantinople in the late 5th C. The grammarian and poet Priscian, the historian Marcellinus Comes, and the poet Corippus all belong to this Constantinopolitan Latinity.

As the Western world passed out of Byz. control, however, knowledge of Latin became less relevant and rarer in the East. Though the Codex Justinianus and Digest were published in Latin, most of Justinian’s Novels are in Greek, and Greek translations of the Codex and Digesta were made for teaching purposes in his lifetime. Hērakleios in the early 7th C. abandoned Latin for Greek in the imperial titulature. Lawyers preserved some knowledge of Latin, often superficial, from the 8th to 11th C., and Constantine IX’s novel establishing a law school in Constantinople prescribes the teaching of Latin. From the 11th C. onward, closer, if sometimes hostile, contact with the West led to increasing knowledge of Latin in leading Byz. circles; Romanus III spoke Latin and Psellos claimed some knowledge of it. Still, cultural arrogance usually marked Byz. attitudes to the West and its language.

The Fourth Crusade and the division of the empire between Western powers strengthened Greek antipathy to Western culture. A few intellectuals and statesmen, however, began to see that Byz. had something to learn from the West. Maximos Planoüdes translated works of Cicero, Ovid, Augustine, and Boethius, and Demetrius and Prochoros Kydones in the later 14th C. translated the two summæ of Thomas Aquinas. Latin inscriptions occur widely in illuminated MSS of the 13th C., although the best known of these have been linked to a lectionary of 1298 rather than to the period of the Latin conquest of Constantinople as previously supposed. Latin incipits of the Gospels appear on codices held by Evangelists depicted in a number of 13th-C. books (Chatzimicolau-Paschou, CBMG 2, no.5). Bilingual Gospel books and a richly illustrated psalter (C. Havice, Jahrbuch der Berliner Museen 26 [1984] 79–142) are also preserved. By the 15th C. some knowledge of Latin was common in Constantinople and widespread in regions under Western rule such as Crete, Cyprus, Chios, Attica, and the Ionian islands, but religious dissension and bitter historical memories precluded deeper understanding except among a limited group of Byz. intellectuals.

—R.B., A.C.

LATIN CHURCH IN CONSTANTINOPLE. See DOMINICANS; FRANCISCANS; LATIN EMPIRE; THOMAS MOROSINI.

LATIN EMPIRE, name conventionally applied to the political successor of the Byz. state founded at Constantinople on 13 Apr. 1204 by the LATINS
of the Fourth Crusade; it lasted until 25 July 1261. Contemporaries called it Romania or Imperium Constantinopolitanum. The Latin Empire claimed sovereignty over all former Byz. territory. While it sought to control its vassal states established in Greece (the kingdom of Thessalonike, the principality of Achaea, the duchy of Athens), it rarely exercised authority outside of Bithynia and eastern Thrace.

After the capture of Constantinople, a committee of 12 electors (six Venetian, six others) chose as emperor Baldwin of Flanders; when he vanished into a Bulgarian prison (1205), his brother Henry of Hainault became regent, then (once Baldwin’s death was known) emperor. The most capable of the Latin rulers, Henry secured the allegiance of Thessalonike, Athens, and Achaia and conciliated his Greek subjects. Upon his death (1216), the barons selected Peter of Courtenay, husband of Henry’s sister Yolande, but Peter, captured (1217) by Theodore Komnenos Doukas, perished in an Epirote prison. Yolande ruled until her death in 1219. She was eventually succeeded by her son Robert of Courtenay (1221–28). His successor was his brother Baldwin II; because Baldwin was too young to rule, John of Brienne became emperor (1231–37). As emperor, Baldwin II (1240–61) had to spend much of his time in western Europe in quest of assistance. (See table for a list of rulers of the Latin Empire.)

The Latin Empire retained many Byz. institutions. Wearing purple boots, the emperor was crowned in Hagia Sophia according to a modified Byz. ritual. He bestowed Latin versions of Byz. titles, such as cesar, sevastocrator, and protovestiarius, along with Western dignities such as seneschal and constable (B. Hendrickx, Byzantina 9 [1977] 187–217). In reality, the Latin Empire was a feudal state. Three documents formed a “constitution,” which each new emperor was required to uphold: a treaty between the Venetian and non-Venetian Crusaders (Mar. 1204) that provided for election of a Latin emperor and division of the spoils; the Partitio Romaniae (Sept./Oct. 1204); and a treaty (Oct. 1205) that regulated the Venetians’ relations to the emperor. A council of Venetian and other barons had an effective veto over the emperor’s actions.

To succeed, the Latin Empire needed to reconcile the Greek population to its rule. Constantinople and the smaller towns were for the most part inhabited by Greeks, who initially welcomed the Crusaders. A few Byz. nobles joined the Latins: briefly, Michael I Komnenos Doukas, before leaving to found his state in Epiros; permanently, Theodore Branas, influenced by his relationship with Agnes of France. Emp. Henry won the affection of the Greeks. The fairness of his decisions was celebrated. He appointed Branas ruler of Didymoteichon and Adrianople and tolerated Orthodoxy. His Greek subjects even fought for him against Byz. armies. Later emperors ignored the Greeks; Baldwin II vigorously repudiated the charge of having any Greek members in his council. The emperors relied on their Western vassals—chiefly French, who owed military service for their holdings—and on mercenaries.

Within the Latin Empire, Venice occupied a special position. Although entitled to extensive territories, Venice concentrated its rule on the islands and principal ports. A substantial portion of Constantinople belonged to Venice, which regained all the rights and exemptions it had enjoyed under Byz. Thus, the Venetians paid no commercial taxes, although those who held fiefs were obligated to the usual feudal duties. The Venetians were governed in Constantinople by a podestà and council who, with the leading barons, formed the emperor’s council. The Venetians’ power to veto imperial actions was reinforced by their near-monopoly of commerce and their control of the only fleet that could provide naval support for the Latin emperors. The podestà was closely controlled by the government of Venice.

Under the preconquest agreement of Mar. 1204, whichever party, Venetian or non-Venetian, did not gain the office of emperor was entitled to choose the patriarch of Constantinople. Thus, in 1204 the Venetians designated their own clerics to form a cathedral chapter for Hagia Sophia; the clerics then elected Thomas Morosini as patriarch. Pope Innocent III presently approved this election and granted papal recognition (previously denied) to Constantinople as a patriarchate. He and his successors sought to loosen Venetian control over the church in the Latin Empire, and until 1261 most later patriarchs were designated by the pope. Although the higher clergy was Latin, the parish priests largely remained Greek. Many refused to recognize the Latin patriarch but turned to the Orthodox patriarch of Constantinople re-established at Nicæa. The Franciscans and Do-
MINICANS won some converts and sponsored some church's decoration, notably a cycle of the life of St. Francis at Kalenderhane Cami.

In its early decades, the principal foes of the Latin Empire were to its west. When the Bulgarian Kalojlan offered alliance to the victorious Crusaders, the Latins arrogantly rejected him. Kalojlan defeated and captured Baldwin I, then killed Boniface of Montferrat in battle. Kalojlan's death allowed Emp. Henry to maneuver among the rival Bulgarian claimants Boril, Slav, and Strez; Henry married his illegitimate daughter to Slav and ca.1213 or 1214 himself married a daughter of Boril. The Greek rulers of Epirus were usually rivals, sometimes allies, of the Latin Empire. In 1224 Theodore Komnenos Doukas took Thessalonike, only to fall victim to the revived Bulgaria of John Asen II. The latter appropriated most of the Latin Empire's European territories and boasted in an inscription at Turinovo that the empire survived only by his permission.

Initially, the Crusaders despised the Byz. state re-created at Nicaea; they repeatedly defeated Theodore I Laskaris. But after John Asen's death (1241), John III Vatatzes acquired the territory the Bulgarians had taken from the Latin Empire; his domains enveloped the Latins to the east and west. Only transfusions of funds from western Europe, papal support, and the Venetian fleet preserved Constantinople. Unable to hire sufficient knights, the Latin Empire became so debilitated that even Pope Innocent IV was prepared to accept a Byz. recovery of Constantinople if Vatatzes would acknowledge papal supremacy. When in July 1261 the Venetian fleet departed for an expedition in the Black Sea, the army of Michael VIII Palaiologos was admitted to Constantinople by the citizens. Constantinople again became the Byz. capital, and Baldwin II fled to the West, where the empty title of Latin Emperor lingered through most of the 14th C.

### Rulers of the Latin Empire

### LATIN PATRIARCHATE OF JERUSALEM

Established by the Crusaders in 1099 because the Orthodox patriarch Symeon II had fled. Westerners regarded the patriarch as the primate of the kingdom, subject to the pope's supervision, rather than as an independent patriarch in the Eastern tradition (Y. Katzir in *Crusade and Settlement* [Cardiff 1985] 169–75). A line of Orthodox patriarchs of Jerusalem continued at Constantinople. Orthodox monasteries, notably St. Sabas, survived in Palestine. By ca.1164, as a result of Manuel I's alliance with the kingdom of Jerusalem, Orthodox clerics reappeared at the Church of the Holy Sepulchre beside the Latin canons (H.E. Mayer, *Bistümer, Klöster und Stifte im Königreich Jerusalem* [Stuttgart 1977] 406f). That they outlasted Manuel's death is doubtful. After the Third Crusade, the Latin patriarch of Jerusalem resided at Acre.

---

### LATIN RITE

Conventional denomination of the religious usages, liturgical, canonical, monastic, etc., of the Roman Catholic churches, fully Latin only when the gradual shift from Greek to Latin was completed in Rome in the second half of the 4th C. Rome had a more pluralistic liturgical policy than the Byz. church, and there were several Latin rites besides the Roman, which originally prevailed only in the area around Rome, in southern Italy, and the islands (Sicily, Sardinia, Corsica). The rest of Italy had distinct local uses, not only in metropolitan sees like Milan (the Ambrosian rite) and Aquileia but also in over 40 other
centers. Roman uses gradually came to predominate throughout Europe in the 8th–9th C. under the Carolingian and Ottonian emperors.

Within the territory of the Byz. Empire the Latin church predominated in Byz. Italy (except for the very south), in North Africa west of Cyrenaica up to the Arab conquest, and in Pannonia, Illyricum, and Thrace. There were Latin churches in Constantinople and environs, Latin monasteries in Jerusalem, even an Amalfitan monastery on Mt. Athos. The Latin rite continued in peaceful coexistence with the Byzantine rite until the 11th C., when the Norman descent into Byz. Italy and the Crusades, esp. the imposition of a Latin Empire and church at Constantinople in 1204–61, made the Latin rite a threat to the Byz. (C.A. Frazee, BalkSt 19 [1978] 33–49). But even in times of tension, Latin churches had usually remained open at Constantinople and Catholics and Orthodox were admitted to communion in each others’ churches right through the 12th C. Eastern clergy in Palestine, Italy, and Cyprus submitted to Latin jurisdiction, and Latin priests could be ordained by Greek bishops even after 1204 (PG 119:959–64).

The Byz., more concerned with ritual uniformity than the Westerners, first impugned Armenian and Roman uses at the council in Trullo: for example, Saturday Fasting (par. 55—Mansi 11:969 AB). The dispute over the filioque arose in the 9th C., but more acrimonious still was the controversy over azymes in the time of Patr. Michael I Kerouarios. Michael induced Bp. Leo of Ohrid to write a letter to Bp. John of Trani fiercely attacking such Latin practices as Saturday fasting, azymes, and not singing alleluia in Lent (RegPatr, fasc. 3, no.862). In a letter to Patr. Peter of Antioch, Kerouarios expanded the list of accusations: the Latins shave, they eat strangled things, their monks eat meat, they sing the Great Doxology wrongly, they add the filioque to the Creed, they allow two brothers to marry two sisters, they put salt in the candidate’s mouth at baptism, they impose clerical celibacy, their bishops wear rings, etc. (ibid., no.866). To all this one can add the dispute over whether salt should be used in baking the eucharistic bread (Latins yes, Byz. no [PG 120:837BC; 126:233D, 236A; 155:265]). The azyme dispute remained alive until the end of Byz., providing a large corpus of Byz. polemical writings (J.M. Hanssens, Institutiones Liturgicae de Ritualibus Orientalibus, vol. 2 [Rome 1930] 141–56).

In the 14th C. a new dispute arose, over whether the formula of the eucharistic consecration in the anaphora was the Words of Institution (“This is my body, this is my blood”) or the epiclesis. Though a far graver issue, this dispute provoked much less polemical writing than had the azyme controversy. It was dealt with by Mark Eugenikos (PO 17:426–34), Symeon of Thessalonike (PG 155:733–40), and, most masterfully and objectively, by Nicholas Kabasilas in Explanation of the Divine Liturgy, chs. 29–31. But in spite of the polemics, contacts between the two rites were frequent, and Latins studied, translated, and even adopted Byz. liturgical texts for their own use (S. Gero, GOrThR 25 [1978] 81f).

Actually, the differences between the rites were more those of language, form, and ethos; more of ceremonial and its mystagogic interpretation than of substance. Both rites had Eucharist—but the Latin rite anaphora had no consecratory epi- clesis to the Holy Spirit, and the Latins used azymes, did not add ΖΕΩΝ to the chalice, from the 12th C. refused the chalice to the laity, and then gradually abandoned giving communion to infants. Both rites celebrated the other sacraments—but the Latins admitted baptism by as- persion and pouring, whereas the Byz. required triple immersion. The Latin rite also separated confirmation from baptism, did not marry by crowning, did not have seven priests to celebrateunction, ordained to more minor orders, etc. Both had the full cycle of hours, but the Latin rite office had a monastic stamp, centered on the recitation of the psalmody, where the Byz. hours had received a massive infusion of liturgical poetry in the period after the first phase of Iconoclasms. The Latin rite is viewed as extremely sober and conservative (cf. E. Bishop, Liturgica historica [Oxford 1918] 1–19); the Byz. rite underwent far more development and change. Whereas the Byz. rite had undergone theological enrichment as a result of the early dogmatic controversies over the divinity of Christ and the Holy Spirit and had a decided Trinitarian thrust (L. Gillet, Questions liturgiques et paroissiales 9 [1924] 81–90), the Latin rite remained more Christological in its orientation.

—R.F.T.
LATINS (Λατίνοι, Latini). Latin was a term originally describing ethnic origin (the habitants of Latium) that was adopted by Roman law to designate certain groups of people with restricted legal rights; thus Junian Latini were manumitted slaves who were free during their lifetime but reverted to slavery at death, so that their property went to their patrons as peculium. Justinian I abolished the status of Latin in 531 (A. Steinwenter, RE 12 [1925] 922).

The Greek term Latinos—in a different meaning—reappears in Byz. sources from the 11th to 12th C.: absent from Theophanes or Skylitzes, it is found frequently in Anna Komnene, John Kinnamos, and Niketas Choniates. A patriarchal decision of July 1054 (RegPatr, fasc. 3, no. 869) normally uses the phrases “Italian language” and “Italian characters,” and only in a section translated from Latin does the term Latinos appear. Latinoi became a generic appellation for Western peoples. The introduction of the term in Byz. Greek reflects a new Byz. perception of the unity of the Western world that had been treated in earlier centuries as a conglomeration of ethne, tribes, each having its place within the empire. The granting of Byz. court titles (see DIGNITIES AND TITLES) to foreign princes (Western, Slavic, Caucasian, etc.) symbolized this worldview. The assumption of the imperial title by Charlemagne in 800 signaled the first crack in the concept of the universal Roman Empire; first the emperors of the Franks, then the rulers neighboring the Byz. (Germans, Bulgarians) came to rival the basilieus, and the popes asserted their primacy over the ecumenical patriarch.

Late Roman ideology cherished the image of a united Mediterranean, even though an economic and cultural breach began to develop as early as the 4th C., and by the 7th C. the linguistic unity was totally disrupted. Contacts between East and West continued in the form of embassies and pilgrimage, whereas commercial, literary, and artistic exchange became sporadic. Only in a few regions (primarily in Italy) did the two cultures meet on a regular basis.

In the 11th and 12th C. the interconnections between Byz. and the “Latin” world intensified. The colonies of Italian merchants on Byz. soil became sizable. Eustathios of Thessalonike counted 60,000 Latins in Constantinople (Eust. Thess., Capture 34.2–3); they received concessions more significant than those the Rus’ had enjoyed in the 10th C. Western mercenaries occupied an important position in the Byz. army, and the Normans (as well as the English and Germans) replaced contingents from Rus’. Matrimonial connections between the Byz. and Latins became more frequent: the genealogical tables published by Grumel (Chronologie 363f), although incomplete, demonstrate a drastic difference between the matrimonial policy of the Macedonian dynasty (867–1056) and that of the Komnenoi (1081–1185). In the first table only two foreign marriages are recorded—with a Bulgarian and a Kievan ruler. The second table has 15 foreign marriages, of which only one (the earliest) is with an eastern princess (from the Caucasus). The others are with Latins: six with nobles from the Crusader states, three with France (and Montferrat and Montpellier; the two marriages of Agnes of France are counted as one), three from Hungary, one each from Germany and Austria. Cultural exchange also became regular, esp. in the sphere of theology that contributed so much to the definition of “national” identity. Literary interchange is less evident: however, the epic of Digenes Akritas was known in the West, and the mutual influence of Western and Byz. erotic romances is plausible. In the realm of art, Byz. impact on the West intensified from the 10th C. on, esp. in the period of the Crusades (see ART AND THE WEST).

After the capture of Constantinople in 1204 by the Fourth Crusade (the Norman invasion of 1185 prepared the way), the era of a peaceful, if unstable, balance of power ended. The Latins came to be viewed as oppressors of the Byz. From the Latin viewpoint, Byz., which in the 12th C. had seemed to be a country of great wealth, was perceived from the 14th C. onward as impoverished and unable to pay its debts. Byz. was an easy prey for bold invaders or even discontented mercenaries such as the Catalan Grand Company. The divergency in religious belief and practice, focusing more and more on questions of rite, increased. A modus vivendi with the Latins could not be reached despite individual attempts to relieve tensions; the cohabitation of Greeks and Latins and emergence of mixed population groups (e.g., Gasmoulo) in areas such as the Morea; the active literary interaction that resulted in such works as the Chronicle of the Morea, the Chronicle of the Tocco, and Greek chivalric romances; and an urgent
need for Western military assistance against the Ottoman invasion.

The stereotype of the Latins as it was established by 1204 included such features as religious divergence (esp. with regard to the Filioque and AAZymes but also differences in vestments and haircut of the clergy, fastdays, etc.), arrogance and greed, military prowess, and disdain for literacy. A few Byz., however, were sufficiently enlightened to distinguish the “good” Latins from the “bad” ones, and in the 14th C. a strong current of pro-Latin sentiment developed in some cultural circles (e.g., around the Kydone brothers).

—A.K.

LATOMOU MONASTERY. See Hosios David.

LATRINES (sing. ἀθέδρων). The building of latrines, together with the installation of PLUMBING, such as sewers, gutters, and water pipes, was subject to strict regulations that were introduced to ensure public and private amenities. The legend of ARIUS described his death in a latrine (A. Leroy-Molinghen, Byzantion 58 [1968] 105–11), in some versions in a public toilet. John Moschos (PG 87:3:2897) relates that the archbishop of Thessalonike, Thalelais, also died in a latrine, and his partisans found him with his head down the hole (solem). The legend of the building activity in Constantinople of the architect Euphratlas portrayed him as concerned with sewage systems. According to a vita of Constantine I (AB 77 [1959] 87.30–36), a system of sewers was built in Constantinople through which was channelled “the waste from latrines and slaughterhouses.”

Legal texts give evidence that in private homes latrines were built in the courtyard and each was provided with drain pipes and gutters. Harmanopoulos in the Hexabiblos (Harm. 2:4.78), repeating the building regulations of Julian of Askalon (cf. Ja. Sjuzjumov, ADSV 1 [1960] 3–34), described two types of cesspool (koprodochion): one with thick stone walls; the other simply dug out of the earth. The first type had to be at least 3 ells (pechies) distant from a neighbor’s wall; the second no less than 6.5 ells. Washing facilities (christeria) could be constructed in a courtyard, provided they caused no harm to neighbors (Harm. 2.4.79). In crowded apartment houses sanitary conditions were poorer. The law (Harm. 2:4.71) forbade throwing human waste from upper floors, yet John Tzetzes, who was living on the second floor of a three-story building, complained that the 12 children and the pigs of a decoan who lived upstairs “urinated so much that they produced navigable rivers” (ep. 18, p. 33.5–16). For chamber pots the Byz. used special vessels (amis, etc.) made of clay, glass, and even silver and gold (Koukoules, Bios 2:276). Dreams about latrines occupy an important place in the Oneirokritikon of Achmet ben Sirin (pp. 30.11–28, 62.3–63.21): images of urinating or evacuating one’s bowels in various places were interpreted as portents of good or bad fortune.

Archaeological Evidence. The large public latrines of Roman and late Roman date continued in use until the 6th–7th C., but apparently not beyond (Scranton, Architecture 68). At Corinth a private house of the 6th–7th C. had a latrine located immediately off the main room (ibid. 19–21), while simple unlined pits, probably in courtyards or behind houses, have been identified as Byz. latrines. Latrines are frequently found in towers and under stairs of fortifications, and elaborate arrangements were often made for them in Crusader castles (e.g., at Saranda Kolones in Paphos).

LATROS (Δάτρος), anc. Latmos, monastic center in Caria, northeast of Miletos. Its numerous forts, fortified monasteries, and hermits’ caves were located on islands in the lake of Herakleia (Bafa) and immediately to the east on the slopes of Mt. Latros (Beşparmak); most remain anonymous. The early history of Latros is obscure. According to local tradition, Latros was settled in the 7th C. by monks fleeing the Arab invasion of the Sinai. The
hegoumenos Isidore attended the Second Council of Nicaea in 787. When the monk Paul, later called Paul of Latros, came to the region in the early 10th C., three monasteries already existed there: Kellibara, the Savior, and Karya. Paul founded the Stylos (named probably in honor of the apostle Paul, the “pillar” of the church), which was dedicated to the Theotokos. Leo VI granted the monastery a proasteion and other lands (MM 4:324.11–15). A fragment of the Latros cartulary containing about 15 documents from 987 to the mid-13th C. has survived (MM 4:290–329; B. Pančenko, IRAIK 9 [1904] 142–45). These acts deal important is the case of the peasants of the village of Sampson (MM 4:290–95, a.1217—see Reg 3, no.1693), which sheds some light on the institution of morte.

In the 11th C. Christodoulou of Patmos was hegoumenos of Stylos as well as protos of Latros’s monastic confederation. Latros flourished during the empire of Nicæa; in 1222, 11 monasteries were under the authority of its kathegoumenos and archimandrite (RegPar, fasc. 4, no.1231), a title disputed between the superiors of Stylos and Kellibara. By the end of the 13th C., however, Latros was in decline as a result of Turkish encroachment; Kellibara with only nine monks was merged with Michael VIII’s new foundation of St. Demetrios in Constantinople. By the 14th C. Latros disappears from the sources.

Restle (Wall Painting 3, pls. 542–43) has assigned a mid-6th-C. date to the wall paintings in the so-called Pantokrator Cave. Painted Gospel cycles in a cave chapel at Yediler—probably to be identified with Kellibara—and in the Stylos have been variously dated in the 11th–13th C. The Stylos also contains scenes of the funeral of Paul and other scenes from the saint’s life.

LAUSIAC HISTORY. See Palladios.

LAUSIASKOS (Λουσιακός), a hall (triklinos) in the Great Palace constructed under Justinian II. It was located near the Triklinos of Justinian and the Chryso-triklinos and was connected by a bronze gate with the kitchen, situated probably under the private chambers of the emperor. The aristeion, the emperor’s private dining room, was also located nearby. The connection of the Lausiakos with the banquet-kitchen area suggests that the oiketarioi of Lausiakos were involved in the organization of banquets. The Lausiakos played a role in the palace ceremonies as a place through which various processions passed. Some emperors (Leo V, Theophilus) used it for administrative meetings and theological discussions. Manuel I is said to have restored and adorned the Lausiakos.

LAUGHTER (γέλως) was defined by MELETTIOS THE MONK (PG 64:1137B) as “agitated movement of the facial muscles or a broadening of [the same] muscles caused by the motion of internal organs.” While antiquity accepted laughter as a positive emotion and considered it a proper quality of Homeric gods, the church fathers, esp. Jerome and Basil the Great, rejected laughter. Laughter, for Jerome, was a sign of ungodliness and would be punished on the Day of Judgment. According to Basil (PG 31:961C), it was incompatible with a Christian vocation—Christ, he said, never laughed. More tolerant of laughter was John Chrysostom, who distinguished between permissible and excessive laughter. Monastic communities were particularly hostile to laughter. The church fathers, however, accepted laughter as an expression of spiritual joy and as derision of the pagan world and of mundane objects.

Despite all these invectives against laughter by the ecclesiastical establishment, the Byz. enjoyed a good laugh at their banquets (with professional mimes as entertainers) and elaborated such genres of humor as satire, parody, and puns. They believed that laughter possessed magic power; for example, late Byz. vernacular literature depicted the dance of laughter as a magical means against death. Thomas Magistros includes the expression “broad laughter” (i.e., not thundering) in his Lexicon (Elogia vocum atticарum [Hildesheim–New York 1970] 293.4).

—A.K.
LAVRA (λαόρα), a type of monastery. The word originally meant a narrow lane or an alley in a city (Athanasiós of Alexandria, PG 25:764B); Eu- stathios of Thessalonike, who was often critical of monasticism, adds that the word spodesis(lavra) (lit. “streetwalker”) meant a whores (Kazhdan-Frank- lin, Studies 152). Evagrius Scholastikos (HE 1:21, ed. Bidez-Parmentier, 29.24–25) defines a laura as a monastery in which everyday life (diaita) is individual, but social life (politeia) is directed to the common purpose of loving God.

In a laura a group of dispersed monastic cells (kellia) was associated with a central complex containing a church, refectory, common hall, and various outbuildings (storerooms, stables, bakery). The monks lived as solitaries during the week, occupied with prayer and manual labor, but owed obedience to a hegoumenos and assembled on weekends at the laura to attend services together and to obtain food and materials for their handwork. A laura thus represented a compromise between eremitic and cenobitic monasticism.

Cyril of Skythopolis, when describing Palestinian monasticism, usually contrasts the laura and the koinobion, although he sometimes notes the transformation of a laura into a koinobion “in accordance with God’s will” (p.58.29). By the 8th C., however, the difference between the terms seems to have disappeared. In later centuries, on Mt. Athos, the term laura was applied to the larger monasteries (Great Lavra, Iveron, and Vatopedi) and to Karyes. Lavrai were almost invariably established in remote rural locations, but on rare occasions the sources refer to urban and suburban monasteries as lavrai, e.g., the laura of Kaisarios in 9th-C. Rome (AAAS Nov. 4:662F) and the monastery of St. Michael at Analpous, referred to as he tes lavras tou archistrategou mou (Pachym., ed. Bekker, 2:203.6).

LAVRA, GREAT (ἡ μεγίστη Λαόρα), also called the Lavra of Athanasios, monastery located near the southeastern tip of the peninsula of Mt. Athos. It was founded by Athanasios of Athos in 963, with the financial assistance of the general and future emperor Nikephoros (II) Phokas, who intended to retire to the Holy Mountain. Although called a laura, the monastery was really a koino- bion with which a limited number of hesychasts were associated. Athanasios’s typikon permitted only five monks to live in kellia outside the Lavra. As soon as the kitor Nikephoros became emperor, in July 963, the Lavra obtained the status of an imperial monastery. In 964 Nikephoros issued three chrysothele on behalf of Lavra, guaranteeing its independence from ecclesiastical authorities, limiting the number of monks to 80, and providing it with an annual grant (solemnion) of 244 gold pieces and a quantity of wheat. Athana- sios supervised the construction of a large monastic complex, including a Church of the Theotokos, cells, a kitchen, refectory, hostel, and waterworks.

The number of monks soon increased to 120, and by mid-11th C. reached 700. In 1045 the typikon of Constantine IX Monomachos specified that the hegoumenos of Lavra had precedence over all other hegoumenoi, even the protos; Lavra re- tained this primacy in perpetuity. Lavra remained an imperial monastery: in 1052 the monks of Lavra asked Constantine IX to appoint an influential patron to the monastery in order to protect it from any new fiscal burdens (kainotomiai, epe- reiai) that might be imposed by local archontes (Lavra 1, no.31.24–25). In response the emperor sent a praepositas, the chief of the kytón, and the kanikleios John to carry out the mission.

The increase in Lavra’s estates, which were signifi- cant in the 11th–12th C., came to a halt under Latin rule. After the mid-13th C., however, the monastery continued to acquire further property: in 1259 Michael VIII confirmed the properties of Lavra and added the village of Toxompos; Andronikos II was even more generous to the monks. At the same time Patr. Athanasios I attempted to put Lavra under the control of the patriarchate. Lavra was evidently involved in the political and religious conflicts of the second quarter of the 14th C., having as its hegoumenoi such luminaries as Philotheos Kokkinos and Gregory Palamas. On the other hand, some dis- sident elements penetrated into the monastery, although the information about their activity is obscure: thus Andrew Palaiologos, one of the Zealot leaders, ceded a portion of his property to Lavra; the Latinophile Prochoros Kydones was connected with the monastery; and in the 1360s the case of a certain Moses Phakraces (a favorite of Philotheos Kokkinos) shook the community
and required the patriarch's intervention; unfortunately, we do not know the basis of the charges against him. The internal problems were aggravated by military threats: the raids of the Catalan Grand Company were followed by the Serbian occupation of Mt. Athos, and then the brief establishment of Ottoman authority in 1877. In the early 15th C. Manuel II still had some prerogatives over Lavra and levied a third of the charatation (the Turkish tax harae). In 1430, Thessalonike and all of Mt. Athos were finally conquered by the Ottomans.

The rich library of Lavra contains over 2,000 MSS, of which about 800 are of Byz. date. The archives of Lavra are also a precious resource for the Byzantinist, since they contain 172 acts dating before 1453.

Architecture of the Lavra. The katholikon of the Lavra, begun in 962/3, consists of a cross-domed core enlarged into a triconch by the addition of apses to the cross-arms. The naos is covered by a dome on piers. Two parekklesia flank a deep narthex that, in 1814, replaced the original inner and outer narthexes. The church's bronze doors were made in Constantinople ca. 1002 (Ch. Bouras, *JÖB* 24 [1975] 229–50). The exterior of the church is rather austere with little embellishment. Directly in front of the church and sharing its axis is a phiale and, further away but still on the same axis, the refectory or trapeza. The church plan type used here for the first time, and called the Athone type by some scholars, was emulated in later monastic churches in northern Greece and the Balkans.

Art Treasures of the Lavra. The Lavra possesses the richest collection (about 30) of icons of Byz. date on the peninsula: outstanding are panels of St. Panteleemon of the first half of the 12th C. and an early 14th-C. mosaic icon of John the Evangelist (Furlan, *Icune a mosaic*, no.18). A double-sided icon of the Anastasis and Pentecost is now in Leningrad (*Iksusstvo Vizantii* 3, no.473). The monastery's collection dates back at least to the early 11th C., when Kosmas, a former ekklesiarches of the Lavra, ordered a portrait of St. Athanasios from the Constantinopolitan painter Panteleon. The treasury also contains a silver cross supposedly donated by Nikephoros II Phokas (A. Grabar, *CahArch* 19 [1969] 99–125), the so-called Phokas lectionary (K. Weitzmann, *Sekond* 8 [1936] 83–98), and a gold paten of Thomas Preljubović. The luxurious late 11th-C. evangelion in the Lavra treasury or skewophylakion (K. Weitzmann, *Byzantine Liturgical Psalters and Gospels* [London 1980] pt.XI [1936], 83–98) has full-page miniatures of three of the Great Feasts within wide ornamental borders. It may have been an imperial gift, though not, as tradition has it, from Nikephoros II Phokas. The Lavra library includes many other illustrated Gospel books and evangelia of the 11th and 12th C.

LAVRATON. See PORTRAITS AND PORTRAITURE: Imperial Portraits.

LAW, CANON. See CANON LAW.

LAW, CIVIL. The totality of the laws and rules of the empire; it comprised private law (the law of persons, things, succession, obligations) as well as criminal law and public law. Justinian I (*Institutes* 1:2:1) distinguishes *jus civilis*, as a system of laws established in a particular state, from the *jus naturale* that is common for all mankind; the idea of natural law was not disregarded by the Byz., but their major categories were civil law and canon law.

The foundation of Byz. civil law was the Justinianic *Corpus Juris Civilis*, which summarized the achievements of Roman jurisprudence. Written mostly in Latin, the *Corpus* was paraphrased in Greek by the antecessores, and their translations were used in the later legislative books *Epanagoge*, *Prochiron*, and *Basilika*. Another set of legislative works diverged to some extent
from the Corpus—thus the Ecloga introduced a new approach to the laws of marriage and to criminal law, and the Novels of Leo VI tried to change regulations that were obsolete and contradicted contemporary reality. The legislators of the 10th C. (Romanos I through Basil II) tackled problems arising from the contemporary situation in the countryside. Later emperors dealt with new issues, such as the marriage of slaves (Alexios I), or tried to reorganize legal procedure.

The works of jurists stayed mostly within the framework of the Corpus: they produced indices (synopseis) to the Basilika (e.g., Tepoukeitos), excerpts, treatises on specific questions (e.g., De peculius, De actionibus), and general surveys (Harmenopoulos). Some jurists, however, illustrated the general principles of the Basilika with examples drawn from their own practice (Peira) or described their cases at length (Demetrios Chomatenos, John Apokaukos).

Unlike Western countries, Byz. had very few texts devoted to customary law (see Custom): to this category belonged the Farmer’s Law and the Book of the Eparch as well as miscellaneous texts regulating fiscal and administrative activity (treatises on taxation, Taktika). Byz. customary law is reflected primarily in documents, such as contracts and purchase deeds, in monastic Typography, in wills, in the decrees of emperors and their officials, in patriarchal charters, etc. The scarcity of available information means that literary sources, such as patristic texts, later romances (P. Pieler, JOB 20 [1971] 189–221), or hagiography (G. Bourdara, To dikaia sta hagiologika keimena [Athens 1987]), assume a considerable importance.

The study of Byz. civil law has hitherto focused on the Justinianic Corpus; later legal texts are used primarily to fill in gaps in the Corpus tradition or to clarify difficult passages. The analysis of Byz. civil law as actually practiced is still rudimentary, and the legal significance of surviving documents has been appreciated only for the papyri and the acts from Byz. Italy (M. Amelotti in SBNG [Galatina 1983] 184). The general assumption, then, has been that the Byz. regulated their lives by the norms of Roman law, an assumption that is supported by the tendency of the Byz. themselves to treat both the Basilika and the Corpus as valid legislative collections. However, under the cover of Roman law some more or less substantial changes were taking place in the following areas:

1. Emphasis was put on the decisive role of the state and the emperor as its representative. The emperor was proclaimed not only "the living law" (as early as Justinian I) but also the sole source of all administrative authority (thus the scholion to Basil. ser. B. 9:3839, abrogating Basil. 60:46.1). He acquired supreme right to the land so that any parcel that he entered could be declared imperial property (PG 114:1156A).

2. The principles of public law prevailed over those of private law. Thus, ownership came to be treated as an accessory to the tax payment, and freedom interpreted as exemption from taxation.

3. The role of the church increased. Its rules became moral obligations, esp. as civil law began to converge with canon law. Its right to succession was confirmed, and the church was granted—like the state—a third of an intestate inheritance (abiotikon). The Epanagoge even suggested the concept of two equal powers, that of emperor and patriarch; at any rate, the patriarchal court was given the right of appeal over civil court decisions.

4. The bonds of marriage were strengthened, and the formality of marriage rites increased.

5. Slavery was moderated: not only did the church encourage manumissions, but the family of a slave was given legal status.

6. The rights of neighbors were developed—both as protimesis and as a responsibility for the taxes of the neighboring allotments; the Roman principle superficies solo eedit ceased to exist. At the same time various forms of partnership were encouraged.

7. Elements of semifudal law were introduced—in the division of property (pronoia, charistikion) and in the status of the dependent peasantry (paroikoi).

8. The written form of contract tended to replace the oral form; stipulations degenerated into a vague kind of written guarantee; the number of witnesses deemed necessary increased.

9. Legal procedure lost its flexibility, and rigid lists of penalties were introduced.

10. Many subtleties of Roman law were forgotten, and its strict terminological distinctions obscured; jurists repeated traditional Roman legal terms often without understanding their significance.

The history of Byz. civil law can be tentatively divided into several periods: from the 4th to the early 7th C. Roman law dominated; in the 7th to
early 9th C., the period of the Ecloga and the Farmer’s Law, there were attempts to attach some customary, biblical, and Near Eastern rules to the remnants of Roman law; the mid-6th–10th C. was the period of encyclopedism and “accumulation”—“pure” Roman law was restored in the Basilika and similar legislative books, and numerous treaties were issued to regulate court life, military organization, trade activity, and the fiscal system; during the 11th–13th C. there was a revival of legal activity in the form of commentaries on normative texts—the most independent legal minds of the period were Eustathios Rhomaios, Balsamon, and Chomatemos—and the need for scrutinizing practical cases was appreciated. In the final period, the tendency toward systematization again prevailed.

——A.K.

LAW, PUBLIC. The 6th-C. principle, “public law is that which concerns the affairs of the Roman state, private law that which concerns the interests of individuals” (Digest 1.1.1.2 = Basil. 2.1.1), was a distinction made in the law schools with few theoretical or practical implications; nor can a requirement for a legal-theoretical clarification of the relationship of public law and private law that is of any significance be established for the following period. The lack of such reflection is explicable from the circumstance that the precise demarcation of public law from the entire mass of norms is only considerable when consequences are connected with it, that is, with regard to legislative competence, jurisdiction, justiciability, and the friction of private law and public law. As long as every legal norm drew its legitimacy from the emperor, and he was not restricted with regard to the composition and execution of norms—as was the case in the entire Byz. period—then any division of Byz. law into public and private law was artificial. A consideration of Byz. law with regard to the existence of public law can therefore make no concepts that are specific to the Byz. period but can employ only the terminology in use since modern times. The latter understands by public law: (1) the law of state organization, that is, the distribution of the areas of supreme command (taxation, police, army, jurisdiction, economic control, etc.) among certain “organs” of the state; (2) administrative law, that is, the rules governing the execution of laws through these designated organs.

If the fundamental principles of both these areas are laid down in law, this definition is called a “constitution.” In these areas the late Roman period up to and including Justinian I was legislatively the most productive. Book 1, titles 14–57, and books 10–12 of the Codex Justinianus, as well as approximately half the novels of Justinian I, are concerned with the subject of public law. This legalization of political measures, which is based on the motto (armis et legibus gubernare) and relies on the efficiency of the administrative apparatus executing the law, did not persist in Byz.: the emperors increasingly renounced the legislative regulation of state organization and administration. Notable legislative undertakings are represented by the Book of the Eparch and titles 2–11 of the Epanagoge (which remained an experiment). For the rest, apart from sporadic legislative attempts in the area of public law, only jurisdiction remains of lasting interest.

The diminishing legislative activity in the area of public law does not mean that Byz. had no normative notions concerning good state government and state administration. Such concepts are rather to be reconstructed from sources such as the Mirrors of Princes, the Notitia Dignitatum and the Taktika, the De ceremoniis and De administrando imperio as well as the admittedly rare deliberations of jurists such as Chomatianos. Whether the normative concepts transmitted in this matter should be entitled an (unwritten) “constitution” is still under discussion.

——M.Th.F.

LAW, ROMAN, heavily oriented towards practice, was determined and developed first by professional jurists and later increasingly by the legal statements of the imperial chancery. By the order of Justinian I this law was made definitive in the so-called Corpus Juris Civilis. Both this Corpus
and the Novels of Justinian I make claim—at least in the sphere of private law—to reproducing a uniform law of the empire that is firmly bound to Roman tradition and that in principle recognizes neither regional nor time-specific peculiarities. This conservative and exceedingly reverent attitude toward Roman law was assumed by later Byz. emperors in their legislation and by jurists in their composition of law books. In spite of certain deviations from the Roman tradition—sometimes conscious, sometimes involuntary (e.g., the regulation of customs by Leo VI or the creation of really new law through the agrarian legislation of the 10th C.)—there never ensued any fundamental criticism of Roman law. On the contrary, efforts can be observed to reappropriate this temporarily (esp. in the 7th and 8th C.) forgotten or neglected law.

The discrepancy between “official” Byz.-Roman law and the law as practiced is most obvious during the last two centuries of Byz. The charters reveal that fundamental concepts of Roman law had over the course of time either become virtually meaningless (e.g., servitus) or were misunderstood or reinterpreted (e.g., ownership, possession). Roman law lived on as a theoretical claim and in its terminology, but with the changed conditions of life and the disappearance of a highly professional class of jurists, the original meaning of its terminology and the specifically juristic thinking in these categories was largely lost.

Reception of Roman Law. The reception of Roman law is an expression that designates the discovery and revision of Roman law—in the form of the Corpus Juris Civilis—in the states of western Europe from the 12th C. onward, as a result of which Roman law became the basis of their legal system. There was no comparable reception of Roman law in this sense in Byz., where it had never been entirely lost and was assumed to be continuously present and valid. Nevertheless, a kind of “reappropriation” of Roman law, which had been translated into Greek in the 6th C., did take place, in two significant steps: first, through the anakatharsis ton palaion romanon (Schminck, Rechtsbüchern 33–38, 65f), that is, the preparation of the complete text in the Basilika; and second, through a substantial reworking of the content, particularly in the 11th C. The latter was achieved through a decision-making practice reflecting Roman legal dogma (petra); through reinforced use of the oldest available law texts, namely the writings of the Antecessores, which were inserted as scholia to the Basilika text; through the transmission of the Latin juristic language in teaching (Psellos) and in Latin-Greek legal lexika (glossae—Lexica juridica byzantina, ed. L. Burgmann et al. [= FM 8 (1990)]); as well as through the systematic presentation of the rules of Roman law in treatises (De peculiis, Meditatio de nudis pactis, Tractatus de creditis).

LAW, VULGAR, an expression coined by the legal historian E. Levy to characterize the law of the late Roman Empire in the West. The expression refers not only to the formal elements of a legal principle (its outward, linguistic form) but also to its substance (the consistency and precision of the regulation). It derives its notional content as a “low level of style” from a notional opposition to a “higher level of style,” initially that of classical Roman law. The expression has been extensively adopted by legal/historical scholarship and serves to characterize varying phenomena. Thus, it is used to contrast rural provincial phenomena of a linguistic or material kind from the legal standard of the capital (“provincial law”: e.g., the law of the Byz. provinces in Italy); to designate special ethnic law (“folk law”: forms of law of the Slavs and Armenians living on Byz. territory) as opposed to state and imperial law; to contrast simply structured reflections on law with the complex works of more exacting, educated men (e.g., the Synopsis Minor versus the Synopsis Basilicorum); and to compare different levels of legal culture (e.g., the Ecloga versus the law of Justinian I). Since the term vulgar is both vague and, as a rule, used in a perjorative sense, its application should be accompanied by a statement of the criterion for evaluation and an exact description of the related phenomena.

LAW IN ITALY, BYZANTINE. With the Sanc-tio Pragmatica of the year 554 (Appendix 7 to the Novels of Justinian I [= CIC 3:799–802]), the validity of the Roman-Byz. law contained in the Corpus Juris Civilis was extended to the reconquered Italian regions. In the course of the later history of southern Italy and Sicily the continued existence of Byz. law is documented in various types of sources. The Byz. origin of the material is most evident in the Prochiron Legum, which was produced on Italian soil. Whether other law books, esp. the Ecloga ad Prochirum mutata, also originated in Italy is disputed. Nevertheless, that many Byz. legal texts were at least known in medieval Italy is attested by the large number of legal MSS of southern Italian provenance. The use of Byz. law by the Greek-speaking population of southern Italy is indicated by the fact that the documents share a set of institutions (e.g., hypobo-lon, theoretron, protimesis) with the law of the Byz. Empire. Other institutions used both in Byz. and in southern Italy and Sicily may merely have a common basis in Roman law. As for Norman-Staufen legislation, both the Assises of Ariano of 1140 (L. Burgmann, FM 5 [1982] 179–92) and the constitutions of Melfi of 1231 (cf. T. von der Lieck-Buyken, Die Konstitutionen Friedrichs II. [Cologne-Vienna 1978]) are based on Roman law, but the latter esp. shows clear traces of post-Justinianic Byz. law (e.g., nose-cutting as punishment for adultery; the prohibition against the acquisition of land by monasteries; formal regulations for marriage).

LAW IN SLAVIC COUNTRIES, BYZANTINE.

Byz. law was introduced into Slavic lands along with Orthodox dogma and liturgy in the wake of Byz. missionary work in the area. In Great Moravia part of the Synagoce of Fifty Titles was translated into Slavonic by Methodios himself. The Zakon Sudnyj Ljudem may date from the same time, even if its place of origin remains controversial. Bulgaria and later the Slavic mon-asteries on Mt. Athos must have played a large role as centers for the translation of legal literature. From the 11th C. onward, most texts were reaching Rus’, where they were assembled in collections such as the Kormćaj Kniga and supplemented in time by additional translations. The Byz. legal literature available there ultimately included the commentaries of the canonists of the 12th C., the Pandektaia of Nikon of the Black Mountain, numerous novels, synodal acts and treatises (esp. on marriage law), the so-called Mo-saic Law, and, from the sphere of secular law, the Ecloga, the Prochiron, and the Painter’s Law (Zemledelčeskij zakon). Under Ste-fan Uroš IV Dušan, who proclaimed himself "Tsar of the Serbs and Greeks," Byz. legislation was imitated in Serbia and translations were made of the Syntagma of Matthew Blastare as well as of the short compilation of civil law known as the "law of Justinian."

LAW IN THE EAST, BYZANTINE. A part of early Byz. Canon Law survived among the Eastern churches after their separation from the church of Constantinople in the 5th C. But with the exception of Georgia, where an adaptation of the Nomokanon of the Fourteen Titles was made in the 12th C., the new post-Chalcedonian canons were received in the East only with great reservation. The oldest Syriac translations of Byz. sec-ular law texts likewise stem primarily from pre-Justinianic sources, namely the Syro-Roman law-book and the Sententiae Syriacae, two collections of Roman provincial law of Eastern origin dating from the 5th C.; the Greek originals are lost. The Syro-Roman lawbook was widely disseminated in the Christian East in several languages. Moreover, Byz. legal texts of secular content were received almost everywhere. At the end of the 12th C., Nersès of Lambron made an Armenian translation of the Ecloga with its Appendix as well as the Nomos Stratiotikos and the so-called Mo-
SAIC LAW. Coptic ecclesiastical law collections of the 13th and 14th C. contained, among other things, the Ecloga with Appendix and the Prochiron; the date of composition of the Arabic translations is uncertain, as is the possibility that they were transmitted via the Melchites.

LAW SCHOOLS. The system of private education in law typical of the early Roman Empire was replaced, during the late Roman Empire, by a system of state universities. Theodosios II, in the constitution of 27 Feb. 425, prohibited legal education “within private walls” and organized a law school in Constantinople supported by the state. There was another reputable law school in Berytus. Some professors of these law schools are known by name: Theophilos, Dorotheos, Thalelaios, and so on. The program of legal education, as prescribed by Justinian I, included a year for the study of the Institutes, three years more for the Digest, and the fifth year for the Codex Justinianus. Since knowledge of Latin was declining in Constantinople, the teachers (antecessores) suggested the Indices—Greek adaptations—and translations of these texts provided with protheorai (examples or digressions); paragraphai, or notes; and finally interpretation of “the books themselves,” paraphrased in Greek. The method of erotapokriseis was widely used.

From the 7th C. onward, this elaborate system was abandoned, even though some scholars (e.g., W. Wolska-Conus, TM 8 [1981] 531–41) claim uninterrupted continuity of legal education. The Book of the Eparch refers to nomikoi and teachers within the framework of a corporation of notaries. While knowledge of law was often claimed to be something every Rhomaios had to possess, and professional lawyers are known at least in the 11th and 12th C., jurisprudence remained an element of general (primarily urban) culture rather than professional erudition. The state-sponsored schools in Constantinople (those of John [VIII] Xiphilinos and Michael Psellos in the mid-11th C.), probably parts of the so-called University of Constantinople, appear to have been short-lived, connected with an individual scholar, rather than with an institution.

LAWYER (σωμήγορος, Lat. advocatus). Advocati (sometimes called scholastikoi) acted as legal advisers, while nomikoi drew up contracts. In the late Roman Empire, advocati formed associations in major cities (Constantinople, Alexandria, etc.). The membership in these colleges was limited; thus, Leo I decreed (Cod.Just. II 7.17) that the prefecture of Illyricum should have 150 lawyers. Their honorarium was fixed in Diocletian’s Princ. Edict as 250–1,000 denarii. Ammianus Marcellinus wrote an angry tirade against advocati who “sow the seeds” for all sorts of quarrels and “sharpen their venal tongues to attack the truth” (Amm.Marc. 30.4.9–19), underscoring not only the rivalry between lawyers but their clashes with judges. It has been conjectured (by R. Taubenschlag in Festschrift Fritz Schulz [Weimar 1951] 192) that the role of lawyers was reduced as that of judges grew.

From the 11th C. onward, however, Greek texts again often mention lawyers. Constantine IX’s novel on the law school in Constantinople prescribes the formation of two categories of jurists—notaries (tabonarioi) and synegori; Balsamon states that synegori are organized into a college led by a primikerios and receive their salary (siteresia demosika) from the state (Rhalles-Potles, Syntagma 1:160.15–21). A novel of Manuel I expresses indignation at the endless speeches in court of synegori, which delay the proceedings (R. Macrides, "Justice" 126.54–59); the same novel calls for synegori to be assigned to the courts (138.217–26, 180, n.208). Sometimes there was rivalry between lawyers and canonists (M.T. Fögen in Cu- pido legum 65). The term nomotribounmenoi in Chomatenos apparently refers to those who are experts in legal knowledge.

LAZAR, prince of Serbia (from 1371); born Pri-pleac near Novo Brdo ca.1329, died Kosovo Polje 15 June 1389. Son of Pribac Hrebelenjanović, logothetes of Stefan Uroš IV Dušan, Lazar married Milica, a descendant of Stefan Nemanja’s son Vukan, and gained control over northern Serbia following the death of Stefan Uroš V. Using diplomacy, dynastic marriage, and military force (in alliance with the Bosnian ban Tvrtko), Lazar expanded his principality to Braničevo, Niš, Kru-ševac, and Novo Brdo, gaining control also over the mines of Rudnik. These victories, however, made him a vassal of Hungary. In 1375 reconciliation with the Byz. church in Constantinople was achieved over the matter of the separate Serbian patriarchate, which had been proclaimed at Peć in 1346. Lazar refused to acknowledge the suzerainty of Hungary in 1382 and attacked and plun-dered Belgrade, which was under Hungarian control. He had, however, to avoid a confrontation with Sigismund of Hungary when the Ottoman threat to Serbia worsened. Murad I invaded Serbia and defeated Lazar in 1389 at the battle of Kosovo Polje, in which both rulers lost their lives. As a result the Ottomans gained suzerainty over Serbia.

The cult of Lazar as martyr commenced shortly after his death. In Serbian popular tradition, the historical prince Lazar and the legendary martyr of Kosovo are intertwined. The Kosovo cycle glorifying the victory of the heavenly over the earthly kingdom is the finest of epic poetry. Lazar built St. Stephen’s church (Lazarica) at Kruševac (ca.1375) and the Ravanica monastery (1381) as his mausoleum. His best preserved portrait is in the Ljubostinja monastery, the foundation of his wife.

Lit. O knezu Lazaru: Navični skupi Kruševca 1971 (Belgrade 1975); D.J. Trifunović, Srpski srednjovekovni spisi o knezu Lazaru i Kosovskom boju (Kruševac 1968); R. Mihaljić, Lazar Hrebelenjanović, istorija, kult, predanje (Belgrade 1984).

LAZAR OF P'ARPI or Lazar P’arpeci, Armenian historian; born in P’arpi below Mt. Aragats, fl. second half of the 5th C. Brought up with Vahan Mamikonean in Georgia after the suppression of the Armenian revolt of 450/1, Lazar later wrote a ‘History of Armenia’ dedicated to Vahan, who in 485 was appointed governor (mazrpan) of Armenia by the shah of Iran, Balâsh.

Łazar presents his work as the “third” history of Armenia, following those of Agathangelos and pseudo-’Pawstos Buzand. It falls into three sections: the life and work of Mesrop Maštoci, a version of the war against Persia parallel to the account of Ežiše, and the career of Vahan Mamikonean from the Armenian defeat of 451 to his appointment as mazrpan in 485—the prime source for this period.

The original version is extant only in fragments, the complete surviving text being a revision of uncertain date. A letter addressed to Vahan (of uncertain authenticity) describes Łazar’s Greek education.

LAZAROS, painter, a Khazar according to the Liber Pontificalis (Lib. pont. 147); saint; died Rome after 28 Sept. 865, although Janin (infra) questions this date; feastday 17 Nov. The entry in the Synaxarium of Constantinople (Synax.CP 231–34) describes Lazaros as a monk and painter from an early age; a defender of images, he became a victim of Iconoclast persecution when he was punished by having his hands burned. Released at the behest of Empress Theodora, he fled to the monastery of the Prodromos tou Phoberou where he painted an icon of John the Baptist. After Theophilos’s death he painted the icon of Christ Chalkites, according to Theophanes Continuatus (TheophCont 103.19–21). A supporter of Patr. Ignatios, Lazaros played the role of diplomat: he participated in a mission to Pope Benedict III (855–58); According to the Synaxarium, he died during a second mission to Rome. J. Raasted (Cahiers de l’Institut du moyen-âge grec et latin 37 [1981] 124–38) identified him with a certain La-zaros, who sent a letter (after 858) to his “spiritual lord master.” The attribution by M. Šćepkina (Miniature 297–99) to Lazaros of the illustrations in the Khudov Psalter lacks any documentary support.
LAZAROS, patriarch of Jerusalem; died after Apr. 1368. Soon after his election to the patriarchate (date unknown), Lazaros left for Constantinople to have his appointment confirmed by Andronikos III. In his absence, however, the monk Gerasimos slandered him and succeeded in having himself elected patriarch. When Andronikos died, the matter had not yet been decided. Nevertheless, during the Civil War of 1341–47 that followed, Patr. John XIV Kalekas recognized Gerasimos. For his part, Lazaros favored Kalekas’s opponent, John VI Kantakouzenos, and was responsible for crowning him emperor (21 May 1346) in Adrianople (Kantak. 2:564.10–18). After Kantakouzenos’s victory, Lazaros was recognized (sometime between May and Aug. 1347) as the lawful incumbent. Still, only in the second half of 1349, when Gerasimos was expelled from Jerusalem, was Lazaros able to take possession of his see.

LAZAROS SATURDAY, a feast celebrated on the Saturday before PALM SUNDAY in commemoration of the raising of Lazarus (JN 11:1–45). Together with Palm Sunday, Lazarus Saturday separates LENT from HOLY WEEK. Egeria describes a procession on this day leading from Jerusalem to Bethany with two stations: one at a church on the road, where the bishop’s procession is met by the monks and people, and the second at Lazarus’s tomb in Bethany. Surprisingly, neither the lections at these stations nor Egeria herself make reference to the actual raising of Lazarus. Talley (Liturgical Year 176–89, 203–14, 234) argues convincingly that this theme on Lazarus Saturday in Constantinople cannot be traced to Jerusalem, but probably originated in Alexandria instead.

On Lazarus Saturday, the emperor and his court went to the Church of St. Demetrius, where the emperor gave out palms and silver crosses (De cer. 170f). In the 14th C. he celebrated the feast at the monastery of St. Lazarus instead (pseudo-Kod. 246:13–20). Teachers in the Patriarchal School of the 12th C. delivered enkomia of the patriarch on this day.

One of four occasions for BAPTISM in Constantinople, Lazarus Saturday was characterized by a complete baptismal liturgy performed in Hagia Sophia (Mateos, Typicon 2:62–65). At the conclusion of orthros the reading of Acts began and the patriarch descended to the baptistery where he baptized the candidates and anointed them with chrism. Then a psalmist intoned Psalm 31 and led the neophytes into the church to the chant of the psalmody, for the continuation of which he mounted the ambo. At a signal from the deacon
the psalmody was broken off and the reading resumed with Acts 8:26, after which the liturgy began with the antiphons.

**Representation in Art.** The standard Byz. composition of the Raising of Lazarus first emerged in the 6th C. (Rossano Gospels, fol.13): with Lazarus's sisters Mary and Martha at his feet and disciples behind him, Christ is shown gesturing toward the shrouded corpse of Lazarus, which stands at the mouth of a cave or small building (aedica) at the right, surrounded by onlookers. One, holding his nose against the stench, supports Lazarus while another holds the sarcophagus lid. This composition displaces an earlier one—showing a youthful Christ waving a thaumaturgic wand toward a shrouded corpse in an aedicula—that recurs more than 100 times in funerary art of the 3rd to 5th C. The Byz. composition underwent some modifications: 11th- through 12th-C. versions may show an embroidered hood over Lazarus's head or a sarcophagus at Lazarus's feet, and the noseholder may be shown unwrapping Lazarus; some 13th-C. examples show Lazarus sitting or lying in the sarcophagus; and 14th-C. renditions combine Lazarus in his sarcophagus with cave and aedicula. In some 11th- through 12th-C. MSS and mural paintings, Lazarus appears as a bishop, reflecting the legend that he became bishop of Kiton in Cyprus (C. Walter, REB 27 [1969] 197–208). The **Typikon of the Great Church of Constantinople** calls Lazarus "friend of Christ," and homilies present him as proof of the rewards to be had from friendship judiciously conferred.

---

**LAZIKA** (Λαζικόν), at first the southwest region of ancient Colchis lying along the east shore of the Black Sea and including the mouth of the Phasis River; Lazika hence has often been confused with Tzanika. In the 4th C., the Lazes extended their suzerainty northward toward Abchasia and Svaneti (Svania) to form a kingdom, with Archaiopolis as capital, which commanded some of the Caucasian passes. Lazika then came to the attention of Byz. and trade was initiated; the Laz kings received their regalia (see SIGNIA) from Byz. even though they paid no tribute (Prokopios, Wars 2.15.2). Increasing Byz. interference in the region and the building of the fortress of Petra on the coast of Lazika provoked the Persians to invade the country in 542 and capture Petra. The protracted Lazic war (549–56) ended with the reestablishment of Byz. control in the area under the terms of the Peace of 562 (Menander Protector, fr.6.1, ed. Blockley, 80.474); the Laz tribes graduated southwestward, however, so that the toponym Lazika was increasingly identified with the southeast shore of the Black Sea as far as Trebizond. Byz. maintained control of Lazika until the revolt of the patriarch Sergios in 697 opened the way for the Arab invasion of Lazika early in the 8th C., their capture of Archaiopolis, and the islamization of the previously Christian Lazes. The diocese of Trebizond was officially named that of “entire Lazika” through the 14th C. (Notitiae CP no.20.33).

**LEAD** (μολύβδος), probably from Trebizond, Macedonia, and northern regions of the Balkans, was broadly employed in Byz. In a list of craftsmen supplementing Constantine I's law of 337 (Cod.Theod. XIII 4.2, Cod.Just. X 66.1) are mentioned workers in lead (plumbarii) that in the Greek translation is rendered molybdourgoi, even though ploumaroi (sic) are named as well (Basil. 54.6.8). Lead was added to copper alloys to improve their casting properties (B. Iatrides, Archaiologa 1 [Nov. 1981] 73f). The metal's low melting temperature also allowed simple lead objects to be produced domestically: thus in Cherson in the 9th and 10th C. fishermen made weights for their nets at home, and lead blanks were found in several other houses (A. Jakobson, Rannesrednevekovuyj Chersones [Moscow-Leningrad 1959] 322–25). The softness of lead made it a perfect material for seals, and its weight lent itself to carpenter's plumbets. Scribes used it to make RULING PATTERNS on MSS.

Lead was used for roofing to protect domes and vaults (L. Petit, IRAIK 13 [1908] 59–33–34) from rain and for manufacturing water pipes. It strengthened the piers of Hagia Sophia, Constantinople (Prokopios, Buildings 1.1.53). Lead sarcophagi with Christian motifs were produced in Syria/Palestine from the 4th C. onward, continu-
ing an older industry based in Sidon. Lead was used by goldsmiths in repoussé work and for the production of cheap amulets and crosses (Harrison, Sarachane, nos. 621–23) as well as for pilgrimage ampullae (Ch. Bakirtzes, JØB 32:3 [1982] 523–28).

LEARNING. Erudition was divided in Byz. into two categories: “our” paideia, that is, Christian doctrine; and “outside” (exo, thyrathen) sophia, the classical (pagan, Hellenic) erudition. Attitudes toward education were ambivalent. On the one hand, church fathers and authors of saints’ vitae in high style disparaged secular wisdom, and writers such as Symeon the Theologian contrasted the knowledge attained through reading with the revelation granted by God, and were suspicious even of knowledge of the Holy Writ (Kazhdan, “Symeon” 37). Knowledge was not included among the four basic virtues that should adorn the ideal emperor, according to the basilikos logos; its place was taken by good sense (phronesis). On the other hand, the same ecclesiastics who criticized secular wisdom tried to show their familiarity with that wisdom; learning also formed an essential part of the system of secular values, and higher education was often a prerequisite for an administrative career.

The Byz. curriculum encompassed primarily the classical language (grammar), eloquence (rhetoric), and philosophy or logic; the quadrivium included the complementary disciplines of arithmetic, geometry, music, and astronomy. Psellus (Sathas, MB 5:352.6–10) claimed to have studied every science (mathema), that is, rhetoric, geometry, music, rhythmic, arithmetic, stereometry (spathireke), law, the sacred science (hieratike), theology. Prodromos, however, in the vita of Melletios the Younger of Myoupolis (ed. Vasil’evskij 42:16–21), contrasted the study (paideia) of Holy Scripture with “unnecessary” disciplines—the “outside” philosophy, rhetoric, physics, astronomy, geometry, and arithmetic. Gregory II of Cyprus distinguished between two major divisions of secular knowledge, logic and physics (PG 142:381A).

LEASE. See Mistrhosis.

LEATHER. The processing of leather does not seem to have attained much importance in antiquity. Not only are terms for leatherworkers in Egyptian papyri (Fikhman, Egitet 29f) infrequent and of uncertain meaning, but most of the artisans listed by Fikhman as working with leather are in fact furriers, saddlers, and shieldmakers. In Rome of the late 3rd to early 4th C. only a few inscriptions mention the guild of tanners—corarri (E. Kornemann, RE 4 [1901] 458).

In Byz., on the other hand, leather processing and the manufacture of leather products became one of the most widespread artisan professions. Leather was used not only for footwear but also for certain types of cloaks, harnesses, tents and shields (for the army), and parchment. New words for leatherworkers, such as skytergates (PG 92:1377A) and skyloergos (PG 37:1235A) appear in the vocabulary of 4th–7th-C. authors. The division of labor was relatively elaborate, comparable only to the complexity of silk production. The Studios monastery in the 9th C. had tanners (byrseis), leather processors (dermatopoioiuntes), shoemakers (skyteis and similar terms), hypodematorrhaphoi (sandalmakers?) dyers of footgear (skytoleusopoioiuntes), and makers of parchment (Dobrokonskij, Feodor 1:412f). The 10th-C. Book of the Eparch strictly distinguishes between harnessmakers (lorotomoi), tanners, and malakatarioi (“softeners”), but omits shoemakers.

In the Palaiologic period Constantinopolitan Jews played a major role in leather processing. Italian merchants brought hides and furs to Constantinople for processing, and leather goods were produced for export. In the 14th C. Constantinopolitan leatherworkers were allowed to work in Dubrovnik, one of the main centers of trade in cattle and sheep (B. Krekić, Dubrovnik [Raguse] et le Levant au Moyen-Age [Paris 1961] 217).

— A.K.

LEBOUNION, MOUNT, site of a battle on 29 Apr. 1991. Lebounion (Λεβούνιον) was a hill located near the mouth of the Marica (Hebros) River; the plain at its base was the scene of a decisive victory of Alexios I over the Pechenegs. The Cumans supported Alexios. When he de-
layed battle, awaiting the arrival of Western re-
forcements, the Cumans insisted on immediate
engagement; since Alexios feared a Pecheneg-
Cuman alliance, he was forced to fight. The Byz.
and Cumans advanced at dawn in a crescent against
the Pechenegs, who sheltered themselves and their
families behind their covered wagons. At the out-
set the Pechenegs were weakened by desertion to
the Cumans. The conflict lasted much of the day;
neighboring peasants brought water to relieve the
thirst of the Byz. soldiers. The struggle ended,
according to Anna Komnene (An.Komm. 2:142f),
in a terrible massacre, including women and chil-
dren, although some prisoners were taken. A 12th-
C. historian (Zon. 3:740f) records that the surviv-
ing Pechenegs were settled in the MOGLENA theme.
Pecheneg power was broken; Anna Komnene re-
ports a fragment of a popular song: “For lack of
one day, the Scythians missed seeing May.”

Comnène,” BZ 44 (1951) 241–52. — C.M.B.

LECHAION. See CORINTH.

LECTIONARY, a general term for various lit-
turgical books containing lections intended for
reading in liturgical services. Most have lists ap-
plied indicating the feasts, both fixed and mo-
bile, of the church calendar, with their proper
lections. A true lectionary gives the full text of
the lections, not just inceptit-desinit tables (tables of
beginning and concluding phrases).

The earliest complete lectionary covering the
entire liturgical year is that of Jerusalem, trans-
mitted through the 5th-C. Early Syriac lectionary
(F.C. Burkitt, ProcBrAc 10 [1921–23] 301–39), the
5th-C. Armenian lectionary (A. Renoux, PO 35–
36), the 5th–8th-C. Georgian redactions (M.
Tarchischvili, CSC 188–89), and the 6th-C.
Palestinian Syriac lectionary of the Old Testament
and Epistle lections (A.S. Lewis, A Palestinian Syriac
Lectionary [London 1897]). This Jerusalem lec-
tionary is of major importance for the history of
Byz. feasts, calendar, and lectionaries. The Byz.
calendar, fixed probably before 700, gave rise to
a new disposition of lections based largely on the
Jerusalem system, rather than the earlier lection
system of Antioch (Ehrhard, Überlieferung 1:25–
35).

The oldest Byz. lectionary MSS are from the
9th C. The two major types of lectionary were the
EVANGELION, which contains Gospel passages, and
the PRAXAPOSTOLOS for the other New Testament
passages. Other lectionaries were the PROPHETO-
LOGION for the Old Testament lections; the aposto-
loevangelion, containing both Epistles and Gospel
readings; and the anagnostikon, a rare book con-
taining all the Old and New Testament lections,
found in Philotheon 6, an 11th-C. MS on Mt.
Athos (Lampros, Athos 1:151, no.1769).

LIT. Y. Burns, “The Historical Events that Occasioned
Perikopenordnungen des ersten Jahrtausends (Münster 1921).
A. Rahlfis, “Die alttestamentlichen Lektionen der griechi-
schen Kirche,” Mitteilungen des Septuaginta-Unternehmens der
— R.F.T.

LECTIONES (ἀναγνώσματα), liturgical readings,
drawn exclusively from the Bible for the Eucha-
rist, for other services drawn occasionally also
from hagiographical (see SYNAXARION of Constan-
tinople) or patristic writings and conciliar decrees.
Lections, collected into various types of lection-
aries, are a major component of liturgy, esp. of
vigils. Byz. hours had no daily scripture lections;
the lections were added on feasts in accordance
with Palestinian practice.

Developed lection systems first appear in the
5th-C. lectionary of Jerusalem. The Byz. system,
based originally on that of Antioch, later under-
went Jerusalem influence. This synthesis took place
probably before 700. At first there were lections
only for Saturdays and Sundays. Weekday read-
ings were added as Eucharist was extended to
weekdays, not earlier than the 7th C., and then
only in monastic usage. The TYPikon of the
GREAT CHURCH still lacks these weekday lections,
and the earliest Byz. lectionaries (9th C.) have no
weekday lections outside the Easter season.

Lections were either “select,” that is, chosen for
their suitability to the feast—this system was used
esp. for the fixed feasts, the MENAION cycle—or
“continuous,” that is, lections read day after day
more or less in the order in which they occur in
the Bible text. This latter system was used for
most of the mobile cycle of the church CALENDAR.

In cathedral services, the Gospel was usually
read by the deacon, other readings by the anagnostes; though on some more solemn occasions (Easter and other solemn vigils; sometimes at late), the patriarch or bishop or, in his absence, the priest, proclaimed the Gospel. At monastic hours, readings were done by the monks themselves, most of whom were not ordained.

LECTOR. See anagnostes.

LEGAL SCIENCE. In order to speak of Byz. legal science one must allow to be considered as science the production of texts that have as their subject the meaning of legal norms and their relation to each other. There was a legal science of this kind among those individuals attached to law schools and to the judiciary. Excluded from legal science, on the other hand, are the producers of norms (legislation), the collectors of norms (authors of law books), or the producers of normative models (production of formulae: the notaries). Legal science pursued either a pedagogical purpose (teaching) or served the decision-making process (judgments, legal statements). For all the periods of the empire in which such a legal science can be demonstrated (4th–6th and 10th–13th C.), it is characterized by the following methodological features: stringent “philological” commitment to the basic text; a marked use of “juristic logic,” that is, deductions that can be reconstructed by formal logic, whose premises are not secured and are susceptible to rhetoric (e.g., analogy and inverted deduction); the use of hermeneutic techniques (etymology, explanation according to significance and object of the norm); and the use of rhetorical figures of speech and models of presentation. Since the legal scholars were also familiar with juristic dogma—understood as the sum of the transmitted and accepted legal statements both legislative and judicial in origin—the differences between these and today’s European or Anglo-Saxon juristic techniques are minor.

LEGATARIOS (λεγατάριος), subaltern official in several departments both civil and military; neither taktika nor the De ceremoniis define his functions. More is known about the legatarios of the eparch of the city who had to oversee the foreign merchants in Constantinople. The attempts to identify the latter legatarios with either the symponos or the logothetes tou praitoriou (e.g., M. Ja. Sjuzjumov in Bk. of Eparh 249) are not correct; these two officials were the emperor’s appointees, while the legatarios was appointed by the eparch (Oikonomides, Listes 314, n.156). The legatarios is known also in the sekretos of the logothetes tou stratiorikou and under some military commanders.

LIT. Stöckle, Zünfte 90–92.

LEGATON (λεγάτον), in contrast to the appointment of an heir, was the separate donation of single pieces or portions of the deceased’s estate, with the consequence that the heir (or heirs) was charged with the distribution of the legacy. Any heir, including the church and pious institutions as well as such incertae personae as “the poor,” could be the recipient of a legaton. The legaton was executed by the legatee at the expense of the heirs by means of a lawsuit. The heirs were protected by the Lex Falcidia against the overburring of the estate with legata. In the post-Justinianic period, esp. in practice, exact distinctions were often no longer made between the appointment of an heir and the apportioning of a legaton, so that the question of who was to be considered the heir and who the legatee cannot always be clearly answered. A further consequence is that the Lex Falcidia and the legal expedients that safeguarded against exclusion from a will (the right to a legitimate portion) merge with one another to a great extent. The process of this development has not yet been the subject of detailed research. The term legaton also acquired the specific connotation in Byz. of a gift given to manumitted slaves (e.g., Laura, no.1.22 [a.897]) and as such appears in several saints’ lives that describe pious acts of manumission.

LEGES FISCALES, conventional name for a collection of regulations concerning taxes and the rights of holders of adjacent properties. Compiled
from the Greek versions of the Corpus Juris Civilis, it was divided into five titles, with 233 chapters in all. Apart from the Prochiron and the collection of novels by Theodore of Hermopolis (end of the 6th C.), its immediate sources are uncertain; the Basilika were probably not used. The intitulatio, which mentions Leo VI and his brother Alexander, offers a trustworthy basis for the dating of the collection to the early 10th C. but does not prove it was an official promulgation.

—L.B.

LEGES MILITARES. See Nomos Stratiotikos.

LEGITIMACY, POLITICAL. Roman constitutional vagueness encouraged Byz. inventiveness in justifying the possession of political power, the main themes of which permeate imperial propaganda. Despite their stability, the weight accorded to each theme changed, reflecting ideology and the political structure. Six forms of legitimacy proved most enduring.

1. Legitimacy based on military success (e.g., triumphs), reckoned as revealing divine approval, was fostered by political survival and the emperor's original connection with military command.

2. Civic legitimacy came from the emperor's political civility (e.g., the ostentatious refusal of minor perquisites of absolute power), as long as Roman republican traditions still carried weight. This legitimacy was transformed in the emperor's role as lawgiver and benefactor, for example, in his philanthropy.

3. Historical legitimacy derived from the Roman character of Byz., combined with the Byz. mentality's attachment to the old and to taxis.

4. Dynastic legitimacy emerged as aristocratic lineages coalesced. It explains the epithet porphyrogennetos, commemorative coinage of the Isaurians (DOC 3.1:9) or Anna of Savoy, and the use by John III Vatatzes of the Doukas surname and his treatment of Andronicus I as his grandfather.

5. The unique status of Constantinople made into a source of legitimacy the possession of the capital itself and all that went with it in terms of resources and the legitimizing power of the ceremony. For example, failure to take Constantinople doomed the revolt of Thomas the Slav, and Kekaumenos (Kek. 268.8–13) insisted victory belonged to the emperor who controlled the capital.

6. Religious legitimacy was indispensable. Divine election justified usurpation or its repression, and the emperor's personal piety and orthodoxy confirmed and allowed his Christomorphic rulership. This development peaked in late Byz. with, for example, the appearance of anointing at the coronation.

Components of legitimacy often converged: for example, lineage, Romanness, and religion combined when emperors claimed genealogical descent from St. Constantine (e.g., Basil I) or ancient Roman nobility (e.g., the Doukai, anonymous preface to Bryen. 67.21–69.4).

—M.McC.

LEISURE (σχολή), as a form of philosophical behavior, designated in antiquity both scholarly discussion and scholarly speculation on nature and "origin." Church fathers denounced the ancient concept of philosophical leisure: Basil the Great (PG 29.429A) condemned "the evil leisure of the Athenians" that was still being imitated by his contemporaries, who were trying to invent new concepts and thus fell within the embraces of "dirty and evil spirits." He contrasted this leisure to "a good and beneficial schole," which was, in the words of Athanasios of Alexandria (PG 27:216D), "the cognizance of God." Schole was thus transformed into an emphasis on contemplation, which became an important part of ascetic exercises.

—A.K.

LEKAPENOS (Λεκαπηνός, fcm. Λεκαπηνή), or Lakapenos, a family of Armenian stock. Its founder, Theophylaktos Abakistos or Abastaktos, rescued Basil I in a battle in 872 and was rewarded with a piece of imperial land, perhaps in the region of Lakape that gave the family its new name. Theophylaktos's son became Emp. Romanos I Lekapenos, his sons were proclaimed co-emperors, and the youngest, Theophylaktos, was appointed patriarch. The oldest brother, Christophor Lekapenos, died in Aug. 931; on 16
Dec. 944 Stephen and Constantine deposed their father, but they were in turn arrested on 15 June 945, exiled, and eventually murdered. For several decades the Lekapenoi maintained a leading position: Romanos I's illegitimate son Basil the Notios, the parakoimomenos, administered the empire during Basil II's youth, and Christopher's son, Michael the Raiktor, gained the high title of magistros. Thereafter their role declined: from the 11th C. only a single family member is known—Constantine, whose seal mentions neither his title nor office (Laurent, Coll. Orghidan, no. 446). In the 14th C. George Lekapenos was a writer, landowner, teacher, and official of a mediocre rank. (See genealogical table.)

LEKAPENOS, GEORGE. See Lekapenos, George.

LEMBIOTISSA (Λεμπιώτισσα), or Lembos, a monastery dedicated to the Virgin, located halfway between Smyrna and Nymphaion. It existed by 787 when Theodore, hegoumenos of Lembos, signed the acts of the Second Council of Nicaea; its history thereafter until the 19th C. is obscure. Restored and richly endowed by John III Vatatzes, it flourished until 1307, when it was apparently attacked by the Turks and burned.

A kodix or cartulary of Lembiotissa survives in a Vienna MS (ÖNB, hist. gr. 125) that preserves copies of about 200 private and official acts dating from 1192 to 1294 (Dölger, infra 295) or probably even from as early as 1133 (Ahrweiler, "Smyrne" 128). This collection permits the establishment of the list of Lembiotissa's hegoumenos between 1223 and 1293 (Dölger, infra 302–06) and contains data concerning the topography and administration of the Smyrna region, the activity of the episcopal chancery, and esp. the structure of the village-estate. The possessions of Lembiotissa were located in Smyrna and in several villages. In no case was Lembiotissa the sole owner of these villages. In the villages can be found properties of various secular and ecclesiastical landowners, independent and dependent peasants (e.g., a paroikos who had two masters simultaneously, peasants under pronoia); some allotments were tiny (1–3 modia), and many owners held property in several different villages. The kodix also provides data about the price of fields and vineyards, taxes, and rent, esp. the epiteleia.

Source. MM 4:1–289.

LEMMATA (λημματα), designation (occasionally attested already in antiquity) of the title usually placed at the head of a work or a chapter. It is often written in characters different from those of the text (i.e., in minuscule MSS the lemmata are often written in uncial, and vice versa) and also in ink of a different color (usually red). Sometimes a scribe forgot to add the lemma (and initial letters) to a text so that the work remained without title (aneleipographos) until a later copyist invented a new one.

Normally the lemma contains the author's name (sometimes, however, only in the formula tov au- tou, "by the same," which is misleading) and details about contents, occasion, and (esp. in the case of letters) the addressee. Sometimes the lemma provides the only information at our disposal about the writer and the historical context of the work, Byz. texts being mostly tacit in this respect. On the other hand the reliability of the lemma is always relative, because it is not formulated by the author himself, except in the case of autographs. Cases of pseudepigraphy occur time and again; they are often due to the attempt to gain a higher price for the MS by means of an attractive author attribution.

LEMMOS (Λήμnos), island in the northern Aegean Sea that controlled the passage between Constantinople and Thessalonike; its capital was Hephaisteia. In late antiquity it was listed among the cities of the province of ACHAIA (Hierokl. 649.1); by the 9th C. it was part of the theme of the Aegean Sea. Ahrweiler (Mer 127, n.6) hypothesized that in the 10th C. Lemnos was under the command of the strategos of Thessalonike, but her reference to Skyl. 368.78 does not support this view. Neither do we have any proof that Lemnos was an important shipyard: a donation of 1016 (Lavra 1, no.20.79) only mentions a certain Andrew, a homeowner or former epeiktes of the island, and a purchase deed of 993 identifies the protospatharios and exaristes ("rigger") Michael as a friend of Athanasios of Athis (Lavra 1, no.10.23-25)—his whereabouts are not indicated.

The island was sacked by the Saracens in 902 and remained for several years a focus of anti-Arab naval operations. After 1204 Lemnos was placed under the authority of the Latin Empire but was reconquered by Michael VIII (Greq. 1:98.16). The loss of Asia Minor made Lemnos important as a source of food (monasteries of Mt. Athos had properties on Lemnos), as a political force (the inhabitants of Lemnos supported Andronikos III against Andronikos II—Kantak. 1:150f), and as a prize in the struggle for power (John VI Kantakouzenos gave it first to his brother Manuel, then to his son Matthew Kantakouzenos—Kantak. 3:312.1-8). The island was demanded by Alfonso V of Aragon (1416-1458) as the price of his aid for Constantinople, and offered by Constantine XI to Giustiniani Longo if he would help to repulse the Turks. After 1453 Lemnos was given briefly to the Gattilusi of Lesbos, then granted as part of an appanage by Mehmed II in 1460 to Demetrios Palaiologos, former despotes of the Morea. It was finally conquered by the Ottomans in 1479.

The bishop of Hephaisteia attended the Council of Nicaea in 325. A part of Eastern Illyricum, the island was under the jurisdiction of Rome until the 8th C. Lemnos became an archbishopric in the 9th C. and metropolis during the Civil War of 1341-47. The Latin conquest seems not to have affected the position of the Greek bishops of the island.

LENT (τεσσαρακοστή, lit. “fortieth [day]”), a period, ideally 40 days in duration, of penance and fasting in preparation for Easter. This period is also called “Great Lent” to distinguish it from the three lesser Byz. lents, those preceding the Nativity of Christ, the Dormition of the Virgin Mary, and the feast of Sts. Peter and Paul on 29 June (the last Lent extends from the Monday following the Sunday after Pentecost until the vigil of the Apostles’ feast).

The first sure evidence of Lent occurs in Festal Letter II of ATHANASIOS of Alexandria, from 330. By the end of the 4th C. a prepaschal Lent was in practice almost everywhere, an outgrowth of the preparation for Baptism at Easter. Lent later
became also a penitential preparation for the reconciliation of penitents during Holy Week. But growth was not uniform, as evidence from Jerusalem, Rome, and Egypt shows: Egypt, for instance, once had a six-week post-Epiphany fast in imitation of Jesus’ postbaptismal fast.

The duration of Lent and the ways of calculating it have also varied. Originally the whole period lasted six weeks. Where Saturdays and Sundays were not fast days (except for Holy Saturday), this amounted to only 36 days of fasting in Lent plus Holy Week; thus these days were called “the tithe of the year.” Soon literalism and the desire to have 40 actual fast days led in the 6th–7th C. in Constantinople to the addition of another, pre-Lenten tyrine, or “Cheesefare Week” of fasting that, with the six weeks of Lent plus Holy Week, makes a total of eight weeks, each with five fast days, 40 in all.

Lenten liturgical legislation first appears in canons 45 and 49–52 of the Council of Laodikeia in 380 (Mansi 2:571 CE), and Lenten liturgy is already highly developed in Jerusalem by 384, as the diary of Egeria reveals; other evidence is provided by the contemporary homilies of Cyril of Jerusalem and by the 5th-C. Armenian lectionary. Byz. Lenten liturgy, later codified in the liturgical book called the triodion, is seen in the TyRikon of the Great Church, in later monastic typika as well as in the Klerorologion of Philotheos and other ceremonial books (De cer., bk.1, chs. 28–30; pseudo-Kod. 221–24). Many Lenten sermons have survived: the preacher usually used the season of Lent to expose the vices of his flock and to suggest ways for moral improvement.

—A.K.

LEO I, called the “Butcher” (Μακέλλας) or the “Great” (probably not because of his piety but to distinguish him from Leo II, the “Little,” his grandson), emperor (from 7 Feb. 457); of Bessian origin, born in Illyrian Dacia ca. 400, died 18 Jan. 474. A low-ranking officer commanding a garrison in Selymbria and a personal servant (kourator) of Aspar and his son, he was chosen by Aspar as emperor upon Marcin’s death. Aspar saw Leo as a compliant tool through whom he could exercise power. Leo was crowned by Patr. Anatolios (449–58)—the first case of imperial coronation by a patriarch. Leo’s reign witnessed natural disasters (a fire in Constantinople in 465, earthquakes) and religious conflicts (Timothoe Αιλουρος in Alexandria, the attempt of Peter the Fuller to seize the see of Antioch). He was forced to lower taxes and curb official abuses. Aspar defeated the Huns in 468, and the Danubian provinces enjoyed relative prosperity; the situation in the East was quiet. Attempts to control Italy led to military coups when the army, commanded by Ricimer, proclaimed as augustus Majorian, Anthemius (both Leo’s nominees), and Glycerius (whom Leo refused to recognize and replaced with Julianus Nepos). The maritime expedition of 468 against the Vandals failed due to the incompetence of its commander Basiliskos.
By 468 Leo started to liberate himself from the control of Aspar and the Goths, using the Isaurians under Zeno as a counterweight to them. Leo married his daughter Ariadne to Zeno. In 471 Aspar and his son Ardabourios were murdered. Orthodox tradition depicts Leo and his wife Verina as pious sovereigns devoted to the cult of the Virgin. Thus, in a 10th-C. MS (ed. A. Wenger, *REB* 10 [1952] 541), they are said to have ordered a gold soros for a relic of the Virgin’s clothing (here *peribolē*; see *Maphorion*), placing above it an image of Mary enthroned and adored by members of their family. (See genealogical table.)

-T.E.G., A.C.

**LEO I THE GREAT**, pope (from 29 Sept. 440) and saint; born end of 4th C.? in Volterra? Tuscany, died Rome 10 Nov. 461; Greek feastday 18 Feb. Leo contended with barbarian assaults on Italy: in 452 he participated in an embassy to Attala and persuaded him to withdraw from Italy; in 455, while Petronius Maximus tried to flee from besieged Rome, Leo negotiated with the Vandal Gaiseric and convinced him to spare the city from fire. Another problem was the growing power of the Eastern churches—Leo joined Constantinople against Alexandria. He opposed NESTORIANISM and in an epistle to Patri. FLAVIAN of Constantinople defended the thesis of the two natures of Christ. The main problem he faced, however, was the relationship of the church to the state: Leo propagated the idea of close collaboration between the two authorities and emphasized the divine principles of the imperial power.

He developed the concept that authority and obedience were dialectically interwoven and that the emperor, while obedient to God, was to be the master of his subjects (H. Arens, *Die christologische Sprache Leos des Grossen* [Freiburg im Br. 1982] 698f).

Loyal to Valentinian III, Leo sought the support of Constantinople, where he established his *apocrisiarius* as intermediary between Rome and the emperor. Leo did not approve of the idea of convening the Council of CHALCEDON, but he submitted to the emperor’s will and worked supportively; he only required unconditionally that his legates should preside over the council (M. Wojtowytzsch, *Papsttum und Konzile von den Anfängen bis zu Leo I.* [Stuttgart 1981] 331f). Leo developed the idea of primacy but supported canon 28 of the Council of Chalcedon. The ICONOPHILES respected Leo, and in the 9th C. THEODORE GRAPTO composed a *kanon* in his honor (E. Bouvy, *EO* 1 [1897-98] 172). His Greek vita, vague in its contents (C. Van den Vorst, *AB* 29 [1910] 400-408), was probably compiled on the basis of a poem in political verse (R. Goossens, *Byzantium* 6 [1931] 427-32). Leo’s lengthy letter dated 11 June 453 to THEODORET OF CYPRUS where the pope vouchsafes the orthodoxy of Theodoret’s views is, probably, a mid-6th-C. forgery produced in the vein of Western reaction to the affair of the THREE CHAPTERS, or a revision of the authentic text (R. Schieffer in *Antidoram. Hudle aan Dr. Maurits Geerard* [Wetteren 1984] 81-87).

-A.K.

**LEO II**, “the Little” (ο  μικρός), emperor (473-74); born ca.467, died Constantinople 17 Nov.? 474. Since Leo I had no sons, he of necessity looked to his grandson Leo, the child of his daughter Ariadne and her husband Zeno, to continue his line. In the fall of 473, shortly before Leo I died, he proclaimed his six-year-old grandson as cesar and then augustus. Early the next year, immediately after the death of Leo I, the child emperor crowned his father Zeno in the Hippodrome, with the approval of the senate (Feb. 474); the boy died a few months later. Latin
writers (Victor Tonnensis, Isidore of Seville) accuse Zeno of murdering his son. In any case, after the boy’s death a conspiracy developed against Zeno in which Leo I’s widow, Verina, played an active role; she then changed her mind, however, and warned Zeno about the plot.

-A.K.

LEO II/I (Arm. Lewon), successor of his brother Ruben III as RUBENID prince Leo II (1187–1198/9), then first king of Armenian CILICIA as Leo I (1198/9–1219). Leo successfully fought the Turcomans and the Seljuks and allied himself with the Crusaders through his successive marriages to Isabel of Jerusalem and Sybil of Cyprus. The consolidation of his principality and the failure of ecclesiastical discussions with Byz. after the death of Emp. Manuel I led him to turn for recognition to the Holy Roman Empire. Although the death of Frederick I Barbarossa and cautious negotiations with Rome toward a union of churches were setbacks, Leo was crowned king at Tarsos on 6 Jan. 1198/9 (the date is still disputed) in the presence of both the local Byz. metropolitan and the archbishop of Mainz; from the latter he received the royal insignia in the name of Emp. Henry VI of Germany. This investiture was apparently approved by Alexios III Angelos who also sent Leo a crown.

The reign of Leo marked the political apogee of the Cilician kingdom, as he gained the support of the Hospitallers and the Teutonic knights to whom he granted extensive domains. He likewise encouraged Western traders, who enriched the country. Relations with the Crusader states deteriorated, however, as a result of his protracted and vain attempts to secure the principedom of Antioch for his half-Latin grandnephew Raymond-Ruben. Soon after Leo died, the resentful Armenian nobles murdered his Latin son-in-law and forced Leo’s daughter Zabel to marry Het’um I, which initiated the new Het’umid dynasty in 1226.

-N.G.G.

LEO III, emperor (717–41); founder of the ISAVIAN DYNASTY; born Germanikeia ca.685, died Constantinople 18 June 741. His baptismal name was perhaps Kônôn. Some scholars accept Byz. reports that place Leo III’s early career in the East, but most believe Theophanes the Confessor’s account (Theoph. 391.5–11) that Leo was reared in Mesembria, where his family had been resettled under Justinian II. Theophanes also reports that in 705 he was entitled spatharios after donating 500 sheep to Justinian and that he followed Justinian to Constantinople and rose to prominence, being sent to the Caucasus to secure the Alans against the Arab-backed Abchasians (M. Canard, REArm 8 [1971] 353–57). Leo was named strategos of the Anatolikon by Anastasios II, after whose deposition he joined forces with Artabasdos to force the abdication of Theodosios III. Leo entered Constantinople on 25 Mar. 717 and secured his throne by resisting the siege of Maslama and suppressing revolts by the Sicilian strategos (718) and Anastasios (719).

Throughout his reign, Leo was concerned with the defense, organization, and unity of the empire. He raised taxes to repair the land walls of Constantinople (Foss-Winfield, Fortifications 53, 82, 100). He campaigned against the Arabs in alliance with the Khazars and Georgians; his victory at Arroinon in 740 ended their advance in Asia Minor. Leo’s administrative actions included the creation of the ThRAKESION and KIBYRRHAIOTAI themes, and the droungarion of the AEGEAN SEA; he may also have raised CRETE to the status of theme. His ELOGA was an important revision of Justinianic law. Possibly raised as a Monophysite, Leo as emperor insisted on Chalcedonian religious uniformity, persecuting Montanists and Jews to the point of forcible conversion. In 726 he inaugurated imperial support for ICONOCLASMS (Anastos, “Leo III’s Edict” 5–41) and in 730 convoked a SILENCE to ratify an edict condemning icons. This provoked Patr. GERMANOS I, whom Leo deposed. It also brought conflict with popes Gregory II (see EUTYCHIOS, exarch of Ravenna) and Gregory III. The origins of Leo’s Iconoclasm are obscure. There is no evidence that Muslim actions (see YAZID II) or Jewish circles stimulated these views, as hostile Byz. writers charged. He had the support of some high clerics, esp. in Asia Minor, but their degree of influence is unknown. He himself referred to biblical prohibitions against images.

Leo increased taxes in Sicily, Calabria, and Illyricum in 732/3; he may have transferred these territories from papal to Byz. jurisdiction (M. An-
astos, SBN 9 [1957] 14–31), although this more likely occurred under Constantine V (Ostrogorsky, History 170, n.1). He also had to subdue a revolt from Hellas and the Cyclades (Th. Korres, Byzantia 1 [1981] 37–49). He crowned his wife Maria in 718 and their son Constantine (V) in 720.

—P.A.H.

**LEO III**, pope (26/7 Dec. 795–12 June 816); probably of humble origin. Beck refutes the theory that Leo’s father Atzupios was a Greek (Ideen, pt.VII [1969], 131–37), suggesting the man’s Arab origin. Leo scrupulously respected Frankish sovereignty over Italy: he immediately notified Charlemagne—not the Byz. emperor—of his election and, no later than 798, went beyond Hadrian I by adding the Frankish ruler’s regnal years to his own in dating documents. On 25 Apr. 799 a faction including Hadrian’s relatives attacked Leo, who escaped to Charlemagne at Paderborn. Restored by the Franks, Leo crowned Charlemagne emperor in St. Peter’s on 25 Dec. 800; his action, which perhaps reflected Frankish rejection of Empress Irene’s legitimacy, resulted in the creation of a rival empire in the West with lasting political implications. The ensuing controversy with Constantino ple was settled only in 812 when the envoys of Emp. Nikephoros I accepted a new treaty issued jointly by Charlemagne in Aachen and Leo in Rome, and Patr. Nikephoros I was finally allowed to send Leo the customary synodika. Leo did not act on the suggestion of Theodore of Studios that he convene a council with regard to the Moechian Controversy, but Theodore’s biographers credit the pope with a role in its resolution. When ca.807 a dispute about the filioque arose in Jerusalem between Frankish and Greek monks and Charlemagne’s court backed the Franks, Leo accepted the Greek view and sought theological support from the patriarch of Jerusalem. Michael Sikelkellos was sent to Leo ca.813 by Patr. Thomas of Jerusalem, but the embassy was detained in Constantinople.

—M.McC., A.K.

**LEO IV THE KHAZAR**, emperor (775–80); born Constantinople 25 Jan. 750, died Strongylo 8 Sept. 780. He was the son of Constantine V and his Khazar wife, Irene, and was thus nicknamed “the Khazar.” Crowned co-emperor in 751, Leo was married to Irene in Dec. 769. Soon after his accession Leo crowned their son Constantine VI as co-emperor, prompting a conspiracy in favor of his five half-brothers (including Caesar Nikephoros), which he easily suppressed. Little is known of Leo’s reign. He was active against the Arabs, sending campaigns into Syria in 776 and 778 under the command of Michael Lachanodrakon but could not prevent major incursions into Asia Minor in 776, 779, and 780 (the last by Harun al-Rashid). Leo supported Iconoclasm but actively persecuted Iconophiles only in Aug. 780, when he had a number of court officials beaten, tonsured, and imprisoned. He died of a fever while campaigning against the Bulgarians.

—P.A.H.

**LEO V THE ARMENIAN**, emperor (813–20); died Constantinople 25 Dec. 820. He was the son of the patriarch Bardas (Genes. 26.75), who was of Armenian descent (Toumanoff, “Caucasia” 151). Raised in the Anatolikon theme, Leo served in 803 under strategos Bardanes Tourkos, possibly as protospatharios. He deserted Bardanes for Nikephoros I, who named him commander of the Foederati and gave him two palaces in Constantinople (Janin, CP byz. 137, 331f). Nikephoros later exiled him, perhaps because Leo had enriched himself illegally or perhaps because Leo sympathized with the rebel Arsaber, whose daughter Theodosia Leo had married. Michael I recalled Leo and named him hypostategos of the Armeniakon theme, then strategos and patriarchs.

Leo was acclaimed emperor after the battle of Versinikia and crowned by Patr. Nikephoros I on 22 July in Hagia Sophia, Constantinople. The accession of the Bulgarian khan Omurtag and the death of the Abbassid caliph Harun al-Rashid permitted Leo to rebuild towns and defenses in Thrace. He restored Iconoclasm by appointing
a preparatory commission under John (VII) Grammatikos, deposing Patr. Nikephoros, and convoking, in 815, a local council in Constantinople (see under Constantinople, Councils Of) that renounced the Council in Trullo and rehabilitated the Council of Hieria (P. Alexander, DOP 7 [1953] 35–66). Because of his Iconoclasm, Byz. sources are hostile to Leo, accusing him, among other things, of stoning the recently restored image of Christ at the Chalké and thus of emulating Leo III. He was, however, an excellent general and enjoyed a reputation for fairness and honesty. He made competent military appointments, including Michael (II), Thomas the Slav, and Manuel. He also fortified Constantinople’s walls at Blachernai. Leo was assassinated in church on Christmas Day by supporters of Michael II; his body was publicly exposed in the Hippodrome before being buried on Prote.

LEO VI, co-emperor (from 6 Jan. 870), emperor (30 July 886–912); born Constantinople? 19 Sept. 866 (V. Grumel, EO 35 [1936] 331–33), died Constantinople 11 May 912. Second son of Basil I, Leo was called the Wise or Philosopher (Dölger, Byzanz 201, n.13). An educated man who dabbled in literature, he was perceived by the next generation as a prophet and a sage. The officialdom of the capital supported him, his major counselors

Leo VI. Emp. Leo VI the Wise on his deathbed. Miniature from the illustrated manuscript of the Chronicle of John Skylitzes in Madrid (Bibl. Nac. vitr. 26-2, fol.116v); 12th C. Biblioteca Nacional, Madrid.
being Zaoatzes, the eunuch Samonas, and the eunuchs Constantine; Leo sought the support of aristocratic families such as Phokas and Doukas, but also tried to keep them at bay, thus provoking serious conflicts (e.g., the revolt of Andronikos Doukas). His ecclesiastical policy was parallel: Leo was supported by patriarchs such as his brother Stephen (886–93), Zaoatzes’ nominee Antony II Kauleas (893–901), and Leo’s spiritual father Euthymios, whereas he deposed Photios and was in conflict with Nicholas I Mystikos, esp. over his fourth marriage. Leo hoped for political reconciliation: he delivered a speech praising his father but at the same time arranged a solemn translation of the body of Michael III to Constantinople. Leo’s administration was active in codification and in establishing political “order”: the Basilika, the Novels of Leo VI, the Book of the Eparch, and the Kletorologion of Philotheos were published; and under Leo’s name a book on military tactics, the Taktika of Leo VI, was produced. The lack of a male heir and the premature death of his first three wives, Theophano, Zoe (daughter of Zaoatzes), and Eudokia Balane, undermined Leo’s search for stabilization. When finally his concubine Zoe Karbonopsina gave birth to Constantine VII, instead of stabilization a severe struggle over the Tetrarchy of Leo resulted.

Leo’s international policy was more or less unsuccessful: in 896 Symeon of Bulgaria defeated the Byz.; in 902 Taormina was lost and in 904 Leo of Tripoli sacked Thessalonike; the Rus’ prince Oleg attacked Constantinople in 907; and in 912 the fleet of Himerios was annihilated. Leo did not trust aristocratic generals and preferred to negotiate with his neighbors by sending envoy such as Leo Choiropakte. He was compelled to accept the papacy’s intervention into domestic church affairs.

The Madrid Skylitzes MS richly illustrates the events of Leo’s reign (Grabar-Manoussac, Skylitzes, nos. 242–72). In the Paris Homilies of Gregory of Nazianzos (Omont, Miniatures, pl.XVI), Leo is portrayed as a youth of about 15 with his mother Eudokia Ingerina and brother Alexander. The best known and most controversial image of Leo is over the central door of Hagia Sophia, Constantinople, where he appears in Proskenesis at Christ’s feet. N. Oikonomides has argued that this mosaic is an image of penitence, set up at the order of Nicholas Mystikos following the council of 920, which posthumously pardoned Leo’s tetragamy (DOP 30 [1976] 151–72).

- A.K., A.C.

LEO IX (Bruno of Egisheim), pope (from 2 Dec. 1048, crowned in Rome 2 Feb. 1049); born Alsace 21 June 1002, died Rome 19 Apr. 1054. Leo strove to create a strong and independent papacy based on a reformed clergy; among his advisers were Hildebrand (later Pope Gregory VII), Humbert (later cardinal of Silva Candida), and Peter Damiani. A relative of the imperial house, Leo was nominated as pope by Henry III of Germany, but it is unclear how long this collaboration continued; at any rate, Germany did not help Leo against the Normans, and Leo had no choice but to seek the support of Byzantium and the Byz. governor in South Italy, Argyros, son of Melo (D. Nicol, infra 8). In May 1053 Leo himself led a small expedition against the Normans, but before Argyros could join him the pope was defeated at Civitate (18 June) and captured; the Normans kept him prisoner for 9 months. While in captivity in Benevento, Leo corresponded with Emp. Constantine IX and Patr. Michael I Keroularios, and in Jan. 1054 a Roman embassy left for Constantinople in an attempt to create an anti-Norman coalition. The history of this embassy is obscure and the nature of related Latin documents, including the Donation of Constantine and their Greek translations, is questionable (H.-G. Krause in Aus Kirche und Reiche: Festschrift für Friedrich Kempf, ed. H. Mordek [Sigmaringen 1983] 131–58). The mission failed despite Constantine IX’s desire to reach an agreement; it is probable that Argyros played a treacherous role by inciting the Byz. authorities against the pope. Leo returned to Rome on 12 Mar. 1054 a broken man, and died before the abrupt end of negotiations (see Schism). The
question of whether his vita was written by Humbert (H. Tritz, *StGreg* 4 [1952] 246–72) or not (H.-G. Krause, *DA* 32 [1976] 49–85) is under discussion.

—A.K.

**LEO GRAMMATIKOS.** See **SYMEON LOGITHETE.**

**LEONARD OF CHIOS,** Dominican eyewitness to the fall of Constantinople; born Chios 1395/6, died probably Genoa, 1459. After studies in Italy, Leonard became archbishop of Mytilene (1 July 1444), where he enjoyed close relations with the GATTILUSIO lords of Lesbos, as reflected in his *De vera nobilitate* (On True Nobility [Avellino 1657]). He joined ISIDORE OF KIEV and a papal delegation at Chios and arrived with them at Constantinople on 26 Oct. 1452 to realize ecclesiastical union. Although captured by the Turks in the conquest, he managed to escape to Chios, whence he dispatched a report to Pope Nicholas V (16 Aug. 1453) that describes the conquest in a fashion hostile to the Byz. and Venetians but favorable to the Genoese. It survives in the Latin original and a Venetian (G. Lanuschi, *Excidio e presa di Costantinopoli*, ed. G.M. Thomas, *SBAW* 2 [1868] 1–38) as well as a vernacular Greek translation (ed. G. Zoras, *Chronikon peri ton Tourkon Sultanon* [Athens 1958] 79.17–94.3; cf. Gy. Moravcsik, *BZ* 44 [1951] 428–36). Leonard returned to Italy ca. 1458 to work for a counteroffensive against the Turks and probably died there.

—M.McC.

**LEONTIOS,** (Λεόντιος), Eastern usurper; born Dalisados, Isauria, died at the fort of Papyrios (Paperon), Isauria, 488. A military commander (*magister militum*), whom Emp. Zeno sent to oppose the rebellion of I1LOS in 484, he was persuaded to join the rebels. Leontios was crowned at Tarsos on 19 July 484 by the empress VERINA, who claimed the right to nominate the emperor. The rebels were defeated by Zeno’s troops at Antioch in Sept. 484 and were besieged at the fort of Papyrios. After a four-year siege they were betrayed and executed.

—T.E.G.

**LEONTIOS,** presbyter of Constantinople and homilist; fl. 5th or 6th C. He is to be distinguished from the 6th-C. theologian LEONTIOS OF BYZANTIUM as well as from Leontios the monk who lived sometime between the 6th and 8th C. and wrote a homily on the birth of John the Baptist (C. Datema, P. Allen, *Byzantium* 58 [1988] 188–229). Nothing is known of the biography of Leontios the presbyter, although Datema and Allen lean towards placing him in the mid-6th C. In the MS tradition 11 homilies are attributed to him; the editors assign another three to his pen on the basis of stylistic and lexical arguments. His homilies were written for specific feast days, on such topics as Job, the birth of John the Baptist, Palm Sunday, and Pentecost. He wrote in a vivid style, making use of monologues and dialogues; his vocabulary is rich and varied, including numerous rare or unattested words. His works are distinguished more by their rhetorical skill than for their theological subtlety.

—A.M.T.

**LEONTIOS,** emperor (695–98); died Constantinople 15 Feb. (?) 706. A *patrikios* of Isaurian origin, Leontios was appointed *strategos* of Anatolikon, apparently by Constantine IV. In 686 Justinian II sent him against the Arabs in Armenia and Georgia, where he campaigned effectively but with great cruelty. In 692 Justinian imprisoned him in Constantinople, perhaps as punishment for Arab victories in Asia Minor. In 695 he was released and appointed *strategos* of Hellas but, aided by the Blue Faction, whose extermination Justinian was rumored to be plotting, and Patr. Kallininos I (693–705), he seized the throne. Byz. sources call him Leontios but his coinage and references in Western sources indicate that he ruled officially as Leo. Little is known of his activities as emperor. When the Arabs cap-
tured Carthage in 697, he dispatched a fleet under John Patrikios to recapture North Africa. He was clearing Constantinople’s Neorion harbor of debris in 698 when the bubonic plague struck. He was overthrown that year by Tiberios II, who mutilated his nose and imprisoned him in the Dalmatou monastery. After retaking Constantinople in 705, Justinian II paraded Leonios through the city and beheaded him in the Hippodrome.

LEONTIOS OF BYZANTIUM, theologian; died ca.543. Establishing his biography depends on a series of identifications: one of them, as LEONTIOS OF JERUSALEM, is now rejected; another, as a collaborator of St. Sabas who traveled with his teacher to Constantinople in 531 and from whom Sabas separated when he learned of Leonios’s Origenist inclinations, is strongly supported by Evans (infra). Scholars differ in their judgment of the doctrine of Leonios: traditional opinion is that Leonios was a staunch supporter of the Chalcedonian creed, whereas Evans views Leonios as a follower of ORIGEN and esp. EVAGRIOS PONTIKOS. The focal point of Leonios’s theology was the search for a solution to the problem of the two natures and two hypostases in the incarnate Christ: in his book Against the Nestorians and Eutychians, Leonios rejected both the Nestorian and the Monophysite concepts. Even though his search for a philosophical definition of relation and substance harked back to Origen and Plato (A. de Halleux, RHE 66 [1971] 983–85), Leonios’s perception of Christ differs from that of Evagrius: in Evagrius the intellect is not united with flesh in essence, in Leonios the person is the ontological principle of union of both natures (S. Otto, BZ 66 [1973] 97). Leonios frequently used the term enhypostatos, “existing in an hypostasis,” to characterize the status of the natures of Christ, saying, “There is no nature that is not hypostatized.” For Leonios the being-in-hypostasis is not a relation (as in Evagrius) but a reality.

Leonios also wrote two treatises, Solution of the Arguments of Severos and Thirty Chapters, which attack SEVEROS of Antioch. A pamphlet entitled Against the Forgeries of the Apollinarians is of disputed authenticity. The tract On Sects, ascribed in some MSS to Leonios, has also been attributed to THEODORE OF RAITHOU and to THEODORE ABU-QURRA.

LEONTIOS OF JERUSALEM, ecclesiastical writer; born ca.485, died ca.543. Leonios used to be confounded with his contemporary, LEONTIOS OF BYZANTIUM, but is now generally recognized as a separate person. It is probable that this Leonios, a moderate Chalcedonian monk, attended as spokesman for his fellow Palestinian brethren the meeting convoked at Constantinople ca.532 by Justinian I in search of reconciliation with Severos of Antioch and the Monophysites. He was also present in the same capacity at the council of 536 in the capital that anathematized Severos, Anthimos, and other Monophysite leaders. He is now acknowledged to be the author of two tracts, Against the Nestorians and Against the Monophysites; these are the works of a neo-Chalcedonian whose Christology was frequently expressed in the language of CYRIL of Alexandria and also of moderate Monophysites.

LEONTIOS OF NEAPOLIS (on Cyprus), bishop; 7th-C. hagiographer. His dates of birth and death are unknown. Leonios penned both a Life of St. JOHN ELEEMON (in 641–42), based on materials collected by JOHN MOSCHOS and SOPHRONIOS of Jerusalem, and one of ST. SYMEON OF EMESA; another biography, that of the Cypriot saint Spyridon, is lost. A conflated text of the Lives of John by Moschos-Sopfronios and Leonios was used by SYMEON METAPHRASTES. Leonios’s professed intention in the Life of John was to stress themes omitted by Moschos and Sophronios, also to provide an account in a Greek style plain enough for
uneducated readers to understand. Some notice is taken of secular events of the time, although Mango (infra) warns against using it as a historical source. The chief importance and pleasure of the Life is its information on everyday life in Egypt in the 7th C. Also preserved are some fragments of his Speech Against the Jews (PG 93:1597–1609), in which veneration of icons is shrewdly upheld by appeal to Old Testament texts against Jewish objections (L. Barnard in Iconoclasm 8, 11).

LEONTIOS SCHOLASTIKOS, 6th-C. author of about 24 epigrams (some individual ascriptions are uncertain) in the Greek Anthology via the Cycle of Agathias. There has been much speculation over the precise identity and career of Leontios (Leóntios), rendered largely fruitless by the plethora of Leontios in the period; a sample possibility is to equate him with the lawyer Leontios who helped Tribonian in the compilation of Justinian’s Digest. His short poems (six lines at most), unremarkable in language and meter, mirror various aspects of Byz. society, esp. what have been called the permitted pleasures of baths, chariot-rides, and mimes; only one epigram is erotic. His descriptions of works of art include important testimony on portraits of officials, for example, an eparch of Constantinople and a koukikoulos (bk.16, nos. 32–33). Al. and Av. Cameron (JHS 86 [1966] 15) take the Peter of one poem (bk.7, no.579) to be Peter Patrikios; if this identification is correct, Leontios provides an account of that dignitary’s death from a fatal fall in the theater.

—B.B. A.C.

LEO OF CHALCEDON, a prelate who, between 1081 and 1091, opposed the secularization and the melting down of church treasures by Alexios I Komnenos. Leo’s opposition forced the emperor to back down temporarily (1082). The resumption of confiscations and the leniency of the patriarch and other bishops toward imperial policies led Leo to break communion with the patriarchate (1084). In 1086 the synod indicted and deposed him. The emperor published a decree (semeioma) justifying the secularization (Reg, vol. 2, no.1130). Eventually, Leo was reconciled with the church at the local council of Constantinople of 1094, held at Blachernai (see under CONSTANTINOPLE, COUNCILS OF).

The debates of the case involved the decree of the Second Council of Nicaea (787) about “worship” (latreia) due to God alone, and the “relative veneration” (proskynesis schetike) due to images. This “veneration” was seen as ultimately directed to the “prototypes,” not the materials out of which
images were made. Leo maintained, however, that a secular use of the material was equivalent to blasphemous disrespect for the image, and therefore the prototype. By assuming a body, the Logos had assumed a “form,” represented materially on an icon. The “form” was thus integrated in his divine person. Leo finally accepted the position that since “worship” was not addressed to the material image, the urgent needs of the state could be met at the expense of church treasures.

J.M.

LEO OF CONSTANTINOPLE, APOCALYPSE OF, text written in the tradition of Daniel and preserved in late MSS (from the 14th C. onward). One MS (Venice, Marc. gr. 11,101) identifies the author as Patr. Leo Stypes (1134–49), whereas another calls him the priest Leo. The Apocalypse of Leo reflects the views of a monastic milieu—the monks are the only social group that as a whole will enter paradise. Maisano (infra) distinguishes two versions of the Apocalypse: one of the 9th C., another of the 12th C. (he denies the authorship of Leo Stypes). The first version is anti-Iconoclastic, but at the same time very critical of Empress Irene, whose pious successor Constantine was not her son but a newcomer from Arabia. The second version contains some anti-Bogomil polemic (e.g., the rejection of their view of Enoch and Elijah as emanations of the Old Testament God). It remains questionable whether the first version was in fact a 9th-C. work.

A.K., J.L.

LEO OF OHRID, 11th-C. polemician. A former chartophylax of Hagia Sophia in Constantinople, he became autocephalous archbishop of Ohrid after 1025. He was the spokesman of Patr. Michael I Kerouarios in debates between Byz. and Latin clergy in southern Italy, giving the controversies a universal dimension. In a letter (1053) sent to the Italian bishop John of Trani, but addressed “to all the bishops of the Franks and to the most respected pope,” Leo for the first time shifted the religious estrangement between East and West toward liturgical and disciplinary issues, basing his attack either on Scripture (the Latins were eating strangled meat, with blood, contrary to Acts 15:20), or on the canons of the Council in Trullo (fasting on Saturdays), or on simple differences of usage (chanting Alleluia during Lent). His major argument, however, was directed at the Latin use of azymes in the Eucharist. Two other letters of Leo expand on the same issues. Transmitted to Rome, the first letter of Leo provoked a sharp answer, written by Cardinal Humbert, initiating a whole series of exchanges, including the fateful mission of Humbert to Constantinople, and mutual anathemas (1054).

J.M.

LEO OF SYNADA, metropolitan, synkellos, diplomat, and writer; born ca.940. His biography is known only from his letters. These are addressed to the emperor (Basil II), whom Leo calls the Scythian and “antarctic” (ep.54.12), alluding to his Bulgarian campaigns, and also to various church and secular officials (ep.13 is addressed to the kanikheiros who is at the same time strategos, i.e., to Nikephoros Ouranos). Darrouzès dates the letters to the 990s, but if his identification of the addressee of Letter 25 with Christopher of Mytilene is valid, then some of the letters must be later. Mild humor and sarcasm fill the letters and esp. Leo’s will, written at the age of 66 (in which he calculates the number of his sins at 48,180). The most important part of Leo’s correspondence describes his embassy in 996–98, together with a certain Kalokyros, to Rome, where in his own view Leo acted boldly in support of the antipope (whom Leo calls Philagathos), although he despised him personally. In his letter to Patr. Sisinios (996–98), he boasts that Rome is now in the
hands of the “great emperor” (ep. 11.18–19). Leo mentions also his mission to “Frankia” (Aachen, according to Schramm) to negotiate a political marriage. One letter to the emperor (ep. 43) is valuable for his description of agriculture in the Synada region, where neither olive trees nor grapes grew, and instead of wheat the soil produced barley.

A.K.

LEO OF TRIPOLI (Arabic names Rasiq al-Wardami and Ghulam Zurafa), probably a MARDAITE from Attaleia, who was taken captive by the Arabs, converted to Islam, and became a commander of the Arab fleet. In 904 Leo set off against Constantinople. The suggestion that he captured Attaleia en route to Constantinople is an error arising from Arab sources’ confusion of Thessalonike and Attaleia. After taking Abydos, Leo diverted from his original goal and led his fleet toward Thessalonike; after a three-day siege in July (A. Kazhdan, BZ 71 [1978] 302), he sacked and pillaged the city. In 912 Leo and another Arab admiral, Damian, annihilated the fleet of HIMERIOS; in 921/2 Leo headed again for the Aegean Sea and devastated Lemnos, but was defeated by John Radenos, patrikios and droungarios of the fleet.

A.K.

LEO SAKELLARIOS, addressee of two letters from the Anonymous Teacher (R. Browning, B. Laourdas, EEBS 27 [1957] 161f) whose student he was; died before 943. Browning (Studies, pt. IX [1954], 434) suggests that the last datable letter in the collection is of 931, but C. Mango (infra) dates the letters to Leo shortly after 940. Mango identifies him as Leo, patrikios, praitpositos, and sakellarios, the patron of the illuminated Bible in the Vatican (Vat. Reg. gr. 1). The MS is a very large (41.0 × 27.0 cm) codex with 18 full-page miniatures intended as frontispieces to the books of Genesis through Psalms; some are, however, misplaced, and Canart (infra) has stressed the lack of overall planning and the uneven relationship between the miniatures, illuminated initials, and text. Each of the miniatures is enclosed in a border containing epigrams referring to the scene within. T. F. Mathews (OrChrP 43 [1977] 94–133) sees a close theological relationship between the epigrams and the miniatures, some of which are related to pictures in the Paris Psalter and the Octateuchs. The dedication miniatures show Leo, a eunuch, presenting his book to the Virgin (fol. 2v), as well as a kathegomenos, Makar, and Leo’s brother Constantine, founder of the monastery for which the Bible was most likely intended, in proskynesis before St. Nicholas (fol. 3r).
LEO THE DEACON, historian; born ca. 950 in Kaloe at Timolos (Asia Minor), died after 992 or 994. Leo received his education in Constantinople and became a palace deacon. His History encompasses 959–76 and includes some episodes from the beginning of Basil II’s reign, e.g., the disastrous expedition against Bulgaria in 986 in which Leo participated. His sympathies lie with Nikephoros II Phokas: quite possibly Leo, like Skylitzes, used a chronicle of the Phokas family that is now lost. The History criticizes Basil II (S. Ivanov, VizVrem 43 [1982] 74–80), whereas an enkomion of Basil attributed to Leo is full of flattering phrases (M. Sjuzjumov, ADSV 7 [1971] 138f); the difference can be explained either by the conventions of genre, by a change in Leo’s attitude, or by the existence of two homonyms at Basil’s court.

Leo’s worldview in the History is pessimistic: Providence determines success and righteousness, Tyche is made responsible for failures and injustice. Antiquity interests Leo: his paradigm is Agathonias rather than Theophanes the Confessor. His ethnography is archaic: the empire of the Romans seems to him surrounded by Huns, Scythians, Mysians, even Troglodytes, and the Rus’ are descendants of Achilles. Leo is bold enough not merely to compare his heroes to ancient personages but to equate them: Nikephoros II is a new Herakles, John I a new Tydeus. Leo rejected the contrast of the hero and villain. Three major personae of his story—Nikephoros, John, and Svjatoslav—are not embodiments of either virtue or evil but courageous warriors who nonetheless have their failings. The narrative is not a survey of sequential events but a unity of momentous episodes graphically presented. Leo tends to describe not only the actions but also the physical appearance of his major heroes. His history concentrates on men’s affairs; women, even Theophano, are pushed to the background.

LEO THE KOUROPALATES. See Phokas, Leo.

LEO THE MATHEMATICIAN, or Leo the Philosopher, scholar; born ca. 790, died Constantinople? after 869. After years of education (on Andros) and travels, Leo became a teacher in Constantinople. He came to prominence due to the interest of the caliph Ma’mūn in his studies; although invited to Baghdad, Leo remained in Constantinople. He constructed a system of beacon lights to carry messages about Arab raids (V. Aschoff in Deutsches Museum, Abhandlungen und Berichte 48.1 [1980] 1–28). The cousin (or nephew) of the Iconoclastic patriarch John VII Grammatikos, Leo was elected metropolitan of Thessalonike (840–43). After the defeat of Iconoclasm, he taught at the Magnaura school; Constantine the Philosopher may have been one of his pupils (I. Ėvěenko, AHR 79 [1974] 1533).

Leo assembled a library of which we know partly from his epigrams, partly from his notes on several MSS (Ptolemy, Archimedes, Plato); he encouraged the study of ancient mathematics and philosophy. V. Laurent proposed Leo as the author of a homily on the Annunciation that is full of antiquarian details (ST 232 [1964] 281–302). The central episode of the homily, however, the healing of a deaf-mute Jewish girl by the Virgin and St. Demetrios (whom she recognized since she had seen their icons displayed in a baptistery [p.301.146–49]), is inconsistent with Leo’s role as an Iconoclast bishop. Legends preserved by George Hamartolos, Symeon Logothete, Theophanes Continuatus, and others present Leo as an astrologer able to predict the future who knew how to raise abundant crops, played a significant part in the surrender of Amorion in 838, and built the automata adorning the imperial palace. Contemporaries regarded Leo as a “Hellene.” The attribution of the work of Leo and his namesakes, Leo VI and Leo Chiorosphaktes, is sometimes difficult.

LEO THE PHILOSOPHER. See Leo the Mathematician.

LEO THE PHYSICIAN, medical encyclopedist; traditionally dated to 9th C. but possibly as late as 12th–13th C. (cf. R. Renehan, DOP 38 [1984] 159, n.5). Leo is known for two works, Epitome on the Nature of Man, culled from a similar tract by Meletios the Monk, and Epitome of Medicine, a rather good summary in seven books of medical theory, therapeutics, and surgery (cf. Bliquez, “Surgical Instruments” 190f). Only occasionally does one detect Hippocrates and Galen in the latter work, and information is reduced to an extremely clipped format.

—J.S.

LEO TUSCUS, official translator (imperatoriarum epistolæarum interpess); fl. between 1160 or 1166 and 1182. A Pisan, brother of the theologian and author Hugo Eteriano, Leo was in Constantinople during Manuel I’s controversy with Demetrius of Lampe. While accompanying Manuel on campaign in Bithynia and Lykaonia (ca.1173–76) Leo sent his brother his translation of the dream book of Achmet ben Sirin. About 1173–78, Leo translated the liturgy of St. John Chrysostom with texts from the Hologogion and the Apostolos for the use of the Aragonese envoy Ramón de Mon(t)cada; he intended to make the Orthodox service comprehensible to the Western visitor.

—C.M.B.

LEPROSY (λέπρα, i€r€a χόρος). PAUL OF AEGINA (bk.4.1–2) presents the fullest Byz. account of “leprosy,” although his description includes psoriasis and related skin diseases as well as what modern medicine would call leprosy. Often be-
Romanus, sent it into slow decline. During the 5th C., the city endured the encroachment of sand dunes, heavy winter flooding, and the destruction of its walls by the Vandals. In 523 Leptis was sacked by the tribe of Leuathai. When Byz. forces entered the city in 533 it was partially covered by sand dunes and virtually depopulated. Justinian I made Leptis the seat of the dux of the limes of Tripolitania and constructed a new defensive wall that enclosed the port and old forum quarter. He is also credited with rebuilding the “palace” of Septimius Severus, probably the Severan forum, dedicating a church to the Mother of God (undoubtedly the 6th-C. church erected in the Severan basilica), and constructing four smaller churches (one of which is perhaps the 6th-C. church on the north side of the circular piazza, another the church erected in an early 2nd-C. temple). It was at a banquet at Leptis that the dux Sergios slew the chieftains of the Leuathai, precipitating a second major conflict between the Byz. and Mauri (543–48). As part of the reorganization of the prefecture of Africa (ca.585–91), Tripolitania, including Leptis, was attached to the diocese of Egypt. The subsequent history of Leptis is unknown, although it was perhaps abandoned by the time of the first Arab invasion of Tripolitania (643), since it is not mentioned in any accounts of the Muslim conquest.

LESBOΣ (Λέσβος), island in the northeastern Aegean Sea; its major cities were Mytilene (also Mitylene, a name also used for the entire island) and Methymna. Archaeological evidence reveals that in late antiquity Methymna had shrunk and shifted from the seashore to a position near the walls of the acropolis. In 802 the empress Irene was exiled to Lesbos, where she died. An important point on the sea lanes to Constantinople, Lesbos served as the gathering place for the fleet of Thomas the Slav (TheophCont 55,20–21). Constantine VII Porphyrogennetos (De them. 17,24, ed. Pertusi, p.83) considered Lesbos part of the theme of the Aegean Sea; in the 11th C. it was under the command of the kourator of the dioikesis of Mytilene (An.Komm. 2:110,18–19). Tzachas occupied Mytilene, but Methymna remained a base for resistance against him. In the 12th C. the Venetians plundered Lesbos several times. After 1204 it was granted to Baldwin of Flanders. Reconquered by John III Vatatzes after 1224, the island was in 1354 given to the Genoese corsair Francesco Gattilusio, whose descendants ruled Lesbos until 1462. Archbishops of Mytilene and of Methymna are listed as autocephalous (Notitia CP 1:51, 1:58, etc.); Mytilene was raised to metropolitan status by the early 10th C. (7,678) and Methymna by the 12th C. (13,785).

Lesbos is esp. rich in the remains of churches from late antiquity: S. Charitonis (ArchDelt 23 [1968] 10–62) recorded some 54 individual churches from this period. The castle of Mytilene is largely Byz. in date (B. Petrakos, ArchDelt 31 [1976] 152–65).

LESNOVO MONASTERY. See GAVRIIL OF LESNOVO.

LESSER ARMENIA. See CILICIA, ARMENIAN.

LETTER. See EPISTOLOGRAPHY.

LETTER OF THE THREE PATRIARCHS, an iconodulic Greek text that has survived in several MSS, the earliest of which is in uncial script of the 9th C. (Patmos 48). A lemma to this letter states that it was compiled by Christopher of Alexandria (805–36), Job of Antioch (813/14–844/5), and Basil of Jerusalem (820–45, other dates have also been suggested) and sent to Emp. Theophilus in Constantinople; it was supposedly written in Jerusalem during a major council in Apr. 836 attended by 185 bishops, 17 hegoymenoi, and 1,153 monks and was devoted to the question of icon worship. In the 10th-C. Narration on the Image of Edessa, the Letter is mentioned but the names of the patriarchs are confused: Job is said to be “of Alexandria,” Christopher “of Antioch.” The authors of the Letter claim the apostolic origin of holy icons created earlier than the Gospels and describe miracles worked by a mosaic of the Adoration of the Magi in Bethlehem (ed. Duchesne,
infra 283f) and by icons in Alexandria, Cyprus, Constantinople, and on Lemnos.

The improbably large number of alleged participants in the council of 836, the unreserved praise of the victorious emperor Theophilos (Iconoclast though he was), and the overly expressed desires to reunite the patriarchates with Byz. (all three being under the authority of the caliph) make the authenticity of the Letter dubious. It was probably a political document created in the 9th C., after Theophilos's death (when a tendency to rehabilitate him emerged), at a time when several victories over the Arabs contributed to the illusion of an imminent reconquest of the lost eastern provinces. Eutychos of Alexandria was not familiar with the Letter but spoke instead of an epistle sent to Theophilos by Sophronios I, patriarch of Alexandria (836–59).

LEWOND, or Leontios, Armenian historian; fl. late 8th C. Nothing is known of him save that he was an eyewitness of events after 774 and wrote a History covering the period 632–789. It was commissioned by Bagratid Sapuh, son of Smbat, governor of Armenia 761–75. Although the History concentrates on Muslim control over Armenia, it also contains valuable information on the Byz.-Arab conflict in the 7th–8th C. The History includes a long letter, supposedly sent by Emp. Leo III to the caliph 'Umar II, which defends the Christian faith. This version of the letter is an Armenian composition added later (Gero, Leo III 153–71).

LEX AQUILIA (Ἀκούλιος νόμος), a plebiscite initiated by a certain Roman tribune, Aquilius, probably in the 3rd C. B.C., which in the course of time developed into a comprehensive law regarding injury to things (including animals and slaves) and, eventually, bodily injury to free men. The (private) action based on the Lex Aquilia was aimed at simple compensation or, when the perpetrator denied the charge, double compensation (Institutes 4:3; Digest 3:2; Cod.Just. 3:35; Basil. 60:3). Special regulations applied in cases where the injury was caused by a slave or an animal (see Noxal Actions). Although the “Akouiliou” (as the Lex Aquilia came to be known) was maintained in learned legal literature, in the rural sphere liability for the injury or death of animals was regulated differently and varied according to the case (see esp. Farmer's Law).

LEX FALCIDIA, a law of the Roman republic (40 B.C.) that was intended to secure for the heir or heirs a certain portion of a testator's property. To this end the encumbrance of the deceased's
estate with *legata* was permitted only to the extent of three-quarters of the value of the inheritance, so that one-quarter remained for the heirs. If the testator had encumbered this quarter as well, all *legata* were proportionately reduced. As "heirs" in the legal sense, they were considered the heirs instituted by the testator in a will. Following the dissolution of Roman family order from the 3rd C. onward, increasingly only children, parents, and siblings were still accepted as heirs. At the same time the limitations on the arrangements of the testator were gradually extended to all arrangements "in case of death," that is, besides the *legata*, mainly to *fideicommissa* and gifts *mortis causa*. The *quarta Falcidia* thereby became a legitimate portion. Justinian I regulated the law of legitimate portion thoroughly and thereby increased it for children (*Nov. Just. 18, 115*). It is unclear whether the legitimate portion for parents was to remain one-quarter and whether the portion for siblings was to be maintained at all.

Later sources deal almost exclusively with the legitimate portion for children, which was practically the only important inheritance portion, now called *ho Phalkidios*; it amounts to a third of the parental estate if there are up to four children; if five or more, half of the parental estate is divided. The net fortune (*kathara ousia*) serves as a basis for calculation. The portion of the property that comes under assessment (1/3 or 1/2) is divided according to the number of children. If the testator had undertaken many arrangements, difficult problems of calculation could occur, for which Byz. legal literature has left a series of special treatises, most of them still unedited.

LEXICON VINDOBONENSE. See Lopadiotes, Andrew.

LEXIKAI, lists of Greek words, often rare or unusual, with explanation of their meanings. The earliest Byz. *lexikon*, falsely attributed to Cyril of Alexandria and probably compiled in the 5th/6th C., exists in many different recensions (M. Naoumides, *ICS* 4 [1979] 94–135). It includes words from classical literature and biblical words, and was primarily intended for use in the teaching of rhetoric.

The 9th-C. revival of learning led to the compilation of the earliest *etymologika* and the *Lexikon* of Photios, which drew both on commentaries on classical texts and on the debris of *lexika* from classical antiquity. These latter were of three main types: (1) descriptive lists of rare words or meanings occurring in classical literature (e.g., the *Lexikon* of Hesychios of Alexandria); (2) prescriptive lists of "correct" words or meanings drawn up by Atticists such as Aelius Dionysius, Pausanius, Phrynichos, and Moiris; and (3) etymological lists explaining the true meanings of words by their supposed derivation, based on the assumption that the structure of language reflects that of the universe. Byz. lexicographers used all three types. The *Souda* is a combination of *lexikon* and biographical dictionary compiled from a wide variety of classical and later sources. The longest Byz. *lexikon* and the most frequently used and copied—more than 100 MSS survive—is that of pseudo-Zonaras, compiled in the first half of the 13th C., perhaps by Nikephoros Blemmydes, for educational use. The renewed classicism of the late 19th and early 14th C. stimulated the compilation of new prescriptive Atticist *lexika*, one attributed to Manuel Moschopoulos, the other by Thomas Magistros.

In addition to general *lexika*, the Byz. used and compiled short specialist *lexika* (e.g., botanical, geographical), as well as a *Lexikon of Synonyms* by pseudo-Ammonios, which distinguished between words of similar meaning. Byz. *lexika* are of interest both for their information on Byz. attitudes and for the fragments of lost classical and later works which they contain.

—R.B.

LEX RHODIA. See Rhodian Sea Law.

LIBADARIOI (Ἀλβαδάριοι, fem. Ἀλβαδαρέα), a family considered by Pachymeres as one of the greatest in the mid-13th C. Their connection with
the Libadas family, one of whom, Demetrios, was an official (in the department of the megas logiastes?) in 1186 (Patmou Engraphe 1:92–94), is unclear. The Libadarioi held high court and military posts. A certain Libadarios, related to the Mouzalon family, was appointed pinkernes by Michael VIII, and his daughter married Michael’s son, Theodore Palaiologos. Another Libadarios, megas chartularios and strategos of Tralles, was defeated by the Turks ca.1280. A different Libadarios was protosvestiaries and later megas stratopedarches and governor of Neokastra near Smyrna ca.1295; he fought successfully against Alexios Philanthropenos. Some Libadarioi were patrons of monasteries: Libadarea, wife of a megas stratopedarches, founded a nunnery in Thessalonike before 1326; ca.1300 Theodore Komnenos Libadarios established a monastery dedicated to the Virgin, which Manuel Philes praised, and also commissioned the painted decoration of a monastery of St. George near Servia. The Libadarioi should probably be distinguished from the Limpidares/Limpidarios family, known as commanders of the army and fleet in the 14th C. (PLP, nos. 14940–41).

LIT. PLP, nos. 14856–62. — A.K.

LIBADENOS, ANDREW, ecclesiastical and imperial official in Trebizond and writer; born Constantinople between 1308 and 1316, died after 1361. After schooling in Constantinople, Libadenos (Λιβαδένος) had the opportunity at age 12 to serve as undersecretary on an embassy to the Mamluk sultan in Egypt (sometime before 1328). During this journey he also made a pilgrimage to Jerusalem. At some point after his return to Constantinople he was appointed apographeus of the island of Tenedos. About 1335, motivated by the desire to study astronomy, he went to Trebizond, where he spent most of his remaining years in the service of the metropolitan (as chartophylax) and of the Grand Komnenos (as a notary). His career was troubled by bouts of ill health and the civil strife that plagued the Trapezuntine Empire. Libadenos is last mentioned in 1361.

The primary source for his life history is the autobiographical Periogiesis (Geographical Description), which relates events down to 1355. He also composed an enkomion of St. Phokas, verses to the Virgin, and a horoscope for the year 1336. His writings reveal some familiarity with ancient authors and abound in citations of the Old Testament, New Testament, and church fathers.

LIBANIOS (Λιβανίος), rhetorician and teacher; born Antioch ca.314, died Antioch ca.393. Libanios was educated at Antioch and Athens. After brief professorial tenure in Athens, Constantinople, and Nikomedea, he returned in 354 to an official teaching post in Antioch for the rest of his life. He accepted an honorary praetorian prefecture from Theodosios I in 383. Nostalgic for what then passed as classical culture, he clung to paganism and was devastated by the premature death of Emp. Julian, about whom he wrote sympathetic orations. Libanios preferred coexistence to confrontation and taught and mixed with men of both faiths, including Basil the Great, Gregory of Nazianzos, and John Chrysostom. Outside the political mainstream by choice, he championed many an individual and municipal cause in 64 speeches (the first was his autobiography) and 1,600 letters. He was an eloquent spokesman for the material and cultural aspiration of the curiales, but also a critic of social oppression. More pedagogical are his school declarations and similar model exercises. Libanios tried to write in pure Attic, with results that are now viewed as tortuous but were much admired by Byz. stylists.

LIBELLESIOS (Λιβέλλησιος or Λιβέλλησιος), according to the Kletorologion of Philotheos a subaltern official in the department of the quaestor.
Bury (Adm. System 77) thought that the *libellesios* was a successor of the late Roman *libellensis*, who performed secretarial functions in the *scrinium libellorum* and in other bureaus (A. von Premerstein, RE 13 [1927] 24–26). In the 10th C. the term *libellos* designated a document connected with assignment of a *klasma* (e.g., Prot., no.5.37) and it is probable that the *libellesios* had specific notarial duties: a seal of the 11th C. belonged to a certain John, *libellesios* and imperial notary (Laurent, Corpus 2, no.210). Döger (Diplomatik 69) hypothesized that the *libellesios* made notes on petitions addressed to the emperor, while Ljubarskij (Psell 275) surmised that he composed imperial acts; neither of these theories has any substantive basis. The *libellesios* played a role in palace ceremonial, serving as the mouthpiece of the Augusta (De cer. 418.20–22). There were also provincial *libellesioi*-notaries: for example, Nicholas, *libellesios* and *symbolaioi*raphos in 897 (Lavra 1, no.1.34); Nicholas, *koubouklelesios* and *libellesios* of Thessalonike in 982 (Ivir. 1, no.479); Stephen, *libellesios* and *primikerios* of the *taboullarioi* in Thessalonike in 1097 (Lavra 1, no.5.42). In contrast to this evidence, the anonymous *libellesios* addressed by Psellos (Sathas, MB 5:451.26) was a high-ranking functionary of the civil administration. Peter Libellisios, a well-educated inhabitant of Antioch in the second half of the 11th C., mastered both Greek and Arabic learning, but it is not clear whether *libellesios* was his job or his family name.

Lit. Oikonomides, Lists 322. —A.K.

**LIBER DIURNUS** (lit. “day book”), anonymous collection of papal letter formulas and documents from the 6th to 8th C. preserved in three slightly distinct MS versions from the early 9th and 10th C. Many formulas recur wholly or partially in letters of contemporary and later popes, and the formulation and topics of the letters shed much light on ecclesiastical affairs of Byz. Italy and relations between the *Papacy* and Constantinople. Much like the De ceremoniis, the Liber diurnus includes a list of addresses and subscriptions appropriate to papal correspondence with the emperor and high officials of Constantinople and the provinces (ed. Foerster, infra 181f). A number of the documents reveal the local historical situation, reflecting for instance the care of bishops disorganized by enemy action (82f), or procedures for petitioning the emperor (112f) or the exarch (113–21) for confirmation of papal elections, as well as attesting local bishops’ anti-Monotheletism and loyalty to the emperor (136f; cf. 138) or prayers for his triumph (e.g., 164).

**LIBERIUS**, pope (from 17 May 352); died Rome 24 Sept. 366. The pontificate of Liberius coincides with the upsurge of Arianism supported by Constantius II. The Arians required Liberius to condemn Athanasius of Alexandria. After a long struggle Constantius achieved this condemnation at the Council of Milan in 355; since Liberius refused to submit, he was exiled to Berroia and replaced by Felix II (355–65). Liberius finally yielded and after a time was allowed to return to Rome as Felix’s colleague—the witty Romans exclaimed that they now had two parties and two colors, as in the circus (Theodoret of Cyrrhus, HE 2.17.5–6). The death of Constantius in 361 allowed Liberius to retreat and find common ground with the Homoousians, who leaned toward a slightly revised formula of the creed of the Council of Nicaea. Liberius was popular in Rome, esp. as founder of the Basilica of Santa Maria Maggiore. In the hagiography of the 6th C., however, he is presented as a traitor, while Felix II is depicted as a firm supporter of Orthodoxy.

**LIBER PONTIFICALIS** (Pontifical Book), prime source on Byz., the *papacy*, and Italy that records pontificates from Peter to the late 9th C. The initial section was compiled in the 6th (Duchesne) or early 7th C. (Mommsen), relying on general historical sources whose value ranges from poor (down to Gelasius I and from Vigilius to Benedict I) to excellent (Anastasius II to Silverius). The Liber pontificalis consistently drew from papal archives information on munificence by and under each pope from Silvester onward, whence
splendid data on Byz. monuments of Rome (H. Geertman, *More veterum* [Groningen 1975]) and imperial grants from Constantine I to Constantine V (Reg 1, no. 310). From Pope Honorius I, biographies were composed by contemporaries in the papal entourage (e.g., Anatasius Bibliothecarius) and even published during the subject’s lifetime. While the structure of each biography remains essentially the same (name, geographical origin, parentage, length of reign, writings, significant historical events, constructions, gifts, death, burial), the length, detail, focus, and reliability vary greatly from life to life (e.g., O. Bertolini in *La storiografia altomedievale* [= SetStu 17] [Spoleto 1970] 387–455) or even within different parts or recensions of the same life. Thus one recension of the Life of Gregory II pays more attention to Byz. than the other, supplying details on the future pope’s theological discussion with Justinian II (ed. Duchesne, *infra* 1:396.8–11), Byz. cooperation with the Lombards, and the usurpation of Tiberius Petasius (ibid. 407.19–409.9). Countless later historians of religious institutions, such as Agnellus and the deacon John of Naples, took the Liber pontificalis as their model. The continuations from Pope John VIII to Urban II, the so-called Liber pontificalis of Pierre Guillaume (ed. J.M. March [Barcelona 1925]), rarely touch on Byz.

LIBISTROS AND RHODAMNE (Λίβιστρος καὶ Ῥοδάμην), an anonymous romance (about 4,500 unrhymed political verses, in the longest of several discrepant MSS). Because both Theodore Meliteniotes (died 1393) and Mazaries (*Journey to Hades*, ca. 1415) refer to the poem, it must be dated to the 14th C. Libistros and Rhodamne is formally the most sophisticated of the Byz. “popular” verse romances of chivalry: a first-person narrative by Klitobos, traveling companion to Libistros, starts in medias res and covers both the adventures that Libistros describes to him and also the hazards he and Libistros experience together as they seek for Rhodamne. Although written within the tradition of the novels of late antiquity and those of the 12th C., Libistros and Rhodamne has much in common with *Kallimachos* and *Chryssorhoe* and Belthandros and Chrysanta including elaborate ephrasesis of buildings, witches, and magic horses as well as Latin princes and Frankish hairstyles that reflect a mixed Frankish-Greek society, such as that of the Morea.

LIBRA. See Litra.

LIBRARY (βιβλιοθήκη). Libraries underwent a substantial change during late antiquity: municipal libraries disappeared and the public libraries organized by Constantius II (*Themistios, Orationes* 1:84–87) and Theodosios II were state institutions. Byz. libraries could be imperial (such as the one in 15th-C. Constantinople described by Pera Taufur), patriarchal, monastic, or private. As Wilson (*infra* 281) stresses, “the university of Constantinople has left no trace of a central library,” though Constantine IX’s foundation charter for the School of Law makes provision for one. Some libraries had inventories, several of which (e.g., the catalog of the library of the monastery on Patmos) have survived. The books had shelf-marks (e.g., at the library of the Great Lavra on Athos) and were placed on shelves accordingly. Some libraries had their own scriptoria and professionals to repair and bind books (*L. Politis in Wandlungen* [Waldsassen-Bavaria 1975] 285–92). Data concerning the size of libraries are rare: in the early 13th C. the Patmos library had approximately 330 books; the library of Lavra possessed about 960 MSS. Most libraries, esp. private ones, were much smaller (e.g., the library of Eustathios Boilas in the late 11th C. contained 81 books).

The contents of libraries differed significantly: a 6th-C. papyrus list of ten books given to a monastery contains a chronicle and biblical, patristic, and hagiographical texts (R. Dostalová, *Byzantina* 13.1 [1985] 535–47); the inventories of
Later monastic libraries were similar. The library of the patriarchate of Constantinople reportedly possessed a special chest of heretical books. The private library varied according to the individual: men like Libanius read widely in classical poets and rhetoricians (A. Norman, *RhM* 107 [1964] 158–75); the bibliophile Arethas of Caesarea acquired primarily secular classics. John Konnenos Synadenos (late 15th C.), son-in-law of Michael VIII's brother and uncle of John VI Kantakouzenos and Andronikos III, collected religious books. George Palaiologos Kantakouzenos (mid-15th C.) owned a library at Kalavryta that included Herodotus and Prokopios. (See also Mousieion and Library of Alexandria.)

**LIBRI CAROLINI** (Books of Charles), treatise containing a violent theological attack on the Second Council of Nicaea of 787 and the cult of icon veneration, prepared ca. 790–93 in the name of Charlemagne by his entourage, particularly Theodulf of Orleans. The Libri Carolini was evidently revised and then abandoned because of the reluctance of Pope Hadrian I to condemn the council. The aggressively formulated refutation of the Byz. council survives in the original MS (Vat. lat. 7207) and still bears in the margins what may be notes of Charlemagne’s oral comments (A. Freeman, *Speculum* 46 [1971] 608–12). The Libri Carolini expresses polemical outrage at the relics of the imperial cult embedded in Byz. etiquette and official jargon (1.1–4) and assails the role of imperial portraits in Byz. public life (3.13). The treatise was motivated in part by imperfect Latin translation of the original Greek acts (latreia [worship] of God and prosknēsis of icons were both rendered as *adoratio*, whence the charge of idolatry) and in part by political and military competition with Constantinople, perhaps aggravated by a perceived rapprochement between the Papacy and Constantinople (G. Arnaldi in *Culto cristiano, politica imperiale carolingia* [Todi 1979] 61–86; cf. P. Speck, *Kaiser Konstantin VI*, vol. 1 [Munich 1978] 163–65, 185f).

**LICARIO** (*Ikápios* of Greek sources), Italian adventurer in the service of Michael VIII Palaiologos; dates of birth and death unknown. From a Veronese family that settled in *Negroponte* (Euboea), Licario incurred the displeasure of the Lombard rulers of the island through his liaison with a noble widow and fled to a castle near Karystos. The chronology of his career is uncertain; Loenertz (*ByzFGr* I 558–70) has proposed the following sequence of events: in 1271 Licario offered his services to the Byz., became an imperial vassal, and seized several castles on Euboea. After taking Karystos in 1276–77, he was rewarded by Michael VIII with the whole island as a fief and with a noble Greek wife. He eventually conquered all Euboea except for Chalkis and restored to Byz. control a number of Aegean islands: Skopelos, Skyros, Skiathos, Amorgos, Keos, Santorini, and Lemnos. In 1276 Licario was appointed *megas konsta naulos*, the next year *megas doux*. In 1279/80 he captured John I de la Roche, duke of Athens, and Giberto da Verona, triumvir of Euboea, and brought them triumphantly to Constantinople. Thereafter he disappears from the sources.

**LICINIUS** (*Alkínios*), more fully Valerius Licini anus Licinius, augustus (308–324); born Dacia ca. 265, died Thessalonike spring 325. Friend and perhaps praetorian prefect of Galerius, he was named augustus at the Conference of Carnuntum in 308 and held power in the East. In the succeeding civil wars Licinius allied with Constantine I and married his half-sister Constantia in 313. He proclaimed toleration of Christians in his territory at an early date (see *Edict of Milan*), and the struggle with Maximinus became a contest
between monotheism and polytheism. Just before going into battle Licinius had his men recite a prayer to the “Great Holy God”; he was then victorious. After May of 313 Licinius was supreme in the East as Constantine was in the West. By 316 relations between the two emperors had deteriorated and there was open war in the Balkans. From this time onward Licinius sought the support of pagans and openly harassed Christians in his domain. War broke out again in 324. Licinius was defeated, first in Thrace, then at Chrysopolis in Bithynia on 18 Sept. Licinius abdicated the next day. He was sent into exile in Thessalonike, where he was subsequently executed.

-T.E.G.

LIFE EXPECTANCY. The evidence of skeletal material from archaeological excavations suggests a mean age at death of about 35 years for the Byz. population. Women usually died earlier than men, primarily because of the higher mortality associated with childbirth and, possibly, poorer food. The anthropological findings are corroborated by the evidence of funerary epitaphs (Patlagean, Pawreté 95–100) and praktika (Laiou, Peasant Society 296). Byz. longevity was comparable to that of Iron Age Greece and lower than that of classical Greece, when the mean age at death was 45 years for men and 36 for women. Nevertheless, the Byz. definition of old age (geras) was similar to the modern conception; it began about 60. Anyone living into his 70s was considered to have exceeded the allotted biblical life span of 70 (Ps 90:10) and to have entered “extreme old age.” Literary evidence indicates that many Byz. did have long lives. Thus, the average life span of the Komnenian emperors was 61, of the Macedonian 59, and of the Palaiologan 60. Scholars also tended to live into their 60s or 70s (A. Kazhdan, ByzF 8 [1982] 16f). Saints reputedly lived longest, often into their 80s or 90s; in fact there seems to be a correlation between old age and sanctity.

-T.A.M.

LIGATURE, term used in palaeography and epigraphy. It describes the linking together of letters to save space and time. Gardthausen (Pala-

Ligature. Sample ligatures.

laeographie 2:53) classifies ligatures into primary, secondary, and tertiary examples. In primary ligatures, letters are combined but preserve their essential elements; in secondary ligatures two letters are united so that they share a common element; in tertiary ligatures three letters are joined. In epigraphy there are examples of eight letters combined together. Occurring relatively infrequently in uncial MSS, ligatures became common in cursive and minuscule script.

-A.M.T., A.K.

LIGHT (φῶς). Byz. terminology for light can be classified into two distinct areas: liturgy and spirituality, which of course are interdependent. From the time of Justin the Philosopher and Ignatius of Antioch baptism was designated primarily as “illumination” (phutismos). Epiphany, the preferred day of baptism, bore the name “Festival of Lights” or “Lights” (J. Ysebaert, Greek Baptismal Terminology [Nijmegen 1962] 157–78). The light (the Sun) is naturally Christ, as expressed in the thanksgiving hymn of the eucharistic liturgy (Phos Hilaron) and in Christmas hymns. Every weekday should be concluded with a thanksgiving for the light. The illumination of spiritual man through Christ is the favorite theme of pseudo-Dionysios the Areopagite and Symeon the Theologian. John Climacus (Scala paradisi 26, PG 88:1020D) described the angels as the light of the monk, and monastic life as the light of all men, while Gregory Palamas incorporated the vision of the (transfigured) light in his doctrine of energies and assigned it first rank in spiritual life.

Light in Art. In the visual arts light is not so much the medium of visual perception as a token of sanctity or majesty. Illumination is almost always an emanation from a divine source, created by God (Gen 1:3) or projected by a sacred figure.
As in the narthex mosaic of Hagia Sophia, Constantinople, the enthroned Christ often carries an inscription identifying him as the Light of the World (Jn 1:9) and he is invariably treated as a source of light, even if this is conveyed by reflections from his skin and brilliant vestments. The sun and moon, when represented, rarely cast light, although an arc of heaven, inhabited or not, frequently illuminates the upturned face of a holy man (e.g., in the Menologion of Basil II [Cutler-Nesbitt, Arte 230]). Recipients of sacred light are shown blinded (St. Paul), bowled over (the apostles in the Transfiguration), or, like the face of Moses, reflecting the glory of God. The marked 14th-C. interest in the depiction of light has been connected with Palamite vision.

Formally, light is as often a decorative device spun over the surfaces of objects as an element contributing to their substantiality. In mosaic and fresco its impact is registered by the liberal use of white; on silver and ivory its effects are heightened by burnishing. In sacred pictures light normally descends from above, illuminating the upper surfaces of the faces and limbs of figures. But there is no suggestion of a specific source, and the various parts of an image are lit independently. The play of light and shade is determined more by conventional means of suggesting plas- ticulty than by the search for a consistent effect. During and after the 11th C. the drapery of sacred figures is enlivened with chrysography (see illuminators), brilliant splashes of gold emitting rays over adjacent surfaces of the fabric. The highlights on faces, hands, and drapery in early Palaiologan painting are later broken into short parallel strokes; vestments seem to crackle electrically. This is part of an apparent effort to give physical form to radiance, an attempt most palpable in images of the Ascent of Elijah and of the Transfiguration.

pose, often carried a wide range of connotations (G. Galavaris, BMGS 4 [1978] 69–78). Though the church fathers tried to restrict the lavish display of lights in churches, it is evident from accounts in the Liber pontificalis that by the late 4th C. ecclesiastical lighting had become remarkably elaborate. A novel of Justinian I of 538 (67 pr.) stressed the importance of providing revenues for the maintenance of lighting in a church. Textual evidence and dedicatory inscriptions show that many lighting fixtures were the votive offerings of both church officials and laymen.

Polykandela with glass lamps were the dominant lighting devices before the 8th C. The earliest types are crown-shaped with dolphin-brackets supporting glass lamps (Greece and the Sea [Amsterdam 1987] no.150). Three other sorts of silver polykandela are found in the Sion Treasure: circular, cross-shaped, or in the form of a rectangular tray. Openwork silver lamps (kaniskia) were employed in churches along with lamps of solid metal; the altar was illuminated with floor candelabra and lampstands as well (Mango, Silver 96–101). In Hagia Sophia, Constantinople, cross and disk-shaped polykandela are recorded, along with boat-shaped lamps and tree-shaped chandeliers (Paul Silentarijos).

From the 9th C. onward, ecclesiastical lighting
increasingly relied on candles. *Polykandela*, some of them in silver, continued in use. In the 12th C. the *choros*, a polygonal structure carrying *polykandela* or lamps and candles, was introduced in domed churches. Floor candelabra in pairs (*manoulia*) were employed in front of votive icons, sometimes furnished with disks with extra candle-holders for the major feasts. Metal beams carrying candleholders (*lamnai*) were employed over the temple epistyle and icon frames. Oil lamps with one or more lights (*kandelai*) were suspended before votive icons of Christ and the Virgin, under the dome, over the holy altar, and before the bema doors. Lanterns enclosing as many as ten lamps were employed for the illumination of open spaces around the church during processions. A number of monastic *typika* provide explicit instructions for the lavish illumination of churches on major feasts and the anniversaries of the deaths of the founders.

—L.Ph.B.

**LIGHTING IN EVERYDAY LIFE.** Private houses were illuminated by small windows (*photagogia*) by day, and lighting devices (*lychnia*) after dusk. *Lychnia*, along with a couch and table, were considered the most essential furnishings of a house (vita of Basil the Younger, ed. Vilinskij, 1:300.32–33). In the late Roman period, the lamp (of clay, metal, or glass) remained the major lighting device. Even though literary texts continue to mention lamps through the entire Byz. period, archaeological evidence shows that clay lamps practically disappeared after the 7th C. They were replaced by candles. Certainly palaces and rich houses were brightly illuminated, esp. during banquets. Monastic authorities disapproved of candles in cells—thus Lazaros of Mt. Galesios regarded a monk who lit a candle in his cell as dead in the eyes of God (AASS Nov. 3:549AB); John Moschos tells the legend of a monk who did not need artificial light because he was able to read in the dark (PG 87:2998A).

Streets in large cities of the 4th–6th C. had artificial lighting: *kyros*, the prefect of Constantinople, installed lighting devices on major thoroughfares of the capital after 437, and Theodosios II imposed a tax on houses and shops in the area of the Baths of Zeuxippos to maintain the luminaria (*Cod. Just. VIII* 11.19). Apparently, the system fell into decay even in Constantinople: the Synaxarion of Constantinople (*Synax.CP* 231.35–39) records that near Hagia Sophia it was so dark that people needed a torch to walk at night. The Book of the Eparch (*Bk. of Eparch* 19.3) required shopkeepers to switch off lighting devices (*lebetia*) in the evening; legend has it that Leo VI was arrested and beaten by a watchman when he decided to walk at night. Yet lights were used in public buildings (bathhouses, amphitheaters) and in special situations—in lighthouses, on boats, for optical signals (see Beacons), and in warfare.

—A.K., L.Ph.B.

**LIKANDOS.** See Lykandos.

**LIMBURG AN-DER-LAHN RELIQUARY,** the most resplendent extant example of a Byz. *staurotheke*, that is, a container for a fragment of the True Cross. It consists of two chronologically distinct parts unified, however, by the common use of silver-gilt, enamel, and gems. The front displays images of the Deesis, developed to include the archangels Michael and Gabriel, the 12 apostles and military saints, as well as an inscription in which Basil the Notos is given the title of *proedros*, thus indicating a date after 963. Basil claims responsibility for the work in verses that relate its splendor to the beauty of Christ who died on the wood contained in the reliquary. In the same spirit, the back is decorated with a foliate cross. The reliquary itself was set within an inner, cruciform compartment, surrounded by seraphim, cherubim, and other heavenly powers represented on the lids of compartments labeled for relics of Christ (such as the towel with which he washed the apostles’ feet), of the Virgin, and of St. John the Baptist. An inscription on the frame for the Cross names two emperors, Constantine (VII) and Romanos (probably I, but possibly II). They are said to have crushed the barbarians as Christ shattered the gates of Hell. In 1207 the reliquary was brought from Constantinople to the West by the Crusader Heinrich von Ulmen.

Limburg an-der-Lahn Reliquary. Interior of the box with the setting for the cross reliquary and compartments for various other relics. Cathedral Treasury, Limburg an-der-Lahn.

—M.E.F., A.C.

LIMES, a Roman term designating the boundary, esp. the system of frontier fortifications that was developed in Britain, Upper Germany, RAETIA, the Danubian provinces (PANNONIA, SCYTHIA MINOR), the eastern provinces (SYRIA, PALESTINE), and AFRICA from the 2nd C. onward. Different in different areas and periods, the fortifications of the LIMES have not yet been properly categorized. Their major elements include palisades, earthen walls, ditches, wooden towers, and forts. Under Diocletian (or earlier) appeared the castella, or quadriburgia, of the so-called Diocletianic type — relatively small forts, square in plan, with square angle- and interval-towers that saddle the curtain walls (J. Lander in Roman Frontier Studies, ed. W.S. Hanson, L.J.F. Keppie, vol. 3 [Oxford 1980] 1051–60). On the Middle Danube, Valentinian I organized active construction of new fortifications but, after the catastrophe at Adrianople in 378, the LIMES was restructured: forts became smaller, while towers of smaller size were abandoned and replaced by larger ones (S. Soproni, Die letzten Jahrzehnte des pannonischen Limes [Munich 1985] 98ff.). Attempts to fortify the frontier took place again under Anastasios I and Justinian I; among the new forts and walls erected at this time were the LONG WALL in Thrace and the fortification in southwestern Crimea. New forts were constructed on the Lower Danube in the second half of the 10th C.

From the 4th C. onward, the settled garrisons of LIMITANI were placed along the LIMES. Farming communities were transplanted to the LIMES to guarantee the upkeep and provisioning of forts (M. Gichon in StMlRom 1 [1967] 191ff). Eventually, the LIMITANI themselves became settled farmers. The LIMES was also a factor in the increased activity of artisans in the frontier districts (A. Rădulescu in StMlRom 2 [1977] 387–92).

—A.K.

LIMISA (Ksar Lemsa), site of one of the best-preserved Byz. quadriburgia (four-towered forts) in North Africa. Its position on the Oued Maarouf along the southeastern slope of the Tunisian doral served to guard against MAURI incursions into the province of AFRICA PROCONSULARIS. The fort itself is undated. Diehl (L’Afrique 205–10) proposed a Justinianic date. Pringle (infra), drawing attention to an inscription referring to the construction of a turris in the reign of Maurice and found 1 km east of Ksar Lemsa, suggested that inscription and fort belong together (in which case turris would refer to the fort itself). P.-A. Fevrier (Revue de l’Occident Musulman et de la Méditerranée 35 [1983] 35), however, rejected the link between the two on the grounds that the inscription refers to a singular turrin, unlikely to be anything more than an isolated tower. Apart from a reference to
an *episcopus Limnicensis* at the council of 646, nothing else is known of the settlement’s history.

**LIMITANEI** (from Lat. *limes*), late Roman Empire frontier soldiers, as opposed to the mobile army of the comitatenses. The origin of *limitanei* is unclear; the *Historia Augusta* (ed. Hohl, 1:298.5-6) asserts that Severus Alexander (222-35) assigned conquered land to the *limitanei*, but O. Seeck (*RE* 2.R. 1 [1920] 917) rejects this statement as a forgery. A 6th-C. historian (Malal. 308.17-19) says that Diocletian built fortresses on the eastern frontier and stationed *limitanei* there. The term *ripenses*, or *riparienses*, was used between 325 and 400 for frontier soldiers on the Danube, from Scythia to Pannonia Secunda, but from 369 onward (*Cod.Theod. XII* 1.56) the term was replaced by *limitanei*. Cavalry and infantry *limitanei* formed units under the command of a *dux* (see Doux), with normally two legions in each province, while auxiliary troops were under the command of the governor of the province. Less privileged than *comitatenses*, the *limitanei* had to serve 25 years; they received *annona* in kind for nine months a year and money for three months; from the second half of the 4th C. the entire *annona* was commuted to cash. Officers tried to secure most of the pay for themselves and, according to Themistios (ed. Schenkl, Downey, 1:207.1-19), urged soldiers to make their living by plundering the vicinity. *Limitanei* were peasant soldiers, and Justinian (*Cod.Just. I* 27.8) describes their duty as “defending the castles and towns of frontier districts and tilling the soil.” Enrollment in the border troops was hereditary, from father to son. By the 6th C. the *limitanei* grew inefficient, and Prokopios (*SH* 24.12-13) reports that Justinian deprived them of the “name of warriors.” The system disappeared after the old *limes* was overrun by barbarians, and the last mention is probably for 586.

**LINE AND CONTOUR**, the essential means by which form is defined in the artistic theory of the church fathers and later Greek writers. Eusebius of Caesarea (PG 20:1545C) objected to the making of holy images on the grounds that delineations (*skiaographiai*) and the colors added thereafter are inanimate; John Chrysostom (PG 51:247-49) describes the creation of imperial portraits in terms of white lines sketched around their figures. “Shadowy outline” (*apokrisma*) was, for Andrew of Crete (PG 97:1213C), the first step that painters took before applying color. According to Ignatios the Deacon in his vita of Tarasios (418.10-14), additions were the work of the master and his companions after the master had drawn the black sketch that “announced the design.” These views accord with practice. A standard technique of *mosaic* decoration was the outlining of figures with courses of tesserae; wall painters imitated this method. Ivory craftsmen defined carved figures with contours before cutting away superfluous material, while the technique of *enameling* called for both contour and interior lines. This emphasis on linearity militated against *plasticity* and substituted for the classical aesthetic a manner that was characteristically Byz.

**LINEAGE.** The nuclear family became the cornerstone of Byz. society by the 8th C.; even earlier the Roman concept of *gens*, with its inner links and family *names*, was in a state of decline. The extended family, living together in a single household (e.g., the three-generation family of St. Philiparetos the Merciful) continued to exist, but on the other hand there is no evidence of the concept of lineage as a community based on kinship and mutual support. So far as can be judged by the history of the Heraklian dynasty in the 7th C., family links were considered dangerous and burdensome rather than supportive. The reappearance of lineage can be dated to ca.1000; after this date family names are abundant in sources; certainly some lineages (Skleros, Phokas, Doukas) were established a century earlier.

**LINCOLN COLLEGE TYPIKON.** See Bebaisas Elpidios Nunnery.
From the end of the 11th C., lineages became the basis of political organization and, unlike the 7th-C. emperors, the Komnenoi and later Palaiologoi were supported by an expanded network of kinship. The Byz. lineage of the 12th–15th C. remained, however, a loose social grouping: it was not strictly patrilineal—the relatives on the maternal side were not excluded from the lineage; it had no common property; the tracing of lineage to a common ancestor (going back to the traditional heroes of Greek legends or Roman aristocratic families) and not to mythical founders of the particular lineage was in an incipient phase. The concept of princely rule as the “property” of a lineage (the principle of the Merovingians or Kievan Rus’) was never developed in Byz. —A.K.

LINEN. Even though the cultivation of flax is hardly mentioned in the Geoponika (2.40.3), it played a significant role in Byz. agriculture: stored in the proasteion of Baris, for example, in 1073 were wheat, barley, beans, and flax seeds, or linokokkoi (Patmou Engrapba 2, no.50.119–20), a term that frequently appears in later documents (e.g., Patmou Engrapba 1, no.11.27; P. Schreiner, JOB 27 [1978] 219–27). The seeds were processed in special ergasteria, called linelaiotribika (Lavra 3, no.168.4–5), and made into oil (linelaion). A chrysobell of 1088 distinguishes the seeds from the linarion, or flax fibers (Patmou Engrapba 1, no.6.55), whereas a chrysobell of 1086 considers linarion as a kind of seed (Lavra 1, no.48.41–42).

The fibers of flax were used to produce textiles. In the late Roman period Egypt was the traditional center of the linen industry: the spinning of linen thread was often a household industry there (e.g., Palladius, Hist.Laus., ed. Butler, 21.19–20, 86.10–12). The linen thread was then given to linen weavers, linojphi (e.g., T. Nissen, BZ 38 [1938] 367.27–28). After Egypt fell to the Arabs in the 7th C., linen cloth was imported to Constantinople primarily from Bulgaria and the regions of Strymon, Pontos, and Kerasous. The linen merchants, othonioprazi (also called mithaneis), purchased the linen cloth and resold it to either vestioprazi or any would-be purchaser on condition that the linen would not be sold yet again. The othonioprazi also dealt in bambakina (cotton?) tunics. The 10th-C. Book of the Eparch (ch.9) distinguishes the othonioprazi from linen weavers, who were prohibited from selling their wares in ergasteria but had to carry them around “on their shoulders” to peddle them. The profession of linen merchant was evidently held in some contempt—a 12th-C. historian (Nik.Chon. 484.69) was indignant that some of these merchants (along with money changers) were granted noble titles.

Linen cloth was used primarily for tunics and burial shrouds but could be of varied quality and function. Some fine linen was used to make tablecloths (TheophCont 204.1–2); a court decision of 1384 lists various objects used in a bedchamber, including a red linen pillowcase (linokoukoulon) whose value was estimated at 4 hyperpers (Docheiar., no.49.29); Niketas Choniates (74.43–44) mentions “gold-laced” linen produced in Thebes. In the 9th C. the widow Danelis reportedly brought various textiles from the Peloponnese: among them were linomalatarias (fine fabrics) and plain soft linen as well as cloths “finer than cobwebs,” each of which could be folded and fit inside a burluhs (TheophCont 318.15–18).

The place where flax was worked was called linobrocheion, and it is possible that in the 13th–15th C. the use of the lord’s linobrocheion became a coercive obligation, a banality.

LIONS (sing. λέων) were rare in Byz., esp. after the loss of the southern provinces in the 7th C. In the early centuries they were exhibited in the Hippodrome, and tame lions performed in street shows (John Chrysostom, PG 54:591.35–40), earning money for their keepers; in the later period we hear of lions with iron collars kept in cages (Nik.Chon. 349.94–95). The taming of a lion was a typical subject of early hagiography: lions were represented not only as caring for holy men and women in the desert, but even digging a hermit’s grave after his solitary death (Deux versions grecques inédites de la Vie de Paul de Thèbes, ed. J. Bidez [Gand 1909] 28–33).

Despite its rarity, the lion, “the fierce and imperial beast” (PG 54:699.10–11), played an important role in Byz. imagery. Although it is doubtful that the Byz. actually hunted lions after the 7th C., the hunting and slaughter of lions were standard topics in imperial iconography, a tradi-
tion that joined with David’s killing of the lion (1 Sam 17:34–36) to produce the perennial theme of the Old Testament shepherd-king protecting his flock; one of the David Plates and much Psalter illustration are the best-known examples of this confluence. The victories over lions (or panthers?) by Digenes and his father, described in the Digenes Akritas, have rather legendary features. Traditional proverbs and sayings based on the Bible, Aesop, and other texts present the lion as a mighty beast that, however, could suffer from a mosquito or whose fangs could be broken. The Byz. perception of the lion was ambivalent: on the one hand, it was the symbol of Christ and the basileus as powerful victors; on the other hand, it was a roaring beast, the symbol of impurity, particularly associated with the Iconoclast emperors, Leo III and Leo V. In the Diegesis ton tetrapodon zoon the lion, as the ruler of the animal kingdom, is the protector of predators.

LIPARI (Λιπάρις), main island of the Aeolian archipelago, port on the route from Sicily to Rome. According to archaeological material (ceramics, coins, inscriptions), the island seems to have been quite well populated until the end of the 5th C. The lack of later material may be attributed to the partial desertion of the island following the eruption of the local volcano in the late 7th or 8th C. The Arabs conquered and devastated the island in 835–38. Seat of a bishop, suffragan of the metropolitan of Syracuse, Lipari was a famous place of pilgrimage because of the relics of the apostle Bartholomew, venerated there from the 6th C. onward. It was also a place of banishment for political exiles from late antiquity to the early 9th C. No Byz. monument survives in Lipari.

LIT. L. Bernabò-Brea, Le isole Eolie dal tardo antico ai Normanni (Ravenna 1988). —V.x.F.

LIPARITES (Λιπαρίτης), a family name of Iberian (Georgian) origin. The founder of the family, Liparit IV, duke of Trialei, was the chief Caucasian ally of Byz., who in 1048/9 commanded the Iberian troops that fought together with the Byz. army against the Seljuk. Taken captive, Liparit was soon released by Tughrul Beg. After long involvement in Georgian feuds, he was encouraged to leave Georgia, went to Constantinople, took the monastic habit under the name of Antony, and died between 1062 and 1064. His sons Ivane and Niania served the empire (Niania died in Ani, whereas Ivane returned to Georgia), but later some descendants of Liparit joined the Seljuk. One branch of the Liparites family, however, remained in Byz.: in 1177 Basil Liparites was a judge; an anonymous 12th-C. epigram mentions Bardas Liparites; according to Laurent (Coll. Orghidan, no.248), Constantine Liparites served as kommerkiarios in the 11th C.

—A.K.

LIPS (Λύψ, lit. “the southwest wind”; also Libes/Libas [on a seal]), the last name or a sobriquet of a 10th-C. family of Constantinopolitan dignitaries. There is considerable confusion about the biography and chronology of the best-known member of the family, Constantine Lips. According to the chroniclers, Constantine was a contemporary of Leo VI and restored a monastery in Mardosangaris (a region of Constantinople) near the Church of the Holy Apostles. A legend has it that he invited the emperor to the inauguration (enkainia) of the monastery, but a “wind called lips” blew up, destroying houses and churches and forcing the guests to scatter (Leo Gramm. 280.7–14). The monastery restored by Constantine has been identified as Fenari Isa Camii (see Lips Monastery), whose 10th-C. church preserves a fragmentary verse inscription stating that a certain Constantine dedicated the church to the Mother of God. C. Mango and E. Hawkins (DOP 18 [1964] 299–301) supplied the additional words “hetaireiarches Lips” in their conjectural reconstruction of one of the fragments. The traditional date of the inauguration, 907/8, is arbitrary, based on the false chronology of pseudo-Symeon Magistros. Constantine participated in the revolt of Constantine Doukas in 913 and fell in the battle at Achelous in 917.

Constantine VII (De adm. imp. 43.42–76) describes a Constantine, the son of Lips, who was protospatharios and domestikos of the hypourgia (an assistant of the epies trapezes) and (by 952?) anthypatos and megas hetaireiarches; he went at least three times as an envoy to the Armenians and
married his daughter to an Armenian notable who bore the Arabic name of Abu Ghanim. Mango (supra) argues that Constantine Porphyrogennetos has erroneously made this man his own contemporary and that the passage refers to the Constantine Lips of the early 10th C.

According to the *Patricia of Constantinople*, the Lips who was *patrikios* and *droungarios* of the fleet founded a monastery and a xenon during the reign of Romanos I and Constantine VII; Mango again suggests that the patriarchical tradition is in error and that this refers to the events of 907.

The *patrikios* Bardas, the son of Lips, conspired against Romanos II in 962 (Skyl. 250.65–66). Thereafter the name disappears.

—A.C., A.K.

**LIPSANOTHEK**, a conventional term applied to a small number of surviving objects thought to have contained relics, thus functionally indistinguishable from reliquaries. The word is most frequently used of a late 4th-C. (?) ivory box in Brescia (Volbach, *Elfenbeinarbeiten*, no.107), the lid and sides of which are carved with scenes from the Old Testament, New Testament, and Apocalypse. Neither its form nor iconography requires that it was originally used for relics. A smaller box in Venice (ibid., no.120), with liturgical scenes, has perhaps a better claim: from the 4th C., the Eucharist was celebrated over relics kept under the altar. This box was found, with relics, below the altar of a church at Samagher, near Pola. A composite icon, formerly known as the Stroganov Lipsanothek (*Ishusstvo Vizantii* 2, no.538), was equipped in the 11th C. and later with scenes of the Passion in enamel, portraits of saints in gilded silver, and now-empty compartments, inscribed with the names of St. John Prodromos, John Chrysostom, and others, intended for relics.

—A.C.

**LIPS MONASTERY** (Fenari Isa Camii), founded in the Lycus valley in the western part of Constantinople probably by Constantine Lips; it is traditionally believed to have been inaugurated in June 907. Whether the 10th-C. monastery was for monks or nuns is not known. The sophisticated church of 907, dedicated to the Virgin, is related in design to the Nea Ekklesia. Its cross-in-square naos (see *Church Plan Types*) has five domes (the main one supported on now-missing columns), and lateral chapels. Fragmentary inlaid icons found at the site may have served in the additional chapels of the upper story. The interior was decorated with mosaic (now lost), glazed tile, and some of the most important surviving examples of 10th-C. sculpture—the apse mullions, cornices, corbels, etc. Some of these employed “orientalizing” motifs in relief on marbles, of which many are spolia (reused tombstones, etc.).

The Dowager Empress Theodora Palaiologina (died 1303), widow of Michael VIII, restored the monastic complex, attaching a second church, dedicated to St. John the Baptist, to the south side of the 10th-C. church, as a mausoleum for the Palaiologan family, including Theodora herself, her mother, a daughter, and a son (Andronikos II). This church is wider than the 10th-C. building and boasts a much more ornate exterior, its multifaceted apses adorned with round-headed niches and decorative brickwork. Its interior has been much altered, but the dome, supported on piers at the corners of the naos with intervening pairs of columns, and 16 arcocelia survive. The graves are distributed through the naos, the narthex, and the groin-vaulted ambulatory that wraps around the south flank of the newer church and connects it at the west to that of Lips. This pretentious complex was built to emulate the Pan-tektrator Monastery, the mausoleum of the Komnenoi.

The *typikon* of Theodora (composed between 1282 and ca.1300), which survives in a deluxe MS (London, B.L. Add. 22748), indicates that the 13th-C. monastery was designed to house 50 nuns. Sphrantzes (Spfr. 34.22–24) notes that in the late 14th C. Lips was one of the larger nunnerys in Constantinople. Theodora and her mother endowed the convent with substantial properties in Asia Minor (near Pergamon and Smyrna), Thrace, Macedonia, and Constantinople itself, with certain revenues specified for the upkeep of an attached, 12-bed hospital with a staff of 21, including a priest, three doctors, and three pharmacists.

LIRIS. See Garigliano.

LITANY (λειταγεία), a series of short liturgical petitions, usually voiced by a deacon, that precede an oration, and to which the congregation replies with a fixed response, most commonly Kyrie eleison, one or more times. Litanies first appear in late 4th-C. Greek texts in the region of Antioch. Structurally they are a development of the primitive invitation to prayer (Taft, East & West 154–56), in which the diaconal biddings are addressed to the praying community and the prayer to God is the people’s response. There are three Byz. litanic types, all known as early as the 4th C.: the synapte; the synapte meta ton aiteson (with demands), which has the concluding “angel of peace” biddings, originally a litany of dismissal, to conclude a service or part thereof; and the ektene, or “intensive litany,” originally used in stational processions (LITE).

LIT. Mateos, Typikon 2:279, 293, 304, 320. Taft, Great Entrance 311–49.

LITE (λιτή), a liturgical procession of clergy and people to a designated church or “station” for the celebration of a feast. In Jerusalem, these processions were limited to Holy Week; in Rome they occurred during Lent; in Constantinople they were spread throughout the church year and connected with saints’ days and major events in the history of the capital and were accompanied by antiphons and litanies. Initially, litaī served to combat heresy or plead for some special favor: the remission of sins, cessation of an earthquake, the lifting of a siege, a miracle, or to commemorate the original lita in the day when these favors were granted. There is evidence for lita in Constantinople as early as the 4th C., when John Chrysostom introduced nocturnal processions to counter those of the Arians (Taft, Liturgy of the Hours 171–73).

In the Typikon of the Great Church, there are 68 lite days, with the emperor participating in 17 of them, and the patriarch in 32. These services had a major influence on the development of the Byz. liturgy (R. Taft, OrChrP 43 [1977] 360–69). The term lite can also refer to a short service comprising a litany and prayers celebrated during a procession of this kind.

LITERACY was more widespread in Byz. than in the medieval West, esp. in cities, where elementary education was widely available, and in monasteries, where a knowledge of reading was required of choir brothers and sisters. Functional literacy was usually a prerequisite for any administrative or spiritual career. During late antiquity, attitudes toward the book changed drastically: instead of being a vocational necessity, it became a tool of religious education and a symbol of power (G. Cavallo in L’imperatore Giustiniano [Milan 1978] 235). Egyptian papyri show more illiterate persons in the 6th than in the 5th C., but the difference is primarily due to the insignificant number of 5th-C. documents (R. Calderini, Aegyptus 30 [1950] 15). Even some monastic superiors in the 6th C. were unable to sign their names (R. Merkelbach, ZPapEpig 39 [1980] 291–94). This explains why Justinian I’s novels prohibit an illiterate person from being elected bishop (Beck, Ideen, pt.III [1966], 72). Documents from the Athos archives, which sometimes bear crosses instead of signatures, indicate the existence of illiteracy, but a statistical analysis has not yet been done (N. Oikonomides, DOP 42 [1988] 167–78). Despite this general esteem for literacy, two emperors (Justin I and Basil I) were reportedly illiterate, and several illiterates climbed high on the bureaucratic ladder: for instance, when Leo VI appointed the brave sailor Podaron protospatharios of the phiale, the emperor ordered a judge of the hippodrome to assist him, since Podaron was illiterate (De adm. imp., 51.100–102). Especially in the countryside, “where education and knowledge were on a low level,” illiteracy created difficulties for the functioning of law and administration; thus Leo VI, in his novel 43, permitted the use of oral testimony in villages to authorize wills.

LITERATURE. The Byz. term closest in meaning to our concept of literature was logos, denoting the totality of texts written in artful language; hence these texts would compose the totality of knowledge, that is, they might include scientific,
legal, medical, and other texts. This perception of Byz. literature as inclusive of all forms of writing (pis'mennost', Schriftum in Russian and German terminology) is retained by the best modern scholars, such as Krumbacher, Hunger, and Beck. Attempts have been made, however, to distinguish between the entire body of writing produced in the Byz. era and literature in the narrower sense (A. Kazhdan, JÖB 28 [1979] 1–21; J.-L. van Dieten, HistZ 231 [1980] 101–9).

Traditionally, Byz. literature has been divided into three categories: secular works in the "pure" (artificial) language, literature in vernacular, and theological literature. This categorization is illogical, however, because it is based on two different principles (language and contents), and because the distinction between secular and theological literature or between pure and vernacular dialect is often too conventional. For example, the classification of hagiography as a theological genre and the Digenes Akritis and Stephanites and Ichnelates as vernacular works is debatable. I. Ševčenko (JÖB 31.1 [1981] 289–312) suggested a different classification, whose core is the existence of three levels of style (high, middle, and low), reflecting social and educational levels of writers and their public. Ševčenko's levels of style, however, are too close to the levels of grammar, and therefore limited, neglecting questions of imagery, composition, characterization of the hero, etc.; and these levels of style remain static throughout time.

Questions of language, geographical distribution, and chronology also need to be considered in treating Byz. literature. Traditionally, the framework of Byz. literature has encompassed works written in medieval Greek regardless of the place of their creation, that is, including Arab Syria (John of Damascus) and Norman Italy (Eugenios of Palermo). The mid-6th C. is sometimes chosen as a starting point, mainly on the formal and technical ground that 19th-C. textbooks on ancient literature extended their coverage to ca.550. This date does not coincide, however, with the traditional periodization of Byz. history (see Byzantium, History of) or art. In this article, Byz. literature is defined as having been written between the early 4th and mid-15th C.

Until recently, Byz. literature was considered to have had little aesthetic value and was viewed either as an inferior continuation of its Greco-Roman and patristic or biblical models, or (as far as vernacular works are concerned) praised for the qualities that made it a predecessor of modern Greek literature. In fact, medieval authors in both East and West did develop new ethical values and aesthetic approaches, for example: (1) "objectivization" of the author, whose external modesty and avowed lack of cultivation stood in sharp contrast to his proud self-conception as possessing final truth; (2) a shift from the spoken word toward the book, that is, from public oral presentation toward individual reading, that led to the extinction of the theater, a predominant genre of classical literature, and the limitation (at least temporary) of rhetoric; (3) presentation of the dramatis personae as allegorical rather than "real" figures, so that the hero became an embodiment of all moral values and the antihero a bearer of all vices; (4) sympathy for humankind, which transformed the author from a dispassionate observer of human deeds and errors, virtues and vices into one deeply involved with human sorrows and sufferings; and (5) the idea of the stability and immutability of the cosmos and man, which was reflected in the preservation of obsolete and artificial language, in imitation (mimesis), in the consistent relating of the present to the past, so that the events and personalities described were interpreted as reproductions of ancient events, biblical or patristic models. These principles were connected with general trends of Byz. culture. They were neither created in an instant at the beginning of Byz. history, nor did they remain unchanged or unopposed during the thousand years of the empire, but they formed the mainstream of Byz. literature.

Although some ancient genres survived, the system of genres was restructured. Ancient drama was criticized for immorality and replaced by the emphatically repetitive world of liturgy; poetry, also a predominantly oral form of literature, was either attached to liturgical purposes (hymn) or remained, at least after the 7th C., at the fringe of literary life, mainly as epigram. Epic gradually vanished. The tendency to inculcate official moral and political values fostered the flourishing of genres such as sermon, hagiography, gnoma, and admonitions. The sphere of personal human relations remained underdeveloped, and accordingly epistolography was consistently restricted to trivial formulas and standardized situations, and lyrical poetry was limited. Historiography,
the other hand, flourished: the Byz. were more interested in clashes of collective forces (Iconoclasts, Turks, etc.) than individuals (autobiography was a rare genre).

Byz. literature can be divided into the following phases of development:

1. *Predominance of antique traditions* (4th–mid-7th C.), including such genres as lyrical poetry (Gregory of Nazianzos) and epic as well as elements of paganism. Literary works were created in several languages (Greek, Latin, Syriac), and Greeks such as Ammianus Marcellinus or Claudian happened to be the most significant Latin writers of the period, while Romans the Melode, a Syrian or Jew, made a major contribution to the development of ecclesiastical poetry by using some oriental literary techniques. The major goal of the greatest writers (John Chrysostom, pseudo-Dionysios the Areopagite, Prokopios of Caesarea) was to express new approaches, a new vision of the universe and man, of society, and expectations for the future in traditional literary forms bequeathed by the glorious past; among others Nonnos of Panopolis (or a contemporary of his) tried to reconcile Christianity with the inherited poetical forms in a poetic paraphrase of the Gospel of St. John. Less spectacular but more innovative were attempts in hagiography and chronicles to produce “modest” stories of miracles and miracle-workers who acted partly in a completely new setting, the desert (Apophthegmata Patrum), and partly in the traditional milieu of the urban community, whose values, however, they rejected (Symeon of Emesa).

2. *Period of relative silence*, the “dark ages” (mid-7th C.–ca.800), when some significant theologians were still active (Maximos the Confessor, Germanos I), esp. in Syria after the Arab conquest (John of Damascus), whereas hardly any historiography and hagiography were produced.

3. *Revival of the 9th–10th C.* (see Encyclopedism), starting with the development of minuscule handwriting and the transliteration of texts written in uncial. Its first stage (800–850) was predominantly monastic and ecclesiastic, represented by such writers as Theophanes the Confessor, Theodore of Stoudios, Ignatios the Deacon, Niketas of Amnia, and the poet Kassia, even though some figures of the revival such as Patr. Tarasios and Nikephoros I began their careers as lay officials. After George Hamartolos, however, there was no monastic writer of importance until Symeon the Theologian (ca.1000), and lay and ecclesiastical functionaries dominated the field. The most conspicuous feature of the period is the assembling of the ancient heritage: the edition of old masters such as Homer, Plato, Aristotle, and the tragedians; issuing collections of texts (Greek Anthology) or excerpts (sponsored by Constantine VII Porphyrogennetos), lexiika, and bibliographical entries (the Bibliotheca of Photios). Even hagiography was put in order, both externally, by the assemblage of texts for liturgical purposes (Symeon Metaphrastes); and internally, when to the eccentric heroes of early vitae (desert fathers, prostitutes, women in male disguise, holy fools, stylists, etc.), which continued to be read, were added a few new types of hero, such as the generous almsgiver Philaretos the Merciful, the good matron Mary the Younger, and monks and nuns indoctrinating and obediently submitting to monastic discipline (Theodora of Thessalonike, Irene of Chrysobalanton). Theophanes the Confessor attempted to create a new type of historical writing: he adhered to the annalistic principle, and presented history as an eternal conflict between Good and Evil.

4. *Period of the 11th–mid-13th C.*, here conventionally called pre-Renaissance (see Renaissance), seems to be a contradictory period: on the one hand, the literati reacted against the encyclopedistic emphasis on order and were involved in a search for personal and even mystical experience (Symeon the Theologian); on the other hand, ancient tradition was used, not only as a source of excerpts, but as a means for understanding reality (Eustathios of Thessalonike). The idea of expressing the author’s personal experience was reborn (Psellos, Prodomos), and writers began to be openly proud of their talents. A new image of man was introduced, as one who united in a single person the positive qualities of the hero and negative qualities of the antihero (Psellos, Niketas Choniates). Topics of sexuality, including love and nudity, were presented (even if rarely) side-by-side with officially sanctioned chastity, and from the 12th C. onward the genre of romance was revived, following Hellenistic models. A new chivalric ideal was developed, both in official rhetoric (Theophylaktos of Ohrid) and historiography (esp. Nikephoros Bryennios) and in the epic of Digenes Akritas. A new type of literati emerged: neither
monk nor bureaucratic functionary, but a professional poet or intellectual, claiming poverty (Prodromos, Tzetzes), or a “university” teacher (Michael Italikos, Eustathios). Vernacular began to be used sparingly as a language of literature. Some old genres, including hagiography, went temporarily out of fashion. The Byz. were becoming less “serious”—mild humor, puns, self-mockery on the part of the author are all encountered in the period. Even the problems of artistic creativity were hotly discussed (Michael Choniates).

5. Final period (13th–15th C.) characterized by a revival of hagiography, an increasingly tragic perception of history (Chalkokondyles), a sense of incompetence in comparison with antique predecessors (Metochites), and introduction of the topic of failure and the defeat of the hero (John VI Kantakouzenos). Former confidence in God’s perpetual assistance and in final victory over the barbarians was lost. Contacts with Western literature increased: the late Byz. romance was influenced by Western chivalrous literature. The heroes of works produced in regions of Latin domination (Peloponnnesos, Epiros, Crete) were Latins or heavily latinized seigneurs (Chronicle of the Morea, Chronicle of the Tocco). A small group of authors, mostly converts to Catholicism, learned Latin and began the translation of both ancient and medieval Latin writers into Greek; a few emigrated to Italy, where they taught Greek and encouraged the translation of ancient Greek literature (primarily philosophy) into Latin. The perception of social injustice became sharper (Alexios Makrembolites), esp. in vernacular fables. A tendency to bring narrative “closer to the earth” led to the poetization of human weakness and vice (Stephen Sachilikes). On the other hand, the tendency to preserve the “dead” language along with classical stylistics remained quite strong, and the authors of this vein (Plethon, Bessarion) had great influence upon the Italian Renaissance.

LITERATURE, DIDACTIC, works written to instruct or convey facts (rather than to entertain—as in historiography, hagiography, or romance—or fulfill a ceremonial purpose); of necessity a large and diverse group. Categories of writing that can be classed under this heading include handbooks written for use in the schoolroom on, for example, grammar or meter (cf. schoedogphía, epimerismós, erotapokriseí, proymnasmata, lexíka) as well as on music, legal terms, etc.; a number of these were in political verse (for example, by Michael Psellos and John Tzetzes) or the rhythms of religious literature (e.g., the grammatical kanones of Niketas of Serres), presumably as a mnemonic device. Also to be classed as didactic are works written on such subjects as astronomy, mathematics, medicine, philosophy, and natural science.

LITHOSORIA (τὰ Λιθόσωρα), battle site of unknown location. In Oct. 774 Constantine V learned that the Bulgar khan Teleféric had dispatched an army of 12,000 to capture Berzitia and resettle its populace in Bulgaria. Berzitia’s whereabouts and ethnic composition are unknown; the inhabitants may have been Slavs dwelling in Byz. territory. Constantine promptly raised a large army (reportedly 80,000 strong) and fell on the Bulgars at Lithosoria, winning a “great victory” (Theoph. 447-23) and returning to Constantinople in triumph. It is unclear whether the name Lithosoria (“stone piles”) indicated an actual town, a natural landmark, or an artificial marker of the border between Byz. and Bulgaria.

LITHUANIA (Λιθουάνια, τὰ Λιθουαδα) originated as a state in the mid-13th C. It expanded under Gedymin (1316–41) and Olgerd (1345–77) into the principalities of Smolensk and Kiev, becoming a rival to Moscow and Tver* for control over Russia, and under Vitovt (1392–1430) expanded further along the lower Dnieper to the Black Sea. Byz. policy focused on the issue of church organization. Until 1386 Lithuania was officially pagan: Byz. sources refer to its inhabitants and
esp. the king as fire-worshipers (e.g., Greg. 3:514.7–9; MM 2:12.21, 117.32–33), and in 1364 Patr. PHILOTHEOS KOKKINOS canonized victims of Olgerd. There was, however, an Orthodox population. A metropolis may have been established as early as 1299–1300, although the only well-attested incumbents are Theophilos (ca. 1315–30), Theodoret (1352–54), Romanos (1355–62), and Kiprian (1375–81). Such appointments split the see of “Kiev and all Russia,” of which Lithuania began to be considered an independent part, characterized in the title of the Polish king as Lithorhosaia, i.e., Lithuania-Rossia (MM 2:280.22). In an ekthesis of Andronikos II it was stated that Andronikos and Patr. John XIII Glykys transformed to Lיתבoda, the district (enoria) of “Great Rossia,” into a metropolis (Notitiae CP, no. 17.89). This action could be seen as antagonistic toward Moscow. In 1386 Lithuania and Poland came under the sole rule of Jagiello (1377–1432), who converted to Catholicism. Laonikos Chalkokondyles (Chalk. 1:125.3–19) described Lithuania as a vast Catholic country with a distinctive language (Ditten, Russland-Exkurs 96f).

LITOS (λίτος, “simple”), term applied to a certain category of titled dignitaries. In describing the future emperor Marcian as a stratiosites litos, Theophanes (Theoph. 104.2) uses the word in a non-technical sense of “common, plain.” In the taktiaka of the 9th C. and 10th C. the term appears as a synonym of the apratos to characterize a dignitary without function. In descriptions of MSS, the term litos seems to describe uncial script.

LITRA (λίτρα, Lat. libra), unit of weight of various sizes.

1. The most important Byz. measure of weight was the logarikhe litra (“pound of calculation”), established by Constantine I in 309 or 310 as the basis of the monetary system: 1 logarikhe litra of gold = 72 solidi or exagia = 12 oungiai = 1,728 keratia = 6,912 sitokokka = 1/100 kentenarion. The exact weight of the logarikhe litra is disputed; its theoretical norm seems to have been slowly debased from approximately 324 g to 319 g. The logarikhe litra is normally simply called litra, but it could also be termed chrysothikhe (gold) or thalassia (maritime) litra; sometimes in classicizing texts it is called mnu or even talanton. The logarikhe litra could also be a measure of land: 1 logarikhe litra = 1/40 thalassios metron.

2. The souallia litra was a special unit reserved for weights of oil or wood = 4/5 logarikhe litra = 256 g; 30 soualialai litrai of olive oil = 1 thalassion metron.

3. In regions such as Cyprus and Trebizond, which had regular contact with Islamic lands, a special argyrike (silver) litra of 12.5 logarikhe oungiai (= 333 g) existed alongside the other units. It was apparently related to the Arab raif of 337.6 g.

4. In the later period various “pounds” of local circulation were in use, partly of Arab, Italian, or Turkish origin.

Lit. Schilbach, Metrologia 277f. – E. Sch.

LITTLE ENTRANCE (ἡ μικρὰ εἰσόδος), ritual procession that introduces the liturgy of the Word, in which the deacon, accompanied by the priest(s) and servers, carries the evangelion from the altar into the nave and through the templon back to the altar. It symbolizes Christ’s coming as logos and is a ritual remnant of the entrance of clergy and people into church at what was once the beginning of the liturgy. At first accomplished in silence, this procession was embellished in the 6th C. with a prayer and antiphonal psalmody with two refrains, first the Trisagion, then, under Justinian I, the monogenes.

At the solemn pontifical Eucharist, celebrated by the patriarch or a bishop, the Little Entrance remained a true introit procession until at least the 12th C. (Taft, “Pontifical Liturgy” 105–10): the patriarch, waiting in the narthex, recited the introit prayer evoking the vision of the heavenly sanctuary as the Imperial Doors of Hagia Sophia stood open before him and he gazed down the nave. The entrance of the patriarch, accompanied by the chanting of the introit antiphon (Ps 94), sung as the procession moved forward, presaged the appearance among the people of the Heavenly Celebrant himself.

On entering the sanctuary, the patriarch kissed the endyte and reverenced the altar with candles.
and incense while the Trisagion was sung; he then went to his throne in the apse for the Lections. When the emperor participated, he joined the patriarch in the narthex and proceeded with him down the nave of the church and into the sanctuary where he offered gifts (De cer., bk.1, ch.9, ed. Reiske 64f). An imperial entrance procession of this sort has been depicted in the mosaics of San Vitale in Ravenna.

Called by Maximos the Confessor “entrance of the people with the bishop” (PG 91:688D) and by Patr. Germanos I “entrance of the Gospel” (Germanos, Liturgy, par.24), it was only later called “Little” Entrance (Diakysis of Philotheos Kokkinos, Hæi tres leitourgikai kata tous en Athenais kodikas, ed. P. Trempelas [Athens 1935] p.6) to distinguish it from the Great Entrance.

-LITURGICAL BOOKS are of two kinds: books that contain liturgical texts actually used in the services, and books that regulate how those texts are to be used. The texts themselves comprise fixed and variable elements.

Books of the “ordinary,” or invariable, part of the Liturgy are the archieratikon and euchologion, for the use of the bishop and presbyter; the diakonikon, for the deacon; and the horologion, for monks, choir, or anagnostes at the liturgical hours. Books of the variable, or “proper,” parts include the various types of lectionary; anthologies of sermons (panegyrikon, menologion); and the synaxarion and the Psalter (the antiphonarion and psallerion, see Psalmody), used for the eucharistic service and for liturgical hours by deacon, anagnostes, and the singers. The oktoechos, triodion, and pentekostarion, books for the mobile feasts of the church calendar, are hymn books for the use of the choir, as is the menaion for the fixed feasts.

These last four books are the result of liturgical changes in the post-Iconoclastic period, when new texts composed for the developing poetical form, the kanon sung during orthros, supersede older compositions such as the acrostic kontakion. The separate liturgical books that contained these older compositions, namely the kontakarion, stichera- rion, tropologion, and hieirologion, were thus rendered obsolete.

The liturgical typikon governs the services and, when the multiple “propers” conflict, regulates which is to prevail. The diataxis is a book of rubrics, telling the celebrants what to do when, esp. at the celebration of Eucharist. The distinction between liturgical books is often blurred, that is, material in one book may appear in another as well. Other liturgical books are but extracts of those already mentioned (for leitourgikon, hieratikon, hagiasmaterion, see Euchologion).

-LITURGICAL HOURS. See Hours, Liturgical.

-LITURGICAL PLATE. See Paten and Asteriskos.

-LITURGICAL ROLLS. See Rolls, Liturgical.

-LITURGICAL VESSELS (σκεύη λειτουργικά) and related objects formed part of the church treasures. From at least the 4th C. onward they comprised several main categories of objects used for the rites of the Eucharist (chalice, paten and asteriskos, spoons, ewers for wine and water) and baptism (basin for water, flask for oil). Other objects (e.g., the rhhipidion, Gospel book cover, reliquary, cross, censer, chernixostenon, and lighting fixtures)—often of valuable materials—used in the church were not essential to the performance of the liturgy. Although liturgical vessels are known in glass, precious stones, and marble, they were most often made of precious metal, sometimes gold but mainly silver, the earliest extant set in the latter metal being the 4th-C. Durobrivae Treasure from Roman Britain (K.S. Painter, The Water Newton Early Christian Silver [London 1977]). By the 10th–11th C., chalices and patens were also made of tinned copper (e.g., DOCat 1, nos. 89–90).

While liturgical vessels and objects of the 4th–7th C. bore dedicatory inscriptions, those made

LITURGY (λειτουργία, lit. "service"), in the New Testament a life of service modeled on Jesus' self-giving; also, church services (sacraments, esp. EUCHARIST, BAPTISM; other AKOLOUTHIAI) that memorialize this mystery in obedience to Jesus' command.

Liturgical ceremonies involve the symbolic use of sensible objects such as BREAD, WINE, water, OIL, salt, CANDLES, INCENSE, ICONS, furnishings (ALTAR, baptismal font), vesture (ecclesiastical costume, baptismal robe), edifices (church, BAPTISTRY, sketeophylakeion), and ritual GESTURES or actions such as ANOINTING, blessing, signing, bathing or washing, imposition of hands, touching, kissing, dressing or stripping, eating, processions, proskynesis, KNEELING, and other postures. These objects and signs have an agreed-upon meaning expressed in the formulas that accompany the ritual. Though rooted in natural symbolism, the prime significance of liturgical symbols derives from their New Testament transformation into signs of God's saving work in Jesus (e.g., the LORD'S SUPPER, the bath of baptism). Secondary symbols and gestures (e.g., the baptismal anointings) were added later to explicate this core.

The liturgy was usually presided over by a minister in priestly orders (bishop or presbyter) and directed by a deacon who regulated the gestures and posture of the congregation via instructions (DIAKONIA) and announced the intentions of their prayer (LITANY). The liturgical system of a church, comprising the totality of its particular rites and usages, is also called a "rite" (LATIN RITE, BYZANTINE RITE).

Liturgical ceremonies contain both fixed and variable elements. The "ordinary" is the basic skeleton that remains invariable regardless of the day, feast, or season. The texts of the ordinary express a service's changeless purpose; for example, VESPERS is always evening prayer. The "proper" comprises those pieces (LECTIONS, HYMNS, PSALMS, refrains, etc.) that vary with the day, feast, or season. Christmas Vespers is evening prayer in commemoration of the Nativity. The texts of the proper are contained in a variety of different liturgical books.

In Byz. the term liturgy refers specifically to the ritual of the Eucharist, often called the Divine Liturgy (he theia leitourgia) of which there were two parallel Constantinopolitan formularies, attributed to JOHN CHRYSOSTOM, who seemingly elaborated an existing anaphora of the Apostles, and to BASIL THE GREAT, who is believed to have authored at least one of the redactions of the anaphora named for him (A. Raes, REB 16 [1958] 158–61; G. Wagner, Der Ursprung des Chrysostomusliturgie [Münster 1973]). Each formulary comprises 19 PRAYERS (euchai), the main one a borrowed Antiochene-type ANAPHORA (Chrysostom's from Antioch, Basil's from Cappadocia), elaborated and embedded in a common ritual setting and structure of DIAKONIA, lections, psalmody, and chants. Ten of these prayers are later additions common to both liturgies.

The liturgy of Basil predominated in Byz. until ca. 1000, when that of Chrysostom took over; the liturgy of Basil was thereafter celebrated only ten times a year (Sundays of Lent; 1 Jan.; Thursday
and Saturday of Holy Week; and the vigils of Nativity and Epiphany, the two feasts with para-
mone). Byz. authors claim, dubiously, that this change occurred because the Chrysostom liturgy was shorter.

In its full form, largely complete by the 12th C., the liturgy had four major parts: (1) the pro-
thesis rite, or preliminary preparation of the bread and wine; (2) the enarxis, or introductory service of three antiphons, litanies, and prayers (Mateos, La parole 27–90); (3) the Liturgy of the Word, which opened with the Little Entrance and Trisagion, comprising scripture lections interspersed with psalmody and concluding by li-
tanies and prayers (ibid., 91–173); (4) the Liturgy of Eucharist, which opened with the Great En-
trance and included the preanaphoral rites, anaphoral dialogue, anaphora, precommunion (includ-
ing fraction, zeon), communion, thanksgiv-
ing, and dismissal.

The early liturgy, described in the homilies of John Chrysostom at Constantinople in 397–404 (van de Paverd, Messlittenie 425–535), was a clas-
sical late antique Eucharist whose texts had been marked by the Arian controversy and the defini-
tions of the First Council of Nicaea. In the 5th–6th C., esp. with the construction of Hagia So-
phia, the liturgy became “imperial,” acquiring greater ritual splendor. This period witnessed the addi-
tion of the Creed and three important chants: Trisagion, Monogenes, Cherubikon.

In the 5th–7th C. the liturgy was esp. marked by the developing Constantinopolitan system of stational services (J. Baldovin, The Urban Character of Christian Worship [Rome 1987] 167–226). In such a system the entire city was “liturgical space,” and the principal liturgy of a feast, held at a predetermined “station” (synaxis), was preceded by a procession (liti) up to 10 km long. Though frequent in the 6th–7th C., such processions later took place in Constantinople only on certain im-
portant occasions. Several elements of the first half of the liturgy, however—the opening of the synapte litany, the three antiphons, the Trisagion and its accompanying prayer, and the ektene litany after the Gospel—derive from these processions.

Other developments include the addition of litanies to cover the priests’ silent recitation of the prayers and, in the 9th–12th C., the evolution of the prothesis rite and the addition of certain for-
mulas to the preanaphoral rites. Much of this later development was the retroinfluence of mystagogic interpretations of the liturgy as a representation of Jesus’ early life (see Commentaries).

Especially characteristic of the liturgy are the introits, or entrances, which open and symbolize the two major parts of the service. The Little Entrance symbolizes Christ’s coming as Word (Logos); the Great Entrance prefigures his coming in the sacrament of his body and blood. Both these foreshadowings are fulfilled in two later appear-
ances—when the deacon proceeds to the ambo for the proclamation of the Gospel, and when the priest comes out to distribute the consecrated gifts in communion—thus completing the symbolic structure of the liturgy.

As the liturgy underwent increased monastic influence, esp. after Iconoclasm and after the Latin occupation of Constantinople, these ritual processions were gradually compressed; once functional entrances, they were increasingly con-
finned to the interior space of a church and re-
duced to purely symbolic ritual turns that end where they began. The churches themselves be-
came smaller and smaller, and the ritual more private, retreating into the enclosed sanctuary, as the templon evolved into the iconostasis. The synthronon, once elevated so that the clergy could see and be seen, disappeared from the apse; lections and sermons became a ritualized formality, and communion, the point of the whole lit-
urgy, became a dead letter as fewer and fewer communicants approached to receive the sacra-
ment.

The Stoudite typika introduced into the liturgy some usages from the monastic hours (e.g., the typika [see Presanctified, Liturgy of the] and the apolysis, or dismissal); the mid-14th-C. diaita of Patr. Philotheos Kokinos and the Sabaitic typika fixed the final ceremonial and use of the liturgy in Byz.

RIFF. M. Liutprand of Cremona (also Liuoz and other forms), Lombard statesman and historian; born ca.920, died before 20 July 972 (?), certainly
before 5 Mar. 973. Liutprand was raised at the court of Hugh, king of Italy (927–47), became a deacon at Pavia, and served in Berengar II's (950–61) chancery before defecting to Otto I and probably joining his chapel (958–61; homily delivered there, ed. B. Bischoff, Anedota novissima [Stuttgart 1984] 24–34). Liutprand accompanied Otto to Italy, received the bishopric of Cremona, helped depose two popes, and figured prominently in Otto's service (962–70; cf. his Book of the Deeds of Otto). Liutprand knew a surprising amount of Greek (J. Koder, infra, against B.S. Karageorgos, Liutprandos ho episkopos Kremones hoi historikos kai diplomatès [Athens 1978]); Munich, Bayer. Staatsbibl. CLM 6888 suggests that Liutprand or members of his milieu were among the first Westerners to use Greek minuscule. Liutprand's father and stepfather had conducted embassies to Constantinople (927 and 942), and Liutprand visited Byz. at least three times (Koder, infra 60). His embassy (17 Sept. 949–31 Mar. 950 or later) on Berengar's behalf brought him familiarity with the Byz. court and friendship with Constantine VII; Liutprand may have supplied data for De administrando imperio, ch.26 (De adm. imp. 108–12; cf. R.J.H. Jenkins, ibid., 2:83–87). His second embassy (4 June–2 Oct. 968), which was supposed to settle relations in Italy and obtain from Nikephoros II Phokas a Byz. bride for Otto II, was a failure. Whether Liutprand participated in the embassy of 971 that brought Theophano to Otto II is unknown.

Liutprand's knowledge, acute observation, and literary talent combine with a quicksilver personality and polemical or humorous distortions to produce a penetrating—often disingenuous—account of Byz. diplomacy, court politics and ceremonial, and daily life. His Antapodosis (Tit for Tat), an unfinished history of Byz., Germany, and Italy (888–949) composed between 958 and 962, began as literary retribution against Berengar. Despite muddled chronology, its anecdotal account is rich in Byz. data. Descriptions of events from before Liutprand's lifetime derive from oral sources—possibly in Constantine VII's milieu—or lost written sources shared with surviving Byz. historians. The Antapodosis reports, for example, the claim that the Nea Ekklesia was Basil I's expiation for murdering Michael III (bk.1, ch.10 [ed. Becker, p.9.1–20]; cf. bk.3, chs. 33–34 [pp. 89.21–90.5]), the nocturnal security of Constantinople (1.11 [pp. 11.3–13.6]), Byz. relations with Italy (2.45 [pp. 57.17–58.7]; 2.52–54 [p.62.4–25]; 3.22–38 [pp. 82.9–22]; 5.9 [pp. 134.33–135.9]; 5.14–15 pp. 137.8–139.4, esp. on the Rus'), and with Romans (1.50 [pp. 141.16–145.19]), while book 6 (pp. 152–58, apparently incomplete) glowingly describes Liutprand's first embassy to Constantinople.

Liutprand's Relatio de legatione Constantinopolitana (Narrative of an Embassy to Constantinople) testily depicts the second embassy in a report to Otto I (possibly intended as propaganda against Byz.—M. Lintzel, Studien über Liutprand von Cremona [Berlin 1933] 35–56; cf. W. Ohnsorge, BZ 54 [1961] 28–52). Its accurate portrait of daily life (e.g., food, ch.20 [p.185.15–21]), Nikephoros II, his court, its acclamations, ceremonies (e.g., the Pentecost procession and banquet, chs. 8–13 [pp. 180.14–183.12]), and personalities (Leo Phokas, Basil the Nothos) is infused with sarcasm and malevolent interpretation, perhaps inspired in part by Liutprand's earlier warm relations with Constantine VII.

-M.Cc.

LIVESTOCK. The Byz. raised horses, oxen, water buffalo, camels, donkeys, mules, swine, sheep, and goats. Cadastral records of the late Roman Empire suggest a serious understocking, in some regions at least (C.E. Stevens, CEH 1:95). Later the situation changed: already in the Farmer's Law cattle breeding apparently took priority over the cultivation of the soil. In the 12th C. the pilgrim Daniel Igumen was astonished at the amount of stock he saw on Patmos, Rhodes, and Cyprus, and the Norman jongleur Ambroise emphasized the abundance of victuals, cattle, fowl, and wine on Cyprus (M.J. Hubert, J.J. La Monte, The Crusade of Richard Lion-Heart [New York 1941] 92, 106f). Especially rich in cattle and flocks were lands in Anatolia east of the Sangarios (PaphLAGONIA, Cappadocia, Lykandos, etc.) and in Bulgaria. The evidence of bones found in excavations in Bulgaria indicates that by the 12th C. there
was, at least in some areas, an increase in the percentage of cattle among the livestock, which suggests a higher level of agricultural production (Z. Vukarova, Slavjano-bulgarsko selisce kraj selo Popina [Sofia 1956] 89). Leo of Synada (ep.54.28–34) reports that Pylae in Asia Minor was a center of livestock trade in the 10th C.; it was chocked with pigs, asses, cattle, horses, and sheep—all destined for the capital. As late as the 14th C. great landowners such as John VI Kantakouzenos possessed enormous herds in Thrace.

Livestock were used for dairy products (esp. cheese) and meat, for pulling carts and plows, and as beasts of burden. The animals also provided valuable manure for enriching the soil. In certain areas of Asia Minor, as attested by Leo of Synada (ep.43.9–11), dung mixed with straw was burned in place of wood.

LIPIOS (λιπίος), liege; a Byz. term appropriating the Western feudal concept of liege-homage, applied during the 12th and 13th C. to Westerners with whom the emperor established a personal bond, yet not used in his relationships with Greek subjects of the empire. The first Greek source to use the term lizios is the Alexiad (An.Komm. 3:125.28–30). In the account of the treaty of Devol in 1108 between Alexios I and the defeated Norman prince Bohemund, the latter promised to be faithful to the emperor as “the liege-man (lizios anthropos) of your scepter” and to give him assistance against all enemies of the empire, as was his duty as a vassal (oikeses kai hypocherrios). In recognition of this, the principality of Antioch was granted to Bohemund as an imperial fief (R.-J. Lilie, Byzanz und die Kreuzzfahrerstaaten [Munich 1981] 67–69). Among the lizoi of the 12th C. were princes such as Raymond of Poitiers and Ladias of Bohemia and high-ranking functionaries such as Roger “Sclaus” and Theorianos; in the 13th C. the wealthy kaballarios Syrgares (possibly Sir Harry), a pronoia holder in the area of Smyrna, was titled lizios. The term could be used for a designation of collective vassalage: thus the citizens of Ancona acknowledged themselves as lizoi of Manuel I (Nik.Chon. 201.13); in 1273 Michael VIII recognized the Genoese of Galata as “his men (idioi) or lizoi, as one of them might say” (Pachym., ed. Failler 2:471.8). The term seems to have disappeared thereafter.

–M.B.

LOAN (δανείον), the conveyance of money or other movable things on the understanding that the recipient will return to the donor analogous objects in the same quantity. The loan differs from a loan for use (chresis, commodatum), which had as its object the mere use of things (movable or immovable) given on condition that they be returned as such. Moreover, the loan for use was free of charge, while the loan proper had to be repaid. Technically speaking, a misthosis (locatio-conductio) fell between a loan and a loan for use, since, in that case, a remuneration (misthos) was paid for a transmission of use that did not lead to ownership. Justinianic law preserved these older Roman distinctions quite exactly, as did the legal texts of the 9th–11th C. (e.g., Basilia, Prochiron, Michael Attaleiates) and Constantine Hemenopoulos. However, as the dearth of surviving loan-formulas shows, practice appears to have been otherwise. The actual situation is unfortunately poorly understood, since the Byz. credit system which was closely connected with loan contracts, has been examined only from papyri down to the 7th C. It is therefore unclear to what extent the circumstances assumed by Justinian I in novel 136 (a.535) on bankers’ contracts actually held true for later periods. The regulations found in the Book of the Eparch for jewelers (ch.2) and bankers (ch.3) yield scarcely any information about business transactions. The 11th-C. tractatus de credits deals less with the nature of credit than with rules governing the precedence of various claims secured by pignus (e.g., claims on the dowry or claims of the state, etc.) and is, moreover, completely academic. Yet a case handled by Demetrios Chomatenos (no.92) shows that the practice of obtaining a loan to cultivate a field in the 13th C. differs little from that found in the Hellenistic papyri. The remuneration paid for a loan was called interest (tokes).

–D.S.

LOCKS AND PADLOCKS. In addition to sliding and turning key-lock systems to secure doors and cabinets, the Byz. made extensive use of portable
padlocks. Only a limited number survive, but many are represented near the broken doors of Hades in images of the Anastasis. Most are "spring padlocks," so-called because the bolt is held in place by iron flange-springs that expand inside the lock chamber until, like barbs on an arrow, they cannot be removed. The bolt-flanges are compressed and the lock opened by means of a sliding key, which consists of an open circular or rectangular bit attached at right angles to a long, narrow shaft. The bit is fitted over the end of the flange and then pressed forward to compress it and release the bolt. Most spring padlocks are barrel-shaped, although some are adapted to animal forms (e.g., bulls and horses).

Lit. Vikan-Nesbitt, Security 6f. –G.V.

LOCULUS, the shell-like grave often found carved into the walls of the corridors and cubicles of catacombs. The loculi of the Roman catacombs were usually no larger than the space needed to set one body parallel to the wall; on occasion, however, loculi were intended to house more than one burial. In the catacombs and tombs of the eastern Mediterranean, and often in the Jewish catacombs, loculi were set perpendicular rather than parallel to the wall. After the burial of the body, the loculus was covered with a marble or terra-cotta plaque, usually bearing a prayer and an identifying inscription, and sealed with cement.

Lit. P. Testini, Le catacombe e gli antichi cimiteri cristiani in Roma (Bologna 1966) 135f. –W.T.

LOCUS SANCTUS (αγιός τόπος), literally, a “holy place”; practically, the goal of the pilgrim; the term hagios topos is attested on pilgrims’ ampullae. Because sanctity was believed to be physically transferable, and objects or places thus sanctified were deemed worthy of adoration and contact, Christians were impelled toward pilgrimage. A locus sanctus might be the site of a biblical event—those of the Old Testament greatly outnumbering those from the New Testament—or the home of a famous relic or a saint; some holy sites, like that of St. Menas, were popular healing shrines, with only loose religious associations. The most famous loca sancta were those in Palestine associated with the birth, miracles, and esp. the Passion of Christ, although lesser sites in great variety dotted the entire eastern Mediterranean. With the expansion of pilgrimage in the 5th–6th C., the choice and sequence of loca sancta to be visited in and around Jerusalem came to be fixed. Indeed, the visit itself involved a kind of protocol, which would typically include prayers, Bible readings, physical contact, and, when possible, participation in the appropriate liturgical service. The entire process would be facilitated by local guides, guide books and maps, and, perhaps, by an Onomastikon (such as that of Eusebius of Caesarea), a volume giving the local names for sites. Loca sancta influenced art in two ways: through the often grand and innovative architectural monuments that sprang up along the pilgrims' routes, and through the various eulogiai in which the travelers brought home with them.

LOCUS SANCTUS MARRIAGE RINGS, conventional label for a closely interrelated series of 6th- and 7th-C. octagonal gold marriage rings bearing scenes from the Palestinian Christological Cycle on the facets of the hoop. All but one show on the bezel the crowning of the bridal couple by Christ and the Virgin (see Rings, Marriage; Marriage Crowns). That they served as amulets—probably directed toward successful procreation—is suggested by their octagonal design (Alex. Trall. 2:377-20), by their Christological cycle (traditionally associated with amuletic pilgrimage eulogiai), and by the inscription from Psalm 5 on one example, "Thou hast crowned us with a shield of favor." (See also Marriage Belts.)

Lit. Vikan, "Art, Medicine, and Magic" 83. –G.V.

LOGARIASTES (λογαριαστής), financial official who functioned primarily as controller of expenses. The term is not mentioned in the Taktira of the 9th and 10th C. and is first attested in 1012 (N. Oikonomides, TM 6 [1976] 140). Guillard (infra 102) refers to a seal of a logariastes of the 10th/11th C., but the date is later (Laurent, Corpus 2, no.400). Logariastai served in various departments—the vestiarion, the sekretion of the sarkelarios (on seals of the 12th C.), in the genikon (in an act of 1088), etc. Logariastai also served in provincial administration, in monasteries, and on
the estates of private individuals. The office of the megas logariastes was created by Alexios I and is mentioned for the first time in 1094; at the beginning he served as the general controller, along with the sakellarios, but eventually replaced him. In two documents of 1196 (Lavra 1, nos. 67–68) the dikaiodotes and megas logariastes Nicholas Tripsychos acts as the president of an important tribunal (P. Lemerle, REB 19 [1961] 264f).

Logariastai are known up to the 15th C., the megas logariastes until the 14th. In the 14th C. a special logariastes of the aule (court) had the task of paying salaries to certain courtiers. The duties of the enigmatic logariastes of the chrysobulls (Laurent, Corpus 2, no. 229) are unclear.

LOGARIKE, PALAIA AND NEA (lit. "the old and new [methods of tax] accounting"), a treatise on taxation that has survived in a single MS of the late 12th C. (Paris, B.N. gr. 1670). It was written after the death of Alexios I, either between 1118 and 1120 (Hendy, infra 50) or in 1134/5 (Svoronos, infra 108, n. 2). The treatise consists of two sections. The first describes the method of estimation of surtaxes (parakolothemata) in proportion to the sum levied as demotion (kanon); the second part contains several reports (hypomnestika) of the fiscal officials of the early 12th C. and Alexios’s lyesis, or responses (rescripta). The task of the fiscal department as reflected in the treatise was to reconcile the actual situation in the provinces with the new principles created by the monetary reform of Alexios I. He required that instead of the miliareson a nomisma had to be collected, the so-called trachy palaion, which served as the basis for estimating the parakolothemata; the latter could be collected in copper coins.

lit. Hendy, Coinage 50–64. Svoronos, Cadastre 81–118.

LOGIC, a philosophical discipline concerned with distinctions between types of arguments (syllogisms) and their constituent elements (terms and propositions or premises) and with the conditions for formal validity in arguments. It developed in Byz., as it had in late antiquity, essentially in the form of glosses, commentaries on, and paraphrases of the logical corpus of Aristotle, the Organon (including the Categories, On Interpretation, Prior and Posterior Analytics, Topics, and On Sophistical Refutations). Neoplatonism had already made substantial contributions to the field. Porphyry wrote an influential introduction (Eisagoge) to the Organon; his commentaries (which included elements of Stoic logic), together with the commentaries produced esp. by members of the Neoplatonic school of Alexandria (in particular Ammonios, John Philoponos, David the Philosopher, and Elias of Alexandria) on various parts of the corpus, constituted, with the commentaries by Alexander of Aphrodisias and the paraphrases by Themistios, the foundation of work on Aristotelian logic. A long series of Byz. commentators and paraphrasers contributed to this scholarly tradition, among them Photios, Michael Psellos, Michael of Ephesus, Eustratios of Nicaea, Theodore Prodromos, Sophonias (late 13th C.), Theodore Metochites, Leo Magentenos (14th C.), George Pachymeres, John Pediasimos, and Manuel Holobolos. Because much of the Byz. material has not been properly edited or examined, it is not possible at present to write the history of the Byz. contribution to the science of logic.

Logic was considered by the commentators of the Alexandrian School as the instrument (organon) of philosophy and was thus taught at the beginning of the curriculum. This remained the case in Byz.: a training in philosophy would normally include (and sometimes go no further than) study of the elements of logic. Didactic summaries were therefore produced by the Alexandrian commentators; those by David and Elias esp. were distilled further in the Dialectics of John of Damascus and in Photios’s Amphilochia. Later Byz. synopses of logic include those by Psellos, John Italos, Blemmydes’ Compendium of Logic, and the collections of Joseph Rhakendyes and John Chortasmenos.

As logic clearly belonged to pagan philosophy, the Byz. attitude to it was as to philosophy in general. The teaching and use of logic could be justified on the grounds of the New Testament teaching that “every perfect gift is from above” (Jas 1:17) and that logic in particular is useful in the refutation of error. This approach, suggested by John of Damascus, was exemplified later in Eustratios of Nicaea’s claim that Christ used syl-
logisms. Logic also suffered, however, from movements of rejection of pagan learning, esp. in the context of conflict with a Latin Scholastic theology characterized by logical formalism. Some Byz. intellectuals, however, found merit in such theological use of logic. The logic of Latin Scholasticism was made available in Planudes' translation of Boethius and Gennadios II Scholario's translation of Peter of Spain. Byz. thinkers influenced by Neoplatonism stressed the inapplicability of logic to transcendent realities and in particular to God. For speaking of God another kind of "logic" was appropriate, the logic of negation (apophatic logic) as formulated by pseudo-Dionysios, which went beyond the limits (and principles) of logic properly speaking.

-D.O.M.

LOGOS (λόγος, lit. "word, reason"), a philosophic concept, broadly used in Stoicism and by Philo and accepted by early Christian theologians, interpreting Christ as the Logos of John 1:1–8. Origen took over the concept of the Logos as a mediator standing between the creator and the created world, "the idea of ideas," that was elaborated in Platonism (see Krämer, infra) and corresponded to Philo's Logos and the image of the divine INTELLECT in Plotinos. The "Word of the Father" was equated with the Son of God (the second person of the TRINITY), the term Logos having various connotations and associations: primarily, the idea of revelation, reason, and will as well as creation and redemption.

The concept of the Son-Logos, however, produced certain difficulties: was the Son's substance the same as the Father's? How could one reconcile the idea of the Logos being generated by the Father with the thesis of the preexistence of the Logos? What was the relation between the divine Logos and the human nature of the incarnate Christ? Is the Logos-reason the property of the Godhead (as in MONARCHIANISM) or a distinct hypostasis? If the Logos is distinct from the Father, does it mean that the Godhead could have been construed without the Logos-reason? After long disputes these problems found their solution in the concept of the TRINITY and of Christ's possession of two NATURES in one hypostatic union.

Some pre-Nicaean theologians, and sometimes later ones (e.g., Severianos of Gabala), interpreted the Logos's work of redemption in categories of priesthood: the Logos, in his capacity of high priest, would offer sacrifice to God. On this basis, in the 12th C., Soterichos Panteugenos rejected the traditional formula concerning the Eucharist as implying that the Logos was both offering and receiving the sacrifice; in contrast, Nicholas of Methone responded that the hypostatic union allows us to consider God as performing the human act of offering and the divine act of receiving.

-K.-H.U.

LOGOTHESION (λογοθήσιον), the bureau of a LOGOTHETES. In the 6th C., however, in Justinianic legislation (Nov. 128.17–18), the term referred to municipal income outside the control of the praetorian prefect. By the beginning of the 9th C. the word acquired the meaning of a bureau: the vita of Niketas of Medikon (died 824) mentions a clerk of "the so-called logothesion" (AASS, Apr. 1, p.XX D [see back of vol.]). Usually the term was accompanied by a specification, such as logothesion of the genikon (Theoph. 367.23). Seals of chrotouarios of the logothesion of the genikon are known from the 8th C. onward (Laurent, Corpus 2, nos. 354–55); the logothesion of the stratiotikon is also common on seals, while the logothesion of the dromos and of the "herds" (see LOGOTHETES TON AGELON) are mentioned infrequently. Charters of the 10th and 11th C. mention logothesia but there is no evidence that the term survived much after this date. The usual designation of a department in 12th-C. charters is sekrēton. In the ecclesiastical administrative system, according
to a prostagma of 1094, the “five logothesia” were supreme offices of the patriarchate (Darrouzès, Offikia 59).

LOGOTETES (λογοθέτης), generic term that in the taktika of the 9th and 10th C. designated a high official (one of the sekretrikoi) at the head of one of many departments with primarily but not exclusively fiscal functions. The origin of the office is unclear: it has been connected by various scholars with Roman numerarius, scriinarii, or rationales; the term was used in papyri (Preisingke, Wörterbuch 3:139) and by church fathers for subaltern officials and auditors. The Notitia dignitatum does not include the term, but it was common in the 6th C. as a designation for fiscal controllers on various levels of the administrative ladder. The seals of simple logothetai are dated predominantly to the 6th or 7th C. (Laurent, Corpus 2, nos. 269–71). A radical change in their status occurred around the 7th C. when the office of praetorian prefect lost its importance and individual departments became independent; the chiefs of some of these (dromos, genikon, stratotikon, and agelai) were called logothetai (see Logothetes tou Dromou, Logothetes tou Stratotikou, Logothetes tou Ageloon). Alexios I tried to coordinate the civil administration under the control of a single official—the logothetes sekeretion who was later replaced by the megal logothetes. The bureau (sekeretion) of a logothetes was called a logothesion through the 11th C. The term logothetes was used for other functionaries, such as the logothetes tou praitorion. Patriarchal logothetai acquired special importance after the 12th C. (Darrouzès, Offikia 359–62). Metropolitan logothetai seem to have had judicial functions (MM 6:99.14–15, a.1118; Ephig., no.28.22, a.1387).

LOGOTETES TON HYDATON (λογοθέτης τῶν ὑδατῶν, lit. “logothetes of the waters”), an obscure functionary mentioned only once: a late 11th-C. historian (Attal. 107.15–16) relates that the logothetes ton hydaton Basil Maloses was taken captive at Mantzikert in 1071. The functions of this logothetes are not clear; Ahrweiler (Structures, pt.II [1961], 250) identified him with the parathalasites, Oikonomides (Listes 314, p.153) seems to equate him to the komes hydaton.

LOGOTETES TON AEGELON (λογοθέτης τῶν ἄγελων), supervisor of the state herds of horses and mules. The office is first mentioned in the mid-9th-C. taktikon of Upenskij, while some seals of logothethai ton aegelon are dated by Laurent to the 8th–9th C. It is generally agreed that the logothetes ton aegelon succeeded the praepositus gregum of the 4th C., although there is no direct evidence of the link. According to the Kletorologion of Philotheos, estates in Asia (i.e., western Asia Minor) and Phrygia were under the control of the logothetes of the herds. Strangely enough, Philotheos included the logothetes ton aegelon in the category of stratarchai rather than as a sekretikos like the other logothetai. The role of the logothete of herds probably increased during the 10th C. and reached its zenith by the end of the 13th C. when several men of importance, including Theodore Metochites, held the post in turn. The staff of the logothete of the herds in the 9th–10th C. consisted of protonotarioi of Asia and of Phrygia, administrators of mitata (estates), and komites; seals also mention the ek prosopou and chartoularioi of the department.

LOGOTETES TON DROMOU (λογοθέτης τοῦ δρόμου), head of the sekeretion of the dromos, known since the 8th C. D.A. Miller (infra 469) identifies the first logothetes tou dromou as Leo, ca.762, while Guillard (infra 46) suggests that Gregory, an ambassador to the caliph in 742, was also logothetes tou dromou. The office derived from the curious cursus publici praesentalis, a subaltern official under the magister officiorum in charge of the public post. When the logothesion of the dromos became an independent department, probably in the 7th C., its chief acquired new duties: some
LOGOTHETES TOU PRAITORIOU (λογοθέτης τοῦ πραιτορίου), coadjutor of the eparch of the city. The office is mentioned in the mid-9th-C. taktikon of Uspenski and in the late 9th-C. Kletorologion of Philotheos, but not in later taktika. A 10th-C. historian (TheophCont 470.13–17) relates that Romanos II appointed as the eparch’s assistants two symponoi, the second of whom (the spatharokandidatos and judge Joseph) is also called logothetes tou praitorion. The last logothetes tou praitorion mentioned in literary texts is the askeireis Leo in 1023 (RegPatr, fasc. 3, no.933, with an incorrect date). Seals give a broader chronological range for the existence of the logothetai tou praitorion—from a John of the 7th/8th C. to Constantine Bringas of the 11th C. The title of the logothetes tou praitorion was usually spatharios or spatharokandidatos; since the Praitorion was one of the major prisons of Constantinople, the logothetes presumably assisted the eparch on police and judicial matters.

LOGOTHETES TOU STRATIOTIKOU (λογοθέτης τοῦ στρατιωτικοῦ), a high-ranking official. The only direct evidence for his functions is in a 10th-C. ceremonial book (De cer. 698.13–15), according to which the logothetes tou stratiotikou controlled exemptions and reestablishment of taxes on the households of soldiers. The hypothesis (of, e.g., E. Stein, Traditio 7 [1949–51] 149) that this logothete dealt with the levy of troops, the construction of fortifications, and military expenditure cannot be proved. The first attested logothetes tou stratiotikou was Julian, a participant in the Third Council of Constantinople in 680; the logothete Eustathios, known from a seal (Laurent, Corpus 2, no.529) probably lived earlier, at the beginning of the 7th C. The commonly accepted view that a logothetes tou stratiotikou is mentioned in the Chronicon Paschale (Chron.Pasch. 721.8) under the year 626 is a mistake—the text speaks of the patrikios Theodosios as a logothetes in general, not specifically as a logothete of “soldiers.” The early logothetai tou stratiotikou seem to have fulfilled fiscal duties; in any case the patrikios Eulampios was logothetes of the sakelle (see Sakellion) and of the stratiotikon (Laurent, Corpus 2, no.533). By the 11th C. logothetai tou stratiotikou combined their functions with those of a judge. The office disappeared after 1088. Among the known logothetai tou stratiotikou was Symeon Logothete (I. Ševčenko, DOP 23/4 [1969/70] 215f). The staff of the logothetes tou stratiotikou included chartoularioi of the central bureau and of the themes and the tagmata, legatarioi, mandatores, and various clerks (the protonotarioi attested on seals probably correspond to the protokankellarioi of the taktika); on seals from the end of the 10th C. appears the megas chartoularioi of the logothetes tou stratiotikou (Laurent, Corpus 2, nos.554–58), who is unknown to the taktika.

LONGI TEMPORIS PRAESCRIPTIO (ἡ τοῦ μακροῦ χρόνου παραγραφή, lit. "exception taken on the basis of too long a time"), possession by prescriptive right, a legal basis for the acquisition of another person's property. The longi temporis praecriptio was originally the objection countering a plaintiff's claim for the return of his property from the possessor, if the plaintiff had failed to make his claim valid in time. By the period of Justinian I, the longi temporis praecriptio had changed from a procedural objection to an independent ground for acquisition through possession (dia τις chronias nomes despozein), equivalent to usucapio. With the constitution Cod. Just. VII 31.1 (Basil. 50.10.4), Justinian stipulated that movable things can be acquired by longi temporis praecriptio after three years of possession, immovable things after ten years, or, in the absence of the owner, after 20 years. In special cases the time limit is extended to 30 or 40 years. According to Justinian's novel 9 (a.535), things that belong to the church, monasteries, and pious institutions—as long as they do not come under the res religiosae and are thereby completely excluded from possession by prescriptive right—can be acquired only after 100 years; according to novel 111.1 (a.541) and novel 131.6 (a.545), however, this can be done after 40 years. The 40-year longi temporis praecriptio was incorporated into the Basilika (5.2.14, 5.3.7).

The other prerequisites of possession by prescriptive right also remained binding in the following centuries: in order to be able to make the longi temporis praecriptio valid, the possessor must be in good faith, that is, consider himself the rightful owner, and the object must have come into his possession lawfully, that is, not through theft, use of force, or arbitrary seizure.

-M. Th. F.

LONGOBARDIA (Λαογραβδία, Λαογουβαρδία), Byz. geographic term that designated those parts of Italy dominated by the LOMBARDS. Theophanes (Theoph. 464.4-5) distinguished between Longobardia (the principality of BENEVENTO) and Great (Megalae) Longobardia, the Lombard kingdom. Constantine VII emphasized that "all of Longobardia was in the possession of the Romans when Rome was the imperial capital" (De adm. imp. 27.3-
6) and that Basil I again conquered "all of Longobardia," which in Constantine's time belonged to the emperors of the Rhomaioi (De them., ch. 11.42–44, ed. Pertusi, 98). The term was used ambiguously: in the strictest sense of the word, Longobardia was a Byz. theme that comprised roughly the modern province of Apulia and the northeastern parts of the Basilicata, but in a broader sense it also encompassed the Lombard principalities of Benevento, Capua, and Salerno as well as the duchies of Naples, Amalfi, and Gaeta. These were practically independent states, governed by their own princes and dukes; they recognized the Byz. emperor as their suzerain, but they did not pay taxes to Byz. and were not administered by Byz. officials. The origin of the Byz. theme of Longobardia is not clear: N. Oikonomides (REF 23 [1965] 118–23) hypothesized that from 876 on Longobardia was a tourma of the theme of Kephalena and that by 891/2 it was under the command of a strategos who jointly administered several regions (Macedonia, Thrace, and Kephalena as well as Longobardia). A distinct strategos of Longobardia is attested from 911 onward. In 938 and 965 Longobardia seems to have been united (temporarily?) with Calabria. The theme of Longobardia was abolished ca. 965 and replaced by the katepanate of Italy.

-V.V.F., A.K.

LONG WALL (Μακρόν Τεῖχος), also called the Long Walls or the Wall of Anastasios I (Theoph. 233.9), a system of fortifications erected west of Constantinople and extending a distance of two (Prokopios) or four (Ibn Khurdadhbeh) days' journey. The remains of walls that lie about 65 km from Constantinople and extended from Selymbria to the Black Sea have been identified as the Long Wall; R.M. Harrison (infra) calculates their length as 45 km. The southern half has disappeared, but the well-preserved central and northern sections indicate that the wall was 3.30 m thick, and the height in the best preserved parts is up to 5 m. The wall was made of hard, pinkish mortar with nodules of brick in a technique markedly different from that used to build the walls of 5th-C. Constantinople (no use of brick courses, a continuous arcade of several blind arches built into the rear face). The wall had towers (rectangular and polygonal), forts with gateways (in the area of fort D several 6th-C. stamped bricks were found), and an outer moat. The date of construction is under discussion: B. Croke (infra) asserts that the Long Wall was originally constructed by Anastasios, whereas M. Whitby (infra) suggests that it was first built after 447, damaged by the earthquake of 478, and repaired by Anastasios between 495 and 505. The wall proved ineffective (probably because of its length and the lack of a sufficient garrison to man it) and was many times penetrated by invaders, beginning in 559. According to the preface to novel 26 of Justinian I, there were two vicarii of the Long Walls: one for military affairs, the other for civil administration. In later centuries the commander responsible for the defense of the wall was the komes ton teichon.

The term Long Walls was also used of other fortifications, possibly of the Chersonese in Thrace and the tmes Tauricus in the Crimea (A.L. Jakobson, Srednevekovny Krym [Moscow-Leningrad 1964] 153f).

LOPADION (Λοπάδιον, now Ulubad), fortress in northwestern Asia Minor on the Rhynndakos River, about 20 km south of the Sea of Marmara. Lopadion was important for its bridge that carried the main highway eastward from Kyzikos. It first appears as the site of a xenodocheion in the letters of Theodore of Studios. A strategic point and substantial market town, Lopadion was the scene of fighting between Alexios I and the Turks; it rose to prominence in 1130, when John II built a powerful fortress that became the base for his campaigns in Asia Minor. The French and German contingents of the Second Crusade met there in 1144; the Latins held it in 1204 and 1211–20. In the early 14th C. it was a frontier post against the Ottomans; Orhan took it in 1335. Lopadion, not previously attested as a bishopric, became an archbishopric in the early 12th C. The surviving walls are the work of John II Komnenos.
-C.F.

**LOPADIOTES, ANDREW**, man of letters and teacher in Constantinople; fl. ca. 1300–30. Apparently a pupils or colleague of Manuel Moschopoulos, Lopadiotes (Λοπαδιώτης) was the addressee of 14 letters (Florence, Laur. S. Marco 358) probably written by George Oinaiotes. Lopadiotes was the author of a panegyrist, now lost, of an epigram on the crucifixion, and of a lexic of Attic Greek, conventionally called the Lexicon Vindobonense. Although a mediocre compilation mainly from Harpokration, the Souda, Manuel Moschopoulos, and the Lexicon of pseudo-Zonaras, it nonetheless contains otherwise unknown fragments of Sophocles and Pherekrates as well as quotations from Maximos of Tyre and Himerios, which show better texts than those of the surviving MSS. These must have been taken from some now-lost lexikon or gnomology. Used by Varino Favorino in 1523 for his Greek-Latin dictionary, the Lexicon was lost sight of until 1851.

-R.B.

**LORD'S SUPPER.** Christ's celebration of the Eucharist was commemorated in three different images.

1. The *Last Supper* (Deipnos) depicts the Gospel narrative; it shows Christ and his disciples reclin around a semicircular "sigma" table (Ravenna, Sant'Apollinare Nuovo; Rossano Gospels, fol.3r), with Christ at the table's left cusp, often with John leaning against him, and Judas reaching for food. This image survived with few alterations throughout Byz. art.

2. The *Communion of the Apostles* (Metalepsis kai Mitadosis ton Apostolon), a liturgical composition, presents the 12 Apostles standing to either side of an altar table and receiving communion from Christ, who is often depicted twice, offering bread to one group and wine to the other. Found initially on 6th-C. patens (Kaper Koraon Treasure) and MSS (Rossano Gospels, following the Last Supper), this composition adorns the wall of the altar chamber in churches after the 11th C. (Kiev, St. Sophia; Hagia Sophia in Ohrid). When deacon angels join the scene, it becomes not only Christ's establishment of the Eucharist, but the archetypal, celestial Eucharist celebrated in Heaven by the angels, of which the earthly meal is a reflection.

3. The *Divine Liturgy* (Theia Leitourgia) elaborates the celestial Eucharist. First seen in an 11th-C. liturgical roll (A. Grabar, *DOP* 8 [1954] 174, pl.10) and incorporated from the 13th C. into cupola imagery, the Divine Liturgy shows Christ officiating at an altar to which thrones angels, some bearing chalices and balancing patens on their heads as do the deacons in the Great Entrance.

-A.W.C.

**LOROS** (λωρος, from lorion, a strip of leather), a long scarf, esp. the heavy stole about 5 m long and studded with precious stones worn by both the emperor and empress. A vestige of the Roman *trabea triumphalis* (the toga of consuls), the loros was arranged in an X over the upper body; one section then fell straight down the front, while the other came from behind the right shoulder to cross the chest and drape over the left arm (as on the coins of Justinian II). In the 10th–11th C. the garment was provided with a hole and could be pulled on over the head, though the long end was still brought horizontally across the body in front and draped over the left arm (P. Griers, *DOP* 20 [1966] 248f). The emperor wore the loros on certain festive occasions (e.g., Easter), over the *divetesion*. According to Constantine VII Porphyrogenetos, the loros symbolized the cross as the instrument of Christ's victory (*De cer.* 638.5–9); its convolutions eventually led to its symbolizing the winding sheet of Christ.

The term loros occurs in the 6th C. as a gilded shoulder-strap (John Lydos, *De mag.* 2.2, p.84.13); in the 14th C. the word was still used on occasion to designate leather (e.g., leather whips in pseudo-Kod. 181.30). The "pale" that Robert de Clari states was worn by Baldwin of Flanders for his coronation in the Church of Hagia Sophia in 1204 was probably a loros, even though the Byz. emperor was not himself in the habit of wearing the loros at his own coronation.

A loros could be worn also by certain very high
dignitaries on the occasion of the Easter banquet (Philothoës, ed. Oikonomides, *Listes* 201.24); archangels in attendance upon Christ are thus often represented wearing the loros. Scarves of lighter material could also be referred to as loroi, for example, the loros that constituted the badge of authority of an eparch.

A special arrangement of the empress's loros, evident in 11th-C. imperial portraits, gives it a shieldlike shape over the lower body (M. Soteriou, *EEBS* 23 [1953] 524–30). This section was once mistakenly thought to be a separate garment, specifically the thorakion mentioned in texts (W.H. Rudt de Collenberg, *MEFRM* 83 [1971] 263–361).

**LOROTOMOS** (λωροτόμος, “thong-cutter”), craftsmen who worked in leather. The word appears, although rarely, in late Roman papyri (Fikman, *Epiget* 50). In the 5th C. (?) the lexicographer Hesychios of Alexandria explained the term as being synonymous with skytotomos, shoemaker, but according to the 10th-C. Book of the Eparch, the lorotomoi produced not footgear but harnesses and saddles. The harnessmakers were subordinate (hypotassomenoi) to the eparch and fulfilled services for the demotion or state (ch.14.1); on the other hand, they were exempted from certain payments. If they were required for the emperor's service, they were put under the command of the protospatharios, but in this case they were entitled to some remuneration (kertos) from the imperial treasury. It is not clear whether these statements reflect the particular status of the guild or only the specific approach of the legislator in this chapter.

**LOUIS VII** (Λούδοικος), king of France (1137–80); born 1120 or 1121, died Paris 18 Sept. 1180. He was a leader of the Second Crusade (1147–49). Taking with him Queen Eleanor of Aquitaine (whom the Byz. called “Gold-Foot”), he followed Conrad III through the central Balkans. While Louis's army was encamped outside Constantinople, Bp. Godfrey of Langres suggested capturing the city. Unlike Conrad, Louis met formally with Manuel I in the palace at Constantinople. After Louis's soldiers attacked the tables of the money-changers set up for the Crusaders' use east of the Bosphorus, Manuel demanded homage from the French nobles and pledges to restore any conquered, formerly Byz. towns in Asia. In return, Manuel offered gifts, supplies, and guides. Reluctantly, Louis allowed the oaths (Oct. 1147).
The French blamed the Byz. for Turkish attacks in Aratolia. When Louis returned from Palestine (spring 1149) on a Sicilian ship, his vessel joined a Sicilian fleet raiding the Peloponnesos. Intercepted by the Byz., Louis’s ship escaped capture only by displaying the banner of the French king, a Byz. ally; Eleanor and others were briefly held captive by the Byz. In 1180, Louis’s daughter Agnes married Manuel’s heir, Alexios II.

---

**LOUIS OF BLOIS**, count of Blois, Chartres, and Clermont; born 1171, died near Adrianople 14 Apr. 1205. Niketas Choniates (Nik.Chon. 539.90 and elsewhere) purposely metathesized the name from Λούγιος to Δούλιος, from dolos, treachery. Among the first to enroll in the Fourth Crusade, Louis was one of its leaders. He favored the diversion to Constantinople and participated in the conflicts of 1203. During the attacks on Constantinople in Apr. 1204 he was confined to bed with fever, but was able to participate in the coronation of Baldwin of Flanders. Louis received Nicaea as a duchy and sent his vassals Peter of Bracieux and Payen d’Orleans to occupy it, while remaining in Constantinople. When Kaloyan invaded Thrace, Louis fell in battle against him.

_Lit._ Longnon, _Compagnons_ 79–84.
---

**LOUKAS CHRYSOBERGES**, patriarch of Constantinople (between Aug. and Oct. 1157–between 19 Nov. 1169 and Jan. 1170); died Constantinople. A member of the Chrysoberges family, Loukas was a monk before his election to the patriarchate. Gregory Antiochos, in an unpublished speech, relates that Manuel I took Loukas from the monastery of Pege (Kazhdan-Franklin, _Studies_ 1971). As patriarch, Loukas had to cope with various ideological movements; he participated in the second synod on the case of Soterichos Panteugenos, and Antiochos claims that Loukas achieved a reconciliation. Then he tried to curb the popular heresy of Demetrios of Lampe. He presided over several sessions of the local council of Constantinople of 1166–67 (see under Constantinople, Councils of) to confirm Manuel I’s edict on the discussion of the statement of John 14:28, “My Father is greater than I”; several theologians (the deacon and kastrinios Samuel, the deacon Basil of ta Hagiopanta, etc.) were condemned and deposed. Loukas attempted to restrict the lease of ecclesiastical lands, prohibited the combination of secular and ecclesiastical offices in a single person (Darrouzès, _Offikia_ 81), and tried to expand church jurisdiction over certain cases involving laymen (e.g., control over illegal betrothals). Unlike Alexios Stoudites, Loukas in 1166 prohibited marriages between relatives of the seventh degree (A. Kazhdan, _Vizvrem_ 24 [1964] 84–90; D. Simon, _FM_ 1 [1976] 123–25), a decision that could be used against the intermarriages of noble families. Documents presenting negotiations between Loukas and Andrej of Bogoljubovo concerning the establishment of a metropolitan see in Vladimir survive only in late Russian versions (N. Voronin, _Vizvrem_ 21 [1966] 29–50).

---

**LOUKAS THE STYLITE**, saint; born in the village of Attikom, Anatolikon, traditional date 879, but probably ca.900, since he was about 30 during the great famine (of 927/8?), died Chalcedon 11 Dec. 979. Born to a well-to-do family of peasant-soldiers, at age 18 Loukas participated in an unsuccessful military campaign against the Bulgarians; at 24 he became a priest but remained several years more in the army. Loukas aspired to an extreme asceticism, not only rejecting family and friendship but also despising the earth and life itself (Delehaye, _infra_, 198.20–23); he ate only wild herbs, slept on the ground, and wore chains. He retired to the monastery of St. Zacharias on Olympos; later he moved to Constantinople where he spent his final 42 or 44 years standing on the column of Eutropios in Chalcedon.

The author of Loukas’s Life claims to have known the “earthly angel” for 27 years, and the vita (preserved in a single 11th-C. MS) may have been produced very soon after Loukas’s death. The hagiographer is fascinated by Constantinople and its churches but is far removed from the Constantinopolitan elite; he mentions people of high rank only rarely (Patr. Theophylaktos, the magistros Basil Petinos). Loukas’s associates were
predominantly clerics, merchants, low officials, fishermen, and nautkleri; special attention is paid to medical services (e.g., the hospital of Euboulos), which allegedly could not compete with Loukas’s healing gift.

**Representation in Art.** Portraits of Loukas are rare: he is probably the anonymous stylite whose image, unaccompanied by any text, follows that of Daniel the Stylite in the Menologion of Basil II (p.238). The saint’s column is built on a sort of platform out in the water, evidently a reference to the Bosporos. His church is visible on the shore.

SOURCE. Delehaye, Saints styli 195–237.

-A.K., N.P.S.

**LOUKAS THE YOUNGER** (of Stiria), saint; born in village of Kastorion, Phokis, before 900, died Stiris 7 Feb. 953. Born to the family of a well-to-do peasant, Loukas soon came into conflict with his relatives, who could not accept his generous habit of giving away all he could to the poor. After his father’s death he ran away to Athens, where he became a monk. He lived as a hermit in several different places in the Peloponnese and Phokis: Bulgarian and Hungarian raids often forced him to move. A hegoumenos even criticized his penchant for “rustic” (agrotikos) manners and avoidance of ecclesiastical organization (ed. Kremos 32.II.5–10); Loukas applied to an archbishop of Corinth for permission to celebrate the Eucharist in his hermit’s cell without a priest (ed. Kremos 41.1.37–41). His Life was written after 961, probably during Basil II’s reign; the anonymous author focuses on the provinces: although he mentions some monks traveling to Italy (ed. Kremos 34.I.8, 53.II.19–20), Constantinople remains beyond the scope of his attention. The hagiographer deals much with illnesses and miraculous healings and strongly emphasizes the saint’s sexuality: once during a winter storm Loukas let two women sleep in his cave with him and his disciple Pankratios and was as unaffected as a stone or log or a boy with his mother; another time Loukas sent Pankratios to cure a sick woman by rubbing a special ointment on her naked body (ed. Kremos 55f). Neighboring peasants covered Loukas’s grave with bricks; after six months the monk and eunuch Kosmas adorned the place. Later the monastery of Hosios Loukas was built on the site.

**Representation in Art.** Though portraits of Loukas are rare, the portrait type seems to have been established soon after the saint’s death: he appears in the narthex of the Church of Hosios Loukas as an orant monk in a koukoullion, or hood, with a rich brown beard; he is again shown as a relatively young man in a MS of the menologion of Symeon Metaphrastes (Messina, Bibl. Univ., San Salvatore 27, fol.58v).

**LOVE.** Besides philia, friendship, the Byz. mainly used two words to designate love: eros and agape. Eros had a pagan connotation, as the name of a mythological god of love, and the term played a substantial role in Platonist and Neoplatonic philosophy. Agape, on the contrary, was connected with a Christian milieu (S. West, JThSt 20 [1966] 228–30). The Byz., however, did not see the distinction between eros and agape as one of carnal and divine love, respectively; both eros and agape could express positive (divine) or negative (diabolic) qualities. The Byz. condemned carnal love (see SEXUALITY) as inspired by the Devil, esp. forms of sex such as prostitution and homosexuality, and recommended limitations in conjugal sex, but they expanded the terminology of love (passion, desire, wedding, marriage) to describe the relationship between God and man, thus making possible the allegorical interpretation of erotic romance as the soul’s yearning for God. The term eros could designate God’s love as a suprasensible quality that binds together “dissimilar similarities” (Pseudo-Dionysios the Areopagite, PG 31:144A); it could also mean man’s passionate love (“fire”) for God and divine beauty. Agape, comprising both these meanings, had also the special connotation of charity and of the community based on love (i.e., of the Church).

Many Byz. texts praised fraternal love, love between parents and children, and conjugal love, although the lyrical expression of passion is rare (e.g., Prodromos, ed. E. Legrand, REGr 4 [1891] 72). The extremes of love and of jealousy were usually condemned, but many cases of extramarital love (e.g., Constantine IX and Skleraina, Andronikos I Konnenos and Theodora) were de-
scribed by contemporaries with warmth and sympathy.

—A.K.

LOVEČ (Λοβετζέ; Old Slavonic Lovć; Lat. Melta), city on the upper course of the river Osüm (Assam) in northern Bulgaria, on the route from the Danube to the Mediterranean via the Trojan Pass and Philippopolis. During the uprising of Peter of Bulgaria and ASEN I (1185–87), Loveč was an important fortified position defending the approaches to Tūrnovo. The Byz. besieged it unsuccessfully for three months; by a treaty signed there in 1187, they formally recognized the Second Bulgarian Empire. A colony of Dubrovnik at Loveč is evidence of its role in Balkan trade. Ruins of a 13th- or 14th-C. basilica survive. In 1393 Loveč was captured by the Ottoman Turks and by 1430 was capital of a vilayet. The nearby monastery of the Virgin was a center of transmission of Old Slavonic literature.

—R.B.

LUCANIA (Λουκανία), province bounded, according to Diocletian’s reform, by Salerno and the rivers Bradano and Lao. Together with the ager Bruttius (the present Calabria) Lucania formed Regio III of Italy, governed by a corrector, who was resident in Reggio-Calabria. The territory was conquered by the Lombards during the late 6th–7th C. After the Byz. recovered Italy in the late 9th C., the eastern part of Lucania was integrated into the new theme of Longobardia, whereas the western part continued to belong to the principality of Salerno. Originally the area was not densely populated, but because of Arab raids on Calabria during the second half of the 10th C. many Greeks from the south migrated to Lucania. In 1042, for the first and only time, a Byz. strategos of Lucania is mentioned, active in the kastron of Merkourion in the Lao valley. The extent of his theme, the name of its capital (Casano, Ionio, or Tursi?), and the date of its creation are unknown. The Normans conquered the territory ca.1045–60; their administration did not preserve a province called Lucania.

—V.v.F.

LUCIAN (Λουκιανός), Greek sophist and satirist; born Samosata ca.120, died ca.180. He is the author of some 80 pieces, chiefly in dialogue form, which have survived in more than 150 MSS. The earliest MS, containing a 6th-C. Syriac translation of On Calumny, dates from the 8th or 9th C. The Souda, incorrectly dating him to the time of Trajan and calling him a blasphemer, slanderer, and atheist, says that he was killed by dogs and would burn in Hell for slandering Christ. He is further reviled in the scholia by ARETHAS OF CAESAREA, who heaps abusive epithets on him. By contrast, Photios (Bibl., cod.128) praises him for ridiculing the pagan gods and for his clear and expressive style. His works were much admired and imitated by later Byz. writers. Three Byz. imitations of Lucian, the Philopatris, Charidemos, and the Timarion, are included in many MSS of the 15th–16th C. as works by Lucian himself. His works were influential in the development of three popular literary genres: satirical dialogue, the imaginary voyage, and the dialogue of the dead. The Journey of Mazaris contains elements of all three genres. Of the 53 epigrams ascribed to Lucian, all but one are preserved only in the Greek Anthology.

—K.S.

LUCIAN OF ANTIOCH, presbyter of Antioch, martyr, and saint; died Nikomedéia 312; feastday 15 Oct. One of the pupils at the theological school that he founded in Antioch was ARIUS; hence Lucian is credited with being an inspiration of the Arian heresy. In this connection, the second of four creeds proposed at the local council of Antioch of 341 may go back to him. Only fragments of his own writings survive; one in the Chronicón Paschale attests to Byz. interest. Lucian’s most enduring work was his revision for style and content of the Greek Bible, and his version of the
New Testament is generally thought to be embodied in the one used in Byz. A vita of Lucian was written by Philostorgios (Kirchengeschichte, ed. J. Bidez, F. Winkelmann [Berlin 1981] 184–201).

-B.B.

LUKE, saint; feastday 18 Oct. According to Byz. tradition, he was the author of the third Gospel (written under the direct inspiration of the Holy Spirit) and of the Acts. Luke’s Gospel was commented upon by Origen, Titus of Bostra, and Cyril of Alexandria; some commentaries—those of Eusebius of Caesarea (D.C. Wallace-Hadrill, HTHR 67 [1974] 55–63), Apollinaris of Laodikeia, Theodore of Herakleia, Theodore of Mopsuestia, and Photios—are known primarily from later catenae, one of which was compiled by Niketas of Herakleia. The commentaries of Euthymios Zigabenos and Theophylaktos of Ohrid, surviving in a direct tradition, are compilations.

Eulogies of Luke were produced by various writers, including Andrew of Crete, Niketas Paphlagon, and Philagathos. A certain Gregory of Syracuse (in the 7th C.)? wrote a kontakion on Luke (E. Mioni, BollBadGr n.s. 1 [1947] 208f) and Symeon Metaphrastes included Luke’s vita in his collection. Luke’s biography does not contain abundant miracles or dangerous travels—he is presented as a well-educated man who, in Greece and Egypt, studied disciplines such as grammar, poetry, rhetoric, logic, and ethics, but was never strong in philosophy (PG 115,1129B). He was a physician and painter, who died peacefully in Achaia; his relics are said to have been transferred to Constantinople by St. Artemios, under Constantius II. Antony of Novgorod mentions a Church of St. Luke in Constantinople. Legend has it that Luke was the first artist to paint the Virgin’s portrait. The monasteries of Hodegon and Soumelà claimed that the icons of Mary in their possession were Luke’s work.

Representation in Art. Although white-haired in the 6th-C. Cambridge Gospels (F. Wormald, The Miniatures in the Gospels of St. Augustine [Cambridge 1954] pl. II), Luke appears in most Byz. author portraits as a youth with brown, curly hair, hollow cheeks, and a wispy beard. He is usually shown writing in front of a desk (see Evangelist Portraits). He is occasionally accompanied by Paul who supposedly inspired his Gospel, and more often by Theophilus, his patron. In some MSS, his portrait prefacing his Gospel is paired with a miniature of the birth of John the Baptist or the Annunciation; that preceding the Acts may be accompanied by the Ascension (Codex Ebnerianus, fol. 23r). Traditionally numbered among the Apostles, Luke is occasionally represented as suffering a martyr’s death (K. Weitzmann in Books & Bookmen, fig. 56).

LUPERCALIA (Λυπερκαλία), a festival of the Roman imperial and late antique periods, celebrated 15 Feb. at the Lupercal, a cave on the Palatine Hill in Rome. The Lupercalia lasted through the 5th C. and beyond. In a letter of 494, Pope Gelasius I denounced a certain Andromachus who, along with other residents of Rome, celebrated the Lupercalia “according to the primeval custom.” Gelasius alludes to men performing sacrifices, a procession of boys dressed in the skins of sacrificed goats, and general debauchery. Andromachus, though a Christian, believed the cult practice would aid the fertility of the soil; to counter this conviction, Gelasius cites the plague that struck Rome when Emp. Anthemius (467–72) arrived in the city in the wake of the Lupercalia. The Lupercalia never became firmly established in Constantinople; it is last mentioned there by John Lydos, who refers to it as a fertility ceremony for “increasing the fruits” (De Mensibus, ed. R. Wuenisch, 83,7–8).

LUPUS PROTOSPATHARIUS. See Annals of Bari.
LUSIGNANS (Λουκουνίας), a noble family from the county of Poitou. The younger sons of Hugh VII of Lusignan, Aimery and Guy, gained importance in the kingdom of Jerusalem in the 1180s. Guy became king in 1186 as the husband of Sibyl, daughter of Amalaric I. In 1187 he was defeated and captured by Saladin. In 1192 Richard I Lionheart made him regent of Cyprus, recently taken from Isaac Komnenos. Guy died in 1194. He was succeeded by his brother Aimery, who was crowned king of Cyprus in 1197 and king of Jerusalem in right of his wife Isabel (daughter of Amalaric I and Maria Komnene). Aimery’s descendants (by a previous wife) ruled Cyprus until 1489. In the 13th C. several were also kings of Jerusalem and retained that title after 1291.

LUXOR (Πόλις κάστρων), Pharaonic temple in Upper Egypt that Diocletian turned into a military camp in 297. The headquarters (principia) occupied a room behind the hypostyle hall, in which are preserved traces of several Tetrarchic wall paintings with military scenes and, in the apse (often misunderstood as the apse of a church), the deified emperor with his three colleagues. The camp was apparently in use until the Persian invasion (616–20). The earliest church in Luxor dates from the late 6th C. and is built outside the camp directly beside the main gate. It is a typical Egyptian basilica with a tripartite sanctuary and a secondary triumphal arch.

LUXORIUS, author of approximately 90 poems (some individual ascriptions are debatable) in the Latin Anthology; fl. 5th–6th C. Their internal evidence suggests that he lived in or near Carthage during the reigns of the last Vandal kings Hilderic (529–50) and Gelimer, although some scholars put Luxorius earlier. Superscriptions to two poems contain the titles vir clarissimus and spectabilis, perhaps honorary in acknowledgment of his status as grammaticus. Luxorius may be identifiable with the Lisorius who wrote a treatise on orthography. His poems, in different meters on various subjects, owe much to their classical models, notably Martial, whose taste for physical deformity and moral perversion Luxorius often reproduces. Overall, however, they provide a valuable glimpse into the Vandal society overthrown by the Byz. reconquest of Africa, esp. with his epigrams on charioteers and mimes.

LUXOR TREASURE, dated to the 5th–7th C. and discovered in 1889 in a small church built inside the Temple at Luxor. Now in the Egyptian Museum, Cairo, it is composed of ten silver objects (a cross, three patens, fragments of five vessels, and a chain). While the processional cross is similar to contemporary examples found elsewhere (e.g., Kaper Koraon Treasure, Phela Treasure), the patens, formerly described by Strzygowski as book boxes but correctly identified by Hellenkemper, are unusual in being rectangular (like the secular lanx [see Plates, Display]), rather than circular like a paten and asteriskos. Two of the three dedicatory inscriptions, on the cross and two patens, mention, in addition to the donors, a priest and two different bishops, the latter perhaps successive holders of the see with authority over the village of Luxor.

LYCHNIKON. See Vespers.

LYCIA (Λυκία), the rugged southwestern region of Asia Minor, characterized by forested mountains and a long coastline. Because of its numerous harbors and its location on the sea route
between Italy or Constantinople and the east, Lycia prospered from trade. It contained numerous small cities, but never supported a large population. Lycia became a separate province under Constantine I, with its metropolis at Myra. It was esp. prosperous in the 6th C.; an abundance of remains (e.g., Holy Sion) attests growth in city and country at that time, notably in the regions of Myra and Makre. At the same time, however, banditry and other disturbances afflicted the interior. In the 7th C., Lycia became part of the Kibyrhiaotai theme, but continued to exist as an administrative and customs unit through the early 8th C. (Zacos, Seals, 1, no.225). Mentions of Lycia after the 8th C. refer to the ecclesiastical province or the geographical region. Prosperity ended with the onset of Arab raids in 655 and their continuation through the 9th C. Many coastal towns were abandoned; others became fortresses. Recovery in the 10th C. produced the remarkable church of Dere Ağa, but most settlements remained small. Lycia flourished briefly under the Komnenoi before falling to the Turks in the late 12th C.

LYDDA. See Diospolis.

LYDOS, JOHN. See John Lydos.

LYKANDOS (Λυκανδός), also Likandos, fortress in the Antitaurus Mountains, southeast of Elbistan. When Melias assumed command of the area in 903, he found the castle in ruins and the adjacent plain deserted. He rebuilt the castle, which became the headquarters of a kleisoura in 908 and of a theme by 916. Its strategic location, commanding a route through the mountains, gave Lykandos considerable importance in the foreign and civil wars of the 10th C. Its administration was sometimes combined with that of Melitene or Tzamandos. “Retainers (agouroi) of Likantos” are mentioned in Digenes Akritas (p.203.1968). The area had an Armenian population. Although effectively lost to Byz. after the battle of Mantzikert in 1071, Lykandos formed part of the territory granted by Alexios I to Bohemund in 1108. Lykandos was apparently never a bishopric. It contains remains of a substantial castle, probably the work of Melias.

—C.F.

LYKAONIA (Λυκαονία), the southern part of the central Anatolian plateau, an arid, treeless plain bounded by hills and mountains. The country is generally unproductive and had a sparse population whose main centers were around the edges of the plain. It contains, however, much grassland suitable for pasture, and the adjacent mountains are rich in minerals. In the reforms of Diocletian, the north of Lykaonia was assigned to Pisidia and the south to Isauria. Lykaonia became a separate province ca.370, with its civil and ecclesiastical metropolis at Ikonion. As a result of Isaurian raids, Leo I appointed a comes as military commander of Lykaonia beside the civil governor. When this proved inadequate, Justinian I in 535 created a praetor with full civil and military powers. This, too, failed, and in 553 a dux, or biokolytes, was appointed as military governor to maintain order. The civil province of Lykaonia was absorbed in the Anatolikon theme, though kommeriaroi of Lykaonia were still active at the end of the 7th C. A tourmarches of Lykaonia and Pamphylia is attested in the late 9th C. Lykaonia contains many Byz. monuments, notably the churches of Binbirkilise and an extensive network of fortresses.

LIT. TIB 4:54–57.

LYKOSTOMION (Λυκοστόμιον), a town (chora) in the estuary of the Danube mentioned in some portulans from the 14th C. onward (P. Nästurel, SCIV 8 [1957] 296f). Its location is uncertain; O. Iliescu (RevIsl 25 [1972] no.3, 435–62) located Lykostomion in Periprava, on the river-branch Kilia. Ahrweiler (Mer 89, rev. by P. Nästurel, RESEE 4 [1966] 649f) identified it with the Lykostomion to whose archon, Thomas, Photios ded-
LYTHRANKOMI | 1259

LYONS, SECOND COUNCIL OF. This council was convened (7 May—17 July 1274) to establish the Union of the Churches and liberate the Holy Land. Actually, this “union” was little more than the consummation of a political deal between Pope Gregory X and Emp. Michael VIII Palaiologos. Rome was to receive the ecclesiastical submission of the Byz. church, while in return Michael was to be rid of Charles I of Anjou and his threat to reconquer Constantinople. Michael’s three representatives swore obedience to the Roman church and its faith by accepting papal primacy, purgatory, and the filioque. (Ironically, the last issue, which had divided the churches for centuries, was first pronounced dogma at the Council of Lyons.) The Byz. church, strictly speaking, was never a participant in the negotiations. The Byz. delegates at the council simply acknowledged a profession of faith previously signed by the emperor alone. Predictably, most of the Byz. population actively opposed the union. Despite Michael’s ruthless persecution and his imposition of John (XI) Bekkos as Unionist patriarch, the resistance drew from all sections of society, including monks, laity, and clergy; Arsenites (for religious but also for dynastic reasons); and even members of the imperial family. Equally hostile were the separatist Greek states, Serbia, and Bulgaria, to which the emperor’s own anti-Unionist sister had fled. These regions quickly became centers of anti-Unionist propaganda. Still, the settlement survived until Michael’s death, when the local council of Constantinople of 1285, under Patri. Gregory II, officially repudiated it (see under Constantinople, COUNCILS OF).

LYRIC, poetry in form song, originally intended to have an instrumental accompaniment. Scant use was made in Byz. of the wide range of complex lyric meters, based on syllable quantity and not stress, developed in the classical world (the KATOMYOMACHIA of Theodore Prodromos, a parody of the ancient tragic form, is a partial exception). Only Anacreontics were employed to any extent in their classical form (e.g., by Gregory of Nazianzos and Synesios of Cyrene), but they soon became a stressed eight-syllable line used largely for ecclesiastical purposes, as in the odes of Sophronios of Jerusalem. Vernacular lyrics in political verse exist independently in the Erotopaignia (Love Songs) and were also incorporated in romances such as Libistros and Rhodamen and the Achilleis.

—A.F.

—E.M.J.

LYTHRANKOMI, 34 miles northeast of Famagusta, Cyprus, site of the Church of Panagia Kanakaria. The church is a three-aisled, three-apsed basilica preceded by a narthex, with domes over the central bay of the narthex, the third and fourth bays of the nave, and the bema. Narthex, aisles, and nave are otherwise barrel-vaulted. After the original structure, with only one apse and a timber roof, was completed—probably at the end of the 5th C.—the church underwent three extensive renovations. Traces of wall painting dating from the 9th/10th C. to ca.1500 are found in narthex, nave, and aisles (scenes of Christ’s life, St. George), but the true glory of the edifice was the mosaic in the apse (dating between 525 and 550), one of the three apse mosaics on the island.

—A.K.
to have survived until modern times (with Kiti and the Panagia tes Kyras near Livadia). Unfortunately it was recently detached from the apse of the church and partly destroyed. The mosaic showed the seated Virgin and Child in the center of the conch, isolated in a great mandorla and flanked by palm trees and archangels; busts of the apostles in medallions form the principal outer border. The program of the apse has been explained by Megaw in terms of the Chalcedonian doctrine of the dual nature of Christ—with the boldly frontal and axial Theotokos embodying the human nature of Christ, and the enveloping mandorla expressive of the divine—and is thought to have been derived from Constantinople.

-W.T.
MA’ARAT AL-NUMĀN TREASURE, dated to the 6th or 7th C. and found ca.1945 in a village just south of Ma’arat al-Nu’mān, southwest of Aleppo (BERRIOA) in northern Syria, is composed of five objects and about 14 plaquettes, all of silver. It is now divided among museums in Paris, Baltimore, and Toledo, Ohio. This heterogeneous collection of objects (two crosses, a spoon, a box, a plaque) does not represent the essential liturgical vessels of a church and may be part of a treasure, unlike other contemporary church silver treasures that seem to be complete. Of interest, however, are the large votive plaque portraying one of the Symeon the Stylites and the set of tiny votive plaques, the use of which may continue a pagan custom of offering ex-votos to Asklepios in thanksgiving for healing.

Lit. Mango, Silver, nos. 67–72. -M.M.M.

MABBUG. See Hierapolis.

MACCAEBES (Μακκαβαῖοι), Jewish family that led a revolt against the Syrians in the 2nd C. B.C. The Byz. included all four Books of the Maccaebes in the Old Testament, thus giving special emphasis to the expansive account of the torture and death of Eleazar, seven unnamed brothers, and their mother (4 Macc 5:18, and cf. 2 Macc 6:18–7:41). The Synaxarium of Constantinople (Synax. CP 859f) names Eleazar, the mother Solomonis, and his brothers Abibos, Antoninos, Gourias, Eleazar, Eusebonas, Samonas, and Markello. All nine, loosely termed the Maccabees, were regarded as saints and protomartyrs in Byz. (cf. Gregory of Nazianzos, PG 35:912–33). Churches were dedicated to the Maccabees, for example, two in Constantinople (Janin, Églises CP 313f), and they appear already in the 7th-C. frescoes at S. Maria Antiqua, Rome. The feast of their martyrdom was celebrated on 1 Aug. and included by Symeon Metaphrastes, taking 4 Maccaebes as a text. The feast was illustrated both in calendar-based icons and MSS. An illustrative cycle is found in many MSS of Gregory’s homilies, but follows the biblical account (in 4 Macc), not the homily text. In the Bible of Leo SAKELLARIOS the frontispiece to Maccabees was placed not at the start of the book, but facing 4 Maccabees. In the 4th C. a martyrion of the Maccabees was built in Constantinople, just outside Galata.

- J.H.L., C.B.T.

MACEDONIA (Μακεδονία), in antiquity a region between Thrace and Epiros comprising the watersheds of the Haliakmon and Varadar rivers. Central Macedonia is a large plain dominated by the city of Thessalonike, with Serres and Philippi in the east and Kastoria, Berroia, Ohrid, and Prespa in the west. In the 4th C. Macedonia was a province in the diocese of Moesia; by the time of the Notitia Dignitatum it was divided into Macedonia Salutaris and Macedonia II. This administrative structure was retained in the 6th C: Hierokles calls Thessalonike the capital of Macedonia I and Stobi that of Macedonia II. Constantin VII Porphyrogennetos anachronistically described Macedonia I as an eparchia (under a consularis) containing 32 cities and Macedonia II (under a hegemon) as having eight cities.

In the late 6th–7th C. much of Macedonia was occupied by Slavs, resulting in cultural bifurcation: Slavs controlled the countryside and upland regions while Byz. retained possession of most of the towns. Byz. reconsolidation began in the 8th C. A new administrative unit, the theme of Macedonia, was created in 797–801, according to P. Koledarov (IzvInstBülgist 21 [1970] 219–43). Theophanes (Theoph. 475.22) mentions a mono-strategos in Thrace and Macedonia active in 801/2. At the same time, a 9th-C. seal of Leo, spatharios and tourmarches of Macedonia (Zacos, Seals 1, no.2147), shows that Macedonia was first a tourma of Thrace. In 813, however, the patrikios John Aplakes served as strategos of Macedonia. Several seals of various strategoi of Macedonia belong to the 9th C. The office of the strategos of Macedonia
is mentioned in the earlier taktika but not in the Taktikon of the Escurial of 971–75 (Oikonomides, Listes 355); the theme of Macedonia was probably replaced by that of Larissa—at any rate, a strategos of “Larisa and Makaidonia” in 1065/7 founded a church in Tao (K. Juzbašan in Elinističeski Blšnij Vostok, Vizantiya i Iran [Moscow 1967] 115).

In Byz. terminology of the 10th-12th C. the name Macedonia was applied to Thrace: thus, Niketas Choniates (Nik.Chon. 6.22–24) calls Adriano polesi the richest and strongest polesi of Macedonia, and Basil I, born in Thrace, was founder of the “Macedonian” dynasty. A 13th-C. historian (Akrop. 23.3–16) lists Philippopolis, Heracleia, Rhaides, and many other Thracian polesi as located in Macedonia. On the other hand, a 14th-C. historian (Greg. 1:524.18, 3:99.15, 100.7) distinguishes Thrace from Macedonia, and Kantakouzenos (Kantak. 3:104.20) sees Macedonia as a region that included Thessalonike (N.P. Andriotes, BalkSt 1 [1960] 147).

After 1204 all of Macedonia fell under the control of Boniface of Montferrat, king of Thessalonike. The area was invaded by Kalojan and conquered by Theodore Komnenos Doukas of Epiros in 1222, then by John III Vatatzes ca.1242. The Chalkidike became a base for the Catalan Grand Company in 1307–08 and much of Macedonia fell to Stefan Uros IV Dušan ca.1345. The Ottomans conquered Macedonia in the late 14th C., although some cities held out into the early 15th C. The metropolitans of Macedonia were the bishops of Thessalonike and Philippopoli; they were under the authority of the papacy until 732/3, afterward under that of Constantinople.

Culturally, Macedonia formed a single unit, although the settlement of Slavs created some division, and the successive Bulgarian and Serbian states contested political control with Byz. Thessalonike dominated the south and Ohrid, from the 9th C., the north. Macedonia was the center from which Byz. culture reached the Slavs of the Balkans. Both Thessalonike and Ohrid developed cultural forms of their own, and one may speak of distinctly Macedonian styles of architecture and painting, although these were always strongly influenced by Constantinople and individual styles developed in many rural parts of Macedonia.

Macedonian Dynasty (867–1056). Byz. dynasty founded by Basil I, who came from an Armenian family that settled in Thrace or Macedonia. According to a legend, originated probably by Photios, the family was descended from the Arsacids, but in fact Basil’s parents were simple peasants. He advanced rapidly thanks to his extraordinary physical strength and boldness, murdering his rival, Caesar Bardas, and then his protector Michael III, whose former mistress Eudokia Ingerina was Basil’s wife.

The Macedonian dynasty included direct male descendants of Basil I: his sons Leo VI and Alexander, a grandson Constantine VII, a great-grandson Romanos II, and Romanos’s sons Basil II and Constantine VIII. During the minority of Constantine VII the imperial functions and the emperor’s title were assumed by Romanos I, who tried to establish his own dynasty, that of the Lekapenoi; his attempt failed. During the minority of Basil II and Constantine VIII imperial power and the emperor’s title were bestowed upon Nikophoros II Phokas and John I Tzimiskes. Although Constantine VIII died in 1028 without a male heir, the dynasty was continued by a series of emperors, Romanos III Argyros, Michael IV, Michael V, and Constantine IX, all of whom were related to the Macedonian dynasty through ties of marriage or adoption by Constantine VIII’s daughter, Zoe. This emphasis on continuation of the dynasty demonstrates the strength of the ruling family in the 10th and 11th C. Michael V’s attempt to depose Zoe led to his overthrow; the dynasty became extinct only after its last member, Theodora, died childless. (See genealogical table; on the achievements and policies of the Macedonian emperors, see “Age of Recovery and Consolidation” under Byzantium, History of.)

Macedonian Renaissance. See Encyclopedia; Renaissance.

Machairas, Leonios, Cypriot chronicler attached to the court of the Lusignans; born Cyprus ca.1380, died after 1432. In 1401 Machairas (Μαχαίρας) was secretary to Jean de Nores (PLP, no.20722), in 1426 he was responsible for wine distribution in Cherokita (in southern Cyprus), and in 1432 he went on an embassy to the Turkish ruler in Laranda in Asia Minor.

The prose chronicle that Machairas composed on the history of Cyprus begins with a summary of ecclesiastical history from Constantine I onward. His account becomes much more detailed with the reign of Peter I Lusignan of Cyprus (1359–69) and continues to 1432. The chronicle of Machairas was derived from a combination of Western and Greek written sources, oral tradition, and personal reminiscences. It reflects the viewpoint of a patriotic and Orthodox Cypriot, who was at the same time a great admirer of the Lusignans, while despising the Genoese. Machairas was bilingual and wrote in a 15th-C. Cypriot dialect with numerous loanwords, esp. from French. His work bears few traces of the learned Byz. language or literary tradition, but contains elements of folklore and popular storytelling.

-A.M.T.

Machairas Monastery, founded in the mid-12th C. on a mountain near Tamasos (or Tamassia) in central Cyprus; it continues to function at the present. The early history of the monastery of Machairas (Μαχαίρας, “swordmaker”), which was dedicated to the Theotokos tou Machaira, is known only from the typikon (typeikon dia-
taxis) composed in 1210 by Neilos, bishop of Tamasia. It began as a hermitage established by two Palestinian monks, Neophytos and Ignatios. After the death of Neophytos, Emp. Manuel I granted Ignatios the mountain and an annual income of 50 nomismata to build a small monastery and chapel; the independence of Machairas was guaranteed (Tsiknopoulllos, infra 111f). After 1172 the complex was greatly enlarged under the leadership of Ignatios’s disciple Neilos, who accumulated considerable property and received a tax exemption and 24 paroikoi from Emp. Alexios III Angelos (Tsiknopoulllos, infra 17.1–4). Neilos also founded a nunnery in Tamasia and provided it with a rule that has not survived.

The typikon, modeled on that of the Euergetis monastery in Constantinople, begins with instructions for the celebration of services; it then provides a detailed description of the administrative structure of Machairas. An unusual feature was the appointment of two oikonomoi, one to supervise internal affairs and the other to supervise agricultural activity on its estates. Other monastic officials included two docheiarioi, an ekklesiarch, a cellarer, and a disciplinary officer (epistemonarches). Neilos devoted particular attention to record keeping and other provisions to guard against fraud. He specifically forbade the entrance of women and the education of lay children at the monastery.

MACROBIUS, more fully Ambrosius Theodosius Macrobius, Latin writer of 4th/5th C., perhaps the Theodosius who was praetorian prefect of Italy in 430 (Al. Cameron, JRS 56 [1966] 25–38). His Commentary on the Dream of Scipio, a Neoplatonist exposition of Scipio Africanus’s epiphany in Cicero’s De re publica, was very influential in medieval times. The Saturnalia, whose dramatic date is 17–19 Dec. 384, although itself perhaps not published until after 410, comprises seven books (with lacunae at the beginning and end of some) of antiquarian polymathy, couched in the traditional form of a symposium. Hosts and participants include prominent pagans (e.g., Symmachus) and the Vergilian commentator Servius. Virgil himself is the central topic, cast in the superhuman form that anticipates his role in Dante. The Saturnalia is a piece of classical and pagan nostalgia, studiously ignoring Christianity and contemporary troubles. A third work, *On Dissimilarities and Similarities between Greek and Latin Words*, survives only in medieval excerpts.

-M.B.

MADABA (Μᾶδαβα, Ar. Mādābā in modern Jordan), city and bishopric in the province of Arabia, under the jurisdiction of Bostra; it flourished in the 6th–7th C. Lying to the east of the pilgrimage site of Mt. Nebo, Madaba itself had at least 12 churches. Subjects of the numerous floor mosaics uncovered in Madaba include a map of the Holy Land (MADABA MOSAIC MAP), Hippolytos and Phaedra, Achilles and Patroklos, Herakles, a Dionysiac procession, hunting scenes, city Tyches, and a personification of Thalassa (the last in a Church of the Holy Apostles of 578). An inscription records the restoration of a cistern by Justinian I. Other dated inscriptions of building and paving are of 562 and 603/4 (the cathedral), 595/6–607/8, and 663 (the Church of the Virgin, by the “people of this polis of Madaba”).

-M.M.M.

MADABA MOSAIC MAP, a late 6th-C. topographical pavement depicting the Holy Land, set into the transept of a church at Madaba in Jordan. The major surviving fragment (10.5 × 5 m) shows the area from the Jordan Valley to the Nile; dominating its center is Jerusalem, directly in front of the apse. Based on a Roman road map and the *Onomastikon* of Eusebius of Caesarea, supplemented by a few Jewish and later Christian sources, the mosaic provides a graphic guide to Old and New Testament sites. Although small towns are represented only by conventional structures, larger cities are laid out with surprising
detail in bird's-eye view; in Jerusalem five of the ten churches shown can be identified. There are indications of vegetation as well, and, in many cases, enough information to judge the relative importance of the various Loca Sancta in the 6th C.

MAENADS, ecstatic and frenzied women in Dionysos's retinue, who in their madness dance and devour raw flesh. Allusions to maenads are found in late Roman literature both pagan and patristic: thus, Basil the Great (PG 31:189BC) in his list of women's vices speaks of maenadic misbehavior—drunkenness, fornication, insolence, etc., while the vita of John Klimax (PG 88:600B) describes the sword of obedience as extinguishing maenadic tyranny. Nonnos of Panopolis, in the Dionysiaka, presents maenads as zealous warriors in the great Indian war launched by Dionysos, but he also describes them (34:352–56) as discarding their manly character and once more becoming women who refuse to do battle and return to the distaff and spindle. Christian authors explained their omophagia (devouring raw flesh) as merely a commemorative rite, in commemoration of the day when, according to the legend, Dionysos was torn to pieces (E.R. Dodds, HThR 33 [1949] 165). Niketas Choniates (Nik.Chon. 321:20–26) compares Andronikos I Komnenos and his courtesans to Dionysos and the maenads.

By the 10th–11th C. the maenad had become a generic figure in art, adapted to a specific situation by the attributes that she holds (Weitzmann, infra, figs. 114, 157). Thus divorced from their original context, they lent their form to the dancers on the crown of Constantine IX (Rice, Art of Byz., fig.134).

Lit. Weitzmann, Gr. Myth. 129f, 179f. —A.K., A.C.

MAGIC. See Adoration of the Magi.

MAGIC (μαγεία). In Byz. usage synonymous with sorcery (γυμεία), magic was a normal phenomenon in the life of late Roman society. It served two major goals: to explain "supernatural" forces (dreams, visions, extraordinary natural phenomena, constellations of celestial bodies) and to influence them (or prevent their effect) through special prayers, amulets, and the assistance of demons. The position of Christianity toward magic and divination was ambivalent: on the one hand, holy objects (relics, icons, liturgical objects) and holy persons (both living and dead) were granted the ability both to explain and to control the activity of supernatural powers. On the other hand, traditional magic was condemned and perpetrators of magic could be burned alive (e.g., A. Leroy-Molinghen in Rayonnement grec 286f).

The church distinguished between the holy man or woman who relied upon divine aid, and the magician who, however powerful, acted with demonic assistance. Magic was to prove inferior in any confrontation with genuine divine power: magical creatures dissolved before the sign of the cross, the books of the Holy Writ, or a sincere prayer, and sorcerers (like medical doctors) had to yield to the greater power of a saint. Another distinction, an internal one, lay in the nature of the act performed: the sorcerer concentrated on fulfilling sexual desires, producing ludicrous situations or objects, creating fake riches or secular knowledge, and inflicting harm, whereas the saint acted as healer and protector of men and animals, and countered the eruption of the evil forces of the cosmos (earthquakes, flood, locusts, etc.). The struggle against magic is one of the main topics of hagiography (H.J. Magoulias, Byzantium 37 [1967–68] 228–69).

The ambivalent attitude toward magic was typical even of intellectuals: Niketas Choniates records numerous cases of the efficient exercise of sorcery (the magic power of letters and words, hypnotic effects, knowledge of the future) but condemns them as futile, unchristian activities. The church fought against sorcery until the very end of the empire (e.g., C. Cupane, JÖB 29 [1980] 237–62), but various forms of magic were nonetheless accepted in Byz. daily life (the idea of beneficial and harmful days, dream interpretation, fortune-telling) and even in criminal procedure (ordeal by hot iron, the examination of an alleged thief by a "magic eye").

MAgICANS (μάγοι), sorcerers (goetai), and witches existed in both urban and rural society and in all social and economic classes of the late Roman Empire; pagans and Christians alike appealed to them for help: the vita of George of Choziba (7th C.) mentions a wrestler who reported to a magician to alleviate the effects of poison, and the sorcerer Albicierus helped the young St. Augustine find a silver spoon. Political trials, esp. numerous in the 4th C., were often interwoven with accusations of sorcery, and political biographies of this period frequently include a magician’s attack.

In the Hippodrome of Constantinople (5th–9th C.), members of the factions paid magicians to destroy the charioteers of their enemies. High officials suffering from maladies attributed them to the sorcery of magicians hired by their competitors for rank and promotion in the imperial administration; these officials recuperated at monasteries like that of St. Hypatios at ROUPHINIANAI in Bithynia, where the saint’s blessings and EULOGIAI were thought to counteract sorcerers.

The nature of INCANTATIONS (preserved in Egyptian papyri), inscribed AMULETS, and magic books all presuppose literacy among sorcerers. Their ability to procure papyrus and metal for amulets suggests the financial viability of their profession. In popular belief, magicians were usually, but not always, connected with Egypt.

Christianity viewed the magician as a rival of the holy man, and hagiography encouraged the negative image of the sorcerer, usually described as a Jew, heretic, or heathen, who might direct hordes of locusts against tilled fields, practice poisoning, make love potions, and own magic books full of spells against men, animals, and houses. Nevertheless, practitioners of sorcery were active until the end of the empire. Tradition endowed even some biblical personages (SOLOMON) with witchcraft and power over demons. The Iconoclast JOHN (VII) GRAMMATIKOS was proclaimed magician par excellence, and in the Khludov marginal Psalter he is shown being trampled by Patr. Nikephoros I, just as the nearby figure of the sorcerer Simon Magus is trampled by St. Peter (fol. 51v).

— F.R.T., A.C.

MAGISTER EQUITUM. See MAGISTER MILITUM.

MAGISTER MILITUM (στρατηγόλάτης), commander in chief of the armies in the late Roman Empire. According to a historian of the 5th–6th C. (Zosim. bk.2.33.3), Constantine I removed the praetorian prefect from military command, entrusting the scholae palatinae to the magister officiorum and the regular army to the strateletes of the cavalry and of the infantry; the Latin terms, magister equitum and magister peditum, are known only from the period after Constantine. The distinction between the two kinds of troops, mounted and foot, was more theoretical than real. Constantius II created three posts of local magistri militum for both troops: for Oriens (350/1), Gallia (355), and Illyricum (ca.355). The next step in the division of military power occurred in 364, when the empire and the army were split between Valentinian I and Valens.

Thereafter several magistri militum existed in both the West and East, some at court (magistri praesentales) and some in the provinces (A. Hoepfner, Byzantion 11 [1936] 483–98). Theodosius I tried to reduce the number of magistri militum, and Arkadios attempted to abolish them altogether, placing military power in the hands of the eunuch Eutropios, but the post was soon reestablished. The distinction between cavalry and infantry disappeared by 370, when the title of magister utrius militiae was introduced, although the former designations continued to exist; in the West the magister peditum seems to have dominated.

The magistri militum were recruited mainly from Germanic peoples, in the 4th C. often from the lower strata, in the 5th primarily from princely families. Besides direct military functions and the right of conscription, magistri militum possessed judicial authority over their officers. Western magistri militum (like STILICHON) held supreme power; in the 5th C. they either appointed emperors or gained the throne themselves. In the East the
The service costume of magistri militum in the 5th C. consisted of a sword, lance, chlamys (a richly embroidered tunic), and, at least on the diptych of Stilicho, a shield decorated with the emperors' busts.

—A.K., A.C.

MAGISTER OFFICIORUM (μάγιστρος τῶν ὀφθαλμών), master of the offices, the head of the central civil administration in the late Roman Empire. The office (first mentioned in 320) was created by Constantine I with the aim of restricting the praetorian prefect. Originally, the magister officiorum had under his control three chief scrinia (bureaus), the agentes in rebus, and the scholae palatinae, although he never exercised military functions. The increasing role of the agents and the imperial bodyguards enabled the magister officiorum to become the central figure at court, a member of the consistorium with control over the cursus publicus, the state police, diplomatic negotiations, and armament factories.

The master of offices had judicial powers and some authority over everyday affairs in the palace, tending the lamps and introducing people to the consistorium. To some extent he collaborated with the quaestor but had no influence over fiscal services. The attempt to assign military functions to the magister officiorum failed in the West, but in the East he acquired control over the limitanei and the border strongholds. Under Justinian I the struggle between the praetorian prefect (John of Cappadocia) and magister officiorum (Tribonian to 535) ended in the defeat of the latter official. In the 7th C. the magister officiorum was most functions (Bury, Adm. System 29); the domestikos ton scholon assumed command over the bodyguard, and the office of magister officiorum eventually involved only the conduct of imperial ceremony. Although in the late 9th C. Stylianos Zaatuzes was occasionally called magistros ton ophthikon, from the 9th C. the office of magister officiorum in reality ceased to exist and magistros became merely a title.

—A.K.

MAGISTER PEDITUM. See Magister Militum.

MAGISTROS (μάγιστρος), a high-ranking dignity. The word is etymologically connected with the Latin magister officiorum, but the Byz. magistros had nothing in common with the late Roman functionary. The first certain mention of magistros as a title is in the late 9th-C. Kletorologion of Philothoés, who places magistros above the anthypatos. Bury (Adm. System 30) notes the omission of magistros from the mid-9th-C. taktikon of Uspenskij, but Oikonomides (Listes 47) considers this a scribal error. There were several magistroi, one of whom was called protomagistros: Stylianos Zaatuzes, among others, was granted this title. The number of magistroi was fewer than 12 at the beginning of the 10th C. but reached 24 by the time of the embassy of Liutprand of Cremona. Simultaneously, the title began to lose its significance. It probably disappeared by the mid-12th C.; a 14th-C. ceremonial book in verse (in pseudo-Kod. 398.124) mentions it among obsolete dignities. One of the last magistroi bore the name of Rousopoulos, indicating his ethnic origin (Seibt, Bleisiegel, no.124). The female title magistress is also known—a seal of the magistress Maria Bryennissa is dated by Seibt (Bleisiegel, no.119) to ca.1080. The term magistros, usually in the vernacular spelling maistor, was also used to designate a craftsman or teacher.

—A.K.

MAGNAURA (Μαγναūρα, from Lat. magna aula), ceremonial hall situated on the periphery of the Great Palace of Constantinople, east of the Augustaion. It had the form of a basilica with apses
to the east and two lateral aisles supporting galleries. In the central apse stood Solomon’s Throne flanked by lions. The west façade opened onto a courtyard planted with alleys of trees. The Magnaura had, therefore, approximately the same situation and the same architectural form as the Senate House rebuilt by Justinian I (Prokopios, Buildings 1.10.6–9), and one may wonder whether they were one and the same, the more so as the Senate House is never mentioned after the reign of Justinian.

The Magnaura was restored by Herakleios after 628 (AnthGr 9:655). It was later used for receptions of foreign ambassadors, who were impressed by the hall’s automata. In the reign of Michael III the Magnaura became the seat of a school. It was also the normal venue on occasions when the emperor addressed the people. These considerations indicate that the Magnaura was easily accessible from outside the palace. Another Magnaura was located in the suburb of Hebdomon.

MAGNENIUS (Μαγνένιος), more fully Flavius Magnus Magnentius, usurper (from 18 Jan. 350) and augustus (from 1 Mar. 350); born Amiens ca.303, died Lyons 10/11 Aug. 353. Of Germanic origin, Magnentius rose in the army to the position of comes rei militaris in charge of the palatine legions. He conspired with the comes rei privatae Marcellinus and overthrow and killed Constans I. Gaul, Britain, and Spain joined him. Taking advantage of the absence of Constantius II on the eastern frontier, Magnentius marched toward Illyricum. The Roman aristocracy tried to organize resistance, proclaiming Nepotianus as emperor on 3 June 350. In Illyricum the general Vetrario was elevated on 1 Mar. 350 as “saluator rei publicae”; he attempted to negotiate between Magnentius and Constantius. Magnentius defeated Nepotianus and had him executed. He enacted some measures against the wealthy that caused senators to flee to Constantius and Vetrario. Although himself a pagan, Magnentius planned an alliance with the Orthodox in Egypt against the Arian Constantius.

In 351 Constantius appeared in Illyricum, where he gained the support of Vetrario. His attempt to enter northern Italy failed and in the summer of 351 Magnentius marched via Siscia to Sirmium, near which, at Mursa, he was defeated in a bloody battle on 28 Sept.; 54,000 soldiers reportedly perished. Magnentius then withdrew to Gaul, where Constantius again defeated him (end of summer 353) at the battle of Mons Seleucus. Magnentius soon thereafter took his own life. The empire was united under Constantius II.

MAGNESIA (Μαγνησία, now Manisa), city of Lydia in western Asia Minor, at the foot of Mt. Sipylos. Magnesia became important in the 12th C. It developed further under the Laskarids when it was functionally capital of the empire of Nicaea, whose rulers resided nearby at Nymphaion and maintained their treasury and mint at Magnesia. In the 13th C. Magnesia was a market for local and foreign trade and site of an imperial palace. It was the center of a rich agricultural district that contained the important monastery of Sosandra founded by John III Vatatzes. Theodore II received the Seljuk sultan at Magnesia in 1257, and Michael VIII was there confirmed in power in 1258. By the late 13th C., Magnesia was increasingly exposed to attack. It was the base of Michael IX’s campaign against the Turks in 1202, during which it withstood a long siege. In 1304, Magnesia was used by the Catalan Grand Company, who so oppressed the citizens that the gates were shut against them; the city resisted their consequent attack. In 1313, the Turks of Saruhan took the city. Magnesia was a suffragan bishopric of Ephesus, frequently contested with Smyrna. Remains of the walls and citadel appear to be the work of John III.

MAIN (Μαίνη in the Chronicle of the Morea, Fr. le Grande Magne), castle in the Mani region in southern Greece. Although the castle is mentioned frequently in texts of the 13th–14th C. and was one of the major strongholds ceded to
the Byz. by the treaty of Constantinople in 1262, its precise location is still disputed (P. Kalonaros, *HellCont* 3 [1939] 375–80). Some have identified it with Zarnata, but this seems unlikely, while others have suggested Tigani on the west coast (N.B. Drandakes et al., *PraktArchEl* [1978] 183–91).

---

**MAISTOR** (μαίστωρ), one of several vernacular forms of the classical *magistros* (Lat. *magister*). While *maistros* was used (by authors or by later scribes) to describe the *magister militum* or *magister officiorum*, *maistor* was understood (e.g., in the *Souda*) to mean teacher. The word was extended to designate the leader of an atelier or team of artisans; thus it is applied to Gerontios, a woodworker and “the best of his profession,” by Theodoret of Cyrhus. Texts included in the *Patria of Constantinople* mention *maistores* and their apprentices (μισθιοί). The term *protopomatōr* designated the head of a guild. It could also refer to an expert performer and teacher of sacred chant (pseudo-Kod. 190.7, 359.20); the most famous of them, John Koukouzelis, is frequently cited in the MSS simply as “the maistor.” *Megas maistoras* was the Greek translation of the title of the head of a Western monastic order.

---

**MA杰STAS DOMINI** (Lat., lit. “Majesty of the Lord”), the conventional name for a highly synthetic visual image showing Christ’s majesty at the end of time. Blending elements from the various apocalyptic and prophetic visions (Is 6:1–4, Ezek 1:4–28, Rev 4:2–9), it shows Christ—youthful, mature, or as the Ancient of Days—right hand raised in speech and book in left hand, enthroned on a rainbow in a mandorla from which project the four beasts and often the wings studded with eyes, the fiery chariot, and angels. It is first seen in the apse of Hostos David, Thessalonike, where prophets witness to Christ in a paradisiac landscape; in *Bawt* (Chapels 26, 51); at *Saqqâra*; and on an icon at the monastery of St. Catherine on Mt. Sinai (Weitzmann, *Sinai Icons*, no.B.16). The inscriptions used in these early versions indicate that the image owes its particular blend of elements to invocations of Christ’s majesty in the liturgy. Popular in the 9th–10th C., the image appears in Cappadocian apse compositions of the Prophetic Vision, reflecting the Iconophile emphasis on visions as proof of the visibility of God. Komnenian Gospel books use the image as a frontispiece, invoking the Gospel prefaces that discuss “him who sits upon the Cherubim.” The *Majestas Domini* recurs in Palaiologan miniature and icon painting in versions showing both the youthful
Christ with prophets, as at Hosios David, and the lone, mature Christ.

—A.W.C.

MAJORIAN (Μαύριανος), more fully Flavius Julius Valerius Majorianus, Western emperor (1 Apr. 457–2 Aug. 461); died Liguria 7 Aug. 461. Of an Italian senatorial family, Majorian served in the army under Aëtius, but retired temporarily before 451. In 454 Valentinian III recalled Majorian to court. After the emperor's murder he was considered a possible successor. He served as a high military commander under Petronius Maximus and Eparchius Avitus and cooperated with Ricimer in the overthrow of Avitus in 456. In 457 he was appointed magister militum, probably by Leo I, then acclaimed by his troops as augustus, and on 28 Dec. recognized by the senate in Ravenna. Leo I accepted him as emperor by May 458. Majorian tried to support the urban curiae, improve the system of taxation, and enhance the old Roman virtues. He had to deal with a threat in Gaul, where he found strong opposition (B. Czúth, _Acta classica Universitatis scientiarum Debreceniensis_ 19 (1983) 113–22), and in Africa, which had been conquered by the Vandals; Prokopios preserved a legend that Majorian visited the court of Gaeseric incognito (G. Max, _BS/EB_ 9 (1982) 58–63). Majorian prepared expeditions against the Vandals in 460 and 461, but in both cases Gaeseric attacked the Roman ships before they set out and the attempts failed. In 461 Majorian was deposed and executed by order of Ricimer.

—T.E.G.

MAJUSCULE. See UNGIAL.

MAKARIOS/SYMEON, or pseudo-Makarios, monastic writer who probably lived in Mesopotamia or eastern Anatolia at the end of the 4th and beginning of the 5th C. Makarios/Symeon has become the conventional name for this author, whose works include 50 _Spiritual Homilies_ that were attributed to the 4th-C. Egyptian monk Makarios the Great in some MSS. Certain pieces by this author have also been assigned in the MS tradition to "Symeon," identified by Dörries (infra) with the Symeon who was the leader of the Messalian heresy condemned by the Councils of Side (390) and Ephesus (431).

In addition to the homilies Makarios/Symeon wrote the _Great Letter, erotapokriseis_, and collections of _logia_. His works emphasize the constant spiritual struggle toward perfection and the supreme importance of prayer. Messalian elements (others prefer Gnostic) have been detected in the mystical nature of the _Homilies_, esp. as there are verbal accords with the Messalian _Ascetic Book_. Makarios/Symeon was also influenced by Basilian monasticism and by Gregory of Nyssa. The works of Makarios/Symeon were translated into Syriac, Arabic, Georgian, Latin, and Church Slavonic.

—B.B., A.M.T.

MAKARIIOS OF PHILADELPHIA. See CHRYSOKEPHALOS, MAKARIIOS.

MAKARIIOS OF ROME, saint; principal feast-days 23 Oct., 19 Jan., and others. Son of a Roman senator named John, Makarios ran away from home during his wedding, which had been arranged by his father. According to his Life, the angel Raphael led him to the ends of the earth, where he lived in a cave in peace with wild beasts. Makarios's vita takes the unusual form of a traveler's romance: three monks—Theophilus, Sergio, and Hygeinos—set off from a monastery in Mesopotamia to see the edge of the sky "at the iron pillar." The sober description of their route via Jerusalem to Ctesiphon gives way later to images of fabulous rivers, mountains, animals, and people in India and farther east. Finally they encountered Makarios, his body hidden by his white hair, his fingernails and toenails as long as a leopard's claws. He briefly told the monks his story and explained that they were not allowed to
proceed further, since 20 miles from Makarios's cave were two walls—one of iron and another of bronze—surrounding Paradise. Many MSS from the 11th C. onward preserve the legend; the editor, A. Vassiliev, proposed a dubious *argumentum ex silentio*—that the legend originated in the 5th–6th C. since it does not mention the Arabs. The legend is very important for reconstructing early medieval geographic perceptions.

**Representation in Art.** One of the very rare portraits of this saint is that in the *MenoLogion of Basil II* (p.334), where he appears as an elderly monk standing alongside *Makarios the Great*; the two are celebrated together on 19 Jan.

–A.K., N.P.S.

**MAKARIOS THE GREAT,** or Makarios the Egyptian (to distinguish him from Makarios the Alexandrian or Politikos), saint; born Upper Egypt ca.300, died Sketes ca.390; feastday 15 or 19 Jan. He became the leader of an eremitic group in Sketes (WADI NATRUN) in which the monks lived in separate shelters and gathered only for worship and guidance from the leader. He was ordained in 340. As a supporter of the Nicene policy of Athanasios, he was exiled under Loukios, the Arian bishop of Alexandria.

The anecdotes about Makarios stress his strict asceticism and ability to work miracles. His ascetic practice aimed at complete detachment from bodily functions: for example, *Palladios (Lauzisci Histo-ry 18.28*) recorded that Makarios had not spat since he was baptized. Many writings in Greek as well as in Syriac, including the works of pseudo-Makarios/Symeon, were incorrectly attributed to him.

–J.A.T.

**MAKEDONIOS CONSUL,** 6th-C. poet. The Greek *Anthology* preserves 43 of his epigrams, coming from the *Cycle of Agathias*. They are mainly anathematic, ekphrastic, erotic, and satirical, largely unremarkable in subjects and style. J.A. Madden (*Mnemosyne* 30 [1977] 153–59) detects evidence of Christian belief in one poem (bk.9, no.649), but the sentiment is entirely neutral and commonplace (B. Baldwin, *Mnemosyne* 37 [1984] 451–53). Makedonios (*Makedonios*) has been identified both with a former referendarius reported by Malalas and Theophanes the Confessor to have been purged for paganism in 529, and with a *vir illustris* who was an imperial official of 531; reconciliation of the two is not impossible. Since his name is not in the official *fasti*, his consulate must have been honorary.

**Lit.** B. Baldwin, *"The Fate of Macedonios Consul,"* *Eranos* 79 (1981) 145ff.

–B.B.

**MAKIN, AL-**, more fully Jirjis al-Makin ibn al-‘Amid, Christian Arab historian; born Cairo 1205 (or 1203?), died Damascus 1273. Following in the footsteps of his Coptic father, al-Makin became a civil servant of the Ayyubids in Damascus. After a long and eventful service (he was twice thrown into prison), al-Makin spent the rest of his life in that city. He composed a universal chronicle in Arabic entitled *The Blessed Collection*. The first part of this work begins with Adam and ends with the eleventh year of the rule of Heraclios. The second part covers the period of Islam, beginning with Muhammad and ending with 1260. It refers to Muslim contacts with the Byz., e.g., the confrontation at Mantzikert, which consists of an abbreviated version of the account found in *Sibt ibn al-Jawzi* (C. Cahen, *Byzantion* 9 [1934] 618). The work of al-Makin was used by the famous Egyptian Muslim historian al-Maqritzī as his main source of information about the Christians.

–A.S.E.

**MAKRE (Μάκρη,** anc. Telmessos, now Fethiye), coastal city of western Lycia. Constantine VII Porphyrogennetos (*De them.* 14.16, ed. Pertusi 78) still knew it as the "famous *polis* Telmessos," but in a notitia of ca.800 it appears as "Telmessos or Anastasiopolis" (*Notitiae CP* 2,310). The name *Telmessos* disappears from notitiæ by the 10th C., when the name *Makre* emerges (*Notitiae CP*, p.
MAKREMBOLITES (Μακρεμβολίτης, fem. Μακρεμβολίτισσα), a family of civil functionaries, probably of Constantinopolitan origin; Makros Embolos ("Long Portico") was a district in Constantinople. The first known Makrebolites, whose death LAZAROS OF MT. GALESIOS predicted (AASS Nov. 3:539E), apparently lived in Constantinople. John Makrebolites, a conspirator against Michael IV in 1040, belonged to the aristocracy of the capital: he married the sister of MICHAEL I KEROURARIOS, and his daughter, EUDOKIA MAKREMBOLITissa, wed Constantine X Doukas. The Makrembolitai remained influential in the 12th C.: Demetrios was Manuel I's envoy to Conrad III and Louis VII in 1146–47; John served as megas droungarios tes viglas in 1157; Eumathios, sebastos and eparch (died ca.1185), was a grandson of Eudokia's nephew, according to his epitaph by Theodore Balsamon (K. Horna, WS 25 [1903] 182f). Both John and Eumathios are known by their seals (Laurent, Corpus 2, nos. 896, 1041). Theophyllaktos of Ohrid corresponded with a certain Makrebolites, archon of Frespa (on his name, G. Litavin, IzvInstBülglst 14–15 [1964] 521), and characterized him as a man who skillfully acquired alien property. Some family members also held high ecclesiastical posts: Theodore was metropolitan of Methymna in the early 12th C. (Laurent, Corpus 5–3, no.1798). The Makrembolitai corresponded with some literati. Eustathios or Eumathios Makrebolites wrote the romance On Hysmine and Hysminias. Alexios Makrebolites was a writer in the 14th C. (see MAKREMBOLITES, EUSTATHIOS AND MAKREMBOLITES, ALEXIOS).

LIT. PLP, nos.16951–53.

—A.K.

MAKREMBOLITES, ALEXIOS, writer; died after 1349 or 1353. All that is known of his life is that he was in the service of the exisotes Patrikioi (a financial adviser of John VI Kantakouzenos) and was a teacher and member of a group of literati. His works include orations on the Genoese War of 1348–49 and anti-Jewish and anti-Islamic polemics. His worldview is tragic, portraying a society torn between the poor and wealthy people, whose moral principles are perverse (M.A. Poljakovskaia, ADSV 8 [1972] 95–107; 10 [1973] 251–54); the Genoese exploit the empire, the Turks incessantly attack it, and gloomy omens portend the imminent end of the world (Eadem, ADSV 18 [1981] 135–40; 11 [1975] 87–98). A realist who was well aware of the decline of Byz., Makrebolites attributed the success of the Ottomans to their moral character, in contrast to the sinful Byz., who oppressed the poor. Makrebolites' language is rhetorical, and concrete interpretation of his work is difficult. Lj. Maksimović (ZRVI 20 [1981] 99–109) suggests that "the rich" in Makrembolites' Dialogue between the Rich and the Poor (of 1343) are financiers in the milieu of Alexios Apokaukos. At any rate, the Dialogue is not a revolutionary manifesto, and Makrebolites looks to intermarriages between rich and poor as the solution for social inequality. Eschatological lamentations about the plight of the empire in his threnos on the collapse of the dome of Hagia Sophia are harmonized with the expectation of the advent of Christ. Makrebolites drew on the Bible rather than classical authors for literary allusions. In his commentary on Lucius or the As of Lucian he allegorically interprets the text as a story of salvation through toil and purification (M.A. Poljakovskaia, VizVrem 34 [1973] 137–40).

ED. AND LIT. I. Ševčenko, "Alexios Makrebolites and his 'Dialogue between the Rich and the Poor,'" ZRVI 6 (1960) 187–228, with Eng. tr. S.I. Kourouses, "Hai antiép...
MAKRINITISSA MONASTERY, a 13th-C. Thessalian foundation dedicated to the Theotokos of Oxeias Episkepses ("of swift visitation"). Only fragments of the original buildings now survive in the village of Makrinitsa on the slopes of Mt. Pelion near Volos. The monastery of Makrinitsa (Μακρινίτισσα) was established in the early 13th C. by Constantine Maliasenos, the ruler of Demetrias, and is first mentioned in a document of February 1215. The monastery’s status as a stauropos region was challenged on several occasions by...
the bishops of Demetrias but reaffirmed by Patr. Germanos II and Arsenios. Constantine eventually became a monk at Makrinitissa and died there ca.1256. His son, Nicholas Maliasenos (PLP, no.16523), succeeded him as second η τετορ and by 1266 had retired to Makrinitissa as the monk Ioasaph. The monastery flourished in the 13th C., acquiring several μετοχια, including the Hijarion monastery at Halymyros.

In 1271/2 Nicholas also founded the Nea Petra monastery at nearby Dryanoubaina, together with his wife Anna Kommene Doukaina Maliasene. Dedicated to St. John the Baptist (Prodromos), it was also located on the slopes of Mt. Pelion, above the modern village of Portaria. Nea Petra was originally a nunnery, to which Anna retired between approximately 1274 and 1276 as the nun Anthousa, but within a few years it was converted into a male monastery. The monastic complex still survives, but the original Byz. church has been replaced by a 19th-C. structure. The monastery was a σταυροπεδιον under patriarchal jurisdiction; it was exempted from paying taxes and from the jurisdiction of the bishop of Demetrias.

A deluxe illuminated MS of 1282–86 (Turin, cod. gr. 237), which preserved a copy of the charters of both monasteries, was destroyed by fire in 1904; it contained a portrait of Nicholas-Ioasaph and his wife (Spaetharakis, Portrait 188f., 248, figs. 141–42). The cartulary provides important information on the properties of the Maliaseni and on sales and donations of land to the two monasteries, in addition to recording their disputes with the bishops of Demetrias (B. Pančenko, IRAIK 9 [1904] 173–81).

MALAGINA (Μαλάγινα, later Μελάγγεια), district of Bithynia in the central Sangarios valley. Malagina first appears in history when Empress Irene sent an army there against the Arabs in 786. In 798 Arabs captured the royal saddle and horses at Malagina; they attacked again in 860 and ca.875. Malagina was the site of the main imperial stables where mounts were obtained for campaigns in the east. The first aplekton on the road to the frontier, it was where the strategoi of Thrakesion and Opsion joined imperial expeditions. In 1074 John Doukas had his palace in the vicinity, and in 1145 Manuel I restored its central fortress of Metabole after a Turkish attack. Manuel gathered troops at Malagina for his attack on Dorylaion in 1175. Its people supported the pseudo-Alexios against Alexios II. Malagina became the center of a province administered by a δοχεια στρατότεχνης in the late 12th C. (Angold, Byz. Government 245). Attested as an archbishopric in the 12th C., Malagina became a metropolis under the Laskarids. Its powerful fortifications, overlooking the Sangarios near Pamukova, show two periods, probably of the 7th and 12th C.

MALAJA PEREŠČEPINA TREASURE, a group of more than 200 gold and silver objects as well as weapons and clothing, found in 1912 on the banks of a tributary of the Dnieper River, near Poltava in the Ukraine. The finds included Byz., Sasanian, and Avar pieces and others of disputed origin. The oldest Byz. object is a silver pater with control stamps of Anastasios I and an inscription noting that it was "renovated" by Bp. Paternos, possibly the early 6th-C. bishop of Tomis (Iskusstvo Vizanti 1, no.142). Other finds included silver utensils with stamps of Emp. Maurice, a massive gilded silver amphora (early 7th C.), and 69 solidi from Maurice to Constan II (V. Kropotkin, Klady vizantijskh monet na territorii SSSR [Moscow 1962] no.250), indicating a date after the mid-7th C. for the burial of this diverse assemblage. Effenberg (infra) suggested that the objects came from a grave rather than a hoard; others have argued for and against the thesis that it belonged to a Khazar or Bulgar leader such as Kuvrat.

MALAKES, EUTHYMIOS, metropolitan of Neopatras (from before 1166), writer; born Thebes ca. 1115, died before 1204. Malakes (Μαλάκης) was related to the Tornikioi (his sister probably married the logothetes Demetrios). He belonged to the circle of the Patriarchal School in Constantinople and was closely connected to intellectuals such as Eustathios of Thessalonike, whose monody Malakes eventually wrote, and Michael Choniates. In his speeches he praised the military exploits of Manuel I and the heroism of Alexios Kontostephanos; he ridiculed those who climbed the social ladder without acquiring the values of friendship and love for motherland and family (Bonis [1937], infra 62f); he criticized the “chief tax collector” (architelles) Bardas for his cruelty (p. 50.23–25). As a metropolitan, he tried to impose discipline on the monks of his diocese. Malakes’ rhetoric remained conventional, although he introduced some vivid features in his portrait of Manuel: the emperor carried stones for the construction of Dorylaion; during expeditions he slept on straw, using his shield for a pillow and his armor for a blanket (Bonis [1941–48], infra 533.25–28, 538.1). Darrouzès (“Notes” 155–63) attributed to Malakes three speeches published by Papadopoulos-Kerameus (Noctes Petr. 142–87) under the name of Euthymios Tornikios, Malakes’ closest friend and author of a monody on Malakes.

LIT. G. Stadtmüller, Michael Choniates, Metropolis von Athen (Rome 1934) 306–12 (184–90). — A.K.

MALALAS, JOHN, chronicler; born ca. 490, died 570s. The name Malalas (Μαλάλας) means rhetor or scholastikos in Syriac. Malalas was educated in Antioch and evidently worked there as a bureaucrat; he probably moved to Constantinople in the 530s or soon after 540. The city of Antioch figures prominently in his Chronicle, an 18-book world history covering the Creation to the era of Justinian I. The sole Greek MS breaks off in 585; the narrative may have subsequently been extended to 574 (E. Chrysos, JÖB 15 [1966] 147–52). Book 18, which describes the reign of Justinian, shows more interest in Constantinople and fewer hints of Monophysite sympathies than the rest of the chronicle; it seems grafted on, either by the author himself, with his views and residence changed, or by another. The suggestion of J. Haury (BZ 9 [1900] 337–56) that the author be identified with John III Scholastikos, patriarch of Constantinople, is now rejected.

The work is important as the first Byz. universal chronicle; as such it exercised great influence, as it was also translated into Church Slavonic (M. Černyševa, Vizvrem 44 [1983] 221–26) and Georgian. It is of great linguistic interest, written largely in an undemanding vernacular (presumably for a popular audience), a refreshing change from Atticist pretensions. One positive aspect of the chronicle is the constant and unusual citing of sources by name, esp. in books 1–14, although many look secondhand. Books 15–18 derive more from oral sources and the author’s personal experience. Greek mythology is constantly rationalized. The Justinianic section seems often to be based on imperial propaganda, giving the official point of view (R. D. Scott, DOP 39 [1985] 99–109).

— B.B.

MALATYA. See Melitene.

MALCHOS OF PHILADELPHIA (probably in Syria), successful sophist in Constantinople; fl. 5th–6th C. Malchos (Μαχός) wrote a history called Byzantika, whose contents are uncertain. Most of the extant fragments come from the Excerpta de legationibus of Constantine VII (see Excerpta). Other fragments from the Souza, with and without his name, are variously ascribed to Malchos or to Kandidos Issauros, whose his-
tory covered Leo I and Zeno. The surviving excerpts, emphasizing Eastern events, do much to justify the enthusiasm of Photios (Bibl., cod. 78), who thought Malchos a paradigm of historical writing in style and content. Photios was, however, cool towards Malchos's religious position, observing that he was "not outside the Christian faith," a comment that has led various scholars to label Malchos a Neoplatonist, a pagan, or a flirter with heresies, but that may only mean that he was studiedly neutral on all religious issues.

MALEINOS (Μαλείνος), a family probably originating from Charsianon (Ch. Loparev, VizVrem 4 [1897] 558–69), although S. Papadimitriou considered the name non-Greek (VizVrem 5 [1898] 734). In 866 the first known Maleinos, the general Nikephoros, crushed the mutiny of Smbat, a close relative of Caesar Bardas (TheophCont 680.15–20). Eustathios Maleinos was also a general; his grandson evidently administered Cappadocia for many years in the mid-10th C. (L. Petit, ROC 7 (1902) 551.6–9). Constantine's brother Michael Maleinos was an influential church leader and the spiritual adviser of Nikephoros II Phokas, his nephew (see MALEINOS, MICHAEL). Another Eustathios, one of the richest Byz. magnates, fought in 976 against Bardas Skleros but in 986 effectively supported Bardas Phokas. Basil II, impressed by his wealth, took Eustathios to Constantinople, confined him, and after his death confiscated the Maleinos estates. Eustathios is thought to be the patron of a silver-gilt Sion, a shrine or relicary now in the cathedral treasury at Aachen; only the first name is inscribed. According to E. Honigmann (AIPHOS 4 [1936] 268–71), Arab itineraries for Asia Minor note the Maleinos estates that stretched from Klaudiopolis to the Sangarios River for about 115 sq. km. Several seals of the Maleinoi of the 11th C. have survived; they bore titles of patrikios and proedros; Niketas Maleinos was hypatos and strategos in the mid-11th C. (Seibt, Bleisiegel 274f). Thereafter the Maleinoi lost the role of military commanders: in 1084 Stephen Maleinos was a modest landowner in Thessalonike (Lavra 1, no. 45.8), and, under Andronikos I, Eustathios of Thessalonike (Eust. Thess. Capture 56.15) described a certain Maleinos as noble, although Niketas Choniates (Nik.Chon. 296.76–78) considered him neither noble nor rich.

A branch of the family existed in Calabria: a protospaharios Gregory Maleinos, perhaps a relative of Neilos of Rossano, served in the Byz. administration in the 10th C.; family members were landowners, administrators, and church leaders in 11th- and 12th-C. Calabria (Falkenhauen, Dominatione 154f). The family is unknown in late Byz.

LIT. Winkelmann, Quellenstudien 191. -A.K., A.C.

MALEINOS, MICHAEL, saint; baptismal name, Manuel; born Charsianon ca. 894, died Mt. Kyninas, Bithynia, 12 July 961. Born to the noble MALEINOS family, he received the title of spatharocandidatos at an early age. At 18, however, he left the imperial court and retired to the monastery of Kyninas, where he served as a waiter (trapezites). After his father's death Maleinos ceded his vast property to his brother Constantine and lived several years on a rock and then in an isolated location. In 921 he returned to cenobitic life: first in the monastery of Xerolimne, then ca. 925 in Kyninas, where he became priest and hegoumenos. He had great influence on Nikephoros II Phokas, who was his nephew, and on Athanasios of Athos.

His Life was written by a Theophanes, whom L. Petit identified with the Theophanes mentioned in the Life as a calligrapher and the disciple of Maleinos for 40 years; at any rate, the Life was apparently written by a contemporary. The author eulogizes the aristocracy: he criticizes Romanos I and describes with pride the Maleinos genealogy. He depicts social conflicts, such as an attempted murder of Maleinos by the monk Kyriakos. Theophanes included several visions, one of which concerned the Byz.-Bulgarian war; since the victory in the dream is ascribed to the black dog and the man in black dress (i.e., to Bulgarians), it is probable that Theophanes wrote before the Byz. victories over the Bulgarians under John I Tzimiskes.

MALIASENOS (Μαλιασένος, fem. Μαλιασένη), a 13th-C. noble family in Thessaly, confused by some scholars with the Μέλισσενοι. The Maliasenoi may have been related to the sebastos Nicholas Maliase[s], a participant in the council of 1191. Constantine Maliasenos supported Michael I Komnenos Doukas of Epirus and married his daughter. Constantine's son Nicholas changed sides, married Anna Palaiologina, Michael VIII's niece, ca.1267, and became imperial gambros. Nicholas (monastic name Ioasaph) and Anna built or rebuilt several monasteries and churches in Thessaly, including Μακρινίτισσα and Nea Petra. In 1274 Anna became a nun under the name of Anthousa; she died probably before 1276. Slabs from her elaborate sarcophagus, identified by its inscription, are preserved at Nea Petra and at Ano Volos. A portrait of Nicholas and Anna in a collection of monastic charters (Turin, cod. gr. 237) was destroyed by fire in 1904 (Spatahrakis, Portrait 188f, 248, figs. 141-42).

MALTAN (Μελίτη), island lying 80 km off the southeast coast of Sicily. Probably ruled by the Vandals from ca.455 until it was taken over by the Ostrogoths at an uncertain date. It was conquered by the Byz. ca.535. By 592 it was the seat of a bishopric within the Sicilian province, initially under papal jurisdiction, but transferred to the patriarchate of Constantinople ca.756. Although attached to the administration of Sicily, it had its own doux by 637 (Nikeph. 25.23). G. Schlumberger's association of the seal of an archon kai drourigrarios (ReGr 13 [1900] 492, no.209) with Malta has led to the suggestion that, owing to its strategic position and excellent harbor, a fleet was stationed there. Archaeological evidence is scanty and in Byz. sources Malta figures most often as a remote place of exile. Probably after a series of Arab attacks it fell to the Aghlabids from North Africa on 29 Aug. 870. Destruction of Christian sites and near complete Islamicization followed; a Byz. attempt at reconquest ca.1050 failed. Even after its conquest by the Norman count Roger I in 1090 the Islamic presence remained strong.

MALIKSHÁH (Μαλικσή), Seljuk sultan (1073–92); born Aug. 1055, died Baghdad Nov. 1092. Son of Alp Arslan, Maliksháh ruled Iran, Iraq, and northern Syria and claimed control over the Turkomans in Anatolia. In 1074 Michael VII, seeking an alliance, exchanged embassies with Maliksháh, while Psellos wrote a treatise on the Incarnation addressed to Maliksháh, praising his tolerance. The alliance proved ineffective. About 1086 or 1087, after Abu'l-Kásim had secured possession of Nicaea, Maliksháh sent Bursuk with an army against him. He also sought alliance with Alexios I, who, however, chose to support Abu'l-Kásim. In 1092 Maliksháh sent Buzan to Anatolia to subdue Abu'l-Kásim and proposed the marriage of the sultan's son to a daughter of Alexios, restoration of Byz. territory in Anatolia, and aid against the Turkomans. Alexios declined the marriage proposal; his embassy to Maliksháh was frustrated by the latter's death. The ensuing fragmentation of Seljuk territories allowed the First Crusade's success and the Byz. reconquest of parts of Anatolia.

MAMAS (Μάμας), saint; feastday 2 Sept. The earliest panegyrics by Basil the Great (PG 31:589–600) and Gregory of Nazianzos (PG 36:620f) are devoid of factual information: they only call Mamas a poor shepherd; Gregory reports that Mamas, who used to milk the deer, “now pastures the people of a metropolis.” The so-called encyclical passio, preserved only in Latin (although the authors assert that it was written in Greek), develops the theme of Mamas's pastoral life among animals: when he was arrested and thrown to wild beasts, the lions and leopards knelt at his feet. The passio locates Mamas in time and space: supposedly puer (servant?) of T[h]jaumasios,
an absolutely unknown bishop of Caesarea in Cappadocia, he was about 17 when he was discovered in the wilderness, brought to trial, and executed in the reign of Aurelian (270–75). A Greek legend describes Mamas as born in Gangra, son of a senator named Theodotos, and martyred at age 15. The legend of Mamas is also known in Syriac and Armenian versions.

**Representation in Art.** There are several different types of images of Mamas, the type varying with the context in which the portrait appears. Plain portraits show him clad in a short tunic and long cape, with a crook or a knife in his hand, sometimes standing among sheep. In the Menologion of Basil II (p.5) and other calendar cycles, the martyrdom of Mamas is chosen (he is speared in the stomach). In illustrated MSS of the works of Gregory of Nazianzos, Gregory’s homily on Mamas is frequently accompanied by the image of the shepherd boy, kneeling to milk a doe or merely seated among animals on a hillside (Galvaris, Liturgical Homilies 100–93). The images of Mamas astride a lion may reflect eulogiai distributed at his shrine (A. Marava-Chatzenikolaou, DChAE 2 [1960–62] 131–36).

**Source.** H. Delehaye, “Passio sancti Mamnetis,” AB 58 (1940) 126–41.

- A.K., N.P.S.

**MAMAS, MONASTERY OF SAINT**, located in the southwestern section of Constantinople near the gate of Xylokerkos. Byz. tradition assigned the original foundation of the monastery variously to Pharasmanes, a chamberlain of Justinian I (Zon. 3:300.23–26), or to Gordia, the sister of Emp. Maurice (Preger, Scriptores 3:274.4–5). The church served as a private mausoleum for the family of Maurice, containing the tomb of the murdered emperor and his wife.

By the late 10th C. Mamas had fallen into decline and was restored under Symeon the Theologian. According to tradition, he served as hegoumenos for 25 years; ca.996–98, however, a group of monks briefly rebelled against his authority. By the mid-12th C. the condition of the monastic complex had deteriorated once again, reportedly on account of the abuses of charistikarioi. It was rescued by the mystikos George Kappadoke, who rebuilt the monastery and secured a chrysobull from Emp. Manuel I Komnenos declaring its independent and self-governing status. In 1158 the hegoumenos of Mamas, Athanasios Philanthropenos, composed a typikon of 48 chapters based largely on the 11th-C. typikon of the Euergetis monastery. Although the monks were theoretically limited in number to 20, 29 signed the typikon. The monastery is last attested in 1399.

**MAMIKONEAN (Mαμικωνιανος),** leading family of early Armenia, said to have been descended from the Čenq. The latter were traditionally identified with China, but recent scholarship has identified them with either the Tzans of the Caucasus or an Asiatic group in the vicinity of the Jaxartes. During the 4th and 5th C., the Mamikoneans were hereditary commanders-in-chief (sparapet`) of the Armenian forces and royal tutors (dayeakk`). As such, they were able to play kingmaker for the dynasty of the Arsacids (pseudo-P`awstos Buzand, bk. 5, chs. 37–44) and were Persian viceroys after the fall of the dynasty. Their domains included T`ayk`/Tao and Tar`on and they inherited lands belonging to the Church at the death in ca.438 of the last hereditary patriarch, through the marriage of his only daughter to Hamazasp Mamikonean.

Politically, the Mamikoneans usually sided with Byz. despite occasional compromises with the Persians and the Arabs. In 368/9, Mušel Mamikonean collaborated with imperial troops to replace Pap on the Armenian throne. The 5th- and 6th-C. revolts of Vardan I and II Mamikonean served Byz. interests because they were directed against Persia and because Vardan II sought refuge in Constantinople after his defeat, even though Justin II's promised help had not come. Vardan's unsuccessful revolt and flight were repeated by
Grigor Mamikonian in 748, during his revolt against the Arabs.

From the 7th C. onward, the power of the Mamikonians waned. They lost command of the army and their lands to the rival Bagratids. The death of Musel Mamikonian in battle against the caliphate ca.772, the subsequent murder of his sons, and the marriage of his daughter to the Arab freebooter Jahhaf marked the end of the main line in Armenia, though some minor branches survived.

Even though Greek texts do not employ the family name of Mamikonian, many scholars (e.g., Toumanoff, Adontz) have suggested that certain Byz. noble families of Armenian origin (Mosele, Artabasdos, even Phokas) were descendants of the Mamikonians. The Mamikonian connection was also ascribed to some emperors, such as Heraclius and Philippikos, Empress Theodora, and her brother cesar Bardas. Attractive though it is, this thesis cannot be proven for want of sources.

MAMISTRA. See Mopsuestia.

MAMLÜKS (Μαμουλικοι, from Ar. mamluk, "slave"), a dynasty of sultans that ruled over Egypt from 1250 to 1517 and in Syria from 1260 to 1516. The Mamluks originally were Turkish slaves who formed the bodyguard of the Ayyubid sultan in Cairo. Taking advantage of the crisis caused by the Crusade of Louis IX (1249-50), the Mamluks murdered the last Ayyubid sultan Turanshah in 1250 and seized effective political control; for a period of ten years, however, they installed a series of nominal Ayyubid rulers, among them a woman Umm Khalil Shadjar al-Durr. The real founder of the Mamluk sultanate was Al-Zahir Baybars (1260-77), who established his position by defeating the invading Mongol army of Hulagu at ‘Ayn Jalut, near Nazareth, in 1260. Baybars and his immediate successors subdued independent lords in Syria, conquered Crusader fortresses such as Caesarea and Antioch, and finally drove the Crusaders from their last stronghold at Acre (‘Akka) in 1291. The sultanate remained a great power through the mid-14th C., when al-Nâṣir Hasan (1341-51, 1354-61) tried to play the role of an autocratic ruler; thereafter incessant usurpations and Turco-Mongol attacks created a precarious situation, and in the early 16th C. the sultanate fell to the Ottomans.

The Mamlûk sultans were natural allies of Byz. in the confrontation with the Latins and Turks. The treaty of 1281 (M. Canard, Byzantion 10 [1935] 669-80), signed by Michael VIII and Kalâwûn (1279-90), established eternal peace between Constantinople and Cairo and guaranteed security of both envoys and merchants. Exchanges of ambassadors continued under Andronikos II Palaiologos; Andrew Libadenos served as undersecretary on one of these embassies, sometime before 1328. In 1349 John VI dispatched to al-Nâṣir Hasan an embassy led by Lazaros, patriarch of Jerusalem, and Manuel Sergopoulos, asking for the reestablishment of a Greek quarter (Harat al-Rûm) in Cairo, protection of the Christians in Jerusalem, release of captives, etc. (Reg 5, no.2950). Sometime between 1425 and 1428 John VIII corresponded with the sultan Barsbay (1422-38), seeking an alliance against the Ottomans (Gy. Moravcsik, VisVrem 18 [1961] 105-15). Nonetheless there was occasional persecution of Christians in Mamlûk lands. At the beginning of the 14th C. Theodore Metochites wrote a Logos (no.12) on the neomartyr Michael who had been recently executed in Egypt, just at the time of a Byz. embassy (ed. H. Delehaye, AASS Nov. 4 [1925] App. 670-78).

MAMRE, OAK OF (Μουμμηνη ε δρυς, also called Τερεβυδων, lit. "turpentine tree"), the locus sanctus near Hebron associated with the Philo- xenia of Abraham when he provided hospitality to the three angels. Eusebios of Caesarea (De- monstr. evang. 5:9,7, ed. Heikel, Eusebius Werke
MA’MÜN (Μαμούν), caliph of the ‘Abbāsīds (813–33); born Sept. 786, died Tarsos 7 Aug. 833. He was the son of Hārūn al-Rashīd. Under Ma’mūn the study of ancient Greek works enriched the caliphate’s flourishing cultural life. Ma’mūn esp. patronized philosophy and science, funding translations of such authors as Aristotle and Ptolemy into Syriac and Arabic and sending to Constantino- nople and Sicily for MSS. He unsuccessfully attempted to have Leo the Mathematician visit Baghdad (Lemerle, Humanism 174f). For most of his reign Ma’mūn avoided direct attacks on Byz., although he supported the revolt of Thomas the Slav. In 829/30 he received the embassy of John VII Grammatikos. Hostilities flared in March 830, when Ma’mūn led an army into Byz. territory, probably pursuing the general Manuel and reacting against Byz. support for the Khurramites led by Bābak (J. Rosser, Byzantina 6 [1974] 265f). With his brother Mu’tasim in 831 Ma’mūn launched another invasion, during which his son al-‘Abbās defeated Emp. Theophilos. Ma’mūn refused the emperor’s peace entreaties and in July 833 invaded Asia Minor, where he died, having proclaimed Mu’tasim his successor.

MANAZKERT. See Mantzikert.
MANDAEANS (from Aramaic manda [γνώσεις], "knowledge"), a sect whose teachings are based on Gnosticism, also known as Nasoreans or St. John Christians; it apparently already existed in Syria in the 1st and 2nd C. and still survives today in Iraq and Iran. Teachings of the Mandaeans, contained in works such as the Ginza (Treasure), are dualist and resemble MANICHAEISM: the soul is imprisoned in the body and will be freed by Manda d’Hayé, a personification of the “Knowledge of Life.” Mandaeans stressed frequent baptism and paid special honor to John the Baptist, causing some scholars to argue that they were disciples of the Baptist. The Mandaeans were opposed to practices such as celibacy and baptism in still water. Their historical importance lies in their survival as a group, allowing insight into a living Gnostic tradition that is otherwise largely extinct.

-T.E.G.

MANDATE (ἐντολή, mandatum), a transaction whereby an authorized person (the mandatory) was empowered and obligated to act for another. A mandate was issued when the mandatory was to appear, on behalf of the person who authorized him, before a court, state authorities, or at a transaction. There seems to have been no attempt to work out any theory of legal representation. Therefore, the distinction is fluid between the representative in court (entoleus, cf. Nov. Just. 71) who appeared for a single case and the administrator of an estate (epitropos, procurator) who served for a long time or even continuously on another’s behalf in various ways. The custom of entrusting by will a close relative or spouse with the administration of the estate for the survivors led in the post-Justinianic period to a type of mandatory known as an epitropos, whose role must be variously interpreted according to context: as guardian, administrator, or executor of a will (see Peira, 15; Iuvi. 1, no.12.8–12, a.1001; Laura 3, no.160. 1–2).

-D.S.

MANDATOR (μανδάτωρ), subaltern official employed for special missions. The taktika of the 9th and 10th C. distinguish between imperial mandatores and those of high-ranking military and civil functionaries; a seal records the mandator of the LOGOTHETES TOU DROMOU (Laurent, Corpus 2, no.472). The term mandator is first used in a 9th-C. chronicle (Theoph. 182f) for Justinian I’s spokesman during the Nika Revolt of 532. Mandatores also had police functions—according to the (late 10th-C.?) vita two of them were sent to arrest MAXIMOS THE CONFESSOR (PG 90:109C). The seals of imperial mandatores are of the 7th–9th C. (Laurent, Corpus 2, nos. 257–68); mandatores are also mentioned in the mid-9th-C. taktikon of Uspenskij and in the late 9th-C. Kletorologion of Philotheos. In chrysobulls of the end of the 11th C. mandatores of the dromos function as guides for foreign envoys (e.g., Laura 1, no.48.45). The chief of the mandatores was called protomandator; a seal of the protomandator George Pekoules is dated to the 11th C. (Laurent, Corpus 2, no.256). The office of mandator disappeared thereafter; according to Guiscard (Institutions 1:597), it was replaced by tzaousios.

-A.K.

MANDORLA (lt., lit. “almond”), a conventional term for the aureole shown surrounding an entire figure to indicate the presence of the power of God. Usually almond-shaped, it may be round for seated figures. Seen first in 5th-C. art—Old Testament scenes at S. Maria Maggiore, Rome; apse of Hosios David, Thessalonike—it then envelops Christ in scenes of his Transfiguration and Ascension and the Virgin in Glory in 6th-C. art. Rooted in Jewish and Antique literary images, the mandorla unites ideas of enveloping light and enveloping, protective cloud. Applied initially to varied instances of the “glory of God” (Septuagint doxa—W. Loerke, Gesta 20 [1981] 15–22), it was eventually restricted to Christ and the Virgin Mary as a sign of their celestial glory. It surrounds the figure of Christ in the Anastasis from the 10th C. onward and in the Dormition from the late 12th C. In Palaiologan art, the mandorla was
understood primarily as light and was extravagantly developed in images associated with Ἑσυχασμ, as in, for example, the miniature of the Transfiguration in Paris, B.N. gr. 1242 (Rice, Art of Byz., pl.39).

MANDYAS (μανδύας), originally a light Roman cloak (attested from ca.200), resembling the chlamys. Both Hesychios of Alexandria and Eustathios of Thessalonike assert that it originated with the Persians. The term came to designate the long, dark, plain cloak worn over the monastic tunic by both men and women. Hanging from the shoulders, it opens in front and stretches down to the knees; it is fastened at the neck and below the waist by drawstrings. According to monastic typika, a new mandyas was distributed to monks every two years (P. Gautier, REB 32 [1974] 65-610). The term mandyas can also refer to the cloak that is worn by a bishop except when he dons the omophorion to celebrate the liturgy; the episcopal mandyas may be more elaborate, with embroidered panels at its four corners from which spread rays called potamoi (“rivers”). In the 14th C., the emperor donned a gold mandyas during the coronation (pseudo-Kod. 261.3).

MANDYLON (μανδύλιον), the Holy Towel, a precious acheiropoiētos said not only to have been an authentic likeness of Christ but one which Christ himself willingly produced. It was thus often cited both as proof of the reality of his incarnation—as it had been in contact with his body—and as justification for the iconophile position: Christ thereby endorsed the making of his images.

The existence of the Mandylon is first mentioned in the 6th C. According to one of several versions of the story, Abgar, a 1st-C. king of Edessa, had fallen ill and begged Christ to come and cure him; instead, Christ gave the King’s messenger a towel that he had pressed to his face and that retained the impression of his features. (In some reports Christ sent a letter instead. Both relics were honored in Edessa.) The king was cured by the miraculous image, which, after being lost and then miraculously rediscovered, remained in the city even after its conquest by the Arabs. In 944, John Kourkouas besieged Edessa and obtained the Mandylon as a condition of his withdrawal. The Mandylon was carried in a triumphal procession to Constantinople that same year to the Pharos chapel in the Great Palace. Its arrival is described in the Story of the Image of Edessa (PG 113:421–54) attributed to Emp. Constantine VII Porphyrogenetos, and the event was celebrated thereafter annually on 16 Aug. (V. Grumel, AB 68 [1950] 135–52). The Mandylon may have been one of the relics purchased by King Louis IX in 1247 and taken to Paris; these were housed in the Ste. Chapelle until lost during the French Revolution.

The extent of the influence exerted by the relic on other images of Christ after its arrival in Constantinople remains to be explored. Its original aspect can be reconstructed through its many copies. Although Christ's features on the Mandylon are those of the Pantokrator, the Mandylon image is not a bust: it shows the nimbed head of Christ and part of his neck, but not his shoulders. The face is painted as though imprinted on a horizontal fringed strip of white cloth, which is sometimes woven with a diaper pattern or stripes of ornament. The earliest surviving example is on a 10th-C. icon at St. Catherine’s monastery, Sinai, celebrating the Abgar story (Weitzmann, Sinai Icons B.58).

As the Story of the Image was incorporated into the menologion of Symeon Metaphrastes, some 11th-C. illustrated MSS of the menologion also contain images of the Mandylon and even short narrative cycles illustrating the story of the relic and of its arrival in the capital. Longer cycles appear in the 14th C.: on a scroll in the Morgan Library (S. Der Neressian, IzvBülgArchInst 10 [1936] 98–106; Illuminated Greek MSS, no.56), on ten silver panels that frame a 14th-C. painted icon of the Mandylon in Genoa (Grabar, Revêtements, no.35), and in the Serbian church of Matejić (V. Petković, PKJIF 12 [1932] 11–19). A curious miniature in the Madrid Skylitzes MS shows Emp. Romanos I receiving and embracing the Mandylon, here represented not as a piece of im-
printed cloth but as the disembodied head of Christ resting on a towel (Grabar-Manoussacas, Skylitzès, fig. 158).

In monumental painting, the Mandylion was a popular theme in all quarters of the empire and beyond, including Cappadocia (N. Thierry, Zografa 11 [1980] 16–18) and Georgia (T. Velmans, Zografa 10 [1979] 74–78). It has no fixed place in church decoration, but often forms a pendant to the keramion. The Mandylion image was also known in the West where, with certain differences of detail (Christ’s neck is not included, the crown of thorns is eventually added), it developed as the "Veronica."

-N.F.S.

MANFRED, king of Sicily (1258–66); born 1232, died Benevento 26 Feb. 1266. The illegitimate son of Frederick II Hohenstaufen, Manfred was elected king of Sicily in 1254 after the death of his half-brother Conrad IV. He was not crowned until 1258, however, after overcoming papal opposition. Manfred continued his ancestors' policy of conquest of the Balkans. Although his sister Constance-Anna was married to JOHN III VATATZES, Manfred abandoned his father's alliance with the empire of Nicea after the death of THEODORE II LASKARIS and formed a coalition with the despotate of Epiros. On 2 June 1259 he married Helena, daughter of Michael II Komnenos Doukas of Epiros (M. Dendias, EpChron 1 [1926] 219–94). Michael confirmed Manfred's possession of coastal lands that he had previously seized in Albanian Epiros. Manfred joined the anti-Nicene alliance of Michael and WILLIAM II VILLEHARDOUN and sent 400 German knights to fight at Pelagonia, but did not himself participate in the battle (D.J. Geanakoplos, DOP 7 [1953] 101–41). After the defeat of the coalition, the victorious MICHAEL VIII PALAIOLLOGOS offered to marry Manfred's sister Anna, but she refused. Manfred was killed at Benevento in battle against CHARLES I of ANJOU, who succeeded him as king of Sicily. Manfred's daughter Constance was married to Peter III of Aragon, thus providing the latter with a claim to Sicily (see SICILIAN VESPERS).

-A.M.T.

MANGANA, region of Constantinople, named after a depot of military engines (μαγγανα), situated on the east declivity of the Acropolis hill. The family of Michael I Rangabe owned a mansion there, transformed by Basili I into a crown domain with far-flung landed possessions to defray the expenses of the imperial table. Constantine IX Monomachos developed the area: he built a monastery of St. George, a palace (later destroyed by Isaac II), and a hospital, and established a law school there. The monastic church, cloister, and surrounding garden were constructed on a lavish scale by Constantine, who was subsequently buried there in 1055. The imperial court visited the church annually on 23 Apr., the feast of St. George. Constantine IX granted the "pronoia of Mangana" to the future patriarch CONSTANTINE (III) LEICHOUDES, but the meaning of the term pronoia here is debatable (A. Hohlweg, BZ 60 [1967] 291–94).

After brief occupation by Latin monks during the 13th-C. Latin Empire of Constantinople, the monastery was restored to the Greeks under Michael VIII. JOHN VI KANTAKOUZENOS lived at Mangana for a while after his abdication. Greek monks continued to inhabit Mangana until 1453, when Turkish dervishes occupied it. Soon thereafter the monastic complex was destroyed to accommodate the fortified circuit of the seraglio. Archaeological exploration has revealed a complex of substructures among which the remains of the Church of St. George are recognizable.

During the 14th C. the monastery housed the relics of Christ's Passion, which attracted numerous visitors, including pilgrims from Rus'. It held second place in the hierarchy of Constantinopolitan monasteries. A number of MSS have survived from its library; at least two were copied at Mangana in the 14th C.

MAGLABITAI (μαγλαβιταί), member of the maglabion (lit. "cudgel"), a detachment of imperial bodyguards (along with the hetaireia). Manglabitai preceded the emperor at ceremonies and had to unlock certain doors of the palace every morning. They were armed with swords (De cer. 576.1). The first mention is in the 9th-C. vita of Philaretos the Merciful—his son John was saptários and manglabites. The etymology is under discussion: M. Canard (Byzantion 21 [1951] 495, n.1) has associated the word with the Arabic mijlab, a whip, while others have suggested the combination of Lat. manus, "hand," and clava, "cudgel" (De adm. imp. 5.161–62); the verb manglabizo was used for flogging (Ph. Koukoules, Thessalonikes Eustathio tu laographika [Athens 1950] 2:114, n.6). The term rabdouchou, "bludgeon-carriers," in the vita of Ignatios the Deacon (PG 105:529C), was probably a synonymy for manglabitai.

Manglabitai fulfilled special assignments, sometimes to kill or capture an imperial adversary; because of their closeness to the ruler they would occasionally be involved in conspiracy against him. Their commanders, sometimes called epi tou manglabiou or protomanglabitai, held a high position in the 10th C., whereas a simple mangabites could be illiterate (Laura 1, no.16.49. a.1012). According to Oikonomides (Listes 328), imperial manglabitai disappeared by the end of the 11th C. On the other hand, manglabitai of the Great Church are known only from seals of the 11th–13th C. (Laurent, Corpus 5.1, nos. 142–43).

—A.K.

MANI (Μάνη, Μάανη), the mountainous central "finger" of the Peloponnese extending southward into the Cretan Sea and terminating in Cape Tainaron (Matapan). The region has an unusually rough and rocky terrain formed by the southern reaches of Mt. Taygetos, which plunges sheer into the sea at many points; as a result it tended to be isolated from the rest of the peninsula, and its population has a tradition of resistance to control by a central authority.

In the 4th and 5th C. the Mani was ravaged by invasions of Goths and Vandals, and also suffered from severe earthquakes. In the late 6th C. began the invasions of the Slavs, some of whom settled permanently and came to be known as the Ezeritai and Melingoi. According to Constantine VII Porphyrogennetos (De adm. imp., 50.71–75), the Maniots were ethnically Greek ("the descendants of the ancient Romans who even to this day are called 'Hellenes' by the local inhabitants") and retained their allegiance to the Byz. Empire during the period of the Slavic invasions. Byz. political control over the Mani was reasserted in the 9th C.; the Mani was part of the theme of the Peloponnese. In the 13th C. the Mani was briefly under the control of the Franks who constructed great castles at Passava and Maina; by the 1262, but their authority over the region remained nominal. The Ottomans added Mani to their territory after the fall of Mistra in 1460.

Christianity penetrated into Mani by the 5th C. and at least four churches built there in the 5th and 6th C. are known. Nonetheless, there must have been considerable reversion to paganism during the time of Slavic settlement in the peninsula, and Constantine VII states that Maniots were considered by some [Christian] "local inhabitants" as idol worshipers; he says that they were converted to Christianity by Basil I. Strangely enough, the conversion of the Maniots is not mentioned in the Vita Basilii, and missionaries (notably Nikon ho "Metanoite") were active in the Mani in the 9th and 10th C. The churches built in the 10th C. and thereafter are remarkable for their number and their state of preservation, although it is unclear whether this should be attributed to the wealth of the area in Byz. times or to its modern isolation. Most of these churches are small versions of the cross-in-square plan although local features, such as the vault of the nave projecting into the narthex, are evident, as at St. Theodore, Vamvaka, dated by inscription to 1075. Among the most elaborately painted are the Church of Hagios Strategos at Voularioi (12th C.) and St. Nicholas at Kambinari near Platsa, whose first program of decoration was commissioned by Constantine Spanes, military governor (itaousios) of the region in 1337.
MANI (Μάνης), religious leader and founder of Manichaeanism; born Babylonia 14 Apr. 216, died 2 Mar. 274 or 26 Feb. 277. According to a legend, he was flayed alive by authorities of the Sasanian state and his “passion” or “crucifixion” lasted 26 days. The Byz. had a negative view of Mani and regarded him as a particularly noxious heretic rather than as the founder of a separate religion; some theologians (e.g., Aphrahat) admitted, however, that he did recognize the unity of the Godhead. His name was derived by the Byz. from the verb mainomai, “to be furious or mad” (e.g., Titos of Bostra, PG 18:1077 B). The Byz. legend of Mani, differing from that of Muslim sources, is developed in the Acta Archelai; some details were added by Epiphanius of Salamis, Cyril of Jerusalem, Cedrenos, etc. According to this legend, Mani’s real name was Skythianos; in the days of the apostles, he settled among the Saracens; his wife, an Egyptian prostitute, urged Mani to go to Egypt, where he met a certain Terebinthos who became his disciple and recorded Mani’s doctrines in four books—Mysteries, Chapters, Evangelion, and Treasure. Epiphanius relates that Mani-Skythianos was killed when a roof fell on his head; Cyril locates his death in Judea; Sokrates (HE 1.22.4) states that Terebinthos assumed the name of Buddha.

MANIAKES, GEORGE, general and usurper; died Ostrovo near Thessalonike between Apr. and early June 1043 (Shepard, “Russians Attack” 174, n.4). Of low birth, Maniakes (Mavákës) impressed even his opponents by his great size, courage, and military skills. In 1030, as strategos of Telouch, he saved his town from Arab attack; in 1031 or 1032, as strategos of the cities of the Euphrates (Samosata in Yahya—V. Rozen, Imperator Vasiliì Belgaroboec [St. Petersburg 1883] 72), he won Edessa and sent to Constantinople Jesus’ purported letter to Abgar (see MANDYLION). He governed Vaspurakan ca.1034 or 1035. About 1037 Michael IV sent him to Italy as strategos autokrator. In 1038 he attacked Sicily with forces that included Varangians (with Harold Hardrada) and 500 Normans. Maniakes conquered eastern Sicily. But in 1040, falsely accused, he was recalled and imprisoned in Constantinople. Released by Michael V, he went as katepano to subdue the Normans in southern Italy (arrived Apr. 1042), where he behaved with great cruelty. His feud with Romanos Skleros (their estates abutted in Anatolia) culminated when the latter influenced Constantine IX to recall Maniakes (Sept. 1042). Outraged, Maniakes rebelled, crossed to Dyrachion (Feb. 1043), and marched on the Byz. capital. He fell at the moment of victory; his head was paraded through Constantinople. Maniakes’ career is depicted at length in the Madrid Skylitzes MS (Grabar-Manoussacas, Skylitzēs, nos. 500f, 519–21, 545–47). Descendants of his former troops, called Maniakatai, are attested in the late 11th C. (An.Komm. 2:117:3); a protostatharios George Maniakes (the same or a grandson?) held land in central Greece (Svoronos, Cadastre 69). K. Konstantopoulos (EESB 9 [1932] 123–28) denies that the seal published by G. Schlumberger (L’époque byzantine [Paris 1905] 3:457) belonged to Maniakes.

MANIAKION. See TORQUE.

MANICHAEANISM, a system of belief that spread throughout the Roman Empire, the Near East, and as far east as China; the remnants of Manichaean writings have been found in Tebessa (Theveste), North Africa (P. Alfaric, Revue d’histoire et littérature religieuses 6 [1920] 62–98), in Fayyum, and in northwestern Turkestán (E. Chavannes, P. Pelliot, JSAV 18 [1911] 499–617). The system was allegedly formulated by the Persian religious leader Mani. It was uncompromis-
ingly dualistic and grew out of Zoroastrianism; the latter, however, presented the primal conflict between Light and Darkness primarily as that of the forces of nature, whereas Manichaeanism emphasized the struggle of ethical principles—Good and Evil; while Zoroastrianism was optimistic, Manichaeanism tended toward pessimism. It was influenced, at least in its western manifestation, by Gnosticism and Judeo-Christianity.

The search for the roots of evil made Manichaeanism popular: even Augustine was temporarily an adherent (A.I. Sidorov, *VDI* [1983] no. 2, 145–61). According to Manichaean teaching, the history of the cosmos consists of three periods: the past when the Spirit was not yet mixed with Matter; the present when these two principles are mixed, creating tension and conflict; the future when Evil (Darkness) and Good (Light) will be separated in two different zones, Good in the north and Evil in the south. Each of the two principles has its king—the Father of Light and the Prince of Darkness; the Prince of Darkness is surrounded by demonic forces, whereas Light sends its divine emanations—the Mother of Life, the Friend of Life, the Friend of Light, or Demiurge, the Messenger of Salvation, the Longing of Life, Jesus the Luminous, who suffered on earth and whose apostle Mani opened the final way to salvation. Adherents of Manichaeanism were divided into grades (the Elect and the Hearers), each professing different levels of asceticism. Manichaeanism maintained eschatological expectations: the sect was to spread and prosper until all light (except for a tiny bit) was liberated and this would be followed by a universal confession lasting 1,468 years and leading to the triumph of Good.

Manichaeanism met strong opposition from both Zoroastrianism and Christianity. The Neoplatonist Alexander of Lykopolis (ca. 300) wrote a treatise against Manichaeanism and many Christian theologians followed suit: Serapion of Thmuis, Titos of Bostra, Epiphanius, Germanos I, John of Damascus, and others; the *Acta Archelai* was the major refutation of the sect. Christian criticism of Manichaeanism was based on the idea that there can be only one principle, monas, and not two; Evil is not a being but the lack of existence, and Matter is not necessarily evil since it brings forth good fruit: otherwise, as John of Damascus points out (*Contra Manichaeos* 76.3–6, ed. Kotter, *Schriften* 4:392), the Pantokrator would surely have destroyed it. The Christian law codes regard Manichaeanism as the most noxious of heresies, but the testimony of St. Ephrem and Mark the Deacon show that Manichaeism remained strong in Syria and Mesopotamia. The Byz. systematically identified later dualistic movements (Bogomils, etc.) as Manichaean, although there was probably no direct link between them.

—T.E.G., A.K.

**MANIERA GRECA.** See Art and the West.

**MANKAPHAS, THEODORE,** nicknamed “Morotheodore” (“Theodore the Fool”); fl. ca. 1188–1205. Apparently a prominent personage of Philadelphia, ca. 1188 Mankaphas (Μάνκαφας) secured the allegiance of its inhabitants and neighboring provincials, took the imperial title, and minted silver coinage. I. Jordanov attributed a series of billon trachy coins found in Bulgaria to Mankaphas, but E. Pochitonov (BS 42 [1981] 52–57) assigns these to the contemporary Peter of Bulgaria. Grierson (Byz. Coins 235f) and Hendy (*Economy* 439) ascribe them to Mankaphas.

Isaac II besieged Mankaphas in Philadelphia (June 1189), but the advance of Frederick I forced a compromise: Mankaphas gave up his imperial title and offered hostages but retained control in Philadelphia. Basil Vatatzes, *doux* of Thrakias, forced Mankaphas ca. 1193 to flee to Kay-Khusraw I at Ikonion. The sultan allowed him to recruit Turks with whom he ravaged southwestern Anatolia. Isaac persuaded the sultan ca. 1194 to sell him Mankaphas, on condition that Mankaphas suffer no corporal punishment. Mankaphas was imprisoned, but by 1204 free and again powerful in Philadelphia. Following the Fourth Crusade, he created an independent state around Philadelphia. Mankaphas brought a large force to counter Henry of Hainault, who had occupied Atramyttion, but was defeated on 19 Mar. 1205. Mankaphas soon lost his territories to Theodore I Laskarès.
MANKIND. The unity of the human race is the presupposition in Byz. theology for Christology, soteriology, and the doctrine of theosis. The prototypes of this unity are Adam and Christ who, along with creation and the incarnation, are cited as the inner basis for the unity of the human race. In some Christological texts one encounters the view that the "human reality" (commonly called sarx) of Christ assumed by the Logos is the "full human nature," that is, humanity as a whole, and not a particular human individual. The latter would be considered a person, but one cannot present the humanity of Christ as a human person without falling into nestorianism.

MAN OF SORROWS (ἡ ᾔκρα ταπεινώσις, lit. "the peak of humiliation," from Is 53:8). Known in the West as the Imago Pietatis, or the Christ of Pity, this image shows the upper body of Christ naked, upright in a sarcophagus, arms visible only to the elbow and hanging down at his sides (or, from the 14th C., crossed), eyes closed, his head bent in death. The cross is placed directly behind him in the background. Essentially a combination of elements drawn from scenes of Christ's Passion, particularly his deposition and entombment, the theme existed as a separate image as early as the 12th C. (e.g., an icon from Kastoria [Holy Image, no.9]) and was a response to developments taking place in the Holy Week liturgy, notably that of Good Friday, over the course of the 11th and 12th C. The importance of the Virgin and her laments in this liturgy inspired a pendant image, that of the mourning Virgin; often the two were paired as wings of a diptych or on either side of a bilateral icon, esp. in the 14th C. The association of the icon type with Good Friday is reflected in images of St. Paraskeve the Elder, who holds an icon of the Man of Sorrows. The image of the Man of Sorrows was used in MSS of the Decorative Style group to accompany the Gospel passages read on Good Friday and deco- rated some Epitaphios textiles. It was also used in monumental painting in a more strictly Eucharistic context, for example, in the Pastophoria, esp. the prothesis (S. Dufrenne, REB 26 [1968] 297–310). It appears on mosaic icons; one of the earliest of these (ca.1300), housed in Santa Croce in Rome, gave birth to the long tradition of the image in the West.

MANUALION. See LIGHTING, ECCLESIASTICAL.

MANPOWER. It is generally accepted (even though there is no direct data from demography) that the economic crisis of the later Roman Empire was caused by a decrease in manpower that affected both military institutions and the economy. It is argued that the government tried to solve the former problem by recruiting foreigners, primarily Germanic mercenaries and foederati; it dealt with the insufficiency of farmers, craftsmen, etc., by attaching the coloni to the soil, the tradesmen to their guilds, and the curiales to their cities. It is also generally accepted that in the 7th–9th C. the crisis of manpower was overcome and that by the 10th C. the empire had "an ample demographic reservoir" (Vryonis, infra); the hypothesis of Russian Byzantinists (V. Vasil'evskij, etc.), who proposed that this demographic upsurge was a result of the settlement of the Slavs in Byz., is now rejected for lack of evidence. One can affirm, however, a significant shift of population by the mid-7th C. from the city to the countryside that may have contributed to the increase of manpower within the fiscal and agricultural sector.

It is also assumed that from the 11th C. onward a new crisis of manpower developed as a consequence of social (the growth of great landownership) and ethno-geographical (primarily, the Turkish invasion) causes. This assumption can be challenged, however, since the growth of urban centers in this period seems certain, whereas the desertion of the countryside is questionable, at least up to the 14th C., when the praktika provide the earliest dependable data for southern Mace-
donia. Even in the 14th C., however, the land was not less valuable than the workers, and the great landowners tended to acquire rather than dispose of deserted or escheated fields. The constant influx of foreigners and refugees from the regions occupied by the Turks helped to preserve a certain balance of manpower.

MANŞUR IBN SARJÜN, high-level administrator in Damascus; a member of a prominent Syrian Melchite family; died after 696. Theophanes the Confessor (Theoph. 365.23–24) mentions a certain Sergios, son of Manşur, “general logothetes” in the reign of Justinian I. Probably promoted to a high post by Maurice, Manşur (Mavrotp) retained his position at the time of the Persian occupation of Damascus in 613. When Heraclius entered Damascus in 630, he required Manşur to pay again “100,000 dinars” that the city had already given in taxes to the Persians. Manşur’s dislike of Heraclius intensified from that moment. According to Eutychios of Alexandria, Manşur still held his position at the time of the Muslim invasions in 635. The Byz. general Vahan attempted to secure provisions from Manşur in the summer of 636. Manşur claimed that the city’s resources were insufficient. Eutychios says that Manşur subsequently created a ruse, using noisy civilians in the night to frighten encamped Byz. soldiers. In that case, Manşur contributed to the disorder of the Byz. army on the eve of the battle at YARMUK. Possibly, however, this incident is confused with a different group of military actions prior to the first Muslim capture of Damascus in 635. Manşur surrendered Damascus to the Muslims, for which he was allegedly excommunicated. His son Sarjûn ibn Manşur was public and private secretary to Caliph Mu’awiya and a friend of Caliph ’Abd al-Malik. Manşur’s grandson was JOHN OF DAMASCUS.

MANTZIKERT (Manzikert, Arm. Manazkert), city north of Lake Van. Already an important episcopal see in the 4th C., Mantzikert was the site of a council of union between the Armenian and the Syrian churches in 725/6 and is still recorded as an episcopal see in the 11th C. The 9th–10th C. marked the apex of Mantzikert’s prosperity as a military and trade center and as the site of a mint under the Arab Kaysite emirs. In 968/9, however, the Byz. retook and razed the city, later granting it to David of Tayk’/Tao. It reverted to the empire at his death in 1000.

MANTZIKERT, BATTLE OF (Aug. 1071), the first encounter of the Byz. with the regular army of the Seljuk sultan Alp Arslan. The battle is described in various Greek sources (primarily Attaleiates and Nikephoros Bryennios) as well as by oriental (Michael the Syrian, Matthew of Edessa, Sibt ibn al-Jawzi) and even Western historians (William of Apulia); their information is, however, contradictory. After victories in skirmishes with separate Turkish bands, the emperor Romanos IV in the spring of 1071 led an enormous expedition into Anatolia to clear the eastern provinces of the Seljuks. His army included numerous foreign contingents (Franks, Rus’, Pechenegs, Uzes, Caucasians) and was, according to the late Muslim historians, 200,000–400,000 strong; Cheynet (infra) lowers this figure to roughly 60,000. For Alp Arslan’s army the Muslim sources give 15,000. The armies met on 19 or 26 Aug. someplace on the road between Mantzikert and Chlïat (mod. Ahlat).

Romanos evidently underestimated his adversary. He divided his forces and sent the Norman general Roussel de Bailleul and Joseph Tarchaneiotes to Chlïat; they did not participate in the battle, however, but fled westward as soon as the fighting began. The first phase of the battle was a cavalry attack by the Byz. The Turks retreated, feigning flight, then suddenly turned, entrapping and annihilating their pursuers; the main portion of the Byz. army attacked the Seljuks, forced them to withdraw, and safely returned to their camp. The next day Alp Arslan
managed to attract some contingents of the Uzes to his side, but he was far from victory and suggested a truce; Romanos’s conditions, however, were unacceptable to the Turks. When fighting resumed, the Byz. army advanced in the center, under command of Romanos himself; but at that moment Andronikos Doukas, the emperor’s old rival, spread the rumor that Romanos had been defeated. Doukas then fled from the battlefield and caused a general retreat. Romanos was surrounded and fought desperately but was taken captive. One reason for the Turkish victory was their skillful use of mounted archers (W. Kaegi, *Speculum* 39 [1964] 105f).

The battle itself was not such a great disaster as it is usually presented by modern historians. The Byz. had insignificant losses, and Romanos was chivalrously treated by Alp Arslan and signed an honorable peace. His enemies in Constantinople, however, took advantage of Romanos’s captivity to proclaim a new emperor, Michael VII Doukas. The uncertainty of the political situation enabled the Seljuks to occupy rapidly the larger part of Asia Minor.

—A.K.

**MANUEL**, Armenian general who served both Byz. and the Arabs; died 27 July 838 (W. Treadgold, *DOP* 33 [1979] 182ff). Manuel was *protostrator* under Michael I; Leo V appointed him *patrikios* and *strategos* of the Armeniakon theme, where he apparently served also under Michael II. In late 829, after the accession of Theophilos (not before, as suggested by E.W. Brooks, *BZ* 10 [1901] 297), Manuel fled to the Arabs, apparently fearing court intrigues. In 830 he campaigned for Ma’mūn with Byz. captives against the Khurramites. The embassy of John VII Grammatikos to Ma’mūn in winter 829/30 was likely intended to recall Manuel, who returned to Byz. territory in autumn (J. Rosser, *BS* 37 [1976] 168–71). Theophilos made him *magistros* and *domestikos ton scholion*. Manuel campaigned with Theophilos in 837, when they took Zapetra. Wounded on 22 July 838 at the disastrous battle of Dazimon, Manuel died five days later and was buried in his palace in Constantinople by the cistern of Aspar (Janin, *CP Byz.* 384). Some scholars, identifying Manuel with a *magistros* Manuel who was apparently the uncle of Empress Theodora, believe that Manuel survived the battle, became *protophagos* of the army, served as tutor to Michael III, and died ca.860 after saving Michael’s life in another battle at Dazimon (rejected by F. Halkin, *Byzantion* 24 [1954] 9–11).

**MANUEL I KOMNENOS**, emperor (1143–1180); born Constantinople 28 Nov. 1118 (Barthos, *Genealogia* 1:205, n.13), died Constantinople 24 Sept. 1180. Youngest son of John II and the Hungarian princess Irene. Manuel was proclaimed heir to the throne in Cilicia, even though his elder brother
Isaac was still alive. Manuel reached Constantinople on 27 June but required time to establish his rights; he was probably not crowned until 28 Nov. One of the most contradictory figures among the Komnenoi, chivalrous and courageous, Manuel imitated a Western way of life and therefore contemporaries considered him a Latinophile. He used Latins as soldiers and diplomats rather than as generals, however; some of his military commanders were of Turkish origin. His willingness to appease the Turks is revealed in his negotiations with Kilic Arslan II and in his attempts to find a conciliatory formula relating to “the god of Muhammad.”

At the same time Manuel endeavored to entrench himself on the Mediterranean coasts in Cilicia and Antioch. In 1158–59 he subdued Tòros II and Renaud of Châtillon. Efforts to gain suzerainty over the kingdom of Jerusalem became meaningless after the failed siege of Damietta (1169). The Second Crusade caused Byz. difficulties but did not change the situation in Asia Minor. Thereafter Manuel had to face a coalition of Normans, Serbs, Hungarians, and Kievan. Manuel experienced some successes. He allied himself with Conrad III against the Normans, placed Bàla III on the Hungarian throne, and, probably with the support of Jurij Dolgorukij, gained a footing on the Sea of Azov (A. Kazhdan in Okeanos 346–48). His temporary success aroused opposition in the West, esp. when Frederick I Barbarossa succeeded Conrad. Although a Byz. invasion of Italy failed (1155–57). Manuel financially supported the Lombard League against Frederick (1167) and negotiated with the pope for the Western imperial crown (P. Classen, Ausgewählte Aufsätze [Sigmaringen 1983] 147–70, 176–83). Relations with Venice worsened: Manuel favored Pisa and Genoa (G. Day, Journal of Economic History 37 [1977] 289–301; idem, Byzantion 48 [1978] 393–405) and on 12 March 1171 he arrested Venetians throughout the empire, confiscating their property. An expedition against Kilic Arslan also failed. Manuel was defeated at Myriokephalon. He repelled attacks on the Meander valley and Kladiaupolis in 1180 (P. Wirth, BZ 59 [1957] 68–73), but lacked resources for a new, large-scale war.

Manuel’s domestic policy experienced difficulties. He had to contend with rivalry within his own “clan.” His brother Isaac, the sebastokratirissa Irene Komnene (widow of another brother), and esp. the future Emp. Andronikos I caused trouble. Manuel sought support in the church, helping its struggle against heretics such as Soterichos Panteugenos and Demetrios of Lampe. His piety is suggested by a MS of the acts of the council of 1166, devoted to the nature of Christ, in which the emperor and empress are portrayed (Papararaki, Portrait, fig.155). As a sort of Christological pun on his name, Manuel placed the image of Christ Emmanuel on his coins. He reestablished the office of hypatos ton philosophon as an intellectual censor. But Patriarch Michael III would not tolerate his pro-Western inclinations, and the emperor had to give in (at least according to the Dialogue between him and the patriarch), as later he had to compromise on his attempt to conciliate potential Muslim converts. Many contemporary writers, esp. John Kinnamos and Eustathios of Thessalonike, glorified Manuel, whereas Niketas Choniates, while praising his energy, stressed his failures and immorality. At the end of Manuel’s reign, the seeds of a crisis were sown; the minority of his heir, Alexios II, troubled by hostile factions, brought catastrophe closer.

Manuel was married twice: to Bertha of Sulzbach and after her death to Maria of Antioch. Manuel was the greatest patron of art of his dynasty. Creations such as the refectory in the monastery of St. Mokios, Constantinople, decorated with images of his ancestors, and the triklinia he built at the Blachernai and in the Great Palace, both filled with history painting, epitomize the Komnenian use of art for political and dynastic purposes.

MANUEL I KOMNENOS, emperor of Trebizond (1237/8–Mar. 1263). Although data concerning his reign are scarce, it is plausible that Manuel, like his contemporary John III Vatatzes of Nicaea, was successful in fortifying his small state. Panaretos calls him warlike and fortunate, while Joinville, a historian of Louis IX (1266–70), describes Manuel as great and rich (Histoire de Saint Louis, ed. N. de Wailly [Paris 1867] 346f). Even though Manuel was compelled to pay tribute
to the Seljuks, and after 1243 to the Mongol Ilkhaids, Trebizond remained independent; Manuel minted coins and styled himself autokrator. In 1253 when Manuel’s envoys met Louis IX at Sidon, the French king attempted to attract the Trapezuntine emperor to an alliance with the Latin Empire against Vatazès. Manuel refused, however, to join the Latins. By 1260 he agreed to a tentative compact with Nicaea, gaining such privileges as the right of the Trapezuntine metropolitan to appoint local bishops (RegPatr, fasc. 4, no. 1351).

Manuel married three times. Two of his wives, Anna Xyloloe (died 1245 or 1250) and Irene Syrikania (who survived him), were of local noble families that evidently supported Manuel, while Rusudan (died before 1253) was a Georgian princess. Anna bore to him Andronikos II, his successor (1263–66); Rusudan produced Theodora, who usurped the throne in 1284/5; and Irene gave birth to GEORGE KOMNENOS and JOHN II KOMNENOS.

The date when Manuel built the Church of Hagia Sophia near Trebizond is unknown. A fresco portrait, sometimes identified as the emperor, survived in the church until the 19th C.

MANUEL II PALAILOGOS, emperor (1391–1425); born Constantinople 27 July 1350, died Constantinople 1425 probably on 21 July (Barker, infra 383ff, n. 161). Second son of John V Palaiologos and Helena Kantakouzene, Manuel was named co-emperor and heir to the throne in 1373 after the rebellion of his older brother ANDRONIKOS IV. When Andronikos again rebelled and seized the capital, Manuel was imprisoned in Constantinople from 1376 to 1379, together with his father and younger brother THEODORE (I) PALAILOGOS. In 1381 John V was forced to recognize Andronikos IV as his heir. Manuel, excluded from the succession despite his loyalty to his father, established himself as independent emperor in Thessalonike (1382–87). He defended the city against the Turks until it was forced to surrender in Apr. 1387. When John VII claimed the throne after the death of his father Andronikos IV, Manuel again supported John V and succeeded him as emperor in 1391; the next year he married Helena Dragash and was formally crowned (cf. Majeska, Russian Travelers 416–36).

Manuel’s career was marked by alternating policies of accommodation with the Turks and the search for Western military aid to fight them. As an Ottoman vassal he had to accompany sultan BAYAZID I on campaign in Anatolia in 1391. From 1399 to 1403 Manuel visited western Europe, seeking assistance against the Turks who were besieging Constantinople (1394–1402). His search was fruitless, but the Turks withdrew after the defeat of Bayazid by Timur at Ankara (1402). Manuel was an energetic ruler who went on campaigns, conducted diplomatic negotiations, and supervised the reconstruction of the Hexamilion at the Isthmus of Corinth (1408, 1415). He suffered a stroke in 1422 and died three years later as the monk Matthew.

Manuel had a penchant for study and literary discussion and left a significant corpus of writings: correspondence, theological treatises, rhetorical exercises (including a description of a tapestry in the Louvre), a funeral oration for his brother Theodore (Paris, B.N. suppl. gr. 309), etc. His 68 surviving letters are of particular interest; although rhetorical in style, they provide information on the Turkification of Asia Minor, the campaigns of Bayazid, Manuel’s visit to Europe, and contemporary literary circles and criticism. Manuel, Helena Dragash, and their sons John (VIII), Theodore, and Andronikos are depicted in the MS Louvre, Ivoires 100, a copy of the works of pseudo-Dionysios the Areopagite (Spatharakis, Portrait 139–43). According to its colophon, written by Manuel Chrysoloras, the emperor sent the book to the monastery of St. Denis, near Paris, in 1408, a few years after his visit there. He is also portrayed in the manuscript of the funeral oration for his brother (ibid. 233f).

MANUEL III KOMNENOS, emperor of Trebizond (20 March 1390–1416); born 16 Dec. 1364, died 5 Mar. 1417? (Bryer-Winfield, Pontos 208 n.191). Son of Alexios III Komnenos, Manuel was connected with the Georgian royal family by his first marriage in 1377 (M. Kuršanskis, BK 34 [1976] 118–21) to Koukalan-Eudokia (died 1395), daughter of David VII, and with the Byz. nobility through his second marriage to Anna Philanthropene. Manuel ruled the empire of Trebizond during the troubled years of the Mongol invasion of Anatolia. In 1402 he provided the Mongol khan Timur with 20 galleys to support his campaign against the Ottomans. After Timur defeated BAYEZID I at the battle of Ankara that same year, he did not annex Trebizond but forced it to pay tribute, as noted by the Castilian envoy CLAVIRO during his visit to the city in 1404. Manuel was on good terms with the Venetians, confirming their trade privileges in 1391; relations with the Genoese were less amicable. In 1401 Patr. Matthew I censured Manuel for simony because he tried to secure the election of the hieromnkh Symeon as metropolitan of Trebizond (RegPatr, fasc. 6, n.3236). About 1409/10 Emp. MANUEL II PALAIOLLOGOS of Constantinople sent Manuel of Trebizond a copy of some of his writings (ed. Dennis, 150–53).

Lit. Miller, Trebizond 61, 70–79. PLP, no.12115. A.M.T.

MANUEL ANGELOS, emperor at Thessalonike (1230–ca.1237); born 1186 or 1188, died ca.1241. A younger brother of THEODORE KOMNENOS DUKAS, he escaped capture at the battle of KLOKOTNICA in 1230 and secured control of Thessalonike with the connivance of the victor JOHN ASEN II, whose illegitimate daughter, Maria Beloslava, Manuel had married in 1225. He held the rank of DESPOTES, but affected the imperial title and prerogatives, which left him open to ridicule. To protect the church of Thessalonike from Bulgarian claims, he first sought papal backing, but then turned to the Nicaeans patriarch. In 1232 the longstanding breach with the church in Nicæa was healed (A.D. Karpozilos, The Ecclesiastical Controversy between the Kingdom of Nicæa and the Principality of Epiros [1217–1233] [Thessalonike 1973] 87–95). John Asen II released Theodore ca.1237. In vain Manuel looked for help from GEOFFREY II VILLEHARDOUIN, prince of Achaia, whose suzerainty he was willing to recognize. Forced into exile in Attaleia, Manuel was able to return in 1239 with Nicaean backing. He recovered control of parts of Thessaly and came to terms with his brother, but died soon afterward.

MANUEL KANTAKOUZENOS, despotes of the Morea (25 Oct. 1349–10 Apr. 1380); born ca. 1326?, died Mistra. Second son of John VI Kantakouzenos, he served briefly as governor of Berroia (1343–47) and Constantinople (1348). In 1348 Manuel was named ruler of the despotate of Morea, newly created by his father. He assumed his duties in late 1349 upon his arrival in the Peloponnesh. He was a capable and conscientious governor who successfully established order among the rebellious local Greek archontes, who both fought each other and joined in revolt against the despotes. When John VI abdicated in late 1354, John V Palaiologos attempted to replace Manuel with two governors, Michael and Andrew Asan. Manuel, however, successfully resisted their efforts to take control of the Morea and was eventually confirmed in his position by John V. He maintained amicable relations with his Latin neighbors in the Peloponnesh, esp. with the principality of ACHAIA. In the 1360s he even joined a Greco-Latin alliance to combat the ever-increasing danger of Turkish attack on the Peloponneshes. Manuel encouraged the immigration of ALБANians to settle as farmers in the depopulated Morea and to serve as mercenary soldiers. He sponsored the construction of the Church of Hagia Sophia at Mistra.

MANUELATION (νόμισμα μακονηλάτου), one of several terms (cf. T БΙΚΕΠHALON) used in the late 12th and early 13th C. for the one-third HYPERPYRON or electrum TRACHY, a denomination last struck in any quantity under Manuel I and taking its name from him. It is more common in its Latin form (manuellatus or variant) than in Greek.

Lit. Hendy, Coinage 19f, 23, 27, 225f. Ph.G.
MANUMISSION (ἀπελευθέρωσις, also eleutheria pscharrou). The concept of emancipation was well developed in classical Roman law, to which late Roman emperors introduced some alterations: thus Constantine I (Cod. Theod. IV 7.1) simplified manumission by allowing masters to give liberty to their slaves by making a public statement in a church (in ecclesia); Justinian I established that all valid manumissions made slaves cives Romani; according to another Justinianic law, the slave became a citizen if a will appointed him heir to his master even if it did not mention his liberation. Justinian stressed that emancipation was irrevocable. Slaves who became priests or monks, undertook military service, received imperial dignities, suffered from certain cases of mistreatment, or informed against a master’s murder or a counterfeiter had to be freed.

Byz. law preserved the Roman principles of manumission. Acts of emancipation are known from formularies (Sathas, MB 6:617f.), charters of manumission (A. Kazhdan, Šrednie veka 17 [1960] 319f.), wills (e.g., of Eustathios Boilas, Eustathios of Thessalonike), and hagiographical texts. They usually stressed that SLAVERY IS AN INSTITUTION contrary to the law of nature and that freedmen were transformed by emancipation into Roman citizens with freedom to travel; sometimes acts of manumission also provided slaves with LEGATA. In practice, freedmen remained in a state of dependency on their former masters, although some emancipated slaves (esp. those of the emperor) might climb high on the social ladder.

A.J.C.

MANUSCRIPT. See Book Illustration and Illumination; Codex; Palaeography.

MANUSCRIPT TRADITION, term describing the systematized relationship between extant MSS of a given text. The purpose of the study of MS tradition is to approach as closely as possible the original form of the text, and to study the history of the copying and editing of the text in the Byz. and immediately post-Byz. periods. The author’s original is scarcely ever available, except in the case of charters and similar documents and very occasional autograph copies of works by Byz. authors. The study of the MS tradition proceeds by elimination of MSS that can be demonstrated, by internal or external evidence, to be copied directly or indirectly from other extant MSS; it then goes on to try to construct a “family tree” or STemma of the latter based on shared textual variants and finally aims to reconstruct the common ancestor or archetype of all surviving MSS.

Some texts have been preserved in almost uniform copies with only minor deviations and scribal errors; others show a complex MS tradition, sometimes reflecting different versions by the author as well as reworkings by later scholars or copyists (variant recensions or redactions). Documents may survive in the original, in official copies close to the original, in private and often much later copies (the text of which may have been deliberately “doctored”), and in paraphrases in narrative sources. Inscriptions sometimes survive only in later copies or paraphrases. The indirect MS tradition includes translations into foreign languages, sometimes made from an original much older or better than surviving MSS, catenae, and quotations; polemical works may contain citations from “nonconformist” texts later destroyed or lost. The results of the study of the MS tradition are usually presented in the form of a stemma codicum, a list of MSS to be eliminated, and a critical apparatus, in which the variant readings of significance for the constitution of the text are recorded.

A.K., R.B.

MAP, WALTER, Welsh courtier and raconteur; born ca.1140, died 1 Apr. 1209/10. Map studied at Paris, became a royal clerk to Henry II (1170s), participated in Lateran Council III (1179), and was chancellor of Lincoln by 1186, canon at St. Paul's, London (1192), and archdeacon of Oxford (1196/7). From ca.1181 to ca.1193 he composed De nugas curialium (Courtiers' Trifles), a collection of entertaining anecdotes and satirical tales. The semimythical Byz. that emerges is rich in silk and gold (bk.5, ch.5 [ed. James et al., p.450]) but degenerate. A garbled, unfinished history of the
later Komnenoi describes how Andronikos I (his wickedness outdid Nero: 5.3 [p.410]) gained access to Constantinople through the "gate of the Dacians" and criticizes the Byz. knightly class for having lost its prowess after the Trojan War; Western emigrés at Constantinople are "fugitive phalanxes" of inborn vice (2,18 [pp. 174–78]). Map retells the legend of the "whirlpool of Satalia" (Atteleia) apparently brought back by Crusaders (cf., e.g., Roger of Hoveden, Gesta, ed. Stubbs, 2:195–96), in which the necrophiliac Byz. knight appears as the "haunted shoemaker of Constantinople" who, to win his love, became a robber baron and emperor (4,12 [pp. 364–68]).

MAPHORION (μαφοριον), a garment covering the head and shoulders, mentioned in papyri of the 4th–6th C. (Preisigke, Wörterbuch 2:55); the term was occasionally used for an element of monastic dress for men and women (PG 34:1220A, 87:3688A). A civil official, such as the praisos tieatos of the Senate, could wear a maphorion, which apparently covered his head and entire body (De cer. 529.20–22). The inventory of the Petritzos monastery (P. Gautier, REB 42 [1984] 123.1736–37) lists seven maphoria, some of silk and one bearing an image (outlined?) in pearls.

A distinguishing feature of the costume of noble women, the maphorion became the traditional attire given the Virgin Mary and holy women in artistic representations. The Virgin's maphorion or "veil," usually blue, brown, or purple, may be decorated with gold dots or pellets in the form of a cross; the maphorion of Eve is generally red.

Whether the maphorion of the Virgin is the same article of clothing as the Virgin’s “robe” is unclear. George Hamartolos (ed. de Boor 2:617.5–10) says that the Virgin's robe (esthes) was found in Jerusalem by a pious Jewess and deposited in the Blachernai Church during the reign of Leo I. The deposition of the honorable robe was celebrated annually in Constantinople on 2 July (Synax.CP 793.5–9). In the text of the Synaxarion of Constantinople, the pious Jewess was replaced by two patrikioi and Jerusalem by a village in Galilee. Pseudo-Symeon Magistros, in the 10th C., relates that it was the maphorion preserved at Blachernai that Photios used in 860 as a talisman to repel an attack of the Rus’ (TheophCont 674.23), whereas other versions of the chronicle (Leo Gramm. 241.8, TheophCont 827.6) have omophorion instead. In the 14th C., Nikephoros Kallistos Xanthopoulos was familiar with the version of the Synaxarion but characterized the relic of Blachernai as a shroud—entaphia spargana (PG 147:69D), peristolia (401D)—that was preserved there alongside a part of her girdle and headgear.

MAPPA (μαππα), a badge of consular authority, the white handkerchief that the consul tossed as a signal to begin the circus games; the word was also transferred to the games or races themselves (e.g., Malal. 412.13). On consular dipthschs the consuls are often depicted holding the mappa in their right hand and a scepter in their left (e.g., Delbrück, Consularldiptyschen, pls. 2, 6, 16, 20, etc.). A special official, the mapparios, was introduced; his role was to strike a gong (semantron) as the signal to begin the games (pseudo-Chrysostom, PG 59:570.7–8). Kedrenos (Cedr. 1:297.15–19) states that the mapparios picked up the cloth after the consul threw it. In a burlesque presentation of games ca.1200, the mapparios was responsible for starting the foot races (Nik.Chon. 509.10–19).

By the 6th C. the emperor assumed the consular function of giving the signal to start the games, and thus the mappa became a symbol of imperial authority: on coins of Phokas and Constans II the emperors are depicted holding the mappa in a raised hand as if ready to throw it (DOC 2.1:87). A. Alfoledi (MDA/I RA 50 [1935] 34–36) hypothesized that the transfer to the emperor of the function of throwing the mappa was connected with the change of the circus factions from sporting organizations into political bodies. By the 8th C. the mappa was replaced by the akakia in representations on coins (DOC 3.1:133).

MAPS. See CARTOGRAPHY; MADABA MOSAIC MAP.
MAQDISÎ, AL- (al-Muqaddasi), more fully Muḥammad ibn Aḥmad al-Maqdisî, traveler and Arab geographer of the systematic school (see ARAB GEOGRAPHERS); born Jerusalem 946, died ca.1000. His Best Classification for the Knowledge of Regions (published q86, revised q89) is a comprehensive regional, economic, and human geography of the Islamic world. It is based mostly on his observations and interviews during extensive travels in Muslim lands; he only infrequently incorporates material from earlier geographers, despite his familiarity with these and his “extensive research in various royal libraries.” His varied experience included witnessing Byz.-Arab naval warfare.

Although his scheme deliberately excludes non-Muslim lands, he refers to Byz., “for some Muslims reside in Constantinople and knowledge of routes thereto is needed for envos, ransomings of prisoners, military expeditions, and trade.” He refers to Byz. treatment of Muslim prisoners of war: if skilled, they would be forced to work; they could also attend races in the Hippodrome as spectators. He describes several routes through Asia Minor including two through “the country of the Maleinos family.” He considers Constantinople as possibly smaller than Baṣra, reiterates certain popular notions about the Byz. capital, and contemptuously calls the emperor “the dog of the Rûm.” He ignores Tarsos and the other towns, “since they are in Byz. hands.”

MAQŘĪZĪ, AL-, more fully Taqī al-Dīn Abūl-ʿAbbās al-Maqřīzī, Arab writer, teacher, jurist, and preacher; born Cairo 1364, died there 9 Feb. 1442. In the 1420s, following a multifarious public career in Egypt and Syria, al-Maqřīzī retired to Cairo and devoted the rest of his life to extremely prolific literary activities. Thorough analysis and copious quotations from earlier authorities characterize his works. They cover a wide chronological and topical range mainly focused on Islamic Egypt. Best known is his monumental work, Admonitions and Observations on the History of the Quarters and Monuments. It deals with the historical geography and archaeological legacy of Egypt, placing special emphasis on the topography of its capital cities. No less important are al-Maqřīzī’s contributions in the field of political history, for example, his history of the Fāṭīmid and his chronicle of Egypt from 1181 to 1436, which refer to Egyptian contacts with the Byz., the Crusaders, and other non-Muslim peoples. His literary legacy also includes major biographical works and specialized treatises dealing with economic crises in Egypt, numismatics, and metrology.

MARAŞ. See GERMANIKEIA.

MARBLE (μάρμαρος), generic name for any number of limestone varieties in crystalline state capable of taking a high polish. Hard, durable, and costly, marble was the favorite material for ostentatious architecture and sculpture in antiquity. Diocletian’s Price Edict lists 19 varieties (M.H. Ballance, JRS 60 (1970) 134–36). The most important and popular marble in Byz. times came from the quarries of Prokonnesos. It is characterized by its white color, with bluish-grayish veining, and was shipped throughout the Mediterranean world (see MARBLE TRADE). Following Roman practice, the Byz. continued to use multicolored marbles, most impressively in Hagia Sophia, Constantinople. This spectacular display captivated Paul Silentiarios, who devoted much space to the description of different types of marbles and their sources. Production and widespread use of marble declined after the 6th C. but never disappeared, while the use of spolia became common. Aesthetic fascination with polychrome marble interiors continued to be attested, as, for example, by the description in the Vita Basilii of the so-called Kainourgion built by Basil I in the Great Palace. Equally telling is the widespread practice in and after the 11th C. of using fresco to emulate marble revetments.

MARBLE TRADE. Difficulties of shipping heavy material such as marble required above all that quarries be located near rivers, coast, or on islands. Half-finished sarcophagi, architectural elements (basket capitals), and even statues have been found at Prokonnesos; these partially worked marbles were exported in specially built boats. The shipment of prefabricated marble is remarkably attested by the cargo of columns, capitals, etc. contained in a wreck off Marzamemi, Sicily (G. Kaptan, *Archaeology* 22 [1969] 122–33). Both underwater archaeology and texts (e.g., Lemerle, *Miracles* 239.18–240.19) inform us of ships carrying prefabricated marble furnishings for churches and stopping at North African ports. In much of the central and western Mediterranean, the Roman marble trade had come to an end by the mid-7th C., but Phrygian onyx and Thessalian verd antique, among other stones, still supplied Justinian I’s huge building programs, and as late as ca.670 a North African bishop was able to buy an ambo, a ciborium, and other marbles for his church from ships trading along the coast (ibid., 1:235f). Similar imports are reported in the *Vita Basii* but, thereafter, claims of such imports all but vanish from the sources. Only objects such as the “serpentine” (i.e., Lakonian green porphyry) medallion, inscribed with the name of (Nikephoros) Botaneiates and now in London (Beckwith, *ECBA*, fig.208), support the belief that small amounts of semiprecious stones may have continued to be transported. Outside such luxuries, the medieval marble trade consisted largely of spolia, most notoriously in the case of Venetian loot from Constantinople in and after 1204.

MARCELLINUS COMES, 6th-C. Latin chronicler; born Illyria, perhaps near Skopje. After coming to Constantinople to seek his fortune, Marcellinus served Justinian I as kancellarios be-

fore the latter’s accession in 527 and subsequently received the rank of comes and title of vir clarissimus. These honors may have been rewards for his writing. He composed a chronicle extending initially from 379 to 518 in formal continuation of Jerome, later adding a sequel down to 534: a second supplement to 548 is not by him. The viewpoint of his chronicle is eastern, its focus Constantinople. Apart from providing many interesting and important details, Marcellinus stands out as seemingly the first perpetrator of the notion of the fall of Rome in 476 (B. Croke, *Chiron* 13 [1983] 81–119). Cassiodorus, who recommends Marcellinus’s chronicle as the best of the Jerome continuators, also mentions two lost works, *The Description of Constantinople and Jerusalem*, an apparent travelogue, and *On the Nature of Eras and on the Locations of Places*, of uncertain subject, but pronouncedly Christian.

dal raids, Marcian limited himself to sending an embassy to the Vandals asking for the return of Eudoxia, Valentinian III's widow, and her children who had been captured by the Vandals. He refused to send tribute to Attila and managed to divert him westward; after Attila's death Marcian's generals defeated Hunnic troops and settled peoples that had been subjugated by the Huns on the northern frontier of the empire.

The Byz. preserved a favorable impression of Marcian's reign as a pious ruler he was compared to Constantine I and Theodosios I; Theophanes the Confessor describes his rule as a golden age. Legends relate predictions Marcian received that he would be emperor. His marriage with Pulcheria was praised for the preservation of her virginity. He reportedly participated on the very eve of his death in a 10-km religious procession.

MARDAITES (Μαρδαίται), a people inhabiting the Amanus mountains and the Taurus region in the 7th C.; called Jarajma in Arabic sources (M. Moosa, Speculum 44 [1969] 597-608). The origins and ethnic composition of the Mardaites are obscure; they may have been Armenian (Bartikjan, infra) or Persian. They were Christian, probably Monophysite or Monothelete. In the late 650s the Arabs hired the Mardaites to guard the border north of Antioch, but they more often served Byz. interests. In 677 their invasion of Syria "as far as Jerusalem" (Theoph. 357.5), probably directly supported by Constantine IV, forced Mu'āwiyā to raise his siege of Constantinople and agree to a disadvantageous treaty. A decade later the Mardaites, encouraged by Justinian II, again invaded Syria and compelled 'Abd al-Malik to renew Mu'āwiyā's treaty, but 'Abd al-Malik stipulated that Justinian resettle them in Byz. territory. They were likely removed to Epiros, Kephalonia, the Peloponnesos, and Asia Minor, where they later served prominently in various thematic fleets (Ahrweiler, Mer 399ff). Theophanes the Confessor (Theoph. 363.19-20) condemned Justinian for evacuating the border regions, but many Mardaites remained and continued to raid Arab territory. In 707/8 Maslama captured their stronghold of Jarjuma and resettled numerous survivors throughout Syria. He allowed them to remain Christian but pressured them into the army: the Mardaites fought under him in Iraq in the early 720s.

MARGARIT (from Gr. μαργαριτας, "pearl"), a collection of homilies by John Chrysostom in Slavonic translation, esp. popular in Eastern Slavic territory. Greek collections of patristic "pearls" vary in their composition, but the Slavonic Margarit is consistently based on a stable group of 39 homilies, supplemented in some redactions. The homilies are from Chrysostom's On the Incompre- hensible Nature of God (PG 48:701-48), Against the Jews (PG 48:843-56, 871-942), On Lazarus (PG 48:663-1016), On David and Saul (PG 54:675-708), and the possibly spurious On Job (PG 56:563-82). The earliest extant Eastern Slavic MSS of the Margarit are from the 15th C., though the translation is thought to date from at least the 13th or 14th C.

-S.C.F.

MARGINAL PSALTERS. See Psalter.

MARIA (Μαρία), Mary (in the New Testament also Mariam), feminine personal name derived from Hebrew. Frequently used in the New Testament (Virgin Mary, Mary Magdalene, and some others), it means "she who commands," according to John of Damascus (Expos.fid. 87,50, ed. Kotter, Schriften 2:200). Rare in the 4th C. (PLRE 1:558), it became more common in the 5th (PLRE 2:720-22), esp. among ladies of Spanish, African, and Italian connections. E. Patlagean (in Byz. Aristocracy 25f) notes that the name was rare
in early provincial epitaphs. Theophanes the Confessor mentions only three Marias (including the Virgin), but later the name became the most popular: eight Marias in Skylitzes (more than Theodora and Irene) and seven in Niketas Choniates (as many as Irene and more than Theodora). In the later acts of Laura, vols. 2–3, Maria holds uncontested first place. —A.K.

MARIA OF "ALANIA," more correctly, of Georgia, Byz. empress (1071/3–81); born ca.1050, died after 1103. Born Martha, daughter of Bagrat IV of Georgia, and distinguished for her beauty, Maria came to Constantinople ca.1066 to wed the future Michael VII. The marriage, between ca.1071 and 1073 or earlier, produced one child, Constantine Doukas. On Michael VII's fall, Maria fled with her son to the Petron monastery and then, to protect his position, agreed to marry Nikephoros III. Her favor was sought by Isaac and Alexios Komnenos (the future Alexios I); she adopted the latter and rumor magnified their relationship. When Nikephoros disinherited Constantine Doukas, she supported the Komnenoi, who promised to restore her son's rights. Her warning (Feb. 1081) that their plot had been discovered precipitated their revolt. When Alexios occupied Constantinople, she remained in the palace a week, until the coronation of Irene Doukaina. Although adopting a nun's habit, Maria apparently maintained a court at the Mangana Palace; she patronized Theophylaktos of Ohrid and Eustratios of Nicæa. Anna Komnene was in her care (ca.1090–94) as her son's betrothed. Alexios ignored the part Maria had in Nikephoros Diogenes' plot to kill Alexios in Maria's villa (early 1094). Thereafter she may have entered a convent; Theophylaktos wrote to her at Prinkipo. In 1103 a Georgian synod offered her greetings. Maria appears with her first husband in a psalter in Leningrad, on the Khakhouli triptych, possibly executed for her coronation, and with either Michael VII or Nikephoros III in the rich Chrysostom MS in Paris, B.N. Coislin 79 (Spatharakis, Portrait, figs.10f).

MARIA OF ANTIOCH, Byz. empress (from 1161); born 1140s, died Constantinople 1182/3. Daughter of Raymond of Poitiers and Constance of Antioch, called "Maria" by William of Tyre, but "Marguerite" in the Lignages d'Outremer (RHC Lois 2:446), Maria was sought in marriage by Manuel I after the death of Bertha of Sulzbach. The marriage, 25 Dec. 1161, cemented his alliance with Antioch. After Manuel's death, Maria nominally became a nun, Xene, but, as principal regent for her son, Alexios II, effectively ruled the empire. Despite her beauty, her foreign origin and devotion to Latins alienated the populace of Constantinople. Still youthful, she chose Alexios Komnenos the protosebastos as her chief minister and allegedly her lover. After the victory of Andronikos I, Maria sought help from Béla III of Hungary. Andronikos used her letters to Béla to secure her condemnation. Once her son signed her death warrant, she was strangled.

MARICA. See Hebros.

MARICA, BATTLE OF (26 Sept. 1371), crucial victory of Ottoman Turks over the Serbs. After the unsuccessful attempt of the Byz. emperor John V to obtain Western military assistance, despite his personal conversion to Catholicism in Rome in 1369, Patr. Philotheos Kokkinos proposed an anti-Ottoman alliance of the Orthodox states—Byzantium, Bulgaria, Serbia, and Russia. This plan was welcomed by the Mrnjačević brothers, king Vukašin of Macedonia, and the despotes John Uglješa of Serres, as their territories were directly endangered by the Turkish advance. Uglješa sent an embassy to Constantinople to negotiate a joint campaign against the Turks, but Byz. delays forced Uglješa and Vukašin to set out alone against the Turks in Sept. 1371, with armies numbering perhaps 70,000 men. Approaching from two directions—Vukašin following the Marica valley and Uglješa crossing the Rhodope mountains—they camped on the right bank of the Marica (Hebros) River at Černomen (modern Ormenion in Greek Thrace), some 25 miles upstream from Adrianople. During the night of 25–26 Sept. the beylerbeys of Rumelia, Lala Şahin, made a surprise attack on the Serbian army. After a
fierce battle, the Serbs were totally routed; Vukasín and Uglješa were among the many who fell on the battlefield.

The consequences of the Serbian defeat at Marica were of far-reaching importance: for the Serbs, the principality of Serres ceased to exist and Vukasín’s heir Marko Krkaljević became a Turkish vassal; for the Turks, it opened the way to the West and made possible their eventual conquest of Serbia and Bulgaria; for the Byz., it was a turning point shortly after which John V Palaiologos became a vassal of the sultan and the empire a tributary state of the Ottomans.

MARKINA (Mápîva), known as Margaret in the West, late 3rd-C. martyr and saint; feastday 17 July. Marina was executed under Diocletian in Pisidian Antioch. Her legend ascribes to Marina victories over a dragon and Satan.

MARKINA, in Greek versions Maria, legendary saint; feastday 8 or 12 Feb. According to the legend, after her mother’s death Maria followed her father Eugenios to a cenobitic monastery, where she lived disguised as a boy named Marinos. When sent on assignment with three other monks, Marina was accused of impregnating the daughter of an innkeeper. Marina did not deny her “guilt,” accepted the punishment, and raised the infant. Only when she died did the monks learn that “abba Marinos” was a woman.

The origin of the legend is obscure. Clugnet (infra) hypothesized that the original was Latin and that Maria lived in the 5th C. in the area of Tripoli, Syria. Richard (infra), on the other hand, considered the Greek vita antiqua as the closest to the original; it bears a strange title—*The Life and Deeds of Eugenios and his daughter Maria*. The original redaction appeared in a written form, Richard thinks, between 525 and 650. It was translated into Syriac, Latin, and probably Armenian, whereas the Coptic, Arabic, and Ethiopic versions are based on oral tradition and differ substantially from the Greek original. Richard established the existence of several revised Greek versions: the vita rescripta, the vita aucta, etc. Contrary to the opinion of Clugnet, none of them was Metaphrastic. A Sicilian vita of the 12th C. calls the heroine Marina (as do Latin texts) and places her birth in 1062 in the “poor village of Skanion” (Sicily).

**Representation in Art.** The death of Marina and the revelation it brought is depicted in the Menologion of Basil II (p.394) and in the “imperial” menologion MS in Moscow (Hist. Mus. gr. 183, fol.47r).

MARK, saint; author of the second GOSPEL; feastday 25 April. Early tradition presents him as Peter’s translator, who wrote the Gospel “according to Peter’s instruction” (Eusebios, HE 6.25.5); in later tradition, he is “Peter’s son and companion of the keeper of heavenly keys” (PG 100:1185A). Church fathers commented little on Mark.Probably after 500 a certain Victor of Antioch compiled a commentary on Mark that is, in fact, a collection of exegetical explanations on Matthew and Luke by John Chrysostom, Titus of Bostra, Cyril of Alexandria (to whom, in some MSS, the whole work is attributed), Theodore of Mopsuestia, and others. Acts 15:39 links Mark to Barnabas and his mission to Cyprus.

Byz. legends connect Mark primarily with Egypt: he worked wonders and healing miracles in Alexandria, became the first bishop there, and died as martyr at an Easter festival (PG 115:168C). The cult of Mark in Alexandria is attested in the 4th C. In 828 two Venetian merchants transferred Mark’s relics to Venice (only his head is said to have remained in Egypt), where the basilica of San Marco was erected in his honor; Mark became the patron of Venice. In Constantinople Theo-
dosios I built a Church of St. Mark, which was
reconstructed by Romanos I. Several sermons were
devoted to Mark; among their authors are a deacon
and chartophylax Prokopios (8th C.?) and Symeon
Metaphrastes. Hagiographers describe Mark
as a man of modest stature, with a long nose, thick
eyebrows, and large beard; "the virtue of his soul
outshone his physical quality" (Synax. CP 630.6–
11).

Representation in Art. Mark is depicted most
often in the context of evangelist portraits as
a robust, mature man with dark brown hair
and beard. Occasionally shown standing or en
buste, he is usually seated and writing, dipping his pen,
or pausing with his hand on the lectern rising
from his desk (see Writing Desk). Sometimes a
second figure joins him; after the 9th C., the
accompanying figure is Peter. In 16 surviving
codices, a miniature of the Baptism of Christ (see
Epiphany) accompanies Mark’s portrait. His martyrdom
is depicted in cycles of the deaths of the
apostles. Scenes of his life are rare outside of
Venice, but a group of ivories representing
aspects of his biography has been considered to be
8th-C. Byz. work (Weitzmann, “Grado Chair” 43–
91).

–J.L., A.K., A.W.C.

MARKELLAI (Μαρκέλλαι), a stronghold near
the Bulgar-Byz. border; it is variously called a
phronesion (Nikeph. 56.26–27) or kastron (Theoph. 467.28). Its exact location is under debate,
although it can probably be identified with the ruins
of Hisarlük, near Karnobad in Bulgaria (Dujčev,
Proučvaniša 19). The stronghold played an impor-
tant role during the Bulgar-Byz. wars of the 8th
and 9th C.: Constantine V defeated the Bulgars
there in 756, in 792 Constantine VI fortified it
but was routed by the khan Kardamos, and in
811 Emp. Nikephoros I reached Markellai during
his march to Pliska. It is probable that sometime
thereafter Markellai was destroyed; a 12th-C. his-
torian (An.Komm. 2:105.27–29) mentions a valley
between Iambol and Goloe where the Pechenegs
pitched their tents near "the so-called Markella."

–A.K.

MARKELLOS OF ANYKRA, bishop of Anykra
(by 314) and opponent of Arianism; born ca.280,
died ca.374. While Markellos (Μάρκελλος) was a
stalwart Nicene in 325, his attack a decade later
on the Alien Aristios the Sophist included charges
against Eusebius of Caesarea, who responded at
once with counter-accusations of Sabellianism.
A synod at Constantinople in 336 condemned,
deposed, and exiled Markellos. Over the next
decade the ensuing theological seesaw had him re-
stored in 337, deposed in 339, restored in 343
after proving his orthodoxy to the councils of
Rome (340) and Serdica (343), and finally de-
posed and exiled in 347. He was condemned as
a heretic in 381 in canon 1 of the First Council
of Constantinople.

Little remains of the voluminous writings as-
crbed to him by JEROME (De viris illustribus 86). The
Profession of Faith required of him for the
council at Rome survives, but only fragments of the
diatribe against Aristios. He is probably the author
of the tract On the Holy Church ascribed to
ANTHIMOS OF NIKOMEDIA (Richard, Opera minora
2, no.33). Markellos attacked Arianism as poly-
theistic, himself expounding the theory that the
Logos was only in God before the Creation and
will likewise be only in God at the redemption,
being consubstantial with the Father but ungen-
erated and not a person, unlike Christ the Son.

–B.B.

MARKELLOS THE AKOIMETOS, saint; born
in Syrian (?) Apameia ca.400, died near Constan-
tinople before 484; feastday 29 Dec. Born to a
family of noble birth (*eupatriides*), Markellos was educated in Antioch and worked as a calligrapher in Ephesus. He was invited to Constantinople by Alexander, founder of the wandering community of Akimetoi, the “sleepless monks”; when the group settled at Irenon on the Bosphorus, Markellos became archimandrite of the Akometoi monastery (before 448). He became involved in political and religious struggles and fought against Monophysites and Arians; with Patriarch Gennadios I, Markellos headed the demonstration in the Hippodrome ca. 470 against an attempt to proclaim Patrikios, son of Aspar, Caesar and heir to the throne (Dagron, *infra* 316–18). In 463 Markellos helped to found the Studios Monastery.

The anonymous Life of Markellos, written in the mid-6th C. according to Dagron (p. 278), tends to play down the involvement of the Akometoi and Markellos in Messalianism and Nestorianism, and to emphasize his orthodox activity. The author describes Markellos’s role as an organizer of monastic life; helped by a generous grant by a certain Pharetrius, “the first in the great council,” he built a spacious chapel, lodgings for the brethren, a hostel for strangers, and hospitals (p. 297.12–18). The service according to the rite of the Akometoi (akolouthia ton akometon) was broadly spread at this time. Markellos worked many miracles, for example, assisting the wife of the deacon Eugenios during a difficult childbirth. Symeon Metaphrastes (PG 116:705–46) slightly retouched the original Life.

LIT. *BHG* 10272–1028. — A. K.

MARKET (*âyôpa*), also *phoros*. The term market in modern, Western economic parlance denotes both the area in which buyers and sellers meet and the establishment of prices through the forces of supply and demand. The Byz. terms designate the place where transactions occur, either in a specific, geographic sense, or in the more general sense of marketplace; they can also refer to an occasion for carrying out transactions. Thus, according to a chronicle (*TheophCont* 87.16–17), the emperor Theophilus went through the agora checking on the price of commodities; Basil I built a church for the use of those who frequented the “agora that was named Phoros” (ibid. 339.1–5).

In the general sense of marketplace, the term is employed, for instance, in Attaleiates (Attal. 270.8), where Nikephoros III Botaneiates is acclaimed by, among others, the most important people of the agora, or in Eustathios of Thessalonike (Eust. Thess., *Opuscula* 223.38–40), where he accuses some monks of frequenting the agora more than the church.

The term is frequently encountered in the sense of an occasion for carrying out transactions. Note- worthy in this respect is the fact that markets could be impermanent, occasional, or periodic. Kekaumenos (Kek. 184.12 and 32) uses the term *phoros* interchangeably with *paneygiris* to denote a market established on a single occasion. The Book of the Eparch talks specifically of the “established market-days” (2.3, cf. 9.7), on which transactions are to take place. While the distinction between market and fair is blurred in such cases, the terms for market generally denote a more permanent and more frequent institution than the fair.

Byz. cities had specific areas where commercial activities were concentrated. In Constantinople, the main market was along the Mese (Guillaud, *Topographie* 2:69–79).

The role of the market as a mechanism of price formation was considerably tempered by the fact that, for much of Byz. history, the price of important commodities was regulated. While there is evidence of negotiated price formation in every period, it was certainly in the Palaiologan period, and probably also in the 11th–12th C., that the regulatory role of the state decreased and prices were, to a considerable extent, formed in the marketplace. Attaleiates (Attal. 200–04) suggests that grain prices in Rhaedestos were being formed through the mechanism of supply and demand before the reforms of Nikephorites, while some evidence of reaction to prices by sellers and buyers may be found in a text by Psellos (A. Kazhdan, *Byzantion* 53 [1983] 550). — A. L.

MARKIANOPOLIS (Μαρκιανόπολις), Roman city in Bulgaria at Reka Devnia, about 30 km west of Varna on the road to the Danube. In the late 4th C. Markianopolis was a base in the war against the Visigoths and was for four years the residence of Valens. Two fierce battles were fought outside its walls in 376 and 377. Justinian I restored the
city walls as part of the defenses of the northern Balkans. Captured and sacked by the Avars in the third quarter of the 6th C., Markianopolis seems to have remained a military post until its final abandonment at the end of the century. The site was never reoccupied. There are substantial remains of a single-nave basilica of the 4th or 5th C., rebuilt and enlarged in the 6th, and of several churches of the Justinianic period.

R.B.

MARKIANOS OF HERAKLEIA (in the Pontos), geographer, probably of the 4th to early 5th C. His biography is unknown. He himself names three of his works: Periplus of the Outer Sea, an epitome of Artemidorus of Ephesus, and an epitome of Menippus of Pergamon, the last two being ancient geographers who had described the Inner Sea (Mediterranean). Markianos depended heavily upon his classical predecessors. In the Periplus of the Outer Sea, after some general deliberations about the size of the tripartite world (Asia, Libya, and Europe), he describes the “right” sections of the world, from the “Arabian Gulf” to the Indian Ocean, and then the “left” sections, from the Persian Gulf via India to the gulf of the “fish-eating Sinai,” that is, the Chinese (GGM 1:537.15). The second half of the book deals with the ocean from Spain to Britain. Of Markianos’s other works only fragments survive.

Lit. GGM 1:515–76.

A.K.

MARKO KRALJEVIĆ (lit. “king’s son”), eldest son of the Serbian kralj (king) Vukašin and popular folk hero; died Rovine 17 May 1395. Following Vukašin’s death in 1371 at the battle of Marica, Marko inherited his father’s title and his territories in western Macedonia. At the same time he was forced to become an Ottoman vassal; as such he took part in the battle of Rovine against Mircea of Wallachia and fell together with Constantine Dragas. He was the kletor of Markov Manastir near Skopje and the Holy Archangels Church near his capital Prilep; portraits of Marko and of his father are preserved at both sites.

Although the historical sources on Marko are rather limited, he became the most famous hero of the epic poetry of the Serbians (and other Balkan Slavs). Endowed with supernatural strength, valor, fearlessness, and a sense of justice, he and his single-handed victories are the subject of hundreds of folk songs and ballads. A number of toponyms in the Balkans also bear his name.

J.S.A.

MARK THE DEACON, a disciple of Porphyrios of Gaza and allegedly his hagiographer; fl. 5th C. According to the vita of Porphyrios, Mark was originally from the province of Asia. He came to Jerusalem, where he supported himself by working as a calligrapher. After entering the service of Porphyrios, in 395 he accompanied the newly appointed bishop to Gaza, where he himself became deacon. Thereafter he was the constant companion of Porphyrios in his struggle to convert the pagans of Gaza and close their temples.

There has been considerable discussion of the authorship of the vita of Porphyrios. According to its most recent editors, Grégoire and Kugener, its compiler was not Mark, but someone who worked much later, ca.600, virtually copied the preface to the Religious History of Theodoret of Cyrthhus, and suppressed Porphyrios’s heretical sympathies with Pelagianism. The compiler did, however, use a diary written by Mark and preserved the true pattern of events. Whoever the author, the biography is valuable for its description of pagan-Christian tensions, as well as social life and backstairs intrigue at court and church. It is lucidly and vividly written, almost novelistic. The vita is known in a Georgian version, which, according to P. Peeters (infra), derives from a lost Syriac original. Mark claims (ch.88) to have commemorated Porphyrios’s debate with the Manichaeeans in a separate book, but no such work survives.

MARK THE HERMIT, or Mark the Monk, ascetic writer to whom at least 14 works are ascribed in Greek and oriental (Syriac and Arabic) tradition; it is still unclear whether they were works of a single or different authors. Even though Mark was often cited by the church fathers (Dorotheos of Gaza, John of Damascus, Theodore of Studios, etc.), his biography is unknown. GEORGE HAMARTOLOS (599.5) names the ascetic Mark, together with Neilos and Isidore of Pelousion, among the pupils of John Chrysostom—but this evidence seems suspicious. On the basis of his works Mark has been variously dated between the end of the 4th and the 6th C. and situated in Palestine or Egypt; however, there are no data for a convincing conclusion.

The most important point of Mark's doctrine is his rejection of Messalianism, even though he retained some vocabulary of pseudo-Makarios/Symeon; he esp. underlined the perfect nature of baptism in the spiritual struggle against sin. A treatise On Melchizedek or Against the Melchizedekites denounces a sectarian view widespread in Egypt and Phrygia that claimed Melchizedek was the son of God rather than human (O. Hesse, *OrChr* 51 [1967] 72–77). Mark's tract *Against the Nestorians* maintains the notion of hypostatic union; though recognizing the Nestorians as heretical, his tone is one of compromise between Orthodoxy and its opponents. Some later theologians, including Photios, accused Mark of Monophysite leanings.

B.B., A.K.

MARMARA, SEA OF (Πρωτοντίς), a small sea between Thrace and Asia Minor. Two straits, the Bosphorus and the Hellespont, link it with the Black Sea and the Aegean, respectively. The transformation of ancient Byzantine into Constantinople, capital of the empire, increased the significance of the Sea of Marmara as a trade route and the importance of the ecclesiastical centers on its shores. Thracean *Heraclia* and Se-

LYMBRIA on the northern shore and *Lampsakos* and *Kyzikos* on the southern shore were important harbors and customs points on the way to Constantinople. Of the Marmara islands the most important were *Propontis* (whose marble quarries gave the sea one of its names) and the *Princes' Islands*. A group of churches and monasteries (the Archangels at Sige/Syke, Medirion, Pelike, Polichnion/Polychronia, etc.) survived on the southern shore. In the 9th C. the enigmatic office of "archon of the monasteries on Propontis" (PG 105:532B) existed or was created by Photios for one of his favorites. In Feb. 764 Theophanes the Confessor observed an unusual phenomenon—the Sea of Marmara was covered with ice so that children could walk to its islands.

A.K.

MARONEIA (Μαρώνεια), city in Thrace on the Aegean Sea near Lake Ismaris, midway between the Nestos and HEBROS rivers. Mentioned by Ammianus (Amm.Marc. 27.4.13) as the second city of RHODES, it appears anachronistically in Constantine VII Porphyrogennetos (De them. 2.36, ed. Pertusi, p.88) as a city in the theme of MACEDONIA. The data on Byz. Maroneia are scanty: a lead seal of the 11th–12th C. defines it as a *kastron* (K.M. Konstantopoulos, *Thrakika* 4 [1933] 35–39). More is known about the ecclesiastical history of Maroneia: it was an autocephalous archbishopric of Rhodope at least from the 7th C. onward (Notitiae CP 1.45); a notitia indicates that after the death of Andronikos III, "in the time of havoc," it was transformed into a metropolis (17.122.23). It changed status thereafter, being called an archbishopric in a document that may date to 1369 (MM 1:471.12), but a metropolis in 1405 (RegPatr, fasc. 6, no.3270). A mutilated document, perhaps of 1371, referring to the invasions of "godless peoples" that ravaged and burned "the beautiful land" of Maroneia relates that the archbishop of Maroneia was transferred to the "widowed" metropolis of Mesembria (MM 1:594.2–19). Some seals of archbishops of Maroneia have been published (Laurent, *Corpus* 5.1, no.819; Zacos, *Seals* 2, no.546).
MARONITES, a Christian sect in Lebanon. Their early history is obscure. P. Dib believes that they originated from the disciples of the priest and anchorite Maron who lived in Syria II and corresponded with John Chrysostom ca. 405; Maron's exploits are described by THEODORET OF CYRUS. In contrast, M. Moosas asserts that this Maron of the early 5th C. had no connection with the future Maronites; he also denies that a letter of 10 Jan. 518 signed by Alexander, priest and archimandrite of St. Maro, and describing an attack of "rustics" sent by SEVEROS of Antioch against his monastery, is related to the early phase of the Maronite movement. The first indisputable data concerning the Maronites come from DIONYSIOS OF TELL MAHRE (9th C.) and EUTYCHIOS OF ALEXANDRIA (10th C.) who speak of their activity in the 7th and late 6th C., respectively. John of Maron, who may have been the first Maronite patriarch, lived in the 7th C. (sometime between 630 and 707), according to Breydy (infra 1985 76). Many of his works in Syriac survive.

It is plausible that the Maronite politico-religious community was established in the period of the Persian invasion and subsequent Arab conquest of northern Syria when the patriarchs of Antioch sought refuge in Constantinople. The religious affiliation of the Maronites is also under discussion: Dib insists on their orthodoxy, their support of the Chalcedonian creed, and their alliance with Rome, whereas Moosa considers them to be predominantly Mononitherite. The Maronites supported the Crusaders' effort to gain control of the Holy Land. WILLIAM OF TYRE relates that they abandoned their ancient Mononitherite "heresy" and united with the Latin patriarchate of Antioch in 1187—evidence rejected by Dib.

MAROULES, or Maroulles (Μαρουλλός, fem. Μαρουλλίνα), a family name that according to V. Laurent (EO 30 [1931] 481–84) was of vernacular origin, signifying a vegetable merchant (cf. maroulion, "lettuce"). The first known Maroules ("the son of Maroules") was domestikos ton Hikanaton under Constantine VII (TheophCont 389.5); Skylitzes conveys his first name, Olbianos (Skyl. 203.88). Another Maroules was katepano of Italy in 1060/1 (Falkenhausen, Dominazione 98). The family did not hold military offices in the 12th C.; the protonotarios Basil attended the council of 1143; John owned a seal that calls him doulos of Manuel I. Several family members served in church administration: Constantine was in charge of a patriarchal sekretos (Laurent, Corpus 5.1, no. 135); another Constantine (?) Maroules was metropolit of Thessalonike (Corpus 5.1, no. 458); John (or Constantine) was exarch in Miletos (MM 6:153–17; cf. Patmou Engraphe 2:142f) in the beginning (Laurent: the second half) of the 13th C.; Alexios was chief of the sakellion in Smyrna in 1274 (Ahrweiler, "Smyrne" 114). The 14th-C. members of the Maroules family were generals and courtiers: the megas archon Maroules led an army against the CATALAN GRAND COMPANY (Pachym., ed. Bekker, 2:424.2); a purchase deed of 1312 mentions the sebastos Maroules as a landowner (Xerop., no. 16.9); Phokas Maroules was domestikos of the imperial table ca. 1328–41; he also founded a convent of the Theotokos in Constantinople before 1341 (MM 1:221–26; 2:424.16–18). A charter of 1384 names John Maroules archon (Doecheiar., no. 49.10). Demetrios Maroules was an "honorable physician" in Thessalonike ca. 1322. Peasants of several Athonite monasteries often bore the related name of Maroulas.

MARRIAGE (γάμος). In Roman law marriage was originally a relationship based on the husband's domination over the wife (manus) and later a relatively "free marriage" (i.e., union of equals in which divorce was permissible). The radical

SOURCE. Jean Maron, Exposé de la foi et autres opuscules, ed. M. Breydy, 2 vols. (Louvain 1988).

-A.K.
Christian sects (Marcionites, Gnostics) attacked marriage as contrary to the Gospels, as fornication, and as the work of the devil. Mainstream Christianity had to work out a compromise between the complete rejection of marriage and the Roman legal concept of "free marriage" following St. Paul’s dictum that "it is better to marry than to burn" (1 Cor 7:9). Late Roman legislation shifted back and forth on the question of the permanence of marriage and the possibility of divorce; Justin II in a novel of 566 still maintained the traditional view that divorce could be allowed with the agreement of the two partners. The principal changes occurred (probably under the influence of customary law) by the 8th C., and were formulated in the Ecloga. The major aspects of the change were restriction of divorce, strengthening bonds of property within the family, and balancing the rights of the mother and father regarding their children. Later came the prohibition of concubinage.

Church fathers considered marriage a divine institution established for the procreation of children and the prevention of fornication. The consent of the bride and groom, and often of their parents or guardians, was necessary for marriage, although in romances marriages were sometimes performed without parental approval. A formal marriage rite or wedding was required for the conclusion of a marriage; eventually under Alexios I, the distinction between marriage and betrothal was limited. The minimum age for marriage was puberty, reckoned as age 12 for girls and 14 for boys; normally, the husband was older than the wife. Second marriages were permitted (for lay persons), while a third was undesirable and required an epitimion (see remarriage). The marriage of eunuchs was prohibited by Leo VI, and the marriage of slaves was considered illegal until the 11th C. (see slavery). There were various marriage impediments, based on reasons of religion, consanguinity, or affinity. Although highly regarded, marriage was considered inferior to virginity, and canon law required celibacy of monks and bishops; second marriages were prohibited for priests.

The metaphor of marriage was frequently used in Byz. imagery: the church was identified as the bride of Christ, and individual women committed themselves in marriage to the immortal bridegroom Christ (Brock-Harvey, Women 71,165).

MARRIAGE BELT, apparently one of the customary gifts from groom to bride. Unlike the marriage ring and marriage crown, it was associated with the nuptial chamber, rather than the wedding ceremony (A. Amiand, La légende syrienne de saint Alexis, l’homme de Dieu [Paris 1889], 12f). Two gold specimens survive, at Dumbarton Oaks (DOCat 2, no.38) and in the de Clercq Collection; both date to the later 6th/7th C. and are said to have been found in Syria. Each consists of repoussé medallions—many small ones with Dionysiac figures or Tyche (de Clercq) and two large ones at the center that depict the dextrarum junctio (see Marriage Rite). Their iconography is that of marriage rings, with Christ as officiating priest.

Marriage Belt. Marriage belt; gold, late 6th to 7th C. Dumbarton Oaks, Washington, D.C.
as are their inscriptions; the Dumbarton Oaks example bears "From God, Harmony, Grace, Health," while the de Clercq medallion is inscribed "Wear in Good Health (Hygienousa phori [sic]), Grace of God." Their emphasis on health and their association with the bridal chamber suggest that these marriage belts had an amuletic role in facilitating conception and childbirth.

-G.V.

MARRIAGE CROWNS were usually designated by the generic term for crowns, stephanoi. A. Vogt's (De cer., vol. 1:225) strict distinction between imperial crown (stemma) and nuptial crown (stephanos) does not prove valid: in the chapter on the marriage (stephanon) of the augusta, the despotai are said to have been crowned with the stemma (bk. 1, ch. 50[41], vol. 2:17.15). The habit of crowning newlyweds was known by the end of the 6th C.; describing the marriage of Maurice, Theophylaktos Simokates (Theoph.Simok. 57.17–19) notes that stephanoi were employed. Wedding crowns appear on the bezels of 6th- through 7th-C. marriage rings as well as in later MS illumination (e.g., the marriage of Constantine IX and Zoe in the Madrid Skylitzes—Grabar-Manoussacas, Skylitzes, no.542). Generally, they appear to be wide, simple bands (of metal?), which is consistent with the only known surviving set, in the Byzantine Museum, Athens (P.A. Drossoyianni, JÖB 32.3 [1982] 529–38). These tin-plated copper crowns have an arch bearing a cross over the forehead; each carries an invocation and a quotation from a psalm sung as part of the marriage ceremony. The so-called Akolouthia of Betrotthal and Marriage (preserved in MSS from the 10th C. onward) prescribes that two crowns be set on the altar, together with a glass wine cup that the bride and groom were to share; after they express their wish to marry, the priest girds a sword around the waist of the groom and puts crowns on the heads of the pair as symbols of imperial power (P.N. Trempelas, Theologia 18 [1940] 120–23). The crowns would be hung over the marriage bed for seven days.

MARRIAGE IMPEDIMENTS. Marriage with certain categories of people was prohibited; enumerated in Byz. law books mainly under the rubric "On Forbidden Marriages," these people included Jews, heretics, clerics, guardians, rapists, adulterers, those marrying for the third and fourth time (see TOMOS OF UNION), and, above all, relatives. Impeded relatives were at first defined by their kinship designations on a case by case basis. From the 11th C. onward the general rule prevailed that all blood, adoptive, and spiritual relatives to the 7th degree of relationship (see RELATIONSHIP, DEGREES OF) were prohibited categories (to the 6th degree for those related by marriage). Important sources for the development of the topic are canons 53, 54, and 98 of the Council in Trullo, title 2 of the Ecloga, and acts of the patriarchs Sisinnios II, Alexios Stoudites, Michael I Keroularios, and John VIII Xiphilinos, as well as novels of the emperors Alexios I and Manuel I Komnenos. That the topic was of great relevance is attested by the existence in many MSS of various different treatises dealing with it; John Pediasiemos and Matthew Blastares were esp. concerned with the subject.

MARRIAGE RITE (stephanomai, lit. "crowning") consisted of two separate parts: BETROTTHAL (mnesieta), and crowning, originally with a garland, later with a MARRIAGE CROWN of precious metal, which is the marriage proper. Crowning was a traditional element of pre-Christian weddings; hence Christians first discouraged it as pagan, but accepted it by the 4th C., interpreting it in a Christian sense as the crown of victory over concupiscence (John Chrysostom, PG 62:546.51–52). Crowning became a customary part of the ecclesiastical ceremony by the end of the 6th C. (Ritser, Marriage 136). After the rite of betrotthal, stephanoma follows with the synapte, three prayers, the crowning itself, lections (Eph 5:21–33, Jn 2:11), the ektenes litany, another prayer, the synapte with atetes, Our Father, a prayer, the ritual procession, removal of the crowns, concluding blessing, and prayers. Some early MSS also have a blessing of the nuptial chamber. The nuptial blessing and crowning were restricted to first marriages up until the 8th C., when the prohibition
against second marriages was relaxed and the church extended its control over all Christian marriages. Only in this period does the ritual take shape. Gradually the church’s nuptial blessing became the only acceptable Byz. form of marriage, extended even to slaves by the 11th C. The legislation accompanying these developments is an important part of Byz. jurisprudence (Ritzen, *Mariage* 127–213). From the 11th C. onward, legislation reserved nuptials to the bishop or, with his permission, a priest, though the stipend went to the bishop according to the *typikon* of Constantinian IX Monomachos (*Reg* 2, no. 923). There is a commentary on the rite by Symeon of Thessalonike (PG 155:503–16).

**Representation in Art.** The earliest depictions of Christian marriage appear in the 5th C. They show the couple with joined right hands, the gesture of the *dextrarum junctio* common in Roman rite, which symbolized *concordia*. The celebrant is now Christ, replacing the personification of Concordia. He places his arms around the shoulders of the couple. A solidus of Pulcheria and Marcian with this image was struck to commemorate their marriage. The same composition appears on marriage rings and a marriage belt of the 6th–7th C. in Dumbarton Oaks (E. Kantorowicz, *DOP* 14 [1960] 1–16). On the 7th-C. *David plate* on Cyprus, Saul stands as the celebrant between David and Michal, but he is no longer embracing them. From the 11th C. onward the celebrant places crowns on the heads of the couple, for example, Saul marrying David and Michal in the Psalter MS, *Vat. gr. 752* (fol. 2v: E. De Wald, *The Illustrations in the Manuscripts of the Septuagint*, vol. 3.2 [Princeton 1942] pl.4). When Christ is placing his hands on the crowns of imperial couples, it cannot be determined from the images alone whether a marriage or a coronation is commemorated. Certain scenes in the Madrid MS of John Skylitzes are unambiguously marriage ceremonies. The essential elements in these scenes are the bishop or patriarch who is celebrating the marriage rite, the couple, and the marriage crowns (*stephanoi*) either already on the heads of the couple or about to be placed there by the bishop. In the miniature of the marriage of Zoe and Michael IV Paphlagon (fol. 206v) the marriage crowns are joined by a cloth band. Michael also holds Zoe by the wrist, a late example of the *dextrarum junctio*. (For the secular celebration of marriages, see *Wedding*.)

**MAR SABA MONASTERY.** See Sabas, Great Lavra of.

**MARTIN I**, pope (July 649–July 653) and saint; born Todi, Tuscany, died Cherson 16 Sept. 655; feast day in the Greek calendar 13 Apr. Martin served as papal *apocrisiarius* in Constantinople, where he supported MAXIMOS THE CONFESSOR against official Monotheletism (W. Peitz, *Hist* 38 [1917] 213–36, 429–58). When he was elected pope, Martin did not receive confirmation from EMP. CONSTANS II. Martin immediately took steps to find backing in Palestine by dispatching John of Philadelphia as his vicar; he summoned the LATERAN SYNOD in 649 to reject the *Typos* of Constans II. Constans considered these actions political treason and sent the exarch OLYMPIOS to arrest the pope. Olympios, however, made peace with Martin and soon proclaimed himself emperor. The new exarch Theodore Kalliopas entered Rome with an army and forced Martin to submit; the pope was brought to Constantinople on 17 Sept. 653 and tried on 19 Dec., charged with conspiring with Olympios and sending money to the Arabs who were attacking Sicily. His attempt to discuss the *Typos* was not permitted. Condemned to death, Martin was instead exiled to Cherson, whence he sent letters lamenting his fate. The Greek church proclaimed Martin a martyr; the history of his ordeal was described probably by Theodore Spoudaios (R. Devreesse, *AB* 53 [1935] 49–86).

—A.K.

**MARTINA**(*Mortrīnai*), empress; second wife of HERAKLEIOS; born ca. 598; died probably Rhodes, after 641/2. The niece of Herakleios, Martina
married him after the death of Fabia/Eudokia in 613/14. Patr. Sergios I protested that the marriage was incestuous, and the Greens insulted the emperor when he appeared with Martina in the Hippodrome. Martina produced perhaps ten children, some of them retarded, a fact her enemies interpreted as evidence of God’s wrath. Martina was Herakleios’s supporter, adviser, and assistant, accompanying him on military expeditions and exercising important influence on his policy. His will left her co-ruler with his son by his first marriage, Herakleios Constantine, and Martina’s son Heraklonas, but the people refused to acknowledge the will of Herakleios. Herakleios Constantine’s premature death and Heraklonas’s minority gave Martina the reins of power, but she was unable to suppress the opposition of the senate and army: the revolt of Valentinos Arasakuni led to her deposition. She was accused of poisoning Herakleios Constantine, her tongue was slit, and she was banished to Rhodes.

W.E.K., A.K.

MARTYR (μάρτυς “witness”), a saint who gave his or her life for the Christian faith. Despite the obvious similarity between the Christian image of martyrs, on the one hand, and Jewish veneration of the just or certain Greek mythological themes, on the other hand, the cult of martyrs was a new phenomenon developed by the early church. Moreover, the New Testament use of the word “witness” is not directly linked to the later tradition (N. Brox, Zeuge und Märtyrer [Munich 1961]); the traditional meaning of the word was apparently established by the late 2nd C., whereas the first epistle of Clement still uses the verb martyrein in the sense of “testify.” Tertullian (ca.150–ca.230) and Cyprian (ca.200–58) stressed the difference between red and white (bloodless) martyrdom, between martyr and confessors, while the literary genre of martyrion emphasized the ordeal and execution of martyrs. The cult of martyrs was a reaction to persecution, and its purpose was the heroization of real and legendary victims. Emp. Julian tried to compromise the cult of martyrs, presenting it as an imitation of pagan cults. Later, Byz. theologians expanded the concept of martyr (or martyrlike attitude and martyrlike glory) to other types of holy man (D. Balfour, Sobornost 5.1 [1983] 20–35).

Representation in Art. A saint was designated as a martyr in art by holding a small cross in one hand. Scenes of martyrdom (see Hagiographical Illustration), frequently preceded by scenes of torture, are esp. developed in Calendar cycles, where, along with routine beheadings, there are depictions of death by beating, stoning, drowning, crucifixion, incineration, dismemberment, etc., all rendered with considerable devotion to detail.

A.K., N.P.S.

MARTYRION (μαρτύριον), a term that refers both to a martyr’s shrine (Eng. martyry) and to an account of a martyr’s life.

Shrine. A martyrion was a building or shrine erected over the grave of a martyr or on a site connected with the life of Christ or a saint. The earliest martyr—Christian successors to pagan heroae—were simple shrines erected at the graves of martyrs, such as the aedicula at the supposed tomb of St. Peter on the Vatican Hill in Rome. Monumental martyrion appeared ca.300 as in the large baldachinlike structure that sheltered the “Tomb of St. John” at Ephesus. After 312, monumental martyrion were erected in large numbers throughout the Christian world. Grabar (infra) showed that the architectural form of martyrion derived largely from that of Roman funerary monuments. Many martyrion were centrally planned—circular, as in the Anastasis rotunda in Jerusalem; octagonal, as in the structure sheltering the Grotto of the Nativity in Bethlehem; or cruciform, as in the Martyrion of St. Babylas near Antioch. The basilica form was also used for martyrion, for example, the Holy Sepulchre basilica in Jerusalem; at the Constantinian Church of St. Peter in Rome, the transept functioned as a martyrion. Martyria continued to be erected in later periods, as in the case of St. Euphemia in Constantinople, actually a palace converted into a chapel to accommodate the saint’s relics in the early 7th C. The distinction between martyrion and regular churches was gradually lost, beginning in
the mid-4th C., with the first translations of relics to churches that were not specifically built as martyria.

MARTWAZI, AL- (Marvazi), more fully Sharaf al-Zaman Taher al-Marwazi, Arab author and court physician of Malikshah; fl. late 11th–early 12th C. His Properties of Animals (written ca.1120) contains a brief chapter on Byz., among other nations. Based partly on earlier Arabic reports, it refers to the Byz. military hierarchy. His descrip-
tion of Constantinople—its walls, gates, statues, Hagia Sophia, imperial palace, role of the empress, sports in the Hippodrome—supplements that of Harun ibn Yahya. He also refers to Byz.'s northern and western neighbors and the survival of Hellenistic learning. His reference to Muslim merchants, rather than prisoners, at Constantinople seems indicative of the contemporary situation.

MARY MAGDALENE ("of Magdala"), saint, one of the MYRRPHOROIKI; main feastday 22 July. Her tomb was located in either Jerusalem or Ephesus, whence her relics were transferred to Constantinople at the order of Emp. Leo VI. Her cult in Byz. never attained the stature it had in the West, where Mary was identified with both Mary of Bethany (sister of Lazarus) and the anonymous sinner of Luke 7. She was praised, however, by numerous authors, from Gregory of Nyssa to Nikephoros Kallistos Xanthopoulos, and most highly in the Greco-Italian tradition of pseudo-Theophanes Kerameus (probably Philagathos), which celebrates Mary as the first to see the risen Christ and thus as the "apostle of apostles." In art as in literature, the earliest Eastern works singling out Mary from the other Myrrphoroi have Western associations (Noli me tangere on the Crusader façade of the Holy Sepulchre, Jerusalem, and in MS Kiev, Academy of Sciences, gr. 25. [Cart, Byz. Illumination, fig.12B11] where it is paired as in Western literature, including pseudo-Theophanes, with the Doubting of Thomas). From the early 13th C. onward (Mileševa), Byz. art gives Mary a central place in images of the deposition from the cross. Her softly colored garments do not distinguish her from the other Myrrphoroi.

MARY OF EGYPT, saint; feastday 1 Apr. Her chronology cannot be established. A singer in the Church of the Anastasis in Jerusalem, Mary fled to the desert, taking a basket of vegetables that lasted 17 years, according to the Life of Kyriakos by Cyril of Skythopolis (ed. E. Schwartz 223f; Fr. tr. A.J. Festugière, Les moines de Palestine [Paris 1963] 50f). Before her death Mary told her story to the monk John, who showed her grave to Cyril. Moschos tells a similar tale (PG 87:3049). The story was reworked by Sophronios of Jerusalem (his authorship is denied by Beck, Kirche 435), who dramatized the story, apparently using the Life of Paul the Hermit by Jerome. John was replaced by another narrator, Zosimas; Mary became a licentious woman from Alexandria who suddenly converted to Christianity when a supernatural force prevented her entrance into the Church of the Anastasis; a lion appeared to dig her grave. The author retained certain details; for example, his Mary survived 17 years on three small loaves. This legend stressed the vital topic of repentance, absent in the earlier version. The story of Mary was included in the collection of Symeon Metaphrastes and retold by many writers, for example, Manuel Holobolo and Manuel II. The legend is known also in Syrian, Armenian, Latin, and other versions.

Representation in Art. The figure of Mary is distinctive: gaunt and bony, with long unkempt white hair and no headcovering, she is sometimes depicted without any clothes at all, and her body is covered with hair or sores. In church programs she appears either among the holy women or opposite the bishop Zosimas, who holds a paten and a spoon with which he offers her communion. The latter scene often occupies a position near the apse (e.g., at Asinou). In the Theodore Psalter (fol.68r), Zosimas extends to her his mantle.

MARY THE YOUNGER, saint; born Armenia (?); before 866 (?), died Biyze ca.902/3; feastday 16 Feb. Mary was the youngest daughter of an Ar-
menian family that moved from Armenia to Constantinople during the reign of Basil I. She married a certain Nikephoros, droungarios and eventually tournarches, and followed him to Byz. The intrigues of Nikephoros's relatives made him jealous of Mary; finally he beat her fatally.

Mary's anonymous Life, preserved only in 14th-C. MSS, was probably written at her monastery in Byz. Its date of composition is usually assigned to the 11th C., since the hagiographer refers to Basil II; Beck (Kirche 565), however, places it soon after 903; in this case, the reference to Basil II is an interpolation. The hagiographer also dwells on the fate of two of Mary's sons and describes miracles performed at her tomb. The Life conveys important information about Byz.-Bulgarian relations up to the death of Symeon. A new type of saintly woman, Mary is a modest matron and housewife who apparently worked no miraculous deeds while alive; rather, the author stresses her works of charity. The hagiographer, quite reasonably, comments that many people may doubt Mary's sanctity; he insists, however, that posthumous miracles at her tomb demonstrate her sainthood. The Church of Hagia Sophia in Byz had an inscriptions mentioning the "life-containing tomb" of Mary (C. Mango, ZRVI 11 [1968] 11f); probably it was the cathedral church in which Mary's corpse supposedly remained uncorrupted for 25 years until transferred to a private chapel. The Life describes Mary's appearance in a vision to an artist in Rhaistatos; she ordered him to paint an icon of her. The icon was sent to Byz., and the hagiographer stresses its resemblance to Mary (p.699BC).

source. AASS Nov. 4:692-705.

MASON (λιθοξόος), worker in stone or marble. In late Roman texts the term lithoxos designated both a stoneworker and a stonemaster in a quarry, but primarily had the connotation of sculptor (and in a Christian context specifically a maker of idols). Gregory of Nyssa (PG 46:737D) referred to a carpenter who made wooden statues of animals and a lithoxos who carved stone plaques as if they were soft silver. In inscriptions the term lithoxos designated both a workman who installed decorative stonework and a builder (Robert, infra 33). In the 5th-6th C. Isaurian masons were esp. famous: they built the Church of St. Sabas ca.501, the monastery of St. Symeon the Stylite the Younger between 541 and 551, and repaired the dome of Hagia Sophia in Constantinople ca.558. They formed teams that traveled considerable distances and were a close-knit group, caring for their companions if they fell ill (see Building Industry). Inscriptions from Cilicia mention marble masons: marmarios once (MAMa 3, no.683) and frequently marmararioi; esp. noteworthy is the epitaph of the marmarios Stephen, the son of the marmararios Konon (MAMa 3, no.721). They are also attested in inscriptions from Greece, Cappadocia, Lydia, and other places. From ordinary masons should be distinguished experienced marbleworkers, such as a certain Leonstios who worked in a luxurious house in Antioch ornamenting walls with marble plaques and setting a beautiful, perhaps multicolored marble floor (vita of St. Thekla, ed. Dagron, ch.17.3-6, p.334).

The scanty evidence from later centuries indicates that a lithoxos was an ordinary craftsman: thus Symeon the Theologian (Traités théologiques et éthiques 2 [Paris 1967] 166.142-48) lists a litho-
xoons (ed. reads limxoons) side by side with other such artisans as a jeweler and a smith and equates him with a tekon (carpenter). In the 10th-C. Book of the Eparch (ch.22.1) marmarioi were regular construction workers.

Masons’ Marks. Masons incised letters, monograms, and nonverbal signs on blocks of stone and other architectural members either in the quarry or at the time of their use in construction projects. The collection, let alone the study, of such masons’ marks is in its infancy, for example, most of the ca.1500 such marks found by R. van Nice at Hagia Sophia, Constantinople, remain unpublished. Marks served a variety of purposes, more often functioning as invocations or records of the name or place of origin of a mason or his workshop than as assembly marks. There were also stamps on bricks, probably having a similar function.

—A.K.

MASONRY. See Ashlar; Brickwork Techniques and Patterns.

MASSACRE OF THE INNOCENTS. See INFANCY OF CHRIST.

MASTOTS. See Mesrop Maštoc’.

MAS'UD I, Seljuk sultan of Ikonion; died between Apr. and Sept. 1155. Son of Kilic Arslan I, Mas'ud (Мас'уд) deposed his brother Shakhanshah (between 1116 and 1118) but had to flee to Constantinople (ca.1125/6) from his brother 'Arab. Restored with Byz. aid, Mas'ud received Byz. refugees: Isaac, brother of John II (after 1130), temporarily, and Isaac's son John (1140), permanently. Overshadowed by the Danishmends, Mas'ud emerged after 1140 or 1142 as the leading Anatolian Muslim ruler. When, in response to Turkish ravaging in western Anatolia, Manuel I attacked Ikonion (1149), Mas'ud's forces outside the city prevented a siege. Mas'ud and Manuel made peace (1147) to confront the Second Crusade. In 1152–54, Mas'ud received Byz. subsidies to attack T’oros II in Cilician Armenia, but was unsuccessful.

—C.M.B.

MAS'UDI, al-., more fully Abū’l-Hasan ‘Ali ibn al-Husayn, al-Mas'udi, Arab historian; born Baghdad 893?, died al-Fuṣṭat Sept./Oct. 956. Concerned with the broader theoretical implications of social and cultural phenomena, al-Mas'udi spent much of his life traveling. He journeyed east to India, visited Arabia and East Africa, and spent his last 30 years in Syria and Egypt, where he did most of his writing. He gathered much information on other lands and cultures during these travels.

Only two of his 36 Arabic works survive: The Meadows of Gold and Mines of Gems, a discursive world history from Creation to 947, and Elucidation and Overview, a historical and geographical digest. Both books range over many topics and reflect his keen interest in other cultures. Of these, Byz. is of first importance, due to Mas'udi’s intense interest in Christianity and his admiration for the empire’s political power and venerable tradition of institutions and administration. Mas'udi speaks at length about the imperial and ecclesiastical history of Byz., describes Constantinople and the empire’s lands, lists the themes and other administrative divisions, and discusses Byz. relations with the Muslim world, the Bulgars, Khazars, Rus’, and the West. He treats matters of commerce and culture, as well as the usual military and diplomatic affairs. His accounts, remarkably objective, are well informed and esp. important for events of his own times.

—L.I.C.

MATASUNTHA (Ματασούνθα), Ostrogothic queen; daughter of Amasuntha; born ca.518, died after 551. While a young girl, she was married against her will to Vitiges in 536/7. More
Roman than Goth in upbringing and culture. Matasuntha became the center of the senatorial opposition to Vitiges, whom she disliked. In 538 she started negotiations with John, the Byz. commander in Ariminium. rumor even accused her of burning Ravenna’s grain when Belisarios besieged the city. After Ravenna fell, Vitiges and Matasuntha were brought to Constantinople as prisoners of war. When he died, she married the widowed GERMANOS; this marriage was intended to symbolize the unity of Justinian’s court and the AMALI. Wroth (Western & Provincial Byz. Coins, xxxvi–xxxvii) attributed to Matasuntha some silver and bronze coins with monograms; these, he surmised, were struck in Constantinople in 550 during the preparation for Germanos’s expedition to Italy. These coins are now considered (W. Hahn, FelRav 1 [1979] 64) to have been issued by Mastinas, the client king of Mauretania (ca.535).

Mathematical Problems, Textbooks Of. The earliest collections of problems in mathematics appear in Byz. in a series of epigrams preserved in the Greek Anthology under the name of Metrodoras, a grammarian of the early 6th C. (Heath, Mathematics 2:441–43); this is followed by a 7th- or 8th-C. papyrus found at Akhmim.

The only other known Byz. mathematical problem books were written under the influence of an oriental tradition that goes back to India. These works are an anonymous collection of the early 14th C. and a “letter” of 1341 to Theodore Tzabouches from Nicholas RHABDAS. Another anonymous treatise, written after 1453, also belongs to this oriental tradition. The late Byz. problem books deal with cases of construction work, financial transactions, etc., and contain substantial data for economic history (K.-P. Matschke, Jahrbuch für Geschichte des Feudalismus 3 [1979] 181–204), as well as for the history of language (E. Kriaras, ByzF 3 [1968] 141–56).

LIT. H. Hermelin, “Arabic Recreational Mathematics as a Mirror of Age-Old Cultural Relations between Eastern and Western Civilizations,” Proceedings of the First Interna-

Mathematics in Byz. encompassed four fields: arithmetic (including notation), geometry, optics and catoptrics (that portion of optics dealing with reflected light), and metrology. The Byz. used mathematics in their studies of astrology and astronomy, for the computus (to establish the date of Easter), and for financial transactions and architectural construction (see Mathematical Problems, Textbooks Of). The Byz. placed great importance on number symbolism, esp. in the spheres of theology, art, and architecture.

Arithmetic. Teachers at Alexandria, like AMMONIOS and John PHILOPONOS, used the Introduction to Arithmetic of Nikomachus of Gerasa (fl. ca.100) as their text. This work also provided the basis for the arithmetical portions of the Quadrivium of 1007/8 (with the addition of Euclid) and of that by George PACHYMERES; it continued to be widely read in the Palaiologan period. Nikomachos’s book (but not its Byz. commentaries) was translated into Latin by BOETHIUS and into Arabic by Thabit ibn Qurra.

The only other early Byz. work on arithmetic, a reaction against Nikomachos, is the 5th-C. Handbook of the Introduction to Arithmetic, composed by DOMNINOS of Larissa (in Syria), who together with PROKLOS had studied with Syrians. Domninos also wrote a brief tract on removing one ratio from another, the Pos esti logon ek logou aphelein.

Thereafter there is a gap in the tradition until the 9th-C. scholar LEO THE MATHEMATICIAN, who studied arithmetic (among other subjects) with a teacher on Andros, and later taught arithmetic and geometry in Constantinople. According to Theophanes Continuatus (TheophCont 185–90), his fame reached the Arab caliph al-Ma’mun, who consulted him on problems of geometry and astronomy. His library included works of Euclid, Apollonios of Perge (on conics), PROKLOS the Neoplatonist (on geometry), and Archimedes (Le- merle, Humanism 195–204).

In the 10th–12th C. the only traces left of the study of arithmetic are in the Quadrivium of 1007/8, which should remind us that arithmetic was always included in the school curriculum even if no original treatises were being composed, and from the mid-11th C. a short piece by PSELLOS,
the *On Numbers*. Unlike astronomy and astrology, Byzantine mathematics in this period seems not to have experienced any influence from Islam.

During the Latin occupation of Constantinople, however, there was written in 1252 a treatise on the use of Indian numerals entitled *The So-called Great Computation according to the Indians* (A. Allard, *RHT* 7 [1977] 57–107). It is not clear whether this is based directly on an Arabic source (it transliterates some Arabic technical terms and uses the epoch of the Hijra in an example) or on some Latin version of one, such as the *Book of the Abacus* of Leonardo of Pisa (who is known to have visited Constantinople). In any case, this anonymous text was the main source of *The So-called Great Computation according to the Indians* of Maximos Planudes, to which supplements were added by Nicholas Rhabdas and Manuel Moschopoulos (ed. A. Allard, *Le grand calcul selon les Indiens* [Louvain-la-Neuve 1981]).

The last arithmetical tradition in Byz. was that of the *Arithmetic* of Diophantos of Alexandria, which deals with problems we now classify as algebraic. The commentary of Hypatia on the *Arithmetic* is now lost but may be the source of Psellos’s letter concerning Diophantos. There now survive only six of the original 13 books in Greek; four others have recently been discovered in an Arabic translation by Qustâ ibn Lûqa (see J. Sesiano, *Books IV to VII of Diophantus’ Arithmetica* [New York 1982]), which shows that a more complete MS survived until at least the late 9th C. Nikephoros Blemydes had read Nikomachos and as much of Diophantos as his teacher understood; Pachymeres paraphrased the beginning of the *Arithmetic* in his *Quadrivium*; Planudes commented on the first two books, and in the 14th C. both Rhabdas and Demetrios Kydones refer to Diophantos. (For further scholia, see A. Allard, *Byzantion* 53 [1983] 664–760). One should also note the treatise on magic squares, *Exposition for Finding Square Numbers*, addressed by Manuel Moschopoulos to Rhabdas, and the treatise of Isaac Argyros on finding square roots.

**Geometry.** The tradition of Byz. studies of geometry was, of course, based on Euclid. The *Elements* were commented on by Pappos (bk.10), Proklos (bk.1), Simplicios (bk.1), and Isaac Argyros (bk. 1–6), while Barlaam of Calabria wrote an arithmetical explanation of book 2. The *Data* was commented on by Marinus. Both of these works of Euclid were revised by Theon. The *Elements* was the basis for the geometrical sections of the *Quadrivium* of 1007/8 and for that by Pachymeres.

From the corpus of Archimedes, the *On the Sphere and the Cylinder, On the Measurement of a Circle*, and *On Plane Equilibria* were commented on by Eutokios, who also explained books 1–4 of Apollonios’s *Conics*. Also largely in the form of explications of the theories of earlier mathematicians is the *Collection* of Pappos. A younger contemporary of Pappos, Serenos of Antinoeia, also wrote a commentary on Apollonios’s *Conics*, but it is unfortunately lost. There do survive from his hand two related treatises, *On the Section of a Cylinder* and *On the Section of a Cone*. Also in the tradition of conic sections is Anthemios of Tralles’ *On Burning Mirrors* of which we possess only a fragment.

Aside from the numerous scholia, esp. on the *Elements*, virtually the only other known Byz. treatise on geometry is a work on triangles, based on Heron, that Isaac Argyros composed in 1367/8. It is remarkable that none of the brilliant advances in geometry made by the Arabs ever reached Byz.

**Optics and Catoptrics.** The principal Byz. texts on these subjects are Theon’s recession of Ptolemy’s *Optics* and the pseudo-Euclidean *Catoptrics*, which Heiberg (infra) conjectured to be the work of Theon. The *Quadrivium* of Pachymeres (3, 59–76) used the original Euclidean form of the *Optics*. An older contemporary of Theon was Damianos, the son (or pupil) of Heliodorus of Larissa, who composed the *Chapters of Optical Hypotheses*.

**Metrology.** The mathematical aspects of metrology derive from the traditions of Heron’s *Geometry, Stereometry*, and *On Measures*. These include the pseudo-Heronian *Geodesy, the Synopsis of Measurement and Division of the Earth* of John Pediasimos, Isaac Argyros’s *Method of Geodesy*, and George the Geometer’s *On Geodesy* as well as several anonymous texts (see J.L. Heiberg, *Heronis Alexandrini Opera*, 5 [Leipzig 1914] lxvi–cxii). A large number of other metrological texts exist, including a poem attributed to Psellus (ed. Schilbach, *Quellen Met.* 116–25).

**MATINS.** See Orthros.
MATRIMONIAL LEGISLATION. From the 4th C. outward marriage, more than any other institution, was the subject of both secular and ecclesiastical regulations. The two generally complemented one another and conflicted only in exceptional cases. Most of the norms of matrimonial legislation originate in Roman law and are widely expounded in all parts of the Corpus Juris Civilis and in the Basilika (books 28–30) as well as in minor compendia. Collections of relevant canons were assembled, esp. in the Nomokanon of Fourteen Titles (9.28–30, 13.2–4), the commentaries on which also include other relevant material. The principal concerns of matrimonial legislation were the age of the betrothed couple (see Betrothal), marriage impediments (title 2 of the Ecloga), divorce, remarriage, and new marriage rites (title 16 of the Epitome). Even if the main principles of matrimonial legislation were apparently widely known and respected, the legal rules were presumably often and easily disregarded through oikonomia.

MATTHEW (Ματθαῖος), named Levi before his conversion; evangelist and saint; feastday 16 Nov. Author of the first Gospel, he was one of the apostles and preached to the Jews in their native tongue, according to Eusebius of Caesarea (HE 3.24.5–6); Eusebius (HE 6.25.4) quotes Origen to the effect that Matthew had written his gospel “in the Hebrew language.” Matthew’s Gospel was the object of lengthy exegesis, esp. by Origen and John Chrysostom; catena also include fragments of Apollinaris of Laodikeia, Theodore of Mopsuestia, Cyril of Alexandria, Photios, and several other theologians. Later, Euthymios Zigabenos and Theophylaktos of Ohrid compiled commentaries on Matthew. Matthew’s biography was developed in apocryphal acts of apostles and in homilies (among the authors are Niketas Paphlagon and Symeon Metaphrastes); hagiographers paid special attention to Matthew’s transformation from a tax collector (an abominable profession) into a disciple of Christ. They describe his widely ranging travels, which included Persia and Ethiopia. More modestly, the Synaxarium of Constantinople (Synax. CP 227–30) limits Matthew to a journey to Hierapolis in Syria; he is said to have died there peacefully. Matthew’s cult in Byz. did not flourish: he had no shrine of his own in Constantinople, and his memory was celebrated in the Church of St. Peter, near Hagia Sophia.

Representation in Art. In Evangelist Portraits Matthew is depicted as a vigorous gray-bearded. Usually he is shown writing before a desk (see Writing Desk), but sometimes he stands (Nelson, infra, figs. 62–63), a posture used in some MS illuminations to distinguish Matthew and John, who were disciples of Christ, from Mark and Luke, who were not. Matthew may be accompanied by an angel or image of Christ—the latter en buste or as the Majestas Domini (Nelson,
infra, fig. 40)—to indicate that Christ inspired the Gospel, or by a youth, perhaps James the brother of Christ, who supposedly translated Matthew’s Gospel into Greek. In 17 MSS, a miniature of the Nativity accompanies the portrait of Matthew. The scene of his conversion (Mt 9:9; Lk 5:27-31) is illustrated in several densely illuminated MSS and occasionally in wall painting. His ministry and martyrdom appear in cycles of the lives and deaths of the apostles.

ED. J. Reuss, Matthäus-Kommentare aus der griechischen Kirche (Berlin 1957).
—J.J., A.K., A.W.C.

MATTHEW I, patriarch of Constantinople (Oct. 1397-1402; 14 June 1403-10 Aug. 1410); born ca.1360 or earlier, died Constantinople. At age 15 Matthew entered the Charsianites monastery in Constantinople under the spiritual guidance of the hegoumenos Markos (PLP, no.17017) and of his successor Neilos Kerameus, the future patriarch. After Neilos’s death (1388), Matthew succeeded him as superior of the monastery. In 1387 Matthew was made proedros of Chaledon but not consecrated; he was then appointed metropolitan of Kyzikos (MM 2:108-11). Thus, when he became patriarch, he was attacked by his enemies, Matthew of Medea and Makarios of Ankyra, for unlawfully holding the position of bishop three times. He was also accused of negotiating with the Turks during their siege of Constantinople in order to secure his own position, a charge that Matthew rejected as slander (MM 2:263-67). He was briefly deposed (summer 1402-June 1403) by a synod composed of four metropolitans but reinstated by Manuel II upon his return from Italy (G.T. Dennis, ByzF 2 [1967] 100-06). Matthew remained hegoumenos of the Charsianites monastery throughout his patriarchate and in 1407 wrote a typikon for the monastery as part of his last will and testament (H. Hunger, BZ 51 [1958] 294-303).

MATTHEW I KANTAKOUZENOS, co-emperor (1353-57); born ca.1325, died Mistra 1383 or 1391. Eldest son of John VI Kantakouzenos, Matthew in 1341 married Irene Palaiologina, granddaughter of Andronikos II. He followed a military career and supported his father during the Civil War of 1341-47. Angered when John VI failed to recognize him as heir after his own coronations in 1346 and 1347, Matthew declared his independent rule over eastern Thrace. John then granted him this territory as an appanage. John finally agreed to grant Matthew the title of co-emperor in April 1353. Patr. Kallistos I resigned in protest. The coronation was performed in Feb. 1354 by a newly elected patriarch, Philotheos Kokkinos. Tensions between Matthew and his brother-in-law John V Palaiologos increased after John VI’s abdication in Dec. 1354. The rivals for the throne were at war in 1355-56. In 1356 Matthew was captured by Serbs and handed over to John V, who held Matthew until he renounced his title of emperor at Epibatai in 1357. In 1361 Matthew moved to the Morea, where he spent his remaining years (A.C. Hero in Okeanos 280-87). He assisted his brother, the despotes Manuel Kantakouzenos (1349-80), in the administration of the province and briefly succeeded him as despotes in 1380-81. He wrote some insignificant commentaries and addressed two treatises on religion and philosophy to his daughter.

ED. “Matthaiou basileos tou Kantakouzenou Logoi anekdotoi dyo,” ed. I. Sakkellion, DIFE 2 (1887) 425-39. For further list, see Beck, Kirche 791.

MATTHEW OF EDESSA (Matt’os Urhayec’i), Armenian historian, priest in the large Armenian population of Edessa. Of his life nothing is known, save that he was an eyewitness of events in the Crusader principality of Edessa in the early 12th C. His detailed Chronicle begins in 952 and reaches 1136. It is of prime importance for Byz.-Crusader-Turkish history in Cilicia and northern Syria. Gregory the Priest (otherwise unknown) continued the narrative to 1162.

Matthew says that he took eight years to compile his work from written and oral sources, which he does not identify. The narrative proceeds strictly chronologically, events being grouped together
year by year according to the Armenian calendar. Like many Armenians, Matthew was ambivalent toward Byz. He praises individual emperors (notably Basil II) for their policies or characters but blames the Greeks for destroying the unity of Armenia and thus causing Turkish success in Anatolia. The attempts of the Byz. to impose Chalcedonian orthodoxy he denounces, yet he calls Constantinople a city under divine protection.

MATTHEW OF EPHESSUS. See Gabalas, Manuel.

MATTHEW OF KHAZARIA, late 14th-C. poet. A hieromonk from the monastery of Kyriou (in Constantinople or Bithynia), Matthew was sent to Crimea in Aug. 1395 by Patr. Antony IV as exarch of KHAZARIA (MM 2:492.26–29). He wrote a poem of 15-syllable verses on the “city of Theodore,” most probably Dory. It takes the form of a dialogue between a visitor to Crimea (the poet) and the “city of Theodore.” The stranger praises the city’s site and splendid buildings, but asks why the place seems deserted. The city replies that she has suffered for years from enemy attack and siege (probably the campaigns of Timur). The poet concludes with edifying reflections on the transience of material things; therefore man should concentrate on his spiritual salvation. The poem is couched in literary language, but frequently lapses into vernacular syntax, morphology, and vocabulary, esp. when necessary to conform to the meter.

LIT. Hunger, Lit. 2:148. PLP, no. 17309.

- A.M.T.

MATZOUKA (Ματζουκά), bandon of the empire of TREBIZOND, consisting of the valleys immediately south of the coast that control routes to the interior. The region was dominated by the landholdings of the monasteries of Peristera, Soumela, and Vazelion and inhabited by Greek-speaking peasants. These tough mountaineers saved Trebizond from Turkish attack in 1283 and 1361 and retained considerable independence after its fall. Besides the great monasteries and numerous castles, remains consist of modest village churches in a vernacular late Byz. style, many of them decorated with paintings of conventional types. The region is important for providing a great range of unpretentious buildings that illustrate rural conditions.

- C.F.

MAUREX (Μαύρηξ), also Maurix, Maurikas, a Byz. family that flourished in the 11th and 12th C. Its founder, whose first name is unknown, was a common sailor from Herakleia Pontike. According to Italian chroniclers, in 1066 and 1067 a certain Ma(m)bica commanded a fleet attacking Robert Guiscard; WILLIAM OF APULIA (p.240.99) calls him dux of Alexios I’s fleet. Bryennios (Bryen.197.19–24) says that his naval experience made Maurex indispensable and the emperors conferred upon him enormous wealth; he controlled a local militia consisting of his slaves and servants. In 1082 he was in charge of the navy dispatched to intercept Norman communications between southern Italy and the Balkans (An. Komm. 1:148.30–31). He is usually identified as the Michael Maurex who was titled strategos of Chios, magistros, katepano of Dyrrhachion, etc., on several seals of the 11th C. (Selbt, Bleisiegel 168–71), but narrative sources do not confirm that the naval commander Maurex held these ranks.

In the 12th C. Constantine Maurikas was prator of the Peloponnese and Hellas (Laurent, Bulles métr., no.305); John Maurikas, in the mid-12th C., was a konupalates (Guilland, “Europalate” 209). More complicated is the case of a certain Maurexius, a servant (familiaris) of Manuel I who was granted special powers during the expedition of Andronikos Kontostephanos to Egypt in 1169; William of Tyre (PL 201:791A) states that at the end of his life Manuel I entrusted him with the administration of the empire. No Greek source confirms this, nor is it known whether Maurexius belonged to the Maurex family. The traces of later family members are scanty: in 1280/1 a cer-
MAURI (Mαυροίς), Moors. From the 3rd C. onward this term was used primarily to designate the semiromanized peoples in North Africa who inhabited the area extending from the Syrtic Gulf to the Atlantic Ocean (Austuriani, Baquates, Leuathai, Mazikes, Musones, Quinquegentanei, Tyndenses, etc.). Mauri was also used in late Roman military jargon as a synonym for rebels. Both senses of the term are employed by Prokopios and Corippus in their accounts of the 6th-C. wars between the Byz. army and Mauri tribes in the North African provinces of Tripolitania, Byzacena, and Numidia.

The conflicts were precipitated by Byz. efforts to wrest control over the southern parts of these provinces from various Mauri tribal coalitions that, in some instances, had formed a series of loosely defined Mauri-Roman "kingdoms" during the 5th and early 6th C. Although generally successful militarily, the Byz. were unable to establish full control over the Mauri, and in 547 the Mauri crushed the army of John Troglita. To offset this, treaties of alliance and friendship, grants of administrative autonomy, and other diplomatic measures were employed to ensure the loyalty of the tribes. To protect against razzias the Byz. also constructed numerous fortifications in towns on the edge of Mauri-controlled areas and along seasonal north-south migration routes used by the pastoral tribes (e.g., Limissa). Finally, efforts were made to convert those tribes that were still pagan.

The relative success of Byz. efforts to assimilate the Mauri was demonstrated during the Arab invasions of Africa in the 7th and 8th C. when, according to the Arab sources, the Barbar (the Arabic term for the Mauri, from which the word Berber is derived) were frequently found in alliance with the Romani (i.e., Romans). Indeed, there is a growing body of epigraphic, archaeological, and numismatic evidence that points to a substantial Romano-Christian element among the Mauri in the 6th and 7th C.

Maurice (Mαυρίκιος), emperor (13/14 Aug. 582–23 Nov. 602); born Arabissos ca.539, died Chalcedon 27 Nov. 602. A legend makes him Armenian (P. Charanis, Byzantium 35 [1965] 412–17), but the question of his ethnic origin remains unresolved. Maurice came to Constantinople as a notary and made a career as military commander; Tiberios I appointed him caesar (in summer 582) and heir to the throne. After his predecessor's death Maurice married Tiberios's daughter Constantina. Evagrius describes Maurice as simple in private life and undemanding in his diet; however, yielding to the taste of the Constantinopolitan population, Maurice arranged splendid festivities at his wedding and upon entering the consulate. In the Karianos portico that he had built in 571 (Theoph. 261.13–15) at the Blachernai, Maurice had painters depict his life story up to the time of his accession. In 596 he set up his statue in a courtyard at the Magnaura.

Maurice tried to diminish Justinianic centralization; he introduced the exarchates and in 597 wrote a will, planning to divide the empire among his three sons. The circus factions revived after long inactivity (Y. Janssens, Byzantion 11 [1936] 499–515). Maurice used able generals (Philippikos, Priskos, Komentilos) and diplomats (Domitianos) and was so successful in the war against Persia that Chosroes II acknowledged dependence on Constantinople. In the West the situation was worse: the Lombards continued to encroach upon Italy, and under Gregory I the papacy grew more independent; attempts to ally with the Franks against the Lombards failed. The situation on the Danube border became dangerous because of Avar pressure and rebellious armies that felt themselves underpaid and overburdened. The revolt of Phokas led to the overthrow of Maurice, his execution, and that of his male relatives.

MAURITANIA (Mauratia). From the 1st C. A.D., Mauritania designated that part of North Africa extending from the border of Numidia (the Ampsaga River) to the Atlantic. Originally, Mauritania was divided into two provinces: Caesariensis to the east and Tingitana to the west, the
border between the two formed by the Mulucha (mod. Moulouya) River. Diocletian detached the eastern part of Caesariensis to form the new province of Sitifensis. Following the Byz. reconquest of Africa (533), Justinian I called for the reestablishment of the "two Mauritanias." The fact that Mauritia Sitifensis was not recovered militarily until 539 led Pringle (infra) to argue that the second Mauritia was Gaditana, the northern coastal strip of Tingitana around Septem, which was held by the Byz. after 533. This hypothesis, however, overlooks the fact that Justinian’s script was intended to serve primarily as a blueprint for the future, not as a reflection of the existing extent of Byz. control in Africa in 534. Moreover, since the prefecture of Africa was modeled on the Diocletianic diocese of the same name, which included Sitifensis but not Tingitana (the latter attached to the Spanish dioceses), it is arguable that Sitifensis was the second Mauritia.

A further problem in the case of Sitifensis arises from Prokopios’s inclusion of Sitifis in Numidia (Buildings 6.7-9), thereby leading Y. Duval (Latomus 29 [1970] 157–61) to conjecture that by 554 Sitifensis had been absorbed into Numidia. There is no evidence, however, that Sitifensis was ever more than a civil province (see Prokopios, Wars 2.20.30). As with parts of Africa Proconsularis, it is more likely to have formed part of the large military province under the dux Numidiae. Byz. control of Caesarea and Rusgumia in Caesariensis is attested in the late 6th C., but beyond that time nothing is known; Septem in Gaditana remained in imperial hands until seized by the Arabs in 711.

MAUROKATAKALON. See Katakalon.

MAUROPOUS, JOHN, writer; born Paphlagonia ca.1000, died Constantinople after ca.1075–81, according to Ja. Ljubarskij (BBulg 4 [1973] 50f). Mauropos (Μαυρόπους) was a teacher in Constantinople, a court rhetorician under Constantine IX, metropolitan of Euchaita (ca.1050–75), then a monk in the monastery of Prodromos in Petra in Constantinople. He claimed the leadership of young intellectuals (such as his pupil Psellos), who tried to direct the policy of Constantine IX; in 1047 Mauropos courageously petitioned the emperor to acquit the participants in the rebellion of Leo Tornikios. The chronography Mauropos wrote was destroyed because of its political heterodoxy (Lagarde, no.96). Socially, Mauropos was antimilitaristic: he contrasted imperial justice and omnipotence with the frenetic activity of barbarians and rebellious generals doomed to lose in the end. Mauropos paved the way for the use of rhetoric as a means of political influence. His speeches dealt with the most important events of political life. After being forced to leave Constantinople ca.1050, Mauropos concentrated on religious topics, producing kanones and saints’ lives; his antiaristocratic tendencies are revealed in his praise of the foot soldier St. Theodore Teron whose festival was celebrated in Euchaita. A forerunner of Psellus, Mauropos sought to introduce vivid images into his speeches, letters, and epigrams and eagerly defended ancient writers, such as Plato and Plutarch, against charges of atheism (Lagarde, no.43). His speeches are also a valuable source for the history of Byz. relations with their northern neighbors, even though their vague imagery makes some of their data disputable (e.g., J. Shepard, JÖB 24 [1975] 61–89; A. Kazhdan, JÖB 26 [1977] 65–77). Psellus’s very conventional enkomion of Mauropos (Encomio per Giovanni piissimo metropolita di Euchaita, ed. R. Anastasi [Padua 1968]) is lacking in concrete information.

MAUROZOMES (Μαυροζώμης), a noble family of the 12th C. The etymology of the name is “black broth” (Koukoules, Bios 6 [1957] 494); the name is preserved in the toponymy of the Peloponnesos, and it is possible that the family originated from this area. Theodore Maurozomes was one of the favorite generals of Manuel I and was briefly chief of the imperial secretaries under Andronikos I; John Maurozomes led an army from
the Peloponnese to the relief of Thessalonike in 1185 (Brand, Byzantium 59, 61, 165).

Circa 1200 Manuel Maurozomes was, according to Ibn Bīṭī (tr. Duda 30), one of the great “caesars” of Byz. When the Seljuk sultan Kay-Khusraw I went into exile in Constantinople, he married the daughter of “a great patrikios” (according to Rashid ad-Dīn and Gregoire Abūl-Faraj); the name of the sultan’s father-in-law, Manuel Maurozomes, is provided by Niketas Choniates and Ibn Bīṭī. Probably before the fall of Constantinople in 1204, the sultan fled to the “island” or “fortress” of Manuel and from there went to Ikonion; both Kay-Khusraw and Manuel were stopped in Nicaea, since the “basileus” (Constantine Laskaris or Theodore I Laskaris?) had already signed a treaty with the Seljuk ruler. They managed to escape, and eventually Kay-Khusraw resumed power and appointed Manuel to a high position. Manuel fought unsuccessfully against Theodore I, but under Seljuk pressure the emperor acknowledged the jurisdiction of Maurozomes (as a Turkish vassal) in the basin of the Meander, including Chonai and Laodikeia. The family, although Christian, retained influence in Ikonion until at least 1297, when the funerary inscription of a certain John Komnenos Maurozomes was erected there (P. Wittek, Byzantium 10 [1935] 505–15).

MAUSOLEUM (ἡρῴων), a monumental tomb. Late Antique mausoleums, like those of Diocletian at Split and Helena at Rome, were domed structures with centralized plans, providing space for visitors and for memorial services. Mausoleums of pagan rulers were freestanding while those of Christian rulers were generally attached to a church. Three centrally planned 5th-C. mausoleums survive in Constantinople (Eyice, infra 117–30). The tradition of building such structures continued at least into the early 7th C., when four small, polygonal mausoleums were attached to the newly completed Church of St. Euphemia (R. Naumann, H. Belting, Die Euphemia-Kirche am Hippodrome zu Istanbul und ihre Fresken [Berlin 1966] 49–55). The most important mausoleums in the Byz. world were those of the emperors attached to the Church of the Holy Apostles in Constantinople. Four imperial mausoleums adjoined the church: the Mausoleum, or “Herōon,” of Constantine I, a domed rotunda; the “North Stoa” and “South Stoa,” two small mausoleums of uncertain form completed by ca.405; and the cruciform Mausoleum of Justinian I. With the change in custom to burials within narthexes and parekklesia sometime after the 6th C., the practice of erecting separate buildings as mausoleums was abandoned. The function of the so-called Mausoleum of Galla Placidia in Ravenna is debated.

MAVIA (Mavia), queen of the Arab foederati in the 4th C. and wife of an anonymous federate king; he was probably a Tanūkīd. After her husband died (ca.375), the treaty or foedus with Byz. automatically lapsed and Mavia revolted. She was an Orthodox Christian and her revolt against the Arian emperor Valens assumed religious aspects. She took the offensive, attacking Phoenicia and Palestine. In pitched battles she twice defeated Byz. generals, and Valens sued for peace, agreeing to the consecration of an Arab, St. Moses, as the bishop of Mavia’s foederati. Her daughter married Victor, the magister equitum for Oriens; subsequently Mavia sent troops that participated in the Gothic war in Thrace and successfully defended Constantinople against the Goths after the battle of Adrianople (378). Difficulties arose with Theodosios I and, after a second revolt, Ricimer crushed the Arabs in 383, when Mavia’s rule probably ended. Two Christian inscriptions, found outside Anasartha in Syria, may refer to Mavia and her daughter. Arabic odes composed on the occasion of Mavia’s victories are the first recorded Arabic poetry in Oriens.

MAXENTIUS (Μαξεντιος), more fully Marcus Aurelius Valerius Maxentius, son of MAXIMIAN and emperor (306–12); born ca.286, died Rome 28 Oct. 312. Although ignored by the arrange-
ments of Diocletian for the succession in 305, he married Maximilla, daughter of Galerius. After Constantine I's assumption of the imperial title in 306 Maxentius was proclaimed by the praetorian guard and the people of Rome. At first he avoided the title Augustus, but assumed it by early 307. Maxentius called on the assistance of his father, who returned from retirement and aided in the defeat of Severus, after which Maxentius controlled Italy and Africa. He initially allied with Constantine, who was married to his sister Fausta. The alliance was broken, however, when Maximian denounced his son and fled to Constantine's court. Left out of the reconstituted Tetrarchy at the Conference of Carnuntum in 308, Maxentius faced revolt from Domitian Alexander and the threat of Licinius, who had been appointed to accomplish his suppression. Maxentius attempted to win popular support through religious toleration and an active building program, but military needs forced heavy financial burdens on inhabitants of territories he controlled. Although he was certainly not the tyrant pictured in later Constantinian propaganda, his rule became more arbitrary and unpopular. In 312 Constantine anticipated Licinius and invaded Italy; Maxentius was defeated at the battle of the Milvian Bridge, during which he perished. The villa at Piazza Armerina in Sicily was probably built by Maxentius.

Maximian, full name Marcus Aurelius Valerius Maximianus, Diocletian's co-ruler and caesar (285), Augustus (286–305); born Sirmium (?) between 240 and 250, died Massilia 310 (before 21 July). Born to a peasant family, Maximian (Mαξιμιανός) was fellow-soldier with Diocletian and made a military career under Aurelian and Probus. His wife was Evropia, a Syrian. Diocletian elevated him to the dignity of emperor, and Maximian ruled in the West, his residence being Milan. He was faced with barbarian incursions across the Rhine, a revolt of Bagaudae in Gallia, and the revolt of his subordinate Carausius, who occupied Britain and northern Gallia but was defeated in 293.

In May 305 Maximian was persuaded by Diocletian to abdicate; he was succeeded by Constans. The death of the latter in July 306 created a shaky situation in the West and allowed Maximian's interference in the political situation. First he assisted his son Maxentius (proclaimed emperor in Rome) against the Augustus Severus, who fled to Ravenna but soon surrendered (before 1 Jan. 307?); then he sought an alliance with Constantine I the Great (married to Maximian's daughter Fausta) against Maxentius. Constantine, however, did not recognize Maximian's claims to the title of Augustus, so Maximian took advantage of Constantine's preoccupation with a war against the Franks and revolted in 310. His rebellion was unsuccessful, however. He was forced to retreat to Massilia, where he surrendered; soon thereafter he was found hanged.

Later tradition was hostile to Maximian. He suffered damnatio memoriae and his statues were destroyed. Christian legends present him as persecutor of the faithful, even though the persecutions in the West were not as severe as those in the East under Diocletian.

Maximian, archbishop of Ravenna (546–553); born Pola 498, died Ravenna 22 Feb. 553. From his native city, where he was a deacon, Maximian went to Constantinople. Shortly after his consecration on 14 Oct. 546 by Pope Vigilius at the orders of Justinian I and Theodora (Deichmann, Ravenna, 1:14), Maximian dedicated the Church of St. Vitale in Ravenna, where he is portrayed in mosaic. He had built a church at Pola and, during his tenure of the see of Ravenna, built a Basilica of St. Stephen near S. Vitale and another of St. John outside Ravenna; he dedicated the Church of Sant'Apollinare in Classe on 9 May 549. The Liber pontificalis of Agnellus records Maximian's donation of vessels for chrism, an endye, and other gifts to the see of Ravenna.

Cathedra of Maximian. The cathedra is a thronelike object preserved in the Archiepiscopal Museum, Ravenna, and the only nearly complete piece of ivory furniture to survive from the Byz. era. It is now generally accepted as having been made for Maximian because of a monogram on the front that resolves as MAXIMIANUS EPIS-
other aspects of style vary greatly from one group of panels to another. Its size (124 cm high) and manner of construction—the ivory panels were attached to one another without the often postulated wooden core—imply that the object could scarcely have functioned as an episcopal throne. It has also been suggested that it served as a display stand for a Gospel book. Nothing is known of the cathedral’s presence in Ravenna before the 17th C.

**MAXIMUS DAIA**, or Caius Galerius Valerius Maximinus (Daia was part of his original name and was not used in his official title), Augustus (from 310); born Illyricum ca. 20 Nov. 270, died Tarsos summer 313. The nephew of Galerius, Maximinus (Μάξιμου) was named by Diocletian as Caesar on 1 May 305. He ruled the prefecture of Oriens. At the Conference of Carnuntum in 308, despite the protests of Galerius, Maximinus was not elevated in rank, but was proclaimed Augustus by his troops in 310 (on 1 May according to C.H.V. Sutherland, Roman Imperial Coinage 6 [London 1967] 157). His proclamation, along with that of Constantine I, meant the effective end of the Tetrarchy. Upon the death of Galerius he seized Asia Minor, gaining popularity there through tax relief. Despite Galerius’s edict of toleration, Maximinus continued to persecute the Christians. He formed an alliance with Maxentius, and, after the battle of the Milvian Bridge, Constantine ordered him to cease the persecution. In 313 Maximinus attacked Licinius. He was defeated in Thrace. He fled eastward and then committed suicide.

**MAXIMOS KAUSOKALYBITES** (Καυσοκαλύβητος), saint; born Lampsakos 1270 or 1285, died Mt. Athos, 13 Jan. 1365 or 1380. Maximos was an Athonite hermit who carried to an extreme the monastic ideal of poverty. He was reputed to
own only the clothes on his back and to have foraged for his food. His epithet, the “hut-burner,” derives from his practice of periodically burning down his thatch hut and moving to another site.

Maximos first took monastic vows on Mt. Ganos at age 17. There followed years of restless wandering and pilgrimages to the shrines of Constantinople and Thessalonike. In Constantinople he refused to enter a monastery and became a holy fool living in the streets. He finally settled on Mt. Athos; after a few years of submission to the cenobitic discipline of Lavra, he lived as a solitary until his death at 95. Maximos’s astonishing prophecies and feats of asceticism attracted to Athos disciples and famous visitors, including the emperors John V and John VI, Patr. Kallistos I, and Gregory Sinaites. He was a staunch hesychast and opponent of Gregory Akindynos. Four different vitae of Maximos were composed during the century after his death (BHG 1236z-1237f); the most detailed is that of Theophanes, prohegomenos of Vatopedi; another was written by the monk Niphon. The Athonite skete of Kapsokalyvia, founded in the 18th C., is named after him.

source. F. Halkin, “Deux vies de S. Maxime le Kapsokalybe, ermite au Mont Athos (XIVe s.).” AB 54 (1936) 38–112.

—A.M.T.

MAXIMOS OF EPHESUS, Neoplatonist philosopher; born Smyrna? ca.300, died Antioch 371/2. He was confused in the Souda with an almost unknown Maximos of Epirus or Byzantine. Maximos, who belonged to the school of Iamblichos, contributed much to the introduction of elements of divination and wonder-working into philosophy. His colleagues called him a “theatrical miracle-monger” and related how he made a statue of Hekate laugh and caused the torches she held in her hands to burst into flame (Eunapius, ed. Wright, infra 434.4–19). His works have not survived; from incidental references we know that he commented on Aristotle. Maximos’s attempt to deliver public declamations proved a failure. He did not adhere to the ideal of the philosopher-hormit, but preferred interaction with people and making money.

The young Julian chose Maximos as his teacher and developed his belief in Platonism under the influence of Maximos. After Julian’s accession to the throne, Maximos joined the emperor in Constantinople, became his favorite, acquired enormous wealth, and accompanied him on the Persian expedition. Julian’s death curtailed the career of Maximos: he was brought before a court and sentenced to an exorbitant fine; he considered suicide, but was frightened after his wife poisoned herself. Partially rehabilitated, he began lecturing on philosophy and thus recovered much of his wealth and his reputation as fortune-teller. His interpretation of an oracle as predicting for Emp. Valens a strange death without burial resulted in Maximos’s arrest and execution.

—A.K.

MAXIMOS THE CONFESSOR, theologian and saint; baptismal name Moschion; born 580. According to the 10th-C. enkomion by a Stoudite monk, Michael Exaboulites (W. Lackner, AB 85 [1967] 312), Maximos was born in Constantinople, whereas his Syriac biography by Maximos’s contemporary George of Reșaina, a hostile document but concrete in detail, places his birth in the village of Hefsin east of Lake Tiberias. Maximos died on 13 Aug. 662 in the kastron Schiomari, near the frontier with Alania (R. Devreesse, AB 46 [1928] 42). Michael calls him the son of noble and pious parents (PG 90:69A), but George describes his father as a Samaritan merchant and his mother as a Persian slave girl. After his stay in the monastery of “Palaia Lavra,” Maximos was part of the entourage of Sophronios of Jerusalem and eventually became asekretis at the court of Herakleios (W. Lackner, JÖB 20 [1971] 64). Condemned for his religious views, Maximos fled to Africa ca.630 and energetically fought against Monotheletism. He supported Pope Martin I in 649 and was accused by Constans II of treason. He was exiled in 655 to Bizye in Thrace and in 662 to Lazica, where he died. His feast day was celebrated on 21 Jan., the translation of his relics to Constantinople on 13 Aug.
Maximos was a prolific author. His major works are Mystagogia, The Book of Asceticism, Questions to Thalassium, and The Chapters on Love. He was influenced first by Origen (whom he later refuted), then by pseudo-Dionysios the Areopagite. The idea of the perfect human nature in Christ forms the core of the theology of Maximos; it allows the deification of man—the ultimate goal of man’s creation. Man as microcosm has a middle position between the extremes of creation; his task, interrupted by the Fall, is to overcome the trichotomy of mind, soul, and body, to ascend via the image of God to likeness with God. The human will plays a decisive role in man’s ascent to God by suppressing the vices of self-love, gluttony, fornication, etc. (Maximos developed the hierarchy of vices of Evagrios Pontikos), and by achieving the state of virtuousness and reintegration with Christ.

The anthropocentric theology of Maximos is reflected in his concept of the Church: it is not only the “type” and icon of God, but also of “the spiritual man,” man in his turn being “the mystical church” (PG 91:684A). Unlike pseudo-Dionysios, Maximos did not emphasize the hierarchical structure of the church, but its hypostatic unity: the church is a single house, “not divided into its constituent parts” (PG 91:683D). These concepts of the atomization of the human will and the unity of the cosmos made Maximos one of the most “Byzantine” philosophers; his works, nevertheless, were translated in the West (I. Boronkai, ActaAntHuni 24 [1976] 307–33).

MAXIMUS (Maξiμος), more fully Magnus Maximus, usurper (383–88); died Aquileia 28 Aug. 388. Of Spanish origin, he was perhaps related to Theodosios I. He rose in the army and com-
manded troops in Britain under Gratian. He was proclaimed Augustus by his troops probably in the spring of 383 (V. Grumel, REB 12 [1954] 18f). The assassination of Gratian followed soon after; as a result all of Gaul came under the control of Maximus. Theodosios I and the court of the young emperor Valentinian II at first acceded to the rule of Maximus. The new Augustus posed as a champion of Orthodoxy and had his praetorian prefect conduct a hearing that led to the condemnation of the heretic Priscillian and his followers, a process that was attacked by Ambrose of Milan and Martin of Tours as inappropriate for the state. Tempted by the weakness of Valentinian II, he invaded Italy in 387, forcing the court to flee to Thessalonike. Theodosios I finally marched westward and defeated Maximus in two battles. The rebel was apprehended and killed at Aquileia.

MAYYĀFĀRIQĪN. See Martyropolis.

MAZARIS (Maξaπος), author of a satirical dialogue entitled Journey to Hades, addressed probably to Theodore II Palaiologos; fl. ca.1414/15. Mazaris was associated with the court of Manuel II before 1399 but then fell into disgrace. In imitation of Lucian, the satire describes conversations in Hades with recently deceased imperial courtiers. The first part of the work, composed between Jan. and July 1414, is primarily a dialogue between Mazaris and Manuel Holobolos, a former imperial secretary who had been dismissed. Mazaris heaps abuse not only on garrulous, adulatory bureaucrats and corrupt judges, but also on incompetent doctors and immoral monks and nuns. Part II of the satire, written in 1415 after Mazaris moved to the Peloponnese, attacks the various nationalities that comprised the Moreote population, including “greedy” Italians, “bloodthirsty” Slavs, “contentious” Jews, and “deceitful” Albanians. He also satirizes the rebellious local toparchs. Besides providing valuable prosopographical data, the satire contains information on Manuel’s reconstruction of the Hexamilion in 1415. S. Lampros (BZ 5 [1896] 63–73)
suggested that Mazaris might be identified with the monk Maximos Mazaris, who wrote grammatical canons, and/or with Manuel Mazaris, who composed a legend of St. Irene (PLP, nos. 16121–22).

MAZDAK, Persian heresiarch; born Madariya? or Nisa ca. 450, died 528/9 or, according to O. Klima (Charisteria orientalica [Prague 1956] 135–41), in 524. The movement that took his name originated in the preaching of Zaradust, whom Christensen (infra) identified as a certain Bundos who lived in late 3rd-C. Rome and then returned to Iran; Klima, however, placed Zaradust in the 5th C. Mazdakism attained its greatest political success through its influence on the Sasanian ruler Kavād and on some of his social legislation. Mazdak evidently became the head of a Mazdakite “church,” and took an active part in the dynastic politics between Kavād’s sons, Kāvūs and Chosroes. Simultaneously the radical social doctrines of the sect, which attacked the strict caste system and the established power of the Zoroastrian clergy, brought about violent social uprisings in which the peasantry violated the purity of the social classes and the property of the wealthy nobility. This led to brutal retribution; Mazdak and the Mazdakite leaders were slaughtered and the movement was dispersed. It went underground, however, and survived the destruction of the Sasanian Empire. Many Greek historians (Prokopios of Caesarea, Agathias, Theophylaktos Simokattes, Theophanes) wrote about this movement, which they described as Manichaeanism without mentioning the name of Mazdak.

-M.A.T.

MEASURES. Byz. units of length, surface, volume, weight, and time originated in late antiquity. Although through the 6th C. some measures were in widespread use (e.g., the litra, modios, and sextarius), there was no coherent system throughout the whole empire. Rather the systems that had existed historically in the various regions were employed. A coherent system of specifically Byz. measures developed gradually in the period after Justinian I, owing to the requirements of the central fiscal system. The authorities constantly emphasized that official measures be used properly, and standard measures were frequently set up in towns and villages for public observation. From the 12th C. Italian merchants were allowed to use their own measures in the Latin quarters of cities.

Three measures were of central importance. The basic measure of weight was the logarike litra of approximately 920 g, the primary unit of length was the pous of 31.23 cm, and the main measure of volume was the megarikon of 102.5 liters. For measuring the surface of fields, the Byz. used measures such as zeugaron (yoke) and modios (a unit of grain capacity), along with linear measures such as schoinion or orgyia. In theory, measures formed a strict system, but in practice their interrelations varied within a wide range.

-M.A.T.

MC’XET’A, capital of Georgia (4th C. B.C.—A.D. 5th C.), and an important Georgian religious center. Many of its churches commemorate St. Nino’s trials and miracles and her role in the conversion of King Mirian (265–342) to Christianity. A 4th-

C. (?) chapel commemorates Nino’s refuge in the governor’s garden. The Samt’avro (lit. “governor’s residence”) monastery, with an impressive 11th-C. domed cruciform katholikon, was built around this chapel. The Church of Džvari (“cross”) replaced the large cross Nino had erected on a mountain overlooking Mc’xet’a. It is a tetraconch like St. Hrips’imè at Væarşapat and dates sometime between 586 (or 587) and the late 7th C., depending on the identity of the donor, Stephen, lord of K’art’li (W. Djobadze, OrChr 44 [1960] 114–27).

The church of Sveti C’xoveli (lit. “light-giving pillar”) is a domed basilica (begun in 1010) that replaced at least three earlier churches; its name refers to a cedar pillar that miraculously glowed and floated into place in the first church at Mc’xet’a after originally proving impossible to move. Reliefs of bulls’ heads (5th-C.?) are incorporated in its 18th-C. gateway.

LIT. R. Gverditingali, Mechina (Tbilisi 1962).

-M.A.T.
Parallel to the official measures were units of only local validity whose origin often cannot be determined. In part, these were special measures, developed by the necessities of trade or craft, for example, special measures for the salt trade, different yards for the woolen, cotton, or silk industries. Often these local measures were introduced through contacts with foreign peoples, esp. Muslims and Italians. With the advance of the Ottomans, some Turkish measures were introduced, just as Byz. measures were adopted in the Ottoman Empire. (See also METROLOGY.)

MEAT (κρέας) constituted a substantial part of the Byz. diet; from the 7th C. onward it is probable that the proportion of bread decreased, whereas meat and dairy products acquired greater importance (A. Kazhdan, ByzF 8 [1982] 117–20). The most popular kind of meat was lamb (see SHEEP); Symeon Seth recommended particularly the meat of year-old animals. Goat meat is mentioned, among others, by Liutprand of Cremona (J. Koder, T. Weber, Liutprand von Cremona in Konstantinopel [Vienna 1980] 90f), who did not enjoy the "fat goat" served at the imperial court in Constantinople. Pork was considered a coarse food, whereas the chine of beef appears in Niketas Choniates as a staple of imperial banquets and of the Crusaders. The Book of the Eparch, with its special chapters on butchers and vendors of swine, shows the extent of the meat trade in Constantinople. The meat of domestic animals (see LIVESTOCK) and domestic fowl was supplemented by fish from fishing and meat obtained through the hunting of wild animals—esp. venison (although it was not recommended during summertime) and the flesh of hare and wild boar.

Meat was roasted (sometimes over an open fire) or boiled. It might be served with various sauces, usually vinegar and honey or wine and honey. Lamb or mutton was sometimes cooked in a casserole with garlic, onion, and leeks. Pseudo-Kaisarios describes a special cooking method allegedly used by herders who would put meat into a glass vessel enclosed in dried dung and leave it in the sun (PG 38:928.39–45). To preserve meat for storage or transportation, it was dried, smoked, salted, or pickled. The Byz. also made lard and prepared sausages (neura) that were sold in the shops of grocers.

Ascetics avoided eating meat at any time; it was never consumed in monasteries by monks. Abstinence from meat was enjoined for laymen on days of fasting. Canon law forbade the consumption of blood and of animals killed by strangling.

MEDALLIONS, a term customarily applied to coins of the Roman Empire through the 6th C. that are exceptional either in their types, or in being of unusually fine workmanship, or in lacking some feature of normal coins (e.g., the S C for Senatus Consultum on bronze coins of the early empire), or through being multiples of more frequently used denominations. Those of the early empire are for the most part of bronze, but from the late 3rd C. onward medallions are normally of gold or silver. Either they are high denominations of current coins, so that some scholars prefer to term them multiples, or they perpetuate some obsolete denomination, such as the aureus struck 60 to the pound in contrast to the solidus struck 72 to the pound, presumably because the entitlement of some official to receive such a coin had been established when it was in normal use. Money medallions reached their heyday in the 4th C., with great variety in thematic content; in the 5th and 6th C. they became rarer and none later than the reign of Phokas is known. The field of the obverse was reserved for a depiction of the emperor, customarily a head or half-bust in profile. A range of reverse types is found: the emperor standing alone, between captives, on horseback, or in a quadriga; the seated figures of Roma and Constantinopolis; or a seated figure of either of these alone.

It was formerly believed that all medallions were made specifically for presentation to individuals or for distribution on such occasions as accession, anniversaries, and victory or consular celebrations. Some were certainly made for such purposes and have often survived elaborately mounted in pectorals or other pieces of jewelry. Others, however, are found mixed in hoards with ordinary coins and clearly were part of the regular currency.
MEDICAL SERVICES, MILITARY. Soldiers wounded in battle were rescued by men specially appointed for this task. The Strategikon of Maurice (Strat. Maurik. 2.9, pp. 126–28) instructs that eight to ten unarmed men be reserved to follow each unit to help unhorsed or wounded soldiers. Called deopotatoi, these men attached an extra stirrup to their saddles to enable both rider and injured man to mount the horse and ride to safety. They also carried flasks of water to relieve the thirst of the wounded men. The deopotatoi received one nomisma for each man saved. The 10th-C. De re militari assigns the task of transporting wounded men back to Byz. territory to one of the army’s service units (ed. Dennis, Military Treatises 324.20–21), but exactly where the wounded were taken and what care they received is not recorded.

Physicians (therapeuta or iatroi) are listed among the nonmilitary personnel accompanying the army in 6th- and 10th-C. Strategika. Sections of the medical treatises of Oribasios and Paul of Aegina cover military medicine, esp. fractures and extractions; Prokopios (Wars 6.2.25–32) describes the skillful extraction of an arrowhead from a wounded man by military surgeons.

—E.M.

MEDICINE. Byz. physicians inherited the tradition of Greco-Roman medicine; Hippocrates and Galen were always considered basic sources of medical knowledge in Byz. Scholars such as Oribasios, Aetios of Amida, Alexander of Tralles, and Paul of Aegina created medical encyclopedias that both demonstrated their knowledge of classics and prepared for an anthropological approach to the tradition. When in the 9th C. a new interest in ancient science became evident (Wilson, Scholars 85–88), medical MSS were not among the most popular; Lemerle (Humanism 341) places the revival of the genre of medical treatises in the 10th C. Even though post-7th-C. medical authors—Meletios the Monk, Leo the Physician, Symeon Seth, Theophanes Chrysobalantes, Nicholas Myrepos, and John Aktouarios, to name only a few—are unavailable in reliably edited texts, and thus it is premature to pronounce final judgment, clearly Byz. doctors did not simply parrot and transmit their written sources verbatim, but used them carefully, rearranging, truncating, and supplementing them with contemporary experience. Close examination of Aetios of Amida’s use of Galen’s notions of drug theory, for example, shows how Aetios chose precisely those passages that would explicate the Galenic idea of “drugs by degrees,” a classification system of pharmaceuticals that would be standard in medicine until the 18th C. Greco-Roman was a predominant, albeit not the only, tradition of Byz. medicine; among others, Seth shows traces of Arabic experience, and Myrepos’s treatise contains some recipes from Salerno and others of Eastern origin.

Practical medicine was on a high level according to medieval standards: Hospitals existed not only in Constantinople, but also in the provinces. Thanks to Byz. Pharmacology, many diseases received sophisticated treatments, and the medical tracts of Alexander of Tralles and Paul of Aegina show the variety of drugs prescribed for ailments of the chest, heart, digestive system, and other organs. Byz. Surgery also existed on a high plane; listings of Surgical Instruments suggest specialized expertise, perhaps derived from the known instances of dissections and autopsies performed by Byz. physicians and surgeons (L.J. Bliquez, A. Kazhdan, BHM 58 [1984] 554–57; R. Browning, BHM 59 [1985] 518–20). Byz. medicine knew professional specialization, including as separate branches obstetrics and gynecology, ophthalmology, dermatology, and dentistry. Practicing physicians worked sometimes in the mold of ancient traditions, sometimes in adaptations of those traditions to newer theories, esp. in innovative aspects of medical diagnosis such as uroscopy (John Aktouarios) and pulse lore.

Nonprofessional medicine existed alongside medical theory and practicing professionals. Oribasios was not the first to prepare a simplified summary of medicine for a friend, but his Synopsis for Eunapius suggests the range of drugs and elementary remedies available to the nonphysician in the 4th C. Various nonmedical authors
throughout the long history of Byz. also show comprehension and an interest in the best medicine of their day: for example, *Prokopios* describes the plague in the reign of Justinian I (542); *Photios* summarizes several medical authors, including Dioscorides, certain works of Galen, Aetios of Amida, and Ctesias; Psellos in his *Chronography* recounts the illness and death of Romanos III, with details based on personal knowledge of technical medical theory as well as a close acquaintance with the approaches of practicing physicians in the 11th C. Similarly the account by Anna Komnene of the death of Alexios I shows a long-standing awareness of therapeutics and medical theory; the writings of John Tzetzes contain much classical medicine and medical theory embedded as analogy, allegory, and allusion; many of the jokes in the collection called the *Philogelos* are medically informed; and many ecclesiastical writers could be added to this list of secular authors who indicate that interest in medicine permeated all levels of Byz. society.

Magical means were also valued, not only at the quasi-Christian *healing* shrines, but also in the writings of the finest physicians, exemplified by the occasional prescriptions of amulets by Alexander of Tralles (6th C.) for certain illnesses. Astrological medicine enjoyed many centuries of respect, as documented in the texts collected as the *Catalogus codicum astrologorum graecorum*. Many of these works are paralleled by those of pure medical magic in the *Papyri graecae magicae*, generally in Greek, Coptic, and demotic from late Roman and Byz. Egypt.

The rich panoply of Byz. medicine has its counterpart, very poorly known, among the Sasanians before their collapse in the Arab conquest of Mesopotamia in the 7th C.; although classical Arabic medicine derived many of its precepts from the Byz., the links through Syriac remain only murky. The kuriakon, much as the later borrowings in medieval Armenian medicine from Byz. practice and sources reside in partially edited Armenian MSS. In western European medieval medicine, Byz. influence came in the form of redactions and truncated translations of specific topics, esp. uroscopy, the theory of pulses, and distilled Greco-Roman medical concepts ultimately derived from the Hippocrates and Galen.

---

**MEDIKION MONASTERY**, a center of resistance to Iconoclasm in Asia Minor. Medikion (Μηδίκιον) was founded in the 780s by the monk Nikephoros, .5 km south of the Bithynian village of Trigleia (Turk. Tirilye) and 2 km from the Sea of Marmara. Nikephoros restored a ruined Church of St. Michael at the site; when he signed the acts of the Second Council of Nicaea in 787, however, he referred to the monastery as “St. Sergios of Medikon.” The monastery reached its peak under the saintly Nikephoros (died 813) and his successor, St. Niketas (died 824), an iconodule confessor. Both hegoumenoi were buried in the narthex of the Church of St. Michael. In the 11th C., when Medikon was granted to Michael Psellos as a *charistikon*, it was also called the monastery of the Holy Fathers (Hagion Pateron).

Although Medikon disappears from literary sources after the 11th C., it continued to function as a monastery until the modern period. The basilican church, the north aisle of which was separated from the nave by square piers, was razed in the mid-20th C.

---

**MEDIMNOS.** See Modios.

---

**MEDITATIO DE NUDIS PACTIS** (Μελέτη περὶ υψιων συμφώνων), lit. “Essay on Bare Contracts,” i.e., on informal agreements), a legal treatise composed in the mid-11th C. Its anonymous author, probably the Basilika scholastik Nikaeus (H. J. Scheltema in *Études offertes à Jean Macqueron* [Aix-en-Provence 1970]). 595–97), argues against an adversary, probably John (VIII) Xiphilinos, for the higher merit of the writings from Justinianic times (esp. the *Digest* and the scholia of the jurist Stephen that elucidate it), over the Basilika. The treatise, which was presumably occasioned by a real lawsuit between a monastery and a *protopatharios* over the binding force of an informal
agreement (nudum pactum, see Pacta), is of great importance for the question of the exclusive validity of the Basilika in the 11th C.

MEDITERRANEAN SEA. As late as the 4th C., the Mediterranean continued to be an "inner sea," totally surrounded by the territory of the Roman Empire. It was the only sea for Greeks, the eso thalassa (Aristotle) as opposed to the eso thalassa or ocean; for the Latins the mare internum, intestimum, or nastrum. The term mare mediterraneum did not appear until the 3rd C.; Isidore of Seville used it in the early 7th C. (O. Maull, RE 15 [1932] 2222). The Byz. did not have a general term for the Mediterranean, although they used special names for its parts—the Aegean, Ionian, Tyrrhenian, (or Tyrrhenian), Sikelikon, Kretikon pelagos.

Roman control of the region of the Mediterranean began to disintegrate in the 5th C. when the Germanic tribes—Visigoths, Vandals, and Ostrogoths—occupied the western parts of the Ostrogoths. Politically independent, the Germanic kingdoms retained, to a certain extent, the feeling of belonging to a cultural entity through Latin language, court ceremonial, some features of municipal organization, visual art, and coinage. The renovatio imperii Romani by Justinian I was based on the continuing perception of Mediterranean unity. As late as 663 Constans II attempted to transfer his capital from Constantinople to Syracuse, in the middle of the Mediterranean. His murder, accompanied by the mutiny of Mezizios, manifested the end of Byz. sovereignty over the Mediterranean. Two factors enforced the disruption of the former unity: the Arab conquests and increasing Arab domination of the sea, and the proclamation of a second—Frankish—empire in the West (see Franks). Until the end of the Byz. Empire the Mediterranean was an area of rivalry between various political forces, including the Normans, Italian republics, the papacy, Spain, and even distant England.

MEGALOSCHEMA. See Schema.

MEGARIKON (μεγαρίκον), also magarikon (MM 6:244.1) and madarikon (Xerop. no.9A.16), the name of a large clay vessel, originally probably made in Megara, in charters usually juxtaposed with pithoi. Megarika of honey (Laur. 1, no.54.14) and of wine (Laur. 1, no.34.34) were used as fiscal units; in an act of 1196 (Laur. 1, no.67.81–82) the customs toll for the transportation of wine (given in megarika, pithoi, or barrels) to Constantinople is established as every tenth vessel. Metrological treatises define a megarikon as 6 thalassioi modii (= 102.503 liters), but emphasize that in trade megarika of different volumes were used as well. A megarikon may be either a liquid measure or a dry measure of grain. The imperial kalathion, mentioned in a charter of 1339, may perhaps be identified with a megarikon of grain.

MEGAS DOMESTIKOS (μέγας δομέστικος), supreme military commander (after the emperor). The origin of the office is not clear; apparently the megas domestikos replaced the domestikos ton scholon, but both offices existed side by side for a time. The date of this replacement is also unclear. The title of a certain Galen, primkerios of the megas domestikos (Laurent, Corpus 2, no.945), on a seal of the 9th–10th C. is suspicious. Guillaume doubts that domestikos major (the term applied by Liutprand of Cremona to Nikephoros II Phokas) was an official title, but in the Skrifter incertus (339.20–21) the magistros, megas domestikos, "and other patrikioi" form the closest entourage of the emperor. By the mid-11th C. the titulature was well established, and John, the brother of Isaac I Komnenos, bore this title.

Henceforth the office of megas domestikos, megas domestikos of the scholai, and megas domestikos of the army are regularly mentioned; Laurent (Corpus 2, 2:499f), however, denies that it was a permanent rank before 1204. In the 11th–12th C. the megas
domestikos could command the separate armies of West or East, but it seems that in the 13th C. this distinction was abolished. The place of the megas domestikos in the hierarchy is also unclear: in the 13th C. it seems to have been below the protovestiaro and megas stratopedarche, but in the 14th-C. pseudo-Kodinos it is one of the highest ranks, following directly after Caesar. The megas domestikos also had an aulic function, waiting on the emperor at banquets. The office-title existed until the end of the empire.

MEHMET I (Μοχουμέτ; Μοχεμέτ in Doukas), Ottoman sultan (from 1413; born 1389?, died Edirne 21 May 1421. A younger son of Bayezid I, he was sultan of Ottoman Rumeli and Anatolia (1413–21). After the battle of Ankara on 28 July 1402, Mehmed established himself at Amaseia. He officially attained his father’s throne only in 1413, after a series of struggles with his brothers Isa (died 1409), Süleyman Çelebi (died 1411), and Musa (died July 1413). His sovereignty was again challenged in 1416, when Mustafa (allegedly his brother) and Cüneyd (beylerbeyi of Rumeli) led an abortive rising in Rumeli.

Mehmed’s relations with Constantinople from early 1411 to his death were usually peaceful. Manuel II Palaiologos aided him in his war against Musa, and in 1413 a pact was concluded in which Mehmed evidently reaffirmed the terms of the 1403 treaty. Thereafter serious tensions arose only in 1415, when Manuel rebuilt the Hexamilion Wall in the Morea, and again in 1416, when Manuel gave asylum to the refugees Mustafa and Cüneyd.

Mehmed’s image in contemporary Byz. sources is far from negative. The historian Doukas, for example, lauds his friendship with the Palaiologoi as genuine and states that he was sympathetic to Christians.

MEHMET II (Μουχαμέτ and similar forms), seventh Ottoman ruler (1451–81) and conqueror of Constantinople, whence his epithet Fatih (conquerer); born Edirne 30 Mar. 1432, died near Gebze 3 May 1481. He was the third son of Murad II and his slave Hatun bint Abdullah. Mehmed doubtless ascended the throne with dreams of taking Constantinople, something his kinsmen Bayezid I, Musa, and Murad II had attempted but failed. Still, he preserved amicable relations with Constantine XI into autumn 1451. Then, however, Constantine hardened Mehmed’s resolve by threatening to support the claims of Orhan, a grandson of Süleyman Çelebi, and the emperor’s ward in Constantinople. Soon thereafter Mehmed systematically prepared for his assault on Constantinople, beginning with the construction of Rumeli Hisar (Apr.–Aug. 1452).
Mehmed began the siege on 6 Apr. 1453 and directed it with energy and tactical ingenuity (see Constanti- nople, Siege and Fall of). After Constantinople fell to the besiegers on 29 May 1453, Mehmed allowed his troops a day of plundering and then assumed full control. He immediately began "the greater war"—transforming the ravaged city into a vital new capital, a project that engaged him the rest of his life.

As sultan in Istanbul, Mehmed established there a court and pattern of society fully consonant with developed Turco-Islamic tradition. The conquered were fitted into that framework. Greeks remained prominent in Mehmed's Istanbul; indeed, many of the communities he forcibly transferred to Istanbul throughout the period 1453—79 were Greek. Largely to assure their stability and to cultivate their loyalty, he secured the election of the staunchly anti-Unionist Gennadios II Scholarios as patriarch (Jan. 1454). Mehmed evidently had an eclectic curiosity about the culture of the Greeks. He discussed Christian precepts with Gennadios and was interested in the history and monuments of Constantinople. Greek MSS, including Homer's Iliad, were copied in his scriptorium (J. Raby, DOP 37 [1983] 15—34).

Precisely how Mehmed's installation in Istanbul changed his self-perception as a ruler is speculative. The conquest certainly heightened his sense of himself as a great military hero, akin to Achilles and Alexander the Great, whom he admired. It is implausible, though, that he regarded himself as heir or successor to the Christian Roman emperors. More likely he viewed his victory in terms of the prophesied triumph of Muslims over Christians in Kostantiniye (Ar. name of Constantinople)—his rule therefore supplanting rather than continuing the previous tradition. Few conquered Greeks, reciprocally, conceived of Mehmed as a new "emperor of the Romans" in the spirit of Ammianus, who lauded the sultan as such in his 1466 letter. Contemporary Greeks, whether pro- or anti-Unionist, typically regarded Mehmed's conquest of Constantinople as a catastrophe and like Doukas viewed the sultan as a consummate tyrannos at best, and Antichrist at worst. His conquest of the despotate of Mistra in 1460 and of Trebizond in 1461 sealed that perception. On the contrary, Kritoboulos highly praised Mehmed for his personal qualities (justice, generosity, courage) as well as for his patronage of trade, craftsmanship, and building activity (Z. Udal'cova, VizVrem 12 [1957] 172—83).

—S.W.R.

MELANIA THE YOUNGER, saint; born Rome 383, died Jerusalem 31 Dec. 459; feastday 31 Dec. Born to a rich and noble family, Melania (Μελάνη) was married at age 13 or 14 to Valerius Pinianus, son of a former Roman prefect. Perhaps influenced by her grandmother, Melania the Elder (see F.X. Murphy, Traditio 5 [1947] 59—77), Melania pursued ascetic ideals, and, after the early death of two children, the couple decided to live in chastity. The decision of Melania and Pinianus in 404 to sell their enormous properties (located in Italy, Spain, Sicily, Africa, etc.) met resistance from both the senate and the slaves of their Roman proasteia (Vie, pars. 10—11), but Melania finally received permission to liquidate her estates, with the help of Serena, wife of Emp. Honorius. After 406 Melania and Pinianus left for Sicily, Africa, and then Jerusalem, where Melania built a cell for herself on the Mount of Olives as well as a nunnery and monastery. Melania had personal contacts with Egyptian monks and with great ecclesiastical leaders such as Augustine, Palladius of Helenopolis, Cyril of Alexandria, and Paulinus of Nola. In 436 she visited Constantinople and urged her uncle Volusianus to convert to Christianity.

Her Life was probably written by an ardent Monophysite, Gerontios (died 485), who supervised Melania's monasteries in Jerusalem after her death. It survives in Greek and Latin versions, which probably derived from a common Greek prototype (A. d'Ales, AB 25 [1906] 448—50). It was reworked by Symeon Metaphrastes. The activity of Melania and her family is attested by many contemporary observers, primarily by Palladius of Helenopolis. John Rufus also mentions her in his Syriac Life of Peter the Iberian. Melania is usually portrayed in art as a nun.
MELANODION. See MYLASA AND MELANODION.

MELBOURNE GOSPELS. See THEOPHANES.

MELCHITES (Μελκίας, from Syriac malkāyā, "imperial"), or Melkites, members of the Chalcedonian church in Syria and Egypt, areas generally dominated by MONOPHYSITES. Between the murder of Proterios, the first Chalcedonian bishop of Alexandria, in 457 and ca.537/8 there was only an irregular Chalcedonian presence in the Syrian and Egyptian ecclesiastical hierarchy, but from the time of Justinian I until the Arab conquest Chalcedonian patriarchs were normally resident in Alexandria, Antioch, and Jerusalem. Usually supported by imperial troops, the Melchite clergy ministered to a largely urban and Greek-speaking populace, while the countryside was mostly Monophysite. After the Arab conquests of the 7th C. the Melchites lost most of their official support; frequent vacancies in the hierarchy occurred and bishops often lived in Constantinople. The Melchite communities were, however, given a special position under Islam and were regarded as Byz. enclaves within the caliphate. During the Crusades and the subsequent Latin domination of Syria and Palestine many bishops fled their sees. Among Melchite authors were George of Martropolis and Constantine and Leo of Harran; on the whole, however, Melchites contributed little to SYRIAC LITERATURE, which was dominated by Monophysites (A. van Roey, Orientalia Lovaniensia Periodica 3 [1972] 125-53).

MELEAGER, in Greek mythology a mighty hero. Malalas (Malal. 165f.), referring to a play of "the wise Euripides," relates that Meleager killed a terrifying boar that ravaged the land of Calydon and gave its skin to Atalanta, whom he loved. Meleager's father Oeneus became enraged and threw into the fire a twig of olive upon which—magically—Meleager's life depended. Tzetzes (Hist. 7:61-70), who quotes Homer and a certain Sotirchios, evidently knew only the first part of the myth—the killing of the Calydonian boar.

An image of Meleager and Atalanta at rest after a hunt on a silver plate of Herakleian date in Leningrad (Iskusstvo Vizantii 1, no.136) lacks any reference to the boar. Atalanta is shown hunting boars with Orion in a miniature in Venice, Marc. gr. 479 (Weitzmann, Gr. Myth. 115f, fig.191).

MELENKIS. See MELNIK.
MELETIAN SCHISM. There were two Meletian schisms in the 4th C., one in Egypt, the other in Syria.

MELETIAN SCHISM IN EGYPT. This schism, sometimes called the First Meletian Schism, was incited by Meletios of Lykopolis in Upper Egypt (died after 325). During the persecution of 306 he condemned Christians who hid from the authorities; in defiance of the state, he demanded the resumption of the liturgy. He founded a "church of martyrs" that excluded the lapsi (the "fallen," i.e., those who yielded in the face of persecution), was thrown into jail, and released only after the toleration edict of 311. His moral authority enabled Meletios to attract many partisans—by 325, 28 bishops supported him and he was able to challenge the position of the patriarch of Alexandria. The struggle against Arianism prompted Alexander of Alexandria to a policy of reconciliation with the Meletians, but Athanasius of Alexandria took a strong stand against the dissidents. The argument was political rather than ideological, and soon the Arians began to side with the Meletians; thus Pistas, a friend of Arians, was consecrated a Meletian bishop; the new allies accused Athanasius of beating Meletian bishops, murdering one of them, and using a Meletian liturgical vessel for secular purposes. The significance of the Meletians decreased in the 5th C., but some trace of them is still distinguishable in the 8th C.

MELETIAN SCHISM IN SYRIA. The second Meletian Schism originated in Antioch, where in the mid-4th C. the community was split between the Arians and the supporters of the Council of Nicaea; the latter were, in turn, divided into two parties. Both orthodox groups united around Meletios, who was elected bishop of Antioch in 360, but was soon deposed and exiled by Constantius II. In his absence the Nicaeans (called "Eustathians" after Eustathios of Antioch), with the strong support of Athanasius of Alexandria, elected in his stead the priest Paulinos; when Julian allowed Meletios to return to Antioch, three bishops claimed the see.

A theological difference emerged between the Meletians and Eustathians: according to the Eustathians ousia and hypostasis were identical and God possessed one ousia/hypostasis and three prosopa, which the Meletians regarded as Sabellianism (see Monarchianism); in their view God was one ousia in three hypostases, a position that the Eustathians equated with Arianism. The Cappadocian Fathers sided with Meletios, and his two banishments by Valens only contributed to his authority. Rome and Alexandria supported Paulinos and his successor Evagrios. Meletios presided over the First Council of Constantinople in 381, which approved his formula. Reconciliation with the Eustathians took place in 413.

MELETIOS THE MONK, physician and medical writer; his dates are unknown, but he is usually dated to the 9th C. He lived no earlier than the 7th C., and perhaps as late as the early 13th C. (M. Morani, La tradizione manoscritta del De natura hominis di Nemesio [Milan 1981] 147–55). He was a monk at the monastery of the Holy Trinity in Tiberiopolis (in the Opsikian theme). On the Constitution of Man (Perti tes tou anthropou katastheus) is his treatise on human anatomy and physiology, composed almost entirely of excerpts from earlier authors such as Galen, Gregory of Nyssa, and Nemesios; his latest source is Maximos the Concestor. Much of his importance lies in his preservation of passages from the lost works of ancient medical writers such as the 2nd-C. Soranus of Ephesus (R. Renehan, DOP 38 [1984] 159–68). The treatise survives in a number of MSS and was highly regarded in the late Byz. period.

MELETIOS THE YOUNGER, also called Meletios of Myoupolis, saint; born in village of Moutalaske, Cappadocia, ca. 1035, died in monastery of Myoupolis, Boeotia, ca. 1105; feastday 1 Sept. At age 15 he left his village for Constantinople, where he took the monastic habit; he then moved
to Boeotia to live in the eukterion of St. George near Thebes. After long pilgrimages to Palestine, Rome, and perhaps Spain, he moved to Mt. Myopulis, on the border between Boeotia and Attica, and Patr. Nicholas III consecrated him priest. By ca. 1081 Melletios acquired the Symboulion monastery (Hosios Melletios) nearby and received from Alexios I an annual donation of 422 gold coins.

Melletios’s biography was recorded by Nicholas of Methone and Theodore Prodromos; both Lives are rich in political events and emphasize Melletios’s connections with members of the elite. The two authors do not always agree in their facts and chronology, and their approaches differ. Thus Nicholas stresses Melletios’s concern for his community: he protects the monastery from fire and drives rabbits from the monastery garden. Prodromos introduces more entertaining elements, for example, a more elaborate description of Melletios’s travels; he alone tells of a noble Theban lady who attempted to seduce Melletios; only Prodromos describes (and criticizes) the extreme mortification of the flesh by a certain Noah, son of a Constantinopolitan noble.

MELIAS (Μελιάς; Ar. Malih al-Armani, Arm. Melh-mec [Mleh the Great]), general; died 934. Melias was an Armenian prince who moved to Byz. during the reign of Leo VI, participated in the battle at Bougarophygon, and served thereafter in Asia Minor. He probably supported Andronikos Doukas in his rebellion, and after the failure of the insurrection sought refuge with the emir of Melitene. Circa 908, when Leo pardoned the participants in the aristocratic conspiracy, Eustathios Argyros was appointed strategos of Charsianon, and Constantine Doukas came back from the caliphate. Melias returned, too, with a group of Armenian chieftains, became tourmarches of “Euphratia,” and eventually founded the kleisoura of Lykandos, which served as a base for operations against the Arabs. In 912 he successfully repelled an Arab attack on the “fortress of Malih al-Armani,” in 915 invaded Arab territory as far as Maras, and ca. 930 temporarily occupied Meli-}

tene. The descendants of Melias wielded power in the same area until the late 10th C.; the domestikos ton scholon Melias participated in the campaigns of John (I) Tzimiskes and was killed at the walls of Amida in 973.

In the Cappadocian church known as the Pigeon House at Cavusin, an inscription mentions Melias (a contemporary of Nikephoros II Phokas), apparently the same person. He is shown as a nimbed, equestrian figure with a long spear. It is uncertain whether Melias here is to be understood as a patron of the church or merely as an aide to Nikephoros Phokas and his family, who are depicted in the north apse. It has been suggested that the figure of Melias “the Great” was reflected in the personage of the apelates Melementzes mentioned in the epic of Digenes Akritas.

-A.K., A.C.

MELINGOI (Μηλιγγοί), also Milingoi, one of two groups of Sklaenoi in the Peloponnese. Both their origin and the etymology of their name are obscure (D. Georgacas, BZ 43 [1950] 301–27). The Milingoi lived on the western slope of Mt. Taygetos, near the Ezerital. They are first mentioned by Constantine VII Porphyrogennetos (De adm. imp. 50) as paying 60 nomismata in tribute; after they rebelled, in the reign of Romanos I, their payment was increased to 600. The author of the vita of Nikho “Metaneiteit” (ed. Sullivan, ch.62.4–5) identifies them as the ancient Myrmidones (whom the Byz. often connected with the Scythians). The Chronicle of the Morea relates that William II Villehardouin bestowed on the “great droungos of the Milingoi,” as a proud mountain people, the right to exkoussela from any service except military assistance (A. Vasiliev, VizVrem 5 [1898] 434f). Inscriptions of the 14th C. in this area mention the Milingoi: an inscription of 1331/2 from Oitylon (Vitlyo) in Lakonia speaks of the founding of the Church of St. George by Constantine Spani and Larinkas Slabouri who were Milingoi; Constantine Spanes (evidently the same person) founded another church in 1337/8 according to an inscription at Kampinari located nearby—he was the tzavosios of the droungos of the
Melingoi. Thus the Melingoi preserved an independent enclave although they adopted the Greek language, espoused Christianity, and fulfilled some services to the emperor as well as, from the 13th C. onward, to Frankish lords.

MELISENDE, PSALTER OF. See Crusader Art and Architecture.

MELISMOS. See Fraction.

MELISSA (Μέλισσα, lit. "Bee"), a ghost title of a sacro-profane florilegium compiled probably in the 10th or 11th C. in two books and 176 logos (chapters). The author drew upon an interpolated copy of the 10th-C. florilegium of pseudo-Maximos the Confessor and a version of the SACRA PARALELLE. For secular sententiae he used a gnomologium of Democritus-Isocrates-Epictetus and gnomai of Theognis; the source of the last five chapters is unknown. In each chapter the quotations are presented in hierarchical order: Old Testament, New Testament, church fathers, secular authors. The first book focuses on the themes of virtue and vice and of pious behavior (attitudes toward almsgiving, humor, etc.); the second deals with political roles (emperors, bishops, judges) and social structures (lords and slaves, family, etc.). Traditionally, Melissa is considered to be the work of a certain ascetic, Antony, allegedly called Melissa (Beck, Kirche 643); Richard (infra) demonstrated that the first editor (C. Gesner in 1546) invented both the name and title, the Bee being a common designation of anonymous florilegia of proverbial sayings. In the surviving MSS, all incomplete, the work is anonymous or attributed to John of Damascus. The Melissa was translated into Slavonic with the title of Pčela.

MELISSENOS (Μελισσηνός, fem. Μελισσηνή), a noble family for which two questionable genealogies were produced in the 16th and 17th C. Makarios Melissenos in his chronicle traced the family from Michael Melissenos, patrikios and relative of Emp. Michael I Rangabe (Sphr. 270.12–20); a treatise probably written by the metropolitans Nikephoros Melissenos describes in detail all the descendants of Michael's son, the magistros Leo (S. Lamprós, NE 1 [1904] 191–202). According to more dependable sources, the first known Melissenos was the patrikios Michael, governor of Anatolikon under Constantine V. His son, Theodore Kassiteras Melissenos, became patriarch of Constantinople as Theodotos I. From the 9th through 11th C. the Melissenoi were primarily military commanders and governors of themes (Koloneia, Anatolikon, Philippopolis, Antioch); Leo (I. Jordanov, BBUig 8 [1986] 183–87) and Theognostos participated in the rebellion of Bardas Phokas. The family remained in power in the mid-11th C.: Theognostes Melisinos [sic] served as katepano of Mesopotamia (D. Theodoridis, BZ 78 [1985] 363f), and Maria Melissene held the title of zoste patrikia (Seibt, Bleisiegel 260–62). Nikephoros Melissenos, who married Eudokia Komnene, belonged to the family through the maternal line. In 1080 he rebelled against Nikephoros III but submitted to Alexios I Komnenos, who gave him the title of caesar; he had possessed estates around Dorylaion, but later Alexios allowed him to settle in Thessalonike; he was called despotes both by Theophylaktos, the archbishop of Ohrid, and on a seal. The 12th-C. Melissenoi served in the civil administration. According to later sources, Andrew Melissenos moved during Alexios I's reign to Crete, where he founded a local branch of the family. The 13th-C. Melissenoi were known as landowners in the Smyrna region (Ahrweiler, "Smyrne" 172). Nothing is said of their role in cultural life. (See also MELISSENOS, MAKARIS.)

MELISSENOS, MAKARIS, metropolitan of Monemvasia; died Naples 1585. A rich landowner in the Morea, Makarios Melissourgos was involved in an anti-Ottoman plot after the battle of Lepanto (1571) and was forced to flee to Naples to the Spanish court of Philip II. There Makarios changed his name to Melissenos and produced a series of forged documents, such as a chrysobull
MELITENIOTES, THEODORE, patriarchal official and writer; died 8 Mar. 1393. By 1360 Meliteniotes (Μελιτηνιώτης) had held the positions of deacon, didaskalos ton didaskalon, and megas sakellarios; from 1368 to 1393 he was also archdeacon of the palatine clergy. Meliteniotes was Palamite and anti-Latin; in 1368 he signed the Tomas condemning Prochoros Kydones. He corresponded with Makarios Chryssekephalos (R. Walther, JÖB 23 [1974] 223–27), Joseph Bryennios, and Demetrios Kydones.

Meliteniotes was a prolific writer with wide interests. He compiled a manual of astronomy based on Ptolemy, Theon, and Persian sources, titled the Three Books on Astronomy or Tribiblos, of which only the preface has been published (PG 149:987–1001). He also wrote a gargantuan and derivative commentary on the harmony of the Gospels (Diatessaron) in nine volumes, of which three are preserved (C. Astruc, TM 4 [1970] 411–29). It has been calculated that the entire work would have run to 2,500 folios. F. Dölger hypothesized (APhOS 2 [1933–34] 315–30) that Theodore Meliteniotes was also the author of a lengthy allegorical poem, On Temperance, by a certain Meliteniotes. The poem, in 3,062 15-syllable verses, contains echoes of Byz. romances such as Digenes Akritas (V. Tifitxoglu, BZ 67 [1974] 1–63) and Libistros and Rhodamine.

MELKITES. See Melchites.

MELNIK (Μελνικός, Μελένικος, mod. village of Melnik in southwestern Bulgaria), a fortress in the eastern valley of the Strymon River in Macedonia. The name is of Slavic derivation, although some S. Kyriakides (Makedonika 3 [1953–55] 404–7) has attempted to connect it with an (unknown) eponym, Melenikos. Melnik is first mentioned by an 11th-C. historian (Skyl. 351.83–87), who states that in 1014 it was a Bulgarian phourion in Zagoria, built upon a rock and well fortified.

Melnik acquired particular significance after the Crusade of 1204. Kaloyan captured it and resettled Greek inhabitants of Philippopolis in Melnik; soon afterward, probably in 1207, Alexios Slavos, governor of Melnik, proclaimed the town independent of Bulgarian rule; Henry of Hainault conferred upon him the title of despotes. Alexios supported first the Latins in their war against Bulgaria; later he switched his allegiance to THEODORE KOMNENOS DOUKAS of Thessalonike. In the second quarter of the 13th C. Melnik’s position became difficult because of conflicts between Bulgaria, Epiros, and the Latin Empire. Alexios disappears from the sources after 1229, and the town was evidently recovered by the Bulgarians.

In 1246 John III Vatatzes took the fortress and appointed the future emperor Michael (VIII) Palaiologos as its governor. A revolt in Melnik, led by a Bulgarian named Dragota, was quelled by Theodore II Laskaris in 1255—with the supernatural help of the two Sts. Theodore, according to a legend preserved by Theodore Pediasimos (F. Dölger, IzvBulgArchInst 16 [1950] 275–79). Little is known of the later history of Melnik. In the mid-14th C. it belonged to the Serbs and was a metropolis.

Some medieval buildings survive in Melnik, including a private aristocratic house (S. Georgieva, D. Serafinova, Palaeobulgaria 3.2 [1979] 37–54) and the Church of St. Nicholas (L. Mavrodinova, Cúrkvata sveti Nikola pri Melnik [Sofia 1975]) in which a wall painting of the 13th C. and a Greek inscription of the sebastos Vladimir, brother of the sebastos Frankos, were preserved. These frescoes are now in the Archaeological Museum in Sofia. Two coins found in the church have been attributed to Manuel I. Two other churches in Melnik have dated fresco programs of the late 15th C.

MELODIA (Μελοδία), personification of Melody, usually shown as a companion of David the musician. In aristocratic Psalter illustration she appears in the guise of a Muse seated on a rock beside the Psalmist and appearing to inspire him. The same figure in the 11th-C. Psalter, Venice, gr. 565, is inscribed he synesis (“intelligence”).

Lit. Cutler, Aristocratic Psalters, nos. 9, 27, 32, 37, 39, 44, 45. —A.C.

MELOTE. See John the Baptist.

MEMNON (Μέμνων), bishop of Ephesus (ca.428–40), dominant figure at the Council of Ephesus in 431 as ally of Cyril of Alexandria and opponent of Nestorios. He closed the churches of Ephesus to the supporters of Nestorios and helped to organize massive demonstrations in favor of Alexandrian theology. Although temporarily deposed and arrested by imperial troops, Memnon retained his see after the reconciliation between Cyril and John of Antioch in Apr. 433 (see NESTORIANISM). A determined supporter of the rights of his church against the encroachments of Constantinople, he maintained his own position against potential rivals partly through terror.

MEMORY as an ability to enrich one’s knowledge was underpinned by an educational system oriented toward memorizing the Psalms and other biblical texts; the learning of liturgical responses
and prayers also trained the memory. Antiquity highly valued memory, and accordingly Ammianus Marcellinus (Amm. Marc. 16.5.8) praised Julian for his enormous "jar of memory." The Byz. tendency toward imitation (mimeisis) and topos favored the use of memory, and literati often boasted of their incredible powers of recall: Psellos bragged that he had memorized the whole of Homer, and Tzetzes stated that after having sold his library he was still able to quote its books from memory. Even the works of contemporary writers were memorized: Michael Italikos informed Prodromos that he had met a priest who knew by heart all the prose writings and iambics of Prodromos (R. Browning, BBulg 1 [1962] 282). Inexact quotations of the Bible and classics probably can be explained by the fact that they were cited from memory.

- A.K.

MENAION (μηνική, from μήν, "month"), a set of 12 liturgical books, one for each month, containing the variable hymns and other texts (lectiones, synaxarion notices, kanones) proper to vespers and orthis of each feast of the fixed cycle, that is, those feasts that fall on a fixed date in the church calendar. Although the cycle of feasts itself had been established since the 10th C., and earlier rudimentary "proppers" had been contained in the tropologion—of which several 11th-C. MSS are extant (A. Wade, OrChrP 50 [1984] 451–56)—and in collections of stichera and kanones, the first systematic menaia with hymnography for each day of the year appear only in MSS of the 11th–12th C.

When a movable feast lands on a day with a fixed feast, the menaion "propers" have to compete with those of the triodion, the pentekostarion, and the oktoechos (comparable hymn books for the mobile cycle). Their relative precedence in such cases is regulated by the liturgical typikon.

MENANDER PROTECTOR historian; born Constantinople?, fl. late 6th C. Described by the sources as protiktor, he was probably a protector domesticus or palace guardman. Menander (Μένανδρος) himself says (fr.1) that he preferred the pleasures of Constantinople to the legal career planned and financed for him by his father but was rescued for historiography from involvement in the circus factions by the accession of Maurice and the rewards open to men of letters. He produced a History for the period 558–82, in formal continuation of Agathias. More than 70 fragments are preserved in the Excerpta de legationibus of Constantine VII (see EXcerpta) and the SOUDA; several unattributed notices in the latter may also belong to him. Though exhibiting some of the vices of the age and the genre, and perhaps unduly concerned with Eastern events at Western expense, his work has considerable virtue, esp. a willingness to research documentary sources and reproduce them without excessive Atticism: fragment 6.1 provides a detailed account of the negotiations for the peace treaty of 561 between Justinian I and Chosroes I. As a scholiast on Strabo noted (Paris, B.N. gr. 1393), Menander is good on Persian ethnography. Closer to home, he is balanced on Justin I, informatively favorable to Tiberios I, an encomiast of Maurice. His aggressive Christianity is manifest in an epigram on the Persian martyr Isbozetes (fr.13.3, also Greek Anth. 1.101); a possible new fragment describes importing relics of the True Cross to Constantinople.

MENANDER RHETOR, or Menandros of Laothoe, (on the Lykos River), fl. late 3rd C. According to the SOUDA, Menander's works included commentaries on HOMOGENES and Minucianus. Two treatises on EPIDEICTIC oratory survive in incomplete form under his name, though they were probably written by different authors. These give rules for speeches on formal occasions, dealing with topics not included in Hermogenes' text.
books but nevertheless very important in the schools of the SECOND SOPHISTIC and later. The first treatise, Division of Epideictic Speeches, discusses hymns to the gods and heroes, and enkomia of cities and states. The second and more influential, On Epideictic Speeches, contains the rules for the basilikos logos, epithalamation, prospho- netikos logos, monody, etc. Speeches of this sort were central to Byz. ceremonial Rhetoric.

 Despite a relatively limited MS tradition, Menander’s treatises, with their slightly cynical sense of what was appropriate, remained a fundamental rulebook and influenced Byz. authors of all periods. A private letter of the 6th/7th C. (P. Berol. 21849) lists Menander’s techne among some books required (H. Maehler, GRBS 15 [1974] 305–11). Both Chorikios and Prokopios of Gaza were indebted to Menander, and later rhetoricians, such as John of Sardis, John Doxopatres, and Joseph Rhakenides (in the Synopsis of Rhetoric) all draw on Menander’s treatises. Further evidence of Byz. attitudes toward Menander comes from the MSS: in the second treatise they present the chapters in varying sequences, suggesting divergent practice in different Byz. schools. Substantial textual variants in some MSS are best taken as proof that later teachers of rhetoric thought it worthwhile to try to improve Menander’s text.

–F.M.J., N.G.W.

MENAS (Μενάς), legendary saint; feastday 11 Nov. According to Romanos the Melode, Menas was an Egyptian who served in the army in Phrygia under Diocletian, proclaimed himself Christian in a theater, and was executed. Both Krumbacher and Delehaye (infra) assume that Romanos used an earlier, now lost passio. Several versions of Menas’s martyrdom survive, one ascribed to Athanasios of Alexandria; to embellish the story, one hagiographer used the homily of Basil the Great on Gordios. In these panegyrics Menas is variously said to have been martyred in Kotyaiion, Phrygia, in the second year of Diocletian (295) or in Alexandria under Maximinus. In a later legend the idea of Menas’s noble origin was introduced (A. Kazhdan, Byzantina 13.1 [1985] 667–71). The cult of Menas originated in Egypt, but spread beyond its boundaries. A collection of tales, some of which are ascribed to Timothy, patriarch of Alexandria, relates Menas’s posthumous miracles, including the story of a virtuous Jew (P. Devos, AB 78 [1960] 275–308). Another legend reports that Menas’s coffin swiftly floated to Constantinople; the relics were allegedly rediscovered at the time of Basil I. Menas was venerated particularly as a protector of pilgrims and merchants. Another Menas is celebrated on 10 Dec. along with Hermogenes and Euphrastes.

**Representation in Art.** Images of Menas have been preserved in stone and ivory as well as on the Menas Flasks; probably all reflect originals in his shrine at Abu Mina. Menas is portrayed as a young orans in a short tunic, flanked by two camels. His martyrdom by the sword and his effigy standing within his shrine receiving pilgrims are carved on a 6th-C. ivory pyxis in the British Museum (Age of Spirit., no.5.14). In the Menologion of Basil II (p.174), he is celebrated along with three other martyrs—Viktor, Vikentios, and Stephanos—and beheaded; in illustrations to the menologion of Symeon Metaphrastes, all the men are shown wearing court costume, while Stephanos is omitted.

–A.K., N.P.S.

MENAS, patriarch of Constantinople (13 Mar. 536–24 Aug. 552) and saint; born Alexandria, died Constantinople; feastdays 25 and 27 Aug. Menas began his career as a priest and xenodochos of the hospice of Sampson in Constantinople. A legend ascribes to him the healing of Justinian I from a dangerous disease. He was ordained by Pope Agapetus I and tried to preserve good relations with Rome, fighting against the Monophysites and the Origenists. In 544 Menas supported Justinian’s edict against the Three Chapters and was temporarily excommunicated by Pope Vigilius’s legate in Constantinople. By 547–48 the pope agreed to condemn the Three Chapters and the pope’s name was restored to the diplotych of Constantinople ahead of the name of Menas (Malal. 484.11–13). In 550, however, Vigilius again excommunicated Menas.
titled ECUMENICAL PATRIARCH (S. Vailhé, \textit{EO} 11 [1908] 66f) and archbishop of “Constantinopolitan Rome” (Dölger, \textit{Byzanz} 94, n.37). Menas supported Justinian in his building activity: he came in an imperial carriage to dedicate both Hagia Sophia and the Church of the Holy Apostles and dedicated the Church of St. Irene in Sykai together with Apollinarios, patriarch of Alexandria.

To Menas was ascribed a speech addressed to Vigilius concerning the one will of Christ that was used by adherents of MONOHELETISM; at the Council of 680 the codex was investigated and proclaimed a forgery (F. Dickamp, \textit{Die origenistischen Streitigkeiten im sechsten Jahrhundert} [Münster in Westfalen 1899] 69). The short vita of Menas (\textit{BHG} 1272) is anonymous and lacking in information. Beck (\textit{Kirche} 408) hypothesizes that it was written by a contemporary.

\textbf{LIT. RegPatr, fasc. 1, nos. 232–43. R. Janin, Bibl.sanct. 9:318f. –A.K.}

**MENAS FLASKS**, the largest subcategory of pilgrims’ AMPELLAE, issued from the 5th to the 7th C. at the famous complex of St. Menas at ABU MINA. Made of clay, with a round, flat body, a projecting neck, and a pair of large handles, these crude, mass-produced vessels were used by pilgrims to carry home miracle-working EULOGIA waters, which were dispensed from cisterns at the shrine. Examples have been discovered throughout the Byz. Empire and beyond its frontiers. Most are between 6 and 15 cm in height and bear figural compositions impressed on the front and back. Menas is usually shown in the ORANS attitude, flanked by a pair of kneeling camels. A workshop for the production and storage of such flasks was discovered at the site.

**MENOIKEION, MOUNT**, located east of SERRES. Menoikeion (τὸν Μενοικείον) was the site of a monastery of the Prodromos, founded ca.1275 by the monk Ioannikios (died ca.1300), future bishop of Ezivai (Ezeva). He was succeeded as superior by his nephew, the hieromonachos Ioakeim (died 1333), who eventually became bishop of Zichnai. Ioakeim enlarged the complex, adding the church and refectory, obtained patriarchal status for the monastery (1321), and greatly increased its properties so that it became one of the wealthiest in Macedonia. In 1304 he enlisted the patronage of Simonis, wife of Stefan Uroš II Milutin of Serbia; in 1332 megas domestikos John (VI) Kantouzenos succeeded her as patron. Stefan Uroš IV Dušan was also a benefactor of the monastery after his conquest of Serres in 1345. Though in debt and disrepair under Ottoman domination, the monastery survives to this day.

The typikon of Ioakeim, revised in 1332, stressed the cenobitic life and denied anchorites entrance to the monastery. Under its unusual collegial system of administration, the hegoumenos acted in concert with a council of monks. The early archives of the monastery are preserved in 19th-C. copies of two 14th-C. cartularies (I. Dujčev, \textit{REB} 16 [1958] 169–71). About 50 charters (primarily privileges conferred by Andronikos II, Andronikos III, and Dušan) as well as Greek translations of Turkish documents survive: they give lists of the monastery’s properties and reveal the history of its acquisitions. Of special interest are data concerning oikonomiai in the region and the prosopography of local landowners. Numerous MSS produced in the monastery’s scriptorium also survive (L. Politis in \textit{Wandlungen, Studien zur antiken und neueren Kunst} [Waldsassen 1975] 278–95).

The katholikon, a domed basilica, was built in the early 14th C. The frescoes in the naos date from the period of Dušan and his successors, particularly John Ugješa, despotes of Serres (1365–71). A portrait of Dušan and his family together with the kktor Ioakeim, who was shown offering a model of his church to a winged John the Baptist, survived in the exonarthex until at least 1761. The chapel of St. Nicholas that contains the grave of Ugješa’s sister, Helen, was decorated with frescoes commissioned by her husband Nicholas Radosja between 1358 and 1364. I. Djordjević and E. Kyriakoudis (\textit{Cyrillomethodianum} 7 [1983] 167–234) proposed that these paintings, as well as others in the outer narthex and some frescoes in the chapel (behind the apse of the katholikon) representing the Prodromos and his father, Zacharias, were executed by artists from Thessalonike who went on to work at Hilandar and Vatopedi on Mt. Athos.

Menologion of Basil II (Vat. gr. 1613). This MS, the most lavishly illustrated of all Byz. liturgical MSS, was made sometime after 979 (S. Der Nersessian, Byzantium 15 [1940–41] 104–25) for the emperor Basil II, whose name appears in a dedicatory poem on p.XII. Its text is not in fact a menologion at all, but a version of the Synaxarion of Constantinople for the months of September through February. It has 430 miniatures, one on nearly every page, all with gold background; 15 miniatures lack textual notices and two both their text and title. The absolute balance here between text and image is unparalleled in any other calendar cycle; each occupies half a page, and just as each miniature, regardless of content, has been composed to fit a prescribed space, so each Synaxarion text has been modified so as to take up exactly 16 lines on the page. The miniatures include several illustrations of the Great Feasts, the translation of relics, and figures of prophets and saints standing before elaborate architectural settings or in exquisite landscapes. But the vast majority are scenes of martyrdom and torture, astonishing as much for their level of violence as for their extreme refinement of execution and the absence of caricature.

Symeon’s texts, many reworked or abridged, were reassembled once more in the 11th C., to form the so-called “imperial” menologion. In this version, each vita is followed by a set of verses acclaiming the emperor; the acrostic of these verses in each case spells “Michael P.,” thought to be the emperor Michael IV Paphlagon. Some MSS of the “imperial” menologion were illustrated in the 11th C.; the illustrations are careful copies not of the miniatures found in MSS of Metaphrastes’s menologion—the source for the texts—but of those in the Menologion of Basil II (S. Der Nersessian in Sbornik . . . V.N. Lazareva 94–111).

—A.M.T. A.C.
Each miniature is accompanied in the margin by a name in the genitive case; these names, eight in all, are often preceded by the words 'tov zographou ("by the painter") and are presumed to be names of the artists (PANTOLEON, George, Menas, Symeon, Michael the Younger, Nestor, Michael of Blachernai, and Symeon of Blachernai). If this Pantoleon is identical to the painter Pantoleon attested elsewhere, then the Menologion would date to the early 11th C. and be contemporary with the Psalter of Basil II (Venice, Marc. gr. 17, now dated to ca. 1005 by A. Cutler, Arte Veneta 31 [1977] 9–15).

The illustrated "imperial" menologia of the 11th C. were clearly meant to imitate the Menologion of Basil II. Their miniatures are exact copies of those in the Basil MS, attached to a different set of texts.

---

**MENOUTHIS.** See KYROS AND JOHN.

**MENTESHE (Μανταχίας, Μενδεσίας),** a Turkish emirate that emerged from the breakup of the Seljuk sultanate of Rûm. It occupied the fertile plain of the river Meander and extended up to the cape of Makre (Fethiye); its main cities were Miletos, Mylassa, and Mugla. The emirate was probably founded by a certain Sal(am)pakis, who fought successfully against the Byz. and ca. 1280 conquered Tralles. His successor was probably Mas'ud, who allied with the Genoese and attacked the Hospitallers on Rhodes and the surrounding islands in 1311. In the 1330s Menteshe, after repeated naval raids, reduced the lords of many Aegean islands and territories to the status of tribute-paying vassals. The emirate established commercial relations with Venetian Crete ca. 1300 and concluded with it at least seven treaties, which mention several exported staple goods: agricultural products (mainly cereals), livestock and related products connected with the nomads (cattle, horses, hides), and slaves. During the Crusades against the Aegean emirates (in 1333/4 and in
Menteshes appeared more willing to side with the Christians than with its Turkish neighbors. The emirate was temporarily annexed by the Ottomans from 1390 to 1402 and permanently in 1421.

**MERARCHES** (μεράρχης), military officer, mentioned in military treatises of the 6th C. He commanded a cavalry division (meros) in the assault line. In the Strategikon of Maurice (86.12), the merarches is ranked between the strategos and doux. The Kletorologion of Philotheos (Oikonomides, Listes 109.9) equates merarches with tourmarches, as does the Tahtika of Leo VI (ch.4.8; PG 107:701C). In effect the two offices were merged. Bury (Adm. System 42) suggests that in a theme, in addition to two tourmarchai, there was a merarches who commanded the third brigade but had no geographical district under his administration. The seal of a merarches of Knossos (Schlumberger, Sig. 201) contradicts this hypothesis.

LIT. Oikonomides, Listes 109, n.65. –A.K., E.M.

**MERCENARIES** (μισθοφόροι) were hired by the Byz. throughout their history to secure needed manpower or skills. Germanic mercenaries, attracted by wages and the prospect of advancement, had played an influential role in the late Roman army, and cash taxes obtained from the population in lieu of military service were used to pay for them (Jones, LRE 619–23). The expense, coupled with the recruitment of the provincial armies (themata) from local and transplanted populations, reduced the demand for mercenaries between the late 7th and 9th C. The 10th and 11th C., however, witnessed the partial transformation of the Byz. army from an indigenous to a mercenary force. This change in manpower is attributed to the commutation of personal military service (strategia) into cash taxes used to hire mercenaries and the loss of Anatolia in the 11th C., depriving Byz. of its prime source of soldiers.

The multinational armies of the 10th C. amazed the Arabs (Vasiliev, Byz. Arabes 2.2:333, 339); 11th-C. chrysobulls list a wide range of peoples, now including Western soldiers (J. Shepard, Traditio 29 [1973] 53–92), in Byz. service, while Turkish mercenaries became prominent in Komnenian and Nicaean armies. Food and other necessities (perhaps also lodging) were obtained for them from the empire’s population through the mitaton. So widespread was the use of mercenaries that in the 12th C. Benjamin of Tudela declared that the Greeks no longer participated in warfare. In the 14th C. Byz. hired companies of soldiers (such as the Catalan Grand Company) and attempted to retain their services by bestowing rights of pronoria (N. Oikonomides, TM 8 [1981] 353–71).

Mercenaries served in separate corps and used their own weaponry and methods of warfare, although the Byz. sought to keep these troops under their overall command. The most famous corps was composed of the Varangians who served Basil II as an expert fighting force; foreign corps also served as bodyguards for emperors who could not trust their own soldiers.

LIT. S. Vryonis, “Byzantine and Turkish Societies and their Sources of Manpower,” in War, Technology and Society in the Middle East, ed. V.J. Parry, M.E. Yapp (London 1975) 126–40. –E.M.

**MERCHANT** (ἐμπόρος), also pragmatelutes, denoting a middleman, that is, one who made his living primarily through buying and selling merchandise (Cod. Theod. XIII 1.13). In the period through the 6th C., the sources show the existence of a considerable number of merchants engaged in both wholesale and retail trade; recent scholarship has stressed the importance of differentiating between independent middlemen and traders who acted as agents of the state or of the large landowners who disposed of their surplus directly to the consumer. In this period, some rich merchants are attested, both in Alexandria (where one of them is said to have had a fortune of 275 pounds of gold) and in other parts of the empire, as, for example, the merchant from Askalon mentioned in John Moschos (PG 87:3068AB). Merchants, however, occupied a relatively low social position; they were not allowed to hold important offices. The size of their enterprises and their capital was also small relative to that of great landlords. Patrician sources are suspicious of the profession of the merchant, since they consider trade an occasion for sin (e.g., John Chrysostom, PG 64:436C).

In the 7th–10th C. the tendency toward self-sufficiency reduced the role of the merchant, although there is no doubt of the continued existence of middlemen, such as the rich merchant
from Chios mentioned in the Miracles of St. Artemios. The Rhodian Sea Law (ch.11.11) shows merchants sailing with their wares and even gives evidence of large and precious cargoes being sent by ship. The Book of the Eparch (ch.11.1) reveals the close connection between trade and manufacturing; candlemakers, for example, sold their wares in their own shops. The state controlled some prices and legislated against "unreasonable profit" (ibid., ch.10.2). By the time of Basil II, merchants in regional and local markets appear significant enough to give rise to legislation concerning their participation in fairs (Reg 1, no.783). Their formal social status remains low, the Basilika (6:1.29) forbidding them access to the senate.

In the 11th C. the merchants of Constantinople acquired both wealth and, for a while, important social status. They were clearly a powerful group, courted by emperors such as Constantine IX, Constantine X, and Nikephoros III Botaneiates; they gained access to the senate, a privilege soon rescinded by Alexios I Komnenos. In the 12th C. merchants had no share in political power; nevertheless, some continued to prosper, as, for example, the money-changer Kalomodios. According to Benjamin of Tudela, Byz. merchants in this period sailed as far as Barcelona and Montpellier; they were in search of profit, as noted by Constantine Manasses (ed. Mazal, bk.9, fr.178). The competition of Italian merchants and the changes brought about by the Fourth Crusade also modified the position and the role of the Byz. merchant.

In the Palaiologan period Byz. merchants engaged primarily in local and medium-distance trade, sometimes independently and in competition with the Italians, sometimes in cooperation with them. Unlike earlier periods, the aristocracy participated heavily in trade, both as investors and as merchants. Women were important as retail traders (A. Laiou, JIB 31.1 [1981] 233–60), esp. in cloth, but also in alimentary products. They are attested in that role almost continuously, from the time of John Chrysostom until that of Ibn Battuta (p.160) who wrote that in the "bazaars" of Constantinople "the majority of artisans and sellers . . . are women." In the Palaiologan period, we also find women investing in shops and in relatively long-distance trade.

MERIAMLIK (now Ayatekla), site of the shrine of St. Thekla outside Seleukeia in Isauria. Egeria, on her pilgrimage in 384, noted several monasteries and the church of the saint, all surrounded with walls for protection against the Isaurians, whose attacks in the early 5th C. caused the church treasure to be removed to Seleukeia for safekeeping. The site contains two major churches: a richly decorated basilica built over the cave where St. Thekla allegedly descended into the earth, dated to ca.375 with redecoration in the 6th C., and a rectangular church with a central tower and an atrium with a large exedra. This latter church, similar in plan to Alahan Manastiri and others of the region, was apparently dedicated by Emp. Zenon. Meriamlik also contains a necropolis basilica, a bath, and remains of fortifications. Its history after the 6th C. is unknown.

MERISMS (μερισμός, lit. "division, apportionment"), term used in the Farmer's Law, par.8, in which the review was permitted of a merismos that had turned out to "wrong certain people in their lots (skarphia) or lands." The text has been interpreted (among others by Lipšic, infra) as evidence of the periodic redistribution of land in village communities of the 7th and 8th C. Kosmas Magistros, however, in the 10th C. applied the term to the division of lands that had been previously used by villagers in common (e.g., as pastures); this interpretation is supported by a charter of 943 referring to the judgment of Kosmas Magistros (Prot., no.6.7–8) and regulating the border between Mt. Athos and Hierissos. E. Lipšic (in
Zemledel'českij zakon, ed. I. Medvedev [Leningrad 1964], 148) suggests that the changes made between the 8th and 10th C. were so significant that it is impossible to apply Kosmas's judgment to the interpretation of the Farmer's Law. Even from the Farmer's Law, however, one cannot conclude that there was periodic redivision of the land: on the contrary, par.32 of this document speaks of the merismos of "an undivided place."

MERKOURION, mountainous area in northern Calabria. Merkourion comprised the valley of the Lao, one of whose confluent streams is still called Mercurion. The kastron of Merkourion, which no longer exists, gave the name to the homonymous eparchia, which might have been a tourma of Lucania. In the 10th C. the area was famous for its monastic settlements—"a new Thebaid"—which are mentioned in several Calabrian saints' Lives.

MERKOURIOS (Μερκούριος, Mercurius, Mar Qurios), saint; feastdays 25 and 26 Nov. His cult is attested by Theodosios Archidiaconos (6th C.) in Caesarea, Cappadocia (Itineraria Hierosolymitana, ed. P. Geyer [Leipzig 1898] 144). By that time a legend had spread (narrated in Malalas, John of Damascus, and Eastern sources) that ascribed to Merkourios the posthumous exploit of killing Emp. Julian. The Greek passiones preserved in 10th-C. and later MSS present Merkourios as a courageous warrior whom the emperor Decius appointed stratopedarches for his heroic deeds against the barbarians (Symeon Metaphrastes calls them Scythians); later Decius executed Merkourios for his Christian beliefs. The legends about Merkourios's martyrdom and his assassination of Julian were united only by Nikephoros Gregoras. Some Syriac texts regard Merkourios as one of the Forty Martyrs of Sebasteia. In the West the cult of the Cappadocian Merkourios seems to have been conflated with that of Mercurius of Eacleum, Apulia (feastday 26 Aug.), whose relics were transferred to Beneventum in 768 (H. Delehaye in Mélanges Godefroid Kurth, vol. 1 [Liège 1908] 17–24).

Representation in Art. Merkourios was one of the most popular military saints; his portraits in full armor abound in wall paintings and appear on 10th-C. ivories. In MSS of the menologion of Symeon Metaphrastes, he is more commonly dressed in court costume. He is young, with short brown curly hair and an incipient beard. His martyrdom by beheading is occasionally depicted in menologia, and his assassination of Julian (who has fallen from his horse and is speared by the mounted Merkourios) appears in the 9th C., in the Paris Gregory (fol.409v).

MEROBAIDES, FLAVIUS, 5th-C. general, senator, and Latin orator. Of Frankish origin, Merobaudes evidently moved to Spain, near the Baetis River. By 435 he was in Ravenna, where he achieved literary and military distinction at the court of Valentinian III. The inscription on an honorific statue at Rome (435) records his titles (vir spectabilis, comes sacri consistorii), honoring also his eloquence and military achievements. Merobaudes himself speaks of attaining the maximus honor, either the patriciate (which would have involved a trip to Constantinople) or an honorary consulate. In 443 he began successful campaigns against rebels in Spain but was recalled because of hostile court intrigues. Apart from the De Christo (Anthologia latina, ed. F. Buecheler, A. Riese, vol. 1.2 [Leipzig 1906] no.878), probably though not certainly his, his occasional pieces in prose and verse honor mainly his patron Aetius and Valentinian, the imperial family being celebrated in ekphraseis of mosaics that depicted them. These ekphraseis survive primarily in a damaged palimpsest MS of the 5th/6th C. Now his work is valued more for its historical information about Aetius and Ravennate art than for its literary quality.

MESARITES, NICHOLAS, writer; born ca. 1163/4, died after 1214. By 1200 Mesarites (Μεσαρίτης) held high ecclesiastical office—skewophylax at the Pharos church in Constantinople. He left the capital for Nicaea after his brother John died (5 Feb. 1207) and became metropolitan of Ephesus and exarch of Asia. In 1214 he headed an embassy to Constantinople for talks with Cardinal Pelagius; the dialogues with the Latins ascribed to him in this connection appear to be forgeries (G. Spiteris, OriChrAn 204 [1977] 181–86). Mesarites belonged to the “school” that questioned the traditional values of Byz. rhetoric and tried to create new aesthetic principles. His speech on the revolt of John Komnenos the Fat differed drastically from those of other contemporary orators (Nikephoros Chrysoberges, Euthymios Tornikios, and Niketas Choniates) as a result of his interest in vivid details and in his own role in the events. In the preamble he parodied the conventions of Byz. writing, including the traditional theme of working under pressure from a friend: according to Mesarites, he wrote his work because people in the street wearied him with their incessant inquiries. In the same way Mesarites described his journey from Pylae to Nicaea, or the fine food with which he was regaled in Constantinople. In his picture of the Church of the Holy Apostles he depicted Christ and his disciples in motion and asserted that he even sensed the smell of the sea—in sharp contrast with the conventional, rigid, and motionless presentation by his predecessor Constantine of Rhodes. Mesarites respected education deeply and described the school at the Holy Apostles in detail, but he disliked pedantry, abhorred the brutality of teachers, and derided the “quotational” method of argument.

MESAZON (μεσαζων), the emperor’s confidant entrusted with the administration of the empire. The word in the plural form mesiteuntes and with a nontechnical sense of “principal administrators” is used first by a 10th-C. historian (Genes. 61.90–91). In the 11th–12th C. the term mesazon became a semiofficial designation, Constantine (III) Leichoudes being the first to hold the rank. The title could be bestowed on any high official, such as the logothetes ton sekreton or kanikleios. Under the Palaiologoi the office of mesazon was institutionalized, even though pseudo-Kodinos does not assign it a specific rank on the hierarchical ladder; he knows, however, that the megas logothetes was supposed to fulfill the mesastikion, the duty of mesazon. A 15th-C. historian identified the mesazon with the Turkish vezir (Douk. 141.26). Describing the appointment of Demetrios Kydones in 1354, Kantakouzenos (Kantak. 3:285,5–9) emphasized that he lived within the palace not only because of imperial favor but also because, as mesazon, he was needed by the emperor “day and night.” Among the mesazontes of the 13th–14th C. were Theodore Mouzalon, Nikephoros Choumnos, Theodore Metochites, and John Apokaukos. The last known mesazontes in Constantinople were Loukas Notaras and Demetrios Palaiologos Kantakouzenos (Nicol, Kantakouzenos 193) in the 15th C. The office existed also at the courts of Morea, Epirus, and Trebizond; the mesazon of Trebizond acquired the epithet megas.

MESE (Μέση, lit. “middle [road]”), the central avenue of Constantinople. It started from the Milion, the initial milestone of the empire. The Milion was located on the Augustaeon square, in front of Hagia Sophia (its precise location has not yet been determined). A grandiose structure with a dome supported by four arches, it was adorned with imperial statues, including Constantine I and Helena holding a cross and guarded by the Tyche of the city; nearby were the equestrian statues of Trajan and Theodosios II (Janin, CP byz. 103f). In the part of the Mese called Philadelphia (according to tradition in honor of Constans I and Constantius II, whose statues were erected there), the street forked: one branch continued northwest, parallel to the Golden Horn,
toward the Gate of Adrianople; another angled southwest, ending at the Golden Gate; one section of this avenue branched off (after the walls ofConstantine) and led to the Gate of the Source (Pege).

The Mese connected the major public squares (forums or agora) of the city: after the Augusteion came the Forum of Constantine (sometimes simply called the Phoros), which was not rectangular like Roman forums but, according to the Patria, imitated the shape of the Ocean or of Constantine’s tent, that is, it was circular in shape. The Phoros was adorned with a marble arch, porphyry columns, and statues, including Constantine and Helena holding a cross, and the Tyche of the city holding the modios as a symbol of correct weight (or perhaps the modolos crown as conjectured by Dagron, CP Imaginaire 185, n. 1115). Michael I Rangabe ordered the hands of the Tyche to be cut off as a deterrent to popular revolts. Next came the Forum Tauri or the square of Theodosios I with the emperor’s statue atop a column and various other monuments; the remains of a marble structure (probably the triumphal arch of Theodosios) were found during the excavations of the square. The location of the Forum Amastrianum has not yet been identified. The texts place it between Philadelphia and the next square, the Forum Bovis (of the Bull), that is, at the beginning of the southwestern branch of the Mese. It contained many pagan statues, among others Zeus-Helios on a chariot of marble, and a pyramid with two bronze hands holding the modios. The Forum Bovis (on the southwestern branch of the Mese) took its name from an enormous bronze head of a bull brought from Pergamon and placed there; the square was adorned with porticoes and statues, among which were again Constantine and Helena with a cross. The last forum, the square of Arkadios, was located on the Xerolophos hill and adorned with a column, surmounted by a statue of Arkadios, and surrounded by the statues of other rulers (Theodosios II, Marcian, etc.).

Along the entire Mese were numerous churches and monasteries, of which the best known were the Holy Apostles, St. John Prodromos of Petra, Chora, Kecharitomene, and Christ Philanthropenos (on the northwest branch), and St. Mokios, Studios, and Dalmatou (in the area of the southwest branch). Various public buildings (e.g., Basilike), baths (of Zeuxippos), palaces, and mansions were constructed along the Mese. Fountains, cisterns, porticoes, statues, and other monuments (e.g., the Anemodoulion) also lined the course of the Mese. At the same time, the Mese was the main commercial center of the city, with depictions of the modios indicating the state control over merchants: workshops of jewelers, candle makers, fur-merchants, and bakers (Artopolia), and so forth were located in its vicinity, while the Makros Embolos connected the Artopolia (between the Forum of Constantine and the Forum Tauri) with the harbors of the Golden Horn. Some squares (Amastrianos, Forum Bovis) functioned as marketplaces and also as places of execution.

The avenue (esp. its southwest branch) served as the major artery for imperial processions and triumphs. The emperor usually entered the city through the Golden Gate and then paraded toward Hagia Sophia, being acclaimed at several “stations,” mainly the forums. For these processions the guilds were obliged to decorate the Mese and clean the streets and strew them with flowers.

**MESEMBRIA** (Μεσημβρία: Bulgarian Nesebûr), city on the Bulgarian Black Sea coast, 35 km northeast of Burgas, on a small rocky peninsula linked to the mainland by a narrow causeway. Prosperous in Hellenistic times but declining under Roman rule, in the 7th–8th C. Mesembria became an important Byz. naval and military base, a place of exile, and the seat of a bishop. From this period or earlier can be dated two basilicas, including the three-aisled Old Metropolis built of coursed rubble with brick arcades. Captured by Krum in 812, Mesembria had returned to Byz. allegiance by 860 and continued to play a significant role as a Byz. base. In 1078 a revolt broke out in the city, led by one Dobromir, presumably a Bulgarian. At the end of the 12th C. Mesembria was incorporated in the Second Bulgarian Empire but frequently changed hands in the following two centuries. Despite political instability, the city developed economically; the many late Byz. churches—some built under Byz. patronage, some under Bulgarian—bear witness to its prosperity. Mesembria remained in Bulgarian hands until in 1367 it was captured, sacked, and returned to Byz. control by Amadeo VI of Savoy. Thereafter it remained a Byz. city until 1452, when Constan-
tine XI ceded it to Janos Hunyadi. In Feb. 1453 Mesembria surrendered to the Ottoman Turks, only three months before the capture of Constantinople.

Many medieval buildings survive, including the two basilicas and seven churches dating from the 11th to 14th C. Especially notable is St. John Aleitourgetos, which, like other churches at Mesembria, is elaborately decorated on the exterior with ceramic ornament in the manner of Apokaukos’s church at Selymbria. A cross-in-square building, its ruined bema and prothesis chamber retain fragmentary frescoes depicting liturgical scenes. Many of the late Byz. defense works are still visible.

—R.B., A.C.

MESOPOTAMIA (Μεσοποταμία, “land between the rivers”), geographical name of all the territory between the Euphrates and Tigris rivers. The name was also used to refer to both a province and a theme in the Byz. Empire.

PROVINCE OF MESOPOTAMIA. From the 4th to 7th C., Mesopotamia was a civil and ecclesiastical province of the diocese of Oriens. It extended from the province of Osroene north and east toward the Tigris and Chaboras rivers. The capital of the province and seat of the doux of Mesopotamia with authority over the local limitanei was Nisibis until the mid-4th C. Following Julian’s defeat, Jovian ceded to Persia by the treaty of 363 Nisibis, Singara, and lands beyond the Tigris that had been gained by Diocletian in 296–97. Thenceforth the provincial capital was Amida and the doux of Mesopotamia was stationed at either Constantina or, later, Dara; other cities included Martyropolis and Kephas.

War with Persia resumed under Kavad, thus compelling Anastasios I to found Dara and fortify other cities; the work continued under Justinian I. In the early 6th C. Mesopotamia was subdivided into three civil and/or ecclesiastical provinces: to the north was Armenia IV, with its capital at Martyropolis; south of the Tigris was Mesopotamia, with its capital at Amida; and below that was southern Mesopotamia, whose capital was at Dara and which had jurisdiction over the Tur ‘Abdin. Maurice’s alliance with Chosroes II in 591 allowed Byz. to recover certain territories (including Dara) lost to Persia in 573, but the new war (from 605 on) led to further territorial losses until Herakleios destroyed the power of Persia between 623 and 628. Between 633 and 640 the region fell to the Arabs.

—M.M.M.

THEME OF MESOPOTAMIA. The Byz. theme of Mesopotamia was organized to the northwest of the province of Mesopotamia. The date of its formation is unclear: it is usually accepted that Mesopotamia was created between 899 and 911 (Oikonomides, Listes 349). There is, however, a seal of the strategos of Mesopotamia probably dating from 825/6 (Zacos, Seals 1, no.284). Still called a strategos in the 10th-C. Taktikon of Benešević, the commander of the theme became doux before 971 or 975. In the 11th C. the theme was commanded by Armenians (Gregory Magistros and his son Vahram); Michael VII tried to reestablish Greek administration in Mesopotamia (Skabanovitch, Gosudarstvo 198). By the end of the 11th C. the Seljuks had conquered the region.

—A.K.

MESOPOTAMIA TES DYSEOS (Mesopotamia “of the West”), Byz. military district mentioned in the Escorial Taktikon (Oikonomides, Listes, p.269,16). It was probably situated in the Danube delta and/or between the lower Danube and the Dniester, comprising territory conquered from Svyatoslav by John I Tzimiskes in 971. Partly re-conquered by Samuel of Bulgaria, the territory was later incorporated in the new Byz. theme of Paristrion. The name may be a translation of “Atelkouzou” (De. adm. imp. 38,30, 40,24; i.e., Old Hungarian Etelkúzú, “between the rivers”). The Byz. fortresses of Capidava and Pâcuilul lui Soare probably formed part of its defenses. Its capital may have been Little Preslav.

LIT. N. Oikonomides, “Recherches sur l’histoire du Bas-Danube aux Xe–XIe siècles: La Mesopotamie de l’Occident,”
MESOPOTAMITES (Μεσοποταμίτες, fem. Μεσοποταμίτισσα), a family probably originating from Mesopotamom in Epiros (Moritz, Zunamen 2:34, n.1) or a place called Mesopotamia. The family became prominent in the 11th C. as military commanders: Basil, Alexios I's general, was praised by William of Apulia as an experienced warrior; George was deus of Philippopolis. Manuel I's contemporary, Nicholas Mesopotamites, was extolled by an anonymous poet for adorning the Virgin's icon (Lampros, "Mark. kod." 185, no.366.16). In the late 12th C. the Mesopotamitai occupied important posts in the civil administration: Constantine the kanakeios, Isaac II's favorite, was eulogized by Nikephoros Chryssoberges in an unpublished speech (Kazhdan-Franklin, Studies 226f). As a result of the protection of Empress Euphrosyne Doukaina Kamatera, Constantine acquired the highest place in the administration of Alexios III, along with his two (unnamed) brothers; Constantine had an ecclesiastical career as well, and Patr. George II Xiphilinos granted him special permission to serve both state and church. Later he fell from imperial favor and ca.1196-98 was appointed metropolitan of Thessalonike to remove him from the court; he remained metropolitan until sometime between 1222 and 1228. Several Mesopotamitai were civil officials at the end of the 12th C., including Michael, protonobelissimos hypertatos in 1195. Joseph Mesopotamites was imperial secretary, close to the circle of the Crown Prince Theodore Laskaris, but in 1253 he fell into disgrace and came under investigation (Angold, Byz. Government 163). The Mesopotamitai played a substantial role in church administration: Mesopotamites Konstomeres was metropolitan of Neopatras in the early 13th C.

Some Mesopotamitai bore the name not because they belonged to this family, but because they were monks of the Mesopotamon monastery in Epiros, which is attested in the 11th C. G. Astruc-Morize (Scriptorium 37 [1983] 105-59) suggested that Isaac Mesopotamites, the owner of several MSS produced in the mid-13th C. and metropolitan of Smyrna ca.1261, was a monk at Mesopotamon.

MESOTHYNIA. See Bithynia.

MESROP MAŠTOC', inventor of the Armenian script; born Tarōn mid-4th C., died Vafarşapat 17 Feb. 439 or 440. He is known as Maštoc' in the earliest sources and as Mesrop in the 8th C. and later. Modern writers often combine the names.

After an early career at the Armenian court Mesrop Maštoc' became a hermit. By the end of the century he was engaged in missionary activity in outlying areas, accompanied by a group of disciples. Encouraged by King Vram-Shapuh and Patr. Sahak, he sought help in northern Syria to compose a script. Circa 400, with the help of a Greek calligrapher, Rufinus, he created the Armenian alphabet at Samosata. This was based on the Greek alphabet with extra letters intercalated. The first book translated was the Proverbs of Solomon. (See ARMENIAN LITERATURE.)

According to his pupil and biographer Korjun, Mesrop Maštoc' also invented scripts for Georgian and Caucasian Albanian; this is not confirmed by non-Armenian sources. Mesrop Maštoc' spent the rest of his life in missionary activity and in organizing with Sahak the first groups of translators.

MESSENGER, the ascetic and pietistic movement of the Messalians (Μεσσαλιανοί, from Syriac mslyn, "praying people"), also termed Euchitai; it probably originated in Mesopotamia in the 4th C. and spread to Syria, Egypt, and Asia Minor. The Messalians never formed an institutionalized sect, nor did they develop any doctrine or create a hierarchy (J. Gribomont in Epektasis [Beuchesne 1972] 611). They expressed the feelings
of radical groups within Christianity: they believed that a demon is encamped in man’s soul and that neither baptism nor other sacraments suffice to expel him; only the “baptism of fire” or spiritual purification can liberate men from the power of evil (A. Guillaumont in Mélanges d’histoire des religions offerts à Henri-Charles Puech (Paris 1974) 517–23); the instrument of purification is first and foremost prayer, through which man attains freedom from passions and the Holy Spirit descends upon him. The leading exponent of Messalianism was Makarios/Symeon.

Attitudes toward Messalians were ambivalent: on the one hand they were criticized by Ephrem the Syrian, Epiphanius, and later theologians such as John of Damascus and Euthymios Zigabenos; they were condemned by local councils in Side and Antioch in 390 and at the Council of Ephesus in 431. On the other hand, some church fathers such as Eustathios of Sebasteia and Gregory of Nyssa described them with sympathy; extreme monastic asceticism in Syria and Mesopotamia had much in common with Messalian practice.

Both names, Messalians and Euchitai, appear in later antithetical polemics: Psellos composed a dialogue against Euchitai in Thrace who worshiped Satan (M. Wellenhofer, BZ 30 [1929–30] 477–84), and Patr. John XIV Kalekas attacked the “modern Messalians” (Beck, Kirche 712). Evidently, these Messalians had no direct connections with the extremist movement of the 4th–7th C.

—T.E.G.

MESSINIA (Μεσσηνία), a region in the southwestern Peloponnesos bordering on Elis, Arkadia, and the Taygetos mountain chain. The data from the period of the Roman Empire are scarce; among a few inscriptions with names of emperors, the latest is what may be a milestone from Haliartos mentioning Constantine I and his sons (Inscriptions Graecae 5.1 [Berlin 1913] no.1420); some large estates existed in the western valley (U. Kahrstedt, Die wirtschaftliche Gesicht Griechenlands in der Kaiserzeit [Bern 1954] 220–34). The name of the city of Messene is still to be found in Hierokles, and the Peloponnesian bishopric of

“Mossina” appears in a notitia (Notitiae CP 3:766). In the 7th–8th C. the territory was invaded by the Slavs, who left some traces of their language in local toponymy. Thereafter the name Messinia disappears from the sources, with the exception of certain archaising writers such as pseudo-Sphrantzes, who speaks of the Messeniac Bay (Sphr. 278.23, 280.4–5). Korone, Methone, and, to a lesser extent, Kalamata were the most important cities; remains of several Byz. and Frankish monuments survive there and elsewhere in Messenia. The most significant fresco program is that at the Church of the Virgin Zoodoschos Pege at Sama- rina, painted ca.1200 in a style that is already emerging from late Komnenian formulas (C. Scheven-Christians, Die Kirche der Zoodoschos Pege bei Samari in Messenien [Bonn 1980]).

—A.K., N.P.S.
Muslim support against Roger (Chalandon, Domination normande 1:192–96).

Greeks continued to play a role in Messina after the Norman occupation: the archives of the monastery of S. Maria di Messina contain Greek documents beginning with a deed of purchase dated 1076/7 as well as Latin acts, the earliest of which is the grant of bishop Robert of Triona and Messina of 1103. The typhikon of the monastery of the Savior (S. Salvatore) in Messina was compiled in Greek by the archimandrite Loukas in 1131. In the 13th and 14th C. merchants from Messina were active traders in the East.

Monuments of Messina. Destroyed by an earthquake in 1908 and by bombardment in World War II, Messina has only a few extant medieval monuments. The earliest survivors are S. Annunziata dei Catalani (12th C.) and, outside the city, S. Maria near Mili San Pietro, founded by Count Roger I around 1092. On the site of the destroyed Basilian monastery of S. Salvatore is the Museo Regionale, displaying objects from the buildings ruined in 1908, including byzantinizing mosaics from S. Gregorio (13th C.); the sarcophagus of Loukas, archimandrite of the Patir monastery (died 1175); and a marble icon of the Hodegetria copied from an 11th-C. exemplar in Istanbul.

METALLURGY, the extraction of metals from their ores, normally at sites near mines. The metal was then formed into INGOTS (mazia) which were sold to smiths for fabrication into metal objects.

Iron. Ironmaking in the Roman period was often divided into two states, roasting and smelting. Crushed iron ore was roasted in open furnaces, with wood as fuel, to remove excess water or carbon dioxide. The roasted ore was then smelted, at a higher heat, in small furnaces, using charcoal as fuel. The resulting spongy mass of iron was then alternately hammereded and heated to produce ingots. Remains of furnaces and slag heaps have been found at numerous archaeological sites, for example, in the Crimea (A. Jakobson, Srednevekovye sel'skie poseleiniya Jugo-Zapadnoj Tavriki [Leningrad 1979] 164–68), and in Capidava, Pâciului lui Soare, and Dinogetia (E. Zah, Pontica 4 [1971] 191–207). It is sometimes said that before the 14th C. only wrought iron was made, and that the temperatures in the furnaces could not be raised sufficiently high to produce molten cast steel. In the 5th or 6th C. the lexicographer Hesychios of Alexandria explained the word kalathos as a vessel in which iron was melted (R. Halleux, Le problème des métalx dans la science antique [Paris 1974] 197).

Copper. After being smelted from its ore, it was alloyed with tin to form bronze or with zinc to form brass.

Silver and Gold. Silver and gold were extracted from lead and other base metal ores by a process called cupellation. They were heated in a furnace to a temperature of about 1,000 degrees centigrade and oxidized with air from a bellows. The extracted metal was very soft and hence was usually alloyed with copper. Sometimes gold nuggets could be panned from streams and needed no further refinement.

—A.M.T., A.K.

METALWORK. The metals most used in Byz. were GOLD, SILVER, BRONZE, LEAD, and IRON. Imitations of gold and silver were obtained by applying gold, silver, and tin leaf to other metals. Related metallic effects were gained by glazes and glosses added to ceramics, while glass objects copied those in metal—eventually, perhaps, replacing some domestic gold and silver plate. Precious metals were sometimes counterfeited, and therefore a touchstone was used by the silversmith to test for purity. Metals were obtained from mines but were also recycled, particularly for coins. At least in the 4th C., metals were transported by the state in the form of ingots. State metalworking extended to gold, silver, and bronze coins, gold Medallions, Largitio Dishes, Jewelry, Weapons, and Armor (including ceremonial armor embellished in gold and silver by the Barbaricarii) and, apparently, from the 4th to the 7th/8th C., certain silver objects marked with imperial Silver Stamps. Lead seals were produced for civil, military, and ecclesiastical officials of all
ranks. Public and private metalworking establishments functioned simultaneously: the Book of the Eparch (Bk. of Eparch 2.1, 11) refers to the independent ergasteria of silver- and goldsmiths in Constantinople and stipulates that the chrysochooi be grouped together on the Mese. Coppersmiths (see Smith) were apparently located near the Chalkoprateia church.

Byz. metalwork generally preserved Roman techniques, with the notable exception of the manufacture of large-scale bronze statuary, which had ceased by the early 7th C. Techniques that did continue included the application of hammered sheets of gold, silver, and bronze to furniture and architectural members as metal revetments and the related treatment of doors. The survival of advanced metalworking techniques is suggested by the existence of automata. Smaller scale Byz. metalwork included the production of gold plates used from the 8th C. onward in making enamels; domestic plate, household fittings (see Tools and Household Fittings), utensils, and liturgical vessels in silver and bronze produced by both hammering and casting techniques; and forged iron tools. Gold and silver objects display diverse techniques of decoration, for example, raising decoration from the reverse (repoussé) or from the front (engraving and chasing) and openwork (as on the Antioch “Chalice”); embellishments, included gilding and inlaying of details in niello and encrustation with gems or enameled plaques. Techniques used for jewelry were likewise varied.

In contrast to the investigation of 4th–7th C. silver and bronze, so far very little scientific research has been undertaken on works of the 9th C. and later (M. Cagiano de Azevedo, BICR 9–10 [1952] 23–40). It is clear, however, that the size and weight of cast bronzes was reduced and silver usually employed only in thin sheets after the 9th C.; in the 15th C. Bessarion complained that metalwork was no longer to be expected in Byz. The account in De ceremoniis of the preparation for the Cretan campaign of 960–61 is extremely useful for the list of implements and weapons it provides, for some information about their cost and the quantity, as well as for the cost of lead, copper, and tin valued in the ratio of 4:18:34 (De cer. 675.14–15, 676.2–3). Alchemical MSS may someday provide clues to the composition of alloys, methods of refining metals, and casting and gilding; for the time being they have been insufficiently studied. (See also Metallurgy.)

—M.M.M., L.Ph.B.

METAMORPHOSIS. See Transfiguration.

METANOIA (Metánoia), female personification of Repentance (see Penance), associated with David’s remorse for his sin with Bathsheba (2 Sam 12). Metanoia occurs in the Paris Psalter and related MSS (Buchthal, Paris Psalter, figs. 8, 54) and embodies the sentiment physically conveyed by the king’s attitude of proskynesis. Metanoia is depicted as a classicizing figure, garbed in a chiton and raising one hand to her chin in the Antique gesture of meditation or mourning.

—A.C.

METAPHOR (μεταφορά, lit. “transference”), a compressed simile in which two objects are juxtaposed by analogy. Eustathios of Thessalonike (Eust. Comm. II. 4:523 [1242.33–35]) states that poetry requires “unusual imagery” (terastion), citing as an example Iliad 21:388, “heaven trumpeted.” “Had [Homer] said ‘heaven thundered,’ it would not have the effect of a paradox,” comments Eustathios. In the wake of antique classification, the Byz. used metaphors aimed at the animation of the material world (apo empsychon eis apsycha), so that, for example, arrows would be called bloodthirsty. Especially important was metaphor in relation to religious objects or persons worthy of veneration: the Virgin was the new Eve, ekklesia, a well, crown, rose, burning bush, rod of Aaron, closed garden, and so on; the cross (according to Germanos II) was the throne of God, a ladder to heaven, the imperial scepter, the altar, the couch of the Lord, and so on (PG 140:637B–640A). The effect of metaphors was enhanced by their agglomeration, exaggeration, and conjunction with puns. On the other hand, traditional and “stable” metaphors (e.g., “time rides by”) were not perceived as such. Vestiges of popular everyday metaphors, including references to sexual and bodily functions, are infrequent in “pure”
METATORION (μετατοριόν; also mitatorikon, etc.), a room in Hagia Sophia, Constantinople, and perhaps other churches. The term first appears in Theodore Lector (127.26–27), who relates that some conspirators attacked Patriarch Euphemios (489–95) “in front of the metatorion.” According to the Narrative on the Construction of Hagia Sophia (Pregler, Scriptores 104.1–3), Justinian I erected a metatorion, that is, a chamber (koiton), paneled with gold, where he might rest whenever he went to the church. In the Book of Ceremonies Constantine VII Porphyrogennetos often mentions the metatorion as a chamber in the Great Church that “the lords” enter during great feasts (De cer. 566.1–4); after taking communion in a chapel, the emperor moved into the metatorion (88.10–11); here he changed his clothes (192.18–19) and took breakfast together with his megistanes and senators (18.2–4). This implies that the metatorion was a substantial space housing a suite consisting of a narrow triklinos (the place for breakfast), the metatorikon proper, and a koiton (194.21–23). The precise location of the metatorion is not clear: Constantine variously describes it as situated near the bema and altar (17.12, 145.16–17), behind the gate of the narthex (64.4–5), or in the gallery (157.16); even more enigmatic is the evidence of chroniclers (e.g., TheophCont 370.18–20) that when Nicholas I Mystikos prohibited Leo VI from entering Hagia Sophia, the emperor went to the metatorion “via the right side.”

This diversity of evidence in the sources has resulted in diversity of scholarly opinions: there is disagreement as to whether there were one, two (Dagron, *CP Imaginaire* 256, n.192), or even three (Strube) metatoria; and whether it was housed in the southeast exedra (Majeska, *Travelers* 228) or in the south nave (Strube), or inside or outside the church (D.F. Beljaev, *Byzantina* 2 [St. Petersburg 1893] 128). In the Madrid MS of John Skylitzes the term is attached to a domed structure in which Leo VI reads Samonas’s attack on icons (Grabar-Manoussacas, *Skylitzès*, no.268). Attempts to identify certain parts of excavated churches as metatoria (D. Pallas, *EEBS* 20 [1950] 295–307) are highly hypothetical (P. Lemerle, *REB* 10 [1952] 185).

METEORA (from μετέωρος, “floating in the air”), a group of monasteries built on rocky spires in northwestern Thessaly near Stagai. The spectacular outcrops of this region, from 200 to 300 m high, are formed of eroded conglomerate and riddled with caves that provided shelter for the hermits who first settled there. Organized monasticism developed quite late at Meteora; its first attested establishment was the early 14th-C. skete at Doupiane under the supervision of a protos. A number of Athonite monks moved to Meteora to escape Turkish pirate raids. The oldest surviving church is the katholikon in the rock-cut monastery of the Hypapante, built, according to a later inscription, in 1366/7. Its well-preserved decorative program (T. Velmans, *La peinture murale byzantine à la fin du Moyen Age* [Paris 1977] 2017) includes painted local bishops such as Achilleios of Larissa and Oikoumenios of Trikka. The most important monastery at Meteora was the Great Meteoron, dedicated to the Transfiguration and founded by Athanasios of Meteora in the late 14th C. The second founder of the Meteoron was John-Ioasaph Uros (1373–1423), son of Symeon Uros, “emperor” of the Serbs and Greeks in Thessaly; he eventually became head or “father” of the Meteoron. The cross-in-square church that he founded in 1388 now serves as the bema for the 16th-C. katholikon. The monasteries of St. Stephen and St. Nicholas Anapausas were also founded in the late 14th C., Hagia Trias in 1476; the Church of St. Nicholas Anapausas, built in 1527, has frescoes by Theophanes of Crete. Other monasteries, including Barlaam, Roussanou, and Prodromos, were post-Byz. foundations of the 16th C. when the Meteoras were at the height of their prosperity and provided a bastion of Orthodoxy during the Turkish occupation of Greece.

—A.M.T. A.C.

**METHODIOS**, bishop of Olympos in Lycia, perhaps also of Patara, Philippi, and Tarsos; saint (martyred ca. 311); feastday 20 June. His one extant work is the *Symposium* or *On Chastity*, a dialogue in which ten maidens extol their purity, in contrast to the celebration of Eros in Plato’s *Symposium* (T. Miller in *Antičnost’ i Vizantija* [Moscow 1975] 175–94). Two main themes are Origenist asceticism and Irenaeus recapitulation. Attached as postlude is his *Partheneion* (Maidens’ Song—The Greek title perhaps deliberately recalls Alcman), a hymn to Christ, Mary, and the Church (virginity again the connecting theme), in iambic strophe with acrostics and refrain, the first Greek fore-runner of the kontakion. Methodios was also an active polemicist, attacking Origenist notions of the human body and time in a treatise on the resurrection (*Aglaothron*) and Gnostic fatalism in an essay on free will (I. Dujčev, *Balcanaica* 8 [1977] 115–27); extracts from the Greek text survive. His Plotinian view of time and his development of a dualism between historical and eternal existence, akin to Plato’s form-matter dichotomy, have been seen as a critical influence on the theology of the *Cappadocian Fathers* (B. Otis, *DOP* 12 [1958] 118–20). Other works, mainly scholarly exegesis of Old Testament lore, survive only in Church Slavonic translations. The lost work most to be regretted is probably his refutation of Porphyry. (See also *Methodios of Patara, Pseudo-*.)

—B.B.

**METHODIOS**, missionary to the Slavs and saint; born Thessalonike ca. 815, died 6 Apr. 885; feastday 6 Apr. His baptismal name was perhaps Michael. The brother of Constantine the Philosopher, Methodios began his career as an administrator, serving as archon of a “Slavic prin-
cipleship" in Macedonia. About 850 he abandoned his wife and withdrew to Mt. Olympos in Bithynia, where he eventually became hegoumenos of the "Polychron" (= Gr. Polychronios?) monastery and perhaps was ordained a priest. He may have accompanied Constantine on his trip to Khazar in 861. Emp. Michael III sent Methodios and Constantine to Moravia in 863. The extent to which Methodios helped Constantine create the Glagolitic alphabet and translate Greek texts into Church Slavonic is unclear. He journeyed with Constantine to Rome in 867, and in 869 Pope Hadrian II consecrated him bishop.

Returning to Pannonia and Moravia in 870, Methodios was arrested by the Franks, tried, and imprisoned in Swabia. After being released in 873, he worked hard to organize a native church in Moravia, despite pressure from the Franks, who forced him to go to Rome in 879 to defend his orthodoxy. He returned to Moravia in 882 via Constantinople, where he obtained support for his efforts from Photios. According to his Life, probably written by Kliment of Ohrid, in 884 he completed translating the Bible. Other translations attributed to him after Constantine’s death include “patristic books,” the Synagoge of 50 Titles of John III Scholastikos (see Nomokanon), and a kanon for the office of St. Demetrius. The many liturgical works available in Church Slavonic after his death, including the Triodion, Heirmologion, and Oktoechos, may have been translated under his direction. He may also have composed Constantine’s vita.

METHODIOS I, patriarch of Constantinople (4 Mar. 843–14 June 847) and saint; born Syracuse second half of 8th C., died Constantinople; feast day 14 June. A son of influential parents, Methodios went to Constantinople to continue his education but instead entered the Chelonakkos Monastery in Bithynia; he subsequently became hegoumenos either there or in another monastery. After 815 Methodios traveled to Rome, probably as a representative of the deposed patriarch Niképhoros I; upon his return in 821, he was arrested and exiled by the Iconoclast government. Released in 829 he assumed importance at the court of Theophilos; elected patriarch after the latter’s death, Methodios was instrumental in the restoration of icon veneration in 843 (see Triumph of Orthodoxy). Difficult political problems ensued: while Methodios tried to be moderate toward former Iconoclasts, the radical Stoudites urged him to inflict severe punishments on heretics; they criticized Methodios for his defense of the opportunistic patriarchs Tarasios and Nikephoros. These attacks by the extremists forced Methodios to excommunicate and confine some intransigent monks (I. Doens, C. Hannick, JÖB 22 [1973] 93–102). The patriarch’s attitude toward the West is poorly known; it is worth attention that his name was inscribed in the Reichenau Liber confraternitatum alongside that of the local abbot Heito who resigned in 822/3 (H. Lowe, DA 38 [1982] 341–62).

A well-educated man, Methodios is known as a copyist of MSS (P. Canart in Palaeographica, Diplomatica et Archivistica I [Rome 1979] 343–53) and a writer; his own writings include polemical, liturgical, and hagiographical works (e.g., biographies of Theophanes the Confessor and Euthymios of Sardis), poetical kanones, and homilies. The authorship of some works attributed to Methodios (e.g., a vita of St. Nicholas) remains contested. The vita of Methodios (BHg 1278) is anonymous and poor in information.

relatives of Alexander the Great); and prophetic, describing the Arab conquest and their future defeat by the Byz. The consensus is that the text was written in Syriac (even though Syriac MSS are of later origin), probably in Mesopotamia, although M. Krivov (VizVrem 44 [1983] 215–21) hypothesizes that it was produced in a milieu of Syrian refugees in Byz. Apocalyptic in its essence, the text is hostile toward the Arabs and full of anticipation of their defeat. The major difficulty in its interpretation is the statement that the Byz. victor over the Arabs will issue forth from the Ethiopian sea: M. Krivov (VizVrem 38 [1977] 120–22) interprets this as an indication of a Greco-Ethiopian alliance against the Arabs, P. Alexander (ADSV 10 [1973] 21–27; AHR 73 [1968] 106ff) as a replacement of the traditional expectation of Ethiopian triumph by the hope of Byz. victory. The Latin version is known from MSS of the 8th C. In Byz. the prophecy became esp. popular from the 14th C. onward—the Greek version survives in four redactions in 14th–17th-C. MSS.

METHONE (Μεθώνη), or Modon, city of Messenia in the far southwest corner of the Peloponnesos, an important naval station on the route between the Aegean Sea and Italy. Attested as a city in late antiquity (Hierokl. 647.17), it was visited by Belisarios on his way to North Africa in 533. Methone apparently survived the Slavic invasions more or less intact, and it was undoubtedly strongly fortified. The city suffered considerably from Arab devastation in the 9th–10th C., although it did receive refugees from other parts of the empire; in 881 the Byz. admiral Nasar donated the booty he took from the Arabs to the church of Methone (TheophCont 304.13–14). The city apparently prospered during the 11th–12th C., but it also became the lair of pirates, and the Venetians attacked it in 1125 and destroyed the walls. Methone played a crucial role in east-west trade and it was one of the ports that Alexios III opened to Venetian traders in 1198. To many of the Crusaders the Peloponnesos was known as the isle de Modon (Robert of Clari 111), reflecting the central role the city played for many Westerners; Geoffrey I Villehardouin landed at Methone in 1204 and began his conquest of the Peloponnesos there. The Partitio Romaniae, however, granted Methone to Venice and, along with Korone, Methone remained under Venetian control (despite struggles with the despotate of the Morea) until 1500, when it fell to the Ottomans.

The bishop of Methone was originally subject to Corinth (Notitia CP 3.762), but by the 10th C. he was a suffragen of Patras (7.551). The best known bishops were St. Athanasios of Methone (late 9th–early 10th C.) and Nicholas of Methone, who provided an interesting contemporary description of the city (J. Draseke, BZ 1 [1892] 445). The Venetian overlords retained the Greek bishop of Methone, who in 1301 was under the jurisdiction of Monemvasia (Laurent, Corpus 5.1.482).

The walls of Methone are primarily Venetian in date, but they are mostly built on Byz. foundations and many Byz. spolia are used in them. Near the city is a Christian catacomb of St. Onouphrios, similar to some in Sicily and southern Italy, dating from the 4th C. (D. Pallas, ArchEph [1968] 119–73).

METHYMNA. See Lesbos.

METOCHION (μετόχιον), a monastic establishment (usually small), subordinate to a larger independent monastery. The word is not found in papyri and was probably not in use before the 9th C. Metochia were frequently founded in the countryside near monastic properties located at some distance from the monastery, to facilitate the supervision of the estates. They were also established in cities as an urban base of operations for the monastery and as a residence for monks visiting the city for business or other purposes.
As few as one or two monks might live in a metochion on a permanent basis; they were under the jurisdiction of the hegoumenos of the controlling monastery and followed its rule. A metochion had its own church or chapel, and sometimes, as at the Skoteine Monastery, owned a significant number of liturgical books and sacred vessels. Especially in the later period, a monastery in decline might be transformed into the metochion of a more prosperous monastery; an example is the monastery tou Hagiopatitou, which was transformed in 1257 into an agrus belonging to another monastery (Koutloum, no.2.8).

METOCHITES (Μετοχιτής), an important family of the Palaiologan era whose name derived from METOCION (cf. also modern Greek metochites, “monk of a metochion”). George Metochites (born ca.1250) was archdeacon in Constantinople (1276–82) and went as an ambassador to several popes between 1275 and 1278. A supporter of the Union of the Churches and friend of Patriarch John XI Bekkos, he was dismissed and imprisoned in early 1283. While in prison, where he died in 1328, he wrote several theological works, including the so-called Dogmatic History, in which he relates the theological controversies that followed the Council of Lyons in 1274.

His son Theodore (see METOCHITES, THEODORE), the renowned statesman and writer, had five sons, who also took part in administration, esp. as governors and generals: Demetrios Angelos Metochites (fl.1326–55); Nikephoros Laskaris Metochites (megas logothetes, 1355–57); Michael Laskaris (ca.1326); Alexios Laskaris Metochites (megas domestikos, 1355–69); and the fifth son whose name is unknown. Theodore’s daughter Irene married John Palaiologos (caesar, after 1325). The exact relationship of some other, later members of this family is unknown: Manuel Raoul Metochites in Mistra (1362–80), correspondent of the writer Manuel Raoul; Laskaris Metochites (megas chartoularios in Thessalonike, 1373–76); Andronikos Metochites (archon in Thessalonike, 1421); and Demetrios Palaiologos Metochites, megas stratopedarches (1444–53) and gover-

nor of Constantinople, who died together with his sons during the Turkish conquest of 1453.

METOCHITES, THEODORE, statesman, scholar, and patron of the arts; born 1270, died Constantinople 1332. Son of the pro-Unionist George Metochites, he followed his father into exile in Asia Minor in 1283. Despite this serious handicap to a future government career, Metochites, who maintained orthodox views, came to the attention of Emp. Andronikos II in 1290 because of his unusual scholarly attainments and entered imperial service. The cursus honorum of Metochites included the positions of logothetes ton agelon, logothetes ton polemarchon (1295), logothetes tou genikou (1305), and megas logothetes (1321). He was also

entrusted with the delicate negotiations for the marriage of Michael IX to Rita-Maria of Armenia (1295) and of the child-princess Simonis to the Serbian king Stefan Uroš II Milutin (1298/9). From 1305 onward Metochites held the important office of Mesazon, or prime minister, replacing his rival Nikephoros Choumnos. Because of his close ties with Andronikos II, he shared in the elderly emperor’s downfall in 1328. He was imprisoned, his palace destroyed, and his vast wealth confiscated. After a miserable period of exile in Didymoteichon, he returned in 1330 to Constantinople, where he ended his days as the monk Theleptos at the monastery of Chora.

Statesman by day, Metochites devoted his evenings to scholarly pursuits. He was a prolific and versatile author, who wrote commentaries on Aristotle, miscellaneous essays, an Introduction to Astronomy, orations, hexameter poems, and hagiographical enkomia. All of his writings except his letters are preserved; much remains unpublished, however, because of his notoriously obscure style. Metochites devoted much attention to classical antiquity, writing essays on ancient Greek history and comparing Demosthenes to Ailios Aristides. He was somewhat overwhelmed by the ancient heritage, arguing that nothing was left for his generation to write about. He was conscious of the decline of the empire, realizing that Byz. was one in a series of world empires; like a living organism it had periods of growth, prosperity, and decay. He emphasized the instability of human life, but hoped to gain immortality through his literary endeavors.

Metochites was an avid collector of books. The scope of his library is reflected in the allusions to more than 80 ancient authors in his writings. He donated his library to the Chora monastery, whose church he restored between 1316 and 1321. His mosaic portrait is preserved in a lunette panel in the church’s inner narthex.

METROKOMIA (μητροκομία, lit. “mother-village,” perhaps formed on the model of metropolis): a rare term that designated a type of rural district. Interpretation of the term varies: a privileged village (Gelzer, Verwaltung Ägyptens 75, 78), administrative center of a region-pagus (A.C. Johnson, L.C. West, Byzantine Egypt [Princeton 1949] 325), tax district (Lemerle, Agr. Hist. 8, n.2). The term is known from inscriptions in Syria (e.g., Dittenberger, Orientis 2, n.609) and Egypt (no.769, the reign of Diocletian) but not from papyri. The edict of 415 (Cod. Theod. XI 23.6) established that only fellow villagers (convicani) could possess lands there and no patrocinium could be imposed upon metrokomiari. The term reappears in 10th-C. legislation: a novel of Romanos I (Zepos, Jus 1:201.5–8) refers to an “old law” (probably that of 415) forbidding sales of land to persons other than the inhabitants of the same metrokoma; a novel of Constantine VII of 947 (1:217.15–18) allows the purchase of land only by fellow villagers (synchronai) and, in case of emergency, by villages (choria) of the same metrokoma or kometoura. The term was not employed in charters.

METROLOGY, the study of the measures used for length, surface, volume, weight, and time, along with the relationships among these. This study is based on various literary texts, including both theoretical works and practical texts, and on surviving items such as coins, weights, and buildings (all of which presuppose standards of measurement). A primary problem in the interpretation of the texts is the use of one term for different measures and, vice versa, the use of different terms for the same measure; in addition, it is frequently difficult to distinguish between theory and practice and to determine which standards were actually in effect at a given time. This is exacerbated by the existence of numerous local systems, many of which had no connection with the official standard. In addition, Byz. systems of measurement grew out of ancient practice, and many ancient names survived when the medieval reality had changed totally. The state maintained control over measures and, although standard measures were commonly made available to the
public to facilitate trade and commerce, they are not always easy to determine today.

—E. Sch.

**METRON** (μέτρον), measure of capacity of liquids; synonymous terms are mistaton, mitro, and mirro (lt.). Different metra were used depending on whether wine and water or oil was being measured and on the purpose of measuring.

1. From the 9th C. onward the most important wine measure was the *thalassion metron* (generally called simply *metron*), of 1/10 *megarikon* (= 10 minai = 10.25 liters), which can be filled with 30 *logarikai litrai* of white wine or 32 *logarikai litrai* of water. Besides this standard measure, other *metra* are preserved: the *annonikon metron* (= 2/3 *thalassion metron* = 6.8 liters), the *monasteriakon metron* (= 4/5 *thalassion metron* = 8.2 liters), and other *metra* of local validity.

2. For oil the *thalassion metron*, sometimes called *elaikon metron* or simply *metron* (= 1/12 *megarikon* = 1.5 *lageria* = 8.52 liters), can be filled with 30 *soulailai litrai* or 24 *logarikai litrai* of olive oil. Its ratio to the corresponding wine measure is 5:6.

LIT. Schilbach, *Metrologie* 141–53.

—E. Sch.

**METROPHANES** (Μητροφάνης), politician and writer; metropolitan of Smyrna (ca.857–80). A staunch supporter of Patr. IGNATIOS, Metrophanes was exiled in 860. According to F. Dvornik (in *New Catholic Encyclopedia* 9 [1967] 758), Metrophanes went to Cherson, where he met CONSTANTINE THE PHILOSOPHER and Methodios on their way to Khazaria; he eventually informed ANASTASIUS BIBLIOTHECAIUS that Constantine had discovered St. Clement's relics. Restored after Photios was deposed, Metrophanes refused to recognize Photios in 879/80 and was excommunicated by the pope's legates. His letter to Manuel, *logothetes tou dromou*, is an important source for the struggle between Photios and Ignatios (Dvornik, *Photian Schism* 43f). Metrophanes also wrote an *enkomion* of St. Polycarp of Smyrna, several exegetical works (the *Commentary on Ecclesiastes* is preserved only in Georgian), an Anacreonic hymn on the Trinity (Mercati, *CollByz* 1:443–51), etc.

ED. Mansi 16:413–20. For list of other works, see Beck infra.

LIT. Beck, *Kirche* 543f.

—A.K.

**METROPOLITAN** (μητροπολίτης), the head of the episcopate in an ecclesiastical territory normally coinciding with a civil *provincia* (eparchia). The title, first employed by NICAEA I, is derived from the capital (metropolis) of the province, in which the metropolitan-bishop resided. This administrative division of the church (already fully developed by the 4th C.) was officially sanctioned at Nicaea I. The same council also legitimized the metropolitan's right to confirm all episcopal elections within his territory (canon 4). The ordination itself was to be performed by all the bishops of the province. As supervisor of his territory, the metropolitan convoked and presided over the provincial synod, which as a rule was held twice yearly (cf. Nicaea I, canon 5). Some bishops without suffragans were nevertheless given the title metropolitan, and some metropolitans (e.g., of Athens, Thessalonike, Ephesus) were also called archbishops.

—A.P.

**MEZIIOS** (Μεζίζιος, Arm. Mžež), an Armenian probably of the princely Gnuni house (Toumanoff, "Caucasia" 135); *patrikios* and *komes* of the Opsikion; usurper. He accompanied CONSTANS II to Italy and in Sicily was proclaimed emperor following Constans's murder in 668. The revolt of Mezizios ended in early 669, but scholars disagree on the circumstances. Most accept the report of Theophanes the Confessor (Theoph. 352.4–7) that Constantine IV personally led a fleet to Sicily, where he captured and executed Mezizios and his father's murderers. Others (following E.W. Brooks, *BZ* 17 [1908] 455–59) believe the Liber pontificalis (*Lib.pont. 1:346*) that troops from Italy and Africa suppressed the rebellion and sent Mezizios's head to Constantinople. Mezizios's son John also revolted against Constantine IV but was defeated and killed.

—P.A.H.
MICE (sing. μῦς) were treated in Byz. literature as despicable and abhorrent. Their skin was ugly (vita of Basil the Younger, ed. Veselevskij 2:143.14–15); they spoiled food and destroyed books and even works of art (Christopher of Mytilene, epigram 103; Michael Gabras, ep.359). Eustathios of Thessalonike, with mild irony, described the bold foraging of mice that he was unable to stop. Mice belonged to the underworld, where they prospered, according to the Timarion. In the Katomyomachia (War of the Cat and the Mice), by Theodore Prodromos, they represented the political underworld with its vocal demagogues. Mice are treated in a different, philosophical vein in the oriental material included in Barlaam and Ioasaph (ed. G.R. Woodward, H. Mattingly, 188.9-13): two mice—one white and the other black, symbolizing day and night—gnaw the roots of the tree of human life.

The appearance of a mouse, weasel, or snake in a house was viewed as an omen in ancient times (PG 36:1024Α), but firmly rejected by John Chrysostom (PG 64:741Α). The author of the Geoponika (1:3.13) believed that the squeaking of mice forecast a storm; he was also familiar with the magical prescription against an invasion of mice (one had to glue to a rock a sheet of paper with a special appeal to mice), but he did not believe in its effectiveness. There is also a 15th-C. treatise on getting rid of mice (E. Kakoulides, Hellenika 16 [1958–59] 119–25).

MICHAEL (Μιχαήλ), Hebrew personal name (lit. “who is like God”). It occurs in the Old Testament as a common name, but in the New Testament only twice—for the archangel. Unknown in Greek and Roman antiquity, the name appeared in the second half of the 5th C. (PLRE 2:762f) but remained extremely rare. Prokopios of Caesarea mentions only the archangel Michael, and in Theophanes the Confessor there are but five Michaels, including the archangel. No saints of this name are known before the period of Iconoclasm. From the 9th C. onward the name became popular: in Skylitzes there are 44 Michaels, following only Constantine (60) and John (48); it holds fourth place in Anna Komnene, after George; fifth place, after Theodore, in Niketas Choniates.

It retains fifth place in the acts of Laura: in those of the 10th–12th C., the name Michael stands between Constantine and Nikephoros, and in later ones between Nicholas and Theodore. From the 9th to the 13th C. it was a popular imperial name; nine emperors were called Michael. Four patriarchs of the 11th through early 13th C. bore this name.

—A.K.

MICHAEL, archangel and saint, feastdays 6 Sept. (Miracle at Chonai) and 8 Nov. (Synaxis ton Asomaton). Michael is mentioned twice in the Old Testament (Dan 10:21, 12:1) as the helper of the people of Israel; he is called an angel (or archon in a variant reading). He also appears twice in the New Testament, in the Epistle of Jude (v.g), where he is described as disputing with the devil over the body of Moses, and in Revelations 12:7–9 where he fights a dragon; in Jude he is specifically referred to as an archangel.

In Byz. Michael was venerated, primarily in western Asia Minor, as a wondrous healer whose activity was closely associated with sacred springs: a church dedicated to Michael in Germa WAS famous for its healings with “holy waters.” Even more famous was Michael’s church at Chonai, a center of pilgrimage, connected with the miracle performed there by Michael (see Chonai, Miracle at). At Pythia, not far from Constantinople, Justinian I enlarged a church of Michael built on the site of a temple of Apollo famous for its hot spring (Janin, Églises centres 85). There were nearly two dozen sanctuaries of Michael in and around the capital, many of them going back to the 6th C. (Janin, Églises CP 337–50).

From the 9th C. onward, Michael was esp. venerated as the commander (archistrategos, taxiarcho) of the heavenly host who brought his troops to the aid of the imperial armies; hence he was particularly cultivated by the emperor in the latter’s role as military commander. The classic visual image of this aspect of Michael is his appearance before Joshua in military garb on the eve of Jericho (e.g., Joshua Roll, sheet IV). A victory attributed to the intervention of Michael is related in the Latin Apparitio S. Michaelis in Monte Gargano, translated into Greek by the 10th C. (S. Leanza, VetChr 22 [1985] 291–316).

In monumental painting, Michael stands as an archangel with Gabriel, both dressed in imperial
robes, alongside Christ or the Virgin or flanking a doorway. Michael is also presumably the angel shown weighing souls in images of the Last Judgment.

Many incidents of angelic intervention in the Old and New Testaments came to be attributed to Michael, and eventually a cycle of miracles was developed, for example, the 9th-C. narration of the deacon Pantoleon (BHG 1286; cf. F. Halkin, Inédits byzantins [Brussels 1963] 147–52). Illustrated cycles of the miracles of St. Michael, attested from at least the 11th C. (Psellos, Scripta min. 11:120–41), were essentially biblical cycles involving the angels and archangels to which were added more recent miracles performed by Michael (S. Koukiarès, Ta thaumata-empaniseis ton angelon kai archangelon sten byzantine tekhne ton Balkanion [Athens 1989]). In 1076 the Church of St. Michael at Monte Sant’Angelo in Italy ordered bronze doors from Constantinople to be adorned with 23 scenes involving Michael and Gabriel; an equally lengthy cycle devoted entirely to Michael adorns the bronze doors of the 13th-C. Church of the Virgin at Suzdal.

MICHAEL I ANGELOS. See Michael I Komnenos Doukas.

MICHAEL I KEROUARIOS, patriarch of Constantinople (25 Mar. 1043–2 Nov. 1058); born between 1005 and 1010, died Heliopolis, 21 Jan. 1059. A member of the senatorial family of Kerouarios, Michael was involved in 1040 in a plot against Emp. Michael IV; to avoid a greater punishment, he became a monk. He was restored to imperial favor by Constantine IX, who appointed him patriarch after the death of Alexios Stoudites. Kerouarios, who inherited the rigorism of Symeon the Theologian, was in conflict with liberal intellectuals like Psellus and his companions while enjoying the strong support of the Constantinopolitan population; the downfall of the “liberal” faction vindicated his position.

In the early 1050s the tension between Byz. and Rome increased. The controversy centered around the question of the Azymes. The papacy tried to attract to its side Peter III, patriarch of Antioch, but he, albeit more moderate than Kerouarios, supported the Byz. point of view. When the papal legate Humbert arrived in Constantinople for negotiations, Constantine IX was anxious for an alliance that was necessary to resist the Norman penetration into southern Italy, but neither Humbert nor Kerouarios was ready to agree. Niketas Stehathos served as the patriarch’s mouthpiece, and a collection of texts, the so-called Panoplia, was produced, attributed to Kerouarios by A. Michel (but see Timnefeld, infra 109–14). The tract On the Azymes also does not belong to him (J. Darrouzès, REB 25 [1967] 288–91). The conflict reached its peak in the reciprocal excommunications of Humbert and Kerouarios (16 July 1054). After the rupture Kerouarios started using the title of Ecumenical Patriarch on his seals (Laurient, Corpus 5.1, no. 16), but the schism was not yet final.

Through his victory over Constantine IX in this conflict, Kerouarios acquired exceptional influence in Constantinople; Empress Theodora wanted to depose him, but was powerless. Kerouarios ran the government under Michael VI and achieved the transfer of power from Michael VI to Isaac I Komnenos. Soon his relations with Isaac worsened, and the patriarch even threatened to destroy the emperor “like an oven he had made.” Isaac had the backing of the military, however, and easily attracted the support of intellectuals who were at odds with the unyielding patriarch. Isaac ordered the arrest of Kerouarios and his deportation from the capital (where Kerouarios could count on the support of the population). When Kerouarios refused to abdicate he was put on trial, with Psellus acting as his main accuser. The trial was supposed to take place outside of the capital in an unknown location in Thrace, but Kerouarios died on the way. It has been suggested that the silver revetment of a cross in the Dumbarton Oaks collection was commissioned by Kerouarios (R. Jenkins, E. Kitzinger, DOP 21 [1967] 233–49), but C. Mango (CahArch 36 [1988] 41–49) has rejected this hypothesis.

A.K.
MICHAEL I KOMNENOS DOUKAS (more commonly but imprecisely called Michael I Angelos), ruler of Epiros (1205–15); died Berat, Albania, 1215. An illegitimate son of the sebastokrator John Doukas, Michael was a cousin of the emperors Isaac II and Alexios III Angelos, but never used the Angelos family name himself. He is first mentioned in 1190 as a hostage of Frederick I Barbarossa. Before 1204 he was dux and anagrapheus of the theme of Mylassa and Melanoudion. After the fall of Constantinople to the Fourth Crusade, Michael briefly entered the service of Boniface of Montferrat, but then went to Epiros to lead the resistance of the Greek inhabitants against the Latins. He acted as an autonomous ruler but did not assume the title of despotes, as used to be thought (Nicol, Epiros II 2f). It is not clear whether the Michael who was defeated by the Franks at a battle in southern Messenia in 1205 was Michael of Epiros (R.-J. Loeper, *Byzantium* 45 [1973] 377–81, 388f). From his capital at Arta, he expanded his territory into Thessaly, taking Larissa in 1212. By 1214 he had recovered Dyrrachion and Keryra from the Venetians. At the time of his murder in 1215 Michael controlled all of northwest Greece from the Gulf of Corinth up into Albania, thus laying the groundwork for what would become the despotate of Epiros.

MICHAEL I RANGABE (Ῥαγγάβη), emperor (811–19); died 1 Jan. 844 (Grierson, “Tombs and Obitis” 56, n.168). Son of the patrikios Theophylaktos (PG 105:489C), Michael became kouropalates under Emp. Nikephoros I, having married (before 794) the emperor’s daughter Prokopia. She bore him three sons—Theophylaktos, Staurakios, Niketas (see Ignatios)—and two daughters—Georgos and Theophano (PG 105:492AB). After campaigning with Nikephoros in July 811 and surviving the disastrous encounter with Krum, Michael became emperor on 2 Oct., when his brother-in-law Staurakios abdicated in his favor. The elevation was engineered by the domestikos ton scholon Stephanos with the blessing of Patr. Nikephoros I, who made Michael vow in writing to uphold Orthodoxy and respect clerics.

“Completely honest and equitable but incapable of managing matters” (Theoph. 499.32–500.1), Michael undertook a reaction against Emp. Nikephoros I, reversing his fiscal austerity with lavish donations to churches, monasteries, and charities and recalling his exiled opponents, including Leo (V). Although rejecting the claims of Charlemagne to the imperial title, in return for capturing Byz. territory in Italy Michael recognized the Frankish ruler as basilicus and tried to marry Theophylaktos to one of Charlemagne’s daughters. Michael was keenly interested in religious affairs, ending the Moechan Controversy and urging Patr. Nikephoros to correspond with Pope Leo III. He was heavily influenced by Theodore of Studios, who convinced him in 812 not to make peace with Krum. His failure to check the Bulgars gave rise to a conspiracy on behalf of Caesar Nikephoros, which Michael easily suppressed, but after his defeat at Versiniki he abdicated in favor of Leo V on 11 July. His sons were castrated, and Michael became a monk on the Princes’ Islands, taking the name Athanasios. His son Niketas, after becoming the patriarch Ignatios, transferred Michael’s body to the monastery of St. Michael at Satyros in Bithynia.

MICHAEL I THE SYRIAN, Jacobite patriarch of Antioch (from 1166); historian; born Melitene 1126, died 1199. Prior to his election Michael was a monk and the archimandrite of the monastery of Bar Saumā. His major work is the fullest, most comprehensive chronicle in Syriac, surviving in a single MS of 1598. The *Chronicle* is composed of 21 books in chronological order from Creation to 1195. There are three columns per page, presenting religious history, secular history, and extraordinary events, respectively. At the end are lists of kings, priests, patriarchs, emperors, and Muslim rulers as well as chronological tables. For the earlier parts Michael used as sources such chroniclers as pseudo-Dionysios of Tell Mahre and John of Ephesus. Michael provides abundant
data on Byz.-Arab rivalries after the rise of Islam and about the course of events in the Eastern patriarchates, esp. in the 12th C. when he was an eyewitness. His data on Byz. relations with Armenia, Syria, and Crusaders are also important.

S.H.G.

MICHAEL II, emperor (820–29); founder of the Amorian dynasty; born Amorian, died Constantinople 2 Oct. 829 (Grierson, “Tombs and Obits” 56). Born of humble parents, Michael advanced through an army career in the Anatolikon, marrying Thekla, the thematic commander’s daughter, who bore him Theophilos. In 803 he served under Bardanes Tourkos but deserted to Nikephoros I, who appointed him komes tes kortes and gave him a palace in Constantinople. During the reign of Michael I, Leo (V) made Michael the Amorian his own protosтратor. Once Leo became emperor, he named Michael domestikos of the exekoubitoi with the rank of patrikios; Leo was also godfather to one of Michael’s sons, probably Theophilos. Yet in Dec. 820 Leo arrested Michael on charges of treason and sentenced him to death. Michael escaped execution when his fellow conspirators assassinated Leo and acclaimed him emperor. Michael was crowned by Patr. Theodotos on 25 Dec.

As emperor Michael weathered the revolt of Thomas the Slav with help from Omurtag, but he could not prevent the Arabs from taking Crete between 824 and 827 and invading Sicily ca. 827. In 824 he supported Iconoclasm in a letter to Louis the Pious (Mansi 14:417–22); opponents accused him of favoring Athisanai and of being a Sabattian. Yet he prohibited public discussion of Iconoclasm and restored Iconophiles (but not Patr. Nikephoros I) whom Leo V had attacked; he persecuted only the future patriarch Methodios (I), who had conveyed to Michael a letter of Pope Paschal I defending images. Michael’s marriage ca. 829 to Euphrosyne, the daughter of Constantine VI and then a nun, was denounced as uncanonical by Theodore of Studios.

S.H.G.

MICHAEL II ANGELOS. See Michael II Komnenos Doukas.

MICHAEL II KOMNENOS DOUKAS (called Michael Angelos in narrative sources), ruler of Epiros and Thessaly (from ca.1230); born ca. 1206; died between Sept. 1266 and Aug. 1268 (B. Ferjančić, ZRVI 9 [1966] 29–32). A bastard son of Michael I Komnenos Doukas, he went into exile after his father’s murder. He established himself as ruler of Epiros after the capture of his uncle Theodore Komnenos Doukas in 1230 at the battle of Klokotnica. Marriage to Theodora Petrallhaina (see Theodora of Arta) brought him the support of the powerful Petrallphas family, which favored closer ties with the empire of Nicea. This culminated in 1238 with the personal visit by Patr. Germanos II to Arta and with the grant of the rank of despotes by John III Vatatzes ca. 1249 (Nicol) or 1252 (Ferjančić).

In 1256, as the price of the marriage of his son Nikephoros Angelos to a Nicaean princess, he was forced to surrender the key positions of Servia and Dyrrachion. It was too high a price. Thereafter Michael sought to check the Nicaean advance. One by one he recovered the towns and fortresses lost to the Nicaeans. The recovery of Thessalonike seemed to be within his grasp. To this end he allied with Manfred of Sicily and William II Villehardouin. Mutual suspicion wrecked the alliance. A Nicaean army defeated the allies completely at the battle of Pelagonia (1259). Although Michael had to flee to the Ionian islands, the Nicaean occupation of Epiros was so unpopular that he was soon able to return and drive the conquerors out. He finally came to terms with Michael VIII Palaiologos in 1264. His achievement was largely negative: he insured that Epiros would never be fully reincorporated in the restored Byz. Empire. He was buried in the monastery of the Blachernai, just outside Arta.

S.H.G.

M.J.A.
MICHAEL III, emperor (842–67); born 19 Jan. 840 (L. Rydén, Eranos 83 [1985] 182, n.30), died Constantinople 23/4 Sept. 867. Son of Theophilos and Theodora, Michael was crowned co-emperor as an infant in 840 but had no real authority under Theodora’s regency (842–56). In 855 Theodora arranged a bride show and married him to Eudokia Ingerina. At age 16, with help from Caesar Bardas, Michael deposed the regents Theodora and Theoktistos and became sole ruler on 15 Mar. 856 (W. Treadgold, DOP 33 [1979] 190). Byz. sources, writing largely to justify Basil I’s murder of Michael, portray him as a dissolute emperor engaging in drinking bouts, horse races, and religious burlesques, while ignoring state affairs. Yet modern scholars have shown that he was not inactive, esp. in military affairs, and, with capable advisers such as Bardas, Patr. Photios, Petronas, and Basil, his reign had important achievements (A.A. Vasiliev, Byz.-Metabyz. 1 [1946] 237–48; Jenkins, Studies, pt. 1 [1948], 71–77).

Under Michael III the Arabs were held in check. In 859, during his first military campaign, he unsuccessfully besieged Samosata. In 860 an attack on Constantinople by the Rus’ forced him to break off a campaign in Asia Minor, but in 863 he played an important role in defeating ‘Umar, emir of Melitene (G. Huxley, GRBS 16 [1975] 443–50). He rebuilt Ankyra and refortified Nicæa. He sponsored the mission of Constantine the Philosopher and Methodios to Moravia and the baptism of Boris of Bulgaria. Yet he was easily influenced by associates: Michael permitted Basil to assassinate Bardas in 865 and crowned him co-emperor in 866, but shortly thereafter Basil had him murdered in his bedroom at the palace of St. Mamas. Michael’s body was buried in Chrysopolis, but Leo VI (perhaps Michael’s son by Eudokia Ingerina) removed it to the Church of the Holy Apostles, Constantinople (Grierson, “Tombs and Obits” 57).

The revival of monumental painting in Michael’s reign has generally gone unrecognized. Theophanes Continuatus credits him with having “the empress’s wardrobe” in the Great Palace decorated with religious images. Michael’s own likeness was set up in the Chrysotriklinos, along with those of Christ and the Virgin (AnthGr, bk. 1, no.106). The inscription around the apse mosaic of Hagia Sophia, Constantinople, implies his participation in this major enterprise.

- P.A.H., A.C.

MICHAEL III, patriarch of Constantinople (Jan. 1170 [V. Grumel, REB 1 (1943) 258]–Mar. 1178); died Constantinople. A relative of the metropolitans of Anchialos (his customary designation “of Anchialos” is incorrect), he made an ecclesiastical career in Constantinople as the chief of the patriarchal chancery and then protoexdikos. Around 1165–67 he was promoted to the post of Hypatos Ton Philosopher; in his inaugural speech (which is incidentally important as a source for Byz.-Hungarian relations [Browning, Studies, pt.IV (1961), 173–214]), Michael emphasized as his purpose the struggle against rationalistic (“heretical”) views. As patriarch he continued condemnation of the non-Orthodox interpretations of John 14:28 that had been rejected by the Council of 1166 under Patr. Loukas Chrysoberges. He tried to improve the discipline of the clergy: he confirmed the strict division between civil and ecclesiastical offices (V. Laurent, EO 33 [1934] 309–15), forbade bishops to ordain clerics from other dioceses, and established—according to the principle of oikonomia—steresis for deposed deacons lest they become wandering beggars (S. Trojanos, FM 6 [1984] 205–18). Loyal to Manuel I, Michael published on 24 Mar. 1171 a tomos prescribing the oath of fidelity to the emperor’s heir.

Michael’s attitude toward Rome is a subject of discussion: traditionally (e.g., V. Grumel, EO 29 [1930] 258–64) the Dialogue of Manuel I and Michael on the Union of the Churches, in which Michael expresses consistently anti-Latin views, has been considered authentic; J. Darrouzès (REB 23 [1965] 79–82), however, redated the text to the 13th C., probably without sufficient foundation. Negotiations with Pope Alexander III continued but were unsuccessful, even though the pope reduced conditions for reunion to a minimum. R. Ljubinković (Starinar 20 [1969] 191–
204) attributed to Michael's patriarchate the MS Paris, B.N. gr. 880, which has an evident anti-Latin tendency. Negotiations with regard to union with the Armenian church by Michael's envoy Theorians also failed.

MICHAEL III ŠIŠMAN (Σισμανος), Bulgarian monarch, son of Šišman, despotes of Vidin; born before 1292, died Velbuzd after 28 July 1330 (?). Elected tsar by a council of boyars after the death of Georgij Terter II (1222), he brought the war against Byz. to a successful conclusion. In 1224 Michael married Theodora, daughter of Michael IX and widow of Tsar Theodore Svetoslav. In the Byz. civil war of the 1320s he first supported Andronikos III against his grandfather Andronikos II in 1237 but in the following year changed sides and besieged Constantinople. After the defeat of Andronikos II, Michael concluded an alliance with Andronikos III, directed against the growing power of Serbia. Defeated and captured at the battle of Velbuzd, Michael died of his wounds. Shortly afterward he was succeeded by his nephew Ivan Alexander who reversed Michael's policy by making a lasting alliance with Serbia.

LIT. Fine, Late Balkans 268–75. A. Burmoy, "Istorija na Bulgaria na vremeto na Šismanovite," GSU FIF 43.1 (1946–47) 1–58. —R.B.

MICHAEL IV PAPHLAGON, emperor (1034–41); died Constantinople 10 Dec. 1041. Member of a family of money-changers of Paphlogonian origin, he was introduced to the Empress Zoe by his brother, John the Orphanotrophos. Michael became Zoe's lover and, when Romanos III was murdered, he was proclaimed emperor (12 Apr. 1034). The short-lived resistance of Patr. Alexios Stoudites was ended by a generous donation. Michael, an honest and unsophisticated man who suffered from epilepsy, was pushed into the background by John, whose policy favored the highest civil functionaries. John aimed to increase the state's monetary income: the aerikon was introduced, and taxation in kind in Bulgaria was replaced by payment in specie. Morrison ("Dévaluation" 6) stressed that the devaluation of Byz. coinage began in Michael's reign. These policies incited resistance of both the aristocracy (Michael faced the opposition of Constantine Dalassenos and plots of the Keroularioi) and the provincial population, esp. the rebel Peter Deljan. The military successes of George Manakes collapsed after his recall from Sicily, and Stefan Voislav established the independence of Dukla (Diokleia). Michael actively supported the church, partly in hope of a cure for his epilepsy. John strove to retain the predominance of the Paphlogonian family; childless, Michael proclaimed as heir his nephew, the future Michael V. With immense personal effort, Michael led a successful expedition against Deljan; soon after celebrating a triumph in Constantinople, he resigned, received the tonsure, and died. His conspiracies and death are illustrated in the Madrid Skylitzes MS (Grabar-Manoussacas, Skylitzés, nos. 505–66, fig.243).

Michael V Kalaphates, emperor (1041–42). Son of Stephen, a caulkier (whence Michael's nickname), and the sister of Michael IV, he was adopted by Zoe and named Caesar and heir ca. 1035. Three days after Michael IV died, Zoe proclaimed Michael emperor, while he pledged to respect her. Once in power, he banished John the Orphanotrophos, released John's opponent Constantine Dassenas, and sent George Maniakes to Italy as katepano. He enforced strict justice. Relying on the advice of his uncle, the nobelissimos Constantine, Michael determined to exile Zoe. He confirmed his popularity with the masses in several processions (Easter, 11 Apr. 1042, and the following Sunday). Once Zoe had left, he claimed that she had plotted against him. On 19 Apr. a widespread popular uprising occurred. Houses and chapels built by his relatives were destroyed and the Great Palace besieged. Despite aid from his uncle and Katakalon Kekaumenos, the mob broke through the walls. At dawn, 21 Apr., Michael and Constantine fled from the palace to Stoudios, whence both were soon dragged, blinded, and dispatched to monasteries. Constantine IX sent Michael to Chios.

Michael VII Doukas, emperor (1071–78); born ca. 1050, died Constantinople ca. 1090. Eldest son of Constantine X, he ruled as co-emperor with Eudokia Makrembolitissa and Romanos IV Diogenes. After the latter's capture, the caesar John Doukas put Michael on the throne. Possibly slow mentally, Michael was an inactive ruler. He was a pupil of Psellus, who composed treatises for the emperor and ends his Chronographia with a eulogy of Michael and his family. In Michael's name, an alliance was made (ca. 1074) with Robert Guiscard, whose daughter Olympias (Helena in Byz.) was betrothed to Michael's son Constantine. In 1073–74 negotiations with Pope Gregory VII for reunion came to nothing. Administrative power passed to Nikephoritzes, whose severe fiscal policies made Michael unpopular. Plundering Turks beset Anatolia, while rebels (Nestor, Roussel de Bailleul, Nikephoros Bryennios, and the future Nikephoros III Botaneiates) devastated Asian and Balkan provinces. Consequently, Michael's coinage was seriously adulterated (Morrisson, "Dévaluation" 8–12), while the diminution of the modios of grain by a pinakion, without a reduction in price, earned Michael the nickname "Parapinakes." When Botaneiates' victory became certain, Michael abdicated (31 Mar. 1078) and entered a monastery; his wife Maria of "Alania" married the victor. Michael was subsequently named metropolitan of Ephesus but paid only one brief visit there before returning to his mon-
astery. Numerous portraits of Michael survive, the most important on the enamels of the Khakhouli triptych (with his wife) and on the Holy Crown of Hungary (with his son); these objects exemplify Michael’s use of art as dynastic propaganda (Wessel, *Byz. Enamels*, nos. 37–38).

---

**MICHAEL VIII PALAILOGOS**, emperor (1259–1282); born 1224 or 1225, died in village of Pachomios, Thrace, 11 Dec. 1282. Son of the *megas domestikos* Andronikos Palaiologos, Michael descended from three imperial families and founded the long-lived dynasty of the Palaiologoi (1259–1453). He embarked on a successful military career, but his loyalty to the Nicene emperors **John III Vatatzes** and **Theodore II Laskaris** was questioned on several occasions. Michael took advantage of the power vacuum left by Theodore’s premature death (Aug. 1258) to usurp the throne. After joining an aristocratic conspiracy to murder George Mouzalon, regent for the child emperor **John IV Laskaris** (Sept. 1258), Michael succeeded Mouzalon as regent and was named *megas doux* and, on 13 Nov. 1258, *despotes*. He was crowned co-emperor in Nymphaion sometime after 1 Jan. 1259 (P. Wirth, *JOB* 10 [1961] 91). He further secured his position by his victory at Pelagonia over an anti-Nicene coalition (summer or fall 1259) and the recovery of Constantinople from the Latins by his general Alexios Strategopoulos in July 1261. On 15 Aug. 1261 Michael entered Constantinople and soon received a second coronation. After ordering the blinding of **John IV** (Dec. 1261), he became sole emperor, but was excommunicated by Patr. Arsenios.

The early years of Michael’s reign were devoted to efforts to repopulate the capital and to begin the restoration of damaged churches, monasteries, and public buildings. He also set about the construction of a fleet and strengthening of the fortifications of Constantinople, esp. the sea walls. The considerable expense of his program of reconstruction necessitated a devaluation of the hyperpyron. His concern for justice is shown by a *prostagma* threatening appropriate punishment for imperial officials found guilty of maladministration (L. Burgmann, P. Magdalino, *FM* 6 [1984] 377–90).

Michael’s foreign policy focused on the use of skilful diplomacy to ward off Latin attempts to regain Constantinople. His primary motive in agreeing to Union of the Churches at Lyons (1274) was to forestall the projected invasion of the empire by **Charles I of Anjou**. At the end of his reign, 1282, Michael again averted Charles’s imminent attack on Constantinople by helping instigate the anti-Angevin rebellion known as the *Sicilian Vespers*. Michael also formed an alliance with the Mongol khan Hulagu against the Mamluk ruler Baybars and Berke of the Golden Horde. After Berke defeated the Byz. in 1264–65, however, Michael was forced to join the alliance of the Golden Horde and Egypt (G. Vernadskij, *SemKond* 1 [1927] 73–84). Although Michael was responsible for several important military and diplomatic accomplishments, he neglected his Anatolian frontier, permitting the Turks to increase their strength; moreover, his Unionist religious policy alienated his subjects and the majority of the clergy. At his death he was refused the final rites of the Orthodox church.

---

Although Michael was a brave and energetic soldier, his military campaigns were notoriously
unsuccessful, with the exception of some victories over the Bulgarians in 1304. He opposed Roger de Flor, leader of the Catalan Grand Company, and may well have arranged his assassination in Apr. 1305. Two months later Michael suffered a humiliating defeat at Apros at the hands of the vengeful Catalans. After being defeated again in 1311, this time by the Turks, Michael was relieved of responsibility for the defense of Thrace. He predeceased Andronikos II, dying at the age of 43, reportedly of grief over the accidental murder of his son Manuel (Greg. 1:286.6–12). Michael died in Thessalonike, where he had restored the basilica of St. Demetrios.

---

MICHAEL (ASTRAPAS) AND EUTYCHIOS, two, or possibly three, wall-painters working in Macedonia and Serbia, ca. 1295–1317. The names of Michael and Eutychios are preserved in inscriptions in four churches: the Virgin Peribleptos (now St. Clement) at OHRID, the Bogorodica Ljeviška at PRIZREN, St. NIKITA at Banjani, and St. George at STARO NAGORIČINO. Some scholars distinguish Michael, who signed with Eutychios in the last two of these churches, from Astrapas, who so signed his name at Prizren. But the inscription "the hand of Michael tou Astrapas" appears on the sword of St. Merkourios at the Peribleptos and it is possible that Astrapas ("lightning") was merely the nickname of a speedy painter. However that may be, the hands of Michael and Eutychios are effectively indistinguishable, the style of both exhibiting strong chiaroscuro and heavy drapery marked by hard folds. The painter John Astrapas, mentioned by Demetrios Triklinos, is thought to be a member of the same family, supposedly of Thessalonican origin. Michael and Eutychios also painted icons (P. Miljković-Pepe, JÖB 16 [1967] 297–309).

---

MICHAEL ITALIKOS, writer; died before 1157. Michael taught rhetoric and philosophy in Constantinople and was later appointed the didaskalos of physicians; probably in 1126 or 1137 he participated in an embassy to Rome. He also taught the Gospels in the Patriarchal School. After 1143 he became metropolitan of Philippiopolis where, in 1147, he successfully reconciled CONRAD III with the Byz. A paradigm of the Byz. intellectual, Michael proudly assured Empress Irene Doukaina that administrative offices were better filled by intellectuals than by illiterate "logariastai and pronoetai" (Gautier, infra 94f). He mocked the fashion of tracing genealogies back to mythological Greek kings (Kazhdan, Gasp.klass. 48f) and praised "logical feasts" at which "philosophical venison" would be served along with "physiological hare" and "musical swan" (Gautier, 156.4–
8). Michael corresponded with members of the ruling elite, with intellectuals such as Theodore Prodomos, and with several physicians. His speeches-addressed to John II Komnenos (see U. Criscuolo, Annali della Facoltà di Lettere e Filosofia, Università Macerata 5-6 [1972–73] 541–52) and Manuel I convey important information on contemporary political events.

-A.K.

MICHAEL OF EPHESUS, philosopher and commentator on Aristotle. His biography is obscure and his dates disputed. K. Praechter (BZ 31 [1931] 1–12) asserted that Michael lived before 1040. If, however, “the wise man from Ephesus,” who worked on Aristotle until he ruined his eyesight, can be identified with Michael (Darrouzès, Tor nikés 283.9–11 and n.70), then the date of his life should be shifted to ca.1100. Probably a member of the circle of Anna Komnene, he was instrumental in the revival of Aristotelianism in Constantinople in the 11th and 12th C.

Michael commented on Aristotle’s zoological works (Michael’s commentary on the Generation of Animals was wrongly attributed to John Philoponos—CAG 14:3) as well as the Nicomachean Ethics, Politics, Rhetoric, Sophistical Refutations (wrongly attributed to Alexander of Aphrodisias; CAG 2:3) and the short psychological works (i.e., Parva naturalia). The commentary of pseudo-Alexander on the Metaphysics is doubtless Michael’s as well (Preus, infra 12). His commentaries contain allusions to the contemporary situation, including criticism of the emperor (E. Barker, Social and Political Thought in Byzantium [Oxford 1957] 140f) and a discussion of education in Constantinople where, lacking guidelines for the teaching of youth, fathers taught them according to their own understanding (CAG 20:6:10.11–13).

-A.K., M.W.T.

MICHAEL RHETOR, mid-12th-C. writer, nephew or protégé of a metropolitan of Thessalonike, perhaps Basil of Ohrid. He made a career as a teacher at the Patriarchal School at Constantinople (didaskalos of the Gospels and magistros ton rhetoron) and patriarchal proteikas. In 1156 he supported Soterichos Panteugenos and was condemned with Nikephoros Basilakes but soon thereafter submitted a confession “of his errors” (ed. L. Allatius, De ecclesiis occidentalis et orientalis perpetua consensione [Cologne 1648] 691). Michael delivered three speeches to Manuel I with important information about the coalition of the Normans and Hungarians and imperial warfare against Serbia; he mentions the Second Crusade and conveys unique evidence about Manuel I’s plans for an expedition to the Azov Sea (A. Kazhdan in Okeanos 345–47). Since it mentions a Sicilian attack on the “northern shores of the Roman empire” (Regel, Fontes 156.13), one speech may have been delivered after 1158 when the Normans approached Constantinople, i.e., after Michael’s confession. Michael’s description (ekphrasis) of Hagia Sophia (the end of which is lost) presents the architectural and sculptural elements (not mosaics) and interprets the building symbolically as a reflection of the cosmos: the beholder is invited to see the entrance, the “heaven” above, the sides of sparkling stone, and the floor which is a “sea, out of which the holy sanctuary has been scooped.”

-A.K.

MICHAEL SYNKELOS, homilist, grammarian, and saint; born Jerusalem ca.761, died Chora monastery in Constantinople 4 Jan. 846. Of “Per sian” (Arab) origin according to his vita, Michael entered the Lavra of St. Sabas ca.786 and was ordained a priest; ca.811 he became Synkellos of the patriarch of Jerusalem. Patriarch Thomas sent Michael to Rome ca.815 to solicit financial assistance and to discuss theological and political problems. En route Michael was arrested in Constantinople as an Iconodule and suffered persecutions under Leo V and then under Theophilos, as a

In Edessa ca.811–13 Michael wrote a treatise on syntax, based on ancient grammarians; the earliest Byz. book preserved on the subject, is divided into eight chapters, from the noun to the conjunction. Michael treated the problem of the word, rather than the relation between words. His terminology is sometimes determined by extra-grammatical influence—thus the noun is defined as “essence (ousia) acting or suffering” (par.6). Especially popular from the 13th C. onward, Michael’s work survives in approximately 100 MSS. Besides the Treatise, Michael composed homilies and enkomia on saints (his authorship of the story of the Forty-two Martyrs of Amorion is questionable); a polemical account of the origins of Islam incorporated in the Chronicle of George Hamartolos (697.12–702.9) may be his work. He also wrote liturgical hymns and an anacreontic poem on the restoration of images. Michael was eulogized by an anonymous contemporary hagiographer, and later by Nikephoros Gregoras.

MICROCosm (μικρός κόσμος, lit. “small world”), the world in miniature. In patristic literature man is described as a microcosm in that he possesses in himself all the elements of the macrocosm; a unity of visible and invisible components, of body and soul. The latter is conceived as the essence “lying on the borders” (methrios) between the spiritual and the material, which serves as the mediator of a natural synthesis (Maximos the Confessor) and as “the bond (syndesmos) of the entire creation” (Kosmas Indikopleustes). Created by God, man is like the world, “a miniature world within the larger one” (John of Damascus, Exp. fidei 26.25–26, ed. Kotter, Schriften 2:76), a unity of elements subject to the law of transience (John Italos, Quaestiones quodlibetales, par.70, ed. Joanou, p.118). The doctrine of the microcosm represents the attempt to develop an anthropology in the framework of a metaphysic of participation and sympathy, in cooperation with a holistic psychological conception; as Proklos states, “The essence of man is found in his soul” (In Alchibadem 1.18.4, ed. L.G. Westerink, 8).

The Church Building as Microcosm. The concept of microcosm in Byz. was extended to the church building, and thus the domed church as a reflection of the universe is a leitmotif in liturgical exegesis and ekphrasis. Following a cluster of Syriac commentaries (Ephrem the Syrian, Jacob of Sarug), the Byz. interpretation of this relationship is fully articulated in the so-called church history of Patr. Germanos I (“the church is a heaven on earth”) and implicit in church programs of decoration in and after the 9th C.

Michael Višević (τοῦ Βοσεβούτζη), prince of Zachlumia from ca.910; died ca.932? or after 949. He was the ally of Symeon of Bulgaria in his struggle against Byz. Constantine VII reports that his relatives came from the area of the river Visla (De adm. imp. 33.16–18). In 912 Michael arrested Peter, son of the Venetian doge Orso II, who was returning from Constantinople with rich presents, and sent him to Symeon. In 917 Michael informed Symeon about the mission of the strategos of Dyrrachion, Leo Rhabdouchos, who was trying to form a broad coalition against Bulgaria; Symeon acted promptly and won the battle at Achelous. In 926 Michael crossed the Adriatic and sacked Siponto (10 July) in Byz. Italy. He also sought an alliance with the papacy; in 924 papal legates summoned a council in Spalato (Split) and addressed Michael and Tomislav of Croatia, condemning the use of the Slavonic language in liturgy. After Symeon’s death (or before, according to Zlatarski, Ist. 1:2:479), Michael was reconciled with Byz., acknowledged the sovereignty of the empire, and was granted the titles of antihypatos and patrikios.

MICROCosm (μικρός κόσμος, lit. “small world”), the world in miniature. In patristic literature man is described as a microcosm in that he possesses in himself all the elements of the macrocosm; a unity of visible and invisible components, of body and soul. The latter is conceived as the essence “lying on the borders” (methrios) between the spiritual and the material, which serves as the mediator of a natural synthesis (Maximos the Confessor) and as “the bond (syndesmos) of the entire creation” (Kosmas Indikopleustes). Created by God, man is like the world, “a miniature world within the larger one” (John of Damascus, Exp. fidei 26.25–26, ed. Kotter, Schriften 2:76), a unity of elements subject to the law of transience (John Italos, Quaestiones quodlibetales, par.70, ed. Joanou, p.118). The doctrine of the microcosm represents the attempt to develop an anthropology in the framework of a metaphysic of participation and sympathy, in cooperation with a holistic psychological conception; as Proklos states, “The essence of man is found in his soul” (In Alchibadem 1.18.4, ed. L.G. Westerink, 8).

MICROCosm (μικρός κόσμος, lit. “small world”), the world in miniature. In patristic literature man is described as a microcosm in that he possesses in himself all the elements of the macrocosm; a unity of visible and invisible components, of body and soul. The doctrine of the microcosm represents the attempt to develop an anthropology in the framework of a metaphysic of participation and sympathy, in cooperation with a holistic psychological conception; as Proklos states, “The essence of man is found in his soul” (In Alchibadem 1.18.4, ed. L.G. Westerink, 8).

**MICROSTRUCTURES**, small social groupings, a modern scholarly term for classifying those societal units that were relatively stable and locally limited, conscious of their existence, and thus determined by law or ritual. Byz. microstructures included family, lineage, village community, guild, confraternity, monastery, and, to some extent, town community. A special feature of Byz. microstructures was their "atomistic" character: the family was the main social unit, while the links of lineage, guild, or *polis-municipium* remained relatively loose.

**MILAN** (*Mediolanum*, Lat. Mediolanum), residence of the praetorian prefect of Italy and of certain emperors (Maximianus, Gratian, Valentinian II, and Theodosios I) in the 4th c. Ausonius praised Milan as the fifth-largest city of the world after Rome, Constantinople, Carthage, and Trier. In Feb. 313 Constantine and Licinius met in Milan to elaborate common religious policy. Milan became ecclesiastical metropolis of most of northern Italy, its most famous bishop being AMBROSE. The city declined following the transfer of the imperial court to Ravenne in 402; the see lost part of its jurisdiction to Ravena and Aquileia. A major mint in the late 4th c., its coin production declined ca.404, ceased completely ca.420, and resumed on a much reduced scale from the last years of Valentinian III to 498.

The city was sacked by the Huns in 452 and was contested by the forces of ODOACER and THEODORIC THE GREAT between 489 and 491 but recovered under the OSTROGOTHS. In 538 Milan's leading citizens declared in favor of the Byz. cause, and in retaliation the Ostrogoths razed it in 539. Following Frankish raids in the 550s Milan was restored by NARES but fell to the Lombards on 3 Sept. 569; its bishop fled to Genoa, where his successors remained until ca.650. Under Carolingian and later Ottonian rule, Milan remained a connecting point with Byz.: in 1001 its archbishop Arnulf was sent to Constantinople by OTTO III. It is possible that the Pataria movement of 11th-c. Milan originated under the impact of Byz. dualist sects. In 1112 Peter GROSSOLANO, archbishop of Milan, visited Constantinople to discuss the FILIOQUE and other theological problems. In the 1160s, while involved in war against FREDERICK I, Milan sent two legates to Constantinople for negotiations; Emperor Manuel I promised financial support for Milan's restoration but required an oath of *fidelitas*.

**Monuments of Milan.** In the 4th and 5th c. Milanese art and architecture were more inventive and diverse than those of any other Western city, even ROME. S. Lorenzo, a uniquely ambitious tetraconch related in plan to 5th-c. churches in Syria, was probably an imperial foundation and is to be identified with the "Basilica Portiana," sequestered from St. Ambrose by Valentinian II. The niches of its octagonal chapel of S. Aquilino contain late 4th- to early 5th-c. mosaics that depict Christ as philosopher and as HELIOS; in the vestibule are fragments of a large apocalyptic composition. Churches sponsored by St. Ambrose were materially more modest but interesting for their symbolism. The Basilica Apostolorum (rebuilt as S. Nazaro) was a cross-shaped cemetery basilica that signified the faith in general resurrection for all who were buried in Christ. In the octagonal baptistery of the cathedral, Ambrose added a verse inscription that explained the regenerative symbolism of the number eight. A portrait of Ambrose is included in the 5th- to 6th-c. mosaics in the chapel of S. Vittore in Ciel d'oro at S. Ambrogio; although posthumous, it is a highly individualized image that clearly attempts to "portray" him in the modern sense.

**MILDENHALL TREASURE**, dated to the 4th c. and found in 1942 near Mildenhall in Suffolk, England. Now in the British Museum, it represents a medium-size collection of domestic silver plate. The treasure is composed of 27 silver objects (four plates, eight bowls, two goblets, five ladies, eight spoons), many elaborately decorated and some (goblets, ladles) bearing a resemblance
to pieces in the CARPATHOE TREASURE. The mixture of pagan and Christian elements in the decoration resembles much domestic silver of the period: a set of three plates (one large, two small) displays Dionysiac scenes; three bowls have emblems of Alexander the Great, his mother, and a hunter, respectively, while three spoons are inscribed with a CHRIStOGRAM. The names Pas- centia and Papitdeo appear on two spoons and that of Eutheros is scratched on a plate. It has been suggested that the last-mentioned individual was Emp. Julian’s praeceptor sacri cubiculi of that name (355–61 [PLRE 1:314]) who, as owner of the treasure, presented it to Lupidicus, the ma- gister equitum for Gaul (ibid. 1:520), before the latter’s departure for Britain in 360. 

MILEŠEVA, a monastery in southwestern Serbia, near Prijevoj, founded ca. 1220 by Prince Vladis- lax, son of King Stefan the First-Crowned. The katholikon, dedicated to the ASCENSION, has a Byz. ground plan: a nave with short cross arms for the choir, a single dome on pendentes, and three semicircular apses. The frescoes were probably executed before 1228; they reflect a standard Byz. church program, though the selection and distribution of the scenes is unusual. Along with portraits of the founder and his ancestors, the narthex contains a portrait of an unidentified Byz. emperor, possibly John III Vatatzes, standing near Constantine I the Great and Helena, his holy forebears; this is the only example in a Serbian church of a Byz. emperor thus acknowledged as overlord. Two artists were responsible for the frescoes; both were probably Greek, for they used a technique for rendering volume—the juxtaposition of red and green tones—otherwise employed only by the most sophisticated and classi- cizing Byz. painters. The backgrounds are either blue or ochre, the latter covered by gold leaf with imitation mosaic cubes drawn upon it. These frescoes are important for any study of the antecedents of Palaiologan painting, as few Byz. monum- ents have survived from this period. The marble sarcophagus of Vladislaw is preserved in the nave beneath his portrait; an exonarthex with two side chapels and frescoes of the Last Judgment was added ca. 1236 to house the tomb of St. SAVA OF SERBIA.

MILESTONE (μιλιον, Lat. miliarium), a stone post placed on a highway to indicate distance. Thou- sands of Roman milestones have been found from North Africa to Britain to Arabia; they were cy- lindrical columns made of limestone, granite, etc., usually 2–3 m high and set on a square base. They regularly bear inscriptions in Latin or Greek, some in praise of emperors, including those of the 4th and 5th C. (e.g., a milestone erected under Theodosios II and Valentinian III in 435—CIL 17.2, no.53). Apparently no milestones of the 6th C. or later have survived. The marking of dis- tances, measured in Milia (about 1,480 m), started from the Milion in Constantinople (see MESS). Milestones are an important source not only for studying the system of roads, but also for late Roman imperial propaganda. After the triumph of Christianity in the 4th C. certain milestones were provided with Christian symbols (e.g., the cross) and inscriptions.

MILETOS (Μίλητος), city on the Aegean coast of Asia Minor, now Balat (from Gr. Palatia). Its excavated remains show that Miletos flourished in the time of Diocletian, when much building and restoration took place, then fell into a decline; ancient buildings collapsed and small, shoddy structures, which disregarded the regular urban plan, were constructed over and within the ruins. The reign of Justinian I brought recovery as shown by a new cathedral, restored baths, and drainage of the harbor, works owed to the influence at court of a native son, HESYCHIOS of Miletos. New fortification walls of the 7th–8th C., which ex- cluded much of the ancient city and used the theater as their citadel, indicate a drastic contrac-
tion; small houses were built over the ruins within the circuit. Eventually, perhaps in the 12th C., Miletos withdrew entirely within its ancient theater, which was provided with a new citadel. It consequently took the name Palatia, for the people of the time thought the theater had been a palace. Miletos, which was originally a city of the Thrakesion theme, was briefly occupied by the Turks after Mantzikert and after the reconquest assigned to the theme of Mylasa and Melanoudion in the 12th C. By then it was a small township referred to as a *chora* (Pamou Engrapha 2, nos. 64.15, 73.9) or even *klima,* "estate" (op. cit. 2, no.66.1); it possessed no separate administration except for fiscal officials called *praktores.* It fell to the Turks of Menteshe ca.1285.

Suffragan of Aphrodisias, Miletos became an autochthonal archbishopric by 536, and a metropolis under Manuel I. The monastic center of Latros was northeast of Miletos.

---

**MILIARESION** (μιλιαρήσιον, from Lat. milliarensis), a name applied in the 4th C. to silver coins struck 72 to the pound and having in terms of bronze coins a value of 1,000 half-scripula or obols (J.-P. Callu, *RN* 22 [1980] 126–30). Byz. sources of the 7th–11th C. use it for the basic Byz. silver coin reckoned 12 to the solidus. Thus, *miliareion* was the Byz. name for the hexagram in the 7th C., and, afterwards, for the coins of a broad, thin fabric introduced by Leo III in 720 and characteristic of the 8th–11th C. (Numismatists, however, generally use the term *miliareion* for the latter coin only.) These coins seem initially to have been struck 144 to the pound, giving them a theoretical weight of 2.27 g, but in the Macedonian period they were heavier, probably 3.09 g (108 to the pound). Miliareia ceased to be struck in 1092, as a result of Alexios I's coinage reform, and the name survived as a money of account, 1/12 of the nomisma. The denomination was subsequently revived as the *basilikon.* Western documents apply the derivative term *millerès* to various types of Muslim silver coin.

---

**MILION** (μιλιόν), a measure of distance originally meaning 1,000 Roman double-steps (*passus*), also called *stathmos* or *semeion.* Byz. metrolological tables calculate 1 *milion* as 7 or 7.5 *stadia,* respectively 4,200 and 4,500 "feet" (see Pous), that is, approximately 1,312 m and 1,404 m; the figure of 7.5 *stadia* is also given in the *Treatise on Taxation* (Dölger, *Beiträge* 113.8–9), but John Tzetzes gives 4,600 "feet." On the other hand, both the *Treatise on Taxation* and Constantine Harenopoulos define 1 *milion* as 750 geometrical or 840 simple *orgyat* (= 1,581 and 1,574 m, respectively). As longer measures of distance, an *allage* of 6 *milia* and *hemeresios dromos* of approximately 90 *milia* were used. The classicizing *stadium* and *parasanges,* although mentioned in the *Treatise on Taxation,* were not employed in everyday life.

(For the Milion in Constantinople, see *Mese.*)

---

**MILITARY RELIGIOUS SERVICES** on a regular basis date from the early 4th C., when Constantine I granted his Christian soldiers leave to attend Sunday liturgy. By the mid-5th C. military chaplains are found in the army (Jones, *LRE* 632f), and priests are commonly listed among the army's nonmilitary personnel in 6th- and 10th-C. *strategika*; St. Loukas the Stylist (10th C.), for example, was a military chaplain who conducted services for soldiers each Sunday (Delehaye, *Saints stylites* 201.14–25). Liturgical books were brought along on imperial campaigns (*De cer.* 467.4).

Religious rituals were an integral part of the army's daily routine. According to the 10th-C. *Praecepta militaria,* matins and vespers were held daily, and the soldiers sought repentance through prayer and tears; anyone failing to participate was severely punished. Before battle the soldiers were enjoined to resolve their differences, to fast, and to confess their sins before taking communion—measures intended to reinforce morale, to dispel anxiety and the fear of death, and to secure God's favor. Other prebattle rituals included the blessing of standards and weapons. After battle, proper services for the dead were
observed and thanksgiving for victory was offered, esp. following such notable successes as the triumph of John Tzimiskes over the Rus' in 971 (Skyl. 300.65–67).

—E.M.

MILITARY SAINTS, a group of saints (including George, Demetrios, Nestor, Theodore Toten, Theodore Stratelates, Merkourios, Prokopios) conceived and represented as armed soldiers. The evolution of the image of military saints consisted in the militarization of their roles: from civic official to warrior, from soldier to general, from foot soldier to mounted knight. The chronology of this development, however, cannot be established with precision. Some earlier martyrs contained the theme of the Christian's renouncing the military profession and proclaiming himself a fighter for the king of heaven; later this "antiwar" attitude disappeared. The miracles worked by military saints included, besides "normal" ones, actions such as the defense of cities and providing assistance to armies. The military saints cannot, however, claim an exclusive prerogative to military deities: the Virgin Mary, the apostle Andrew, and some other saints were also active as military protectors of the Byz. The military aristocracy often chose military saints as patrons and placed their images on seals; the Komnenian dynasty introduced figures of Demetrios, George, and Theodore on coins.

—A.K.

MILL (μύλος). A mill powered by oxen, mylikon ergasterion zoikinon (typikon of Petritzos monastery, ed. P. Gautier, REB 42 [1984] 43.392–93), was the predominant device for grinding grain in the Roman Empire. In a law of 364 an average bakery is described as having animals and slaves. This form of mill continued to exist in later centuries: the 10th-C. Book of the Eparch (ch.18.1) also mentions the animals that turn the millstones, and in the 11th C., on the ground floor of the Constantinopolitan mansion of Michael Attaleiates, was a mill driven by a donkey. The typikon of the Kosmosoteira monastery at Ber (p.60.25–26) forbade strangers access to the monastery's onomoi, mills powered by donkeys.

The hand mill (cheiromylos) was also known: a thief stole the quern that Loukas the Younger kept in his hut (E. Martini, AB 13 [1894] 103.30–31); such querns were carried in the wagon trains of campaigning armies (Taktika of Leo VI 5.6). A most unusual example is the geared mill turned by Samson in an illustrated Octateuch (Vat. gr. 747, fol.251r [II]).

Water mills (hydromylones) were used in late antiquity: a 5th-C. mill was excavated at the agora of Athens. The axle ran between the sockets from the wheelrace to the pit in the mill room; on the shaft, where it crossed the pit, a vertical tympanum was set, meshing with the larger horizontal tympanum whose vertical shaft moved the millstone. In Rome, mills on the Janiculum powered by water from an aqueduct are attested in the 4th–6th C.; when the Goths in 537 stopped the flow of water through the aqueduct, the Romans tried to set up floating mills on the Tiber. Byz. texts water mills are common from the Farmer's Law to the documents of the Palaiologian period; evidently they became the principal type of mill. Water mills were of two types, the winter mills that worked only when streams were in full spate and the "year-round ergasteria" (e.g., MM 4:7:7). A water mill is included in the floor mosaic of the Great Palace at Constantinople (Great Palace, 1st Report, pl. 41).

Windmills (anemomylones) appear infrequently in documents, but they evidently existed in the 14th C.: thus, a praktikon of 1304 mentions a windmill located near a water mill (Laura 2, no.99.39). The same praktikon indicates that peasants could own shares of a windmill (ibid., no.99.54, 152).

—A.K., J.W.N., A.C.

MILUTIN. See Stefan Uroš II Milutin.
MILVIAN BRIDGE, span over the river Tiber in Rome, site of the battle of 28 Oct. 312 where Constantine I the Great defeated Maxentius. Prior to the battle, according to both Eusebius of Caesarea and Lactantius, Constantine had some sort of religious experience, attributed at least in later times to the Christian God. The emperor put signs on his troops' shields or devised standards (labarum) that reflected that experience. Maxentius cut off the approaches to Rome, including the Milvian Bridge, but constructed a temporary bridge of boats and came out to fight. Constantine's victory and the death of Maxentius made him sole emperor in the West and consolidated the position of Christianity (see Eclect of Milan); it was also an important precedent for Christian concepts of triumph. The battle is depicted on the Arch of Constantine; a relief from Caesarea in Mauritania often said to show the battle probably does not. The patrician comparison between the battle and the crossing of the Red Sea was exploited on sarcophagi and preserved in Byz. art. In the Paris Gregory (fol. 440r), the miniature depicting Constantine's victory places the bridge over a Tiber painted red.

MINERALOGY. Contrasted with the careful classification of "stones" in Theophrastus's work of ca.300 B.C., Byz. lapidaries concentrated almost always on their magical and medical properties, a tendency foreshadowed by sections of the Hippocratic corpus as well as the record of medical stones and metals by Dioskorides. When Aetios of Amida wrote his medical encyclopedia, the topic of medical stones had become subsumed within a large, popular genre of magical and mythological lapidaries, represented in the extant texts of "Orpheus," called On Stones (Orphoeos lithika, ed. G.N. Giannakes [Ioannina 1982]). Under the name of Zoroaster survive fragments of lapidaries, closely related to certain passages in the magical papyri (The Greek Magical Papyri in Translation, ed. H.D. Betz [Chicago 1986] vol. 1) as well as to On Stones by Psellos. Also related are some of the Greek works on alchemy. The astrological properties of "stones" are linked with seasonal herbs, likewise of major importance, in some tracts purported to be by Hermes Trismegistos as well as many sections in the texts of Byz. astrology. Byz. authors sought to discover the connections of "stones" and their growth in the earth with pharmacology and magic; although precious and semiprecious gems were emphasized, the study of "things mined" (including coral, magnetite, and amber as well as the expected opal, topaz, emerald, gold, silver, and copper) entailed an ever more detailed collection of data, used to provide efficacy in astrological or alchemical medicine and pharmacy. (See also Gems, Amulet, and Mines.)

MINES (μεταλλα) operated in various areas of the Roman Empire and are often mentioned and described in the sources; some of them ceased to function, at least temporarily, in the late 3rd C. (J. Ramin, La technique minière et métallurgique des anciens [Brussels 1977] 13). For the late Roman period, there is information about both public and private mining operations throughout the empire. Edmondson (infra) has argued that at this time larger mining districts declined, the emphasis changed to smaller-scale exploitation of mines, and there was less direct government control of mining operations. Although many miners were

MIMESIS. See IMITATION.
freemen (Sodini, “L’artisanat urbain” 101), widespread use was made of criminals (and prisoners of war), since legislation of the 4th and 5th C. prescribed work in the mines as punishment (in metallum damnare). This legislation, preserved primarily in the Codex Theodosianus, was repeated in the Basilika and by Harmenopoulos, but these later repetitions may be anachronistic. In the Balkans in late antiquity mines were under the supervision of the comes metallorum for Illyricum. There is very little information on Byz. mines from the 7th to 12th C., much more data (primarily from non-Byz. sources) for the 13th–15th C. Vronis (infra) has argued that the silence of the Byz. sources does not mean that mines ceased to function on Byz. soil, but that Byz. historians did not consider this sort of information important.

Iron was widely available: mines are attested in Syro-Palestine, Anatolia (Trebizond, Sinope), the Crimea, the eastern Danube region (Capidava, Pačuiul lui Soare, Dinogtea), Macedonia, and Noricum. In the Roman period major centers of copper production were located in the West (M. Lombard, Les métaux dans l’ancien monde du Ve au XIe siècle [Paris–The Hague 1974] 13–15); the mines of Euboea were exhausted, and those of Sinai and neighboring areas ceased to be exploited after the 3rd C. Among the sources of copper after the 6th C. were Cyprus, Pontos, and the Caucasus; old bronze was also recycled. A decrease in bronze coinage is evident from the beginning of the 7th C. but it is hard to determine to what extent this was connected with a decline in copper mining.

The ancient sources of gold in Macedonia, Thrace, and Asia Minor were practically exhausted by the 6th C. even though the traditional expression “the gold-rich Pactolus” (in Lydia) was still used proverbially. Gold was brought to Byz. from Armenia: in the 6th C. Prokopios (Wars 1.15.18) cites the strongholds of Bolon and Pharrangin in Persarmenia as places where the metal was extracted, and in the 9th C. Theophanes the Confessor (Theoph. 179.7) speaks of golden mines (chrysorychia) in the Armenian mountains. Gold came also via Axum: Kosmas Indikopleustes (2:51f) describes how Axumite merchants visited the land of Sasou (Yu. Kobiščanov, PSb 111 [1964] 94–112) to exchange meat, salt, and iron for gold ingots called tanchara. Gold was also mined on Mt. Pan-

gaion in Thrace, and nuggets were found in the auriferous streams of the Rhodope Mountains.

Silver was likewise mined in widespread regions of the empire. The mines in Attica (at Sou- nion, Laurion, and Thorikos) were in operation in the 5th–6th C. (G. Fowden, JHS 108 [1988] 55 and n.43). In the 6th C. Paul Silentarios (vv. 679–80) noted that silver used in the decoration of Hagia Sophia, Constantinople, came from Sounion and Mt. Pangaión. Other silver mines were located in Armenia and Cyprus; esp. in the late Byz. period silver was obtained from the Caucasus and Serbia (e.g., at Novo Brdo).

Numerous toponyms of small settlements deriving from the terms for iron and copper—for example, Sidera (Xénoph., no.19.35), Sidereas (Lavra 2, no.111.11), Sideropetra (Lavra 2, no.90.210), Siderokastron (Solovjev-Mošin, Grčke povele, no. 28.44), Siderokauseia (Ephig., no.15.19, etc.), Sideronin (Vazelon, no.12.3), Chalkobounon (Xénoph., no.4.17), Chalkopagas (Lavra 3, no. 122.12)—probably reflect the expansion of medieval mining; it is noteworthy that toponyms connected with gold and silver (save for large towns like Chrysochoris) are extremely rare—for example, the rivulet Argyroba (Lavra 2, no.108.899).

A.K., A.M.T.

MINORITES. See Franciscans.

MINTS. Byz. coins were at some periods minted only at Constantinople, but more often there were one or more provincial mints as well. Only in the early period (4th–8th C.) were the mints commonly indicated on the coins. Where explicit mintmarks are absent, identification is highly conjectural.

The pattern of minting in the later Roman Empire was set by Diocletian, who brought all mints under the direct control of the state. The great size of the empire made the centralized
manufacture of coins impossible, so provincial mints were created, patterned closely upon the civil dioceses. Minting was controlled through the praetorian prefectures, but the directors of the mints (procuratores monetarum) came under the jurisdiction of the comes sacrarum largetionum. Closely geared to the needs of the state and army, minting was to some degree sporadic, gold and silver coins in great quantity being required at intervals for accession donatives and quinquennial distributions.

A mint-mark forming part of the design on a coin identified the mint by abbreviating its name (e.g., RM for Roma), often adding SM (for Sacra Moneta) or the standard abbreviation for the technical term for refined gold (OB, obryzum) or silver (PS, pusulatum). Also, as most mints were divided into officinae, this was indicated as well, normally as a Greek numeral (from A to I = 1–10). In the third quarter of the 4th C. the minting of gold was centralized in the palatine officium of the comes sacrarum largetionum, so that coins of this metal were struck only when and where the emperor was in residence. After the accession of Arkadios, the eastern emperor rarely left Constantinople; in consequence the formulae CON and CONOB (COMOB in the West) became the distinctive mark of gold coins, used even when the gold was minted elsewhere. This was notably the case after Justinian I’s reconquest of the West, for this resulted in the opening or reopening of imperial gold mints at Carthage, Ravenna, and Rome. The little silver that was then being struck came from the same mints. At the same time there were many provincial mints for copper, with mints and officinae normally identified on the coins as they had been in the 4th C.

The reign of Herakleios saw a change, for in 628–29 all provincial mints other than Alexandria were closed. Whether such a situation could have lasted, given the difficulty of transporting heavy copper coins over large distances, is impossible to say, for Syria and Egypt were lost to the Arabs within a few years. But dies were occasionally sent out from Constantinople to enable minting to be carried out at Thessalonike, and in the West a plethora of mints existed down to the time of the loss of these provinces.

In later centuries the bulk of coins was struck at Constantinople. Nicholas Mesarites vividly describes the dirt and noise in which the mint em-

ployees worked in his account of their role in the revolt of John Komnenos in 1200 (Mesarites [ed. Heisenberg] 25.32–26.9). Provincial mints were opened from time to time, as administrative or military needs dictated, but since mint-marks were no longer employed—even CON did not last beyond the reign of Leo III—their products can be separated from those of the capital only by iconographic or stylistic differences, and the locations of the mints themselves can be determined only by the evidence of find spots or, in the case of coins struck by usurpers, by our knowledge from other sources of where these usurpers were in power (e.g., Isaac Komnenos in Cyprus). The main provincial mint was normally Thessalonike, to which Hendy would assign all copper folles with rulers’ names struck between 1059 and 1092 (leaving the Anonymous Folles to Constantinople). This mint was supplemented in the 12th C. by one in central Greece, perhaps at Thebes. Later coins can sometimes be attributed to Thessalonike by their peculiarities in style or fabric, confirmed occasionally by a preference for representations of St. Demetrios or of an emperor, or an emperor and another saint, holding a building inscribed with the name of the city. Trebizond was a mint under the Gabradas and again from the 13th C. onward under the emperors of Trebizond; Nicaea and Magnesia were imperial mints at various times in the 13th C. The mark ΦΑΔΦ identifies a group of 14th-C. trachea struck at Philadelphia—Pegolotti refers to perperi di Filadelfe (S. Bendall, Schweizer Münzblätter 34 [1984] 3–8).

MINUSCULE, the script used from ca.800 to copy MSS. It evolved in the 7th or 8th C. from the cursive script. The oldest dated minuscule MS is the Usfenski Gospel Book from 835. In book production the minuscule had such advantages over the uncial as greater compactness and greater speed of writing, combination of letters by ligature, and (later) frequent abbreviations. The use of accents and breathings (at first intermittent, later regular) led to greater legibility and more reliable texts. In the 9th–10th C. it served for the transliteration (metacharakterismos) of Greek uncial MSS, including antique works: examples of metacharakterismos are the codices com-
missioned by Arethas of Caesarea, e.g., the Euclid MS of 888 (Oxford, Bodl. D’Orville 301), or the Plato of 895 (once on Patmos, now Oxford, Bodl. Clarke 59). The hypothesis that minuscule script originated in the Studios Monastery in Constantinople has been met with skepticism by N. Wilson (Scholars 66). The new Sinai finds (1975) suggest that an early form of minuscule was in wide use in the Palestine region between 800 and 850.

Minuscule is written without regard for the regular separation of words; it is contained within four parallel lines, with upstrokes and downstrokes. Among the typical features of early minuscule are (1) the angular breathings (in the form of a truncated eta; (2) the iota adscriptum (i.e., written on the line next to the preceding letter), a feature that continues into the 11th C.; and (3) writing the letters on the ruling line (later, the letters are written under the line). As early as the late 9th C. letters from the majuscule alphabet, for example, gamma and kappa, were reintroduced into the minuscule, at first at the end of lines. H. Hunger has proposed the term “pearl script” to characterize the style of minuscule that flourished esp. in the 10th and 11th C. (H. Hunger in PGEB 202). In the 12th C. the enlargement of the circumflex and certain letters changed the appearance of the written page. In the second half of the 13th C. was introduced a cursive form of minuscule (called beta-gamma style by N. Wilson and Fettaugenmode [“blob of fast style’”] by H. Hunger), alongside the traditional or archaising minuscule, which imitated 11th-C. models. The bookscript of the 14th C. is characterized by a more calligraphic style, called “Metochites style” by Hunger after the style of deluxe MSS containing works by this author (e.g., Vienna, ONBL phil. gr. 95), and by the development of the HodEgon style. The earliest Greek printed books (and to a great extent modern ones as well) adopted the 15th-C. minuscule letters for their type.

MIRABILIA. See Paradoxography.

MIRACLES (sing. θαυμα), extraordinary events, either beyond the range of corporeal nature or extremely unlikely. Perceptible to the senses, miracles were believed to have been produced by God or—with divine support—by a saint as a sign of the supernatural. A miracle is to be strictly distinguished from extraordinary phenomena produced by demons or magic. The miracles caused directly by God were viewed primarily as punishing humans for their sins (fire and brimstone poured on Sodom and Gomorrah, the Egyptian plagues, drowning the Pharaoh in the Red Sea) or predicting danger, whereas the Virgin Mary and the thaumaturgic saints were thought to work a broader range of miracles: healing (including exorcism); rescues from shipwreck, captivity, or enemy attack; creating abundance instead of shortage (of bread, wine, and oil); assistance in travels (esp. in crossing rivers); entering or escaping from locked buildings; sending messages and documents with extraordinary speed; prophecy; revealing men’s concealed thoughts and actions (esp. theft); incorruptibility of the corpse.

The saints work miracles thanks to the grace they have received from God who distributes among them aspects of his power, sometimes allotting a saint a geographical region and a particular field of action; they usually act in response to human petition and prayer. “This world of saints,” says G. Dagron (Vie et Miracles de sainte Thècle [Brussels 1978] 95), “is closely modeled on the empire (served by) functionaries.” Saints differ from pagan gods and miracle workers in that they do not need material objects to achieve their goals—they act primarily by purely spiritual force and psychic contact, by word (prayer), gaze, and gesture.

Collections of miracles are usually divided into those worked during the saint’s life and posthumous ones; the latter are either described at the end of the vita or form special treatises (miracula), such as those of Sts. George, Demetrios, and Nicholas.

The Byz. sometimes evinced a critical attitude toward miracles—not in principle, but in specific cases. Some extraordinary phenomena, such as earthquakes, found a natural explanation, and hagiographers often complained of their audience’s scepticism about miracles; contemporaries, for instance, questioned both the authenticity and divine character of the miracles of Kyros and John.
**Representation in Art.** When a miracle performed by a saint parallels a Gospel event, the biblical iconography was adopted with a minimum of alteration (see Hagiographical Illustration). Depictions of exorcisms or healings performed by holy men, for example, generally show the saint standing before the afflicted person and raising one hand in a sign of blessing; the visual association with the figure of Christ is far from coincidental. Miracles that are not paralleled in the Bible were less apt to be chosen for illustration; where they do exist, the complex events were often reduced to what could be rendered by means of simple formulas. Miraculous or posthumous appearances are not signaled in any particular way: the saint just turns up in person to take part in the scene. Woven into the fabric of regular vita cycles, miracle scenes are rarely illustrated independently. One exception, however, is a temple beam at the St. Catherine monastery on Mt. Sinai, which illustrates a sequence of posthumous miracles of St. Eustathios.

**MIRACLES OF CHRIST.** Of all the episodes of Christ's ministry, his miracles are the most frequently depicted. The earliest Christian art of the Catacombs draws almost exclusively on his infancy and miracles. Especially widespread are the Marriage at Cana and the Feeding of the Multitude, often paired as prefigurations of the Eucharist; the water miracles (Jn 4:5–30; 5:2–9: 9:1–7, see healing of the Blind Man), associated with Baptism; and the healing miracles, associated with conversion. By the 6th C., the miracles had been assembled into cycles (Sant’ Apollinare Nuovo, Ravenna). The 10th-C. Göreme churches of Tokali Kilise and St. Theodore, Sousam Bayrii (Restle, *Wall Painting* 2, figs. 71, 88–91, 105; 3, figs. 374–84) retain such sequences, but few miracles are represented in the following century and a half other than those that became major liturgical feasts, such as the miracle of the Raising of Lazarus (Jn 11:1–46; see Lazarus Saturday), or those included in the Frieze Gospels. Miracle scenes reappear in the later 12th C. and become prominent again in the discursive imagery of the Palaiologan period: CHORA; Athos, Iveron 5 (*Treausres* II, figs. 11–39); monastery of St. Nikita at Çučer; Stara Nagoričina.

**MIRCEA THE ELDER,** or Mircea the Great (called Myrzas [Μυρζάς] or Miltzes in Byz. sources), prince of Wallachia (from 1386); died 31 Jan. 1418. In Byz. terminology he was referred to as voivod of Blachia, archegos of the Moesi or “Moesians” (Doukas), or tyrannos of Dacia (Chalkokondyles). Mircea joined the anti-Turkish alliance but was defeated at Kosovo Polje. When Bayezid I invaded Wallachia, Mircea organized a partisan war against him (Chalk. 1:73f) and on 17 May 1395 routed the Turks and their Slavic vassals at Rovine. Despite the victory, Mircea had to acknowledge the suzerainty of the sultan. The next year Mircea, in alliance with Sigismund of Hungary, marched against the Turks, but the allies lost the battle at Nikopolis on the Danube. Mircea had to give up Dobrogea, which he had recently annexed. The Turkish defeat at the battle of Ankara in 1402 reversed the situation: Mircea formed a coalition with Sigismund and Stefan Lazarević against the Turks, in 1404 supported the revolt of Constantine and Fružin in Bulgaria (P. Petrov, *IzvInst-BülgIst* 9 [1960] 187–214), and again occupied Dobrojudja. The Ottoman prince Musa sought Mircea’s support against his brother Süleyman Çelebi and until Musa’s death in 1413 Wallachia enjoyed relative security. It was surrendered to the Turks either in the last years of Mircea or, according to R.-S. Ciobanu (*RevIst* 39 [1986] 764–73), after 1419/20.

**MIRROR OF PRINCES,** conventional term borrowed from Western medieval literature to describe a text offering advice to a ruler. Although drawing on common principles of statecraft, Mirrors are distinct from basilikoi logoi, because they offer elements of criticism rather than pure adulation. Hunger (infra) considers the speech of Synesios titled *On Kingship* as the earliest Byz.
MISKAWAYH, Abū ‘Alī Ahmad ibn Muhammad, Arab historian; born ca.942, died 16 Feb. 1030. Of obscure background, a secretary under the vizierate of the ‘Abbāsids, he later served the Būyids in Rayy, where he held several positions, including curatorship of a private library. An enormously learned man, he was esp. interested in philosophy, medicine, and alchemy. He wrote on medicine, philosophy, and religion and was a respected littérature and poet. He disdained the contemporary Greeks but admired the classical thinkers and firmly advocated religious toleration.

His best-known work is The Experiences of the Nations, a history from Creation to 980. Its first volumes are based on Miskawayh’s predecessors. As he sometimes preserves material from works now lost, his accounts of the Persian wars under Maurice and Herakleios and of the Arab conquests in Syria are of interest. From 951 on he provides original material informed by keen critical observation and access to extensive library resources and official circles. He repeatedly relates Byz. successes in the frontier wars of the 10th C., and also describes diplomatic negotiations and contacts, in particular the magnificent reception for Byz. ambassadors in Baghdad in 917.

—L.I.C.

MISIMIYAH. See Phaini.

MISSIONS. Christianity was a missionary religion from the time of the apostles, esp. St. Paul. Missionary activity received added importance in the 4th C. when the concept developed that the late Roman Empire and christianized territory were co-terminous (see OIKUMENE); hence, the conversion of non-Christians was a boon to the empire. Thus, the state was frequently involved in missions and often used missionaries as agents of imperial policy. Byz. missions can be divided into three categories: those in which military intervention was used to support the spread of Christianity, those that were part of a diplomatic effort, and those conducted by individuals, who were sometimes officially supported, sometimes on their own.

In the 4th–5th C. Orthodox bishops such as Porphyrios of Gaza spread Christianity among pagans, but missions to people outside the empire were undertaken largely by Arians, Nestorians, and Monophysites, whose activities within Byz. were limited; Ulfilas was the primary missionary to the Goths while Nestorian missionaries traveled as far as China. The great age of Orthodox missionary activity began in the 9th C., inspired in part by the Rus’ attack on Constantinople in 860, and leading directly to the mission dispatched by
Photios to Boris I of Bulgaria and that of Con-
stantine the Philosopher and Methodios to
the Moravians. Missionary centers were estab-
lished at Ohrid, Preslav, and other cities, where
Slavic priests were trained in Byz. Christianity.
Missionaries were also sent to the Alans and other
peoples of the northern Caucasus and to Hun-
gary. The greatest success of Byz. missionaries
was the conversion of Vladimir I of Kiev in 988.
Missionaries such as St. Nikon ho “Metaneite”
worked within the frontiers of the empire for the
conversion of pagan peoples settled there.

Characteristically, Byz. missionary activity worked
“from the top down” by focusing first on the
rulers and leaders of society who then arranged
the conversion of their people en masse, although
missionaries also worked consistently among the
people after the “official” conversion. The tradi-
tional view that Byz. missionaries normally oper-
ated on the premise that people should be ad-
dressed in their own language, and hence the
Scripture, liturgy, and writings of the Fathers
were translated into local languages, has recently
been questioned (I. Ševčenko, infra 19 and n.38).
Forced hellenization was sometimes attempted,
esp. when Byz. achieved direct political control
over the missionary area. Byz. practice, however,
led in most places to the emergence of native
“national” Christianity, strongly influenced by Byz.
models but culturally and administratively sepa-
rate.

Lit. I. Ševčenko, “Religious Missions Seen from Byzant-
(1967), 649–74. C. Hannick, “Die byzantinischen Missi-
onen,” in Kirchengeschichte als Missionsgeschichte, II, 1. Die
F. Dvornik, Byzantine Missions among the Slavs. SS.
Constantine-Cyril and Methodius (New Brunswick, N.J.,

T.E.G., I.S.

MISSION TO THE APOSTLES refers to two
distinct Gospel episodes: Christ’s mission to the
newly assembled 12 Apostles (Mt 10:1–42, Mk
6:7–11, Lk 9:1–5) and his farewell to the 11,
recounted in Luke 24:50 as a parting blessing and
elsewhere (Mt 28:18–20, Mk 16:15–18) as a final
mission. Two compositions existed, one showing
a frontal Christ flanked by two groups of six
disciples, the other showing him to one side. Each
composition could be applied to either episode,
although, where both compositions appear in the
same MS, the accompanying text reveals that the
symmetrical one is meant to represent the fare-
well. This is confirmed in the wall paintings in
Cappadocia (Tokali Kilise, Göreme—Ristie, Wall
Painting 2, pl.108), where the Ascension is con-
flated with the symmetrical image of the Mission.
Paul often appears as one of the disciples, and
the farewell scene always depicts 12, not the can-
onical 11, to show that the scene signifies Christ’s
mission to his Church. Miniatures of the Mission
preface certain 11th- through 12th-C. Gospel
books, illustrating the call to evangelize that the
Gospels fulfill. Unknown before the 9th C., the
image becomes rare again in Palaiologan art.

MISSORIUM. See Plate, Domestic Silver and
Gold.

MISTHIOS (μισθος), also misthotos (from misthos,
 wage), terms that in papyri denoted hired workers
(Fikman, Emodern 109). Misthios appears once in the
FARMER’S LAW (par.34) as a designation of a
hired shepherd, and hagiographers, drawing upon
John 10:12, often speak of a misthotos who, unlike
a good shepherd, abandons the sheep and runs
away. The Book of the Eparch describes misthioi
misthotoi as journeymen in the guilds of metaxopra-
tai and serikarioi: they signed contracts with their
masters for not longer than a month. In the
Treatise on Taxation (ed. Dölger, Beiträge 115.41)
as well as in the vita of Basil the Younger, a misthios
is a peasant who resides and works in a PRO-
asteion in which the owner does not live. St.
Christodoulos of Patmos, in the typikon of 1091,
is probably referring to this category of people
when he speaks of laymen who work five days a
week for his monastery and return home for the
weekend. Ecloga 8:2 applies the term misthios to
the poor freeman who worked to repay debt or
ransom. Late Roman texts contrasted misthios/mis-
 thotos with misthotes, tenant or contractor, but Byz.
jurists confused these terms: the Basilika used the
word misthotos for both contractor and free colonus
(E. Popescu in Beiträge zur byzantinischen Geschichte

The terms are infrequent in later documents
and appear usually in conjunction with douleutes
MISTHOSIS (μισθωσις), a form of lease. Byz. legal sources designate as misthosis a series of legal transactions involving the transference of something or the performance of a job for pay (misthos). The term corresponds to the Roman/Justinianic locatio-conductio and to the Hellenistic misthosis. The tenure of a vineyard, the rent of a house, and the completion of a piece of work are all accordingly designated as misthosis. Since the labor of an individual can also be given over to another person in exchange for payment, the service and work contract was also classified as misthosis. The term (cf. Digest 19.2) is maintained in the Basilika (20.1) and even into the 14th C. (cf. Harm. 3.8) in collections of legal norms.

In practice, however, this uniformity quickly dissolved; the notion of ownership was not distinctly outlined, so that by the post-Justinianic period the distinction between misthosis and a loan was difficult to establish and misthos and tokos (see Interest) became interchangeable. Not only land lease in general but also its specific form, emphyteusis, could, as the Peira 15.17 shows, be characterized as misthosis. Even charistikon could be treated in this way (Peira 15.9), although there the absence of payment meant the transaction was closer to a loan. The collapse of the old concept was finally caused, on the one hand, by the great number of new transactions of transmission—which fluctuated between privilege, donation, transfer of rent-collection rights, among other things—and, on the other, by the reduction of free contracts for paid labor on account of the numerous institutional dependent and bondage relationships.

In place of misthosis new terms appeared such as pakton, aktos paktotikon (Sathas, MB 6:622.25), or paktotike symphonia (624.2–3), or nonspecific older words such as ekdosis or homologia. Only misthos held its ground as a term for “rent” (Dionys. no.14.5), for “payment for a job” (Meyer, Haupturkunden 105.5f), for “salary” (Prot. no.7.115), etc. In the 13th–15th C. the Byz. probably still distinguished between credit, tenure relationships, and service contracts as phenomena in their everyday life. However, it cannot be said at the present time whether in the consciousness of the jurists a uniform “act of transmission” had taken the place of the differentiated contract-typology or whether simply a collapse of the tradition of legal culture had occurred.

MISTRA (Μυστρας or Μυστράς), fortress and city in the Peloponnese, on a hill west of Sparta, at the foot of Mt. Taygetos; it was capital of the despotate of Morea. Mistra first appears in the sources in the 13th C. William II Villehardouin built a castle there shortly after his capture of Monemvasia; its purpose was to secure the plain of Lakonia from the Slavs of Taygetos. In 1262, after the battle of Pelagonia, Mistra was surrendered by the Franks to Byz. From 1262 to 1348 Mistra was ruled by a strategos, called kephale, who initially changed every year (until 1308) and who ruled all the Byz. Peloponnese. During this period, and esp. after the Frankish victory at the battle of Makryplagi (1264?), there was considerable insecurity in the region and the inhabitants of Lakedaimon moved for greater safety to a city built under the fortress at Mistra. From 1348 to 1460 Mistra was seat of the despotes of the Morea. The city witnessed a remarkable cultural renaissance, including the teaching of PLETHON (at Mistra ca.1407–52), and attracted artists and architects of the highest quality. The city surrendered to Mehmed II on 31 May 1460.

The castle at Mistra is perched at the top of a hill that has precipitous slopes except on the east. The circuit wall has only one tower, above the ascent, and a single entrance. The keep occupies the height of the hill. The castle seems entirely Frankish in construction, but the walls of a chapel in the keep do not bond with the surrounding masonry; this may be evidence of earlier Byz. construction on the site (N.B. Drandakes, 10 CEB 1 [Athens 1954] 154–66). The city is surrounded
by a fortification wall and divided into two sections, an upper and a lower, each pierced by several gates.

The palace of the despotai was located on one of the few flat spaces at Mistra, in the upper city at the highest point where running water was available. It is composed of an L-shaped complex of buildings constructed in several stages from the 13th to 15th C., all arranged around a monumental open space (S. Sinos, *Architettura* 17 [1987] 105–28).

The oldest part, perhaps inaugurated already by the Franks, was a rectangular block with a single barrel-vaulted room on the ground floor and painted windows above. To this was attached a two-story residential section built in the second half of the 14th C., with six contiguous rooms on the second floor and an arched portico along the rear, the roof of which formed a balcony overlooking the wide valley. In the early 15th C. a new wing was built at right angles to the previous structures; it had a large audience hall on the upper floor and a two-story external portico along the wall facing the square.

The houses at Mistra are among the best-preserved examples from Byz. (A. Orlandos in *Art et société à Byzance sous les Paleologues* [Venice 1971] 75–82). The great houses resemble the palace, with large halls on the upper floor and storerooms at street level; many of them have balconies looking out over the plain.

**Churches of Mistra.** Seven of the town’s churches, dating from the late 13th to the early 15th C., have been preserved. Their plans are varied and show an awareness of contemporary trends in Constantinople, though one particular plan survives nowhere else and may be a local invention. Their masonry, for the most part a sober cloisonné (see brickwork techniques and patterns), exhibits in some cases lively patterns of a Constantinopolitan type. Much of the interior stone carving consists of *spolia*, mostly medieval, robbed probably from buildings in the city of Sparta. Frankish elements appear frequently in such architectural details as pointed windows but do not affect the actual church plans; similarly, Western elements invade individual frescoes but never the overall program of decoration. The latter follows the general course of late Byz. monumental painting, with a growing emphasis on liturgical themes and extended secondary cycles, esp. those of Christ and the Virgin, at the expense of hagiographical cycles and the isolated portrait.

The earliest of the surviving churches is that of St. Demetrios, the metropolitan church built in the second half of the 13th C. as a wooden-roofed
basilica. A marble inscription suggests the involvement (in 1291/2?) of the metropolitan Nikephoros Moschopoulos, but the church and some frescoes at its eastern end may actually precede him (M. Chatzidakis, *DChAE* 9 [1977–79] 143–79). The church was renovated (in the 15th C.) to adapt its elevation to the model of a nearby church, the Afendiko. Its original fresco program, though severed in its upper reaches by the renovation and not absolutely uniform in date, shows a standard feast cycle in the central part and more discursive cycles (miracles of Christ, life of St. Demetrios, miracles of Sts. Kosmas and Damianos) in the aisles and *pastophoria*.

Roughly contemporary are the two churches of the Brontocheion monastery founded by the *protoyskellos* Pachomios, who became the monastery’s *hegoumenos*. One, dedicated to the Sts. Theodore, was begun between 1290 and 1295; it is the latest in date of the surviving octagon churches represented by Daphni and Hosios Loukas and was inspired perhaps by the Church of Hagia Sophia at Monemvasia. Considerably more space is allotted to fresco decoration than is usually the case in the churches of this type: there is a feast cycle, a Passion cycle, and a Virgin cycle. A second church, known as the Aphendiko, was built in the monastery shortly afterward (by 1311); it is dedicated to the Virgin Hodegetria. This building was to exert a great influence on later church design at Mistra. Its plan is that of a cross-in-square superimposed on a basilica with galleries: one large dome covers the center bay of the nave, with four smaller domes over the four corners of the galleries and another over the narthex. The plan has affiliations with earlier plans such as those of Bize or Dere Ağız, but whether it represents a conscious revival of earlier forms, is a late survivor of a lost genre, or even an innovation peculiar to Mistra, is hard to determine (H. Hallensleben, *Marburger Jahrbuch für Kunstwissenschaft* 18 [1969] 105–18).

The church was surrounded on three sides by porticoes; this and certain other architectural and masonry details (such as the marble dado inside) reveal a debt to contemporary works in Constantinople and Thessalonike. The fresco decoration shows a fine sensitivity to the various elements of the church plan and makes a clear division between the primary program (in the cross-in-square parts) and the secondary cycles (miracles and Passion of Christ, liturgical themes), which are relegated to the aisles, narthex, and galleries. A fresco of the Baptism is esp. rich in vignettes of daily life (D. Mouriki in *Okeanos* 459–61). In a room at one end of the narthex are painted texts of *chrysobulls* in favor of the monastery.

The Church of the Virgin Peribleptos was built into the face of the cliff, at the opposite end of town from the Brontocheion. Though there are portraits of the founders inside the church, the figures are not named, and there are no other documents or inscriptions by which to date it or explain its location. It is generally attributed to the third quarter of the 14th C. Its architecture, which had to be adjusted to the uneven terrain, is essentially a traditional cross-in-square, with the dome resting on two, instead of four, columns; the fresco program is characterized by a preponderance of eucharistic themes spreading from the main apse into the *pastophoria*, by an unusually extensive cycle of the childhood of the Virgin, and by multfigured feast compositions in dramatic landscapes.

Two other two-column cross-in-square churches are also 14th C. in date. Hagia Sophia, which inscriptions reveal was founded by the *despotes* Manuel Kantakouzenos, probably as a palace church, later became the *katholikon* of a monastery, possibly the patriarchal monastery of Christ Zoodotes known from a document of 1365. The Evangelistria Church (late 14th–early 15th C.) differs from others of this type in having a galleryed narthex, and, unlike most other churches in Mistra, it preserves a good deal of contemporary sculptural decoration.

A large number of these churches have separate chapels attached to the main body of the church. The generally funerary character of these chapels is evinced by the tombs they house and the fresco portraits of noble families adorning them.

The latest of all the churches is the Virgin Pantanassa. The church (or at least its altar) was consecrated in 1428; various inscriptions in the church name the *protostrator* and *mesazon* John Phrangopoulos as its founder. The architecture imitates that of the Aphendiko, but the corner domes barely project above the roof. Festoons decorate the apses, pointed arches frame some windows; and further signs of Frankish influence can be seen in the prominent bell tower. The fresco decoration, based on that of the Periblep-
tos, survives in its original state only in the upper stories; it involves familiar feast compositions richly enhanced by genre details, some deriving from antique formulas and others, especially townscapes, showing considerable Western influence.

**MITATON** (μιτάτον, also μητάτον, from Lat. metor, “to measure off,” “pitch camp”), a term with several meanings in Byz. Greek.

**Kind of Inn.** In the minutes of the council of 536 and 681, mitaton designated “lodgings.” In the 10th-C. Book of the Eparch (ch. 5), where the term is also rendered oikos ton mitaton, the word mitaton acquired a specific meaning—the inn in Constantinople for Syrian merchants where they stored their goods after having paid a rental fee, enoikion. At the mitaton the textile merchants (prandiorpatai) divided up the wares that they had purchased collectively from the Syrians. Linen merchants, on the other hand, were forbidden to buy cloth “from the mitata.” Sjuzjumov suggests that mitata were transformed into trading stations of foreign merchants.

**Fiscal Term.** Mitaton was also a kind of eperela, the character of which remains under discussion. The word appears with this sense in a Justinianic novel (130.9), and later in documents, most commonly chrysothulls, from 974 to 1384/5, in which privileged landowners are exempted from this burden. The earlier texts speak of the kainotomia of mitaton (Lavra 1, no. 6.23, Iur., no. 2.33), then the more neutral term “imposition” (epithesis or katalhesis) emerges. In all periods, evidence for its active imposition is rare. The term usually seems to mean the obligation on private individuals to quarter military and state officials (e.g., in the diatikos of Attaleiates, ed. P. Gautier, REB 39 [1981] 105.125–26). However, passages in Andronikos II’s 1319 chrysothull for Ioannina (MM 5:82.22–5) and his 1307 chrysothull for the sees of Berat and Kanina (P. Alexander, Byzantium 15 [1940–41] 181.79–81) led Maksimović (Byz. Proc/Admin 157–60) to conclude that, at least in the 14th C., mitata were forced sales of grain, at a price below that which was customary, for the needs of kephalai and perhaps for armies in transit.

**Kind of Ranch.** In Constantine VII Porphyrogenetos (De cer. 458.19), the term mitaton refers to state-supervised ranches located in “Asia and Phrygia” that supplied mules and horses for the imperial army. The officials in charge were called the dioiketai of the metata (Laurent, Corpus 2, no. 593), protonantarios of the metaton of Asia (Zacos, Seals 1, no. 3077A), or protonantarios and episkopites of Phrygia (no. 3115).

**MITHRAISM,** the cult of the Iranian sun-god Mithra. The first traces of Mithraism in the Hellenistic world (Egypt, Koinagene) date to the 3rd–2nd C. B.C.; it spread widely across the Roman Empire, esp. in the frontier provinces (North Africa, Pannonia, Dacia, Syria, etc.). The cult of Mithra, popular among soldiers, was supported by Aurelian and Diocletian, but then declined despite an attempt to revitalize it under Julian. After ca. 400 it disappeared, even though the erudite Michael Psellus evoked the name when accusing monks of Chios of having introduced alien rites and mysteries.

The Mithraic cult was celebrated in temples (mithraeum), usually subterranean, which were ornamented with reliefs showing Mithra slaying a bull. The ritual comprised banquets of bread and wine, as well as baptism through water and blood. The birthdate of Mithra was given as 25 Dec., after the winter solstice. Attempts at a rapprochement between Mithraism and Christianity were already being made in late antiquity (e.g., by Porphyry), but the similarity between the two is superficial, as Mithraism was predominantly a nature religion in which the idea of resurrection and salvation remained undeveloped.

Source: F. Cumont, Textes et monuments relatifs aux mystères de Mithra, vol. 2 (Brussels 1896).

MODALISM, a modern concept in the history of dogma, used from the 19th C. onward to designate a form of MONARCHIANISM that sharply distinguishes between the mode of God's manifestation in the history of salvation (OIKONOMIA) and the one wholly transcendent God; Father, Son, and Holy Spirit are understood as different persons or manifestations of God. The Father is depicted as the creator and lawgiver of the Old Covenant; the Son as the redeemer; and the Spirit as the paraclete and perfecter.

K.-H.U.

MODE (ἡχος), a system of melodic formulas for Byz. chant, the Oktoechos being the collection of eight modes that forms the compositional framework of Greek and Latin medieval music. Each mode has a restricted set of melody types peculiar to it that can be employed in many different combinations and variations. Byz. theorists refer to the eight sets as Modes I–IV Authentic and I–IV Plagal, a terminology borrowed in early Western treatises.

The origins of the oktoechos are obscure. It appears to have little in common, apart from nomenclature, with the ancient Greek tonal system. Some scholars have speculated that its beginnings lie in Near Eastern musical and philosophical traditions. The authenticity of an 11th-C. MS of John of Maiuma's Plerophoriai (ca.515), which alludes to "the music of the oktoechos," is questionable. Also doubtful is the allegation that an anthology of hymns by Patr. Severos of Antioch was an oktoechos. It does seem certain, however, that by the late 7th C. the eight-mode system had become established within the Greek liturgical world, and the attribution of its organization to John of Damascus, while not totally accurate, may contain some historical fact. In any event, he contributed significantly to the formation of a liturgical book called the oktoechos that contains the variable hymns of the hours throughout the church year, beginning with the first week after Easter.

MODELS AND MODEL-BOOKS. Literary sources suggest that painters employed earlier works of art as models for their creations. Basil the Great (PG 31:493A) speaks specifically of artists who
“copy icons from icons,” while Symeon Metaphrastes (PG 116:657B) uses the image of skilled painters depending upon an archetype. Such texts do not explain the transfer of design from a mosaic or fresco in situ to another mosaic or fresco geographically far removed, nor the recurrence in miniatures of designs executed earlier in monumental art. Accordingly, scholars have suggested the use of model-books, motif-books, and iconographical guides. The oldest surviving example of this last genre, the Painter’s Manual (Hermeneia) of Dionysios of Phourna (infra), written ca. 1730–34, may incorporate Byz. practices, as may the working drawings of post-Byz. painters (L. Bouras in Holy Image 61–63). Cartoons (anthibola), the preparation of which Dionysios describes, were made from existing works and may bear some relationship to drawings from the periphery of the empire that are said to reproduce Byz. works of art (Buchthal; Der Nersessian, infra). Like the descriptions of Oulpios the Roman, some such sketches may be based on, rather than be the basis of, images. But identification of their function raises even more difficult problems than the fact of their rarity.

The use of model-books by Late Antique floor-mosaicists has been vigorously denied (P. Bru- neau, RA [1984] 241–72). Yet Paulinus of Nola and Sulpicius Severus exchanged pictureae for use in the decoration of churches that they were building. Hagiographical allusions to architects’ sketches abound and the 8th-C. vita of St. Pancratios of Taormina has its hero set out for the West from Palestine equipped with chartia (panels? papyri?) and two volumes containing the “pictorial story (eikonike historia) of the Old and New Testaments.” Both general iconographical guides and sets of specific motifs have been suggested as means whereby images were disseminated in the 12th C. (E. Kitzinger, The Mosaics of Monreale [Palermo 1960] 56f, 84). Use of the Cotton Genesis as a source by the mosaicists of the narthex of S. Marco in Venice remains the only plausible example of a richly illuminated MS serving as a guide to the creation of a monumental cycle.

—A.C.

MODESTY, TOPOS OF, a typical feature of authors’ self-characterization in the prefaces (rarer in the closing parts) of their works; it is also found in the colophons of scribes. The topos was well known in antiquity: Quintilian advocated its use, Lucian made fun of it, Menander Rhétor gave its rules. The Byz. used various epithets of modesty (παιδεύοντης) or self-deprecation: hamartolos (sinner), athlios (wretched), akathartos (dirty), amathes- tatos (illiterate), agroikos (boorish), and so on; even an author as excellent as Basil the Great might deplore his astheïa (weakness). George Hamar- tolus calls himself worthless and states that he has no knowledge “of scientific inquiry and systematic treatment of secular [affairs]” (ed. C. de Boor, 1:1.11.11–14); Theophanes the Confessor admits his ignorance (Theoph. 4.2–3); the author’s incompetence is mentioned in the preface of almost every saint’s vita.

This modesty, however, is only one side of the coin: it is introduced as an antithesis to the truth and clarity that are the author’s major objective. The same George “the Sinner” forgets his modesty when he states that his “poor booklet” presents the unadorned truth in concise and clear form (p.2.6–8). The anonymous hagiographer of Loukas the Stylist takes a further step: after complaining of his weakness and faintheartedness and expressing his desire to remain silent, he boldly announces that his vita is “a work of divine force and a gift granted by the superior power” (ed. Délehaye, Saints stylites 195.7–17). The modest and untutored writer considered himself a tool in the hands of the Holy Spirit. From the 11th C. onward we sometimes encounter the author’s frank appraisal of his talent, for example, in Psellos and Tzetzes, but the topos of modesty continued in scribal colophons and other writers.

—A.K., I.Š.

MODIOLOS (μοδίολος, lit. “little pot”), a gold imperial crown mentioned by several 10th-C. au- thors and, after a long interval, by Patr. Germanos
II in the 13th C. (A. Kazhdan, JÖB 38 [1988] 339f). According to Constantine VII Porphyrogenetos (De cer. 414.17, 432.15), this type of crown was offered to Leo I in 457 and to his grandson Leo II in 473. It was also worn by empresses (Genes. 5.64–67). If the emendation of Dagron (CP imaginaire 185, n. 115) is correct, the statue of Tyche in Constantinople bore a modiolos as well. The scanty source evidence does not permit a clarification of the constitutional role of the modiolos; most probably, it was given by the senate to the emperor during the coronation ceremony.

-A.K.

MODIOS (μόδιος), a unit of measurement for both grain and land, of varying quantity. A normal Roman (or Italic) modius equaled 20 librae (litrai, pounds) of wheat, the modius castrensis in the 4th C., 30 librae. There were various kinds of modioi in Byz. The sea (thalassios) or imperial (basilikos) modios equaled 40 logarikai litrai, or 17.084 liters; the monastic (monasteriakos) modios, 32 logarikai litrai, or 13.667 liters; the revenue (annoniakos) modios, 26.667 logarikai litrai, or 11.389 liters. E. Schilbach assumes that the so-called large (megas) modios equaled 4 sea modioi and identifies the cross-signed (staurikos) modios with the revenue modios. He also assumes that there was a special modios for trade, which he identifies with the public (politikos) modios mentioned in Byz. sources and with the Italian maggio (mozo) di Romania. He equates this with 18 sea modioi.

The sea modios was mostly used as a measurement for the land modios. Synonymous terms are sowing (sporimos) modios and geometric (geometricos) modios. The following equation is established: 1 modios = 2 sq. schoinia = 40 logarikai litrai of wheat seed = 200 sq. orgyiia, that is, 888.73 sq. m; in some cases 1 modios is equated with 288 sq. orgyiia, or 1,279.78 sq. m. From the 13th C. stremma was synonymous with modios. In some classicizing texts the term medimnos was used instead of modios.

Use in Documents. Both treatises on taxation and acts recording actual practices (cadasters, charters) measure land in modioi without specifying what type of modios was in use. Another difficulty that Byz. land surveyors faced was the transition from linear measurements to modioi as square measures (G. Litavr, VizVrem 10 [1956] 101–03). Some inconsistencies in measurement force scholars to assume that in certain cases large modioi were employed, in other instances small modioi (Svoronos, Cadastre 128, n. 1). Difficulties sometimes appeared insurmountable: thus officials who compiled the praktikon of Kephallenia confessed that they were unable to “measure in modioi” (modiologesai) 36 small pieces (komatia) of land (Th. Tzannetatos, To praktikon tes Latinikes episkopes Kephallenias tou 1264 kai he epitome autou [Athens 1965] 47:253); in other cases a komatis could be expressed in modioi (e.g., MM 6:159.8–9). Definition of an allotment as komatis (“piece”) or loris (“strap”) is typical of Trebizond (e.g., F.I. Uspenskij, V. Beneševič, Vazelonške akty [Leningrad 1927] no. 143), where they were sometimes calculated in psomiaria; Schilbach (Metrologie 127) identified psomiarion as the sea modios. The capacity of boats was also measured in modioi (e.g., Ptomou Engrapha 1, no. 7.14), likewise without specificaion.

-E. Sch., A.K.

MODON. See Methone.

MOECHIAN CONTROVERSY (from μοεχία, “adultery”), a religious, political, and legal dispute (795–811) over the second marriage of Constantine VI. In 795 Constantine divorced his wife Maria to marry his mistress Theodote, Maria’s koubikouloarea. Constantine’s mother Irene reportedly encouraged him in order to undermine his authority; Constantine claimed that Maria had tried to poison him. Patr. Tarasios initially opposed the marriage, since no emperor had ever divorced his wife, but acceded when Constantine threatened to restore Iconoclasm (PG 99:1048–53). The wedding, performed in Sept. 795 by Joseph, aikononomos of Hagia Sophia and superior of the Kathara monastery, angered many churchmen, who considered the marriage uncanonical and broke off communion with Tarasios. Constantine tried to appease Plato of Sakkoudion and Theodore of Studios, but in 797 he had them beaten and exiled. After Constantine’s de-
throne that same year, the monks returned and were reconciled with Tarasios, who then deposed Joseph of Kathara.

In 806 Patr. Nikephoros I revived the issue by rehabilitating Joseph, probably because Emp. Nikephoros I wished to reward him for mediating during the revolt of Bardanes Tourkos in 803. By 808 Archbp. Joseph of Thessalonike (Theodore’s brother) refused to communicate with the emperor and patriarch. In 809 a synod confirmed Joseph of Kathara’s restoration, anathematized those who refused to apply oikonomia to the affair, and reduced Archbp. Joseph to priest. The monks of the Stoudios monastery rejected the “adulterous” synod and were persecuted. Michael I ended the affair in 811 by restoring the Stoudites and deposing Joseph of Kathara. The Moechian Controversy greatly enhanced the prestige of the monastic clergy and further differentiated “rigorists” from those who favored oikonomia in theological dispute.

MOESIA, Roman province on both banks of the Lower Danube. When, in the 3rd C., the territory north of the Danube was evacuated by the Romans, Aurelian created DACIA Ripensis between Moesia I (formerly Superior) and Moesia II (Inferior); later, SCYTHIA MINOR was separated from Moesia II and Dardania from Moesia I. Diocletian developed the system of forts and watchtowers in Moesia I, so that in the 4th C. the province was relatively quiet, the mainstream of barbarian invasions moving through neighboring PANNONIA.

Mócsy (infra) hypothesizes that the 4th C. in Moesia I was a period of growth for larger estates that belonged to urban landowners; they were situated farther south from the LIMES than the smaller villas of the previous period. The pressure of the Huns made part of the Roman population abandon Moesia I and search for refuge in the mountainous areas in the south. By the mid-5th C. Naissus replaced the Danubian towns as the center of trade with the Huns.

Archaeological investigation of Roman cities in the territory of Moesia II (IATRUS, NOVAE, etc.) shows that urban life in this area ceased to exist by the mid-7th C., sometimes as a result of a catastrophe (invasion of the Avars and Slavs), sometimes of a slow decline. Byz. authors of the 11th–15th C. applied the ethnic term Mysoi primarily to the Bulgarians, but also to the Pechenegs and Hungarians (Moravcik, Byzantinoturcica 2:207–09).

—A.K.

MOGLENA (Móglene), a region in southeastern Macedonia. Circa 1015 Moglena was a Bulgarian territory administered by an archon Elizet (Skl. 352.33–34). Captured by Basil II, it formed a theme first attested in 1086 (Lavra 1, no.48.6) and a bishopric mentioned in a chrysobull of 1020. The Lavra of Athanasios obtained lands in Moglena and ca.1196 had a dispute with local straitiai and the bishop of Moglena’s paroikoi when they refused to pay rent (dekaiteia) to the monastery (Lavra 1, no.69). Another conflict arose ca.1181 when the monastery contested the rights of Cumans who were granted pronosai in Moglena (Lavra 1, no.65). In 1205 Moglena was conquered by Kalojan.

—A.K.

MOKIOS (Mókios), legendary saint whose memory was celebrated on 11 May, the day of the foundation of Constantinople. According to his martyrion (written probably after the 6th C.), Mokios was born in Amphipolis, fought against idolatry, suffered during Diocletian’s persecutions, and was decapitated at the decision of the curia (bouleuterion) of Byzantium. His cult became popular in Constantinople at an early date; by the 5th C. Sozomenos (Sozom., HE 8:17.5) mentions his shrine there. Later tradition ascribes the foundation of the church to Constantine I himself, who allegedly constructed it on the site of the temple of Zeus (or Herakles).

The location of the church and the monastery of St. Mokios is not yet precisely established. It was probably situated near the cistern of Mokios
built on the seventh hill, beyond the walls of Constantine and not far from the Golden Gate. It is questionable that the church collapsed in the reign of Leo III, as alleged, but a section of it was destroyed in the 9th C. and sumptuously restored by Basil I. It was a place of important court ceremonies; on 11 May 903, during a customary procession to St. Mokios, Leo VI was attacked and wounded in the church. The memory of various martyrs was celebrated at St. Mokios, which also housed the relics of St. Euthymios the Younger. Still splendid at the beginning of the 13th C., the church was in ruins at the end of the 14th C. when John V used its stones to repair the walls near the Golden Gate.

LIT. Janin, Églises CP 354–58.

—A.K.

MOKISSOS (Μωκισσός, now Viranşehir), a city in western Cappadocia at the foot of the Hasan Dağ southeast of KOLONÉIA. Justinian I rebuilt the ruined city, renamed it Justinianopolis (a name last attested in 692), and elevated it to the rank of ecclesiastical (though not civil) metropolis, with an eparchia that stretched south of the Halys River. The bishopric survived under its original name through the Byz. period, without playing any role in history. The extensive site, which lies in a protected valley, contains the remains of nine churches (mostly standard basilicas, one cruciform), streets, and unidentified civic buildings.

—C.F.

MOLDAVIA (called Pogdania or Bogdania [Boydaia] by the 15th-C. Greek historians Sphrantzes and Chalkokondyles, probably from the name of the mid-14th-C. prince Bogdan [H. Ditten in BBA 5 (1957) 94f]), geographic term designating the territory north of the Lower Danube, in the basin of the Dniester, Prut, and Siret rivers. The term Moldavia is found in vernacular texts, such as the Chronicle of the Turkish Sultans, and Moldoblacchia appears in ecclesiastical nomenclature (Notitiae CP, no.21.181); both terms are probably later than 1453.

In late antiquity Moldavia was populated by Daco-Getans and remained in the sphere of Roman economic and cultural influence. From the 4th C. onward, Moldavia was a passage zone for many barbarian tribes (Germanic, Hunnic, Avar, etc.); at the end of the 6th C., Slavs began to settle there. Byz. impact diminished and the area seems to have been cut off from the empire until the 10th C., when Byz. coins and objects penetrated into Moldavia. Archaeologically distinct in the 7th C., the autochthonous and Slavic cultures were probably merged in the 8th C. Byz. coin finds decrease again in the 11th C., as first the Pechenegs and then the Cumans became the dominant factor on the Lower Dniester. It is possible that Rus’ tribes of Tıvertians and Ulichians gained control of the area, whereas the ethnic origin of the Brodniks (who are mentioned in the same area in the 12th–13th C.) is still controversial.

In the mid-13th C. Moldavia was occupied by the Tatars and lost its connections with Byz. In the 14th C., Hungary established its power over Moldavia and between 1359 and 1365 the country achieved independence.

MOMČILO (Μομτζίλος), Bulgarian soldier who fought on both sides in the Byz. Civil War of 1341–47 and was rewarded with the titles of despotes (by Anna of Savoy) and sebastokrator (by John VI Kantakouzenos); died Peritheorion 7 June 1345 (Bartusis, infra 209). In his youth Momčilo was a hajduk (bandit) who plundered both Byz. and Bulgarian territories. He then served in the army of Andronikos III, but fled to Stefan Uroš IV Dušan and then joined the rebel Kantakouzenos in the early winter of 1343/4, at the time of his unsuccessful siege of Peritheorion. Kantakouzenos entrusted to Momčilo the Merope district, where he raised 300 horsemen and about 5,000 foot soldiers. He turned against Kantakouzenos, however, forcing him to flee. He briefly aided the loyalist forces of the regency, changed allegiance again, and then in the summer of 1344 pro-
claimed his independence. He captured Xanthelia and assembled an army of 3,000 horsemen. He was soon defeated at Peritheorion, however, by Kantakouzenos and his Turkish ally Umur Beg, and died in this battle. Momčilo became a hero of South Slav epic, a brigand of monumental proportions, victorious in legendary battles against the Turks.

**MONARCHISM** (from μονάρχια, “one rule, monarchy”), a term designating certain theologies of the 2nd and 3rd C. The term *monarchia* was used already before the Christian era, esp. by Philo, and then chiefly by the Apologists to designate the theistic view of *monotheism*. Generally, a distinction is made between “dynamic” and “modalistic” Monarchism. The former is a characterization of Adoptionism, while the latter is used to describe so-called Sabellianism. The Sabellian heresy eventually becomes that which is generally understood by the terms Monarchism and Modalism. It is consciously opposed to the doctrine of the Logos presented in the Gospel of John and the Apologists, and esp. to the notion of mediator (subordinationism) that was applied in the middle-Platonic doctrine or theology of principles encountered, for example, in Origen, Father, Son, and Holy Spirit are simply different modes by which the one God appears in the history of salvation (οἰκονομία). The proponents of this effort to interpret the data of the New Testament in the framework of Hellenistic concepts of divine epiphanies, so as to preserve the monotheism inherited from the Judaic tradition, were Sabellios, Noetos of Smyrna, and Epigonos (called Praxcas in the West).

In the genealogies of heresies so common in Byz., 4th-C. theologians connected Marcellus of Ankyra with Monarchism, while in the 6th C., the same charge was made against Severos of Antioch and the Jacobites. Protestant dogmatists of the 19th and early 20th C. largely overestimated the significance of modalistic Monarchianism and presumed a background of religious ideas directed against the philosophical tradition.

**MONARCHY.** See Autokrator; Taxis.

**MONASTERY** (*μονή*), complex of buildings housing monks or nuns (see also Nunnery). The term is used primarily for a koinobion, lavra, or an idiorrhythmic monastery. Byz. monastic architecture was standardized at a fairly early date, with many of the common elements appearing at Sohag in Egypt, Qal‘at Sem‘ān in Syria, and St. Catherine on Mt. Sinai. A monastery was often contained within strong defensive walls, along the inside of which were located the dormitories of the monks, stables, workshops, and storage buildings. These surrounded an open space, with the principal church (the katholikon) at its center. In front of the church was the phiale. One side of the enclosure, most commonly that facing the church, was occupied by the refectory (*trapeza*). Other buildings could include a bath and an infirmary.

Monasteries varied greatly in size, ranging from a minimum of three (later eight to ten) monks to several hundred (A.-M. Talbot, *GotThR* 30 [1985] 4f, 18–20). They were located in both town and countryside but were most numerous in Constantinople and the Holy Mountains such as Mt. Olympus and Mt. Athos. A. Bryer estimated that about 1,000 different monasteries are recorded in the Byz. sources (*SChH* 16 [1979] 219f, n.3), about one-third of them in Constantinople (a statistic perhaps skewed by the nature of the available sources).

There were no monastic “orders” as in the West; thus the organization of each monastery varied and was prescribed by its typikon. There were nonetheless some connections between monasteries, for example, between those on the same holy mountain or between a monastery and its smaller affiliated establishments, the metochia. The *typika* of some monasteries were closely modeled on those of earlier foundations. Monasteries were variously classified as imperial, patriarchal (see Stauropegion), or episcopal, and as private or independent.

In general each monastery had a superior (hegoumenos), steward (οἰκονόμος), sacristan (ἐκκλεισάρχης), and other officials charged with supervision of the refectory, treasury, and archives. Most monasteries possessed agricultural lands and other properties that provided food for the monks and revenues to maintain the buildings.
and operations of the monastery. (See also MONASTICISM.)

-M.J., A.M.T.

MONASTERY, DOUBLE (δυπλοῦν μοναστήριον), a monastery housing two separate but adjacent communities of men and women, under the direction of the same superior, and supported by the same sources of income. Because of the dangers posed by such close proximity of monks and nuns, double monasteries were officially prohibited as, for example, by novel 123.36 of Justinian I (556). The ineffectiveness of his legislation is demonstrated by the continuing existence of double monasteries, such as the one presided over by St. Anthousa in the 8th C., which allegedly housed 900 monks and nuns (C. Mango, AB 100 [1982] 401–09). The Second Council of Nicaea (787) forbade any future foundations of this sort (can. 20). Circa 810 Patr. Nikephoros I went a step further and closed all double monasteries.

The Palaiologan period saw a resurgence of these institutions. Some of the foundations, such as the monastery of Philanthropoupos Soter established in Constantinople by Irene Choumnaina, were designed so that the family of the founder could remain close even in monastic seclusion (R. Trone, BS/EB 10 [1983] 81–87). Patr. Athanasios I attacked the practice (RegPatr, fasc. 4, no.1747) but is known to have founded two double monasteries himself, Nea Mone on Mt. Ganos and the monastery on the hill of Xerolophos in Constantinople. Because of disputes over the division of labor, the latter monastery was partitioned in 1383 by Patr. Neilos Kerameus and its property distributed to the two communities of monks and nuns (MM 2:80–83).

-M.J., A.M.T.

MONASTICISM (from μονάζειν, “to live alone”), a life devoted to worship, practiced by monks and nuns. Monasticism was an essential part of the social and religious fabric of the empire, affecting the life of every Byz. and playing a spiritual, economic, philanthropic, and cultural role. Initially a lay movement, monasticism first appeared in the late 3rd C. when Christians began to retire to the Egyptian desert for solitary lives of asceticism and prayer. Among these early desert fathers was Antony the Greater, whose biography by Athanasios of Alexandria provided a model for future generations of monks. In the 4th C., as the hermits attracted disciples, communities of monks and nuns developed. Pachomios wrote a rule for these semicenobitic Egyptian monastic communities (see PACHOMIAN MONASTERS), which added to the celibacy and poverty of the hermits the virtue of obedience to a superior. He also emphasized regular religious services and manual labor. From Egypt monasticism spread to the laras of Syria and Palestine (Wilderness of Judaea) and to Anatolia, where Basil the Great composed the Long Rules, which were to provide the basic foundation of Byz. monasticism. Basil strongly favored cenobitic monasticism (see KINOBION) over eremitism and advocated that the monastery should be a community of self-sufficient working monks. He urged moderation in asceticism and endorsed the establishment of urban monasteries.

The first monastery in Constantinople was Dalmatou, founded in the late 4th C. Thereafter monastic institutions proliferated rapidly in both town and countryside. By 536 there were almost 70 monasteries in the capital. A number of holy mountains developed, where both eremitic and cenobitic forms of monasticism were practiced. The tradition of the monastery as a working community was realized in its most ideal form at the Stoudios monastery in the early 9th C., thanks to the reforms of Theodorus of Stoudios.

Late Roman emperors, esp. Justinian I, conferred upon monasteries particular economic privileges (the right to inherit from private citizens, the prohibition against confiscation of their properties, beneficial forms of renting out their lands), but, nevertheless, until the 9th C. monasteries remained predominantly modest landowners, more often rewarded by solemnia than actual land donations; it is plausible to surmise that during Iconoclasm many monasteries even lost their buildings and liquid assets. In the 10th C. monasteries began to acquire substantial amounts
of immovables. They accumulated fields, vineyards, pastures, livestock, mills, fishponds, saltworks, urban rental properties, and workshops through purchase and through the donations of emperors and private pious benefactors. Monasteries also received gifts of cash and precious liturgical objects from the faithful in exchange for old-age pensions (adelphia) or posthumous commemoration. Monastic wealth was further increased because of the customary exemption of monasteries from payment of state taxes (exkousseia).

Nikephoros II Phokas, who endorsed the concept of the “poor monastery” and strongly supported Athanasios’s foundation of the Great Lavra on Mt. Athos, tried unsuccessfully to curb the growth of monastic estates. In 964 he issued an edict restricting further acquisition of land, esp. by monasteries that lacked sufficient manpower to cultivate the estates they already owned. His decree was overturned, however, by his successor John I Tzimiskes, and monasteries continued to expand their possessions. However, in the Partitio Romanae of 1204 only the Pantokrator monastery in Constantinople is listed among the major landowners of the empire. There are copious documents from the end of the 13th C. to the 15th C. recording monastic acquisitions of land in southern Macedonia, Trebizond, on Aegean islands, etc.—but since almost all of these documents survived in monastic archives, the result is a distorted perception of the exclusive role of monastic lordship in late Byz. In reality, the state managed to curb the growth of monastic estates, and after 1371 distributed a substantial part of monastic lands among soldiers.

One feature of Byz. monasticism was the individualism of many monks and their disregard of the canonical principle of monastic stability; this was esp. true of holy men, many of whom moved frequently from one monastery to another or alternated between a cenobitic monastery and a hermit’s kellion. Another manifestation of this trend was the development of idiorrhythm monasticism in the 14th C. Unlike the West, there were no established “monastic orders”; rather, each monastery was a unique foundation with its own rule or typikon, although some monastic rules imitated earlier models.

The most important function of monasteries was to provide a haven from the world where pious men and women could devote themselves to the vita contemplativa (theoria) in the search for their own salvation and the salvation of those for whom they prayed. Monasteries also played a philanthropic role, by offering a refuge to social outcasts or those in need of assistance: orphans, the elderly, the maimed or disfigured, the mentally ill, battered wives. (They also served as a place of imprisonment or exile for deposed emperors and patriarchs, and unsuccessful rebels or political rivals.) In addition to accepting people in distress as members of their community, monasteries used some of their resources to run philanthropic institutions, increasingly performing functions that had been in the purview of the state. A number of monastic complexes included hospitals, gerokomeia, and xenodocheia; they also regularly distributed food, money, and clothing to the needy. Owing to the relative stability of monastic property, many keteres considered monastic institutions a convenient place for “investment” and granted them lands in exchange for certain rights (sometimes hereditary). On the other hand, emperors and patriarchs endowed upon some lay people or ecclesiastical institutions benefits similar to those enjoyed by keteres (charistikion).

In contrast to the West, education was not a function of the Byz. monastery, except for the training of a few children destined for the monastic life. Monasteries did, however, play an integral role in the intellectual and cultural life of the empire. Establishments like the Studios and Hodegon monasteries in Constantinople housed scriptoria that produced manuscripts for both internal and external use. A. Cutler (BZ 74 [1981] 328–34) has estimated that in the 10th and 11th C. about 50 percent of scribes were monks, in the 14th C. about 25 percent. Although most monastic libraries were modest in size and restricted in scope to the Scriptures, hagiography, patristics, theology, and liturgy, a few, like Chora, had some secular holdings. Literacy was required of choir brothers and sisters; many devoted themselves to study of the Scriptures, and a number became writers, esp. of hymnography, hagiography, and theology. In the first half of the 9th C. monks and nuns formed the majority of literati; for the 14th C., I. Ševčenko (Society, pt. I [1974], 72) has calculated that more than 25 percent of the literati were monks.
Monasteries had a significant impact on the development of Byz. theology and spirituality. Many leading theologians and churchmen who wrote on doctrine, liturgy, and mysticism were monks. Monks played a key role in the ecumenical councils of the 4th and 5th C.; they were prime supporters of icons in the debate over Iconoclasm and defended Orthodoxy against attempts at Union of the Churches. The mysticism of Symeon the Theologian in the early 11th C. and the Hesychasm of the monks of Athos in the 14th C. profoundly affected the evolution of Orthodox tradition. A number of monks had a chance to influence ecclesiastical policy through their promotion to a bishopric or the patriarchate (see Constantinople, Patriarchate of).

Even though monks were the leading icons in veneration in the 8th–9th C., there is little firm evidence to link monks with the production of art. Normally, teams of outside architects and artists were hired to build and decorate monastic complexes, and in many cases even MSS copied in monastic scriptoria were illuminated elsewhere, esp. when the miniature was on a separate page. Nonetheless, monasteries were great patrons of art and architecture. Most surviving Byz. churches were once monastic churches, and many icons, MSS, liturgical vessels, and the like were originally made for monasteries or were eventually donated to and preserved in monasteries.

MONEMVASIA (Μονεμβασία, lit. “single entrance,” Malvasia and Malmsey in Western sources), a fortified city on an isolated rock that lies just off the coast of the southeastern Peloponnese. It is called a kastron by Paul of Monemvasia in the 10th C. (AASS May 5:426B). Evidence for its early history is scanty. It is mentioned first by Hucburt, who described it as located in a “Slavic land.” Theophanes (Theoph. 422.29–30) speaks of Monemvasia only once, relating that the plague of 746/7 arrived there from Sicily and Calabria. A colophon of the MS Vat. Palat. gr. 44 mentions a certain Leo who was “taboularios of Monobasia” in 898 (P. Nikolopoulos, LakSp 5 [1980] 227–46). On the other hand, later legends, preserved in the Chronicle of Monemvasia, pseudo-Sphrantzes, and other sources, claim that Monemvasia was founded ca.582/3 (P. Schreiner, TM 4 [1970] 471–75) and that it obtained metropolitan status from Maurice. In fact, however, a simple bishopric of Monemvasia is known from 787; it was probably a suffragan of Corinth and not Patras, as a literary tradition asserts (Laurent, Corpus 5:1:430). In the 12th C. Monemvasia served as a naval station in wars against the Normans, who in 1147 failed to seize it.

Monemvasia was the last stronghold in the Peloponnesos to acknowledge the supremacy of the Franks in the aftermath of the Fourth Crusade: it fell to William II Villehardouin in 1248 after a two-year siege. In 1262 the Byz. recovered Monemvasia as a result of the Treaty of Constantinople and the next year the Byz. fleet secured control of the surrounding territory; as a naval base it was administered by a komes (Ahrweiler, Mer 361). Michael VIII granted certain privileges to Monemvasia, but the authenticity of Andonis II’s chrysobull of 1301 is questionable (P. Schreiner in Praktika B’ Diethnous synedriou Peloponnesiakon spoudon 1 [1981–82] 160–66). Michael VIII elevated Monemvasia to a metropolis that was later moved from the 34th place in the hierarchy to the 10th; the 16th-C. list of the metropolitans of Monemvasia is evidently a forgery (Dölger, Diplomatik 383f). In 1384 Theodore I Palaiologos, despotes of the Morea, offered the city to Venice, but the powerful Mamonas family prevented the donation. In 1460 Monemvasia came under papal authority, in 1462/3 it was ceded to Venice (B. Kričić, ZRVI 6 [1960] 131–35), and in 1540 it fell to the Turks.

The impressive walls of Monemvasia are largely Venetian, but they are everywhere built on Byz. foundations. The Church of Hagia Sophia in the upper citadel has a breathtaking location at the edge of a sheer cliff. It is a domed octagon of the type and scale of Hosios Loukas and Daphni; it was probably constructed ca.1150, though E. Stikas (LakSp 8 [1986] 271–376) argues that it was founded by Alexios I. It has frescoes of the 13th C.

An important 14th-C. icon of the Crucifixion
was removed from the Helkomenos Church to the Byzantine Museum in Athens (A. Xynopoulou, Peloponnesiaka 1 [1955] 23–49; Catalog of the Ekthesis gia ta hekato chronia tes Christianikes Archeiologikes Hetaireias [Byzantine Museum, Athens, 1984] no.8). The church itself preserves a carved lintel of ca. 1000.

MONEY-CHANGER. See Banker.

MONGOLS (Μογγούλιοι), also called TATARS, an Asian people who, under the leadership of Genghis Khan (died 1227) and his successors, created an empire stretching from the Baltic to the Pacific Ocean. While its capital was in Karakorum, two appanages separated from it in the west: the Golden Horde (with a center at Saray on the Volga) and the empire of the Ilkhas in Persian territory. In the north the Mongols defeated the Cumans in 1233 and obliged them to seek a refuge in Byz.; they conquered Kiev Rus' by 1240 and penetrated Dobrudja. In the south the Mongols captured Baghdad in 1258, but were halted by the Mamlûks at ʿAyn Jalût on 3 Sept. 1260.

In Anatolia, Trebizond had to acknowledge its dependence on the Mongols and pay tribute to them, while the empire of Nicaea retained a more independent stance. At first, the Nicaean emperor John III Vatatzes supported the Seljuks of Rûm against the Mongols, but, after the Seljuk defeat at Kösedağ on 26 June (or 2 July) 1243, he tried to maintain friendly relations with both powers. His successors continued this ambivalent policy. In 1265 Michael VIII Palaiologos sent his natural daughter Maria to Karakorum as a wife of the great khan Hulegu; the khan died before her arrival, however, and Maria was married to his son Aqaq. The monastery of the Theotokos Pana-giotissa in Constantinople, of which Maria was a patron (Janin, Églises CP 213 f.), became known as "St. Mary of the Mongols." Another Maria, illegitimate daughter of Andronikos II, married Toktay, khan of the Golden Horde, toward the end of the 13th C. It is probably this Maria, rather than Michael's daughter, who appears as the nun Melania in the Church of the CHORA MONASTERY (Underwood, Kariye Djami 1:46f), where she is described as "the lady of the Mongols." Despite this intimacy, Mongols are never represented in Byz. art, in contrast with Crusader art, where distinctly Mongol features are given to one of the Magi on an iconostasis beam at the St. CATHERINE monastery on Sinai (K. Weitzmann, DOP 20 [1966] 63f). Michael VIII also managed to preserve friendly relations with NOGAY in the north. Nup- tial connections continued in the 14th C.: Andronikos III gave his daughter in marriage to Özbeg, the khan of the Golden Horde. The Mongols remained tolerant toward the Christian church and, in Saray, a bishopric was established under the jurisdiction of Constantinople.

Timur temporarily united the Mongol Empire. He crushed both the Mamlûks and Ottomans, and his victory at the battle of ANKARA in 1402 postponed the Ottoman conquest of Constantinople. After Timur's death the empire dissolved. Its last vestige in contact with Byz. was the khanate of the Crimea, founded ca. 1430, which was supported by the Genoese of Kaffa. After 1475 the southern coast of the Crimea came under direct Ottoman administration.

MONK (μονοχός), a man who renounced the world in order to devote himself to a life of asceticism and prayer. In Byz. there were various types of monks: (1) the cenobites, who lived and ate together in a communal society, the koi- nobion; (2) the lavriota or kelliota, who lived in separate cells but came together for common worship (see LAVRA, KELLION); (3) IDIORMTHYMIC monks; (4) anchorites or HERmits, who lived alone in an isolated location; and (5) wandering monks. The minimum age for adoption of the habit varied from monastery to monastery but averaged around 18; many men, however, became monks
at a later stage in life, often after being widowed. Some categories of individuals (e.g., eunuchs, young boys, fugitive slaves) were denied or limited permission to become monks. After a novitiate that could range from six months to three years, the novice took vows of poverty, celibacy, and obedience. The monastic profession was symbolized externally by the tonsure, the monastic habit (schema), and the adoption of a monastic name (which usually, but not necessarily, began with the same initial letter as one's baptismal name). In theory monks were supposed to remain in the same monastery for life (see Stability, Monastic), but in practice many of them wandered from one monastery to another, or left a koinobion to become a hermit (often as a temporary stage).

A monastery had two sorts of monks: the literate choir brothers, responsible for singing the daily offices, and the uneducated brethren who were servants (diakonetai) and did much of the manual labor. This hierarchical division of the monks into two classes was also reflected in their different food and dress, their seating in the refectory, even their place of burial in the cemetery. Members of the nobility who entered monastic life were frequently accompanied by servants and lived in a suite of rooms rather than a single cell. Prospective monks customarily made substantial donations to the monastery at the time of their admission; despite their vows of poverty they were allowed to retain some personal property after they took the monastic habit. In addition to the daily round of prayers and manual labor, monks might engage in intellectual endeavors such as study of the Scriptures, copying of MSS, or composition of hymns and hagiographical works.

MONOCONDYLE, a conventional scholarly term formed from the classical Greek adjective μονοκόνδυλος, “having but one joint” (said of the thumb). The term designates a word or a short sentence written in a single, uninterrupted line drawn without lifting the pen from the parchment or paper. The monocondyle sometimes deliberately obscures the name or signature. Synodal decisions were signed by bishops in the form of a monocondyle (examples survive primarily from the post-Byz. period); the imperial chancellery used monocondyle notes written over two glued-together sheets of a document to prevent the addition of forged insertions.

—A.K. MONOCYCLIC AND POLYCYCLIC, terms central to recension theory, specifically as it is applied to the study of illuminated MSS. The former designates a MS whose miniature cycle coincides both in substance and extent with the limits of its accompanying text. A polycyclic MS, on the other hand, is one whose original set of pictures has been supplemented by one or more series of images, each originally created for its own text and having its own recensitional history. Each may also carry traces of the style of the model from which it was drawn. Weitzmann labels as polycyclic a number of the finest extant Byz. MSS, including the Paris Gregory, whose original, comparatively small set of homely pictures, he suggests, was enriched by excerpted picture cycles deriving ultimately from, for example, an illustrated Genesis, a Book of Kings, a Gospel book, etc.

Lit. Weitzmann, Roll & Codex 193–205.

—G.V. MONODY (μονοψίδια), a short unrelieved lament, intended to comfort the bereaved by sharing their grief. It differs from epitaphios in not being part of the actual funeral ceremony.

—E.M.J. MONOENERGISM (from μόνος and ἐνεργεo, “one energy”), a conventional scholarly term to describe a theological movement of the 7th C. Its core was the assumption that Christ had a single energy attributed to his individual hypostasis. This idea was implied in Monophysitism (one nature presumes a single “activity”), but even pseudo-Dionysios the Areopagite (PG 3:1077C) spoke of a “new theandric activity (theandrike energia)” in Christ, a phrase that was broadly used (misused, from the Orthodox point of view) by the
Monothelites. The Neo-Chalcedonians (see Neo-Chalcedonism) seem to have been close to the development of the notion of a single activity, but the movement fully arose as an attempt at political unification of the Chalcedonians and Monophysites in the face of the Arab threat.

Kyros of Alexandria attempted in 633 to reconcile the two parties on the basis of the formula “the single Christ and Son operating as God and man in the single theandric activity” (Mansi 11:565D). Sophronios, the future patriarch of Jerusalem, remonstrated against this formula, and during his discussions with Patr. Sergios I of Constantinople they came to a compromise: both phrases “single activity” and “two activities” were prohibited—instead, one had to speak of “the single Son acting upon both divine and human [things].” Both parties assumed that Christ was theokinetos, “moved by God.” Pope Honorius approved of the compromise and in his letter to Sergios spoke of “una voluntas” of Christ. Sophronios soon rekindled discussion, but since the Ekthesis issued by Emp. Heracleios in 638 banned the energia formulas, the debate subsequently focused on the problem of the single will (Monothelitism).

–T.E.G.

MONOGENES, HO (ὁ μονογενὴς, “the only-begotten”), TROPAION that sums up the teaching of the early councils on the Christian economy of salvation in terms drawn from their creeds (J.H. Barkhuizen, BZ 77 [1984] 3). It was probably unknown in Constantinople before 519, for it is not mentioned in the disputes that year over the theopaschite clause, “One of the Trinity was crucified,” which it paraphrases.

Justinian I introduced the Monogenes into the liturgy of Constantinople in 535/6 (Theoph. 216.23–24). The Orthodox attributed its text to Justinian himself; the Monophysites to Severos of Antioch. Both Orthodox and Monophysite churches used it, probably from the attempted reconciliation of 533/4.

Found at the beginning of the Eucharist in Armenia, Syria, and Egypt, its first certain attestation in the Byz. Eucharist is in the 9th-C. Latin version of the so-called Church History of Patr. Germanos I by Anastasius Bibliothecarius (actually a commentary on the liturgy). It served as refrain of the third antiphon on ordinary days; on feasts the Monogenes was a variant refrain of the second antiphon (Mateos, Typikon 2:308, 313f.). It was intoned by singers standing beneath the ambo of Hagia Sophia in Constantinople.

–R.F.T.

MONOGRAM, the combination of a number of letters that form, when read in the correct order, a name, a title (or name and title), or an invocation. The Byz. monogram normally contains all letters of the name or word(s) in question (a repeated letter, however, is only used once). Sometimes abbreviations are used, as in the case of the Christogram, and the symbols for authors’ names in marginal notes in MSS. Monograms are found on elements of architecture, silver objects—here both to identify the donor by name and title and to serve as control stamps (see Silver Stamps)—ornaments, ivories, coins, and esp. seals. They occur abundantly from the 6th to 8th C., become rare in the 9th to 12th C., and reappear again in increasing number in the Palaiologan period, in MSS, on book bindings, and esp. on architectural elements. The most common forms are the block or box-type monogram where the letters are joined together in the form of a quadrangle, and (from ca. 550 onward) the cruciform monogram where the letters are placed at the extremities of a cross.

Monogram. Sample monograms. Above: block or box-type monogram signifying “of Paul”; below: cruciform monograms signifying “Mother of God, help.”
The arrangement of the letters seems to follow primarily aesthetic principles; attempts to discover underlying rules have failed. Hence the decipherment often proves difficult and in many cases remains ambiguous.

W.H.

MONOMACHOS (Μονομάχος, lit. "fighting in single combat," fem. Μονομάχινα), the name of a family of functionaries, perhaps related to the Monomachatoi and Monomachiti. The first occurrences of the name are questionable. The 9th-C. Life of Ioannikios refers to an Iconoclast bishop of Nikomedea whom it calls "monomachos or rather theomachos" (AASS Nov. 2:1:432B), that is, a fighter against God; monomachos, which prompted a pun, is here to be taken as a proper name. A patrikios Niketas, during Irene’s reign, took the sobriquet Monomachos. An addressee of Leo Chirospaktes was a son of patrician Niketas Mon[omachos]; unfortunately, the reading of the name is conjectural. Another Monomachos, a functionary who supervised monasteries ca.921, was mentioned by Nicholas I Mystikos (ep.963). The family flourished in the 11th C. when the son of a judge Theodosios became Emp. Constantine IX Monomachos. The Monomachoi had property in Constantinople and functioned primarily as judges (e.g., Pothos, protospatharios and judge of the Hippodrome). Despite their warlike name and the frequent use of the image of St. George on their seals, the only member of the family who is known to have been connected with the military administration was George Monomachatos, doux of Illyricum (Dyrrhachion) during the reign of Nikephoros III; Alexios I dismissed him, and George fled to Serbia but eventually was granted amnesty. A female relative of Constantine IX (Maria or Anastasia?) was married to a prince of Rus’ and gave birth to Vladimir Monomach.

The family played no role under the dynasty of the Komnenoi, but emerged again at the end of the 12th C.; George Monomachos, for example, was an official of maritime administration (Patmou Engrapha 2, no.59.27). The family is attested in Asia Minor from the beginning of the 15th C. A John Monomachos lost his fortune in Philadelphia when it was besieged by the Turks in 1304; he then moved to Thessalonike, where he exercised military functions and belonged to the entourage of Nikephoros Choumnos; later he became intimate with Alexios Philanthropenos and accompanied him to Philadelphia in 1324 (H. Ahweiler in Philadelphia et autres études [Paris 1984] 9–16). The Monomachoi were still active in the first half of the 14th C., when George Monomachos and esp. his brother Michael, eparch and grand konostavlos, were generals. In Jan. 1333 Michael received a praktikon granting him the oikonomia of 50 hyperpera in the villages of Chantax and Nision—an exceptional case of a recorded donation of a pronoia to a secular person (Zogr., no.29). He died before 1346. Another George Monomachos was an architect (oikodomos) in Thessalonike ca.1421 (Dölger, Schatz., no.102).

MONOPHYSITISM, religious movement that originated in the first half of the 5th C. as a reaction against the emphasis of Nestorianism on the human nature of the incarnate Christ. The term Monophysite (Μονοφύσιτης), from monos (one) and physis (nature), is, however, of later origin: it appears in Anastasios of Sinai (7th C.) and John of Damascus (8th C.) when the heat of the Monophysite dispute was long over. On the other hand, some roots of Monophysite views can be found before the 5th C., for example, in Apollinaris of Laodikeia. As a theological doctrine, Monophysitism was an attempt to find a solution to the problem of the God-Man relationship in Christ: if before the Incarnation the divine nature of the Logos existed separately, it came into contact or union with the human nature after the Incarnation. What kind of union was thus created? Was the divine nature only in an apparent unity with the man in Christ while the human nature prevailed? Was it a real mixture? Did the divine nature engulf the human nature so that only one physis remained? Philosophically and
theologically the questions were difficult to answer. The Monophysites suggested two responses: the so-called real Monophysites (the followers of Eutyches) inclined to accept the doctrine of the union of natures, whereas the moderate or “verbal” Monophysites (the partisans of Severos of Antioch) construed the physis as close to the concept of prosopon or hypostasis and saw in Christ a new physis, possessing both perfect divine and perfect human qualities.

The Monophysite dispute began in the 440s. The initiators of the movement were Eutyches and Dioskoros, patriarch of Alexandria, who developed some formulations originally made by Cyril of Alexandria. After a short-lived victory at the so-called Robber Council of Ephesus (449), the Monophysites were condemned at the Council of Chalcedon (451) that elaborated the dyophysite (or Chalcedonian) formula. The movement continued with varying degrees of success, Emp. Anastasios I supporting the Monophysites, Justin I favoring the Chalcedonians, and Justinian I vacillating between the two dogmas. The controversy was accompanied by severe persecutions of both parties, banishment of leaders, destruction of churches, etc. In the 7th C. the state and church tried to find a compromise in the form of Monothelitism.

Theological and philosophical differences were exacerbated by political, social, and cultural factors: the most evident of them was the rivalry of Alexandria with Constantinople and Rome. It seems also that the rural population of Egypt and Syria supported Monophysism partly as a protest against oppression, partly due to local traditions: the belief in a deity who died and was then resurrected was well entrenched in Egypt and Syria, and in these provinces the addition to the Trisagion (“We believe in God who died for us”) was received sympathetically. Monophysitism in its earlier stages seems to have been allied with the state, and only from the late 6th C. onward did the increasing persecutions alienate the Monophysites and make them potential supporters of foreign enemies, like the Arabs. As a symbol of local independence the Monophysite churches that were established in Syria and Egypt, and the separation of Christians into the Melchite and Jacobite sects intensified political and cultural disension in these lands. Monophysitism was accepted by the Armenian church.

-A.K.-

MONOPOLY (μονοπώλιον), the exclusive privilege of trading specific goods, existed in Byz. in two forms: state monopolies and rights granted (or farmed) to particular persons/organizations. Leo I prohibited officials from granting monopolies in any place or city for any kind of goods except salt (Cod. Just. IV 59.1, 4.73); Zeno outlawed monopolistic production of clothing, fish, and other commodities and underlined the illegality of collusion among construction workers, teachers of crafts (ergodidaskaloi), and bath attendants (Cod. Just. IV 59.2, 4.483; Basil 19.18.2).

The question of state monopolies has been hotly disputed. J. Nicole (Le livre du préfet [Geneva 1904] 292–94), who developed a concept of Byz. as a paradise of monopolies and privileges, viewed monopolies as a factor that helped destroy the Byz. economy; in contrast, both A. Andreades (Byzantion 9 [1934] 171–81) and G. Mickwitz (Die Kartelfunktionen der Zünfte [Helsinki 1936] 207f) denied the existence of state monopolies and acknowledged only a state regulation over commerce that was allegedly beneficial for tradesmen. Prokopios twice (Wars 2:15.11, SH 25.11) mentions “the so-called monopolies” established by governors on the frontier with Lazika and in Alexandria: the governors prohibited all trade activity by merchants and acted as kapeloj of all goods. While “all goods” is apparently an exaggeration, in some spheres (esp. the silk trade) the existence of a state monopoly is probable; N. Oikonomides (DOP 40 [1986] 33–50) assumes that by the 9th–10th C. this monopoly loosened. Albert von Aachen (RHC Occid. 4:311D) testifies to the presence of state monopolies at the end of the 11th C., saying that only the emperor could sell wine, olive oil, wheat, barley, and other victuals throughout the entire empire; Attaleiates’s description of the monopoly in Rhaedestos (Attal. 202.5) likewise reveals state privilege in the grain trade. On the other hand, the report (Skyl. 277.44–
5) that Nikephoros II Phokas traded in “imperial grain” during a famine is not sufficient to assert the existence of a monopoly at that time. Other state monopolies included the emperor’s exclusive rights over objects of **purple** and **gold** as symbols of his power and the production and use of some types of weapons (e.g., **Greek fire**).

**MONOTHEISM** in Christianity was perceived as a refutation of polytheism (“Hellenic deception”) and Judaic absolute or consistent monotheism (John of Damascus, *Exp. fidei* 7.28–30, ed. Kotter, *Schriften* 2:17). The rejection of polytheism was a relatively easy task, even though Nicholas of Methone still found it necessary to discard Proklos’s polyarchy of gods, and Plethon attempted the revival of Olympic deities. Disassociation from Judaic absolute monotheism was a more difficult problem, solved by the concept of the Trinity. Absolute monotheism created an unbridgeable gap between God and mankind, whereas the triune God, one in substance and numerical in hypostases, provided the possibility for intercourse with humans, a possibility realized in the double nature of Christ that formed the cornerstone of the doctrine of salvation. Besides the Trinitarian and Christological controversies that required sophisticated definitions of substance and hypostasis, the concept of the Trinity implied a danger of confusion with “TRITHEISM.” Nicholas of Methone (Anaptyxis, p.10.13–16) pointed out that pagan gods are a multitude (plethos) and differ from each other, whereas within the Trinity there is no difference (diaphora) but one *ousia*, power, energy, will, glory, kingdom.

In modern times Peterson (infra) argued that monotheism was a political ideology closely connected with the idea of the unique Roman Empire; the introduction of the concept of the Trinity brought an end to this connection. Although plausible for the West, this alleged disruption did not occur in Byz. (F. Dölger, *BZ* 36 [1936] 225f) where the concepts of monarchy and monotheism remained interwoven, even though in some cases political slogans could be perverted, as happened during the riot of 668 when the army, referring to the Trinity, demanded that Constans II establish the collective rule of three brothers. —A.K.

**The Monotheistic Structure of the Trinity.** The Byz. concept of God was monotheistic; nevertheless they believed in the Trinity, that is, in God the Father, the Son or Logos, and the Holy Spirit, who were of common substance, although of three hypostases. The “common” (koine) substance or substance “shared in common” was understood as follows in the theology of the Cappadocian Fathers: that in thought or in contemplation there was a difference (diaphora) and not a distinction (diairesis) between the persons of the Trinity. Gregory of Nazianzos (PG 36:348A) emphasized that the term diairesis had to be applied with caution lest their unity and their difference be obscured. The “difference” was a sufficient condition for countability or number (arithmos), the concept developed by MAXIMOS THE CONFESSOR (Balthasar, *Kosmische Lit.* 104–09). “We venerate monarchy,” said Neilos KABASILAS (ed. M. Candal, *OrChrP* 23 [1957] 252.17–20), “We believe in one God, one not numerically—this would be a Judaic baseness—but one by nature; numerically God is not one but three.” When the Byz. spoke of “one Godhead and one *ousia,*” they meant a monad that stood beyond any number, that is, was not countable (e.g., JOHN ITALOS, *Quaestiones quodlibetales*, par.63, ed. Joannou, p.87.95).

After Trinitarian monotheism was established in disputes against ARIANISM, in opposition to the notions of MONARCHIANISM and ADOPTIONISM, it faced a challenge from DUALISM, which posed the question of the limits of God’s power: if there is only one Lord of the created world, what is the cause of evil? Byz. theologians had to refute the old idea expressed particularly by the MANICHAEANS and some heresies possibly drawing upon them (PAULICANS, BOGOMILS) that there is an opposition between the realm of light (or God) and that of darkness (or matter); the anti-Manichaean arguments and the principles of monotheism were formulated, among others, by JOHN OF CAESAREA in his *Dialogue with a Manichaean* (*Opera* 58f, 245f).

**MONOTHELETISM** (from µονός and θέλημα, “one will”), scholarly term designating a 7th-C.
theological movement. It inherited the problems raised by Monoenergism after the ban of the  
energeia formulas in 638. The new phrase, “a single will (thelema) in Christ,” was suggested by  
Patr. Sergios I of Constantinople and developed by his supporters such as Makarios of Antioch  
and Pyrrhos. The emperor Herakleios saw Monotheletism as a means of compromise between  
Chalcedonians and Monophysites and proclaimed it in the Ekthesis of 638. The main opponent of  
Monotheletism was Maximos the Confessor who elaborated the concept of a variety of wills: the  
natural will, he argued, is a property of nature, and therefore desires good; free will (proaréisis)  
means a choice and therefore presupposes the possibility of error or sin; finally, boulessis is imag-  
ninative desire (phantastike orëxis—PG 91:133B). Christ, having two natures, had to have two na-  
tural wills.

The Typos of Constans II (648) forbade discussion of the controversy, but Maximos defied the  
edict. He was exiled, as was Pope Martin I who supported him. The Council of Constantin-  
ople in 680 condemned Monotheletism and its adherents. Emp. Philippikos repudiated this con-  
demnation and tried to revive Monotheletism, but when he was overthrown the movement finally  
disappeared.

vain 1985) 35–45.

T.E.G.

MONREALE, Sicilian town 18 km southwest of Palermo, site of the abbey church of a monastery,  
chartered by William II on 15 Aug. 1176; also a cathedral. It is essentially a magnified version of  
his grandfather’s Cappella Palatina in Palermo, which Monreale overlooks. The figural mosaics in  
the nave, aisles, transept, and three apses are generally ascribed to Byz. craftsmen because their  
style is similar to that of late 12th-C. monumental painting in Cyprus, Macedonia, and other centers of Byz. art. According to Demus (infra), so huge a body of decoration would have taken 50  
mosaists five to six years to complete, and new scenes had to be invented to extend the standard  
repertoire. The decoration includes an unusually detailed Old Testament narrative in the nave;  

MIRACLES OF CHRIST in the aisles and transept; and in the main apse a bust of the PANTOKRATOR,  
the Virgin Panachrantos, apostles, and saints. Some of the miracle scenes were composed on Greek  
rhetorical principles and may directly reflect the sermons of Philagathos (Maguire, Art and Elo-  
quence 80–83). In the sanctuary are two portraits of William in imperial dress, crowned by Christ  
and again, as in a Byz. donor portrait, offering his foundation to the Virgin.

W. Krönig, The Cathedral of Monreale and Norman Architecture  
—D.K., A.C.

MONTANISM, the heresy of the Montanists (Montanistoi), also called Kataphrygians, followers of a certain Montanus who preached in Phrygia in the 2nd C. Their theology did not differ substantially from Orthodoxy, although some church fathers (e.g., Didymos, PG 39:881B) accused “thick-witted Montanists” of teaching the doctrine of the identity of the members of the Trinity. The main particularities of Montanism were: an emphasis on the exclusive role of the “new prophets” (Montanus and two women, Priscilla and Maximilla); attacks on the established  
church and its concessions to the pagan state; stress on asceticism and rejection of marriage;  
eschatological expectations; and veneration of a deserted city, Pepouza in Phrygia, as the new  
Jerusalem. John of Damascus (Haeres. 49, ed. Kotter, Schriften 4:33f) noted the role of women among the Kataphrygians—not only did they dominate the group and serve as priests, but Priscilla taught that she had had a vision of Christ “in a female  
shape.” According to Epiphanius of Cyprus (Panarion 48.14.2), Montanists were numerous in Cap-  
padocia, Galatia, Phrygia, Cilicia, and Constantinople; they were also known in the West, as far  
as North Africa and Spain.

Both state and church persecuted the Montanists. John of Ephesus reportedly went to Pepouza  
where he burned their place of assembly and destroyed the relics of Montanus and the two  
prophetesses (S. Gero, JThSt 28 [1977] 520–24). According to a 9th-C. historian (Theoph. 401:22– 
27), Leo III ordered that Montanists be forcibly baptized in 721/2; they responded by gathering  
“in the houses of their deviation” and burning themselves to death. Montanism may have sur- 

vived in Byz. into the 9th C.
MONTECASSINO (μονή του Κασίνου), monastery south of Rome, founded in 529 by St. Benedict of Nursia. After destruction by the Lombards (581) and the Arabs (889), the monastery was finally reestablished by Abbot Aliginus ca.950. Though officially patronized by the Western emperors and not in Byz. territory, the abbey, which owned possessions in Apulia, was favored throughout the 10th–11th C. by the strategoi of Longobardia, the katepano of Italy, and the Byz. emperors themselves. Montecassino was closely associated with Greek monasticism: ca.980–95. 

NEILOS OF ROSSANO lived with some 60 disciples in Valleruce, a metochion of Montecassino; some Benedictine monks from Montecassino migrated to Mt. Athos, Jerusalem, and Mt. Sinai. A Greek monk from Calabria, Basil, was abbot of Montecassino from 1036 to 1038. During the Norman conquest of southern Italy Abbot Desiderius (1058–87) actively supported the invaders, who bestowed lavish donations on the monastery. Nevertheless, between 1076 and 1112, Michael VII and Alexios I sent sumptuous gifts to the abbots of Montecassino, hoping for their mediation in the conflict with Rome and with the Crusaders (Reg 1, nos. 1006, 1207f., 1262–64). In 1206, after the Latin conquest of Constantinople, Montecassino was given the monastery of S. Maria de Virgiottis (tes Euergetidos) outside the walls of Constantinople (Janin, Églises CP 181).

Monuments. Montecassino is one of the few places in Italy where written sources attest the activity of Byz. craftsmen. According to the chronicler Leo of Ostia, when Desiderius rebuilt its main church (1066–71), he sent to Constantinople for mosaics to decorate the sanctuary vaults and the pavement; perhaps ca.1070 a monk was dispatched to Constantinople to commission precious fittings and liturgical furniture, including the elements of a bronze and silver templeton (J. Shepard, BSIEB 9 [1982] 233–42) and a gold and enamel altar frontal. The new basilica also incorporated bronze doors that Desiderius had commissioned in Constantinople for the old church ca.1065. Of these expensive Byz. objects only some pieces of the nave pavement and 15 plaques from the bronze doors survive; nevertheless, much has been written about Montecassino as a source of Byz. artistic influence in Rome and southern Italy (see Sant’Angelo in Formis; Salerno), and certain illuminated MSS made in the monastery’s scriptorium have been said to reflect the work of Byz. artists (H. Toubert, MEFRM 83 [1971] 187–261).

Leo of Ostia wrote that “since magistra latinitas had left uncultivated the practice of these arts for more than 500 years,” Desiderius had a number of young monks trained in mosaic-making and in the arts of silver, bronze, iron, glass, ivory, wood, alabaster, and stone. It is not clear whether all of these arts were considered Byz. or taught by Byz. craftsmen, and it is usually overlooked that Amatus of Montecassino attributes the pavement to “Greeks and Saracens.” Unquestionably Montecassino was a unique showcase of imported Byz. objects in southern Italy; yet modern scholars may have overestimated its role as a center of diffusion of Byz. artistic practice.

V. F., D. K.

MONTH (μήν). Ancient local systems and local names of months (Egyptian, Syriac, Attic, Macedonian, etc.) continued well into the late Roman period, but from the 5th C. onward they were replaced by Roman names; only on the outskirts of Byz. civilization were other denominations and systems in use—Armenian, Jewish, and Islamic. In Egypt, Egyptian month names were used until 641; their use by Christians continued even after the Arab conquest. Late Byz. antiquarians (Phymeres, Theodore Gazes) tried to revive Attic names of months (with slight variations), but this scholarly conceit never extended to documents and was rarely used by historians. In the Roman/Byz. calendar the reconciliation of the cycle of lunar months with the 365-day solar year was achieved by having 12 fixed months of uneven length and by intercalating one day to a given month every four years. Plethon suggested a reform of the calendar, introducing numerical designations for the months (instead of Roman or Attic names): the first was to begin after the winter solstice; the year was to be composed of 12 months, a 13th month being intercalated.
whenever the 12th month did not extend to the winter solstice (M. Anastos, *DOP* 4 [1948] 188–90). Plethon also suggested the division of the month into four parts to simplify the institution of new holy days invented by him. Within each month individual days were sometimes designated according to the traditional Roman calendar as being a certain number before three fixed points in the month—Kalends (1st), Nones (5th or 7th), and Ides (13th or 15th). However, the continuous reckoning system (1st, 2nd, etc.) eventually became the norm.

**MONTHS, PERSONIFICATIONS OF.** In the literary sphere a series of texts appears from the 11th C. onward, describing the personified months and the actions (mainly agricultural) appropriate to them; these texts fall into two groups according to whether or not dietary regulations are included. The chief representative of the first group is a set of *dodecasyllables* attributed to Theodore Prodromos (W. Hörandner, *Theodoros Prodromos: Historische Gedichte* [Vienna 1974] 55), in which the months address the reader directly, giving equal space to seasonal activities and to diet (the rules for which derive from the medical handbook of Hierophilos of Alexandria, 3rd C.). The chief example of the second group is the set of short *ekphrases* found in the romance *Hysmine and Hysminias* (at 4:5–18) of Eustathios Makrembolites, where the months are described in terms of the Late Antique culture, which Eustathios is apparently recreating (March wears military dress, carries sword and bow, etc.). Both groups are reflected in subsequent shorter texts lacking the pseudo-antiquity of Makrembolites; these are usually in verse and anonymous, though one set of dodecasyllables was written by Manuel Philes. The most significant of the later texts are the vernacular descriptions in *Libistros and Rhodame* (ed. J. Lambert, [Ms E, 1017–1107] pp. 116–23), influenced by Makrembolites, and *Ta eidea ton dodeka menon* (The Forms of the Twelve Months), in turn influenced by *Libistros* and accompanied by illustrations. In most of the texts the year begins in March, though in some (e.g., *Ta eidea*) it starts in September.

**Representation in Art.** While Late Antique images of the months drew on astronomy, local cults, and folklore, Byz. cycles were generally much more restricted. Certain ancient symbols were retained: the consul representing January in floor mosaics at Argos (G. Akerström-Hougen, *The Calendar and Hunting Mosaics of the Villa of the Falconer in Argos* [Stockholm 1974]) and GERASA is also preserved in the Vatican Prolemy (Vat. gr. 1291). By the 11th C. this image had been replaced by one of feasting on a boar, as in Octateuch illustration, where the Months are shown beside tombs to suggest the longevity of Abraham’s descendants. In Late Antique art such personifications occurred in many media, whereas in Byz. they were confined to MSS, appearing as marginal vignettes in the Vatican MS of John Klimax (Vat. gr. 394) or as atlantes decorating *canon tables* in Gospel books. Here these figures represent labors, corresponding to descriptions of the Months in Eustathios Makrembolites. Novel variations on this iconography occur as late as the illustrations in the *typikon* of the Church of St. Eugenios, Trebizond (Athos, Vatop. 1199), written in Feb. 1346 (Strzygowski, infra).

**MONTPELLIER,** commercial center in Languedoc, founded in the 10th C. The first significant contact between Montpellier and Byz. was the marriage of William VIII of Montpellier and Eudokia, the niece of Manuel I Komnenos, in 1178 (Barzos, *Genealogia* 2:346–59; W. Hecht, *REB* 26 [1968] 161–69). The arrangement was not part of the emperor’s original plan: Manuel had hoped to marry his niece to the brother of Alfonso II of Aragon (see *Catalans*) but, to the surprise of the imperial embassy that arrived in the kingdom, he was found to be already wed. It was probably on the advice of Alfonso that William was proposed as an alternative bridegroom. The marriage was ultimately a failure for all of the concerned parties but particularly for Manuel, since Montpellier was at that time a minor political power far too immersed in its own local affairs to advance Byz. diplomatic policy.
The only other evidence of significant interaction between Montpellier and Byz. is found in a series of notarial acts from Montpellier dating between 1293 and 1348 that reveal considerable commercial activity between Montpellier, Constantinople, and unspecified ports in "Romania." The major item of export from Montpellier to the empire was Languedocien and French cloth, particularly woolen items. The Genoese at Pera seem to have acted at times as intermediaries in the process. In return for cloth, the Montpellier-erains sought luxury products as well as alum, skins, and wax. In 1327–28 and 1333, when poor harvests occurred, Montpellier also imported grain from the Black Sea area. The absence of notarial sources after 1348 is probably a reflection of a decline in commerce between Montpellier and the empire caused by internal problems within the empire, the economic depression in the West brought on by the onset of the Hundred Years War in 1337, and the arrival of the Black Death at Montpellier in 1348.

**MONUMENTALITY**, a quality of massiveness and, by implication, of realism normally associated with renderings of the human figure. Primarily a function of scale and proportion, in Byz. painting it was achieved also through plasticity and a sense of setting in space. Monumentality is not necessarily absent in relief sculpture, the minor arts, or book illustration: it is found in many ivories and Ms illustrations of the 6th and 9th–10th C. Nor is a progressive chronological decline from the truly monumental—still apparent in much Late Antique ivory and silver—to its negation in late Byz. art an acceptable view of stylistic development, since monumentality is strikingly evident in, for example, the massive figures, drapery, and architectural settings at Sophia. But such works constitute exceptions. As most *ekphraseis* make clear, to the Byz. eye the monumental was the result not of classical techniques but of a work's brilliance and ability to engage the emotions of the spectator. —A.C.

**MONUMENTAL PAINTING** in Byz., comprising frescoes and mosaics, can be divided into three periods: the 4th–8th C., the 9th–12th C., and the 13th–15th C.

**First Period (4th–8th C.).** If there was a theme common to the development of monumental painting in the 4th–8th C.—a period of great artistic diversity—it is the adaptation of Roman modes of decoration to the new contexts and imagery of Christianity. Style and medium were transformed, and mosaic became the preferred form of mural decoration. The scarcity of evidence, with random chronological concentrations and geographical distribution, makes understanding the period as a whole difficult. Most evidence survives in two main functional contexts: in churches and their ancillary structures such as chapels and baptisteries, and in tombs, esp. the catacombs; important remains also survive in a number of houses and palaces.

The invention of a variety of schemes for ornamenting the surfaces of a room ranging from the naturalistic or illusionistic to the fantastic and abstract was an important contribution of ancient Roman wall painting. Painters continued in the 4th–8th C. to use many of these methods, with emphasis given to one style or another at certain periods. At the beginning of the 4th C., and in contrast to the immediately preceding era, dominated by a highly abstract style of wall design, the preferred mode of wall painting was illusionistic, with the fictive architectural membering of walls and ceiling (columns, coffering) and the imitation of opus sectile. An important document of the period survives in Trier (ceiling traditionally dated to the time of Constantine I) where the figures, too, have a tangible, natural quality that has earned them the label "classical" (I. Lavin, *DOP* 21 [1967] 97–113). Much painting also survives in Rome (Via Latina Catacomb; Catacombs of Domitilla, Petrus, and Marcellinus); scattered remains are found elsewhere (Aquila, Ephesus).

The simple and rational architectural systems of the early 4th C., however, became progressively more complicated and illogical (with painted coffers curiously out of joint as, for instance, at Stobi) in the later 4th and 5th C. Similarly the depiction of the human form gradually lost its organic unity. In late 5th–C. Rome, Ravenna, and Thessalonike, walls and ceilings frequently bore ornamental strips or a lattice of lines and complex patterns drawn from textiles (Rotunda of St.
George, Thessalonike). During this period a formula for the decoration of the basilica emerged that would prove vastly influential in the Middle Ages (a single large image in the conch focused on the figure of Christ or the Virgin; files of narrative scenes in rectangular panels in the nave).

In the era of Justinian I the framework of mural decoration was richly articulated with floral and geometric motifs (S. Vitale, Ravenna) in an attempt to evoke illusionistic schemes of the past but with curious contradictions (regarding, for instance, the distinction between frame and field—Kitzinger, infra 81–98). A more severe, abstract mode soon replaced this richly ornamental style (St. Catherine on Sinai, S. Apollinare in Classe, Ravenna). In the Church of St. Demetrios, Thessalonike, and S. Maria Antiqua, Rome, of the 7th and 8th C., the subdivisions of walls—often no more than thin strips of color—were determined more by the needs of individual figures and scenes (monumental icons) than by a sense of the framework as a unified composition.

The Early Christian use of vault mosaics persisted into the 4th C., as in the Mausoleum of Constantia, Rome, but with the lower reaches of the wall reveted in opus sectile. The mausoleum clearly illustrates how the progressively less logical schemes of decoration of the period used the unique resources of the medium: patterns of strewn flowers and fruit on the ambulatory vault, first developed for floor mosaics, here appear in mosaic on the ceiling (H. Stern, DOP 12 [1958] 157–218).

Probably from the time of Constantine onward, mosaics decorated the apses and perhaps even the entrance walls of great basilicas of Rome (S. Sabina). Often though not always (S. Maria Maggiore), wall paintings covered the nave walls. The preference for mosaic owed in no small part to the luminous qualities of the medium, deemed particularly appropriate to the depiction of the heavenly realm. Consequently, gold emerges as a dominant element of decoration particularly for the conch, as if sheathing the curved surface of the apse with light. Contemporary inscriptions (as at S. Stefano Rotondo, Rome) often commented on the effect. In many later churches, such as S. Vitale in Ravenna, mosaic was limited to the bema.

Regarding secular mural decoration in the 4th–8th C., little is known. Some houses of the period, painted notably with imitation opus sectile, survive in Ostia and Ephesus. The wall decoration of the great Palace in Constantinople is known only from literary descriptions. The two paired images of the Anastasis and the Virgin and Child in the corridor beside the nave of S. Maria Antiqua in Rome, dated to the reign of Pope John VII, may have been painted as part of the redecoration of the palatine palace, which John VII assumed as his residence, and may reflect contemporary palace decoration in the East (P.-J. Nordhagen, BZ 75 [1982] 345–48).

During the period of Iconoclasm (726–843), painting of sacred images was forbidden; it is known from both literary sources and surviving decoration that in some churches the figures of holy personages and biblical events were replaced by pictures of trees, flowers, birds, and animals as well as crosses.

Second Period (9th–12th C.). A sequence of dominant metropolitan monumental painting styles can be observed between the restoration of images in 843 and the fall of Constantinople in 1204. Of course, a range of stylistic alternatives was always available to Byz. artists.

A number of post-Iconoclastic figural mosaics from the late 9th/early 10th C. surviving in Hagia Sophia, Constantinople, show stoutly proportioned, flatly patterned figures that have an eminently legible presence. These are found in the room over the vestibule (870s?), the bishops in the nave tympanums (3rd quarter of the 9th C.), the lunette of the central portal (900s?), and the portrait of Emp. Alexander (ca.912). The figures in the Ascension in the dome of Hagia Sophia in Thessalonike are similar. Frescoes in this style found in the provinces indicate the artistic hegemony of the capital (e.g., Ayvalı Kilise in GÜMÜ DERE; Hagios Stephanos, KASTORIA; S. Pietro, OTRANTO). No extant monumental works in Constantinople can be dated with assurance to the mid-10th C. The lavish wall paintings of the New Church of Tokali Kilise in GÖREME suggest, however, that the highly classicizing style found in manuscripts such as the Paris Psalter and the Joshua Roll had a monumental equivalent.

A series of mosaic programs from the early and
mid-11th C. (Hosios Loukas, the Nea Mone on Chios, and St. Sophia in Kiev) suggest that a style characterized by simple, organically articulated figures isolated on a plain ground developed in the capital concurrently with the Great Feast cycle (see Church Programs of Decoration). A very similar style is found in the crypt frescoes of Hosios Loukas (early 11th C.). Frescoes elsewhere in the empire continue to reflect the responsiveness of the provinces to metropolitan developments, as indicated in the dramatically hard-edged figures in monuments such as the Panagia ton Chalkeon in Thessalonike and the apse decoration of Eski Gümüş. The notion that this is a particularly “monastic” style has been appropriately dismissed (C. Mango in Habitat, structure, territorio [Galatina 1978] 45–62).

From the mid-11th C., the dogmatic clarity of monumental images is dramatized by a new emotional content. The master of the frescoes of Hagia Sophia, Ohrid, lent his images intensity through the expressions of his figures and his juxtaposition of contrasting shades. Whether this master had metropolitan connections, as did his presumed patron Leo of Ohrid, is debated. The imprint of the same aesthetic is, nevertheless, found in other parts of the empire and in Italy, contemporaneously at Karabaş Kilise in Soğanlı, later at Asinou and, with less sophistication, in the Mavriotissa at Kastoria and in Sant’Angelo in Formis. The mosaics of the main porch and main apse of St. Marco in Venice, dated by Demus to the late 11th/early 12th C., show a similar formal clarity though they lack emotional expressiveness. The mosaics at Daphni suggest a concurrent revival of a classicizing figural style. Not only are the figures organically convincing, but there are intimations of a pictorial middle ground, a novelty in post-Iconoclastic painting. Classicizing conventions of figural representations appear in the frescoes of Veljusa and in the mosaics of the Cappella Palatina and the Martorana in Palermo and of Cefalù, which, like the Venetian mosaics, have been ascribed to Byz. artists.

In the second half of the 12th C. an elaborate, linear manner developed. No monumental examples survive in Constantinople with the exception of a fragmentary angel in Kalenderhane Camii. The Annunciation icon at St. Catherine’s on Sinai ascribed to ca. 1170–80 has been treated as a metropolitan representative of this style. Its chronological position may be suggested by datable frescoes in the provinces. The painted figures at Nerezi refine the emotional expressiveness introduced earlier in the frescoes at Ohrid. At Nerezi the forms are elongated and their drapery elaborated with multiple complex folds, while the settings for the narrative images remain uncluttered. In the frescoes at Kurbinovo and phase two of the Anargyroi in Kastoria, this elegant expressiveness is carried to an extreme. Less emotionally wrought versions are found contemporaneously elsewhere: Monreale in Sicily, the Enkleistra of St. Neophytos and Lagoudera in Cyprus. The relatively homogeneous development of monumental painting in Byz. between the late 9th and late 12th C. as well as the restricted programmatic framework within which stylistic change evolved reflect the highly centralized nature of the empire. The decentralization of the empire that was to result from the conquest of Constantinople by the Latins in 1204 would fundamentally disrupt the traditions of craftsmanship and patronage that informed Byz. art.

Third Period (13th C.–1453). Though few monuments survive, written sources testify to the existence of considerable artistic activity in Constantinople in the years between the restoration of the Byz. Empire in 1261 and 1300. Some older churches were restored (St. Andrew in Krisei), and others, such as the church dedicated by the empress Theodora Palaiologina to St. John the Baptist (south church of the Lips Monastery) or the north church of the Virgin Pammakaristos, were built anew. The churches founded by Nikiforos Choumnos and his daughter, Irene Choumiana, and by the patriarch Athanasios I are not preserved, nor are the wall paintings in the Church of the Theotokos ton Magoulian or the works of Modestos, the painter who decorated the katholikon of the Theotokos tes Panagiotissess (1266). Nothing survives of the mosaic portraits of Emp. Michael VIII and his family that once adorned the Church of the Virgin Véristéptos in Constantinople.
The Deesis mosaic in the south gallery of Hagia Sophia, Constantinople, however, preserves the basic features of what may be called the "first Palaiologan style": the larger scale of figures, the three-dimensionality, the rich shading of each particular form. The use of earlier classicizing models in this period results in a more convincing depiction of space and a better knowledge of anatomy. Drawing their inspiration from works as old as the 5th–6th C., the artists of Constantinople created a distinctive stylistic vocabulary in works such as the MS of the Acts and the Epistles in the Vatican (Vat. gr. 1208) or the Gospels produced before 1300 in a scriptorium patronized by a "Palaiologina" (Buchthal-Belting, Patronage). The new style was immediately developed in monuments at some distance from the capital, such as the frescoes of Sopočani in Serbia (1263–68).

The next generation concentrated less on monumental forms and complementary colors and more on the dramatic aspect of their subjects. The frescoes of the Protaton monastery on Mt. Athos, of the Virgin Peribleptos at Ohrid, of the mosaics of the Paregoretissa at Arta (1290) announce the main features of the so-called second or mature Palaiologan style, which reached its full development only in the second decade of the 14th C. in the mosaics and frescoes of the Chora monastery in Constantinople and in the mosaics of the Holy Apostles in Thessalonike, and the frescoes of the Church of Christ in Berroia. This "mature" Palaiologan style is marked by the introduction of a multitude of figures into each composition, an intensity of feeling conveyed by gesture and movement, a new sense of plasticity achieved by gradually lightening the tone of a color on the drapery, and a new sense of space enhanced by elaborate background architecture. The artists of this period also loaded their images with multiple narrative and symbolic meanings. Such painted metaphors and allusions, used rarely in Komnenian painting, became the standard mode of expression after 1300. Other important extant monuments of this period are found in Mistra and in the churches painted by Michael (Astrapas) and Eutychios. The style also appears in both painted and mosaic icons as well as in miniature painting.

The style was not accepted everywhere, however, and it was not easily mastered by provincial artists. While artists trained in the larger urban centers followed more classical traditions, mannerist exaggerations appeared in provincial monumental painting toward the middle of the 14th C. (cf. esp. some frescoes from Lesnovo, near Stip, and some Greek island churches).

After the civil wars of 1321–1328 and 1341–1347 ended, artists of Constantinople tried to impose a new, "heroic" style featuring monumental figures of saints with powerfully rendered bodies, whose cheeks were covered by tiny white parallel lines to symbolize a transcendent light. These idealizing portraits of calm and powerful saints should perhaps be viewed as a response to the growing threat of Ottoman domination. The frescoes in the Peribleptos and Pantanassa churches at Mistra, in the naos of Dečani, and at Andrea (1389) probably most closely reproduce the style as it was practiced in the capital. Some icons also are painted in this manner (i.e., the Great Deesis in the Hilandar monastery on Athos of ca.1360, the Pantokrator in Leningrad of 1363, the Thaumato Latomou in Sofia of ca.1371, and the Pantokrator on Lesbos of the third quarter of the 14th C.). This late Palaiologan style did not spread quite as widely as had the previous ones, but characterizes the monuments of the "Morava" school in Serbia, the Church of Calendžica in Georgia (painted by Manuel Eugenikos), and the works of Theophanes "the Greek". During the 15th C. a new artistic center emerged in Candia (Crete), where Byz. masters produced vast quantities of icons and frescoes based on early 14th-C. models.

MONZA AMPULLAE. See Ampullae, Pilgrimage; Monza and Bobbio, Treasures of.

MONZA AND BOBBIO, TREASURES OF. The Cathedral of St. John the Baptist at Monza, founded by Theodelinda, queen of the Lombards, and the abbey of St. Columban at Bobbio, built by her husband Agilulf (r.590–615) and his
son Adaloald possess important collections of pilgrim tokens and ampullae from the Holy Land. The lead flasks, formed in molds, were made to contain oil from lamps that burned in the Christian sanctuaries of Jerusalem and the region of Bethlehem; such provenances determine their description as pilgrimage ampullae. They are decorated with images of the Virgin enthroned, scenes from Christ’s infancy, ministry, and Ascension, as well as symbolic representations of the Crucifixion and the memorial aedicula on Golgotha. Although the Bobbio fragments are less well preserved than those at Monza, they are of interest because their iconography includes such unusual subjects as the “Navicella” (the ship, emblematic of the Church, from which the apostles watched Christ walk on the water). Sun-baked clay pilgrim tokens illustrate the Flight of Elizabeth (Bobbio) and the Virgin at the spring (Monza).

At Monza three lead boxes contain fragments of wood and bone; 25 glass flasks and a small black glazed amphora from Rome are said to have held oil from lamps in the catacombs. Five palm-shaped purses may also have contained relics. Finally, Pope Gregory I sent Theodelinda’s infant son Adaloald a gold True Cross relicuary of which the original niello and gold low-relief panels may survive under a modern crystal cover. Gregory probably received the relicuary when he was apocrisiarius at the Byz. court. Three late antique ivory diptychs at Monza include one representing Stilicho, his wife, and their son.

MONZA VOCABULARY, a list of some 65 Latin or Italian words with the Greek equivalents, written in the Latin alphabet, added on the final page of a 10th-C. Latin MS in the Biblioteca Capitolare of Monza, near Milan. The Monza vocabulary is written in a rough Carolingian minuscule of approximately the same date as the MS to which it is appended. Difficult to read, and often more difficult to interpret, the Monza vocabulary is important because of the early Italian and vernacular Greek forms that it records. It was apparently constituted through questioning of a Greek speaker, perhaps a clergyman in northern Italy. No evidence links the Monza vocabulary with the Greek spoken in southern Italy. Like the bilingual Psalters and similar texts, the Monza vocabulary attests to interest in and elementary knowledge of Greek in the West in the early Middle Ages.

MOORS. See MAURI.

MOPSUESTIA (Mo(μ)psuestia, Crusader name Mamistra, Turk. Misis), civil and ecclesiastical metropolis of CILICIA II (under Antioc). Justinian I rebuilt Mopsueia’s bridge over the Pyramos and in 550 called a council whose records reveal the exceptional power of the imperial representative, the comes (or strateletes). The city is said to have been destroyed by Herakleios when the Arabs advanced (they first took Mopsueia in 637), leaving a no-man’s-land between Antioc and Mopsueia. The region remained desolate from raids of the MARDATES. In 703, the Arabs took Mopsueia and transformed it into a base against Byz., whose attacks it frequently met. John (I) Tzimiskes captured Mopsueia in 965. In 1085, it became part of the ephemeral state of Philaretos Brachamios; from 1097 to 1133, Mopsueia was generally controlled by the Crusaders, who appointed a Latin archbishop. John II captured Mopsueia in 1137, but Manuel I had to reconquer it in 1159, when it became his main base in Cilicia. Soon after, the Armenians gained control of Mopsueia, first as Byz. vassals, then (after 1173) as independent princes.

The most remarkable Byz. remains are the elaborate mosaics of a probably 5th-C. building—a church rather than a synagogue. These include Noah’s Ark and a unique cycle of the deeds of Samson (E. Kitzinger, DOP 27 [1973] 133–44).

MORA, or Morhra (Mórrha), also called Achridos, a mountainous region in the eastern RHODOPE. The toponym Achrido appears in the Alexiad.
(An.Komn. 1:151.23), while Mora is a later appellation, esp. frequent in Kantakouzenos. The area was dotted with fortresses—called astea, phouria, or polemnia in the Greek sources (Čer- nomen on the Marica, Ephraim, Ouistra, Con- stantia, and others). According to Kantakou- zenos (Kantak. 3:251.19–22), the inhabitants of Mora bred livestock and took their herds to Chalkidike for the winter. Achridos-Mora, to- gether with Melnik, probably formed a part of the principality of the despotes Alexios SLAVOS but was then conquered by Theodore Komnenos Doukas of Epiros. In 1255 Alexios Doukas Philanthropenos, leading a Nicaean army, captured a stronghold in Achridos (not near Ohrid, as stated by Polemis, Doukai 168), and was appointed the commander of garrisons in Achridos and Tsepaina (Akrop. 1:119.11–16). Mora was a point of contention during the mid-14th C.

—A.K.

MORAVIA (Mopēa, also in Constantine VII Porphyrogennetos as Great [Megale] Moravia and the country of Svjatopluk), state that arose in Pannonia in the early 9th C. after the dissolution of the Avar khaganate. It reached its apex under the princes Rastislav and Svatopluk but was crushed by the Hungarians in 906.

Archaeologists have discovered in Moravia remnants of at least 18 churches of the 9th C. (e.g., those of “Na Valách” and “Na Špitálkách” in Staré Město), some of which are of the Byz. inscribed cross type, with a dome over the nave; Byz. jewelry and silk; and a gold coin of Michael III. It is quite plausible that some economic and political relations between Moravia and Constantinople began in the first half of the 9th C.

Excavations at Mikulčice show that the Moravians were pagan in the 7th–8th C. but thereafter converted to Christianity. The first missionaries active in Moravia were monks from Bavaria ca.800. Prince Rastislav, who was probably fearful of growing German influence in his country and a possible Germano-Bulgarian alliance, requested missionaries from Constantinople in 862. The Byz. sent CONSTANTINE THE PHILOSOPHER and METHO- DIOS in response. After Constantine’s death and the departure of Methodios, an “archbishop of Moravia” named Agathon (probably a supporter of Patr. Ignatios) was active in the country ca.873–79, but Latin missionaries came to dominate there. Constantine VII erroneously calls Moravia unbap- tized (De adm. imp. 40.33). Byz. retained some ecclesiastical connection with Moravia even after Hungarian settlement there.

MOREA (Mopēa), alternative name for the Pe- loponnesos. The origin and etymology of the name is obscure, and attempts to derive it from Slavic more, the sea, were rejected by Vasmer (Slaven 2). Others see in the name a Latin corruption of the Greek Romia, “land of the Romans.” The most common derivation is from the name of the mulberry tree (morea), whose leaf is similar to the shape of the peninsula. The bishopric of Moreon first appears in a notitia of the 10th C. (Notitiae CP 7:554) or in an addition to this text; at any rate, a seal of Theodore, a bishop of Moreon, is dated by Laurent (Corpus 5,1, no.656) in the 11th C. V. Laurent’s conjecture (REB 20 [1962] 186) that the bishopric was created by Nikephoros III is purely hypothetical. The bishopric of Moreon was a suffragan of Patras. Its location is uncertain, probably in Elis, near the promontory Ithys (A. Chatzes, BNJbb 9 [1932] 65–91). It remains unclear whether and how the local to- ponym Moreon was transformed into Morea and from the 13th C. onward became the designation of the Peloponnesos as a whole, or specifically of its western coastal regions. In the 15th C. MAZARIS jokingly and artificially connected the name, which he reads as Mora, with words such as moros, death.

MOREA, DESPOTATE OF (1349–1460). As a result of the Fourth Crusade, the Frankish con- quest of the Peloponnesos (or MOREA), and the establishment of the principality of ACHAIA, the Byz. lost all control over southern Greece from
1205 to 1262. After William II Villehardouin's defeat at Pelagonia, however, and his cession of several fortresses to the Byz. by the Treaty of Constantinople (1262), the Byz. regained a foothold in the Peloponnesos. During the ensuing century the Greeks reconquered the southern portion of the peninsula from the principality.

Soon after he ascended the throne, John VI Kantakouzenos created the despotate of Morea as an autonomous province under imperial suzerainty. He sent his son Manuel Kantakouzenos to the Morea as its first despot in 1349 to reestablish order in a province troubled by dissident archontes. Manuel's long rule brought a measure of peace and prosperity to the region. Shortly after Manuel's death in 1380, John V Palaiologos made his son Theodore I Palaiologos despot; thereafter the despotate was an appanage ruled by a member of the Palaiologan family. By 1429 the despotate gained control of the entire Peloponnesos by a combination of warfare and marriage diplomacy and eliminated the principality of Achaia. Its final years (1429–60) were marked by conflict among the sons of Manuel II (Theodore II Palaiologos, Constantine XI Palaiologos, Thomas Palaiologos, and Demetrios Palaiologos) over the rule of the despotate and devastating attacks by the Ottoman Turks, who were only temporarily thwarted by the construction of the Hexamilion wall (1415) to defend the Isthmus of Corinth. After 1447 the despotate of Morea became a tribute-paying vassal of the Ottoman sultan. The despotate briefly survived the Turkish conquest of Constantinople; its capital of Mistra fell to the Ottomans on 29 May 1460. (See table for a list of the despotai of Morea.)

The economic basis of the despotate was agriculture (esp. wine, olives, and raisins) and the production of salt and silk. An influx of Albanian immigrants provided the manpower for farming in the region, which was severely depopulated by constant fighting. The Albanians also served as mercenaries in the army. Trade was controlled by the Venetians, who also defended the coasts. The despotate of Morea was the site of the final flowering of Byz. culture, esp. at Mistra, where many churches were built and decorated with frescoes. The court of the despotai attracted numerous intellectuals, most notably the philosopher-reformer Gemistas PLETHON.

-A.M.T.

**MORPHOLOGY**, study of the structure of words; in Greek, the study of nominal and verbal inflections and paradigms. Byz. grammarians adopted the analysis and classification of these features worked out by Alexandrian grammarians and given canonical form by Herodian and did not take into account the changes in Greek morphology over the centuries. This traditional prescriptive morphology is represented by the Canons of Thedosios of Alexandria (4th–5th C.) and Theognostos (9th C.), the epimerisms of George Choiroboskos, and the eretemata of late Byz. grammarians. Meanwhile radical changes occurred in the morphology of spoken Greek. In noun paradigms most consonantal stems were restructured as vowel stems, for example, μήτηρ was replaced by μητέρα, declined like χώρα; thus the ancient third declension was virtually eliminated (H.-J. Seiler, Glotta 37 [1958] 41–67). In verb paradigms the personal endings of imperfect, first aorist, and second aorist became identical, the future was replaced by various periphrases, the perfect and pluperfect became aorist equivalents and were gradually eliminated, the

Source: Based on Grumel, Chronologie 375, and Zakythinos, Despotai.
MORTARY (δήμων). Eustathios of Thessalonike (Eust. Comm. II. 3:168.11–14) defined a mortarium as “a round cylindrical [sic] stone or a hollow vessel made of stone or wood, in which pulse or other objects were ground.” In addition to their use in the preparation of food, mortaria were employed to manufacture drugs and colors, or to mix metallic powder; querns or “hand mills” for grinding grain were also known. Roman clay mortaria are found throughout the West, but in the eastern Mediterranean they seem to have been replaced by vessels of stone and marble. However, a group of large clay mortaria (diam. approximately 50 cm; weight approximately 11 kg) of the 3rd and 4th C. has been found in Syria. All share the same basic form—flat base, high flaring wall, broad, slightly downturned rim with spout—and all are stamped on the rim with a maker’s name or trademark (e.g., “of Kassianos”; see STAMPS, COMMERCIAL). The center of manufacture has been archaeologically identified as Ras el-Elasit, on the Syrian coast north of Laodikeia.

MORTAR, a bonding material made of slaked lime, sand, and crushed brick (ranging from dust to small pieces) used in thin beds to bind courses of ashlar blocks or in thick beds to bind courses of bricks. Mortar was also mixed with irregular pieces of stone to form the concretelike core of walls faced on both sides with ashlar blocks and brick. When used with brickwork, mortar beds are normally 5–6 cm thick. Since Byz. brick is 4 cm thick, a Byz. brick structure has more mortar than brick—the reverse of Roman brick construction. This lavish use of mortar probably contributed to the excessive warping and settling of the structure as the mortar dried. The “rubble” mortar used as the core of walls is friable and weak; it was thus avoided in piers designed to carry great weight. In the 6th C. the pointing of mortar beds resulted in smooth concave surfaces recessed behind the leading edge of the brick; later pointing created a flat surface more deeply recessed above than below.

MORTE (μορτή, lit. “portion”), a term denoting the (usually) in-kind rent paid by a PEASANT on agricultural land belonging to the state or to a private landowner. The land leased was called hyppomortos ge (Chil., no.92.162). Morte is found predominantly in 13th- and 14th-C. documents referring to monastic and state lands in Asia Minor. It may be equivalent to PAKTON and the more common terms dekateia (see TITHE) and dekaton (“tenth”), although in some 15th-C. praktika the dekateia appears to be a fixed levy in specie, based on the total land owned (i.e., not merely leased) by monastic PARAOKI, which was paid to the monastery that held them (N. Svoronos in Laura 4:170, n.659). In the 13th C. the difference between ownership and renting for morte was obscured, and tribunals had to investigate whether peasants were paying tax or morte; the “contract” of morte could pass from one generation to another (Kazhdan, Agrarnye otnoseniya 129f).

MORTUARY CHAPEL. See PAREKKLESION.
Mosaic: The Baptism of Christ; mosaic, early 11th C. Northwest squinch of the katholikon of the monastery of Hosios Loukas, Phokis.

MOSAIC (ψηφιδωτόν, μοναστיכון), the most elaborate and expensive form of mural decoration (see Monumental Painting) employed by the Byz. With the toleration of Christianity in the 4th C. and the beginning of the construction of churches, the use of small cubes (tesserae) as an artistic medium was no longer limited to floor mosaics. It was deemed more appropriate for depictions of sacred personages and biblical events to be placed on the walls and ceilings of churches than on floors where they might be walked on. The gradual shift to mosaic for mural decoration made possible the use of a greater variety of more fragile materials for the tesserae; in addition to the multicolored stone and marble typical of floor mosaic, artists used brick or terra cotta, semi-precious gems, and opaque colored glass. Gold and silver tesserae were produced by sandwiching foil between layers of translucent glass. Tesserae varied much in size, the smallest being used for modeling faces and other important details. Often following preliminary, painted guidelines, the mosaicists impressed these tesserae into a setting bed, itself laid over previous plaster strata. While tesserae could be produced in a small local workshop, as at Masada in the early 5th C. (Y. Yadin, IEJ 15 [1965] 102), mosaic decoration on a large scale presupposes huge financial investment and industrial organization. The mosaic in the apse of Hagia Sophia in Constantinople required almost 2.5 million tesserae “smeared,” as Photios said, “with gold” (Cutler-Nesbitt, Arte 106). Depending on the size of the tesserae used, a mosaicist could cover up to four square meters per day (I. Logvin, Kiev’s Hagia Sophia [Kiev 1971] 16).

In contrast to fresco technique, mosaic is an essentially additive medium, contributing materially to the dominance of line and contour. This inherent linearism could be overcome only by the use of microscopic cubes, such as are found in miniature mosaic icons of the 11th C. and later. Despite this limitation, mosaic was, at its best, a medium of great subtlety, involving hundreds of shades of color.

In late antiquity, wall mosaics were subordinate in extent to floor mosaics and were restricted to such surfaces as domes and the conches of apses until the 6th C. During the reign of Justi-
nian I a new model was established at Hagia Sophia in Constantinople, paved in marble but with its upper surfaces sheathed with “the glitter of cut mosaic” (Paul Silentiarios—ed. Friedländer, *Kunstbeschreib.* 245.647). Mosaic was more widely used in this period than it was to be ever again; the finest 6th-C. examples survive at the monastery of St. Catherine at Sinai, Poreč, and Ravenna; others are found at Dyrarachion, Gaza, and at several sites on Cyprus. Mosaic was soon to become an important Byz. export. Thus in the early 8th C. the Arabs imported from Constantinople “40 loads of mosaic cubes” and a number of workmen for the decoration of the Umayyad Mosque in Damascus (H.A.R. Gibb, *DOP* 12 [1958] 225–29), while Pope John VII seems to have employed Byz. mosaics for his oratory in St. Peter’s, Rome (P. Nordhagen, *ActaNorv* 2 [1965] 121–66).

By the late 8th C., holy figures executed in mosaic were a common feature of sacred decoration: the author of *Stephen the Younger* complained that the images of birds and beasts set up by Iconoclasts in the Church of the Blachernai to replace a Gospel cycle left the building “altogether undecorated” (PG 100:1120 C). The economic revival of the 9th and 10th C. saw the frequent use of mosaic in the churches and private chapels of Constantinople. It was also the model of luxury in palace decoration, attested for the Kainourgion at the Great Palace built by Basil I (*TheophCont* 332.14–335.7) and in the epic of *Digenes Akritas*.

Mosaic was the technique chosen for imperial portraits in Hagia Sophia for three centuries (9th–11th) and was favored in the 12th C. by Manuel I for scenes of history painting (Nik. Chon. 206.48–52). In emulation of the empress Helena, the same emperor may have sent mosaic cubes and even craftsmen such as Ephraim to Bethlehem for the Church of the Nativity. Clavičio describes mosaics (of the 12th or 13th C.?) in both the church and cloister of the Peribleptos Monastery in Constantinople, as at St. George of Mangana. It is also known that large areas of the Holy Apostles in Constantinople were decorated by Eulalios in the 12th C. The 11th and 12th C. in general represent a high watermark in work in this medium. The decorations of Hosios Loukas, the Nea Mone on Chios, and Daphni witness to the transport of artists and materials over great distances. In the early 11th C. small and mosaicists were sent to Kiev for the embellishment of St. Sophia (A. Poppe, *JMedHist* 7 [1981] 41–43), and local workmen were taught the craft. A similar importation probably prevailed during the protracted decoration of San Marco in Venice, and mosaicists figure among the other craftsmen brought from Constantinople in the 11th C. by Desiderius of Monte Cassino. The extent to which Byz. artists participated in the 12th-C. mosaic decoration of Palermo and Monreale remains in question.

From the 13th C. onward mosaic was used only in the most lavish enterprises at Constantinople and, exceptionally, at Arta. While the mosaic of the Deesis in Hagia Sophia (late 13th C.) may have been an imperial commission, later programs, such as those at the Chora and Pammakaristos in Constantinople and the Holy Apostles in Thessalonike, were generally sponsored by the bureaucratic or ecclesiastical elite, often in conjunction with fresco decoration. The last major mosaic undertaking in the capital was at Hagia Sophia following the partial collapse of the dome in 1346. Shortly after 1355 the Pantokrator in the dome was restored, and images of John V Palaiologos, John the Baptist, and the Virgin were installed on the great eastern arch (Mango, *Materials* 66–76, 87–91). The mosaics on the eastern arch, covered by plaster for centuries, were rediscovered in 1989.

-A.C.

**MOASIC LAW**, more fully titled “Excerpts from the Law Given by God through Moses to the Israelites,” a collection of passages from Exodus, Leviticus, Numbers, and Deuteronomy that is preserved in dozens of MSS from the 11th C. onward, usually as an appendix to the *Ecloga*. The compilation cannot be earlier than the 8th C. Out of the 50 chapters of the compilation, about 20 deal with marital and sexual problems; among other topics are theft, murder, witnesses, loans, just weights and measures, charity, etc. The
MOSCHABAR, GEORGE, a second name possibly Psyllos (Ψύλλος) or Psyllates (Ψυλλάτης), a relentless opponent of UNION OF THE CHURCHES; fl. second half of the 13th C. Moschabar (Μοσχάριος) is attested in 1281 as didaskalos tou Evangelio and from 1283 to 1286 as chartophylax. Before Michael VIII died, Moschabar fought against Union anonymously. His Dialoge with a Dominican on the Procession of the Holy Spirit (1277–78), another work on the same subject, still unpublished, and the Antiirhetic Chapters that refute the work of Patr. John XI Bekkos date from this time. After the restoration of Orthodoxy, Moschabar openly opposed Bekkos and his supporters (Pachym., ed. Bekker 2:98:18–99:3). His relations with the new patriarch Gregory II of Cyprus deteriorated quickly. Moschabar was instrumental in bringing about Gregory’s resignation in 1289 and wrote a certification of Gregory’s Orthodoxy in exchange for the abdication (PG 142:129AB).

MOSCHOPoulos, MANUEL, writer and philologist; nephew of the bibliophile Nikephoros Moschopoulos; born ca.1265?, fl. Constantinople ca.1300. A student of Maximos PLANoudes, Moschopoulos (Μοσχόπουλος) became a commentator on and perhaps editor of classical Greek poets. Virtually nothing is known of his biography, except that in 1305/6 he became involved in a plot, fell into political disgrace, and was imprisoned.

Moschopoulos was a versatile scholar, who wrote a book on Greek grammar (Erotetmata grammatic) with an appendix on schedographia (J.J. Kea-

MOSCHOPoulos, NIKEPHOROS, bibliophile and bishop during the reign of Andronikos II; died between 1322 and 1332. He was named titular metropolitan of Crete by 1285, but could not reside in his see because of the Venetian occupation of the island. He was subsequently made PROEDROS of Lakedaimon (Sparta) ca.1289. In 1291/2 he restored the Cathedral of St. Demetrius at Mistra (M.I. Manousakis, DChAE 4 1 [1959] 70–79). He also built windmills and planted vineyards and olive groves in the countryside nearby. Whenever possible, however, Moschopoulos preferred to live in Constantinople. In
1296 the emperor sent him to Venice on a diplomatic mission; in 1303 he served as imperial emissary to Patr. John XII Kosmas, who had just resigned his throne. In 1305 Patr. ATHANASIUS I forced him to return to Mistra.

Like his more famous nephew, the philologist MANUEL MOSCHOPoulos, Nikephoros was a scholar and admirer of classical literature. He possessed a library so extensive that it took four horses to transport it; he copied some codices himself (E. Gamillscheg in Byzantios 95–100), commissioned the copying of others, and was generous in his donations of MSS to monasteries. Among his books were a copy of the Odyssey and a 10th-C. MS of the homilies of Chrysostom. Moschopoulos apparently also engaged in hymnography; E. Papa-eliopoulou-Photopoulos attributed to him an akolouthia on John Cassian (Diptycha 2 [1980–81] 119–45).

—A.M.T.

MOSCHOS, JOHN, sometimes nicknamed “Ekuratas”; monk and writer; saint; born Gilicia (P. Pattenden, JThSt 26 [1975] 41, n.1) between 540 and 550 (S. Vailhé, EO 5 [1901–02] 108), died Rome Sept. 619 or more probably Constantinople in 634. The prologue to his book, written by a contemporary, records that Moschos (Μοσχός) lived in and visited various monasteries and ascetic centers in Judea, Syria, and Egypt. After the Persian capture of Jerusalem (614), he sailed to the “great city of the Rhomaioi,” that is, Constantinople, where he lived as patriarch-in-exile of Jerusalem. Before his death he entrusted the incomplete version of his book, The Spiritual Meadow (Leimon or Leimonariou) to his pupil and fellow traveler, SOPHRONIOS, the future patriarch of Jerusalem (H. Chadwick, JThSt n.s. 25 [1974] 41–74). This work, which was dedicated to Sophronios, consists of short edifying anecdotes about monks and hermits, in the tradition of the APOLPHETEGMATA PATRUM. Its contents and pleasantly unaffected Greek ensured the wide later circulation described by Photios (Bibl., cod.199), who mentions variously sized EKDOSEIS. Translations were made into Arabic, Latin, and Church Slavonic. As with other similar hagiographies, the work provides a wealth of information both for linguists (E. Mihvec-Gabrovec, Études sur la syntaxe de Ioannes Moschos [Ljubljana 1960]) and for those interested in the social and intellectual history of his day. It also innocently spotlights, sometimes horribly, the emotional and sexual repressions of its ascetic subjects. Together with Sophronios, Moschos produced a revision of the vita of JOHN ELEEMON.

—B.B.

MOSCOW (Μοσκόβια), town in the Volga-Oka basin, capital of a principality that, though subject to the MONGOLS, emerged in the 14th C. as the major rival to Tver’ and LITHUANIA for control over Russia. Moscow was in contact with Byz. from the early 14th C., though it is not mentioned explicitly in Byz. sources until 1380 (MM 2:12.12), when Ivan II (1353–59) was designated the great rex and all Russia, while Symeon of Moscow (1341–53), in a letter of John VI Kantakouzenos in 1347, is called the great rex of all Russia (MM 1:263.27). The route from Moscow to Constantinople via the Don and the Azov Sea is described by IGNATIJ of SMOLENSK. Muscovite princes contributed regularly toward the repair of monuments in Constantinople (e.g., in 1347, 1364, 1398; cf. Greg. 3:199.24–200.9). Byz.-Muscovite diplomatic activity focused on the metropolis “of Kiev and all Russia.” Metr. Peter (1308–26) transferred his actual residence to Moscow, and most of his successors followed suit. The official residence, however, was moved in 1354 at the order of Patr. PHILOTHEOS KOKKINGS from Kiev only to Vladimir-on-the-Kliaz'ma, which was regarded as the senior principality (Greg. 3:15.14–17). Philotheos and ANTONY IV used their involvement with the metropolis to sustain the semblance of Byz. authority, an authority that was lost when Moscow rejected the Council of FERRARA-FLORENCE. Byz. artists (THEOPHANES “the Greek”), worked in Moscow from the mid-14th C., as did writers associated with the Hesychast movement (KIPPRIAN, EPIFANIJ PREMUDRYJ, PACH-
MOSELE (Μωσηλέ), or Mousele, a family name of Armenian origin. In 791 Alexios Mosele, the first known droungarios tes viglas, supported Constantine VI against his mother Irene and was rewarded with the post of strategos, but was soon arrested and blinded. Theophilos proclaimed another Alexios Mosele heir to the throne, married him to his daughter Maria, and made him caesar. After military successes in Italy, Alexios was accused of a conspiracy against Theophilos and soon retired to a monastery. The family maintained its importance in the 10th C., when another Alexios Mosele served as droungarios tou plomou under Romanos I, and Romanos Mosele obtained the high title of magistros under Constantine VII. Basil II, however, mentioned in an edict that Romanos’s descendants had fallen into extreme poverty. Family members of the 11th C. are known only from several uncertain seals, one of which belonged to the imperial notary John Mosele (Laurent, Corpus 2, no.208); in the 12th C. Michael Mosele married a noble lady related to the families of Mélissenos and Xeros. In Constanti-

nople there were both an oikos and a monastery of Mosele; H. Delehaye (AB 14 [1895] 161–65) suggested that a school was located in the oikos, a hypothesis rejected by Lemerle (Humanism 283, n.6); the monastery existed until the 14th C.

Lit. Kazhdan, Arm. 106; Janin, Études CP 358f; Winkelmann, Quellenstudien 155f, 176f, 184f. —A.K.

MOSES (Μωσῆς), biblical legislator and prophet; the ideal king, according to PHILO; feastday 4 Sept. One of the tasks of Christian theologians was to demonstrate that Christ was much more than “a new Moses”: Moses not only predicted the advent of Christ but “using obscure ridges shed some light on the Trinity” (pseudo-Basil of Seleukeia, PG 85:136C). Human history was construed as consisting of three stages: a period of natural law, one of Mosaic law, and one of Grace and the New Testament. God sent Moses, says Eustathios of Thessalonike (Eust. Thess., Opuscula 17f), and Moses issued “a better law” that his contemporaries were unable to grasp in full. Gregory of Nyssa wrote a Life of Moses (ed. Simonetti, infra); its first book is a historical commentary on the events related in Exodus and Numbers, stressing the miraculous, rejecting naturalistic explanation, and suppressing shocking detail; the second, much longer, book is an allegorical and spiritual reading of the life of Moses as the soul’s journey to liberation. The Byz. also found the story’s romancelike details attractive: Moses’ miraculous rescue from the river, the wonders he worked, his flight to the country of Madiam, and his military success. Moses’ Crossing of the Red Sea was interpreted as a prefiguration of the triumph of Christianity and paralleled Constantine I’s victory at the Milvian Bridge.

Representation in Art. Images of Moses are found in many contexts. As the protagonist in events of Exodus and Deuteronomy, Moses recurs in narrative art, such as the Octateuchs and two excerpted passages: the Odes of Moses (Ex 15:1–19; Dt 32:1–43) included and illustrated in Psalters. A New Testament setting is provided by the Transfiguration account (esp. Mt 17:3), in which Moses and Elijah appear beside Christ. Moses is represented as an idealized beardless youth (e.g., in the Vatican MS of Kosmas Indikopleustes) and as a white-bearded patriarch (e.g., apse mosaic of St. Catherine’s, Sinai). A single 12th-C. icon at Sinai with 20 narrative scenes from the life of Moses in the frame is probably to be explained by a local cult (Weitzmann in Place of Book Illum., figs.20–21). A characteristic 12th-C. innovation is a woeful Moses with sunken cheeks (e.g., Soteriou, Eikonos, no.161), a type further developed in the 13th C. by the addition of a short beard and heavily lined features to create an entirely different portrait type (ibid., no.175).

MOSESDAY, Arab saint of second half of 4th C.; feastday 7 Feb. According to Sozomenos (Sozom., HE 6.38.5), he was a holy man and miracle worker who lived in the desert. When the Orthodox Arab queen Mavia revolted against the Arian Valens
ca. 375–78, she insisted during negotiations with the emperor that the Orthodox Moses be consecrated as the bishop of her foederati. Valens finally agreed to this condition, and Moses was taken to Alexandria to be consecrated by Loukios, the Arian bishop of the city. Moses refused, however, to be consecrated by an Arian, and was subsequently taken to the “mountain” where the rite was performed by Orthodox bishops in exile. Moses then returned to Mavia’s foederati and engaged in missionary activity among the Arabs. By some scholars he is identified with Moses the Black (J.M. Sauget, Bibl. Sanct. 9:652–54).

–I.A.Sh.

MOSES DASXURANC’I (or Kalankatuac’i), Armenian historian (fl. 10th C.?) of whose life nothing is known. His History of the Caucasian Albanians ends with the attack of the Rus’ on Partaw in 914. Although based on many previous Armenian sources, this History is valuable as a prime source for Caucasian Albania and its relations with Armenia, Iran, and Georgia.

Moses focuses on the history of the church in that area of the Caucasus; he claims Albania was converted no later than Armenia. References to Byz. are few, but the campaigns of Herakleios, the schism of the Eastern churches after the Council of Chalcedon, and the travels to Constantinople and Rome of Stephen (later bishop of Siwnik’) are given some prominence. Also included is a lengthy description from about 660 of the holy sites in Jerusalem (E.W. Brooks, EHR 11 [1866] 93–97).

–R.T.

MOSES OF BERGAMO, or Moses de Brolo, Latin translator from northern Italy who was in imperial service at Constantinople ca. 1130; died after 1157. Moses probably participated in John II Komnenos’s Danubian campaigns, lived near Constantinople’s Venetian quarter, and was selected over Burgundio di Pisa and James of Venice to interpret the debate of Anselm of Hav-}

–M.McC.

MOSES XORENAC’I (“from Xorean [or Xoren],” an unknown town, in Armenian tradition, “the father of history.” The reliability and date of his History are still debated. This important work, the first attempt to give a coherent account of Armenian history from the settlement of the country in the days of the giants down to the death of Mesrop Maštoc’ in 439, became the standard version.

In book 1 Moses correlates the legends about the origins of Armenia (also found in Sebols as the “Primary History”) with the biblical genealogies and the events of world history as known from the Chronicle of Eusebios of Caesarea. In book 2 the role of Armenia between Rome and Parthia is expounded; here the Jewish War of Josephus served as a prime source. Based on the works of Agathangelos and pseudo-Pawstos Buzand the narrative continues to the death of Trdat, first Christian king of Armenia. Book 3 describes the predicament of Armenia between
the Byz. emperors and the shahs of Sasanian Iran. It ends with a lament over the end of the Arsacid monarchy and the removal of the patriarchate from the family of Gregory the Illuminator.

The author claims to have been a pupil of Maštoc' and to have studied in Alexandria and Constantinople. If so, the History contains many anachronisms. Nor is it quoted or mentioned until after 900. Its emphasis on the preeminent role of the Bagratids and the down-playing of the Makoneans has led many to believe that it was written when the former rose to power and the latter declined—in the 8th C.

Moses (whoever he was) was very widely read in Greek theological and secular literature, but he used Armenian renderings of nearly all foreign sources. As a historian Moses was the first Armenian to develop an explicit philosophy of historiography. He speaks of himself as an “anti-quarian,” anxious to preserve information about past deeds of great men. His values are those of a landed aristocracy where valor is assessed on the basis of martial accomplishments, and rank depends on hereditary standing. Frequently Moses speaks of the importance of veracity and elegance in historical writing, and emphasizes that “there is no true history without chronology,” but he had no hesitation in interpreting his sources quite tendentiously.

Several other works have been attributed to Moses Xorenac’i. Among them a unique Geography dates to the 7th C.; based on Pappos of Alexandria, it briefly describes the entire world, with expanded information on the provinces and political geography of Armenia (R. Hewsen, REArm. n.s. 4 [1967] 409–53; S.T. Eremyan, Hayastane est Ašarhaç’oç’e [Erevan 1963]). A book of rhetoric (chérai) said to be by Moses is more difficult to date. It is based on Apiṭhonos and other Greek rhetorical writers, but adduces biblical and Christian examples to illustrate traditional Greek themes (A. Baumgartner, ZDMG 40 [1886] 457–515; R. Sgarbi, Rendiconti, Accademia di scienze e lettere, Classe di lettere e scienze morali e storiche, Istituto Lombardo 103 [1969] 78–84).

MOSQUE (μακριήδιον), Muslim building for worship. The earliest mosques are difficult to identify because they may lack definitively distinguishing architectural features; the mihrāb niche begins to be present only with the caliphate of al-Walid in the early 8th C. A possible north Syrian or Coptic/ Ethiopian Christian influence on early mosque architecture is much debated.

In areas newly conquered by Byz. some churches were converted to mosques, or possibly even divided, temporarily, into areas for Muslims and Christians. A 6th-C. guest house in the monastery of St. CATHERINE at Sinai was converted into a mosque; it contains a minbar dated by inscription to 1106. Some of the earliest surviving mosques on former Byz. territory include that at BOSTRA as well as the controversial and rebuilt so-called Mosque of ‘Amr in Fusṭāt (Old Cairo). In areas that Byz. recaptured from Muslims, mosques were usually closed and the Muslim population ousted or annihilated.

In Constantinople a mosque was protected by treaties with the Fatimids in the 10th–11th C. (M. Canard, Journal Asiatique 208 [1926] 94–99); epigraphical evidence raised the question of similar Fatimid protection for a possible mosque in Athens (G.C. Miles, Hesperia 25 [1956] 329–44). A mosque in Constantinople is again mentioned in the 14th and early 15th C. Which Muslim sovereign’s name would be mentioned in prayers at this mosque was always controversial.

MOSYNOPOLIS (Μοσυνώπολις), town in Thrace on the Via Egnatia; it is called a kastron in the typikon of Pakourianos, “cité” or “ville” by Villehardouin. It was built on the site of late Roman Maximianopolis (ancient Porsulae) at the foot of Mt. Papikion. The archbishop of Maximianopolis is listed in the notitiias of the early 10th C. as suffragan of Traianopolis (Notitiae CP 7,598). Basil II used Mosynopolis as an operational base for his Bulgarian wars. In the 11th C. the town was a bandon of Boleron. Anna Komnene knew
Mosynopolis as a center of Manichaean activity. It played an important part in military operations at the end of the 12th through the beginning of the 13th C.: the Normans took it in 1185, and it was ravaged by Kalojan. Whether the town recovered after this blow remains unclear: its name appears as part of the title of the works of Bole-ron and Mosynopolis in 1317 (Guillou, Métracée, no.7.26), and a synodal decison of 1347 mentions the return of the bishopric of Mosynopolis from the jurisdiction of Xantheia to that of Traiano-polis (MM 1:260.18–21). Asdracha (infra 106) argues that Mosynopolis was in ruins by the 14th C., identifying it with the "old polis of Mesene, destroyed many years ago" mentioned by Kantakouzenos (Kantak. 2:429.14–15).

- T.E.G.

**MOTION, THEORY OF.** The theory of motion developed in antiquity primarily by Aristotle was modified by the Byz. in several ways. First, John Philoponos rejected the Aristotelian theory that a moving missile was pushed by both the thrower and by the surrounding air that was forced into motion by the agent; instead he introduced the theory of impetus, or "kinetic power," which was transferred from the thrower to the projectile (S. Sambursky, The Physical World of Late Antiquity [London 1962] 74–76). Then, John of Damascus (Dial. 45.9–19. ed. Kotter, Schriften 1:129f) suggested a detailed categorization of types of motion: in essence—birth and destruction; in size—growth and decrease; in quality—alteration; in space—circular and linear movement.

The theological concept of motion was developed in the struggle against Proklos, who considered the First Principle as immovable and the soul as self-moving, autokineto. In contrast, the church fathers saw in the Trinity the source of all motion. There were two main theological concepts of motion: one, still connected with Neoplatonic emanationism, construed motion in terms of rest (mone), procession (proodos), and return (epistrophe); Nicholas of Methone (Anaptixis 43.3–4), however, perceived return not as a circular energy (as Proklos) but going the same way as the proodos. He also emphasized the ethical element in proodos-epistrophe: the creature that is to return not to itself (as in Proklos) but to God has free will to act according to nature or to go against nature and to join Satan and his demons who have no access to epistrophe. Another view is presented by Maximos the Confessor, who replaced the Proklean terminology with another triad—being, power, and energy (or action)—thus stress-
being the category of rest to which both being and action belong (Armstrong, Philosophy 492–505).

A.K.

MOUNTINITZA. See Boudonitzza.

MOUNT OF OLIVES (Ἑλαμών, ὄρος τῶν Ἑλαμών). On this steep hill overlooking Jerusalem from the east is located the cave associated with the Ascension teachings of Christ, where he “prayed with his disciples and handed down to them the mysteries of perfection” (EUSEBIOS OF CAESAREA, Demonstr. Evang. 6.18.23, ed. Heikel, Eusebii Werke 6:278.25–28); from the nearby hillock, with its “divine footprints,” it was believed that Christ rose into heaven (EGERIA, Travels 43.5). Constantine I built a basilica here, the apse of which incorporated the cave. By the late 4th C. a circular, colonnaded structure open to the sky marked this locus sanctus where pilgrims could collect eulogia dust. In the vicinity were many lesser churches, monasteries, and nurseries. Golgotha and the Mount of Olives reportedly were the scene of the vision of the Cross in 351 on the eve of the victory of Constantius II over the usurper Magnentius in Pannonia.

G.V., Z.U.M.

MOUSAIO (Μουσαίος), poet; born Egypt?, fl. 5th–6th C. Mousais is described in some of his MSS as a grammarian (grammatikos). Nothing else is known of him, though he might be the Mousais addressed in two letters from PROKOPIOS OF GAZA. An epyllion Hero and Leander is extant, which shows Mousais to be a follower of NONNOS OF PANOPOLIS and influenced by PROKLOS. Gelzer (infra [1967] 136) interprets the poem as a Christian Neoplatonist allegory, but this position is not universally accepted. Mousais’s presumed use of the Heroïdes of OVID is of interest in the tracing of Byz. awareness of Latin literature. The attribution to Mousais of the anonymous poem on Alphaeus and Arethusa (AnthGr, bk.9, no.362) is debatable.

B.B.

MOUSEION AND LIBRARY OF ALEXANDRIA. The Mouseion was a center of scholarship and letters; its members received a stipend and many engaged in teaching. The Library, with its librarian and staff, was probably housed in separate premises. Both were founded and funded in the 3rd C. B.C. by Ptolemy II Philadelphos. They continued to enjoy official support throughout the Hellenistic and Roman periods. The Library was reputed to contain 400,000 volumes, that is, papyrus rolls (L.E. Lödberg, Eratos 3 [1899] 166). Its history in the later Roman Empire is obscure. Probably the collection of the "great library" was moved by the 4th C. to a "daughter" branch in the temple of Serapis; at the end of the century it was visited and described by APHthonios. It remains under dispute whether the Mouseion was destroyed in 391/2 when the temple of Serapis was razed to the ground (J. Schwartz in Essays in Honor of C. Bradford Welles [New Haven, Conn., 1966] 97–111); at any rate, the Mouseion is not mentioned by any writer after Aphthonios. The final destruction of the Library may have been caused by ‘Amr ibn al-‘As, the Arab general, when he conquered Alexandria in 642. One must view as apocryphal, however, the story that ‘Amr, in response to John Philoponos’s plea that it be spared, observed that if the books agreed with the Qur’an they were superfluous, and if they disagreed with it they were pernicious and had to be destroyed.

A.K., R.B.

MOUZALON (Μουζάλων, fem. Μουζαλώνιστα), a family whose first member is known from an 11th-C. seal—Theodora Mouzalonissa, "archon-
tissa of Rhosia” (Ch. Loparev, Vizvrem 1 [1894] 160). She has sometimes been considered the wife of Oleg Svyatoslavich, prince of Tmutorokan, but possibly her husband was a Byz. governor of Rhosia on the Cimmerian Bosporos. In the 12th C. the family produced Nicholas IV Mouzalon, patriarch of Constantinople, and Constantine, a patriarchal notary (Benesević, Opisaniće 1:290.3–5). The Mouzalon family reached its zenith in the 13th C. when they were regarded as originating from Atramytton (Pachym., ed. Failler 1:41.10): Theodore II Laskaris appointed his childhood friend, George Mouzalon, megas stratopedarches, his brother Andronikos megas domestikos, and another brother, Theodore, protokynegos; after Theodore II’s death George became regent for John IV Laskaris but was overthrown by Michael VIII Palaiologos; both George and Andronikos were murdered in 1258 (see Mouzalon, George). Only Theodore retained influence with Michael VIII and the post of logothetes ton genikon, but since he disagreed with the emperor on religious policy, he was flogged (by his own brother). Later he became Andronikos II’s adviser and favorite; his daughter married the emperor’s son Constantine. The Mouzalons regained their position in the army: Stephen Mouzalon was megas droungarios and led the negotiations with the Catalan Grand Company; George Mouzalon, hetairiarches, commanded a troop of Alans but was defeated by the Turks at Bapheus in 1902.

MOUZALON, GEORGE, regent of the empire of Nicaea (1258); born ca.1220, died Nymphaion 25 Aug. 1258. He and his brothers were the boyhood companions of Theodore II Laskaris. They were by all accounts of non-noble origin. As emperor, Theodore raised them to the highest offices of state, making George megas domestikos first, and then protovestarios, protosebastos, and megas stratopedarches. Imperial favor earned them the hatred of the great court families, which intensified when they were given aristocratic brides. George married into the Kantakouzenos family. Appointed regent by Theodore II for his young son John IV, George faced the hopeless task of trying to placate the aristocracy led by Michael (VIII) Palaiologos. Latin mercenaries under Michael’s command murdered George along with his brothers during a commemoration service for the late Theodore at the monastery of Sosandra near Nymphaion.

MOUZALON, NICHOLAS. See Nicholas IV Mouzalon.

Mu’awiya (Mu‘āwiya) ibn Abū Sufyan, caliph (661–80) and founder of the Umayyad Caliphate; born Mecca between 600 and 610, died Damascus Apr. 680. A brilliant administrator and general, Mu‘awiya served as a secretary to the prophet Muhammad and then participated in the conquest of Syria, notably the capture of Caesarea Maritima (640/1). As governor of Syria and Palestine, Mu‘awiya retained the native bureaucracy: Greek continued as the language of record; Byz. images and inscriptions appeared on coins minted in Damascus; and Christians occupied leading offices, esp. those concerning finances. Yet he aggressively attacked Byz. by aiding rebels like Saborios and conducting direct assaults. He sent annual raids into Asia Minor and Armenia, leading some himself, and received permission from Caliph ʿUthmān to build a fleet, with which he captured Cyprus (649), Rhodes (654), and Kos (654), and in 655 defeated Constans II in the “Battle of the Masts” at Phoenix (mod. Finike in Turkey). Mu‘awiya’s struggle with ʿAli for the caliphate forced him in 659 to sign a three-year truce with Constans requiring weekly payments of 1,000 solidi, one slave, and one horse (Reg 1, no.239).

After becoming caliph Mu‘awiya’s renewed conquests—Kyzikos (670) and Smyrna (672)—culminated in a great siege of Constantinople (674–78). Byz. use of Greek fire and attacks by the Mardaites forced him to withdraw and negotiate a 30–year treaty stipulating annual Byz. payments of 3,000 solidi, 50 hostages, and 50 horses (Reg 1, no.239). As caliph, Mu‘awiya was tolerant of Christians and rebuilt the ruined cathedral of Edessa (679).

MUHAMMAD (Μουάμματς, מואמה, etc.), prophet of Islam; born Mecca, tribe of Quraysh, ca.570, died Madina, 8 June 632. Among the most controversial aspects of Muhammad's life and thought is the extent to which he had contact with Christians and was influenced by them and by Christian (and Jewish) ideas. In sūra 30 of the Qur'ān, titled al-Rūm, Muhammad showed concern for and expressed optimism about the survival and welfare of Byz. in its war with Persia. Muslim traditions allege that Muhammad dispatched messengers to various contemporary sovereigns, including HERAKLEIOS, to call them to Islam. Muhammad's first expedition against Byz. territory ended in the battle of Mu'ta (628), a serious Muslim defeat. The earliest reference to Muhammad in a Byz. source is found in DOCTRINA JACobi SUPER BAPTIZATI, ca.634–35. The aims and reasons for Muhammad's policy against Byz, late in his life are poorly documented and controversial. His conception of Christians as 'people of the Book' enabled his successors to concede them protected status. Hostile and inaccurate traditions about Muhammad exist in Byz. sources, even though some may draw on Christian Oriental and even Muslim texts.

MULES. See Beasts of Burden.

MUNDIR, AL-. See ALAMUNDARUS.

MUNICH TREASURE, dated to the 4th C. and found ca.1973 at an undetermined site "in the eastern [Roman] empire." Now belonging to the Bayerische Hypotheken- und Wechsel-Bank in Munich, it is composed of nine silver objects (eight bowls and one plate), five of which are larigitio dishes made ca.921/2 in three different centers and noteworthy as the only such collection yet found in the East. Three bowls have in their centers struck, coinlike portraits—one of LICINIUS and two of his son Licinius II, the caesar, inscribed with acclamation of the latter's fifth anniversary. Two of these bowls (one of the emperor and one of his son) have silver stamps thought to refer to a mint workshop of Nikomedia. The third such bowl, of the son, has a comparable stamp for the mint of Antioch. Two other bowls have incised inscriptions: one acclimating the tenth anniversary as caesar of CRISPUS and CONSTANTINE II and the other bowl the fifth anniversary of Licinius II. The former bowl has a pointillé inscription referring to Naissus and the latter, one of Antioch. As Naissus had no mint, Baratte (infra) suggests that the bowl was manufactured in a state treasury. The close similarity of objects made in different centers for different emperors—and their ownership by one individual—indicates a tightly organized system of larigitio manufacture and distribution. The owner is thought to have been an official who buried the objects at the time of the overthrow of Licinius by Constantine I in 324.

MUNICIPAL ADMINISTRATION was inherited by the late Roman Empire from antiquity, but by the 4th C., imperial administration came to predominate, and civic self-government was restricted to small hereditary oligarchies, the curiales. Their organ was the boule (Lat. curia), the city council, which consisted of curiales and exercised certain rights of justice; administered city estates; and oversaw food supply, building activity, public games, education, and medical care. It was also responsible for paying imperial taxes. During the 5th and 6th C. all of these forms of urban administration fell gradually into the hands of the emperor's agents. In the 7th C. municipal administration declined as the city ceased to be the leading social institution; this change was reflected later by a novel of Leo VI abrogating the boultai. At the same time the local bishop became responsible for certain aspects of urban affairs. In the 11th and 12th C. some forms of self-government were reestablished in provincial towns. Eustathios of Thessalonike (Eust. Thess., Opuscula 92.1–58) mentions an annually elected magistrate who was constantly active in the marketplace and city council (bouleuterion), and Michael Chroniates describes with some derision noisy assemblies that discussed common affairs. Under the Palaiologoi certain cities, such as Ioannina, Kroya, Phanarion, and Monemvasia, received imperial charters that guaranteed their privileges, including elements of
municipal administration. In Byz., however, the conduct of urban affairs was strictly limited not only by imperial administrative omnipotence but also by the power of local landowners and the church.

—A.K.

**MURAD I (Μουράτ, Αμουράτ, etc.), Ottoman sultan (1362–89); son of Orhan and his Greek wife Nilüfer Hatun; born 1326?, died Kosovo Polje 15 June 1389. Under Murad the Ottoman beylik evolved into an empire stretching from the Balkans to central Anatolia. As this transpired, the Palaiologoi one by one became Murad's tributary princes—partly to avert total conquest, partly to gain his aid in times of dynastic struggle. John V became Murad's vassal ca.1372–73, following the Turkish conquest of Adrianople (1369) and the battle of the Marica (1371). Murad's posture toward John vacillated opportunistically. In 1373 Murad and John V cooperated closely in crushing the joint rebellion of their sons SAVCI Beg and Andronikos IV. In 1376, however, Murad aided Andronikos in unseating John V and Manuel II, receiving in turn KALLIPOLOS (1377), which the Turks had lost in 1366. When John V and Manuel recovered power in 1379, it was likewise with Murad's aid, for which he received larger annual tribute. Murad's later relations with John V and Andronikos IV (installed as Murad's vassal in Selymbria 1382–85) were generally stable.

Throughout the period 1383–87, Murad's chief Byz. antagonist was Manuel, who was ruling in Thessalonike and refusing accommodation with the Turks. This hostility ended in 1387 when the Thessalonians surrendered to Hayreddin Pasha, and Manuel later made his submission to Murad. THEODORE I PALAIOLOGOS, Manuel's brother and despotes of Mistra, also became Murad's vassal in 1387. At that point, the sultan regarded all the leading Palaiologoi as coordinate members of his state and as sources of revenue and military manpower. Having this network of control, Murad never attempted direct conquest of Constantinople. The Palaiologoi preserved their alignment with Murad in his final years and did not participate in the uprising of the knez LAZAR. This uprising led to the Battle of Kosovo Polje, during which Murad was assassinated.

—S.W.R.

**MURAD II (Μουράτης and other forms), Ottoman sultan (1421–51); eldest son of MEHMET I; born Amasya (AMASEIA)1404, died Edirne (Adrianople) 9 Feb. 1451. In his reign Murad had important dealings with Emps. MANUEL II, JOHN VIII, and CONSTANTINE XI. Murad's relations with Manuel were chronically tense. In Aug. 1421 Manuel failed to restrain John from launching Düzme Mustafa in a revolt against Murad. Düzme Mustafa claimed to be a son of BAYEZID I and had been imprisoned in Constantinople since 1416. John expected in return territorial concessions, esp. Kallipolis. In Jan. 1422, however, Murad crushed Düzme Mustafa and then moved to chastise the Palaiologoi, opening attacks upon Thessalonike and Constantinople in June. After his 24 Aug. general assault on Constantinople failed, Murad soon lifted that siege. Meanwhile Manuel attempted to undermine Murad by supporting the claims of Murad's brother in Anatolia, Küçük Mustafa. Murad eliminated this Mustafa sometime in 1423 and retaliated by dispatching Tural-han Beg to ravage the Morea (late May-June). The continuing siege of Thessalonike so reduced its citizens that the despotes Andronikos surrendered the city to Venice (formalized July 27, 1429), further enraging Murad. Early in 1424, Manuel finally concluded peace with Murad, conceding territory and promising tribute of 100,000 hyperpyra yearly.

Murad's relations with Byz. were more stable throughout the period 1424–46. John VIII formally abided by the 1424 pact. Murad's 1430 conquest of Thessalonike strengthened his hold over Macedonia and then Epirus, but thereafter he conducted his European campaigns in the northern Balkans. John's frequent maneuverings for Western help in the 1430s and his absence from 1437 to 40 to attend the FERRARA-FLORENCE Council provoked Murad's suspicions but occasioned no breach. The emperor, moreover, played no visible role in the Crusades that Murad faced in 1443–44; indeed, John dutifully congratulated Murad following his victory at VARNA. Murad's
posture stiffened after 1444, however, when the despotes of Mistra Constantine (XI) Palaiologos rendered Murad’s vassal, duke Nerio II Accia-juoli of Athens, tributary to himself. Murad replied in 1446 by invading the Morea, after which Constantine became tributary to Murad.

In the turmoil following John VIII’s death (Oct. 1448), Murad supported the despotes Constantine’s succession, and concluded a peace pact with him in March 1449. This pact governed their relations down to Murad’s death in 1451.

-S.W.R.

MURDER (φόνος). Byz. law retained the criterion for murder of Roman law, which required evidence of intention to kill, determined by the weapon used (Basil. 60.39–51,13,17). Punishment for the intentional killer differed according to his social status: for the entimoi (persons of rank), banishment and confiscation of property; for the etulelos (commoners), death. The intentional killer of this law corresponded to the category of he-kouios phoneus of Byz. legal texts, but Byz. law also introduced divisions within this category (Troianos, Poinalios 6–10). There were several mitigating factors in the application of the death penalty for intentional killers. The murderer could avoid prosecution for the crime by paying a settlement to the victim’s family (Basil. 11.2.2; 60.53–1). Further, the church saved the lives of intentional killers through asylum. A few cases of killing preserved in excerpted form in the Peira (63.24–28) show that the murderers who had not sought asylum received corporal punishment or the death sentence (commuted to hard labor in the mines), while those who were under the church’s protection had their property divided between their family and the victim’s family.

Better sources for the circumstances in which murders occurred are the confessions preserved in the writings of Demetrios Chomatenos and John Apokaukos from 13th-C. Epiros. These are cases of spontaneous attacks provoked by trespassing on property or insults to personal honor. Although they do not provide a full range of murder cases, they do give examples of everyday murder in rural communities and show that even the innocent needed protection from civil officials, who moved in and confiscated property at the first opportunity (see Phônion).

-M.R.J.

MUSA (Musa, Musa, etc.), more fully Musa Çelebi, younger son of Bayezid I; died near Sofia 5 July 1413. Between 1410 and 1413 Musa attempted to establish himself as Ottoman sultan at the expense of his brothers Süleyman Çelebi and Mehmed I. In 1410–11, he eliminated Süleyman and gained control of Rumeli. After campaigning in Serbia, he waged war on Byz. to punish Manuel II for having supported Süleyman and to recover losses suffered in the peace of 1403. Both Thessalonike and Constantinople were besieged, the latter probably from spring 1411 to summer 1412. In response, Manuel first tried to undermine Musa by supporting the claims and maneuvers of Süleyman’s son, Orhan. This failed, and by summer 1412 Manuel had allied with Musa’s brother Mehmed, who was based in Anatolia. Musa foiled Mehmed’s first efforts to crush him, but on 5 July 1413 was defeated, captured, and then strangled at Mehmed’s command south of Sofia. By this victory, Mehmed reunited Ottoman territories in Rumeli and Anatolia and ended the dynastic strife that had weakened the Ottomans vis-à-vis Byz. and others since 1402.

Byz. sources depict Musa as intensely anti-Christian and notoriously cruel. His siege of Constantinople evoked renewed outpourings of devotion to Mary, the city’s patron; among these is Manuel II’s dolorous Hymn to the Theotokos. According to the historian Doukas, Musa assaulted Constantinople out of religious zeal and a desire to wreak vengeance on the Palaiologoi for having incited Timur to liquidate Musa’s father, Bayezid.

-M.S.W.

MUSIC. Apart from the acclamations, no music survives from Byz. that is not directly connected with the liturgy. Secular music is frequently described by Christian authors and historiographers (see Musical Instruments; Musicians; and Singers), but its styles, genre, and form are unknown. Hence, modern scholars use the phrase
“Byz. music” to refer to the medieval sacred unaccompanied chant of Christian churches following the Eastern Orthodox rite and to a certain group of ceremonial songs in honor of the emperor, the imperial family, and high dignitaries of the Orthodox church. This music is undeniably of composite origin, drawing on the artistic and technical productions of antiquity as well as on Jewish music, and was inspired by the plainsong that evolved in Alexandria, Antioch, and Ephesus.

MSS with symbols to indicate melodic movement (see Neumata and Notation) appeared only from the 9th C. onward, so our knowledge of the earlier period has to be gleaned from Typika, patristic writings, and medieval historians. The evidence suggests that hymns and psalms were originally syllabic or near-syllabic in style, stemming as they did from congregational recitatives. Later, as monasticism developed—first in Palestine and then in Constantinople—and with rites and ceremonies taking place in magnificent new edifices (such as Hagia Sophia in Constantinople), trained choirs of singers, each with its own leader (the protopsaltes for the right choir, the lampadarios for the left—offices common in Byz. churches but unknown at Hagia Sophia before 1453 [see Singer]) and soloist (the domestikos or kanonarch), assumed full musical responsibilities. Consequently, after ca.850 the tendency arose to elaborate and ornament the music, leading to a radically new melismatic and ultimately kalophonic style (see Teretismata).

Byz. musical notation passed through several stages of evolution before the fully diastematic system (which indicated step by step the direction of the melody) emerged ca.1175. Earlier forms were memory aids, cueing the singer along a familiar melodic path; they remain undeciphered today. The mature, diastematic Round Notation, readily convertible into the modern system, represented a highly ingenious complex of interrelationships among a handful of symbols that enabled composers to convey a great variety of rhythmical, melodic, and dynamic nuances.

The Orthoechos provided the compositional framework for Byz. psalmody and hymnody. For all practical purposes, this system of modal organization was the same for Latins, Greeks, and Slavs in the Middle Ages. Each mode is characterized by a deployment of a restricted set of melodic formulas peculiar to that mode, which constitutes the substance of the hymn. While these formulas may be arranged in many different combinations and variations, most of the phrases of any given chant are nevertheless reducible to one or another of this small number of melodic fragments.

Psalmody and hymnody are represented in Byz. MSS by both florid and syllabic settings. Byz. syllabic psalm-tones display extremely primitive features, such as the rigidly organized four-element cadence, which is mechanically applied to the last four syllables of the verse, regardless of accent or quantity. The florid psalm verses, such as those for the Eucharist, which first appeared in 12th- and 13th-C. choir books, demonstrate a simple uniformity in motifs that transcends modal ordering and undoubtedly reflects early congregational recitative.

A special position, however, was accorded to nonbiblical hymnody, within which the generic term Troparion came to signify a monostrophic stanza, or one of a series of stanzas, in poetic prose of irregular length and accentuation. The development of larger forms began in the 5th C. with the rise of the kontakion, which found its apotheosis in the work of Romano in the Melode. In the second half of the 7th C., the kontakion was supplanted by a new type of hymn, the kanon, initiated by Andrew of Crete and developed by John of Damascus and Kosmas the Hymnographer.

Another kind of hymn, important both for its numbers and for the variety of its liturgical uses, was the sticheron. Proper stichera, accompanying both the fixed psalms at the beginning and end of vespers and the psalmody of Lauds in the orthros, exist for all the feasts of the year, the Sundays and weekdays of Lent, and the recurrent cycle of eight weeks in the order of the modes, which begins with Easter. Their melodies, preserved in the Sticherarion, are moderately elaborated and varied, contrasting with the more rigidly syllabic tradition of the Heirmologion. Nevertheless, all forms and styles of Byz. music, as exhibited in the early sources, are strongly formulaic in design. Only in the final period of its development did composers abandon this procedure in favor of the highly ornate kalophonic style. The most celebrated of them, one entirely representative of the new school, was John Kououzeles, who organized the new chants into larger anthologies called Akolouthiai (see Papa-
This final phase of Byz. musical activity provided the main thrust that was to survive throughout the Ottoman period and still dominates current Orthodox musical practice.

There exist a few Byz. theoretical documents on music, which are usually philosophical, frequently speculative, and rarely concerned with specific problems. The more conservative ones simply reproduce late classical statements on harmony and symmetry from the writings of Plato, Aristoxenos, and Ptolemy, without acknowledging contemporary practice; such are the Quadrivium of George Pachymeres and the three-volume Harmonika transmitted under the name of Manuel Bryennios. Other treatises are simply catalogs of neumata and melodic formulas. The oldest of these, found in the 10th-C. MS Athos, Lavra T.67, lists rudiments of the tonal and modal systems together with the names and graphic representations of early musical signs. Of the discursive statements, the earliest, known as the Hagiotopolites (12th C.), contains observations about the modes and the intonation formulas. It is followed by a Papadike, the dialogue attributed to John of Damascus that begins Ego men o paides, the treatises of John Laskaris, Manuel Chrysaphes, and Gabriel Hieromonachos.

**MUSICAL INSTRUMENTS (μοσικά ὀργάνα).** The number, kind, and function of musical instruments in Byz. is not fully understood. No instrumental music survives and the nature of accompaniment for songs—whether it followed the vocal line faithfully or indulged in heterophonic embroidery—is unknown. Written texts give lists of names, rather than descriptions of musical instruments, and it is difficult to establish the relation between the terms and the pictorial evidence preserved in MSS, ivories, and metalwork. John Chrysostom (PG 55:532f; 62:112.12–14) mentions various terms, all known from ancient sources: kymbalon (cymbal), aulos (flute), tympanon (drum), salpinx (trumpet), psalterion (harp), kithara (harp), syrinx (pipe). In Constantine VII Porphyrogennetos (De cer. 379.7, 381.11) are cited cheirôkymbalon (cymbal) and pandoura (lute); in a 14th-C. ceremonial book (pseudo-Kod. 172.9–20), anakara (cymbals) as well as horns and trumpets made of silver; Libystratos and Rhodamne (ed. J. Lambert, p.315,3168) adds seistron (metallic rattle) and baukion (trumpet). The distinction between some of these terms is unclear.

Pictorial data are provided mostly by mythological scenes (flutes, harps, cymbals, etc.); by the illustrations of the Psalms (e.g., Cutler, Aristocratic Psalters 39, 49, 73f), in which David is often represented playing a harp or a lyre; and esp. (if it is indeed of Byz. origin) by the 12th-C. silver vase from Berezovo (V.P. Darkevič, Svetsko iskusstvo Vizanti [Moscow 1975] 163–77), the medallions of which show musicians playing stringed instruments (both plucked and bowed), flutes, trumpets, cymbals, and a drum.

Musical instruments played little if any role in liturgy, but occupied an important place in palace ceremonial, noble entertainment (as described in Digenes Akritas), and as accompaniment to dances. At wedding celebrations, such as those described in the dialogue Anacharsis (260:65–67) and by Choniates (Nich. Chon. 494.7–8), string and wind instruments (including the kithara, pektides [angle harps], lyre, and aulos) and cymbals were played. The description in a 14th-C. ceremonial book of the Christmas Eve procession in Constantinople reveals the existence of a small imperial band (pseudo-Kod. 197.12–19). The musicians (paigniotai), who stood behind the clergy and were separated from the crowd by standard-bearers, consisted of trumpeters (salpinktai), horn players (bykinatores), cymbal players (anakaristai), and pipers (souroustitai). According to pseudo-Kodinos, musicians using "smaller instruments" were not part of the band. Horns, trumpets, and cymbals—played singly or in concert—were used in battles (Strat.Maurit. 2.17; Nich. Chon. 381.31–32), as were tympana (Leo Diacon. 24.17, 36.6).

Both the repertory and construction technique of Byz. musical instruments were heavily based on ancient tradition, although some innovations were made under Eastern and/or Western influence, such as use of drums and bowed string instruments. One of the most imposing instruments was the organ.

Actual examples of Byz. musical instruments are extremely rare. In Corinth the wooden body of a lyre (10th or 11th C.) has been discovered; the bowl would have been covered by a sound-
board (of leather or wood), on which strings would be fastened; neither has survived (Ph. Anogeianakes, DCHAE 3 3 1962/3 115–25).

-D.E.C., A.K.

MUSICIANS (μουσικοί). While vocal music and singers were sponsored and encouraged in ecclesiastical circles, instrumental musicians in Byz. were accorded little recognition. Indeed, most references to instrumental music-making in the early period condemn the practice. Rhetorical outbursts by church fathers, such as John Chrysostom ("Where aulos players are, there Christ is not," PG 62:389,52–53), were strengthened by strict ecclesiastical legislation. Legal tradition denied baptism to aulos and kithara players unless they renounced their trade (APOSTOLIC CONSTITUTIONS 8:2,9; Epiphanius of Salamis, PG 42:832A), and a 4th-C. Alexandrian law set excommunication as the penalty for a cantor who learned to play the kithara. This vehemence against instrumental musicians is primarily explained by the association of musical instruments with sexual license, luxurious banquets, and the immorality of the theater (J. McKinnon, Current Musicology 1 [1965] 69–82). Nothing more is known about the social status of musicians and no names of players have been preserved. Descriptions of musical performances at receptions and processions in the writings of Constantine VII and pseudo-Kodinos (see MUSICAL INSTRUMENTS) suggest that, in later periods, musicians were given certain official duties, though nothing about their training or the scope of their activities is known. In the dialogue ANACHARSIS (218–25), the art of instrumental performance is considered a feature of noble breeding. Finally, while the folk music tradition must have been vigorous, no source describes the musician’s role in it. The most interesting representations of Byz. musicians are on the medallions of the silver vase from Berezovo (in the Urals), now in the Hermitage (Inv. ω 3) (V.P. Darkevič, Svetskoe iskusstvo Vizantii [Moscow 1975] nos.117–33).

Lit. Wellesz, Music 91–97. -D.E.C.

MUTANABBĪ, AL-, more fully Abū-al-Ṭayyib Ahmad ibn al-Ḥusayn al-Mutanabbī, Arab poet and warrior; born Kūfa 915, died Iraq 965. He joined the entourage of SAYF AL-DawlA at Aleppo from 948 to 957, and accompanied the Ḥamdānīd ruler on most expeditions, including the almost annual campaigns into Byz. territory between 950 and 957. Thereafter, court intrigue forced him to leave Aleppo, and his unfulfilled ambition to become governor of some province led him to the courts of Egypt and Persia. He was killed by marauders on his way to Baghdad.

His odes on Sayf al-DawlA’s war against Byz., besides their artistry, are valuable historical documents. Of his almost 300 known poems, about 20, some fairly long, are devoted to Sayf’s Byz. campaigns, and two or three refer to Byz. envoys or otherwise bear on Byz.-Arab relations. Though containing poetic hyperbole, his poems, with historical notes by various commentators, provide valuable and often specific details of campaigns and their sequence of events, itineraries, toponymy, names of Byz. personages, actual battles, and the reactions of combatants, as with the battle of AdatA (al-Ḥadath), 30 Oct. 954. In addition, he often throws light on the strength and weakness of Ḥamdānī war efforts and public relations, and supplements the reports of historians and other literary sources on the Byz.-Arab encounter.

-A.Sh.

MUṬΑṢIM (‘Abṣūrāk in the story of Forty-two Martyrs of Amorion), caliph of the ʿABBĀSIDs (833–42); born between 795 and 797, died 5 Jan. 842. He was the son of Hārūn al-Rashīd. Under his brother MAʿMūN, Muṭaṣim campaigned against Byz. in Asia Minor. After his accession in Aug. 833 he defeated the Khurramites, who fled to Theophilos with Theophobos. He sought peace with Byz., but Theophilos sacked Zapetra (reportedly Hārūn’s birthplace) in 837. In 838 Muṭaṣim led a great expedition into Asia Minor that defeated Theophilos at Dazimon on 22 July,
seized Ankyra, and on 12 Aug. captured Amorion (the birthplace of Theophilus's father, Michael II). Many captives were sold as slaves, but a group of murdered officers became celebrated in hagiography as the Forty-two Martyrs of Amorion.

- P.A.H.

MUTILATION. Like all bodily punishments, mutilation was economical to execute and in addition stigmatized the person punished without actually violating taboos against killing. It was so commonly used in late Roman criminal justice—which left the choice of penalty largely to the appropriate officials—that Justinian I was compelled to forbid its abuse (Nov. Just. 134.13), without entirely renouncing it. It became a crucial part of the penal system of the Ecloga: in cases of major theft, counterfeiting, and the infliction of severe bodily harm, the culprit's hand was cut off; in cases of perjury, the tongue. For sacrilege the punishment was blinding; for bestiality, castration; for adultery, cutting off the nose. Many of these punishments more or less reflected the nature of the offense. In the 7th C. mutilation was widely used in political struggles to prevent a possible usurper from seizing the throne; the case of Justinian II shows, however, that this preventive measure was not always successful. In the case of saints, mutilation of the body, whether voluntary or inflicted by persecutors, might actually have served to sanctify it. In certain cases the wealthy were fined for crimes for which the poor were given corporal punishment. Corporal punishment was also applied as an administrative measure—for refusal to pay taxes or violation of trade regulations.

Mutilation is in obvious discord with Christian morality. Some scholars, however, considered its application as a humanitarian act allegedly substituting for the capital punishment of pagan Roman law.

- A.K.

MYLASA AND MELANOUNDION (Μυλά(σ)σα, Μελανουδίου), theme of southwestern Asia Minor first attested in 1143 as the theme of Mylasa. Under Manuel I, when it replaced the parts of Kibyrrhaiontai still under Byz. control, it received the name Mylasa and Melanoudion. It also comprised the region of Miletos. The theme, commanded by a doux, is frequently mentioned in the documents of the Lembotissa monasterly; it survived until Byz. rule in the area ended in the late 13th C. In 1259, Theodore Kalothetos was doux of Mylasa as well as Thrakesion (Ahrweiler, infra 146f). The theme was well defended; it preserves the remains of numerous Byz. fortresses (W. Müller-Wiener, IstMitt 11 [1961] 8–24), notable among them the walls of Melanoudion, ancient Heracleia ad Latnum, which date to the 13th C., and the fortified monasteries of Latros. The town of Mylasa, now Milas, contains no significant Byz. remains.

- C.F.

MYRA (Μύρα, now Demre), metropolis of Lycia. Myra flourished in late antiquity: walls were constructed under Marcian (AnthGr, bk. 15, no. 2), and the whole city was rebuilt by Justinian I after the earthquake of 529. Although the civic monuments of Myra are poorly known, remains of its port, Andriake, indicate substantial growth in the 6th C. Myra was subject to frequent devastations by Arab raids during the 7th–8th C. Building activity in city and port indicate recovery in the 11th C., interrupted by Turkish and Latin attacks, then yielding to desolation and Turkish conquest in the late 12th C. Myra's major monument, the Church of St. Nicholas of Myra, was a cross-domed basilica built over the ruins of a Justinianic church, perhaps in the 8th C. During the 11th–12th C., when it was an important pilgrimage center, it was redecorated and enlarged. The fortress on the acropolis shows two periods, probably of the 7th–8th and 12th C. The region of Myra contains numerous stone churches (notably the monastery of Holy Sion), chapels, and entire villages that indicate considerable prosperity in the 6th C. and general decline or abandonment thereafter.

MYREIAION, MONASTERY OF (Bodrum Camii), located west of the Forum Tauri in Constan-
tinople (see Constantinople. Monuments of). The origins of Myrelaion (Μυρέλαιον), allegedly named after an icon of the Virgin that exuded myrrh, are obscure. Before 920 it came into the possession of Romanos I Lekapenos, who either built or acquired a mansion constructed over the remains of a vast 5th-C. rotunda (R. Naumann, IstMitt 16 [1966] 199–216). Romanos added a church (probably between 920 and 922) and converted the complex into a nursery; he himself and several members of his family were buried there, contrary to the practice of previous emperors, who were buried at the Church of the Holy Apostles. Endowed with estates in Asia Minor and Greece, the Myrelaion convent housed several illustrious inmates, including the wife and daughter of Isaac I. By 1315 it had evidently been converted into a male monastery (Hunger-Kresten, PatrKP, no.10.106–07). It is last mentioned in Byz. sources in 1400.

Constructed entirely of brick, the Myrelaion church is a cross-in-square structure built over a lower story as to bring it to the same level as the mansion. In the Palaiologan period the substructure of the church was used for burials. Myrelaion was transformed into a mosque, probably under Bayezid II (1481–1512), and took its name, Bodrum Camii (“cellar mosque”), from the substructure of the church. Badly restored in 1964–65, Myrelaion was recently refurbished for use as a mosque.

MYREPSOS. See Perfumes and Unguents.

MYREPSOS, NICHOLAS, probably the author of a late Byz. compilation of pharmaceutical recipes, collected into a work called the Dynameron and attributed to “Nicholas.” Nicholas Myrepos (Μυρηπός, lit. “preparer of unguents”) has been traditionally identified with the Nicholas who was chief physician (aktouarios) at the court of John III Vatatzes in 1241 (Akrop. 63.13–15). Modeled after the much more modest Antidotarium of Nicholas of Salerno (just under 150 recipes), the Dynameron has 2,656 recipes, arranged in 48 classes based on pharmaceutical properties; of particular interest are the 87 kollyria, “eye salves” (E. Savage-Smith, DOP 38 [1984] 1851, 51 enemas, 98 ointments, 12 recipes for narcotics, and 15 recipes for powders and salves to repel insects. As in the Properties of Foods by Symeon Seth, one observes Arabic influence in the Dynameron: musk, camphor, and senna are mentioned frequently. This text became the major source of Byz. pharmacy and pharmacology available in western Europe; Nicholas of Reggio translated it into Latin (14th C.). A copy of the Dynameron, together with botanical and astronomical texts, was completed in Aug. 1339 by the priest Kosmas Kamelos, exarch of the metropolitan of Athens, for the physician Demetrius Chloras (Paris, B.N. gr. 2243). Its miniatures include a doctor holding a vial, his patient on crutches, a pharmacist and an assistant mixing drugs (Spatharakis, Corpus, no.251, fig.451).

MYRIOBIBLION. See Bibliotheca.

MYRIOKEPHALON (Μυριοκέφαλον), site in Phrygia east of Choma that gave its name to a battle of 17 Sept. 1176 between Byz. and the Seljuks. After strengthening the frontier by re-fortifying Dorylaion and Soublaion (see Choma), Manuel I Komnenos decided to break the power of Kilic Arslan I. He set out with a huge army in the summer of 1176, marching past Laodikeia, Chonai, Choma, and the ruined fortress of Myriokephalon. The sultan, whose offer of peace had been rejected, occupied the long and narrow pass of Tzibritze on the route of the Byz. army. Meanwhile he sent irregular troops to harass the Byz. forces and scorched the earth before them. When Manuel and the army entered the pass on 17 Sept., they were overwhelmed by the Turks, who descended from the heights and inflicted such catastrophic losses that Manuel contemplated abandoning the army in secret flight. Since Turkish losses were also considerable, the sultan made peace, demanding only that Manuel’s new fortifications be dismantled. The battle was de-
scribed in detail by Niketas Choniates (Nik.Chon. 178–191), who blamed the emperor for the defeat, and by Manuel himself in a letter to the English king Henry II. Manuel's account tried to soften the effect of the disaster, which had shaken the West and allowed Frederick Barbarossa to assume an insolent position toward the weak "king of the Greeks."

In the last years of his reign, however, Manuel I managed to improve the situation: he did not dismantle Dorylaion (as he had promised after the battle), and he successfully repelled Turkish attacks such as that against the city of Klaudioupolis (P. Wirth, BZ 50 [1957] 68–73). Nonetheless, the battle had decisive effects: Byz. plans to gain supremacy over the Seljuks were abandoned; the frontier was seriously weakened (Dorylaion and Kotyaion, its major bastions, were in Turkish hands by 1182); and the whole area was exposed to raids and nomadic occupations that made it Turkish by the end of the century. The battle is incorrectly named, for it was fought not at Myriokephalon but in the pass of Tzibritze, whose location has been established north of Lake Eğridir in Pisidia.

**MYRROPHOROI** (μυροφόροι, lit. "unguent-bearers"), a term sometimes applied to the half-dozen women who placed themselves at the service of Christ (cf. Synax.CP 789.7–18) but more usually confined to the women who brought spices to Christ's tomb on Easter morning. According to Matthew 28:1–9, Mary Magdalene and Mary, the mother of James, came to look at Jesus' grave. The resurrected Christ met them and greeted them saying *Chairete,* and they clasped his feet, falling prostrate before him. In art, the Myrrophoroi are depicted most often at the empty tomb. In Early Christian art, the tomb is usually shown as a round structure recalling the rotunda of the Anastasis at the Holy Sepulchre, and there may be two women (Mt 28:1–7; Sancta Sanctorum Reliquary) or three (Mk 16:1–10; Baptistry at Dura Europos). Thereafter, except in rare instances illustrating John 20:11–2, there are but two. The round tomb is replaced after the 8th C. by a cave: the angel sits on a stony block before it, often with soldiers at his feet and grave clothes visible in the entryway, while the women huddle at the left. Sometimes one woman turns to flee, suggesting the vivid emotions found in the description by Nicholas Mesarites of a mosaic in the Holy Apostles in Constantinople. The Myrrophoroi appear in certain other scenes: sitting mourning on the ground beside Christ's sarcophagus, prostrate before the risen Christ, or—very rarely—in the scene of Christ's encounter with Mary Magdalene in the garden. (See also **Appearances of Christ after the Passion.**)

**MYRTAITES** (μυρταίτης), an enigmatic office or title mentioned in the 14th-C. ceremonial book of pseudo-Kodinos: the myrtaïtes occupied a low rank on the hierarchical ladder, between the sebastos and prokathemenoï of towns, whereas the megas myrtaïtes followed the domestikos of the Western themes; their functions are not defined. The myrtaïtes is rarely mentioned in other sources: the myrtaïtes George Doukopoulos probably signed an act of donation of 1311 (Doeicheir., p.117); in 1328 Maria, wife of the myrtaïtes George Prokopios, concluded an agreement with the monks of Hilandar (Chil., no.117); Mazaris twice refers to wise statements of a certain myrtaïtes Andronikos (ed. A. Smithies [1975] pp. 10.14, 26.3) who died before 1414.

**MYSTAGOGIA.** See Commentaries.

**MYSTERION** (μυστηριον), term used to designate any of a number of secret cults of Greco-Roman antiquity, such as the Eleusinian mysteries, Mithraism, and veneration of Isis. Enormously varied, *mysteria* included three major features: worship of the divine Mother Earth (as Demeter at Eleusis), the tendency to replace rigid dogma with the "religion of sentiment," and the search for salvation. Even though rooted in primitive and oriental cults, later mystery religions formed an atmosphere in which early Christianity developed. The notable similarities between Christianity and the mysteries were early recognized and indignantly rejected by early Christian authors: Tertullian accused *mysteria* of imitating Christianity. A more
sophisticated position was taken by CLEMENT OF ALEXANDRIA, who summoned believers to join the new mysteries of the Logos. Despite the difference between pagan secret cults and the Christian mysteries of the Trinity, Incarnation, and Salvation, the terminology of mysteries, as used by the church fathers, esp. JOHN CHRYSOSTOM and pseudo-DIONYSIOS THE AREOPAGITE, served to describe the ineffability of God and the salutary interventions of God in history. This terminology was applied to LITURGY ("frightful mystery"), SACRAMENTS, and revelation, and permeated Christian symbolism with its images of the mysteries of the cross (esp. exalted in the apocryphal Acts of the apostle Andrew), of BAPTISM, of the symbolic presentation of Christ as HELIOS and the Church as Selene, the moon.

—A.K.

MYSTICISM in Byz. is a notion of immediate experience or intuitive knowledge of the divine that surpasses rational, logical perception and knowledge as well as “normal” religious consciousness. Apart from the title Mystical Theology and formulas derived therefrom in pseudo-DIONYSIOS THE AРЕOPAGITE, the term mystikos, in contrast to the Western tradition, is not used as a technical term in the East. In ORIGEN (In Johannem 1.30.29), the Cappadocians, and later church fathers, however, it occurs in the context of apophatic theology, and its attainment is seen as an intellectual or “ecstatic” act. The reference point of the Byz. mystic was intellectual “vision” attained through pure prayer by mature individuals (monachos, monotropos) who have surpassed the two stages of practice and contemplation (theoria physique). This is exemplified in EВAGRIOS PONTIKOS whose influence on monastic spirituality, particularly in the tradition of Sinai, persisted in spite of his condemnation as an Origenist and his intellectualism, which contrasted with the Areopagite’s “mystical theology,” involving ecstatic union granted through grace. These facts are firmly rooted in the synthesis of MAXIMOS THE CONFESSOR, which integrated the Evagrian “movement out of the world and out of the self” (ekdemia) with the ecstatic experience of the Areopagite.

In the 11th C., with SYMEON THE THEOLOGIAN, a new element comes to the fore in the history of Byz. mysticism. Following DIADOCHOS OF PHOTIKE and JOHN KLIMAX, Symeon developed the doctrine that divine activity can be spiritually and sensually perceived; without experience and feeling, the mental and spiritual life dies. What had been casually treated by his predecessors became for Symeon the basis of his spirituality. This spirituality prevailed on Athos in the 14th C. owing to the influence of GREGORY SIANITES and led in HESYCHASM to the belief that “vision” or “mysticism” can be learned by everyone; it also resulted (in contrast to tradition) in a high esteem for the visionary elements, esp. of certain experiences of light, attainable through concentration and breathing techniques. From the time of Symeon onward, particularly in texts on the hesychastic “method of prayer,” meditation receives scant attention, but in the sacramental mysticism of Nicholas KABASILAS it finds its appropriate place once again.

—K.-H.U.

MYSTIKOS (μυστικός, lit. “secret, private”), high-ranking functionary. The office is known from the second half of the 9th C., when Leo CHIROSPHAKTES was mystikos of Basil I (G. Koliá, *Léon Chirosphatés* [Athens 1939] 127.96). Dölger (*Diplomatik 64*) considered the mystikos as a secretary for the emperor’s private correspondence, whereas Oikoñomides (*Listes 324*) viewed the mystikos as a judicial official; in any case, the mystikos was very close to the emperor and could also carry out the duties of protasekretis, judge, and chief of the imperial kórtos. Known mystikoi include several well-educated people such as the future patriarch NICHOLAS I Mystikos and Theodore DAPHNOPATES. The office existed until the 15th C.

The term served as a basis for the formation of the names of additional offices: in 1057 the protomystikos John Xeros was assigned to preside over a legal case (*Pantel.*, no.5.8); the terms mystographos
and mystolektai are often found on seals. The mystographos, who follows the mystikos in the 10th-C. taktikon of Escurial, may have been the assistant of the mystikos; he also fulfilled notarial and judicial duties. First mentioned in an inscription of 911/12 (Grégoire, Inscriptions, no. 302), this office seems to have disappeared after 1100. Among mystographoi there were also scholars such as John Mauroposium. Mystolektai, known primarily from seals of the 11th–12th C., served also as courtiers (primikierios and koitonites), notaries, and judges.

MYTILENE. See Lesbos.

MYTILENE TREASURE, dated to the 7th C. and found in 1951 at Krategos, on the island of Lesbos, 8 km south of Mytilene. Now in the Byzantine Museum, Athens, the treasure is an example of domestic silver plate made up as a set, unlike the First and Second Cyprus Treasures and the Lampsakos Treasure, which were formed over several generations of owners. The Mytilene Treasure is composed of 17 silver objects (four plates, two trullae, a ewer, a lampstand, a lamp, eight spoons), 21 pieces of gold jewelry, a bronze stamp with two monograms, 32 gold coins of Phokas and Herakleios, and bronze coins of 565–610. Except for the spoons, the vessels all bear silver stamps of 605–630. Although occasionally described as liturgical vessels, the large naked Aphrodite on one trulla handle is sufficient to indicate a profane use for the whole treasure, given the homogeneity of craftsmanship and date.

—M.M.M.
NABLUS. See Neapolis.

NAG HAMMADI, site near the Nile north of Luxor where a collection of Coptic MSS produced in the 4th C. was discovered in 1945. The MSS are now in the Coptic Museum in Cairo. The collection consists of 52 tractates in 12 papyrus codices plus part of a thirteenth. The book covers were stiffened with papyrus letters and documents, some dated, and these indicate that the collection was buried ca. 400. All tractates were translated from Greek into Coptic. Gnostic thought, Hermetic and popular philosophy, and orthodox Christian devotion are represented in the collection.

The collection constitutes the most important single source for the study of Gnosticism without the filter of Christian heresiologists. The burial of the MSS close to an important monastic center (Pbow, the monastery of Pachomios) may also illuminate the mixture of orthodox and heterodox belief in early monasticism. Wisse (infra) has argued that the common thread in the tractates is a belief in asceticism as the highest expression of religious faith.

ED. Nag Hammadi Studies (Leiden 1971—). The Nag Hammadi Library in English 5 (San Francisco—Leiden 1988).

NAGYSZENTMIKLÓS (now Sinnicolau Mare, Rumania, close to the Tisza and Maros rivers), a place where in 1799 a treasure of 23 gold vessels (jugs, bowls, etc.) ornamented with reliefs was found; the objects are now in the Kunsthistorisches Museum, Vienna. Both the original provenance (Avar, Bulgarian, Hungarian?) and the date (700–900?: Z. Kadar, Folia Archaeologica 13 [1961] 117–28) of this domestic plate are debated; the pieces probably came from different workshops. Traces of the Greek world are few: scenes probably from Greek mythology (e.g., Zeus carrying off Ganymede) on two jugs; Christian symbols (the cross) on several bowls; Greek inscriptions; and a Turkic inscription in Greek letters. Byz. techniques such as granulation, filigree, and niello are absent.

NAISSUS (Náissos, Serb. Niš), Roman city on the river Nišava, near modern Niš in southeastern Yugoslavia. In describing Naissus, Priskos of Panion considered it a polis of Illyria, while under Justinian I the city belonged to Dacia mediterranea. Constantine I often stayed in Naissus and adorned it with many buildings. In the mid-4th C. it was an important center in the imperial power struggle: in 350 the magister peditum Vetriciano was proclaimed emperor in Naissus, and in 361 Julian briefly stopped there before his march on Constantinople. In 441 the Huns destroyed the city. Justinian I allegedly restored Naissus, but it was seized and ravaged by the Avars. According to numismatic evidence, the city fell to the Avars ca. 613/14 (V. Popović, CRAI [1980] 248). At Jagodina mala, near Niš, a necropolis of the 4th–5th C., containing hundreds of tombs with sarcophagi and inscriptions, and a basilica have been found.

In the medieval period, the city is called Nais(s)os or Nisos (e.g., in Niketas Choniates). In donations of Basil II, it is termed a Bulgarian bishopric. In 1072 Constantine Bodin made the city the center of his anti-Byz. struggle. Located on important routes leading to Hungary and to Serbia, Naissus was “rich and populous” in the 12th C. (Kinn.
NAJRÂN, major caravan city in western Arabia that mediated trade between South Arabia and the Mediterranean. The Christianization of Najrân in the 5th C. drew it spiritually into the orbit of Byz., and Monophysite Christianity finally prevailed in the city; a Monophysite bishop is attested in the early 6th C. Around 520 the Himyarite king Yusuf persecuted the city, but a Byz.-Axumite military expedition avenged ARETHAS and the other martyrs of Najrân and made South Arabia a Christian country for some 50 years. The city's martyrion was an important place of pilgrimage. The rise of Islam signaled the decline of Najrân. Around 630 a deputation of Najrânites came to Muhammad at Medina and concluded a treaty, which left them free to practice their Christianity but made them pay tribute. Later, the caliph 'Umar ordered the Najrânites to evacuate their city; most of them settled in Syria and Iraq.

NAKOLEIA (Νακόλεια, mod. Seyit Gazi), an ancient and medieval city in the highlands of Phrygia. The river Parthenios (mod. Seyit Su) made the area fertile, and it is plausible that in the 3rd C. there were imperial estates nearby (C.H.E. Hespels, The Highlands of Phrygia, vol. 1 [Princeton, N.J., 1971] 185). The city played an important political role in the 4th C.: in 366 Valens defeated the usurper PROKOPIOS at Nakoleia and forced him to take refuge in the woods (the area was later deforested); in 399 Nakoleia was the center of the revolt of TRIBIGILD. In 782 the kastron of Nakoleia was temporarily seized by the Arabs (Theoph. 456.5–22).

Constantine, bishop of Nakoleia, was one of the initiators of Iconoclasm in the reign of Leo III. Soon thereafter, Nakoleia was evidently elevated to the rank of archbishopric—it has this status in the notitia of Nicholas I Mystikos (Notitiae CP, no.7.82). A metropolitan of Nakoleia is listed among the participants in the council of 1066 (RegPatr, fasc. 3, no.896) but is in last place among the metropolitans. As a metropolis without suffrags, Nakoleia existed through the 14th C. (Notitiae CP, no.19.86).

NAMAAN (Namaan, Ar. al-Nu'mân), 6th-C. Ghassânid king, the son and successor of Alamundar; not to be confused with the last Lakhmid king, al-Nu'mân (580–602). In 582, after the exile of Alamundar, four of his sons, the eldest of whom was Namaan, revolted and ravaged imperial territory. Emp. Maurice attempted to install a brother of Alamundar in the phylarchate, but the candidate died almost immediately. Maurice tried to persuade Namaan to renounce Monophysitism and resume the war against the Persians, offering to recall his father from exile in return. Upon Namaan's refusal to change his doctrinal position, Maurice ordered his arrest and had him join his father in Sicilian exile. When news of Namaan's misfortune reached the Arab foederati, they divided into 15 groups, each under
a phylarch, and some even joined the Persians. Thus, religious sectarianism finally brought about the downfall of the Ghasṣānids and destroyed the effectiveness of the defense system in the East.

LIT. Gubert, Byz. avant l’Islam 236–59. —I.A.Sh.

NAMES, FAMILY. See Prosopography.

NAMES, PERSONAL. A rough division can be made into three categories: family names (patronyms), given or baptismal names, and monastic names. In the late Roman period the ancient custom of accepting a kinship name (nomen gentile), such as Aelius or Flavius, survived. However, this tradition was sharply criticized by the Christian writers: John Chrysostom (Sur la vaine gloire et l’éducation des enfants, ed. A.M. Malingrey [Paris 1972] 146.648–53) urged Christians to give their children the names of saints, rather than of ancestors. I. Kajanto (in L’onomastique latine [Paris 1977] 419–28) has demonstrated that after the 4th C. the nomen gentile disappeared from inscriptions (with the exception of some areas in Africa). Family names are absent in Theophanes the Confessor and are exceptionally rare on seals of the 8th–10th C. (A. Kazhdan, ZRVI 11 [1968] 521). A few names of aristocratic lineages (e.g., Skleros, Doukas) are known from the 9th C., but as a typical phenomenon they appear only after 1000. The inheritance of family names was never strictly established and children could bear not only their mother’s patronymic, but also that of their maternal grandmother; in some noble families brothers might each bear a different family name.

From the period of the 11th–12th C. we know primarily the family names of the ruling lineages. They can be divided into two groups: the military aristocracy and the civil nobility. The family name of military aristocrats often originated from relatively obscure toponyms (villages, fortresses) in Asia Minor and Syria (Botanantes, Arbanenos, Dalassenos, Dokeianos, etc.), whereas among the civil nobility we encounter names derived from trade professions (Pantechines), quarters of Constantinople (Akropolites, Makrembolites), provincial towns (Choniates), and monasteries (Manouelites). Also typical of this group are names emphasizing positive qualities, such as Aoinos (“drinking no wine”), Kalothes (“of good character”), or Eirenikos (“peaceful”), as if the nobility of second rank tried to compensate itself. Peasant names are preserved mostly in Praktika of the 14th C. from Macedonia (A. Laïou, BMGS 1 [1975] 71–95). Sometimes commoners assumed pompous names, such as Komnenos or Synadenos, probably reflecting their (former?) links of dependency. Usually, however, their names differed from those of noble lineages: some have a Slavic or Vlach origin, some are derived from crafts (Chalkeus, “smith”; Raptes, “tailor”; etc.).

It is not always possible to draw a line between the given and family name, since some given names (both foreign and native) were transformed into family names (e.g., Roger, Rogerios). In the earlier period the distinction between the given name and the nomen gentile appeared blurred. In any case, in the 4th C. old names were frequent—among the most popular names in Ambianus Marcellinus are Claudius, Florentius, Severus, Ioulianus, Marcellus, Maurus, Maximus, and Sallustius; only one name, Eusebios, can be interpreted as Christian. The situation changed by the time of Prokopios of Caesarea, in whom the most frequent names are John, Theodore, Paul, Theodosios, Peter, Leontios, and Alexander. In the late Roman period, given names were primarily of biblical origin or indicated piety or other virtues—esp. Eusebios, but also Akakios, Euphemia, or Theodore. In subsequent centuries, however, few biblical and “virtuous” names of the late Roman period remained popular; John and Theodore were the most striking exceptions, while Eusebios, Paul, and Peter lost their popularity. The names of other apostles (Luke, Andrew, Matthew, Thomas, etc.), were never frequently used.

On the other hand, the group of “imperial” names grew more and more fashionable: Basil and Leo—imperial by etymology—as well as Constantine and later Romanos, Alexios, and Manuel. The names George and Demetrios were probably used on a more “democratic” level; in any case, in vols. 2–3 of the acts of Laura (13th–15th C.) John, George, and Demetrios are the most frequent names. Among feminine names (the number of registered cases is much lower, and therefore conclusions even more difficult) Maria became the most popular, probably after the 9th C. The formation of new names contin-
ued—the feminine name KALE became fashionable in the late centuries; also several feminine names ending with the letter omega (Ioanno, Leonto, etc.) were introduced. Among masculine names, later formations such as Xenos, Peros, Stamates, Stanos, Panagioties, and Strabioanannes never became very popular.

Pachymeres (ed. Bekker 2:276f) describes a procedure for selecting the name for a newborn baby. Andronikos II already had several sons when a daughter was born to him. A group of experienced and pious women were delegated to choose the most appropriate and protective name. They set out the icons of the twelve apostles and lit candles of equal size in front of each. Since the candle of the apostle Simon burned longer than others, the girl was christened SIMONIS, a very rare name.

Certain families favored specific given names: the KONTOSTEFAVNOI liked Stephen, Alexios was esp. popular with the KONNENI, Michael with the BOURTZEES family, etc. It is unclear, however, whether the baptismal name was transferred from grandfather to grandson or from uncle to nephew, or whether there was no strict rule of transmission.

Assumption of the monastic habit was accompanied by the alteration of names. Usually the monastic name began with the same letter as the baptismal name, for example, Andronikos II Palaiologos assumed the monastic name Antony. However, this principle was not mandatory: Constantine PSELLOS became the monk Michael. It is quite plausible to suggest that many names were used almost exclusively as monks’ names, at least in the later centuries; thus in Lavra, vols. 1–3, Bartolomaioi, Gabriel, Gerasimos, Dionysios, Isaias, Theodoulos, Iakobos, Ioannikios, Leonios, Makarios, Meletios, Nikodemos, Niphon, and Sabas are names limited to monks. Some early emperors changed their names at the time of their coronation to a more imperial name (e.g., Artemios became ANASTASIOS II). It was also customary for foreign princesses to take new Greek and Orthodox names when they married Byz. emperors; examples are BERTHA OF SULZBACH and Adelaide of Brunswick (wife of Andronikos III), both of whom became IRENE.

NAOS (ναός, lit. “temple”), a church, strictly speaking the core of a Byz. church; it was commonly domed. From the symbolic point of view, the naos was the earthly embodiment of the Christian universe. Functionally, the naos was the area where the congregation assembled for services and where sermons were delivered from the AMBO. Though descended from the nave of 4th-through 6th-C. basilicas, the naos is distinguished from it by its form, function, symbolism, and CHURCH PROGRAM OF DECORATION. The naos is frequently preceded by a NARTHEX and separated from the BEMA by a TEMPLE SCREEN. It was often flanked by subsidiary spaces such as aisles, ambulatories, or LATERAL CHAPELS.

NAPELS (Ναύπαλαι), from antiquity a city and port in Campania. It apparently remained prosperous in the 4th and 5th C. (J. d’Arms, Romans on the Bay of Naples [Cambridge 1970] 116–64). Constantine I repaired both the forum and aqueduct; Valentinian III built a new system of fortifications in 440, when the city center evidently shifted to the northeast, away from the sea. In the mid-5th C. Bp. Notrianus built a bath bearing his name that was still standing in the 9th C. In the same period Bp. Vincentius added a dining hall (accurbitum) to the episcopal palace. On the other hand, imports to Naples from the Near East and Africa declined during the later 5th and 6th C.

Naples suffered during the Gothic war of Justinian I. In Nov. 536 Belisarios captured and sacked the city; subsequently it was besieged by Totila and surrendered in 543. After Narses’ victory over Teia (end of 552), Naples and its region came under the control of Constantineople. The city was threatened by the Lombards, who appeared at its walls in 581 but could not capture
it. According to Constantine VII Porphyrogenetos (De adm. imp. 27.49), Naples, as well as Gaeta and Amalfi, escaped occupation by the Lombards. During this period, control of some of the city’s secular buildings passed, at least temporarily, into the hands of the bishop: in 598 Pope Gregory I (ep.9.76) wrote to the bishop of Naples ordering him to return control of the city gates and aqueduct (which was still functioning) to secular officials.

In the 7th–8th C. the administration of Naples underwent a militarization, the indix Campaniae being replaced by the dux. Naples enjoyed autonomy without formally renouncing allegiance to Constantinople. The Neapolitan mint replaced the image of the emperor on its coins with that of the local saint Januarius, and in 763 the city acknowledged the ecclesiastical supremacy of Rome. The seals of 8th-C. archbishops of Naples have Latin, not Greek legends (Laurent, Corpus 5.1, nos. 918–19).

In 838 Naples concluded an alliance with the Arabs and assisted them in capturing Messina in 842/3. The Normans did not conquer Naples until 1139; the city played an important role in the Norman state, eventually becoming capital of the kingdom of Sicily.

Naples has several catacombs, the largest of which is S. Gennaro (St. Januarius) on Capodimonte, representing a characteristic series of 3rd- through 10th-C. frescoes and mosaics rivaling those of Rome. The baptistery of the old Cathedral of S. Restituta, S. Giovanni in Fonte, is decorated with important mosaics that most scholars attribute to Bp. Soter (362–408).

NARRATIO DE REBUS ARMENIAE. Originally composed in Armenian ca.700, this text is known in its entirety only in a Greek translation made before the 11th C., the Diegesis. It describes from a pro-Chalcedonian viewpoint the relations between the Armenian and Greek churches: the Council of Nicaea, the rejection of the Council of Chalcedon by the Council of Duin in 555, attempts at reunion in the 6th and 7th C., and their final failure. The 9th-C. Georgian catholikos Arsen used it in a work on the Armeno-Georgian schism. It was known to later Armenian writers, but the original (which does not represent the "official" Armenian position) has been lost.

ED. G. Garitte, La Narratio de rebus Armeniae (Louvain 1952).

NARRATIONES, more fully notationes animae utiles (διηγήσεως ψυχωφελείας), conventional designation of a subgenre of hagiographical literature. They originated in the eremitic milieu of the Egyptian desert, primarily among Coptic-speaking monks. J. Wortley (in Kathegtria. Essays Presented to Joan Hussey for her 80th Birthday [Camberley 1988] 313) estimates that 700–800 tales were produced between ca.375 and 650. Then there was a gap until the mid-10th C. when Paul of Monemvasia wrote a series of edifying stories. Some anonymous novelettes can also be included in this group, such as the story of Sergios, a demotes (member of a demos) in Alexandria (ed. J. Wortley, Les récits édifiants de Paul, évêque de Monemvasie [Paris 1987] 125–37). The last stories of this genre were produced ca.1000.

NARSAI OF EDESSA, or Nares, Nestorian theologian; born region of Ma‘alta, near Mosul, ca.399, died Nisibis? between 502 and 507. He was later called "the tongue of the Orient" and "the harp of the Holy Spirit." Narasi studied and taught in Edessa, but after the death of Ibas of Edessa (in 457) the climate in the city changed, and eventually (in 471?) he was driven out by hostility to his Nestorian views. He then took refuge in Nisibis, where he taught in the "academy" at the invitation of his bishop Barsauma. A Syriac catalog by 'Abdisho bar Berikā attributes to Narasi exegetic works on the Old Testament, a liturgical treatise, and 360 sermons in verses (memre). The authenticity of his exegetical and liturgical works is questionable, but of his memre more than 80 are known in Syriac (not all yet published). These sermons
treat biblical, liturgical, moral, and theological problems; one of them was devoted to great teachers—Diodoros of Tarsos, Theodore of Mopsuestia, and Nestorios. The theology of Narsai is not original, being based primarily on Theodore of Mopsuestia—his role was to compile and clarify the essence of Nestorian tenets. His work probably influenced Kosmas Indikopleustes and Nestorian writers of the 9th and 10th C.

—A.K., B.B.

**NARSESES** (*Narşē̂s*), general; born Persarmenia 480 (Agennius, ch.95, but see Stein, *Histoire* 2:356) or 490 (A. Lippold, *infra* 870), died Rome 574. After early life at court, Narses, a eunuch, participated in the suppression of the *Nika Revolt*. As imperial commissioner to Alexandria, he removed and exiled Gaianos and restored his rival Theodosios as patriarch in 535. Justinian I promoted him to praepositus sacri cubiculi in 538 and sent him to Italy with a large army to vanquish the Ostrogoths. Rivalries with Belisarius permitted the Ostrogoths to retake Milan and resulted in the recall of Narses to Constantinople. In 545 he campaigned against the *Aetnæ* in Thrace. Six years later he received supreme command of all Byz. forces in Italy. He brought to Italy another large army, which included Herulians he had recruited, fatally crushed Totila at Busta Gallorum in 552, and pursued the retreating Ostrogoths and their new king Teia south to Mons Lactarius, where he decisively defeated them and systematically reduced remaining Ostrogothic strongholds. In 553–54 Narses repulsed a Frankish-Alemannic invasion of Italy by the chieftains Leutharis and Butilinus. Narses occupied northern Italy, organized its defenses, and concluded operations against external foes by 562. In 566 he suppressed a Herulian rebellion. In 567 he was removed from military command, yet he probably remained in Italy until his death. Narses was diplomatically skillful, operationally and tactically efficient, and, in religious sympathies, probably Monophysite.

—W.E.K.

**NARSSES**, general; died Constantinople 605/6. After serving as commander at Constantina in 588, Narses was appointed by Emp. Maurice to lead the expedition to aid the restoration of Chosroes II in 591 after the deposition of the previous Byz. commander, Komentiōlos. Narses defeated the Persian rebel Bahram and remained *magister militum* of the East until Germanos replaced him in 600. Narses was military commander in Byz. Mesopotamia when Phokas overthrew Maurice. Narses revolted against Phokas in late 603, seized Edessa, and wrote to Chosroes II, encouraging him to open hostilities against Phokas. The relationship of Narses to the false Theodosios, son of Maurice, is uncertain. It appears that there was no unanimity of support for Narses at Edessa: Severos, bishop of Edessa, opposed this rebellion and was therefore killed by mob action. Narses' revolt seriously embarrassed Phokas, who first sent Germanos against both Narses and the Persian forces of Chosroes II. After an initial Persian victory over Germanos, who perished, Phokas sent the eunuch Leontios against Narses, but he failed to quell the rebellion; Persian successes, however, caused Narses to flee to Hierapolis. Phokas replaced Leontios with his nephew Domentziolos, *kouropalates* and *magister militum* of the East, who successfully negotiated Narses' surrender on sworn promise of personal safety. Domentziolos handed Narses over to Phokas, who had him disgraced in the Hippodrome and burned alive.

—W.E.K.

**NARESES.** See also NARKSES.

**NARTHEX** (*náρθη̂s*), a vestibulelike space preceding the *naos* in a Byz. church. Functionally and formally distinct, the interior walls of the narthex were commonly embellished with a special decorative program. This often emphasized the funerary function of these spaces. From the 4th through 6th C. the narthex was a large oblong
hall in which the preparation of the liturgical entrances into the naos took place. After the 9th C. the narthex became proportionally reduced in size, but the number of its functions, including baptism and commemoration of the dead, increased. In the 13th and 14th C. the narthex was often the site of church councils. Not every Byz. church had a narthex, but it appears to have been a common feature. Occasionally a narthex was added to an existing church; in a limited number of cases a second narthex was added in front of the first, as in monastic churches from the 11th C. on (e.g., the south church of the PANTOKRATOR monastery in Constantinople; the main church of the Nea Moni on Chios; the main church of Hosios Loukas). In such cases, in contrast to the exonarthex the inner narthex is referred to as the endonarthex or esonarthex.

---

**NATIVITY** (ἡ γέννησις), the birth of Jesus, or Christmas, 25 Dec., one of the 12 Byz. GREAT FEASTS, seen first in the West at the beginning of the 4th C. By the 4th–5th C. it was celebrated everywhere except by the Armenians. In the East Jesus' birth was originally commemorated at EPIPHANY, but the Nativity was celebrated in Antioch and environs by 376, in Constantinople by 380, and in Asia Minor by the end of the 4th C., though Palestine adopted it definitively only in the 6th C. (M. van Esbroeck, *AB* 86 [1968] 368–71).

The Nativity is one of the most splendid feasts of the church calendar. It is solemnized by the

**NASAR** (Νασάρ), *patrikios* and *droungarios* of the fleet under Basil I; his name was Basil according to the vita of Elias the Younger (p. 36.481f). In 880 (Vasiliev) or 879 (Guilland) the emperor sent Nasar with an enormous fleet to repel Arab ships pillaging in the KEPHALENTIA and Zakynthos region; Arab sources calculated his fleet at 140 battleships, whereas the vita of Elias puts the figure at 45. When many of his rowers deserted, Nasar was forced to halt at Methone; however, severe measures taken by Basil I restored discipline. Nasar attacked the enemy and won a night battle (probably along the western shore of Greece), and then moved to Sicily; he captured so many Muslim boats with precious merchandise that the price of olive oil in Constantinople fell sharply. Nasar supported successful operations of Prokopios and Leo Apostyppes in southern Italy and routed an Arab squadron at Cape Stelai. His success contributed much to the restoration of Byz. authority in southern Italy, although Sicily was lost after the fall of Syracuse in 878. A brilliant Greek victory over the Arabs is mentioned in a letter of Pope John VIII dated 30 Oct. 880.

---

**Nativity.** The Nativity of Christ; mosaic, late 11th C. Southeast squinch in the church at Daphni. Below the scene is a lunette with the bust of St. Gregory, bishop of Akragas. Under the arch to the left is the figure of the holy deacon St. Euplos.
two Sundays preceding the feast and the following Sunday and has a 40-day preparatory fast; a five-day forefeast, the longest in the Byz. calendar; a paramone vigil as at Easter and Epiphany; a following synaxis 26 Dec.; and an afterfeast of six days. The 10th-C. Nativity festivities in Hagia Sophia, which included the pannychis vigil, are outlined in the Typikon of the Great Church (Mateos, Typicon 1:134–36, 145–70).

The Nativity was also one of the most heavily charged days of the imperial ceremonial (De cer. 128–36), filled with receptions, visits of dignitaries and factions, promotions, the veneration of relics, honors rendered with candles at various sanctuaries, all done in solemn procession, the final one to Hagia Sophia, where the emperor joined the patriarch in the narthex and made the little entrance with him. The day’s ceremonies continued with various visits in the company of the patriarch.

Byz. sermons for the Nativity stress that it celebrates not a past event but the ever-present mystery of salvation first manifested in Jesus’ birth. Jesus must be born in each Christian, each one must receive him in communion as the manger received him in Bethlehem.

Representation in Art. Initially including just child, manger, ox, and ass (the beasts variously interpreted but always present), the image of Christ’s birth developed by the 6th C. into a presentation of his incarnation as an epiphany unifying human and divine. Two compositions emerged, both associated with the Holy Land. One, drawing on imperial imagery, showed the enthroned Virgin and Child between acclaiming Magi or shepherds and Magi (Monza and Bobbio Amplulae). The other, more narrative (Sancta Sanctorum Reliquary), showed the star (not the star of the Magi but of Num 24:17), Joseph and the midwife Salome as witnesses (see Protoevangelion of James), the reclining Virgin, and the Child in a masonry manger before a cave, recalling the block altar and cave setting at Bethlehem. Slowly, the narrative version incorporated the imperial elements. By the 8th C., Salome was displaced by the motif of the infant’s bath, traditional in pagan and imperial nativity scenes (P. Nordhagen, BZ 54 [1961] 333–37), and at Castelseprio, the acclaiming shepherds were added to the scene at the cave. The cave scene became standard after the 9th C., with the addition of choirs of angels and the Adoration of the Magi, in accord with their liturgical celebration on Christmas Day.

---

NATURAL PHENOMENA (sing. σημεῖον, θεοσημεῖον), such as eclipses of the sun and moon, the appearance of comets and brilliant stars, earthquakes, floods, etc., were recorded by Byz. historians and chroniclers, who considered them important events and therefore provided significant details about their occurrence and the effect they had on people. Generally such phenomena were attributed to divine providence. Comets, eclipses, dust storms, etc., were believed to be portents of impending catastrophes or of political and dynastic change—the death of a ruler, a rebellion, military defeat, and the like. On such occasions the faithful were called to repentance in order to appease the divine wrath (cf. John Mauroposal, Or. 185, ed. Lagarde 165–78). Alongside the popular beliefs and the superstitions connected with them, there were also attempts to provide a scientific explanation, such as in the Peri dixoeméion by John Lydos (De ostentis, ed. C. Wachsmuth [Leipzig 1897]) and the Synopsis ton physikon of Symeon Seth (ed. Delatte, AneidAth 2:16–89). Still greater popularity was enjoyed by the various practical handbooks (such as Seismologia, on earthquakes, or Brontologia, on thunderstorms), which dealt with the prognostic element in natural phenomena.

---

NATURE (φύσις). The terminology of the ancient Greeks survived in Byz. in the term physis, which is everything in the world that belongs to the realm of matter insofar as it is provided for man, and not something created by man (through his thechnē, or culture, customs, and laws). Therefore, it also includes everything that actually exists, the totality of objects and the state of affairs to which any judgment must exactly conform.
The term not only designates everything that exists, that grows or takes place in the "natural world" apart from human intervention, but it can also be used to designate the process of production itself.

The early church rejected the Stoic view that nature is the creative cause and principle of the world. This implies that nature has been reduced to a theological concept, inasmuch as it is nothing other than creature or the result of God's creation. Nonetheless, if when speaking about nature one focuses on its power to generate, then this can easily become a natura naturans in which the reference to God is no longer essential, but redundant; nature is an unseen force that can be grasped by the mind only. It is conceived, as in Aristotle’s Physics, as the dynamic principle of reality, a concept encountered, for example, in Michael Psellos (De omnifaria doctrina, par. 57).

The synthesis of Plato and Aristotle, together with the view of nature as the demiurge, led for John Italos only to difficulties (Quaestiones quodlibetales, pars. 65–66, 93, ed. Joannou, pp. 99–101, 149f) that he judged to be the result of a failure to distinguish between natura naturans (physis heautes poietike) and natura naturata (physis as apoteloumenon eidos). If one conceives nature as immaterial, "then one speaks not of nature, but of the soul," namely, of the World-soul or the third hypostasis of Plotinos, which cannot be accepted by Christianity as a principle of cosmology. On account of the difficulties resulting from the concept of nature he outlined, Italos asserted that only the concept of nature presented by the church fathers remained (i.e., nature is conceived as substance and species). But if nature is defined as dynamis, it means the Platonic program of mathematical description of the world, that is, its actual scientific description (John Italos, ibid., 42, p. 53). In a specific sense the term physis was applied to the divine "nature," the "common denominator" of the Godhead encompassing three hypostases: accordingly Christ, after the Incarnation, was construed as possessing both divine and human natures—the concept denied by the Monophysites. (For nature in the sense of the material world surrounding man, see Environment.)

- K.-H. U.

NAUKLEROS (ναυκληρός, Lat. navicularius). By the 4th C., transport of passengers and goods by sea was arranged through navicularii, or state-employed shipowners, who financed the construction, manning, repair, and operation of merchant vessels. Men of means sufficient to bear these costs were attracted by the privileges and tax/toll exemptions granted to navicularii, since freight itself paid only a low percentage of the profit. Apart from private commerce, navicularii saw to such state requirements as the shipping of grain to Rome and Constantinople or the delivery of foodstuffs and supplies for the army. They belonged to a state guild and received government reimbursement for ship or cargo losses honestly incurred.

By contrast, the Byz. naukleros appears in 7th-C. sources as an independent ship's captain, or sometimes simply a merchant, who commissioned ships, hired crews, and was responsible for shipping tolls (Ahrweiler, Mer 61); he had no state-imposed obligations. Legal texts note that the naukleros contracted cargo and passengers (for which he received freight and carrying charges) and was liable to merchants and passengers for damage, risk, or losses (W. Ashburner, The Rhodian Sea Law [Oxford 1909] cxxx–cxxxvii).

NAUMACHIKA (Ναυμαχική). Five treatises on naval warfare in Milan, Ambros. B 199 sup., form the corpus of Naumachika, comprising book 19 on naval warfare and a few excerpts from book 20 of the Taktika of Leo VI; instructions on fording rivers from the Strategikon of Maurice (Strat. Maurik. bk.12B, ch.21); a 6th-C. treatise on naval tactics attributed to Syrianos Magistros; and a short outline of naval terminology and tactics dedicated in a prefatory poem to the parakoimomenos Basil the Notos. The dedication to Basil, commemorating his successful expedition against Samosata (C.M. Mazzucchi, Aevum 52 [1978] 304–06), fixes the date of the compilation of the Naumachika as 959. The paraphrase of Leo and Syrianos by Nikephoros Ouranos in his Taktika rounds out Byz. writing on naval warfare.

The Naumachika show that the tactics of the Byz. navy were elementary and not much differ-
ent from classical practice. The Byz. put their heavy ships in the center of the line and lighter ships on the wings, advancing in a crescent-shaped formation. They aimed both to break through the enemy line in the center (diekplous) and envelop it from the outside (periplous), using Greek fire, archers, and ballistic weapons to disable enemy crews before boarding their ships.

ED. A. Dain, Naumachica (Paris 1943).

**NAUPEKTOS** (Naupaktos, Venetian Lepanto), city on the western part of the north shore of the Gulf of Corinth, commanding the entrance into the gulf. In the 4th C. it was the most important harbor between Corinth and Oaxa (W.A. Oldfather, *RE* 16 [1935] 1994); in the *Tabula Peutingeriana* Naupaktos and Evanthia/Oianthea are the only cities named in western Lokris. It was a bishopric suffragan to Corinth, then probably to Athens, and after 900 an independent metropolis. Constantine VII Porphyrogennetos (De them. 5.12, ed. Pertusi, p.89) lists it as a *polis* of the theme of Hellas, Skylitzes (Skyl. 411.57) as a site in the theme of Nikopolis. Naupaktos was the seat of a *strategos* ca.1025; its *strategos* George died during a revolt and all his property was seized by the inhabitants; Constantine VIII punished the rebels and blinded the metropolis (Skyl. 372.73–80). In 1040 Naupaktos was the only city of the theme that survived the attack of *Deljan* and his army. There is little information on its economy: in the 12th C. Benjamín of Tudela found a community of 100 Jews there; a seal of an *exaristès* ("rigger," man in charge of a wharf?) of Naupaktos of the 9th C. is known.

After 1204 Naupaktos formed part of the despote of *Epiros*, but in 1294 it was given to *Philip I of Taranto*, beginning the city’s long period of Western domination. In 1361 Naupaktos fell into the hands of the Catalans, and the city passed from one Western power to another for several decades until the Venetians conquered it in 1407; thereafter they used Naupaktos to safeguard their trade through the gulf against the growing power of the Turks. They strongly fortified the city, but it surrendered to Bayezid II in 1499.

The present walls of the acropolis, of the lower city, and of a small harbor are works of the Venetians, built on ancient and Byz. foundations. A possibly five-aisled basilica has been excavated in the lower city, and another can be surmised from the various marble fragments discovered in the acropolis. Additional Byz. sculpture and inscriptions have been found throughout the city, but, aside from these, little of Byz. Naupaktos survives.

**NAUM OF OHRID,** Bulgarian priest, scholar, and saint; born ca.890, died Sveti Naum 23 Dec. 910; feastdays 20 June, 17 July (Bulgaria), 27 July (Russia). A close companion of CONSTANTINE THE PHILOSOPHER and Methodios in their mission to Moravia, Naum was ordained priest in Rome by Pope Hadrian II in 868. When Constantine the Philosopher died in Feb. 869, Naum returned to Moravia with Methodios. After Methodios’s death and the collapse of the Byz. mission, Naum was imprisoned, but finally made his way, along with KLIMENT OF OHRID and Angelarius, to Bulgaria in 886. Naum directed a group of translators and writers in Preslav. In 893 he succeeded Kliment as teacher and evangelist in Macedonia, first at Devol, then ca.900 in Ohrid, and finally ca.905 in the monastery that he founded on the southeastern shore of Lake Ohrid, now Sveti Naum. He became a monk on his deathbed. It is difficult to identify Naum’s personal share in the early Slavonic translations and original works produced in Preslav and in Macedonia. The authenticity of a *kanon* on the apostle Andrew is indicated by an acrostic. A 10th-C. Slavonic Life of Naum and a somewhat later Greek Life as well as a Greek *akolouthia* by Constantine *Kabasilas* (13th C.) survive.

NAUPLIA (Ναύπλια, also Nauplion, medieval Anapli, in Western texts Napoli in Romania), city in the ARGOLID, port of Argos. Through most of its history it shared the fate of Argos; under the later Roman Empire it had no independent status. The acropolis was fortified, and its main gate to the lower town, built into later walls, still survives. The city rose to prominence by the 11th C., undoubtedly as a result of its maritime position; an 11th-C. historian (Skyl. 386.60) reports that ca.1033 a strategos resided there (Bon, Πελοπόννησος 78, n.2; cf. D.A. Zakythenos, EEBs 17 [1941] 250f). Prosperity at Nauplia is suggested by the large number of churches built in the vicinity in the 12th C., although regulations drafted by Leo, bishop of Argos and Nauplion, for Hagia Mone at AREIA show that ca. 1143 the area around the city was threatened by pirates. Nauplia was one of the cities in which the Venetians were given special trading privileges in 1198. The fortifications of Nauplia allowed it, like Argos, to hold out against the Franks until 1212. Nauplia fell under the nominal control of the duchy of Athens, and came under Venetian rule in 1388.

Nauplia shared a bishopric with Argos, as is stated in both the vita of Peter of Argos (ed. Ch. Papaikonomos, par.9, p.64.1–9) and a letter of Theodore of Nicaea to Basil of Corinth (Darrouzès, Epistoliers 7.43.16–18, p.315).

Nerio ACCIAIUOLI bequeathed a monastery to the local bishop at Nauplia and a sum of money for the construction of a hospital, but these buildings are otherwise unknown. Habitation at Nauplia during the medieval period was probably concentrated in the upper city, with a port and harbor facilities in the lower area. The spacious western fortifications, built on ancient foundations, probably represent the Byz. city; to the east is an area added by the Crusaders, while the easternmost part of the fortifications as well as the wall around the lower town were erected by the Venetians. The remains of a probably Byz. church have been excavated on the citadel, and the Church of Hagia Sophia just under the walls may date to the Frankish period.

NAVARRESE COMPANY, army of professional mercenaries from Navarre and Gascony that controlled part of Greece from 1378/9 to 1402. Originally in the service of Don Luis of Evreux, brother of Charles II (the Bad) of Navarre (1349–87), the band occupied DYRRACHION in 1376 to support Don Luis’s claim to Albania. After Don Luis’s death (1376), the Navarrese sold their services to a variety of claimants to power in Greece. Two companies briefly entered the service of the HOSPITALLERS in 1378 and went to Morea. One of these units, led by John de Urtubia, took THEBES and Livadia from the CATALANS in 1378 or 1379 (G. Dennis, OrChrP 26 [1960] 42–50) but failed to conquer Athens. The Navarrese invasion seriously weakened the Catalans, however, so that Athens fell ten years later (1388) to the ACCIAIUOLI.

Most of the Navarrese entered the service of Jacques de Baux, claimant to Achaia (1373–83), to press his claims to the Morea. They succeeded in conquering the western Peloponnese, from Vostitsa (Aigion) to Kalamata. After Jacques’s death, the Navarrese effectively controlled the principality of ACHAIA under the vicars-general Mahiot de Coquerel as imperial bailie (1381–1386/7) and Pierre Lebourd (Peter Bordo) de St. Speran as imperial vicar (1387–96); from 1396 to 1402 the latter bore the title of prince of Achaia. The Navarrese fought principally against the Acciaiuoli and THEODORE I PALAIOLOGOS for control of the Peloponnese. In 1401 Pierre de St. Speran joined the Turks for raids against Korone and Methone. The history of the Navarrese in Greece ends with the death of Pierre de St. Speran (1402).

NAVICULARIUS. See NAUKLEROΣ.
NAVIGATION was restricted by climate and Byz. control of the sea; naval technology remained limited. Since the Byz. ship was usually small with a shallow keel, designed essentially for coastal cruising, the Byz. remained cautious mariners, "touching dry land with the oars" (THEOPHYLAKTOS OF OHRID, ed. GATIER, 2:139.28-29). Sailing speeds reached 6 to 8 knots. The introduction of the triangular lateen sail by the 7th C. provided easier handling in bad weather and greater flexibility in catching the wind, but steering by compass, developed in the 13th C., and the stern rudder, important innovations in deep-sea sailing, came into widespread use after the decline of the Byz. navy. ASTROLABES were discussed in theoretical treatises, but their practical application is unattested.

As in antiquity, sailing was normally restricted to the good weather months between April and October. The prevailing northerly winds made sailing north to south fairly rapid and easy, but approaching Constantinople from the south was often difficult and time consuming. A series of way stations (HORMETERIA, TOPOI SKALOMATOS) dotted the Byz. littoral for fleets in need of provisions or awaiting favorable conditions (AHRWEILER, MER 419-25). Sailors steered point to point, by landmarks, beacons, and ports, or by sun and stars when out of sight of land. Naval commanders required knowledge of the winds, seasons, and stars to navigate the fleet (TAHTKA OF LEV VI 19.2). DE CEREMONIIS (467.9-12) lists books on the seasons and weather compiled for sailors (R.H. DOLLEY, MARINER'S MIRROR 37 [1951] 5-16) and supplies a table of distances between Constantinople and Crete (G. HUXLEY, GRBS 17 [1976] 295-300), but local pilots were also used; in 960 Nikophon Phokas relied on sailors from the island of Karpathos to guide his invasion fleet over the open seas to Crete from his last way station in Asia Minor (ATTLA. 224.14-22). Other guides to navigation were the PERIPLUS AND PORTULAN.

LIT. H. ANTONIADIS-BIBIOU, ÉTUDES D'HISTOIRE MARITIME DE BYZANCE: A PROPOS DU "THÈME DES CARAVISIENS" (PARIS 1966) 26-29. -E.M.

NAVY (πΛΩΙΜΟΝ). In the 6th C., Byz. warships gained control of the sea by recapturing Carthage and destroying the VANDAL fleet; the navy became a police force operating from Constantinople and Mediterranean bases. In the mid-7th C., however, the incursion of Slavic pirates and the development of Arab seapower by Mu'awiya forced a naval reorganization; the fleet of the KARABISI-ANOI was created to defend the Byz. littoral and the approaches to Constantinople. Following its dissolution under Leo III, regional fleets whose costs were borne independently by the naval strategy were organized in the exclusively maritime themes of KIBYRRHAIOTAI (by 732), AEGEAN SEA (by 843), and SAMOS (by 899). The imperial fleet (BASILIKON PLOIMON) was based at Constantinople under the DROUNGARIOI KOU PLOIMOU to protect the Byz. capital; it also undertook expeditions to which the thematic fleets contributed ships and men. The navy achieved its greatest successes in the 10th C., esp. in the destruction of the fleet of the Rus' in 941 and in the reconquest of Crete (961) and Cyprus (965).

The navy declined during the 11th C. The thematic fleets disappeared; by the 12th C. naval command, financing, and recruitment had been centralized at Constantinople (N. OIKONOMIDES, TM 6 [1976] 146f), where a small flotilla still patrolled. Under John II Komnenos, taxes raised for maintaining the navy were diverted into the imperial treasury; from then on, fleets of varying sizes were constructed on an AD HOC basis, and alliances (see, e.g., NYMPHAION, TREATY OF) were sought with Venice and other naval powers to obtain ships and manpower for expeditions. Although the Komnenian and Nicaean navies enjoyed several successes, the Venetians and Genoese steadily took control of the Aegean until even the Byz. themselves acknowledged the superior seamanship of the Italians. The last major Byz. fleet was built by Michael VIII Palaiologos but disbanded by his successor Andronikos II Palaiologos. Later, however, Andronikos III's small navy, under the command of the MEGAS DOUX ALEXIOS APOKAUKOS, enjoyed success against the Genoese, and John VI Kantakouzenos built a small flotilla, but complete control of the seas had passed to the Italians and Turks by the end of the 14th C.

NAXOS (Νάξος, also Naxia), island in the central Aegean Sea, in late antiquity part of the province
of the Islands (Insulae). Its later fate is poorly known: texts of the 10th C. mention Naxos as a station on the way from Constantinople to Crete (e.g., AASS Nov. 4:227E); according to John Kaminates (59.07), it paid phoroi to "the inhabitants of Crete." Naxos may have been capital of an ephemeral theme of Dodekanese in the later 12th C. In 1205–07 Marco Sanudo seized Naxos and the adjoining islands, creating the duchy of Naxos (or duchy of the Archipelago) that was considered as held from the Latin Empire. In 1248 suzerainty over Naxos was ceded to William II Villehardouin; the Byz. reconquest of the Aegean islands in 1263–76 under the command of Alexios Philanthropenos failed at Naxos, and after 1278 the duc became a vassal of Charles I of Anjou. The duchy remained independent until the Turkish conquest in 1566 (with short periods of Venetian tutelage: 1494–1500 and 1511–17). The Latin occupation of Naxos led to the introduction of feudal law based on the assizes of Romania; nevertheless, as late as the 16th C., the indigenous population continued to use Byz. laws of marriage and ownership, while the impact of Italian law was limited to terminology.

The bishop of Naxos was originally a suffragan of Rhodes (Notitiae CP 1:429). In 1083 the see was united with that of Paros (as Paronaxia: RegPatr, fasc. 3, no.929) and shortly thereafter was raised to metropolitan status (Notitiae CP 11:84).

Remains of early Christian basilicas are found throughout the island, representing a wide variety of architectural styles, and there are even more churches of the 9th–14th C. (Pallas, Monuments 207–15; B.K. Lamprounoudakes, PraktArchE1 [1982] 253–59); many have full fresco programs, with esp. fine examples dated from the 13th C. Non-representational decoration in some churches has led to their identification as Iconoclastic (A.G. Basilake, DChAE 4 [1962–3] 49–74; but see D.I. Pallas, JOB 23 [1974] 306).

NAZARETH (Ναζαρέθ), village in Galilee in which the Virgin reportedly received the Annunciation from the angel Gabriel, and where Jesus spent his childhood. The area remained completely Jewish at least up to the reign of Constantine I, when it was noted that the town had no Christian population and no church (Epiphanios of Salamis, Panarion, 30.11.9–10). Excavations at Nazareth have uncovered the remains of a basilica dedicated to the Virgin (later the Annunciation) and dated to the beginning of the 5th C. Below the basilica were fragments of a synagogue. Egeria saw at Nazareth only "a big cave in which Mary had lived" incorporating an altar, and a garden "in which the Lord used to dwell." The Piacenza Pilgrim indicates that in his time the house of Mary was a basilica. He describes the area as exceptionally fertile.

Nazareth was conquered by the Arabs in 636, but al-Mas'udi mentions a church held in great veneration. This building is described at length by later pilgrims, such as Danil Igumen and John Phokas: within the church was an entrance to a cave incorporating a cell where the Virgin was said to have lived with the Child. At the site of the Annunciation a black stone cross was set in white marble. Under the Crusaders Nazareth remained a small town, but church building continued. Some architectural fragments of the 12th-C. Church of the Annunciation have survived, including five well-preserved capitals. In 1187 Saladin seized Nazareth. Legend has it that the house of Mary was miraculously transferred from Nazareth to Fiume on 10 May 1291, and in 1295 to the town of Loreto in Italy.

The term Nazaraios or Nazinaios, meaning "Nazarene" or "man of Nazareth" (cf. Mt 2:23), was applied to Christians in general, and specifically to Christ and monks, esp. hesychasts (cf. Souda, 3:434).

NAZIANZOS (Νάζιανζος, now probably Nenezi), a minor station (stathmos) on the highway that led across Anatolia to Palestine; according to Sokrates (Sokr., HE 4:11.9), "a shabby polis" near Caesarea. It became a bishopric ca.325. After its bishop Gregory died in 374, his son, Gregory of Nazianzos, administered the see. The bishopric was suffragan of Caesarea, then Tyana, eventually Mokissos. Romanos IV transformed Nazianzos
into a metropolis. It fell to the Turks after the battle of MANTZIKERT in 1071. Remains of the site are insignificant.

- C.F.

NEA ANCHIALOS, modern name for Thessalian or Phthiotic Thebes (Θήβαι Φθώντες), a city in central Greece on the Pagastic Gulf south of Volos. In late antiquity it was the third city of the province of Thessaly and its major port. The ancient city centered on the upper acropolis, while the early Christian city lay in the plain near the sea on the site of ancient Pyrasos. The city prospered from the 4th to the 7th C. when it was the dominant town on the Pagastic Gulf. It was destroyed by a great fire at the end of the 7th C.; there is evidence of some rebuilding immediately after the fire and again in the 9th C., but the city never fully recovered and its place was later taken by Halmiros. The bishop of Thessalian Thebes, amply attested in the epigraphic and documentary evidence, is last mentioned in the 8th/9th C. (Notitiae CP 3.672). The latest evidence of Nea Anchialos is a coin hoard of the early 9th C.

Nea Anchialos is best known because of the many churches excavated there (nine basilicas have been found). Basilica A, dedicated to St. Demetrius, was the episcopal church, a three-aisled basilica similar to the Acheiropoietos Church in Thessalonike, with an atrium possibly flanked by towers; it was built sometime in the late 5th or early 6th C. Basilica B, the so-called Elpidios Basilica, has a similar chronology; Basilica G, called the “church of the archiereus (bishop) Peter” on the basis of an inscription of the mid-6th C. discovered at the site, has elaborate floor mosaics and is part of a vast ecclesiastical complex; its earliest phase dates to the late 4th or early 5th C. Basilica D, dated to the 7th C., was a cemetery church located outside the city walls. Excavation of the harbor revealed places for anchorage (P. Lazarides, PraktArchEt [1973] 33). A burial epitaph for a Jew, written in Greek letters, has been found (E. Deilake, ArchDelt 29.2 [1973–74] 548).

- T.E.C.

NEA EKKLESIAS (lit. “new church”), built in the Great Palace by Basil I and completed in 880. Situated a short distance east of the Chrysotriklinos, the Nea was covered by five domes, probably one in the center and one each over the four corners. It was dedicated to Christ, the archangel Michael (and Gabriel?), the prophet Elijah, the Virgin, and St. Nicholas, which implies four chapels in addition to the main altar. The decoration was particularly sumptuous: the chancel screen, synthonon, and altar table were revetted with silver, the floor was of opus sectile, the domes were roofed with bronze tiles. The atrium was adorned with two fountains of precious marble (TheophCont 325–29). The church had its own clergy and played an important part in patronite ceremonies. Converted into a monastery by the 12th C., the Nea was robbed of many of its ornaments by Isaac II. During the Latin occupation it served as a pataline chapel. It survived the Turkish conquest and was probably destroyed in 1490.

The New Church was described in detail by Constantine VII Porphyrogennetos or someone from his milieu in the Vita Basilii. Beginning with F. Combebis, scholars had believed that the ekphrasis of an unnamed church in the 10th homily of Photios referred to the Nea until Jenkins and Mango (infra) demonstrated that the 10th homily could not have been produced later than 864 and was related to the consecration of another church, that of the Virgin of the Pharos. E. Bolognesi (StMed 28 [1987] 83–98), however, reassigned Photios’s ekphrasis to the Church of the Virgin Hodegetria. The problem needs further investigation.

- C.M.

NEAI PATRAI. See Neopatra.

NEA MONE (Nēa Mōnē, “new monastery”), the name of several Byz. monasteries. Two of the most important were on Chios and in Thessalonike.

NEA MONE ON CHIOS, dedicated to the Virgin, was founded shortly before 1042 by the local hermits Niketas and John (and, according to tradition, Joseph). Constantine IX, the monastery's
principal benefactor, conferred abundant privileges and lands on Nea Mone. His chrysobulls and sigilla, as well as the charters of later emperors (the last of Andronikos II in 1289), are important for the study of large landownership, exkouseia, status of peasants, and the taxation of Jews, primarily in the 11th C. Outside of Chios, the monastery owned property in Asia Minor and Thessaly. Nea Mone was exempted from episcopal jurisdiction and was granted the right to invite any bishop for the ordination of priests and deacons.

According to tradition (confirmed by architectural analysis), the present church was built during the reign of Constantine IX. Within walls built in recessed-brick technique, the naos is laid out as a small square below a tall segmented dome (now restored) on an octagonal drum. Outer and inner narthexes and a low bema form distinct parts of the structure. All except the first are internally sheathed with local red marbie and mosaics that, like the overall design, are said to be of Constantinopolitan origin. Mouriki (infra) suggests that the mosaic decoration was begun after 1049 and finished before Constantine’s death. Less restored than those of Hosios Loukas and Daphni, the mosaics atypically include an orant Virgin in the apse and eight Great Feasts in the deep squinches of the drum. The inner narthex cupola contains the oldest known example of the Virgin guarded by military saints and martyrs. The monastery’s defense tower and cistern are also of the 11th C. The refectory contains a table inlaid with marble of probably the same period.

NEA MONE IN TESSALONIKE was founded between 1360 and 1370 by Makarios Choumnos on the site of the earlier imperial palace, south of the Arch of Galerios. G.I. Theocharides has identified it with the church now dedicated to St. Elias (Makedonika 5 [1961-63] 1-14). Originally dedicated to the Theotokos, it housed 15 monks, two novices, and two postulants at the time of its foundation. Sometime before 1374 Makarios was summoned to Constantinople to serve as hegoumenos of the Studios monastery. He was succeeded at Nea Mone by his disciple, the hieromonk Gabriel, who would later become hegoumenos of the Chora monastery, metropolitan of Chalcedon and then Thessalonike. Gabriel supervised the completion of the construction of the church. Nea Mone was granted the status of an imperial and patriarchal monastery and was thus exempt from the jurisdiction of the local metropolitan. According to Ignatij Smolensk, who visited in 1405, Nea Mone was one of the most flourishing monasteries in Thessalonike. At this time its monks were also involved in bitter disputes over property with the Akapniou Monastery in Thessalonike. Nea Mone is known to have survived until at least 1432. Although the monastery’s archive is preserved at the Great Lavra of Athos, there is no proof that Nea Mone became a metochion of the Lavra, as Theocharides asserted.

-Α.M.T.

NEA PETRA MONASTERY. See MAKRINITISSA MONASTERY.

NEA PHOKAIA. See PHOKAIA.

NEAPOLIS (Νεάπολις, biblical Sichem, Nablus in Israel), city in the province of Palestina I under CAESAREA MARITIMA and bishopric under the patriarch of Jerusalem, noted for its Church of the Theotokos built on top of Mt. Garizim, site of an ancient Samaritan shrine. At the request of Bp. Terebinthios, this large octagonal church was erected by Emp. Zeno after the Samaritan uprising of 484 and garrisoned. A tetraptugia circuit wall was added by Justinian I after another uprising in 529, when he also provided for the restoration of five shrines. A cruciform church surrounding Jacob’s well at Neapolis was sketched by the pilgrim Arculf (see ADOMAN) in 670.

NEBO, MOUNT, mountainous region in Jordan (called Abarim in Dt 32:49) overlooking the Dead Sea's north shore, a place of PILGRIMAGE. Early Christians identified its ridge, called Siyagha ("monastery") in Aramaic, as the place where Moses viewed the Promised Land before his death (Dt 34:1–6). In 384 EGERIA saw only a small church "with a place for a tomb" (Égérie, Journal de Voyage, ed. P. Maraval [Paris 1982] ch.12.1, p.172), no doubt the 4th-C. triple-apsed memorial chapel (cella trichora) excavated by Saller (Saller-Schneider, *infra*). About 470 PETER THE IBERIAN (Life, ed. Raabe, 82f) visited a large church surrounded by cells, which is probably the three-aisled basilica and monastery complex—one of the largest in the region—likewise exposed by Saller. Circa 600 a Theotokos chapel and baptistery were added. Mosaic pavements display geometric, floral, and animal motifs, and a panel before the apse of the Theotokos chapel has a unique mosaic plan of the Jewish Temple. In 1976 Piccirillo (*infra*) discovered an earlier pavement, dated 531, beneath the basilica's *diakonikon*, this one with pastoral and hunting scenes.

The town of Nebo (Khirbet el-Mekhayaat), about 4 km southeast of Siyagha, had four 6th- and 7th-C. churches with spectacular mosaic pavements; surviving portions depict scenes of daily life, allegories, and donor portraits. One shows Earth personified as a woman.

-K.G.H.

NEBOULOS (Néboulou), military commander of Slavic or perhaps Bulgar origin (Moravcsik, *Byzantinoturcica* 2:210). In 693 Justinian II formed a special force of 30,000 troops from the Slavs settled in Opsikion in 688. As its ARCHON he appointed Neboulos, chosen "from the nobles" (Nikeph. 36.24), and campaigned with this army against the Arabs at Sebastopolis "by the sea" (E.W. Brooks, *BZ* 18 [1909] 154–56). After initial success Justinian was defeated when Neboulos, bribed by the Arab commander, deserted with most of his troops. According to Theophanes the Confessor (Theoph. 366.21–23), Justinian retaliated by massacring the remaining Slavs and their families. The Arabs settled Neboulos and his men in Syria.

- P.A.H.

NECKLACE (περιδερασίαν). As opposed to the TORQUE, which was worn by men, women's necklaces consisted of several kinds of chains, from simple loops to complex braids, either undecorated or with additional elements. PENDANTS might be added, similar to those used in earrings. Gold coins or medallions were often reused in necklaces, but until the 7th C. the commonest type seems to consist of beads of cut gemstones, glass paste, or pearls, interspersed with single loops of chain. Contemporaneous, and gradually becoming more common, were more complex chains, esp. types with openwork gold disks or links (Brown, *infra* [1984], pls. 1–6, 12–18). The construction of the jeweled collars—worn, for example, by the female saints in S. Apollinare Nuovo and by Theodora's companions in S. Vitale, RAVENNA—is difficult to identify: although necklaces with *cloisons* (thin strips of gold) containing single large gems were made in the Hellenistic period, the form seems to disappear until the 11th or 12th C. Niketas Choniates (Nik.Chon. 443.78–80) accused Isaac II of making necklaces and torques with jewels taken from crosses and Gospel books.

-S.D.C., A.C.

NEGEV (Negeβ), area of PALESTINE III (Sautari) extending south of the Dead Sea to the Gulf of 'Aqabah. Its territory included PETRA (the capital); the cities of Mampsis, Birosaba, and Elusa; and the settlements of Nessana, Sobata (Shivta), and Oboda. Despite the scarcity of narrative sources, the economy and culture of Negev in late antiquity has been well studied on the basis of archaeological remains, inscriptions, and the Nessana papyri. Agriculture flourished in Negev in...
the 4th–7th C., thanks to irrigation. The land produced grapes, wheat, barley, olives, dates, and almonds. There were three types of landowners: the church, individual farmers, and limitanei. The region also benefited from the trade route that led north from Aela on the Gulf.

From ca. 300 active fortification of the sites helped to protect them from Bedouin attack. Christianity penetrated the Negev by the 4th C., but Elusa is the only bishopric attested by external sources—its bishops participated in some councils of the 5th and 6th C. The region was thoroughly christianized, however, in part under the influence of the neighboring Sinai peninsula. Numerous churches of the 5th–9th C. have been excavated in Mampsis, Nessana, Oboda, and Sobata. The earlier churches have a single apse, while churches with three apses are a later development; some were decorated with floor mosaics and reliefs.

The area began to decline, at least at Mampsis, ca. 500. Building activity in Oboda had stopped by the beginning of the 7th C. In 636 the Arabs conquered Negev. Urban life continued in some places until ca. 700, then died out, and the desert replaced orchards and vineyards.

NEGROPONTE, Italian name for Euboea, probably originating from Euboeas via a distorted form of Egripus. In 1204 the Venetians gained control of the ports of Karystos and Chalkis, while the rest of the island was first given to a Frankish baron, James II of Avesnes. After his death Negroponte was partitioned, in 1209, among three Veronese lords, who in turn acknowledged Venetian suzerainty. Venetian power grew on the island, but the rough terrain allowed considerable independence for the minor Frankish nobility, while Venice used Negroponte as a base for its operations in the Aegean. Pirates from Negroponte ravaged much of the east coast of Greece in the 13th to 14th C. From 1322 onward, the Turks began to attack isolated areas on Negroponte, and in July 1470 the island fell. Under Latin domination the church of Negroponte was an important outpost of papal power. The name Negroponte was indiscriminately applied to the entire island, to its capital Chalkis, to the Frankish lordship, and to the Venetian administrative unit.

NEIGHBOR (γείτων, πλησιάζων), a person or juristic person owning or holding property in close spatial proximity to another property, or a member of the same fiscal unit, as opposed to a stranger (xenos). In Byz. it was a well-established principle that neighbors enjoyed specific privileges such as the right of protimesis by reason of anakoinosis, “enclave” (e.g., Esphig., no. 30.11) or plesiasmos, “coming near” (e.g., Docheiar., no. 43.12), as well as jura in re aliena. On the other hand, neighbors as members of the same fiscal unit (metrokonia, village community) shared collective tax liabilities (epible, allelengyion). One of the most common ways of identifying properties in the praktika was by naming the owners of neighboring properties (e.g., choraphion plesion tou Basileiou).

NEILOS KERAMEUS (Κεραμεύς), patriarch of Constantinople (Mar./Apr. 1380–1 Feb. 1388); baptismal name Neophyto; born Thessalonike, died Constantinople 1 Feb. 1388. An ardent Palamite, Neilos took the monastic habit at the Chiasmiseites monastery in Constantinople in 1354; his spiritual master was the hegoumenos Markos (PLP, no. 17017), for whom he drafted a monastic rule. After Mark’s death, Neilos succeeded him briefly as superior before being made patriarch. He apparently continued to serve as hegoumenos throughout his patriarchate. Shortly before Neilos’s death, he bequeathed the monastery to the future patriarch Matthew I.

Around 1380 Neilos and the synod drafted an important document defining imperial rights in ecclesiastical affairs (V. Laurent, REB 13 [1955] 5–18). In 1383 he divided the double monastery
of Patt. ATHANASIUS I (MM 2:80–89). A collection of 43 of his homilies (heavily influenced by John Chrysostom) remains unedited. He also wrote enkomia of Gregory PALAMAS and Anthimos of Crete.

LIT. RegPetr, fasc. 6, nos. 2696–843. PL P, no. 11658.

-A.M.T.

NEILOS OF ANKYRA, also called Neilos the Ascetic, theologian and saint; died ca. 430; feast-day 12 Nov. According to the Synaxarium of Constantinople (Synax CP 217:4–6) and Nikephoros Kallistos Xanthopoulos (PG 146:1256A), he served as eparch of Constantinople under Theodosius I and then left for Sinai together with his son Theodoulos. These data are now considered as legendary; they are based on a romance, entitled Diegema ta (Narrations), which describes the adventures of Neilos and Theodoulos on the Sinai peninsula. Various works have survived under the name of Neilos (CPG 3:6043–84), both in Greek and other languages (Syriac, Armenian, Latin, etc.). Distinction between the different Neiloi is difficult, but it is usually accepted that there were two of them—
one of the author of the ostensibly autobiographical Narrations, and another who wrote letters, treatises on monastic life, commentaries on the Song of Songs (R. Browning, REB 24 [1966] 107–14), etc. A number of “heretical” writings, notably those of EVAGRIOS PONTIKOS, have been preserved under his name.

Two of the works ascribed to Neilos are the most important and the most controversial: the Narrations and a corpus of 1,061 letters. The Narrations contains rich ethnological data about barbarian tribes that lived between Arabia and Egypt and knew no craft, trade, or agriculture, sustaining themselves only by the sword (ch. 3.1, ed. Conca, p. 3.1–5). J. Henninger (Anthropos 50 [1955] 81–148) considered Neilos’s ethnological observations untrustworthy, whereas V. Christi des (Byzantium 43 [1973] 39–50) argued that his data on Bedouin stoneworship and sacrifices of camels and humans are accurate. The corpus of letters has suffered from editorial corruption, perhaps in the 6th C. when it was well known; many of the titles of the letters addressed to illustrious officials have now been unmasked as anachronistic additions. Al. Cameron (GRBS 17 [1976] 181–96) considers the bulk of the correspondence genuine, even though edited by an admirer of Neilos, while Ringshausen (infra) sees in the correspondence the work of a different author. The major themes of his letters are the imitation of Christ as the way to perfection, practical advice for seekers of spiritual guidance, and allegorical interpretations of biblical texts; discussions of Christology and refutations of ARIANISM also appear. Letter 4.61, to Olympiodoros the eparch, praises the value of depicting biblical scenes on church walls to instruct the illiterate but criticizes the use of hunting scenes (H.G. Thümmel, BZ 71 [1978] 10–21).

-B.B., A.K.

NEILOS OF ROSSANO, also known as Neilos the Younger, saint; born ROSSANO in Calabria ca. 910, died GROTTAFERRATA 26 Sept. 1004. An orphan from an illustrious family, after a chaotic youth Neilos abandoned secular life (and his child) for the ascetical life of Italy’s “New Thebaid.” He came under the guidance of PHANTINOS THE YOUNGER in the region of Merkourion. He secured the monastic habit despite governmental prohibitions, which may evidence the antimonastic attitude of ROMANOS I after the novel of 934. In the early 950s Neilos returned to the neighborhood of Rossano, where he founded the monastery of St. Adrian. Around 980, fleeing admirers and Muslim raiders, he moved north to MONTECASSINO, where he and his followers lived about 15 years at the daughter house of Vellelucce. Then, disenchanted by laxity, Neilos and many of his monks moved to Serperi, near Gaeta. Shortly before his death he founded the monastery of S. Maria di Grottaferrata.

Neilos’s career marks the high point of Italo-
Greek monasticism. He was a talented scribe. His hymns are elegant. A disciple commemorated him in a vita that is remarkable for its style and substance, describing not only Neilos's rigorous asceticism but also Italo-Greek monasticism in general. By vividly contrasting Neilos with Byz. notables, the Montecassino monks who greeted him as "another Benedict," the decadent Lombard princess Aloara, and Emperor Otto III, the vita reveals not only the saint's charismatic power but also the power of Byz. culture.

NEILOS THE ASCETIC. See NEILOS OF ANKYRA.

NEKTARIOS, bishop of Constantinople (June 381–27 Sept. 397); born Tarsos. He was a member of the senate when Gregory of Nazianzos retired from the see of Constantinople; Diodoros of Tarsos included Nektarios in the list of candidates presented to Theodosios I, who selected Nektarios despite the fact that he had not yet been baptized and stood at the very bottom of the candidate list (Sozom. HE 7.8.1–6). Nektarios was a politician rather than a church leader and worked in close contact with Theodosios. He presided over the Council of 381 in Constantinople that condemned the Council of Arias (see under CONSTANTINOPE, COUNCILS OF), but thereafter Nektarios endeavored to achieve reconciliation. He tried to increase the authority of Constantinople without entering into a conflict with Rome and Alexan-

dria: even though the Eastern bishops refused to participate in a council planned by Pope Damasus in 382, Nektarios appealed the pope by subscribing to Western theological tenets. In 394 the patriarchs of Alexandria and Antioch peacefully attended a local synod in Constantinople. Nektarios probably extended the jurisdiction of Constantinople over Thrace; bishops of Asia Minor and even distant Bostra began to seek his arbitration in their litigations. Nektarios reformed the system of Penance, abolishing the office of a permanent confessor and permitting a believer to partake of the sacraments from a priest of his/her choice.

A homily on St. Theodore is preserved under the name of Nektarios (PG 39:1821–40). Palladius of Galatia (Laus. Hist., ch. 38, ed. Butler, 117.5–6) characterized him as "the most dialectical [in disputes] against all the heresies." An enkomion of Nektarios by an unknown grammaticos, Leo of Sicily, is preserved in an unpublished 14th-C. MS (BHG 2284).

NEMANJID DYNASTY, Serbian royal family (ca.1165/68–1371). Its founder was STEFAN NEMANJA. The ten successive rulers increased in stature from župan of Raška to emperor of the Serbs and Greeks, in the person of STEFAN UROŚ IV DUŠAN. The branch of Nemanja's son Vukan ruled in ZE타. During the 200 years of Nemanjid rule, the borders of Serbia expanded into Byz. territory as far south as the Gulf of Corinth. Through marriage, the Nemanjids became related to dynasties in Constantinople, the despotates of Epiros, the Bulgarian Empire, the kingdom of Hungary, and the kingdom of Naples and to the doges of Venice. The opening of silver mines in the 13th C. secured economic prosperity, which provided the financial base for military success. The Serbian church became an independent archbishopric, first headed by Nemanja's youngest son SAVA OF SERBIA. All the Nemanjids built ecclesiastical foundations, churches, and monasteries such as Djurdjevi Stupovi, Žiča, Studenica, Hilandar, Mileševa, Morača, Sopočani, Gradac, Arijle, Gračanica, Dečani, Peć, Holy Archangels near Prizren, and Matejić. The genealogical tree of the Nemanjid dynasty, styled after the Tree of Jesse, is painted
Genealogy of the Nemanjic Dynasty (ca. 1167–1371)

Stefan Nemanja

- Vukan
- Stefan the First-Crowned

J.S.A.

NEMESIOS (Νεμέσιος), late 4th-C. bishop of Emesa in Syria, a successor of Eusebius of Emesa. His treatise on anthropology, entitled On the Nature of Man, in which he attempts to fuse a Platonizing doctrine of the soul with Christian revelation, was much exploited by John of Damascus in his Exposition of the Orthodox Faith (bk. 2, chs. 12–99) and by Meletios the Monk in his synopsis of Christian and pagan ideas on the
human constitution. The treatise was translated into Armenian and Latin; Thomas Aquinas was a notable Western user. The content is more philosophical and scientific than theological, albeit the exegetical methods of the Antiochene School come through, and there is an obtruded mention of contemporary controversy over hypostatic union. Nemessios’s use of classical Greek science is highly eclectic, adopting or rejecting Plato and Aristotle according to the needs of the moment; many other sources are adduced, notably scientific writers from Epicurus to Galen.

The tract of Nemessios is an exalted praise of the human being as a perfect creature between the corporeal and incorporeal worlds, a microcosm (mikros kosmos, “little universe”). The human being possesses both the incorporeal soul—the major part of which is reason and which is preexistent (like Plato’s idea) and eternal—and the body, consisting of perishable matter. Its most beautiful member is the eye. Optimistically, Nemessios stresses free will, creativity, wisdom, and the ability to foresee the future, and admonishes man not to fear death, since only sinful death is evil.

—B.B.

NEO-CHALCEDONISM, a conventional scholarly term to designate a theological movement of the 6th C. The goal of the Neo-Chalcedonians was to overcome the problems posed by the Christological formula accepted at the Council of Chalcedon in 451; this dyophysite formula, which stressed the existence of two natures in Christ, did not sufficiently clarify the character of the union between the divine and the human in the incarnate Logos. Whereas Nestorianism shifted eastward, to Persia and the Syrian borderlands, the Monophysites maintained an active presence within the empire and kept accusing the strict Chalcedonians, predominantly those of Constantinople, of Nestorian tenets. Some theologians, such as Nephalius (C. Moeller, _RHE_ 40 [1944–45] 73–140), John of Caesarea, and Leontios of Jerusalem, tried to find a compromise between Chalcedonians and moderate (“verbal”) Monophysites; although they accepted the 12 anathemas of Cyril of Alexandria and the statement that “one of the Trinity has suffered,” they tried not to separate the human principle from the divine _phys_ of Christ but emphasized the _synthesis_ (“combination,” the term also used by the “verbal” Monophysites) and hypostatic (but not “natural”) unity of the two principles.

Political considerations (the search for reconciliation) brought into the Neo-Chalcedonian camp both ecclesiastical leaders, such as the patriarchs of Antioch Anastasios (559–69) and Gregory (569–93) (P. Allen, _Byzantium_ 50 [1980] 13–16), and emperors, such as Justinian I. The official acceptance of their views at the Council of Constantinople in 553 was followed by an “anti-Nestorian” reaction—the condemnation of the Three Chapters. A compromise with the Monophysites, however, was not achieved.

_NEOKAISAREIA_ (Neokaisareia, Turk. Niksar), city of Pontos in the Lykos Valley on one of the main northern routes across Anatolia. Famed for its first bishop, Gregory the Thaumaturge, Neokaisarea became the civil and ecclesiastical metropolis of Pontus Polemoniacus. Although struck by earthquakes in 344 and 449, Neokaisarea’s powerful fortress remained suitable as a refuge when Chosroes I attacked _Sebastia_ in 575. Thereafter its history is obscure until the 11th C., when it was attacked by the Turks, who first sacked it in 1068 and captured it after the battle of Mantzikert in 1071. The Gabrades restored Byz. power in the 1080s, but by the end of the century Neokaisarea fell to Danismend. The Turkish epic _Danismendname_ preserves the memory of these struggles. The imprisonment of Bohemund here provoked the unsuccessful Crusade of 1101. After failing to take Neokaisarea in 1140, John II Komnenos brought back many inhabitants of the region and settled them in securely Byz. lands. Neokaisarea contains a mas-
sive and well-preserved fortress, some of whose walls are certainly Byz.

LIT. Bryer-Winfield, Pontos 107–10. —C.F.

NEOKASTRA (Νεόκαστρα), one of the themes in the empire of Nicaea. Its origins are obscure: Niketas Choniates applies this term, meaning “new castles,” to a group of phrouria (Chliara, Pergamon, and Atramyttion) in northwestern Asia Minor that stood under command of a harmostes sent from Constantinople; they paid taxes to the imperial treasury (Nik.Chon. 150.53–56). On the other hand, the chrysobull of Alexios III of 1198 and the Partitio Romaniae list the “provincia” of Neochestron/Neocastri separately from Atramyttion, Chliara, and Pergamon. George Akropolites (Akrop. 28.3–8) describes Neokastra as a theme along with Kelbianon, Chliara, Pergamon, Magidia, and Opsikion. He includes in Neokastra the village of Kalamos (in the north?), but Ahrweiler’s thesis (infra) that it encompassed also Magnesia and Sardis is only hypothetical (Pachym. [ed. Bekker, 2:220f] contrasts Neokastra and Sardis). Neokastra was administered by a doux; one of these administrators, Libadarios, supported Andronikos II against Alexios Philanthropenos in 1296. Ahrweiler suggests that Constantine Nestongos was the last known doux of Neokastra ca. 1304.

NEOPATRAS (Νεόπατρας, also Neai Patrai, anc. and mod. Hypate), Thessalian city in the Spercheios Valley, east of Lamia. The name Hypate was used by Prokopios and Hierokles; Constantine VII Porphyrogennetos (De them. 2.42–43, ed. Pertusi, p.88) knew it as Hypate “which is now called Neai Patrai.” In the 12th C. Basil of Ohrid (Rhalles-Potles, Syntagma 5:393.1–2) stated that Symeon, bishop of Neopatras, was transferred to Laodikeia “in the days of Leo VI and Photios (sic),” but we do not know whether the new name was used in 9th-C. documents or only applied by Basil. The seal of Euthymios Malakes designates the bishopric as “Patrai Helladikai” as distinguished from Patrai Katotero (i.e., of the Peloponnese: Laurent, Corpus 5.1, no.769).

The city was perhaps abandoned at the time of the Slavic invasions and until 1204 is known only as an ecclesiastical center—by the 10th C. it was already a metropolis with one suffragan, increased to 12 in the 12th C. It played a greater role after 1204, first under Latin control, then within the despotate of Epiros. After the battle of Pelagonia Neopatras fell to Byz., but by the end of the 13th C. it was under the authority of independent Thessalian doukes. Circa 1309 John II of Neopatras married Irene, the illegitimate daughter of Andronikos II, and styled himself “the lord of the lands of Athens and Neai Patrai and the doux of Kastoria” (Nicol, Epiros II 74f). The Catalans seized Neopatras in 1319 and retained the city when almost all their possessions had been lost. In 1394 the Ottomans captured Neopatras.

Remains of the largely 13th-C. castle with keep are south of the modern town, on the site of the ancient acropolis. In the town are remains of a three-aisled basilica and in the Church of St. Nicholas spolia of Byz. buildings with an inscription of proedros Demetrios Katakalon, the ktetor of the Church of Hagia Sophia (P. Lazaredes, ArchDelt 16 [1960] 164–66).

NEOPHYTOS ENKLEISTOS (Νέοφυτος Ενκλειστός), Cypriot monastic writer and saint; born Leukara, Cyprus, 1134, died after 1214; feastday 24 Jan. At age 18, he left his poor family and was tonsured at the monastery of John Chrysostom on Mt. Koutzoubendes; there he worked five years in the vineyard, received some education, and became subascanzant (parekklesiarches). Then he left the monastery and traveled through Palestine. After his return to Cyprus, when he was about to journey to Latros, Neophytos was arrested, robbed of two nomismata (the price of the fare), and barely escaped imprisonment. He endeavored to become a solitary hermit but had difficulty getting permission: in 1159, when he withdrew to a cave near Paphos, the local bishop ordered him to receive disciples. Although Neophytos spent some time as a recluse (enklestos), he was closely connected with the monastery of Enkleistra, which he had founded and provided with a typikon (second version in 1214). He wrote various books on ecclesiastical subjects (panegyrics, catecheses,
NEOPATONISM, a modern term for the philosophy of Plotinos and of the philosophical schools that he inspired, which flourished principally at Athens and Alexandria through the 6th C. Like his immediate predecessors ("middle" Platonists), Plotinos sought in the dialogues of Plato a systematic philosophy. Taking advantage of Aristotelian and Stoic ideas, he reached conclusions of some originality and cogency. The material world he saw as a unified whole, organized and sustained by soul (psyche), which acts as the transmitter to matter of form inspired by models found in another radically different type of reality corresponding to Plato's realm of Forms (or Ideas). This is a reality from which soul itself derives; it is outside space, time, and body and is the object of thought and the very activity of a transcendent divine intellect or mind (nous). This intellect and its object of thought, as multiple, presuppose in turn a first principle, the "One," which as prior to ("beyond") being (the Forms) and intellect transcends the knowable and the speakable; at the same time it must also be that from which all else, in descending hierarchical order (nous, psyche, material world), must derive its existence, each level existing from and in orientation (epistrophe) to the level above it.

The lowest level, matter, although ultimately derived from the One, as that which receives form, must remain impassible and is therefore absolute evil, according to Plotinos. It also gives rise to moral evil in souls that become engrossed in the material world and forget their original nature and mission as a progression outward from the realm of divine intellect as expression of the perfection and power of the One. Man's happiness depends on orientation toward and a return (ascent) to the One; PHILOSOPHY is the method required for achieving this "assimilation to God" (Plato, Theaetetus 176b). This flight from the world is balanced, however, by a desire to communicate perfection and reform the lesser, a desire that can show itself in political as well as personal life.

Plotinos's pupil Porphyry did much to publicize this philosophy and also to antagonize Christian leaders (on the difficult relations between Neoplatonism and Christianity, see PHILOSOPHY). Porphyry's pupil Iamblichos founded a school in Syria that influenced Emp. Julian and stimulated a revival of Platonism at Athens, the principal figures of which were Syrianos, Proklos, Damaskios, and Simplicios. Proklos's pupil Ammonios became head of the Neoplatonic school at Alexandria, with which were associated Asklepios, John Philoponus, Olympiodorus of Alexandria, Elias of Alexandria, David the Philosopher, and

Stephen of Alexandria. The Neoplatonic schools developed Plotinus's philosophy in various ways, integrating much of Aristotle’s logic, physics, and ethics in the curriculum, elaborating and modifying Plotinus’s metaphysics and “harmonizing” it with the revelations of the Chaldean Oracles (which included theurgical rites) of the Egyptians, Orphics, Homer, and Hesiod. In 529 Justinian I severely curtailed the activity of the Academy of Athens and provoked a temporary exile of seven philosophers at the court of Chosroes I in Persia. The school at Alexandria continued, however, possibly thanks to some cooperation with church authorities. Besides determining the form in which philosophy (and in particular logic) was taught in the earlier part of the Byz. period, as exemplified by Maximos the Confessor and John of Damascus, Neoplatonism was later revived as a philosophy by Michael Psellos and by Plethon.

-D.O’M.

NEREIDS, sea nymphs, daughters of the sea god Nereus, one of whom was Thetis, mother of Achilles. They are often mentioned in late Roman epic: thus, Quintus of Smyrna (3:662) speaks of the “deathless Nereids” and frequently alludes to Thetis and other Nereids plunging into the depths of the sea. Nonnus of Panopolis calls Ino “a Nereid who has charge of untumultuous calm” (Dionysiaka 10:124–25), alluding to the nymphs’ function as helpers at sea. Elsewhere he describes a Nereid seated upon a dolphin and paddling with her wet hand (Dionysiaka 1:72–75) or a Nereid in long flowing robes who drives unbridled the bull of Zeus, which walks upon the waters (1:101–03). In Byz. hagiography the function of helping at sea was transferred from Nereids to plain dolphins, as, for example, in the vita of Basil the Younger.

In modern Greek folklore, Nereids have assumed an important role, and their name is linked to the vernacular nere, “fresh water.” In contrast to “bodiless” angels Nereids are imagined in corporeal form, working mischief upon men, women, and children. Byz. sources reveal neither the date nor the manner of this transformation of Nereids into water demons.

Lit. Lawson, Folklore 130–46. -A.K.

NEREZI, site in Macedonia of the Church of St. Panteleemon. According to an inscription over the entrance, the church was founded in 1164 by Alexios Komnenos, son of Theodora Porphyrogennete and scion of the Angelos family (Ostrogorsky, Byz. Geschichte 166–82). The building, constructed of irregularly cut stone and brick laid in thick mortar beds, has a domed cruciform core. Arches, vaults, and ornamental details are realized in brick. The corner bays to the west are separate chapels opening from the narthex; those to the east function as pastophoria. Frescoes of the original foundation were discovered on the walls of the church when it was cleaned in 1923. Included among the scenes from the cycle of the Passion of Christ is one of the earliest examples of the Threnos in monumental painting. In the narthex and narthex chapels are sequences of hagiographical illustration. The expressive temperament of the frescoes, like those at Kurbinovo and Kastoria, is characteristic of Macedonian monumental painting in the later 12th C.

NERSÉS. See also Nares.

NERSÉS I THE GREAT, saint, great-great-grandson of Gregory the Illuminator, and hereditary patriarch of Armenia (353?–373?). Nersés was a dominant figure in the history of the Armenian Church, though the precise dates of his pontificate are still debated. Consecrated at Caesarea in Cappadocia, as were most of his predecessors, Nersés may have been known to his contemporary, St. Basil the Great, with whom he is occasionally confused in Armenian sources. The council called by him at Aštšat (ca.354) introduced a number of Byz. usages into the Armenian church. Nersés is particularly renowned for his many charitable foundations possibly influenced by those of Eustathios of Sebaste. Nersés probably headed the embassy sent to negotiate a peace
between the Persians and Byz. in 358, but his opposition to the arianizing policy of Constantius II and of the Armenian kings led to a long exile from ca.359 and his eventual murder. The tradition that he was present at the First Council of Constantinople (381) is clearly apocryphal. The refusal of Caesarea to consecrate the successor of Nersès presumably broke the link between it and the Armenian church.

LIT. Garsóan, Armenia, pts. V–VII. —N.G.G.

NERSÉS OF LAMBRON, Armenian churchman, author, and translator; born 1153 at Lambron in the western Taurus, died Cilicia 1198. Son of the lord of Lambron and a member of the Het’umid family, at age 22 he became Armenian archbishop of Tarsos. He was important in the ecclesiastical and political life of Armenian Cilicia, and promoted friendly relations with the Greeks and Crusader states. The Oration he delivered at the Synod of Hrom-klay (the patriarchal see) in 1179 reflects this irenic spirit. In 1190 Prince Leo II/I Rubenid sent him to meet Frederick I Barbarossa, but the emperor had drowned before Nersès reached Seleukeia, and his heir, Henry VI, was reluctant to crown Leo. Alexios III Angelos, anxious to prevent an Armenian entente with the Latins, promised the crown to Leo, and in 1197 Nersès traveled to Constantinople for preliminary negotiations but was disillusioned by the Byz. A scholar and literary figure, he sought out texts as yet unavailable in Armenian, notably in the Greek and Latin monasteries on the Black Mountain. His translations include the Benedictine Rule, the Syro-Roman Lawbook, and a version of the Revelation of John. His more noteworthy original compositions include commentaries on the Psalms, Proverbs, Ecclesiasticus, 12 Minor Prophets, the liturgy; an elegy on NERSÉS ŠNORHALI; letters; and homilies.

NERSÉS ŠNORHALI (“gracious”) or Klayec’i (“from Hrom-klay,” the patriarchal see in Armenian Cilicia); born Covk’ (near mod. Elazig) 1102, died Hrom-klay 15 Aug. 1173. A member of the Pahlavuni family, he was a brother of the katholikos Gregory III (1113–66) and himself became katholikos (1166–73).
In 1165 Nersès initiated discussions with the protostrator Alexios Axouch, concerning union of the Greek and Armenian churches. The exchange of views between Cilicia and Constantinople was continued on the Greek side by Theorianos, and after Nersès’s death by his nephew Gregory Tzav on the Armenian side, but eventually came to nothing.

Nersès is esp. renowned for his religious poetry. His longer works include Lament on the Fall of Edessa (to Zangi in 1144), Jesus the Son, and On Faith. His Encyclical Letter is ironic toward the Greek church, and his letters are important for their exposition of the Armenian theological tradition.

NESEBUR. See Mesembria.

NESAAN (‘Auja al-Hafir in Israel), settlement in the Negev situated on a trade route between Gaza and Sinai; it was fortified and garrisoned (421–22?) with “very loyal Theodosians” by Theodosius II (?). An inscription records that another building was constructed there under Justinian I and Theodora. Churches were built there in the 5th and 6th C., and the excavators believe that the fort of Nessaan was converted to a monastery in 598–605. In 601/2 three more churches were built with the donations of various laymen whose names are inscribed on individual architectural elements. Excavators also found the Nessaan papyri, literary papyri, and several archives dating from the 6th to late 7th C.

-M.M.M.

NESAAN PAPYRI, Greek, Latin, and Arabic documents and literary material found in 1935–37 at Nessaan in the Negev, constituting one of the few papyri finds outside Egypt. Nessana was a Byz. military and ecclesiastical outpost, located on the trade and pilgrimage routes; the town remained prosperous until well after the Arab conquest. The papyri date from the early 6th to the late 7th C., although there is a gap ca.600–70. The documentary papyri come from the archives of the garrison, the noble families of church dignitaries, and the later Arab administration. They include contracts, accounts, receipts, requisitions, sales, loans, documents of family law, and ecclesiastical and private letters. The literary papyri comprise school texts including a bilingual Vergil glossary and Latin Aeneid codex, a legal text, and theological works including New Testament books, the “Abgar letter,” hagiography, homilies, and catechetical writings. Presumably they were studied in the monastic school at Nessaan. As a whole the Nessana papyri illustrate the flourishing of a Byz. Palestinian town and its decline in later Umayyad times.
NESTONGOS (Νεστόγγος), a family of probably Bulgarian origin that entered Byz. service after 1018. Some seals of 11th- and 12-C. Nestongoi are known, including the nun Xene (Laurent, Corpus 5.3, no.2014). The family is also mentioned in the typikon of the PANTOKRATOR MONASTERY in Constantinople. Although they were related to JOHN III VATATZES, two of them conspired against the emperor: Andronikos escaped to the Turks, but his brother Isaac was arrested, blinded, and mutilated. However, the Nestongoi retained prominence: Theodore II reportedly planned to make George Nestongos his son-in-law.

Under the Palaiologoi the Nestongoi held important posts and possessed much landed property. The family intermarried with the DOUKAI; many of its notable members bore the combined name of Doukas Nestongos, such as Alexios (governor of Thessalonike and pin kernes in 1267), Constantine (parakoimomenos tes megales sphendones and governor of Nyssa ca.1280–84), a megas he taieriarches (first name unknown) and primikierios tes aules in 1304, Roger de Flor’s enemy. Another Doukas Nestongos served Stefan Uroš IV Dušan (Ostrogorsky, Serska oblast 98). Several other Nestongoi are known, from Michael (a relative of Michael VIII, protosebastos and great enemy of the ARSENITES) to Laskaris Nestongos (an official in 1385). Eudokia Nestongonissa, the wife or widow of a megas papias, appeared in 1315 as an aunt of Andronikos II. The hymnographer Nestegon, who composed an office on PALAMAS, may have belonged to the family.

NESTORIANISM (Νεστοριασμός—THEODORE LECTOR, HE 111.1), theological doctrine developed in the first half of the 5th C. by Nestorios (who gave the name to the movement), supported by DIOCELOTUS OF TARSOS and THEODORE OF MOPSUETIA. Nestorianism was directed against the partisans of APOLLINARIS of Laodikeia; the Nestorians also considered Cyril of Alexandria as an Apollinarist, and probably the most dangerous one. While the Monophysites (see MONOPHYSITIS) emphasized the union of two natures in Christ, a union in which the human nature seemed to have been engulfed by the divine physsis, the Nestorians underscored the human principle in Christology. Although they repeatedly asserted (and to some extent believed in) their adherence to “the Orthodoxy of Pope Leo the Great and Patr. Flavian,” they preferred the term synaphea (conjunction) to the Orthodox henoosis (unity) to designate the relationship between the two natures in Christ; they denied the hypostatic unity of Christ, accepting only the prosopic unity—two hypostases in one prosopon; they rejected the epi-
that Theotokos for the Virgin, replacing it with Christotokos, the mother of Christ.

Opponents accused the Nestorians of acknowledging the existence of two distinct Sons of God—a charge that they jealously denied—but they evidently put more stress on Christ's humanity than did the Chalcedonians. Accordingly they paid greater attention to the problems of will and ethics in their soteriology, which resembled Pelagianism; man's active role in overcoming his sinfulness was so striking in Nestorian belief that their opponents ascribed to them the view that Christ did not lack the capacity to sin but liberated himself by the effort of his will.

Defeated and condemned at the Council of Ephesus in 431, the Nestorian bishops rejected the alliance concluded by Cyril of Alexandria and John of Antioch in Apr. 433 and the election of Attakos to the see of Constantinople; they established a separate church, which received its form and its name at the Synod of Seleukeia-Ctesiphon in 486 (W.F. Macomber, OrChrP 24 (1958) 142–54). The Nestorian church gained a firm foothold in Persia and in some regions of Syria and spread its influence to northern Arabia and eastward to India, Central Asia, and China; it probably was popular among merchant communities in the Persian and later the Arab world and beyond. Their main theological schools were active in Seleukeia and Nisibis. The Nestorian synod of 612 formulated a doctrine incompatible with the tenets of Chalcedon, since it accepted two hypostases in Christ but a single prosopon and rejected the term Theotokos. The theologians of Nestorianism developed the concept of seven sacraments but did not include marriage in this number; they did consider the "sign of the cross," however, as a sacrament.

A.K.

NESTORIOS (Νεστορίως), bishop of Constantinople (10 Apr. 428–22 June 431); born Germanikeia ca.381, died Egypt after 451. Nestorios entered the monastery of St. Euprepios at Antioch and may have studied with Theodore of Mopsuestia. In Antioch he earned a reputation as an orator and was summoned by Emp. Theodosios II to Constantinople. There he acted as a rigorous moralist, preaching against games and theaters; in his criticisms he offended Pulcheria. He showed himself to be a fierce opponent of Arians and Novatians but supported Pelagian bishops deposited in Italy. The major controversy incited by Nestorios resulted from his objection to the term Theotokos for the Virgin: he pointed out the difficulty in accepting the idea that Mary gave birth to God, but he was opposed by Cyril of Alexandria and Pope Celestine, who stressed soteriological concerns rather than exactness of philosophical definition (H.J. Vogt in Konzil und Papst [Munich-Paderborn-Vienna 1975] 97). The Council of Ephesus in 431 condemned both sides, trying in vain to suppress the controversy, stimulating instead the movements of Nestorianism and Monophysitism. Nestorios was exiled to his monastery at Antioch, then to Petra, and finally to the Oasis in Upper Egypt. Before his death he accepted the decisions of the Council of Chalcedon.

Sokrates (Skr. HE 7.92) asserted that Nestorios only appeared to be eloquent and educated but that he did not understand "the ancients." In general, Nestorios was a victim of his Monophysite and Orthodox adversaries and his works were destroyed within the empire; only a Syriac translation of his Bazaar of Herakleides and some fragments (in Greek, etc.) exist, although Gennadius of Marseille Believed many of his writings. Whether Nestorios was essentially Orthodox (M.V. Anastos, DOP 16 (1962) 117–39) or not (G. Jouassard, RHE 74 (1979) 346–48) is still under dispute.

T.E.G.

NESTOR OF THESALONIKE, saint executed by Maximian in Thessalonike; feast day 26 or 27 (Synax.CP 167) Oct. According to a legend in-
included in the passio of St. Demetrios of Thessalonike. Nestor, a Christian youth, killed in single combat Lyaios, Maximian’s favorite, with the help of the “god of Demetrios,” thus infuriating the emperor and causing his and Demetrios’s execution. Strangely enough, Nestor plays an active part in the early passio of Demetrios, whereas Demetrios himself is restricted to a passive role. The Synaxarion of Constantinople (Synax.CP 1671) and the Menologion of Basil II (PG 117:129AB) include short notices on Nestor. Some enkomia (e.g. by Joseph of Thessalonike [762–852]) on Nestor are preserved.

Representation in Art. Nestor’s association with Demetrios (his feast is independent but celebrated on the same day) means that his portrait is sometimes included when only that of Demetrios is actually warranted (e.g., menologion of Symeon Metaphrastes, Vienna, ÖNB hist. gr. 6, fol. 3v). A depiction of his beheading accompanies his notice in the Menologion of Basil II (p.141 of facs. ed.), while other episodes of his life, such as his murder of Lyaios, are illustrated in Demetrios cycles. Nestor, a young man with somewhat unruly dark hair, is reckoned one of the military saints, and dressed accordingly.

—A.K., N.P.S.

NEUMATA (νεύματα, sing. νεύμα), graphic symbols (see Notation) representing one or more musical notes attached to sacred words. The use of signs to designate melodic movement for Byz. liturgical texts may be traced back at least to the 9th C. The ekphthetic signs, those in lectionaries, are used sparingly, usually at the beginnings and endings of sentences. They indicated the manner of recitation without specifying actual pitch or offering further details about the melodic contour.

Other neumatic signs evolved and developed in the 10th–15th C. Two stages may be distinguished: (1) neumata of the 10th–12th C., believed to originate in the prosodic signs or accents of the Alexandrian grammarians (recent scholarship has divided this stage into two types—the so-called Chartres notation using complex signs to stand for entire groups of notes and the so-called Coislin notation designating each melodic step by a separate sign); and (2) neumata of the 12th–15th C., in which each sign specifies the precise interval between one note and its neighbor. The neumata that move in steps are called somata (“bodies”) and those that leap are called pneumata (“spirits”).

—D.E.C.

NEW TESTAMENT (Καινή Διαθήκη), the second part of the Bible, consisting of the Gospels, Acts, the Epistles of Paul and other apostles (James, Peter, John, and Judas [the so-called catholic epistles]), and the Apocalypse attributed to John. The New Testament canon was formed during the 2nd–4th C. and its contents were finally established by Athanasios of Alexandria in his 39th Easter letter of 367; dispute concerning the canon (esp. Apocalypse) nonetheless persisted. The text of the New Testament was preserved primarily in parchment codices, either together with the Old Testament, as a separate book, in its separate parts (Gospel book, etc.), or in the form of the lectionary.

Church fathers understood the word diathèke to mean a covenant between God and his people. The old covenant established by Moses culminated in the work of John the Baptist. Christ established a new covenant that passed from Israel to the “new Israel,” the Christian community. Thus the New Testament, without annulling Mosaic law, reflected a higher level of relation between God and man. John Chrysostom (PG 51:284–2–5) compared the Old Testament with a mother’s milk and elementary education, while the New Testament offered solid food and philosophy. In the words of Maximos the Confessor (PG 90:677CD), the Old Testament raised the body to the soul, thus impeding the mind’s descent to the body; the New Testament led the body to God, purifying it by fire.

—J.L., A.K.

NEW TESTAMENT ILLUSTRATION. New Testament imagery forms the basis of Byz. art as we know it. Within the New Testament, the Gospels predominate. The Apocalypse, accepted as
canonical only in the 14th C., never entered the liturgy, and its imagery was rarely exploited. The Epistles were illuminated at most with portraits of the various authors and an occasional scene from their lives. Acts had a coherent tradition of illustration, but this survives in only three Byz. cycles. Imagery from the Gospels was enriched by the apocrypha, not only the Protoevangelion of James, which narrated the early life of the Virgin, but also the 7th-C. homilies based on the Transitus Mariae (a group of texts on the Dormition of the Virgin) describing the Passion and Anastasis, the lives of those Apostles treated sparsely in Acts, and the apocalyptic texts associated with Peter and Ephrem the Syrian.

The most distinctive creation of Byz. New Testament illustration was the depiction of the Great Feasts, each one the image of an event designed to stand not only for the event itself but for the Church feast that—by celebrating it—made it perennially present. Fully developed by the 10th C., these images constituted a ready pool of stable, well-understood compositions available for use in countless contexts. The feasts are the staple of monumental painting; along with the single figure, they dominate icon painting; they appear on ivories and steatites used for private devotion; they adorn jewelry. They provide the most consistent body of material for illuminated MSS, accompanying the texts for each feast in liturgical books of all kinds, in homiletic compilations and in Gospel books, even though several of these images—notably the Anastasis for Easter—draw primarily on apocryphal texts. They signal the importance of the liturgy for the shaping of Byz. art.

First Period (4th–6th C.). Historically speaking, New Testament imagery is rooted in the pan-Mediterranean art of early Christianity and is inseparable from it. In Dura Europos no less than in Rome, New Testament imagery was at first limited to iconic scenes, primarily of the Miracles of Christ, that served along with Old Testament vignettes of salvation from death as signs of the saving power of the Christian faith. The triumph of the Church in the early 4th C. generated a wave of eschatological images analogous in their iconography to imperial triumphal art. These gave new focus to scriptural imagery, presenting Christ's life as a triumphant victory over death and a path to sovereignty. The ensuing century saw a radical expansion not only in subject matter, which now embraced both Gospels and Acts, but in physical setting, as a public, monumental art began to emerge. The eschatological themes moved up into apses and domes ("Tomb" of Galla Placidia in Ravenna; Rotunda of St. George and Hosios David in Thessalonike). The Gospel episodes were gathered into coherent cycles. First among these was the Infancy of Christ, followed by his Miracles; the Passion, still usually without the Crucifixion, developed by the early 6th C. in response to an emerging emphasis on the sacrificial as well as the triumphal aspect of Christ's humanity.

Second Period (6th–7th C.). In the eastern Mediterranean, ample material survives to allow focused study of 6th–7th-C. Byz. art. By this time, New Testament imagery was quite fully developed. With few exceptions, the thematic material of all subsequent compositions had been established; lengthy Gospel cycles already appeared in MSS and monumental painting. Narrative was not the primary function even of the lengthy cycles, however. Typology is overt—witness the prophets who accompany the scenes in the Sinope and Rossano Gospels; the scenes of the Infancy of Christ are amplified by apocryphal vignettes emphasizing the union of human and divine; at Sant'Apollinare Nuovo, Ravenna, the cycles reflect both liturgical usage and Christological thought. The miniatures of the Rabbula Gospels, some simple and some richly interpretative, also reflect the multiplicity of levels on which this art is intended to function. Significant for the future in this respect are the compositions of Christ's Epiphanies found on the Monza and Bobbio Ampullae. Incorporating elements of the pilgrimage sites, they connoted the sites themselves; they also conveyed theological messages; above all, they stood for the theophanies represented—to see one was to see the event's divine meaning revealed. In several cases, they inaugurated imagery that would eventually become standard for the depiction of the Great Feasts.

Third Period (8th–12th C.). The quantity of surviving Eastern Christian material dwindles during the Arab expansion and Iconoclasm, and an extensive artistic tradition reasserts itself only in the later 9th C. The intervening centuries, labeled the era of Iconoclasm, produced a slow, fundamental realignment of Byz. that goes far beyond Iconoclasm itself. The Byz. culture that emerged was dominated intellectually by a small,
Constantinopolitans aristocracy; its art served the interests of the highly centralized church and state, whose patterns the provinces echoed. This centralization is reflected sharply in the 10th-C. codification of liturgical books and the attendant development of the powerful liturgical icons. A new, courtly composition of the Last Judgment emerged. Small, usually vaulted, private churches were in favor; the extensive Gospel cycles of the old, congregational churches, though retained in some cases, suited these interiors less well than condensed cycles; by the 11th C. one finds the "classic" system of condensed imagery: the hierarchic decoration based primarily on the feast icons. The plenitude of Early Christian Gospel and Acts imagery was, however, maintained in MSS that became a reservoir for the variations that constantly vitalized the classic system.

Throughout the arts, imagery focused ever more sharply on the life of Christ, esp. his human death in the Passion and its reenactment in the liturgy. The exegetic intellectuality of MSS like the Paris Gregory gave way to an expressive devotional imagery of strong personal appeal. This developed in conjunction with the affective amplification of Holy Week ceremonies in the liturgies of private monasteries. To the Passion cycle were added emotive extrabiblical scenes (Threnos, Man or Sorrows), and episodes in the Infancy of Christ were invested with poignant foreshadowings of his death. Mary acquired new prominence. This development must have taken place to a fair extent in MSS and above all in icon painting, which expanded in both numbers and iconography in the 12th C. Later 12th-C. monumental cycles also abandoned the classic repertoire of feast scenes in favor of more sacramental themes.

Fourth Period (13th–15th C.). Like Gothic art, the imagery of the Palaiologan period is visually detailed and intellectually intricate. Few of the images are actually new, though they are used in new contexts. Thus familiar scenes of the life of the Virgin now illustrate the Akathistos Hymn for the first time. The Akathistos appears more often in monumental painting than in MSS; this is not surprising, as the illuminated MS nearly vanished as a vehicle for New Testament imagery in the 14th and 15th C. Monumental painting, by contrast, displays cycles of unprecedented length and detail. These, again, draw largely on extant images, but assemble and amplify them. Long, coherent cycles develop around secondary themes like the ministry of John the Baptist, the trial of Christ, or the preparation for the Crucifixion; analogies such as that between Christ's descent into the humidity of the cave at birth, into the depths of the sea at Epiphany, and into the darkness of Hell at death are visualized more vividly; and typological parallels like the Prefigurations of the Virgin are developed with unprecedented fullness. Perhaps most distinctive in Palaiologan imagery is its use of allegory, as in the image of the Virgin Zoodochos Pege (see PEGE). Rare in Byz. art before the 14th C., allegory becomes a major Palaiologan contribution to post-Byz. iconography.

Nicæa (Nikaa, mod. Iznik), city in Bithynia. One of the greatest Byz. cities, capital of an empire in the 13th C., and seat of two ecumenical councils (see Nicæa, Councils of). Nicæa prospered from its location on major trade and military routes and its control of an extensive fertile territory. In late antiquity, it was a large, powerfully fortified city filled with civic and private buildings laid out on a regular plan. It was a major military base—site of the proclamation of Valens as emperor and of the revolt of Prokopios—and seat of an imperial treasury where tax revenues were deposited. Earthquakes in 363 and 368 combined with the growth of Constantinople provoked decline; many civic buildings fell into ruin, to be rebuilt by Justinian I. During these centuries, the church of Nicæa flourished: Valens made it a metropolis independent of its ancient rival NikomeDEIA; conflicts between the two sees flared at the Council of Chalcedon, originally planned to meet in Nicæa.

After a period of obscurity, Nicæa frequently appears in the 8th C. and later as a powerful fortress: in 715, it was the refuge for Emp. Anastasios II, and in 716 and 727 it resisted Arab attack; the city was a major bulwark on the highway that led to Constantinople. Damage from the siege of 727 was compounded by an earthquake in 740. Nicæa, base for the revolt of Artabasdos, became capital of Opsikion in the 8th C. In the 10th C., Nicæa was a center of administration and trade, with a Jewish community and an im-
perial xenodocheion. Rebels sought to control it as a strong point near Constantinople: Bardas Skleros, Isaac I Komnenos, Nikephoros III Botaneiates, and Nikephoros Melissenos all fought in and around Nicaea. When Melissenos joined Alexios I in the West in 1081, he left Nicaea to his Turkish allies, who soon assumed control. Nicaea was thus capital of the first Turkish state in Asia Minor until the First Crusade captured it in 1097 after a long siege, their first victory in Asia and the only time in history that Nicaea succumbed to direct assault rather than blockade. Alexios I took control of Nicaea from the reluctant Crusaders and defended it against the Turks. In 1147, Nicaea was the supply base for the abortive Second Crusade and in 1187 unsuccessfully revolted against Andronikos I.

After the fall of Constantinople in 1204, Nicaea at first took an independent position, but recognized Theodore I Laskaris in 1206; he was crowned there in 1208. From that date until 1261 Nicaea served as capital of the empire (see Byzantium, History of: Empire of Nicaea), although John III Vatatzes resided in Nymphaion and Magnesia; it was also the seat of the patriarch and home of many illustrious refugees, notably Niketas Choniates, Nicholas Mesarites, and Nikephoros Blemmydes. Laskarid Nicaea was the scene of frequent synods, embassies, and imperial weddings and funerals and became a center of education, notably under Theodore II Laskaris, who founded and endowed an imperial school. After the recapture of Constantinople, Nicaea declined in importance and prosperity. Neglect of the eastern frontier provoked a serious revolt in the region in 1262, and in 1265 the whole city panicked on rumor of a Mongol attack. In 1290 Andronikos II arrived on a tour of inspection and restored the walls, but the region remained defenseless against a new foe, Osman. Nicaea held out until 1331, when it fell to the Ottomans after a long blockade. When Gregory Palamas visited Nicaea in 1354, its Christian population was severely depleted.

The well-preserved walls of Nicaea, completed in 270, manifest numerous styles of construction representing constant rebuilding, notably in the 8th, 9th, 12th, and 13th C. Originally a single rampart 5 km long with 80 towers, built of rubble and brick, the walls were raised and strengthened before being transformed by John III, who added an outer wall and a moat. The most noted of Nicaea's churches was the monastery of Hyakinthos, known in modern times as the Church of the Dormition. A rectangular structure with a cruciform nave surmounted by a dome on massive pillars and separated from the aisles by arcades, it manifests affinities with a group of cross-domed basilicas and appears to date to the late 6th C. The church was decorated with mosaics whose images, replaced by the Iconoclasts, were restored after 843. It was rebuilt and redecorated after the earthquake of 1065 and stood until 1924. The surviving basilica of Hagia Sophia in the center of the city, probably site of the council of 787, preserves traces of its elaborate marble decoration. Most renowned in the 13th C. was the Church of St. Tryphon, scene of a miracle in which lilies bloomed out of season on the annual festival of the saint, Nicaea's patron. The recently discovered ruins of the church are no longer in evidence. Surviving remains of two other 15th-C. churches have not been identified. Civic buildings have not been preserved, with the exception of the Roman theater, abandoned and used as a quarry and dump after the 7th C. The 15th-C. city is known in some detail, from the enkomia of Theodore Laskaris, delivered before John III ca.1250, and of Theodore Metochites, addressed to Andronikos II in 1290. Although the speeches are filled with extravagant rhetoric, they give an image of the city in its regional context and show that churches, monasteries, charitable institutions, palaces, and houses shared the area within the walls with extensive open spaces.

NICAEA, COUNCILS OF. Two ecumenical councils were convened in Nicaea.

Nicaea I. The first ecumenical council (20 May or 19 June—ca.25 Aug. 325) was convened by Emp. Constantine I to deal with the controversy
over Arianism. No account of its proceedings survives except a list of 20 canons issued by the council, its creed, and a synodal letter excommunicating Arius. The exact number of bishops in attendance is unknown. Various authors give figures between 200 and 300, while church tradition fixes the number at 318 (E. Honigmann, Byzantion 11 [1936] 429–49; idem, Byzantion 20 [1950] 63–71). The council’s creed—probably a revision of the baptismal formula used in Jerusalem—was the first dogmatic definition of the church to have more than local authority. Rejecting Arius’s ontological subordination of the Son to the Father, the council defined the incarnate Logos as consubstantial or homoousios with the Father. This definition’s implication is vital: for Christ were not fully divine, as Arianism proclaimed, then man could not hope to share in divine life or salvation. Even so, the nonscriptural homoousios clause adopted by the council was to cause doctrinal disunity down to 381. The council also dealt with the computation of Easter by ordering its celebration on the Sunday after the full moon following the vernal equinox. Finally, among its disciplinary regulations, canon 6 is important for its recognition of the jurisdiction of Rome, Alexandria, and Antioch. This canon, in effect, marks the origin of the patriarchates.

Nicaea II. Under the patronage of Empress Irene and the presidency of Patriarch Tarasios, this council (24 Sept.–13 Oct. 787) of 350 bishops, including two papal legates, brought to an end the first period of Iconoclasm. Irene’s plan to reverse her predecessor’s policy, however, was momentarily thwarted when soldiers sympathetic to Iconoclasm dissolved its first meeting in Constantinople (31 July 786). Only in the following year (24 Sept.) did the council meet again, this time in Nicaea, where all sessions took place, except its eighth and last formal session held in Constantinople in the Magnaura palace. Its dogmatic decree condemned the “pseudo-council” of Hieria (754) and formally defined the degree of veneration due to images. Its justification of the cult was based, above all, on the reality of Christ’s historic incarnation: the visible and paintable incarnate Christ permitted and, indeed, required pictorial representation. The council carefully distinguished between legitimate veneration due to icons (proskynesis) and absolute worship (latria) due to God (Mansi 13:377–82. The latter, if directed to images, was declared unlawful, a form of idolatry. Indeed, even in the case of proskynesis, the true object of honor was never the image, but that which was depicted. Unlike Pope Hadrian I, who approved the council, Charlemagne, for ulterior political motives (though the faulty Latin translation of the Acta did not help), had it condemned at Frankfurt in 794. Final approval by the West was given in 880. The council is the seventh and last ecumenical council to be recognized as such by the Byz. church.

NICANDER. See Nikander.

NICCOLÒ DA MARTONI, a notary from Campania, the author of Latin memoirs recounting his trip to Jerusalem (June 1394–May 1395). His description is precise and full of personal observations, although his accounts of historical events are sometimes confused. Niccolò visited Cyprus, islands in the Aegean Sea, Alexandria, Mt. Sinai, Jerusalem, Athens, Corinth, Patras, Corfu, and other locales. He describes trade, the quality of wine, ancient monuments (e.g., the Acropolis of Athens), churches, relics, feasts, and legends.

ED. L. Le Grand, ”Relation du pèlerinage à Jérusalem de Nicolas de Martoni,” *ROL* 3 (1895) 566–669.

—A.K.
NICHOLAS (Νικόλαος), personal name. Known in Greek antiquity, the etymology is evidently "victorious people" or "victorious with the people," but in the Roman period the word was used to designate a variety of date sent from Syria, allegedly by Nicholas of Damascus, to Emp. Augustus (Athenaeus, Deipnosophistai, bk.14:652a). The name was infrequently used in the secular milieu of the 5th C. (PLRE 2:789), one of the few examples being the rhetorician Nicholas of Myra. It was more popular with the clergy, esp. in Lycia of the 5th and 6th C. (W. Enslin, RE 17 [1937] 360f). Prokopios (Buildings 1.6.4) mentions a church of Priskos and Nicholas in Constantinople, but not a single man of this name. Nicholas does not appear in Malalas either, but Theophanes the Confessor has three: the saint of Myra, a former deacon, and a "heretical" hermit. After the 9th C. the frequency increased: Skylitzes has 13 Nicholas, Anna Komnene six, and in acts Nicholas are even more numerous. In Lauda, vol. 1 (10th–12th C.), Nicholas (42) are second only to John and in Lauda, vols. 2–3 (13th–15th C.), they hold fourth place, ahead of Michael and Theodore. No emperor bore the name, but four patriarchs between the 10th and mid-12th C. were called Nicholas.

NICHOLAS I, pope (from 24 Apr. 858) and saint; born between 819 and 822, died Rome 13 Nov. 867; feastday 13 Nov. He was born to a noble Roman family. As pontiff, Nicholas resolved to establish papal primacy over secular and ecclesiastical power in both the West and East. As his ideological vehicle Nicholas used the pseudo-Isidorian Decretals and effectively exploited political crises in Lorraine, France, Italy, and Byz. In 861 Nicholas managed to depose John of Ravenna (H. Fuhrmann, ZSavKan 75 [1958] 353–58). The conflict between the Byz. patriarchs Ignatios and Photios gave the pope an excuse to interfere in the internal struggles of the Byz. church. Nicholas sent Zacharias of Anagni and Radoald of Porto to Constantinople to investigate the matter; at the Council of 861 in Constantinople they sided with Photios but failed to secure the return of Sicily, Calabria, and Illyricum to Roman jurisdiction. In 863 Nicholas changed his policy, accused Radoald and Zacharias of exceeding their authority, and proclaimed that Photios was uncanonically elected. In its turn, the Council of 867 at Constantinople deposed the pope. Nicholas attempted to take advantage of the success of Constantine the Philosopher and Methodios in Moravia and invited them to Rome. Nicholas also tried to attract the support of Boris I of Bulgaria; Anastasius Bibliothecarius was the pope's staunchest supporter, although it is questionable to what extent he dictated Nicholas's policy. Evaluations of Nicholas range from an enthusiastic panegyric (J. Roy) to the debunking of his policy as a complete failure (J. Haller).

NICHOLAS I MYSTIKOS, patriarch of Constantinople (1 Mar. 901–1 Feb. 907, and May 912–May 925); born Italy 852, died 15 May 925. A friend of Photios, Nicholas fell into disfavor after Photios's dismissal in 886 and sought refuge in the monastery of St. Tryphon, near Chalcedon. Leo VI, his former schoolmate, brought him out of the monastery, appointed him mystikos, and eventually made him patriarch. Soon, however, Nicholas proved recalcitrant: he opposed the tragicomy of Leo and supported the rebel Andronikos Doukas. Replaced by Euthymios as patriarch, Nicholas was exiled to his own monastery of Galakrenai, near Constantinople, but later returned to the patriarchal throne, probably before Leo's death on 11 May 912. Regent after Alexander died in 913, he parted company with the Doukai and after some vacillation sided with Romanos I. Nicholas's restoration as patriarch incited a fierce struggle within the church between his supporters and those of the deposed Euthymios; reconciliation was finally achieved in 920, with the Tomos of Union.

Nicholas's correspondence is a first-rate source for the history of ecclesiastical affairs and of Byz. relations with southern Italy, with Bulgaria under Symeon of Bulgaria, and with the Caucasus region. Nicholas also wrote several canonical works and a very conventional homily on the capture of Thessalonike by the Arabs in 904. Like Photios, Nicholas was a man of critical mind who dared to reject the authority of Old Testament quotations (ep.32.459–64) and to limit the Byz. principle that
the emperor is an unwritten law (ep.32.89–92;304–05). But he lacked originality in his theology and ethics, stressing the traditional view of the instability of the world and praising traditional values such as righteousness, moderation, and caution.

-A.K.

NICHOLAS III (Giovanni Gaetano Orsini), pope (from 25 Nov. 1277); born Rome ca.1215 (according to R. Sternfeld, Der Kardinal Johann Gaetan Orsini [Berlin 1905] 315f), died Sorano 22 Aug. 1280. CHARLES I OF ANJOU was the major threat to the security of papal territory, and Nicholas dealt with him circumspectly. Accordingly, he pursued a cautious policy toward Emp. Michael VIII; thus he refused to excommunicate the allies of Charles in Thessaly and Epirus, but at the same time prevented Charles from attacking Constantinople. After receiving the embassy that the emperor had sent to Nicholas's predecessor John XXI (1276–77), the pope gave the envoys several letters addressed to Michael, his son Andronikos (II), and Patr. John XI Bekkos. While praising the Byz. for accepting union at the Council of Lyons in 1274, Nicholas imposed new requirements; he insisted on a truce between Byz. and Charles. The orders dictated to the pope's muntii were even harsher—Nicholas was very negative toward the Byz. position of maintaining the Greek rite. Runciman argues that Michael made an agreement with Peter III of Aragon (1276–1285) against Charles and bribed Nicholas to join this alliance. Anti-Union resistance in Byz. grew, but Michael dispatched a new mission to Rome to continue negotiations; when the envoys arrived, however, Nicholas was already dead.

NICHOLAS III GRAMMATIKOS, patriarch of Constantinople (Aug. 1084—Apr./May 1111); died Constantinople. According to an unpublished enkomion by Nicholas Mouzalon, Nicholas Grammatikos was educated in Constantinople and lived in Pisdian Antioch (where he probably took the monastic habit). He left this city ca.1068 when it was endangered by Turkish raids (J. Darrouzès, TM 6 [1976] 163, n.4). In Constantinople he founded the monastery dedicated to John the Baptist and called tou Lophou (Janin, Églises CP 418f). After several years Alexios I chose him to replace the deposed patriarch Eustathios Garidas (1081–84). Nicholas inherited several difficult problems: he sided with the emperor in the case of Leo of Chalcidon and in the struggle against heretics, esp. the Bogomils, but he was more cautious in the conflict between provincial metropolitans and the central administration (Darrouzès, Offkia 53f, 65). Despite the vehement opposition of the clergy of Hagia Sophia, he supported Niketas of Ankyra against the emperor's right to promote metropolitans and he tried to restrict the influence of the chartophylax. Nicholas was also concerned about ecclesiastical discipline: he ordered the eviction of the VLACHS from Mt. Athos and dealt diligently with the regulation of fasting (J. Koder, JOB 19 [1970] 203–41).

The political situation prompted Nicholas to seek a union with Pope Urban II. V. Grumel (EO 38 [1939] 104–17), however, ascribed to Nicholas a letter addressed to Symeon II of Jerusalem in ca.1089, in which the patriarch refuted the Latin views concerning the filioque, azymes, and primacy. On the contrary, J. Darrouzès (REB 23 [1965] 43–51) considers it a fake as well as the letter devoted primarily to disciplinary differences such as marriage of priests, fasting on Sunday, portable altars with relics, etc. (J. Darrouzès, REB 28 [1970] 221–37).

Some images previously identified as representing Theodore of Studios may depict Nicholas.

-A.K., A.C.

NICHOLAS IV MOUZALON, patriarch of Constantinople (Dec. 1147–March/April 1151), born ca.1070, died 1152. A member of the Mouzalon
family, Nicholas probably began his career as dī-
daskalos of the Gospels (BASILAKES, Orationes 79.16–
19). Alexios I sent him to Cyprus as archbishop but in ca. 1110 Nicholas abdicated. He spent 37
years in the Kosmidion monastery (see KOSMAS
AND DAMIANOS, MONASTERY OF SAINTS). Nicholas
addressed to Alexios I a treatise on the Procession
of the Holy Spirit (Zeses, infra 309–29) in which he
refuted the concept of the FILIOQUE. Nicholas’s
election as patriarch aroused a fierce dispute about
the canonical validity of occupying a second see
after resigning a first. Basilakes (not an anonymous
rhetorician—as Zeses asserts, p.238) and
NICHOLAS OF METHONE defended Nicholas’s elec-
tion, whereas ZONARAS opposed it. Faced to re-
tire from the see of Constantinople, Nicholas died
soon thereafter. As patriarch Nicholas succeeded
Kosmas II (1146–47), who was involved in (or
accused of) BOGOMILISM, and tried to suppress
popular influence on ecclesiastical culture, e.g.,
he ordered the burning of the vita of PARASKEVE
OF EPIBATAI. Although in principle he supported
the strict prohibition of marriages between close
relatives, Nicholas was lenient with regard to arist-
tocratic families (RegPatr, fasc. 3, no.1029). Be-
sides theological works he wrote a poetic defense of
his abdication from the see of Cyprus that con-
tains vivid pictures of both his journey to Cy-
prus and the tragic situation on the island.

ED. S. Doamidou, “He paraítesis Nikolaou tou Mouza-
lonos apo tes archiepiskopes Kyprou,” Hellenika 7 (1934)
109–50 (cf. E. Pezopoulos, EEBS 11 [1935] 421f.; P. Maas,

LIT. RegPatr, fasc. 3, nos. 1027–35. Th.N. Zeses, “Ho
patriarches Nikolaos IV Mouzalon,” EEThSPTh 23 (1978)
233–330.

NICHOLAS V (Tommaso Parentucelli), pope (from 6 Mar. 1447); born Sarzana 15 Nov. 1397,
died Rome 24 Mar. 1455. The conquest of Con-
stantinople by the Turks occurred during his ponti-
ticate, and some of his contemporaries (e.g.,
Enea Silvio Piccolomini, the future Pope Pius II)
accused Nicholas of insensitivity toward the fate
of the Eastern Christians and the mighty strong-
hold on the Bosporos. The pope’s position was
determined by several factors: his involvement in
a war in Italy, the indifference of European rulers,
and a general perception of the Greeks as schismaticos. The last Greek mission, headed by
Manuel Angelos Palaiologos, arrived in Venice in
Nov. 1452. In response, Nicholas wrote to Con-
stantine XI on 29 Jan. 1453 stating that aid was
conditional on Byz. acceptance of UNION OF THE
CHURCHES (W. Deeters, QFI/ArCh 48 [1968] 365–
68). The papacy did, however, make certain ges-
tures: in May 1453 Nicholas dispatched ISIDORE
OF KIEV to Constantinople with 200 men; on 28
Apr. 1453 the pope appointed Jacopo Veniero
commander of a fleet intended to rescue the be-
sieged Constantinople. The ships had not yet left
Venice, however, when Constantinople fell. The
negotiations about organizing an expedition against
the Turks continued, but the majority of Euro-
pean princes ignored the summonses occasionally
issued by the pope or the German emperor. A
Renaissance pope, Nicholas collected many Greek
MSS and supported Greek scholars who had im-
migrated to Italy.

à Rome et à Venise pour sauver Constantinople (1452–
1453),” BS 14 (1953) 226–44.

NICHOLAS OF ANDIDA (in Pamphylia; Beck
[Kirche 645] suggested Sandida), late 11th-C. theo-
logian. He wrote a treatise on AZYMES probably
as a result of a dispute he had had with the Latins
on Rhodes (ca.1095–1099?). He also wrote a li-
turgical work, Protheoria, a shorter version of which
is preserved under the name of Theodore of
Andida. In the Protheoria Nicholas constantly re-
ferred to the liturgical usage of Hagia Sophia in
Constantinople, which he tried to imitate in his
diocese. Interpreting the liturgy symbolically, he
wanted to see in it the representation not only of
the passion, death, and resurrection of Christ but
also of all the acts of his life, both public and
private. Nicholas also insisted on the polyvalence
of liturgical ceremonies, each of which, according
to Nicholas, could signify two or three different
facts. A short verse summary of the Protheoria is
attributed in several MSS to PSELLOS (P. Joannou,
BZ 51 [1958] 3–9); Darrouzès, however, questions
this attribution.

Darrouzès, REB 25 (1967) 286.

-A.K.
NICHOLAS OF KERKYRA, writer, metropolitan of Kerkyra; fl. ca.1100. He was a participant in the council of 1117 concerning Eustatios of Nicæa. Nicholas wrote a lengthy commentary on Maximos the Confessor, with a verse prologue. His letter of abdication (a genre developed by Patr. Nicholas IV) presents the author as an honest man in a rotten world whose only hope is life in a desert. In enigmatic lines (p.33.76–78) Nicholas contrasts himself, an objective writer, with “the daughter of the emperor,” who praises everything; did he mean Anna Komnene? Nicholas describes human nature bitterly, dwelling particularly on the perfidy of a false friend (p.37.202–03). Lampros identified Nicholas with the anonymous bishop of Kerkyra to whom Theophylaktos of Ohrid addressed two letters; these, dated in 1105–08, describe military and domestic difficulties in the Balkans.

LIT. P. Gautier in Théophylacte d’Achrida, Lettres (Thessalonike 1986) 88–90. —A.K.

NICHOLAS OF METHONE, theologian, bishop of Methone (from ca.1150); born early 12th C., died between 1160 and 1166. His life remains obscure. As panegyrist of Manuel I, Nicholas consistently developed the concept of unity of state and church; not only a victorious general in the east, north, west, and at sea (Logoi dyo, p.6.7–8), but a benefactor of the church as well (p.45.17–20), Manuel himself resembled vigilant saints (p.43.17–20). Nicholas dreamed that Manuel would unite the Western and Byz. churches (p.8.23–27). Unity within the church was Nicholas’s focal concern. He criticized the Bogomils and strictly opposed the transfer of Nicholas IV from the see of Cyprus to Constantinople. Nicholas fought for the perception of the unity of God: he polemized against the filioque, fearing it would lead to denigration of the Second Person of the Trinity, and he emphasized the equality of the Holy Spirit with regard to the divine essence. He rejected the innovations of Soterichos Panteugenos. Stressing the unity of Christ in the act of the Eucharist, Nicholas reproached Soterichos for raising the dispute at a time of danger from barbarians (p.44.1–4,70–72). Nicholas opposed Neoplatonist philosophy; in his refutation of Proklos (J. Draseke unjustifiably questioned Nicholas’s authorship of this work—BZ 6 [1897] 55–91), his method of argumentation was an appeal to the Fathers rather than logic. Optimistic despite all the dangers, Nicholas believed that “our time” could produce genuine piety and dedicated a vita to a contemporary saint, Meletios the Younger.

NICHOLAS OF MYRA, legendary saint; feastday 6 Dec. His cult is mentioned several times in the vita of Nicholas of Sion, who lived near Myra (chs. 8.9. 57.25–26. 76.1–2); the latter’s death is conventionally dated to 10 Dec. 564, even though MSS give different and inconsistent dates. Many of Nicholas’s miracles are the subject of separate stories: for example, On the Three Stratelatai (or stratopedarchai), which was cited already by the priest Eustatios of Constantinople at the end of the 6th C.; and On the tax, in which the administrative and fiscal terminology (chrysobull, sympathia, protonotarios, chartoularios) that is used indicates probably a date of composition in the 9th or 10th C. Sometimes legends about Nicholas’s miracles are combined in groups, as the so-called Three Miracles. Some stories link Nicholas with Constantine I the Great, thus placing the saint’s activity around 300: he appeared to Constantine in a vision and convinced him to release three stratelatai who had been falsely accused of treason and sentenced to death; he visited Constantine on behalf of Myra and received from the emperor a chrysobull exempting the city from taxation (A. Kazhdan in Aphtheroma Svoronos 1:135–38). One of the Three Miracles reflects the raids of Cretan Arabs in the Aegean and should be dated to the 9th or even 10th C. (A. Kazhdan, Byzantion 54 [1984] 176–82).

Surprisingly, a saint who was not martyred for his faith, left no theological writings, and was almost unknown before the 9th C. thereafter
Nicholas, some comprising 16 or more scenes, were very popular in monumental painting and on icons from the 12th C. onward. They emphasize scenes of consecration, the miracle at sea (from the life of Nicholas of Sion), and various episodes of the story of the three generals, a story that revealed the remarkable powers of Nicholas as intercessor.

NICHOLAS OF MYRA, rhetorician; born Myra ca. 430 (not between 410 and 412, as previously believed), died after 491. Nicholas belonged to the school of Gaza and was a teacher in Constantinople, where his brother held a high administrative position. There is no evidence that Nicholas was Christian. The Progymnasmata is his sole surviving work; his other works (Declarations, The Rhetorical Skill) are known only by title. Nicholas was used, directly or indirectly, by some Byz. commentators on rhetoric, such as John of Sardis, John Doxopatres, and Maximos Planoudes.

NICHOLAS OF OTRANTO, southern Italian writer and diplomat; abbot of the monastery of St. Nicholas in Casole (from 1219/20); born Otranto between ca. 1155 and 1160, died Casole 9 Feb. 1235. His monastic name was Nektarios. Nicholas served as interpreter to Benedict, legate of Innocent III to Byz. in 1205–07, and to cardinal Pelagius of Albano in 1214/15. His third visit to Byz. is known only from a letter of his friend George Bardanes. On that occasion Nicholas traveled to Nicaea, probably in 1225 on behalf of Frederick II (G. Weiss, BZ 62 [1969] 369). Nicholas was a Grecophile who wrote in Greek such works as The Art of the Scalpel (a collection of writings on astrology and geomancy); an anti-Jewish dialogue; three anti-Latin syntagmata, treatises on the differences between the Greek and Latin churches with regard to the Filioque, Azyges, etc.; letters; and poems. He also translated some Greek liturgical texts into Latin and corresponded with Greek ecclesiastics. In his dealings with Rome he defended the Greek clergy in Apulia and Calabria. Another Nicholas of Otranto, a Greco-Italian poet and son of Nicholas’s friend and disciple.
Nicholas of Stoudios, monk, politician, and saint; born Kydonia, Crete, 793, died Constantinople, 4 Feb. 868. Educated in a school directed by the Stoudios monastery, Nicholas became a staunch supporter of Theodore of Stoudios, whom he accompanied into exile in Metopa in 815. After the restoration of icon veneration in 843, Nicholas was appointed hegoumenos of Stoudios (846–49), but as a result of ecclesiastical struggles he had to retire. He was then recalled (853) but retired again in 858 in protest against the election of Photios as patriarch. He lived in various places, refusing any reconciliation with the Photians. After reinstating Photios, Basil I entrusted Nicholas once more with the leadership of Stoudios (867).

Nicholas was a renowned scribe. He copied several MSS, including the Uspenskij Gospel Book of 835 (Leningrad, Publ. Lib. gr. 219), the oldest dated minuscule MS. His vita, which was written by an anonymous Stoudite monk ca.915–30, contains substantial information about the second period of Iconoclasm, the struggle between the Photians and Ignatians, and the rebellion of Thomas the Slav. It also includes Nicholas’s prediction of the defeat of Nikephoros I by the Bulgarians in 811 and the story of a pupil of Nicholas who participated in this campaign; contrary to I. Dujčev (in FGH Bulg 4 [1961] 25–27), there is not sufficient reason to identify Nicholas of Stoudios with a different Nicholas, the straitotes, whose legend is contained in the Synaxarion of Constantinople. E. von Dobschütz (BZ 18 [1909] 71f) considered the vita anti-Photian and biased, whereas F. Dvornik (Photian Schism 240) found that it exuded “an atmosphere of peace.”

Nicholas Orphanos, Church of Saint, early 14th-C. church located in the northeastern part of Thessalonike just inside the eastern walls. It was presumably named after its founder or patron, who is otherwise unknown. The original church, now surrounded by later aisles on three
sides, was a simple single-aisled building with a gabled roof and coursed stone and brick construction; brick decoration was used, esp. in the upper parts of the eastern and western ends. Earlier impost capitals were reused in the interior and the original carved templon survives. The interior is almost completely covered with frescoes contemporary with the construction of the church; these include feast scenes, scenes from the Passion, the lives of St. Gerasimos and St. Nicholas of Myra (Śevchenko, Nicholas 42f, pl.23.0–23.13), and liturgical cycles such as illustrations of the Akathistos Hymn and a calendar cycle. To the west of the church are remains of the entrance to the monastery to which it once belonged.

- T.E.G.

NICODEMUS, GOSPEL OF, an apocryphal gospel or commentary (hypomnemata), produced in the 5th C. or even after 555, attributed to Nicodemus. Nicodemus, a Pharisee, is mentioned in the Gospel of John (Jn 3:1–10, 7:50–51) as having shown some support for Jesus. The Gospel consists of two independently written parts: the Acts of Pilate and Christ's Descent into Hell. The first section, known already to Epi-phanios of Salamis, was produced probably in the 4th C. to counter the fake Acts of Pilate issued as anti-Christian propaganda by Maximinus Dalai; Pilate is made to witness the trial, Crucifixion, and interment of Christ. His Acts are accompanied by a description of the meeting of the Sanhedrin (in which Nicodemus played an active part) that testified to the reality of the Resurrection. The second section presents Christ's victory over Satan and Hades, the liberation of Adam, and Adam's encounter in Paradise with Enoch and Elijah, who are granted eternal life and are prepared to fight and kill the Antichrist. The question of the original language is under discussion; Greek, Latin, Syriac, Coptic (the Coptic church praised Pilate as a saint and martyr), Georgian, Slavonic, and other versions have survived. The notion of an early Byz. illuminated Nicodemus cycle and the long-supposed derivation of the Anastasis image from it have recently been rejected (A. Kartsonis, Anastasis: The Making of an Image [Princeton 1986] 10–16).

--- J.I., A.C.

NIELLO (Lat. nigellus), a mixture of sulphur and silver or other metal. It was used for coloristic effect on metal objects, esp. silver domestic and display plate, finger rings, liturgical vessels, etc. Niello's black color contrasts effectively with gold, bronze, and silver to create salient linear effects and inscriptions. Although usually replaced by ENAMEL in and after the 10th C., it was in use as late as the 14th C. (Treasury S. Marco, no.28). If the term enkausis is correctly translated as niello, this medium was also employed on a large scale on the beaten silver floor of Basil I's Elijah chapel in the Great Palace (TheophCont 330.14).

--- A.C.

NIGHT (νύξ). In patristic vocabulary "night" was a metaphor for spiritual darkness and, in a broader sense, for sin, misfortune, and uncertainty. John Chrysostom (PG 59.309.28–41), referring to the apostle Paul (Rom 13:12), considered the present time as night "since we dwell in darkness" and tried to demonstrate that Paul's saying did not contradict the words of Christ (Jn 9:4), who spoke of the present as daytime and of the future as night, "when no one can work."

Representation in Art. The personification labeled Night depended not upon patristic imagery but on Antique models. The Late Antique form of an aged female with wings and a black cloak, found in the Ambrosian Iliad, is replaced in Psalter illustration with a younger woman holding a star-girt veil over her head (Cutler, Aristocratic Psalters, figs. 155, 177, 253). In this guise, as in Octateuch illustration, she supervises the Crossing of the Red Sea. Night appears in the Paris Psalter and elsewhere as the partner of Day but of Dawn (Orthros), who is depicted as a child: Dawn holds her blazing torch upright while Night lowers hers. The figure of Night here resembles Antique images of Selene and Hekate (Buchthal, Paris Psalter, fig.40) and is blue-skinned. Her identity is sometimes indicated in Job MSS by a dark aureole.

--- A.C., A.K.
NIKA REVOLT, uprising in Constantinople (11–19 Jan. 532); the name (lit. “Conquer!”) was the cry of the rioters. The Greens started the mutiny at the Hippodrome; it remains questionable, however, whether the “Acclamations against Kalopoulos” (see KALOPODIOS) refer to this event. The riot was provoked by Justinian I’s severe fiscal policy and the exhortations of his advisers; at the core of the discontent lay fear of a general tendency toward centralization and an assault on the traditional privileges of the factions and the senate (A. Čekalova, VizVrem 32 [1971] 24–39). Soon the Blues joined the Greens, and many senators supported the riot. Justinian ordered arrests of some members of both factions, but this drove the crowd to violence. The rioters attacked and burned government buildings, slew guards, and released the imprisoned; among the destroyed edifices were Hagia Sophia, the Chalke, the Church of St. Irene, the baths of Zeuxippos, and a part of the Augustaion. Urged to yield, Justinian removed the hated John of Cappadocia, Tribonian, and Eudaimon, prefect of Constantinople. As the unrest continued, Justinian ordered Belisarios and a troop of Goths to attack the mob, but they could not quell the movement. On 18 Jan., Justinian tried to negotiate with the mutineers from his kathisma in the Hippodrome, but the crowd rejected his promises and arranged the coronation of Hypatios, Anastasios I’s nephew. In consternation Justinian was ready to leave Constantinople but was stopped by Empress Theodora, who urged him to act. Belisarios and Moundos attacked the Hippodrome and bloodily crushed the revolt. According to Prokopios of Caesarea and Malalas, 30,000–35,000 people were killed. Hypatios and his brother Pompeios were executed on 19 Jan.; thereafter many others were killed or exiled, their property confiscated. The races were stopped perhaps until 537, and, until the reign of Constantine V, the activity of the circus factions remained largely ceremonial.

NIKANDER, didactic poet of the 2nd C. B.C. who composed the Theriaka, concerning remedies for bites from poisonous animals, and the Alexipharmaka, about poisons and their antidotes. The earliest and best MS of Nikander is Paris, B.N. suppl. gr. 247, written and illustrated in the 10th C. Most images depict directly the subject matter of the texts, snakes, scorpions, and plants, and plausibly derive from early sources. Human figures, incorporated into some compositions, demonstrate the effects of the poison or illustrate the author’s mythological allusions. Thus the mention of Orion occasions a representation based upon the constellation figure. The text, popular in Byz., was paraphrased in illustrated MSS of Dioscorides in Vienna and New York and accompanied by scholia in some MSS (M. Geymonat, Scholia in Nicandri Alexipharmaca [Milan 1974]). Planoudes produced a MS containing both poems.

LIT. Weitzmann, Roll & Codex 144f., 167. J. Weitzmann-Fiedler in Age of Spirit. 248f. —R.S.N.
NIKE (Lat. Victoria), in Greek mythology the winged goddess of victory. Late Roman authors (e.g., Himerios, ed. A. Colonna, or.65:29–30; Nonnos of Panopolis, Dionysiake 2:205–07) call her a daughter of Zeus. In Rome Victoria became a symbol of the emperor’s victorious might. The triumph of Christianity led to a heated controversy about the Altar of Victory, which was finally destroyed in 382; the image of Nike turned out, however, to be resilient. At the beginning of the 5th C. the cult of Victoria was still alive in Rome, as attested by Claudian (Al. Cameron, Claudian [Oxford 1970] 237–41). On coins of Herakleios (Grierson, DOC 2.1 [1968] 269) is the globos with Nike, who crowns the emperor, and Grierson suggests (DOC 3.1 [1973] 227) that the inscription “Jesus Christ conquers” on 8th-C. coins is a conscious adaptation of the “Victoria Augusti” of earlier solidi.

It is plausible that the Angel replaced the winged Nike in Christian imagery and that the idea of the victorious cross replaced that of the victorious emperor (McCormick, Eternal Victory 4, n.12). The attitudes and costumes of Nikai on such monuments as the Arch of Constantine are faithfully reproduced in the angels on the Barberini ivory and similar compositions.

NIKEPHORITZES, correctly Nikephoros (allegedly nicknamed because of his youthful among the officials of Constantine IX), principal minister of Michael VII; both Boukellarios, died 1078. During the reign of Constantine X, Nikephoritzes, a eunuch, was twice sent away from court to govern Antioch, allegedly because he had slandered Eudokia Makrembolitissa. During Eudokia’s reign, he was imprisoned; Romanos IV released him and sent him to Hellas as praetor. Upon Michael VII’s accession, Nikephoritzes was appointed logothetes tou dromou. He soon displaced other ministers, even the caesar John Doukas. Nikephoritzes’ administrative ability was grudgingly recognized by contemporaries; he was admired only by Kekaumenos. Attaleiates, who suffered from Nikephoritzes’ policy of fiscal se-}

verity, retails stories of his greed, corruption, and disregard for the empire’s well-being. In establishing a central warehouse (phoundax) at Rha- destos, Nikephoritzes planned to assure Constantinople’s grain supply, tax the grain trade, and provide places for his supporters. Attaleiates’ claim of consequent inflation and scarcity seems exaggerated (I. Karayannopoulos, Byzantina 5 [1973] 106–09). Nikephoritzes recreated the corps of Athanatoi and employed the Turks against Roussel de Bailleul. His charistikon, the Hebdomon monastery, became the focus of his personal estate and revenues. At the accession of Nikephoros III, he fled to Roussel. He was seized and tortured to death lest he regain power.

NIKEPHOROS (Νικηφόρος), personal name. As an epithet meaning “victorious” or “bringing victory,” it was applied to several deities or personifications of ancient Greek mythology and also used, although rarely, as a given name. It remained infrequent in the secular milieu of late antiquity; PLRE gives only one example (2:781). Nikephoros the koubikoudarios, on an inscription from Lydia of the 5th–6th C. At the same time, at least two bishops of this name are known (W. Ensslin, RE 17 [1937] 312). Prokopios does not mention a single Nikephoros, but in Theophanes the Confessor they are relatively numerous (12), as many as Sergios, Theodosios, and Andrew. The name reached seventh place in Skylitzes, right behind Basil and Theodore, and fifth place in Anna Komnene, after Michael. Relatively frequent in the acts of Laura, vol. 1 (10th–12th C.), where Nikephoros edges out Basil and Theodore, the popularity of the name plummeted to eighteenth place in Laura, vols. 2–3 (only 20 individuals). Even more indicative is the case of the collection of acts of Docheiariou: it contains only six Nikephoroi of the 12th–14th C., all of them belonging to the upper echelon of society. In the acts of Esphigmenou, four Nikephoroi, monks of the 11th C., are listed; in addition, we find in the
praktikon of ca.1300 widows of two Nikephoroi (peasants) and a boy of this name.  

NIKEPHOROS, caesar; died on island of Aphasia in the Sea of Marmara after 812. Son of Constantine V by his third wife Eudokia, and half-brother of Leo IV, Nikephoros was crowned caesar in 769. Along with his full brothers—the caesar Christophoros and the nobilissimi Niketas, Anthimos, and Eudokimos—Nikephoros was often the center of opposition to Leo, Irene, and their son Constantine VI. In 776 Leo crowned Constantine as co-emperor and extracted a general oath that Constantine alone would be accepted as emperor. Bypassed in the succession, Nikephoros and his brothers mounted a conspiracy but were denounced to Leo, who spared them.

After Leo’s death in 780 several senior officials, including the logothetes tou dromou Gregory, favored Nikephoros over Constantine, but Irene arrested and exiled them and forced the caesars and nobilissimi to be tonsured, ordained, and made to celebrate the liturgy publicly. Discontent with Irene’s return to power and Constantine’s defeat at Markellai in 792 spurred imperial guards to elevate Nikephoros, but Constantine blinded him, slit his brothers’ tongues, and imprisoned them in the monastery of Therapeia. After Irene deposed Constantine in 797 they sought sanctuary in Hagia Sophia and were there proclaimed emperors, but Irene’s adviser Aetios persuaded them to surrender and exiled them to Athens. In 799 Akameros, “the archon of the Slavs in Belzeta,” and thematic troops from Hellas hoped to elevate one of the five, but Irene imprisoned Nikephoros on Panormos island near Constantinople and blinded his brothers. Fearing a pro-Iconoclastic conspiracy on their behalf, in 812 Michael I moved them to an island in the Sea of Marmara, where they eventually died.

In deposing Irene, the conspirators may have wanted to prevent her proposed marriage to Charlemagne, but more likely they were seeking to block the ambitions of Irene’s adviser Aetios. Although an excellent administrator whose economic and military policies strengthened the empire, Nikephoros is characterized by Theophanes as avaricious, lecherous, tyrannical, even heretical. The “evil notions” of Nikephoros included a general increase in taxes, the extension of the kapnikon to paroikoi of ecclesiastical institutions, the abolition of Irene’s tax remissions, a tax on slaves purchased beyond Abydos, the implementation of the allelengyon, taxes on inheritances and treasures, and a state monopoly on loans with interest. He raised more troops by requiring village communities to underwrite poorer peasants’ military service and stabilized sailors’ income by requiring them to purchase uncultivated land. His financial measures permitted a building and re-fortification program. He established his own law court at the Magnaura to expedite judicial proceedings.

Nikephoros hellenized Greece by transplanting families from Asia Minor to Sklavinia in 810 (Charanis, Demography, pt. XIII [1946], 75–92) and extended Byz. administration westward by creating the themes of Thessalonike, Dyrrachion, Kephallenia, and possibly Peloponnesos (Oikonomides, Lists 350, 352). The election of Patr. Nikephoros I and the revival of the Moechian Controversy provoked religious opposition, esp. from Theodore of Studios. The policies of Nikephoros sparked rebellions (by Bardanes Tourkos and Arsbair); in 807 he dispatched a fleet to quell a revolt in Venice. He could do little against the Arabs and signed a humiliating treaty with the ‘Abbasid caliph Harun al-Rashid. He rejected Charlemagne’s claims to the imperial title, but could not stop the capture of Venice by Pepin in 810. He took the field several times against the Bulgarians and was killed in battle with Krum. Nikephoros was succeeded (very briefly) by his son Staurakios and then by his son-in-law Michael I Rangabe, who was married to his daughter Prokopia.

NIKEPHOROS I, emperor (802–11); born Seleukeia ca.760, died 26 July 811. Nikephoros was of Arab ancestry, according to an oriental source (E.W. Brooks, EHR 15 [1900] 743). He began his career as patrikios, senator, and logothetes tou genikou under Irene. On 31 Oct. 802 Nikephoros was proclaimed emperor by several high civil officials.

NIKEPHOROS I, patriarch of Constantinople (12 Apr. 806–13 Mar. 815), historian, and saint; born Constantinople ca. 750 (Beck, Kirche 489) or 758 (Alexander, infra 54), died monastery of St. Theodore near Chrysopolis 5 Apr. 828. Son of the asekretis Theodore, Nikephoros followed to Nicaea his father, who had been exiled by Constantine V for icon veneration. When Nikephoros returned to the capital, he served as the secretary of the emperors (probably Irene and Constantine VI); then he retired, left Constantinople, and founded several monasteries on the eastern shore of the Bosporos. Circa 802 he came back and was appointed director of the largest poorhouse in Constantinople.

After his election as patriarch in 806, Nikephoros faced serious problems: he had to appease Theodore of Stoudios and his supporters who took advantage of the continuing moechian controversy to undermine imperial authority. Nikephoros failed, and the state applied radical means to silence the stubborn Stoudites. In 815, yielding to Stoudite pressure, Nikephoros had to move to a more consistent stand; he refused to sign the decisions of the Iconoclast council and was exiled to one and then to another of the monasteries he had founded. He wrote several books defending the cult of icons, ca. 814 the Apologeticus minor, and in 818–20 three Antirhetikos. His major task was refutation of those texts that the Iconoclasts used as the basis of their tenets. Nikephoros dismissed the authenticity of the passages they cited from Eusebios of Caesarea and Epiphanius of Salamis. Like Theodore of Stoudios, Nikephoros looked to the pope for support against the emperors.

The Historia Syntomos (Breviarium) of Nikephoros (written probably between 775 and 787) exists in two versions. It describes the events of 602–769 and forms a parallel to the Chronography of Theophanes the Confessor; like Theophanes, Nikephoros presents events from an anti-Iconoclastic viewpoint. Nikephoros, however, does not follow an annalistic system. His geographical terminology is more precise than that of Theophanes, and Nikephoros pays less attention to Constantinople. Nikephoros’s brief Chronographikon is a list of rulers from the creation of the world to 829; it was very popular and was translated into Latin (by Anastasius Bibliothecarius) and into Slavic languages (E. Piotrovskaja, Viz Vrem. 37 [1976] 247–54). The vita of Nikephoros was written by Ignatios the Deacon, who praised his hero’s policy of compromise.

NIKEPHOROS I, metropolitan of Kiev (Dec. 1104–Apr. 1121). He was of Greek origin, but his early career in Byz. is unknown. In Rus’ Nikephoros was conspicuous in nurturing the local church and in advising the local rulers. In 1108 he added Feodosij of Pechera to the synodikon and on 2 May 1115 he helped translate the relics of Boris and Gleb. Four works are ascribed to him, all probably written in Greek, though only Slavonic versions survive (cf. Metr. John II). Nikephoros himself admitted to not speaking Slavonic. The works are (1) a homily for the Sunday before Ash Wednesday (perhaps in fact by Nikephoros II, ca. 1183–1201); (2) a letter to Prince Jaroslav Svatopolković listing the errors of the Latins; (3) a letter to Vladimir Monomach on the same topic, largely reproducing a list attributed to Metr. Doma (ca. 1065–76); and (4) a Lenten epistle to Vladimir Monomach, in which Nikephoros discourses on the three properties of the soul (reason, feeling, will) and on its servants, the five senses. The philosophical exposition turns into an allegory for princely rule and then into practical instruction for Vladimir. Nikephoros is also conjecturally associated with Vladimir in an inscription in St. Sophia in Kiev (S.A. Vysockij, Srednevekovye nadpisi Sofii Kievskoj [Kiev 1976] 48f). V.L. Janin attributes to him Greek seals of “Nikephoros of Rhossia” with the effigy of the Virgin (Aktovy pečati drevnej Rusi X–XV vv., vol. I [Moscow 1970] 48f).

NIKEPHOROS I KOMNENOS DOUKAS, of the Angelos family, ruler of Epiros (ca.1266/8–ca. 1296/8); born ca.1240, died Epiros between 3 Sept. 1296 and 25 July 1298 (D.M. Nicol, RSBS 1 [1981] 251–57). Eldest son of Michael II Komnenos Doukas, he was granted the title of despotes by John III Vatatzes ca.1249–53 and in 1256 married John's granddaughter Maria (died 1258). He accompanied his father to the battle of Pelagonia and resisted Michael VIII's encroachment on the Balkans. After Michael II's death Nikephoros divided Epiros with his half brother John I Doukas, retaining for himself "Old Epiros" from Ioannina to Naupaktos together with the islands of Kerkyra, Kephallenia, and Ithake. Despite his second marriage to Anna, a niece of Michael VIII, in 1264/5, Nikephoros remained an adversary of the emperor, acting in alliance with Charles I of Anjou, whose vassal Nikephoros acknowledged himself to be (14 Mar. 1279). At the beginning of the war against Michael VIII had some limited success. Nikephoros recovered Butrinto, which he delivered to Charles, but in 1281 the allies were defeated at Berat. Michael's death reopened hope for reconciliation, and the basilissa Anna traveled to Constantinople to negotiate a truce. By that time, however, a substantial part of Nikephoros's possessions were already in the hands of the Italians and the rest under the sway of Constantinople. Nikephoros's daughter Thamar (Caterina) married Philip I of Taranto in 1294.

NIKEPHOROS II PHOKAS, emperor (963–69); born ca.912, died Constantinople 11 Dec. 969. Son of Bardas Phokas, Nikephoros replaced his father in 954 as domestikos ton scholon and led the Byz. offensive in northern Syria; in 957 he captured and razed Hadat. In 960 he attacked Crete and in March 961 seized Chandax from the Arabs. After Romanos II died prematurely, Nikephoros claimed the throne but was opposed by the civilian officialdom, headed by Joseph Brin- gas; in April 963 Nikephoros withdrew from Constantinople to Cappadocia, where he was proclaimed emperor on 2 July at the instigation of John (I) Tzimiskes. Nikephoros's army, the military aristocracy, the church hierarchy under Patr. Polyeuktos, and the people of Constantinople supported him. After breaking Brinagas's resistance, Nikephoros entered Constantinople on 16 Aug. 963.

Nikephoros's policies reflected the interests of the army and military aristocracy. In 967 he restricted the peasants' right of protimesis, which had been introduced by Romanos I. In another novel he increased threefold the minimum size of the holding of a stratitotes, linking this change with the introduction of heavy armament. He considered Kataphraktoi the core of the new army. On the other hand, he tried to limit the

NIKEPHOROS II, despotes of Epiros (1356–59) and komes of Kephallenia; born ca.1328/9, died in Acheulian region, spring 1358 (Soulis, Dušan 113–15) or 1359 (Nicol, Epiros II 136f., n.47). Son of John II Orsini (ruler of Epiros 1323–ca.1337) and Anna Palaiologina, Nikephoros was a child when his mother poisoned his father and assumed the regency for her son. When the Byz. launched a campaign to recover Epiros (1338), Nikephoros took refuge in the Morea with Catherine II of Valois, titular Latin empress of Constantinople (1308–46). After his return to Epiros, however, he was forced to capitulate to John (VI) Kantakouzenos. He was betrothed (1340) to John's daughter, Maria, and received the title of panhypersebastos from Andronikos III. The marriage took place in 1342. Nikephoros was given the title of despotes by John VI in 1347 and in the following year commanded a cavalry unit that defended Constantinople against Genoese attack. In 1351 he was appointed governor of the Thracian Hellespont.

After John V regained control of the empire in 1355, Nikephoros succeeded in recovering his ancestral dominions in Epiros and Thessaly. Sometime after 1355 he briefly repudiated his wife for a politically expedient marriage with a sister of Helena, widow of Stefan Uroš IV Dušan, but then recalled Maria. Soon thereafter he was killed in battle with the Albanians.

NIKEPHOROS II, despotes of Epiros (1356–59). Born ca.1328/9, died in Acheulian region, spring 1358 (Soulis, Dušan 113–15) or 1359 (Nicol, Epiros II 136f., n.47). Son of John II Orsini (ruler of Epiros 1323–ca.1337) and Anna Palaiologina, Nikephoros was a child when his mother poisoned his father and assumed the regency for her son. When the Byz. launched a campaign to recover Epiros (1338), Nikephoros took refuge in the Morea with Catherine II of Valois, titular Latin empress of Constantinople (1308–46). After his return to Epiros, however, he was forced to capitulate to John (VI) KANTAKOUZENOS. He was betrothed (1340) to John's daughter, Maria, and received the title of PANHYPERSEBASTOS from ANDRONIKOS III. The marriage took place in 1342. Nikephoros was given the title of DESPOTES by John VI in 1347 and in the following year commanded a cavalry unit that defended Constantinople against Genoese attack. In 1351 he was appointed governor of the Thracian Hellespont.

After John V regained control of the empire in 1355, Nikephoros succeeded in recovering his ancestral dominions in Epiros and Thessaly. Sometime after 1355 he briefly repudiated his wife for a politically expedient marriage with a sister of Helena, widow of Stefan Uroš IV Dušan, but then recalled Maria. Soon thereafter he was killed in battle with the Albanians.

NIKEPHOROS II, emperor (963–69). Born ca.912, died Constantinople 11 Dec. 969. Son of Bardas Phokas, Nikephoros replaced his father in 954 as domestikos ton scholon and led the Byz. offensive in northern Syria; in 957 he captured and razed Hadat. In 960 he attacked Crete and in March 961 seized Chandax from the Arabs. After Romanos II died prematurely, Nikephoros claimed the throne but was opposed by the civilian officialdom, headed by Joseph BRINGAS; in April 963 Nikephoros withdrew from Constantinople to Cappadocia, where he was proclaimed emperor on 2 July at the instigation of John (I) Tzimiskes. Nikephoros's army, the military aristocracy, the church hierarchy under Patr. POLYEUKTOS, and the people of Constantinople supported him. After breaking Bringas's resistance, Nikephoros entered Constantinople on 16 Aug. 963.

Nikephoros's policies reflected the interests of the army and military aristocracy. In 967 he restricted the peasants' right of PROTIMESIS, which had been introduced by Romanos I. In another novel he increased threefold the minimum size of the holding of a STRATITOTES, linking this change with the introduction of heavy armament. He considered KATAPHRAKTOI the core of the new army. On the other hand, he tried to limit the
wealth of the church and in 964 prohibited land donations to ecclesiastical institutions; he supported Athanasios of Athos, whom he mistakenly regarded as a proponent of the "poor church." Nikephoros continued his offensive against the Arabs: in 965 he took Cyprus, Tarso, and Mopsuestia; in 969 Michael Bourztes seized Antioch, and soon thereafter the Byz. captured Aleppo. Nikephoros attempted reconciliation with Otto I the Great, but refused to pay tribute to Bulgaria and attempted to crush his neighboring rival with the assistance of Svjatoslav of Kiev. At the end of his reign he lost popular support, in part owing to the strict fiscal policy of Leo Phokas; nonetheless the image of Nikephoros as the "people's king" and genuine hero remained in contemporary literature, such as Philopatris or John Geometres. Nikephoros was murdered by an aristocratic plot of his former supporters (John Tzimiskes, Michael Bourztes) with the help of his own wife Theophano. Apart from coins, the only known portrait of Nikephoros is in a 15th-C. Cretan (?) MS (S. Lampros, NE 1 [1904] 61).

NIKEPHOROS III BOTANEIATES, emperor (1078–81); born 1001/2, died ca.1081 (E. Tsolakes, Hellenika 27 [1974] 150ff). Originating in Phrygian Lampe, Nikephoros claimed kinship with the Phokas family. From the reign of Constantine IX on, he was an active general, aiding the uprising of Isaac I Komnenos. When Nikephoros Bryennios rebelled in the Balkans, Botaneiates revolted in Anatolia ca. Oct. 1077; he had active supporters within Constantinople. With Turkish aid, he advanced and defeated the troops of Michael VII near Nicaea; after Michael abdicated, he entered Constantinople (3 Apr. 1078) and received the imperial insignia. His coronation followed on 2 July (2 June, according to Polemis, "Chronology" 71). About 1179 he married his predecessor's wife, Maria of "Alania" (B. Leib, 6 CEB [Paris 1959] 1:129–40). Already elderly, Nikephoros was ineffectual; he relied on his freedmen Boril and Germanos and on Isaac and Alexios Komnenos. Nikephoros's extravagant generosity to his supporters (praised by his eulogist Attaleiates) compelled him to reduce official salaries and debase the nomisma to 8–9 carats (Morrisson, "Dévaluation" 8, 15ff). While Turks plundered the Asian suburbs of Constantinople, Nikephoros was preoccupied with the rebellions of Bryennios, Nikephoros Basilakes, Nikephoros Melissenos, and finally the Komnenoi. When Alexios I Komnenos seized Constantinople, Nikephoros abdicated (4 Apr. 1081) and entered the Peribleptos monastery, which he had restored. He is identified by inscription as the emperor receiving the sumptuous Chrysostom MS, Paris, B.N. Coisli. gr. 79; I. Spatharakis (Portrait, fig.69) argued that the inscription is secondary and that the portrait originally depicted Michael VII.

C.M.B., A.C.

NIKERITES, LEO, late 11th- to early 12th-C. general and patron of the arts. A eunuch, Nikerites (Nikepritēs) was brought up among soldiers (An.Komm. 2:93.17–18). He rose through the ranks, first as anthypatos and strategos of the Peloponnesos. He is described as protoprodos and anagrapheus of the same theme on a seal (Laurent, Méd. Vat., no.110). After defeating the Pechenegs at Lebounion in 1091 he was made doux of Paris-trion. The colophon of the richly illustrated Job MS (Vat. gr. 1231) that Nikerites commissioned names him as nobelissimos, megas doux, and apographeus of Cyprus. A lost Octateuch, produced to his order in Nov. 1103, calls him protonobilissimos and oikeios anthropos (of Alexios I). He was still alive in 1117, fighting the Turks at Lopadion.

NIKETES (Nikētēs), personal name. The similar form Niketes (lit. "winner") that was bestowed upon Julian as an epithet (SIG 2:906B: an inscription from Magnesia) is attested in Greek antiquity. In the mid-4th C. the name Niketes was still found (PLRE 1:629); in the 5th C. the form Niketas appeared (PLRE 2:781f), but infrequently. Like Nicholas and probably Nikephoros, Niketas seems to have been popular in the late Roman
eclesiastical, rather than the secular, milieu (W. Ensslin, RE 17 [1937] 317). Only one Niketas is listed in Prokopios, but Theophanes the Confessor has 11 and Skylitzes 16 Niketases. The name is rare in acts, esp. of the later period. The name was borne by two patriarchs of Constantinople, but by no emperor.

-A.K.

NIKETAS, general; died 629. A cousin of Heralkeios, Niketas commanded troops in the rebellion (609) that reconquered Cyrenaica and Egypt from Phokas. In Egypt Niketas decisively defeated Phokas’s general Bonosos, who fled in early 610. Then Niketas invaded Palestine. He became patriarch and praetorian prefect, and doux in Egypt; in effect he was civilian governor until 619, when the Persian conquest forced him to flee to Constantinople. Niketas befriended Patr. John Eleemon of Alexandria. From Palestine Niketas brought the Holy Sponge and the Holy Lance to Constantinople, where they were venerated in ceremonies on, respectively, 14 Sept. and 28 Oct. 612. Heralkeios appointed Niketas komes of the exkoubaitoi on 5 Dec. 612 and sent him to replace general Priskos at Caesarea. The Persians defeated Niketas in the vicinity of Antioch in 613. He returned to Africa, where he was exarch from 619 to 628/9. Heralkeios was fond of Niketas and erected a statue to him. Niketas’s daughter Gregoria married Heralkeios Constantine. The last exarch of Africa, Gregory, probably was a son of Niketas.

-W.E.K.

NIKETAS BYZANTIOS, surnamed also Philosopher and Teacher (didaskalos), theologian of second half of 9th C. His life remains obscure. Under his name are preserved several polemical works: against the Monophysitism of the Armenians, against Islam, and against the Filioque. Niketas’s anti-Latin polemics are relatively mild.

-A.K.

NIKETAS DAVID PAPHLAGON, writer of the late 9th to early 10th C. Despite attempts to distinguish several writers of this name (J. Darrouzès, REB 18 [1960] 128ff.), it now seems established that he was a single but very prolific author (A. Kazhdan in Due vizantjskie chroniki [Moscow 1959] 125f.; Jenkins, Studies, pt.IX [1965], 241–47). A pupil of Arethas of Caesarea, he joined his teacher in opposing the tetragamy of Leo VI; in a letter (ep.87) he describes the pressure exerted by Pope Nicholas I to persuade him to support the emperor. When Arethas, after some resistance, accepted the dispensation, Niketas distributed his goods to the poor and fled to Thrace. He was arrested, brought back to Constantinople, and imprisoned. Freed at the initiative of Euthymios, he lived two years in seclusion, probably under Euthymios’s control.

Niketas wrote about 50 enkomia of saints, a treatise on the calculation of the approaching end of the world, a Commentary on the Psalms, and other works. In his Commentary Niketas introduced original features, e.g., moral exhortations attached to every psalm. Although drawing upon pseudo-Dionysios the Areopagite, he reduced the complex hierarchy of the world to a simple contrast between the humble position of man and the omnipotence of God. Typical of Niketas is his animosity toward musical instruments. In hagiography, Niketas deviated from the traditional laudation: his vita of Ignatios is a pamphlet against Photios; he was also accused of issuing a pamphlet against Leo VI and Euthymios. Moreover, he was charged with heresy for allegedly proclaiming himself God or Christ; this probably means that, contrary to his Commentary, he emphasized the divine nature of man.

-A.K.

NIKETAS MAGISTROS, high-ranking official, writer; born Larissa, Thessaly, ca.870, died after 946. Westerink hypothesizes that his last name
was Eladikos or Helladikos. In 919 Niketas supported Romanos I and married his daughter Sophia to Romanos’s son Christopher Lekapenos. In 928, accused of plotting to replace Romanos with Christopher, he was exiled to Hellasponit, where he owned land. From there he sent letters to Constantine VII and various members of the elite (such as Kosmas Magistros). The letters are very conventional and poor in information. One interesting reference is to the iron ore carried by the Hermos River to the sea, which casts it onto the shore; the local people produce iron from this “sand” (ep.5.12–24). His correspondence is full of allusions to ancient mythology and literature; thus, Homer is quoted more frequently than the Old Testament. Westerink identifies Niketas with the author of the vita of Theoktiste of Lesbos. A line of an unknown grammaticos Euphemios, quoted in De Thematibus (De them. p.91.37–42), refers to Niketas as having “an arrogant Slavic face.”

NIKETAS OF AMASEIA, canonist and metropolitan (second half of 10th C.). His life remains obscure. At the end of the 10th C. Niketas wrote a treatise on the election of metropolitans, probably to refute an anonymous treatise dated 963–69. Contrary to the anonymous writer, Niketas defended the primacy of the patriarch of Constantinople over metropolitanans and his right to preside over their elections. Where the anonymous writer interpreted canon law literally, Niketas appealed to Byz. reality: he contrasts the metropolitan “who does not even have a drown-garios under his power” with the patriarch who rules the capital and is the father of the emperors and the senate (p.160.10–16). This discussion is an important reflection of the struggle between centripetal and centrifugal forces within the church.

ed. Darrouzès, Ecclés. 160–75, with Fr. tr.

—A.K.

NIKETAS OF ANKYRA, 11th-C. canonist and metropolitan, mentioned in two documents of 1038 and 1072 (although it is not sure that both refer to the same person). Darrouzès ascribed to him five anonymous treatises: On Ordination, On Councils, On Elections, On the Right of Resignation, and On Prohibited Marriages. The attribution is questionable (A. Kazhdan, Viz.Vrem 30 [1969] 285), esp. since a marginal note ascribes one of these pieces to another 11th-C. author, Demetrios of Kyzikos. The first four treatises, unlike the one on marriages, develop a consistent theme: the power of the bishop is higher than that of the emperor (p.214.5–8). The author—whoever he was—also criticizes the patriarch, whom he calls an octopus clinging to rocks (p.200.23–24), whereas he should be a mother concerned for her children, the metropolitanans. The author’s ideal is a council of metropolitanans and lay archontes to advise the emperor (pp.202.30–204.6).

NIKETAS OF HERAKLEIA, theologian; born ca.1050, died after 1117 (not 1093–1100, as stated in Beck, Kirche 651). Neither his career nor the exact composition of his oeuvre is yet established. He was nephew of a metropolitan of Serres and held the post of didaskalos of Hagia Sophia in Constantinople. In 1117 Niketas, already metropolitan of Herakleia, was among the accusers of Eustathios of Nicaea. He corresponded with Theophylaktos of Ohrid; J. Darrouzès has proved that Niketas did not correspond with Niketas Stethatos (Nicetas Stethatos, Opuscules et lettres [Paris 1961] 19–21). Niketas’s main work is catenae to the Gospels of Matthew, Luke, and John as well as a commentary on Gregory of Nazianzos. Niketas also wrote several grammatical poems and possibly 13 canonical responses addressed to Constantine of Pamphilon, a suffragan of Herakleia (A. Pavlov, Viz.Vrem 2 [1895] 160–76).

lit. J. Sickenberger, Die Lukashänten des Niketas von Hera-

—A.K.
NIKETAS “OF MARONEIA” (or rather a nephew of the bishop of Maroneia in Thrace), theologian; fl. first half of the 12th C. Niketas served as chartophylax of Hagia Sophia in Constantinople and from 1192/3 on as archbishop of Thessalonike. He wrote six dialogues between a Greek and a Latin on the procession of the Holy Spirit, in which he, as a supporter of the imperial tendency to UNION OF THE CHURCHES, defended the Western point of view. The dialogues, mentioned already by Hugo Eteriano, were used and refuted by later authors; according to Bessarion, Niketas was fighting for the “donkey’s shadow,” since he accepted the idea of filioque, but refused to make a corresponding addition to the symbol of the creed (PG 161:329A). The possibility of identifying Niketas with Niketas of Thessalonike, author of several canonical responses and a short treatise on the marriage of slaves, remains open. Even less probable is his identification with the author of the Life of St. Demetrios (11th C.?), suggested by A. Sigalas (EEBS 12 [1936] 317–60).

-A.K.

NIKETAS OF MEDIKION, Iconodule monk; saint; born Caesarea in Bithynia ca.760, died near Constantinople 3 Apr. 824; feastdays 3 Apr., 6 Oct. After a short period of eremitic life, Niketas joined the small Bithynian monastery of Medikon, which had been founded by a certain Nikephoros of a well-to-do Constantinopolitan family. Niketas became a priest and, after the death of Nikephoros in 813, was made hegoumenos. At the beginning of the second period of Iconoclasm, Leo V exiled him to the kastron of Massalaia, but Niketas soon reconciled with the Iconoclast patriarch THEODOROS I KASSITERAS; criticized by Theodore of Studios, Niketas recanted and was anewed anew to the island of Glykeria. Michael II released Niketas, but he did not return to Medikon. After his death his body was brought to Medikon to repose in the tomb of Nikephoros.

A certain Theosteriktos wrote his vita, probably between 829 and 840; E. von Dobschütz (BZ 18 [1909] 81–83) hypothesizes that this vita was revised in the Stoudite milieu and was intended to celebrate the ideological victory of Theodore over Niketas. Although conventional and badly informed about the activity of Niketas, this vita contains precious evidence about ICONOCLASM (Constantine V’s comparison of the Virgin, after she gave birth to Jesus, with an emptied purse [ch.28]; Leo V’s discussion with the Iconophiles). The author of the second vita is an unknown John of the monastery of St. Elias. In synaxaria Nikephoros and Niketas are sometimes confused (F. Halkin, AB 88 [1970] 13–16).

Representation in Art. The Menologion of Basil II (p.94) contains a portrait of Niketas. He is depicted as a monk holding the round icon of Christ that he had refused to let the emperor burn.

NIKETAS OF THESSALONIKE. See Niketas “Of Maroneia.”

NIKITA, MONASTERY OF SAINT, situated northeast of Skopje between the villages of Banjani and Čučer. The monastery was restored by the Serbian king STEFAN UROŠ II Mилутин; its church was begun before 1303 and was offered to the Hilandar monastery on Athos before 1308, according to charters of Milutin and a letter of Andronikos II (M. Živojinović, HülZb 6 [1986] 60– 72). The church is constructed of stone and brick in cloisonné (see BRICKWORK TECHNIQUES), its fa- çade richly ornamented with niches and brick arches; it has a cross-in-square plan, with a single dome. The frescoes preserved in the lower zones may date before 1308 or be as late as 1320; the names of two artists, Michael (Astrapas) and Eutychios, are inscribed on the shield of St. Theodore Teron on the south wall. P. Miljković-Pepek (Mihail i Eutihij 51–56) believes the two merely supervised the work. The program is essentially Byz.: scenes in the nave include the miracles and parables of Christ, and standing figures
of saints (including Stefan Nemanja and Sava of Serbia). The figures are more elongated and drier than in other works by these masters, and the compositions are more complicated, incorporating numerous participants and highly developed architectural backgrounds (e.g. the Miracle of Cana and the Expulsion of the Money Changers from the Temple). The damaged frescoes on the vaults were restored in 1483/4 by Greek painters.

-G.B.

NIKI (Νική), city in Arkadia, in a fertile plain, on the site of ancient Tegea. Both the etymology and the origin of Nikl are uncertain: the name may be derived from the bishopric of Amykleion (under the jurisdiction of Patras) mentioned in notitiae (Notitiae CP 13,536) and in the vita of Nikon ho “Metanoeite.” On the other hand, the Aragonese version of the Chronicle of the Morea claims that William II Villehardouin founded it in the mid-13th C. Nikl was the center of a Frankish barony; the “Women’s Parliament” of 1261, following the battle of Pelagonia, met there. The Byz. destroyed Nikl in 1296 but did not occupy the area immediately, and the city was not restored. The population retreated to the mountains where two strongholds were created, Mouchli and Cepiana (Tsepiana).

The remains of at least four Early Christian churches have been investigated in the area of ancient Tegea. A fine mosaic floor, probably of the late 5th C., once adorned the basilica built by a certain Thyrsos. It represents the terrestrial world, and includes images of the Four Rivers of Paradise and personifications of the Months (Maguire, Earth & Ocean 24–28). Few remains of the medieval city survive; in the late 19th C. traces of a rectangular fortification wall were still visible (H.F. Tozer, JHS 4 [1883] 222f), but these have disappeared. The Church of the Dormition, built in the 11th or 12th C. and cruelly restored in 1888, is a cross-in-square with five domes, unusual in the Peloponnnesos at this date. The parliament of 1261 met in this church. There is no evidence that Nikl had a palace. In Mouchli there are remains of a small fortress, houses of the 14th–15th C. (N.K. Moutsopoulos, Byzantina 13.1 [1985] 321–53), and several ruined churches including a 14th-C. Church of the Virgin (idem, Peloponnesiaka 3–4 [1958–59] 288–309). Cepiana has a Church of the Panagia Gorgoepekoos similar to that of the Virgin at Mouchli.

- T.E.G., N.P.S.

NIKOMEDEIA (Νικομήδεια, now Izm), city of Bitinia, the residence of Diocletian and his successors until 330. The foundation of Constantinople brought decline, but Nikomedia remained a provincial capital and seat of a philosophical school headed by Libanius. Ruined by the earthquake of 358, Nikomedia never really recovered, though Justinian I restored some public buildings and the highway eastward. The vita of St. Theodoret of Syrkon reveals many details of local topography and economy; Nikomedia had a group of influential scholarii, a weapons factory (founded by Diocletian), a poorhouse, and numerous churches and monasteries. Its location on the main road to the capital made Nikomedia a major military base: it played a role in the campaigns of Herakleios, Justinian II, Leo III, and Artabasdos and was defended against Arabs and Paulicians. As a commercial center Nikomedia was headquarters of kommerkiarioi in the 8th–9th C. (Zacos, Seals 1, nos. 1411A, 1599). Its bishop Theophylaktos (ca.800–15) built a complex of poorhouse and monastery, and an imperial xenodocheion was established by the 9th C. Nikomedia became the capital of Optimatōi but was described by Ibn Khurdadbeh as ruined, no doubt because the huge ancient city by the harbor had been abandoned as Nikomedia withdrew to a defensible hilltop. As the Turks advanced toward Constantinople after their capture of Nicæa in 1081, Nikomedia was the base for Alexios I’s attempts to retain control of the coastal regions. The First and Second Crusades both stopped there; Odo of Deuil described it as a city whose lofty ruins were overgrown with thorns and brambles.

Nikomedia saw much fighting after 1204. At first it was controlled by Theodore I Laskaris, who defeated David Komnenos of Trebizond nearby; by 1206, however, the city fell to the Latins, who, finding its walls in ruins, fortified the Church of Hagia Sophia as their main castle. A treaty of 1207 returned Nikomedia to Theodore and its fortifications were demolished, but the
Latins regained it and held it until ca. 1240. Nikomedea was exposed to the attacks of Osman, who inflicted a severe defeat on the Byz. at nearby Barheus in 1302; after that, the agricultural population took refuge within the walls and the Turks ravaged the district. In 1304 and 1330, Nikomedea was blockaded and threatened by starvation; on the latter occasion John (VI) Kantakouzenos rescued it with his fleet. The city finally fell to Orhan in 1337. Nikomedea preserves much of its fortifications, the long city walls of Diocletian, and the medieval hilltop fortress, which appears to be of the 12th–14th C.

As a metropolitan bishopric Nikomedea played a major role under Eusebius of Nikomedea, but later yielded in importance to Nicaea.

LIT. Janin, Églises centres 77–104. —F.F.

NIKON "HO METANOEITE" (μετανοείτε, "you should repent"), saint; born in district of Polemoniaka, Armeniakon, ca. 930; died Sparta ca. 1000; feastday 26 Nov. Son of a provincial landowner, Nikon (Νικώ) ran away from home and spent 12 years as a monk at the monastery of Chryse Petra (between Pontos and Paphlagonia). After wanderings in the "eastern regions," he went to Crete in 961; he spent seven years preaching Christianity to the island's inhabitants, many of whom had converted to Islam during the Arab occupation. He then traveled in Greece, finally settling down, probably in the early 970s, in Sparta. There he founded a monastery next to the marketplace and near a stadium. Nikon's view of life was pessimistic: he stressed the vanity of existence, compared life with smoke and childish games, and called for repentance as the seminal way to salvation.

His vita, probably written in the mid-11th C., consists of two parts, the biography and posthumous miracles. The hagiographer, a hegoumenos of Nikon's monastery, may have known the holy man personally and may have witnessed some of the miracles. The vita is consistently provincial in approach: predominantly local nobles or minorities (Spartan Jews, Melingoi, etc.) are mentioned, and the central authority is condemned for entrusting power in the provinces to the worst and cruelest functionaries (ch. 58, ed. Sullivan, p. 184. 18–20). The vita contains valuable information about church construction and decoration, as well as the legend of a Constantinopolitan artist commissioned by a Peloponnesian grandee, John Malakenos, to paint a posthumous portrait of Nikon; the artist found himself unable to paint the icon solely on the basis of a verbal description and only supernatural assistance helped him. The hagiographer has borrowed from the 10th-C. Life of Loukas the Younger.

Representation in Art. Portraits of Nikon, found most frequently in Greek churches, begin to appear not long after his death (e.g., at Hostios Loukas), and are probably based on the icon commissioned by Malakenos. The saint is characterized by monastic clothing, dark slightly wind-blown hair low over his forehead, and a full dark beard.

—A.K., A.M.T., N.P.S.

NIKON OF THE BLACK MOUNTAIN, Melchite ecclesiastical writer; born Constantinople ca. 1025, died in monastery of St. Symeon the Stylite the Younger, near Antioch, between ca. 1100 and 1110 (Nasrallah, infra 152) or in monastery of Roidiou (Solignac, infra 319). According to his own testimony in the Taktikon, Nikon was born to a family of archontes and served in the army under Constantine IX. He then retired from the world, was tonsured by Luke, former metropolitan of Anazarbos, and settled in the monastery that Luke had founded on the Black Mountain north of Syrian Antioch. After Luke's death, Nikon met with hostility from the other monks when he attempted to impose monastic discipline, and he was eventually forced to leave. After attempting to found his own monastery, he settled in the monastery of Symeon the Younger on the Wondrous Mountain. When the Seljuks conquered Antioch in 1084, he moved to the monastery of the Virgin of the Pomegranate (Theotokos tou Roidiou).

Nikon compiled the Pandekta, a collection of statements by the councils and church fathers concerning canon law that was to serve as a compendium for wandering monks. His Taktikon, in 40 chapters, is also a collection of authoritative texts on canonical and liturgical problems and includes a typikon for the monastery of Roidiou.
Nikon's works were soon translated into Arabic and Church Slavonic.

—A.K.

NIKOPOLIS (Νικόπολις, lit. "city of victory"), the name of several cities and a theme.

NIKOPOLIS IN EPIROS, on the Ambrakian Gulf, in late antiquity capital of Old Epiros (Hierokl. 651.4). In 362 the rhetorician and high official (consul) Claudius Mamertinus lamented the decline of Nikopolis and praised Emp. Julian for its restoration. The city flourished in the 5th and 6th C. The walls of the city, constructed at the end of the 5th C., are well preserved and stand in some places to nearly their full height. Five Early Christian basilicas have been uncovered, all of the 5th–6th C. Basilica A (Doumetios Basilica) is a three-aisled structure with transept; it has mosaics representing the Earth surrounded by Ocean, with many varieties of flora and fauna and inscriptions (Maguire, Earth & Ocean 21–24). Basilica B, the so-called Alkison Basilica with five aisles, has mosaics, one of which (in an annex east of the church) names the bishop Alkison. Attacked by the Vandals in 474/5 and the Ostrogoths in 551, Nikopolis was restored by Justinian I. Its fate at the time of the Slavic invasions is uncertain. Constantine Arkopolites, in the vita of St. Barbaros, describes an attack of the Hagarones on Aitolia and the polis Nikopolis "that is called locally Maza" (Papadopoulos-Kerameus, Analekta 1:408.16) during the reign of Michael II, but the accuracy of this late hagiographic evidence is doubtful. Nikopolis is identified as a metropolis in earlier notitiae, but seals of the 8th–9th C. refer only to an archbishop (Laurent, Corpus 5.1, nos. 670–72).

—T.E.G.

THEME OF NIKOPOLIS, located in southern Epiros and Aitolia, founded probably between 843 and 899 (it is first mentioned in the Klerorologion of Philotheos), possibly after 886; its capital was NAUPAKTOS. The seal of a tournarches of Nikopolis (Zacos, Seals 1, no. 2576) must have preceded the creation of the theme; another seal, of Joseph, epoptes of Nikopolis and an official in the Peloponnese (no. 2068), suggests that the region (tourma?) of Nikopolis was part of the Peloponnese before the creation of the theme. Seals of the strategoi of Nikopolis are also known, the earliest dating to the second half of the 9th C. (no. 2620). Nikopolis was a maritime base in the struggle for southern Italy, and the troops of the Mardattai were stationed there, at least in the 10th C. Nikopolis fell within the Bulgarian orbit in the 10th C.: ca.930 the Bulgarians invaded the theme; in 1046 its population revolted against Constantine, murdered a tax collector, and joined Peter Deljan. A chrysobull of 1198 mentions the "provincia" of Nikopolis and specially notes the existence in it of episkepseis belonging to private persons, churches, and monasteries. After 1204 the region from Dyrachion to Naupaktos came under Venetian control; by 1214 it was conquered by Michael I Komnenos Doukas of Epiros and became part of the despotate of Epiros.

—T.E.G.

NIKOPOLIS ON THE DANUBE, Nikopolis ad Istrum or ad Haemum (the Balkans) was a Roman city in Moesia south of IATRUS on the Danube, located near the modern Bulgarian village of Nikjup. Constantius II settled in the Nikopolis region a group of baptized Goths (Goti minores) who remained loyal to the empire during the 4th–5th C. Its bishops are recorded in 458 and 518. Justinian I is said to have rebuilt the city, and it is mentioned in both Hierokles and Simokattes. Archaeological excavations, however, have revealed the abandonment of ancient Nikopolis already by the 6th C.—ceramics later than the 4th C. are rare; roughly built structures were constructed in the agora in the 4th C.; only one building inscription can be dated in the 4th–5th C.; and coins of the 6th C. are absent. The old city territory of 21.55 hectares was abandoned in favor of a fortification of 5.7 hectares with strong towers erected along the south wall of ancient Nikopolis. Within this "annex" there are indications of only two small buildings. After Simokattes, Nikopolis disappears from written sources.

The name was transferred to a town on the Danube, modern Nikopol. A Hungarian legend ascribed its foundation to Herakleios (G. Seure,
NIKOPOLIS, CRUSADE OF, a great international expedition in 1396 designed to free the lands of eastern Christendom from Muslim occupation. This Crusade was mounted primarily at the instigation of Sigismund of Hungary (1387–1437) in reaction to the Ottoman conquest in 1390 of Vidin, which was under Hungarian suzerainty. The Crusade was given added impetus by the appeals of Manuel II for Western aid (Douk. 79.15–81.10) after Bayezid I began the siege of Constantinople in 1394. In Feb. 1396 Manuel and Sigismund signed an anti-Turkish alliance; the Byz. emperor promised to send ten galleys to the Danube to assist the expedition. In the end, however, the Byz. played no military role in the Crusade because of the blockade of their capital.

In Sept. 1396, a multinational Christian army besieged the key Ottoman fortress of Nikopolis on the south shore of the Danube. The number of Crusaders was variously reported, between 16,000 and 130,000; the lower figure is probably correct (Rosetti, infra 633–35). A battle ensued on 25 Sept. when Bayezid arrived to relieve the siege. The Crusaders were decimated. Only a few notable escapes by ship or were released afterward by the Turks in exchange for ransom. The failure of the Crusade was a bitter disappointment for the Byz., as Bayezid intensified his blockade of Constantinople soon after.

NILE (Νείλος), Egypt's only river; hence in Greek and Coptic texts sometimes referred to simply as "the River" (e.g., Ex 7:15–18). It was identified with the biblical river Gihon, the river of Paradise that flows through the land of the Ethiopians (Chron. Pasch. 1:52.14; Zon. 1:22.6–8; Cedr. 1:24.6). The source of the Blue Nile in the highlands of Ethiopia, where annual rains accounted for the inundation of Egypt, was known (e.g., Athanasios of Alexandria, Life of Antony, ch. 32). The source of the White Nile was said to be in mountains farther south, probably based on information gathered from indigenous traders. No Byz. traveler records visiting either site. Olympiodorus of Thebes (ed. Blockley, fr.35) explored the Nile in Lower Nubia, and Prokopios (Wars 1:19.28–29) describes its distance from Axum and mentions the stone gorge (Baṭn al-Hagar) south of the Second Cataract. The Expositio totius mundi (descr. 34–36) describes the Nile valley as provider of grain to Constantinople and extols the benefits of the annual inundation for agriculture. In view of the importance of the yearly inundation, measured by the Nilometers, the Egyptian church (both Monophysite and Chalcedonian) conducted special annual liturgies to bless the Nile waters and pray for a good level of flooding (L. MacCoull, JThS 40 [1989] 129–35).

Often depicted in art, the Nile appears on textiles (Age of Spirit., nos. 150, 172), floor mosaics (no.252), and in opus sectile (Ibrahim et al., infra nos. 1–12) as a swamp people with nereids, dolphins, and nude boys hunting water fowl, with the occasional crocodile or hippopotamus. On early reliefs (Age of Spirit., no.157) and an ivory pyxis (no.170), the river is embodied as a bearded male figure against a background of lotus. Chorikios of Gaza (Chorik.Gaz. 40.18–23) stresses that the Nile is depicted at St. Stephen's at Gaza not as a personification, "the way painters portray rivers," but with "distinctive currents and symbols." Practical aspects of the Delta are represented by a water wheel on a tomb fresco in Alexandria (Age of Spirit., no.250) and a Nilometer on a trulla in Leningrad with control stamps of Emp. Anastasios I (Dodd, Byz. Silver Stamps, no.1). In medieval art the swamp is replaced by a rushing stream. The 12th-C. Octateuchs (e.g., Vat. gr. 746, fol.153r, unpub.) show the stream in which the infant Moses was found as attended by a woman in a maphorion, while in the atrium mosaic of St. Mark's at Venice
Made by Absens

DEMUS, Mosaics of S. Marco, vol. 2, pl. 313) it flows vertically downward from the standard male 11th–12th-C. personification of rivers.

—D.W.J., A.C.

NIMBUS (Lat., lit. "cloud"), a halo. In literary texts the term turns up infrequently; in the 4th C., Servius, in his commentary on Vergil, defined nimbus as divine brilliance, and later Isidore of Seville described nimbus as light surrounding the heads of angels (K. Keyssner, RE 17 [1937] 598f). The Greek term, phengeion (from φέγγος, "radiance"), may refer to metal nimbi that were applied to icons from the 12th C. onward. Thus, an inventory of Veljusa monastery describes a large icon of the Virgin and Child that had two enamel and silver-gilt haloes (L. Petit, IRAIK 6 [1900] 118.23–119.1) as well as other icons with silver haloes. In 1365 a priest was condemned for removing and selling a phengeion from an icon of the Theotokos (MM 1:475.9–10). In the 15th C. Symeon of Thessalonike spoke of circle-like phengia that on holy icons emphasized the grace, brilliance, and energeta of God (PG 155:869B); according to Symeon (col.408D), the eagle, one of Byz.'s important symbols, could also bear the phengeion.

Representation in Art. Artists depicted the nimbus as a colored disk encircling the head of a prominent figure. Christian art inherited it from antiquity, where it had distinguished gods, heroes, personifications, and—from Constantine I onward—the emperor, displacing the rayed corona of Sol invictus. The nimbus enters Christian art slowly, and during the 4th C. is restricted almost exclusively to Christ, the LAMB OF GOD, the PHOENIX, and the emperor. In the 5th C., its use is extended to angels, prophets, the Virgin Mary, and apostles. Simultaneously, Christ's nimbus is ever more consistently differentiated from a CLASSICISM. By the 6th C., saints, too, were awarded the nimbus, as were certain patrons and bishops (7th C.); some prominent living persons were depicted with a square nimbus. By the 9th C., it had clearly become a sign of sanctity rather than mere prominence and had vanished from any but sacred figures and emperors. Though nimbus means cloud, it was not shown as nebulous. Sharply delineated, it was usually conceived as light and gilded, though it could also be brightly colored, jeweled, or even highly decorated.

—A.W.C., A.K.

NIPHON (Νιφων), patriarch of Constantinople (9 May 1310–11 Apr. 1314 [cf. V. Grumel, REB 13 (1955) 138f]); born Berroia, died 3 Sept. 1328 (cf. Dmitrievskij, Opisanie 3:377). Niphon was hegumenos of the Lavra on Mt. Athos in 1294 (V. Laurent, REB 28 [1970] 101) and then became metropolitan of Kyzikos sometime before 1303, when he led that city's defense against the Turks. Although ca.1309 he was accused of theft and simony by Patr. ATHANASIUS I, he was chosen to succeed Athanasios on the patriarchal throne because of his moderate position on the ARSENITE controversy (V. Laurent, BSHAcRoum 26 [1945] 251–56). Indeed, the schism was healed at the beginning of his patriarchate. Niphon greatly increased patriarchal revenues by appropriating the administration of several wealthy sees, after deposing their bishops on charges of simony (V. Laurent, REB 27 [1969] 219–28). In 1314, however, Niphon was himself deposed on charges of simony and retired to the PERIBLEPTOS monastery in Constantinople. He took his revenge on Andronikos II, who had failed to rally to his defense, when in 1328 he advised Andronikos III to force his grandfather to retire. Contra Tafrali (Thessalonike 87), he was never archbishop of Thessalonike but was a patron of the Church of the Holy Apostles, constructed there during his patriarchate (J.M. Spieser, TM 5 [1973] 168–70, nos. 20–22).

—A.M.T.

NIPHON, monk who spent most of his life in hermitages on the Holy Mountain; saint; born Loukovi, Epiros, 1315, died Mt. Athos 1411; feastday 14 June. Son of a priest, he demonstrated a
proclivity for monasticism even as a young child. At age 10, he left home to be trained by his paternal uncle, a monk at the monastery of St. Nicholas of Mesopotamia (in Epirus). After receiving the tonsure and ordination as a priest, a desire for hesychia led Niphon to Mt. Athos. There he lived in a succession of isolated retreats, at first as a disciple of an elderly hermit, later himself attracting youthful disciples. For a few years (ca. 1360) he shared his solitary existence with Maximos Kausokalybites, whose vita he later composed. This work reveals Niphon as an author of little training and no literary talent.

Niphon represents a common type of late Byz. holy man, who eschewed the cenobitic life, preferring the challenge of the hermitage. Allegedly endowed with the gift of prophecy and miraculous powers, he was reputed to have lived to the venerable age of 96. An anonymous vita of Niphon (BHG 1371) was written by a contemporary Athonite monk.

SOURCE. F. Halkin, "La vie de Saint Niphon ermite au Mont Athos (XIVe s.)," *AB* 58 (1940) 5–27. —A.M.T.

**NIPSISTIARIOS** (*νηπίστιαριος*), a eunuch whose function was to give the emperor a basin to wash his hands in before he left the palace or before other ceremonies. The basin was of gold with precious stones; the nipsistiaros wore a robe with a design (?) of a basin (*schemati phialiou*) as a symbol of his service. In the *Kletorologion* of Philotheos the nipsistiaros holds the lowest position among the palace eunuchs, but the vita of Patriarch Euthymios (Vita Euthym. 51.4–7) describes Samonas as rising from the post of *koubikoularios* to nipsistiaros. The earliest mention of nipsistiaros is on a seal of the 7th C. (Zacos, Seals 1, no. 873). The post is not included in the 14th-C. ceremonial book of pseudo-Kodinos.

**NIŠ.** See Naissus.

**NISIBIS** (*Νησίβις*, Ar. *Naṣībīn*, now Nusaybin in Turkey), city in MESOPOTAMIA on the Mygdonios (mod. Jaghjaghah) River. A bone of contention between the Romans and Persians, Nisibis also became the major center of Roman trade with the Sasanians and, from 540, with the pre-Islamic Arabs (Stein, *Histoire* 2:519f). It was the strongest fortress on the frontier, and the Persians repeatedly stormed it in vain. According to legend, it was saved in 338 by the prayers of its bishop Jacob, who incited swarms of insects against the besiegers. In 350 the Persians dammed the Mygdonios and assaulted the walls from their ships; they attempted to send elephants and cavalry through breaks in the ramparts, but the animals became stuck in the muddy river bottom. Jovian’s peace treaty of 363 surrendered Nisibis, empty of its inhabitants (as stipulated by the treaty), to Persia. Despite Byz. attempts to regain Nisibis during the 6th C., the city remained Persian. It was taken by the Arabs in 639. The Byz. reappeared in the area in the 10th C.: John Kourkouas took Nisibis in 942; the Armenian general Mlehs (see MELIAS) captured it on 12 Oct. 972 (D. Anastasievic, *BZ* 90 [1929/30] 403f). It continued to change hands up to the Ottoman conquest.

Until 363 the administrative metropolis of the province of Mesopotamia, Nisibis was the seat of the *doux* of Mesopotamia, a bishopric under the jurisdiction of Amida, and a center of Christian culture, even though pagan cults apparently survived there under Persian rule. Ephrem the Syrian was active at Nisibis but had to move to Edessa in 363. In 489 the School of Edessa was expelled by Zeno and reestablished at Nisibis, where a small school was already present. Its statutes, which survive in Syriac, reveal its character: the core of the curriculum was historical exegesis of the Bible on the principles laid down in the Nestorian interpretation of Theodore of Mopsuestia. Written sources record church construction: Jacob of Nisibis built the Great Church (i.e., cathedral) in 313–20; its baptistery with elaborate sculpture—erected, according to its Greek dedicatory inscription, in 359 under Bp. Volagesos—survives.

**NIZĀM AL-MULK**, originally known as Abū ʿAli al-Hasan, Persian statesman; born near Tūs in Khorasan 10 Apr. 1018, murdered 14 Oct. 1092 near Siňa, on the way from Iṣfāhān to Baghdad. As supreme vizier of the Seljuk court he supplied to the Seljuks, who had only recently arrived in
Iraq, the older political traditions and wisdom that the new conquerors needed to rule their empire. At the request of the sultan Malikshāh, he composed, ca.1091, in Persian, the political treatise Šiyāṣatnāma (The Book of Government), intended as a guide for the running of the state, the management of the nomads, and suppression of religious heresy. Organizing his work around 50 chapters/principles, the author draws on a bewilderingly rich historical repertoire that includes Achaemenids, Alexander, Sasanians, and the Islamic and Turkic worlds in order to illuminate the principles of political conduct. Of particular interest for Byzantinists is his description of the ghulām or page system. Niẓām al-Mulk also relates a legend about the caliph Muṭṭasim (833–42), who allegedly was taken captive to Rum but later led a successful expedition, routed a “Caesar,” sacked and burned Constantinople (? , probably Amorion), founded a mosque there, and released a thousand men from captivity.

NOAH (Nōe), biblical patriarch; hero of the story of the Flood and builder of the Ark. Noah was a righteous man and the progenitor of a new race, according to Philo. He was interpreted by the church fathers as a prefiguration of Christ: Cyril of Jerusalem speaks of Christ as “the true Noah” (PG 33:981A) and Cyril of Alexandria as “the truest Noah,” baptism being the antitype of the flood (PG 69:65B). In the same vein, Asterios of Amaseia (PG 40:448C) exclaimed that Christ in the tomb resembled Noah in his ark and thus put an end to the flood of impurity and granted us the baptism of resurrection. Another episode of Noah’s life, his drunkenness and self-exposure, became a classical example of the evils of wine. Some church fathers, however, excused Noah: Ambrose (ep.28:12) says that Noah was not ashamed of his nakedness because he experienced spiritual joy. The episode was elsewhere used as an anti-Jewish polemic: Ham’s attitude toward his father’s drunkenness was identified with the Jewish treatment of the Cross, while Shem and Japheth symbolized the Gentiles who honored Jesus. Some elements of Noah’s story are reflected in the First Book of Enoch.

Representation in Art. Noah was more often represented in terms of the events of his life than those of his character or personality. In the catacombs, as in floor mosaics of the 5th–6th C., emphasis was placed on NOAH’S Ark. Simultaneously, however, other events of his life appear in the basilicas of St. Peter and St. Paul in Rome and in the Cotton and Vienna Genesis MSS. Later cycles, such as in the Octateuchs or the mosaics of the Cappella Palatina and Monreale in Sicily, probably reflect early models of related type.

NOAH’S ARK (κιβωτός τοῦ Νῶe), the ship built by Noah at the time of the Flood, on which he saved humankind and all species of animals from extinction (Gen 6–9). It was early seen as a prefiguration of the church, which provided the means of salvation (e.g., Didymos the Blind, PG 39:696A–B). The tripartite division of the Ark (Gen 6:16) was considered a reference to the Trinity (e.g., by Athanasios, PG 28:1064A). That it carried within it Noah, the righteous man judged worthy of salvation, led to a further connection of the Ark, like the Ark of the Covenant, with the Virgin (e.g., Theodore of Stoudios, PG 96:689B), for the Virgin brought forth Christ, the new Noah. This symbolism was visualized in the lost Kosmas/Physiologos MS of Smyrna (Kosm. Ind., 1:96f), where the image of the Ark on the waters was combined with the Virgin and Child enthroned.

The Ark is depicted as a chestlike structure in the Cotton Genesis, and also in the Octateuchs, in which, however, it appears as a boat under construction. Its tripartite division is emphasized in the monumental zigguratlike Ark of the Vienna Genesis, and in a simpler version with sloping sides found in the Vatican MS of Kosmas Indikopleustes. In the floor mosaic at Mopsuestia the Ark appears as a flat-topped chest with four legs (H. Buschhausen, JÖB 21 [1972] 57–71, fig.2).

NOBELISSIMOS (νοβελίσσιμος), a high-ranking dignity. The Latin equivalent nobilissimus appeared in the 3rd C. as an imperial epithet; according to a 5th-C. historian (Zosim. bk.2.39.2), Constantine I introduced it as a title for some
members of his family, ranking below that of Caesar. In disuse for some time under Justinian I (who was himself nobelissimos under Justin I), it was applied again to Herakleios's son Martin and later to Niketas, son of Constantine V. In the Klerotologion of Philothoeis nobelissimos occupied the place between Caesar and Kouropalates. While a 9th-C. chronicler (Theoph. 444.5–6) described his costume as consisting of a golden cloak (chlaina) and diadem (stephanos), the later sources do not mention a diadem and the De ceremoniis ascribes to him a green or red cloak (Oikonomides, Listes 97, n.51). Until the mid-11th C. the dignity of nobelissimos was reserved for members of the imperial family (e.g., Michael V's uncle Constantine), but from the end of the 11th C. it was given to supreme military commanders; the future emperor Alexios I was the first among them. In 1074 the title was promised and eventually conferred on Robert Guiscard. Inflated through the 12th C., the title served as the basis for new formations such as protonobelissimos and protonobelissimoypertatos (e.g., Seibt, Bleisiegel 288–97). The title was in use in the 12th C. and survived—contrary to Dölger's hypothesis—until the Palaiologan period (V. Laurent, EO 38 [1939] 362–64).

NOGAY (Nojyòj), a Mongol prince, commander in the expeditions of the Golden Horde against Persia in 1262 and 1266; born first half of 13th C., died 1299 near the Dnieper. In 1265, summoned by the Bulgarian tsar Constantine Tich to help fight the Byz., Nogay crossed the Danube; the army of Michael VIII Palaiologos fled in panic, and the Mongols ravaged Thrace. Michael had to seek Mongol support and gave his illegitimate daughter Euphrosyne as wife to Nogay, a match that probably allowed Michael to retain some authority in Dobrudja. Nogay helped the Byz. overthrow the popular Bulgarian leader Ivaïlo in 1279. In Bulgaria Nogay established de facto Mongol rule. In Nogay's day the Mongols, Byz., and Mamlûks formed an alliance opposed to both the Latins and Persia. Nogay was tolerant toward Christianity.

Nogay perished amid internal strife in the Golden Horde: he had placed Tokay on the throne in 1290, but in 1297 Tokay rebelled against the omnipotent prince. After initial success Nogay was defeated in battle and killed by a soldier of Rus'.

NOMIKOS (νομικός), a scribe or secretary. The Klerotologion of Philothoeis gives the name of nomikos to subaltern officials of the eparch of the city; according to the Book of the Eparch (1.13) the nomikos or paidodidaskalos nomikos was the teacher of law elected by the taboularioi. Nomikoi are often mentioned in an ecclesiastical context; e.g., John Moschos speaks of a nomikos of the church of Alexandria (PG 87:3073AB). In acts of the 11th–14th C., ecclesiastical nomikoi appear preparing documents, esp. deeds of purchase. There was probably a local distinction of terminology—taboularioi were primarily scribes in the bureaus of Constantinople, Thessalonike, and Serres, whereas in Hierissos, Miletos, and Smyrna nomikoi were more common. Nomikoi fulfilled various ecclesiastical offices, some connected with their notarial duties (protekdikos, archdeacon, bibliophylax, etc.). They are known also as scribes of books (e.g., J. Darrouzès, REB 8 [1950–51] 180). A. Dain (REB 16 [1958] 166f) published a formulary for the appointment of an ecclesiastical nomikos.

NOMINA SACRA. See Abbreviations.

NOMISMA (νόμισμα), a word meaning "coin" generally, but specifically used of the standard gold coin of 24 keratia which formed the basis of the late Roman and Byz. monetary system. It was thus identical with the coin called in Latin a solidus. From the late 11th C. onward the standard gold coin was more commonly termed an hyperpyron.

—Ph.G.

NOMODIDASKALOS. See Nomikos.

NOMOKANONES (νόμοκανώνες), compilations of secular laws (nomoi) and ecclesiastical regulations (kanones; see Canons), the two most important components of canon law. Such compila-
tions, for which the terms nomokanon (and nomokanonon) are attested from the 11th C., were undertaken over and over again from the time of Justinian I into the post-Byz. period. By far the most important collection of this kind was the Nomokanon of Fourteen Titles. Much less frequently copied is the Nomokanon of Fifty Titles, in which the Synagoge of Fifty Titles is enlarged by the inclusion of excerpts from the Corpus Juris Civilis. These excerpts derive mainly from the Collectio 87 Capitulorum; several fragments are also taken from the paraphrase of the Justinianic novels by Athanasios Scholastikos of Emesa. This nomokanon was compiled possibly toward the end of the 6th C. in Antioch. Among the other nomokanones, the Syntagma kata stoicheion of Matthew Blastares is particularly notable.

-A.S.

NOMOKANON OF FOURTEEN TITLES, the most frequently copied of all nomokanones, and the most important source of canon law. Zacharia von Lingenthal conjectured that the Nomokanon of Fourteen Titles proper was preceded by a Syntagmata of Fourteen Titles compiled ca. 580, which included only the material contained in the canons but had the Collectio tripartita as an appendix. According to E. Honigmann (Trois mémoires posthumes [Brussels 1961] 49–64), this Syntagma was compiled by the patriarchs Eutychios and John IV Nesteutes. It is commonly believed that the Nomokanon of Fourteen Titles proper was created in the time of the emperor Herakleios by Anonymous, ”Enantiphanes,” who integrated into this Syntagma parts of the Collectio tripartita and other texts going back to the Corpus Juris Civilis. In a second prologue, composed by Photios and dated to 882/3, it is stated that the canons that had been issued in the interval would be taken into account; most of these are in fact contained in this reworking.

At first the Nomokanon of Fourteen Titles merely made reference to the canons; their full texts, arranged in chronological order, were given only in a section following the Nomokanon. Later, however, the full texts were sometimes integrated into the Nomokanon. According to a third prologue composed by a certain Theodore (Bestes) and dated 1089/90, he added secular law texts from the Basilika and other sources that had hitherto been cited in the Nomokanon of Fourteen Titles only in part. Familiar with this reworking, Theodore Balsamon composed—probably in 1177 and the following years—a similarly structured ”commentary” (introduced by a fourth prologue) in which he mainly addressed the question as to whether the law texts cited in the Nomokanon had been taken over into the Basilika. Of the various versions mentioned, that of the 9th C. in particular was translated into Slavonic at an early date.

-A.S.

NOMOPHYLAX (νομοφύλαξ, lit. “the guardian of law”), an office originated by Constantine IX in 1043 (E. Folliero in Studi in onore di Edoardo Volterra, vol. 2 [Milan 1971] 657–64). 1045 (N. Oikonomides, TM 6 [1976] 134), or, more probably, 1047 (J. Lefort, TM 6 [1976] 284). The future patriarch John (VIII) Xiphilinos was the first to hold the office. Constantine IX created the nomophylax as president of the law school in Constantinople; enrolled him among senators; gave him the “chair” right after the epitikon kriseon; and established his annual roga at 4 litrai plus a silk robe, imperial presents on Palm Sunday, and undefined benefits or siteresia (A. Salač, Novella constitutio saec. XI medii [Prague 1954] 25, par. 11). He could be demoted only in a few strictly limited cases. Psellos describes him as the president of the court, the strategos of the judges, and the leader of the laws (N. Oikonomides, FM 7 [1986] 190).

The office quickly changed character after its creation, and, according to Darrouzes (Officia 314), became a position between the state and church administration. In the 12th C. the post was held by several renowned canonists such as Alexios Aristenos, Neiios Doxopatre, Theodore Balsamon, and in the 14th C. Constantine Harmenos-Poulos. In the 14th C. there were both civil and ecclesiastical nomophylakes; the ecclesiastical nomophylax occupied a position equal to the dikaiophylax.
NOMOS GEORGIKOS. See Farmer’s Law.

NOMOS NAUTIKOS. See Rhodian Sea Law.

NOMOS STRATIOTIKOS (Νόμος Στρατιωτικός; Lat. Leges militares, “Soldier’s Law”), a collection of approximately 55 regulations, mainly penal and disciplinary, for soldiers.

Manuscript Tradition. The extensive MS tradition offers numerous recensions from which the original text cannot be reconstructed with certainty; the source-references for the headings are unclear (“Rufus”), imprecise (“Taktika”), or incomplete (“49th book of the Digest, title 16”). One sequence of 15 chapters, which occurs in a nearly identical form in the Strategikon of Maurice (1.6–8), forms a unit; the rest of the chapters originate in the Corpus Juris Civilis. Two groups can be distinguished: the first compiled possibly as early as the end of the 6th C., the other attached only later, certainly by the middle of the 8th C. The Nomos stratiotikos is found in one variant version of the Appendix of the Ecloga and appears in the supplements to later law books, often alongside the Farmer’s Law and the Rhodian Sea Law. A few MSS of the Taktika preserve a recension of the Nomos stratiotikos wherein the collection is expanded and provided with references to the Basilika.

Content of Regulations. The code embodies the basic principles of military law: to enforce discipline and to expel or reject undesirables. Crimes committed in wartime, such as insubordination, desertion, cowardice, or looting (see Booty) were punishable by death. Punishment for crimes in peacetime or violations of conditions of service were lighter, often entailing expulsion from the army with the attendant loss of privileges associated with military service. Anyone guilty of a civil offense was deemed ineligible for enlistment. The code effectively defines the reach of military as opposed to civil jurisdiction—only in cases of adultery were soldiers turned over to civil authorities.

NONNOS, THEOPHANES. See Chrysobalantes, Theophanes.

NONNOS OF PANOPOLIS, one of the many poets who came from late Roman Egypt. The life of Nonnos (Νόννος) is obscure; his career is usually dated to the first half of the 5th C. (B. Baldwin, Eranos 84 [1986] 60f). His major work is the Dionysiaka, detailing in 48 hexameter books the exploits of Dionysos in India. The composition of the Dionysiaka is “linear,” with each episode connected to the next without any coherence in space and time (M. Riemschneider, BBA 5 [1957] 68–79); situations and images recur steadily. The epic is unified by a consistent perception of the world as manifold (poikilos), changing, and unstable (W. Fauth, Eideos poikilon [Göttingen 1981]). The agglomeration of synonyms and riddelike metaphors creates the impression of an enigmatic world, and, according to Averincev (Poetika 136–49), resembles the style of pseudo-Dionysios the Areopagite. Nonnos was interested in the founding of cities (he tells the story of Kadmos, mentions Byzas, the eponym of Byzantium); he relates the foundation-myth for the law school of Berytus and expresses his faith in the civilizing mission of Rome. Themes of Astrology, prophecy, and eros permeate his work. Nonnos possibly composed a hexametric paraphrase of the Gospel of John (see K. Smolak, JÖB 34 [1984] 1–14).

NONNOSOS (Νόννοσος), writer of the first half of the 6th C. Nonnosos wrote a narrative (now lost), perhaps in the form of a memoir, recounting his adventures in Ethiopia and central and south-
ern Arabia during a diplomatic mission for Justinian I (530/1); his father and grandfather had been similarly employed by Anastasios I (502) and Justin I (524). Nonnrosos's specific task was to bring to Constantinople a certain Qays, ruler of Kinda (I. Kawar, BZ 53 [1960] 57–73); Nonnrosos subsequently journeyed to Axum. According to Photios (Bibl., cod.3), sole source for his book's existence, Nonnrosos emphasized his own courage during hair-raising adventures. Arabian religion, the local pataois, elephants, and pygmies were some of the features of his narrative. His work may have been used by Malalas and Theophanes the Confessor (Theoph. 141–44).

—B.B.

NORICUM, Roman province northwest of Pannonia, divided by 304/5 into two: Noricum Ripense (major centers, Lauriacum and Ovilava) and Noricum Mediterraneum (capital, Virunum). Noricum Ripense, bordering on the Danube, had a more military character than Noricum Mediter-
raneeum, which was protected on the north by the Alps. The dux of Noricum Ripense directed both civil administration and the garrisons along the limes. The 4th C. was a period of relative pros-
perity: Noricum had flourishing villas (some sur-
vived until the end of the 5th C.), mines were explored, and new buildings were constructed in Virunum and other places. Christianity penetrated into the province, but pagan shrines (esp. that of Isis Noreia) remained active. In the 5th C. the area was systematically plundered by barbar-
ians; the population sought refuge in fortified castles. Eugippius in his vita of St. Severinus described the precarious situation of Noricum at this time. Nevertheless, Christianity became firmly established and many small churches were built throughout the region.

Noricum Ripense was abandoned by the “Romans” in 488, but Odoacer retained control over southern Noricum. In the 6th C. the Franks and Lombards competed for dominance in the area and Justinian I had to cede it to the Lombards; at the beginning of the 7th C., the Avars and Slavs penetrated Noricum and urban life ceased. Evidence of urbanism can be found only in Celeia and even there it is on a very limited level.

Personal bis zum Ende der römischen Herrschaft (Vienna 1969).

NORMANS (“Northmen”), western European term for Nordic people, known as Vikings in Scandinavia, Varangians in Kievan Rus', and Frankoi in Byz. From the end of the 8th C. to the 11th C. the Normans plundered and often settled in various countries from Iceland to Kie-

ven Rus'. In 860 Normans sacked Pisa and, ac-

According to legend, seized and burned Luni, which they mistook for Rome.

The Norman occupation of southern Italy began in 999 or 1016/17. They first penetrated there from Normandy as mercenaries of Byz. or Lombard princes, then formed several principalties that Roger II united into a kingdom. Despite the successes of Byz. generals such as Basil Boloannes

and George Maniakes, the Normans occupied Byz. themes in Italy between 1040 and 1071.

From 1060 to 1072 the Normans conquered Sicily. Their victory in Italy was the result of a turbulent situation in which various forces (Greeks, Germans, Arabs, the papacy, Lombard rulers of Salerno, Capua, etc.) were contending and also the strength of the Norman army. Still peasants

under their chieftains in the 10th C., the Normans at the same time acquired the military techniques of knights. Norman alertness and their use of

ruses often impressed their adversaries.

The Normans in Italy were closely connected with Byz. During the first century of Norman rule large sectors of their administration were run by

Greeks, even former Byz. officials. Many Norman nobles entered Byz. service: in the 11th C. some acted as semi-independent military commanders (Hervé Frankopoulos, Roussel de Bailleul), whereas in the 12th C. they penetrated the Byz.

aristocracy, some (Rogerio, Petralphai, Raoul) even marrying into the imperial family. In the 12th C. Normans constituted the most populous group of Westerners in the Byz. elite (Kazhdan, Gosp. klas. 214). On the other hand, the Normans

exploited Byz.'s precarious situation and tried to establish their command in the Balkans—first in 1081–85 under Robert Guiscard, who was fi-

nally defeated by Alexios I. Bohemond successfully attacked Dyrrachion in 1107–08 and had to sign the treaty of DEVOL acknowledging his

allegiance to Byz. During the constant wars of the 12th C. Normans even sent a fleet against Constantinople; in 1147–48 Roger II's fleet devastated central Greece and the Peloponnese, and the Normans carried off many Byz. silk weavers to Sicily. The Normans' major success was the capture of Thessalonike in 1185, but they were soon routed by Alexios Branas. Another region in which the Normans attempted to create a principality was Antioch, reconquered during the First Crusade. At the end of the 12th C. relations between the Normans and Byz. improved as a result of common animosity toward Germany: the Byz. supported Tancred of Lecce against Henry VI of Germany until Tancred's death; in 1194 Henry (husband of Roger II's daughter Constance and therefore a legitimate heir to the throne) was crowned king of Sicily, thus ending the rule of the Norman dynasty.

NOTARAS, LOUKAS, megas doux (1449–1453); born Constantinople, died Constantinople June 1453. Son of Nicholas Notaras (Nolaras), a wealthy courtier and ambassador of Manuel II, Loukas Notaras served the last three Byz. emperors and was related by marriage to the imperial family. He called himself Cambros of the emperor. S. Runciman (Polychronion 447–49) has suggested that his wife was a daughter of John VII. In 1424, Notaras accompanied George Sphrantzes on an embassy to Murad II; he served as mesazon under John VIII and Constantine XI (J. Verpeaux, BS 16 [1955] 272). In 1441 he commanded the ship on which Constantine sailed to Lesbos to marry Caterina Gattilusio. Notaras did business with Italian merchants, entrusted his money to Italian bankers, and became a citizen of Genoa and Venice (Oikonomides, Hommes d'affaires 19f, 120f). Despite his Italian ties, he was a rabid anti-Unionist and was recorded by a hostile source (Douk. 329) as preferring Turkish conquest to Union of the Churches. Notaras took an active part, however, in the defense of Constantinople during the Ottoman siege of 1453. According to pseudo-Sphrantzes (Sphr. 406, 432–34), Notaras was accused of treachery by Giustiniani Longo and sought an accommodation with the sultan after
the fall of Constantinople; nonetheless, he and his sons were executed. In 1470 a certain John Moschos wrote a eulogy of Notaras attempting to vindicate him from charges of treason (ed. E. Legrand, DICEE 2 (1885-86) 413–24).

NOTARY, an official whose duty was to register transactions and certify documents. He bore various names (e.g., notarius [Lat.], taboullarios, tabellion, symbolographos, nomikos), which changed their meaning over the course of time. Late Roman notarii were primarily stenographers who recorded the minutes of important meetings, while taboullarios were officials found in numerous departments in the capital and the provinces, often involved in fiscal operations. "Imperial taboullarios" appear on seals of the 6th–7th C. (e.g., Zacos, Seals 1, no.914).

From the 6th C. onward, however, the major function of taboullarios became the preparation of documents (a function reflected in the term symbolographos), and the guild of taboullarios, as described in the Book of the Eparch (ch.1), was a private body under the control of state authorities. The taboullarios were required to have a legal education, excellent command of Greek, and good handwriting. Their guild was more closely involved than others in the state hierarchy: the dean of the notaries was called primikeros; taboullarios were given ranks of precedence and their participation in imperial processions was clearly emphasized, but their clientele was private, including noble families, monasteries, euageis oikoi, and old-age homes.

From taboullarios should be distinguished notarii (sometimes with the epithet "imperial"), who are known primarily from seals and who served in various government departments (genikon, vestiarion, dromos, etc.) as scribes and secretaries. In the Madrid Skylitzes MS (Grabar-Manoussacas, Skylitzes, no.414) a figure identified as a notarios is shown writing a letter dictated by John I Tzimiskes. Probably by the 14th or 15th C. notarii assumed the role of public notaries rather than that of secretaries, even certifying state treaties.

In the 19th C. and later the nomikoi, who had previously been lawyers and teachers of law, drafted documents. They probably differed from taboullarios only in that they were located in provincial chanceries, taboullarios primarily in Constantinople and some other large cities.

—A.K., A.C.

NOTATION. Until the introduction of musical signs (neumata) in the 9th C., the church relied on oral tradition for the transmission of its chant repertory. Initially, musical notation was used as only an aid to oral transmission, to establish continuity between the oral and written traditions. The question of why musical notation appeared at that particular time has no simple answer, but surely the rapid growth in hymnography and the concern for preserving ancient practices were contributing factors.

Two varieties of Byz. notation were developed to accommodate two different styles of chanting. One, a lectionary or ekphonic notation for the biblical lessons, was in use by the 8th or 9th C. and continued until the 12th or 13th C. Simply a memory aid, it supplies only a part of the information needed to reconstruct the melodies. Unless an explanatory manual is found, this notation will continue to defy precise transcription. The other, a melodic notation for hymns and psalms, is found in the following important collections: the Heirmologia, the Sticherarion, the Asmatikon, the Psaltikon, and the Akolouthia (or Papadike).

Before ca.1175, Byz. melodic notation was stenographic; the singer was expected to interpret the signs by applying certain established rules (generally unknown to us, but absolutely familiar to him) in order to provide an accurate and acceptable rendition of the music. After ca.1175, the more complex and explicit notation, operating on mathematical principles, rather than on melodic conventions, provided the singer with all the graphic material necessary to execute the chant correctly.
NOTITIA DIGNITATUM, a (probably) official list of all civil and military offices of both halves of the late Roman Empire. The purpose of the Notitia seems to have been to order the precedence of officials, but it records offices actually held rather than honorary titles. The primicerius of the notaries in each half of the empire was supposed to update the Notitia, but changes were not made consistently and partial revisions resulted in substantial contradictions in the surviving text. The exact date of the extant version is debated: Hoffmann assigns the military lists of the Western section to the reign of Honorius and those of the Eastern part to Theodosios II; Clemente distinguishes three strata, that of Theodosios I, a revision at the time of Stilicho, and another ca. 425–29 (see also W. Seibt, Instituts für österreichische Geschichtsforschung, Mitteilungen 90 [1982] 339–46). Many sections of the Notitia contain shield emblems (insignia) of various offices that are usually thought to represent an official pictorial register, although R. Grigg (JRS 73 [1983] 132–41) demonstrated their inaccuracy and questioned their official character.

NOTITIAE EPISCOPTUM (sing. τάξις or ἐκθέσεις), lists of ecclesiastical dioceses. The dioceses are arranged in hierarchical order: first metropolitan sees, then autonomous archbishoprics, and finally bishoprics in clusters, each of which makes up a metropolis. The earliest surviving notitia of Constantinople is that of pseudo-Epiphanius, probably compiled during the reign of Heraclios. Three others belong to the 8th and 9th C., several to the 10th C., and the latest (twenty-first) notitia in the edition of Darrouzès (infra) is of the Turkish period. Gerland (infra, 18) hypothesized that the original document, called by him the Urnotitia, might have been created by the end of the 4th C. The lost notitia of the patriarchate of Antioch was reconstructed by E. Honigmann (BZ 25 [1925] 60–88) on the basis of later Greek, Latin, and Eastern sources. The lists of notitiae are not always consistent with the signatures in the minutes of church councils—in the 12th C. the discrepancies are insignificant, in the 14th C. more substantial owing to the general political unrest of the period; one can conclude that the lists of notitiae were traditional and lagged behind actual changes in the hierarchy.

Attempts have been made to interpret the lists in terms of political and economic history: K. Amantos (11 CEB, Akten [Munich 1960] 21–23) emphasized that the notitiae reflect the decline of Christianity, esp. in the East, during the Arab and Turkish invasions; Ostrogorsky (Byz. Geschichte 109–13) asserts that the notitiae “correspond fairly closely to the actual situation” and demonstrate the survival of urban centers in Asia Minor in the 7th C. and later. On the other hand, I. Snegaroff (IsvInstBülgIst 6 [1956] 647–55) is very cautious in assessing the usefulness of notitiae to clarify the process of Christianization of the Balkans in the 7th C.

NOTITIAE DIGNITATUM, ed. O. Seeck (Berlin 1876).

NOTITIAE URBIS CONSTANTINOPOLITANAEE, an anonymous Latin description of Constantinople compiled ca. 425–30 during the reign of Theodosios II. It consists of a preface, a list of 14 regions indicating the most notable buildings and local officials, and a recapitulation stating that Constantinople possessed 5 palaces, 14 churches, 8 public baths and 153 private bathhouses, 4 squares (foras), 5 warehouses (horrea), 2 theaters, 2 mime theaters (husoria), a hippodrome (circus), 4 cisterns, 322 vici (“wards”), 4,388 houses (domus), 17 docks (gradus), and 5 slaughterhouses; also mentioned are 2 senate houses, the Augustaem, Capitolium, a colosseum, and so on. The local officials named include 13 curatores (the 14th region had no curator), 14 slave-policemen (vernaculi), 560 volunteer firemen (collegiati), and 65 night guards (vicomagistri). This notitia is the document on which calculation of the population of 5th-C. Constantinople is primarily based.

NOTITIAE EPISCOPTUM, ed. O. Seeck (Berlin 1876) 227–43. Germ. tr. F.W. Unger, Quellen der byzantinischen Kunstgeschichte (Vienna 1878) 162–69.

NOUS. See INTELLECT.

NOVAE (Nőßars), a Roman city of MOESIA II, on the right bank of the Danube; it was located near mod. Svištov in Bulgaria. Archaeological excavations reveal a change in the urban plan in the early 4th C., probably after the rebellion of soldiers in 316/17 (T. Sarnowski, Archeologia 30 [Warsaw 1979] 119–28): the central square with its principia (headquarters) was transformed into a forum, but the Roman network of streets and public buildings with porticoes continued to determine the shape of Novae. Coin finds are esp. abundant between 330 and 378 (K. Dimitrov, Pulpudova 3 [1978] 199–203), but economic activity was substantial through the 5th C.: from the end of the 4th C. onward, at least four basilicas were constructed (S. Parnciki-Pudeiko, Archeologia Polona 21–22 [1983] 269). By 430 Novae was a bishopric. Justinian I tried to maintain the city, but after ca.600 the name Novae disappears from written sources; a seal with a nimbate bust and the monogrammatic name (possibly Celtic) METR[O]NOU or MERT[I]NOU (L. Mrozewicz, Archeologia 32 [Warsaw 1981] 82, no.19) is probably to be dated in the second half of the 6th C. (not the 6th–8th C.).

NOVATIONISM, a rigorist Christian sect, named after Novatianus (died 257/8), a Roman priest. He refused the readmission of lapsi, those who had renounced their faith in the face of the Decian persecution (250–51); his followers formed a separatist community. Calling themselves katharoi (the pure), groups of Novatians sprang up throughout the empire, but they were particularly strong in Africa, Asia Minor, and Constantinople. More schisms that heretics, the Novatians modeled themselves closely on the practice of the contemporary church, although they continued to hold that serious sin after baptism could not be for-}

given. They agreed with the Orthodox on the question of Arianism, and the emperors generally hesitated to persecute the sect, whose members were commonly admired for their piety. In the 4th C. the Novatian leadership apparently became more lax, and some sect members separated from the group, calling themselves Protopaschites because of their method for calculating the celebration of Easter. Novatianism lost much of its vigor in the 5th C., but the sect survived at least until the early 7th C.

NOVEL (peepō, Lat. novella [constitutio], lit. a “new [decree]”), the term for an imperial edict. Known from the 4th C. onward, it was specifically applied to ordinances issued after the CODEX THEODOSIANUS and then to the Justinianic Novels (see NOVELS OF JUSTINIAN I) promulgated after the CODEX JUSTINIANUS. The term fell out of use after Justinian I, but reappeared at the time of the “reception” of Justinianic law and was used in the collection of laws issued by Leo VI (see NOVELS OF LEO VI). The emperors of the 10th C., from Romanos I (Reg 1, nos. 595, 628) to Basil II (Reg 1, nos. 772, 783), used the term relatively often; less frequent in the 11th to first half of the 12th C., it became popular with Manuel I (Reg 2, nos. 1341, 1398, 1467, 1535). From this time onward, more general expressions, such as novel or edict (see EDICTUM) were replaced by specific terms, such as chrysobull, proctagma, horismos (Dölger, Diplomatik 122). If we disregard the two cases in which the archaizing historian Pachymeres used this term (Reg 3, no.2040; 4, no.2159), the only novel known from the late Byz. period is the law of Andronikos II of 1306 on ABOTIKION, regulating intestate succession (Reg 4, no.2295).

NOVELS OF JUSTINIAN I. The laws published by Justinian I after the completion of the CODEX JUSTINIANUS were designated as novellae constitutiones or new constitutions. In contrast to the other
parts of the Corpus Juris Civilis they were issued for the most part in Greek, and, in contrast to the concise language of the Digest and Institutes, they are accompanied by a considerable use of rhetoric and extensive justifications and legitimations. Justinian intended to publish the novels as an "official" compilation; this did not occur, however, perhaps due to the death of Tribonian. The novels are thus transmitted only in private collections; the most extensive, which contains 168 novels (some of which are by Justinian’s successors) as well as 13 edicts, is the basis of modern editions. Recensions of the novels from the 6th or 7th C. exist in Latin in the so-called Authenticum and the Epitome Juliani, in Greek in the Syntagma of novels by Athanasios Scholastikos of Emesa, and the collection of novels by Theodore Scholastikos. The greater part of the texts of the Justinianic novels was incorporated into the Basilika.

ED. CIC, vol. 3.

M. Th. F. NOVELS OF LEO VI, a collection of 113 undated imperial ordinances issued by Emp. Leo VI and addressed mostly to Stylianos Zaoutzes. The first novels are devoted to ecclesiastical affairs, then follow the laws involving individuals (marriage, dowry, manumission, adoption). After novel 66 no system can be ascertained. It is unclear whether they were published as an entire corpus or one after another; in any case, a 10th-C. MS containing only 12 novels has been recently discovered (N. van der Wal, Tijdschrift 49 [1975] 257–69). Since Zaoutzes died in 899, the novels must have been issued before this year. N. van der Wal and J. Lokin (Historiae iuris Graeco-Romanie delineatio [Groningen 1985] 86) suggest that they were published after the Basilika, although they contain no direct references to the Basilika. M. Th. Fögen (SubGr 3 [1989] 23–35) argues instead that the novels were issued one by one, while the codification of the Basilika was in progress, to meet problems which arose from the discrepancies between Justinianic law and contemporary needs and customs.

The purpose of the novels was to "cleanse" the legal system and abrogate legislation that had become obsolete (G. Michailidès-Nouaros in Mne-mosynon Perilektoù Bizoukidou [Thessalonike 1960–65] 27–54). It is not yet clear to what extent it was a real program and to what extent an academic exercise. M. Sjūzjumov (VizVrem 15 [1959] 33–49) viewed the novels as coherent legislation directed at the needs of large flourishing cities, encouraging private ownership, trade, loans, and partnerships, but ignoring the situation in the countryside.

ED. P. Noailles, A. Dain, Les Novelles de Léon VI le Sage (Paris 1944), with Fr. tr. C.A. Spulber, Les Novelles de Léon le Sage (Cernăuți 1934) 3–121, with Fr. tr.

-A.K.

NOVGOROD (Нао́городь or Невгородь), town on the upper Volkhov; initially a northern base for the Rus' (earliest reference: De adm. imp. 94) and a prosperous commercial center until the end of the 15th C. A 15th-C. historian (Chalk. 1:122.18–21) speaks of Novgorod as an aristokratia, more prosperous than the other Russian cities. Direct and transit trade with Constantinople was most intense in the 10th–12th C. (esp. exports to Novgorod of glass, walnuts, boxwood, and amphorae of wine and oil). The bishopric was founded ca.990 and its incumbents gradually acquired a status somewhat apart from the other bishops of Rus'; the title "archbishop" was used sporadically from the mid-12th C.; in 1285 Novgorod refused the metropolitan of Kiev the right to overrule judgments of the archbishop, a right that Kir-rian—supported by ambassadors from Patr. Anto-ny IV—tried unsuccessfully to reclaim. Cul-tural ties with Byz., however, were close: the Cathedral of St. Sophia (1045–50) was built by Byz. craftsmen, and it probably included doors made in Constantinople (one of two sets of doors erroneously labeled “Chersonian”—see S. Beljaev in Dreminaja Rus’i slaviane [Moscow 1978] 300–10); the 12th-C. bishops had their seals inscribed in Greek; Byz. liturgical silver from Novgorod is preserved, as are the working notes of a Greek icon painter active in Novgorod ca.1200 (B. Kolčin et al., Usad’ba novgorodskogo chudožnika XII v. [Moscow 1981]); and travelers and pilgrims from Novgorod produced accounts of the holy places of Constantinople (e.g., Antony of Novgorod).

NOVICE (παροφόρος), in the earlier period also called archarios or neopages, a person undergoing a period of probation before receiving the tonsure and taking the monastic habit. In the earliest years of monasticism both Pachomios and Basil the Great prescribed a brief but unspecified trial period for those wishing to take the monastic habit. The legislation of Justinian I (novs. 5, 132.5) and canon law (canon 5 of the Council of Constantinople of 861) ordained that this probationary period should range from six months to three years; some typika specify that the length of the trial period depended on the social rank, age, and experience of the future monk or nun, being shortest for members of the nobility. In the case of gravely ill novices, the trial period was waived and tonsure was immediate.

The minimum age for entrance into a monastery was about 16–18; in some cases younger boys and girls could be admitted. Thus, the typikon of Christodoulos of Patmos allowed boys (paidia) to be brought up at the monastery; if they decided to take permanent vows, they could later be tonsured (MM 6:83.10–12). Usually beardless youths were not allowed to live in the monastery and resided in monastic proasteia. Other categories of individuals who could be denied admission to a monastery were eunuchs, fugitive slaves, and criminals; some hegoumenoi were reluctant to admit children seeking to enter monastic life against the will of their parents. On the other hand, a lavish donation (apotage, prosenexis, anathema, etc.) might enhance one’s chances of admittance, although Balsamon protested against the practice of tonsuring in exchange for a gift of money (Rhalles-Potles, Syntagma 2:632.19–28).

The novice sometimes continued to wear secular garb until the time of his or her tonsure; Blastares even imposed a fine on those who donned the monastic habit before the end of the novitiate. Balsamon prohibited a rasophoros to return to secular life and to marry (Rhalles-Potles, Syntagma 4:746.13–14). Novices were usually assigned to an experienced monk or nun (anadochos) as a spiritual mentor when Symeon the Theologian entered the Studios monastery, he placed all his possessions at the feet of his father pneumatikos and was given a place to sleep under the stairs near his master’s cell.

NOVIODUNUM (Νοβιοδόνος, mod. Isaccea in Rumania), a Roman naval station in Moesia II, on the right bank of the Danube. Archaeologists have discovered the north wall of the fortress, with one large rectangular and seven semicircular towers; a second rampart was built in the 4th C. Baths (one from the 4th C.) and a basilical building were also excavated. Several Christian martyrs are connected with Noviodunum, among them Menerius or Menedemus (E. Polaschek, RE 17 [1937] 1194). A series of coins dated through the reign of Emp. Phokas confirms the functioning of the stronghold to the beginning of the 7th C. It was rebuilt during the reign of John I Tzimiskes. Byz. coins of the late 10th–13th C. have been found as well as seals, including one with the name "despos: Isaakios," probably Isaac II (G. Stefan, Dacia 9–10 [1941–44] 482). Near Isaccea, an 11th–12th-C. cemetery was excavated that yielded Byz. coins (of Romanos III and Michael IV) and Byz. glass, bronze, and silver objects (I. Vasilii, Peuce 9 [1984] 107–41). Noviodunum seems to have been an important point on the Byz. defensive system of the Danube in the 11th–12th C. Tatar coins and objects of the 13th–14th C. testify to their presence in Noviodunum.

NOVYE SENŽARY, a town near Poltava in the Ukraine where in 1928 a "hoard" (in fact, objects from a tomb) was found; the objects disappeared during World War II. The "hoard" contained seven solidi (the latest dating to Constans II, probably before 646), weapons and armor fragments (from a saber and a coat of mail), arrowheads, harness items, a glass goblet and bowl, and gold and silver revetment. The glass vessels and a gold ring were probably of Byz. provenance. The location of this tomb, perhaps that of a nomad.
warrior, is very close to that of the “hoard” of Malaja Perščepina.

NOXAL ACTIONS (νοξαλία ήγωγαι, from Lat. actiones noxales), suits against the owner of a delinquent slave, in which the owner—providing the delict had occurred without his knowledge or consent—could avoid paying compensation or penalties by surrendering the slave (noxae datio) to the person who had suffered the damage. The same option existed in cases of damage by quadrupeds (Institutes 4.8–9; Digest 9.1.4; Basil. 60.2.5). Whether the option was actually exercised in Byz. remains in doubt (despite the evidence of Peira 61.5).

Lit.: Kaser, Privatrecht 2:430–33. – L.B.

NUBIA, general designation for the region on Egypt’s southern border beginning at Syene (Aswan) and following the Nile and Blue Nile basins to an undetermined point above Soba where it bordered on the kingdom of Axum. Circa 530, the “kinglet” (basiliskos) Silko consolidated power in the north by subduing the Blemmyes. In the 6th C., Nubia was divided into three kingdoms: Nobatia in the north, Makuria in the middle, and Alodia in the south. Both Justinian I and Theodora sponsored separate Orthodox and Monophysite missions to convert Nubia between 530 and 580. The readiness to accept missions from Byz. may have stemmed from efforts to check Axum, whose Christian ruler, a sometime Byz. ally, had devastated the earlier Meroitic kingdom. The Nubian kingdoms were subject to strong influences from the emerging Coptic church of Egypt, but not to the utter exclusion of Greek Orthodoxy. The Arab conquests cut off Nubia from further contact with Byz., but Greek continued to be used in inscriptions and Byz. influences on church art are generally acknowledged. The two northern kingdoms, united ca.710, remained independent and Christian until 1323. The kingdom of Soba survived until the 15th C. Islamization followed upon their conquests.

Robert de Clari relates that at the court of Isaac II and Alexios IV he saw a Nubian king (“li rois de Nubie”) who visited Jerusalem and Constantinople and was planning to continue to Rome and Spain. He ruled over a Christian people who dwelt far south of Jerusalem, baptized their children, and branded with a hot iron the sign of the cross on their brows. This pilgrimage took place ca.1203, and the king can probably be identified as Lalibela, the Ethiopian ruler of the second half of the 12th C. known for his pilgrimage to Jerusalem and active construction of churches (B. Hendrickx, Byzantina 13.2 [1985] 893–98; cf. B. Rostkowski in P. van Moorsel, New Discoveries in Nubia [Leiden 1982] 113–16).

– D.W.J., A.K.

NUDE, THE. Unlike classical authors the Byz. tried to avoid describing the naked body: a typical example of Byz. caution is Niketas Choniates’ reference to the statue of Athena in Constantinople, which he praises for being covered with a heavy garment. Byz. costume concealed rather than exposed the body. Contrary opinions were rare: thus Symeon the Theologian, in a hymn, proclaimed that Christ is present in every limb of the human body, even in the genitalia, and that therefore we should not be ashamed of our bodies. The History of Choniates contains no less than 17 words for various organs of the body connected with sexuality and excretory activity. Hagiographical texts often describe the apprehension experienced by pious men before the naked female body and praise holy men who showed themselves indifferent toward nakedness: John Moschos tells a story about a priest who was unable to baptize a beautiful Persian girl until John the Baptist sealed his body from the navel down with the sign of the cross; the priest then baptized the girl without even noticing that she was female (PG 87:2853D-2856B). Suppressed interest in the human body is sometimes revealed by criticism of classical and Islamic imagery.

In Byz. art, the nude is marked less by its rarity than by its cautious treatment. The nude form that is customary in Greek and Roman art survived in late antiquity—as on an ivory diptych in Ravenna (Volbach, Elfenbeinarbeiten, no.125) where Jonah is shown naked and fully sexed under the gourd—but in Byz. art was employed in greatly reduced numbers or else dressed, as in the same scene in the Menologion of Basil II (p. 59). Similarly, Christ appears naked in the baptistery
mosaics of Ravenna, his genitals visible through the Jordan, while in and after the 9th C. his groin is obscured. No matter what the period, it is the identity and function of the nude that seems to have determined the frankness with which the body was treated. Some images of female martyrdom, for example, depict mutilated breasts, and women in Last Judgments are suckled by snakes or frogs.

The pudenda are usually concealed by other parts of the body or by foliage in Creation scenes; where they are exposed, as on a ivory-clad casket in Cleveland, Adam and Eve, expelled from Paradise, have identical genitalia. The Byz. knew Hellenistic works of art with naked eros, such as the Tetrapleuron (Nik. Chon. 648.52—54) preserved until the 15th C. in Constantinople; putti on some Byz. boxes are shown fully exposed.

Nudity could suggest an equation with sin and sickness: Job is covered with sores until he finds the true path. Similarly, the desolation of the Good Samaritan in the Rossano Gospels (fol.7v) is denoted by his nakedness. Conversely in a scene that called for nudity, the Forty Martyrs of Sebasteia are normally shown half-clothed. Generally, the naked body is treated diagrammatically, emphasizing such linear features as the spine and the diaphragm, though in deliberately classicizing works such as the silver Meleager and Atalanta plate, dating from the reign of Heraikleios, its volumetric qualities are observed.

NU'MÁN, AL-. See NAMAAN.

NUMBERS. The Greek notation used to represent numbers consisted of the 24 normal letters of the Greek alphabet plus three archaic letters. The 27 resulting characters were arranged in three series of nine numbers each: units, tens, and hundreds. The three archaic letters were digamma (normally written in MSS as Ψ and from this form known as stigma), kappa, and sampi (see Table). The addition of diacritical marks produced further sets of three series of higher ord-

ders. Thus each of the above 27 numbers is multiplied by 1,000 by the addition of a stroke to the lower left; e.g., gements is replaced by a special symbol, e.g., α = 1000 and θ 800,000. In this way numbers of any magnitude could, in theory, be expressed symbolically. In fact, the highest numbers normally in use were products of the members of the first set and 10,000. In order to express these products one wrote the smaller number above the letter M; for example, Μ = 50,000 and Μ = 8,000,000.

Fractional numbers were written as unit fractions in the manner of the Egyptians, except for 2/3, half. There was also a special symbol for 1/2, V or. Since the numerators of the fractions were always 1, they did not need to be expressed. An integer number was often distinguished from a unit fraction by placing a bar over the integer, an acute accent after the fraction; e.g., δ = 4 and δ' = 1/4. Fractions whose numerators were not 1 were analyzed as the sum of several unit fractions; e.g., δ'η' = 1/4 + 1/8 = 3/8.

From antiquity the Greeks had also employed their letter numbers for 1 through 50 to express the sexagesimal place value system introduced into astronomy by the Babylonians. In this system each place represents a power of 60, a positive power to the left of zero and a negative to the right. The absence of a number in any place was represented by the symbol 0; in pure sexagesimal writing this could not be confused with the integer number represented by omicron, 70, since no number higher than 59 could ever be written in any place. Thus, the motion of Saturn in 30 days, for instance, would be written: αο ιτ ιε μι ιδ κκ ιο

λ = 1 + 0 × 60⁻¹ + 16 × 60⁻² + 45 × 60⁻³ + 44 × 60⁻⁴ + 25 × 60⁻⁵ + 30 × 60⁻⁶.

In the middle of the 13th C. the Indian decimal place value system was introduced into Byz. together with the ten symbols necessary for writing it. The older systems coexisted with this new one until after 1453; and, of course, the sexagesimal system continued to be used in astronomy, horology, and trigonometry.

D.P.
NUMBER SYMBOLISM AND THEORY. Numbers played an important part in Pythagorean and Neoplatonic philosophy, and Christian theologians inherited the problem of the transition from the monad of God to the multitude in the created world. The mystery of the Trinity (three hypotheses of one nature) and the mystery of Christ (two natures united in one hypostasis) formed the bridge from the One to the cosmos and multifarious mankind. Then the question arose whether the number as such was a substance or only the form/measurement. John of Damascus, in his polemics against the Monophysites (Aceph. 4.3–6, ed. Kotter, *Schriften* 4:412), rejects the idea that number is the principle (*archê*) of division; it is rather a “heaping up” or “pouring forth” of individual “monads,” and thus union and not division (*Jacob.* 50:2–3, ed. Kotter, *Schriften* 4:124). John used the argument to support the doctrine of the unity of two natures in Christ.

The Byz. ascribed a particular significance, sometimes mysterious or magical, to various numbers, esp. one (one God, one cosmos, one basileus), two (two natures in Christ), and three: besides the Trinity, they observed an angelic hierarchy divided into three orders, the three days of Christ’s entombment, triple immersion at baptism, three kinds of law (of nature, of Moses, and of grace), etc. Four characterized the elements, quarters of the world, and cardinal virtues; seven indicated perfection (seven virtues); eight, as the cube of two, was an ideal number. For John Lydos and many astrologers thereafter the numbers three, nine, and forty defined the stages of conception, mortality, the progress of the soul, and liturgical commemoration (G. Dagron in *Temps chrétien* 419–30). Symbolic interpretation was popular in rhetoric and used for political propaganda. For instance, at the beginning of Constantine IV’s reign, the army demanded that he proclaim his brothers Tiberios and Heracleios emperors; the request was justified in terms of number symbolism. The soldiers announced, “We believe in the Trinity, we will crown three rulers” (Theoph. 352.15f).

Number symbolism also played a pervasive role in art and architecture: obvious allusion to the Trinity is made in triple apses, naves, and doors. Biblical descriptions of the four corners of the world, rivers of Paradise, and winds were staples of book illustration, and fivefold symmetry an essential aspect of the *Nea Ekklesia* and the *Pen- tapyrignon*. The varying number of apostles at different times in Christ’s earthly life was interpreted in a hymn on the cathedral of Edessa as underlying the architectural form of its members. Eight sides, symbolizing the Resurrection, were traditional for baptismal fonts, while the ideal church, according to the 5th-C. *Testamentum Domini*, included a baptistery 21 cubits long “for the total number of the prophets” and 12 cubits wide “for a type of those . . . appointed to preach the Gospel.”

-A.K., A.C.-

NUMIDIA (*Novumidia*), a province situated to the west and south of *Africa Proconsularis*. Under Diocletian, Numidia was divided into two provinces: Numidia Militana, comprising the military frontier in the south, and Numidia Cirtensis, the Tell and High Plains around Cirta. In 314 this arrangement was abandoned and the province reunited. Numidia was remote and not particularly wealthy. This atmosphere bred in the province a fervent conservatism and resistance to central authority, manifested by the Donatist movement and within it the Circumcellions. In 435 Numidia was ceded to the *Vandals*. Although returned to the imperial government in 442, the eastern and southern parts of Numidia evidently remained under Vandal control. In the late 5th C. *Mauri* tribes from the Aures Mountains sacked Thamugadi and frequently raids as far as Cirta, renamed Constantina.

Byz. authority over the province was established through a series of campaigns (534–41) under Justinian I. The *dux* of Numidia exercised a substantial circumscription, which probably included parts of *Mauritania* and the proconsular province. The military importance of Numidia is evidenced by the fact that some holders of the office went on to become *magistri militum* of Africa. Numerous forts were built under Justinian to secure Numidia against the largely autonomous tribes, although no conflicts are recorded after ca.571.

A Latin inscription from Thamugadi mentions the construction of a church, sometime between 642 and 647, by Gregory *patricius* (presumably Gregory, the exarch) and John, *dux* of Tigisis,
the last reference to Byz. official activity in Numidia. The first Arab incursion in 682 resulted in a Mauri-Byz. victory at Thabudeos, but by then imperial authority in Numidia was in name only.

NUMISMATICS (from νόμισμα), the study of coins and of coinlike objects such as coin weights (exagia), tokens, jettons, and medals. In practice, Byz. numismatics is limited to coins and coin weights, for there are no Byz. medals or jettons, and while objects have been published that may have served as tokens, their nature is uncertain and they have yet to be systematically studied. In like manner the discipline does not include Byz. gold and lead bullae, although these resemble coins in metal composition and in design; bullae form the domain of sigillography. Byz. coins become available to scholars through coin finds, the study of which is almost a specialized subject in itself.

Byz. numismatics is in one respect simple, since for most periods coins have survived in large numbers and the great majority can be assigned to specific emperors. Many of the copper coins from 559 to the end of the 7th C. even bear regnal or indictional dates, and this is occasionally the case for coins of other metals. But the scholar is hampered by the total absence of mint records and the paucity of commercial documents, so that it is often not known how the coins of different metals were related to each other or even what some of them were called. A statistical study of the proportions of coins struck by the same dies in particular samples of coin allows one to determine, within a wide margin of error, the number of dies originally used for issues and, consequently, their comparable sizes. The attempts, however, of some numismatists (e.g., O. Metcalf, Byzantium 37 [1967] 288–95) to turn these into absolute figures with the help of coin-output information from other countries and periods has not met with universal acceptance.

Coins of a single denomination and issue were theoretically uniform in weight and fineness. Weight was originally defined in terms of the number (e.g., 72 for the solidus) struck to the Romano-Byz. pound (see Litra). As absolute uniformity was impossible in practice, coins were always a little above or below the average figure; the limits of authorized variation were probably very small in the case of gold coins, less for silver, and probably undefined for copper, where individual specimens of the same issue and in good condition can vary by as much as 50 percent. Original weights are best ascertained by constructing a frequency table of the weights of a number of actual specimens and determining where the largest concentration occurs, but because surviving coins are always worn, even if only slightly, the result will fall short of the original theoretical weight. A further allowance, necessarily somewhat subjective in character, has consequently to be made for wear. Figures for fineness are usually difficult to ascertain. The purity of gold was in the past usually checked by the touchstone, and specific gravity methods, commonly used today, give results sufficiently accurate for scholarly purposes, but more refined procedures (neutron activation, X-ray fluorescence) are employed when possible. Direct chemical analysis is usually avoided, except for copper and silver coins of little value, because of the inevitable injury to the coins.

Because the state issued the coins, their inscriptions and designs could be used for propaganda purposes and they sometimes throw light on imperial claims or policy. (See also “Thematic Content” and “Language” under Coins.) One may instance the introduction of the full title basileus Romaion on the silver miliareis after Michael II recognized Charlemagne as basileus (but not Romanos) in 812, and that of the title orthodoxos on coins of Michael VI (1056–57) and Isaac I (1057–59) in the decade following the breach with Rome in 1054. The way in which emperors were represented shows the way in which they wished their subjects to see them and elucidates the evolution of imperial costume and insignia (G.P. Galavaris, MN 8 [1958] 99–117). From the 9th C. onward coin types often consisted of representations of Christ and of the Virgin and other saints, and because these can be dated with greater certainty than most other works of art, the variety of types used and their evolution can be of great value to the art historian.

NUMMUS (νομίμιον), a Latin term meaning "coin" but often used for a specific denomination. In the period of the Tetrarchy it was apparently the official name of the large bronze coins of approximately 10 g, which numismatists have long been accustomed to term folles. In the 5th–6th C., nummus was the name of the lowest denomination in circulation, a tiny, ill-struck copper coin weighing approximately 1 g that in a document of 445 was reckoned 1/7,200 of the solidus but more frequently was 1/6,000 or 1/12,000. The usual reverse type was an imperial monogram, but its identity as a unit is shown by some nummi of Justinian I bearing instead the letter A (= 1). The denomination ceased to be struck at Constantinople in the late 6th C. and in North Africa during the 7th C., but it remained notionally in use as a money of account, 1/6,000 of the solidus, or sometimes as a generic term for small change (νομίμιον λεπτοὶ—Psellus in PG 122:956A).

NUN (μοναχή, καλόγραια), a woman who renounced the world and entered a cenobitic nunery. As was the case with monks, women could become nuns at several stages of life, as young maidens or as middle-aged and elderly widows. Women donned the monastic habit for many reasons: a true vocation, gratitude for a miraculous cure, loneliness, or illness. It was quite usual for women to take vows when they were widowed or when their husbands were confined in a monastery; in the convent they found both spiritual and material support for their old age.

Rules on the duration of the novitiate (see Novice) varied from convent to convent; the canonical length was three years, but this was reduced to six months or a year for mature and experienced women of proven character. The minimum age for final profession was normally 16. At the time of her vows it was customary for a nun to take a new name, usually beginning with the same letter as her given Christian name, for example, Theodora—Theodoule. The nun’s habit consisted of a black tunic (the himation), an outer cloak (the mandygas), and veil or headcovering (the skepe). Nuns were divided into two classes: the literate Nun. Nuns of the convent of the Virgin Bebaia Elpidios. Miniature in the typikon of the Bebaia Elpidios nunnery (Lincoln College, Oxford, gr. 35, fol. 12r); 14th C. Bodleian Library, Oxford.

were assigned to service as choir sisters; those unable to read were responsible for housekeeping duties.

NUNNERY (γυναικεία μονή, γυναικωνίτης). The development of female monasteries paralleled that of their male counterparts. Among the earliest 4th-C. convents were a large nunnery in Egypt organized in accordance with the precepts of Pachomios and a nunnery founded in Asia Minor by Makrina, based on the rule of her brother, Basil the Great of Caesarea. Nunneries represented a relatively small proportion of Byz. monasteries, perhaps 15 percent, and in later centuries were concentrated in Constantinople,
where they esp. attracted women from aristocratic and imperial families. Convents were prohibited on Athos and Meteora and discouraged on the other holy mountains.

Typika are preserved for six nunneries, including Kecharitomene, Lips, Bebaias Elpidos, and the convent founded by Neilos Damillas; their rules are similar to those of male monasteries, and emphasize the ideal of the koinobion. The typika enjoin strict enclosure and segregation of the sexes, and a twofold division of the community of nuns into choir sisters and those responsible for housekeeping duties. The officials are also similar, for example, superior (hegoumena; see Hegoumenos), steward (oikonomos), cellarer, and treasurer. In contrast to monasteries that had resident hieromonachoi to conduct services, nunneries had to bring in priests from outside. Unlike male establishments, nunneries supported few intellectual or artistic pursuits (A.M. Talbot in Okeanos 604–18). The important function of convents was the refuge and support they provided to women with a true vocation, and to the sick, widowed, and elderly. (See also Monastery, Double.)

NÜR AL-DIN (Nuradīn), atabeg of Aleppo and (from 1154) Damascus and (from 1169) nominal ruler of Egypt; born Feb. 1118, died Damascus 15 May 1174. Son of Zangi, he succeeded his father at Aleppo and devoted himself to fighting the Crusader states. In 1151 he and Mas'ud I seized the remnants of the county of Edessa, which belonged to Manuel I. In Nov. 1158 Nur al-Din's envoys attended Manuel's humiliation of Renaud of Antioch at Mopsuestia; Manuel sent a friendly embassy that reached Nur al-Din in Mar. 1159. Manuel needed Nur al-Din to oppose the Crusaders in the princedom of Antioch, so that the latter would rely on Byz. aid. Thus, while in Apr.–May 1159 Manuel, Baldwin III, and Renaud advanced toward Aleppo, negotiations with Nur al-Din continued. In May 1159 Nur al-Din re-leased several Crusader leaders and thousands of other captives. He and Manuel agreed to support the Danişmendids against Kilic Arslan II; cooperation continued until 1161. In 1164 Nur al-Din crushed an alliance, which included Constantinian Kalamanos (Byz. governor of Cilicia), and captured Kalamanos.

NYMPHAION (Nymphaión), a monumental fountain set against a wall articulated with niches, often decorated with columns and statuary. The nymphaion was adopted from Roman architecture, though its original association with pagan nymphs was lost by the late 4th C., when the term meant no more than a fountain. The Notitia urbis Constantinopolitanae of ca.425 list four nymphae in Constantinople. Of these the most important was the Nympheum Maius, which functioned as the termination of the Aqueduct of Valens in the Forum Tauri; it survived as late as the mid-16th C. In addition to decorating public places, nymphae were sometimes incorporated into the atria of churches. A large nymphaion occupied the west side of the atrium of Basilica A at Philippi (ca.500), taking over the function of the traditional smaller kantharos (fountain).

NÜR AL-DIN (Novpādīn), atabeg of Aleppo and (from 1154) Damascus and (from 1169) nominal ruler of Egypt; born Feb. 1118, died Damascus 15 May 1174. Son of Zangi, he succeeded his father at Aleppo and devoted himself to fighting the Crusader states. In 1151 he and Mas'ud I seized the remnants of the county of Edessa, which belonged to Manuel I. In Nov. 1158 Nur al-Din's envoys attended Manuel's humiliation of Renaud of Antioch at Mopsuestia; Manuel sent a friendly embassy that reached Nur al-Din in Mar. 1159. Manuel needed Nur al-Din to oppose the Crusaders in the princedom of Antioch, so that the latter would rely on Byz. aid. Thus, while in Apr.–May 1159 Manuel, Baldwin III, and Renaud advanced toward Aleppo, negotiations with Nur al-Din continued. In May 1159 Nur al-Din re-leased several Crusader leaders and thousands of other captives. He and Manuel agreed to support the Danişmendids against Kilic Arslan II; cooperation continued until 1161. In 1164 Nur al-Din crushed an alliance, which included Constantinian Kalamanos (Byz. governor of Cilicia), and captured Kalamanos.

NYMPHAION (Nymphaión), a monumental fountain set against a wall articulated with niches, often decorated with columns and statuary. The nymphaion was adopted from Roman architecture, though its original association with pagan nymphs was lost by the late 4th C., when the term meant no more than a fountain. The Notitia urbis Constantinopolitanae of ca.425 list four nymphae in Constantinople. Of these the most important was the Nympheum Maius, which functioned as the termination of the Aqueduct of Valens in the Forum Tauri; it survived as late as the mid-16th C. In addition to decorating public places, nymphae were sometimes incorporated into the atria of churches. A large nymphaion occupied the west side of the atrium of Basilica A at Philippi (ca.500), taking over the function of the traditional smaller kantharos (fountain).

Nymphaios, Treaty of

from the 12th C., Nymphaios became archbishopric in the 13th C. The council of 1234 convoked in Nicæa to discuss church union was transferred to Nymphaios (RegPatr, fasc. 4, nos. 1273–76).

Nymphaios contains the well-preserved palace of the Laskarids, a rectangular structure of four stories, built outside the city, apparently by John III. Its first floor, which has large windows and three rooms, was evidently the main reception area; upper floors, similar in plan, were reached by a monumental exterior stairway. The palace was built of rubble faced with regularly alternating ashlar and brick bands; it was roofed with timber. The castle above the town is Byz. with several phases of construction, mostly of the 13th C.

Nymphaios, Treaty Of. This agreement between Byz. and Genoa was signed in Nymphaios on 13 March 1261 and ratified in Genoa on 10 July 1261 (just one month before the Byz. reconquest of Constantinople). The text has survived only in two Latin versions. Main articles of the treaty established a permanent alliance of the two powers, and both parties vowed not to conclude separate peace with Venice; a Genoese flotilla of up to 50 battleships was to be placed at the disposal of the emperor but at his expense; the Genoese received trade privileges, including marketplaces in Ephesus, Smyrna, Atramytton, and—after the reconquest—in Constantinople; their property received legal protection (also in case of a shipwreck); their conflicts were to be judged by Genoese consuls.

The treaty was directed against Venice and was advantageous for the Genoese, who before 1261 had not done much business with Byz. but traded actively with northern Africa, Provence, and the Levant. In the 1250s their commercial position in these regions became endangered and Genoa was in search of new markets—the alliance with Byz. opened up to them not only Asia Minor and eventually the Balkans, but also the Black Sea and new routes east and north. Michael VIII Palaiologos, who was striving to recover Constantinople

NYMPHS, in Greek mythology female spirits of nature, esp. of water and trees. Faithful to classical mythology, Himerios, in his epithalamios to Severos (ed. A. Colonna, or. 9:255–58), introduces a band of nymphs dancing together with Nereids (the sea nymphs) and dryads (the tree nymphs), with satyrs, Pan, Dionysos, and Aphrodite herself. Nymphs, esp. naiads (water nymphs that live in springs and streams) and hamadryads (wood nymphs), frequently appear in the Dionysiaka of Nonnos. As early as the 4th C. (Himerios, or. 66.12–13) tree nymphs (dryads and hamadryads) began to be equated with “mountain-haunting demons,” and later the image of the nymph as a beautiful female spirit disappeared from Byz. literature. In painting she is almost as rare, appearing only in the most classicizing of contexts: a blue-skinned nymph spies on David the musician in the Paris Psalter (fol. 1v).

However, the Greek word nympha also meant bride, and the image of the bride (the Church as Christ’s nympha) occupied an important place in Christian symbolism. Visual transformations of this sort include the midwives at Christ’s nativity modeled, according to Weitzmann (Gr.Myth. 206), on the nymphs who wash the newborn Dionysos.

NYSSA (Nousa), name of two cities notable in Byz. times.

1. City in northwest Cappadocia, south of the Halys near the village of Harmandali. This city entered history when Gregory of Nyssa was its bishop (372–76, 378–ca.386). Nyssa was de-
strove by the Arabs in 838 but was restored by the time Leo VI transferred the *topoteresia* (garrison post?) of Nyssa from Cappadocia to Char-sianon. The Turks took it after the battle of Mantzikert in 1071. The site contains only some remains of its fortifications. Many bishops and one archbishop are mentioned on seals of the 7th–11th C.; they may have come from this Nyssa or Nyssa in Lydia (see below).

2. *City in Lydia* on the north bank of the Meander, now Sultanhisar. A bishopric throughout the Byz. period, it played no role in history, but preserves substantial remains of the late antique city as well as fortifications that appear to be of the 7th/8th C. It fell to the Turks ca. 1282.

—C.F.
OATH (ἀρχαῖος). As an assertion of the truth, a strengthening of an agreement, or a guarantee of future conduct, the oath was widely used in the private and public life of the Byz. Theological discussions concerning the New Testament prohibition against oaths (Mt 5:33–37) appear to have resulted merely in the avoidance of “superfluous” oaths, in the use of oathlike formulas, and the release of the higher clergy from having to swear oaths. In the area of “state law,” oaths of office and the closely related oaths of fealty were routinely administered. Emperors required the latter from individuals as well as from social organizations or groups: the oath of fealty often served not only to secure the power of the reigning senior emperor but also to establish dynastic succession (cf. Theoph. 449f). From the Crusaders came oaths of allegiance. The emperor himself often resorted to oaths to strengthen political and even international agreements; the corresponding documents were sometimes referred to as horkomotika. In the area of trial law the Romans used a profuse variety of oaths, some of which fell into disuse; yet Empress Irene’s pious attempt at abolishing the witness-oath ultimately failed. The oath laid upon one party to a litigation by the other or imposed by the judge was deemed an indispensable form of proof. As a rule an oath was sworn on a Gospel book, often inside a church. The oath formula varied; there were specific oaths for Jews (Patlagean, Structure, pt.XIV [1965], 137–56). Perjury was considered a serious crime whose punishment was sometimes left to God as the injured party, sometimes threatened in full severity by the earthly powers.

—L.B.

OBELISK OF THEODOSIOS, conventional name for the Egyptian obelisk of Tuthmosis III (1490–1436 B.C.) brought to Constantinople from Karnak no later than the reign of Constantine I and erected on the spina (central axis) of the Hippodrome in 390 under Theodosios I. It rests on a late 4th-C. sculpted marble base, which is slightly more than 7 sq. m. Reliefs on all four sides of the main part of the pedestal show the emperor and his court attending the games. The emperor’s central position, and the frontally or symmetrically disposed guards, prisoners, and spectators about him all suggest a ceremonial rather than a realistic intent for the imagery. On the lower part of the base Greek and Latin inscriptions relate how the obelisk was raised in 32 days when Proklos was eparch of the city, probably to mark Theodosios’s victory over MAXIMUS and Victor (extinctis tyrannis) in 389; other reliefs on this part of the base depict the mechanics of its erection (H. Wrede in IstMitt 16 [1966] 178–98). As the best-preserved secular monument of its period in the city, the obelisk base is usually treated as a key work of the Theodosian “Renaissance” (see SCULPTURE). Its political interpretation has been less developed by scholars, although M. McCormick (Eternal Victory 45f, 116) has placed its erection and inscriptions in the context of imperial triumphs.

—A.C.

OBLIGATION. See PROSPHORA.

OBLIGATION (ἐνοχῇ), in Roman law, the relationship between two people in which one (debtor) was obliged to furnish some sort of payment or other effects to the other (creditor). Grounds for an obligation were initially classified according to categories of basic human interaction (peaceful or
aggressive) into obligations that had been agreed upon (ex contractu) and those that resulted from an injury (ex delicto). Through the definitions and distinctions worked out by the jurists, this initial concept was developed into a general liability scheme for CONTRACT and DELICT obligations, whose fundamental idea is that not every case of damage should require compensation nor should every agreement lead to contractual responsibilities. The limitation is accomplished technically through the establishment of certain acts and the corresponding right to bring suit (ACTION). Byz. legal science preserved this concept in principle in the Justinianic period (whether—and, in that case, how—it also differentiated and transformed it is extremely controversial) and revived it again in the 10th–11th C. Juridical practice, not at all unsupported by imperial legislation (e.g., Cod. Just. VIII 37.10; Nov. Leo VI 72), went, at least in the area of contract obligation, in another direction and finally decided to recognize the binding nature and enforceability of every contract whose agreement and nonfulfillment were demonstrable (pacta sunt servanda). The delict obligations degenerated, since Byz. criminal law recognized not only public punishment but also the payment of compensation, and because civil and criminal procedures were handled according to very similar regulations and before the same judicial bodies.

D.S.

OBOL. See FOLLIS.

OCTATEUCH ("Οκτάευχος, lit. “eight-book”), the first eight books of the Old Testament comprising the Pentateuch together with Joshua, Judges, and Ruth. These existed as a separate volume from at least the 9th/10th C., the date of the earliest, unillustrated example preserved. Six illustrated Octateuchs survive, one of which, the 11th-C. Florence, Laur. Plut. 5.38, has miniatures only as far as Genesis 3 (Expulsion from Paradise) and is not closely related to the other five MSS. They were made in the mid-11th C. (Vat. gr. 747), the 12th (formerly Smyrna A.1, Istanbul Topkapı gr. 8, Vat. gr. 746), and the late 13th (Athos, Vatop. 602). Their importance lies in their

OCTATEUCH. Miniatures from an Octateuch manuscript (Vat. gr. 747, fol.251r); 11th C. Biblioteca Apostolica Vaticana. The miniatures depict Sampson destroying the temple of the Philistines and the death of Sampson.
extensive cycle of about 375 miniatures, distributed throughout the eight books, but most numerous in Genesis. They range from common scenes, such as the Crossing of the Red Sea, to unique illustrations of obscure texts, such as the Daughters of Zelophehad Given Their Inheritance (Jos 17:3–6) in which the land is surveyed and measured with chains. Some scenes may offer visual clues to the realities of everyday life in Byz.

The relationship of the MSS to one another and to the 10th-C. Joshua Roll is complex and controversial. Around the Octateuch MSS, Weitzmann arranged examples of related iconography to create a recension, often referred to in studies of Old Testament illustration. He believes it existed already by the date of the paintings at Dura Europos and derived from the milieu of hellenized Judaism. It is questionable, however, whether the early existence of one or even several scenes related to the Octateuch, as at S. Maria Maggiore in Rome (432–40), should be taken to imply the existence of the entire Octateuch cycle, as exemplified in the surviving MSS. Detailed studies of small groups of scenes in the Octateuch MSS have been made (e.g., those of the Creation and those related to the Kosmas Indikopleustes MSS—C. Hahn, CahArch 28 [1979] 29–40), but an investigation of the entire cycle is still awaited. Two of the MSS, Vat. gr. 746 and 747, remain largely unpublished.

Octava (ὀκτάβα, from Lat. “the eighth part”), a tax mentioned in several laws of the Codex Justinianus from 227 to 457–65. The term must designate a charge of 12.5 percent, but it is difficult to determine whether it was a tax levied in the portorium (harbor), that is, a predecessor of the later kommerkion, or, as Millet (infra) suggested, a sales tax. Another difficulty is the high rate of the octava: Millet, contradicting his own theory, demonstrated that the regular sales tax in Egypt was only 2 percent; the normal customs tax in the Roman Empire was also 2 or 2.5 percent (F. Vittinghoff, RE 22 [1953] 380), significantly lower than the octava. Antoniadis-Bibicou (infra 73) theorizes that in the late Roman Empire the difference between the tax on merchandise and customs duties was confused and the same official was entrusted with the collection of both. A tax collector called octavarius or oktahereos appears in laws and in an inscription of the 4th–5th C. (Grégoire, Inscriptions, no. 10) in which he seems to be somehow connected with the storage (?) of kommerkion.

ODE. See Kanon; Odes.

Odeljan, Peter. See Deljan, Peter.

Odes, certain songs or prayers in song form (i.e., Odes/Canticles), principally from the Old Testament, were central in the liturgy and offices. Three are gathered together at the end of Psalter MSS, emphasizing the liturgical/devotional character of that book. The selection of odes varies, but includes a basic nine (Ex 15:1–19; Dt 32:1–43; 1 Kg 2:1–10; Hab 3:2–19; Is 26:1–20; Jon 2:3–10; Dan 3:26–45; 52–88 [LXX numbering]; Lk 1:46–55; 68–79). Why further odes such as those of Hezekiah (Is 38:10–20) and Manasses (apocryphal) were added in certain MSS is unclear, although it implies a variety of liturgical usage. Some illustrated MSS, such as the Khludov Psalter, show by the minuscule rescript (12th C.? of the original 9th-C. text of selected odes that the book’s usage changed over time.

Illustration. The illustration of odes is an important aspect of Byz. Psalter illustration. Weitzmann has suggested that the illustrations to the odes, like the texts themselves, were taken over from their original context, i.e., in MSS with illustrations to Exodus, Deuteronomy, etc. The subjects selected for representation are usually popular narrative compositions (e.g., Crossing of the Red Sea, Three Hebrews in the Fiery Furnace), or single figures of the “composer” of the song (e.g., Hannah, Habakkuk) making a gesture of speech or prayer.
ODESSOS. See Varna.

ODOACER ('Oδοακρός), also Odovacer, ruler of Italy (from 23 Aug. 476); born ca.433, died Ravenna 16 March 493. Of Hunnic or Skirian origin (B. Macbain, ClPhil 78 [1983] 323–27), he became leader of the rebellious Germanic troops who overthrew Romulus Augustus in 476. His position, domestic and foreign, was controversial. He was proclaimed king (rex) by the barbarians, but on the official inscription commemorating restoration of the Coliseum the title is omitted. Odoacer wanted to receive the recognition of Constantinople and sent Zeno the regalia of the deposed Western emperor, but Zeno was reluctant to give his approval, remembering Odoacer’s earlier correspondence with the rebel Illus. Thus, Zeno gave Odoacer the title patrikios, but advised him to accept the authority of Julius Nepos. The murder of Julius Nepos relieved the ambiguous situation, and Odoacer punished the assassins and seized control of Dalmatia. Zeno tried to incite the Rugians against Odoacer, but in a preemptive attack (487) Odoacer defeated them and sent gifts from the booty to Zeno, still hoping for a reconciliation (M. McCormick, Byzantium 47 [1977] 212–22). Zeno then invited Theodoric to invade Italy; the Ostrogoth leader defeated Odoacer in a difficult campaign and besieged him in Ravenna. The two antagonists seem to have agreed to share the rule of Italy, but Theodoric had Odoacer murdered. Odoacer and his wife Sunigild were Arians (W. Lackner, Historia 21 [1972] 763f).

ODO DEUILL, French Benedictine monk; born ca.1100, died 8 Apr. 1162. Of modest origins, Odo became Abbot Sugier’s confidant and abbot of St. Corneille in Compiegne (1150) and St. Denis (1151). He served Louis VII as secretary and chaplain on the Second Crusade, during which he composed De protectione Ludovici VII in Orientem (On the Journey of Louis VII to the East), a history filled with sharp observations of Byz. laced with religious hostility (e.g., pp. 54–56, 68–70). The account was intended as a guide for future expeditions, whence his careful attention to Byz. food supplies (e.g., pp. 28–30, 76–82) and his insistence that Byz. treachery ruined the Crusade (e.g., pp. 12–14). His position made him privy to confidential deliberations, e.g., on negotiations with Manuel I (pp. 26–28) or an assault on Constantinople (pp. 58, 68–72). He records differences between Byz. and French etiquette and costume (pp. 24–26; proskynesis, called polychoria, is performed for all Byz. grandees, p.56), music (p.68), and coinage and exchange rates (pp. 40, 66). He describes the Latin suburb of Philippopolis (p.42), the imperial pleasure pavilion outside Blachernai (p.48), and Byz. magnates’ richly decorated private chapels (pp. 54–56). He also gives a magnificent description of Constantinople (pp. 64–66).

ODYSSÉUS, in Greek mythology king of Ithaca and the central figure of the Odyssey. After the Trojan War he wandered many years in hostile seas, endured hardships, and was finally reunited with his wife, Penelope. Church fathers gave an allegorical interpretation to the voyages of Odysseus as a journey of the soul across the earthly sea; Odysseus bound to the mast (while exposed to the songs of the Sirens) was compared to Christ on the Cross. The adventures of Odysseus were the subject of many Byz. interpretations (Malas), paraphrases (A. Ludwich, Zwei byzantinische Odysseus-Legenden [Königsberg 1808]), and vernacular poetry (Beck, Volksliteratur 191). In the 12th C. Byz. writers started to emphasize the cunning and versatility (pokhilia) of Odysseus, in addition to his endurance. For Niketas Choniates, Odysseus exemplifies the talented and wretched Andronikos I Komnenos, while Eustathios of Thessalonike (Eust. Comm. II. 2:540.3–14) gives a similar characterization of Odysseus: he is not just “inventive,” not only a boxer and wrestler, but also a peasant wielding the sickle, helmsman, carpenter, hunter, diviner, cook, provider of medicine (or poison), rhetorician, and astrono-
mer—qualities that appear in the portrait of Andronikos by Choniates.

**ODYSSEY.** See Homer.

**OFFERTORY.** See Prophora.

**OFFERTORY TABLE** (τράπεζα προσφορών), a round, rectangular, or lunate sigma-shaped slab, already in pagan times used as a secondary altar or for sepulchral purposes; in Christian use these tables were often inscribed with the names of martyrs. Between the 3rd and early 7th C. most were carved in marble or colored stone (Sodini-Kolokotsas, *Aliki II* 194—206). Sigma-shaped tables derived from the traditional shape of Roman banquet tables and were decorated with friezes showing scenes of hunting and animal combat. Christian versions emphasized soteriological themes such as Jonah, the sacrifice of Isaac, and the Raising of Lazarus; these are thought to reflect examples in precious metals. Another important group of sigma tables is characterized by a border of 6—17 lobes (*Age of Spirit*, no.575). The general form of these slabs is retained in examples in the refectories of the Great Lavra and Vatopedi on Mount Athos (Orlandos, *Monast. Arch.*, figs. 64—67).

-L.Ph.B.

**OFFICES** (ἀξία διὰ λόγου, also ὄφικινα, ἀρχαι, ζώναι), high administrative positions, to be distinguished from dignities (titles), although sometimes the borderline is difficult to draw and some offices were in fact transformed into titles. The late Roman offices are listed in the *Notitia dignitatum*; the late 6th-C. *Klerorologion of Philotheos* records 60 offices that he divides into seven groups: strategoi, domestikoi, judges, sekretai, demokratai (leaders of demoi), stratarchai, and "others." Strategoi and domestikoi had primarily military functions; judges, sekretikoi, and demokratai were civil officials; while various stratarchai and "others" had military, police, or civil duties. Some offices were only honorary titles. An additional group of offices was held by the court eunuchs who kept order in the palace. The term *offikialios* that in the late Roman Empire designated only subaltern officials was by the 9th C. expanded to include all functionaries, probably with the exception of strategoi. The term *offition* was in use also within the ecclesiastical hierarchy, where it denoted the administrative charge as opposed to the clerical order granted by a sacramental ordination.

-A.K.

**OFFICES, MONASTIC.** See Hours, Liturgical.

**OFFICINA**, a Latin word meaning "workshop" and in a technical sense a subdivision of a mint. Many late Roman and Byz. coins of the 3rd—8th C. bear numerals or other marks showing, presumably for control purposes, in which officina they were struck. Such a mark, when the system became fully organized in the course of the 4th C., usually took the form of a Greek number placed either at the end of the reverse legend or in the field. These marks vary in number according to the importance of the mint and the metal of the coins; the 6th-C. mint at Constantinople, for example, had ten officinae for gold solidi but only five for coins of copper. The use of numbered officina marks ended in the 8th C.; although in the 12th—15th C. some coin series bear privy marks in the form of letters or symbols in the field, or exhibit small differences in design that seem to indicate subdivisions of a mint, it is unclear how far these corresponded to the officinae of earlier times. On one issue of folles of Constans II of 642—43 the officina numerals are accompanied by the letters ΩΑ, presumably for ὄψικινα (ophikina), although this Greek form of the word is not otherwise known.

-Ph.G.

**OGHUZ.** See Turkomans; Turks; Uzes.
OHRID (*Αχρίς*), city in southwestern Macedonia, located on the northeastern shore of a large lake. Archbishop Theophylaktos of Ohrid (died 1108) wrote that ca.900 the city was a center of the building activity of Kliment of Ohrid, but no independent source verifies this late evidence. The city is first mentioned in 11th-C. sources: a Byz. historian (Skyl. 353.61–62) wrote that the palace of the Bulgarian *basileis* was erected there. Ohrid was probably the capital of the empire of Samuel of Bulgaria and of the Bulgarian patriarchate. In 1019/20 Basil II occupied it and made it one of four *kastra* (together with Prespa, Mokros, and Kitzabis) of the autocephalous Bulgarian archbishopric (H. Gelzer, *BZ* 2 [1893] 42.13)—but the name “metropolis of Achris” emerges only in a late notitia (*Notitiae CP* 17.30). The 12th-C. author Anna Komnene (An. Komn. 3:84.13–14) considered the name Ohrid as a barbarous term for the ancient lake of Lychnidos; neither she, however, nor Michael of Devol, in his supplement to Skylitzes (Skyl. 358.94–95), who mention both the lake and the city of Lychnidos, equate Ohrid with the city of Lychnidos, which was a bishopric in the 4th–5th C., replaced in the 6th C. by Justinianna Prima (it is unknown after 519—M. Fluss, *RE* 13 [1927] 2114f). Another—evidently fictitious—12th-C. tradition claimed Ohrid as the successor of Justinianna Prima (G. Prinzling, *BBulg* 5 [1978] 269–87). In the 13th C. Ohrid was contested between Bulgaria and Epiros; returned to Byz. control, it was then conveyed to Stefan Uros IV Dušan by the treaty of Aug. 1334 and fell to the Turks in 1394.

The letters of the city's two most prominent archbishops, Theophylaktos and Demetrios Chomatenos, reflect the changing situation of the church in Ohrid: in the 11th C. the archbishop tried in vain to secure imperial support against the local officials; in the 13th C. his successor defended the privileges of the archbishopric against the patriarchate in Nicaea.

**Monuments of Ohrid.** The Cathedral of St. Sophia in Ohrid, perhaps originally built in the 10th C. by Boris II, seems to have been rebuilt as a domed basilica and redecorated in the 11th C. by the archbishop Leo of Ohrid. A Great Feast cycle decorates the nave; in the conch of the apse an enthroned Virgin holds Christ in a shieldlike mandorla; Christ officiates at the Proskomide below. The liturgical nature of the *bema* program is emphasized by the unusual sequence of scenes from the lives of Abraham and Sts. Basil the Great and John Chrysostom on the bema walls (A. Epstein, *JÖB* 21 [1981] 315–29). In the chapel above the *diakonikon* are scenes of the martyrdom of the Apostles and, on the exterior west wall of the nave, a scene of the *Philoxenia* of Abraham (12th C.?). The outer narthex-portico with its flanking domed bays was added in 1313/14.

The Church of the Virgin Peribleptos (now St. Kliment), was built by the *megas hetaireia* Progonos Sgouro and his wife Eudokia in 1294/5, according to a fresco inscription over the entrance (J. Ivanov, *Bulgarski starini iz Makedonija* [Sofia 1931; tp. 1970] 38, no.8). The domed cross-in-square plan includes a tripartite sanctuary and a narthex covered by a central domical vault flanked by groin vaults. The masonry consists of alternating stone and brick courses, the latter arranged in lively decorative patterns; the main apse has niches. The program of wall paintings contains, along with scenes typical of contemporary Byz. church decoration, a Passion cycle and Gospel scenes in the upper zones, the life of the Virgin in the lower zone of the nave, and the life of John...
the Baptist in the diakonikon. On the walls and vaults of the narthex are PREFIGURATIONS of the Virgin, the Vision of Christ as Angel (based on the Easter Homily of Gregory of Nazianzos), an image of the winged John the Baptist, and illustrations of the Nativity Hymn attributed to John of Damascus. In the wall painting in the south vault of the narthex the souls of the righteous are held in the HAND OF GOD. The frescoes are the first documented work of the artists MICHAEL (ASTRAPAS) AND EUTYCHIOS, whose names are inscribed on depictions of military saints painted on the west dome piers.

The large number of small-scale scenes and the extended narratives (e.g., the DORMITION), the developed compositions involving elaborate architectural backgrounds, and the numerous participants with their exaggerated gestures mark a mature Palaiologan style, although the crude red and blue colors and the over-voluminous bodies reveal a provincial variant. The same painters were responsible for icons made for the iconostasis at a somewhat later date (Ascension, Dormition, etc.); these are now housed in the nearby Gallery of Icons. During the later 14th C. the church was enlarged with side chapels and outer aisles (ambulatory wings) and adorned with new frescoes and icons (V. Djurić in ZbLikh/umet 8 [1972] 143–45). The remains of St. KLEMENT OF OHRID were transferred here at the end of the same century.

Other surviving medieval monuments in Ohrid include the Virgin Bolnička (14th and 15th C.), the Virgin Čelnica (9th C.), St. John the Theologian-Kaneo (1270s or 80s?), Old St. Clement (14th C.), Sts. Constantine and Helena (1365–67), St. Naum (originally a triconch of the 9th C., rebuilt as a cross-in-square church), and St. Nicholas Bolnički (14th C.).

OIKEIADOS (oikeiados), a term used in the Kletorologion of Philotheos (Oikonomides, Lists 191.27) for the emperor’s close relatives. It is probable that the epithet oikeiados was linked to the honorific title doulos: a man titled oikeiados would call himself the doulos of his majesty. By the end of the 12th C. it became a semi-official title; thus, in 1196 a logothetes ton sekretos is called oikeiados of the emperor (Lavra 1, no. 67.24). It was in use through the 15th C., applied primarily to civil dignitaries such as the papias (Dionys., no. 2.11), krites (Xerop., no. 26.29), or megas chartoularios (Docheiar., no. 23.7). Sometimes it was employed as sufficient characterization without additional titulation (Docheiar., no. 49.1; Dionys., no. 3.5). Maksimović (Bys.ProcAdmin 22–25) considers oikeiados as men in a kind of vassalage to the ruler.

OIKEIADOS. See Doulos.
OIKISTIKOS (οἰκιστικός), an enigmatic functionary of the genikon mentioned in the late 9th-C. Klerorologion of Philothkos and the 10th-C. Taktikon of Escurial. E. Stein (ZSavRom 49 [1929] 506), who previously connected the oikistikos with the late Roman numerarius scrinii operum, later rejected this view, indicating that the word oikistikon was used in the papyri in the sense of "account." A treatise on taxation (Döfler, Beiträge 91) describes the oikistikos as an official who had among his duties the registration of tax exemptions (logismoi); in this connection an 11th-C. seal names a certain protovestes Stephen, "oikistikos of the new orthoseis" (Nesbitt, infra, no.4). Oikonomides (Listes 319) suggests that the oikistikos was connected with the administration of the oikoi (imperial domains). By the 11th C. the oikistikos became chief of an independent department, perhaps called oikistike sakelle, mentioned on a seal of the 11th/12th C. (V. Laurent, BZ 33 [1933] 356f; cf. Iwir. 1:160). Oikistkoi and their protonotaries are mentioned in the lists of officials in 11th-C. chrysobulls, for the last time in 1088 (Patmou Engrapha 1, no.6.67). Both seals and charters (MM 4:316.8) show that the 11th-C. oikistikos had judicial functions in various themes (Thraakesion, Boukellarion, Armeniakon, Chaldia).

OIKOMODION (οικομόδιον, Slavic komod), a tax probably originating from the principal tax of the Bulgarian fiscal system under Samuel of Bulgaria (one modios of wheat and one of millet per household possessing a pair of oxen: Skyl. 412.67–73), which was continued in Bulgaria by Basil II. From the 11th C. onward (first mention 1019), it is attested throughout Byz. and appears to have been a regular yearly secondary tax; in the 14th C. it was roughly proportionate to the main land tax (telos) (1/2 modios of wheat [Gr. sitos] and 1/2 modios of barley [Gr. kriitha] for an annual telos of 1–3 hyperpyra: hence the name sitokritos). It is often mentioned together with the oinometrion, which must have had a similar meaning but concerned wine.

OIKONOMIA (οικονομία, lit. "husbandry"), a term with three primary meanings in Byz. First, it referred to the wise or responsible management, "stewardship," or administration of something, sometimes synonymous with pronoia. Second, oikonomia was that component of doctrine dealing with the divine plan of salvation or Incarnation history (Eph 1:9–10), in contrast with the study of the Trinity, which is theologia proper. The theological concept of oikonomia was based on the idea of relationship between righteous God and sinful man that required God’s dispensations of grace and mercy culminating in the "economic" sacrifice of the Son. God’s oikonomia operated through sacraments and revelations. Western theology emphasized God's justification in the action of oikonomia (via grace), whereas the Orthodox stressed man’s participation in the divine being, deification (theosis), the direct encounter of man with the Holy Spirit, the mystical redemption, rather than the principles of Roman law that attracted early Western theologians (A.E. McGrath, Iustitia dei, vol. 1 [Cambridge 1986] 3f).

Finally, oikonomia referred to moral concession as opposed to the rule of order or taxis (Ahrweiler, Idéologie 129–47). In Byz. canonical literature oikonomia is understood as the canonical power of the church by which, under certain circumstances, the strict letter of ecclesiastical law was relaxed. Its purpose was to avoid the severity of the law, to eliminate the obstacle to salvation caused by a rigid legalistic implementation. Thus it was not understood as a legal norm, as dispensatio, the Latin Western translation of the term denoting simple exception or dispensation from a law. Indeed oikonomia, according to Nicholas Mystikos, was ultimately an "imitation of the divine mercy" (ep.32, 236.379–80). This prudent disposition of church stewardship, which aims at the general well-being of the Christian community and each individual—as long as doctrine or truth is not compromised—prompted the church to recognize the episcopal dignity of repentant Iconoclast bishops (except those who had initiated the heresy) and to receive them to its communion (Mansi 12:1030); or, as in the case of the tetragamy of Leo VI, to "economize" by accepting Leo as a penitent following his fourth marriage, to Zoe Karbonopsina (RegPatr, fasc. 2, nos. 625–29).

There were frequent debates concerning the meaning of oikonomia (e.g., during the Moechian
CONTROVERSY and the “tetragamy” affair). Monastic rigorists, like THEODORE OF STOUDIOS, maintained that oikonomia could be admitted only in connection with repentance of the transgressor and a formal cancellation of the act, performed uncanonically. Others adopted a more lenient attitude, but the principle of oikonomia was never denied by anyone.

—A.P.

OIKONOMOS (oikonomos), a cleric, usually a priest, responsible for managing the property, income, and expenditure of a see or religious foundation. The Council of Chalcedon (451) required every bishop to appoint an oikonomos from his clergy and not to administer the affairs of his see in person (canon 26). The ruling was repeated and elaborated by the Second Council of Nicaea (787), which extended the requirement to monasteries (canon 11).

Under Justinian I, the Great Church of Constantinople was served by nine oikonomoi, each with a subordinate staff of CHARTOULARIOI (Cod. Just. I 2:24). Of the nine, it was presumably the head of the “home office” (enokion skrhimon) who evolved into the single patriarchal oikonomos of the 9th C. and later. By the 10th C., the appointment came increasingly under imperial control, being granted even to laitymen until Isaac I formally renounced the right to appoint. By this time the epithet megas had become attached to the title. Byz. lists of patriarchal offices always name the megas oikonomos as the patriarch’s highest-ranking subordinate; however, this precedence was not contested and became something of an honorable anachronism after 1204, with the decline and occasional redundancy of the office.

Oikonomoi were also attached to large public churches of Constantinople such as St. Mokios (TheophCont 365:21–23). The institution was also widespread among imperial foundations, both monastic and otherwise. The NEA EKKLESIA had its own oikonomos and the PANTOKRATOR complex had four.

The oikonomos or steward of a monastery was a senior monk responsible for the management of its properties, esp. agricultural estates, and the maintenance of monastic buildings. He was usually ranked second in the hierarchy of a monastery and often became hegoumenos. The oikonomos of a convent might be a eunuch priest (KECHARITOMENE), a layman (LIPS), or a nun (DAMILAS, BEBAIAS ELPIDOS). The oikonomos at Lips was paid an annual salary of 36 gold pieces, plus an allotment of wheat, barley, and wine.

OIKOS (oikos), a term with a number of meanings, primarily referring to the house and household, but also used in a hymnographic context.

1. Oikos as a Fiscal and Economic Term. The basic meaning house was applied in a broader sense to the aristocratic mansion in urban and rural areas (such as the oikos of DIGENES AKRITAS), in contrast to oikema, the term regularly employed in praktika and other documents for a peasant dwelling; when used in this manner, oikos is virtually synonymous with PROASTEION. J. Gascou (TM 9 [1985] 28–37) views the 5th–6th-C. Egyptian oikos as a “seminublic institution,” representing a delegation of the state’s fiscal authority, whereas later Byz. law emphasized the privacy of the oikos: “No one can be dragged out of his private oikos,” states the scholiast to the Synopsis Basilicorum K. II:45 (Zepos, Jus 5:323.17). Oikos might also mean household, the house of God (i.e., a church), or an imperial (theos) estate. EUGAEIS OIKOI were pious institutions. Metaphorically, the word could be applied to the entire community of the faithful: “We are one oikos,” says SYMEON THEOLOGIAN (Hymn 15:127), “the house of David” (15:118).

2. Oikos in an Astrological Context. In this sense, oikos means the domicile of a planet, or planetary house. According to Malalas (Malal. 175:6–9), the mythical Erichthonios constructed a hippodrome that reflected the structure of the cosmos, that is, had the sky, the earth, and the sea; its 12 gates conformed to the 12 oikoi of the Zodiac. Hephaistion of Thebes often speaks of oikoi of planets
(Mars, Venus, etc.), indicating their correspondence with the signs of the Zodiac.  

3. Oikos as a Hymnographic Term. Finally, oikos also meant a stanza of a kontakion; the initial letters of each oikos, which were built on the same metrical pattern throughout the kontakion, normally formed an acrostic, either alphabetic or giving the author's name. Originally meaning any stanza of the 20 to 30 forming the complete text, the term eventually referred to the second element of the reduced form of the kontakion consisting only of the koukoulion, or prooimion, and one stanza, the oikos. This combination of kontakion and oikos was sung after the sixth ode of the kanon during the Orthros.

OIKOUMENE (οἰκουμένη, lit. "the inhabited [earth]")], an ancient concept that had various meanings in Byz. The word oikoumene was used, as in antiquity, to designate the earth as a whole: thus Eustathios of Thessalonike (Eust.Comm.II. 2:496.16-17) stated that Poseidonios and Dionysios Periegetes envisaged the oikoumene as spherical, Demokritos considered it elongated, and Hipparchos trapezoidal. Byz. astronomy accepted the concept of a spheric earth, and Photios (Bibl., cod.35) defended—against Kosmas Indikopleustes—the image of a spherical cosmos.

Oikoumene also referred to the inhabited or civilized world, an area identical with the Roman Empire or the region of the Mediterranean Sea; remote areas were described as located beyond the oikoumene (e.g., Greg. 2:992.15-16). Already in patristic literature the word acquired a specific Christian connotation: the oikoumene was the world as the scene of Christ's activity and of the celebration of the Christian sacraments, which were performed not in a single city or in a single "theater" but in the whole oikoumene (Photos, ep.284, ed. Laourdas-Westerink 3:69.2300-02). Accordingly, the title of ecumenical patriarch (oikoumenikos patriarches), adopted by the archbishop of Constantinople in the 6th C., expressed his claim to primacy in the Christian church that led to a serious conflict with Rome. Fewer political repercussions arose from the title oikoumenikos didaskalos (see Didaskalos), arrogantly assumed by one of the principal teachers of theology in Constantinople.

OIKOUMENIOS (οἰκουμένιος), 6th-C. biblical exegete, author of the earliest Greek commentary on the Apocalypse. The text of his exegesis was not discovered until 1901 by F. Diekamp. He was identified by S. Petrides (EO 6 [1903] 308ff) as the comes Oikoumenios who was the addressee of two letters of Severos of Antioch. He is called rhetor and philosopher in the MSS of his commentary. He notes at the beginning that he wrote his commentary more than 500 years after the completion of the Apocalypse, that is, ca.550. His identification with the 10th-C. bishop Oikoumenios of Trikka in Thessaly is now rejected.

His interpretation of the Apocalypse is mostly metaphorical and oriented to the future, but in some passages he refers to the events of Christ's life: thus the sun-clothed woman who gives birth to a male child is interpreted by Oikoumenios (as by many others) as the symbol of the Virgin and Jesus. More original (and distinct from the exegesis of Andrew of Caesarea) is his interpretation of the thousand-year reign of Christ. It is construed not as a period in future but as a metaphorical description of the day of the first parousia: only then, says Oikoumenios, was the devil fettered, but after Christ's crucifixion he was again set free. Unlike Origen and Eusebios, Oikoumenios did not consider Augustus as a peacemaker but rather as "the beast," that is, the devil; Oikoumenios believed that the new era of human history began with "the pious Constantine."

OIKOUMENON (οἰκουμένον), a fiscal term, synonymous with telos, stoichikon telos (e.g., Zogr., no.29.76), or oikiaon telos (Guilou, Ménecée, no.35.42, 45); sometimes telos designated an in-
dividual payment while *oikoumenon* meant the sum charged to a fiscal district.

Lit. Ostrogorsky, *Feodalité* 311f. — A.K.

**OIL (έλαιον),** usually made from olives, was one of the most important ingredients of the diet; vegetables were eaten with oil or cooked in oil: thus, Symeon Seth speaks of lentils cooked with oil, garum (a fermented fish sauce), and salt (115.16–17), and of truffles cooked in oil with pepper and garum (109.7–8). Strict ascetics are said to have abstained from oil; normally oil was avoided on fastdays or as penance (Theodore of Studios in PG 99:1724C). In addition to its use in food preparation, oil was employed in the concoction of medicines and ointments and as a fuel for lamps (in the illumination of churches, palaces, houses, etc.); Eustathios of Thessalonike (PG 136:640A) relates that in lighthouses wax and oil were burned in glass vessels that protected them from the wind. Sailors followed the custom of pouring oil onto stormy seas to calm them (Koukoules, *Bios* 5:338, 380).

The word *elaion* was expanded to include “fish” oil (from dolphins) and mineral oil. The *Geoponica* (9.18.1–2) mentions *elaion* produced from terebinth, sesame seeds, and nuts. Oil was also pressed from flax seeds (see *Linen*) and from various fruits and flowers (G. Litavrin, *VizVrem* 31 [1971] 267).

In liturgical practice *anointing* with sacramental oil was administered before or after baptism, and the sacrament of *unction* entailed anointing of the sick for healing and/or the forgiveness of sins. Individuals seeking miraculous healing often anointed themselves with oil sanctified by proximity to a saint’s relics or tomb; anointment was also part of the ritual of *coronation*. The development of the symbolism of oil was enhanced by the similarity of the word *elaion* to *eleos*, mercy: thus it symbolized mercy and grace, and related concepts such as cheerfulness, good works, spiritual riches.

**OINAIOTES, GEORGE,** writer of first half of 14th C. Together with his older kinsman George Galesiotes, he prepared a vernacular paraphrase of the *Imperial Statue* of Nikephoros Blemmydes.

Oinaiotes (*Oionouòtηs*) was identified by S.I. Kourouses (Gabalas 99–121) as the anonymous author of the so-called Florentine collection of 179 letters (Florence, Laur. S. Marco 356). His correspondents included Theodore Metochites, Andrew Lopadiotes, and John Gabras. To date only four of the letters have been published (G.H. Karlsson, G. Fatouros, *JÖB* 22 [1973] 297–18). Although many of his letters are rhetorical exercises, others describe topics such as his illnesses, his vineyards, his problems as a landlord, a trip to Mt. Ganos (where he had close ties to the monks), and his intellectual pursuits, such as borrowing books by John XIII Glykys. His classical education is reflected in frequent citation of ancient authors, esp. Homer, Plato, and Aristotle. Oinaiotes was interested in astronomy and received instruction from a physician (*aktourarios*), perhaps John Aktourarios, according to S.I. Kourouses (*Athena* 78 [1980–82] 260–69).

**OINOMETRION** (*oíoμέτριον*, lit. “a measure of wine”), a secondary tax mentioned in several *praktika* of the early 14th C. A chrysobull of Stefan Uroš IV Dušan of 1346 issued for the monastery of Iveron exempted the monks from “the recently introduced *oinometrion*” (Solovjev-Mošin, *Grčke povelje*, no.6.42), thus indicating a relatively late date for its appearance. The *oinometrion* was levied in proportion to the tax called *telos* (usually one *metron* [local measure] for each nomisma of the tax) and is listed in the *praktika* together with the *oiKomodion*. Dölger (Byzanz 258f) hypothesized that both surtaxes were collected by tax officials for their services in measuring grain and wine, respectively; his hypothesis was rejected by J. Bompaire, who considered *oinometrion* as a rent for vineyards. It may also have been a rent in kind imposed on peasants, the amount of which depended not only on the size of their vineyards but on intangible factors. A fragment of a *praktikon* of the late 13th C. (Esphig., no.7.8) calculates *oinometrion* in cash and places it after *kastrokTisia*, not *oiKomodion*; it should perhaps be interpreted as evidence that in the early 14th C. the tax changed its nature, and payment in kind replaced that in money.
OKTOECHOS (ὀκτώηχος, lit. “eight-toned”), a liturgical book containing the hymns of daily Orthros, Vespers, Eucharist, and Saturday meseoniktikon (see Hours) for the mobile cycle for every day of the year except for Lent, Easter, and Pentecost, which are covered by two other books, the triodion and the pentekostarion. A “proper,” or set of hymns for each of the seven days of the week in each of the eight different musical modes, that is, 56 “propers” in all, the oktoechos cycle takes eight weeks to complete, one mode per week, and is repeated throughout the year from All Saints’ Day (the first Sunday after Pentecost) until progressively replaced by the triodion during Lent. This complete cycle of the “Great” or “New” Oktoechos is now known as the Parakletike, the term oktoechos being reserved for the Sunday hymns. When the oktoechos cycle overlaps with the menaion or the triodion, the liturgical typikon regulates which hymns will be sung.

The name oktoechos was used for these hymns from at least the 11th C. The oldest oktoechos poetic pieces were originally scattered in disparate collections of kanones, stichera, and kathismata, of which MSS of the 8th–9th C. have survived. Anthologies of oktoechos hymns for Sundays date from the 8th C.; those of the weekday cycle were added later. Though St. John of Damascus contributed to the Oktoechos and is often named as its author, the book was completed only after his death. There is only one surviving illustrated Oktoechos, a MS of the decorative style group (Messina, San Salvatore 51). Its eight miniatures, all of which include the figure of John of Damascus, accompany the stichera anastasima.

-R.F.T., N.P.S.

OLD KNIGHT (Ὁ Πρέσβυς Ἰππότης), 14th-C. poem, possibly written in Cyprus. This anonymous compilation in Greek unrhymed political verse of the opening episode of the French prose romance Guiron le Courtois was drawn probably from the compilation of Rusticiano da Pisa (1272–98). Only 306 lines, at a purist language level, survive. The episode describes the arrival of Branor le Brun (the Old Knight) at King Arthur’s court and his challenge to the younger knights of the Round Table—Palamedes, Gauvain, Galahad, Tristan, etc.

-E.M.J., M.J.J.

OLD TESTAMENT (Παλαιά Διαθήκη), the first part of the Bible. It was inherited by Christians from the Jews and available to them in the so-called Septuagint, the translation by 70 (or 72) “wise men”; other translations (by Theodotion, Aquila, Symmachos, etc.) survive only in insignificant fragments. The Greek Old Testament includes the Hebrew canonical books (the Penta- teuch; historical books; poetic books, such as the Psalter and Proverbs of Solomon; and the books of Prophets) and the so-called deuterocanonical books. The authority of these last works was questioned by major church fathers such as Jerome and John of Damascus, but the Western church accepted the canon in full. Jugie (infra) demonstrated that, down to the Council of Ferrara-Florence, the Byz. did not reject the canonicity of the deuterocanonical books; at least this point never emerged as a subject of discussion between the two churches.

The text of the Old Testament survives in complete editions (sometimes together with the New Testament; esp. famous are the 4th-C. uncial MSS, Codex Vatitanus, Sinaiacus, and Alexandrinus) and in separate collections (Occtateuch, historical books, Psalter, Prophets). The validity of the Old Testament was questioned by certain heretics, but the official church emphasized its inspired character. Its prohibition of idolatry created special difficulties for the Iconophiles. The Old Testament occasioned broad exegetes, homilies, and paraphrases as well as APOCRYPHA. Among many others, Nikephoros Kallistos Xanthopoulos wrote poems on the Old Testament and on the later history of the Jews, while Matthew of Ephesus (Manuel Gabalas) used several of its books (Job, Proverbs, Ecclesiastes) for “the moral education of the soul” (S. Kourouses, Manouel Gabalas [Athens 1972] 167).
OLD TESTAMENT ILLUSTRATION. Study of the Byz. contribution to Old Testament illustration raises both practical and theoretical problems. The material is widely dispersed and still only partially known; despite the existence of photographic collections a significant part remains relatively inaccessible. This situation makes it difficult to gain a thorough knowledge of even the surviving material. In addition, what has been published has sometimes been selected on the basis of theories that have influenced the choice of illustrations, as well as interpretations drawn from them.

The Byz. illustrated some scenes and figures of the Old Testament because these had already been adopted, like the text itself, by the Christians of the first centuries. Thus many of the most familiar Old Testament scenes, such as the Crossing of the Red Sea or Jonah and the Whale, were already widely known by the 3rd or 4th C. These compositions remained substantially the same throughout the Byz. period. That some of these illustrations originated in Jewish art has been strongly argued, and that some contain elements of Jewish exegesis is certain; but the syncretistic nature of religious cults, esp. in this crucial period, and the possibility of parallel developments, must be taken into account, esp. in view of the fact that later synagogue FLOOR MOSAICS sometimes reflect the decoration of churches. Clearly many Old Testament scenes and figures (as those of the New Testament) were derived quite simply from formulas in contemporary Hellenistic-Roman art, along with other visual sources.

Some Old Testament scenes—esp. those cited in the Commendatio Animaæ—were popular initially in funerary contexts, such as catacombs or sarcophagi, as suitable images of a hoped-for salvation in Christ. This is characteristic of the 4th–6th C., and to a large extent they were replaced by Christological resurrection scenes. In early monumental art the Old Testament was also important, notably in the great basilicas of Rome, where scenes were selected to prefigure and parallel the New Testament story. In the 9th C. and later, this monumental role almost disappears, with the exception of anomalies such as the mosaics of the Cappella Palatina at Palermo and Monreale, where the basilica nave was probably used in a deliberately archaising way. The one distinctively Byz. development of the scheme was in the use of the Old Testament PROPHETS in the upper parts of churches as hierarchically arranged foretellers of the Gospel.

The situation in MSS is rather different. With the exception of GENESIS illustration, the pre-9th C. evidence is scanty and restricted, though thereafter it is relatively full and diverse. This body of illustration can be further enriched if account is taken of Old Testament scenes that have, metaphorically speaking, migrated from the Old Testament itself to MSS such as the Christian Topography of Kosmas Indikopleustes or the Sacra Parallela. The origin of such scenes, however, remains controversial.

To judge from the MS evidence, which is the most plentiful, the Byz. rarely if ever thought in terms of a unit of text, or of illustration, called the Old Testament. Only a single MS survives that suggests an overall plan for its illustration: the Bible of Leo Sakkarios. Typically the Byz. thought in terms of smaller units: the Octateuch, Psalter, Prophet book, or Job, for example. These represent the convenient volumes in which the Old Testament circulated. They were illustrated, and probably used, in different ways.

Traced over the centuries, the illustration of narrative themes from the Old Testament seems to follow two curves with contrasting profiles. In the public domain, exemplified by the decoration of the walls of churches and monasteries, the 4th–6th C. probably represents a peak, the 9th–12th C. certainly was a trough, and the 13th–14th C. a second peak. This is to be explained by the emphasis after Iconoclasm on large-scale images of the principal events of Christ’s life, whereas those in the 13th–14th C. preferred far more numerous images on a smaller scale, as exemplified by the Joseph cycle in the narthex at Sopočani and the Elijah cycle in the prothesis at Moraca. By way of contrast, in the private domain represented by the illustration of books, it is the...
9th–12th C. that represents the peak of popularity. This fluctuation suggests that the Byz. perception of Old Testament illustration would have been significantly different in, for example, the 5th, 10th, or 14th C., even if its iconography remained substantially the same. That there is any direct connection between the decline of interest in Old Testament illustration in monumental art and its rise in MSS is improbable. It appears to be part of the general pattern of Byz. art.

J.H.L.

OLEG, ruler of Rus'; died after 911. Norman by birth, Oleg succeeded Rurik in Novgorod (in 879 according to the Primary Chronicle) and later subdued the territories to the south. Khazar documents relate that Oleg (named HLGW in the texts), incited by Romanos Lekapenos (?), sacked Tmutarakan (N. Golb, O. Pritsker, Khazarian Hebrew Documents of the Tenth Century [Ithaca-London 1982] 104–05). Golb and Pritsky (pp.61–71) questioned the traditional opinion that Oleg captured Kiev and dated this event to the time of Igor, ca.930. The Primary Chronicle, sub anno 907, describes Oleg's expedition against Constantinople and the treaty concluded between him and Byz.; the text of the treaty is also cited later in full and dated in 911/12. (The majority of scholars now reject the assumption of two separate treaties.) The treaty guaranteed the rights of Rus' envoys, merchants, and mercenaries in Byz.; exchange of captives; and extradition of state criminals.

The silence of the Greek sources about Oleg's expedition has caused a heated discussion of its historicity: H. Grégoire insisted on the legendary character of the chronicle's evidence (La Nouvelle Chio 4 [1952] 281–87), whereas G. Ostrogorsky (SemKond 11 [1940] 47–63) and many other scholars considered it reliable. R. Jenkins interpreted a passage in pseudo-Symeon Magistros describing the "Ros-dromitai" as referring to Oleg's expedition (Speculum 24 [1949] 403–06), but the passage is too vague to warrant any firm conclusion.

LIT. A.N. Sacharov, Diplomatija drevnej Rus (Moscow 1980) 83–180. V.D. Nikolaev, "Svidetel'stvo chroniki Psevdo-

A.K.

OL'GA, princess of Kiev ("Elaia in Greek sources, Christian name Helena); died 11 July 969. Wife and, from 945, heiress of Igor, Olga tried to develop trade and political relations with Byz.; both her baptism and her journey to Constantinople should be placed within this framework. The evidence concerning both events is, however, contradictory. Her journey took place in 946, according to G. Litavin (Istorija SSSR [1981] no.5, 173–83), or in 957, according to the traditional view. G. Ostrogorsky (Byzanz und die Welt der Slaven [Darmstadt 1974] 35–52) suggested that Olga was already Christian when she traveled to Constantinople and was received by Constantine VII; so she must have been baptized in Kiev in 954/5. D. Obolensky (GotTH 28 [1983] 157–71) and J.-P. Arrignon (in Occident et Orient au Xe siècle [Paris 1979] 167–84) hypothesize that Olga's baptism took place in Kiev after her return from Constantinople; B. Phidias (EEBS 39–40 [1972–73] 630–50) insists that she was baptized in Constantinople during her journey, although Constantine VII, who described her visit in detail (De cer. 594–98), did not mention the fact. In any case, Olga's visit to Constantinople did not lead to a strong alliance; in 956 she sent envoys to Otto I the Great, and Libutius was appointed bishop in the country of the Rus'.

A.K.

OLIVE (ελαια). Olives provided a staple food, and, when crushed in an olive press, yielded cooking oil and oil for lamps. Until the Arab conquest, Syria was the major area of olive production, replaced from the 7th C. onward by a narrow strip along the Aegean littoral in Asia Minor and Greece as well as southern Italy, but not in Anatolikon (Leo of Synada, ep.43.7–8). English historians of the 12th C. report that no other place in the world produced so many olives
as the southern Peloponneseos (H. Lamprecht, *Untersuchungen über einige englische Chronisten des zwölften und des beginnenden dreizehnten Jahrhunderts* [Torgau 1937] 117). The Farmer’s Law does not mention the olive tree. In the acts of Athos, olive trees are infrequent, the climate of Macedonia being too severe for olive cultivation (Laiou, *Peasant Society* 26), and the *praktika* only rarely mention 2–6 trees in single households. More numerous were olive trees in the Smyrna region; thus, a small monastery of St. Panteleemon in 1292/3 possessed 150 olive trees located both inside and outside the monastery walls (MM 4:57.15–16); a donation and a sale of 44–46 trees are mentioned (MM 4:116.30–31, 137.26); in the theme of Mylassa and Melanoudion an entire “olive proasteion” is attested (MM 4:320.22). Olive trees can be grown in poor soil and on rocky terrain; sometimes soil under them was irrigated (MM 4:130.13–15), although they can be grown without irrigation. Besides restrictions caused by temperature, the olive tree has other disadvantages: its fruit is produced only in alternate years and, when picked, is easily bruised.

OLIVER, JOVAN, semi-autonomous Serbian prince; died after 1355, probably as the monk John Kalybites, whose death on 20 Jan. was noted in a 14th-C. Serbian Gospel (R. Grujić, *Glasnik Skopskog naučnog društva* 11 [1932] 233–37). Of Greek origin, Oliver (ο Ἐλπίδωρος) held a series of positions at the Serbian court that he described in a Serbian inscription in the Lesnovo monastery (see Garnil of Lesnovo): grand kephale (čelnik), grand “servant” (sluga), grand stratopedarches (vevod), grand sebastokrator, and grand despotes of the entire Serbian land and of Pomorie by the will of Kralj (King) Stefan (probably Stefan Uroš IV Dušan). The date when he received the title of despotes has been a matter of discussion: J. Fine (*Late Balkans* 343, n.3) argues that the title was granted ca.1340 by Dušan, while B. Ferjančić (*Despoci* 159–66) prefers 1347 and John VI Kantakouzenos. It has been suggested that by 1340 Oliver married Maria (Mara) Palaiologina, widow of Stefan Uroš III Dečanski. He obtained control over the province of Ovče Polje, on the border between Byz. and Serbia, was the ally of Kantakouzenos during the Civil War of 1341–47, and acted as his patron at Dušan’s court. On some of Oliver’s coins his name is accompanied by that of Dušan or of Stefan Uroš V; others bear his name alone, suggesting that after Dušan’s death Oliver gradually gained independence.

-A.K.

OLYMPIAS (Ὀλυμπίας), saint; born Constantinople between 361 and 368, died Nikomedea 25 July 408; feastdays 24, 25, and 29 July. Born to an aristocratic family, in 386 Olympias married Nebridios, prefect of Constantinople, who soon died. When she refused to take as a second husband Elpidios, a relative of Theodosios I, the state
confiscated her property, restoring it in 391. Olympia possessed estates in Thrace, Galatia, Cappadocia, and Bithynia, as well as mansions in Constantinople, and used her wealth to support the church and esp. John Chrysostom. Ordained deaconess by Patr. Nektarios, she founded a convent near Hagia Sophia. After Chrysostom's exile, Olympia refused to accept his successor. She herself was banished to Nikomedea, where John wrote her several letters of consolation before her death (Lettres à Olympias, ed. A. Malinqui [Paris 1947]). She was buried at the monastery of St. Thomas of Brochthoi on the Asiatic shore of the Bosporos.

Destroyed during the Nika Revolt of 532, Olympia's convent was rebuilt by Justinian I and inaugurated in 537. Under the pressure of an early 7th-C. Persian invasion, Sergia, hegoumene of the convent, received permission from Patr. Sergios I to transfer Olympia's remains to her nunnery; she then wrote an account of the translation of the relics of the convent. The fate of the convent is unknown. The deeds of Olympia are briefly narrated by Palladius in both his Laurusia History and the Dialogue on Chrysostom's life; her anonymous vita was based on the same sources.

A.K.

Olympiodorus of Thebes (in Egypt), 5th-C. historian, poet, and philosophy enthusiast. For 40 years Olympiodorus traveled adventurously around the world with a parrot that could dance, sing, and speak his name. In 412 he went on an embassy to the Hunnish king Donatus; the latter's subsequent death has raised suspicion that Olympiodorus procured it. The next decade saw him in Athens and back in Egypt. His secular history, written in Greek, was a source for Philostorgios, Sozomenos, and (evidently) Zosimos. It covered the period 407–22 in 22 books and was dedicated to Theodosios II. Photios (Bibl., cod.860), the sole source of the extant 46 fragments, is harsh on Olympiodorus's lack of style and form; nor did his militant paganism endear him to the patriarch. Olympiodorus certainly violated some classicizing canons, notably by including unadorned Latinisms. His preference for facts and figures over stylistic flights, making him the most scientific of late Roman historians, can hardly be praised too much. Possible samples of his poetry are the line quoted in fragment 43 and the contemporary epic Blemmyachia, preserved in P. Berol. 5003; he is known (fr.35-2) to have visited the Blemmyes.

B.B.

Olympios (Olimpios), exarch of Ravenna (from 649); he was a kouvikularios sent to Italy by Constantine II with orders to secure approval of the TypoΣ of Constans II and, if possible, to arrest
Pope Martin I. Olympios arrived in Rome by 1 Nov. 649 and found the Lateran Synod still assembled. Despite his coercion, the bishops refused to confirm the Typos. According to the Liber pontificalis (Lib. pont. 1:339), when the frustrated Olympios tried to have Martin assassinated at mass, God blinded his spatharios at the crucial moment; Olympios was consequently reconciled with Martin. His subsequent actions are obscure, but later accusations against Martin suggest that Olympios rebelled against the emperor. Perhaps in 651 Olympios reached an accord with the Lombard king Rothari (L. Hartmann, Geschichte Italiens im Mittelalter, vol. 2.1 [Gotha 1900] 244). The Liber pontificalis, however, says only that some time after making peace with Martin, Olympios collected his army and “set off to Sicily against the Saracens dwelling there,” that his army was devastated (perhaps by plague), and that Olympios himself died from disease. Most scholars believe that in 652 Olympios crossed over to Sicily to oppose Arab invaders. When and if he actually reached the island is uncertain, and Stratos (JÖB 25 [1976] 63–73), pointing out the problems of an Arab presence in Sicily at this time, proposed that in fact Olympios intended to attack Byz. forces in southern Italy.

Lit. Stratos, Byzantium 3:104–11, 275f. —P.A.H.

OLYMPOS, MOUNT, in Bithynia, modern Ulu Dağ, alt. 2,327 m, a holy mountain southeast of Prousa that was an important monastic center, esp. in the 8th–10th C. It is occasionally called the "mountain of the monks" (oros ton kalogerou). The term Olympos ("Olympos") was sometimes extended to include monastic communities in the plain of Prousa, primarily to the north and west as far as the Sea of Marmara. During the first centuries of Christianity Olympos was inhabited only by a few hermits; the first monastery was established by the 5th C. Over the centuries the region is known to have included about 50 monasteries, only one of which (Peristerai) appears to have been female. The monasteries had no formal connection and, with the exception of Agauros, which had four or five dependencies or metochia, were quite independent of each other. Unlike Athos and Latros, it was not a monastic federation headed by a protos of archimandrite.

The monks of Olympos were active in the struggle against Iconoclasm; many of the signatories of the acts of the Second Council of Nicaea (787) were hegoumenoi of monasteries in this region. As a result a number of the communities suffered persecution, esp. under Leo V, and were forced to disperse, at least temporarily. Because of their isolation the monasteries of Olympos suffered from Arab raids in the 9th C. An important group of monasteries continued to function on Olympos in the 10th C., and it occupied first place in the lists of holy mountains established by historians of this period (Genes. 58.21–22, TheophCont 418.23, 430.18–19). Romanos I sent two centenaria of gold to the monks of Olympos (TheophCont 440.3–4). Leo VI and his son Constantine (VII) made a pilgrimage to the mountain (TheophCont 463f); in the 11th C. disgraced officials (e.g., the protosevastarios Symeon during the reign of Michael IV [Skyl. 396.28–32] and Michael Psellos in 1054) retired to Olympos. The growth of Athos and the invasion of the Seljuks inflicted a blow on Olympos, but separate monasteries in this area were still known in the 14th C.

Among the monasteries of the region were Atroa, Medikion, Peleke, Chenolakkos, Helenou Bomon, Sakkoudion, and the lavra of Symboloi(a). Many monastic saints, such as Plato of Sakkoudion, Theodor of Studios, Ioannikios, the patriarch of Constantinople Methodios, and Euthymios the Younger spent part or all of their careers at Olympos.

OLYNTHOS ("Olynthos"). city in the Chalkidike, north of Potidaia. The late antique and medieval periods are known primarily from excavations. A coin of Justinian I suggests that the settlement survived at least through the 6th C. Late Roman remains were also discovered nearby, at Hagios Mamas south of Olynthos (D. Robinson, G. Mylonas, AJA 43 [1939] 69), including a fine undated column decorated with reliefs, and at Mariana, north of Olynthos (a coin of Constantius II, a tower, traces of a wall: D. Robinson, AJA 37 [1933] 602). The settlement revived in the 11th C.: coins, pottery of the 11th–14th C. similar to that of Thessalonike (infra 5:285–91), and iron objects.
have been discovered. The 12th-C. Church of St. Nicholas had mosaic pavement.

T.E.G.

OMAR. See ʿUmar.

OMOPHORION (ὑμοφόριον), a long scarf, a vestment that only bishops were permitted to wear. It was about 3.5 m long, made of white wool, linen, or silk, and decorated with embroidered crosses. It was worn over the PHELOION, looped loosely over the shoulders so that one end hung down in front and one in back. It was said as early as the 5th C. (letter 1.136 of Isidore of Pelousion, PG 78:272C) that the *omophorion* must be made of wool, not linen, since it represented fleece of the lost sheep that Christ the Good Shepherd raised on his shoulders to carry back home—the bishop thus assuming the role of Christ among his flock. Hence, at that point in the liturgy when the text of the Gospel was to be read, the bishop was required to take off the *omophorion* out of respect for the voice of Christ, the true shepherd.

N.P.S.

OMURTAG (‘Oμωρτάγ), Bulgar khan (814/15–ca.831), son of Krum. Omurtag ended Krum's hostilities, most probably in 816 (W. Treadgold, *RSBS* 4 [1984] 213.20), by concluding with Leo V a 30-year peace treaty; its contents are partially preserved in a Proto-Bulgarian inscription (no. 55) erected by Omurtag. The agreement defined the boundary between Byz. and Bulgaria; required the temporary evacuation of frontier fortresses, probably to permit construction of the “Great Fence of Thrace” (J. Bury, *EH* 25 [1910] 283); stipulated the Byz. surrender of Slavic fugitives from Bulgaria; and arranged for the exchange of captives. Michael II probably revalidated the treaty, perhaps in 820 (Proto-Bulgarian inscription no. 43) or possibly later, in return for Omurtag's decisive intervention in 822 on Michael's behalf against Thomas the Slav (*TheophCont* 65.7–13). Despite evidence that he martyred Byz. captives taken in 813, Omurtag enjoyed harmonious relations with Byz. and instead contended successfully with the Franks for control of the Slavs in Pannonia. During his reign Byz. influence on Bulgarian court culture increased: Omurtag's inscriptions are written in Greek, often containing Byz. titles and formulations as well as the *indiction* dating system; his ambitious building program, including the reconstruction of Pliska, reflects Byz. architectural schemes and techniques.

P.A.H.

ONEIROKRITIKA (ὄνειροκρίτικα), eight popular handbooks on dream interpretation surviving from the Byz. era. Two are anonymous (Paris, B.N. gr. 2511 [ca.1400], Paris, B.N. suppl. gr. 690 [11th C.]), while others are ascribed to the prophet Daniel, Astrapyschos, Achmet ben Sirin, Germanos (I or II?), and Manuel II; another is assigned to Patr. Nikephoros I, although the same work is attributed to both Gregory of Nazianzos (Milan, Ambros. O 94 Sup.) and Athanasios of Alexandria (Venice, Marc. gr. 608). These fictitious designations of authorship are designed to lend credibility and prestige. The handbooks date from the 9th to 11th C., although the dream book attributed to Daniel may be as early as the 4th C.

Reflecting the Byz. belief in the divinatory and divine nature of dreams, the *oneirokritika* played an integral role in Byz. *magic*, superstition, and *divination*. The masses used the dream books, while the upper classes consulted professional dream interpreters (for such sessions, *erōtemata*, see *oneirokritikon* of Achmet, 15f). The format in all *oneirokritika* is uniform: the listing (usually alphabetical) of dream symbols, followed by their various interpretations. The reader selected the proper interpretation by comparing the dream's content with his circumstances, for instance, social status, occupation, and physical condition. The interpretations derived from literary motifs, mythology and religion, cultural traditions, hypothetico-deductive reasoning, antinomies, puns, and, most importantly, the interpreter's unconscious associations, based on his cultural values and conditioning. Accordingly, these interpretations provide a wealth of information on Byz. culture and society, for example, popular natural science,

—S.M.O.

ONOMASTICS. See Names, Personal; Prosopography.

ONOUFRIOS (Ονούφριος), saint; a hermit who is believed to have lived ca.400; feastday 12 June. According to the legend he started his spiritual career as a monk in a cenobitic monastery in Hermopolis, near Egyptian Thebes; then he fled to the desert, lived 60 years in solitude, and died there. The author of his Life presents himself as Paphnoutios, a monk who allegedly wandered in the desert and came across Onouphrios, a naked and hairy man who told Paphnoutios the story of his life and deeds. It remains uncertain whether he can be identified with the anachoretic Paphnoutios who lived in the region of Herakleopolis, near Thebes (Festugiére, *Hist. monachorum* 102–10). The Life is poor in concrete data; the author emphasizes that during his long stay in the desert Onouphrios received “the immaculate communio
n” from an angel (p.28D). Later Onouphrios was praised by a certain Nicholas Sinaiotes (perhaps in the 9th C.) and by *Theophanes of Sicily*, *Philes*, and Patr. *Philotheos Kokkinos*. Coptic, Arabic, Armenian, and Latin versions of Onouphrios’s Life also survive.

Representation in Art. The desert father with his immensely long white beard is generally depicted naked, his entire body covered with hair or with some desert plant shielding his private parts. Sometimes he wears a loin-cloth made out of palm fronds. His encounter with Paphnoutios is illustrated in a 12th-C. fresco at Veljusa.

—A.K., N.P.S.

OPHELEIA (ωφελεία, lit. “aid”), a secondary tax mentioned primarily in *praktika* of the 14th C. and once in a chrysobull of Michael VIII of 1275 (Xerop., no.10.43). In documents the term opheleia usually followed the οικουμενον and was equivalent to 10 percent of it, although a lower rate was possible: thus a *praktikon* of 1321 established the opheleia at 1 nomisma and the οικουμενον at 35, that is, only 3 percent (Xenoph., no.15.21–22). The purpose of *opheleia* is not indicated in the *praktika*: Dölger (Schatz. 191) hypothesized that it was introduced for the use of public roads and equipment; he also identified opheleia with *sitarkia* and *zeugaratikion* (Dölger, *Byzanz* 257, n.88). Neither theory can be proved.

—A.K.

OPISTHOTHELEIA (ὀπισθόθελεια), a rare term designating deferred payment, back taxes. The term was first used by a 4th-C. historian (Theoph. 489.27) who related that in 810 Emp. Nikephoros I demanded *opisthoteleiai* from *archontes* for eight years. The *Treatise on Taxation* (ed. J. Karayannopoulos, *infra* 322,30–38) describes the method of imposition: if in the process of conducting an *orthosis* an *epoptes* granted a tax alleviation (symathetia) and deleted several *stichoi* from the cadaster, his successor after a certain lapse of time could suggest to the peasants of the same *chorion* that ownership be restored; in this case they had to agree to pay *opisthoteleia* for three years. If they refused, the fiscal official (*epoptes*) gave ownership of the land in question to a third person (a higher bidder?). The payment of *opis
hoteleia* could be substantial in a litigation over an estate (Peira 36.24, 58.5). After the 11th C. only Harmenopoulos mentions this type of ar
rears.

—A.K.

OPPIAN, author of the *Halieutika*, a didactic epic on fishing; born Korykos in Cilicia, fl. late 2nd C. *George the Synkellos* (431.2) rightly dates O
ppian to the reign of Marcus Aurelius. Oppian was a school author, widely read and fairly often quoted
by the Byz. In the 5th C. a prose paraphrase of *Haiioutika* appeared. There was considerable interest in Oppian in the 12th C. *Ptochoporodromos* (4:215–24), for example, criticized his family for advising him to read Oppian rather than becoming a baker. John Tzetzes wrote a commentary on Oppian (A. Colonna in *Lanx satura Nicolao Terzaghi oblata* [Genoa 1963] 101–04) as perhaps did Eustathios of Thessalonike (A.R. Dyck, *GPhil* 77 [1982] 153f). Constantine Manasses composed a *Life of Oppian* in 15-syllable verse, which is considered the oldest surviving vita (A. Colonna, *BollCom* 12 [1964] 33–40). It includes anecdotal material preserved in Sozomenos (Sozom. *HE* praef. 6), where the emperor Caracalla offered Oppian a golden coin for each verse of his poem. In the Palaiologan period Maximos Planoudes included Oppian in his collection of epic poetry (Florence, Laur. gr. 32.16).

The Byz. attributed to Oppian two more didactic epics as well (Souda 3:547.15–20), the *Kynegetika* (on hunting) and the *Ixeutika* (on catching birds with birdlime), which were actually written by pseudo-Oppian (born in Apameia on the Orontes in Syria, fl. early 3rd C.). The *Ixeutika* is now lost, but the *Kynegetika* is preserved among others in a richly illuminated MS of the third quarter of the 11th C. (Venice, Marc. gr. 479—J.C. Anderson, *DOP* 32 [1978] 192–96). The majority of the miniatures illustrate specific aspects of hunting, but a smaller group have mythological subjects and attest to medieval attitudes toward antiquity. This MS belonged to Bessarion. Two post-Byz. copies in Paris (B.N. gr. 2736, 2737) are dependent upon it.

**OPPIDO** (*Ωππίδος*), a town and Greek bishopric in the *tourma* of Salines in Calabria. A rich archive of Greek charters of 1050–64/5 from this bishorpic, also named Hagia Agathe, contains 47 documents that shed light on the administration, ethnic character, and economy of this region of Byz. Italy: the *tourma* was divided into *droungoi*; the center of a *droungo* was a *chorion* protected by a tower (*pyrgos*). Oppido itself is described as an *asty* or *kastron*. The population bore primarily (70 percent) Greek names; these “Greeks” included Armenians and probably Turks. Latin names made up 17 percent and Arabic names 13 percent of the total. The economy of the region was agrarian, the acts listing fields, vineyards, fruit trees, mulberry trees; the production of salt is also mentioned. The cultivation of olives was unknown. There is some evidence of a village community. Each landholder’s possessions were scattered, but it remains disputable whether such scattered holdings were often (or ever) extensive (A. Kazhdan, *VizVrem* 37 [1976] 273).

- A.K.

**OPSAROLOGOS** (*Όψαρολόγος*, lit. “Fish Book”), a short *anonymous* animal epic in prose, of uncertain date and context, satirizing late Byz. legal processes. King Whale presides over a court before which Mackerel has been denounced for conspiracy; Mackerel is found guilty and shorn of his beard. Surviving in one MS only (Escorial Ψ IV 22), this *fable*, with its knowledge of technical terminology for court procedures, has much in common linguistically and thematically with the *Porikologos*.

*LIT.* Beck, *Volksliteratur* 178f.

-E.M.J.

**OPSIKION** (*Όψικιον*), one of the four original themes of Asia Minor in the 7th C., derived its name from the Latin *obsequium*, denoting a body of *comititates*. Their headquarters was *Ankyra*, from which their *komes* commanded the troops of all northern Asia Minor from the Dardanelles to the Halys. The theme, perhaps attested in 626, certainly existed by 680. Opsikion played a major role in history from the 7th to the 6th C.: in 715 it revolted and installed Theodosios III as emperor; it was the base for the revolt of *Artabasdos*, its former commander, in 742; its *komes* David suffered blinding for opposing Constantine V in
766; and its troops supported Michael II against Thomas the Slav in 821. In the mid-8th C., Optimatón and Boukellaroní were detached to become separate themes. Thereafter, Opsikion stretched from the Dardanelles to the edge of the central plateau, its capital was Nicæa, it had an army of 6,000, and its general was paid 30 pounds of gold. In the 12th C., the western part was called "Opsikion and Aigaion"; the theme apparently survived under the Laskarids.

OPSONION (ὀψωμίων). In addition to their pay (roga) soldiers on campaign received provisions in kind (Theoph CONT 265.8–12), called either opsonia or siteresia (Delehaye, Saints stylites 201.14–18), together with fodder for their horses (chortasmata). These provisions were distributed monthly (Skyl. 426.19; Kek. 276.24–278.1) or at the beginning of a campaign (De cer. 695.2–3). Opsion or siteresia referred also to a provisions allowance granted in cash to soldiers; an 11th-C. historian (Skyl. 487.34–38) relates how Michael VI Stratiosnikos sent Nikephores Bryennios and John Opsaros to the Anatolikon theme with money to be distributed among the soldiers as their siteresia. In a wider sense, siteresia, stratistikhe opsonia, opsinnas (and other terms) came to mean soldiers’ salaries (Attal. 60.19) or, in effect, the entire expenditure necessary to equip and sustain a soldier (Ahrweiler, Mer 149). However, opsonia or siteresia were not restricted to the military but could also mean payments in cash or kind to monasteries (e.g., Labra 1, no.7.39–40, 62.13) or the salaries of civil officials.

OPTIMATOI (Ὄπτιματοι), theme of northwestern Asia Minor, comprising the region opposite Constantinople, including both sides of the Gulf of Nikomedeia (L. Robert, JSav [1979] 286–88) and stretching inland past the Sangarios. Its capital was Nikomedeia. Optimatoi derived its name from the Latin optimum, a term used in the Strategikon of Maurice to designate an elite corps of foederati, perhaps of Gothic origin. Originally part of Opsikion, Optimatoi appears as a separate theme in the late 8th C. According to 9th-C. Arab geographers, it contained the city of Nikomedeia and three fortresses, and had a force of 4,000. These were not regular troops but were employed to serve the army, caring for pack animals and mules (De cer. 475f). When the imperial troops of Constantinople went on campaign, an optimatós was assigned to each. Constantine VII consequently describes Optimatoi as having nothing in common with the other themes. Its commander was a doméstikos who ranked below all the thematic strategoi. Seals of the 8th and 9th C. give him the title strator, spatharios, or prosopatharios; in the Klitorologion of Philotheos he is, however, antypatos patrikios. Unlike the other themes, Optimatoi was not divided into tourmai and droungoi. The theme long survived: John III Vatatzes reconstituted it after retaking the region from the Latins in 1240.

OPUS ALEXANDRINUM. See Pavement.

OPUS INTRASSILE (lit. "pierced work"), a means of fashioning gold and silver akin to fretwork or filigree. The craftsman started with a solid band of metal and cut away part of the material. The cutting pierced the band to produce an openwork design, often displaying simple geometric forms, busts, or figural scenes. The technique is known from at least the 3rd C. and was particularly popular for bracelets and pendants. It was also used for small plaques intended to be sewn on clothing or a piece of fabric.

OPUS LISTATUM. See Brickwork Techniques and Patterns.

OPUS MIXTUM. See Brickwork Techniques and Patterns.

OPUS SECTILE (σκούτλωσις, συγκοπή, μαρμάρωσις), inlay—usually of marble, but sometimes mother of pearl and/or glass—cut into shapes following a geometric or figural design, applied to walls and floors. Elaborate figured wall deco-
ration in this medium was used in the 4th C. (G. Becatti, *Edificio con opus sectile fuori Porta Marina [= Scavi di Ostia 6] [Rome 1969]), and crates of glass opus sectile for a sanctuary of Isis were found at KENCHREAI. HAGIA SOPHIA (Constantinople) preserves vast expanses of opus sectile in rinceau patterns; an opus sectile panel with a jeweled cross is located above the west door. Wall decoration in this expensive medium was, however, usually geometric, as in the bemas of S. Vitale, RAVENNA, and POLEZ (A. Terry, *DOP* 40 [1986] 147–64). Painted imitation of opus sectile was ubiquitous on walls in provincial buildings.

From the 4th to the 6th C. opus sectile was more widespread, if less varied, on floors than on walls. It was usually laid in rectangular panels of simple geometric designs in colored marbles or white marble and slate. More luxurious than floor mosaic, opus sectile frequently paved sanctuaries, while mosaic was used in less important areas of the church.

Wall decoration in opus sectile appeared only occasionally after the 6th C., for example, at DAPHNI and the CHORA MONASTERY, although its painted imitation was widespread. An 11th-C. opus sectile icon of St. Eudokia was found at the LIPS MONASTERY. Opus sectile floors were common in major Byz. churches of the 10th–12th C., such as the PANTOKRATOR MONASTERY, Constantinople. They differ from earlier floors in having large scale curvilinear designs, parts of which are filled in with intricately laid small pieces and sometimes figures.

—R.E.K.

**ORACLES** (∝ρητημοί), divinely inspired prophecies or individuals who uttered oracular responses. Oracles were still being given in the 4th C. Theodoret of Cyrrhus notes that Emp. Julian consulted the oracles at DELPHI, DELOS, Dodona, and elsewhere before his invasion of Persia (T. Gregory, *Classical World* 76 [1982–83] 290f). Porphyry in his lost treatise *On the Philosophy of the Oracles* collected many anti-Christian oracular utterances, among them a prediction that the cult of Christ established by St. Peter would last only 365 years (H. Chadwick in *Mémorial A.J. Festugièrè [Geneva 1984] 125f*). An oracle at Didyma (HiERON), declaring that it could give no truthful utterance until unimpeded by Christians, served to justify the persecutions of Diocletian. Porphyry, as well as other Neoplatonists, found in the so-called CHALDEAN ORACLES (logia) the foundation of their world view. Christianity rejected the pagan oracles, claiming them to be the work of witches and demons, but tried to appropriate the tradition of renowned oracles: churches were erected on the sites of ancient temples famous for their oracles and Christian writers circulated bogus oracles, such as the one in which the Apollo of Kyzikos confessed that his temple was now the house of the Theotokos. The Jewish SIBYLLINE ORACLES were revised to convey a Christian message. A set of oracles attributed to Emp. Leo VI was popular in Byz. (C. Mango, *ZRV 6* [1960] 59–93), and Byz. apocalypses made use of the genre.

Oracles mentioned in sermons or homilies attributed to GREGORY OF NAZIANZOS and JOHN OF EUBOEA (or John of Damascus) were depicted as statues in MSS of the 11th and 12th C.; these include the figure of Apollo (that at Dodona and of the Kastalian spring at Delphi), and the oracle consulted by King Cyrus in the Persian capital. One, called the Despoina Pege and prefiguring the Virgin, is represented as a
Byz. empress. Sometimes clusters of oracle figures are shown dancing, playing instruments, or falling in the manner of idols. Thoroughly medieval in detail, these images still suggest some awareness of classical statuary.

—F.R.T., A.K., A.C.

ORANS, or orant (Lat., lit. “praying”), the name given to the early Christian posture of prayer: the body upright and frontal, and the open hands lifted to shoulder height to either side. Used to represent piety on many 3rd-C. pagan and Christian sarcophagi, the posture was adopted for innumerable catacomb figures, whether tomb owners or Old Testament characters (e.g., Daniel) depicted at the moment of their salvation from death. Though rare after the 8th C., when prayer was shown by the inclined profile posture of proskynesis, the orant posture was retained throughout Byz. art for the Virgin Mary in the form often known as the Virgin Blachernitissa or Virgin Platynera.

ORARION (ὁράριον, ὁράριον), a narrow white stole of silk (originally linen) worn as a vestment by deacons when officiating; it rests on the left shoulder and hangs down in front and back. Its name derives probably from the Latin orarium, a cloth for wiping the brow. Its liturgical use is attested by the late 4th C. (Council of Laodicea, canons 22 and 23, ed. P.-P. Joannou, Fonti. Fas cico IX. Discipline générale antique [IVe–IXe s.] 1:2. Les canons des Synodes Particuliers [Grottaferrata 1962] 199f), though we have no sure artistic representations before the 9th C. (Paris Gregory). The orarion symbolized the humility of Christ, who washed the feet of the disciples and dried them with a towel (Isidore of Pelousion, PG 78:272C), and at the same time the wings of angels. A homily attributed to John Chrysostom describes deacons running in the church with fine linen cloth on their left shoulder in imitation of angels; they expelled catechumens who were not allowed to see the fatted calf being eaten (PG 59:520.17–27). The orarion often had woven into it the words of the deacons’ pronouncement from the Trisagion, “Hagios, hagios, hagios.” Its two ends also symbolized the Old and New Testa ments. In the modern rubrics for the liturgy attributed to Chrysostom, the deacon is required to present the orarion to the priest before vesting and to kiss it while putting it on.

ORB. See Sphaira.

ORDEAL. The use of ordeal as a means to prove the guilt or innocence of an individual is mentioned in sources of the 13th C.: Demetrios Chomaticenos (Zephy, Jus 7:531f) and John Apokaukos (M.T. Fogen, RJ 2 [1983] 83–96) testify to its use in private cases, while George Akropolites and Pachymeres mention the use of ordeal at the treason trial of the future emperor Michael VIII. There were two major kinds of judicial ordeal: single combat and holding a red-hot iron. Ordeal by combat is also mentioned in the romance of Phlorios and Platzia-Phlora (P. Piefer, JÖB 20 [1971] 216f). Before enduring ordeal by hot iron the suspect had to spend three days in fasting; his hands were bound to prevent the application of ointments. The ordeal consisted of walking three paces while holding a piece of red-hot iron. Ordeal was considered a barbaric practice and was probably borrowed from Westerners (either before or after 1204).

Appeal to divine judgment was also common in Byz. in the case of the election of a bishop or hegoumenos or solution of a theological controversy and often took the form of depositing two or three pieces of paper (inscribed with names or statements) in a church or on a saint’s relics. A 14th-C. historian (Greg. 1:166.14–29) relates that during a religious dispute in Atramytton (1283?) the parties agreed to determine the truth by setting fire to two documents containing their creeds; each party expected its biblos to remain undamaged but both burned to cinders.

ORDERIC VITALIS, Benedictine historian; born Shropshire 16 Feb. 1075, died St. Evroul, Normandy, on 3 Feb., in 1142 or later. Orderic’s Historia ecclesiastica, initially a history of his abbey, grew into a universal chronicle focusing on Norman achievements; the original MSS show how Orderic continuously (ca.1114/15–1141) revised the text. Orderic had access to wide-ranging information and strove for accuracy, although chronological mistakes were made. He conflates traditions on the Norman establishment in southern Italy (2:56–64, 98–104), but his information improves after monks from St. Evroul migrated to St. Eufemia in Calabria (e.g., 2:100–02). He described Anglo-Saxon emigration to Constantinople and connected Michael VII’s fall with resentment of the power of the senate (2:202–04). His monastery provided oral sources (e.g., on the pilgrimage of Abbot Thierry [1050–57] to the Levant, 2:68–74; on Normans with family ties to St. Evroul who participated in Robert Guiscard’s war with Byz., 4:10–38). Independent recasting of oral testimony may explain a parallel with Anna Komnene (4:36–38; cf. Alexiad 1:156.15–157.2). For the First Crusade he depends mostly on Baudry of Bourgueil, but, despite semidependent overtones, Orderic adds details attributable to personal connections (e.g., on Nicaea, 5:50–59; Hugh Bune’s service with Alexios I, 5:156–58; Alexios’s role in releasing Arpin of Bourges from prison thanks to Byz. merchants in Cairo, 5:350–52). He also treats Bohemund’s siege of Dyrrachion (6:100–02), Constantinople’s relations with the Crusader states (6:128–32, 502–08), and an insurrection on Byz. Cyprus (6:130–32).

ORDINATION. See CHEIROTHESIA; CHEIROTONTIA.

ORGAN (ὀργανον). The organ was not used in the Byz. church, but did play an important part in imperial ceremonies, such as banquets, chariot races, weddings, and processions (cf. the organ depicted in the miniature, Entry of the Ark into Jerusalem, in the Vatican Book of Kings [Lassus, Livre des Rois, fig.85]). For these purposes the instrument was decked out in gold and costly decoration. Most sources refer to the bellows-type organ. An Arabic source (al-Maṣʿūdi) suggests that three (or two) bellows fed air into a large reservoir below the pipe-chest. The Blue and Green FACTIONS at court each had an organ, but the instrument otherwise remained a rarity. At his palace the emperor had both automata and true organs, in which at least one emperor (Theophilos) took an interest. Nothing is known of the pipework, sound, compass, precise function, or repertory of the organ in the Chrysotriklinos of the Great Palace or indeed of any others, though one 9th-C. source, the Arab Hārūn ibn Yahyā, does refer to “60 copper pipes” in what appears to have been a large table organ. Byz. organs sent as gifts to the West helped revive interest in the instrument. Organs became objects of visual as well as aural show, eliciting wonder for their intricate technology and respect as extravagant diplomatic gifts or signs of royal power—a notable example being the organ sent to the Frankish king Pepin in 757.

D.E.C., A.C.

ORGYIA (ὀργια), name of several units of length and measures of land.

1. The shorter orgyia of 6 podes (= 96 daktyloi = 1.87 m) had its origin in the ancient Greek orgyia of 1.89 m. Called also haple (simple) orgyia, it was used in commerce and handicraft.

2. A longer orgyia of 9 basilikai spithamai (= 108 daktyloi = 2.10 m) was commonly used in the measurement of land. This orgyia had its origin in the ancient Philetairic orgyia of 2.10 m. Out of concern for the taxpayers, Michael IV ordered the use of a longer orgyia (9.25 basilikai spithamai = 111 daktyloi = 2.17 m) for fields of best and middle quality, while the orgyia of 9 spithamai was retained for fields of poor quality. The orgyia used in measuring land was sometimes called geometrike or basilike orgyia.

3. From the 14th C. onward the use of different orgyiae of local validity can be demonstrated, sometimes called kanna (lt. canna).

On the basis of setting marks for the columns
in the Church of St. John at the Studios monastery, and other calculations, T. Thieme (in *Le dessin d'architecture dans les sociétés antiques* [Leiden 1985] 291–308) suggested that the basilica had been planned using two modules within a system of *orgyia* and *daktylai*.

**ORHAN** (Ὀρχάνης), second Ottoman ruler (1326–62); born 1281?, died 1362. During 1326–27, Orhan incorporated what remained of Byz. Bithynia north and west of the Sangarios River. As his father Osman lay dying, Orhan conquered *Prousa* (6 Apr. 1326), henceforth his capital. He then began a general northeastern advance, which Andronikos III tried but failed to oppose in June 1329. *Nicæa* surrendered to Orhan (2 Mar. 1331), but *Nikomedia* held out until 1337.

After 1345 Orhan was often entangled in Byz. dynastic politics. In May 1346, he married Theodora, daughter of John VI, and remained an ally of the Kantakouzenoi until 1357. Four times he dispatched Turkish troops into Europe to assist them (1348, 1350, 1352, 1356). During the final conflicts between Matthew I Kantakouzenos and John V Palaiologos from 1352 to 1356, Orhan simultaneously supported the initiatives of his eldest son, Süleyman Pasha, in conquering and settling southeastern Thrace. During 1357–59, Orhan adopted a conciliatory policy toward John V to gain his help in rescuing Halil, his youngest son by Theodora, from Phokaian pirates. Orhan favored an engagement between Halil and John V’s daughter Irene, which occurred in Constantinople in summer 1359, following the boy’s ransom. This liaison, however, produced no lasting peace (İnalçık, “Edirne” 189–95). With Orhan’s assent, Turkish expansion in Thrace resumed late in 1359 and continued throughout the rest of his reign.

**ORIBASIOS** (Ὀρίβασιος), physician; born Pergamon ca.325, died after 395/6. Oribasios received early training from Zeno of Cyprus, a famous iatri Sophia, as *Eunapios of Sardis* relates in his short biography of Oribasios. While young Julian was confined to Asia Minor, Oribasios became a close friend of the future emper. In 355, Julian took Oribasios to Gaul with him as personal physician and librarian. An extant letter from Julian to Oribasios (358/9) shows that Oribasios supported Julian’s religious policies. A Byz. legend, found in the vita of Artemios and in Kedrenos, records that Oribasios brought from Delphi to Julian an “oracle” describing the desperate situation of the shrine (T. Gregory, *GRBS* 24 [1984] 355–66). Julian had ordered Oribasios to summarize *Galen*, a task completed after 361; these *epitomei* have not survived. Oribasios also composed a medical synopsis, partially extant. He accompanied Julian on the Persian expedition (363) and was present at the emperor’s deathbed: later Oribasios recorded events of that campaign in a private *Synopsis for Eunapios*. Emperors in the following decade forced Oribasios into exile, but he returned to Constantinople by the mid-470s.

Oribasios established the method for using ancient medical authors: quoting verbatim from carefully cited works and pairing each quotation with another of similar content, not necessarily from the same tract or author, as is seen in his streamlining of Galen’s writings. Oribasios’s version of Galen generally was followed by Aetios of Amida and Paul of Aegina and was the form in which Photios knew Galen’s works. Arabic physicians used Oribasios in translation, and by the 5th C. he was rendered into Latin. Oribasios ensured Galen’s enormous influence on later Byz., western medieval, and Arabic medicine.

**ORIENS** (Ὀρίες), diocese of the Eastern Prefecture from the 4th to 7th C., administered by the *comes Orientalis* at Antioch and comprised of the provinces of Syria I and II, Theodoria, Phoenicia Maritima and Libanensis, Arabia, Palestina I, II, and III, Isauria, Cilicia I and II, Euphratensis and southern Euphratensis, Osrohoen, Mesopotamia and southern Mesopotamia, Armenia IV, and, until 536, Cyprus. Egypt was removed from Oriens and made a separate diocese by Valens. Oriens was an important military, commercial,
industrial, and agricultural region that also included notable intellectual and university centers, esp. in Syria and Palestine. Orients ceased to exist as an administrative unit in the 7th C., with the disappearance of the office of the praetorian prefect and the reorganization of provinces into themes.

ORIGEN (Ὀρεγένης), surnamed Adamantios, theologian; born Alexandria? ca.185, died Tyre? probably 254. A professor of the Alexandrian School from ca.202, he was excommunicated in 231/2 but found refuge in Caesarea Maritima, where he continued his teaching career. His traditional identification with the Neoplatonist Origen, a disciple of Ammonios, is not valid (K.O. Weber, Origenes der Neoplatoniker [Munich 1962]).

Origen was a very prolific writer (Jerome claims that Origen produced 2,000 works), but because of the later condemnation of his teachings most of his works survive only in fragments or in Latin translation. Origen laid the foundations for the further development of Christian theology by introducing such concepts as homousios, theanthropos (God-man), and hypostasis. He treated the questions of sacraments and eschatology and the doctrines of angels and demons, the soul, and sin. He developed allegorical or typological exegesis of Scripture and in polemics against Celsus defended the truth of Christianity. His First Principles is the first systematic treatment of Christian theology, and the Dialogue with Heracleides is a rare case of a stenographic record reporting a lively discussion of the Father-Son relationship. Unlike Clement of Alexandria, Origen proceeded from the idea of God, not the Logos, and he understood the Trinity hierarchically, so that Jerome accused him of subordinationism (a charge that Athanasios of Alexandria refuted); he emphasized the unity of the soul and the human body in Christ after the Incarnation so that Christ’s soul lost the possibility of sin; he taught the preexistence of souls and the eschatological apokatástasis (restoration) when all individuals will be purified.

Discussions about Origen’s theology began immediately after his death, and his student Pamphilios of Caesarea defended Origen from his critics. Then, ca.400, Epiphanius of Salamis and Theophilos of Alexandria attacked him, while John of Jerusalem and Rufinus of Aquileia supported him. In addition to being accused of subordinationism, Origen was attacked for believing in the preexistence of souls and for terminological inconsistency. Some of his tenets were accepted by Egyptian and Palestinian monks who stressed the ascetic and mystical elements of his teaching; extreme supporters of his ideas claimed that in the final account each intellect is equal to Christ (hence their name isochristoi); a more moderate group (protokristoi) taught that Christ is above other intellects; their opponents claimed that the protokristoi introduced Christ’s humanity as the fourth hypostasis in the Trinity. In 542/3 Justinian I issued an edict condemning Origen and his work, and anathemas were signed by Pope Vigilius and certain patriarchs. The isochristoi were condemned by the Council of Constantinople of 553; Origen was also named by the council, linked not to the isochristoi but to the affair of the three Chapters.

ORIGINAL SIN (πρωτατορικὴ ἁμαρτία), the hereditary sin to which every human being is subject at conception as the result of the sinful choice of Adam and Eve. Because of the ancestral fall of man, predisposition to evil is already present in infants and can increase as the person matures, owing to his or her personal guilt (an idea particularly stressed by Augustine). As a result of original sin, all humanity remained excluded from paradise until the “original virginity” (the expression of a certain John the Monk, sometimes confused with John of Damascus, PG 96:1405C) of mankind was restored by the incarnation. In individual cases it is BAPTISM that cleanses man from the defilement of original sin (e.g., pseudo-Athanasios, PG 28:636A).

From the legal point of view the Byz. church accepted the same teaching about original sin as did the Latin church, and the canonists Zonaras and Balsamon formulated the doctrine in accordance with Augustine. Byz. theologians, however, with rare exceptions (e.g., Prochoros Kydones),
provided different emphases. In strong contrast to Gnosticism and esp. Manichaeanism, they (esp. John of Damascus) stressed that man’s nature remained, even after the Fall, an image or icon of God, whereas the likeness (homoiooma) to God, based on grace, was lost and could be recovered only by ascetic purification and union with God. Adam’s sin had an impact on all members of the human race, not in terms of personal guilt but as a punishment imposed collectively on mankind for the generic human sinfulness revealed in individual sins. Photos even considered the concept of original sin heretical (J. Gross, BZ 52 [1959] 304–20), while Symeon the Theologian interpreted it as removing oneself from the vision of God and from deification (J. Gross, BZ 53 [1960] 47–56). All in all, the concept of original sin was elaborated in Byz. less systematically than in the more legalistic West.

—G.P.

ORIKE (ὀρκεική), a supplementary or secondary tax of uncertain nature mentioned in many chrysobulls of the 14th C. In 1318 Andronikos II granted a certain George Troulenos ownership of an estate in the region of Serres and exempted xenoi (“aliens”) and eleutheroi settled on this land from all state epereiai save for sitarkia, kastroktisia, orike, phonos (phonikon), and treasure trove (Guillou, Menécée, no. 8.15–17). A series of documents conferred upon the monastery of Menoikeion, mostly by Stefan Uroš IV Dušan, exempts the monastery from orike, as well as sitarkia, kastroktisia, and (sometimes) ennomion; Dušan’s chrysobull of 1345 (no. 39.31–34) contains a longer list that also includes ennomion on beehives, the tithe on sheep and swine, and pathenophthoria. Charters from other archives sporadically mention the orike: in 1327 Andronikos II exempted the monastery of St. Nicholas near Serres from payment of sitarkia, kastroktisia, orike, and mitaton on their yokes of oxen (doulika seugaria), adding, however, that sitarkia must be paid to the fisc (Chil., no. 113.28–33). Dušan exempted the monasteries of Philotheou (Actes de Philotheée, ed. W. Regel, E. Kurtz, B. Korabliev [St. Petersburg 1913; rp. Amsterdam 1975] no. 9.75), Esphigmenou (Esphig., no. 22.32), and Iveron (Solovjev-Mošin, Grčke povelje, no. 7.92) from orike; the orike is always listed together with kastroktisia. Finally, the chrysobull of 1342 issued at the request of the Bulgarian tsar Ivan Alexander abolishes the payment of sitarkia, orike, and kastroktisia levied in the amount of 50 hyperpera (Zogr., no. 31.21–25). It is thus plausible to hypothesize that the orike was a charge somehow connected with Slav territories. There is no direct evidence that it was a tax on hilly pastures (so Dölger, Schatz. 146f), an interpretation based solely on etymology.

A praktikon of 1321 mentions a (different?) charge called oreiatikon (Lavra 2, no. 109.970,985) that was paid by the whole district (periokhe) together with ennomion. The sum seems to have been insig- nificant.

LIT. Solovjev-Mošin, Grčke povelje 473f. —A.K.

ORNAMENT (κόσμος). The most important categories of ornament in Byz. are floral patterns (including “inhabited” vine and acanthus rinceaux), animal figures, interlace, and the medallion style, originally a special case of interlace, in which tangent or interlaced circular medallions enclose other motifs, often human or animal figures. While these types are to some extent characteristic of every Byz. art form, except perhaps icon painting (though icons often received elaborately ornamented metal covers), the most lavish and innovative ornament is found in floor mosaics, textiles, and architectural sculpture. The major achievements in these areas date from the 5th to 6th and 10th to 12th C., but through their influence on other media and in later centuries, they effectively set the pattern for the historical development of Byz. ornament.

Floor mosaics of the 4th–6th C. display a repertory of floral and geometric forms essential to the development of interlace, which reached an advanced level of complexity in the 5th C., as in the Church of the Nativity at Bethlehem. Complex interlace seems to have lost popularity in the 6th C. but survived to influence the 8th-C. development of Islamic ornament. Another important mosaic pattern was the inhabited rinceau, frequently used in borders, and, in the 6th C., as a large-scale floor decoration in its own right (C. Dauphine, Art History 1 [1978] 400–23). Medallion compositions, which the most stylized of the rinceaux closely resemble, first appear in the 6th C.
at Beth Sh’an (see SLYTHOPOLIS) and Kabr Hiram, although they derived from earlier forms of interlace. The medallion style occurs in almost every medium, exercised a major influence on the arts of western Europe and the Islamic world throughout the Middle Ages, and was transmitted to China and Japan. Its influence is explained by its extreme adaptability, in terms of purpose as well as medium: not only a pattern in itself, it was a way of incorporating figures or even entire scenes into an ornamental scheme without diminishing their pictorial integrity.

Tessellated pavements passed out of fashion by the 7th C. and OPUS SECTILE became and remained the favored technique of luxurious floor decoration. Opus sectile preserved many of the interlace and medallion patterns developed in floor mosaics (PANTOKRATOR MONASTERY, Constantinople); it was instrumental in transmitting these patterns to the West (S. Marco, VENICE). The fullest expression of the medallion style is to be found, however, in SILK textiles. In TEXTILES, as in mosaics, the medallion style derived from interlace patterns traceable at least as far back as the 4th C. Coptic tapestries display a variety of ornament, including floral and interlace patterns that closely parallel those found in mosaics.

The ornament of architectural members as well as of borders and HEADPIECES in illuminated MSS was largely floral, sometimes in the form of GARLANDS or PALMETTES. Although its formal basis was once again Greco-Roman, antinaturalistic tendencies predominated. By the 6th C. the dominant style was close textured and often deeply undercut, with strong contrasts of light and shadow and an emphasis on delicately carved forms that combined sharpness with fluidity (St. POLYEUKTOS and HAGIA SOPHIA, Constantinople; S. Vitale, RAVENNA). Even further conventionalized by the 10th C., these forms were then freely combined with interlace and medallion patterns (HosiosLOUKAS, Theotokos church and katholikon).

A uniquely Byz. contribution to architectural ornament was the use of rectangular stone plaques with motifs in low relief (T. Ulbert, Studien zur dekorativen Reliefplastik des östlichen Mittelmeerraumes [Munich 1969]). The motifs included lozenges and other simple geometric shapes, crosses, small-scale interlace and medallion compositions, and ANIMAL combats featuring both real or exotic creatures; these animals also appeared singly or symmetrically paired. The earliest examples date from the 6th C. but derive from 4th- and 5th-C. RELIEF sculpture, and ultimately from Roman sarcophagi and architectural decoration. Originally applied to parapets and chancel screens, in later centuries both older and contemporary plaques were set in the walls of buildings, such as the old Metropolis church in Athens and S. Marco in Venice (Grabar, Sculptures II, pls. LXV—LXX, XLVIII—I—LI). These carvings embody what is perhaps the most important principle of Byz. ornament: that a pattern need not cover and transform an entire surface but could be set off from its surroundings as a self-contained unit in the manner of a picture. Both figures and rather complex interlace patterns were treated in this way, recalling earlier floor mosaics in which interlace was confined to panels rather than carpeting the entire floor.

This restraint, together with the popularity and longevity of the medallion style, suggest, if not a rejection of intricacy as the basis of ornamental design, a tendency to subordinate it to an easily readable scheme. Nevertheless, despite a general tendency toward greater elaboration and fantasy beginning around the 12th C., containment and comprehensibility characterize much of Byz. ornament throughout its history. Indeed, they are arguably the features which most clearly distinguish Byz. ornament from the contemporary styles of western Europe and the Islamic world.

What we see in Byz. ornament is not necessarily what the Byzantines themselves saw. They valued craftsmanship and luxurious materials, but seem to have had a special regard for naturalistic effects. These were achieved in two ways: through actual representations, as of flowers or vines, and through the materials themselves, esp. the colored marbles used in opus sectile. The latter were not only praised for their intrinsic beauty, but frequently evoked comparison with rivers, gardens, and other natural features.

Many Byz. ornamental themes demand, or at least admit, a symbolic interpretation. The eucharistic and scriptural significance of the grapevine (Jn 15:1—7) helps explain the prominence of vine rinceaux in church decoration. The same motif was used, however, in synagogues, and to a lesser extent in secular buildings, including private dwellings. SHEEP and DEER had obvious religious connotations (Ps 42:1; Jn 10:7—18), but other
creatures used in ornamental contexts may lack overt significance. No convincing interpretation has yet been advanced for the many scenes of animal combat found esp. in architectural sculpture. Not in itself symbolic, the medallion style with its series of linked frames allowed the incorporation of religious imagery into ornamental patterns. This potential was realized first in the 6th-C. Annunciation and Nativity silk in the Vatican, and thereafter in every ornamental medium throughout the history of Byz. art.

-J.T.

OROPOS (Ὀρωπός, Rupo, Ripo), settlement and fortress on the east coast of ATTICA. Although Oropos was an ancient site, little is known of the medieval settlement until around 1200, when it is attested as belonging to the church of Athens. The fortress may have been built ca.1204. The site flourished in the 13th C., when it had close connections with both Athens and Euboëa. The fortification was probably destroyed ca.1400, when it fell briefly into the hands of Albanians. It remained in Athenian control (until 1456) and was taken by the Turks in 1460. No remains of the fortification survive, but there are many churches in the vicinity, most dating from the period of Frankish domination (A.K. Orlando, DChAE 4 [1987] 29–41; M. Chatzedakes, DChAE 5 [1969] 57–103).

Lit. TIB 1:229.

-T.E.G.

OROSIUS, PAUL, Latin theologian and writer; born probably Braga, northern Portugal, died after 418. Around 412 Orosius migrated to Hippo, where he met Augustine, who sent him to Jerome at Bethlehem. While in Palestine Orosius, who had already made a theological mark with his Commonitorium against the Priscillianists and Origenists, combated Pelagianism at a Jerusalem synod in 415, subsequently defending his own orthodoxy in the Apology. Back in Africa, Augustine set him to work on what is now known as the History against the Pagans, seven books of world history from the Creation to 417. This work was designed to reinforce the argument of the City of God that pagan charges that Rome’s problems were the result of deserting the old gods were unfounded. The work is plainly written, but inevitably derivative (not always honestly) and of little independent value until Orosius reaches his own times. Its influence was ubiquitous (approximately 200 MSS survive), being sufficiently regarded in Byz. for Romans II to present in 959 a copy to Caliph ‘Abd al-Rahman III in Spain, who commissioned an Arabic translation.

-B.B.

ORPHANAGES (ὀρφανοτροφεία). As part of their spirit of PHILANTHROPY, Byz. showed particular compassion for orphans as well as for widows, the sick, poor, and elderly. Some orphans were provided for through ADOPTION, others were cared for in monasteries or in orphanages, which were either independent or administered by a monastery. The director of an orphánotrōphēion was usually called an ORPHANOTROPHOS. The earlier orphánotrōphēia served not only as orphanages proper, but also as hostels, and the boundary between them and xenodochēia was not clearly fixed (Justinian, nov.131.15). The most famous orphanage in Constantinople was that of St. Paul in the Acropolis region, which was in existence by the 6th C. Alexios I Komnenos restored it on a grand scale; the complex also included a school for orphans and refuges for the blind, crippled, and elderly. Orphans stayed in orphanages until old enough to marry; state legislation protected their rights. The sources also refer to a trepho-trōphēion, or “foundling home,” in Constantinople.

-A.M.T., A.K.

ORPHANOTROPHOS (ὀρφανοτρόφος), director of an ORPHANAGE. The term orphánotrōphos is first mentioned in Leo I’s novel of 469 as an office invented by the patrikios Zotos. The earlier orphánotrōphoi belonged to the clergy, and two 5th-C. patriarchs (one of them Akakios) were former orphánotrōphoi. In the provinces the office still re-
mained in the hands of priests and monks, such as the humble monk Kandidos in 1162 (Laura 1, no.64.30). In the capital, however, orphanotrophoi became members of the secular hierarchy; in the 9th-C. taktikon of Uspenskij patrikios and orphanotrophos follows the chartularios of the vestiarion. In the Palaiologan period, Manuel Philes defined orphanotrophos as “the treasurer of imperial means” (Philes, Carmina, ed. A. Martini, no.43.59). Some orphanotrophoi were influential personages: an addressee of Theodore of Studios was the patrikios and orphanotrophos Leo; at the end of the 10th C. the orphanotrophos John was simultaneously judge (krites) of the Armeniakon; John the orphanotrophos administered the empire under Romanos III, Michael IV, and Michael V; Michael Hagiotheodorites was orphanotrophos and logothetes tou dromou in 1166–70, and at the beginning of the 13th C. John Belissariotes was orphanotrophos and logothetes ton sekreton. Thereafter, the office was in decline, and a 14th-C. ceremonial book (pseudo-Kod. 185.17–20) notes that the orphanotrophos had no particular functions.

According to the kletorologion of Philotheos, the staff of the orphanotrophos included the chartoularioi of two orphanages (probably those of Zotikos and of St. Paul in Constantinople), the arkarios (cashier), and kouratores. The orphanotrophos is mentioned in formulas of exemption.

ORPHEUS, mythical musician. In late antiquity Christian apologists like Tatian, Theophilus, and Justin attacked Orpheus as a “false” singer. He was made into a pupil of Moses, who ultimately accepted the God of Israel. On the other hand the story of Orpheus charming wild animals with his song was interpreted as a prefiguration of Christ (Clement of Alexandria, Protreptikon 7.74.3–6) in his role as the Good Shepherd (Eusebius of Caesarea, De Laud. Const. [p.244.14–31]), the new Orpheus outshining the old one. F. Halkin argues that the vitae of St. Mamas and esp. St. Zosimos of Anazarbos pattern the saints after Orpheus: both saints prefer animal to human company; a lion, taught by Zosimos, instructs the persecutor Domitian in Christianity (AB 70 [1952] 249–61). The Byz. also viewed Orpheus as one of the ancient sophoi and quoted often from surviving Orphic fragments (Malal. 72.16–76.9).

In Byz. literature Orpheus and his lyre are used as a metaphor for the power of poetry and music (Theophylaktos of Ohrid, ed. Gautier, 1:353.3). Furthermore, a praised addressee (Arethas of Caesarea, Scripta Minora 2:5.27–6.3) or lamented deceased (Psellus, In Mariam Scleraenam, ed. M. Spadaro [Catania 1984] vv. 103, 111) is favorably compared with Orpheus. Various authors, though, use the Orpheus simile in an unusual way to surprise their listeners. Niketas Choniates (Orationes 129.26–9), for example, in praising Theodore I Laskaris says that the bronze statue of Orpheus, symbolizing the Muses, swelled Alexander’s deeds, thus equating the Macedonian king with the emperor and Orpheus with himself; the story is taken from Arrian. Anna Komnene intends to surpass Orpheus, because he moved only stones, while she will move her readers to tears (An.Komm. 1:7.14–20).

A standard figure in floor mosaics of the 3rd–6th C., Orpheus is found in catacomb painting and on Christian sarcophagi—stages in his eventual assimilation to Christ. The potent singer probably also served as a source for images of David the musician, as in the Paris Psalter. From the 9th C. onward, miniatures in MSS of the homilies of Gregory of Nazianzos (Weitzmann, Gr. Myth., figs. 82–84) show Orpheus as a lyre-player or harpist without reflecting the scorn attached to him in the text (PG 35:653AB). Likewise on caskets and boxes he ranks among mythological figures without ulterior motive.

ORTHOGRAPHY, the correct writing of words, including both letters and prosodical signs. The sweeping changes in Greek phonology that took place from Hellenistic to late Roman times were not accompanied by corresponding changes in the writing of the language. Hence the correspondence between letters and phonemes was upset: the same sound could often be written in different ways and the same sign occasionally read in different ways. Byz. grammarians therefore com-
posed prescriptive treatises on orthography. They all drew directly or indirectly on Herodian, particularly on passages concerning the correct writing of long and short vowels and diphthongs. Of the Orthography of Oros (5th C.) only a small fragment survives, and that of John Charax (6th C.) is still unpublished. The Canons of the grammarian Theognostos and the partially preserved Orthography of George Choiroboskos are indicative of the revived cultural interest in the 9th C. Niketas of Herakleia set out the rules of orthography in the form of parodies of liturgical hymns as aids to memory (mainly unpublished). Many brief anonymous treatises on orthography for school use survive from the Palaiologan period, the latest being by the future Patr. Gennadius II. The erratic spelling of inscriptions in churches and on seals, as well as in documents, suggests that Byz. society attributed much less importance to correct orthography than its teachers would have wished. The most common of these errors are ITACISM and confusion between ο and a second element in a diphthong and β.

ORTHOSIS (ἄρθωσις, lit. “making straight, correction”), a fiscal procedure of reestablishing taxes on land that had temporarily been exempted from payment. If the heir returned within a 30-year period to the land declared sympatheia, the tax had to be restored gradually, in three stages. If 30 years had already passed and the sympatheia had been transformed into a klasma, the orthosis would not take place. The procedure was performed by the epoptes or probably by a special functionary called orthotes. The data on orthosis and orthotai are preserved in documents of the 10th to 12th C., primarily in the treatise on taxation published by Ashburner and then by Dölger.

ORTHROS (ἀρθρός), Byz. matins, a daybreak service to consecrate the day to God. Along with vespers, orthros was one of the two principal and original hours of both the cathedral and monastic offices.

In cathedral usage (see Asmatike Akolouthia), the service of orthros began in the narthex and proceeded to the bema in stages (Mateos, Typicon 1:xxiii–iv; 2:309–10). After several antiphons of psalms and canticles (eight on weekdays, four on Sundays), each preceded by a prayer, the ministers entered the nave to the chant of a troparion. The cathedral psalmody of lauds, comprising the Benedicite canticle of Daniel 3:57–88 (festive), Psalm 50(51) with troparion, Psalms 148–150, the Great Doxology (festive), and the Trisagion, was celebrated at the ambo. At solemn festive orthros, during the singing of the Trisagion the patriarch made his solemn entrance and went to the bema for the Gospel lec-
tion and concluding litanies.

The orthros of the Palestinian monastic horologion, gradually adopted by the Stoudite monks of Constantinople from the 9th C. onward, is characterized by its poetic kanon of nine odes based on the ten biblical canticles. Originally the canticles themselves were chanted, but the poetic kanon ultimately supplanted them outside of Lent, except for canticle nine, the Magnificat (Lk 1:46–55). The full kanon was meant to be chanted only at the Sabatic agrypnia or Saturday all-night vigil, but eventually became a fixed element of daily orthros outside of Lent. In Stoudite usage the kanon was interrupted after the third or sixth ode for a lection from the church fathers or Lives of the saints (Arranz, Typicon 381f).

In the final stage of its development, this hybrid office, a fusion of cathedral and monastic usages, was further modified in the Sabatic typika, esp. in the distribution of the psalmody. Characteristic of Sabatic orthros is the reading of the entire Psalter plus all nine odes of the kanon at the agrypnia.

OSMAN (‘Atmán, ‘Ormán, etc.), son of the Turkoman beg Ertogrul and progenitor of the dynasty of the Ottomans; died Söğüt 1326. Osman succeeded Ertogrul ca.1282 as leader of a mixed following of Kayi clansmen and other ghazis (see Turks), whose territory centered on Eskişehir (formerly Dorylaion) and Söğüt (south of the San-
and his economy was still substantially pastoral. In the early years of his rule, Osman's posture toward the neighboring, largely autonomous Greek lords varied between peaceful coexistence and conflict. By the late 1280s and 1290s, however, Osman and his warriors were conducting more determined assaults into the interior of Byz. Bithynia. The smaller fortresses of southern Bithynia were variously captured or incorporated, and by 1301 Osman was besieging Nicaea and harrying Prousia. This provoked a counteroffensive led by the hetaireiarches Mouzalon, whom Osman defeated on 27 July 1302 at Baphius (in Turkish sources, Koyunhisar). This victory assured a Turkic settlement in Bithynia, but did not result in his speedy conquest of its strategic centers. Osman's pressures on Prousia, Nicaea, and Nikomedea continued intermittently throughout the next quarter century. Shortly before his death, Prousia capitulated to his son, Orhan.

Osman welded his inheritance and conquests into a powerful principality, with Turco-Islamic institutions deriving from the Seljuk legacy. It quickly came to rival the other Anatolian beyliks, and by the death of Murad I in 1389 had evolved as a Eurasian empire.

OSRHOENE (Ὄσρηονην), civil and ecclesiastical province of the diocese of Oriens from the 4th to 7th C.; it extended east from the Euphrates River as far as the province(s) of Mesopotamia. The name of Osrhoene is that of the kingdom of a local Arab dynasty (ca.130 B.C.–A.D. 214 or 240—Segal, infra 9–15) and is thought to derive either from their tribe, the Oshroeni (Jones, Cities 215f) or their capital, Orhay (Edessa). The relatively flat land of Osrhoene was cultivated and also offered grazing for herds belonging to Arab nomads. The province was crossed by trade and military routes, and its 4th–7th-C. history was dominated by the Byz.-Persian wars. In addition to its capital, Edessa, it contained 18 cities including Constantina, Kallinikos, Kirkesion, and Batnae/Sarug as well as Carrhae/Harran. The last remained a center of paganism into the 9th C. (Jones, Cities 206).

OSTIARIOS (ὀστιάρος, from Lat. ostiarius, "doorkeeper"), a palace eunuch whose function was to introduce dignitaries to the emperor or empress; at the same time, the term was used as a title. A legend preserved in the PATRIA OF CONSTANTINOPLE mentions a certain ostiarios Antiochos as a contemporary of Justinian I; a seal of the 7th C. bears the name of the koubikouarios and ostiarios Theodesios (Zacos, Seals 1, no.2939), and John, an imperial ostiarios and logosethes of the stratiotikon, participated in the council of 787 (Mansi 12:1051D). The title of ostiarios was conferred on various functionaries, in the 11th C. often on notaries and protonotaries: Psellus sent a letter to John, ostiarios and protonotarii of the dromos (Sathas, MB 5:373.1–2); the ostiarios Bardas Olympianos was imperial protonotarios (Laurent, Corpus 2, no.172). At the end of the 11th C. a certain Nicholas in Calabria was first ostiarios and later protonotarios (C.A. Garufi, ASIStic 49 [1928] 32f).

Although some earlier editors had dated certain lead seals of ostiariai as late as the 13th C., Oikonomides (Listes 300) thinks that the office did not survive the end of the 11th C. The ecclesiastical ostiarios was a deacon; John of Kitros (ca.1200) denied that the post could be held by an anagnostes (Darrouzès, Offilia 539). There could also be ostiarioi in the service of high dignitaries.

OSTRAKA (sing. ὀστρακον), pottery shards (and sometimes limestone flakes) used as writing material, most often for short texts such as tax receipts and private letters between monks. They also carried accounts, orders for payment, lists of names, memoranda, commodity labels, and writing exercises. The archives of the bishops Pesynthiaios of Coptos and APA ABRAHAM contain numerous ostraka bearing requests for ordination from clerics in minor orders. Ostraka were also
used for biblical, patristic, and other literary texts (e.g., the homilies in W.E. Crum, H.E. Winlock, *The Monastery of Epiphanius*, vol. 2 [New York 1926] 56–66), liturgical texts, hymns, prayers, and magical texts. Cheap and ubiquitous, *ostroka* thus provide evidence both for the extent of literacy and for economic and social history throughout late antiquity.

OSTROGOTHS (Οὐστριγοθοί), a branch of the Goths, earlier known as the Greuthingi, who occupied the lower Don basin in the 4th C. Their king, Ermanaric, committed suicide when attacked ca. 375 by the Huns, of whom they remained tributaries in Pannonia until 454. In the late 5th C. their kings Valamer, Thiudimir, and Theodoric the Great alternated between being loyal foederati of the empire and ravaging Illyricum. After besieging Constantinople in 488 they were sent to Italy by Zeno to overthrow Odoacer, after whose death in 493 Theodoric became the most powerful ruler in the West with his capital at Ravenna. The Ostrogothic regime achieved peace and prosperity and, despite their Arianism, maintained good relations with the Roman senate and papacy until ca. 523. After the death of Athalaric in 534, the murder of his mother Amalusuntha by Theodahad gave Justinian I a pretext to invade Italy. In a long, bitterly fought war they suffered initial losses under Witigis, then recovered most of the Byz. gains under Totila. Their main forces were defeated by Narses in 552. Some survivors were deported to the East, while others made common cause with the Lombard invaders of Italy.

- T.S.B.

OTRANTO (Οὗποδες), port in southern Apulia, commanding the shortest route across the Adriatic Sea to Avlona. During the Gothic War Otranto was an important garrison town and naval staging post. A bishop is recorded in 595 and a tribune in 599. It remained Byz. throughout the 7th C., fell to the Lombards sometime after 710 and at some point after its recovery by the Byz. in 758 was the residence of a *doux*. In the 9th C. Otranto withstood Arab attacks, but after the reconquest of the rest of Apulia in 876 it lost its administrative role to Bari. It remained important as a port of entry for troops and officials as well as an autocephalous archbishopric, probably created soon after 876, which lacked suffragans until allocated Acervena, Gravina, Matera, Tricarico, and Tursi in 968. Otranto’s Jewish community was sizable; archaeological finds, including glazed wares and coins, suggest a flourishing economic life. Until 1055 Otranto resisted the Norman advance. Re-captured in 1060, it fell again in 1064 and was finally taken in 1068 by Robert Guiscard, who used it as a base for operations against Byz. territory. Although a Latin archbishop was installed by 1067, the Greek clergy and rite remained preponderant until the late 14th C. and the Terra d’Otranto continued to be a center of MS copying and literary production. Particularly important was the monastery of S. Nicola at Casole, which was founded in 1099 and whose most distinguished abbot (from 1219) was the scholar Nicholas of Otranto. Both city and monastery were sacked by the Turks in 1480.

Monuments of Otranto. The Church of S. Pietro at Otranto is a good example of Byz. provincial art. In plan it resembles the Calabrian cross-in-square churches at Stilo and Rossano, but it differs in elevation, having a single dome rather than five. Corner bays are covered by east-west barrel vaults. It was decorated with frescoes, of which there are at least two layers. The later paintings may be 12th-C.; H. Belting (*DOP* 28 [1974] 12–14, 22) dates the earlier ones to the 10th C., stressing their *retardataire* quality and attributing them to the same workshop as the cave paintings at nearby Carpinignano Salentina.

- T.S.B., D.K.

OTTO I THE GREAT, German king (936–62), emperor (2 Feb. 962–973); born 23 Nov. 912, died Memleben 7 May 973. After stabilizing the situation in Germany, Otto invaded Lombardy in 951; later, under the pretext of helping Pope
John XII (955–64), he entered Rome, where he was proclaimed emperor. His Italian policy and esp. his proclamation as emperor raised the political problem of the relationship between the German and Byz. empires: that is, which could rightly claim to be the successor of the Roman Empire. Vying with Byz., Otto intended to build up the town of Magdeburg as a rival to Constantinople (H. Gringmuth-Dallmer, BBA 49 [1983] 26–29). He attracted former Byz. allies in southern Italy, Salerno, and Benevento and tried to invade the theme of Longobardia. Nikephoros II Phokas tried to solve the conflict by peace negotiations and sent Otto an embassy in the winter of 966/7. After the negotiations failed, Nikephoros led an army against the Germans in the summer of 967; Otto, afraid of impending war, sent the Venetian envoy Domenico to Constantinople to ask for peace (S.A. Ivanov, VizVrem 42 [1981] 94–96). Otto was acknowledged as basileus of the Franks (not Romans), and the political alliance was confirmed by the betrothal in 972 of Otto’s heir, Otto II, to the Byz. princess Theophano. Otto’s expedition against southern Italy in 968 proved a failure.

A.K.

OTTO III, king of Germany (crowned Aachen 25 Dec. 983) and Western Emperor (crowned Rome 21 May 996); born near Cologne July 980, died Paterno near Civita Castellana, north of Rome, 23 Jan. 1002. Son of Otto II and Theophano, Otto (Οὔτος) was guided by his mother from Otto’s death (989) until her own. He esteemed ascetics highly, esp. Neilos of Rossano. He valued his Byz. heritage and styled himself Imperator Romanorum, a translation of the Byz. emperor’s title. Widukind of Corvey had earlier expressed German claims to imperial majesty which Otto sought to realize. He proclaimed a Renovatio Imperii Romanorum, while adopting Byz. court ceremonial and Byz. forms for his documents and seals. He was the only German emperor who tried to make Rome his capital. He rejected the Donation of Constantine as a forgery, in order, in Byz. fashion, to assert his superiority to the papacy. Thus he appointed his cousin Gregory V as pope and his former tutor as Sylvester II (999–1003). Otto sought a Byz. bride; the embassy of Leo of Synada failed but a subsequent envoy brought a princess (possibly a daughter of Constantine VIII), who reached Bari at the time of Otto’s death.

C.M.B.

OTTOMANS (Ἀτμάνες, Ὀθμάνοι), a Turkish dynasty ruling first over an emirate, later over an empire that replaced Byz. Its name derives from its founder Othman (Osman). The earliest contemporary reference to him appears in Pachymeres, who reports that in 1302 a Turkish chief-tain, “Atman,” defeated a Byz. army at Baphius and invaded the region near Nikomedea with his troops. A silver coin struck by Osman confirms later sources that give his father’s name as Ergoghrul. The cradle of the Ottomans was the Söğüt region, west of the Sangarios River; established there during the dissolution of the Seljuk state, they began to wage holy war (jihad) against the Byz. In 1326 they captured Prousia, which they made their capital; Nicaea fell in 1331, and Nikomedea in 1337/8. Annexing the emirate of Karasi gave them access to the Aegean Sea ca. 1348.

During the Civil War of 1341–47, Osman’s successor, Orhan, offered military aid to John VI Kantakouzenos, married his daughter, and largely contributed to his victory, but Orhan’s uncontrolled troops devastated Byz. territory. In March 1354, when an earthquake destroyed the walls of Kallipolis, the Ottomans occupied this strategically important fortress; with it as a base, they expanded into the Balkans. In 1366 Amadeo VI of Savoy sailed to assist Byz. and expelled the Ottomans from Kallipolis, which was restored to the Byz.; but in 1371 the Ottomans defeated the southern Serbs at the battle of Marica, and soon reduced the Byz. emperor to a tribute-paying vassal. Around this time Murad I appointed a military governor (beylerbey) of the European territories and established him in Philippopolis. In 1376 Murad compelled Andronikos IV to surrender Kallipolis. The Ottomans undertook large-scale operations in the Balkans in 1383, conquered Sofia with its surrounding territory ca. 1385, and overran Macedonia, with Thessalonike sur-
rendering in 1387. Finally they defeated the Serbians and Bosnians at Kosovo Polje in 1389. (Some scholars, however, consider the battle at Kosovo a draw.) Systematic colonization followed the conquest; Turkish colonists were settled among the old local population, nomads were transferred from Anatolia to Europe, Islamic religious foundations (waqf) were established, and the sultan granted lands to cavalry officers as timar (the approximate equivalent of the Byz. pronoia).

In 1390 Bayezid I annexed the Turkish Anatolian emirates of Aydin, Saruhan, Mentesh, and others, and the city of Philadelphia. In 1391 he conquered the Kastamon region and marched against Sebastia; he used his Christian vassals in campaigns directed against Muslims. Attacks against his European frontier obliged him to cross to the Balkans, where he undertook several military operations, mainly against the Hungarians. He besieged Constantinople and in 1396 annihilated a crusading army at Nikopolis. Returning to Anatolia, he continued his conquests, which, esp. after the occupation of the caravan city of Keltzene, provoked the intervention of the Mongol khan Timur; the latter's army defeated the Ottomans at the battle of Ankara and captured the sultan in 1402. Timur restored the Turkish emirates occupied by the Ottomans, while Bayezid's son Süleyman Çelebi, established in Adrianople, concluded a treaty with Byz. and other local Christian powers, which involved important territorial concessions on the part of the Ottomans.

After ten years of dynastic strife, Sultan Mehmed I restored unity in 1413. Social turmoil continued as shown by the revolt of sheyh Bedr ed-din, who preached equality between Christian and Muslim. The Venetians profited from this and destroyed the Ottoman fleet at Kallipolis in 1416, but the Ottomans conquered the strategically important port of Avlon (1417), campaigned successfully against Wallachia (1417), and reannexed some of the Anatolian emirates. Under Murad II Timur's successors exercised pressure in Anatolia and protected the emirate of Karaman, which resisted Ottoman supremacy successfully. In the Balkans the Ottomans' main opponents remained the Hungarians under King Sigismund. In 1430 the Ottomans retook Thessalonike and annexed the city of Ioannina. In 1439 they occupied Serbia, including the silver-producing region of Novo Brdo. They twice defeated the Hungarians under Hunyadi, at Varna (1444) and Kosovo Polje (1448). These victories consolidated Ottoman power and prepared for the conquest of Constantinople by Murad II's successor, Mehmed II, in 1453. From the early years the bases of the Ottoman state were the religion of Islam and the dynasty of Osman. Christian slaves converted to Islam played a most important role: they constituted the sultan's personal guard (Janissaries); if proved worthy, they gained the highest offices in the imperial palace and the administration. Most of the sultans' mothers were slave girls of non-Muslim origin. The Byz. disapproved of the easy social ascent among the Ottomans, but high Ottoman officials were proud of their humble beginnings.

The Byz. generally scorned the Ottomans as adherents of a false religion (see Islam, Polemic against) and as cultural inferiors (S. Vryonis, GRBS 12 [1971] 263–86). The Ottoman impact on late Byz. institutions and cultural patterns was minimal, just as Byz. influence on Ottoman institutions and elite culture was circumscribed. Cultural interchange at the folk level, however, was more extensive, esp. during the Tourkokratia period (S. Vryonis, DOP 23–24 [1969–70] 253–308).

OTTO OF FREISING, Latin churchman and historian; born between ca. 1111 and 1116, died 22 Sept. 1158. Half-brother of Conrad III and uncle of Frederick I, Otto studied at Paris (ca. 1127/8–1133), became a Cistercian (1132), was named abbot of Morimond and bishop of Freising (1138), and participated in the Second Crusade. In his Historia de duabus civitatibus (History of the Two States, 1143–46) Otto interpreted the history of Byz. in an Augustinian way as the translation of the empire from Rome to the Greeks (Byz.) to the Franks. He describes there various events of the period, for example, the campaign of John II
Komenos against Antioch (ed. Hofmeister, pp. 354f) and an Armenian embassy to the pope (pp. 360–63).

Otto undertook the Chronica, or Gesta Frederici, at Frederick’s request and finished the first books by summer 1158; his chaplain and secretary Rahewin (died before 11 Apr. 1177), who completed Otto’s work (bks. 3–4; before Feb. or June 1160), pays less attention to Byz. The Chronica describes the Byz. embassy on the marriage of Bertha of Sulzbach to Manuel I and the embassy of Wibald, the attack of Roger II on Greece (1,35 [pp. 53f]), the Second Crusade (1,35–47 and 62–64 [pp. 54–67, 88–91]), Byz. subversion in southern Italy (2,49–52 [pp. 156–59]), a Hungarian victory over Manuel (2,53 [pp. 159f]), and the plot of a kaniklesios (Theodore Stypeiotes) against him (O. Kresten, JÖB 27 [1978] 61f).

OUNGIA (ovyyía), unit of weight derived from Lat. uncia = 1/12 litra. Accordingly, the oungia, as 1/12 of the logariké litra of 320 g, weighed 26.7 g, and the oungia, as 1/12 of the soudia litra of oil (256 g), weighed 21.3 g. Many weights representing an oungia or its multiples have been preserved.

LIT. Schilbach, Metrologie 181f.

- E. Sch.

OURANOS, NIKEPHOROS, official and writer; died after 1097. Ouranos (Oúparos) was involved in the negotiations between Constantinople and Baghdad over Bardas Skleros; a contemporary Arab report describes him as an intimate of Basil II and an enemy of the Notos (H. Amedroz, D. Margoliouth, The Eclipse of the Abbasid Caliphate, vol. 6 [Oxford-London 1921] 23–35). He was a civil functionary (kaniklesios) and held the title of magistros; the diatyposis of Athanasios of Athos records his appointment as lay guardian of the Lavra. It was his military career that made him famous. As archon of the West he annihilated the forces of Samuel of Bulgaria at the river Spercheios in 997, and as governor of Antioch after 999 he repulsed unruly Arab tribesmen (1000/1), campaigned in Armenia (1001/2), and fought the rebel al-Asfar (1005–07).

Some of his surviving letters are devoted primarily to the topics of service to the emperor, friendship, and family affairs—mother, sister, and younger brother, but not wife or children—and contain occasional details of his military activities. Leo of Synada, who sent him a letter, belonged to the same circle of civil functionaries (ed. M.P. Vinson, ep.13 and commentary p.102). Ouranos's
Taktika (written ca. 1000), still only partly edited, is largely a paraphrase of earlier sources, but chapters 56 through 65 represent a revised and expanded version of the Praecepta militaria, including firsthand material based on his campaign experience along the eastern frontier. A. Dain wrongly considered chapters 63 through 74 to have been copied from a part of the Praecepta militaria now missing. Ouranos also composed poetical and hagiographical works.

—E.M.

OUSIA. See Substance.

OVČE POLE (Ευτζάπολις), called Neustopolis by George Akropolites, a district in Macedonia, in the basin of the Upper Vardar. It is first mentioned by an 11th-C. historian (Skyl. 459.82), who relates that in 1048 the governor of Bulgaria, Basil the Monk, settled thousands of Pechenegs in the valleys of Serdica, Niš (Naisius), and Ovče Pole. They later participated in a military expedition in Asia Minor but revolted against Byz. (J. Shepard, JOB 24 [1975] 77). In the mid-13th C. Ovče Pole acknowledged the supremacy of the empire of Nicaea, but at the end of the century it was in Serbian hands: Stefan Uroš II Milutin acquired this territory, and it is cited in his treaty with Charles of Valois (brother of the French king Philip IV) of 1308. Later it belonged to the principality of Jovan Oliver and, after Dušan’s death, was governed by Constantine Dejanović. In 1395 the area was occupied by the Turks.

—A.K.

OVID (Publius Ovidius Naso), Roman poet; born 43 B.C., died a.d. 17. His mythological epic Metamorphoses influenced directly or indirectly a number of late antique poets, such as MOUSAIOIS and NONNOS OF PANOPOLIS. Malalas mentions that Ovid wrote on Phaethon. In the 13th C. interest in Ovid was revived. MAXIMOS PLANODES made complete prose translations of the Metamorphoses and Heroïdes (entitled Epistolai, or Letters). His master copies (in part autograph) are preserved in Vat. Reg. gr. 132 and 133. A 14th-C. MS in Naples (Bibl. Naz. 2 C 32) contains excerpts from Ovid’s amatory works, possibly based on a complete translation produced by Planudes himself or by one of his pupils. Some words in the text that could be considered obscene were modified. Despite this “moral” censorship, the works of Ovid found readers: in PHLORIOS and PLATZIA-PHILLA (ed. Kriaras, Mythostomata 183 [p. 144]) the hero learns much from the Book of Love, probably by Ovid (Beck, Volksliteratur 149, n. 3), and some stories from the Metamorphoses penetrated into Greek folktales (E. Kenney, Mnemosyne 16 [1963] 57).

—P.A.A.

OWNERSHIP (διευκονισια) denotes the full right to dispose of a thing at will; in other words, not only to have it and to use it (as in possession) but also—unlike possession—to be able to dispose of it during one’s lifetime or at death. Ownership can be obtained by various means of acquisition. The owner can demand the return of the object from a third party with an in rem actio (he epi to pragmati agoge); this procedure is called rei vindicatio (Gr. ekdikeisis) (Basil. 15.1).

Although the dogmatic principles of Roman law regarding acquisition and the return of property were maintained in Byz., at least in their Justinianic version, when it comes to the sale of property entirely new regulations for plots of land (immovable things) were introduced by the agrarian legislation of the 10th C. Furthermore, as the documents from the 13th C. onward reveal, the concept of property had effectively changed, despite the continuation of the old legal rulings. Where property rights over a piece of land had once been absolute and indivisible, there were now several proprietorial-like arrangements involving various persons or institutions (the state, landlords, paroikoi) in its sale or inheritance.
Limitations on Ownership. Roman law imposed various limitations on ownership (such as servitudes), and Byz. law took a further step in restriction of individual ownership. These limitations had various characteristics: state ownership or, at least, a broad range of fiscal restrictions was superimposed over individual ownership; neighbors, relatives, and the village community enjoyed certain rights over individually owned land; the church—at least, in the later centuries—acquired certain rights such as a part in the Abiotikon; the lands of peasants (such as paroikoi) were subject to the control of great landowners. The complicated net of overlapping rights obscured the strict distinction between ownership and possession typical of Roman and Byz. law. Accordingly, the alienation of land was subject to serious limitations: the state prohibited the alienation of certain categories of land (e.g., those of the stratiotai); it introduced the concept of the just price; relatives and neighbors were granted the right of protimesis; the transfer of ownership required confirmation. Even though acts of confirmation are rarely mentioned, cases are known in which a functionary confirmed the transaction of free possessors/owners as well as cases in which the lord confirmed peasant transactions.

OXYRHYNCHUS (Ὀξύρυνχος, Bahnasa, Coptic Pemje), town in Upper Egypt, a bishopric from 325, famous for its sculpture and numerous papyri (see Oxyrhynchus Papyri, Oxyrhynchus Sculpture). The city, a center of both classical and monastic culture, was home to the Apion dynasty. Today it is a desolate area, with many modern houses built of reused ancient material.

Historical sources mention a large number of churches and monasteries in Oxyrhynchus and its environs, of which none can be identified save for a few funerary chapels. Excavations in the cemetery have yielded many decorated limestone blocks from several different tombs; there are capitals, nche-heads, friezes, archivolts, etc., all roughly datable to the 5th and early 6th C. Recently the remains of a small monastic settlement were found in nearby Kūm Nadūra (northwest of Samalūt). It contained a three-aisled church, probably of the 7th C., and several small houses.

-O.G.

OXYRHYNCHUS PAPYRI, many thousands of Greek, Latin, Coptic, and Arabic literary and documentary texts found in the rubbish mounds of Oxyrhynchus (Bahnasa) in Middle Egypt, beginning with the excavations of Grenfell and Hunt in 1897. Dating from the first Ptolemies to well after the Arab conquest, they constitute the richest single find of papyri known. Besides previously unknown works of classical literature, the Oxyrhynchus pieces include the sayings of Jesus from the Gospel of Thomas; a history (the Hellenica Oxyrhynchia); Old and New Testament books and apocrypha; Christian hymns, prayers, and liturgical texts; and a 6th-C. calendar of saints’ feast (P.Oxy. XI.1357). Documents illustrating the Byz. period include the archive of the Apion family. Documentary texts come from every genre: letters, accounts, tax rolls and receipts, petitions, sales, leases, wills, and items from every aspect of public and private life. As well as illustrating social, economic, and religious history, they show the changing nature of Greek as it was written and spoken in Egypt during late antiquity.

-O.S.B.MacC.

OXYRHYNCHUS SCULPTURE, conventional term applied to a large body of limestone carvings—for the most part architectural in origin and pagan in iconography—from in or near Oxyrhynchus in Egypt. Most come from a vast pagan (later Christian) necropolis outside the city; early pieces (3rd–4th C.) are grave stelae, usually with a standing or seated boy, while 5th–6th-C. pieces tend to be niche heads, arches, capitals, and other items from underground grave chapels. Dionysos
(with grapevines) was esp. popular, being employed within an eschatological context fundamentally similar to that of earlier Roman sepulchral art (apotheosis of a mortal; anticipated joys of afterlife). Stylistically, however, these pieces are typically Coptic in their technical simplicity and crude expressiveness (see Coptic Art and Architecture). Many pieces are displayed in the Greco-Roman Museum, Alexandria; some of the numerous chance finds, which are now in American and European museums, have been substantially restored.

—G.V.
PACHOMIAN MONASTERIES, a group of monasteries for men and women. They were founded by PACHOMIOS in the first half of the 4th C. in Upper Egypt, first in Tabennesi, then in Pbow, which became the center of the community. Monasteries possessed lands, as shown in many papyri, and paid taxes. According to the Rules attributed to Pachomios (but written, probably, in the next generation), the monks formed Koinoboria and divided their time between divine service (with celebration of the eucharist twice a week, on Saturday and Sunday) and productive work; the large monasteries were separated into “houses” and groups of artisans (linen weavers, tailors, carpenters, cloggers, etc.). The organization of labor was strictly centralized and controlled from above. Rich landowners joined the community, such as Petronios, the first successor of Pachomios, and Theodore (died 368), another of Pachomios’ associates and later the superior of the community. Reading and the copying of books were encouraged (C. Scholten, JbACHr 31 [1988] 144–72).

The community prospered in the late 4th and 5th C., gradually replacing the charismatic leadership by a formal organization, but declined under Justinian I. It exercised substantial influence on monastic communities in Palestine, Asia Minor, and Italy.

—A.K.

PACHOMIOS (Gr. Παχομιός, from a Coptic word meaning “eagle”), leader of the earliest cenobitic Christian monasteries in Egypt and saint; born Upper Egypt ca.290, died Pbow 346; feastday 14 May in West, 15 May in East, 9 May in Coptic church. Born to pagan parents, Pachomios was conscripted into the army (312/13), where he encountered Christians and converted. After leaving the army, he sought guidance in asceticism from an experienced monk, Palamon. Then Pachomios gathered a group of disciples who, at first, followed the eremitic pattern of separate work and devotions. A charismatic leader, both a visionary and a gifted organizer, Pachomios imposed more structure in the monks’ work by assigning them specific tasks; he also required attendance at pray-

in Novgorod, Moscow, the Trinity monastery of St. Sergej, and the Monastery of St. Kirill of Beloozero. Most of Pachomij’s voluminous writings are vitae and eulogies of eastern Slavic holy men. Very few, however, were initially composed by Pachomij himself (a notable exception being his vita of Kirill of Beloozero); usually he revised the work of others (e.g., the vita of Sergej of Radonež by Epifanij, the vita of Varlaam Chutynskij). Most modern assessments accuse Pachomij of vacuous verbosity and of preferring generalized rhetoric to particular evocation or description. Nonetheless, his versions survive in vast numbers of MSS: he helped to establish the cults of several native saints and to produce a “standard” style for hagiography in Rus’. Pachomij was also a scribe: autograph copies survive of a Psalter (1459), a Palejja of 1445 (see Palaija), and a translation from Symeon the Theologian (1443).

ED. Pachomij Serb i ego agiografskie pisaniya, ed. V. Jablonskij (St. Petersburg 1908) appendices; rp. with introd. by D. Čizevskij, Pachomij Logofet: Werke in Auswahl (Munich 1963).

ers at specific times. Fully communal life was established in nine monasteries for men and two for women in *Tabennesi* and vicinity. In 330 he founded a monastery at *Pbow*, which later became the administrative center for the *Pachomian Monasteries*.

The letters of Pachomios are preserved in a Latin translation by Jerome; Greek versions of some letters and Coptic fragments are known as well. Jerome also translated the *Rules* ascribed to Pachomios, though the text now available was probably produced after Pachomios’s death. Pachomios remained indifferent toward Trinitarian discussions of the 4th C.; his relationship with the Gnostic community of *Nag Hammadi* (located near Tabennesi and Pbow) is unclear.

His vitae have survived in three traditions: a Sahidic text, the so-called *Vita Prima* in Greek, and the Latin translation by Dionysius Exiguus from another Greek Life (*Vita Altera*). Lefort (infra) suggested that they were based on a lost Coptic vita; Halkin (infra) considered the *Vita Prima* as the only text chronologically close to the time of Pachomios.

—J.T., A.K.

**PACHYMERES, GEORGE**, patriarchal official and historian; born Nicaea 1242, died Constantinople? ca.1310. After receiving his early education in Nicaea, Pachymeres (Παχυμέρης) went in 1261 to the capital, where he studied with George Akropolites. He became a deacon and member of the patriarchal clergy. In 1277 he served as didaskalos tou apostolou. Eventually he received the ecclesiastical position of *protehdikos* and the civil post of *dikatophylax*.

Pachymeres is best known for his detailed—and for the most part reliable—history of the reigns of Michael VIII and Andronikos II, covering the period 1260–1308. Much of his account is based on eyewitness observation; he places special emphasis on the ecclesiastical controversies that divided the empire. The archaizing style of Pachymeres is notoriously difficult to comprehend; he is noted for reviving the use of Attic names for the months (cf. G.G. Arnakis, *BNJ* 18 [1945–49] 144–53). His chronology has occasioned problems for modern researchers (cf. A. Failler, *REB* 38 [1980] 5–103; 39 [1981] 145–249). Pachymeres is generally regarded as an objective historian, but he does reveal his own opinions. Thus, he was critical of Michael VIII, singling out his irascibility and hypocrisy, and hostile to Pap. Athanasios I of Constantinople because of his intolerance and rigidity, traits shared by his monastic supporters (Pachym., ed. Bekker 2:148f). Pachymeres was a perspicacious observer who fully realized the pathetic condition of the declining empire and was interested in the motives of the protagonists and the causation of events. He believed that *tyche* was the determinant force of history (Pachym., ed. Bekker 2:228.15–229.1).

Pachymeres was also a scholar and writer of wide-ranging interests, including philosophy, rhetoric, mathematics, and law. He composed *Progmnasmata* (*RhetGr*, ed. Walz, 1:549–96) and 13 *meletai* on rhetoric (ed. J.F. Boissonade, *Georgii Pachymeris Declamationes XIII* [Paris 1848; rp. Amsterdam 1966]). In addition he wrote a compendium of Aristotle and a quadrivium.

—A.M.T.

**PACTA** (πάκτα, from Lat. *pactum*). In the Roman system of obligation by contract, *pacta* assumed the important function of denoting the mass of agreements from which no obligations resulted (*pacta nuda*). Justinianic legislation and the jurisprudence of that time still proceeded in principle from this concept. In the meantime, however, the quantity of nonbinding (“nude”) *pacta*
had been reduced to a negligible number, so that the decisive practical difference between *pactum* and contract, namely actionability, had virtually disappeared, and the differentiation appears artificial. Nevertheless, the concept of *pacta* was revived as late as the 11th C. and was supported in a manner faithful to the textual transmission (see *Meditatio de nubis pactis*). In contractual practice the *pacta* converged with the (written) contract of the law of obligations mainly because the classical *stipulation* degenerated into a mere clause used for all kinds of agreements. Consequently and symptomatically, under Leo VI the qualification *nudum pactum* was applied to documents that have no penal stipulation (*nov. 72*). Leo’s measure, which allowed the penal clause to be replaced by other means of achieving the desired effect—for example, by affixing the sign of the cross or an invocation—was revised by Romanos II (*Zepos, Jus* 1:244–46), but the theory of *pacta* did not thereby regain its practical relevance.

—D.S.

**PÂCUIULUI SOARE**, a Byz. fortress on a Danubian island east of DOROSTOLON in southwestern DOBRUDJA (near mod. Ostrov in Romania); its Byz. name is unknown. Evidence of late Roman habitation is scanty. The latest coin found is one of Maurice; the settlement was evidently abandoned ca. 600. John I Tzimiskes restored the fort and constructed a harbor, probably to defend Dorostolon from attacks by the Kievan fleet. Excavations discovered a strong wall (6 m broad at the foundation), the material for which was brought from several quarries in the area (P. Diaconu, E. Zah, *Dacia* 15 [1971] 289–306). The poorly preserved ruins include a large ashlar stepped landing on the southeast side, flanked by two square towers. To the northeast a tower, with one curved side and one straight side at an obtuse angle, presents the least possible obstacle to ice floes. Soon Pâcuilui lui Soare lost its military character and the population concentrated in a smaller area.

The town flourished during the 11th C.—more than 500 Byz. coins from Romanos III to Alexios I have been found on its territory; thereafter, only sporadic coins of Alexios III, John III Vatatzes, and Andronikos II are recorded as well as some of Epirot and Latin rulers. People lived in semisubterranean habitations and were engaged in fishing and trading activity. A potter’s kiln of the 11th C. (S. Baraschi, *SCIV* 25 [1974] 461–79) and various arms and household utensils of bone, also of the 11th C. (P. Diaconu, S. Baraschi, *Dacia* 17 [1973] 351–59), demonstrate the local craftsmanship. Of Byz. origin are some ceramics, glass vessels, and *enkoptia*; on some amphoras there are potter’s stamps as well as Cyrillic graffiti. Some objects found in Pâcuilui lui Soare are of Kievan and Pecheneg origin. Probably at the end of the 11th C. a fire destroyed the town and in the 12th C. it was severed from Byz. In the 13th and 14th C. Bulgarian (and from the end of the 14th C. onward Rumanian) coins dominate among the finds.

—A.K., E.C.S.

**PAENULA** (*φαινόλης, φελόνης*), a heavy cape or traveling cloak made usually of linen or wool, pulled on easily over the head like a poncho. Sometimes it had an attached hood. Originally a garment worn primarily by slaves, peasants, and soldiers, its simplicity and practicality assured it such popularity in the late antique period that it ultimately replaced the *toga* as an everyday costume and was worn even by senators in late 4th-C. Constantinople (*Cod. Theod.* XIV 10.1). The mosaic figures in the Rotunda of St. George in Thessalonike are shown wearing the *paenula*. It is considered to be the source of one important liturgical vestment whose use was reserved to priests and bishops, namely the *phelonion*, the chasuble of the Latin church.

—N.P.S.

**PAGANISM** was a living force in the 4th-C. empire, supported by some parts of the senatorial aristocracy (primarily Western), intellectuals, and the rural population, whereas the main strength
of Christianity came from the lower and middle classes of the city. Although it is hard to generalize, it seems indicative that in Kyzikos the city council asked Emp. Julian to restore Hellenic temples, but the workers of the state woolen factories and the "techmitai of coins" supported the local bishop (Sozom. HE 5:15.4-6). There were three main streams in the paganism of the late Roman Empire: political, intellectual, and cultic. Political paganism stemmed from the religious indifference of the army, a constant influx of Germanic and related warriors, and the influence of the senatorial aristocracy.

The most overt resurgence of paganism took place under Julian. Its political power became evident in the case of the Altar of Victory and in the revolt of Eugenius. Quite a number of pagans were active at the imperial court in the 4th and 5th C.: Themistios, Symmachus, Flavius, and the eparch Kyrkos, to name only a few. Intellectual paganism flourished in the 5th C., which produced such scholars as Proklos and Pamprepios, the historians Olympiodoros of Thebes and Zosimos, and the poet Claudian. A series of decrees issued by Emp. Theodosios I, culminating with the edict of 392, attempted to crush paganism by prohibiting sacrifices and other cult practices. This caused the closing and/or destruction of many temples. Pagan cults continued to survive, however, esp. in the countryside, despite these prohibitions.

In the 5th C. Isidore of Pelousion (PG 78:344A) asserted that in his era "Hellenismos" had disappeared, defeated by the passage of time, by many efforts and weapons, and by reason. His statement was premature, however, and Justinian I still had to struggle against paganism. He tried to eradicate paganism at the intellectual level by closing the pagan Academy of Athens in 529 and attempted to stamp out remnants of pagan religious practice, esp. by using inquisitionary missions such as that of John of Ephesus (J. Irmscher, Klio 63 [1981] 683-88). Thereafter paganism survived either as a component of Christianity, in the form of classical tradition or as an educational vehicle, or in the form of cult tradition. Christian churches were built, for example, on the location of former pagan shrines and the cult of saints was continued at sites of pagan healing.

At the end of the 7th C. paganism as such was preserved predominantly at the level of everyday life, as "pagan" habits—feasts, magic, and as-

trilogy, theatrical performances, and pagan oaths—and in the clothing of law students (I. Rochow, Klio 60 [1978] 495f). Some forms of pagan cult are attested to in 9th-C. Maina (De adm. imp., 50.71f), and vestiges of "pagan" habits were criticized by 12th-C. canonists and by the 14th-C. patriarch Athanasios I (RegPatr, fasc. 4, no.1738). These vestiges of paganism may have been reinforced by Byz. contacts with nonbaptized peoples, such as the Pechenegs. On the other hand, accusations of paganism were an effective method of attacking intellectuals involved in the study of antiquity.

A.K., A.M.T.

PAGOMENOS. See Pepagomene.

PAIDEIA (παιδεία), term that in the Hellenistic and Roman world designated education or training; church fathers (e.g., Methodios of Olympus, Eusebios of Caesarea) retained it to denote pagan education, often in contrast to Christian education based on the Gospels (PG 18:137B). In the wake of the Septuagint and New Testament semitizing usage, they also employed the term in the sense of chastisement or corrective training; God would chastise the Christians for the purpose of their moral discipline. From patristic times onward, authors distinguished between "our" (Christian) paideia as moral and religious training (cf. A. Moffatt, in Iconoclasme 87) and "external (exo, thyrathen) paideia," meaning secular education (Lemerle, Humanism 39). The word thyrathen itself could be used as a noun, (e.g., Nik.Chon. 907.77). At the same time, the Byz. inherited from the Second Sophistic the expression enkyklios paideia/paideusis with a more technical, if polyvalent, meaning: George Akropolites (Akrop. 1:46.13-15) equated it with the study of grammar; Psellos (Sathas, MB 5:147.12-14), on the other hand, speaks of enkyklios paideia as elementary education preceding the study of grammar.

PAKOURIANOS (Πακούριανος, Arm. Bakourian, Georg. Bakuriani), aristocratic Byz. family that made its first appearance in 988 in the army of David of Tayk’/Tao and occupied important administrative positions down to the 13th C. The best-known member is Gregory Pakourianos, who took part in the defense of Ani against the Seljuks in 1064. His career as an imperial dux in the East was cut short by the Turkish advance, but his support of Alexios I earned him the office of megas domestikos of the West and the title of sebastos, with vast estates in the Balkans. He founded a Georgian monastery at Petritzos and supported the monastery of Iveron on Athos. Gregory defended the Balkans against the Normans and died in battle against the Pechenegs in 1086. The facts that the sources sometimes call him an Armenian and sometimes an Iberian; that the typikon for his monastery was composed in Greek, Georgian, and Armenian; and that he signed it in “Armenian characters,” while referring to himself as an Iberian, have led to heated debate over the origin of the family. The most likely explanation is that it belonged to the mixed Armeno-Iberian Chalcedonian aristocracy, which dwell in the border district of Tayk’/Tao.

PAKTON (πακτόν, from Lat. pactum, “contract, agreement, treaty”), a word with several meanings in the Byz. era. (1) The term was used to describe an agreement between rulers, esp. a treaty (usually in the plural: e.g., pakti tes eirenes, “peace treaty”). (2) It also referred to tribute (e.g., pakti chrysio), such as that paid by Byz. to neighboring rulers, and was most commonly used in this sense by Byz. historians of the 9th through 11th C. (3) Also called choropakton, the term is found in documents and denotes the yearly rent or rental fee, normally in specie, paid to the owner or possessor of property (land, fishing rights, mills [nylopaktion], etc.) for the use of that property. The term pakton was employed in regard to land leases between private parties as well as between a private individual (lessee) and the state (lessor). When the state was landlord the distinction between pakton and telos blurred. (For rates of the pakton, see Rent.)

The term ampelopaktion, ostensibly a rent on vineyards, is encountered frequently during the 13th and 14th C., usually in connection with xenoparoi, that is, new or alien cultivators. There was an official called paktoles, for example, on the seal of Nicholas, chartoularios and paktoles of Paphlagonia (Zacos, Seals 2, no.619).

PALACE (παλάτιον), an official residence, such as the residence of the emperor. The term derives from the Palatium complex on the Palatine Hill in Rome, the only official dwelling of the Roman emperors until the late 3rd C.; subsequently the term entered general use.

Imperial Palaces. During the Tetrarchy and on into the 4th C., establishment of new capitals (Antioch, Milan, Trier) brought about the proliferation of imperial palaces. The Great Palace in Constantinople, begun by Constantine I, is the final product of that age. Other, later palaces built in Constantinople included the 5th-C. Boukoleon and Hormisdas palaces, the 10th-C. Myrelaion palace, the 11th-C. Mangana palace, the 12th-C. Blachernai palace, and the late 13th-C. Tekfur Sarayi. Emperors also built palaces away from Constantinople: for example, the 6th-C. Rheigion palace (A.M. Mansel, 6 CEB, vol. 2 (Paris 1951) 255–60) and the 9th-C. Bryas palace (S. Eyice, Belleten 23, no.89 (1959) 79–111).

On the basis of archaeological and textual evidence, the historical development of palace architecture is marked by characteristic changes in the relationship between the building and its urban setting. Initially (4th–6th C.), the complex was open toward the city, continuing Roman practice. Decline of cities (7th–8th C.) brought about the emergence of the fortified palace, reflecting a growing concern for security provided not only by city walls but also by those of the complex.
itself. In the 13th and 14th C. the urban palace-block made its appearance. Probably under Western influence, in Byz. (e.g., Mistra) the type was characterized by continued segregation of the building from the urban environment.

**Palaces of the Nobility.** It is not clear when the nobility began to build palacelike mansions: one 12th-C. historian (Zon. 3:767.6–8) inveighs against the relatives of Alexios I who erected oikoi as large as a *polis* and luxurious as a palace, while another (Kinn. 266.7–9) relates that dignitaries decorated their mansions with *history painting* and scenes representing the emperor’s hunting exploits. The palace described in the poem Diogenes Akritas was an elaborate complex that included a large garden, bathhouse, church, and main building, which was decorated with biblical and classical figures rather than an “imperial” program.

While the typology of palace churches may be in doubt, their functional identity is not. From the time of Justinian I onward, they constituted regularly identifiable components of Byz. palaces. The archaeological evidence for such buildings is meager, but the literary sources are abundant. A large number of churches is recorded within the Great Palace in Constantinople between the early 9th and mid-11th C.: those of Christ, the Virgin, and the Archangel Michael are referred to as having been built by Emp. Theophilos, while the palace church of St. Anne is attributed to Leo VI. Palace chapels of the Savior, Prophet Elijah, Archangel Michael, St. Peter, St. Paul, St. John the Evangelist, St. Barbara, and the Nea Ekklesia were built by Basil I. A 12th-C. (?) description of an imaginary palace also locates a chapel—dedicated to St. Theodore—in its midst (Digenes Akritas, ed. Trapp, 334, G VII 104–05 [3242–43]). The Church of St. George, next to the monastery and palace of Mangana in Constantinople, was built by Constantine IX (Psellos, Chron., vol. 2:61, par.185.3); its remains have been archaeologically ascertained (R. Demangel, E. Mamboury, Le quartier des Manganes [Paris 1939] 19–37). The Bodrum Camii in Istanbul has been identified as the chapel of Romanos I Lekapenos; it stood next to his Myrelaion palace, no longer extant (C.L. Striker, The Myrelaion (Bodrum Camii) in Istanbul [Princeton 1981]).

PALACE GUARD. See Hetaireia.

PALA D'ORO. A pal(ka) was the cloth that covered an altar in early Christian and medieval churches. Also called an antependium, it was sometimes replaced by panels in precious metals, either covering the four sides of the altar or attached only to the altar’s front face. In 1105 Doge Ordelaf Falier (1102–18), one of the founders of San Marco in Venice, ordered the enamel Pala d’Oro from Constantinople for the main altar of his church, perhaps as a replacement for the 10th-C. silver and gold antependium of Doge Pietro I Orseolo (976–78). By 1209, when six feast scenes and the archangel Michael were added to the top, the Pala (measuring 2.1 × 3.5 m) was placed on the main altar, perhaps in imitation of the gold, jeweled (and enameled?) panel on the high altar of Hagia Sophia, Constantinople, that Robert de Claris described after seeing it in 1204. In 1342–45 the Pala was remounted in its present Gothic frame.

The imagery on Falier’s Pala is arranged in typically Western fashion. Christ is enthroned in a large tondo within an inscribed frame, surrounded by the four evangelists. Above, angels and tetramorphs honor the Hetoimasia; the Virgin and the Pala’s patrons—Falier and an Empress Irene (whose identification has been the subject of much discussion)—are placed below, between two inscription panels of 1342–45 that describe the work’s history. It is likely that, originally, Irene was accompanied by her husband. The “wings” display three tiers of prophets, apostles, and angels paying homage to Christ. Twenty-seven “framing” panels depict the lives of Christ and St. Mark and portraits of six locally venerated deacons—Lawrence, Vincent, Stephen, Eleutherius, Peter of Alexandria, and Fortunatus.

The program of imagery resembles the decoration of palatine chapels of the Komnenian era, beginning perhaps in an expanded decoration of the chapel of the Virgin (of the Pharos?) in the Great Palace of Constantinople, and imitated elsewhere, often with Latin adaptations, in the royal churches of Norman Sicily, esp. the Cappella Palatina in Palermo. When Falier ordered the Pala, he seems to have intended to set such an imperial program on the main altar of his palatine chapel.

PALAEOGRAPHY (lit. “ancient writing”), like codicology, is an autonomous field of study, as well as an auxiliary discipline of philology and history. It studies the development of the Greek script in Byz. MSS and documents (see Diplomatics) in its cultural context. It takes its name from the pioneering monograph of B. de Montfaucon, Palaeographia graeca (Paris 1708; rp. 1970). Gardthausen (infra) divided palaeography into Buchwesen and Schriftwesen; the recent tendency is to replace the term Buchwesen by codicology, with the emphasis on the place of the book in Byz. civilization. A sound knowledge of palaeography
enables a text editor to read and date Byz. MSS and to establish the stemma of a given work.

The reading of MSS presents certain difficulties, such as the need to decipher abbreviations, contractions, and ligatures; tachygraphy, monograms, and palimpsests create additional problems. In most MSS, esp. early ones, words were not separated, accents and breathings were omitted or used intermittently, and punctuation was apparently arbitrary. Other problems in deciphering or reconstructing texts are damaged MSS, with folios or parts of folios missing, worm-holes, ink blots, and even modern tape repairs.

The script of Byz. MSS can be roughly divided into two categories, the uncial, or majuscule, and the minuscule, subdivided into the cursive and minuscule intended as calligraphy. An obstacle to the study of the development of uncial script is the lack of any securely dated MSS for the formative period (4th–8th C.); the only firmly dated uncial text (which is also the earliest dated book MS) is the Vat. gr. 1166 of the year 800. Thus the reconstruction of the development must be hypothetical.

After the introduction of minuscule as a book script, uncial survived until the 11th C., but it became specialized for scriptural and liturgical texts. It was used continuously for lemmata (headings) and sections to be emphasized.

Minuscule scripts differ in levels of formality and elegance, ranging from that of a scholar's autograph copy for private use to that of a deluxe codex skillfully written by a professional scribe. Minuscule MSS are more likely to bear a date (the earliest dated one is the Uspefski Gospel book, Leningrad, Publ. Lib. gr. 219, of 835); their colophons sometimes have precise chronological indications, sometimes only certain elements of a date (indiction, month, etc.). Those MSS that are securely dated help reconstruct the evolution of the script and thus indirectly determine the chronology of undated MSS. Palaeographers have attempted to classify bookscripts into certain styles that can be roughly dated, for example, “pearl script” (10th–12th C.), “Fettaugenmode” (13th C.), and “Metochites style” and “Hodegon style” (14th C.). The use of an archeaizing script, which revives or preserves features typical of an earlier period, may, however, complicate the dating of some MSS; for instance, the calligraphy of some late 13th-C. codices imitates the “pearl script” that flourished earlier. Statistical methods have been used to evaluate the reintroduction of uncial letters into minuscule at the very end of the 6th C., but the usefulness of these statistics for dating is still open to question. Another problem in dating MSS is the conservative character of codices copied in the provinces. Paper MSS can be dated more precisely through their watermarks.

Another objective of palaeography (and codicology) is to establish the MS’s provenance. Individualized handwriting was rare in Byz., and relatively few MSS have colophons identifying particular scribes. The minuscule script is strongly formalized up to the 12th C.; more individual features begin to appear only in the 13th C., at the end of which period it becomes possible to recognize the autographs of Byz. scholars such as Maximos Planoudes, Demetrios Triklinios, and Nikephoros Gregoras. The method of attribution of hands is in general the same as that used for dating: listing MSS of individual scribes and comparing unsigned MSS with those whose copyist is known.

Some MSS are known to have been copied in particular scriptoria, and again the similarity of production (format of the book and page, composition of quires, ruling patterns, type of handwriting, illuminations) permits the assignment of a MS to a specific scriptorium. The palaeographer must be cautious, however; typical features in the script or codicological features, such as the ruling patterns, may not be restricted to one region. In contradistinction to Latin palaeography, where the study of regional writing is advanced, Byz. palaeographers have not been able to establish many centers of book production, owing mostly to the dearth of evidence. Only for southern Italy and Cyprus, from where a large number of codices have survived, is it possible to study special regional characteristics on preserved MSS.

A part of the palaeographer’s task is the study of peripheral information contained in the MS: some of it comes from the scribe himself (e.g., colophon, table of contents, some scholia); some, esp. on autograph MSS, from the author, who thereby reveals, for example, his methods of commenting and his practice of textual criticism. Remarks from scribes, readers, and owners sometimes convey data on the production of the book (such as its price) or its history (such as changes of ownership); they may also express a reader’s attitude to a work. On occasion, successive owners
and readers of the book made marginal notes or additions on blank folios that have an independent value.

---

Palaia (παλαιά, "old," paleja in Slavonic), a narrative of events from the Creation to Daniel, based on paraphrased and apocryphal versions of Old Testament episodes and supplemented with passages from, in particular, Josephus Flavius, Gregory of Nazianzos, Andrew of Crete, and Theodore of Studios. The Palaia was therefore compiled not earlier than the 9th C. Similar in concept to the Latin "historiated" Bibles (cf. M. Gaster, Ilchester Lectures on Greeko-Slavonic Literature [London 1887] 147-208), the Palaia is often termed "popular," though few Greek MSS survive (Krumbacher, GBL 398, 1139). It was evidently more widespread among the Slavs. Three Slavonic translations of the Palaia, all entitled Palaia, survive: two are Bulgarian, one is Serbian, though most of the extant MSS are Eastern Slavic and derive from a lost 13th-C. Bulgarian version. The name Palaia was transferred to an unrelated and larger Slavonic compilation that includes extensive commentaries (Palaia tokolvaja) and that in some versions continues the historical narrative down to the death of Romanos I Lekapenos (Palaia chronografiščeskaia). This additional narrative is mainly derived from the chronicle of George Hamartolos and is cited in the Povest' vremennyh let.

---

Palaiołogos (Παλαιολόγος, fem. Παλαιολόγια), a noble family; although palaiołogos meant "junkman," the Byz. believed that the family possessed ancient ancestors. The first known Palaio-

logos was Nikephoros, general and governor of Mesopotamia under Michael VII; his son George, an experienced military commander, was the staunchest supporter of Alexios I. The 12th-C. Palaiologoi were primarily generals (George, megas hetaireiarches in 1166 [O. Lampides, Byzantion 40 (1970) 393-407], Alexios-Antony, megas doux) and governors of provinces (Michael of Thessalonike in the first half of the 12th C., Nikephoros of Trebizond ca.1180); it is possible that the hetaireiarches George's father was Alexios and held the post of megas domestikos at the end of Alexios I's reign. None of the Palaiologoi served in the civil administration. They were wealthy, but little is known of their estates; they acted, however, as monastic patrons. George was praised as the sponsor of a monastery close to Triaditza-Sofia in which he ordered the depiction of the archangel Michael; he and his son the sebastos Alexios were also portrayed there (Lampros, "Mark. kod." 143, no.213 tit.). The Palaiologoi were interrelated with the Komnenoi, Doukai, and Angelo; Alexios Palaiologos (perhaps George's son?) married Irene, Alexios III's daughter; he subdued the rebellion of 1200 in Constantinople and was proclaimed despotes and heir to the throne.

The Palaiologoi retained their high position after 1204; Andronikos, Alexios's son, was megas domestikos, and in 1259 his son became emperor as Michael VIII and founded the Palaiologan dynasty. After the reconquest of Constantinople in 1261, the extensive family took possession of vast estates throughout the empire. Their mightiest rivals, the Kantakuzenoi, were defeated by John V Palaiologos by 1354, and by 1382 they were ousted from the Peloponnesos. A fierce struggle for power ensued, however, within the house of Palaiologos. In 1376 Andronikos IV rebelled against his father John V and arrested him; only on 1 July 1379 did John V and his heir Manuel II manage to reconquer Constantinople. Andronikos IV and his son John VII were recognized as legitimate rulers over Selymbria and several other districts but were not appealed; on 17 Sept. 1390 John VII again seized Constantinople but had to yield to Manuel II. The Peloponnesian branch of the Palaiologos family was loyal to Constantinople but independent: by the time of John VIII, the Peloponnesos was ruled by three of his brothers, the despotai Theodore II, Constantine (XI), and Thomas Palaiologos; since John VIII died childless (Theodore died
Based on Cheynet-Vannier, *Etudes* 186; table at end of Nicol, *Last Centuries*, with modifications; and PLP.
before him), Constantine succeeded him as the last Byz. emperor; he was killed during the Ottoman assault on Constantinople.

The Palaiologoi searched desperately for a Western alliance: they attempted to restore the unity of the church and favored marriages with Western princes and princesses; ANDRONIKOS II married Anna of Hungary and then IRENE-YOLANDA OF MONTFERRAT; ANDRONIKOS III married Irene (Adelheid) of Braunsweg and ANNA OF SAVOY; Andronikos II’s son Theodore married Argentina Spinola and became marquis of Montferrat in 1305 (A. Laïou, Byzantium 38 [1969] 386–410). The Palaiologoi also married their children to the rulers of Serbia, Bulgaria, Trebizond, and Epiros. SOPHIA PALAIOLOGINA, daughter of Thomas Palaiologos, became the spouse of IVAN III of Moscow. (See genealogical table; see also Byzantium, History of: “Empire of the Straits.”)

PALAISTE (παλαιστή, lit. “palm of the hand”), a unit of length = 4 δακτυλοί = 1/4 pous = 7.8 cm. Synonymous terms are gronthos, pygme, tetartion (as 1/4 pous), and triton (as 1/3 imperial spithame).

LIT. Schilbach, Metrologia 18.

—E. Sch.

PALAMAS, GREGORY, theologian, archbishop of Thessalonike (1347–59), and saint, canonized in 1368; born Constantinople ca. 1296, died Thessalonike 14 Nov. 1359. Though destined by his aristocratic background for imperial service, Palamas (Παλαμᾶς) chose the monastic life instead and went to Athos in 1316. After a brief stay at Vatopedi and then at Lavra he joined the skete of Glossia. In 1326 Palamas was ordained a priest. He then continued the life of prayer, which the hesychasts of Athos had taught him, in a number of hermitages. In 1336 he entered into an exchange of letters with BARLAAM OF CALABRIA. His objections to Barlaam’s syllogistic reasoning quickly became a matter of controversy involving both church and society, esp. after Barlaam attacked Palamas and the monastic spirituality of HESYCHASM on Athos. Most of Palamas’s literary production is devoted to this cause (often referred to as PALAMISM) that the church supported and endorsed in the Constantinople local councils of 1341, 1347, and 1351 (see under Constantinople, Councils of). In addition to the monks of Athos and numerous bishops, Palamas’s staunchest supporters included JOHN VI KANTAKOUZENOS and the patriarchs Isidore I, Kallistos I, and Philotheos Kokkinos (the last mentioned wrote an enkomion of Palamas).

Still, during the CIVIL WAR OF 1341–47, Palamas was imprisoned by Patriarch JOHN XIV KALEKAS and his ideas condemned. This censorship, however, was primarily politically motivated, for Palamas was a known sympathizer of Kantakouzenos. Indeed, he was initially unable to enter the city of Thessalonike, to which he had been appointed archbishop (1347), because anti-Kantakouzenist zealots still occupied it. Generally, the party opposed to Palamas was confined to some bishops, the humanist Nikephoros Gregoras, Gregory Abidynos, and the later small circle of Byz. Thomists led by the Kydones brothers.

In addition to his two Apodeictic Treatises, the Hagiorite Tomos, and his Triads in defense of hesychasm, Palamas wrote numerous tracts, letters, and sermons dealing with hagiography, liturgy, asceticism, and prayer. The detailed account of his brief captivity (1354–55) among the Turks of Asia Minor and his conversations with them and the so-called Chionai is striking for its impartial view of Christians living under Turkish rule and of the Turks themselves (cf. A. Philippidis-Braat, TM 7 [1979] 109–222).

—A.P.

PALAMEDES. See OLD KNIGHT.
PALAMISM, the teaching of Gregory Palamas. Its characteristic feature is the distinction between the inaccessible and unknowable essence of God and his uncreated energies. Its goal—expressed most fully in Palamas’s *Triads*—was to give an objective theological foundation to the theory and practice of monastic contemplation or hesychasm. Palamism affirms that the aim of contemplative prayer is the vision of the uncreated light of God, exemplified by the light that shone about Christ at his Transfiguration on Mt. Tabor (Lk 9:28–36; cf. *Triads* 3, ed. Meyendorff, 574–83). By means of this deifying light or energy, salvation or deification (theosis) is realized. Because the contemplative is able to experience God’s own uncreated grace (*energeia*), as distinct from his essence which is unknowable, the heschast encounters the living God directly (*Triads* 1:115.4–5). Therefore, communion with God himself—knowledge of him through his authentically divine operations or energies—is possible and, indeed, accessible to human experience (*Triads* 3:599.22–23). Man, though a creature, was made to participate in God.

This affirmation places Palamism squarely within the development of Byz. theology and its quest for salvation. For both Palamism and Greek patristic theology are soteriologically determined. This is clear from the great Christological debate of the 4th–5th C. with its insistence that the gulf between God and man had been bridged by the Incarnation. Indeed, the focus of this controversy was not theological speculation but salvation, with man’s ascent to God and communion with him—made possible through the hypostatic union of the incarnate Word. That is, Christ’s assumption of the fullness of our humanity makes deification possible. In Byz. theology (as with Palamism) real and immediate knowledge of God in Christ is thus ultimately rooted in the Orthodox Christology of Chalcedon (*Triads* 1:193.4–18). Hence the 14th-C. Byz. church approved the Palamite distinction, despite the formal Aristotelian objections of Barlaam of Calabria that the distinction was an innovation incompatible with the divine simplicity. Hence, too, the Palamite rejection of the opposition of Nikephoros Gregoras, since this also was based on a formal “rationalism” shared in part with Barlaam.

Palamas’s essentially apophatic approach to theological truth has often been viewed as incompatible with Thomism—or as an obscurantist mysticism systematically opposed to secular learning. Palamas, however, was only insisting that knowledge of God could not be reduced to a rational exercise alone, that is, to the dialectic reasoning of scholasticism with its exclusive endorsement of Aristotle. He held that only the mind transfigured or illuminated by grace can know God. Palamas, quite simply, found unacceptable the degree of authority assigned by scholasticism to Greek philosophy—“its pretension to be adequate to the Christian mystery” (Meyendorff, *Palamas* 240).

The Dispute over Palamism. Palamism was established in the mid-14th C. as the official teaching of the Byz. church in spite of strong opposition from men such as Barlaam of Calabria, Gregory Akindynos, and Nikephoros Gregoras. The basic philosophical differences (K. Ware, *ECHR* 9 [1977] 46–51), both ontological and epistemological, could be expressed in two questions frequently discussed by church fathers: how could the gap between God and man be bridged, and how could the incomprehensible God be known by man. An excessive simplification of the problem by some heschastas of the early 14th C. (including influential Athonite monks), who asserted the possibility of seeing the divine uncreated light, led to criticism by Barlaam who identified hesychasm as Messalianism, as eliminating the distinction between the Creator and his creation. Barlaam’s emphasis on the distinction between God and man endangered the concept of deification and consequently of salvation; Palamas had to defend the traditional view by introducing certain innovative definitions.

Akindynos, another critic of Palamism, denied the existence of a middle being (a “noncreated minor [deity] or inferior noncreated [being]”) and stressed the simplicity of God who admits of no distinctions except the properties of the three persons. John Kyparissiotes affirmed that Palamas had introduced a fourth nature (*physis*), and
Barlaam treated the light of Tabor as an image, *indolma*. Up to this point the Palamite dispute remained within the sphere of Greek theology; Prochoros Kydones, however, employed in the anti-Palamite discussion the means of Latin scholastics and tried to prove that in a perfect being *ousia* should coincide with *energeia*.

In response to this criticism the Palamites attempted to modify some flawed formulations of their teacher in order to circumvent the accusation that Palamism introduced higher and lower deities and in order to stress the simplicity of God. Philotheos Kokkinos emphasized the patristic tradition of the concept of uncreated grace, in order to invalidate the identification of Palamism as Messalianism; he states that the real Messalians are those who assumed the possibility of a union with God without such grace, who viewed grace only as a property of the thinking nature. Gennadios II Scholarios accepted this modified form of Palamism.

The social and political role of Palamism has not yet been elucidated: M. Sjuzjumov’s (VizVrem 23 [1963] 262–68) interpretation of Palamism as the voice of the masses against Italian commercial exploitation is evidently simplistic, but Palamas’s alliance with Kantakouzenos and his supporters deserves attention.

A.K.

**PALATIA.** See Miletos.

**PALEJA.** See Palai.

**PALERMO (Πάνωρμος),** from antiquity a city of northwest Sicily, originally on the coast. During the Middle Ages the sea level retreated, and the old city walls are now relatively far from the sea. The city fell to the Vandals in 440 and to the Ostrogoths in 491. During Belisarius’s reconquest of Sicily in 535/6, Panormos was the only city that effectively resisted siege by land, but the Goths surrendered when the fleet from Constantinople was about to attack (Prokopios, Wars 5.5.12–16). It remained in Byz. hands until the 9th C. A seal of a Byz. *horreiaros* of Panormos has been published by Zacos and Nesbitt (*Zacos, Seals* 2, no.634), but it is unclear whether it refers to Sicilian Panormos or to another location of the same name. The bishop of Panormos was suffragan of Syracuse; Neilos Doxopates gives this hierarchy in his notitiae (*Notitiae CP*, no.1448–49), although it was anachronistic by his time.

Palermo was one of the first Sicilian cities to be taken by the Arabs (in Aug.–Sept. 831). It flourished under the Muslims and maintained its status as capital of Sicily after the Norman conquest of 1072. Ibn Hawqal provides a detailed description of Palermo (Balarj) at the end of the 10th C.

**Monuments of Palermo.** Two foundations in Palermo demonstrate the Siculo-Norman court’s ambivalent admiration (colored by rivalry) for the imperial artistic culture of 12th-C. Constantinople: the Cappella Palatina (lit. “palace chapel”) of Roger II and the Church of St. Mary built by Admiral George of Antioch. The latter came to be called “La Martorana” after the nearby Benedictine nunnery founded by Gaufredus de Marturanu. The extensive *mosaic* decoration in both churches must have been at least begun by imported Byz. craftsmen, as Sicily had no contemporary tradition of the craft.

The Cappella Palatina has a southern Italian architectural design (a triple-apsed basilica with a cupola on stepped squinches before the main apse) and an Islamic *muqarnas* ceiling in the nave. The cupola mosaics depict the standard Byz. Pantokrator with ranks of angels below; they are dated by a Greek inscription to 1143. The chronicle attributed to Romualdo II, archbishop of Salerno, mentions mosaics made under William I: these may be the Old and New Testament scenes in the nave and aisles, which Demus and others attribute to Sicilian pupils of Roger II’s Byz. craftsmen.

La Martorana, while characteristically Sicilian in silhouette, is entirely Byz. in plan: a four-columned cross-in-square, with a dome on squinches over the central bay. Influenced by the mosaics of the Cappella Palatina and perhaps by those of Cefalù, the decoration of the Martorana dates between 1143 and 1151, when George of Antioch died. The program includes a seated Pantokrator in the dome with four angels in *proskynesis*, the Nativity and Dormition on a lower vault, and founders’ panels showing George of Antioch and Roger II.

Maguire (infra) has shown that the choice and
position of scenes in both churches were affected by Byz. rhetorical conventions, familiar from homilies. B. Cappelli (BollBadGr n.s. 16 [1962] 77–93) proposed the intervention specifically of Philagathos, but for this, as noted by Kitzinger, there is no proof.

—A.K. D.K.

PALESTINE (Παλαιστίνη) in the 4th–6th C. included the coastal plain from Mt. Carmel south to Raphia on the Egyptian frontier, the Galilee and the Golan in the north, the Jezreel valley, the hill country of Samaria and Judea, and the Great Rift valley of the Jordan and the Dead Sea. When Diocletian reorganized the Limes in this region, he moved the Tenth Legion from Aelia Capitolina (see Jerusalem) to Aila at the head of the Gulf of Aqaba and transferred the southern part of the province of Arabia, including Petra and the Negev desert, to Palestine. The dux Palaestinae commanded the Tenth Legion and other forces of the limes Palaestinae. At first a single consular stationed at Caesarea Maritima headed the civil administration, but by 358 the former parts of the province of Arabia had been separated to form Palaestina Salutaris. After another subdivision ca. 400, Salutaris became Palaestina III, with its capital at Elusa; the Galilee, the Golan, the Jezreel valley, and several trans-Jordanian cities belonged to Palaestina II (capital at Skythopolis); and the rest was renamed Palaestina I (capital at Caesarea). A consular governed each province until 536, when Justinian I promoted the governor at Caesarea to proconsul (Anthypatos), gave him supervision over the two remaining consulars, and regulated his relations with the dux (nov.109, pr., par.1).

Justinian promoted the governor because he presided over “the province in which our Lord Jesus Christ . . . appeared on earth,” a factor that likewise explains why Palestine prospered under the Christian Empire. More farm sites and villages were inhabited than ever before, and the volume of pottery recorded in archaeological surveys exceeds that of any other period. The imperial journey of Helena in 326 created enthusiasm for pilgrimage, esp. among the wealthy. In the 5th C. prominent refugees (e.g., Melania the Younger, Athenais-Eudokia) settled permanently, devoting their fortunes to hospitals and churches. The emperors too made generous donations; the sale of relics brought in further funds. In creating prosperity, this infusion of new capital overshadowed other economic developments, such as the colonization of the Negev and the booming market for Gaza wine.

The cities of Palestine (e.g., Caesarea Maritima, Jerusalem, Skythopolis, Neapolis, Gaza) generally reached their peak in population and built-up area in the late Roman period, while maintaining a classical appearance with new colonnaded streets, civic basilicas, and aqueducts. The density of construction was extraordinary, even in the towns and villages. Most churches were single- or triple-apsed basilicas, but in the 5th–6th C. some centrally planned churches were modeled on the Church of the Anastasis at the Holy Sepulchre in Jerusalem.

Before Constantine, there had been only isolated Christian communities in Palestine, notably at Caesarea, where martyrdoms had taken place under Diocletian and his successors, and at Jerusalem. Bp. Cyril of Jerusalem (died 387) led the christianization of his city. St. Hilarion (mid-4th C.) encouraged the spread of monasticism and brought the new religion to the Negev. By the 5th C. monasteries were numerous but most influential were the Judean desert lavrae of Sts. Euthymios the Great, Saba, and others described by Cyril of Skythopolis. These holy men also converted the many Arabs of Palestine to Christianity, both the desert Bedouin and the Arab villagers.
The metropolis of Caesarea ranked first among the approximately 50 sees of Palestine until 451, when Bp. Juvenal of Jerusalem secured primacy in Palestine and the patriarchate (see Jerusalem, Patriarchate of) by adopting the Christological formula of Chalcedon. This incensed the largely Monophysite monks, whose revolt, supported by the exiled Empress Eudokia, had to be put down by force.

After St. Porphyrios of Gaza destroyed the Zeus Marnas temple at Gaza (probably in 402), little is heard of paganism but, despite conversion and the influx of foreigners, Christians may have remained a minority in the Holy Land until the Muslim conquest. Samaritans were concentrated around Neapolis and their sacred mount, Gerizim, but were also numerous in other parts of Palestine. According to Prokopios (SH 11.27–30) most of the tenant farmers in Caesarea’s territory were Samaritans. Excluded from Jerusalem and most of Judaea, the Jews inhabited the coastal plain and esp. the Galilee, the Golan, and a belt extending from the Dead Sea to the Mediterranean. Numerous synagogues have been excavated, many of them basilicas with niches for the Torah shrine oriented toward Jerusalem, modeled on Christian churches. Despite sporadic imperial legislation against them, both groups prospered in Byz. Palestine, the Jews sufficiently to create the culture reflected in the Palestinian Talmud and other rabbinic literature. Nonetheless, persecution and legal disabilities caused Jewish revolts in 351–52 and again ca. 440. The Samaritans, although they were assimilated readily enough to enter the army and civil service in large numbers, rebelled in 484, when Zenon destroyed their synagogue at Mt. Gerizim, and again in 529 and 555. The authorities crushed these rebellions, deporting many Samaritans to the Persian Empire, but in 578 both Jews and Samaritans revolted once more.

When the Persians invaded Palestine in 614, the Jews and other minorities welcomed them; most cities, with the notable exception of Jerusalem, opened their gates. Renewed Byz. administration, following the end of Persian rule in 628, lasted only a decade. The Muslims first attacked Palestine in 634 and defeated the imperial forces decisively on the Yarmuk River in 636. Jerusalem fell in 638, Caesarea not until 640 or 641/2.

The Muslims abolished Palaestina III, but Palaestina I survived as the Jund Filastin and Palaestina II as the Jund al-Urdunn. Ramla, a new city, became the capital. Many Christians fled, but neither those who remained nor the Jews were persecuted. Pilgrimage continued on a reduced scale except for brief episodes of repression in the 11th C. under the caliph al-Hakim and the Seljuk. In 975 John I Tzimiskes claimed to have penetrated Palestine and briefly occupied some northern cities, including Caesarea but his army did not penetrate so far south. In 1099 the Crusaders seized the Holy City and established the Latin kingdom of Jerusalem (see Jerusalem, Kingdom of).

K.G.H.

PALESTINIAN CHRISTOLOGICAL CYCLE, conventional name for a series of nine scenes from the life of Christ found in various degrees of completeness on a variety of 6th–7th-C. pilgrim eulogiai, as well as on several types of contemporary amulet. The cycle includes the Annunciation, Visitation, Nativity, Adoration of the Magi, Presentation in the Temple, Entry into Jerusalem, Crucifixion, the Myrophoroi, and the Ascension. It appears on pilgrimage ampullae, the Sancta Sanctorum Reliquary, and (as individual scenes) on pilgrim tokens; it is also found on contemporary silver amuletic armbands, octagonal gold marriage rings, and (as individual scenes) on gold fibulae and pendants. The cycle documented the sacred origin of the eulogia contained in the ampullae, reliquary boxes, etc., and it was thought to give magical power to the amulets. Some scenes, such as the Entry into Jerusalem, were developed from traditional Roman iconographical topoi, while others, like the Myrophoroi, were specifically Palestinian, insofar as they reproduce details associated with specific loca sancta.

G.V.
PALIMPSEST (παλίμψητος), a parchment MS used for a second (or even third) time in copying a text. The reason for reusing the parchment was the dearth of writing material. The parchment leaves were washed and the old text scraped off. The scriptura superior was written either parallel to the scriptura inferior or at a right angle to it; in the latter case the reading of the scriptura inferior is easier. Sometimes palaeographers use ultraviolet light to aid in deciphering a palimpsest MS. The scriptura superior provides a terminus ante quem for the erased text and indicates the literary preferences of the later scribe or scriptorium. Replacement of a classical or a secular Byz. author by a Christian text is the rule (e.g., Ephrem over the De Ceremoniis of Constantine VII Porphyrogenetos), but the opposite occurs as well (e.g., Pindar over a sticharion). Many palimpsests have a southern Italian origin, owing to the poverty of southern Italian centers of book production.

—E.G.

PALLADIOS (Παλλάδιος), writer, bishop of Hel- lenopolis in Bithynia (ca.400–406), bishop of Aspu in Galatia (from ca.412); born Galatia ca.363, died Aspu ca.431. A pupil of Evagrios Pontikos, he spent the years 388–400 in Alexandria, Nittia, Kellia, and Palestine. Exiled from Bithynia in 406 as a supporter of John Chrysostom, he traveled the next few years in Egypt, Palestine, and perhaps India before returning to his new bishopric. His account of early Egyptian monasticism, the Laustiac History, is so named from its dedicatee Lausus, koubikoularios of Theodosios II. Written ca.419, it combined the traditions of biography and the APOPHTHEGMATA PATRUM into an engaging mixture of the credulous and the critical (W. Telfer, JThSt 38 [1937] 379–83). Palladios is candid on monkish weaknesses and does not harp on asceticism. The work was translated into Latin by Rufinus of Aquileia and into Oriental languages, including Coptic. The authorship of his other major work, the Dialogue on the Life of St. John Chrysostom, written ca.408, is questioned; it is modeled after Plato’s Phaedo and defends John against Theophilos of Alexandria. Also surviving under his name is a treatise titled On the Races of India and the Brahmins, the first of whose four sections, describing an Egyptian scholar’s journey to India, may be genuinely Palladian (B. Berg, Byzantion 44 [1974] 5–16).

LIT. E. Magheri Cataluccio, Il Lausaikon di Palladio tra semiotica e storica (Rome 1984).

—B.B.

PALLADIUS (Παλλάδιος), epigrammatist, grammarian, and teacher at Alexandria; born 319 (Bowra) or 360 (Franke), lived at least 72 years. Numerically at least, he dominates the GREEK ANTHOLOGY with approximately 150 epigrams (he is variously assigned and denied some anonymous items), partly because he assembled a collection of his own work. His poems portray a poor schoolmaster driven to misogyny by a nagging wife. His nihilism and habit of lampooning important officials may have gotten him into some trouble with the authorities. His talent is for the short poem (18 lines at most) in elegiacs, iambics, and hexameters; he was an inveterate punster. Both pagan and Christian sentiments have been detected in him (M. Bowra, ProcBrAc 45 [1959] 255–67), but overall he may be described as a poet between the two worlds of dying paganism and triumphant Christianity, equally uncomfortable in both.

—B.B.

PALLADIOS (Παλλάδιος), writer, bishop of Hel- lenopolis in Bithynia (ca.400–406), bishop of Aspu in Galatia (from ca.412); born Galatia ca.363, died Aspu ca.431. A pupil of Evagrios Pontikos, he spent the years 388–400 in Alexandria, Nittia, Kellia, and Palestine. Exiled from Bithynia in 406 as a supporter of John Chrysostom, he traveled the next few years in Egypt, Palestine, and perhaps India before returning to his new bishopric. His account of early Egyptian monasticism, the Laustiac History, is so named from its dedicatee Lausus, koubikoularios of Theodosios II. Written ca.419, it combined the traditions of biography and the APOPHTHEGMATA PATRUM into an engaging mixture of the credulous and the critical (W. Telfer, JThSt 38 [1937] 379–83). Palladios is candid on monkish weaknesses and does not harp on asceticism. The work was translated into Latin by Rufinus of Aquileia and into Oriental languages, including Coptic. The authorship of his other major work, the Dialogue on the Life of St. John Chrysostom, written ca.408, is questioned; it is modeled after Plato’s Phaedo and defends John against Theophilos of Alexandria. Also surviving under his name is a treatise titled On the Races of India and the Brahmins, the first of whose four sections, describing an Egyptian scholar’s journey to India, may be genuinely Palladian (B. Berg, Byzantion 44 [1974] 5–16).

PALLIUM. See Himation.

PALMETTE. See Himation.
as well as of decorative borders in wall mosaics, monumental painting, and sumptuary arts of all periods. A rounded form with large petals, often termed the “Sasanian” palmette, was perhaps derived from Near Eastern art. It frequently appears in textiles and is extremely common in 10th-C. MSS and enamels. The “split palmette” is a related motif with two symmetrically branching floral elements extending from a central stem and often enclosing other motifs.

R.E.K.

PALM SUNDAY (Κυριακή τῶν βαΐων), the Sunday before Easter. One of the dominical Great Feasts, Palm Sunday commemorates Jesus’ triumphal entry into Jerusalem and the beginning of his Passion. The event was solemnized in 4th-C. Jerusalem with a procession of the faithful bearing palms or other branches, a usage that had passed to the rest of the East by 518 and is still attested in the 10th-C. Typikon of the Great Church (Mateos, Typikon 2:66). Later Byz. practice generally has only a blessing and distribution of branches and candles at orthros (Dmitrievskij, Opisanie 1:542.10–11).

The imperial ceremony for this feast was elaborate. On the eve, the emperor went to the Church of St. Demetrios, where he distributed palm branches and silver crosses to members of the senate and others before entering the palace church, the Virgin of the Pharos, for vespers. In this latter church he took part in the liturgy on the day of the feast; he also held a banquet in the Chrysotriklinos (De cer., bk.1, chs. 31–32; Philotheos, Kletor. 197.6–26). According to a 14th-C. ceremonial book, the gallery along which the emperor passed on the way to orthros was festooned with branches of myrtle, laurel, and olive (pseudo-Kod. 224.5–226.21).

R.F.T.

Palmette. Common palmette designs. (a) classical palmette; (b) “Sasanian” palmette (Vat. Barb. gr. 449, a.1153); (c) split palmette (Escorial Ω-1-16, a.1293); (d) split palmette (St. Polyeuktos, Istanbul).
PALMYRA (Πάλμυρα, Syriac Tadmor, Ar. Tadmur), city and bishopric situated in an oasis in eastern Syria, in the province of Phoenicia Libanensis. Palmyra was formerly the capital of the ephemeral kingdom of the Arab queen Zenobia, which the Romans conquered in 273. Thereafter it lost out to Nisibis as a principal trading center. The city was restored between 293 and 303 by Diocletian as a military stronghold of the eastern frontier, which it remained until the 7th C. In 527 Justinian I restored Palmyra, including its churches and public buildings (demosia), and placed there the doux of Emesa with a garrison (Malal. 426.1–5). According to Prokopios (Buildings 2.11.10–12), the emperor ordered repairs to the walls (H. Seyrig, Syria 27 [1950] 239–42) and the provision of an adequate water supply. There are in Palmyra the remains of two basilical churches (A. Gabriel, Syria 7 [1926] 88–90) and of Christian paintings in the temple of Bel, which, like that of Baalshamin, was converted into a church in the 5th or 6th C. (J. Leroy, CahArch 15 [1965] 17–20). Excavations in the military area known as the “Camp of Diocletian” reveal on that side of the city a decline in urban life in the late 6th or early 7th C. The wide “Via Praetoria” was encroached upon by humble dwellings and reduced to a narrower (3.7 m) road (K. Michałowski, Palmyre [Warsaw 1963] 41), and public squares such as the Roman Tetrapylon were transformed into residential areas (Idem, Palmyre [Warsaw 1962] 541). Palmyra fell to the Arabs in 633 or 634 (Donner, Conquests 121–26), but Byz. coins continued to circulate there for some years, as indicated by a hoard of gold coins ranging from Phokas to Constans II (641–68).

PALUDAMENTUM. See CHLAMYS.

PAMMAKARISTOS, CHURCH OF HAGIA MARIA (Turk. Fethiye Camii), monastic church at Constantinople, probably founded in the 12th C. by a John Komnenos. After 1261 it came into the possession of the protostrator Michael Tarchaneiates GLABAS (died ca.1305), who was buried there in the south parekklesion built in his memory by his widow Maria. Around 1455 Gennadios II Scholarios chose the Pammakaristos as the seat of the Greek patriarchate; it remained such until 1587, when the Turks confiscated it and converted it into a mosque. A document of the second half of the 16th C. describes a number of tombs and relics there, as well as inscriptions of the 12th–13th C. (P. Schreiner, DOP 25 [1971] 220–41). As preserved today, the building consists of the main church of the 12th C., greatly altered, the south chapel of ca.1305–10, and a U-shaped
ambulatory that contained many of the tombs. The chapel is decorated with mosaics; remnants of wall painting in the south arm of the ambulatory preserve typological allusions to the Virgin, including the Closed Door.

LIT. H. Belting, C. Mango, D. Mouriki, The Mosaics and Frescoes of St. Mary Pammakaristos (Fehtise Camii) at Istanbul (Washington, D.C., 1978). —C.M.

PAMPHYLIA (Παμφύλια), the coastal plain of southern Asia Minor, ca. 100 km long, surrounded by an arc of the Taurus Mountains. This well-watered and fertile area, prosperous from olives, sheep, and trade along the coast and with the interior, supported several large cities (Attaleia, Side, Syllaion). Constantine I made Pamphylia a separate province with Perge as its capital. Leo I appointed military commanders in Pamphylia to resist attacks of the Isaurians. The ecclesiastical structure was more complicated, with intercity rivalry provoking a 5th-C. division into two provinces with Side and Perge as metropolitan sees. Pamphylia was absorbed into the Kibyrrhaiotai theme in the 8th C., but remained a separate military and administrative unit: the tourmarches of Pamphylia and Lykaonia appears in the Klerotologion of Philothoeos, and 9th-C. seals (Zacos, Seals 1, nos. 2198, 3228) mention a tourmarches and an ek prosopou of Pamphylia. Extensive remains indicate considerable prosperity, esp. in the 6th C. Subsequent Arab attacks severely afflicted the cities of Pamphylia; some were abandoned, others became fortresses. After the battle of Mantzikert in 1071, Byz. control rarely extended beyond Attaleia.

LIT. W. Ruge, RE 18.3 (1949) 354–407. —C.F.

PAMPREPLOS (Παμπρέπλος), scholar and statesman; born Panopolis 29 Sept. 440, died at fortress Paprius, Isauria late Nov. 484. Up to age 32 Pamprepios was a poor poetry-writing grammarian in Egypt. Emigration to Athens brought him a more lucrative post as well as association with the pagan Neoplatonists. A fistfight (to which he was prone) caused him to move in 476 to Constantinople, where his pretensions to learning and magic impressed many, notably Zeno’s high official Illos, who procured him public funds and students. The titles of quaestor, patrikios, and (honorary) consul followed in 479. A lucky prediction further endeared him to Illos, whose favorite he became. In 484 he encouraged and joined Illos’s revolt against Zeno. Upon their defeat he hid with the other rebels who, exasperated by the now high failure rate of his predictions and suspecting him of treachery, executed him. His career, commemorated by (among others) Damaskios, ultimately belies the ascription to him by Malchos of Philadelphia of great political acumen. Accusations of licentiousness, treachery, unscrupulousness, and vanity may partly be a pious reaction to his militant paganism. The Souda credits him with various epic poems. Surviving hexameter fragments on the patrician Theagenes and a spring or autumn idyll may well be his; other ascriptions are insecure.

PAN, in Greek mythology, a god of flocks and pastures who is usually depicted in the company of nymphs and satyrs. Nonnus of Panopolis (Dionysiaka 42:258–61) relates the myth of Pitys, the nymph of the fir-tree, who fled over the mountains to escape marriage with Pan. Eventually, Pan assumed a universal significance. Servius, the 4th-C. commentator on Vergil, states that Pan is the god of all nature (wherefrom allegedly comes his name meaning in Greek “all”): he has horns, the symbols of sun rays; the spotted fawnskin of his breast designates the starry sky; and his goatlike legs indicate the stability of the earth (R. Herbig, Pan [Frankfurt am Main 1949] 67). His cult in the Egyptian desert is testified to by Roman inscriptions up to the 4th C. (A. Bernard, Pan du désert [Leiden 1977] 271).

The church rejected with indignation the worship of the divine half-goat with whom various lascivious stories were connected: Philostorgios (HE, ed. Bidez-Winkelmann, 41.5–16) hypothesizes that the ancient Greeks must have developed their conception of Pan (as a combination of a goat and monkey) from seeing a hybrid monster
like the one sent to Emp. Constantius II by the
king of the Indians.

For painters Pan was the embodiment of lust.
He appears as an ithyphallic idol (Weitzmann,
Gr. Myth. fig. 89) or as a horned, goat-legged, and
winged demigod in the act of accosting Aphrodite
(Furlan, Marciana 5, fig. 48b). —A.K., A.M.T., A.C.

PANAGIA. See Virgin Mary.

PANAGIARIÓN (παναγιάριον, from παναγία,
“the all-holy [Virgin]”), a small liturgical paten
(see Paten and Asteriskos) 5–15 cm in diameter,
decorated with a representation of the Virgin,
often in an orans attitude. Panagiaria were
intended to carry the bread offered to the Virgin
by monks during a meal or in the course of the
orthros service (Symeon of Thessalonike, PG
155:661–64). The earliest known example, in the
Hilandar monastery on Mt. Athos, is made of jasper
and has been attributed to the 10th–11th
C. (B. Radijković, Les objets sculptés d'art mineur en
of gold is recorded in the will of Theodore Sar-
anenos of 1326 (G.I. Theocharides, Makedonika
supp. 2 [Thessalonike 1962] 20,53). Examples of
the 14th C. display the Virgin surrounded by
prophets, angels, or apostles in compositions
evoking the incarnation (Kalavrezou, Steadte 204–
08). In the 15th C. the panagiario was trans-
formed into a pyxis or pendant made of two
shallow disks, one of them showing the Virgin
and the other the Trinity. This form of panagi-
ario is often worn by high church officials.
—L.P.B.

PANAGIA TON CHALKEON, church in
Thessalonike. The Panagia ton Chalkeon (Παναγία
ton Χάλκεων, lit. “Virgin of the bronze-smiths”),
was constructed in 1028 (and not in 1044) by
Christopher, governor (katepano) of the theme of
Longobardia, his wife, son, and two daughters, as
indicated by an inscription over the west door.
An arcosolium in the middle of the north wall
was probably originally Christopher’s tomb. An-
other inscription inside the church says that the
founder had constructed the building “for the
forgiveness of his sins.”

The church is of the cross-in-square type, on
four columns; there are three domes, one central
and two over the double-storied narthex, all rather
high in elevation. The exterior of the church is
built entirely of brick, with rectangular pilasters
on the lower level, rounded half-columns above.
The roofline of the west end of the church is
scalloped, while the other arms of the church have
gabled roofs. All the arched openings and blind
arches have two, three, or four setbacks, enhanc-
ing the sculptured effect of the exterior. The
church has connections with Constantinople (e.g.,
the exterior decoration recalls the Myrelaion
church) and with central Greece (e.g., interior,
window treatment), but the overall style is prob-
ably local. In the interior is preserved much of
the original carved marble decoration as well as
frescos of the 11th and the 14th C. The 11th-C.
Ascension in the dome, Last Judgment in the
narthex, and positioning of the Crucifixion and
Anastasis scenes near the tomb develop the fun-
erary character of the program (A. Tsitouridou,
include an illustration of the Akathistos Hymn

PANARETOS, MICHAEL, chronicler of the
Grand Komnenoi of Trebizond; born Pontos?
c.1320, died ca.1390. Panaretos (Παναρέτος) spent
his career in the service of Alexios III Komnenos
and by 1363 held the titles of protosebastos and
protonotarios. He participated in numerous mili-
tary campaigns with the emperor and twice visited
Constantinople, in 1363 and 1368. His personal
involvement with the court of Trebizond ended
in 1379.

The chronicle of Panaretos is the unique nar-
native source for the history of the empire of
Trebizond; it covers the period 1204–1390. The
events of 1340–90, to which Panaretos was an
eyewitness, are more detailed than those covered
in the early pages of the chronicle. The narrative
concentrates on the events of official life: wed-
dings, burials, military expeditions. The manner
of storytelling is annalistic, with serious attention
to chronology and official titularitie.
language is close to the vernacular. The author sometimes mentions his own involvement in affairs (e.g., sub anno 1361 “I was among the archons”), but tries to avoid personal interpretation of events. Since the data provided by Panaretos are unique, verification of his reliability is difficult. A 15th-C. writer added to his chronicle a very brief description of events between 1390 and 1426.

**PANDEKTES.** See Antiochos Strategos.

**PANEAS.** See Panias.

**PANEYRIC.** See Enkomion.

**PANEYRICI LATINI**, general title for a dozen addresses to emperors preserved in the MS discovered by Giovanni Aurispa in 1433. First is Pliny’s panegyric of Trajan, clearly the school model for later efforts. The other 11 all relate to Gaul, nine from the period 289–321, the remaining two datable to 362 and 389, thus suggesting that some Gallic rhetorician assembled the collection in the late 4th C. In chronological order (modern enumerations vary with different editions) these are, by name: two addresses by Mamertinus to Maximian, at Trier in 289 and 291; Eumenius from Autun to Constantius Chlorus in 298 in gratitude for his appointment as professor of rhetoric and school organizer; Nazarius’s encomium on the absent Constantine I the Great in 321; another Mamertinus’s thanks to Julian for his consular appointment in 362 at Constantinople; Drepanius honoring the victory of Theodosios I over Maximus. The other addresses, mainly delivered to Constantine in Trier, are anonymous, perhaps by Eumenius, and datable to the years 297, 307, 310, 312, and 313. Apart from Mamertinus’s somewhat poetical address to Julian, the overall style is Ciceronian à la Pliny. Their tone is uniformly unctuous, every ruler being a superhuman hero. Yet as with modern propaganda, solid history can be teased out of them, while taken together they constitute a mirror of provincial classicism.

**PANEYRIC.** See Fair.

**PANHYPERSEBASTOS** (πανυπερσέβαστος), title created by Alexios I. It was conferred on several members of noble families such as Katakalon-Euphrenbœni, Kontostephanoï, and Taronitai (L. Steiron, *REB* 23 [1965] 223, n.12). A seal of John Dalassenos (before 1196) calls him despotes and panhypearsebastos (Zacos, *Seals* 1, no.2721). A 14th-C. ceremonial book places the panhypearsebastos immediately after the megas domestikos and notes that the two were equal (pseudo-Kod. 136.1–2). Before he became emperor, John (VI) Kántakouzenos was panhypearsebastos. The Komnenoi and their successors introduced other epithets and titles based on the root of sebastos, such as sebastos, sebastohypertatos, and even protopan-sebastohypertatos (Zacos, *Seals* 1, no.2747). —A.K.

**PANIAS** (Πανίας, also Paneas, Ar. Bâniyās), rarely called Caesarea Philippi (i.e., the Caesarea of Philip, son of Herod), ancient city in Phoenicia southwest of Mt. Hermon, near an old sanctuary of Pan. Pilgrims were attracted to Paneas by a sculptural group thought to represent Christ healing the woman with the issue of blood. Eusebios of Caesarea (*HE* 7:18.2–4) describes the bronze statue as a genuflecting woman stretching her hands toward a man in an elaborate cloak at whose feet grew a strange plant with the power to cure all diseases. Reportedly the woman herself had erected this image. More likely the group represented a pagan divine healer reclaimed by the Christians (G. Hölscber, *RE* 18 [1949] 599ff). Eusebios also mentions painted images of Christ, Paul, and Peter in Panias. The fate of the bronze group is often mentioned by later writers. According to Sozomenos (Sozom. *HE* 5:21.1–9), Julian replaced it with his own statue, which was destroyed by fire from heaven. Philostorgios (Philostorg., *HE* 7.3, p.79.1–7) relates that the inhabitants of
Pankras, also Panikos, a late antique city on the north shore of the Sea of Marmara near Rhaeidotis. Constantine VII Porphyrogennetos (De them. 1.50, ed. Pertusi, p.86) lists it among the poleis of Thrace or Europe. A bishop of Panion or Theodosiopolis (Nova) was known in 536 (ACO 3:116.53). In Byz. sources Panion appears either as a polis or kastron (e.g., TheophCont 615.2; Attal. 249.4). In 813, when Krum ravaged Thracean towns, Panion was one of the few that the Bulgarians were unable to conquer (I. Ševčenko, Byzantion 35 [1965] 573). The people of Panion participated in the revolt of Thomas the Slav and did not surrender even after Thomas’s death; the city was captured only after an earthquake destroyed its walls. In 1064/5 Panion again suffered from an earthquake (Attal. 90.1). Niketas Choniates (Nik.Chon. 621.1–2) relates that Venetian ships plundered Panion in 1205. In the partytio Romanae the civilitas Panido was ascribed, together with Rhaeidotis, to the district of Chalkidike and handed over to the Venetians. In 1206 Kaloyan destroyed Panion and resettled its inhabitants on the banks of the Danube (Akrop. 23.10–14).

Pankrailia (Pangkáleia), a plain northeast of Amorion, scene of one or two battles (978–79) during the revolt of Bardas Skleros. Leo the Deacon (Leo Diac. 169f) says Bardas Phokas first encountered Skleros’s army at Pankrailia, a “plain fit for cavalry.” Phokas was defeated, but in a subsequent conflict he triumphed (locale unspecified). Skleros was forced to flee to the Arabs.

Psellos (Chron. 1:5–7) describes a battle with a single combat that resulted in Skleros’s flight. Skylitzes (Skyl. 324–27) reports a first defeat for Phokas near Amorion and a subsequent one at Basilika Thera. Then, with Georgian forces supplied by David of Tayk’/Tao, Phokas overcame Skleros at Pankrailia, which Skylitzes wrongly places near the Halys. The battle featured a duel between the generals in which Skleros was wounded; his bloody horse, dashing through his own men, so alarmed them that they took flight. Skleros withdrew to the Arabs. P.M. Tarchichvili (BK 17–18 [1964] 95–97) has shown that contemporary Georgian sources located the decisive battle at Sarvenis (which he identifies as Aquae Saravenae or Basilika Thera, north of Kaisareia). Skylitzes’ final battle at Pankrailia (duel included), he argues, is a fictionalized duplication of the first one. But Aquae Saravenae (mod. Kırşehir, northwest of Kaisareia and near the Halys) must be distinguished from Basilika Thera (mod. Sarıkaya) (F. Hild, M. Restle, TIB 2:143f, 156f). Yahyá (ed. Kratchkovsky and Vasiliev, PO 23.3:375, 399) gives the date of the first battle as 19 June 978 and of the second as 24 March 979.

Pankratios of Taormina, a legendary disciple of St. Peter, the first bishop of Taormina; martyr and saint; feastdays 9 Feb. and 9 July. The existence of his cult in Sicily is attested by Gregory I the Great, who relates that in 591 a church in Messina was dedicated to “Pancratius.” According to the vita of Pankratios (Pangkraitos), written by a certain Evagrios (otherwise unknown), Pankratios was originally from the Antioch region, lived in a village in Pontos, accompanied St. Peter on his journeys, and came to Sicily, where he converted the governor of the province to Christianity and was eventually murdered by pagans. Evagrios describes an episode that seems to reflect the struggle over icon veneration: the apostle Peter reportedly summoned a painter, Joseph by name, and ordered him to make icons of Christ, Peter himself, and Pankratios; Pankratios then used these icons in his mission. The episode with the painter Joseph was known to Theodore of Studious (PG 99:1135A) and employed in his defense of icons. Whereas Patlagen
PANNONIA (Pannonia), Roman territory south of the Middle Danube that was divided between 293 and 296. Under Diocletian, it was made up of four provinces: Pannonia I (capital, Savaria), Pannonia II (capital, Sirmium), Savia (capital, Siscia), and Valeria (capital, Sopiana). Archaeological data indicate that the 4th C. was a period of flourishing estates, when large-scale grain production began; from the end of the 3rd C. onward wine was also produced. The uniformity of the construction of new villas prompts the hypothesis that they were imperial properties (M. Biró, ActaArchHung 26 [1974] 52–54). Building activity, predominantly of military character, continued through the time of Valentinian I, although the political role of the Pannonians in the empire seems to have decreased (J. Fitz, L'administration des provinces pannoniennes [Brussels 1983] 91).

Starting at the end of the 4th C., Pannonia lay open to barbarian invasions. A part of the Roman population emigrated southward. The minting of coins stopped after 395. The cities were in decline, as shown by systematic excavations carried out in ancient Gorsium: already some 4th-C. graves were located on the site of older houses. Sopiana has a church with a fresco painted probably after 380, but traces of the 5th–6th-C. settlement are insignificant (Gy. Székely, ActaAntHung 21 [1973] 340–42). The first waves of invasion were merely passed through Pannonia en route to Italy, but the Huns lingered in the region a while, according to the treaties of 425 and 433 as foederati. In 434–41 Attila occupied Pannonia. In 455 Eparchius Avitus restored Roman power in Pannonia II. Excavations show that Roman customs still continued in some parts of the province until the 6th C., when avarai settled in Pannonia. Eventually, the territory formed a part of Moravia and finally was occupied by the Hungarians.

PANOPOLIS. See Akhmid.

PANSELINOS, MANUEL, wall-painter sometimes associated with the decoration of various monasteries on Mt. Athos and esp. with that of the PROTATON, ca.1300. This tradition is no older than the 17th C.; in the 18th C., Dionysios of Phourna claimed that Panselinos (Πανσέληνος) was from Thessalonike and that rules for the proportions of figures in his Hermeneia (see Models and Model-books) derived from Panselinos. Panselinos has recently been tentatively identified with Michael (Astrapas) or a member of his family, but there is no substantive evidence for the artist's existence.

- A.C.

PANTECHNES, CONSTANTINE, metropolitan of Philippopolis; fl. ca.1191. He was the author of an ekphrasis in which he vividly described hunting with hounds, falcons, and tame leopards.

Lit. Hunger, Lit. 1:186.

- A.K.

PANTELEEMON (originally Pantoleon or Panteleon), saint, one of the anargyroi; born Niko- medea, died ca.305; feastday 27 July. Theodoret of Cyrhus first mentions a feast in honor of Panteleemon, though not all MSS preserved Panteleemon’s name (PG 85:1035B). According to a later passio, Pantoleon was the son of a pagan senator, Eustorgios, and studied medicine with a famous physician, Euphrosynos. A Christian priest, Hermolaos, persuaded him that neither Asklepios nor Hippocrates nor Galen nor “other gods worshiped by the emperor Maximian” (Latyšev, infra.
41. 16–17) had ever existed; Pantoleon was taught to heal the sick by invoking Christ's name. Pantoleon's miraculous cures brought him fame as well as Maximian's anger. Supernaturally aided, he endured tortures: when he stepped into a vat of boiling lead the fire was immediately extinguished and the lead cooled; wild beasts in the arena knelt at his feet, and the executioners' swords melted like wax. Because he prayed for his torturers, he received a new name (Παντελεήμων), "all-merciful." When he was finally beheaded, milk, not blood, gushed from his neck, and the olive tree under which he was murdered became covered with fruit "from the roots to the crown."

Panteleemon's cult was popular in both West and East: his passio was translated into Latin, Syriac, Coptic, and Armenian; in Byz. Andrew of Crete (or Niketas David Paphilagon), John Geometres, Symeon Metaphrastes, and Constantine Akropolites eulogized Panteleemon.

**Representation in Art.** Portraits of Panteleemon abound in church decoration; his adolescent features recall those of St. George, but he holds a little pyramidal physician's box and a scalpel instead of a lance (e.g., at Nerezi). Various cycles of scenes from his life have been preserved (at Nerezi, on a Sinai vita icon, and in MSS of the menologion of Symeon Metaphrastes), but the choice of scenes and their iconography differs from monument to monument, so that it seems unlikely that any widespread iconographic tradition was ever in existence.

---

**PANTELEEMON** (painter). See PANTOLEON.

**PANTELEEMON MONASTERY**, also called Rossikon, a Rus' establishment on Mt. Athos. The present large complex of the Rossikon, situated north of Daphne on the southwest shore of the Athone peninsula, is of modern construction. Rossikon had its origins in two Byz. monasteries, the Theotokos of Xylourgo and St. Panteleemon (Παντελεήμων), also called "of the Thessalonicon can," which merged in the 12th C. The Xylourgo monastery (present-day skete of Bogoridica or Theotokos) was located in the northwest part of the peninsula and inhabited in the 11th C. by monks from Rus'. The monastery of St. Panteleemon (present-day Palaionomastero), located halfway between modern Rossikon and Karyes, was founded in the late 10th C., probably by Leontios of Thessalonike. It owned a dock and tower (pyrgos) at the site of modern Rossikon. St. Panteleemon fell into decline in the 12th C. and was virtually deserted by 1169, when it was occupied by the Rus' monks of Xylourgo. The prosphorion of Athos gave St. Panteleemon to the Rus' on condition that they restore and fortify the complex. The Rus' hegoumenos assumed the leadership of both St. Panteleemon and of Xylourgo, which was designated an annex (paramonasterion). The reorganized monastery took the name of "the monastery of the Rus' honored with the name of St. Panteleemon" (mone ton Rhoson eis onoma timomen tou hagiou Panteleemonos). Panteleemon prospered, esp. during the period of Serbian domination over Athos, receiving substantial estates from Serbian princes (cf. M. Živojinović, ZRVI 23 [1984] 167–69). Many of these properties were lost, however, after the Turkish conquest of Macedonia in the 15th C.

The archives contain 20 Byz. acts (dating between 1030 and 1430), 15 Serbian documents (1349–1429), as well as later Russian and Moldavian acts. The acts include a detailed inventory of 1142 listing the movable properties, for example, sacred vessels, of the Xylourgo monastery (Pantel., no.7:44–59); a chrysobull of Andronikos II (1311) confirming the Panteleimon monastery's title to properties in Thessalonike and Chalkidike, and guaranteeing certain fiscal immunities; and a chrysobull of John V (1353) granting the monastery properties in the Strymon region. Panteleimon also owned lands on Lemnos. Approximately 169 Greek MSS of Byz. date are preserved in the library (Lampros, Athos 2:280–461), most notably cod. 6, a richly illustrated copy of the homilies of Gregory of Nazianzos. The church formerly possessed a steatite panagiarion inscribed with the name of Alexios III of Trebizond (Kalavrezou, Steatite, no.132).

**Sources.** Actes de Saint-Pantéléémon, ed. P. Lemerle, G. Dagron, S. Čiriković (Paris 1982).

PANTEOLLRIA. See Patellaria.

PANTEPOPTES MONASTERY, located on the fourth hill of Constantinople overlooking the Golden Horn. Founded before 1087 by Anna Dalassene, the Pantepoptes (Παντεπόπτης, "all-seeing") was dedicated to Christ. Although it was a male establishment, the founder retired to private apartments there shortly before her death. Patr. Theodosios Boradiotes was confined there temporarily in 1181 after the revolt of Renier of Montferrat. In 1204, during the final Crusader attack on Constantinople, Alexios V Mourtzouphlos used the Pantepoptes as his headquarters because of its useful vantage point. In 1266 the monastery was taken over by Benedictine monks, but Greeks returned after 1261. The Pantepoptes continued to function until at least 1453, although it is apparently not mentioned by Russian pilgrims in the Palaiologist period; after the Turkish conquest its church became the still-extant mosque of Eski Imaret Cami. The church has a cross-in-square plan and an unusual U-shaped gallery over the narthex. An outer narthex was added probably in the Palaiologist period. The exterior brickwork includes such decorative features as maenander patterns and sunbursts.

PANTEUGENOS, SOTERICHOS, 12th-C. theologian. A deacon of the Great Church of Hagia Sophia in Constantinople, then patriarch-elect of Antioch, Panteugenos (Παντευγενός) became the major figure in theological debates on the nature of Christ's sacrifice. A statement (semeiomata) by a synod meeting on 26 Jan. 1156 directed a condemnation against those who affirmed that the sacrifice of Christ was offered to the Father alone, and not to the other two persons of the Trinity (PG 140:153C). Dissatisfied with the decision, Panteugenos published a Dialogue defending the views condemned in 1156; he faced, however, a refutation by Nicholas of Methone.

A new synod, presided by Emp. Manuel I, was held at the Blachernai Palace on 12 May 1157. The earlier decision was confirmed (PG 140:192A), and Panteugenos renounced his previous position. The Synodikon of Orthodoxy included five anathemas against the condemned doctrines. The synod affirmed that the hypostasis of the incarnate Logos "offered" the sacrifice according to the humanity assumed by him and "received" it according to his divinity, together with the Father and the Spirit. The decision referred to a prayer of the Byz. liturgy addressed to Christ as "the one who offers and the one who is offered."

- J.M.

PANTOKRATOR (παντοκράτωρ, lit. "all-sovereign"), an epithet of God. Used in the Apocalypse of John and by some early theologians (F. Bergamelli, Salesianum 46 [1984] 439-72), it was employed by Athanasios of Alexandria in his polemics against the Arians, who considered the Son of God as a dynamis and denied him the title of Pantokrator (PG 25:472B, 26:80A). In Byz. the term was applied both to God in general and separately to the individual persons of the Trinity, esp. to the Father; the epithet emphasized rule over the whole, in contrast to the kosmokrator or "world-ruler," the title of the Devil. When applied to Christ, the concept of Pantokrator was closely interwoven with the image of the kingship of Christ who was Pantokrator both by nature, as the Son, and—against the Arians—by his role as redeemer. The term is often used in symbols of the Creed (PG 28:1581B, 1589A) and in liturgical texts. Strangely enough, the term is lacking in the list of divine names compiled by Theodore II Laskaris (PG 140:764-70) that includes almost 700 epithets, but there are many synonyms. (For the Pantokrator in art, see Christ: Types of Christ.)

- G.P.

PANTOKRATOR, MONASTERIES OF. Several Byz. monasteries were dedicated to Christ as Pan-
Pantokrator, the most important being in Constantinople and on Mt. Athos.

**Pantokrator Monastery in Constantinople**, a large monastic complex founded in Constantinople by Emp. John II Komnenos east of the Church of the Holy Apostles on the slope of the fourth hill. The three parallel and contiguous church buildings survive to the present under the Turkish name Zeyrek Kilise Camii. One of the churches, dedicated to St. Michael (the Asomatos), was intended as a funerary chapel for members of the Komnenos family. John II and his wife Irene were buried there, as were his son Manuel I and daughter-in-law Berta of Sulzbach. In front of Manuel’s tomb was the slab on which it was believed Jesus had lain after the Deposition from the Cross, brought by Manuel from Ephesus in 1169/70. Two Palaiologan emperors, Manuel II and John VIII, also found their final resting place at Pantokrator.

The south church, dedicated to the Pantokrator, is the most important four-column, cross-in-square church preserved in the capital. The huge columns of red marble, probably spolia, are lost today, as is most of the stained glass, which was supposedly in its east window; much of the figured opus sectile pavement remains. Panels in its templon screen came from the Constantinopolitan Church of St. Polyeuktos. The slightly smaller north church, where women were admitted, was dedicated to the Virgin Eleousa. Here faint traces of the original mosaic decoration are preserved.

John II’s *tyikon*, composed in Oct. 1136, provides explicit directions for the ceremonial in the three churches (e.g., ecclesiastical lighting, commemorations of the deceased), and the administration of the monastery (election of *hegoumenoi*, diet and clothing of monks, etc.). It housed 80 monks, of whom 50 were choir brothers and 30 serving brothers. The complex included a 50-bed hospital and a *gerekmecon* for 24 elderly men. The emperor also constructed a leper hospital at some distance from the monastery. Pantokrator was richly endowed with estates in Thrace, Macedonia, the Peloponnese, the Aegean and Anatolia, and six smaller monasteries in the Asiatic suburbs of the capital.

The monastery was occupied by the Venetians between 1204 and 1261; it was then restored to Orthodox monks and continued to function until 1453. Only a few of its *hegoumenoi* are known, including Makarios Makres.

**Pantokrator Monastery on Athos.** Dedicated to the Transfiguration, this monastery is located on the northeast coast of the peninsula, halfway between Vatopedi and Iveron. Although its foundation has traditionally been attributed to the reign of Alexios I Komnenos or to the 13th-C. general Alexios Strategopoulos, the monastery is not mentioned in any sources until the second half of the 14th C. It was evidently founded in 1357 (Gones, *infra* 89f) by the brothers Alexios (a *megas primikeros* in 1357, who became *megas stratopedarches* in 1358) and John (*protosebastos* in 1357, promoted to *megas primikeros* in 1358); their family name is unknown, but they were related to the Palaiologoi. Ostrogorsky’s (*Sabra deli, vol.* 4 [Belgrade 1970] 615–24) identification of John with the *megas primikeros* John who was the son of Demetrius Palaiologos has now been rejected (*PLP*, no. 21484). The huge icon of Christ that they presented to the monastery is now in Leningrad (*Iskusstvo Vizantii* 3, no. 947). By 1394 the monastery held 15th place in the Athonite hierarchy. Sometime before Jan. 1394 Pantokrator was destroyed by fire and subsequently rebuilt with the assistance of Emp. Manuel II. In 1396 Patr. Antony IV reconfirmed its status as a patriarchal monastery.

Pantokrator had properties on Thasos, Lemnos, and Chalkidike, and a *metochion* called Beltzista near Serres. The 13 documents published by L. Petit range in date from 1357 to 1398 (plus an earlier act of 1107) and include the testament of the founder John (1384). The library of Pantokrator preserves 120 Byz. MSS, including the famous 9th-C. marginal psalter, Pantokr. 61 (Dufrenne, *L’Illustration* 1). From this collection, too, came the Psalter and New Testament of ca. 1084, now Washington, Dumbarton Oaks 3 (Cutler, *Aristocratic Psalters*, no. 51). In the *katholikon* are some frescoes of the 14th C., including a Deesis, the Dormition, and some figures of saints.

**Source.** *Actes du Pantokrator*, ed. L. Petit, *VisVriem* 10 (1903) suppl. 2.
PANTOLEON, painter; fl. 1001–16. Pantoleon’s name occurs more frequently than that of any other artist beside the miniatures in the MENOLOGION OF BASIL II; he was perhaps head of the atelier that decorated this MS. Cutler suggested that Pantoleon’s hand is also apparent in a Psalter (Venice, Marc. gr. Z 17) prepared for the same emperor. Pantoleon is mentioned in both versions of the Life of St. ATHANASIUS OF ATHOS (ed. Noret, A par. 254–36; B par. 78.24–33) as a resident of Constantinople who painted two icons of the saint probably for Antony, later hegoumenos of the Panagioi monastery. In this account, Pantoleon is said to have been at work on an imperial commission.

PAP (Lat. Para), Arsacid king of Armenia (368/9–374), son and successor of ARSACK II/III. This is probably not the Papa mentioned in the Letters of Basil the Great as was once thought. Pap was educated under Roman auspices at NEOKAIASAREIA, where he had taken refuge at the time of the Sasanian conquest of Armenia ca. 363. Valens sent him back to Armenia with an army commanded by the dux and comes rei militaris Terentius. Once reestablished on the Armenian throne, Pap apparently continued to support the Romans against the Sasanians, whom his armies thrice defeated, but he quarreled with the powerful nobles of his own kingdom and esp. with the clergy, which opposed his arianizing policy. Pap contrived the murder of the patriarch NERSES I THE GREAT and was murdered in return, apparently with the con-
nivance of the Roman commander. Latin and Armenian sources disagree sharply on his character: he is praised by Ammianus Marcellinus who bewails his murder as an unspeakable crime, while the Armenian sources portray him as dedicated from birth to the powers of evil.

PAPACY, bishopric of Rome. Early Christian communities used the term PAPAS (father) as a title of affectionate respect, esp. for priests and bishops; from the 4th to 7th c., the term was often used for the patriarch of Alexandria and other bishops. The title is on record in Rome from the 4th c.; from the 6th it was increasingly used specifically for the bishop of Rome.

By the 4th c., the papacy was the West’s leading bishopric and the only one included among the five major sees that formed the PENTARCHY. The First Council of Constantinople, held in 381 (see under CONSTANTINE, COUNCILS OF), explicitly recognized the papacy’s primacy, and the popes took advantage of the struggle between Alexandria and Constantinople to gain supremacy within the church hierarchy. Pope Leo I, in particular, advanced Rome’s claims to primacy throughout the empire in the 5th c.

With Justinian I’s reconquest of Italy in the mid-6th c., Rome entered the Byz. political and cultural sphere, where it remained until the mid-8th c. While papal claims to ecclesiastical primacy continued, the ability of the papacy to thwart Constantinople’s political and religious policies decreased. Byz. emperors deposed Pope Silverius in 537 and convicted Martin I of treason in Constantinople in 653/4; in the 6th c. the bishop of Constantinople assumed the title ECUMENICAL PATRIARCH. While the apocrisiarius represented the papacy in Constantinople, in Italy the exarch usually confirmed papal elections of the 7th and 8th c. (see LIBER DIURNUS).

Persian and Arab invasions of the early 7th c. triggered large-scale immigration of the Eastern ecclesiastical elite into Italy, causing a substantial hellenization of Rome’s clergy, with the result that from 678 to 752, 11 of 13 popes were Greek-speaking. Theology (see LATERAN SYNOD), art (see ROME), liturgy (see SERGIUS I), and literature (see Zacharias) reflect the new Greek orientation, as the papacy developed a Byz.-style bureaucracy and court. In the 8th c., papal opposition to Iconoclasm, combined with resistance to increased taxation, provoked Byz. confiscation of the papal estates in southern Italy and Sicily and subordination of ILLYRICUM to the patriarchate of Constantinople. Constantinople’s grip on central Italy loosened, however, and increasing Lombard pressure forced the papacy to seek an alliance with the Carolingians. When Pope Leo III conferred the imperial crown upon Charlemagne in 800, it symbolized Rome’s independence from Byz. control.

The LIBER PONTIFICALIS records imperial grants that contributed to the landed wealth of the papal patrimonies in the 4th to 8th c. (from CONSTANTINE I to CONSTANTINE V). Originally encompassing estates in Africa, Gaul, Sardinia, and Corsica as well as Italy, their administration became highly centralized under Gregory I. Loss of the overseas territories and Lombard encroachment fostered concentration of papal lands in central Italy, expanded by Carolingian grants under Hadrian I. By the 9th c., the papacy was one of Italy’s most powerful princeps and a major factor in international relations. Nicholas I effectively exploited the situation, trying to subordinate the newly baptized Slavs of Moravia and Bulgaria to Rome, to regain jurisdiction over Illyricum, and to establish control over the church of Constantinople.

This active policy of the 9th-c. popes was short-lived: Nicholas met an energetic opponent in Patri. Photios, while Arab incursions and the weakening of Frankish power again forced his successors to seek alliance with Byz. Involved with domestic difficulties, the 10th-c. papacy temporarily ceased efforts to claim primacy over the Eastern churches.

By the mid-11th c. the papacy believed itself strong enough to reassert universal claims, although the papacy and Constantinople were natural allies against the Normans. The first step in this papal expansion was the conflict between Patri. Michael I Keroularios and Cardinal Humbert in 1054; more dramatic than substantial, the conflict did not cause a real schism, although the dispute highlighted essential theological, administrative, and ritual differences between the Eastern and Western churches.

Church reform, moral improvement of the
clergy, and the development of effective administration in the late 11th to 12th C. significantly enhanced the political influence and ideological authority of the papacy. The power of the German kings in Italy was curbed (partially with the help of the growing Italian communes), and in 1095 Pope Urban II proclaimed a crusade intended to unify Western Christianity against the infidel Muslims. Despite serious friction, Byz. was at first an ally of the Crusaders, and theological dialogue, frequently in a spirit of reconciliation, occurred. A definitive rupture came only in 1204 when the Fourth Crusade unexpectedly turned against Constantinople. The role of Innocent III in this event is uncertain, although the capture of Constantinople and the establishment of Latin rule was beneficial for the papacy, which had long sought to establish control over the Balkans.

This success, however, was undermined by various forces and did not last. On the one hand, papal power in the West was weakened after the 13th C., when it had to face not the universal aspirations of the German emperors, but the nascent national states, which were able to exploit the same elements that the papacy had used in its own behalf: the growing medieval towns and the local church. The external sign of papal defeat was the “Babylonian captivity” of 1309 to 1377, when the popes were exiled to Avignon, where they came under French control. Another factor was the growth of Turkish power: the Crusaders were losing their foothold in the Levant, and Byz. territory was drastically shrinking. The war against the infidel required enormous amounts of money and manpower, while the Crusading movement was declining. Finally, the papacy underestimated Byz. resistance to Union of the Churches and was not willing to yield any significant point to win the sympathy of the Greek people. The condition for union was the full subjugation of Byz. to papal jurisdiction, theology, and rite; a few emperors were willing to accept these terms, but failed to gain popular support for their policies. The Council of Ferrara-Florence in 1439 brought only superficial unity and minimal assistance from the West: the papacy was not able, and did not seriously try, to save Constantinople in 1453.

— A.K. M. McC.

PAPADIKE (Παπαδική), a late Byz. anthology of musical settings, both simple and florid, for hymns, psalms, and other chants used in the liturgy and the liturgical Hours. John Koukouzeles is believed to have first edited this kind of volume, which also bears the name of Akolouthia, Mousikon, Anthologia, or Psaltike. Along with compositions by Palaiologan composers, the earliest 14th-C. papadike preserve vestiges of 12th- and 13th-C. Constantinopolitan repertories; a handful of these, both early and late, contain musical treatises. Fourteen MSS of the Papadike from the 14th C. and nearly three times that number from the 15th C. are extant. Chants in the kalophonic style predominate. This style is chiefly recognizable by its use of the meaningless teretismata and by its demanding virtuosity.

In modern scholarship, the term Papadike usually refers to a short, elementary manual of musical notation that introduces the musical anthologies of chant from the 14th C. onward. The text underwent many modifications; by the 15th C., at least four different versions of the Papadike existed, varying in completeness and order of contents. Typically, the manual consists of lists showing (1) the neumata and their interval value; (2) the “great hypostases” (subordinate ornamental signs); (3) the Phthorai; and (4) small musical examples describing the function and value of the neumata. Following this may be various diagrams undoubtedly intended for use when teachers introduced their students to the neumatic and modal systems. Many sources also include a varying number of short, ad hoc exercise melodies that served as a bridge between the theory and its application to actual singing.

—D.E.C.

PAPAS (πάπας, παπᾶς, παππας, “father”), used widely in the Byz. church as a title of respect and affection for the clerical rank of priest (e.g., Malal. 361.8, 362.5). It emphasizes the spiritual relationship between priest and congregation. As early as the 3rd C., however, the word was also commonly
applied to bishops in both East and West (Gregory Thaumaturgus, PG 10:1020A). In Egypt the bishop of Alexandria was regularly styled papa (PG 20:648C), possibly as early as 231 (PG 111:982D–983A). Only gradually was the term applied solely to the bishop of Rome (see PAPACY). Although it is attested for the Roman bishop in the 4th C., only in the 6th C. does the custom become more general. Even then, however, papa was still occasionally used for other Western bishops as well (cf. Avitus of Vienne, PL 59:299). It was indeed not until the 11th C. that the title was for the first time restricted exclusively to the bishop of Rome by Pope Gregory VII.

PAPER, writing material that gradually came to replace PARCHMENT. Considered inferior to parchment because it was less durable, paper came into wide use because it was cheaper. Palaeographers distinguish between two kinds of paper imported into Byz. oriental or bombycine (βομβύκινον, βομβύκινον, βαμβακινινον, βαμβακινινον, the names coming from the cities of Membij and Baghdad, respectively) and occidental. Both types of paper were made from rags or vegetable fibers. Oriental paper was smooth, brownish, glued with starch, and had no watermarks; Western paper was yellowish or white, thick, rough, glued with gelatin, and had watermarks. The size of the two kinds of paper and the pattern of wires used in the manufacture also differed. The question of whether paper was manufactured in Byz. itself is still open; N. Oikonomides argues that papermakers are attested in Constantinople ca.800 (in PGEB 397f).

Paper was introduced to the Byz. world by the Arabs, who had learned the secret of its manufacture from Chinese prisoners of war captured at Samarkand in 751. The oldest preserved Greek MS written on oriental paper is Vat. gr. 2200, copied ca.800, probably in Damascus; this paper, however, did not come into common use in Byz. territory until the 11th C. The institute of the library of the monastery of Attaleiates, for example, lists eight books on paper and six on parchment. The earliest surviving paper MS copied in Byz. is from 1105 (Vat. gr. 504). Paper was also used for documents; the earliest preserved example is a chrysobull of 1052. The latest Byz. MSS on oriental paper date from ca.1350.

Occidental paper was first imported to Byz. in the 13th C. from Italy, where the oldest paper mill was at Fabriano (in Ancona). By the late 14th C. Italian paper had completely supplanted its oriental counterpart. The dimensions of a sheet of occidental paper average 290 × 450 mm. Folios were formed by folding these sheets in two, four, eight, etc. Stocks of paper were used soon after purchase (3–5 years), which helps to date books on paper provided with watermarks. Modern technology (e.g., analysis by electron microscope, neutron activation, and betagrapy) can also assist in dating.

PAPHLAGONIA (Παφλαγονία), region of northern Asia Minor between GALATIA and the Black Sea, consisting of a narrow coastal strip and isolated but rich interior valleys that produced timber and grain; its metropolis was GANGRA. Diocletian created a separate province of Paphlagonia. In 535, Justinian I merged Paphlagonia and the adjacent Honorias, assigning them to a praetor with civil and military powers. Persian, then Arab attacks reached Paphlagonia occasionally in the 7th–8th C. After being part of Osrioni, Paphlagonia became a separate theme in the early 9th C. Its strategos commanded 5,000 men and five fortresses; he was paid 10 pounds of gold. A katepano was apparently in charge of the fleet. Most of Paphlagonia was lost to the Turks after Mantzikert in 1071; the Crusade of 1101 met disaster in Paphlagonia; the campaigns of John II, 1130–35, were more successful, but brought no lasting gains. The coast remained Byz.: in 1205, David Komnenos of Trebizond established a realm called Paphlagonia, which stretched from Sinope to Herakleia Pontike. Theodore I Laskaris seized the western parts as far as Amastris in 1214; they became the Laskarid province of Paphlagonia. The region was lost to the Turks or Genoese by the late 14th C.

PAPHOS. See CYPRUS.

PAPIAS (παπίας, word etymologically connected with παπάς, father, priest), eunuch in charge of the buildings of the palace. The first mention in narrative sources is for the year 780, when a certain Jacob, protospatharios and papias, was arrested by Leo IV (Theoph. 453.10–11; Bury, *Adm. System* 124f, however, treated this papias as a proper name). The seal of the papias Peter has been dated by the editors (Zacos, *Seals* 1, no. 2821) to 550–650. The papias was primarily the janitor of the palace—his duty was to keep the keys and open the gates; he also kept the keys of the palace prison (Kinn. 234.10–12). The cooperation of the papias was important for any conspiracy: thus, the papias played a decisive role in the plot of Michael II against Leo V. When Basil I plotted Michael III’s murder, the hetaireiarches Artabasdes snatched the keys from the papias and let in the conspirators.

The papias was responsible for the maintenance of the buildings. His staff consisted of diaitarioi or hed domarioi (who served in weekly relays in charge of various rooms of the palace), loustai, kandelaptai, kamenades, and horologoi, who were responsible for the baths, lighting, heating, and horologia, respectively, and zarabi (functions not clear). To this personnel, presented in the *Kleitorologion of Philotheos, Oikonomides* (Listes 306, n. 100) adds the minsourator, who was in charge of the emperor’s tent during military expeditions. The papias was assisted by the deuterous. He also played a part in imperial ceremony, both inside and outside the palace; thus, on 1 Aug. he carried a cross (from the palace treasury) through the streets of Constantinople, visiting houses of the wealthy and collecting from them a fee of some sort (De cer. 723.17–19). In addition to the papias of the Great Palace there were papias of the Magnaura and Daphne palaces; the latter was created by Michael III. From the 13th C. onward megas papias became an honorific title conferred on members of noble families, including the future emperor John VI Kantakouzenos.

PAPYRI. See ANTINOÖPOLIS PAPYRI; APHRODITE PAPYRI; APOLLONOS ANO PAPYRI; ARABIC PAPYRI; NESSANA PAPYRI; OXYRHYNCHUS PAPYRI; RAVENNA PAPYRI.

PAPYROLOGY, an auxiliary discipline dealing with texts written on papyrus (and ostraka), most often in Greek, Latin, and Coptic. (Hieroglyphic and demotic texts are usually dealt with by Egyptologists, as they come largely from periods earlier than the Greco-Roman; on the other hand, Syriac, Aramaic, Arabic, and Pahlavi papyri usually fall to specialists in Semitic, Christian Oriental, or
Persian philology.) As most papyri originate in Egypt, papyrology often becomes largely synonymous with study of the history and culture of late Roman Egypt.

In the 18th and much of the 19th C. the occasional papyri found by *sebakh* (fertilizer) diggers or hunters for Pharaonic treasure in Egypt were regarded merely as curiosities. With the great Fayyūm finds of the late 1870s (brought to the Archduke Rainer collection in Vienna) interest in these documents arose. In the 1880s and 1890s papyrology really began, with excavations by Petrie and Grenfell and Hunt specifically intended to search for papyri. Their spectacular success brought to light classical literature, unknown sayings of Jesus (from the *Gospel of Thomas*), and countless administrative and taxation records, as well as documents of daily life. Nearly continual discovery of papyri since then has augmented the raw material of the field and sparked its growth into an international discipline, producing ongoing publications of source material and historical interpretation.

Papyrology is founded above all on the reading of papyrus texts. Often the papyrus needs conservation before its surface can be read: flattening sheets, unrolling rolls, even taking apart cartonage (the "cardboard" that mummy cases are made of) by means of enzymes, or, as in the case of the Tebtunis papyri, unstuffing mummmified crocodiles. The papyrologist acquires palaeographic skill through practical immersion in texts written in all sorts of hands. Papyrology has greatly enlarged our knowledge of Koine and biblical Greek, of the Latin used by Roman soldiers in the provinces, and of the several dialects of Coptic, both in everyday usage and in literature.

The types of papyrus document are as numerous and as varied as the activities that helped keep society functioning. They can be public documents, such as imperial rescripts, tax rolls, cadasters, registered property declarations, birth and death certificates, or transactions executed by a government official. Even more numerous are private documents, such as transactions of family law (marriage and divorce contracts, wills, inheritance arbitrations), sales, leases, loans, labor contracts, pledges and deposits, orders for payment, and of course letters. The great abundance of these documents provides an unparalleled depth and breadth of knowledge of late Roman Egypt. Both the factual content and the phraseology of papyrus documents illuminate the historical milieu from which they came, providing material for both administrative and religious history. Bureaucracy, the differing legal systems, the interrelationship of city and countryside, and the preoccupations of both pagan and Christian religion are vividly alive in the papyri.

Literary papyri are likewise natural witnesses to the state of culture in Egypt at any given point. Classical authors, scriptural, liturgical, and patristic literature, practical science and magic—all fall within the domain of the literary papyrologist. The state of education can be gathered from school exercises, while the presence of literary papyri in the midst of documentary archives (e.g., the Cairo Menander codex) attests to the reading preferences of the literate bureaucrat and the ordinary citizen. Biblical papyri form a field all their own, being by far the earliest textual witnesses available to the critic, and reflecting the different families of texts and the early versions and lines of transmission. The Gnostic papyrus codices from NAG HAMMADI and the Manichaean literature from Egypt have given rise to specialties of their own.

Papyrology has by now its own working tools, including lexica, dictionaries of proper names, handbooks and standard collections, palaeographical albums, compilations of corrections to previously published texts, and specialized periodicals and monograph series. The data of papyrology are helping to revise our understanding of such fields as chronology, comparative Roman and Greek law, the economic history of the 4th—5th C., and the religious history of early Christianity, Gnosticism, and Manichaeanism. There are still many more extant papyrus texts than there are editors to make them available to historians and students.

**PYRAMUS**, the principal writing material of the ancient world and late antiquity, made from strips of the pith of an Egyptian reed plant (*Cyperus papyrus*). The manufacture and sale of papyrus was a large-scale industry in Egypt throughout its
history, until well after the Arab conquest. Papyrus came in all grades and was used for every purpose, official and private, and in every format, from roll to codex. It provided a tough and long-lasting writing surface. Most extant texts, literary and documentary, on papyrus were preserved in Egypt (though not all were written there): other discoveries have been made at Dura Europos and in Israel. Some medieval papyrus was produced in Sicily. Papyrus was not superseded in the West by parchment until the later 9th C. or in the East by paper until about the 10th C. It continued to be used by the papal chancery until the 12th C. and by the imperial chancery at least until the mid-9th C. (F. Dölger, BZ 48 [1955] 467–70). The discipline that studies texts on papyrus is called papyrology.

—L.S.B.MacC.

PARABALANI (παραβαλανεῖς, “bath attendants,” sometimes, incorrectly, παραβολάννοι, “those who disregard their lives”), hospital attendants and minor clerics who were often fanatically loyal to their ecclesiastical superior. Because their work with the sick exposed them to constant danger, the parabalani were often drawn from desperate elements in society; they were occasionally used by bishops in violent encounters with their opponents. They are best known at Alexandria but appear to have been organized also at Constantinople and probably elsewhere. They were evidently involved in the murder of Hypatia in 415 and provided much of the violence used by Dioskoros at the “Robber” Council of Ephesus in 449. Because of the danger they posed to public order, their numbers were limited by law, first to 500 and later to 600 (Cod. Theod. XVI 2.42 and 43 [anno 416, 418 = Cod. Just. I 3.18]).

—T.E.G.

PARABLE (παραβολή). In the theory of rhetoric, a comparison that differs from an example by including within its scope both animate and inanimate nature (Martin, Rhetorik 122). The term could designate a simple simile as in Theodoret (PG 80:581 A-B): “He delivered a parable . . . calling himself a dead dog.” The word was applied to Christ’s fables, which were told to illustrate his teaching of the heavenly kingdom and were broadly interpreted by several church fathers, esp. Origen and John Chrysostom. According to Origen, Christ used parables of which the popular masses were apt to understand only the external form, whereas the disciples perceived the internal significance. Therefore, the parable acquired the sense of a spiritual truth expressed in the form of a riddle or a short story, esp. of a saying that contained a hidden meaning and required an interpretation.

—A.K., E.M.J.

PARADISE (παράδεισος, lit. “garden”), Eden, a place created by God for Adam and Eve from which they were later expelled. According to Byz legends, it was situated in the east, far beyond India and even beyond the Ocean. Pseudo-Basil the Great (PG 30:64B) describes it as a place of marvelous beauty, brilliance, and security, knowing neither winds nor hail, free from humidity, heat, and cold. Hagiography and related texts preserve numerous visions of paradise, which
variously appears as a garden surrounded by a high gilded wall with marvelous gates (vita of Basil the Younger, ed. Veselovskij, 1.46.5–9) or as a palace full of light and fragrance (vita of Andrew the Fool, PG 111:736C), with traditional Byz. court ceremonial (Mango, Byzantium 151–53). In art, paradise was represented as a garden set against a starry sky, with flowers, animals, and sometimes a jeweled cross at its center. Although the Bible presumes that Adam and Eve, before the Fall, dwelt naked in paradise, some 12th-C. Octateuch MSS show the ancestors of mankind clothed before the Fall, for example, in the scene of the naming of the animals (H.R. Broderick, Byzantium 55 [1985] 250–54). Paradise is also termed (and depicted in painting) as the heavenly Jerusalem, and, as a component of the Last Judgment, on a site in which sit the Virgin and Abraham with the souls of the elect around him. Admission, through a gate guarded by a seraph, was granted by St. Peter.

A traditional view, represented by, among others, Anastasios of Sinai and Photios, depicts paradise as a happy and blessed place where the pious live in the expectation of the realm of heaven, which will be established after the Second Coming of Christ (Parousia). Some church writers, however, distinguished paradise from the earth and located it either in heaven or between earth and heaven. Niketas Stethatos in a special treatise titled On Paradise and in related letters (ed. J. Darrouzès, 154–291) asserted that after the Incarnation the earthly paradise ceased to exist, that Christ dwells not in paradise but in heaven, and that we can speak only of an intelligible paradise whose spiritual plants give us the sensation of delight.

PARADOXNAVON. See Paristrion.

PARADOXOGRAPHY. an ancient literary genre devoted to descriptions of mirabilia, marvelous or miraculous objects. The word paradoxographos was invented by Tzetzes (Hist. 2.154), who placed the paradoxographos Anthemios of Tralles (6th C.) on a par with scientists such as Archimedes and Heron. The genre of mirabilia existed in antiquity and continued into the 4th or 5th C. Philo of Byzantium wrote a short rhetorical tract on the seven wonders of the world (W. Kroll, RE 20 [1941] 54f).

From the 7th C. onward the Byz. maintained an interest in paradoxography. Claudius Aelianus was often quoted, and several collections of ancient paradoxographers were made, such as Vat. Palat. gr. 398 (10th C.) and the compilations of several anonymous paradoxographers, conventionally called Paradoxographos Vaticanus, Paradoxographos Florentinus, and Paradoxographos Palatinus. Original Byz. works of this genre are not numerous: Theophylaktos Simokattes produced a dialogue entitled On Various Problems of Nature, in which he discussed some memorable phenomena of zoology and alchemy; similar questions were treated in his collection of letters. The Paradoxical Readings by Psellus is related to paradoxography
only by its title, being rather a collection of prescriptions against pain, conception, theft, and snakes.

Elements of paradoxography can be found in different genres: hagiography (esp. the vita of Makarios of Rome), historiography (e.g., the description of exotic animals, such as that of the elephant and giraffe by Attaleiates), treatises on geography (A. Delatte, BAcBelg 18 [1932] 189–222), and commentaries such as one on Gregory of Nazianzos ascribed to Kosmas the Hymnographer. The Byz. developed a negative attitude toward famous ancient marvels; thus, Eustathios of Thessalonike asserted that piety is more precious than the foolishness of the Colossus of Rhodes and the pyramids that only cast long shadows (Eust.Thess., Opuscula 193.38–50).

PARADYNASTEUON (παραδυναστευών), semi-official term derived from antiquity (probably Thucydides) and designating an imperial favorite placed at the head of an administrative unit. Used in late Roman texts in a vague sense of “having great authority” (e.g., Philostorg., HE 3.12; Theodoret of Cyrus, HE 2.12.1), it preserved the same meaning in Theophanes the Confessor (e.g., Theoph. 76.25). It is not found in the Taktika of the 9th–10th C. but is applied by 10th-C. chroniclers to such men as Stylianos Zaoutzes or John Mystikos ca.913. The term is common during the Komnenian period and continued to be used by antiquarian writers such as Constantine Akropolites and Nikephoros Gregoras, but was then replaced by mesazon.

PARAKOIMOMENOS (παρακοιμώμενος; lit. “sleeping at the side of the emperor”), the guardian of the emperor’s bedchamber, the highest office conferred on eunuchs; he probably replaced the praepositus sacri cubiculi. The origin of the office is obscure: the story of the parakoimomenos Euphratas, an adviser of Constantine I, is legendary. A 9th-C. chronicler (Theoph. 285.17) mentions a parakoimomenos of Maurice, but this may be anachronistic. It is also uncertain whether Stephen, sakellarios and “the first eunuch” under Justinian II (not Maurice, as in Guillard, infra 204), was parakoimomenos. The first secure reference is Theophanes’ mention of koubikularioi and parakoimomenoi in 780 (Theoph. 453.11–12); at that time there were several parakoimomenoi simultaneously and their position was not very elevated. Under Theophilos, the parakoimomenoi Scholastikos also held the modest title of ostiarios. Some seals (earliest, 650–750, Zacos, Seals 1, no.1395) show that the duties of the parakoimomenoi were usually combined with those of the epi tes trapezes (no.2394) or koubikularios (nos. 2379, 2529; Seibt, Bleisiegel, no.52); at least one of these parakoimomenoi-koubikularioi was appointed strategos (of Sicily).

The situation began to change in the mid-9th C., and in the 10th C. the office acquired enormous significance, when men such as Samonas, Joseph Bringas, and Basil the Notchos were parakoimomenoi. The post continued to be important in the 11th C., when the eunuch Nicholas was parakoimomenos and Domestikos ton Schol. The office seems to have declined in the 12th C. The position was entrusted primarily to eunuchs, though there were some exceptions in all periods: the future emperor Basil I held this post and in the 12th C. some parakoimomenoi were bearded. In the 14th C. the office was divided: the parakoimomenos of the hoiton preserved the old functions of the emperor’s bodyguard, while the parakoimomenos of the sphendon controlled the state seal. The latter played an important administrative role; among others, Alexios Apokaukos held the post. There is no information about parakoimomenoi in the 15th C. A seal (Zacos, Seals 1, no.1699) attests a female parakoimomene, evidently a servant of the empress.

PARAKOLOUTHEMATA (παρακολουθήματα), generic term indicating the surtaxes that were added to the kanon. Their amounts varied with time; all started as exceptional contributions and were later incorporated in the main tax. (1) Dikeraton, i.e., an increase of two keratia (1/12) for every nomisma of kanon; this surtax, first invented by Leo III in order to repair the walls of Constantinople, was regularized by Nikephoros I. (2)
Hexafollon, a surtax of six folleis per nomisma (an increase of about 1/48, liable to variation depending on the amount of the basic tax), may have been initiated under Leo VI. (3) Synetheia, a sportula initially imposed for the benefit of the tax collector: it was 1/12 of the kanon, but the percentage decreased when the tax grew. (4) Elatikon, a flat and relatively low contribution destined to cover the expenses of the tax collector’s suite. The last two were incorporated in the tax in the early 12th C. Moreover, the tax collector and his suite received from each taxpayer a “basket” (kaniskon) in kind (one loaf of bread, one modios of barley, one chicken, 1/2 measure of wine—or multiples of the above—according to 11th-C. rates).

Lit. Svoronos, Cadastre 81-83. —N.O.

Parakyptikon (παρακυπτικος τεικον, lit. “fit for peeping through”), an imperial loge, a place from which the emperor could observe the area beneath him. In the De ceremoniis, the term “parakypkon of the altar” (De cer. 88.5) of the Church of Sts. Sergios and Bakchos refers to a vantage point in the gallery from which the emperor could observe the service; in the plural, parakyptika (342.2-3, 364.19-20), it designated a loggia in the kathisma of the Hippodrome from which the emperor watched the games.

Lit. Strube, West. Eingangssette 81-86. —A.K.

Paralytic, healing of the. See Miracles of Christ.

Paramonarios. See Prosmonarios.

Paramythetikos (παραμυθητικος λογος), a speech of consolation, intended to comfort the bereaved by praising the dead (see epitaphios).

Paraphylax (παραφυλαξ), “chief guardian” (cf. Theodore of Stoudios, PG 99:1232B). The Kleroteriogion of Philotheos (Oikonomides, Lists 161.15) mentions paraphylakes of kastra among officers of low rank. They also appear in 11th-C. lists of exemptions as functionaries of the fisc or of the commonwealth (koinon), either among low-ranking military officers (Patmou Engrapha 1, no.6.61) or those involved in provisioning the army (?), such as synonarioi and ocriarioi (e.g., Laura 1, nos. 33.97-98, 36.32-33). Paraphylakes are mentioned on numerous seals of the 7th-9th C., e.g., paraphylakes of Crete, Thessalonike, Nicaea, of the “Theologian” (probably Ephesus), and esp. Abydos. A functionary of low rank (titled apoeparchon on earlier seals, and then hypatos, strator, or spatharios), he combined his function with that of the kommerkarios, less frequently with the chartoularios of the genikon and with archon. There is no reason to identify the paraphylax as a kommerkarios or abrydikos—his duty was probably to command irregular forces in provincial towns and to supervise public order.

Paraskeve of Epibatai, or Paraskeve the Younger, Slavic name Petka; saint; feastdays 13, 14 Oct. She is believed to have lived in the 10th C. Her Life, written by a peasant, possibly in the vernacular, was ordered burned by Patr. Nicholas IV Mouzalon; he commissioned a certain deacon Basilikos to create an official version of the saint’s Life. Church Slavonic texts, including the vita by Evtimij of Tûrnovo, may preserve traces of this official version. Using Evtimij’s text, Matthew of Myra wrote the Greek Life of Paraskeve in 1605-20. The legend’s central episode concerns a certain George who saw a vision of Paraskeve as an enthroned queen and was ordered to bring her relics from the Church of the Apostles in Epibatai to a new location in Tûrnovo, a mission that he fulfilled ca.1230. An inscription with the name of Paraskeve found in Carevac, Tûrnovo, makes it possible to locate a church dedicated to her.

Paraskeve of Ikonion, the “great martyr”; feastday 28 Oct. She was a predominantly Russian saint, the patron of brides and family life. The origin of her cult remains obscure.

PARASKEVE THE ELDER, saint; feast-days 26 July, 8 and 9 Nov. Paraskeve (lit. “Friday”) supposedly lived in the 2nd C., propagating Christianity and even converting the emperor Antonius. JOHN OF EUBOEA wrote a pasist of Paraskeve, and later Constantine AKROPOLITES composed her eulogy. She is represented in a miniature accompanying an Easter homily in the 9th-C. PARIS GREGORY (fol.285r; S. Der Nersessian, DOP 16 [1962] 202, pl.3), standing alongside HELENA; she carries symbols of the Passion of Christ (lance, sponge, nails, and a container for the vinegar), an early reference to Good Friday and the cult of the cross.

PARASPONDYLOS, LEO, high-ranking official; died after 1057. The name Paraspodylos (Παρασπόνδυλος, or, in Skyl. 479.16, Strabospodylos, “a crook”) is probably a sobriquet. Seemingly, Leo sprang from the family of the Spondylo, one of whom, Michael, served as doux of Antioch and participated in the campaign of GEORGE MANIakes in Sicily (Falkenhausen, Dominatione 74). An official under Michael IV, Paraspodylos became the chief of civil administration with the titles of synkellos and protosynkellos during the reigns of Theodora and Michael VI. When Paraspodylos rejected the demands of the leading generals in 1057, a rebellion developed that led to the deposition of Michael VI and accession of ISAAC I. Paraspodylos was dismissed and probably tonsured. Attaleiates (Attal. 52.1–10) lauds him as an excellent administrator who contributed greatly to the establishment of good government. Psellos (Chron. 2:74, ch.6.15–19) was more restrained in his judgment of Paraspodylos, emphasizing primarily his uncourteous speech yet eloquent gestures. While Paraspodylos was in disfavor, Psellos supported him and on his behalf addressed Paraspodylos’ principal enemies—Isaac I and PATR. MICHAEL I Kerouarios.

PARASTAS (παραστάς, lit. “standing beside”), term usually meaning pilaster, anta, or jamb. Eusebios (VC 3:37) uses the term parastades, however, to describe the twin aisles on each side of the nave of the Golgotha basilica in JERUSALEM (H. Vincent, F.-M. Abel, Jérusalem 2:1–2 [Paris 1914] 160f).

—N.E.L.

PARASTASEIS SYNTOMOI CHRONIKAI (lit. “Brief Historical Notes”), an anonymous work describing the monuments of Constantinople. The work is preserved in a single MS (Paris, B.N. gr. 1936) of the 11th C. The text is often corrupt and hard to understand. Parastaseis has traditionally been dated between Leo III (717–41), who is named in the text, and 829; the text, however, mentions an “emperor of our day” who must be one of Leo’s successors, and 829 is based only on an argumentum ex silento. Cameron and Herrin date the work to the beginning of the 8th C. and consider it as a kind of scholarly work; both conclusions are questionable. The book is a collection of grotesque anecdotes with references to nonexistent or anachronistic sources (e.g., Herodotus as the source for the story that Constantine I murdered his son Constantine—instead of CRIPUS, who was actually killed). Parastaseis should rather be interpreted as a political pamphlet directed against the cult of Constantine I that was being developed under the Iconoclast emperors and their successors; at the same time it reflected the dispute over icons, telling numerous stories about the miraculous power of pagan statues (occasionally called “icons”), which—unlike Orthodox icons—did not work beneficial miracles but brought injury and death.

LIT. Dagron, CP imaginaire 29–48. –A.K.

PARATHALASSITES (παραθαλάσσιται, lit. “by the sea”), a judge in control of those sailing on the sea (Pepia 51.29); the parathalassites was in charge of the seashore and the port of Constantinople, esp. of the import of goods and the payment of tolls. According to the obscure evidence of an anonymous chronicle (F. Cumont, Anecdota Bruxellensia [Ghent 1894] 27.11–12), Justinian I introduced the kommerkon of the straits and the office of parathalassites. In the late 9th-C. Kletorologion of Philotheos (Oikonomides, Listes 113.22) the parathalassites appears as a low-ranking functionary in the bureau of the eparch of the city.
Liutprand of Cremona (Antapodosis 3.26) mentions a paratallassites among the offices filled by Romanos I after his victory over Leo Phokas—paratallassites is last in the list, below spatharoiot and spatharokandidatoi. The seals of the 11th–12th C. confer on the paratallassites higher ranks—up to protoprodros and kouropalates—probably indicating the increasing importance of the office. Ahrweiler surmised that the paratallassites disengaged himself from the control of the eparch of the city and in the 11th C. attained equality with the eparch and the logothetes of the genikon, while Laurent (Corpus 2:625) was very cautious on this point. By the end of the 12th C. the office became collegial. The paratallassites is not mentioned in the 14th-C. ceremonial book of pseudo-Kodinos. In addition to the paratallassites of Constantinople there were also provincial paratallassitai (N. Oikonomides, TM 6 [1976] 133, n. 44).

PARCHMENT (μεμβράνα, περγαμηνή, σωμάτιον, διθέρα, δέρμα, χάρτης), writing material prepared from the skin of animals such as the cow, sheep, goat, or donkey. The skin was washed in lime, cleaned, stretched in a form, and scraped. The hair side and flesh side of the skin had different colors. The kind of animal skin used and the various techniques of treatment explain the divergent appearance of various parchments.

A coarse parchment distinguishes southern Italian MSS. Maximus Planudes preferred parchment that was thin and very white, but not treated with egg white (eps. 100, 106). Parchment dyed with purple was reserved for the emperor.

Expensive and scarce, parchment was sometimes unavailable. An animal skin yielded only two bifolia (i.e., eight pages), and the supply of parchment was seasonal, being more abundant in spring when lambs were slaughtered. Arethas of Caesarea paid between 6 and 8 nomismata for sufficient parchment to produce a volume of about 490 folios (N. Wilson in Books & Bookmen 1–4). This scarcity prompted the reuse of parchment MSS as palimpsests.

The oldest preserved large Greek parchment codices are dated to the 4th C.; they are Gospel and Old Testament MSS, the Codex Sinaiticus (London, B.L. Add. 43725), and the Codex Vaticanus (Vat. gr. 1209). From the 5th C. onward, paper increasingly replaced parchment as writing material, but parchment MSS continued to be produced for rich patrons.

PARDOS, GREGORY, writer, metropolitan of Corinth after 1092 (V. Laurent, REB 21 [1963] 290f); baptismal name probably George; born ca.1070, died 1156 (but cf. U. Begares, BZ 81 [1988] 247f). Pardos compiled several works on rhetoric and grammar: On Dialects, Commentary on Hermogenes, On Speech Construction, Introduction to Speechwriting (D. Donnet, Bulletin de l’institut historique Belge de Rome 37 [1966] 81–97). The treatise On Tropes, published under his name, should be attributed rather to the 1st-C. B.C. Tryphon (M.L. West, CQ n.s. 15 [1965] 230–48). The traditional view that Pardos lacked originality is now to be rejected (J. Glucker, Mymnose 23 [1970] 137f). Pardos applied the technique of schedographia, using a section of a “set text” progressively for examples, as he explained the principles of grammar; he referred to contemporary poets such as Kallikles, Prodomos, and Tzetzes. Pardos also produced commentaries on religious poetry as well as his own religious epigrams.

PAREKKLESION (παρεκκλήσιον), generic name for a subsidiary chapel. Such chapels appear in ecclesiastical architecture of the 4th–5th C. with a great variety of forms, functions, and dispositions. From the 10th to 12th C., the number of chapels in churches increased. These have a variety of plans, usually occur in symmetrically disposed pairs, and are carefully integrated into the overall architectural scheme. From the 13th to 15th C., parekklesia were not as elegantly planned and were often no more than large rooms attached to the flanks of existing churches. Such is
the case at the church of the Chora monastery, a long, apsed rectangular structure built for funerary purposes. Another important example of the period, also sepulchral in nature, was built in the form of a small cross-in-square church on the south flank of Hagia Maria Pammakaristos.

PARENZO. See Poreč.

PARIS, son of Priam, Greek mythological hero famous for his judgment of three goddesses—Hera, Athena, and Aphrodite—and his subsequent abduction of Helen, which led to the Trojan War. This mythological episode was completely reinterpreted by Malalas (or, more probably, his source), who presented Paris as a young man of proper upbringing who wrote a hymn praising Aphrodite as an allegory of epithymia, "desire." Desire, says Malalas, produces everything—children, wisdom, prudence, and the arts. This allegorical interpretation of the Judgment of Paris was developed by Tzetzes, who treated the mythological episode as utter nonsense. Manasses, however, knew the allegorical version, although he did not care for it. The poem of Hermoniakos on the Trojan War reflects the attitudes of both Tzetzes and Manasses to this episode.

PARIS GREGORY (Paris, B.N. gr. 510), an illustrated MS containing the Homilies of St. Gregory of Nazianzos plus some of his letters, a few miscellaneous writings, and Gregory the Presbyter’s vita of the saint. It was produced between late 879 and 883 in Constantinople for Basil I, probably as a gift from Photios. Five miniatures preface the volume; of its 52 texts most were originally preceded by miniatures, and all by elaborate headpieces. In addition, the MS has over 1,600 gold or decorated letters, the oldest surviving examples of Byz. painted initials.

The miniatures, often composed of three or four rows of images, incorporate over 400 different scenes. Few illustrate Gregory’s sermons literally: most provide commentaries on the text, either pictorial exegesis (mostly typological) or visual polemic connecting the theme of the sermon with contemporary events (the textually unmotivated image of the First Council of Constantinople [381] buttressed the Greek position in the filioque debate with Rome during the patriarchate of Photios). Some miniatures flatter the imperial recipient of the MS (the Joseph page should be read as an analogy of Basil’s ascent to the throne), while others echo specific interests of Photios and his circle.

Though the exegetical role for the images was one favored in this period, the Paris Gregory provides unusually sophisticated examples. The iconography of the individual scenes, on the other hand, remains generally conservative, and there was no attempt to make the miniatures stylistically homogenous.

PARIS PSALTER (Paris, B.N. gr. 139), the best-known example of Byz. Psalter illustration, long supposed to be typical of the genre but now recognized as being exceptional in size (approximately 37 × 26.5 cm) and in the beauty of its script and wealth of full-page illumination. Beyond the text and Catena, it now contains eight miniatures devoted to the life and person of David and six (originally nine?) illustrations of the Odes. The David pictures emphasize the virtues of the ideal emperor, often through the presence of personifications, both classical and Christian: H. Buchthal (JWarb 37 [1974] 330–33) proposes that the book was made for the future emperor Romanos II at the behest of his father, Constantine VII Porphyrogennetos. The hypothesis that it is a copy remains unproven, but there is no doubt that the MS stands at the head of a long line of smaller and later books that emulate its body of illustration. The Psalter’s ornament is most closely related to a MS in Moscow, Hist. Mus. gr. 60 (= Vladimir 140), of the year 975. The long-standing thesis that its miniatures are later insertions has recently been challenged (J. Lowden, ArtB 70 [1988] 250f). Certainly the book as we now have it was available ca.1000 when some of its minia-
atures were adapted for Psalters now at the Vatican and Mt. Sinai (H. Belting, *JOB* 21 [1972] 17–38). It was acquired by the French ambassador in Constantinople in 1557–59.

**PARISTRION** (Παριστρίων), a designation of the territory south of the Lower Danube, used in narrative texts of the 11th and early 12th C. Skylitzes (Skyl. 457.32) relates that a certain Michael was archon of the Paristriai poleis; the Conti nuator of Skylitzes (SkylCont 166.16–17) speaks of a vestarches Nestor “who was called doux of Paristria,” and Anna Komnene mentions Paristrion four times in connection with invasions of the Pechenegs and Cumans in Dobrudja. Official documents, however, use the term Paradounakis, as on the seals of the vести Symeon (V. Zlatarski in *Șișičev zbornik* [Zagreb 1929] 143–48) and of Katakalon (N. Bănescu, *EO* 35 [1936] 405–08) and the will of Eustathios Boilas of 1059 (Le merle, *Cinq études* 41), while Anna Komnene (An.Konn. 2:155.8) gives the title doux of Paradounabon to Leo Nikerites.

The origin of the administrative unit (katepanaton or doukaton) of Paristrion-Paradounavis is obscure. Bănescu was inclined to think that Paristrion existed from the time of John I Tzimiskes, whereas Zlatarski thought that it was created only in the mid-11th C. In any event, it did not exist at the end of the 12th C., when Niketas Choniates (Nik.Chon. 127.89) applied the name Paristrion to the region of Branicevo and Belgrade.

**PAROIKIA** (παροικία), a “local” church and its district, under the authority of a bishop. The term was in use from the 3rd C. to designate both an episcopal district and a parish of the Western type.

LIT. Beck, *Kirche 83*.

**PAROIKOS** (παροίκος, lit. “one who lives nearby,” “stranger” in the Septuagint), the general name for the dependent peasant in Byz. from the 10th C. through the end of the empire, analogous, but not identical, to the serf (see SERİF) of medieval western Europe. While the word paroikos is of classical origin, it appears only infrequently in Byz. sources before the 10th C., thus rendering the word’s evolution far from clear. The New Testament employs paroikos to mean a temporary resident or foreigner, and consequently, through the 11th C., the word often implied a recent settler. Since a constitution of Anastasios I (Cod.Just. I 34.1) speaks of georgoi (see COLONI), paroikoi, and emphyteutai (see EMPHYTEUSIS), while a novel of Justin II (Zepos, *Jus* 1:2.8–9) speaks of georgoi, misthotai, and emphyteutai, there is perhaps an equivalence between paroikos and misthotes (see MSTITHAS). Anastasios (Cod.Just. I 2.4) forbade application of the paroikikon dikaios (“law of the paroikoi”) to church property; in the Latin version
of Justinian I’s novel 7.1, this is rendered as *colonoarium jus*. The reference in Theophanes (Theoph. 486.30) to the *paroikoi* of charitable foundations, churches, and imperial monasteries suggests that *paroikoi* were settlers on the properties of large landowners.

From the mid-10th C. onward, references to *paroikoi* became very common, with *paroikoi* appearing as a growing section of the peasantry, gradually overtaking the previously dominant independent peasant of the village community. According to a decision of Kosmas Magistros and the Peira (152–3), *paroikoi* were peasants who received land to cultivate based on an agreement with the proprietor; they could neither alienate the land, nor make any claim on it should they leave or should the proprietor ask them to leave; after 30 (or 40) years they could not be removed from the *stasis*, though this heralded no change in their status or obligations to the proprietor. On the other hand, evidence from the 11th C. onward indicates that the status of *paroikoi* was becoming hereditary, and the obligation of *paroikoi* to their lords usually appears less as a simple rent, than as a collection of state charges and *corvées* required by the lord instead of by the fisc. The nature of the dependent status of *paroikoi* remains ambiguous. During the 13th and 14th C., when almost all peasants appear to have been *paroikoi*, there is still evidence of communities of *paroikoi* acting as a corporate entity and of individual *paroikoi* often acquiring and alienating *gonikon* land.

---

**PARORIA** (*Paroú̂ria*, lit. “borderlands”), site of a group of monastic communities that flourished in the 14th C. on the frontier between Byz. and Bulgaria. The location of Paroria has been much disputed; the tendency of recent scholarship is to identify Paroria with the Strandža mountain range on the border between present-day Turkey and Bulgaria, although F. Halkin (*Byzantion* 31 [1961] 119, n.1) argues that it is impossible to specify a precise site. Gregory *Sinaítes* moved to Paroria ca.1330 and founded four lavras, the largest on Mt. Katakeryomene. Tsar Ivan *Alexander* became the patron of this lavra, providing funds to build a church, cells, and tower. Gregory brought with him the Athonite tradition of *hesychasm*, which he transmitted to both the Greek and Slavic monks who flocked to the region (A.-E.N. Tachíos, *Cyrillomethodianum* 7 [1983] 118–22). Among the distinguished monks who had their spiritual formation at Paroria were David Dishipatós, Theodoros of Túrnovo, Romylós of Vidin, and the future patriarch Kallistos I.
