Capital of the Byz. Empire, Constantinople (Константинополис, Turk. Istanbul) was founded by Constantine I in 324 on the site of the Greek city of Byzantium and dedicated on 11 May 330. The creation of imperial seats of government in the provinces was in line with the policy of the Tetrarchy; Diocletian had already established his residence in nearby Nikomedea. If Constantine was not satisfied with Nikomedea, it was probably because he considered Byzantium to be strategically more advantageous. It commanded access to the Black Sea and lay at the juncture of two military highways, the European Via Egnatia and the road leading from Chalcedon to Nikomedea and points farther east. Yet the site of Byzantium also had the great weakness of being unprotected on the landward side by any natural barrier—a factor that came into play barely 50 years later and posed thereafter a constant threat.

Constantinople was formed by the expansion of Byzantium. The new center of imperial authority, consisting of the complex of the Great Palace and Hippodrome, was placed within the ancient city. From there a colonnaded street, already built by Septimius Severus, ran to the old city gate. Constantine laid out a circular forum outside the gate and continued the main artery (later named Месе) in a straight line westward. About 1.2 km west of the forum a Capitolium was set up. There the street forked, one arm extending southwest to the Golden Gate (near the mosque Isakapi Mescidi; to be distinguished from the Theodosian Golden Gate), the other northwest to meet a new line of walls that described an arc from the Propontis to the Golden Horn, roughly from the modern quarter of Samatya (Псаматия) to that of Cibali. No maritime defenses were put up since at the time there was no threat from the sea.

Constantine envisaged a sharp increase in the population and made arrangements for grain supply from Egypt amounting to 80,000 rations—perhaps a target rather than the figure requisite at the time. Indeed, the population did climb steeply in the 4th–5th C., a process that is reflected in gradually expanded harbor capacity, granaries, and water supply. It is difficult to determine when it reached its peak or to estimate a maximal population figure (opinions have ranged between 250,000 and 1,000,000). Clearly, so large a center of consumption could be maintained only thanks to a complex and potentially vulnerable system of provisioning dependent on Egypt. In addition to the subsidized supply of bread (and oil?) such comforts as were expected in the biggest cities (i.e., luxurious public baths and entertainment in theaters and the circus) attracted people to Constantinople.

The oft-repeated statement that Constantine
willed his new residence to have from the start a purely Christian character is not substantiated by the evidence. The old pagan temples on the Acropolis and elsewhere were not disturbed and the Capitolium, which may be attributed to Constantine, had a clearly pagan character. Constantine probably built no more than three churches: St. Irene to serve as cathedral, and two martyria dedicated to local martyrs, St. Akakios (near the Golden Horn) and St. Makarios in the cemetery area outside the land walls. The Church of the Holy Apostles was built by Constantius II next to Constantine’s mausoleum.

The Gothic invasion and the defeat of the emperor Valens at Adrianople (378) served to underline the vulnerability of Constantinople and necessitated new defensive measures, esp. to protect the water supply only recently guaranteed by the construction of a network of aqueducts extending as far as Bizye in Thrace and possibly farther west, a distance of some 100 km. It was probably to this end, and not because of a multiplication of exposed suburbs, that by 415 the land walls were extended 1.5 km to the west of the Constantinian circuit. The wide belt of land that was added to the city appears to have been sparsely
populated and much of it was taken up by cemeteries. Three enormous open-air cisterns were there—with a total capacity of approximately 1,000,000 sq. m—those of Aetios (421), Aspar (459), and St. Mokios (ascribed to Anastasios I). Somewhat later, a forward defensive line was built from Selymbría to the Black Sea at a distance of 65 km from the city: this was the so-called Anastasian or Long Wall, 45 km long. Fairly effective for a time, it was abandoned in the 7th C. because of the difficulty of keeping it manned and repaired.

The emperors of the Theodosian line made a sustained effort to embellish Constantinople and provide it with further public works such as granaries and the great Theodosian harbor on the Propontis. Simultaneously members of their family and government officials invested heavily in real estate, building for themselves mansions of princely magnificence. The only extant statistical account of the city, the Notitia urbis Constantinopolitanae, dates from this period (ca. 425): it describes briefly the 14 urban Regions and lists the principal monuments contained in each one. Twelve of the Regions were within the Constantinian walls; the 13th was at Sykai (Galata), the 14th at an unknown location (Eyüb?) up the Golden Horn. All in all there were 5 palaces, 14 churches, 8 public and 153 private baths, 4 forums, 4 harbors, 52 major colonnaded streets, 322 other streets, and 4,388 domus (substantial masonry houses?). Multistory tenement houses clearly existed, for their height was limited by law to 100 ft., and specific regulations protected the right to a view of the sea, governed the distance between houses, the width of streets, etc. (Cod. Just. VIII 10.12, reign of Zeno). Constantinople was becoming overcrowded.

The second half of the 5th C. ushered in a period of mounting civil strife and frequent fires,
the most serious being that of 465, which destroyed about half the city. Circus riots became common: the Nika Revolt of 532 left the center of the city in ashes—allowing Justinian I to indulge his passion for building. Procopios (Buildings, bk.1) provides a detailed description of Justinian’s (and Justin I’s) constructions, which suggests, apart from such public buildings as had to be rebuilt after the fire, a shift towards churches, 33 of which are mentioned. The churches built or rebuilt under Justinian include Hagia Sophia, Sts. Sergios and Bacchos, and St. Irene. Another large church built in the Justinianic period was St. Polyeuktos. The population of the city was, however, gravely depleted, perhaps halved by the plague of 542.

Building activity at Constantinople continued until ca.600, then ground to a halt. In 618 grain supply from Egypt was permanently discontinued. In 626 Constantinople suffered its first siege, the cutting of its major source of water (restored only in 768), and the devastation of both its European and Asiatic suburbs. In 674–78 Arab fleets blockaded it. In 715 Anastasios II, foreseeing another Arab attack, expelled all inhabitants who were unable to lay up provisions for three years: only a shrunken population could have survived the Arab siege of 717–18. In 740 a terrible earthquake threw down a considerable portion of the walls; the catastrophic plague of 747 followed.

Practically no building, other than defensive, is recorded for the period ca.600–ca.780. By the end of the period of Iconoclasms, Constantinople must have had a population of a few tens of thousands living amid the ruins of past glories. Only one public granary appears to have survived, and one harbor (out of four) continued to function for nonmilitary purposes. The great public baths and theaters were abandoned. Limited construction was resumed under Irene; Theophilos repaired the sea walls; Basil I undertook a sustained effort of rebuilding mostly churches that had fallen into ruin (31 are named). The pattern of imperial munificence, already foreshadowed by Justinian, shifted decisively to imperial palaces, churches, and hospices for the poor and the ill; what had earlier been the “civic” sphere was abandoned.

Doubtless Constantinople started to recover in the 9th C., with a gradual rise in population and an expansion of commercial and artisanal activities. The Book of the Eparch, while silent about many crafts, mentions the importation of commodities both from the provinces and foreign countries (silk, linen, ungents, honey, wax, soap). The textile industry was active, but exports severely discouraged. Shops along the main street were beginning to charge high rents (N. Oikonomides, DOP 26 [1972] 345–55). Probably the opening up of the Black Sea by the Kievan princes, for all the dangers it brought (witness the attacks on Constantinople in 860, 941, and 1043), benefited trade. Even so, little was built in the 10th C.

The 11th–12th C. witnessed further expansion. Artisanal occupations became profitable, tradesmen exerting a growing influence on political affairs, and new crafts were developed (e.g., the manufacture of bronze doors), some of which were exported to Italy. Of greater importance was the installation of foreign trading colonies. While the Rus’ in the 10th C. were kept at arm’s length at St. Mamas on the lower Bosporos, the Amalfitans, Venetians, Pisans, Genoese, Anconitans, and Germans gained concessions along the Golden Horn, opposite Galata, acquiring their own landing facilities, storehouses, and churches. The size of the colony of Latins in the late 12th C. has been estimated at about 7,000 (Hendy, Economy 593f), although much higher figures are given in some sources.

In terms of construction a feature of the 11th–12th C. is the establishment by emperors and members of the aristocracy of great urban “abbeys”—monasteries in name, they also served educational, welfare, and financial functions. Such were the monasteries of the Virgin Peribleptos, of Kosmas and Damianos, of the Mangana, and of Christ Pantokrator, and the orphanage of St. Paul (enlarged by Alexios I), the last so big that a tour of it required a whole day.

The great fire of 1203 and the Latin occupation (1204–61) destroyed the prosperity of the Komnenian city, which was subjected to systematic spoliation. The initial recovery under the Palaiologoi is mostly reflected in further imperial and aristocratic monasteries, some of which survive (St. Andrew in Krisei, the Virgin Pammakaristos, Christ of the Chora, etc.). By the middle of the 14th C. decay had set in. Travelers from abroad (Clavijo, Pero Tafur, Bertrand de la Broquière, Buondelmonti) describe a partially deserted city contrasting with the bustle of Genoese
Pera across the water. When it was stormed by the Turks in 1453, Constantinople probably had a population of 50,000.

-C.M.

CONSTANTINOPLE, COUNCILS OF. Constantinople was the site of many ecumenical and local councils.

**CONSTANTINOPLE I.** Summoned by Theodosios I (May–June 381), this second ecumenical council of some 150 bishops had as its object the final settlement of the Arian controversy. Although no Western representatives attended, by 451 the council was deemed important enough to be universally accepted as ecumenical. Under the presidency of Meletios, bishop of Antioch (360–81), the synod endorsed the faith of the First Council of Nicaea as well as the full consubstantiality and divinity of the Holy Spirit. In effect, both Pneumatomachoi and followers of Apollinaris were condemned. Probably the so-called Niceno-Constantinopolitan Creed, which Chalcedon later attributed to the council, was originally a local baptismal profession of faith containing the Nicene formula. It may in fact have existed as early as 362. Finally, the council proclaimed Constantinople as the second see of Christendom with honorary precedence over all other sees, except the elder Rome (canon 3). The basis of this primacy, as the canon succinctly states, was the city’s political standing—"because it is New Rome." The acts of the council either did not survive, or, more probably, never existed.

-A.P.

**CONSTANTINOPLE II.** The fifth ecumenical council (May–June 553) was convened by Justinian I to reconcile the proponents of Monophysitism by convincing them that the Council of Chalcedon had not lapsed into Nestorianism or denied the Council of Ephesus. Therefore the council condemned the Three Chapters (the person of Theodoret of Edessa, and some writings of Theodoret of Cyrrhus and Ibas of Edessa), which the Monophysites had viewed as anti-Cyrian and hence Nestorian. Although initially apprehensive that the council was rejecting Chalcedon, Pope Vigilius eventually accepted the council’s decisions (Dec. 553). As a matter of plain fact, the posthumous condemnation of the three 5th-C. authors of the Three Chapters reaffirmed and preserved the authority of Chalcedon and Cyril of Alexandria. Thus the modern criticism (C. Moeller) that the council’s Neo-Chalcedonian opposed authentic Chalcedonian Christology and somehow betrayed Chalcedon is unwarranted. The council also anathematized Origen. This was aimed at the Origenist monastic parties of Egypt and Palestine, who had proposed their own heretical solution to the Christological problem.

Reconciliation, however, proved impossible, as Monophysitism was by then too deeply entrenched to be influenced by the emperor’s desperate bargains or anti-Nestorian zeal. The Egyptians, as Sophronios of Jerusalem put it, were not a race to change their minds or end their hostility toward the central government of Constantinople.

-A.P.

**CONSTANTINOPLE III.** The sixth ecumenical council (7 Nov. 680–16 Sept. 681) was convoked by Constantine IV to settle the controversy over Monothelitism. This doctrine was used by the government early in the 7th C. to conciliate the dissident Monophysites. The council drew up a comprehensive decree in which the reality of Christ’s two wills and two energeiai (operations), one divine and the other human, were acknowledged and declared inseparably united to one another (*Mansi* 11:637B). For if there were two natures in the incarnate Christ, as Chalcedonian
Christology affirmed, there had to be two wills. All those accused of Monotheletism were anathematized, including Pope Honorius (625–38), who had given his written approval to the doctrine, and four patriarchs of Constantinople (e.g., Sergius I and Pyrrhos). The earlier opponents of Monotheletism, Maximos the Confessor, Pope Martin I, and Sophronios of Jerusalem, were thus vindicated. To complete its work and to issue disciplinary canons, the Trullo council convened in 691–92.

—A.P.

**COUNCIL OF 869–70.** Basil I convoked this council (5 Oct. 869–28 Feb. 870) to settle the Photian schism and to restore communion with Rome. In the presence of three papal legates, Patr. Photios was deposed and anathematized and his predecessor Ignatios reinstated. Despite protests from the Roman delegation, it was announced at the council that Bulgaria was placed under the ecclesiastical jurisdiction of Constantinople. In addition, 27 canons were issued endorsing such matters as the theory of the Pentarchy and the veneration of images (canons 3 and 21).

Following the restoration of Photios, the decisions of 869–70 were annullcd at the council of Constantinople of 879–80 (see below). The council of 869–70 was therefore omitted from the list of ecumenical councils recognized by the Latin church, until the second half of the 11th C. After the dispute with Michael I Keroularios, the West began to include it among the ecumenical councils. This interpretation was due (as Dvornik conclusively demonstrated) to Western canonists, who thought the council had not been annulled in 879. Except for a synopsis of the original Greek text (Mansi 16:308–420), the council’s acts survive only in the Latin translation of Anastasius Bibliothecarius.

—A.P.

**COUNCIL OF 879–80.** This council composed of 383 bishops solemnly recognized Photios as patriarch and annullcd the decisions of the anti-Photian council of Constantinople of 869–70 (see above). As Dvornik has shown, its rehabilitation and vindication of Photios definitively ended the Photian schism, because the pope, John VIII, never repudiated the council’s decisions, to which two papal legates had subscribed. Thus the “second schism” described by subsequent “legend” never occurred. On the contrary, the council succeeded at achieving reunion and was even recognized in Rome as “ecumenical” until the Gregorian Reform, when the official Roman tradition was abandoned in favor of the council of 869.

Likewise with Rome’s full endorsement, the council anathematized anyone who would tamper with the original text of the creed (Mansi 17:520E–521A). Although the “privileges” of Rome were recognized, the canonical and judicial authority of pope and patriarch were defined in terms of equality (canon 1). Papal jurisdiction over the Byz church was thus excluded. The council’s decisions were inserted in every subsequent Orthodox collection of canon law and normally followed those of the first seven ecumenical councils. It is referred to as “ecumenical” by some Byz authors.

—A.P.

**LOCAL COUNCIL OF 754.** See Hieria, Local Council of.

**LOCAL COUNCIL OF 815.** This council, which met in Hagia Sophia in spring 815, marks the second restoration of Iconoclasm. The iconodule patriarch Nikephoros I was deposed shortly before the council and replaced by the Iconoclast Theodotos I. Promoted by Leo V, who was convinced that the military disasters of his imperial predecessors, Irene and Nikephoros I, were caused by their support of images, the council repudiated the decisions of Nicaea II (787) and reaffirmed those of Hieria (754). Although a committee headed by John (VII) Grammatikos had assembled a florilegium in preparation for the council, its renewed opposition to image venera-
tion was based on a repetition of the Christological arguments of Hiera: an icon either depicts the uncircumscribable Godhead, or else divides the Lord’s humanity from his divinity, thus compounding the evil (Ostrogorsky, infra 50). The council’s doctrinal definition (Horos) called icons “spurious” and ordered their destruction, but (unlike Hiera) refrained from declaring them idols. Only fragments of the acts of 815 survive.

LIT. P.J. Alexander, “The Iconoclastic Council of St. Sophia (815) and Its Definition (Horos),” DOP 7 (1953) 35–66. — A.P.

LOCAL COUNCIL OF 843. Summoned by the widowed empress Theodora on the first Sunday of Lent (11 March 843), this council marks the official destruction of ICONOCLASM and the solemn restoration of image veneration in the Byz. church. The deliberations of this assembly are lost. Its restoration of images was understandably based on the authoritative decisions of NICAEA II (787). Hence its excommunication of all those who stubbornly clung to the belief that the incarnate Lord was “indescribable.” The council also deposed the patriarch JOHN VII GRAMMATIKOS, replacing him with METHODIOS I. Later the liturgical text of the SYNODICON OF ORTHODOXY was composed to commemorate the TRIUMPH OF ORTHODOXY.

LIT. C. Mango, “The Liquidation of Iconoclasm and the Patriarch Photios,” in Iconoclasm, 139–40. — A.P.

LOCAL COUNCIL OF 920. The council settled the controversy over the TETRAGAMY of LEO VI, which had divided the Byz. church for nearly two decades. In effect, it successfully resolved the schism between, on the one hand, NICHOLAS I MYSTIKOS and his followers, who had been unwilling to sanction either the union of LEO VI with ZOE KARBONOPISIA or its issue, and, on the other, the bishops supporting EUTHYMIOS, who had granted the desired dispensation. Specifically, fourth marriages were explicitly banned by the council’s TOMOS OF UNION (9 July 920). Although third marriages were condemned, childless widowers under 40 years of age were exempt, while those with children were subject to a four-year penance. The council, according to Nicholas’s correspondence (ed. Jenkins and Westerink, ep.94, 361.20–22), also made provisions for restoring bishops expelled from their sees during the controversy.

LOCAL COUNCIL OF 1094. This council was convened by Alexios I in Blachernai in order to resolve the case of LEO OF CHALCEDON. The chronology of the synod is obscure: Grumel (RegPatr, fasc. 3, no.967) and Beck (Kirche 57) date it in 1092, Gautier (infra) at the end of 1094. A. Gla- binas (He epi Alexiou Komnenou [1081–1118] peri hieron skeuon, keimelion kai hagion eikonon eris [Thessalonike 1972] 179–82) at the beginning of 1095.

LOCAL COUNCIL OF 1156–57. The two sessions, 26 Jan. 1156 and 12 May 1157, met to discuss the teaching of the patriarch-elect Soterichos PANTEUGENOS concerning Christ’s sacrifice on the Cross. The council affirmed through its spokesman, NICHOLAS OF METHONE, that the sacrifice of the Cross and the eucharistic sacrifice (which were one and the same) were offered to the entire Trinity, rather than to the Father alone as Panteugenos maintained. The council reasoned that the redemptive or “economic” activity of God, of which Christ’s oblation was the expression, was a Trinitarian action involving all three persons of the Trinity. In addition, the council (quoting the liturgical formula of the CHEROUBIKON) argued because of the single hypostatic union of Christ, the Logos both “offers and is offered, receives and is received.” The anathemas condemning Panteugenos were entered into the SYNODICON OF ORTHODOXY (Gouillard, “Synodikon” 72–74, 210–15).

LOCAL COUNCIL OF 1166–67. This council involved a series of meetings summoned by Emp. MANUEL I KOMNENOS to pronounce on the meaning of the text, “The Father is greater than I” (Jn 14:28). The origins of the controversy lie in the active political and ideological relations with the West during Manuel’s reign. It is usually agreed that his ambassador, DEMETRIOS OF LAMPE, introduced this controversy in Byz. after discussing the question with Western theologians during his mis-
sions to Italy and Germany. In the debate, the opposition argued that the Son could not be inferior to the Father because Christ’s humanity had been deified and was thus “one” with his divinity. The council found this interpretation close to Monophysitism and unacceptable. Specifically, the reality of Christ’s humanity, as concrete humanity—“created and mortal”—was inferior to God. The hypostatic union of Christ’s two natures (as defined by the Council of Chalcedon) did not erase the differences between Christ’s humanity and divinity; his divinity was greater. Likewise, in Trinitarian theology proper, the Father was considered “greater” than the Son inasmuch as he is hypostatically the unique cause, the *principium divinitatis* of both the Son and the Spirit. Finally, the council also found unacceptable the following three interpretations: that the Johannine text separated intellectually Christ’s human from his divine nature; that it underlined his *kenosis*, or condensation, during the Incarnation; and that it indicated his position (due to his shared humanity) as God’s favored Son. The council’s condemnation of the opposition was subsequently inserted in the *Synodikon of Orthodoxy*. The marble plates on which its decision was inscribed were placed in Hagia Sophia (C. Mango, *DOP* 17 [1963] 317–39). The problems of this council continued to be discussed during the session of Feb. 1170.

**Local Council of 1285,** also known as the Second Council of Blachernai (5 Feb.–Aug. 1285). Presided over by Patr. Gregory II, the council was convoked at Blachernai to decide whether the expression “from the Son” (Lat. *filioque*) was equivalent to the patristic phrase “through the Son” advocated by the Unionist ex-patriarch John XI Bekkos, who held that the hypostatic existence or procession of the Spirit was “through” or “from” the Son. The council pronounced this unacceptable, for the Spirit’s eternal mode of origin is an act of the hypostasis of the Father and not of the essence. Rather than revealing the Spirit’s personal procession, the phrase “through the Son” simply refers to the Spirit’s energetic, eternal manifestation by the Son—an activity common to all three divine persons (*Tomos, PG* 142:240C–D). Only in this sense is the Spirit said to proceed through or even from the Son (*ex patre filioque*). Besides condemning Bekkos, the assembly formally repudiated the Council of Lyons (1274). Although several ecclesiastics subsequently opposed the synodal *Tomos* of 1285, penned by Gregory himself, the church never altered or rejected it. Thus it holds a permanent place in Orthodox tradition. The council, in fact, is of major importance as the only official conciliar reaction of Byz. to the *filioque*. It should be noted that the same distinctions among energy, hypostasis, and substance, which Gregory made and the council endorsed, were later elaborated and developed by Gregory Palamas.

**Lit.** Papadakis, *Crisis in Byz.* 62–101, 155–67 (tr. of *Tomos*).

**Local Council of 1341.** The council was convoked (10 June) under the presidency of Emp. Andronikos III to resolve the dispute between Gregory Palamas and Barlaam of Calabria. Both Patr. John XIV Kalekas and future Emp. John VI Kântakouzenos were present. The one-day session was unfavorable to Barlaam, who therefore soon left Constantinople. A second council, with the same participants, convened in Aug. and condemned Gregory Akindynos, who had continued the struggle on Barlaam’s departure. Since Andronikos had died days after the June debate, Kantakouzenos presided.

The synodal *Tomos* published after the Aug. meeting is unmistakably Palamite in content (cf. *PG* 151:680B, 688C), reflecting the victory won for HESYCHASM. Because it concentrates solely on the June meeting and fails to mention the second council in Aug. and its formal condemnation of Akindynos, its authenticity has been questioned. Indeed, M. Jugie (*DTC* 11 [1932] 1778–84) criticized the document as unreliable, a tampered version of the June debate that Kantakouzenos had forced Kalekas to sign. J. Meyendorff, however, has argued that the political rivalry between
Kalekas and Kantakouzenos for control of the regency explains the shape of the Tomos. Specifically, Kalekas refused to present the Aug. synod as official because his adversary had usurped an imperial prerogative by presiding over it; acknowledging the second council would have implied support of Kantakouzenos’s imperial ambitions. Kalekas, therefore, accepted only the earlier synod—excluding the Aug. session—simply because it was the one at which Andronikos had presided, hence the shape of the Tomos.

—A.P.

LOCAL COUNCIL OF 1347. This council of 8 Feb. reaffirmed the decisions of 1341, which had settled the controversy between Gregory Palamas and Barlaam of Calabria over hesy- chasm. These decisions had been overturned by the regency of Anna of Savoy and Patr. John XIV Kalekas during the long civil war (1341–47). The synodal Tomos of 1347 actually incorporates the decisions reached by an earlier assembly (2 Feb.), days before the triumphant entry of John VI Kantakouzenos into Constantinople. Favoring Palamism, these decisions include the deposition of Kalekas and the excommunication of AKINDYNOS. The text gives a Kantakouzenist version of the civil war by blaming Kalekas alone, rather than Anna or Alexios Apokaukos, both of whom are viewed as the patriarch’s victims. Aside from its “legitimist” interpretation of the war, the Tomos also ratifies the doctrinal decisions of the local council of Constantinople of 1341 (see above) and lifts Kalekas’s excommunication of Palamas. The document contains signatures of three sets of bishops: those present on 2 Feb., those who signed before the enthronement of the new hesychast patriarch Isidore I (17 May), and those who signed afterward, including Palamas as newly elected archbishop of Thessalonike.

—A.P.

CONSTANTINOPLE, MONUMENTS OF. The architectural monuments of Constantinople may be considered from the point of view of the following three topics: public monuments, cisterns, and walls. The principal churches and palaces are the subject of independent entries.

PUBLIC MONUMENTS. The architectural development of Constantinople may be divided into three main periods.

First Period (4th–early 7th C.). Constantinople was built as a late antique city with all the normal features of contemporary urbanism, only more magnificent. A straight avenue bordered by colonnades (EMBOLOI) was obligatory: at Constantinople this was the MESE, which ran from the arch
of the Milion near the Hippodrome to the Capitolium, a distance of 1.7 km, then as far again to the Constantinian Golden Gate. This longitudinal avenue was crossed at right angles by another (later called emboloi tou Dominon), with a tetrapylon at the intersection. At intervals along the main avenue were squares, or forums (see Agora), each adorned with suitable monuments. Two of these were inherited from ancient Byzantium, namely the Strategion, later remodeled by Theodosius I, and the Tetrastoon, which became the Augustaion.

The umbilicus of Constantine's city consisted of a circular forum (called simply ho Phoros) bordered by porticoes. At its center stood a column (see Columns, Honorable) made of drums of porphyry and supporting a statue of the emperor wearing a radiate crown. The column is still preserved in a truncated form (Turk. Cemberlitaş). On the north side of the Phoros was the Senate House with a porch of porphyry columns; facing it on the south was a monumental fountain (nymphaeum). The next forum to the west (Forum Tauri, corresponding to modern Beyazit) was laid out by Theodosius I in imitation of Trajan's Forum in Rome: it had a triumphal arch on each side (parts of the west one are preserved; see Arch, Monumental), a basilica and, on axis, a gigantic column covered with spiral reliefs commemorating the emperor's military exploits (destroyed ca.1500).

The next two forums to the west, the Forum Bovis (ho Bous) and the Asmavrios, are poorly documented. Then, on the city's seventh hill (Xerolophos), was the Forum of Arkadios, with a second spirally decorated column (pedestal preserved). At the western limit of the walled city, the Golden Gate (both Constantine's original and that constructed by Theodosius II farther west) had the form of a triumphal arch; evidence indicates that the processional way linking the two gates also received a monumental treatment.

Nearly every emperor from Constantine I to Phokas commemorated his reign by erecting monuments in the capital. Beyond those already mentioned, only two survive: the so-called Column of the Goths on the Seraglio Point, which may be Constantine's, and Marcian's Column. The colossal Corinthian capital discovered in 1959 in the courtyard of the Seraglio has been linked to a column of Leo I and the Barletta Colossus (U. Peschlow in Studien Deichmann 1:21–33). Justinian I was glorified by a column and equestrian statue in the Augustaion; Justin II erected a column of his own in the quarter called Deuteron and started to build another one (not completed) near the baths of Zeuxippos; Phokas put up a column near the Tetrapylon. In addition to imperial monuments, several statues of pagan gods, mythological figures, philosophers, and so on were imported from other cities by Constantine and his successors and placed in public baths, forums, the Hippodrome, and elsewhere. New honorific statues of persons other than emperors were also made, the last recorded one being a statue of Niketas, cousin of Herakleios (ca.614). A monumental weathervane called the Anemodoulion was decorated with bronze statues. These display monuments were put up for the city's adornment but also to express certain ideological messages (e.g., imperial victory, the wisdom of the senate, etc.) and to provide an appropriate setting for ceremonial occasions.

Public buildings of an ornate character included the two Senate Houses; the Basilike next to the Augustaion, which appears to have been a vast stoa with a gilded roof surrounding a central courtyard; the theaters (of which little is known); the Roman amphitheater (Kynegion) and the Hippodrome; the public baths, the biggest of which may have been the Constantinai (begun 345, completed 427) and which also included the Karosianai (built by Valens in 375), the Arkadianai (395), the Honorianai (412), the Helenianai, and the bath of Bagisteos (started by Anastasios I, completed by Justinian in 528) in addition to the famous baths of Zeuxippos and the ancient bath of Achilles near the Strategion. The construction of baths was a favored sector of imperial munificence because of the popularity of bathing.

Also constructed in the capital during the 4th through 6th C. were the Great Palace and the Hormisdas, Antiochos, and Lausus palaces. The principal churches erected in this period were St. Mary of Blachernai and St. Mary at Chalkoprateia, the Basilica of St. John at the Studios Monastery, St. Polyeuktos, Hagia Sophia, St. Irene, Sis. Sergios and Bacchos, and the Holy Apostles.

Second Period (7th–12th C.). The construction of display monuments ended in the early 7th C., when the time city or, at any rate, its main
avenues and squares must have resembled a vast stage set. The "dark age" that followed caused the abandonment of earlier urbanistic practices, the gradual ruination of public buildings, and a shift in popular mentality: the monuments that remained were no longer understood for what they were and assumed a mythic character. They were invested with occult power, either beneficent or maleficient, and interpreted as presages of things to come. The cryptic messages they conveyed could be decoded only by "philosophers." It is in this manner that they are interpreted in the PATRIA OF CONSTANTINOPLE.

The so-called Macedonian Renaissance brought a few instances of the collection and reuse of earlier pieces of sculpture and one recorded case of the restoration of a monument (the masonry obelisk of the Hippodrome by Constantine VII) but did not return to the monumental tradition of antiquity. The Macedonian and Komnenian dynasties, however, constituted a period of considerable construction activity, during which the MANGANA and BLACHERNAI palaces were built in Constantinople and the BRYAS palace in the suburbs. New churches and monasteries of this time include the NEA EKKLESIA, MYRELAION, LIPS MONASTERY, KALENDERHANE CAMII, and PANTOKRATOR MONASTERY.

Third Period (13th–15th C.). Following the Fourth Crusade and the period of Latin occupation of Constantinople (1204–61), during which numerous buildings were damaged or fell into disrepair, a surge of new construction occurred under Michael VIII and Andronikos II. Perhaps to symbolize his work of restoration, Michael VIII erected a group of statuary near the Church of the Holy Apostles representing the emperor offering a model of the city to St. Michael. In addition to the palace of TEKFUR SARAYI, several new monasteries and churches were built, most notably the South Church at the Lips monastery, PAMMAKRISTOS, CHORA, and the BEBAIAS ELPIDOS NUNNERY.

CISTERNs (κυρτότερα). Constantinople, with no rivers, few springs, and fast runoff of rainwater, needed reservoirs to tide the city over dry spells and lengthy sieges, when AQUEDUCTs might be threatened. Water from forests west of the city was introduced into open cisterns (total capacity approximately 900,000 cubic m [Janin, infra 202]) and more than 80 covered cisterns (capacity approximately 160,000 cubic m). Constantinople's daily consumption of water was about 10,000 cubic m. Most cisterns were built between the late 4th C. and early 7th C. as population burgeoned. The largest open cistern was that of ACTEOS (probably the eparch of the city in 419); built in 421, it measured 244 × 85 × about 14 m deep and had a capacity of between 250,000 and 300,000 cubic m. Covered cisterns included BINBAIREK (Philoxenos), whose superposed columns reached a height of 12.4 m and were set in 16 rows of 14 columns each (capacity about 40,000 cubic m), and the BASILIKE (Yerebatan Sarayi), whose 336 columns, 8 m high and set in 12 rows of 28 each, supported a chamber capable of holding approximately 78,000 cubic m.

The major cisterns, usually placed on hills, sup-
plied water to about 40 public baths as well as monasteries and churches. The use of columns rather than the brick and cement piers used by the Romans reduced maintenance costs; impost blocks make an early appearance in cisterns. Hydraulic cement (opus signinum) lined the structures.

—K.M.K., W.L.

WALLS. The first fortifications of Constantinople, on the land side only, were started by Constantine I and completed by Constantius II. In the reign of Theodosios II the Land Walls were extended about 1.5 km to the west so as to describe a huge arc, 6 km long, extending from the Propontis to the Golden Horn. Completed by 413 and repaired on numerous occasions (notably after the earthquakes of 447, 740, 989, etc.), they continued to protect the city throughout the Byz. period and parts of them are still standing. They consist of an inner wall 11 m high with towers at intervals of about 70–75 m, a lower outer wall also furnished with towers, and a moat. The walls are built of bonded masonry with bands of brick (five successive courses going right across the wall) alternating with bands of cut-stone facing, enclosing a core of mortared rubble. The only section of the Theodosian walls that has not survived was in the area of Blachernai, where, as documented both in texts and visible remains, their original line was brought forward by Herakleios to enclose the Church of the Virgin and by Manuel I to protect the imperial palace. The Land Walls were pierced by six main gates, including the Golden Gate, and a number of secondary posterns.

The Sea Walls, both along the Propontis and the Golden Horn, consist of a single line of fortifications and are today poorly preserved. They were first built in 439 and repaired many times, notably under the emperors Anastasios II and

Theophilos. About 65 km west of Constantinople the LONG WALL was built to defend the imperial capital from attack from that direction.

CONSTANTINOPLE, PATRIARCHATE OF. Constantinople was one of the four major patriarchates of the eastern Mediterranean.

History. According to legend, the see of Constantinople was founded by the apostle Andrew, who ordained a certain Stachys as the first bishop of Byzantion. However, the information concerning the first bishops of the city, including two contemporaries of Emp. Constantine I, Metrophanes and Alexander, is mostly legendary. Canon 3 of the Council of Constantinople (381) established Constantinople’s place of honor in the ecclesiastical hierarchy right after Rome; nevertheless, the patriarchate of Constantinople (if we can believe the statement of Sokrates [HE 5.8.14] that the bishop of Constantinople was already called patriarch at this time) had under his jurisdiction only the “megalopolis” and probably Thrace, whereas Pontos, Cappadocia, and Asia formed independent eparchies. Canon 28 of the Council of Chalcedon (451) confirmed the precedence of Constantinople over the patriarchates of Antioch and Alexandria and its jurisdiction over all of Asia Minor.

The bitter rivalry during the 5th C. between the patriarchates of Constantinople and Alexandria was a major factor—in addition to theological and cultural causes—in the controversy over Monophysitism; the papacy’s support of Constantinople in this conflict contributed much to the defeat of Alexandria. In the 6th C. the political situation in Italy, which was first subordinated to the Ostrogothic kings and then conquered by the Byz. army, paved the way for Constantinopolitan supremacy; this new status was reflected in the acceptance by the bishop of Constantinople of the title “of the New Rome” and esp. Ecumenical Patriarch.

The fall of Alexandria, Antioch, and Jerusalem to the Arabs in the 7th C. deprived these three patriarchates of political significance. The patriarch of Constantinople, however, was unable to profit from this situation and expand his role further, since he was restricted by the same factor that had previously promoted his power, that is, his proximity to the imperial throne. Meanwhile, the papacy, more or less emancipated from oppressive political tutelage, was slowly gaining momentum. From the 8th C. onward the popes assumed an independent attitude toward the Byz. emperors, developed further the concept of primacy, and endeavored to intervene in Byz. internal affairs (Iconoclasm, conflict between the patriarchs Photios and Ignatios, the Tetracygm of Leo VI). Ideologically, Constantinople countered the concept of primacy with the doctrine of the Pentarchy, the theoretical equality of the five patriarchates. For a time the patriarchate of Constantinople, taking advantage of the political power of the emperor, was able to expand its authority: it acquired jurisdiction over Illyricum and southern Italy (8th C.), as well as newly converted Bulgaria (9th C.). In the 11th C., however, Roman influence started to penetrate into the Balkans, then into Syria and Palestine. Tensions between the papacy and the patriarchate of Constantinople came to a head in 1054 with the mission of Cardinal Humbert to the Byz. capital and his excommunication of Patriarch Michael I Keroularios, resulting in a deep conflict between the two churches (see Schism).

After the Fourth Crusade in 1204 a Latin patriarchate was established in Constantinople and the Orthodox patriarchate was forced to go into exile in Nicaea. Following its restoration in 1261 the patriarchate of Constantinople never regained its former splendor. It was beset by controversies over the Arsenites, Union of the Churches, and Palamism, which caused deep rifts among the faithful. Although its theoretical sphere of influence, which extended to Moscow, was much greater than that of the Palaiologan emperors, the patriarchs gradually lost even their authority over Slavic countries. The Serbs, for example, established an independent patriarchate at Pécs in the mid-14th C. Nevertheless the patriarchate of Constantinople survived the political fall of the Byz. capital in 1453.

Organization and Jurisdiction of the Patriarchate. The patriarch was in theory elected by the
metropolitans of his patriarchate, and only they had the power to depose him. The metropolitans, however, were entitled only to nominate a slate of three candidates from whom the emperor would select the new head of the church, and in practice the emperor had the final say in both the appointment and deposition of patriarchs. The patriarch administered the territory under his jurisdiction from his headquarters at Hagia Sophia, the GREAT CHURCH. In theory his right hand and potential successor was the synkellos; in practice the chief offices were held by the priests and deacons of Hagia Sophia—oikonomos, skeuophylax, sakellarios, chartophylax, kanstrisios, referendarios, etc. The metropolitans, whose number varied over the centuries (the Corpus of Laurent records 66 metropoleis), expressed their views through the councils and through the emendousa synodos. The tensions between the officials of Hagia Sophia and metropolitans (V. Tiftixoglu, BZ 62 [1969] 25–72) reflected the conflict between centrifugal and centripetal tendencies. The revenues of the patriarchate of Constantinople came from lands located in various parts of the empire and from donations of the imperial treasury that amounted to between 180 and 200 pounds of gold in the 11th C.

The rights of the patriarch, besides his function as the bishop of the capital, included appeal in both ecclesiastical and secular cases, the stauropegion, and the interpretation and elaboration of canon law. From the 5th C. onward the patriarch of Constantinople played a role in the ceremony of the imperial coronation, but he actually crowned the emperor only in the absence of a senior emperor. In addition, the patriarch wielded an exceptional moral authority, although the extent of his influence depended on the real balance of power between the emperor and the church, the degree of popularity of the patriarch, his connection with the monastic establishment, etc. The theory of two powers—those of the emperor and patriarch—emerges in the Epanagoge but did not find a consistent application in Byz. ideology: the bishops of Constantinople displayed a wide range of behavior, including cowardly subservience to a powerful ruler (Attikos), fruitful collaboration with the throne (Sergios I, Athanasios I), and bold opposition to the imperial will (Michael I Keroularios).

The Patriarchs, 300–1204. From the beginning of the 4th C. to 1204 there were 100 patriarchs; the average duration of a patriarchate was thus nine years. Of these patriarchs, 35 died after resigning or having been deposed and five were deposed temporarily. Data concerning the patriarchs’ social and ethnic background are incomplete: at least one (Fravitas [488–89]) seems to have been a Goth and another (Niketas 1 [766–80]) of Slav origin; four were Italians, three came from Armenia or were of Armenian stock; three from Alexandria (all within the 4th–6th C.); six from Syria, including Theodosios Boradiotes (counted already as Armenian); one from Tarsos, one from Trebizond, five from Cappadocia, Pisdia (?), Phrygia, and Isauria, two from Cyprus, one from Aegina; approximately 12 were natives of Constantinople, even though the origin of some (e.g., Constantine III Leichoudes) has not been definitely established. Very few originated from the Balkans—Paul I was from Thessalonike and Michael III possibly from Anchialos.

Of the 100 patriarchs, 30 were former hegumenoi, hieromonks, or simple monks. L. Breher (6 CEB 1 [Paris 1950] 223) counts 45 patriarchs of monastic background during the period 705–1204, but he evidently included men of other status in this group. The “monastic patriarchs” are unevenly distributed over time: only five in the 4th–8th C.; seven from 815 to 912; only four in the 10th C.; and 14 in the 11th and 12th C. Ten patriarchs were former bishops transferred from other sees—seven of these belong to the earlier period, 341–766; later this practice almost ceased. Another ten patriarchs were former priests. The Constantinopolitan ecclesiastical administration produced 27 patriarchs: at least four were synkelloi, 17 were administrators (skeuophylakes, oikonomoi, sakellarioi, etc.). Distribution of this category over time is also uneven: seven patriarchal officials became patriarchs in the 5th–6th C., whereas the undeveloped 4th-C. administration produced none; the 7th C. presents the highest number—ten in 607–715; only two are known from 730–80 and none in the 9th–11th C. (unless we count the monks and synkelloi Euthymios and Antony III [974–79] as officials). Patriarchal officials reappear in the 12th C.—six between 1111 and 1189.

Among the former laymen were two princes—Stephen, son of Leo VI, and Theophylaktos, son of Romanos I (both within the short period

Based on Grumel, Chronologie 435–37, with modifications.

of 886–956); to their numbers could be added Ignatios, but he was son of a deposed ruler and by the time of his election was a hegoumenos. In addition to these princes, 13 other laymen were elected: four in the 4th–6th C., only one in the 7th C., seven between 784 and 1063, and only one, Basil II Kamateros, the supporter of Andronikos I, during the final 150 years of the period.

The Patriarchs, 1204–1453. Thirty-five patriarchs ascended the throne of Constantinople during these 150 years, for an average reign of seven years. Especially after the Palaiologan restoration, service as patriarch proved to be risky. On account of the tumultuous history of the Orthodox church in this period, fully half of the patriarchs between 1261 and 1453, 14 in all, either were deposed or abdicated under pressure. Seven of these were later reinstated. Reflecting the shrunken boundaries of the empire, virtually all the patriarchs were of Greek ancestry, with the exception of Joseph II, who was Bulgarian. The vast majority of the Palaiologan patriarchs (80 percent) came from a monastic background; a number served as hegoumenoi or metropolitans before being selected as patriarch (F. Tinnefeld, JOB 36 [1986] 89–115). The only layman to become patriarch in this period was John XIII Glykys, a former logothetes tou droumou.

—A.K., A.M.T.

CONSTANTINOPLE, SIEGE AND FALL OF. The Ottoman sultan Mehmed II resolved as early as autumn 1451 to attack Constantinople, but officially proclaimed his intent only in Jan. 1453. By 5 Apr., he positioned an army allegedly 80,000–100,000 strong outside the land walls of Constantinople, while an armada of more than 120 ships patrolled the coastal waters. Constantine XI, with the help of the Venetian commune and other foreign allies (notably the Genoese Giovanni Gustiniano Longo), defended Constantinople with 26 warships and fewer than 7,000 fighting men. The
CONSTANTIUS II (Konstantíus), caesar (from 8 Nov. 324) and augustus (from 9 Sept. 337); born 7 Aug. 317, died Mopsoukrene, Cilicia, 3 Nov. 361. The son of Constantine I and Fausta, he was married three times, to the daughter of Julius Constantius (name unknown), to Eusebia, and to Faustina. Perhaps responsible for the murder of his rivals after Constantine I's death, Constantius was originally assigned Oriens, Pontica, Asiana, and Thrace. He became ruler of the entire empire after the overthrow of Constans I and the defeat of Magnentius in 353. Constantius fought the Persians throughout his reign and waged successful campaigns against the Germans in Gaul and the Sarmatians on the middle Danube. He named Gallus as caesar in 351 and Julian in 355 after the usurpation of Silvanus. Constantius was influenced by moderate Arianism and resisted the urging of his brothers who wanted to recall Athanasios of Alexandria. Constantius tried to restore unity to the church by councils held in Ariminium and Seleukeia in 359–60, but the supporters of the homoousion remained insigntent. Constantius is remembered as a persecutor of the Orthodox. His reign was important in the development of Constantinople, whose senators were granted equality with those of Rome in 357. He was responsible for the construction of the original church of Hagia Sophia; the Chronicon Paschale records his lavish donations at the dedication of the basilica in 360. Constantius died in Cilicia in 361 on his way to the West to deal with the usurpation of Julian. His best-known portrait is on a largitio dish now in Linzgrad (Iskusstvo Vizantii, vol. 1, no.34).

T.E.G.

CONSTANTIUS CHLORUS, or Marcus Flavius Valerius Constantius, augustus (305–06); born Dacia Ripensis ca.250, died York 25 July 306. A fiction of Constantinian date made him a descendant of Claudius II Gothicus (268–70). Constantius had a typical military career, becoming governor of Dacia and then, in 288, praetorian prefect to Maximian in Gaul. In response to the usurpation of Carausius and the loss of Britain as well
as a part of Gaul, Diocletian proclaimed him Caesar and member of the Tetrarchy on 1 Mar. 293. At the same time he was adopted by Maximian as part of the “Herculian Dynasty.” Later in that year Constantius drove Carausius from Gaul and in 296 reunited Britain to the empire. In practice though not in theory the Western provinces were divided between Constantius and Maximian. Constantius was responsible for Britain and Gaul from his primary residence at Trier, but he campaigned regularly against German invaders south of the Rhine. Constantius was a devotee of Sol Invictus but apparently did not actively persecute the Christians. There is, however, no reason to credit later Christian testimony that Constantius was a Christian.

Upon the abdication of Diocletian and Maximian in 305, Constantius became senior emperor in the West and apparently added Spain to his territories. In the same year Constantius crossed over to Britain and campaigned against the Picts in the north, where his son Constantine joined him. Constantius had children by two women, first Helena the mother of Constantine I, and later (by 289) Theodora, the stepdaughter of Maximian, with whom he had six children; one of them was named Anastasia (Resurrection), an indication of Jewish or Christian sympathy.

CONSTELLATIONS. The standard constellations referred to in Byz. texts are the 48 listed by Ptolemy in the Almagest (7.5–8.1): 21 northern constellations (Arktos mikra, Arktos megale, Drakon, Kepheus, Boötes, Stephanos boreios, Ho eggonasin [Herakles], Lyra, Ornis, Kassiopeia, Perseus, Heniochos, Ophiouchos, Ophis, Oistos, Ae
tos, Delphis, Hippou protome, Hippos [Pegasos], Andromeda, and Trigonon); the 12 signs of the zodiac (Krios, Tauros, Didymoi, Karkinos, Leon, Parthenos, Chelai [Zygon], Skorpions, Toxotes, Aigokeros, Hydrochoos, and Ichthyies); and 15 southern constellations (Ketos, Orion, Potamos [Eridanos], Lagoos, Kyon, Prokyon, Argo, Hydra, Krater, Korax, Kentauros, Therion, Thymiaterion, Stephanos notios, and Ichthys notios).

Another set of constellations, however, is referred to by Rhetorios of Egypt in his descrip-
tion of the stars that rise simultaneously with each of the 96 decans (paranatellonta); these and others are found in several related Byz. astrological texts (F. Boll, Sphaera [Leipzig 1903; rp. Hildesheim 1967] 5–294). Finally, in a calendar for sailors ascribed to a protopatharios and strategos of the Kibyrhhaiotai theme, the stars are named after the saints or religious events on whose feast days they are first visible (A. Olivieri, CCAG 2:214–16).

There are numerous catalogs of the individual stars that constitute the constellations. In astronomical contexts they are derivatives from the catalog in the Almagest (some, including lists of astrolabe stars, being transmitted through Arabic and thereby acquiring an altered nomenclature, but one that is still equivalent in meaning), while in astrological contexts, aside from the paranatellonta tradition mentioned above, they are derived from the associations of planets with stars found in Ptolemy’s Astrological Effects (1, 9). The astronomers frequently confuse their lists to 30 “bright stars” (P. Kunitzsch, ZDMG 118 [1968] 62–74).

The constellations are seldom depicted in Byz. art. The available evidence was assembled by H. Stern (Le calendrier de 354 [Paris 1953]). A 14th-C. MS at Milan preserves unusual miniatures of the constellations (D. Pingree, JWarp 45 [1982] 185–92). (See also Stars.)

–D.P.

CONSUBSTANTIALITY. See Homoousios.
when the system of indictions and years of the emperor's reign was introduced, at first alongside the old system of consular dating. The last eponymous consul was Basil the Younger in 541; after him only emperors assumed the hypatiea. The last recorded instance is Constans II in 652, but Stein (Op. minora 340–48) suggests the office continued to exist until the 9th C. when Leo VI, in novel 94, abolished the institution as a contradiction of the existing political structure. After this time the term hypatos acquired a completely different meaning.

CONSULARIA ITALICA. See Annals of Ravenna.

CONSULARIS (ὑπατικός), Roman title bestowed on a former consul. In the 3rd C. it became customary to designate as consularis the governor of a province where several legions were assigned. Consulares were considered of higher rank than other governors (praesides and correctores): they were accorded the title of clarissimus. Among the provinces under consulares ca.400 were Palestina I, Phoenicia, Syria I, Cilicia I, Cyprus, Pamphylia, Hellespont, Lydia, Galatia, Bithynia, Europa, Thrace, Macedonia, Dacia Mediterranea, Crete, and Pannonia. By the 6th C. Pannonia was removed from this list and placed under a praeses, while several other provinces became consular; according to Hierokles, they were Epirus Nova, Lycia, Caria, Pisidia, Lycaonia, Phrygia Pacatiana, Phrygia Salutaris, Cappadocia I, Helenopontus, and Arabia. Justinian I's novel of 535 gives a different list, however. The term hypatikos appears on some seals, for example, a 7th-C. seal with a Latin legend (Zacos, Seals 1, no.1197). The title was abandoned when the Roman provincial administration gave way to the new system of themes. The equivalent term proconsul was translated as anthypatos.

LIT. B. Kübler, RE 4 (1901) 1138–42. —A.K.

CONTOURNIAE (from L. contornia, "rim"), the name given since the 18th C. to the large copper-alloy coinlike objects, approximately 5 cms. in diameter, manufactured in some quantity at Rome between the middle of the 4th C. and the last quarter of the 5th, although certainly not products of the official mint. They have on one side the head of an emperor, usually of the 1st or 2nd C., or of some well-known literary or historical figure (e.g., Homer, Alexander the Great), and on the other a representation of a mythical or historical event or of a scene from the circus or public life. Their name derives from the deep groove that always marks their edge, but the purpose of this, as indeed of the objects themselves, is unknown. Because their designs are conspicuously pagan, Alföldi has argued that contourniates were propaganda medalets issued in connection with the public games by the senatorial aristocracy of Rome. They are of special interest to art historians through the contrast between their simplified iconography and the more sophisticated treatment of artistic themes on the gold and ivory objects apparently produced for members of the same senatorial classes. The contourniates often
CONTRACEPTION. The use of contraception was condemned by church fathers. The Penitential ascribed to John IV Nestēutēs considers it a form of infanticide, categorizing several kinds of birth control: application of an ointment (trimmata) that is perceived as the least heinous; drinking a potion (pharmakon); and the worst—the use of herbs to induce abortion (PG 88:1904C). Another text attributed to the same author (col.1924A) required sinners to confess their desire to remain childless, induce an abortion, or use contraceptive herbs. John Chrysostom calls the use of contraception “a murder before birth” (PG 60:626.50–51) and views it as harmful not only because it prevents procreation but also because it leads to involvement in contraceptive magic and idolatry (ibid., 627.6–8). The practice of contraception was usually limited to prostitutes and to women tempted to break their vows of chastity or of marital fidelity. Married couples, however, sometimes abstained from or restricted sexual intercourse after having produced a child or two. Epiphanios of Cyprus (Panarion 26.5.2–6) describes with indignation (and evidently with strong exaggeration) the habits of heretical Gnostics who did not wish to bear children but fornicated for the sake of pleasure, using coitus interruptus or abortion as a means of contraception; they are even reported to have ground up the embryo in a mortar, mixed it with honey, pepper, and other spices, and to have eaten it at their loathsome assemblies.

Byz. medical writers, esp. Paul of Aegina in the 7th C., transmitted the theories and techniques of contraception outlined by the 2nd-C. Gynaikēia of Soranos, which recommended vaginal wool suppositories and the application of olive oil, honey, cedar resin, alum, balsam gum, or white lead to prevent sperm from passing into the uterus. Paul, however, provided only one herbal contraception recipe, whereas Dioscorides had 20. In the 6th C. Aetios of Amida recommended mag-
Types of Contract. Roman and Byz. law distinguished various types of contract. The first group formed “real” contracts, that is, loan, commodatum, deposit, and pignus; stipulation was the main form of the oral contract; consensual contracts included sale, contracts of letting or hiring a thing, service contracts (contracts for paid labor—see mistrhos), partnership, and mandatum.

Extant Contracts. Multiple late Roman and Byz. contracts survived in original form and in contemporary copies. From the earlier period those are primarily on both Greek and Latin papyri (see Ravena Papyri); from the later period are extant certain contracts (mainly purchase deeds) preserved in monastic archives (Mount Athos, Lembiotissia, etc.). (See Acts, Documentary.)

CONTRITION (πένθος), in Byz. spirituality, is the remorseful heart or the gift of tears, whereby one mourns not only for one’s own sins and the sins of the world, but also for the suffering of Christ. This is not a metaphor of the earthly life as “the vale of tears,” but a real weeping and shedding of tears. The Byz. believer sees in the beatitude, “Blessed are they who mourn, for they shall be comforted” (Mt 5:4), the promise of comfort obtained through tears. Accordingly, contrition must be united with unceasing prayer (e.g., the Jesus prayer characteristic of hesychasm) in order to advance in the spiritual life and to attain its goal, hesychia. “In death, God will not reproach us if we have performed no miracles, or if we are not theologians or mystics, but most certainly will we render account to Him if we have not ceaselessly bewailed our sins” (John Klimax, PG 88:816D).

In the APOPHTHEGMATA PATRUM and in hagiography in general one often encounters the gift of tears. The Abbot Isaac, for example, sought the gift of being able to weep continuously, as did Mary under the Cross (PG 65:357B). For Symeon the Theologian, in whose spirituality the experience of spiritual perception or aisthesis gains significance, the gift of tears is as necessary for salvation as the sacrament of baptism, for that is the baptism of the Spirit. Thus Niketas Stethatos, in his vita of Symeon (90.7–8, OrChrAn 12 [1928] 124), likens Symeon’s tears to the flowing waters of baptism. Symeon recommended his own practice to his monks as the ideal: daily prayer and the cultivation of a contrite heart.

COOKING WARE, ceramic vessels used for the preparation and serving of food. Byz. cooking pots developed directly from traditional late Roman shapes, although one cannot exclude the possible influence of wares from the barbarian north. Most were locally produced and are difficult to date except in the most general terms. The pots were simple in design, with a flat or more commonly rounded bottom, round or vertical sides, and a simple often outturned rim on which a lid could be placed; two horizontal or vertical handles were generally added. Cooking ware was comprised of a coarse clay, normally with a liberal admixture of sand and small stones, which usually fires black; the pots were often placed directly in the fire for cooking and it is not always possible to tell if blackening came from the firing process or from use. From the 7th C. onward, cooking pots were commonly glazed on the interior with a yellow glaze that fires a dark brown. (For cooking wares made of metal, see Tools and Household Fittings.)

COPTIC ART AND ARCHITECTURE, a conventional designation for the art and architecture of Christian Egypt.

Christian art in Egypt derived from late Roman provincial art and was fully dependent upon the Graeco-Roman traditions developed along the Mediterranean littoral. Once Constantinople had become securely established as the cultural center of the empire, however, its influence in Egypt increased: in Alexandria, the seat of Byz. civic and military administration and a center of Hellenic culture from the time of its foundation, artistic developments in Constantinople were in-
roduced early and rapidly displaced local tradi-

tions.

The earliest surely datable churches are the transept basilica of Hermopolis Magna and the church of the Dayr Anbā Shinūda (the so-called White Monastery) near Sohag (both first half of the 5th C.). Most of the remaining churches belong to the 6th and 7th C., while those in Old Cairo do not date from earlier than the last decade of the 7th C. For the most part these churches are conventional three-aisled basilicas, but they have an aisle across the west end (the so-called “return aisle,” not to be confused with a narthex), a distinctive feature originating in Ptolemaic and Roman cemetery architecture. Few churches have an atrium. The east end is normally straight, since the apse is usually flanked by pastophoria. A good number, however, have a triconch sanctuary (Sohag, Dendera, and the Monastery of the Syrians in Wādi Natrūn), and a secondary triumphal arch before the entrance into the triconch; from the spatial division this arch caused in front of the sanctuary was to develop the khārus (choir, from Gr. choros) of the early medieval Egyptian church (e.g., Saqqāra). Exceptions to the simple basilican plan are the transept basilicas at Hermopolis Magna, Abū Mīnā, and Marea, and the two tetraconch churches at Abū Minā; these plans were evidently imported from abroad.

The churches at monastic sites are usually rather simple (Sohag is an exception, and the two five-aisled basilicas of the Pachomian monastery at Pbow are impressive only for their size). Each form of monasticism in Egypt developed its own particular type of accommodation: while anchoretes lived in small separate houses containing individual sleeping rooms, oratories, and kitchens (as at Kellia), cenobites were accommodated in larger lodging-houses, occasionally in common dormitories (e.g., Dayr al-Balāyza).

Great quantities of architectural sculpture, such as friezes, niche-heads, and capitals, have been found in Bawṭ and Saqqāra (most now housed in the Coptic Museum in Cairo). Stylistically these pieces are dependent on artistic developments in Constantinople: even the interlaced foliage friezes considered peculiar to Egypt derive from East Roman acanthus branches. Only the form of the door-lintel shows a continuation of Pharaonic design. Spolia were used extensively, and by the end of the 8th C. local production of stone architectural sculpture seems to have come to an end. Figural sculpture found particularly in Akhnās and Oxyrhynchus appears mainly in sepulchral contexts, incorporated into an architectural framework in the form of stelae or niche-heads. Pagan themes are common in works of the 4th and 5th C.; in the 6th and 7th C. the figures are completely surrounded by ornament.

A few wall paintings have survived in catacombs and ecclesiastical buildings; these show the influence of Alexandria. In churches and monastic buildings somewhat later in date than the catacombs, there are frontally posed representations of saints and important figures of Egyptian monasticism. Even the images of Daniel in the Lions’ Den, the Holy Rider, or St. Menas between two camels are more iconic than narrative in character. Compositions in the niches of the little chapels at Bawṭ and Saqqāra are often of high quality, and most echo large-scale models. Though the famous Egyptian mummy portraits belong entirely to the pagan period, their encaustic technique was adapted in early Christian icon painting. The portrait of Apa Abraham, bishop of Hermouthis, in the Louvre (ca.600) follows Byz. models such as the icon of Sts. Sergios and Bakchos from Sinai, now in Kiev (Weitzmann, Sinai Icons, B.9).

Many early Coptic textiles have survived, thanks to the dry climate of Egypt. Though figural motifs of pagan origin were still in use even in the Christian period, these textiles are decorated primarily with ornamental motifs. Egyptian pottery, which is relatively mediocre because of the poor quality of the local clay, follows late Roman types known from the Mediterranean littoral. Many painted bowls have been found dating from the 5th and 6th C. Of much higher standard are the Egyptian works in ivory; the majority of these was produced in Alexandrian workshops and had considerable artistic value even outside of Egypt.

The patrons of Christian art during the 5th and 6th C. in Egypt were mostly local magnates of hellenized Egyptian or partly Greek origin; they were continuously receptive to new developments in Constantinople and lent Coptic art its simultaneously classicizing and Christian character. The art from monastic sites shares this blend of clas-
cial and Christian elements, though it is executed in materials more modest than those used in the opulent city cemeteries.

—P.G.

**COPTIC LANGUAGE AND LITERATURE.** Coptic is the latest stage of the Egyptian language, written in the Greek alphabet plus seven signs derived from demotic. Originally five major dialects—Sahidic, Bohairic, Fayyumic, Akhmimic, and Lycolopolitan (Subakhmimic)—were recognized; modern scholarship has detected several more idiolects (R. Kasser, *Musäon* 93 [1980] 53–112, 237–97; 94 [1981] 91–152). Beginning with 3rd-C. horoscopes, Coptic became the language of Christian Egypt, attaining classic literary status by the 5th C. in the writings of Shenoute. From early versions of the Bible and the liturgy, Coptic writings came to include homilies, hagiography, biblical commentary, panegyric and apocalyptic, both translations from Greek and Syriac and original productions by Egyptian writers. However, not much original theological writing survives. The rich Gnostic literature found at Nag Hammadi and elsewhere was written partly in Coptic. The extent to which Coptic was part of the bilingual society of Byz. Egypt is seen in the enormous volume of Coptic financial and legal documents and letters, as well as inscriptions, surviving from the period of Byz. control and down to the 9th C. The immediate post-conquest period produced more hagiography, hymnody, and lectionary texts. Coptic persisted among the Christian community after the Arab conquest but was inexplicably moribund by the 11th C. A little survives, memorized but comprehended, in the present-day liturgy of the Coptic church.

—L.S.B. MacC.

**COPTS,** the name, derived from Greek *Aegyptioi* via the Arabic *Qibli,* of the autochthonous Christians of Egypt, descendants of the population of Pharaonic times; since the 5th C., they have been adherents to a non-Chalcedonian church later termed "Coptic Orthodox." The term "Copts" is really an anachronism for the Byz. period but serves to designate those who used Coptic as their principal language (or bilingually with Greek) and as a major vehicle of culture, thought, and theology. As a label "Copt" does not carry an automatic class or confessional connotation. A Copt was not necessarily a peasant, an Upper Egyptian (as opposed to an Alexandrian), or a Monophysite; Athanasios and Cyril of Alexandria were Copts as were Pachomios and Shenoute. The Copts constituted a culturally vigorous and creative ethnic group within the empire, producing highly original visual art and abundant literature; the submergence of their language and culture after the Muslim conquest has not been explained. Some eight million Copts survive in Egypt today; large diaspora communities live in North America and Europe.

—L.S.B. MacC.

**COPY, OFFICIAL** (*i6rov*). Major chanceries kept records of outgoing documents and could provide official copies of them. In the imperial chancery copies were identical to the originals but lacked the emperor's signature (and eventually replaced the gold seal by a lead one). The patriarchal chancery produced excerpts of the synod's minutes signed by the *chaktophylax* or copies of documents signed by him and his notaries. Lay administrations had similar practices. Certified copies of all documents could also be delivered by bishops or other public officials, who signed at the bottom or on the verso. These copies could be used instead of the originals even in tribunals (at least from the 10th C. onward) as Byz. had broken with the Roman tradition of banning copies as evidence.

For reasons of security, individuals or institutions (e.g., monasteries) had their archival documents copied on *kontakia* (long rolls of parchment
CORinth (Κόρινθος), city on the Isthmus of Corinth in the northeastern Peloponnesos; it enjoyed the protection of the powerful citadel of Acrocorinth and had harbors at Lechaion on the Gulf of Corinth and at Kenchreai on the Saronic Gulf. The commercial and strategic location of the city made it important throughout the Byz. period.

In late antiquity it was capital of the province of Achaea. The city was devastated by earthquakes in 365 and 375 and by Alaric in 396; afterward the civic center was rebuilt on a monumental scale, but a new city wall encircled only part of the ancient area (T.E. Gregory, Hesperia 48 [1979] 264–80). At least four churches are known in the ancient city, another on Acrocorinth and an enormous 5th-C. basilica at Lechaion (D. Pallas, Ergon 1961 141–48; 1965 105–12). From the late 6th C. Corinth declined. A tomb of the 7th C. found near the walls belonged to a warrior and contained non-Byz. objects; these finds

including women and children, settled (814–15) near Alexandria. In 818 they occupied Alexandria but were expelled from the city and sometime between 824 and 827 landed in Crete. In 839–40 Emp. Theophilos sent an ambassador to Cordoba. In Sept. 947 a Byz. embassy led by the eunuch Salomon arrived in Cordoba and was received by the caliph 'Abd al-Rahmān III. Among the gifts brought by Salomon were a Greek MS of Dioscorides and a Latin MS of Orosius. The caliph, in response, sent to Constantinople a group of envoys headed probably by the bishop of Carthage. It is possible that this exchange of ambassadors was somehow connected with the Byz. abortive expedition against Crete in 949. Al-Ibrīsī (tr. P. Jaubert, 2:60) reported that the qibla of the Great Mosque at Cordoba was decorated with mosaic tesserae sent to 'Abd al-Rahmān by “the emperor of Constantinople.”

CORFUS. See Kerkýra.

CORDOBA (Lat. Corduba), capital of the Roman province of Baetica in southern Spain in the late 3rd and early 4th C., later replaced by Hispalis (Seville). Ossius (or Hosios), bishop of Cordoba (died 357/8), was a staunch supporter of Nicaean orthodoxy and an influential adviser of Constantine I. Little is known of the city’s history in late antiquity, but it was probably an object of Vandal and Visigothic raids. In 550 it was attacked by Agila, king of the Visigoths; the inhabitants of Cordoba defeated him and captured the royal treasure. Justinian I used the situation as a pretext to send a small army into Spain under command of Liberios, although there is no clear evidence to indicate that Cordoba was ever directly occupied by Byz. In 572 Cordoba was seized by King Leovigild, but by 584 it was again independent and the refuge of Hermenegild, Leovigild’s rebellious son. Hermenegild was betrayed and taken prisoner, and Cordoba fell to the king.

In 711 it was conquered by the Arabs and in 716 became the administrative center of al-Andalus. After several riots against the Umayyad caliph of Spain, 15,000 Muslim refugees from Cordoba, or paper) or in volumes (see KôDIX) that constituted chartularies (such as those of Nea Mone of Chios, of St. John Prodromos on Mt. Menoikion, of Makrinissa on Pelion, of Hiera/Xerchoraphion and of Latmos near Miletos, of Lemnos [Lembiotissa] near Smyrna, of Vazelion in the Pontos, etc.). Only some were certified by a superior authority, but all may have been seen as having some probatory value.

raised the question of whether the city was captured in the 7th C. (G.D. Weinberg, *Hesperia* 43 [1974] 512–21); a mutilated inscription, perhaps honoring the victory of Constans II, led to the hypothesis that he recaptured Corinth. The question of the ethnic origin of the invaders has also been discussed, although archaeology can rarely establish the ethnicity of skeletons found in tombs (K.M. Setton, *Speculum* 25 [1950] 502–43; 27 [1952] 351–62; J.H. Kent, ibid. 25 [1950] 544–46).

The primary settlement may have shifted to Acrocorinth in the 7th C. Corinth was perhaps capital of the theme of Hellas from the late 7th C. and was capital of the theme of Peloponnese from the early 9th C. Numismatic evidence suggests that the economy of the city began to recover in the 9th C. (D.M. Metcalf, *Hesperia* 41 [1973] 180–251).

The city of the 11th–12th C. differed significantly from late antique Corinth: public buildings (except churches) disappeared, streets became narrow, and the old Roman marketplace was covered by small shops. Shops also moved to colonnades along the major streets, and tombs slowly began to encroach upon the ancient civic center. From the 9th C. onward the settlement abandoned the ancient city plan, as shops, workshops, gardens, churches, and monasteries jostled one another without any apparent order. Workshops for the production of ceramics (with remains of kilns) and glass (G.R. Davidson, *AJA* 44 [1940] 297–324), as well as smithies, have been excavated. Narrative sources emphasize the existence of a flourishing silk industry in the 12th C. The city continued to function as an important harbor.

In 1147 Roger II of Sicily attacked Corinth: the inhabitants fled to Acrocorinth, which fell as a result of the incompetence of the commander Nikephoros Chalouphes. Roger carried off both Corinthian notables and artisans (particularly the city’s famed silk weavers) as well as considerable wealth, including an icon of St. Theodore. The city apparently did not fully recover from the sack of the Normans. Leo Sgouros took Corinth in 1202.

In 1205 the Crusaders, nominally under the authority of Boniface of Montferrat, began a siege of Acrocorinth, defended by Sgouros. The attackers built a castle at Penteskouphi, but the siege dragged on until ca. 1210 when Theodore Komnenos Doukas, brother of despotes Michael I of Epiros, gained control of Acrocorinth, presumably by treaty; the city became part of the principality of Achaia, and is termed a capitanate in the Assizes of Romania. Little is known of Corinth under Frankish rule, as it was not one of the great baronies; the mint was, however, located at Corinth until it was moved to Clarence (Clarenza). The city and castle were formally surrendered to the Byz. in 1262 by William II Villehardouin, but the local commander refused to relinquish control. Corinth was ceded to Philip I of Taranto ca. 1300 and in 1305 a great tournament was held at the Isthmus. In 1358 the city was given to Niccolò Acciajuoli, who strengthened the defenses. In 1395 Theodore I Palaiologos, despotes of the Morea, gained control of Corinth for Byz. In 1397 he surrendered the city to the Hospitallers, who held it until 1404, when they returned Corinth to Byz. control (J. Chrysostomides, *Byzantina* 7 [1975] 81–110). Around 1443 the future emperor Constantine XI appointed a certain John Kantakouzenos as governor in Corinth. The territory was ravaged by the Turks in 1446. Mehmed II attacked the city in 1458, and on 8 August the residents surrendered Acrocorinth to him.

The bishop of Corinth was metropolitan of the Peloponnese and of the province of Achaia (L. Duchesne, *MEFR* 15 [1895] 375–78). He was present at most of the early councils; in 431 he was the only bishop from the Peloponnese and in 680 the only representative from Greece (Mansi 11:689). In the crisis after the Slavic invasions the bishop of Patras contested control over the Peloponnese with Corinth, and in the 10th C. the suffragans of Corinth were restricted to the eastern Peloponnese and the Ionian Islands (*Notitiae CP* 7:488–95, 9:371–99).

There was a sizable monastery of St. John in the area of the ancient center, and literary sources and seals refer to an important Church of St. Theodore whose site has not been identified. None of the Byz. churches of Corinth has survived intact. The fortifications of Acrocorinth rest largely on ancient foundations, but many sections of Byz. masonry, probably of the 6th–7th C., can be seen, esp. along the inner western wall.

CORINTHIA, the upper part of the entablature of a colonnade or of a door-frame. By the 6th C., the use of cornices was extended to define architectural space by marking the level of galleries or the springing of arches, domes, and vaults. A variant on cornices of the Corinthian order appears in Hagia Sophia, Constantinople, and other Justinianic monuments, with characteristic modillions decorated with acanthus leaves (L. Butler, Ayasofya Müzesi Yılılığı 10 [1985] 27–32). Less ambitious churches display cornices with plain torus or cyma recta profiles decorated with a wide range of acanthus leaves, palmettes, and anthemia, etc. Simplified cornices continued to be used in domed, cross-in-square churches or Greek cross-octagons after the 9th C. Those in the church of Constantine Lips in Constantinople have traces of gilding and color, constituting a revival of 6th-C. forms (C. Mango, E.J.W. Hawkins, DOP 18 [1964] 306–09). The katholikon of Hosios Loukas retains cornices cast in plaster, while that of Daphni shows chapelle cornices with colored inlay evoking opus sectile (Grabar, Sculptures II, pl.XXXIV).

CORON. See Korone.

CORONATION (στέψιμον, στεφάνωσις), imperial accession ceremony (together with acclamation, adventus, shield-raising, banquets, circus spectacles, and anointing), whose significance reflects that of the crown as imperial insignia. From the time of Julian to the 6th C., the coronation shared the imperial election’s military character, as soldiers crowned the new emperor with a torque during his acclamation and shield-raising. From the 5th C. the patriarch of Constantinople blessed the insignia and participated in the coronation, but a constitutional interpretation of his role (P. Charanis, Byzantina 8 [1976] 37–46) seems unlikely (e.g., C. Tsirpanlis, Kleronomia 4 [1972] 63–91). It reflects, rather, the church’s prestige and individual patriarchs’ political stature (F. Winkelmann, Klio 60 [1978] 467–81). Patriarchal coronations occurred only when there was no senior emperor, a minority of cases from 450 to 1000. The shift of coronations (De cer. 410–33) from the Hebdomon to the Hippodrome in the
5th or 6th C. reflects Byz.'s changing political structure. As late as 776, Constantine VI was crowned co-emperor in the Hippodrome between ceremonies in Hagia Sophia.

The coronation of Constans II in the ambo of Hagia Sophia (641) began a long series of coronations at the Great Church and reveals imperial legitimacy's religious element, underscored by the scheduling of coronations to coincide with holy days like Christmas or Easter, and by imperial epithets like theosteptos or a Deo coronatus (G. Rösch, Onoma basilieis [Vienna 1978] 67, 140f). The well-documented Byz. coronation of the 10th C. (De cer., bk.1, ch.38, ed. Vogt 2:1–5, and Goar, Euchologion 726f) comprised receptions by officials and factions during a procession to Hagia Sophia; the patriarch crowned the emperor in the ambo and the audience acclaimed him; the emperor then ascended a throne to receive the officials' proskynesis. A eucharistic liturgy followed. The coronation of co-emperors was similar (De cer., bk.1, ch.38, ed. Vogt 2:3.1–19), except that, like empresses, they were crowned by the senior emperor. Coronations of empresses took place in the Augustaion and at St. Stephen of Daphne (De cer., bk.1, ch.40, ed. Vogt 2:11–15).

The Nicaean Empire temporarily abandoned the coronation of co-emperors and systematically added shield-raising and anointing to the ritual. The Palaiologoi restored co-emperors' coronations. Their ceremony (Kantak. 1:196.8–204.3; cf. pseudo-Kod. 252–72) began with the emperor's subscription to a profession of Orthodoxy (his first use of his title), shield-raising, and acclamation. Next, the emperor, enthroned on a wooden platform in Hagia Sophia, received the sakkos and diadem. Coronation was now integrated into the eucharistic liturgy during which the patriarch and church dignitaries performed the anointing in the ambo. Then the patriarch—assisted by the senior emperor if there was one—crowned the new emperor, who was acclaimed again, and the liturgy continued. A proskynesis followed. Empresses were crowned by their husbands and then performed a proskynesis to them. Several days of festivities ensued. Commemorative coins were often issued in connection with coronation largess; 9th-C. Byz. coronations customarily involved large payments to the clergy of Hagia Sophia and to the bureaucracy and army (see, e.g., McCormick, Eternal Victory 229).

-M.Mcc.

Representation in Art. Depictions of coronations occur on a number of different objects (ivory plaques, MS frontispieces, silver vessels, coins, wall paintings), the earliest probably being that of Basil I in the Paris Gregory (Ormont, Miniatures, pl.XIX). Most depictions show the emperor or imperial couple receiving the crown from Christ, the Virgin, or an archangel. The presentation of the emperor crowned by the divine power expresses the tendency to construe the fact not only as a historical event but as an image of the emperor-Godhead relationship and the selection of the emperor by God. The images on the ivory plaques and the coins were most likely commemorative of the historical event. The coins were first issued at the time of the coronation but often continued through the reign; the ivory panels were possibly given out as gifts to court officials to celebrate the occasion. There are several ivory plaques with the theme of coronation—for example, the Moscow panel of Constantine VII being crowned by Christ. In a similar manner the imperial couple of Romanos and Eudokia is crowned by Christ on an ivory plaque in the Cabinet des Médailles in Paris, which commemorates not only the coronation of Romanos (IV?) but also his marriage to Eudokia (I. Kalavrezou-Maxeiner, DOP 31 [1977] 305–25). A number of coronation scenes illustrated in the Madrid MS of John Skylitzes are neither commemorative nor contemporary with the events they represent. These scenes accompany the chronicler's narrative; they vary in detail but all show the historical ceremonial by depicting the patriarch crowning the emperor or the imperial couple (Grabar-Manoussacas, Skylitzes, nos. 266, 328, 542).

LIT. Grabar, L'empereur 112–22, pls. XXIII–XXVI, XXVII.2, XXVIII.5, 6.

CORPUS JURIS CIVILIS, the name given from the 16th C. onward to the legislative work of Justinian I. It consists of the Institutes, the Digest, the Code Justinianus, and the Novels of Justinian I. All four parts were taught in the law schools of Berytus and Constantinople. The translations of the Latin text of the Corpus that
CORRUPTION in the Roman and Byz. worlds was a means of exercising private power for the achievement of public or private purposes by exploiting the latent compliance of state and ecclesiastical officials. The system was based on a sense of community within the bureaucratic officiandom and was enhanced by the intermixture of private and public elements of administration. The system worked through favoritism (for relatives, friends, former servants or slaves, etc.; bribes, which could be official or semiofficial (grants, *sportulae*); fear; and moral pressure, sometimes effective for pious ends (e.g., the extortion of a donation for a monastery). The exploitation of subordinates also comes under this category (soldiers exploited by a *strategos*, peasants by a local landowner, etc.). The illegal acquisition of private property, a portion of state taxes, or objects belonging to the state (e.g., ropes or other parts of a ship) were widespread types of corruption and barely distinguishable from theft. The state might condone such practices and even institutionalize them (e.g., the payment of judges by litigants), but in some cases measures had to be taken to suppress dangerous excesses; thus, for instance, some emperors of the 10th C. tried to limit corruption in the form of seizure of land by the *dynatoi*.

Corruption is denounced by Byz. authors of all periods. They criticized not so much the purchase of titles and offices, which was always practiced to various extents and was often considered legitimate, but rather arbitrary administrative actions motivated by personal profit. In the sources, emperors are accused of appointing the rich instead of the best or of practicing the abhorred *simony* to increase their own revenues; public officials, of accepting kickbacks; fiscal officials, esp. the taxfarmers, of crushing the rural populations by collecting unauthorized taxes or by other fraud-

CORRUPTION | 535

LIT. Wenger, *Quellen* 582–734. —M.Th.F.

**CORPUS JURIS CIVILIS, COMMENTARIES ON THE.** Evaluation of the writings of Justinian’s contemporaries on the *Corpus juris civilis* depends on one’s opinion of how the Justinianic prohibition on commentary is to be interpreted, a matter that has long been controversial. The prohibition is found in the introductory constitutions to the Digest: it forbids all *commentariori* and *interpretationes* except for translations (*kata podas*), summaries (*indices*), and indications of supplementary and parallel regulations (*paratitla*). The extensive legal literature produced in Justinian’s time seemingly provides ample evidence that the prohibition was not observed. The possibility cannot be excluded, however, that the prohibition was not directed at that literature at all. To this end, arguments of content or of form have been adduced. Arguments based on content claim that the surviving legal literature comments on the law affirmatively and does not represent divergent points of view; only the latter were forbidden, to avoid the danger of confusion. Arguments based on form claim that this legal literature consists of “private” lecture notes, not the published commentaries of professors. Another variant of the argument based on form has been put forward by Scheltema (*infra*), who argues that it was not the production of divergent opinions that are forbidden but rather their inclusion in MSS of the Digest. Given that the prohibition is found only in the Digest (which contained the harmonized remains of the controversies of classical jurists) and given its formulation (that contradictions should be avoided), an explanation based on content is preferable. The relevance of Justinian’s directive remains questionable, however, since the uncritical summing up and exegetical character of juristic writings is probably due not so much to the prohibition on commentaries as to a general professorial mentality. (See also ANTECESSORES.)

were produced in both cities form the foundation of Byz. law and were incorporated into the Basilika and its scholia. Considerable sections of later law books—transmitted mainly through the Basilika—can be traced back to the *Corpus Juris Civilis*. In western Europe the Corpus was forgotten soon after Justinian but was rediscovered in the 11th C. In many European countries it remained the authoritative source of law into the 19th C. (see LAW, ROMAN).
ulent practices. The most famous corruption scandal is that of the KRITAI KATHOLIKOI in 1337.

-A.K. N.O.

CORVÉE, compulsory, usually unpaid, day labor for the state or for one’s lord. State corvées, attested since the Roman period, most commonly involved the regular or occasional obligation of local inhabitants to furnish their labor (and their animals) for maintenance of the DROMOS. Such labor—includes within the terms ANGAREIA, parangareia (from the 11th C., services and animals provided for secondary roads), leitour gia (“public service”), and douleia (“service”)—usually unre- munerated, was also supplied for the building of ships (hatterokitisa, karabopoia), fortifications (kastrokisia), and perhaps for rural and urban guard duty (apovvigesis, vigla, paramonai). In particular areas, certain categories of persons (clergy, bakers, some peasants and soldiers. Jews on Chios in 1049) were exempted (exkoussatoi) from corvée, but this could be annulled in times of emergency (esp. due to war). Probably because of the rise of the paroikia, evidence of state corvée is rare after the 12th C. State officials, while traveling, dem- anded (legally or illegally) labor services from the peasant and urban population: accommodations, food, animals. Landlords needed special privileges to be exempted from such burdens.

The novel of Constantine VII of 935 speaks of angareiai demanded by dynatoi (Zepos, Jus 1:209–20) and considers them a form of oppression. By the 11th C., state corvées were occasion- ally transferred to private landowners and bur- dened their dependent peasants. Documents from the 13th to 15th C. require paroikoi to work (with their animals) for their lords for a fixed number of days per year (ranging from 12 to 52 days, with 12 and 24 being the most common). Svoronos (in Lavra 4:165–68) estimates that in the early 14th C. corvées accounted for at most 20 percent of the cultivation of the domain lands of the monastery of Lavra. The commutation of corvées for cash payments, attested throughout the Byz. era, became common in the last centuries of the empire (e.g., in the cadaster of Lampasakos [1218/19], a zeugaratos was compelled to replace his service obligation by a payment of 4 hyper- pyra).

CO-SEIGNEURY. See CASAUX DE PARÇON.

COSMETICS. The production of cosmetics was often associated with that of perfumes and unguents; those involved in this trade formed a guild (Bk. of Eparh 10.1–2). Simple cosmetics were prepared at home along with medications, unguents, concoctions to grow or dye hair, and so on, as described in various manuals (e.g., G. Litavrin, VizVrem 31 [1971] 249–301). Syneon Seth stated that women applied bean flour to wash their faces, and according to Dioskorides, they anointed their skin with olive oil from Sikyon. Empress Zoë took a passionate interest in preparing perfume and unguents in her palace. Cosmetics—including hair dyes, skin emollients, makeup, and eye shadow—were widely used, esp. by women, to embellish their face and thus to stress their social status. The church took a nega- tive stand toward cosmetics that was retained as late as the 15th C., when John Eugenikos wrote a pamphlet against women who powdered their face, painted their lips, covered their cheeks with rouge, or even blackened their eyebrows to become more attractive (S. Eustratiades, EBS 8 [1931] 42–46).

COSMOGRAPHER OF RAVENNA, anonymous Latin author of the 7th C. who compiled a book called Cosmography. After an introduction that di- vides the earth into 12 southern and 12 northern regions, he gives the geographic nomenclature of the known world: (1) a list of cities and rivers; (2) a periplus of the Mediterranean, beginning with Ravenna; and (3) a list of islands in the various seas. The Cosmographer often draws upon the same source as the Tabula Peutingeriana. He refers to many authors, patrician or otherwise, but his knowledge of ancient geographers is very questionable: he quotes only PROLEMY, whom he confuses with a king of Egypt. Some of the au- thorities (“philosophers”) whom he cites are imag-
inary, and legendary data appear side by side with reliable information. The author’s goal, as he himself formulates it, is to preserve for mankind in a time of general political disturbances the memory of geographic names; he makes no attempt to order the sites in a logical fashion.

—A.K.

COSMOLOGY, conventional term for the doctrine of the structure or arrangement of the cosmos, classified by the Byz., like all knowledge of the past, as “human sciences,” the presupposition of THEOLOGY as a view of ultimate unity. The starting point for Byz. cosmology was the spherical model of Aristotle, as modified by Ptolemy, in which the earth, planets, sun, and moon follow orbits within a large finite sphere. The Alexandrian theologians in general adopted this view. Origen at least knew of it and raised no objections. Clement of Alexandria used the spherical theory, for example, in the allegory of the Ark of the Covenant, hinting already at a fundamental contrast with the Antiochene School, which saw the universe as a cube consisting of two tiers, heaven and earth, separated by a firmament (stereoma) which divides the “waters above” and the “waters beneath.”

These two views clashed shortly before the middle of the 6th C. The Alexandrian view was represented by John Philoponos, who interpreted the first chapter of Genesis on creation against the background of Greek physics and astronomy. The Antiochene belief was represented by Kosmas Indikopleustes, who argued from the Bible and yet actually followed ideas popular in the East and, without realizing it, borrowed from the Greek tradition. For Philoponos (De opificio mundi, ed. Reichardt, 78.20–26, 119.1–5), Moses is the teacher of Plato; according to Kosmas, Moses received the mandate from God to oppose the spherical cosmology of the Babylonians and Greeks (Topographia christiana, ed. Wolska-Conus, 1:437–39, 449–51).

The antispHERical trend was intensified in the 6th C. through the condemnation of Origenism. At the very least, the presupposition inherent in the spherical image of the world, that the spheres are moved by intelligent minds, was anathematized by Justinian I. This conception of cosmos, altered in various ways, generally speaking was responsible for “the popular mind-set in the Middle Ages, and apparently displaced the conception of a spherical world in the Greek world up to the time of Photios and Psellos” (Wolska, infra 182). Naturally, there were exceptions, as, for example, John of Damascus (Exp. fidei 20.9–11, 42–50, ed. Kotter, Schriften 2:50–52).

More important for Byz. spirituality and mysticism is the fact that theoria physike, religious contemplation of the world, remained an essential element in the ascent to God. It served as the presupposition for attaining the vision of God (theologia), a possibility realized through perfected praxis. This means that the program of Evagrius Pontikos (A. Guillaume, RHR 91 [1972] 50f) was preserved in the tradition of the church, esp. through Maximos the Confessor, in spite of the tendency of Byz. spirituality to disregard the world and history in order to find God immediately (cf. Hesychasm, Palamism).

—K.-H.U.

COSMOS (κόσμος, lit. “world”). The fundamental Greek world view emphasized the unity, harmony, and beauty of reality. In the Platonic tradition, the perceptible cosmos is conceived as an image of the world of noetic ideas in the divine intellect, composed of preexistent matter. Christian tradition, in contrast, developed its notion of creation “out of nothing,” without reducing the cosmos to “the world of man” (a tendency observed in late antiquity); it did not view the cosmos as fundamentally evil, as did Gnosticism. The cosmos was seen in a more external, material, eschatologically or ontologically transient character, in contrast to the inner, spiritual, eternal life yet to come. Inasmuch as the cosmos was conceived as a universe, or as the embodiment of all things, the use of a holistic model suggests itself to conceptualize the cosmos as analogous to
an organism possessing the attributes of a "World-soul." The problem for Byz. authors who sought to preserve the holistic model consisted in excluding the notion of a World-soul ("neither divine nor rational"), and particularly in rejecting the doctrine of the World-soul as a third hypostasis, advocated by "the most eminent of the pagan theologians" (John Italos, Quaestiones quodlibetales, pars. 42.6, 68.1, ed. P. Joannou, pp. 52.27, 109.21-22), while maintaining, on principle, an organized totality. -K.-H.U.

Representation in Art. In art the cosmos was depicted as a complex involving Paradise and its rivers, Earth shown as a mountain below the firmament (stereoma) and surrounded by Ocean; the cosmos is represented as a many-leveled structure, as well as planimetrically, in MSS of Kosmas Indikopleustes. From the 14th C. onward "Kosmos" is identified as a personification in images of the Pentecost. (See also Cosmology.) -A.C.

COSTUME. Byz. clothing consisted generally of several layers of loose tunics and mantles (chlamys, himation). The simplest was a knee-length belted chiton with short sleeves, which was worn by laborers, shepherds (including the youthful David in Psalter illustrations), and children. Slightly more formal dress was a full-length tunic adorned in the early period with stripes or clavi and square ornaments at specified places; later tunics had tight sleeves and an embroidered hem and collar. This was the usual costume for ordinary city dwellers or provincial dignitaries. Over this could be thrown a mantle, whose form varied with the sex and social status of the wearer. Trousers, a Germanic and Eastern fashion, are rarely depicted in art, but texts suggest that they were worn, at least occasionally, by the 12th C.; men also wore tight leather hose. Hats (see headgear) did not flourish until well into the 11th C. For footwear, men wore boots reaching to mid-calf rather than sandals.

Though the basic elements of costume, such as tunics, cloaks, belts, hats, and scarves, were common to most social groups, both lay and ecclesiastical, certain versions of these garments became associated over the course of time with specific offices and titles. In fact, costume in Byz. was so strictly regulated and determined by the wearer's office, or role in society, that the distinction that we might make today between costume on the one hand, and insignia or even liturgical vestments on the other, must have been blurred. Elements of costume, both lay and ecclesiastical, were awarded to the wearer in special rituals; on rare occasions, the emperor, as a special honor to a courtier of a certain rank, might grant him the right to wear a special hat or vestment properly belonging to the rank above, but this was inconceivable to the ecclesiastical hierarchy. Being invested of one's costume or forced to wear another's could have the effect of "defrocking" and be a cause of humiliation: for example, Sergios and Bakchos were deprived of their mantiaka (see Torque), and the general Theophilos Erotikos was forced after the failure of his revolt to appear in the Hippodrome in women's clothes (Skyl. 429.13-17).

Imperial Costume. From the costume of a consul, whose office the emperor had assumed, imperial costume derived the loros; this jeweled stole, his red (purple) boots of tzanga, and the crown became the most distinctive elements of the imperial wardrobe. The loros was worn over a silk tunic, the divetesion or sakkos, either of which may in turn have been worn over another tunic of which only the embroidered (detachable?) cuffs are visible in representations. Other garments, such as the skaramangion (another form of tunic) and the chlamys or sagon, were worn not only by the emperor but also by members of the court. For his coronation, the emperor wore the divetesion, the chlamys, and tzanga (Leo Gramm. 246.19-21). The emperor donned full military dress (see Armor) on campaign as well as to celebrate a triumph upon his return to the capital; on such occasions his dress differed from that of his officers only with respect to his crown and red boots.

Purple was the prerogative of the emperor and his relations, and of his household attendants under certain conditions. Compromises on color could be arranged for political purposes: Nikephoros III Botaneiates allowed strands of scarlet to be woven into the clothes of Constantine Doukas (whose father he had deposed as emperor), in honor of Constantine's imperial lineage (An.Komn. 1:115.22-23), and Alexios I Komme-
nos later restored to Constantine as caesar the right to wear shoes entirely of red.

Some imperial garments bore figural designs; for example, the mantle of Empress Theodora in the mosaic at S. Vitale, Ravenna, is adorned with the figures of the Three Magi. In the 14th C. Eagles made of pearls decorated the shoes of members of the imperial family. The imperial garments were so stiffened with gold embroidery and weighed down with gems as to render the emperor and empress virtually immobile.

**Aristocratic and Court Costume.** Aristocratic dress differed from ordinary lay costume in the greater number of layers involved (usually a long-sleeved tunic was covered by another looser tunic, which in turn was topped by a chlamys), in the greater length of the tunics, in the richness of the materials, and probably in the brightness and variety of its colors. Aristocratic costume was intrinsically valuable, not only for its silk material, but for the large number of pearls and precious stones used to adorn the fabrics. Garments were decorated with gold embroidery along the hems, around the upper arm, and at the cuffs: rows of pearls also outlined the various sections of the garment, and collars were studded with gems. In fact, it is hard to determine whether these collars should properly be considered pieces of jewelry or parts of actual garments. The higher the official, the more gems on his clothing and the less his freedom of movement. Some court robes were adorned with lions or pictures of the emperor as well as the more usual floral patterns.

At court, Oriental garments were much in vogue from at least the 9th C. onward (N.P. Kondakov, Byzantion 1 [1924] 7–49): courtiers adopted a wide variety of long silk caftanlike garments (e.g., KABBADION), belted and highly patterned, as well as exotic headdress. Sources that indicate the names of these garments, if not their actual appearance, are the Klerotologion of Philotheos (late 9th C.), De ceremoniis (10th C.), and pseudo-Kodinos (14th C.). The color of the costume was of paramount importance, far more so than the pattern of its fabric: courtiers were lined up in processions by color, and sometimes only the color of their shoes, for example, served to distinguish the dress of two officials of differing rank.

**Monastic and Ecclesiastical Costume.** The monastic habit (see SCHEMA), provided by the monastery usually on an annual basis, consisted of a long dark tunic of cotton or wool; the analabos, a sort of sleeveless vest comparable to the scapular; a dark cloak (mandyas); the khoukoullion, or hood; and black slippers (kalliga).

Ecclesiastical vestments were again a series of tunics, mantles, and scarves, strictly determined by the rank of the wearer: the sticharion and orarion for a deacon; the sticharion, pheionion, and epitrachelion for a priest; and these plus the omophorion, epimanikia, and encheirion/epigonation for a bishop.

**Dress of Women.** There seem to have been comparatively few variations in female dress. Most women wore a full-length long-sleeved tunic and the maphorion over a tight headdress to cover their heads. The distinction in dress between married women and nuns was probably small: nuns, to judge by representations, wore the maphorion more tightly drawn about the neck, so that no part of their body was visible except face and hands. In artistic representations, maidervants, midwives, and the Samaritan woman, always a special paradigm of rural beauty, can have long unbound hair or a loose turban. Their tunics are often sleeveless, as are the tunics of various female personifications; they may wear a short knee-length tunic over a longer one. Female court attire other than that of the empress is rarely illustrated: the women dancing with Miriam in the 11th-C. Vat. Gr. 752, fol.49v (Spatharakis, Corpus, fig.123), wear tunics with extremely wide pointed sleeves, jeweled sashes or belts, and pillowlike headdresses. Donor portraits of the 14th C. show women in beautifully woven silk Oriental tunics like those of the men.

**Nudity.** The Byz. rejected the antique cult of the nude. In art, complete nudity is reserved for the images of Adam and Eve, for Christ in the scene of his baptism, and for figures in exile such as Job. Partial nudity is often associated with people on the fringes of society: wild-haired demons, the devil, certain extreme ascetics (Onuphrius wore only palm fronds), martyrs stripped of their official robes and brought to desert places for execution, or for personifications of natural features, such as river gods.

—N.P.S.

COTRIGURS AND UTIGURS (Κοτρίγουροι, Ουτρίγουροι), Turkic peoples, settled in the mid-6th C. north of the Black Sea, between the Dnieper and the Don. At the request of their Gepid allies the Cotrigurs sent a large force against the Lombards in Pannonia. Urged by the Gepids, the Cotrigurs then raided Byz. territory in 551 and withdrew only when their eastern neighbors and kinsmen, the Utigurs, who lived east of the Don, were bribed by the Romans to attack their home territory. The Cotrigurs had seen the wealth of the empire, however, and realized its vulnerability to a fast-moving cavalry force. In 558/9 they crossed the frozen Danube near its mouth and advanced into Byz. territory in three columns. One swept into Greece as far as Thermopylae, the second entered the Kallipolis peninsula, and the third, commanded by ZABERGAN, approached the walls of Constantinople, where their arrival caused consternation until Belisarios drove them away. During their return they were again attacked by the Utigurs; the hostility between the Cotrigurs and the Utigurs continued until both were subdued in the 560s by the Avars, who took some of the Cotrigurs with them to Pannonia. The Utigurs then became part of the Turkic confederation that captured Bosporos (Kerch) in 576, while the rest of the Cotrigurs became part of the Bulgar confederation settled north of the Azov Sea in the mid-7th C.

COUNCILS (συνόδοι), formal deliberative bodies of bishops and ecclesiastical representatives (priests, deacons, laymen, or monks) that gathered to discuss and regulate disputed questions of church doctrine and discipline. Such assemblies, which could be ecumenical, metropolitan, episcopal, or patriarchal, expressed the essential nature of the church as community or koinonia. The church was indeed conceived as synodal or conciliar in structure from the beginning. This pattern and practice of conciliarity had in fact become the rule by the 3rd C. As regional meetings of several Christian communities were convoked to discuss controversial issues, with nonparticipating churches being informed of their decisions. Presbyters, deacons, and laymen also attended, but probably only as “observers” or as advisers to the episcopal college.

Ecumenical Councils. Strictly speaking, the early church could only express its conciliar nature on a local rather than an “ecumenical” scale while Christianity was still an illegal religion. When it was recognized in the 4th C., however, universal or ecumenical councils representing—at least in theory—the entire episcopate of the empire became possible. Besides, as the church was seen as coextensive with the empire, reliable pronouncements became more urgent; exact definitions of faith were needed in order to determine imperial policy toward dissident or schismatic groups. This was clearly the primary goal of these assemblies as far as the state was concerned. Accordingly, these larger convocations, unlike the pre-Nicene councils, were given imperial confirmation and the binding force of law. Nicaea I (325), convoked by CONSTANTINE I THE GREAT, was the prototype. Seven such councils—all held in the East—were recognized by the Byz. church as genuinely ecumenical: Nicaea I, Constantinople I, Ephesus, Chalcedon, Constantinople II, Constantinople III, and Nicaea II. The eighth “ecumenical” council acknowledged by the West, the council of Constantinople of 869–70, was annulled by the union synod of 879–80. In contrast to the Byz. position, the Roman Catholic church considers as ecumenical several councils convoked by popes; four Lateran synods (1123, 1139, 1179, 1215), two councils of Lyons (1245 and 1274), Vienna of 1311, Constance (1414–18), FERRARA-FLORENCE, etc. Two of them, the Second Council of Lyons and Ferrara-Florence, deliberated problems connected with Byz. (For articles on individual councils, see under site of convocation: e.g., Ephesus, Councils of.)
Significantly, none of the ecumenical councils was convened by a pope. The emperors, who often presided over them (either personally or through their representatives), summoned them. All, moreover, were extraordinary or occasional gatherings. This being so, the canonical literature lacked fixed rules (a typically Byz. phenomenon) concerning their convocation, composition, and organization. Byz. canon law has in fact no philosophy of ecumenical councils.

Although the emperors hoped to use the ecumenical councils as an immediate, binding authority to achieve unanimity or uniformity and cohesion throughout the empire, such councils and their decisions were not accepted mechanically in advance, as divine institutions *de jure divino*. Nicaea I, for example, was not universally acknowledged until 381, while others (Serdica, Hieria, the “Robber” Council of Ephesus, Ferrara-Florence) were eventually accepted as local councils, or rejected as outright heretical concilia-bula, even when they possessed all the criteria of ecumenicity. Their reception therefore was not based on any outward juridical notion of ecumenicity, but on the truth they embodied as authentic organs of episcopal and ecclesial consensus. It was this alone—viewed as a manifestation of Christ’s abiding allegiance to his church—which eventually caused them to be recognized as binding and infallible in authority (J. Meyendorff, *SVThQ* 17 [1973] 267f). Councils quite simply were not above the church.

**Metropolitan Councils.** Unlike ecumenical councils, provincial (or metropolitan) councils were a permanent institutionalized phenomenon: convocations of bishops of a particular province, meeting in the provincial capital under the presidency of the metropolitan, were in place before the 4th C. They met to discuss controversial issues of common concern, but also for episcopal consecrations, which required conciliarity, that is, the presence and participation of all bishops of an ecclesiastical area. Only with Nicaea I, however, were these metropolitan councils permanently established by being ordered to meet twice yearly (canon 5). This regulation was confirmed by Chalcedon (canon 19), but was subsequently changed to a single annual convocation (Trullo, canon 8; Nicaea II, canon 6). The duties of these councils were quite extensive, covering questions of faith, liturgy, morals, discipline, and organization. Nicaea I likewise decreed that the election of a bishop to a vacant see be placed in the hands of all the neighboring bishops of the province (canon 4). These canons mark the beginning of a distinction in ecclesiastical law between different kinds of synods and are, as such, an important stage in the evolution of conciliar theory.

**Episcopal Councils.** The episcopal council was the official assembly of the bishop and clergy of a single bishopric (*paroikia*). It was always under the authority and presidency of the bishop and was responsible for all matters concerning the *paroikia*. This type of council was affected considerably by the new legislation; although not entirely eliminated, it was certainly superseded by the metropolitan council, henceforth viewed as the superior authority. The latter indeed became the higher court of appeal for sentences generated by the lower episcopal council (Nicaea II, canon 3).

**Patriarchal Synods.** The 4th C. also saw the introduction of patriarchal synods, which were councils of the individual patriarchates convoked and presided over by the patriarchs. The most important consultative body of the patriarch of Constantinople was the *endemousa synodos*. This was essentially a permanent “resident” synod with a continuous existence throughout the medieval period in which decisions were reached in collegiality. But regional or local patriarchal councils were also important, particularly after the 11th C. when no ecumenical councils were held because of the schism. In contrast with the *endemousa*, these exceptional, more solemn assemblies held during major doctrinal disputes, included not only metropolitans and bishops, but often also the emperor and members of the senate. Their doctrinal definition (*tomo*) was sometimes included in the *Synodikon of Orthodoxy*, as was the case with the local councils of Constantinople of 1156–57, 1166–67, and 1351 (see under Constantineople, Councils of). The authority of the Byz. church was not therefore restricted to the age of the seven ecumenical councils alone; essentially, regional councils could be and were accepted as universally valid testimony of the Orthodox faith.

**Time and Place.** Normally circumstance and convenience determined the time and place of meeting for councils. This was the case with ecumenical councils, which had to accommodate not
only large numbers, but individual participants traveling long distances. Provincial councils, however, met at the capital of the province. They could also be convened “at the place where the bishop of the metropolis shall approve” (Chalcedon, canon 19; Trullo, canon 8). The actual convocation was held in a church such as Hagia Sophia, or in a building attached to the church, such as the baptistery or diakonikon, with the imperial residence or palace an alternative choice, as the councils held at Hieria, Blachernai, and Trullo illustrate. Often individual contingents (e.g., the Egyptian and Antiobian at Ephesus and Chalcedon) were housed in different buildings. This did not always prevent riots, bloodshed, or even separate or rump synods, which assembled in order to undermine the work of the majority or opposition (see Serdica and Ephesus), for quite often bishops were accompanied by sizable overzealous parties of supporters consisting of priests, monks, and laitymen. It should be noted that this nonepiscopal (i.e., nonvoting) element was often invited to speak and join in the discussion.

Documents. Minutes of the deliberations were carefully recorded by secretaries, although some, such as the acts of Nicaea I and Constantinople I, have not survived. Those of the endemousa were kept in the chartophylakeion of the patriarchate. The signing of these documents was determined by seniority of ordination or by the traditional order (taxis) of sees. The five major sees of the empire (pentarchy) took precedence over all others. A priest or deacon signed if he had attended as a representative of a particular see. In addition to doctrinal definitions, disciplinary canons regulating the life of both clergy and laity were also frequently issued by councils. Often collected separately, these formed an important component of ecclesiastical law. Occasionally anathemas, excommunications, or depositions (kathairesis) directed against individuals or groups would be attached to the dogmatic decisions. Exile or imprisonment in a monastery often accompanied such ecclesiastical punishments.

Church and State. The secular power was represented in most councils, esp. ecumenical and patriarchal ones. Given the close ties between church and state in Christian Byz., this was both natural and understandable. Imperial interest in the outcome of councils was no doubt one reason the public transportation system (cursus publicus) was placed at the disposal of the bishops at Nicaea I; it also explains why emperors often presided over some councils (cf. Marcian at Chalcedon) and even took part in their deliberations. True, abuses and even compulsion were not unknown (e.g., the submission of Pope Vigilius to Justinian I at Constantinople II [see under Constantinople, Councils of]). Despite the tension caused by such flagrant abuse of imperial power, however, the right of formal decision in matters of faith belonged to the episcopate. Indeed, the church was often successful (though not always immediately) in resisting an emperor’s pressure.

Representations in Art. Surviving depictions of councils assume a form closely related to that of other images of authority such as the Pentecost and the Last Judgment. Following Late Antique schemes such as the council of the gods in the Ambrosian Iliad (see Homer) and the emperor’s presidency at the games on the base of the Obelisk Theodosios, they show a semicircle of hierarchs meeting as a college and supervised by the emperor as epistemonarches.

The earliest images of councils are known only from texts. Six councils were depicted in the Mese, in Constantinople, set up, according to the author of the Life of Stephen the Younger, to edify “country folk, foreigners, and the common people” (PG 100:1172A). By the early 8th C. such pictures were fairly common, including mosaics of the First Council of Nicaea in an unknown church in that city. Mosaics showing structures symbolizing each of the seven ecumenical councils, many reworked in the 12th C. and today fragmentarily preserved, survive in the Church of the Nativity in Bethlehem. After Iconoclasm, council scenes were no longer purely commemorative. In the marginal Psalters, Leo V appears amid Iconoclastic bishops at the Council of 815 to illustrate hypocrisy and bloodthirstiness (Ps 25:4), while Theodosios I presides over the First Council of Constantinople in a miniature in the Paris Gregory reflecting the concern of Photios with both Iconoclasm and the Filioque. Even more central is the position given to an Iconoclast shown condemned by Nicaea II, in the Menologion of Basil II (p.108). The Madrid MS of John Skylitzes devotes a unique series of pictures (Grabar-Manoussacas, Skylitzes, nos. 310–12) to the council that forced the resignation of Patr. Tryphon (927–31). Frescoes of four councils—painted as usual
in the narthex—in the Metropolis at Mistra may have liturgical significance (S. Dufrenne, Les Programmes iconographiques des églises byzantines de Mistra [Paris 1970] 8, 59f). The miniature in Paris, B.N. gr. 1242 (Spatharakis, Portrait, fig.86), that shows John VI Kantakouzenos towering over identifiable metropolitan and Patr. Kallistos I at the Council of 1351 reasserts the traditional meaning of council pictures as images of imperial hegemony in matters of doctrine.

COURT, LAW (δικαστήριον). The emperor was the source of law and the supreme judge who determined the right of appeal and of amnesty; the power to judge was thought to be delegated by him to individual institutions or officials. All government bureaus (σερετα) possessed to some extent the right to condemn and pardon, and even the genikon had its own court; since the heads of departments frequently had no professional legal knowledge, they usually were given symponoi as assistants (Balsamon in Rhalles-Potles, Syntagma 3:339.2–9). In the army, strategoi and their subalterns exercised judicial authority. More specific judicial functions were fulfilled by the eparch of the city and the quaestor, whereas the epion deeseon presided over petitions and appeals. As chief of police, the droungarios tes viglas had judicial duties. The imperial judges of the velem or Hippodrome (replaced later by the krítai katholikoi) constituted the highest court. In rare cases the senato discussed crimes of great importance. Bishops, aided by their staff, exercised ecclesiastical jurisdiction extending far beyond canon law, and the precise demarcation between civil and ecclesiastical courts was not always clear.

In the provinces, jurisdiction lay in the hands of the local administration, and governors frequently bore the title of judge (krites) or praetor; sometimes special magistrates arrived from Constantinople to hear local cases. Masters were considered the judges of their slaves and servants, unless they were personally involved in the case (Peira 51.1). The concept of judicial immunity was never very highly developed in Byz.

CRAFTSMEN. See ARTISAN; GUILDS.

CREATION (κτίσις ἐκ τοῦ μη ὄντος). The classical formulation of the Christian doctrine of creation states that the cosmos was brought into existence out of nothing through the omnipotence and free will of God. On the other hand, the divine generation (gennessis) of the Son and the Procession (ekporeusis) of the Holy Spirit, interpreted as "creation" and coming into existence by Arians and the Pneumatomachoi, respectively, had to be distinguished from creation of world and mankind; at the same time any doctrine of emanation to explain creation had to be excluded, since it does "not stem from the essence of God" (John of Damascus, Exp. fidel 8.57–78, 81.6–11; ed. Kotter, Schriften 2:20f, 180).

Emphasis on the freedom and contingency of divine creation runs counter to the idea of its eternality and necessity. In this connection, the question as to the motive of creation (why did God create the world?) receives an answer in which the Platonic tradition and esp. pseudo-Dionysios the Areopagite, that is, the view that the Good continuously generates out of itself, are interpreted to mean that man cannot penetrate the transcendent essence of God who alone is good (Lk 18:19). The question, then, is met by referring to this notion of the essence of the Good: that God creates because he wills to, and not because he is good, an answer that emphasizes the apophatic character of theology (and not, as
in the West, the possibility of theological catastrophic statements). Finally, in connection with the emphasis on God’s freedom in the creation, the Platonic notion that the ideas within the divine mind serve the demiurge as models, insofar as it is given an anthropomorphic interpretation, is rejected.

In spite of the tension that exists between the Platonic cosmological model (presumably based on Gen 1:2 LXX) and belief in the “sovereignty of God,” that is, the unlimited power of God in relation to the world, and in spite of (or even because of) the cosmological speculations of Gnosticism, there slowly developed in early Christianity the doctrine of creation out of nothing that also served as a twofold front against both Gnosticism and philosophy. Nevertheless Plotinus’s interpretation of matter as the final emanation and pure privation (steresis), and Porphyry’s arguments against an eternally preexistent matter, led outwardly to an approach that, for example, in Alexandria in the 5th C., produced a formal (i.e., outward) synthesis in the philosopher Hierokles, who taught that God eternally creates, yet not “out of preexistent matter,” but only on the basis of his will (Photios, Bibl., cods. 214, 251, ed. Henry 3:126.22–26, 7:189.23–191.23). John Philoponos sought, in opposition to Proklos and Aristotle (W. Wieland in Festschrift für Hans-Georg Gadamer [Tübingen 1960] 291–316), to provide the doctrine of creation with a philosophical basis to which he later gave an exegetical foundation by tying it to Basil the Great’s homilies on the Hexaemeron. The cosmology he opposes is that of Theodore of Mopsuestia and his disciple Kosmas Indikopleustes.

In the 11th C., under the influence of the Neoplatonic doctrine of emanation, creation is seen to be continually rooted in the procession and return to God, a “movement proceeding from its origin (arche)” (e.g., John Italos, Quaestiones quoddam libetales, par.69, ed. P. Joannou, pp. 114–17), which constitutes the relationship of the creature to the Creator, except that the difference between them is not addressed. This is observed particularly in commentaries on theological statements of Gregory of Nazianzos.

Representation in Art. Based on the twofold account of Genesis 1:1–2:4 and 2:5–25, representations of the Creation are found in numerous artistic contexts and may be divided into at least three categories, developed probably not much later than Basil the Great’s Hexaemeron. This popular text is preserved in more than 100 MSS, but none of them received narrative illustration. The striking iconographic feature of the days of Creation personified as angels—e.g., in the Cotton Genesis—derived not from biblical exegesis but from Late Antique art (M.-T. d’Alverny, CahArch 9 [1957] 271–300). In another variation type God is present and directs the Creation (Cappella Palatina, Palermo, and Monreale); in a third type, represented by the Octateuchs, the action is carried out by an unseen heavenly power.

CREDITOR (δανειστής), either a professional money-lender (argyroprates or banker) or anyone else to whom money was owed. In Justinianic law and later, social status determined the rate of interest. One could get a loan even from a monastery. Christian public opinion condemned usury and both legal texts and narrative sources describe the cruelty of creditors: Epanagoge 35.1 prohibits creditors from exhuming corpses “under the rationale of debt,” and Demetrios Kydones (Correspondance, ed. Loeneritz 1:30.140–50) describes how a creditor dragged an insolvent debtor from beneath his bed, beat him, “shouted about silver, interest, and months,” and took him before a judge. The hagiographer of St. Philaretos the Merciful sympathizes with a peasant whose ox died and who wanted to run away before his creditors (chreotpheiletai) attacked him like wild beasts (M.H. Fourny, M. Leroy, Byzantion 9 [1934] 119–4–7).

As security the creditor usually received immovables from the debtor—either as a mortgage
or the actual physical possession. If the debtor proved to be insolvent, the ownership of the land, house, or other item was transferred to the creditor.

- A.K.

CREED (σύμβολον), in the strict sense of the word, the short brief exposition of the principles of Christian belief as formulated at the ecumenical councils of NICAEA (325) and the First Council of Constantinople in 381 (see under CONSTANTINOPEL, COUNCILS OF), and as transmitted by the acts of the Council of CHALCEDON (451). Formulas representing the Nicean “creed,” as cited by various theologians, esp. in the commentary of THEODORE OF MOPSTUEIA, do not give a homogeneous text, and the concept of the Nicean creed in the 4th C. seems to have been relatively vague. The creed of Constantinople is also problematic: first of all, it is not mentioned until Chalcedon (an argument ex silentio); secondly, EPIMPHANOS of Cyprus, in a book written seven years before Constantinople I, presents the creed in the same form as that of Constantinople rendered at Chalcedon, although the text of Epiphanius may be interpolated (B.M. Weisgerber, Theologie und Philosophie 53 [1978] 407–14). Thus, the creed of Nicea was developed only over time; it derived from (but did not eliminate) local creeds, probably the creed of Caesarea as attested by EUSEBIOS OF CAESAREA. It served as a baptismal formula that eventually assumed the role of the line of demarcation from heresy—whether this happened by 381 or only 451 is not clear. The text of the creed also survived in papyri of the 5th (J. Kramer, ZPapEpig 1 [1967] 131f) and 6th C. (O. Montecucchi, Aegyptus 55 [1975] 58–69).

CRETAN LITERATURE. Little is known of Cretan literary activity until the late 14th C.; by this time, following the division of territories in the aftermath of the Fourth Crusade, Venetian feudal overlords and Greek subjects had settled into a relationship in which the Italo-Venetian and Cretan Greek dialects and the Catholic and Orthodox faiths maintained a relatively harmonious coexistence. Of the earliest identifiable writers, Leonardo DELLA PORTA stands apart from Stephen SACHLIKES and MARINOS FALIERI, a younger contemporary, in that he employed a standard form of Greek whereas Sachlikes and Falieri preferred the Cretan dialect. Both the latter demonstrate other features that remained characteristic of Cretan literature until the end of its Golden Age. These are the use of rhymed POLITICAL VERSE and a delight in scenes of comic realism drawn from the back streets and brothels of urban Crete. Cut off from the mainstream of Byz. educational traditions and open to influences from western Europe, writers in Crete showed an acquaintance with the vernacular literatures of Byz., esp. the verse ROMANCES (probably also composed and copied on the fringes of the Byz. world), and an awareness of Venetian literary fashions (esp. sharply observed amatory dialogues) which was to culminate in the masterpieces of George Chroratzis (Erofili, Katsourbos) and VINCENTO KORNARO (Erotokritos).

CRETE (Κρήτη), large island in the eastern Mediterranean, midway between Greece and Africa. In the Roman period Crete was primarily agricultural, with industries producing mainly for the local market (L.F. Sanders, Roman Crete [Warminster 1982] 32–35); the island had numerous poleis—different sources give various figures, from 22 to 29—the most important being GORTYNA and KNossOS. Until 295–97 Crete formed a joint province with CYrene but was then separated and under Constantine I included in the diocese of Macedonia. The administrative changes of the 7th C. are obscure: several seals of archontes of Crete are known (Zacos, Seals 1, no.1782) as well as one of a tourmarches of Crete (no.2059)—but this is not sufficient evidence to postulate the existence of a theme of Crete. The 9th-C. Taktikon of UspeNSKIj lists both the archon and—separately—the stratigos of Crete; this double governorship is still enigmatic.

The island was attacked by the Goths in 268,
Vandals in 457, and Slavs in 623. Sometime between 824 and 827/8 expatriate Spanish Arabs led by Abū Hafs landed in Crete, quickly conquered the whole island, and established their capital at Chandax. The Cretan Arabs had a highly developed urban culture and tolerated Christianity. The Muslim occupation of Crete did, however, leave the whole of the Aegean Sea open to devastating raids from the island. After several efforts by his predecessor had failed, in 961 Nikephoros (II) Phokas reconquered Crete and brought enormous treasure for his triumph to Constantinople (Theodosios the Deacon 2:8). After 961 Crete was under the authority of a strategos; in the 10th-C. Taktikon of Escurial he is placed between those of Cyprus and Hellas (Oikonomides, Listes 265-27). From the time of Alexios I Komnenos until 1204 Crete was administered by a doux or katepano. The bishop of Gortyna was archbishop of Crete from the beginnings of Christianity on the island, originally under the papacy and after 732/3 under the patriarch of Constantinople.

Crete under Venetian Rule. After the Latin conquest of Constantinople in 1204, Crete was given to Boniface of Montferrat, who sold it to Venice. The island became a source of agricultural products for the Republic, esp. grain, wine, olive oil, cheese, and wood (A. Laiou in Bisanzio e l’Italia [Milan 1982] 183-86); Venetian influence led to the commercialization of Cretan agriculture. The Greek inhabitants seem to have been less involved in commerce than the Latins and Jews; Laiou (supra 193) reckons that Greeks are named in 20 percent of the 14th-C. notarial acts that she studied. Crete was also an important base for Venetian trade with the Levant, esp. Aydin, Menteshe, and the Mamluk territories (E. Zachriadou, Trade and Crusade [Venice 1983] xxxiiiii). The harsh domination of Venice prompted several revolts in which not only the Greek population but also some Venetian nobles participated, as in 1363 (J. Jegerlehner, BZ 12 [1903] 78-125); in 1453 Sifius Vlasto, a Greek from Rethymno, conspired to overthrow the Venetian government but his scheme was betrayed (M. Manoussakas, He en Kretse synomasis tou Sephe Blastou [Athens 1960]). The Orthodox clergy in Crete was limited to 130 members who were under the jurisdiction of the Latin archbishop of the island (Z. Tsirpanlis, Hellenika 20 [1967] 44-72). In spite of all the political and religious restrictions, Venetian Crete was a place where Greek and Latin cultural traditions came into contact, resulting in a revival of art and Greek literature, esp. in the vernacular, by such writers as Stephen Sachlikis and Leonardo della Porta.

Monuments of Crete. The monuments built on Crete before the Arab conquest of the island are impressive for their size and number (more than 40 survive): the churches at Panormos and Gortyna are large three-aisled basilicas built of carefully dressed blocks, the former having a tripartite transept, atrium, and fine architectural carving.

The far smaller medieval buildings were often built into the ruins of these grander structures. None can be dated before the restoration of Byz. rule in 961, and relatively few from the period preceding the Venetian domination, despite the missionary activity of John Xenos and Nikon ho “Metanoiete.” The Church of the Virgin at Myriokephala, part of a monastery founded by Xenos, has a layer of painting dating from the early 11th C. (G. Antourakes, Hai monai Myriokephalon kai Roustikon Kretes meta ton parekklesion auton [Athens 1977]). The Church of St. Panteleimon at Pege (formerly Bizariano) probably dates from the 12th C.; one of its columns was formed by piling four reused Corinthian capitals on top of one another.

The churches erected under the Venetians are, for the most part, modest one-aisled barrel-vaulted structures lacking dome and narthex, built of stone or rubble masonry with little external decoration. The influence of the Venetians appears mainly on the façades, in the occasional pointed arch or ornamental carving. These churches served as private chapels, or were used by small village communities; as the many surviving inscriptions indicate, they were donated by groups of villages as well as by individuals and families. An adjoining church was frequently constructed parallel to the first, and though the two were designed to communicate and could be virtually contemporary, each “aisle” had a different dedication and
different donors. One of the relatively few domed structures is the cruciform Church of the Virgin Gouverniotissa at Potamies (mid-14th C.).

The fresco decoration of these churches was both rich and surprisingly independent of Western influence (although there are three portraits of St. Francis). The earliest dated program is that of St. Anne at Amari (a.1225, S. Papadake-Oekland, DChAE 7 [1973–74] 31–57); many later ones are also precisely dated, and many, esp. those of the 14th C., bear the names of the artists as well; the name of John Pagomenos appears in eight churches in western Crete over the years 1313–47, and that of the Phokas brothers in three churches in eastern Crete from 1436 to ca.1453 (T. Gouma-Peterson, Gesta 22 [1983] 159–70). The small scale of the churches led to a reduction in the scale of the paintings, but not of their content: some of the individual scenes in the grid of fresco panels adorning the barrel vaults are scarcely larger than portable icons. The lack of a dome meant that the bust of Christ Pantokrator was often displaced to the conch of the apse, where it was flanked by the supplicant Virgin and John the Baptist in a Deesis composition. The programs are not as laced with liturgical themes as are those at Mistra, for example, but are rich in narrative, esp. hagiographical subjects (M. Basileke, Kritike Hestia 1 [1987] 60–83), including the life of the Virgin and local saints.

The earliest frescoes of Crete reveal closer ties with the monastic centers of Asia Minor than with the art of Constantinople or even mainland Greece; 13th-C. monuments such as St. George at Sklavopoula (1290/1) are still provincial versions of 12th-C. Komnenian painting. In the 14th C., however, the successive trends in Palaiologan Monumental Painting as evidenced in such centers as Constantinople, Thessalonike, Serbia, and Mistra came to Crete fairly promptly; apparently without any widespread importation of metropolitan artists, this art would take firm root on the island. In the north and south aisles of the Panagia Kera at Kritsa, the 11 scenes of the life of the Virgin and the elaborate Last Judgment are characterized by multifigured compositions with imposing architectural backdrops, melodramatic poses, and exaggerated facial expressions reminiscent of the early 14th-C. works of Michael (Astrapas) and Eutychios (M. Borboudakis, Panagia Kera [Athens, n.d.]; S. Papadake-Oekland, ArchDelt 22 [1967] 87–111), while the frescoes in the church of the Virgin at Sklavopoula (late 14th–early 15th C.) show the influence of the more graceful and wistful "mature" Palaiologan style favored in Constantinople and Mistra. This latter style was ultimately to lead to the development of the so-called Cretan school of painting of the 15th and 16th C.

CRIMEA, known in antiquity as Tauric Chersonese, a large peninsula situated between the Black and Azov Seas; in Byz. Greek texts the term Khazaria is sometimes used for Crimea. The interior was occupied in the 5th C. by the Huns, but in the early 6th C. Byz. established its power at least in the coastal cities of Cherson and Cimmerian Bosporus. Justinian I ordered the restoration of walls and built phouria at Aloustos and Gorzobitai to protect the coastal part of the Crimea (Prokopios, Buildings 3.10–11); the location of the frontier remains under discussion (e.g., E. Vejmann, ADSV 17 [1980] 19–33). Byz. suzerainty was terminated ca.600, and the remnants of urban life dwindled, but it is plausible that the countryside flourished in the 7th–8th C. (A. Jakobson, Rannesrednevekoye sel'skoe poseleminja Jugo-Zapadnoj Tavriki [Leningrad 1970]). The Khazars dominated Crimea from the 7th to 10th C., but from the 9th C. onward Byz. struggled for hegemony, its stronghold being Cherson and the theme of Klimata (see Klima).

The ethnic composition of Crimea was diversified: besides Greeks and the remnants of Scythians and Sarmatians, there were Goths in Dory, Bulgars in the region of Bosporos, Alans and Pechenegs in the interior, and Rus' in nearby Tmutarakan. Armenians and Italians settled in cities of the peninsula from the 13th C. onward. The Byz. designated the local population of Crimea indiscriminately as "Tauroi" or "Tauroscythians."

After 1204 Crimea was at first within the economic sphere of Trebizond; during the period
of Tatar political domination (after 1235) Genoese and Venetians used Crimean towns (esp. Sougdaia and Kaffa) as bases for long-distance trade. In 1475 the entire peninsula fell to the Ottomans.

CRIMINAL PROCEDURE (ἐγκληματικὴ δίκη). The office of public prosecutor was unknown in Byz. law. Nevertheless, criminal procedures could be initiated by the authorities, but there were few laws governing how they were to be carried out. Punishable offenses were often prosecuted on application of a private person. The nature of the crime dictated who was entitled to prosecute: the injured or harmed person alone, or his relatives and anyone else. The accuser was, as a rule, called a kategoros, and the accusation to be recorded in court was an engraphe; however, the blurred distinction between criminal and civil procedure is reflected in the terminology of the sources. Criminal procedure differed from civil procedure in several ways: for example, there were variations in the arrangements for accusation and representation; witnesses had to appear in person; torture played a large role; the accused could be held in custody; a trial could not last more than two years; and the unsuccessful accuser (syko-phantes) was threatened with the same punishment that would have befallen the accused had he been convicted (tautopolheia).

CRISPUS (Κρίσπος), more fully Flavius Julius Crispus, son of Constantine I and Minervina, probably the emperor’s concubine; born ca.305, died Pola 326. A pupil of Lactantius, he was Caesar from 1 Mar. 317 together with the infant Constantine II. He was apparently put in charge of Gaul and acclaimed for victory over the Franks and Alemanni in 320 and 323. He is titled invictus on a milestone from Lorraine—probably an allusion to the cult of Sol Invictus. As commander of the fleet Crispus played a notable role in the defeat of Licinius in 324, but in 326 was suddenly executed. Aurelius Victor says specifically that this was by order of his father, and many authors (John Chrysostom, Sidonius Apollinaris, etc.) saw a link between his death and the subsequent murder of his stepmother Fausta. Zosimos was the first to relate that Crispus came under suspicion of being involved with Fausta; when Constantine had him murdered, Helena took the loss of her grandson very hard, and Constantine, in order to placate her, placed Fausta in an overheated bath where she suffocated. P. Guthrie (Phoenix 20 [1966] 327f) dismisses any connection between the two murders, but his arguments are not convincing; Crispus must have committed or at least been charged with a serious crime, the nature of which remains uncertain.

CRITICISM, LITERARY, was stimulated in Byz. by the necessity to take a stand with regard to the literary heritage of antiquity. The first task was the assemblage, systematization, and categorization of the surviving texts; this took the form of compiling various lexika and florilegia and establishing the canon of selected authors and works. A greater challenge was the appreciation of classical literature: rejected by radical Christians like Tatian owing to its allegedly amoral character, it was sanctioned—at least as a valid instrument in aiding logic and rhetoric—by such authorities as Gregory of Nazianzos, Gregory of Nyssa, Basil the Great, and, to a lesser degree, John Chrysostom. The judgment was pronounced on the basis of ideological criteria, not literary ones; this ideological approach survived in much later centuries as well and is exemplified by the refutation by Constantine Akropolites of the Timarion. On the other hand, literary critics applied allegorical reinterpretation to pagan texts, esp. to the antique and late antique romances, some of which were seen as the story of the soul’s longing for salvation (Poljakova, Roman. 43–48). Photios, in his Bibliotheca, included a literary evaluation of the books he had read as well as their moral significance (G. Kustas, Hellenika 17 [1962] 132–69). Psellus contributed much to literary criticism: he wrote a stylistic appreciation of the work of a hagiographer, Symeon Metaphrastes; analyzed the rhetorical skill of Gregory of Nazianzos (Mayer, “Psellos'
Rede" 27–100); and compared George of Pisidia with Euripides (A. Dyck, Michael Psellus: The Essays on Euripides and George of Pisidia and on Heliodorus and Achilles Tatius [Vienna 1986]). Psellus emphasized two contradictory principles of a successful literary style—its variety in vocabulary, meter, and form and its internal unity (Ljubarskij, Psell 158f). Eustathios of Thessalonike and Theodore Metochites also analyzed the style of ancient models, such as Plutarch and Synesios, and John Merkouropoulos (see John VIII Chrysostomites) tried to characterize the literary achievements of John of Damascus and Kosmas the Hymnographer.

CROATIA (Χροβατία), northwestern Balkan state, created by Croatian Slavs, who moved into the area in the 7th C. According to Constantine VII Porphyrogennetos (De adm. imp. 31.68–70, 83–84) there were two different Croatian states—Pannonian Great or White Croatia, which was pagan, and baptized Dalmatian Croatia; the latter included the kastra of Nin (Nona), Biograd (Belgradon), one of many "white towns"), Velica (Beltin, and Skradin (Skordona). Constantine asserts that the Croatians were settled there by Emp. Heraclios.

The early centuries of Croatian history are obscure. In Charlemagne’s time the region came under Frankish domination. After his death (814), a rebellion by Pannonian Croatians was crushed by the Franks, but Dalmatian Croatia gained strength under local princes. It obtained papal recognition of its independence in 879, under Prince Branimir (879–92). During the rule of Prince Tomislav (from between 910 and 914 to ca.928) Dalmatian and Pannonian Croatia were united, thus creating a powerful state. In about 923 the Byz. emperor Romanos I sent an embassy to Tomislav to form an alliance with Croatia and Serbia against Symeon of Bulgaria; Symeon’s invasion of Croatia turned into a disaster for Bulgarian troops. It is unclear how and why, but Tomislav then abandoned his Byz. alliance and sought papal support; by 925 Rome acknowledged him as a king.

Probably the danger of Venetian penetration persuaded Tomislav’s successors to turn again to Byz.; at any rate, King Peter Kresimir IV (1058–74) acted as representative of the Byz. emperor in Byz. Dalmatia. Culturally Croatia became further removed from Constantinople when two ecclesiastical conventions in Split (1060 and 1074) condemned and prohibited the Slavonic liturgy, but it survived in many peripheral churches. This anti-Byz. attitude was further developed by King Zvonimir (1075–89/90), under whom Croatia entered a period of internal instability and Hungarian intervention. In 1102 Croatia became united with Hungary, but remained a distinct state, with the Hungarian king being separately elected and crowned as king of Croatia (until 1235). Thereafter Croatia had no further involvement with Byz. affairs.

CROSS (σταυρός), symbol of the Crucifixion of Jesus Christ. From the earliest years of Christianity the paradox that through his death on the cross Christ destroyed the power of death and offered the hope of eternal life to mankind has made the cross a symbol of Christianity.

THEOLOGY OF THE CROSS. Although the cult of the cross (see CROSS, CULT OF THE) did not blossom until the 4th C., theological development of the symbolism of the cross had already begun in the writings of the Apostolic period, with particular reference to Old Testament prototypes (prefigurations) of the cross as, for example, Moses’ attitude of prayer in the victory over the Amalekites, the Tree of Life, and the bronze serpent. The numerous Byz. sermons pertaining to the Feast of the Exaltation of the Cross are devoted chiefly to these prototypes. Surviving examples of these homilies represent a kind of hymnic litany extolling the cross as the sign of victory and salvation (e.g., Makarios Chrysokallos, PG 150:177C). The church fathers repeatedly express their wonder that what was once a symbol of shame became in Christianity a symbol of honor for both crowned heads and simple people, and is treated as such in every church and square and found even on clothing and ordinary utensils (see "The Cross in Everyday Life," below). The danger that the symbol of the cross might degenerate into something meaningless and commonplace is
expressed, among other ways, in a decree of Emp. Valentinian III (Cod. Just. I 8, a.427) and in a resolution of the Council in Trullo (canon 73) forbidding incorporation of the cross into a church floor where it could be trampled underfoot.

Perhaps the most significant theology of the cross is that of John Chrysostom. In many of his sermons, devoted wholly or in part to this theme, he treats the multifaceted mystery of the cross. Beginning with the worldwide spread of Christianity, he emphasizes the central position of the cross as the work of philanthropia, or the symbol of God's providential care (kedemonia) for the world. Rooted in the cross is the salvation of the world because Christ gave his life (psyche) as ransom for the enemy (Chrysostom, PG 58:622.53-55). Referring to St. Paul (Col. 2:14), Chrysostom proclaims that the baptism and the cross canceled the contract that pledged us to the Law and that stood against us: "Not only was it canceled but torn to pieces, the nails of the cross cleft it, made it invalid" (PG 50:462.54-463.1). Through the erection of the cross the air is purged of demons, the citadel of the Devil destroyed. Thus, the cross became the monument to the flight of the enemy. As the Devil conquered Adam through the wood of the Tree of Life, so Christ overcomes Hell through the wood of the cross, leading men who are held captive there to freedom. Through Christ, the sol justitiae, the cross is also immersed in the transfigured light of God. This theological conception yields the artistic form of the crux gemmata, that is, the cross of gold or mosaic overlaid with pearls and precious stones (A. Lipinsky, FelRav 3 30 [1960] 5-62). Chrysostom also considers it obvious that the "sign of the Son of Man" is the cross that precedes Christ in his Parousia or Second Coming.

The veneration of the cross was furthered significantly through Constantine I the Great's vision of the cross at the Milvian Bridge in 312, by Helena's discovery of the True Cross, and by the development of the cult of the cross in the 4th C. and later. It was also advanced by liturgical development in the Feast of the Exaltation of the Cross, whose status was further intensified by Emp. Herakleios's recovery of the True Cross from the Sasanians and its restoration to Jerusalem in 631. For a brief time Iconoclasm also contributed to the portrayal of the cross as an alternative to icons. The Christian attitude of prayer facing east was fixed by mounting a cross in this direction; it also counteracted the orientation of the Jewish Temple and the Marcionites and Phoundagiagites, who prayed facing west.

The liturgy of the triumphal cross was taken as a model for the acclamations for the victorious emperor returning home. The emperor bore the cross on his diadem as a symbol of Christ's sovereignty, while the monks wore this symbol on their headgear or kououlion (J. Engemann in Theologia crucis—Signum crucis: Festschrift E. Dinkler [Tübingen 1979] 137-53). The Patria of Constantinople describes the erection of the cross in the public square of the capital city (probably done first under Theodosios I). The sign of the cross, which was used in all the sacraments, but particularly in the administration of baptism, was made as the eschatological seal of righteousness in the name of Christ. A sermon on the life-giving cross (pseudo-Chrysostom) gives a comprehensive description in one particular passage: "We [i.e., Christians] have for our ship [anti skaphos] the Old and New Testaments, the cross as our helm, Christ as our helmsman, the Father as our captain, the Holy Spirit as our west wind, grace as our sail, the disciples as our sailors, the prophets as our soldiers; we direct ourselves, therefore, beyond the ship into the ocean of thought not to extract a pearl, but something more valuable even than the pearl" (PG 50:817).

The Cross in Everyday Life. The sign of the cross dominated every aspect of daily life: it marked churches, graveyards, religious foundations in general, and house altars. Believing it to be the only true weapon against demonic and evil powers, the faithful wore it around their necks or had it stamped or embroidered on their clothes. To ward off misfortune, the sign of the cross was engraved or carved in a prominent place on city walls, public buildings, bridges, dangerous passes, and private homes. The Second Council of Nicaea ruled that the cross is properly set up not only in churches and on sacred vessels and images but
also “in houses and on streets” (Mansi 13:377CD).
At times of pestilence, drought, or flooding the
faithful carried crosses in litanies led by the clergy.
Miraculous salvation from such natural catastro-
phes was affirmed with the sign of the cross, as
when Theodore of Sykeon gave a blessing and
made the sign of the cross after concluding a
miracle (vita, ed. Festugiére, ch.43:56). On the
banks of a flooded river, at the boundaries of
vineyards or cultivated fields ready for harvest,
or at a place from which evil spirits had previously
escaped, a cross would be erected or carved to
ensure protection against demonic powers (Ibid.,
ed. Festugiére, ch.43:45, ch.45:21–22, ch.53:5,
ch.114:41, ch.144:4, ch.155:15–16). Similarly, a
newly launched ship bore the sign of the cross on
its masts, bow, and stern. Farm animals were also
blessed with the sign of the cross.
Marks of the cross have been widely found in
quarries, apparently used to lend spiritual strength
to the workers’ technical skills (Sodini et al., Alichi
1 124–26). They were painted on the walls of
churches—together with inscribed prayers at To-
kali Kilise in Göreme—before being covered with
more elaborate decoration. Replacing the laba-
rum, the cross was a common sign of faith on
weapons. Gregory Abu’l-Faraj noted among the
loot taken by the Arabs from the Byz. in 887 gold
and silver crosses from the heads of their spears.
During a celebration in honor of the True Cross
that lasted from 28 July to 13 Aug., the houses,
walls, and other buildings in Constantinople were
blessed (De cer. 539:19–21). The illiterate signed
documents by simply drawing a cross; inscriptions
and the signatures of the literate on documents
were usually preceded by a cross.
Occasionally there were acts of impiety such as
swearing and taking false oaths on the cross (Kou-
koules, Bios 3:363, 377) or even faking miracles—
discovering supposedly hidden crosses and pre-
senting them to the faithful, thereby exploiting
their piety (vita of Lazaros of Mt. Galesios, AASS
Nov. 3:512f).
LIT. Hunger, Reich 182–84.

-Cross, Cult of the
Though John Chrysostom says that Christ “did not leave the Cross on
earth but seized it and carried it up to heaven” (PG 49:403:61–3), legends of the finding and
identification of the True Cross by Helena in
the first half of the 4th C. abound. By the second
half of the 4th C. relics of the Cross, used as
amulets—though the practice was condemned by
canon 36 of the Council of Laodikeia ca.360–90
(Mansi 2:570; Gregory of Nyssa, Vie de sainte Ma-
crine, ed. P. Maraval [Paris 1971] 240f, n.2)—had
spread from Jerusalem to Antioch, Cappadocia,
and Constantinople. Circa 384 Egeria described
the beginnings of the liturgical cult of the Cross
on Good Friday in Jerusalem: on Golgotha behind
the chapel of the Cross the bishop took his seat,
and the Wood of the Cross and the Title were
taken out of their box and placed on a table. The
relics were guarded by deacons to prevent the
pilgrims from biting off a piece as they passed to
kiss the Wood (Diary 37:2–3). Egeria also furni-
nishes our earliest description of the 14 Sept. feast
of the Cross in Jerusalem, where it celebrated the
finding of the Cross, associated with an earlier
13–14 Sept. dedication feast of the cathedral com-
plex on Golgotha.
The rite of the Elevation of the Cross is first
attested at the Golgotha martyrion in the 6th C.
(ed. H. Usener, Der hl. Theodosios, Schriften des
Theodoros u. Kyrillos [Leipzig 1890] 71). The 7th-
C. Chronicon Paschale speaks of the exposition
of the Cross (staurophanes) on 14 Sept. (1:531:9–
d2), and testifies to the exaltation (hypsosis) rite in
Hagia Sophia on that day in 614 (705:3–6). In
the rite of Constantinople this exaltation theme
overshadowed the earlier inventio motif, and the
ritual exaltation became the central ceremony,
celebrated with the greatest solemnity (Mateos,
Typicon 1:24; De cer., bk.1, ch.31 [32]). For four
days (10–13 Sept.) the wood of the Cross was
exposed for veneration, and the Sunday before
and after the feast and its vigil (paramene) were
all directed toward the celebration. On 14 Sept.
itself, at orthros in Hagia Sophia, the patriarch
entered in solemn procession bearing the relic of
the Cross, escorted by the emperor and court
dignitaries bearing candles. They formed an honor
guard along the ambo and solea as the patriarch
mounted the ambo with “the precious wood.”
After prostration and prayer, the patriarch ele-
vated the relic of the Cross thrice to the four
corners of the earth, then the people came for-
ward to venerate the relic. After the service the
emperor offered a banquet in the Triklinos of
Justinian (Oikonomides, Listes 222f). In the 14th
The exaltation rite took place on a platform erected in the Triklinos (pseudo-Kod. 239–40).

In the Sabaitic typika this feast is one of the 12 Byz. Great Feasts and the only nonbiblical dominical feast. It does not celebrate Jesus' passion, like Good Friday, but the Cross as instrument of salvation, the triumphant symbol of Jesus' victory over death.

One of two Byz. feasts that are fast days, the Exaltation is solemnized by a forefeast with agrypnia and a week-long afterfeast with apodosis. The festive propers for 14 Sept. in the menaion are repeated on Holy Cross Sunday in the triodion, the Third Sunday of Lent (but cf. Mateos, Typikon 2:38–45).

Historical Development. The veneration of the Cross was concentrated on two "historical" events—the vision of the Cross by Constantine I the Great on the eve of his victory over Maxentius in 312 and the appearance of the Cross in Jerusalem in 351 as described by Cyril of Jerusalem in his letter to Constantius II (E. Bihain, Byzantion 43 [1973/4] 264–96). To this a third "historical" event was added—the discovery of the Cross by St. Helena and Makarios, "patriarch" of Jerusalem. The relic of the True Cross was captured by the Persians who seized Jerusalem in 614, but recovered by Herakleios and restored to Jerusalem in 631. Enormous literature has been devoted to the veneration of the Cross, the treatise of Alexander the Monk being one of the most important works on the subject; unfortunately, the traditional dating in the mid-6th C. cannot be substantiated. The cult of the Cross acquired a particular significance under the Iconoclast emperors of the 8th C., when the Cross was treated as the symbol of the Christian church—on the other hand, the Iconodules emphasized that the Cross is only one of a number of symbols and no more important than the icon. The Iconoclasts stressed the mili-
tary function of the Cross as the instrument of victory; this victory-giving role of the Cross is developed also in the hymns of Kosmas the Hymnographer, whereas John of Damascus remained lukewarm with regard to this theme. A legend of the Iconoclast period recounts that Constantine the Great erected in Constantinople three crosses named Jesus, Christ, and Victory (Herakleios renamed the latter Aniketos, Unvanquished); these crosses were located in the Forum, Philadelphia, and Artopoleion, places that served as stations during the victory celebrations of the 6th C. The Cross remained a military symbol throughout the 10th C.

RFT. A.K.

CROSS, PROCESSIONAL. The carrying of crosses in procession is attested at least as early as 499, when clergy, monks, and lay persons of both sexes, armed with such emblems, traversed Edessa to appease the Providence that had caused an earthquake (JoshStyl 27). Crosses were carried in churches during the LITTLE ENTRANCE and through cities, as in the procession of the patriarch of Constantinople from Hagia Sophia to the Forum of Constantine (De cer. 29.16–17). A miniature in the Menologion of Basil II (p.142) depicts a deacon bearing through the streets a huge pearled cross with pendant jewels, supported by a strap around his neck.

Surviving processional crosses, made of a variety of metals, may be identified by a tanga at the base for insertion in a staff and sometimes by their decoration on both sides. At least two crosses of the 10th–11th C. are referred to as a signon in the texts inscribed upon them (C. Mango, infra 42). In inventories they may be called litanikoi (will of Eustathios Bollas) or baiophorikoi stauroi (Diataxis of Michael Attaleiates). Such docu-

ments suggest their role in the liturgies of even small churches and chapels, when they may have been of quite modest size. Preserved processional crosses of the 6th–7th C. average 30–60 cm in height; they often have flaring arms terminating in small knobs and have suspension holes for pendants—sometimes the Apocalyptic letters alpha and omega. Usually made of hammered silver, some bear dedicatory inscriptions (Mango, Silver 87–91, 235, 249). Post-Iconoclastic crosses in both silver and bronze retain these features but frequently have disks at the ends of their arms or melon-shaped fittings (DOCat 1:59f).

Most surviving examples in silver consist of sheets wrapped around an iron core (L. Bouras, The Cross of Adrianople [Athens 1979]) that may be decorated in repoussé on the obverse and with niello and gilding on the reverse, as on the so-called Cross of Michael I Keroularios. Elaborate processional crosses could be decorated with the Deesis or with scenes pertaining to their donor or the patron saint of a church. The most impressive post-Iconoclastic specimen is the monumental cross of Nikephoros II Phokas in the Lavra on Mt. Athos (A. Grabar, CahArch 19 [1969] 99–125), which is embellished with gems and busts of saints in repoussé.

CROSSING OF THE RED SEA, the escape of the Israelites from Egypt across the Red Sea, whose waters parted miraculously (Ex 14:15–30). This event offered a promise of salvation, both personal and collective, that was visualized as early as the 4th C. in the Via Latina catacomb and on numerous sarcofagi. Didymos the Blind (PG 39:691–8), John Chrysostom, and others treated the Crossing as a type of baptism (F. Dolger, Antike und Christentum 2 [1930] 63–69). As an image of salvation, the passage was chanted in the ambo of Hagia Sophia, Constantinople, on Holy Saturday (Mateos, Typicon 2:84–85). The main application of the image derived from the analogy drawn with Constantine I’s triumph at the Milvian Bridge (Eusebios, HE 9.9.8); it provided a basis for imperial victory celebrations in the mid-10th C. (De cer. 610.2–5). Contemporaneously, the triumphal song chanted by Moses entered Ode
illustration. A miniature in the Paris Psalter shows Night (Nyx), Bythus, and other personifications participating in the Israelites' triumph. With or without these additions, the Crossing remained a standard component of Psalter and other Old Testament illustration.

CROSS-IN-SQUARE CHURCH. See Church Plan Types.

CROTONE (Krótôv), also called Cotrone, coastal city in Calabria. It was an important stronghold during the Gothic wars in Italy: Totila's army besieged it in 551/2, but Justinian I sent a special fleet that saved the city (Prokopios, Wars 4.25.24—26.2). During the Lombard invasion the Byz. continued to hold Crotone. Several important battles were waged near the city: Gay (Italie 937) suggests that in 982 Otto II chased the Arabs from Crotone but was defeated the same year; in 1052 the Normans routed Argyros, son of Melo, at Crotone.

Legend has it that Dionysios the Areopagite, on his way from Athens to Paris, stopped at Crotone and was for a while its bishop. The city's first attested bishop, however, was Jordanes in 551. Bishops of Crotone attended councils at Constantinople in 680, 757, and 870. When the metropolis of Reggio-Calabria was created in the early 9th C, Crotone was one of its suffragans. —A.K.

CROWN (στέφανος, στέμμα), with purple robes and boots, the imperial insignia par excellence. Coins are the best guide to the chronology of changes in crown design, which evolved from simple to complex. Various terms designate crowns of different types, but their rigor and the exactness of modern identifications of terms and designs is unclear. Constantine I adopted the Hellenistic symbol of the diadem and its evolution dominated crowns down to the 12th C. It consisted essentially of a circle of jeweled panels with hanging ornaments called prependoulia and surmounted by a cross; it was sometimes combined with helmets. A 10th-C. ceremonial book (De cer., bk.1, ch.37, ed. Vogt 1:175.10—178.15) refers to red, white, blue, or green crowns, perhaps indi-

cating cloth linings. The torque was used as a crown in coronations from 360 to the 6th C. and may have developed into the collar depicted in imperial portraiture from the 11th C. Modern studies of the late Byz. crown call it kamelaukion and emphasize its golden top that covered the head. The modiolos seems to have been used from the 5th to 13th C. Another kind of crown, the crested toupha, was particularly associated with military events. Empresses' crowns resembled emperors' diadems, except that they normally showed triangular elements projecting upward from the circle. Late Roman caesars shared other imperial insignia, but not the diadem (Zosim. 6.13.1, ed. Mendelssohn, 293.10—12; Vita Marcelli 34, ed. G. Dagron, AB 86 [1968] 316); Byz. heirs presumptive wore some kind of headgear, for example, the kamelaukion (De cer., bk.2, ch.27, ed. Reiske, 628.5—10) and phakiolion (De cer., "Append.", ed. Reiske, 500.12—15).

Crowns were worn during ceremonies. Emperors possessed several, of which particular crowns do not seem to have been handed down, as in the West. Some were buried with the emperor, others given to churches as votive offerings (Theoph. 281.16—20, 453.87—30). Late Roman emperors removed their crown as a sign of mourning (Malal. 421.16—21; Theoph. 173.1—7), penance, and usually—to the 10th C. at least—when they went to church. This custom had changed by Palaiologan times, when it was specified (pseudo-Kod. 268.4—20) that the emperor should remove the crown during communion. When not worn, crowns, like other insignia, were entrusted to court eunuchs. The praepositus usually crowned or uncrowned the emperor (Theodosius in Itineraria et alia geographica [Turnholt 1965] 123.13—124.6). Crowns were kept in cases called korniklia (De cer., bk.1, ch.1, ed. Vogt, 1:4.17).

Client rulers received crowns and other insignia thanks to Byz. diplomacy. The Hellenistic custom of offering golden crowns or wreaths to emperors, as at adventus, became a tax (aurum coronarium) and, in the 9th and 10th C., a symbolic exchange (McCormick, Eternal Victory 211f).

Surviving Examples of Byz. Crowns. Whereas representations of Byz. diadems are copious on diptychs, coins, wall paintings, miniatures, and so forth, few actual specimens have been preserved. Some pieces of an imperial crown were found in
1860 near the Hungarian village of Nyitraivánka; it is unclear how this diadem came to Hungary—as an imperial gift or after the looting of Constantinople in 1204. Z. Kádár (Folia archaeologica 16 [1964] 121f) reconstructs the iconography of the crown as follows: in the center was the Pantokrator flanked by personifications of Modesty (Tapeinosis) and Truth (Atheyelia); below them was a portrait of Constantine IX Monomachos with Zoe and her sister Theodora; on the back King David was represented with Sophia and Propheteia; the three dancing women beneath them suggest that it must have been a festive event (wedding or coronation) that caused the crown to be made.

The lower part of the so-called Hungarian crown of St. Stephen (corona graeca) contains portraits of Michael VII Doukas, his brother or son Constantine, and the Hungarian king Géza I; it was probably sent from Constantinople between 1074 and 1077 as a present to the ruler of Hungary, although Deér (infra) questions that the object was originally intended to be a crown.

Imperial crowns are made of precious metals and ornamented with precious stones and enamels. Much more modest are two tin-plated copper crowns (in the Byz. Museum of Athens) with inscriptions mentioning the spatharokandidatos Romanos, his wife, and children; the objects, probably of the 11th C., may have served either as an altar decoration or as marriage crowns. —A.K.

CROWNING. See Marriage Rite.

CRUCIFIXION. Christ’s death on the Cross (σταύρωσις), the culminating event of the Passion of Christ, was not depicted until the 5th C.; the earliest surviving representations are from the late 6th C. (RABBULA GOSPELS, fol.131T; SANCTA SANCTORUM, RELIQUARY; AMPULLAE). They include many participants—the Virgin Mary, John the Apostle (or Theologian), thieves, soldiers playing dice, the lance- and the sponge-bearer—and most versions show Christ with open eyes, in spite of the open wound on his side as the unmistakable sign of death. This is explained by the theology of the cross of John Chrysostom, who provided a profoundly Antiochene stamp: “Because God loved the world (Jn 3:16), his temple, endowed with a soul, was crucified” (PG 59:159.7–8). The anti-Monophysite emphasis on Christ’s mortal corporeality attests, through the simultaneously opened eyes, the inseparability of the divine Logos from the body and soul of the dead Christ (only the body of Christ sleeps on the cross, while his divinity remains awake). Post-Iconoclastic images show Christ dead with closed eyes, blood and water flowing from his side, to demonstrate his humanity (J. Martin in LCMS 189–96). In these representations he wears a loincloth rather than the earlier COLOBIUM.

In the marginal PSALTERS scenes of Christ being led to the cross, and its raising, indicate that narrative cycles of the Crucifixion existed by the 9th C. In the 10th–12th C., when the scene had become the feast icon for GOOD FRIDAY, the composition focused on the figures of Christ, Mary, and John, only sometimes adding further, symbolic motifs: mourning MYROPHOROI; the centurion Longinus (the first person converted by Christ’s death); personifications of EKKLESIA and Synagogue; Mary fainting beneath the Cross. In Palaiologan art the narrative is again enriched with crowds of onlookers and additional scenes (cf. the long cycles of the Crucifixion at STARIO NAGORICINO and GRAČANICA). A crucifix was placed on top of the TEMPLE FROM the 12th C. onward.

CRUSADER ART AND ARCHITECTURE. The presence of CRUSADER STATES in Syria and Palestine between 1099 and 1291 set the stage for vigorous artistic activity, esp. at the LOGA SANCTA in JERUSALEM, BETHLEHEM, and NAZARETH, formerly under Byz. control and at that time possessed by the Latin Kingdom. Crusader art was sponsored mainly by the resident Franks, but the artists who carried out these commissions in-
cluded western Europeans, indigenous Christians, Frankish artists born in the Crusader states, Armenians, and Byz. Greeks.

After the capture of Jerusalem on 15 July 1099, the Crusaders were challenged to settle and defend newly won territory. From 1099 to 1231 defensive architecture was a high priority, but church building was also attended to. After 1112 in Jerusalem, Crusader architects boldly unified the great Byz. rotunda of the Holy Sepulchre with the Calvary chapel to create a pointed-arch, rib-vaulted French type of pilgrimage church, reusing portions of the Byz. mosaic program. In Bethlehem, the Church of the Nativity was captured intact in 1099; the Crusaders used this Justinianic building for their early coronations and decorated it starting in 1130 with fresco painting in Romanesque styles on the nave columns. In Nazareth, by 1107 TANGRED had rebuilt the Church of the Annunciation on ruins of Byz. buildings. The barrel-vaulted Latin basilica with transepts is used at Nazareth and in Jerusalem in the Church of St. Anne, started shortly after 1113.

The richest and most diverse artistic output of the Crusaders was in the 12th C., esp. between 1131 and the early 1180s. When Melisende (died 1161), eldest daughter of BALDWIN II and his Armenian wife Mornia, came to the throne in 1131, her personal patronage apparently stimulated much activity in and around Jerusalem. The most famous work directly associated with her is the Psalter (London, B.L. Egerton 1139), completed by 1143. Three artists executed the illustrations, all Western-trained, but strongly if differently influenced by Byz.; one of them, Basilios, signed the DEESIS image in Latin. Taken together, the paintings, the text of the calendar with its notable English features, and the ivory covers with a Byz.-looking prince engaged in works of mercy, a Western iconographical concept, epitomize the mélange of East and West that characterizes Crusader art.

Completing the Holy Sepulchre was the most important project of the 1130s and 1140s. The double portal of the main façade echoes the Byz. design of the Golden Gate in Jerusalem. The rich sculptural decoration included elements from Roman, Early Christian, and Arab sources along with Byz.-inspired mosaics in the west tympanum, acanthus capitals, and two Romanesque lintels. At its dedication on 15 July 1149, the Holy Sepulchre must have been a spectacular monumental statement of the interpenetration of artistic traditions that characterized the new Frankish art. Elsewhere in Jerusalem, sculpture in a robust French style decorated the Hospitaller complex, while on the Haram al-Sharif some of the most beautiful nonfigural Crusader sculpture, featuring a wet-leaf acanthus motif in an Italo-Provençal manner, seems to have been sponsored by the Templars.

At Tyre the Byz. church was rebuilt, while at Ramla and nearby Lydda (Diospolis) the smaller churches of St. John and St. George, respectively, demonstrated the more typical Romanesque-Levantine basilica with a flat stone roof and a Near Eastern vocabulary of architectural sculpture. Some of the best known Crusader castles, such as Saone, Krak des Chevaliers, and Belvoir, were begun or rebuilt in these years. Finally, Nazareth and Bethlehem emerge between 1150 and 1187 as major centers of sculpture and painting respectively. The Nazareth capitals, reflecting Romanesque style, Byz. iconography, and Islamic muqarnas, are the best-preserved examples of a major atelier from which nearly 100 figural fragments survive (J. Folda, The Nazareth Capitals and the Crusader Shrine of the Annunciation [University Park, Pa.–London 1986]). The frescoes painted on the nave columns in the Church of the Nativity include a series in the Byz. style and extensive mosaics signed by Basilios and Ephraim. They were completed by 1169 under the patronage of the local bishop, King AMALRIC I, and Emp. MANUEL I Komnenos. The strong Byz. influence here and nearby in the frescoes of the Hospital church at Abu-Ghosh, along with the contemporary products of the Holy Sepulchre scriptorium, reflect the close ties between the Latin Kingdom and the Byz. Empire from the mid-1160s to the death of Amalric (1174).

Saladin's conquest drastically reduced the artistic output of the Crusaders. Only a few places held out, including the castles of Krak des Chevaliers and Margat where frescoes in Byz. style were completed despite the difficult circumstances. Tripoli, Tyre, and Antioch also remained in Crusader hands and the Third Crusade quickly restored Acre (1191), but not Jerusalem. For a century Acre was the major port and the political and artistic center of the Latin Kingdom.

Artistic activity in the Crusader states was thus diminished until the mid-13th C. Castle building
continued of necessity but only one important church was completed, Nôtre-Dame of Tartus. Only one major MS has been attributed to the period: the psalter, possibly commissioned ca.1235 by Frederick II, combining English and Byz. aspects—notably a thoroughly Byz. Nativity and prophets holding scrolls with texts translated from the Septuagint—with a German approach to the program of scenes (Buchthal, Latin Kingdom 40–43).

Artistic output, esp. painting, increased sharply after 1250, stimulated by Louis IX who resided in the Latin Kingdom from 1250 to 1254. The illustrations for an Old French Bible apparently commissioned by Louis are in an accomplished Franco-Byz. style strongly related to frescoes painted in Kalenderhane Camii in Constantinople during the period of Latin occupation. Icons on wood panels demonstrate Byz. influence, while the strength of the Italo-Byz. style reflected the Italian presence in the merchant quarters of Acre. Paralleling developments in the West, secular codices became increasingly popular. A Histoire Universelle, possibly prepared as a gift for Henry II of Lusignan, has a frontispiece showing the impact of Islamic art. Surprisingly, the last important painter in Acre used a purely French Gothic style for the Hospitallers. Recently arrived from Paris, he worked in Acre in the decade before its fall in 1291.

CRUSADER CASTLES. In the East the Crusaders, familiar with the motte-and-bailey castle, encountered Byz. and Arabic fortifications, esp. a descendant of the Roman castra (rectangular, with corner towers) and the irregular mountain-crest castle, usually with several defensive lines on the weakest approach. A vast Byz. crag-type fortification, perhaps 10th C., became the castle of Saone (Sahyûn, between Laodikeia and the Orontes). In the 13th C., this pattern was used on a peninsula at Château Pélérin (‘Atlit, between Haifa and Caesarea). In Frankish Greece, after 1204, the Crusaders adapted these plans to their needs. Refortified classical and Byz. sites include the Acropolis of Athens and Acrocorinth (see Corinth). Chlemoutsi (Clermont) in Elis is an irregular hollow hexagon crowning a low hill. Karytaina is a crest-type castle above a gorge in the central Peloponnesos; Plamaton and Boudonitzza defend the vale of Tempe and a pass near Thermopylae, respectively.

CRUSADER STATES. The states first founded by the Crusaders were on former Muslim territory, where the principal vestiges of Byz. rule were the Christian minorities (Melchites, Jacobites, Maronites). These states included the kingdom of Jerusalem, the principality of Antioch, the county of Edessa, and the county of Tripoli.

Upon lands that the Crusaders later conquered from Byz., the Crusaders founded the kingdom of Cyprus, the Latin Empire of Constantinople, the kingdom of Thessalonike, the principality of Achâia, the duchy of Athens, the duchy of Naxos, and various lesser feudal units. Venice assumed direct rule over Crete, Methone and Korone in the Morea, and eventually Euboia, while Genoa acquired Chios, Lesbos, and Phokaia. Rhodes passed to the Hospitallers. The populations of these states and dependencies were Byz. or partially Byzantinized Slavs and Vlachs. In the Crusader states an aristocracy of Western knights and lords was superimposed on the local society. While the aristocracy followed Western feudal customs, enshrined in the Assizes of Jerusalem and of Romania, the populace generally observed Byz. law, paid dues modeled on what they had paid the emperors, and maintained their Orthodox religion.

CRUSADES were military expeditions launched by popes, initially against infidels for the recovery of the Holy Sepulchre in Jerusalem. The term “bearer of the Cross” (staurophoros), known from Greek texts from the 4th C. onward, has been
construed as referring to monastic life, not Crusaders. The idea of the holy war prevailed during Herakleios's expeditions against the Persians. This idea reappeared in the West in the writing of Pope Gregory VII and assumed final form in the proclamation of Pope Urban II.

Alexios I was partially responsible for inspiring the Crusades. In March 1095 his envoys met Urban II at Piacenza and appealed for Western help against the Seljuk Turks. The pope publicly urged assistance to Byz. On 27 Nov. 1095, at Clermont, Urban renewed his appeal for aid to the Eastern Christians and called for the rescue of the Holy Sepulchre.

The armies of the early Crusades passed through Byz. territory, traveling either from Braničevo on the Danube through Sofia to Constantinople, or from Dyrrachion via Thessalonike. Crossing the straits, they marched through Byz. and Turkish territory to Antioch and the Holy Land. The Byz. attempted to provide markets where the Crusaders could purchase provisions, while restraining them from pillaging the countryside. Nevertheless, the undisciplined Westerners often plundered; policing (usually by Pecheneg horsemen) was brutal. Skirmishes in which both sides suffered losses led to ill feeling.

Forerunners of the First Crusade (1095–1099) were bands led by Peter the Hermit and others that reached Constantinople in 1096. Faced with their turbulence, Alexios transferred them to Anatolia, where they were largely destroyed by the Turks. The survivors blamed the emperor.

The portions of the First Crusade led by nobles such as Godfrey of Bouillon and Bohemund reached Constantinople in late 1096 and early 1097. As they arrived, Alexios sought to gain each leader's favor by gifts, induce him to swear fealty to the emperor, and make him urge later arrivals to do the same. Those who took the oath pledged to return to Byz. all territories recently seized by the Turks. Some, like Hugh of Vermandois and Bohemund, readily agreed; others, like Godfrey, demurred. Godfrey, after his followers quarreled with the Byz., attacked Constantinople, but was beaten off; reconciled with Alexios, he took the oath.

The Crusaders and Byz. jointly attacked Nicaea
(May–June 1097); the former were displeased when the city surrendered to the Byz., but Alexios appeased them with gifts. He dispatched Taktikos and a small force to support their march across Anatolia. During the siege of Antioch, Taktikos was forced to withdraw and Bohemund later used this action to justify his seizure of Antioch. The Crusaders succeeded in capturing Jerusalem on 15 July 1099.

An expedition of Lombards and some French nobles that set out from Europe in 1100 encountered difficulties in crossing Byz. territory; some Lombards even attacked the Blachernai Palace. In 1101 the Crusaders’ rash conduct in Asia Minor brought them disaster. Alexios was charged with treacherously betraying them to the Turks. Byz. claimed Antioch and strove until 1180 to subordinate its princes. Alexios I’s attacks caused Bohemund to join with the pope and launch a Crusade against Byz.; it was defeated in 1108.

The Second Crusade (1147–1149) consisted of a German contingent led by Conrad III and a French one led by Louis VII. In 1147 Conrad’s followers clashed with the Byz. in Thrace, and Manuel I was pleased to transport them over the Bosporos before Louis arrived. Although the French enjoyed a friendly reception from Manuel, Bp. Godfrey of Langres proposed the seizure of Constantinople. Germans and French suffered heavy losses at the hands of the Turks in Anatolia. Manuel provided shipping to transport the survivors from Attaleia to Antioch (Jan. 1148), but the Byz. were blamed for betraying the Crusade. In July the French withdrew from Damascus after an unsuccessful attack.

In subsequent decades, as pressure on the Crusader states from Nur al-Din and Saladin increased, the kings of Jerusalem sought alliance with Byz. Baldwin III married a Komnene, as did his successor Amalric I. A joint Crusader-Byz. force attacked Damietta (1169), but disagreements and mutual distrust caused the expedition to fail. Amalric did homage to Manuel in Constantinople in 1171. In 1177 Manuel attempted to renew the alliance, but the weakness of Amalric’s successors prevented any action.

After Saladin’s conquest of most of the kingdom of Jerusalem (1187), Isaac II attempted a rapprochement with him. To obtain Saladin’s good will, Isaac lured the portion of the Third Crusade (1189–1192) led by Frederick Barbarossa into Thrace, then attempted to destroy it (1189). Enraged, Frederick wrote to his son Henry VI ordering him to bring a fleet for an attack on Constantinople. Isaac, however, soon yielded and allowed Frederick to proceed, but he drowned in Cilicia (10 June 1190) and his army scattered. Another section of the Third Crusade, led by Richard I Lionheart, seized Cyprus from its Greek ruler, Isaac Komnenos. The French and English forces failed to regain Jerusalem but did capture Acre on 12 July 1191. In 1195–97 Henry VI planned a Crusade and used it to blackmail Byz. Only Henry’s death saved the empire from having to pay the Alamanikon tribute.

Byz. hostility to the Crusades, evident in the writings of Anna Komnene and Kinnamos, and with some qualifications in Niketas Choniates, was reciprocated, as shown by Western authors such as Raymond of Aguilers, Odo of Deuil, and Ansbert. Bohemund and Frederick I had proposed a Crusade against Byz. (S. Kindlimann, Die Eroberung von Konstantinopel als politische Forderung des Westens im Hochmittelalter [Zurich 1969]). Pope Innocent III was ready to threaten a Crusade as a means to bring about church unity (A.J. Andrea, I. Motsiff, BS 33 [1972] 6–25). The Crusades had made Constantinople’s wealth known in the West. Philip of Swabia and his ally Boniface of Montferrat had ambitions in the East. Venetian merchants wanted an assured monopoly in Constantinople (Lilie, Handel und Politik 557–95). Philip, Boniface, and Doge Enrico Dandolo of Venice assisted the refugee Alexios IV; they easily won the support of many members of the Fourth Crusade (1202–04) for a diversion against Constantinople. After Alexios IV and his successor Alexios V proved hostile, the Crusaders seized Constantinople for themselves (12 Apr. 1204) and cruelly sacked it. The hostility of the Byz. populace to the Latin Empire established by the Crusaders contributed to its short life (1204–61). The Crusader principalities founded in the Morea, however, such as the principality of Achaia, enjoyed greater success.

After the Latin Empire fell, the Turkish menace to the West was recognized and the defense of Constantinople prompted several Crusades. In 1344 Smyrna was won, but the Crusade of 1396 ended in a crushing defeat at Nikopolis (see Nikopolis, Crusade of). A final attempt to save Constantinople resulted in the Ottoman victory
at Varna (1444) that assured the Turkish conquest of Byz.

Economically, the Crusades stimulated the development of Venice and Genoa at the expense of Constantinople. While cultural exchange between Byz. and the West increased, their mutual hostility furthered the schism. Originally intended in part to rescue Byz. from the Turks, the Crusades contributed substantially to its downfall.

—C.M.B.

CRUSADES, WESTERN HISTORIANS OF THE.
The First Crusade focused Western imagination on the seemingly providential events in Palestine (and secondarily in Byz.), stimulating new departures in Latin literature (G. Spreckelmeyer, Das Kreuzzugslied des lateinischen Mittelalters [Munich 1974]). Letters, like the one that Count Stephen of Blois sent his wife about Constantinople (ed. H. Hagenmeyer, Die Kreuzzugsbriefe aus den Jahren 1098–1100 [Innsbruck 1901] 138–40), or oral and written reports, like the Gesta Francorum, brought new knowledge of Byz. shaped by the confrontation of differing civilizations and conflicting objectives. Crusader admiration or hostility centered initially on Alexios I rather than the Byz. people, reflecting the emperor’s all-pervasive position. The Gesta was rewritten in the polished style required by the so-called 12th-C. renaissance for a burgeoning audience of educated clergy. Although some added little more than literary trappings, others, such as Albert of Aachen and Guibert of Nogent, supplied new material deriving from local Crusaders and, possibly, early vernacular epics. By interpreting Byz. in terms of Western society, they also unconsciously distorted it. Even non-Crusader historians such as Orderic Vitalis, Caffaro (see Annales Ianuenses), and Roger of Hoveden incorporated the Levant into their historical productions. The classicizing literary climate revived antique stereotypes about shifty, effeminate Greeks who were tacitly assimilated to the modern-day Byz. emperor. But early Crusaders did not emphasize religious differences, and the relative serenity of a Lotharingian theologian like Rupert of Deutz typifies the early 12th C.

The growth of administrative kingship and literacy meant that, from the Second Crusade, clerical record-keepers accompanied Western rulers. Some histories, like that of Odo of Deuil, the diarylike material of Tageno, and the Historia de expeditione Friderici, reflect the royal retinues’ contacts with Constantinople, while other Crusaders authored personal accounts like the Itinerarium peregrinorum. Religious hostility toward Byz. swelled dramatically as Western theology’s accelerating development and obsession with local heretics affected differences between the Byz. and Latin churches, exacerbating political conflicts. The old stereotypes now encompassed the Byz. people, increasingly considered as an ethnic unit. The classicizing ideals of the 12th C. revived the Trojan legend and reinforced assimilation of contemporary Byz. and ancient Greeks even as it sharpened hostility, since the “Franks” believed their ancestors came from Troy. The Crusader states, however, produced Latins who knew Byz. directly and could be essentially positive, like Fulcher of Chartres, or reflect political tensions, like Radulf of Caen. This milieu explains the masterful portrayal of Byz. by William of Tyre.

Although epic overtones already pervade Albert and Radulf, written vernacular Crusader poems emerge only late in the 12th C. with the Chanson d’Antioche and the verses of Ambroise. Western fantasies of Byz. and its riches worked their way into fictional works like the Voyage de Charlemagne and the tales of Walter Map, even as the Third Crusade’s failure diminished expectations from such enterprises. The fascination peaked tragically with the Fourth Crusade as Byz. treasures flooded Western society, accompanied by reports of the conquest like the Devastatio Constantinopolitana and the account of Gunther of Pairis. Count Baldwin’s court in Hainault had pioneered vernacular literary innovation, and his role in the conquest combined with the primacy of French as the Crusader states’ vehicular language to encourage prose histories like the Estoire d’Eracles; the works of Geoffrey Villehardouin, Henri de Valenciennes, Robert de Clari; and, later, the Chronicle of the Morea.
CRYPT (from κρυτή, “concealed place,” also “vault”), a chamber beneath the main floor of a church, usually containing relics or tombs. Although never a requisite feature, crypts are found in Byz. churches of all periods and in a variety of locations. Most of the early basilicas of Constantinople were provided with a small cruciform crypt located directly beneath the altar, as in the 5th-C. Stoudios basilica. The entry into these crypts was usually by means of a narrow stairway opening in the interior of the apse, though in other churches, such as the 6th-C. Church of St. John in Hebdomon, access was obtained from outside the building. The spacious crypt under the transept of the 5th-C. Basilica of St. Demetrios in Thessalonike encircled a part of a Roman bath in which the saint was believed to have suffered his martyrdom. The function of many later crypts is not clear; those under such churches as the katholikon of Hosios Loukas, the ossuary of the Petritzos monastery, and the Taxiarchs in Thessalonike were designed expressly for funerary purposes.

CRYPTOGRAM, an encoded text. The most frequent system of cryptography in Byz. MSS originated in magic papyri from the 3rd/4th C. and is based on the use of Greek letters as numbers. The numerals are distributed in three lines, each with nine letters, which switch places within the line: alpha (i.e., one) becomes theta (nine), beta (two) becomes eta (eight), etc. The letter in the middle (epsilon, nu, phi) cannot change its place. This “three-line system” also occurs as early as the Job MS of Patmos (Patmos gr. 171) of ca.800. Another method, also based on the Greek numerals, replaces one letter by two with half of the numerical value (e.g., iota [ten] becomes epsilon-epson [five and five]). This kind of cryptography is attested in dated subscriptions of the 11th–12th C. Scribes of the 14th–15th C. invented a personal cryptography by contorting the Greek letters.

ČUČER. See NIKITA, MONASTERY OF SAINT.

CULTURE encompasses all forms and results of human activity: modes of production, food, clothing, and shelter, which constitute the material aspects of life; behavior with its norms—ethics and law as well as ceremonial and religious rite; education as the means to transmit the normative; spiritual life—visual arts, literature, music, science, philosophy, and theology. The terms “culture” and “civilization” are used interchangeably with regard to Byz.

For a long time Byz. culture was considered a mechanical agglomeration of independent phenomena. In the standard textbook, S. Runciman’s Byzantine Civilisation (New York 1933), as well as in many similar works, government and law, social life, church and monasticism, literature, science, and art form independent sections of a multistory construction, with no staircase leading from one floor to another. The first modern attempt to integrate, rather than merely to juxtapose, the various aspects of Byz. culture, was H. Hunger’s Reich der neuen Mitle (Graz-Vienna-Cologne 1965). The structure of books that followed Hunger (A. Kazhdan, Vizantijjskaja kul’tura X–XII vv. [Moscow 1968] and A. Guillou, La civilisation byzantine [Paris 1974]) differed drastically from that of Runciman; the authors dealt with economy (“the acquisition of the world”), social ties, power of the state, and what Guillou calls “culture,” that is, spiritual culture, and what in Kazhdan’s book is divided into “the image of the world” and AESTHETICS.

If Byz. culture is perceived not as an agglomeration but as a unified entity, the question arises as to the nature of this entity. Hunger, while situating the problem on a purely spiritual plane,
considered Byz. culture as an ancient civilization in the process of transformation into a Christian one. H.G. Beck (infra) shifted the emphasis: in his view, Byz. culture was determined by the role of the state, which created an atmosphere of political orthodoxy and left very little room for non-conformity; Byz. literature and theology, wrote Beck, reflected this political and ideological uniformity.

Kazhdan began his analysis of Byz. culture from a different point: according to him, social groupings (microstructures) played in Byz. a lesser role than in antiquity or in Western medieval countries, whereas family links were stronger and more stable. This situation contributed to the development of individualism, which, however, deprived of the support of any hierarchy and of social groupings, gave way to the omnipotent power of the state and became an "individualism without freedom." An extreme ambivalence with regard to cardinal concepts and a search for stability within the world of imagination determined the main lines of Byz. spiritual life.

Every culture includes traditional elements (heritage) side by side with innovations. The problem of their interrelationship in Byz. has been hotly discussed. The well-established view, that Byz. culture was determined by the continuity of ancient elements (Greek and/or imperial Roman), was developed by G. Weiss (HistZ 224 [1977] 529–60) and continues to be dominant. On the other hand, A. Toynbee (Constantine Porphyrogenitus and his World [London 1973] 510–74) emphasized the radical differences, "the antithesis between the Byz. spirit and the Hellenic spirit," as expressed in such cultural phenomena as prosynesis, dress, architecture, visual art, etc. This antithesis could be explained by Beck's omnipotent state and political orthodoxy, but Averincev (Poetika), following Hunger rather than Beck, interpreted the non-Greek elements of Byz. culture as oriental, penetrating the empire via the Bible.

Both Weiss and Toynbee, regardless of their disagreement, dealt with Byz. as a unity, whether inherited from antiquity or replacing antiquity; Averincev also believed that previously existing "culture circles" were interconnected to form the phenomenon of Byz. culture. Kazhdan and Mango (infra) have a different approach, perceiving Byz. culture as a historical rather than metaphysical event. Both acknowledge the decline of ancient urban civilization, the cultural crisis, and the subsequent revival of culture; for both of them, ancient tradition is not a simply and automatically inherited treasure, but wealth that was almost lost and later regained.

Although a unity, that is, having a common denominator, Byz. culture was far from absolute uniformity; on the contrary, a permanent ambivalence, an inner contradiction, was typical of it (H. Hunger, Byzanz, eine Gesellschaft mit zwei Geschäften [Copenhagen 1984]), as of any living civilization. This ambivalence was caused by various factors: the opposition of centrifugal and centripetal forces, that is, the capital and the province, or a rigid asceticism and a joyful and tolerant approach to life, of the hermitage and koimobion, of patrictic tradition and Hellenic heritage, of totalitarianism and nonconformity and; finally, by ethnic, linguistic, and religious divergences, as well as conflicts between classes and social groups.

CULTURE, DIFFUSION OF. Different kinds of diffusion of Byz. culture may be distinguished.

1. Diffusion of material objects does not in itself indicate any assimilation of culture. Byz. coins (see Coin Finds) and metalwork have been discovered as far north as Scandinavia and as far east as India and China. They may have found their way there through trade, as loot, or as the renumeration of mercenaries.

2. The impact of Byz. on neighboring non-Christian countries was exercised both through trade and Christian communities established there, as in Sassanian Persia, whose kings were anxious to profit from higher Byz. expertise in the crafts and even to emulate a Byz. way of life. The Muslim world proved more resistant to Byz. cultural influence, though it showed interest in ancient and late antique Greek philosophical and scientific writings.

3. A higher degree of penetration was achieved
in Christian countries of Roman Catholic obedience, esp. in Italy, parts of which were Byz. for a long time, less so in Germany, Hungary, and Scandinavia. This is most noticeable in art (painting and mosaics more than architecture) that was spread either by migrant Byz. craftsmen or by the importation of objects (e.g., bronze doors), giving rise to local imitations. The West showed little interest in Byz. writings, except for the several translations made in the 9th C.: those by Anastasius Bibliothecarius (chronicles, acts of the Council of 787), the two translations of pseudo-Dionysios the Areopagite (one of them by John Scotus Eriugena), and a few works of hagiography. Forced symbiosis between Greeks and Latins, beginning with the Third Crusade, led to a greater assimilation of Latin culture by the Greeks than vice-versa. In the 14th and 15th C. a number of Greek scholars, who were attracted by Italian humanism, studied Latin and taught Greek in Italy; some (e.g., Manuel Chrysoloras, George Trapezuntios) became distinguished teachers of Greek, others (Michael Apostoles, Bessarion) collected Greek MSS for Italian libraries, or, like Theodore Gazes and George Trapezuntios, made translations of Greek authors, primarily Plato and Aristotle (see TRANSLATION). An exceptional case is that of Armenia, which, though non-Orthodox, was so intimately tied to the empire as to become profoundly influenced by it.

4. The most thorough diffusion was achieved in Orthodox, mostly Slavic, countries (Bulgaria, Serbia, Kiev, Halyc, and Muscovite Rus’ as well as Romania, Alania, and Georgia); the countries of this cultural Byz. commonwealth owed the bulk of their civilization to Byz., including religion, ceremonial, art, alphabet, and literature. Byz. writings in Greek translated into an Old Church Slavonic koine circulated throughout the Slavic Orthodox world (with the Balkans, esp. Bulgaria, being the main source of such translations). In the case of Georgia, some translations were made from the Arabic as well. In Orthodox countries the diffusion of Byz. culture (esp. in art and literature) continued well beyond the fall of Constantinople; in some countries (Bulgaria, Serbia, Romania) it is attested as late as the 18th C.

CUMANS (Kouμανοι; in Byz. works of the 11th to 13th C. often “Scythians”; Turkic Qıpçaq, Slavic Polovtsy), a confederation of Eurasian nomadic and seminomadic tribes who replaced the Pechenegs in the east European steppe ca.1050–60 and were, in turn, subjected by the Mongols in 1222–97. Cattle breeders and warriors (their capital was located near present-day Khar’kov, Ukraine), the Cumans were also involved in trade (esp. slave trade), for example, with Sougdaia and Chernos. The Cumans appeared on the Byz. frontier on the Lower Danube at the end of the 11th C., first as allies of the Pechenegs with whom they plundered Thrace in 1087. In 1091, however, Alexios I Komnenos used the Cumans against the Pechenegs: the alliance remained ephemeral and Cuman invasions continued at least until 1160. Diaconu (infra) hypothesizes that ca.1122 the Cumans destroyed Dinogèia. At the same time the Cumans began to settle on Byz. territory; some of them were granted pronoiai (Ostrogorsky, Féodalité 48–54). After the Mongol invasion, the Cuman influx into Byz. increased: in 1241 John III Vattatzes reportedly settled 10,000 Cumans in Thrace and Asia Minor, and in 1259 Cuman contingents played an important role in the battle of Pelagonia. Cumans were famous as skilled archers. Their loyalty, however, was sometimes doubtful: in 1256 at Didymoteichon they deserted to the Bulgarians (Angold, Byz. Government 188ff).

The Cumans participated in the anti-Byz. revolt in Bulgaria in 1186, but it is difficult to prove that Peter and Asen I were of Cuman origin (P. Mutafčiev, Izbrani proizvedenija 2 [Sofia 1973] 162–68), even though “Asen” was evidently a Turkic name. Archaeologically the Cumans are little known, and their tombs difficult to distinguish from those of the Pechenegs. The Mamlûk dynasty that ruled Egypt and Syria from 1250 to 1517 was partially composed of former slaves (mamlûk) of Cuman origin.

CURIA (βουλή), city council. In late antiquity curiae administered cities and their territories, controlled local expenditure, sent embassies to the emperor, issued honorific decrees, and appointed urban teachers (sophists). Their heaviest responsibilities were the provision and maintenance of public works and services, and collection of taxes, for which the members had collective responsibility. Curiae selected their own members, curiales or decurions, who sat for life. In the East, curiae were large, often with 500 members; Antioch had 1,200. None of the curiae’s activities involved major policy decisions, which were decided by the governor and his representatives. The financial obligations of service in the curia made citizens increasingly reluctant to serve and anxious to find any avenue of escape; consequently, the curiae declined in size and prestige, and governors came to run cities through their own officials. A law of Anastasios I effectively substituted the collective responsibility of church and landowners for the curia. According to John Lydos, the curiae were a memory by the mid-6th C. In actuality they continued to exist, but only for ceremonial purposes. Leo VI issued a novel abolishing curiae, but their activity is revealed in various later sources. Curiae met in bouleuteria, commonly theaterlike buildings that were kept in good repair through the 6th C.

-C.F.

CURIALES (βουλευταί), members of the local council or CURIA (Gr. boule) of a municipium in the late Roman empire; the term replaced the former decuriones. Constantine I transformed the curia into a body in its own right by giving its members specific rights and obligations and prohibiting them from changing status (e.g., becoming senators, military officers, or clergymen). The major purpose of this legislation was to preserve the class of urban landowners who were responsible for the normal functioning of the city’s institutions (finance, food supply, public works, entertainment). This concern was underscored in the law of 386 (Cod.Theod. XII 3.1) prohibiting curiales from selling their land and slaves. The obligations of curiales were burdensome, esp. their responsibility for local tax-collecting, but at the same time they possessed some fiscal and legal privileges. Libanius presents the curiales of Antioch as an active and efficient body; probably they were less influential in the West, but even there Salvian of Marseilles (5th C.) described curiales as exploiters of the surrounding population.

The diminishing number of curiales and increasing state requirements in the 4th C. forced the government to take coercive measures, including the forcible subscription of criminals to the curia, along with official complaints on the avoidance by curiales of their duty. With regard to the later status of curiales, Bowman and Liebeschuetz emphasize the state’s encroachments on the rights of the curiales, the introduction of offices (such as the defensor civitatis) that held an intermediary position between the central government and the city, and the subjugation of the city to government control. Kurbatov, on the other hand, stresses the differentiation among the curiales and the appearance of an upper echelon which he identifies with feudal seigneurs. The curia as an institution disappeared after the 6th C., and Leo VI abrogated legislation concerning the municipal boule (nov.46), but the elements of municipal administration remained in Byz.

-A.K.

CURRICULUM. The meaning of enkylhios paideia, “general education,” had already begun to narrow in Hellenistic times and continued to do so in late antiquity. John Tzetzes (Historiae 11:15,18–28) plainly stated that the term enkylhios paideia (or mathematika), which previously encompassed the seven “liberal arts,” now designated grammar only. The traditional three-tiered education that had still functioned in the 4th–6th C. was simplified
after the 7th C. and consisted of two stages: the teaching of the elementary skills of literacy (reading, writing, and knowledge of sections of the Bible) and enkiklos paidēia, primarily grammar. Since the school was predominantly private, variations and complementary components were often introduced. The revival of the ancient curriculum (including the quadrivium) probably began in the 9th C.: the professors of the Magnaura school taught some of these disciplines on the secondary level. As a result the 9th C. witnessed the transmission of mathematical and astronomical MSS before those of historians and poets (Wilson, Scholars 85–88). The attempt to resuscitate tertiary education in the 11th C. and the organization of philosophy and law schools in Constantinople had only a limited effect; the curriculum remained oriented toward grammar, philosophy, and rhetoric, with casual sallies into the quadrivium, medicine, and some exotic sciences such as optika, katóptrika (see mathematics), and kentrobarike (e.g., Mich. Ital. 157.10).

-CURSING (κατάρασις), the imprecation of evil or damnation on a person or thing. Church fathers endeavored to soften the passages involving cursing in the Bible and to demonstrate that such curses were not acts of hatred but merely predictions of the future. Nevertheless, cursing remained a regular element of life, and the Timarion (ed. R. Romano, p.67.478) says that the Byz. were particularly fond of it. Cursing was used to protect contracts, property, tombs, and so on; the curse (ara) of the 318 Fathers of the First Council of Nicaea is commonly invoked on purchase charters and in MSS to keep the document from being stolen. Cursing was also used to strengthen church discipline (against heretics, violators of canon law, etc.), anathema being its strongest form. Cursing was thought to bring forth the anger of God and relegate the accursed to the power of the Devil. Cursing could also be an act of evil persons, and Muhammad, among others, was accused of cursing. The euchologion contained prayers for the lifting of curses (ed. Goar, 545–49, 693–96).

CURSIVE, a style of Greek script, the origin of which can be traced back to the script used in business papyri. In the 4th C. Greek cursive evolved from the chancery script; it is contained within four parallel lines and shows typical features for the letters beta, eta, iota, kappa, and delta, and esp. for the epsilon with the upper stroke in the form of a beak. This script occurs in Egyptian papyri of the 6th–8th C. The minuscule evolves from the cursive; this development can be seen already at the end of the 7th C. in the subscriptions of the members of the Third Council of Constantinople (680), written partly in minuscule, partly in uncial. The 8th- or 9th-C. Vat. gr. 2200 is a unique codex exhibiting an alternative to the minuscule, a cursive script used for literary rather than chancellery purposes (L. Perria, RSBN 20–21 [1983–84] 25–68). Cursive elements survived in the regular minuscule, for example, MSS copied by Ephraim in the mid-10th C. or texts written in scholarly hands. N.G. Wilson was able to assign an earlier date to codices written by scholars by comparing them with dated documents showing cursive features (in PGB 221–39).

CURTAIN. See Katafetasma.

CUSTOM (συνήθεια). Byz. legal theory recognized the normative force of custom but tried to set strict limitations on it. Like a law, a customary regulation could achieve recognition only when it had been examined and approved judicially or sanctioned directly by an emperor. When a custom hindered the efficacy of a certain law, it was interpreted as a procedural error on the part of the people to whom the law was addressed, not as the legal establishment of a counterregulation. Thus, a law based on legislation could be rendered ineffective by contrary custom, but it could not be abrogated. The high theoretical value placed on statutory law, closely linked with the concept of the emperor as the living law through God's grace, was contradicted in practice by an enor-
mous mass of customary regulations. This profusion could be explained by the inaccessibility of the legislation, the difficulty of its language, the complexity of its content, and its contradictory nature. A further explanation lies in its inability to adapt to the social developments of the Byz. state, for which only a very small proportion of the Roman imperial and late antique norms were appropriate. Finally, there were a great number of special local or ethnic regulations which the central government was unable to override in the provinces through equivalent legal measures.

Custom in Byzantine Documents and Novels. Although the Byz. clearly distinguished between the law (nomos) and custom (synetheia), they often treated them as parallel and noncontradictory concepts (e.g., *Dochetae*, no.6.60–61, a.1118, no.40.41, a.1370/1). The legislators, however, had to cope with the cases of discrepancy between the two: many of the novels of Leo VI dealt with synteheia—in 16 cases he approved of customary regulations and only in five or six cases rejected them. Passages in many documents state that a particular tax was levied or should not be levied, or a particular procedure had been performed or had not been performed *kata ten synetheian*, “according to custom.”

-C.N.O.

**CYCLE**, in art, a conventional term for a sequence of images recounting events in the lives of biblical and other sacred figures and, in history painting, of emperors. Christian cycles were, to some extent, successors to representations of the vitae of pagan mythological heroes. They existed as early as the 4th C.: the Lipsanothêk at Brescia displays a sequence of pictures drawn from the Passion of Christ, while events from the lives of Moses and Peter are excerpted on sarcophagi of the period. Even at this stage, as in the Palestinian Christological Cycle, dogmatic and typological considerations outweighed narrative impulses in the selection of scenes. The early existence of cycles of the lives of Joshua and David has been hypothesized; the latter was certainly in existence by the time of the Second Cyprus Treasure (early 7th C.). The concept of cycles finds full development in church programs of decoration, icons, and manuscript illumination in and after the 9th C. Cycles of the Infancy, Ministry, and Passion of Christ, and of the lives of the Virgin Mary and of some saints (see Hagiographic Illustration), pervade the remaining centuries of Byz. art. Cycles in the literal sense of the term may then be said to exist in that the sequence of Great Feast scenes appears to be correlated with the recurring liturgical year. In the Palaiologan era cycles multiply both in the recondite nature of their contents and in number, sometimes drawing on hymnographic material such as the Akathistos Hymn.
CYNEGETICA. See Oppian.

CYNEGIUS MATERNUS, staunch supporter of Theodosios I and praetorian prefect 384–88; died Constantinople or en route to Constantinople, March 388. Probably of Spanish origin, Cynegius was an active adversary of paganism, notorious for demolishing pagan temples in Syria and for his anti-Semitic attitude. According to J. Matthews (JThSt n.s. 18 [1967] 438–45), Theodosios brought to Constantinople from Spain not only Cynegius but an entire clan of his relatives, who went on to dominate court life in the capital. One of Cynegius’s relatives was Aemilius Florus Paternus, proconsul of Africa (393), who kept the province loyal to Theodosios when Italy was in revolt. Matthews also postulates a family connection between the clan of Cynegius and Serena, Theodosios’s niece and the wife of Stilicho. Another Cynegius, a zealous Christian, was a member of the consistorium under Arkadios.

CYPRIAN. See KIPRIAN.

CYPRIUS (Κύπρος), island in the northeastern Mediterranean, an important way station between East and West, with good ports, rich agricultural land, and significant mineral deposits, esp. copper. Cyprus, which constituted a province within the prefecture of Orients, enjoyed considerable prosperity in late antiquity and urban life apparently flourished during the period. A series of terrible earthquakes devastated the island in the mid-4th C., but urban life did not collapse. Salamis in the northeast, rebuilt and renamed Constantia by Constantius II, became the capital; restructured urban centers continued at Kourion, Paphos, and elsewhere. In 536 Justinian I removed Cyprus from the jurisdiction of the prefect of Orients and placed it, along with five other provinces, under the newly created quaestor exer-
citus. Cyprus continued to play an important political and economic role in the 6th and early 7th C., since it was at first spared the military upheavals that afflicted the rest of the empire.

The rise of Arab sea power, however, meant the end of peace, and Cyprus became a battlefield between Byz. and Islam. In ca.647 the island began to be the target of Arab raids, whose success forced the abandonment of many of the cities and the dislocation of others (e.g., the removal of Kourion to nearby Episkope). Justinian II resettled some Cypriots in the area around Kyziko and in 688 he signed a treaty with the caliph ‘Abd al-Malik, by which Cyprus seems to have become a no-man’s-land in which taxes were paid both to Byz. and to the caliphate and in which both powers had access to ports (which they might use to mount attacks on each other). In the 9th C., however, pressure built within Byz. for reconquest of Cyprus, and after several false starts Basil I finally accomplished the task (at an uncertain date), incorporating Cyprus into the theme system; after seven years, however, the island resumed its former status. In 965, Nikephoros II Phokas brought Cyprus firmly within the Byz. sphere; it became a province governed by a ka-tepano. In the 11th–12th C. there was some economic recovery, and new cities were founded on the coasts near the deserted sites of antiquity: Ammochostos near Salamis, Lemessos near Amathos, while Nikosia (Leukosia) in the center of the island became the capital. Monasteries and churches sprang up throughout the island as witnesses of this new-found prosperity and cultural vigor.

In the 11th and 12th C. the Cypriots felt heavily burdened by Byz. administrative and fiscal policies, even though the complaints of Patr. Nicholas IV Mouzalon seem to be exaggerated. In 1043 Cyprus revolted, and the protospatharios Theophylaktos, “judge and praktor of the state revenue,” was murdered (Skyl. 429.4–12). In 1092 Cyprus and Crete simultaneously rebelled against Alexios I Komnenos, but the uprising was quelled by John Doukas. Rhapsomates, the leader of the Cypriots, was taken captive, and Alexios sent Eu-stathios Philokales with a strong garrison to the island. In 1184 Isaac Komnenos seized control of Cyprus and proclaimed the island independent.

In the 12th C. the island became a focal point
in the struggle for domination over Syria. In 1148 the Venetians acquired trade privileges in Cyprus. Renaud of Châtillon, the Crusader prince of Antioch, raided Cyprus in cooperation with T'oros II of Lesser Armenia in 1155 or 1156; in 1161 pirates equipped by Raymond, count of Tripoli, attacked Cyprus. In 1191 Richard I Lionheart occupied the island. The next year Richard sold Cyprus to the Knights of the Temple, then presented it to Guy de Lusignan. Under Lusignan rule, most of the land was handed out as feudal grants and the Catholic hierarchy appropriated all the larger sees, relegating the Orthodox clergy to villages and remote areas. The Lusignan period nevertheless seems to have been prosperous, as attested by numerous archaeological sites throughout the island: not only churches and fortresses, but also villages and medium-sized farmsteads. The remains bear witness to considerable cultural contact, particularly with Italy and the Levant. In fact, during those years Cyprus was, after Palestine, the most important Western outpost in the East, the staging ground for whatever Crusader aspirations still remained.

The data concerning connections between Cyprus and Byz. in the 13th–15th C. are scanty. Letters addressed by the Orthodox patriarch (prob. Neophyts) and by Henri Lusignan to John III Vatatzes (K. Chatzepsaltes, KyprSp 15 [1951] 63–81), though limited in factual content, show friendly relations between the two states and the allegiance of the Cypriot church to Nicaea; the patriarch does not complain of the situation of the Greek church in Cyprus. Byz. influence at the court of Nikosia seems to have increased during the reign of Jean II Lusignan (1432–58) who was married first to Medea, daughter of the half-Greek marquis of Montferrat John-James Palaiologos, and then to Helena, daughter of Theodore II Palaiologos, despotes of Morea, who managed to place her adoptive brother Thomas as grand chamberlain; in her circle an idea arose to replace the Latin archbishop of Nikosia, Hugh (died 1442), with an Orthodox Greek (A. Vacalopoulos, Praktika tou A' diethous kyprologikou synedriou, vol. 2 [Leukosia 1972] 277–80).

Even though tradition claimed that the evangelization of Cyprus was the result of the activity of St. Paul and his disciple Barnabas, no data on the Cypriot ecclesiastical hierarchy before 325 are
known. Since administratively Cyprus was under the government of the diocese of Oriens, its church was placed under the jurisdiction of Antioch. In the 5th C. the metropolitans of Cyprus led a struggle for ecclesiastical independence, taking advantage of the conflict between Antioch and Alexandria and appealing to the authority of Rome and Constantinople (G. Downey, PAPh 102 [1958] 224–28). Antioch tried to retain its jurisdiction before the Council of Ephesus in 431, but the Cypriots elected Reginos their metropolitan, and in Ephesus he joined the cause of Cyril of Alexandria. Peter the Fuller tried again to recover Antiochene jurisdiction expecting help from Emp. Zeno, but Anthemios, the metropolitan of Cyprus, stubbornly resisted. In 488 the tomb of the apostle Barnabas was discovered; it also contained a copy of St. Matthew’s Gospel that Anthemios immediately sent to the emperor. Zeno proclaimed the church of Cyprus autocephalous (a decree confirmed by Justinian I); the metropolitan received special signs of respect: a garment of purple silk, a scepter instead of a staff, the right to sign his letters in red, and the title of makarios (“beatitude”). Greek archbishops existed in Cyprus until 1260 (V. Laurent, REB 7 [1949] 33–41).

Monuments of Cyprus. Several large ecclesiastical complexes of the 4th–5th C. have been excavated on the island. Among the most impressive is Salamis. The Basilica of St. Epiphanius, which probably functioned as the cathedral of the city, is the largest Christian building discovered on Cyprus. Other important sites include a 4th-C. ecclesiastical complex at nearby Kampanopetra; Kourion, with a large 5th-C. episcopal basilica and baptistry; Pégia, with two basilicas, a baptistry, and a bath dated to the late 5th or early 6th C.; Soloi and Gialousa.

Mosaics ascribed to the 6th or 7th C. at Kîtî and Lythránkomi were incorporated in churches rebuilt either before the Arab invasions of the 7th C. or during the Arab-Byz. treaty period (688/9–mid-10th C.). Similarly unclear in chronology are the monuments of the Karpas peninsula, including a cross-in-square church near Rizokarpaso, and three vaulted basilicas, all built over the ruins of earlier churches.

A group of triple-domed basilicas including St. Lazaros at Larnaka, St. Barnabas at Salamis, Sts. Barnabas and Hilarion at Peristerona, and St. Paraskeve at Geroskípos, may be very tentatively ascribed to the period before the Byz. reconquest of the island by Nikephoros II Phokas in 965. After the reconquest there is little evidence of artistic activity before the early 11th C., when the cross-in-square katholikon of St. Nicholas tes Steges received its first fresco phase, including a Great Feast cycle. At the beginning of the 12th C., the image of St. Nicholas with a monastic donor was painted on a masonry partition inserted between the diakonikon and the naos. Later in the 12th C. a narthex decorated with a Last Judgment was added.

Perhaps in response to the rebellion of Rhapsomates in 1092 and the advancing armies of the First Crusade, there was much construction on the island during the reign of Alexios I. For example, Saranda Kolonnes, the fortress protecting Paphos harbor, which was initially erected in the 9th C. (?), was rebuilt (the Crusaders would make further additions to this castle after they took the island in 1191). At Koutsovendis, the monastery of Hagios Chrysostomos, founded on 9 Dec. 1090 by a hegoumenos George, was fortified. The complex included a domed-octagon katholikon built partially in cloisonné-brick with a parekklesion. The high-quality decoration of the latter dates from the late 11th or early 12th C. Asinou and a large number of other churches with frescoes stylistically related to those at Koutsovendis further attest to rebuilding on the island in the late 11th and early 12th C.

The second half of the 12th C. is also rich in monumental remains. The Holy Apostles at Parechorio, a small, single-naved, domed church, was decorated with a feast cycle in the 3rd quarter of the century. The unpublished church at Kato Lefkara also seems to date from this period. The rich, painted programs of the Enkleistra of St.
NEOPYHTOS ENKLEISTOS AND LAGOUDERA date to the end of the 12th C.

Before the Latin occupation of Cyprus, its art and to a lesser degree its architecture were informed by a tension between Constantinopolitan and local traditions. In contrast, 13th-C. painting on the island represents a distinctively regional development. The monastery of St. John Lampadistes at Kalopanagiotis is a complex of three churches. The first surviving phase of fresco decoration of St. Herakleidios, a cross-in-square church constructed probably in the 11th C., dates from the 13th C. The Panagia at Moutoullas, a small, rectangular, wooden-roofed structure, was decorated with scenes from the life of Christ for John, son of Moutoullas, and his wife Irene on 4 July 1280. The small monastic church of Panagia Amasgou at Monargi received its principal medieval decoration in the 13th C., though a few fresco fragments of the early 12th C., stylistically related to the paintings at Asinou, also remain.

CYPRUS TREASURE. Two treasures of the 6th to 7th C. are known by this name.

FIRST CYPRUS TREASURE. Found at the end of the 19th C. at Karavas, a village close to Lambousa (anc. Lapithos) west of Kyrenia in Cyprus, the First Cyprus Treasure included 39 silver objects (plate, censer, bowl [with silver stamps of 578–82, 605–10, 641–51, respectively], and 36 spoons) of which all but 11 spoons entered the British Museum in 1899. In 1906 a find of three silver plates (all with stamps of 610–30) decorated with a monogram (read as “Theodore A”) was associated with this treasure by Dalton, as was eventually the Second Cyprus Treasure. Several spoons have inscribed names, including that of Theodore, and one set of 11 spoons has a series of running animals. Although the single plate, bowl, and censer have Christian decorations (cross, busts of Christ, and saints), none is inscribed with a dedication to a church and the treasure is probably domestic silver plate with pious ornamentation like that in the Canoscio Treasure.

SECOND CYPRUS TREASURE. Discovered in 1902 very close to the find-spot of the First Cyprus Treasure, this second find consisted of two lots: 11 silver plates concealed in a walled niche and eight pieces of gold jewelry buried in a pot nearby. Eight bronze objects (lampstand, two lamps, five ewers) also formed part of the group. The silver objects, now divided between the Nikosia and Metropolitan Museums, included the nine David Plates of 629/30 and two dinner plates, one bearing the monogram of a certain John (with silver stamps of 605) and one bearing a small cross (with stamps of 613–30). The jewelry included a belt and a chain containing consular and imperial medallions of Maurice (584, 585). The second treasure was probably part of the contemporary First Cyprus Treasure (which contains similar dinner plates) and belonged to a highly placed family that received imperial gifts in 584–85 and 629/30 and acquired other objects between 578 and ca.641. The objects were probably buried when the island was invaded by the Arabs in ca.647.

CYRENAICA (Κυρηναία). The Roman province of Cyrenaica comprised the plateau of Djebel Akhdar on the east coast of Libya. Under Diocletian it was divided into two provinces: Libya Superior or PENTAPOLIS and Libya Inferior. Both provinces suffered from frequent attacks by the Austuriani in the 4th and 5th C., leading to the establishment of a dux Libyaram ca.385 and, by the late 5th C., of a dux Libiae Pentapoleos. Regulations regarding the provisioning of troops on the times of the province, published in the reign of Anastasios I (Supplementum Epigraphicum Graecum, 9.1 [Leiden 1938] no.356), indicate the continuing interest of Constantinople in maintaining control over Cyrenaica. Anastasios and Justinian I also undertook
the refortification of some towns in Cyrenaica in response to new barbarian attacks, most notably by the Mazikes (see MAURI). Despite these attacks, archaeological evidence from the cities indicates that trade, largely with the Aegean and northeast Mediterranean areas, continued from the earlier Roman period, although never in great volume. The main export was perhaps grain, but olive oil and seafood products may also have been traded. Much archaeological work remains to be done on the rural history of Cyrenaica in the late Roman period, our prime source of information still being SYNEIOS, bishop of Cyrene in the late 4th and 5th C.

Cyrenaica was subordinated to the church of Alexandria and thus affected by Egyptian religious controversies. In the 4th C. Arianism obtained support among Cyrenaican bishops. Zeno's HENOTIKON is addressed to both Cyrenaican and Egyptian clergy, indicating the existence of a strong Monophysite church in Cyrenaica in the 5th C. In 609 Herakleios marched from Cyrenaica into Egypt in his revolt against Phokas. The history of Roman Cyrenaica ends with the Arab invasions of 642 and 645.

R.B.H.

CYRIACUS OF ANCONA, or Ciriaco de’ Pizzicoli, Italian merchant; self-taught humanist and epigrapher fascinated by antiquities; born Ancona ca.1391, died Cremona ca.1455. From 1412 to 1454 he traveled incessantly over the territories once or still controlled by Byz. Beginning ca.1424, he kept in Latin a detailed diary, the Commentaria, that recorded his movements; the people he met, including John VIII Palaiologos (K.M. Setton, Speculum 33 [1958] 227f and n.14), Gemistos PLETNON, and other Byz. potentates and scholars; the places and monuments he saw and sketched; and passages from Greek (for example, B. Baldwin, Scriptorium 37 [1983] 110–12 on the Athos MS of Nonnos) and Latin MSS he consulted. Most important of all, he transcribed vast numbers of Greek and Latin INSCRIPTIONS, for many of which he is the oldest or only witness. In all these do-
mains he collected Byz. material no less avidly than classical, although his honesty has sometimes been questioned.

Of the multivolumed original diary only a small fragment about the Peloponnese (1447–48) survives; more is preserved in autograph extracts that Cyriacus sent to various acquaintances, and sections of the account of his travels in Greece (1435–37) survive in copies. This complex and fragmentary textual tradition complicates the exploitation of his myriad materials. He avidly collected Greek MSS in such places as Constantinople, Thessalonike (M. Vickers, BMGS 2 [1976] 75–82), Chios, and Mt. Athos, where he also made a list of the MSS he examined in Nov. 1444 (ed. Bodnar-Mitchell, 49.859–56.1041).

M.McC.

CYRIL, bishop of Jerusalem (ca.348/50–386/7) and saint; born near Jerusalem ca.313; feastday 18 Mar. Accused both of theological submission to his Arian superior Akakios, bishop of Caesarea, and of harboring pro-Nicene sentiments, Cyril was thrice deposed (357, 360, 367) and thrice restored (358, 362, 378). His major extant work
is a series of 24 catechetical lectures, transcribed by a listener, which were delivered as Lenten and Easter instructions for catechumens. The last five, the Mystagogical Catecheses, may have been written wholly or partly by his successor as bishop, John II of Jerusalem. Cyril's lectures provide much information on both the liturgy and the topography of 4th-C. Jerusalem. His observations on the eucharist are particularly important, as he was the first theologian to discuss transubstantiation and to emphasize its sacrificial nature. His lectures include much on the theory and practice of baptism, which for him was a prerequisite for salvation. His Christology is Nicene, although he notably eschews the term homoousios, more in opposition to Sabellianism than Arianism. The word does, however, appear in his letter to Constantius II describing the apparition of a cross of light in the sky over Jerusalem on 7 May 351; this letter also refers to Helena's discovery of the True Cross (ed. E. Bihain, Byzantium 43 [1973] 264–96; the letter is also preserved in a Syriac version, ed. J.F. Coakley, AB 102 [1984] 71–84). The presence of the term homoousios here may imply a Cyrilline change of mind, or simply an interpolation. A homily on the paralytic also survives.

-B.B.

Cyril, patriarch of Alexandria (from 18 Oct. 412), theologian, and saint; born Mahalla in Egypt 378, died Alexandria 27 June 444; feastday 9 June. He succeeded on the patriarchal throne his uncle Theophilos whom he had attended at the Synod of the Oak (403), which deposed John Chrysostom. His early years in office (up to 428) were marked by conflicts with Jews, Novatians, and pagans, the last provoking suspicion that he was involved in the murder of Hypatia (415). In later years (between 431 and 441), Cyril wrote a detailed refutation of Against the Galilaeans by Julian, thus revealing the tenacity of Egyptian paganism.

The early writings of Cyril were mainly biblical commentaries, allegorical in method though less so than those of Origen, and polemics against Arianism, in which he developed the Trinitarian views of Athanasios. While Athanasios had to deal primarily with the question of the Trinity, Cyril wrestled with Christological problems. Nestorios consistently separated the God-Logos in the incarnate Christ from the Man, accepting only the synaphia or "contact" of the two natures. Cyril's aim was to preserve the concept of unity of the God-Man as a necessary condition of salvation. For this purpose he employed the term hypostasis (introduced by Apollinaris) and asserted that the Logos and the flesh (he preferred these words to "god" and "man") in Christ were not in contact but in hypostatic unity (Richard, Opera minora 2, no. 42, pp. 243–52). Accordingly, Cyril insisted that the Virgin Mary had given birth not only to the man Jesus but to God and therefore deserved the appellation Theotokos. Cyril did not distinguish clearly, however, between the concepts of hypostasis and nature, and sometimes assumed that Christ possessed one hypostasis or nature (physis). Formulations of this kind allowed for a monophysite interpretation of his doctrines. This Monophysite cast to Cyril's writings accounts for the preservation of a great many of his works in Armenian, Syriac, Ethiopic, and Coptic. As S. Gero (OCh 62 [1978] 77–97) demonstrated, there is no evidence to support the theory that Cyril encouraged icon veneration.

Representation in Art. Portraits of Cyril, with his dark pointed beard, resemble those of Basil the Great, but Cyril wears a special pointed bonnet, the prerogative of the patriarch of Alexandria. The bonnet is often decorated with crosses.

-B.B., A.K., N.P.S.
CYRIL, jurist of the time of Justinian I. Cyril was the author of a Greek paraphrase of the Digest, many fragments of which have been preserved in the scholia to the Basilika. His paraphrase of books 41 to 50 of the Digest appears to have been the basis for certain sections of the Basilika text as well.

- A.S.

CYRIL (saint). See CONSTANTINE THE PHILOSOpher.

CYRIL III, patriarch of Antioch (29 June 1287–ca.1308?). The third of his name to sit on the throne of Antioch (not the second; cf. V. Grumel, Mobilnyj 98 [1962] 260, n.3). Cyril was metropolitan of Tyre until his election as patriarch in 1287. A rival claimant, Dionysios I, was elected at the same time in Cilicia. In 1288 Cyril went to Constantinople, where Patr. GREGORY II and ATHANASIUS I refused to recognize his election. He lived in Constantinople at the Hodegon monastery and was finally recognized in 1296 by Patr. John XII Kosmas (1293–1303). He resided in the capital until his death or resignation ca.1308. Athanasios remained hostile to him and accused him of causing a schism in the church (ep.69, ed. Talbot). The chronology of the patriarchate of Antioch in the early 14th C. is not yet fully resolved; PLP (no.14053) suggests that Cyril may have resumed the patriarchate between 1310 and 1314.

- A.M.T.

CYRIL OF SKYTOPOLIS, monk and hagiographer; born Skytopolis (in Palestine) ca.525?, died after 592?. Cyril’s father, a lawyer named John, supervised his early religious education. When still a young child, Cyril met St. Saba, who strongly influenced his future monastic career. According to Flusin (infra), Cyril became an anagnostes shortly after 532 and in 543 was tonsured as a monk. He left almost immediately for Jerusalem, where he met St. John the Hesychast, whose biography he would later write. In 544, after spending some months as a hermit in a lavra near the Jordan, he entered the cenobitic monastery of St. Euthymios the Great at Jericho, where he spent the next ten years. Following the condemnation of Origenism in 553, Origenist monks were expelled from the New Lavra of St. Sabas and replaced in 555 by Orthodox monks, among them Cyril. In 557 he moved to the Great Lavra of Sabas, where he died shortly thereafter.

Despite his short life Cyril wrote a number of biographies of Palestinian monks, such as Sabas, Abraham, Kyriakos (also preserved in Georgian), Theodosios, and Theognis. His evident aim was to produce a corpus of vitae of Palestinian saints, an ambition fostered both by local patriotism and a firm belief in the relationship between holiness and the desert. The historical details in his Lives, where verifiable, are accurate. He is informative on topics ranging from the phylarchs of the Parrembo in Palaeustria I to the movements of Hychios of Jerusalem. Cyril is occasionally illuminating on Constantinople, as in the story of “the liberating of the polis and the church” (ed. Schwartz 176.1–2) from the three hieres—of Arius, Nestorius, and Origen.

- B.B., A.M.T.

CYRIL OF TUROV. See KIRILL.

CYRIL PHILEOTES, saint; born in Philea near Derkos ca.1015, died 2 Dec. 1110 [1120, according to Karlin-Hayter, infra]. A holy man who remained a long time in the world, Cyril spent three years as a sailor; he had a wife and children but was very devoted to monastic life and consistently restricted both his sexual life and diet. From his homeland he frequently visited Constantinople, but he traveled even further, to Chonae and even to Rome. Cyril was connected with the Komnenoi and some of their supporters: Eumathios Philokales, George Palaiologos, Michael Doukas, etc. He took the habit at the monastery founded at Philea by his brother Michael and received there his monastic name of Cyril; his secular name is unknown. Alexios I granted the monastery a confirmation of the independence of all its possessions from the treasury.
Cyril's Life, written by Nicholas Kataskepenos (died after 1143), has an unusual structure: every chapter or paragraph begins by stating a fact in Cyril's biography, followed by a series of patristic quotations that tend to emphasize the general significance of this fact. Kataskepenos presented a rigoristic approach to salvation: his hero performed not only traditional fasting and vigils but also self-flagellation with rope and club (e.g., ch.5.7). Unlike Symeon the Theologian, Cyril is said to have approved of monastic friendship and to have eagerly practiced charity.

**Cyrhhus** (Kúpos, also Hagiopoulis, now Huru Pegamber in eastern Turkey), city of northern Syria in the province of Euphratensis. Bishops of Cyrhus are known from 325 onward; between 460 and 570 it became an autocephalous metropolis. Libanios speaks of it as a small city that had formerly been great; its function as the region's fortress was usurped, under Constantius II, by Hierapolis. Theodoret of Cyrhus, who was the city's bishop in the 5th C., describes the city primarily as a residence of hermits; his own building activity there included the construction of stoas, two bridges, an aqueduct, and the maintenance of public baths. Some revival took place under Justinian I, who stationed a garrison at Cyrhus and ordered the repair of the city walls and the construction of a roofed aqueduct. Several inscriptions have been found in Cyrhus bearing the names of Justinian, Theodora, and Belisarios. The martyron of Sts. Kosmas and Damianos near Cyrhus, first mentioned by Theodoret, was later called a "wonder of the world" by Arab writers; its materials were removed by al-Walid (705-15) for his mosque at Berroia. The circuit walls and the remains of two large basilicas, all from the period of the 4th to 7th C., still stand at Cyrhus; a residential quarter by the cardo has been excavated; and two bridges survive in the area. The remains of a large basilica and traces of an aqueduct have also been discovered.

The Arabs took Cyrhus in 637. From the 10th C. onward the Byz. tried to regain it; in 905 Andronikos Doukas plundered Cyrhus and took its inhabitants captive. Romanos III was defeated in this region in 1030. In the 12th C. Armenians and Crusaders fought over "Guris"/"Qurus"; thereafter it is not mentioned by historians.

**Cyzicus.** See Kyzikos.

**Czech Literature.** Church Slavonic as a liturgical and literary language coexisted with Latin in the Bohemian (Czech) church until its use was banned in 1096/7. The basic texts were probably imported from Moravia. The earliest Church Slavonic MS of indisputably Czech provenance, the 11th-C. Glagolitic Prague Fragments, is a Byz. liturgical text translated from Greek. All other extant Czech translations are from Latin works, although some translators may have known Greek (F. Mares, BS 24 [1963] 247-50). Native literature is esp. notable for its hymnography (the Canon to St. Václav [Wenceslas], the hymn Hospodine pomejny) and hagiography (numerous Latin and Church Slavonic vitae of Václav [died 929], of Václav's grandmother Ludmila [died ca.921], and probably of St. Prokopios). Translated and original Czech literature was exported to the Slavic Orthodox world, particularly to Rus' (P. Devos, AB 72 [1954] 427-38; B. Florja, BS 46 [1985] 121-30). Most Church Slavonic works of Czech origin survive in Eastern Slavic MSS, the earliest dating from 1095/6. (See also Konstantin Mihailović of Ostrovica).

Lit. M. F. Mares, An Anthology of Church Slavonic Texts of Western (Czech) Origin (Munich 1979).

Czechia. In the 9th C., when reached by Byz. missionaries, Czechia was a vassal state of Great Moravia. According to legend, Methodios converted Borivoj of Prague and his wife Ludmila. After the Hungarian invasion and collapse of Moravia (ca.906) two independent princedoms
emerged: one under the Přemyslid dynasty of Prague and another (until 991) under the Slavnik dynasty of Libica. Constantine VII seems to have had some information about Czechia: his “White Serbloi” who lived beyond “Turkey” in a place called Boiki (or Boimi?—De adm. imp. 32.2–4) may be the Slav inhabitants of eastern Bohemia. Twelfth-century Byz. authors speak of the Tzechoi who were allied with Hungary and Kiev against Manuel I (e.g., Lampros, “Mark. kod.” 174, no. 320.6–7), though Kinnamos (Kinn. 223.5–8) implies that the “king of the Tzechoi” was the empire’s λιζιος at the time of the Second Crusade. Vincent of Prague (MGH SS 17:681) records that a noble Czech, Boguta of Moravia, served Manuel and was granted several castles. In 1273 Byz. and Czechia negotiated concerning a union of the churches and the organization of a crusade. In 1451–52 a Hussite emissary, probably Matthew English, came to Constantinople and after lengthy defense of the Hussite creed obtained a letter dated 18 Jan. 1452, signed by seven church dignitaries and inviting the Hussites to join the Greek church. The letter, however, satisfied only the most moderate leaders of the Czech movement. Chalkokondyles conveys some data about the Tzechoi or Boemoi (Ditten, Russland-Exkurs 56f), asserting, for instance, that they were fire worshipers.

DABATENOS, or Diabatenos (Διαβατηνός, fem. Διαβατηνή), a family that flourished in the second half of the 11th C., possibly of Armenian origin. A certain Davatanos, doux of Edessa, fell in battle ca.1062; his brother Levon held the same position in the 1070s. We do not know whether he is to be identified with Leo Diabatenos, a general under Romanos IV, and another Leo, governor of Mesembria in 1080. Another Dabatenos, under Alexios I, served as topoteters of Heraklea in Pontos and of Paphlogonia (1081); perhaps he was the same Dabatenos who more than 20 years later was doux of Trebizond. Even less certain is his identity with Michael Dabatenos, protocheirologos in 1094/5 (P. Gautier, REB 29 [1971] 245f). Several Dabatiotes left seals with such titles as sebastos, prokouropalates, and katepano. Soon after 1100 the family position declined, and the Dabatiotes attested in the 13th and 14th C. were paroikoi, priests, or owners of small farms (PLP, nos. 5365–70).

DACIA, the territory north of the Lower and Middle Danube. It was conquered by Trajan and then abandoned by the Romans in the mid-3rd C. Aurelian, however, created the province of Dacia Ripensis on the south bank of the Danube between Moesia I and Moesia II. Its major cities were Ratiaria and Oescus; Priskos of Panion (fr.1) called Ratiaria a large and densely populated city. Military camps and forts, rather than cities, were typical of the province. Dacia Ripensis flourished in the mid-4th C., and the Romans even managed to recover some fortes on the north bank of the Danube. Gothic foederati penetrated into Dacia, and some settlements probably belonging to them (e.g., a fortified village at Vit) have been excavated. This system of Germanic settlements continued after the battle of Adrianople (378), as in Succidava, where the last Roman coins are of 408–23; probably thereafter the system of forts was demolished by the Huns. The empire renewed the construction of strongholds north of the Danube at the end of the 5th C. and was able to maintain them through the end of the 6th, when Dacia was occupied by the Avars and Slavs (O. Toropu in 9 CEFR [1974] 71–81).

Dacia Mediterranea lay south of Dacia Ripensis and was probably created sometime later. Its capital was Serdica and its major cities were Naissus, Pautalia, and Remesiana. Dacia Mediterranea was more urban and more Greek than Dacia Ripensis and played a larger role in ecclesiastical development.

DACO-GETANS, autochthonous population on both banks of the Lower Danube. Ancient authors considered them a single group, speaking a dialect of the Thracian language, but recent scholars distinguish three ethnic elements: Thracian, Illyrian, and Daco-Moesian (C. Pohiric in L’ethnogénèse des peuples balkaniques [Sofia 1971] 171f). Despite romanization of the region, old Ghetian traditions, esp. old forms of ceramics, survived in Scythia Minor and in Moesia through the 6th C. (C. Scorpan, Thracia 2 [1974] 33–34). From the 7th C. onward, the Slavs settled on the Danube, assimilating a substantial part of the autochthonous population, then the Bulgars and Pechenegs moved into the area. The ancient Daco-Getans mingled with these peoples, even though some Daco-Getans, esp. in mountainous regions, retained their latinized language and certain cultural traditions, eventually emerging as Vlachs.

The ethnic name Dakes reappears in the 10th—11th C. to designate Pechenegs; in the 12th—15th C. it was applied primarily to the Hungarians (Moravcsik, Byzantioturcica 2:116) and, in the 15th C., even to the Danes (E. Trapp, JÖB 36 [1986] 301f).

DAKTYLOS (δάκτυλος, "finger"), the smallest Byz. unit of length, equal to 1/16 pous [= 1.95 cm], also called monas (unit).

LIT. Schilbach, Metrologie 16. - E. Sch.

DALASSENE, ANNA, mother of Alexios I Komnenos; born ca. 1025, died 1 Nov. 1100 or 1102. Her father was Alexios Charon, her maternal grandfather Adrianos Dalassenos (N. Adontz, Byzantion 10 [1935] 171-83). She married John, brother of Isaac I Komnenos, in 1040 or 1045; their children included Manuel, Maria, Isaac, Eudokia, Theodora, Alexios, Adrianos, and Nikephoros. After Isaac I's abdication, Dalassenos opposed the Doukas family, who had succeeded to the throne; she even disliked Alexios's marriage to Irene Doukaina. She actively encouraged Isaac and Alexios's revolt against Nikephoros III (14 Feb. 1081) and had to seek refuge in Hagia Sophia and then the Petronion monastery. Upon Alexios I's accession, she became powerful at court. During his campaigns (beginning in Aug. 1081), he granted her sweeping administrative powers (Reg no. 1073): written or verbal, rational or ridiculous, her orders were to be obeyed as the emperor's own. A copy of her pittakion for Christodoulos of Patmos (May 1088) survives (Patmou Engraphe 1:342-51, no. 49), and in 1095 she ordered the blinding of Nikephoros Diogenes (An. Komn., 2:201.16-22). After popular charges of misgovernment seemingly disturbed her relationship with Alexios (Zon. 3:746.4-7), she retired to the Pantepoptes monastery. Her piety and patronage of monks were renowned; Anna Komnenē greatly admired her.

DALASSENOΣ (Δαλασσηνός, fem. Δαλασσηνή), a noble Byz. lineage originating from Dalasa-Talas on the Euphrates and known from the late 10th C. Adontz's hypothesis that the family was of Armenian stock can neither be proved nor refuted. The magistros Damianos and his son the patrikios Constantine were governors of Antioch in 996-998 and in 1025, respectively. Constantine, called "the lord of the Eastern land" in contemporary epigrams, was an important landowner; Constantine VIII regarded him as his heir, but in the 1030s Constantine Dalassenos fell from imperial favor and was arrested by Michael IV. His brother Theophylaktos was doux of Antioch according to a seal; the third brother Romanos was katepano of Iberia. In the 1060s and 70s the Dalassenoi served in the Balkans: Theodore as doux of Thessalonike and Serres, Damianos as doux of Skopje. Anna Dalassenē was married to John Komnenos and became mother of Alexios I Komnenos. Thereafter the Dalassenoi ceased to be military commanders: the sebastos Theodore served as a judge in 1196; another Theodore, sebastos (and eparch), is known from a seal; a third Theodore is mentioned in Tīpoukeitōs as a lawyer in Eudokia's court (1067), but the high title of protonobelissimos makes this attribution dubious (see Nobelissimos). In the later period the name Dalassenos is rare and used only in a low level of society (PLP, nos. 5035-36).

DALMATIA (Δαλματία), Roman province on the eastern coast of the Adriatic Sea whose capital was Salona. After brief domination by Odoacer, and then by the Ostrogoths, ca. 538 Dalmatia became a Byz. proconsular province, consisting of coastal cities and nearby islands, from Istria to Kotor. It prospered through maritime trade. In the early 7th C. when Slavs and Avars invaded the hinterland and destroyed the coastal cities (Salona, Epidaurus), these centers were replaced by new ones (Split, Dubrovnik). Both cities and islands remained under Byz. rule, but their ecclesiastical jurisdiction alternated between Rome and Constantinople. The metropolis became Zadar (Zara) administered by a prior or archon. Whether he was a Byz. functionary or local magnate remains unclear. In the early 9th C. Charlemagne subjugated Dalmatia, and the dux Jadera briefly functioned there as Frankish representative; in 812 the Franks returned Dalmatia to Byz., but it remained practically independent until the late 860s when Basil I established a Byz. theme there. Ecclesiastically it formed the metropolis of Ke-
phalia under the jurisdiction of Constantinople (*Notitiae CP*, no.3,54).

The area consisted of several independent economic and political zones: the northern centers tended to be pro-Venetian; the mid-Dalmatian cities, mostly autonomous, wavered in their loyalties between Venice and Hungary; Dubrovnik temporarily formed a special Byz. theme; the southern cities were linked with Serbia and Zeta. After a short-lived Venetian conquest in 1000, the Byz. presence in Dalmatia weakened. Various forces—Venice, Croatia, Hungary, the Normans—contended for domination over the area, and in the 1060s real Byz. authority disappeared, except in Dubrovnik. After the union of Croatia with Hungary (1102), northern Dalmatia was under Venice; the central area under Hungarocroatian kings; the southern area nominally Byz., but in fact autonomous. Croatian impact on Dalmatian cities and islands intensified. Brief restoration of Byz. influence in the mid-12th C. collapsed in 1180. From 1204 to 1358 Venice dominated Dalmatia, after which all the area except Dubrovnik was conquered by Hungary. Venetian domination returned in the early 15th C. and lasted until 1797.

**DALMATIC OF CHARLEMAGNE.** Neither a dalmatic nor belonging to Charlemagne, the so-called Dalmatic of Charlemagne, a piece of silk dating ca. mid-14th C., is a patriarchal sakkos presumably from Constantinople; documented in Vatican inventories from 1489, it is currently in the Treasury of St. Peter's. Its association with Charlemagne is purely legendary. The dark blue silk sakkos is decorated with an extensive gold-embroidered figural cycle on the theme of Salvation. The complex iconography begins with the Transfiguration on the back of the garment, continues with the Communion of the Apostles (see *Lord’s Supper*) on the shoulders, and ends with the Parousia, the Second Coming of Christ on the front. Embroidered inscriptions include Matthew 26:26–27, John 11:25, and Matthew 25:34.

**DALMATOU MONASTERY,** an important early monastery, evidently the first to be constructed in Constantinople. Dalmatou (Δαλμάτου, Δαλματίου) was founded in 382 by the Syrian saint Isaac outside the Constantinian walls in the eastern part of the Psamathia quarter. After Isaac's death ca.406, he was succeeded as superior by his disciple Dalmatios, a former officer of the imperial guard (died 438), after whom the monastery was named. In the 5th C. Dalmatou was a bastion of Orthodoxy, and its superior was given the title of archimandrite of exarch, supervisor of the other monasteries of the capital. Beginning in the late 7th C., the monastery was frequently used as a place of confinement for political prisoners, such as the deposed emperors Justinian II, Leontios, and Philippikos. During the Iconoclastic controversy, the Dalmatou monastery was persecuted because of its fervent support of images and even closed for a time. In the 9th C. the vita (unpublished) of Hilarion (died 845), a superior of Dalmatou and iconodule confessor, was written by a certain Sabas (*BHG* 2177, 2177b). In the late 12th C. Dalmatou was transformed into a nunnery; in 1182, Maria, widow of Manuel I Komnenos, was confined there. Thereafter the monastery disappears from the sources.

**DAMAGE BY QUADRUPEDS.** Roman law regulated wrongful damage to property by the Lex Aquilia, which deals primarily with the killing of another person's slave or animal and with damage by the burning, breaking, or destruction of another's property. To these two categories Byz. law added the specific case of praida (προϊδα). The word is derived from Latin praeda (meaning "booty," and metaphorically "gain") and was used in late Roman texts in its original sense of "booty" (e.g., John Moschos, PG 87:3024B). The Farmer's Law, however, lends to this term a new legal sense, that of damage by quadrupeds, and regulates the punishments and compensations due on
both sides when an animal wanders onto a neighbor’s land and causes damage or is injured (pars. 25, 48–53, 58). Some of these norms were accepted in (Italian?) provincial law. Where this “original and practical rule of arbitration” (Simon, *infra*) first arose is unclear. It could be a borrowing from neighboring countries—it exists in the Lombard *Edictum Rothari* and in its Greek translation (*MGH Leges* 4:231)—or a local Byz. development due to similar rural conditions.

**Lit.** Simon, “Provinzialrecht” 102–10. —A.K.

**Damascus (Δαμασκός),** ancient city in southern Syria situated 100 km inland from the Mediterranean between the coastal mountains and the desert, in an oasis watered by the Barada River. An important military stronghold on the eastern frontier, Damascus was one of four cities of Óriens with an arms factory (*NotDign* 11.18–23). The city was the metropolitan bishopric of the province of Phoenicia Libanensis, which was under the civil administration of Emesa. Little remains of Byz. Damascus. The Roman temple of Zeus Damascenos was closed by Theodosios I and a church (later named for John the Baptist) was built within its precincts. Sauvaget (*infra*) demonstrated that the ancient street grid of Damascus evolved into an irregular “oriental” system, but subsequent attempts to date this change to the 5th–6th C., rather than later (H. Kennedy, *ByzF* 10 [1985] 170, n.91), are conjectural. Sophronios of Jerusalem was a native of Damascus.

The city was under Persian rule from 612 to 628 and was taken by the Arabs in 635. There are several conflicting accounts of the siege—including one that emphasized the role of the father of John of Damascus—and the peace terms made between the victors and the people of Damascus (payment of tribute, division of property), as quoted in some sources, may be of dubious authenticity (Donner, *Conquests* 131–45, 246f). Soon after its conquest Damascus became the capital of the Umayyad Caliphate (661–750). In 708 the Church of John the Baptist was replaced by the Great Mosque, which was decorated with wall mosaics attributed by some scholars to Byz. craftsmen. In the 10th C. Damascus passed to the Ikhshidids and Fatimids of Egypt, and, while briefly controlled by the Turk Afteqin, was placed under Byz. protection in 975. From 1154 the city was the base of Nur al-Din, and from 1174 it supported Saladin, who died there.

**Damascus Chronicle.** See *Ibn al-Qalânis*.

**Damaskenos, Peter,** monk and ascetic writer, fl. ca.1156/7. His major works, of the type of the *Philokalia*, were entitled “Admonition [Hypomnemesis] addressed to his own soul” and “Sayings in alphabetical order.” They are based on tradition (the latest author cited is the 10th-C. Symeon Metaphrastes) and treat primarily the problem of salvation. Although Damaskenos’s world view is optimistic and he argues that the way of salvation is open to lay persons (biotikoi), he ascribes the highest esteem to solitary (hesychastic) monks. The ideal way of salvation is neither social nor that achieved in a monastic community, but individual. The first stage of this path is the purification of body and soul, in which reading forms an important element; the second stage, called *theoria* or *gnosis*, is reached not only through meditation but through divine grace: beginning with the contemplation of Christ’s passion, the soul soars up to the contemplation of God in his attributes. Damaskenos was very popular in both late Byz. and Russia.

**Lit.** J. Gouillard, “Un auteur spirituel byzantin du XIIe siècle, Pierre Damascène,” *EO* 38 (1939) 257–78. —A.K.

**Damaskios (Δαμάσκος),** or Damaskios Diodochos, last scholar of the *Academy of Athens*; born Damascus ca.460?, died after 538. Damaskios both studied and taught rhetoric at Alexandria, also studying Plato with Ammonios. Moving to Athens, he studied several subjects, including mathematics, under Marinos. He eventually headed the Neoplatonist school. Sometime after Justinian’s closing of the Academy in 529, he emigrated with six fellow traveling philosophers to the Persian court. Soon disillusioned, they returned to
Byz. territory in 532 under a special treaty giving them safe-conduct and freedom of expression. An epigram that he wrote at Emesa (AnthGr 7:533) shows him still alive in 538.

His biography of his colleague Isidore can be reconstituted from fragments in Photios (Bibl., cods. 181, 242) and the Souda. Of his Platonic commentaries, that on the Philebus is wholly extant, those on the Parmenides and Phaedo partly so. A treatise On First Principles also survives. Several lost works include four books of mirabilia, thought by Photios (Bibl., cod.130) to be concisely written and good of their kind. Damaskios’s literary versatility continues the tradition of the Second Sophistic, while his wedding of science and superstition is typical of late Neoplatonism.

DAMILAS, NEILOS, hieromonk of the monastery of Karkasina at Hierapetra (Crete); died ca.1417. In 1399 Damilas (Δαμιλάς) established nearby, at Baionaia, a nunnery dedicated to the Theotokos Pantanassa and composed a typikon for the nuns. His rule emphasized the cenobitic life, proper psalmody, daily reading, and strict supervision of the nuns to prevent unauthorized contact with men, whether monks, lay workers, or relatives.

Damilas knew Latin as well as Greek, and took an interest in contemporary theological controversies. He composed a treatise, addressed to Maximos Chrysarges, supporting the Orthodox position on the Procession of the Holy Spirit. A bibliophile and scribe, he included in his will of 1417 (ed. S. Lampros, BZ 4 [1895] 585–87) an inventory of books, probably bequeathed to the nunnery at Baionaia. His library numbered 41 volumes, primarily liturgical or theological, but included one lexikon and a MS of the works of Cato, Boethius, and Manasses. In the inventory he noted that six of the MSS were in his own hand.

DAMNATIO MEMORIAE, a modern term designating a punishment for high treason or maiestas, inherited from Rome. The name damnatio memoriae derives from the fact that traitors could be tried posthumously. As a formal procedure, damnatio memoriae is attested only in the late Roman period (e.g., Institutes 4.18.3; cf. Theophilus in Zepos, Jus 3:268.34–38). It entailed obliteration of the condemned’s memory through destruction of his images, erasure of his name from inscriptions, and cancellation of his legal acts (Cod.Theod. XV 14.1–13). Damnatio memoriae was carried out chiefly against usurpers and their appointees, as the consular datings suggest (R.S. Bagnall et al., Consuls of the Later Roman Empire [Atlanta 1987] 25). In later centuries the formal procedure lapsed, but some of its features crop up in measures taken after a change of government, as when Emp. Alexander’s name was removed from literary works (J. Grosdidier de Matons, TM 5 [1973] 229–42) and images of Nikephoros II Phokas were destroyed after his fall. Acts of Basil the Notios were invalidated unless countersigned by Basil II (Reg 1, no.774). Likewise, certain names were suppressed or restored to the liturgical diptychs, depending on the doctrinal tendency of the moment.

DANAE, a mythological figure, daughter of the Argive king Akrisos. She was sealed by her father in a chamber and there conceived a child by Zeus, who visited her in a shower of gold. The image was used in Byz. literature in its direct form, for example, as a simile for a person imprisoned and chained, “like Danaë by Akrisos of old” (Nik.Chon. 56.44). More important, the myth of Danaë had an impact on the creation of Christian legends about noble girls sealed by their
fathers in a tower or an isolated palace where a visiting angel would initiate them into the Christian creed. One of the “Christian Danaës” was St. Barbara; another was St. Irene-Penelope, daughter of King Licinius, who was secretly baptized by Timotheos, disciple of the apostle Paul (BHG 952γ-954C).

LIT. A. Wirth, Danaë in christlichen Legenden (Prague-Vienna-Leipzig 1892).

—A.K.

DANCE (δρυχησις) was inherited by the Byz. from their Greco-Roman past. The attitude toward dance was hotly discussed in late antiquity, when the church fathers rejected dance together with the theater as an embodiment of immorality. On the other hand, in 361 Libanius published an oration, On the Dancers (ed. R. Foerster, 4:420–98), defending both the art of dance and dancers. Although his oration was a refutation of Ailios Aristide (J. Mesk, WienSt 39 [1908–09] 59–74), he was definitely referring to contemporary matters. Dancing on stage died out as did the theater, but dance performances survived in court festivities. They are represented on several artifacts, such as the crown of Constantine IX Monomachos and the silver vase of the 12th C. from Berezovo; the dancers wear long dresses, usually with broad sleeves, and wave kerchiefs over their head. As part of court ceremonial, the members of factions (demoi) performed an “exotic” dance, the Gothic Pageant (De cer., ed. Vogt, 2:88ff, 102–04, 149ff, 182–85).

Despite rhetorical attacks on dance, it remained popular with different levels of Byz. society: the wife of Digenes Akritas danced for her husband on a small carpet (blattis) to the accompaniment of a lyre (kithara); the logosethes tou dromou John Kamateros is described by a 12th-C. historian (Nik.Chon. 113.95) as dancing the licentious kordax, “kicking his legs to and fro.” Lewd dances with suggestive movements and nudity are further documented by the 15th-C. Comedy of Kata-blattas (ed. P. Canivet, N. Oikonomides, Dipycha 3 [1982–83] 29.43–46, 43.194, 210, 73.647). Dance formed an indispensable element of all feasts—the Calends and Brumalia, for example—and esp. weddings. The festival of St. Agathe included dancing by women in the cloth-making trades (A. Laiou in Festschrift Stratos 1:112ff); in taverns men danced with women to the music of flute and cymbals and the clapping of hands.

DANDOLO, ANDREAS, jurist, historian, and doge of Venice (from 4 Jan. 1343); born 30 Apr. 1306, died 7 Sept. 1354. As doge, Dandolo allied Venice with Cyprus and the Hospitaliters against the Turks (1343–45) and waged war against Genoa in alliance first with John VI Kantakouzenos and then John V Palaiologos. In St. Mark’s, he sponsored the restoration of the Pala d’Oro and commissioned the baptistery mosaics and the chapel of St. Isidore. Dandolo ordered the overhaul of the statutes of Venice (Liber Sexitus, 1343–46; Vol-umen statutorum legum ac turium tam civilium quam criminalium DD. Venetorum [Venice 1709]) as well as a systematic collection of instruments relative to Venice’s role in the Levant, Liber albus, which is a precious source on Byz.-Venetian relations (e.g., the treaty of MANUEL I with Venice, Reg 2, no.1365), and Liber blancus, which is on Italy.

Before becoming doge Dandolo had written a concise chronicle from Venice’s origins to 1342, but his most important work, the Chronica per extensum descripta (A.D. 48–1280) was begun after assuming power. Although its chronological framework derives from the universal chronicle of Paulinus, bishop of Pozzuoli (died ca.1344), it transcribes 40 documents and summarizes about 240 others, including numerous Byz. instruments. Aside from the latter (e.g., Emp. Leo V’s order of an embargo on trade with the Arabs, 144.31–33; Reg 1, no.400), this chronicle provides most valuable evidence for the period after that covered by the CHRONICON VENETUM, which it used. Dandolo organized his account after the 8th C. by reigns of doges; he is favorable to the Byz. monarchy at the outset, but his account becomes hostile in the second half of the 12th C. owing to Byz.’s religious deviance; his glorification of the policies of his ancestor Enrico DANDOLO may reflect anti-Turkish projects afoot at the time of the work’s composition (F. Thiriet, RESEE 10 [1972] 5–15).

—M.McC.
DANDOLO, ENRICO, doge of Venice (1192–1205); born Venice ca.1107 or later, died Constantinople ca.29 May 1205. Before becoming doge, Dandolo (Δάνδουλος) served on embassies to Manuel I (1172) and Andronikos I (1184). According to later legend, a Byz. emperor had him blinded, but the story is unconfirmed; his impaired vision did not hinder his vigorous activity. Elected doge ca.Apr. 1192, Dandolo found himself drawn into protracted negotiations with Alexios III; his shrewd foresight is evident in his instructions to envoys sent in 1197. Despite Alexios's renewal of Venetian privileges (1198), Byz. officials abused Venice's rights. In 1201 Dandolo and his council contracted with envoys of the Fourth Crusade to construct a large fleet in return for payment and to send 50 galleys at their own expense. In 1202, when an insufficient number of Crusaders appeared to repay Venice's expenditures, Dandolo offered to postpone the debt, provided that the expedition recover Zara. With Dandolo's encouragement, the Venetians joined the Crusade. At Zara, Dandolo welcomed the suggestion of Philip of Swabia and the future Alexios IV that the Crusade place Alexios on the throne; he had possibly negotiated earlier with Alexios.

Dandolo played a leading role in the capture of Constantinople in 1203, in the ensuing discussions with Alexios IV and Alexios V, and in the conquest of 1204. By the Treaty of March 1204 and the Partitio Romanae, he secured for Venice repayment of its expenses and three-eighths of the empire. He was at Adrianople when Emp. Baldwin I was captured; Dandolo facilitated the Crusaders' retreat but died shortly after. He was buried in Hagia Sophia, Constantinople. Villehardouin admired Dandolo's ability and forceful leadership; Niketas Choniates stigmatized his cunning and vengefulness and imputed to him the Crusade's diversion against Byz.

DANIEL, or Danielis (Δανιήλ), a rich widow in Patras; born ca.820, died Naupaktos? ca.890. She sponsored the future emperor Basil I when he came to Patras ca.850 in the service of the imperial official Theophilos. According to the biography of Basil by Constantine VII (TheophCont 226–28), a monk in Patras prophesied that Basil would obtain imperial power, and Danelis lavished attention upon him and made him spiritual brother of her son John. Later, Basil appointed John protospatharios. Danelis left almost all her property to Leo VI (p.917–21) instead of to her grandson (her son John predeceased her). Her wealth struck the imagination of her contemporaries; she reportedly owned “innumerable” slaves, 3,000 of whom Leo VI freed and settled in southern Italy; she controlled “not a small part of the Peloponnesos as her personal property,” and even for her dispossessed heirs she retained 80 proaspeia. Given the general paucity of great estates in 9th-C. Byz., Danelis's case requires special explanation. Runciman suggested that her wealth was based on a flourishing silk production in the Peloponnesos, but E. Weigand (in Eis mmeme Spyridonos Lamprou [Athens 1935] 504) pointed out that the description of her riches mentioned no silk, only sidonia erga. It is worth noting that Constantine VII states that Basil I was ready to proclaim Danelis mistress (kyria) of “the whole of this land” (p.228.14–15) and that she returned from her voyage to Constantinople “as the lady (despina) and queen (basilissa) of the country” (p.919.8). Possibly Danelis's estates around Patras, an area that in the early 9th C. was controlled by Slavic tribes, still formed a semi-independent “prince-dom” in the middle of the century. Granting the title protospatharios to foreign princes was not atypical of this period.

—A.K.

Origen, in his fourth homily on Ezekiel (PG 13:569-704), led the church fathers in distinguishing three types of just man, represented by Noah, Daniel, and Job (H. de Lubac, Exégèse médiévale, vol. 1.2 [Paris 1959-61] 571-74). Daniel in the Lions' Den (Dan 6) and the Three Hebrews were types of the Resurrection, according to, for example, ORIGEN (Contra Celsum 7.57). During Daniel's second sojourn in a lion's den, Habakkuk brought him bread, which Hippolytos and others interpreted as a eucharistic prefiguration. The Commendatio animae prayer refers to the rescue narratives of the Book of Daniel—Daniel in the Lions' Den, the Three Hebrews, Susanna and the Elders. The Life of Daniel the Stylite, who was named after Daniel, alludes to him frequently and refers to Nebuchadnezzar (ch.68), Susanna (ch.71), and the Three Hebrews (ch.92).

Daniel's relics and tomb, preserved at the church of St. Romanos in Constantinople, were visited by pilgrims. With the Three Hebrews, Daniel was commemorated on 17 Dec. at Hagia Sophia (G. Majeska, DOP 28 [1974] 363).

Representation in Art. Images of Daniel are found, particularly with the soteriological implications attached to the story of the Lions' Den, from the 4th C. onward on sarcophagi and ivory pyxides (Age of Spirit., nos. 421, 436) as well as on objects of daily use (no.377). This scene, with Daniel orans between two lions, was repeated with few changes in illuminated MSS of Kosmas Indikopleustes and in the Menologion of Basil II. In the marginal Psalters, Daniel's vision of the great mountain (Dan 2:34-5) is added. In such miniatures, as in his appearances among the Prophets in church domes, Daniel is usually clad in Persian costume. The eschatological implications of the Book of Daniel were virtually ignored in art.

C.B.T., J.L., J.H.L., A.C.

DANIEL OF SKETIS, monk and hegoumenos of Sketis; saint; born early 6th C., died after 576 in Tombak, Lower Egypt, according to Coptic tradition. His activity is known from a series of short stories that in Ethiopic and Coptic versions form a unified work. The stories are presented as if told by Daniel himself or his associates and contain precious details not only about monks (e.g., the repentant Mark who lived in Alexandria pretending to be a fool) but also of craftsmen (the argyroprates Andronikos in Antioch) and members of the upper class (the patrikia Anastasia, who fled from Constantinople to Sketis). The stories, simple in structure (similar to the Apophthegmata Patrum), combine adventures with moral indoctrination: Daniel was supposedly captured three times by "barbarians" in the desert; the third time he killed his captor, which so upset Daniel that he visited ecclesiastical and secular authorities in Alexandria, Rome, Constantinople, Ephesus, Jerusalem, and Antioch in search of punishment, but he was exonerated everywhere. Another story deals with the eternal question of the damaging influence of wealth: rewarded through Daniel's prayer, a stonemason named Eulogios found a cave full of coins, moved to Constantinople, and became "eparch of the holy praetorium." Wealth and glory did not make Eulogios happy; involved in the Nika Revolt of 532, he was forced to flee to his village from Justinian I's revenge. Only Coptic and Ethiopic traditions made him a staunch anti-Chalcedonian (H. Bacht, LThK 5:155). Besides the Greek original, Daniel's stories are known in Syriac, Coptic, Ethiopic, and Arabic, the last very close to the Greek version.

Representation in Art. Portraits of Daniel, very rare, can be found at Hosios Loukas and in the Enkleistra of St. Neophytos: the saint is portrayed as a monk with a white beard, which, in the Enkleistra, has five strands.

DANIEL THE STYLITE, saint; born in village of Meratha near Samosata 409, died near Constantinople 11 Dec. 493. At age 12 he entered a monastery. After visiting Symeon the Stylist the Elder, Daniel set off for Constantinople and in 460 mounted a pillar in Anaplous on the Bosporus. His anonymous Life is preserved in two versions: Delehaye (infra, xxxv) regards it as a contemporary work; Beck (Kirche 411) dates it ca.600. The hagiographer presents Daniel as a legitimate heir of Symeon—he received Symeon's leather tunic after the stylist's death. The hagiographer also stresses Daniel's political role: for example, he acted as mediator between Emp. Leo I and Gubazes, king of Lazika; he descended from his pillar to resolve the conflict between Patr. Akaikos and Basiliskos. The power of this stylist exceeded that of the emperor: when Leo I dared to mount a horse in sight of the saint, the horse threw him. Daniel was above the elements, too: after the wind tore off Daniel's tunic one winter night, his disciples found him atop the pillar, his body seemingly lifeless and covered by icicles, but they revived him using sponges with warm water. His funeral was regal—tens of thousands of candles were lit, and a large sarcophagus of precious stones was prepared for him. Symeon Metaphrastes reworked Daniel's Life.

Representation in Art. Portraits of Daniel show an elderly monk behind a grill atop his column (MENOLEGION OF BASIL II, p.237) or under a little protective shelter letting down a basket (Theodore Psalter, fol.26v); in church decoration he is paired with other stylists, esp. St. Symeon the Stylite the Elder, who occupy corresponding positions in the church. At Nea Mone on Chios, he is portrayed as having hair that comes down over his shoulders and a very long beard. A mosaic portraying Daniel is also preserved in Monreale.

-A.K., N.P.S.

DANIIIL IGUMEN, an early 12th-C. superior (hegoumenos), presumed to be from southern Rus'; sometimes identified with Danil, bishop of Jur'ev (1114-29). He wrote an account of a journey from Constantinople to the Holy Land, normally dated 1106-08, though conjectures span 1104-09. Danil traveled by sea, stopping at Ephesus and several islands, onward via Cyprus to Jerusalem. During his 16-month stay in the Holy Land he was based at the Lavra of St. Sabas, one of whose monks acted as his guide. Danil's account is exceptionally broad in scope and diverse in detail: his terse descriptions are dense with information on measurements and distances; shapes and dimensions; and local crops, weather, and produce. He also reports stories (often apocryphal and perhaps oral) connected with the sites he visits. Relations between the Orthodox and the Latins are cordial: on a trip to Galilee, Danil travels with King Baldwin I of Jerusalem for safety; he accepts the blessing of the Latin monks on Mt.
Tabor; and he describes at length the joint celebration of the descent of the Holy Light at the Holy Sepulchre at Easter (probably 1107), confirming in all essentials the 1101 account by Fulcher of Chartres.

DANIȘMENDIDS (Τανσομάνιοι), a Turkoman dynasty that ruled over Cappadocia, the Iris valley, and the regions of Sebasteia and Melitene. Its founder, Emir Danisman, appeared after 1085 during a period of anarchy in Muslim Asia Minor. Later he fought against the soldiers of the First Crusade: in 1100, near Melitene, he captured one of its most prestigious leaders, Bohemund, whom he imprisoned in Neokaisareia. Emir Danișmand is the hero of a Turkish epic poem combining history and legend, the Dânișmendndâné. He was succeeded by Emir Ghażî, who increased his power by intervening in the dynastic strife among members of the Seljuk house; he also fought against the Byz. emperor John II Komnenos in the region of Kastamon. Around the mid-12th C. the Danișmendid territories were divided by dynastic struggle from which the Byz. profited. Manuel I Komnenos allied with the Danișmendid Yaghi-Basan and used him against the Seljuks. The Seljuks, however, defeated the Byz. in 1176 at Myriokephalon; after they conquered Melitene in 1178 the Danișmendid dynasty disappeared. Some preserved coins of the Danișmendids bear Greek or Greek and Arabic inscriptions.

LIT. I. Mêlikoff, EI² 2:110f. C. Cahen, Pre-Ottoman Tur-
22, 155–59, 220f.

DANIȘMENDNâME, or Book of Melik Danișmand, a Turkish epic composed in 1360 by Arif Ali, but based on a mid-13th-C. version by Mawlama ibn Ala, now lost. A mixture of simple prose and poetry, the Dânișmendnâme recounts the legendary deeds of Emir Danișmand (died 1104), known to Anna Komnene as Tanismanes, the founder of the Danișmendî beylik in northern Anatolia. As a whole, the Dânișmendnâme depicts the emir’s confrontation with Christians of Asia Minor as a perfect expression of ghazâ, or holy warfare, in the cause of Islam. This aside, the work indubitably reflects the mentality of the Turcomans who conquered Anatolia in the 11th–12th C. as well as the character of the conquest.

DANUBE (Δανοῦβος), ancient Istris, the most important river of central and southeastern Europe. The name Danoubios/Danoubis was being used already in late antiquity (Julian, pseudo-Kaisarios, Stephen of Byzantium), but it did not totally replace the classical Istris. The Danube rises in the Black Forest of Germany and empties into the Black Sea, forming a huge delta. Some of its right-bank tributaries (Sava, Drina, and Morava) connected Byz. territories with the Danube. The river is divided into three almost equal sections: the upper (down to Vienna), middle (to the Iron Gate, near Orsova, Rumania), and lower reaches.

The Romans made the Danube their frontier and established the following provinces to its south: Raetia, Noricum, Pannonia, Moesia I and II; Dacia was to the north. They built a fortified limes, many ports, and cities (e.g., Sirmium, Singidunum, Dorostolon). In the division of the empire in 395, Raetia, Noricum, and Pannonia were ceded to the Western Empire. Soon afterward, however, the territory south of the Danube was occupied by the Germanic peoples, the Huns, and finally (568) by the Avars. Anastasios I and Justinian I tried to fortify the Danubian frontier in its middle and lower reaches, but by 600 the Avars and Sklaventai destroyed what was left of the limes. The Sklavini began to emerge; the “Seven Tribes” settled along both banks of the Lower Danube and by 680 the whole of Moesia was under Bulgar control.

Byz. reconquered the south bank of the Danube between 971 and 1018 and retained it in the 11th–12th C., establishing the themes of Sirmium and Paristrion. Byz. struggled to protect this area from raids of the Pechenegs, Uzes, and Cumans and competed with Hungary in the 12th C. for the region of Zemun and Braničevo.
The Danube was an important mercantile route but, being on the Byz. frontier, did not much influence its internal development. Protected by a fleet and a system of fortresses, it created a serious obstacle for invaders: but the nomads of the steppe learned to cross it—on ice in rare winters when the Danube froze, or swimming behind their horses, or in small boats.

**DAPHNE.** See Antioch.

**DAPHNI** (Δαφνειον, Δαφνιον), located approximately 10 km west of Athens, the site of a celebrated monastery dedicated to the Mother of God and best known for the mosaics of its *katholikon*. Sculptural remains led Millet (infra) to suggest that an earlier church on the site dated from the reign of Justinian I. There is no textual support for this supposition, however; Daphni is not named among the more than 100 monasteries whose representatives attended the Second Council of Nicaea in 787 (Mansi 13:152–56). The dates of construction and decoration of the present church, laid out as a Greek cross-octagon (see Church Plan Types), are unknown, although the mosaics are generally held to be of the late 11th C. The monastery was certainly in existence in 1048 when Dionysios, “monk and priest of the monastery of Daphni,” attached his name to the *tupikon* of a confraternity serving Hosios Loukas. Several seals of the monastery, one of a *hegoumenos* Paul (Laurent, *Corpus* 5.2, no.1245), have been attributed to the 10th–12th C. Daphni is briefly mentioned in the 12th-C. *vita* of *Meletios the Younger* (ed. Vasilievskij, 55-31).

Although it is sometimes assumed to be an imperial foundation, the construction of the church cannot be connected with two later, much damaged frescoes of emperors in its narthex. Cistercian monks settled at Daphni between 1207 and 1211, building an exonarthex and a small cloister on the south side. It remained in Latin hands until the Ottoman occupation of Attica in 1458. Apparently abandoned in the 18th C., the monastery was partially restored after World War II (E. Stikas, *DChAE* 43 [1962–63] 1–47).

The mosaics of Daphni, some employing silver tesserae and set against expanses of gold, are dominated by a Pantokrator in the dome, made more fierce in a restoration of 1889–97, and prophets in the drum. Below, four Great Feast scenes in the squinches and others in panels on the walls concentrate on the life of Christ. Despite the church’s dedication, the only Mariological pictures in the nave are the Birth of the Virgin in the northern arm of the cross and her Dormition over the west door. Other scenes from her life are found in the southern portion of the narthex. Throughout, portraits of saints are far fewer than at Hosios Loukas. The style of the mosaics, often described as having a “classical” or “antique” aspect, is unparalleled in works later than the *Menologion of Basil II*. Their serene monumentality is due in part to balanced composition, in part to skillful framing within ornamental arches on the walls or, as in the squinches, their setting above a finely cut marble cornice.

DAPHNOPATES, THEODORE, high-ranking official and writer; died after 961. Protasekretis, patrikios, and magistros (according to the headings of his works), Daphnopates (Δαφνόπατης) played a very important role at the court of Romanos I; he probably lost influence under Constantine VII, but Romanos II briefly appointed him to the post of eparch of Constantinople. The correspondence of Daphnopates sometimes has an official character and sheds light on Byz. international and domestic politics (including the enthronement of Patr. Theophylaktos and relations with Symeon of Bulgaria). The letters deal also with Armenian affairs; Daphnopates apparently knew Armenian. The correspondence treats theological questions as well, and two letters are dedicated to the interpretation of a dream of Romanos II. Daphnopates wrote homilies, one of which describes the miracles worked in Antioch by a holy relic (the hand of John the Baptist), its theft from Antioch and transfer to Constantinople. He also composed several hagiographical works (on St. George, Theophanes the Confessor, Theodore of Studios) and a collection of excerpts from John Chrysostom arranged systematically, a work typical of 10th-C. Encyclopedism. Skylitzes describes Daphnopates as a historian, and some scholars have suggested that he wrote the last section of the chronicle of Theophanes Continuatus. I. Dujčev (DOP 32 [1978] 252f) considers Daphnopates as the most probable author of an anonymous speech on the Bulgarian Treaty.

DARDANELLES. See HELLESPONT.

DAVID (Δαβίδ), the greatest king of Israel, according to the Bible. David was venerated in Byz. as the author of the Psalms and creator of Christian music and poetry. He was also treated as a prefiguration of Christ: his fight with Goliath symbolizes Christ's victory over Satan, his function as shepherd presages Christ's role as shepherd of souls, etc. The ambivalence of the biblical David—his vices and humility when set against his heroic exploits—attracted Byz. interest, and his penitence for his sins (infidelity, the murder of Absalom) was frequently discussed. David became an esp. popular figure in political rhetoric of the 12th C. when Manuel I and Andronikos I were compared to him. Michael Choniates (1:215,9–24) specifically compares Isaac II to icons of David.

Representation in Art. David normally appears in imperial garb; when this regalia changed, that of David did not. In monumental painting he is found among the PROPHETS or with Solomon in the ANASTASIS. In Psalter illustration David is shown holding the text, inspired by God, or leading musicians. Illustrating the events of 1–2 Kings, he occurs in many narrative situations, such as the anointing by Samuel or slaying Goliath; both scenes occur already on the David Plates. In the PARIS PSALTER and elsewhere, David the shepherd and musician appears as ORPHEUS, inspired by
the personification of Melodia. This composition passed into secular art, serving as the centerpiece of a 12th-C. silver bowl with a representation of Digenes Akritas and Eudokia (Darkevič, "Svetskoe iskusstvo" 132–99).

DAVID, SYMEON, AND GEORGE OF MYTILENE, three Iconodule brothers from Lesbos; saints; feast day 1 Feb. Born to a family possessing a modest amount of property, they lived as hermits and monks on Lesbos; George was elected bishop of Mytilene. Only Symeon is said to have been exiled to the Aegean island of Lagousas, whence he set off for Constantinople, fleeing Arab attacks; he stood on a column near Pegai on the Black Sea. On the basis of their Life, van den Gheyn (infra 210) constructs this chronology of the brothers: David, 716–83/93; Symeon, 764–843; George, 763–844. Halkin (infra 468) questioned the authenticity of the Life, which contains serious chronological contradictions. On the evidence of a 10th-C. Life of George, Patm. gr. 254 (AB 72 [1954] 221), Halkin calculated that George was born ca. 776, became bishop in 804, and died on 7 Apr. 821. I. Phountoules attempted to distinguish three different Georges of Mytilene. The Life of the three brothers seems to have been written after Petronas’s victory over the Arabs in 863 and before the assassination of Bardas (865), to whom George prophesied a happy future (ed. van den Gheyn, p.252.22–30). Anti-Iconoclastic in its tendency, the Life eulogizes the empress Theodora and reveals a good knowledge of her circle; it provides a vivid, contemporary account of the restoration of images (H. Grégoire, Byzantium 8 [1933] 517–20). The collective hero of the Life is a pious family: the "pure virgin" Hilaria, sister of David, Symeon, and George, is also praised, as well as their uncle; the brothers were buried in a common "family" tomb.

DAVID I KOMNENOS, last emperor of Trebizond (1459–Aug./Sept. 1461); born between ca. 1407 and 1409, died Constantinople 1 Nov. 1463. Third son of Alexios IV Komnenos, David held the title of despotes during the reign of his brother John IV Komnenos. In 1458 he went to Adrianople to pay tribute to the Ottoman sultan Mehmed II. Shortly after David ascended the throne, he surrendered Trebizond to the Ottomans, who had attacked by land and sea. He was taken prisoner, together with his family. After a brief period of exile in Adrianople and Serres, David was accused of a conspiracy and subsequently executed.

DAVID II/IV THE RESTORER, Bagratid king of Iberia (1089–1125). Benefiting from the withdrawal of Byz after Mantzikert in 1071 and the collapse of Seljuk rule 20 years later (1092), David restored the power of the Georgian crown over the rebellious native dynasts with the help of mercenaries recruited from among the northern Caucasian Kipchak tribes. He reunited the principalities of Abchasia, K’aheti, and K’art’li into a single kingdom, with Tbilisi, which he had taken from the Muslims in 1112, as its capital. His military victories, together with his foundation of cultural and intellectual centers such as the monastery of Gelati, laid the foundation for Georgian power which, in the second half of the 12th C., reached into Armenia and Azerbaijan.

DAVID KOMNENOS (sometimes called David I Komnenos), ruler of Paphlagonia (ca.1204–12); monastic name, Daniel; died Sinope 13 Dec. 1212. Younger brother of Alexios I Komnenos of Trebizond, David helped conquer Trebizond, then, in late 1204, pushed west with Georgian and other
mercenary troops to occupy Paphlagonia. His lands extended from Sinope to Pontic Heracleia. Namely, David was subject to his brother. Attacking Nikomedea in 1205, his general Synadenos was defeated and captured by Theodore I Laskaris. Under pressure from the Nicaeans, David allied himself with Henry of Flanders; with aid from Constantinople, he survived Theodore’s siege of Heracleia (1206). But after his ally Thierry de Loos was defeated and captured by Theodore’s general Andronikos Gidos (1207), David was forced onto the defensive. He lost Heracleia to Theodore ca.1207; after his death the rest of Paphlagonia passed to the Nicaeans.

DAVID OF TAYK’/TAO, dynast of upper Tayk’/Tao (from 961); junior member of the Iberian Bagratid house and ruler of the Armeno-Iberian marchlands; died 31 Mar. 1000. David’s support of Emp. Basil II against Bardas Skleros won him the title of kouropalates and extensive territories along the Armeno-Byz. border from Tayk’/Tao by way of theodosiopolis to Mantzikert, which he retook from the Arabs between ca.992 and 994. David’s eminent position allowed him to play the role of arbiter in both Armenia and Georgia, and his bilingual court was a great intellectual and artistic center. In 969 David founded a church at Oški (in southern Tao-Klarjet’i), where he and his brother are represented as donors in stone reliefs, once flanking a Deesis and again in the south cross arm. Georgian inscriptions identify “David Magistros” and “King Bagrat, duke of dukes,” as builders of the church, a model of which they hold in the first set of images (W. Djobadze, BZ 69 [1976] 39–62).

Childless, David intended to make Bagrat III of Abchasia his heir and worked to unify other Georgians lands under him, until quarreling with him in 988. After David supported Bardas Phokas, Basil II forced him in 989 to will his lands to Byz. David’s death, possibly instigated by the pro-Byz. party among his nobles, gave Basil a pretext to annex Tayk’/Tao and to transform it into the core of the new theme of Iberia, an event that marked the beginning of the Byz. conquest of the Armenian plateau.

—N.G.G., C.M.B., A.C.

DAVID OF THESSALONIKE, saint; born Mesopotamia ca.450, died ca.540 on a boat en route to Thessalonike; feastday 26 June. He went as a boy to Thessalonike from the east, became pious, lived (for three years?) in an almond tree near a church, and later inhabited a cell. Aristeides, archbishop of Thessalonike, sent David to Constantinople to request the transfer of the eparch’s residence from Sirmium (endangered by Avar invasions) to Thessalonike. David, an Abraham-like hermit with hair down to his loins, was respectfully received by Empress THEODORA and then by Justinian I, in whose presence David worked a miracle—he held hot charcoal embers without burning his hands. He died after his successful mission. According to John Moschos, a certain Palladios in Alexandria related how David dwelt in a cell outside the walls of Thessalonike and how soldiers observed a miraculous fire pouring out of his cell windows. David’s anonymous Life, written in Thessalonike ca.720, contains a surprising eulogy of Theodora. David’s exploits were praised by JOSEPH THE HYMNOPHGRAPHER, Makarios MAKRES, and others.

Representation in Ari. The saint is depicted as a hermit with a long beard that sometimes reaches his feet, for example, in a relief of ca.900 (A. Xygopoulos, Makedonika 2 [1941–52] 143–66); in the parekklesion at CHORA, he is depicted seated in a nest atop an almond tree whose branches substitute for the capital of a stylite’s column. The church of Hosios David in Thessalonike was dedicated to him.

—A.K., N.P.S.

DAVID PLATES, a set of nine plates decorated with a series of scenes from the life of King DAVID, now divided between the Nikosia and Metropoli-
tian Museums. Part of the Second Cyprus Treasure, the plates, made of solid silver chased from the front, all have silver stamps dated to the period 613–629/30 and bear witness, therefore, to high standards of metalworking in the early 7th C. Of three graduated sizes, these dishes were intended as display plates; the biblical scenes, which include David’s combat with Goliath, have been interpreted as commemorating the war Herakleios waged with the Sasanian Persians, which ended in 628, thereby narrowing the date of the plates to 629/30. A plate from another possible David series, found in Russia (Age of Spirit, fig.61), suggests that several sets may have been made for imperial distribution as largitio dishes.

David the Philosopher, a pupil of Olympiodoros in Alexandria in the second half of the 6th C.; Greek sources attribute to him an Introduction to Philosophy and a Commentary on Porphyry’s Eisagoge. In Armenian tradition, however, David the “Invincible” Philosopher was thought to be a pupil of Mesrop Mahtoc. Medieval accounts of his defense of Armenian orthodoxy against the Council of Chalcidon are legendary. Armenian translations of the two Greek works noted above and of Greek commentaries on Aristotle’s Categories and Analytics were attributed to him. Certainly, the Armenian renderings of these standard philosophical texts were of fundamental importance for the development of Armenian philosophy. Numerous Armenian commentaries on the Prolegomena, or “Definitions and Divisions of Philosophy,” were written in the 13th and 14th C.

-R.T.
their heads, on the model of the Hours represented in floor mosaics at Antioch and elsewhere. Personified days played a part in the iconography of the seasons.

DAYR ANBĀ HADRĀ. See SYMEON, MONASTERY OF SAINT.

DAZIMON (Δαζίμων), a site in PONTOS, probably at the modern village of Dazmana (see P. Wittek, Byzantion 10 [1935] 55) above the Iris River, east of Amaseia, at the edge of an extensive plain. Although first mentioned in 375, Dazimon only became important in the wars between Byz. and the Arabs. In those years, the neighboring plain, an imperial estate in the late 6th C., formed an apleron where the troops of the ARMENIACON joined the emperor on eastern campaigns. In 838 Dazimon was the site of a major battle between Emp. Theophilos and the Arabs led by Afshin. In spite of initial Byz. success, the Arabs won a major victory that enabled them to capture Ankyra and eventually AMORION. The Byz. forces took refuge in Amaseia; news of the defeat at Dazimon provoked a riot in Constantinople. Remains of the site have not been reported. Dazimon has alternatively been identified with Tokat, whose jagged peak bears a fortress, some of which is Byz.

DEACON (διάκωνος “attendant, servant”), a specific office in the Byz. church. A deacon’s duties both in the primitive and patristic period were distinctly ministerial. He assisted at baptism (see also DEACONESS), served at the celebration and distribution of the Eucharist (which, however, only a PRIEST OR BISHOP could perform), supervised the charities dispensed by the church, managed the diocese’s properties and finances, and acted as the bishop’s secretary (cf. Council of Laodikeia, canons 21, 23, 25). The latter duty normally fell to the archdeacon, a title which first emerged in the 5th C. Despite his wide authority as the bishop’s chief assistant, the deacon was subordinate to both priest and bishop. He was, as such, the lowest in rank among the three major orders of the CLERGY. Conciliar legislation emphasized the inferiority of the office and even forbade the deacon to sit among the priests (NICAEA I, canon 18). This was later modified for a deacon representing his bishop at a council (Council in TRULLO, canon 7).

From the 11th C. the deacons of HAGIA SOPHIA at Constantinople, esp. those who were members of the ENEMOUSA SYNODS, managed to acquire and wield considerable power and influence within the patriarchate (V. Tiflizoglou, BZ 62 [1969] 33–36). Under Emp. Herakleios the number of deacons at Hagia Sophia was fixed at 150 (Reg 1, no.165), although by the late 12th C. their number had probably dwindled to about 60 (P. Wirth, ByzF 2 [1967] 380–82).

Canonically, the deacon was ordained to a specific diocese or church at age 25 or above (Trullo, canon 14). Marriage was permitted, but only before ordination. The deacon’s characteristic vestments were the ORATION and STICHARIUM. (See also SUBDEACON.)

— A.P.

DEACONESS (διακόνισσα). The feminine form of the term deacon dates from the 4th C. (NICAEA I, canon 19). Her chief liturgical function was to assist at the baptism of women, which, for reasons of decency, could not be performed exclusively by the male clergy. The decline of adult baptism, however, hastened the demise of the office. By the 12th C. it had indeed lapsed, although the title was still being used (“improperly,” according to BALSAMON) for certain women monastics (PG 137:441 D). In the EUCHOLOGIA, their ordination (Goar, Euchologion 218–22) paralleled that of the deacon. It was permissible only to widowed or unmarried women, however. Still, priesthood was never conferred upon a deaconess, although it could be conferred upon her male counterpart. EPIPHANIOS of Salamis emphasizes that deaconesses were not priests but women–elders (PG 42:744D–745A). The age for ordination, 60, was later reduced to 40 (Council of CHALCEDON, canon 15; Council in TRULLO, canon 14).
DE ACTIONIBUS, an anonymous treatise on actions in civil lawsuits. The work has the practical aim of enabling potential plaintiffs to give the correct name to their action. Its original version derives probably from the legal literature connected with the Justinianic antecessores, since its association with the 5th–6th-C. theory of civil procedure (libel suits) is evident. The treatise was still copied and supplemented in MSS of the 11th and later centuries, although the procedural act (editio actionis) appropriate to it cannot be provided for that period.

—D.S.

DE ADMINISTRANDO IMPERIO, conventional and incorrect title of a book compiled by Constantine VII or under his supervision and dedicated to his son Romanos II. The plan, according to the preface, consisted of four points: the relationship of the “nations” (ethnē) with the Rhomaioi and the means of using some ethnē to defeat and subdue dangerous neighbors; the gifts desired by the ethnē; the characterization of their geographical situation and their customs; the changes that took place in the “empire of the Romans.” Moravcsik (Byzantinoturcica 1:362f) tried to demonstrate that the work conforms to the plan despite occasional repetitions, contradictions, and errors; on the contrary, Lemercé (Humanism 320f) emphasized the book’s incoherence and heterogeneity. De administrando imperio has two levels, purely informative sections taken from archival documents and didactic indoctrinations concerning methods of diplomacy; accordingly, one must distinguish between the date of compilation (probably the 950s) and the date of texts included. Some materials are of signal importance (e.g., ch.9 describing the “way from the Varangians to the Greeks”), some are based on unreliable legends, but as a whole De administrando imperio is a unique source for the history of the Caucasus, the north shores of the Black Sea (Rus’, Pechenegs, Hungarians, Khazars), and the Serbians and Croats. The announced fourth section on changes within the empire remained unwritten.

—A.K.

DEATH (θάνατος). There was no fixed Byz. terminology for death; it is variously designated as a separation, passing away, the end of life, return, repose, payment of the common debt, and other formulations. The Byz. view of death, derived from Greco-Roman philosophy, is that it is the separation of the soul from the body; this separation was construed as temporary since eventually the soul would be reunited with its body. Death occurs through the commandment of God and is brought about by an angel sent for that purpose. There were divergent views, however, as to whether the hour of death was predetermined by God. Only the saints could foretell the day of their demise. The soul (naked and without gender) is usually envisaged as leaving the human body through the mouth in order to begin a 40-day journey in the company of the angels. In its ascent to heaven it must pass through the telomeia, or tollhouses, of the demons (cf. vita of Basil the Younger), which charge it for its sins. Thereafter it has the opportunity to see both PARADISE and HELL, and is then brought to a place of rest until the Day of Last Judgment. Doctrines of the wandering of the soul and reincarnation were totally rejected. Both Neoplatonic philosophy and Christianity saw death as a liberation from captivity, and yet laid greater stress on the positive aspect of birth to a new life. For this reason, such theologians as Basil the Great (PG 31:484A) and John Chrysostom criticized loud and excessive mourning over the dead. There was even objection in some radical monastic circles to a special BURIAL.

The rites of the FUNERAL liturgy and certain representations of the hereafter, which derive from
customs and beliefs antedating Christianity, were transformed by Christianity in a specific way. The ancient beliefs in a journey taken by the soul after death, in the need to provide ephodon (victuals) for the journey (G. Grabka, *Traditio* 9 [1953] 1–49), and in a ship and escort of souls, were taken over by the church fathers but filled with new content. Angels took over the role of the psychopompoi, the church became the ship of souls, while the ephodon was seen above all as the Eucharist received before death, though we find it occasionally given a wider meaning so that it includes faith, baptism, or the monastic life. That the Eucharist could sometimes be understood almost superstitiously as a kind of dowry for the hereafter is shown in the recommendation that eventually resulted in the repeated reception of the Eucharist on the day of death in the hope that one would die with the Host in one’s mouth (PG 29:CCCXV, BC). According to Chrysostom, the reception of communion (as an unrivaled means of nourishment) on one’s deathbed ensured the escort of angels (rather than demons), while at the Second Coming (parousia) the righteous entered directly into the dominion of God (PG 61: 364-30–34). Numerous Byz. adopted the monastic habit on their deathbed in greater hopes of salvation.

Another custom, that of kollyba, is derived from the pagan tradition of a (private) funeral meal conducted by relatives at the tomb of the deceased. It was unanimously opposed by the church in the West as a pagan superstition, but the practice survived in the Byz. church. Kollyba were distributed and liturgical prayers were said for the dead particularly on the 3rd, 7th (or 9th), and 30th (or 40th) day after death (G. Dagron in *Temps chrétien* 419–30); the prayers were seen as accompanying the soul of the deceased on its journey. These dates were believed to represent important stations on the soul’s journey either to the final vision of or banishment from God. The deceased were also commemorated on the anniversary of their death and on the Saturday before Meatfare Sunday (to Sabbaton tes Apokireo). The Byz. believed that the fate of the soul could be influenced through the prayers and intercessions of the living and made generous donations to churches and monasteries in order to ensure the proper commemoration of deceased relatives.

The contemplation of death (*melete thanatou*), taken from Stoicism, found a particularly vibrant resonance in the monastic milieu. Church fathers illustrated the frailty of human life by referring to the once-famous Alexander the Great whose grave was unmarked and unknown, while the innumerable graves of the martyrs were everywhere held in the highest honor. Monks desired to know what their brethren saw and experienced in the hour of death; they even contrived to consult the bones of the dead over their fate in the hereafter in order to learn the effectiveness of their intercession; even resurrection of the dead by the saintly desert fathers was reported (PG 34:244B–246A). The death of a saint is often connected with the vision of light, and the effusion of a clearly perceptible fragrance. Conversely, death itself generally brings one near the realm of the “black one” (“Ethiopian” = devil), and is connected with the symbol of the sword (and on icons with the cup of poison). The pre-Constantinian church gave the highest value to martyrdom as a baptism of blood, an imitation of the Lamb of God, and birth into heaven. The martyrs, therefore, as those who had been redeemed, continued to intercede for the living.

Hagiography uniformly stresses the serenity with which the dying saint faced death, because of his belief that death meant freedom from the bonds of the body and union with the divine. The prevailing attitude in epitaphs and monodies is quite different, however. Death is likened to the mythical Charon, who cuts man’s tree of life. Untimely death is generally seen as unjust and as a blow to the family and friends of the departed.

**DEBT** (*χρέος, Lat. debitum*) designated in Roman law both an obligation that originated from the contract of a loan and the object of this contract, that is, a sum of money or a thing owed by one
DE CEREMONIIS, in full, De ceremoniis aulae byzantinae, the modern title for a 10th-C. treatise of Constantine VII Porphyrogenetos that treats court ceremony in the spirit of encyclopedia for the glorification of the emperor and his servants. Major and minor ceremonies are described in minute detail from the perspective of court officials who staged secular rituals. To interpret De ceremoniis requires knowledge of each section's origin because it compiles 5th–10th-C. records (see Table) that document Byz. government, diplomacy, prosopography, Constantinopolitan topography—esp. that of the Great Palace—and historical events. The complete MS (Leipzig, Univ. Lib. 28) is dated to the 10th C. (I. Rochow, Klio 58 [1976] 193–97). It is less a finished work than a dossier that contains instructions for ceremonies and descriptions of actual performances intended as raw material for the former: thus book 2, chapter 38, was stripped of specifics to form the prescriptive book 2, chapter 14 (G. Ostrogorsky, E. Stein, Byzantium 7 [1932] 185–233 and F. Dölger, BZ 36 [1936] 145–57). It also includes sundry memoranda on subjects ranging from officials' salaries to military logistics. The imperial family implied by book 1, chapters 1–9, fits a time frame of ca.957–59, while datable references reveal revisions no earlier than Constantine's last years (bk.1, ch.28—after 27 Feb. 956; bk.2, ch.15—after autumn 957); the text was certainly revised under Nikephoros II Phokas and book 1, chapter 97, may suggest a connection with Basil the Nothos.

Constantine states that book 1 derives from records. Chapters 1–83 offer fairly homogeneous prescriptive material on holy-day processions to Constantinopolitan sanctuaries (1–37) and secular ceremonies (38–83), such as coronations, marriages, funerals, officials' promotions, and circus celebrations. Chapters 84–95 are unrevised extracts from Peter Patrikios, including verbatim

protocols of accession from Leo I to Justinian I (chs. 91–95, partly recycled in acclamations for Nikephoros II Phokas [bk.1, ch.96]).

Constantine’s claim that book 2, possibly an afterthought, draws only on oral tradition holds generally for book 2, chapters 1–25, although even they contain historical records (see Table). The disparate documents of chapters 25–56 may have been physically associated with Constantine’s own copy and transcribed as they were found at the end of the Leipzig MS; they shed precious light on such matters as military mobilization (bk.2, chs. 44–45) against Crete and Italy (cf. G. Huxley, GRBS 17 [1976] 295–300), while a diplomatic style sheet (bk.2, chs. 46–48) illuminates the hierarchy of states (Dölger, Byzanz 183–96; W. Ohnsorge, BZ 45 [1952] 320–39). The remaining chapters concern mostly officials’ precedence, fees, and payments (bk.2, chs. 49–50, 55; 56 concerns BRINGAS). The language of De ceremoniis provides valuable testimony on vernacular usage (G. Moravský, 5 CEB, vol. 1 [Rome 1939] 514–20) and governmental technical terms, esp. of Latin origin (partial list: A. Landi, Koinonia 2 [1978] 301–22).

A treatise, On Imperial Expeditions, incorrectly dubbed Appendix ad librum I (Reiske, infra 444–508), precedes De ceremoniis in the Leipzig MS. Constantine based it largely on a lost work by Leo Kataylas, magistros under Leo VI, and dedicated it to his son. It details the logistics of an imperial campaign into Anatolia (G. Huxley, GRBS 16 [1975] 87–93; Hendy, Economy 304–15) and concludes with records of triumphs by Justinian I, Theophilos, and Basil I.

-M.Mcc.
DECIUS, a Roman aristocratic family that flourished under Theodoric the Great. Its connection with the earlier Roman family of the same name is unclear. Caecina Decius Albinus (PLRE 1:35–36), urban prefect of 402, probably a descendant of the Caesars, may have been the founder of the Decius family. Caecina Decius Acinatius Albinus, urban prefect of 414, may be his son. The family is better known from the end of the 5th C., when Caecina Decius Maximus Basilius was consul (480), as were two of his brothers (484, 486). All four of Basilus’s sons attained consular rank: Albinus in 493 (presumably the first consul appointed by Theodoric), Avenius (501), Theodorus (505), and Importunus (509). They formed, however, a house divided into two pairs of brothers, the first two supporting Pope Symmachus, the other two his rival Laurentius. Circa 519 Albinus was involved in religious discussions to end the schism between Rome and Constantinople, and ca.522 the referendarius Cyprian accused Albinus of having sent treacherous letters to Justin I. Boethius attempted to defend Albinus, but they were both arrested. In 525, however, Theodoric sent Theodorus and Importunus with Pope John I as ambassadors to Constantinople. Their relatives continued to serve as consuls until 534.

A.K.

DECURIONES. See Curiales.

DEEDS OF PURCHASE. See Sale.

DEER (Ἑλαφος, νεβρός). Along with the gazelle and wild goat the deer was a popular object of hunting; miniatures depict scenes of dogs or domesticated leopards in pursuit of deer. According to legend, Basil I was pursuing on horseback a huge stag that suddenly dragged the emperor from his saddle and carried him away on its antlers. Venison was recommended during cool seasons, but not in summer when it was considered poisonous. The horns of the deer were viewed as symbols of marital infidelity. Andronikos I reportedly exhibited antlers of the deer he had hunted, ostensibly to show the size of the killed beasts but actually to mock the inhabitants of Constantinople for the adultery of their wives.

Christian legend described the hart or male deer as fighting and killing snakes, and in this capacity the deer became a symbol of Christ. The 4th-C. exegete Philon (of Karpathos or Karpasia?) describes Christ as turning toward the Gentiles and running like a gazelle or deer to the ends of the world (PG 40:768). Since the nature of the deer is destructive, comments Cyril of Alexandria (PG 69:825A), and snakes flee from its smell and color, the Lord is rightly called nebros since he tramples on and destroys the power of adversity. Apostles, preachers, saints, and all the righteous
were also compared with harts as crushing the power of the serpent.

**Representation in Art.** The image of the hart or stag entered Christian art partly because of Psalm 42:1: “As the hart panteth after the water brook, so panteth my soul after thee, O God.” The thirsting soul was associated particularly with **baptism**, and the hart was widely used in 4th-C. **baptistery** decoration, esp. floor mosaics. Constantine I is supposed to have given the Lateran baptistery in Rome seven 80-pound silver harts that spouted water, and many other baptisteries had hart-shaped fountains or spigots. In Ravenna 5th-C. mosaics in the “Tomb” of **Galla Placidia** show harts flanking streams and the Tree of Life.

Harts appear beside Psalm 42 in the marginal **psalters** and occasionally atop **canon tables**.

**DEESIS** (Δέησις, lit. “entreaty”), the word used since the 19th C. to identify as an image of intercession the Byz. composition of the Virgin Mary and **John the Baptist** standing on either side of Christ with their hands extended toward him. Byz. used the word **deesis** for this composition, too, but not for it exclusively: the Virgin Mary praying, or the Virgin or a donor presenting a petition were also called **deesis**. Intercession, moreover, was neither the exclusive nor the original
DEFENSOR CIVITATIS, an official of the late Roman Empire who functioned as a semi-private advocate of provincial citizens in relations with the central government. The origin of the office remains unclear. It is probable that in the first half of the 4th C. in the eastern provinces of the empire (Egypt, Arabia) there existed the so-called syndikoi or ekdikoi, who acted as advisers of the urban populace in conflicts with the administration; in the West the institution was introduced by Valentinian I in a law of 368 (for Illyricum) as an element in the emperor's anti-aristocratic policy (A. Hoepfner, RH 182 [1938] 225–37). The first defensores were chosen from the upper class of former functionaries such as agentes in rebus or governors, and some had senatorial rank. The importance of the defensores declined gradually, but Justinian I attempted to return the office to its former significance. The functions of the defensor were vaguely defined; primarily he was to record all complaints and by so doing check the malpractice of local administrators. The defensor also had judicial authority in minor cases (Justinian I, nov. 15.3.2, 4). With the decline of the city in the 7th C. the office of defensor civitatis fell into disuse.

DEHES, village in northern Syria, in the mountains between Antioch and Chalkis ad Belum. The history of Dehes, as revealed by archaeological excavation, illustrates the region's economic development. The village prospered in the 4th–6th C., when the enlargement of an olive press suggests flourishing olive cultivation. The buildings grew larger; the houses of nuclear families were transformed into the habitats of extended families. Construction techniques and planning improved—from an irregular to an orthogonal system. After the mid-6th C. the growth of Dehes stopped, even though coin finds indicate economic activity through the reign of Constans II and probably until 674. There are no signs of a catastrophic destruction, but slow decline led to the abandonment of the site ca.900. Incidental coins of the 11th C. (down to Alexios I) testify to the Byz. penetration of northern Syria in that period.

DEIFICATION. See THEOSIS.

DEIPNON. See ARISTON AND DEIPNON; LORD'S SUPPER.

DEIR ZA'FARAN MONASTERY, the "Saffron monastery," also called Mar Hanianiya, Monophysite monastic complex built ca.530 northwest of DARA in Mesopotamia, 5 km east of Mardin in Turkey. Its early history is obscure, but Deir Za'faran should perhaps be identified with the monastery of Natapha where Monophysite bishops sought refuge during the persecution of Justin I. The well-preserved triconch main church of Deir Za'faran displays a complete example of the early 6th-C. type of ornate architectural sculpture found in fragments at, for example, AMIDA, Dara, and SERGIOPOLIS. Refounded in 793 by Mar Hananiya and again ca.1125 after short periods of abandonment, from the 12th C. Deir Za'faran was the seat of the Jacobite Patriarch of Antioch. It formerly housed an important Syriac library, which contained a 6th-C. illuminated MS.
DEKANOS (δεκανός), originally a subaltern officer in the Roman army. From the 4th C. onward, the term designated palace messengers, esp. those of the empress. According to Kallinikos’s vita of HYPATIOS OF ROUPHINIANAI (ed. Bartelink, ch. 41.13), they were mounted dekanoi. They served also as guardians of gates. JOHN LYDOS equates them with lictors (rabdouchoi). In the Kletorologion of Philotheos the dekanos is a modest functionary under the PROTASEKRETIS. According to the De ceremoninis, while accompanying the emperor on an expedition dekanoi were in charge of imperial papers (chartria). The seals of dekanoi are few; the owner of one (Laurent, Corpus 2, no.215, 11th C.) was protospatharios, praitospositos, and dekanos. The term was applied as well to hermits in command of ten other monks, to subalternal patriotic officials, and to ecclesiastical fossores whose function was to bury the dead. It was also used to render the Syriac dihkan, a notable of modest rank (P. Devos, AB 64 [1946] 95). The term does not appear in pseudo-Kodinos, but patriarchal dekanoi are mentioned in later hierarchical lists, at the very bottom (Darrouzès, Offilia 557-32).

In accord with the many functions served by dekanoi, figures labeled as such on works of art display considerable variety. On an early votive icon at Mt. Sinai, the dekanos Leo is shown wearing a square nimbus, a blue mantle with pearl borders over a yellow chiton, and a red belt and shoes. In the Paris Chrysostom (Paris, B.N. Coïlin 79, fol.2r) a dignitary standing at the emperor’s left is inscribed ho proedros kai dekanos. He wears the red mantle decorated with golden ivy leaves of the proedros over a blue chiton and a red hat with black tassels.

DELICT. In Justinianic law a textbook distinction was made between private offenses (delicta, hamartemata, plememeleta) and crimes that were prosecuted through public CRIMINAL PROCEDURE (crimina, enklemeta) (Digest 47-48). THEFT, ROBBERY, damage (see LEX AQUILA), and HYBRIS were considered primary forms of civil wrongs (Institutes 4.1), while crimes included TREASON, ADULTERY, MURDER, FORGERY, violence, embezzlement of public money, and kidnapping (4.18). Through the politically motivated expansion of criminal jurisdiction, however, this distinction had already largely lost its practical meaning. The terminology in the legal texts was vague, and post-Justinianic legal collections eventually placed even the regulations on damage in the area of criminal law (Ecloga 17.7-9; Basil. 60.2-5). The list of punishable offenses inherited from Roman law changed with the christianization of the law: actions that violated the church’s sexual and moral standards were penalized ever more harshly.

DELIANT, PETER, Bulgarian leader of a revolt in 1040-41; died after 1041. His Slavic name, meaning “victor,” normally rendered (O)dekatos, was distorted by Psellos (Chrom. 1.76, ch.40.5-7) into Doliarios, from dolos, “treachery” (M. Dinić, PKJIF 30 [1964] 237f). The revolt, caused by a grave economic situation in Bulgaria, was worsened by the tax reform of JOHN THE ORPHANOTROPHOS, who replaced payment in-kind by cash. Deljan’s origin is unknown; an 11th-C. historian (Skyl. 409.89-90) states that he was a slave who fled from Constantinople. Deljan proclaimed himself a son of SAMUEL OF BULGARIA. Marching from Belgrade, Deljan occupied Niš (Naisos) and Skopje. The troops of the theme of Dyrrachion, who joined the revolt, elected a soldier, Tichomir, basileus of Bulgaria. At a meeting of the two rebel groups (probably at Skopje), after an oration by Deljan, Tichomir was stoned to death. Deljan seized Dyrrachion, sent troops to Thebes, and marched on Thessalonike. Probably at this time the theme of Nikopolis joined the Bulgarian rebels; to Deljan’s camp also came courtiers of Michael IV, such as Manuel Ibatzes. ALOUSIANOS became Deljan’s co-ruler, but in 1041 blinded him and betrayed him to Michael IV. The Byz. then subdued Bulgaria; Deljan and Ibatzes were brought to Constantinople for Michael’s triumph. The entire story, from Deljan’s rise to his blinding, is lavishly illustrated in the Madrid Skylitzes (Grabar-Manoussacca, Skylitzes, nos. 524-29, figs. 255-58).

DELLA PORTA, LEONARDO, first Cretan vernacular poet; born Chandax, Crete, shortly before 1346?, died Chandax? 1419/20. Born to a noble Orthodox family on Venetian-occupied Crete, Della Porta (Ντελλαπορτάς) received a broad education and was bilingual in Greek and Italian. He spent most of his career in the service of Venice as soldier and ambassador. He commanded a warship that fought the Genoese near Negroponte and campaigned in Italy during the Chioggia War (1378–81). In May 1389 he was made a lawyer (diaketois) in Chandax; he served as Venetian envoy to the Ottoman sultan Murad I, to Theodore I Palaiologos of Morea, and to the Hafsid sultan of Tunis, Abu-al-Abbás Aḥmad (M.I. Manousakas, EEBS 27 [1957] 340–68). His final embassy, in 1409, was to the emir of Menteshe at Miletos. Shortly thereafter he fell into disgrace and was imprisoned on charges of fathering an illegitimate child.

While in prison, Della Porta wrote four poems in political verse. The longest and most important poem is a dialogue between the poet and Truth, in which Della Porta protests his innocence and relates many autobiographical details. His other three poems are On Retribution, On the Sufferings of Christ, and prayers to Christ and the Virgin.

DELOS (Δήλος), small island in the Cyclades in the central Aegean Sea, formerly a chief place of the cult of Apollo. In late antiquity there was a substantial community on the island, largely dependent on trade. From the 7th C. the site was abandoned. The remains of several churches survive, including that of St. Kerykos south of the Agora (mid-6th C., with fragments of the ambo) and another near the Asklepieion (perhaps late 7th C.). All of these are simple single-aisled basilicas.

DELPHI (Δελφοί), city in central Greece on the southern slope of Mt. Parnassos, site of the ancient sanctuary and oracle of Apollo; it attained civic status sometime before the 4th C. and enjoyed the attention of several 4th-C. emperors (C. Vatin, BCH 86 [1962] 229–41). Constantine I removed various monuments from Delphi, including the famous Tripod of Plataia, which was set up in the Hippodrome of Constantinople. The pagan cult apparently continued throughout the 4th C., and the Pythian Games were celebrated at least until 424 (Cod. Theod. XV 5.4). The city was probably abandoned in the 6th–7th C. Delphi was apparently a bishopric, although perhaps only briefly, since only a single incumbent is attested. A notitia of the late 8th or 9th C. mentions a bishopric of Delphi (Notitiae CP, ch.3.719).

The late antique city of Delphi was probably located in an area west of the sanctuary, where the remains of a large three-aisled basilica with figural mosaics were found. In the sanctuary itself only spolia of the 4th–6th/7th C. have been securely identified (G. Daux, BCH 86 [1962] 909–12). Recent excavation in the gymnasium suggests, however, that there was a church in that area.

DEMARCHOS (δημαρχος), a term designating the leader of a circus faction. The demarchoi played a prominent role in the Hippodrome and in imperial ceremonial, at least until the 10th C. The term is first attested in 602; the reference in the Notitia Constantiopolitana to two demarchoi under Theodosios II is late and suspect. They are sometimes called dioketai in popular usage (Miracles of Artemios, ch.21, p.26.25). Cameron (infra) considers demarchoi to have been the conductors of a choir or claque, whereas G. Manoljović (Byzantion 11 [1936] 630f) saw them as military commanders of the demoi.

By 842 or 843 at the latest (cf. Zacos, SHA 1, no.2017, for the seal of a demarchos John assigned to the 8th C.), the taktika show they had been coopted into the imperial hierarchy and held dignities such as hypatos of protospatariarcoi. De ceremoniis (bk.1, chs. 53 [55]–65 [66], ed. Vogt 2:75–80; cf. bk.1, ch.89 [80], Vogt 2:178f) pre-
serves protocols for promoting *demarchoi* and their assistants: besides *chartoularioi* and notaries, a deputy (*deutereuon*); specialists, a poet and a composer (*melistès*), for acclamations; the *charioteers*; and *geitonarchai*, whose function ("neighborhood supervisors") remains unclear.

*Demarchoi* of the 11th C. held posts such as *symponos* or *logariaste* (*Zacos, Seals* 2, *nos. 601–02*; *Laurent, Corpus* 2, *nos. 819, 1056*). Although *demarchoi* continue to crop up in the sources, the nature and extent of the continuity of their institutional attributes is uncertain. In the early 14th C., "two of the *demarchoi*" monitored the grain trade and bread production of Constantinople (*Patr. Athanasios I of Constantinople, ep.100, pp. 256f, 429*), a ceremonial book mentions their banners or *phlamoula* (pseudo-Kod. 196.28–33), and they administered Constantinople’s *geitonai*. During the siege of 1453, they played a military role (Matschke, *Fortschritt 101f*. When pseudo-Sphrantzes (*Sphr. 386.24*) relates that Constantine XI appointed Giustiniani Longo *demarchos* and *strategos* over 400 warriors, the word evidently has a military connotation.

-A.K., M.McC., A.M.T.

**DEMESNE**, or domain, a Western medieval term designating that portion of the lands of an estate not granted to tenants but retained by the landlord for his own use. When applied to Byz. conditions the term refers to those lands that were operated by the owner or his representatives, either by exploiting the labor of slaves or the *angarei* of dependent peasants or by leasing the lands on a short-term basis. Despite the abundance of papyri we have only a very vague idea of the structure of demesne in Egypt. I. Fikman (*Oksirinich gorod papirusov* [Moscow 1976] 73) suggests that the estates of the *apias* consisted of *autourgia*, where the "permanent personnel" and hired laborers worked (i.e., *demesne*), and the allotments of tenants; the *autourgia*-demesne formed the smaller part of the estates.

There is no data, even approximate, on the size of *demesne* until the end of the 11th C. when it appears astonishingly large. According to F. Dölger (*Bulletin of the International Committee of Histor-

**DEMETRIAS (Δημητριάς)**, city in east central Greece, on the Pagasitic Gulf, just southwest of modern Volos; the ancient city was of considerable importance because of its harbor. Prokopios (*Buildings* 4.3.5) names Demetrias among Thessalian *poleis* allegedly refortified by Justinian I, but ancient urban life may have already come to an end by the beginning of the 6th C. (P. Marzolff in *Demetrias* 3 [Bonn 1980] 391f). Its territory was settled by the Slavic Belegizitai in the 7th–8th C. The city was placed either in the province of Thessaly (Hierokl. 642.3; *De them. 2.41*, ed. Persusi, 88), or Hellas (*TheophCont* 364.12). It was plundered by the Arabs in 901 or 902 and by the rebellious Bulgarians in 1040. After 1204 Demetrias was granted to the empress *Euphrosyne Doukaina Kamaetera* and in 1210 to Margaret, widow of Boniface of Montferrat. After 1240 Demetrias was supposedly a possession of Manuel of Thessalonike, but in fact it was controlled by the family of the Melissenoi. In the late 13th C. Demetrias was contested between Byz. and the Vene-
tians of Euboea. In 1310 it was plundered by the Catalans, who held it until at least 1381. From 1333 the inhabitants began to migrate to Volos; in 1393 Demetrias fell to the Turks. The bishop of Demetrias, known from 422, was the first suffragan of Larissa.

Byz. Demetrias occupied only a fraction of the ancient city. Besides traces of the walls, there survive the remains of a 4th-C. basilica and another (4th/5th C.) near the northern harbor, along with an aqueduct restored in Byz. times.

DEMETRIOS (Δημήτριος), personal name. Common in antiquity, it became quite rare in the later Roman Empire (*PLRE* 1:247f, 2:352); not a single theologian of this name is known from that period, but a priest Demetrios was active in Carthage ca.393 (A. Mandonu, *Prosopographie chrétienne du Bas-Empire*, vol. 1 [Paris 1982] 271). St. Demetrios, the savior of Thessalonike in the 7th C., is an exceptional hero of this name in the hagiographical calendar (another Demetrios is said to have suffered under the Iconoclasts, the third was an obscure saint in Sicily). The name does not appear in Theophanes the Confessor. Skylitzes mentions St. Demetrios and three other Demetrioi, one of whom was Bulgarian and another Georgian ("Abasgian"). The name became popular in the later period and probably in the countryside; at any rate, in the acts of *Lavra*, vols. 2–3 (13th–15th C.), we find 222 Demetrioi, holding third place after John and George.

A.K.

DEMETRIOS, CHURCH OF SAINT. Located in Thessalonike, this was a major pilgrimage church in the central part of the city, probably built in the 3rd quarter of the 5th C. (W. Kleinbauer, *Byzantion* 40 [1970–71] 40) when the cult of St. Demetrios was transferred from Sirmium. Tradition ascribes its construction to the Roman governor Leonios in 412/13; M. Vickers (*BZ* 67 [1974] 348) has identified him with Leonios, praetorian prefect in ca.435–41 (*PLRE* 2:669). The church is a cross-transcept basilica, more than 55 m long, with five aisles, galleries, and low clerestory windows. Piers and column groups alternate in the nave and, although the columns are *spolia*, they are arranged according to their color. The capitals of the nave arcade date from the 5th C. According to the Sotirious, the church was constructed on the site of several Roman buildings, including a bath and/or nymphaeum incorporated in the crypt under the sanctuary—this may have been the source of the sweet-smelling oil believed to flow from the saint's relics. Krautheimer (*infra* 474, n.49), however, suggests that the apse excavated beneath the present nave may be rather a remnant of an earlier church built by Leontios. A silver ciborium, probably located in the main aisle of the church, housed a silver image of the saint and became the focus of the cult (D. Pallas, *Zograf* 10 [1979] 44–58). The church was damaged by fire between 629 and 634, and restored immediately thereafter; it was again virtually destroyed by fire in 1917, and the present basilica was rebuilt, as far as possible with original materials.

Much of the interior decoration of the church was destroyed in the various fires, but a number of mosaic panels have survived; others are known through texts or from watercolors made shortly before the fire of 1917 (R. Cormack, *BSA* 64 [1969] 17–52). The mosaics do not appear to have ever constituted a coherent program, but are a series of independently commissioned dedicatory panels. Some date before the 7th-C. fire, others just afterward or as late as the 11th C. While the earliest ones show the saint *orans* approached by donors (or worshipers) with their children, sometimes in landscape settings, the late 7th-C. panels celebrate the saint's actions on behalf of the larger community (e.g., his rescue of the city from the "barbarous flood of barbarian ships," probably a naval attack of 647). The increased abstraction of design and elegance of costume of these later 7th-C. mosaics, executed after the fire, may indicate a closer connection with the art of Constantinople. There were also frescoes of unknown date, now lost, depicting the life and miracles of the saint. One extant fresco depicts an *aventus*, probably that of Justinian II into Thessalonike in 688.

A chapel dedicated to St. Euthymios the Great, added to the southeast corner of the church, was frescoed in 1303 at the behest of Michael the *protostrator* (Michael Tarchaneiotes Glabas) and his wife Maria, the couple that was also responsible for the decoration of the *parekklesion* of the Church of the Pammakaristos in Constantinople.
The frescoes, which include a cycle of the life of the saint (T. Gouna-Petersen, *ArtB* 58 [1976] 168–83), were executed by painters working in a style closely related to that found in the Protaton on Mt. Athos; the paintings help confirm the Thessalonian origins of the artists of the Milutin school (see Michael [Astrapas] and Eutychnios). Another Church of St. Demetrios in Thessalonike was located on the seashore (S.D. Mantopoulos, *Makedonika* 20 [1980] 175–91).

**DEMETRIOS ANGELOS DOUKAS** (Angelodoukas in a MS of 1244—L. Politis, *BZ* 51 [1958] 26gf), *despotes* of Thessalonike from before 25 Sept. 1244—Dec. 1246; born ca. 1220, died Lentiana? in Bithynia. Younger son of Theodore Komnenos Doukas, Demetrios succeeded his brother John as ruler of Thessalonike; the title of *despotes* was bestowed on him, as on his brother, by John III Vatatzes. Some charters of Demetrios, including a “chrysobull with a seal of silver,” are mentioned in the inventory of Hilandar (A. Solovjev, *SemKond* 10 [1938] 33–38, nos. 9, 39, 54, 55), but have since disappeared. Demetrios’s brief reign ended in 1246, when some of the leading citizens of Thessalonike organized a conspiracy to surrender the city to the Nicaean emperor. There was little Demetrios could do: he was young and dissolute and real power lay in the hands of the chief families. Following his deposition, he was imprisoned at Lentiana, where he probably died.

Lit. Nikol, *Eptos I* 141–47. Polemis, *Doukai* 93, no. 46. –M.J.A.

**DEMETRIOS OF LAMPE**, diplomat and secular theologian; born Lampe (near Atramyttion), fl. 1160s. Kinnamos reports that after missions to Italy and Germany, Demetrios rejected the Western teaching that Christ is at the same time inferior to God the Father and equal to Him (Kinn. 251–56). He had a disputation with Manuel I, who defended this doctrine and emphasized the existence of two natures in Christ. Then Demetrios submitted a treatise in which he developed his concept. Kinnamos, who thought that only professors, ecclesiastics, and emperors were entitled to discuss theological subtleties, avoids presentation of the core of the dispute. No richer is the information provided by the 12th-C. German theologian Gerhoch of Reichenberg, who knew that Hugo Eteriano argued against Demetrios. Despite the resistance of the emperor and of Patr. Loukas Chrysoberges, Demetrios found many partisans among the elite of the capital, and his case stirred up heated discussion at the local council of 1166–67 in Constantinople (see under Constantino, Councils of).

**DEMETRIOS OF THESSALONIKE**, saint, often called the “Great Martyr” and *myrobytos*, “giving forth myrrh”; feastday 26 Oct. The early lists of martyrs (including a Syriac martyrology of 411) mention Demetrios (or Demetrios the deacon) in Sirmium. By the 6th C., however, Demetrios was closely connected with Thessalonike, where he reportedly worked many posthumous miracles; Emp. Maurice tried to obtain relics of Demetrios from Thessalonike, but in response to his request Archbp. Eusebios stated that the inhabitants of the city did not know the site of his interment (Lemerle, *Miracles* 1:89:20–25).

Demetrios’s biography, unknown before the 9th C., is preserved in three versions: that of Photios (*Bibl.*, cod. 255), paralleled by an anonymous Greek account and a Latin translation of *Anastasius Bibliothecarius* produced in 876; the anonymous story in *Vat. gr. 821* (11th-C. MS); and that of Symeon Metaphrastes. According to the version known to Photios, Demetrios was a “teacher of piety” executed by Emp. Maximian in Thessalonike when the emperor was returning from the stadium where the young Christian Nestor defeated in single combat and killed Maximian’s favorite, the gladiator Lyaios. There is no link between Demetrios and Nestor in Photios’s version—Demetrios was murdered only because Maximian “was intoxicated by wrath and impiety.” Nestor appears as the actual hero of the story, and Demetrios only as a passive victim; nothing is said about his background.

The link between the two martyrs was created
(or developed?) in the 10th C. In the version of Symeon Metaphrastes, Demetrius inspires Nestor, and in the Synaxarion of Constantinople Nestor is said to have come to the arena with the cry: “God of Demetrius, help me!” Metaphrastes stresses emphatically (PG 116:1185A) that Demetrius did not become famous through the brilliance of his ancestors; in contrast, in Vat. gr. 821, Demetrius is depicted as a noble senator, military commander, and anthypatos of Hellas (PG 116:1173B). Photios mentions Leontios, the future eparch (governor) of Illyricum, who supposedly found in Thessalonike the place “in which the body of the martyr was laid to rest” and built there “the famous shrine.” The parallel anonymous Greek text adds that it was near the stadium and public bath. The identification of Leontios causes problems since Leontios, prefect of Illyricum, was the addressee of two laws of Theodosios II issued in 412 and 413 (Cos.Thed. VII 4-32, XII 1-177), but M. Vickers (BZ 67 [1974] 348) rejects this date and places him ca.435-41 (PlRE 2:669). The story of Leontios was developed (AASS, Oct. 4:94E–95A): he allegedly attempted to remove Demetrius’s relics from Thessalonike but was stopped by the saint himself; so he took only Demetrius’s garment, and brought it to Sirmium, where he built another church. Vickers hypothesizes that the cult of Demetrius originated in Sirmium, whereas P. Lemelre (Miracles 2:202) argues that it was transferred from Thessalonike to Sirmium.

Miracles performed by Demetrius were described by many authors: the earliest accounts are those of John I, archbishop of Thessalonike in the first half of the 7th C., and an anonymous late 7th-C. writer. The old legends are a very important source for the history of the Slav attacks on Thessalonike. The topic of the sufferings and miracles of Demetrius was very popular in Byz. literature; there are later versions of his miracles—Niketas of Thessalonike, mid-11th C. (A. Kazhdan, Byzantium 52 [1982] 420-22); John Staurakios, late 13th-C. (I. Duječ, AB 100 [1982] 677-81)—and enkonnia in his honor by Archbp. John (D. Hemmerding-Iliadou, BalkSt 1 [1960] 49-56). Archbp. Plotinos (V. Túpkova-Zaimova, BBulg 3 [1970] 119-23), Leo VI, Eustathios of Thessalonike, Constantine Akropolites, Nicholas Kabasilas, etc. The cult of Demetrius was widely spread among the Slavs.

**Representation in Art.** The numerous extant 7th-C. portraits of the saint in his grave church in Thessalonike (see Demetrius, Church of Saint) celebrate the role of Demetrius as protector both of individuals and of the city as a whole. The most important image of the saint, which was housed in the ciborium, is known, however, only from texts (Cormack, infra). There was once a mosaic (7th C.? ) on the façade of the church depicting Demetrius’s cure of the prefect Marianos and inside the church were frescoes of the saint’s martyrdom. But extensive cycles with relevant episodes from the life of St. Nestor as well as Demetrius’s rescue of Thessalonike from the Slavs exist only elsewhere; on a 12th-C. silver reliquary in the Vatopedi monastery on Mt. Athos (A. Xyngopoulos, ArchEpPh [1936] 101-36; A. Grabar, DOP 5 [1950] 3-5) and in wall painting (Mistra and Serbia). Enkolpia containing tiny figures of the saint lying in his tomb (A. Grabar, DOP 8 [1954] 307-13) served as PILGRIM MEDALLIONS and PILGRIM TOKENS.

Originally portrayed as a youthful princely martyr clad in tunic and chlamys, the image of Demetrius as a military saint had emerged by the 10th C. Demetrius was thereafter often paired with St. George; the two are shown side by side in full armor or both on horseback, and differ essentially only in their hairstyle (that of Demetrius being less full and rarely covering the ears). His image as a warrior was used by Alexis I Komnenos on his coins (Hendy, Coinage 437).

**DEMETRIOS PALAILOGOS, despotes of Morea (1449-60); born Constantinople ca.1407/8; died Adrianople 1470 as monk David. Fifth son of Manuel II, he is described by Zakythinos (infra 241) as ambitious but of immoral character. A mysterious flight to Hungary in 1423 suggests difficulties with his family. In 1442 he besieged**
Constantinople in league with the Turks (Lampros, Pal. Kai Pel. 2:52–57 and I. Vogiatzides, NE 18 [1924] 78–84). Despite his anti-Unionist views, he accompanied John VIII to the Council of Ferrara-Florence (1437–39). When Constantine XI became emperor in 1449, Demetrius left his appanage on the Black Sea for Mistra to share the despotate of the Morea in its final years with his brother Thomas Palaiologos. Throughout his career Demetrius was willing to seek accommodations with the Turks; he requested assistance from the sultan during his conflicts with Thomas. After surrendering Mistra to the Ottomans in 1460, Demetrius married his daughter Helena to Mehmed II and was treated honorably by his son-in-law. He moved to Adrianople and received sizable revenues from Ainos and the islands of Lemnos, Imbros, Thasos, and Samothrace.

DEMOCRACY (δημοκρατία). In a shift that illuminates the social distribution of political power in Byz., democracy’s earlier meanings, which had relatively positive connotations (“popular government,” “republic,” or even “Roman Empire”), faded by the 5th C. and the term assumed the pejorative overtones that dominated Byz. usage: “disturbance” or “riot” associated with “the people” or lower classes (demoi).

DEMOGRAPHY. In broad terms, historical demography addresses two interrelated issues: the absolute size of population in a city or region and the composition and natural growth (or decline) of such populations. The former is influenced by incidents of natural catastrophe (esp. famines and epidemics), by wars, foreign immigration, and by patterns of migration from one district to another or between urban areas and their hinterlands. The latter is determined by such considerations as average duration of women’s childbearing years; rates of fertility and infant mortality; the normal age of marriage; life expectancy; quality of diet and medical care; and by the size, wealth, and cohesiveness of family-household units. Where the number of households is known, a coefficient can be employed to estimate total population; where more complete documentation exists, this population may be broken down according to age and sex and compared to a statistical model (“life table”), which in turn permits calculations of birth and mortality rates, expectations of life at various ages, and rates of population replacement.

Unfortunately, sources for Byz. demography remain fragmentary. Although some judicial compilations provide valuable insights regarding the size and stability of litigant families, Byz. authors did not otherwise ordinarily concern themselves with demographic issues, and most information must be derived either from physical evidence or from surviving government records. Excavations reveal both a qualitative (desertion or repopulation) and a quantitative picture: using as data the size and number of excavated houses, A. Jakobson (VizVrem 19 [1961] 154f) calculated that the average 10th–11th C. city had about 5,000 inhabitants. Osteological material and remnants of grain furnish evidence on medieval diet, while funerary inscriptions provide data on births and mortality, although in many cases this information is insufficient or presented in a manner unsuitable for statistical analysis (Patlagean, Structure, pt.IX [1978], 169–86).

The most important sources are praktika, primarily of 14th-C. southern Macedonia. Many offer detailed listings for members of peasant families dwelling on the estate; since a number of areas underwent recurrent assessments—in 1300–01, 1316–18, 1320–21, and 1338–41—their praktika give some indications concerning household stability. At the same time, praktika should be employed with extreme caution. As fiscal documents, they tend to omit information deemed inessential for taxation; in particular the ages of the population are not recorded—nor is it certain at what age a child was first enrolled—and any division into age groups can thus form at best only a rough approximation (P. Karlin-Hayter, Byzantion 48 [1978] 501–18). It also seems likely that women, when not acting as heads of households, were persistently undercounted, and the registers do not appear always to have taken fully
into account either newly arrived families or those who no longer worked on the estate but might remain in the same (or a neighboring) village (D. Jacoby, *Speculum* 61 [1986] 677f).

Literary texts provide isolated population figures for individual cities: 4th-C. Antioch, 150,000–200,000 inhabitants; 6th-C. Jerusalem, 53,000; 10th-C. Thessalonike, 200,000 (an exaggeration); 11th-C. Edessa, 35,000; 13th-C. Nicea, 30,000–35,000. The population of Constantinople (Jacoby, *Société*, pt.I [1961], 81–109) could not have been larger than 400,000 in the 5th–6th C. All attempts to provide a reliable estimate for the entire population of Byz. have failed, but it is possible to chart its broad fluctuations over the centuries. The steady growth of the 4th and 5th C. seems to have given way during the 6th and 7th C. to a precipitous decline under the recurring impact of famines, plagues (esp. that of 542), and foreign invasions; this was followed in turn by a period of slow recovery. Evidence for the 11th and 12th C. is ambiguous: economic expansion and a modest urban revival indicate growth, while political decline suggests stagnation. The territorial losses of the late 11th C. cost the empire a large portion of its population, and from 1200 onward the areas that remained appear to have experienced virtually continuous demographic regression, exacerbated during the 14th C. by civil wars, the Black Death, and the disruptions caused in Macedonia by marauding mercenaries of the Catalan Grand Company; by 1450 the population of Constantinople itself did not exceed 40,000–50,000.

We also possess information regarding certain aspects of fecundity and life expectancy. Although the legal age for marriage was set at 12 (women) and 14 (men), the usual age appears to have been older (about 15 and 20, respectively); women might normally remain fertile until age 40–45. Infant mortality remained high in all periods (perhaps as great as 50 percent), and the presence of religiously inspired celibacy and heretical groups that rejected procreation probably exercised a significant—if quantifiable—limiting influence on birthrates (Patlagean, *Structure*, pt.VIII [1969], 1353–69). In addition, abortions, contraception, and abandonment of infants are all attested, esp. in the early centuries. Evidence from 4th–7th-C. Palestine indicates that half the adult male population died by age 45, three-quarters by 65, and that women suffered significantly higher rates of early mortality.

Our knowledge of life expectancy in succeeding centuries must remain inferential: Nicholas I Mystikos (ep.29, ed. Jenkins-Westervink, 200.47–49) states that few of his contemporaries survived to 70, while Basil Pediadites (S. Lampros, *Kerkys-raika anekdota* [Athens 1882] 48.21–3) considered an individual over 60 to be decrepit; nevertheless a comparison reveals the possibility that the Byz. in the 11th–12th C. had a longer life expectancy than their predecessors in the 4th–6th C. and their Western contemporaries (A. Kazhdan, *Byz* 8 [1982] 116f). The subsequent centuries probably experienced a demographic crisis: A. Laiou (FM 6 [1984] 279–84) suggests that in 13th-C. Epiros the number of children per family was below the level required for the population to replace itself; she also calculates (Peasant Society 296) that in 14th-C. Macedonia 71 percent of females died by age 45 and 74 percent of males by age 50.

*DEMOI* (δημοί), without further qualifiers, usually means “the people.” It can refer to members of the circus factions and is sometimes used this way alongside meros or demotai, esp. in technical texts like DE CEREMONII. Th. Usopensky (*Viz*Pрем 1 [1894] 1–16) mistakenly connected the political districts of ancient Athens, also called *demoi*, to the very different Byz. meanings. This misidentification fueled the notion that factions resembled political parties and preserved some vestige of ancient Hellenic democracy, which in turn led to far-reaching interpretations of 5th–7th-C. Byz. history based on the interplay of factional riots, the presumed or attested factional loyalties of various emperors, and the social, economic, and religious identities ascribed to each faction. In fact, as Sjujumov and Cameron (infra) independently demonstrated, the *demoi*, whether in the singular or plural, have little to do with districts or political parties in the modern sense.
DEMONOLOGY. Byz. demonology is substantially derived from the patristic synthesis laid down by John of Damascus. Witch hunts appear not to have taken place, as in the West, but there was widespread interest in the theme of demons not only among the common people but among scholars as well. The latter is instanced in two systematic tracts falsely attributed to Michael Psellus. In the longer of the two, Timotheos, or On demons, the unknown author uses the form of a Platonic dialogue to provide an overview of the opinions of the pagans and distinguishes six kinds of demons, which dwell in the vicinity of the moon, in the air, on the earth, in the water, under the earth, and in the darkness. The author also states that the Euchites or Messalians, who are the focus of the dialogue, erred when they saw Satan as the Son of God, since he is simply the prince of lies, cast into the darkness because he thought he could be equal to God. Demonology was frequently connected with idolatry.

DEMONS (haimoves, also allotrioroi, lit. “strangers, aliens”), evil spirits. In addition to rejecting the view that demons were offspring of marriages between angels and daughters of Cain (Gen 6:1–4), Christianity also repudiated the dualist idea of uncreated demons, who were creators of the material world. God created them good and with free will, but they chose the path of evil because of their envy of man. Sometimes they were identified with pagan gods.

Although these fallen ANGELS were incorporeal (contrary to previous views acknowledging a certain kind of body in demons), they were not free from physical desires. They inhabited the earth (esp. dark places like tombs and caves) and its surrounding atmosphere, and appeared to men in the disguise of animals (DOGS, SNAKES, etc.), as ETHIOPIANS, robbers (G. Bartelink, VigChr 21 [1967] 12–24), women, and so on. Rarely represented in art before the 11th C., demons are shown thereafter as small, usually black creatures who travel in packs. They beset Christ in scenes of his MINISTRY, pull monks from the ladder of JOHN KINGS, and collectively stand in for the DEVIL (Galavaris, Liturgical Homilies, fig. 459). In contrast to Western medieval versions, they are usually absent from scenes of the Last Judgment. They were hostile to mankind, producing crop failures, storms, famines, droughts, and other disasters, and attempted to divert men from righteous ways. Demons were esp. active in seducing hermits. Beginning with the vita of ANTONY THE GREAT by Athanasios of Alexandria (W. Schneemelcher in Pietas [Münster/Westf. 1980] 381–92), hagiographic literature presents manifold scenes of the personal struggle of saints against demons. Especially dangerous was the so-called demon of midday (Ps 90:6), who infused the human heart with aRUPE, or torpor and dejection. The demon of midday was sometimes identified as ARTEMIS (C.D. Müller, JHaChr 17 [1974] 95–98).

Some men sold their souls to demons for the sake of power or glory, while others were possessed by demons who caused sickness, esp. mental derangement. Demons had their place in the cosmic development of history: not only were they seducers of men (from the days of Adam and Eve), they were accusers of sinners: demons grabbed their victims’ souls and tortured them in HELL. The best protection against demons was piety and its material manifestations such as the sign of the cross, holy water, incense, amulets, holy books (particularly the Psalms), icons, and sincere prayers. A sure and effective defense against demons was to respond with scriptural passages, to ask the demon its name, or to mock and ridicule it. There was a special service of EXORCISM to rid possessed people of demons.

DEMOSIARIOS (δημοσιαριος, from demosion, “state treasury”), a fiscal category of peasants whose nature is unclear. Demosiaioi appear in only a handful of documents from the mid-10th through the mid-11th C.; in these documents they are sometimes called paroikoi and are often associated with exkousiatoi tou dromon (see EKKSOUSSATOI) and stratiotai, two fiscal categories of peasants with specific obligations toward the state. The traditional interpretation has been that demosiaioi were peasants settled on imperial domains. Ostrogorsky, however, hypothesized that demosiaioi were paroikoi held by the state who owed the state the same fiscal and service obligations that private paroikoi owed their lords. Basing his reasoning on the appearance of the term demosiaioi and later terms such as demosiakos paroikos (which he considers to be equivalent), Ostrogorsky concludes that demosiaioi were in effect state paroikoi and that an independent free peasantry disappeared during the 10th C. and was replaced by an agrarian system in which there were only state paroikoi and private paroikoi. On the other hand, Lemerle, along with other scholars who reject Ostrogorsky's hypothesis, maintains the traditional view and suggests that demosiaioi (and the dedemosiakomenoi paroikoi found in a few 11th-C. documents) were a special category of peasants who lived on state domains and, while these might well be called state paroikoi in that they held land on condition of fiscal and service obligations toward the state, they were perhaps not numerous and did not, during the 10th and early 11th C., signal the disappearance of a free peasantry. It is plausible that the villeins of the Commune, on the Venetian territory of Romania, distinct from the villani or parichi of individuals (Jacoby, *Recherches*, pt.1 [1976], 35f. pt.III [1975], 149), originated from Byz. demosiaioi of the period before 1204.

DEMOSIOS (δημοσιος), term designating the state treasury, fisc, a meaning also found in antiquity. In Byz. the fisc was called demosios primarily as a recipient of fines—in these cases the term is used side by side with vestiarion (Dölger, *Beiträge* 29)—or as a recipient of confiscated property or escheat (e.g., *Ecloga* 2.7). The use of the term demosios as recipient of fines is testified to by later acts, for example, a purchase deed of 1373 (Docheiar., no.42.81). Another use of the word is the definition of the fisc as owner: thus the *Ecloga* (13.1) mentions the lease of land from the demosios or other institutions. In the same way, a prostagma of Manuel II from 1409 contrasts the property of the demosios and that of monasteries. Accordingly, ta demosia denotes state properties; a chrysobull of 1311 speaks of officials administering ta demosia (*Panet.*., no.10.65–66). More rarely the term was employed in connection with tax collecting; thus in 1344 the *provestiarites* John Doukas expressed his concern that the demosios should not suffer in the case of penury (Docheiar., no.23.6–7). The term demosios kanon or to demosion was, however, broadly employed for tax. It remains disputable whether the distinction between demosios and the private imperial (basilikos) treasury, drawn in certain texts (e.g., *Ecloga*, 16.4) reflects reality.

DEMOSTHENES, Athenian orator; born 382 B.C., died 322. He remained “The Orator” for the Byz., who referred to him frequently and used quotations from his speeches through the 15th C. Libanios and Zosimos drafted short biographies of Demosthenes based on ancient sources; numerous papyri from Byz. Egypt contain texts of Demosthenes. A statue of the orator in the Baths of Zeuxippos in Constantinople was described in verse by Christodoros of Koptos. Demosthenes was among those classical authors in whom interest was revived in the 9th C. Photios (Bibl., cod.265) gives a detailed biography of Demosthenes (based on pseudo-Plutarch), and the earliest surviving MS, Paris, B.N. gr. 2934, is dated by Dilts (*infra*, vol. 1 [1983] 7) to the 9th C. Interest in the orator continued in the 10th C., to which four more MSS are dated. In the *Souda* a biographical note was compiled. The MSS were supplied with scholia in which on rare occasions “contemporary” notes were inserted, for example, “Byzantium is now Constantinople” (In Or. 5.25.40) or “Perinthis, a Thracian polis, now named Herakleia” (In Or. 11.3.10).

For Nicholas of Myra Demosthenes was the embodiment of virtue compared to the wretched orator Aeschines (*RhetGr*, ed. Walz., 1:358.8–9) and superior even to Pericles (1:381.1–3). Tzetzes
(Historiae 6.67–188), on the contrary, relying upon a tradition hostile to Demosthenes (based on Aeschines, among others), presents the orator as a Scythian by birth, effeminately dressed, perverse, and easily bribed. Metochites developed the same approach in his comparison of Demosthenes and Aristides (ed. M. Gigante, ParPass 20 [1965] 51–92). Even though as a rhetorician Demosthenes was superior to Aristides, he paid the price of living in a democracy, being ensnared by his passions, and adapting his views to the political situation. Aristides, on the other hand, who lived in the security of the Roman Empire, was concerned only about the serenity of his style.

DEMOTIC. See Coptic Language and Literature; Egypt.

DE OBSIDIONE TOLERANDA (How to Withstand Sieges), conventional title of an anonymous treatise on siege warfare. References to the capture of Thessalonike (904) and the fall of Kitros (924) provide a terminus post quem for the work; mention of the "ferocious Bulgars" reflects its focus on the empire's western regions. The author reviews the initial steps to be taken once enemy intentions were known, including gathering and rationing foodstuffs; collecting raw materials (e.g., wood, linen, flax, cotton, hemp) for weapons and other equipment, while destroying any source of enemy provisioning; and evacuating the elderly or unfit. He then lists the town's craftsmen (carpenters; tailors; smiths; makers of rope, weapons, and saddles) who were to be put to work on necessary items and tasks. Further defensive measures included digging a moat around the wall and setting traps to impede enemy assault, while the walls were heightened, repaired, or doubled where necessary. Citizens and soldiers were properly mobilized and a system of patrols was organized; criminals, a potential source of treachery, were to be rounded up. Forays to ambush the enemy en route to or to ravage their land were advised. Though fully attentive to contemporary conditions, the author frequently supports his recommendations with examples drawn from the past, revealing a wide knowledge of earlier Byz. and classical historians and tacticians.

DE PECULIUS, a special tract on family property law, esp. on the separate property of children (peculium) and their assets that could not be acquired (apropristria) by the person who had authority over them. Demetrius Chomatenos attributed the work to Eustathios Rhomaios. The purpose of the study was the instruction of fellow judges on this difficult material, after uncertainties had arisen in judging.

DEPOSITION FROM THE CROSS (Ἀποκαθήλωσις). The removal of Christ's body from the Cross, though not described in the Gospels, had been elaborated in hymns and homilies by the time the earliest surviving Byz. images appear in the PARIS GREGORY (fol.30v) and in Tokali Kilise, GÜREMÈ, in the 10th C. (Maguire, infra, pl.76; A.W. Epstein, Tokali Kilise: Tenth-Century Metropolitan Art in Cappadocia [Washington, D.C., 1986] pls. 38, 85). These images differ markedly. The Paris Gregory version is emotionally reserved, with Mary standing to one side while Joseph of Arimathea supports Christ's body and Nicodemus removes a nail from his hand. The two Güreme versions are more emotional, as Mary embraces Christ's body, laying her head against his. The reserved variant—with John added and Mary holding Christ's hand—persisted through the 12th C. The more expressive variant continued as well, with the figures gaining in dynamism and emotional urgency in accord with the mounting intensity of the Holy Week liturgies (NEREZI). A fresco at MILEŠEVA anticipates the yet more expressive Palaiologan versions by adding the lamenting Holy
Women and depicting Mary Magdalene holding Christ's hand while Mary embraces his torso, her cheek on his.

DERE AĞZI, site in the Kasaba Valley of central Lycia, noted for its elaborate cross-domed church, which has a domed nave, side aisles ending in pastophoria, a narthex flanked by towers, an exonarthex, and two attached octagons; galleries rise above the aisles and narthex. The masonry consists of rubble faced with cut stones, with bands of brick; much of the material was imported from the region of Constantinople. Traces of frescoes and mosaics suggest a date in the late 9th or early 10th C.; this dating is questioned, however, by U. Peschlow (BZ 79 [1986] 84). The architecture finds parallels in the monasteries of Lips and the Myrelaion in Constantinople. The Byz. name of the church is unknown. Surrounding buildings suggest it was a monastery; its size, wealth, and style indicate a wealthy patron in the capital. The site also housed a small settlement, protected by a large fortress with towers of varying shape; it contains cisterns and ruined buildings and may date from the 9th C.

DE RE MILITARI (On Warfare), conventional title of an anonymous, untitled military treatise dealing with campaign tactics mainly but not exclusively beyond the northwestern frontiers of the empire. The author, a plain stylist and an experienced soldier, envisions an army of about 25,000 men under the emperor's personal command and sets forth the proper procedures for preparing the expeditionary camp (1–6), marching through difficult terrain in enemy territory (9–20), and attacking or defending camps and fortifications (21–27); he concludes with brief notes on assembling and training the army, transport units, and daily assignments (28–32).

The date of the treatise is uncertain. A reference to theagma of the Athanatou (created 970) provides a terminus post quem for its composition, and the emphasis on Bulgaria links it to Basil II's many wars against Samuel of Bulgaria between 986 and 1014. The De re militari is appended to the Taktika of Leo VI in the earliest MSS and was apparently written to complement the Devitatione (ca.975); although similar in style and reliance on firsthand experience, the two texts reveal interesting contrasts in military terminology and conditions between the empire's eastern and western frontiers.

DERMOKAIITES (Δέρμοκαιτης, fem. Δέρμοκαιτης; etym. "hide-burner"), a noble family known from the mid-10th C. An early Dermokaites was a soldier who became a monk and addressee of Symeon Logothete; another (or the same) Dermokaites was the monk on Mt. Olympos to whom Romanos I Lekapenos sent the written confession of his sins in 946. John and Michael Dermokaites were troop commanders ca.1036–40. The family rose to prominence after 1204, when the sebastos Michael Dermokaites held the episkopis of Sampson (see Priene) ca.1216. In 1306/7 the sebastos Dermokaites was recommended by Patr. Athanasios I to take charge of the grain supply of Constantinople. In the 14th–15th C. some members of the Dermokaites family were civil servants and courtiers, such as Theophylaktos, judge in the 1360s; George Dermokaites Palaiologos, governor of Imbros in the mid-15th C.; and Dermokaites, chamberlain of John VIII. They were apparently related to the Rubenids and later the Palaiologos, Asan, and Chrysoloras families. Their role in cultural life was insignificant, even though a Dermokaites was an addressee of Michael Gagaras, and Dermokaitissa Asanina Palaiologina, who was buried in a chapel of the Chora Monastery (after 1330?), may have been among the patrons of the church.

As the numbers of monks increased, some of their desert settlements grew to the point where, paradoxically, “the desert was made a city” (Athanasiou, Life of Antony, ch.14, PG 26:865B), and the real desert often became an ideological phenomenon. Through the Byz. period, the desert symbolized Christian life in its most challenging form (as in Philoxenos of Mabbug, Letter 6; John Klimax, Ladder of Paradise 15,62).

In Psalter illustration and the later Octateuchs, Eremos is personified as a male figure in classical garb sitting in the wilderness that the Israelites traversed before the Crossing of the Red Sea. Desert also appears as a counterpart to Earth in late Byz. representations of the Christmas sticheron. Here it always appears as a woman, depicted as seated, standing, or, as in the frescoes of the Holy Apostles at Thessalonike, kneeling and offering a manger to the Christ child.

DESSERT FATHERS, usual designation for the early ascetics of Egypt to whom are attributed the sayings that became, in written form, the APOPHTHEGMATA PATRUM. Beginning in the 3rd C. they withdrew to the edge of the settled land of Egypt (see Desert), singly or in groups, as a visible alternative to village and family life and more directly to confront powerful spiritual forces. Individuals among them acquired fame for their exploits of sanctity: Sts. Antony and Makarios the Great; Moses the Black, reformed highwayman; Theodore, who sold his books to give the money to the poor; Ammonas, who vanquished a basilisk; Daniel, who defied a barbarian raid; Basarion, who never sat down; Poemen, who loved the hidden life; Hor the silent; and Pambo the humble. There were women too. Said to embrace continence, Synkletike who taught peace. Their life and spirituality were the goal of many pilgrimages in late antiquity. Individual figures such as Arsenios the Great, Antony, and Mary of Egypt appear in church programs of decoration from the 11th C. onward as paradigms of monasticism.

DESPOTES (δέσποτης, lit. "lord, master"), official epithet applied to God, the patriarch, and bishops, but mainly to the emperor. The title of despotes, which was created in the 12th C., occupied the highest rung on the hierarchial ladder, second only to the emperor and co-emperor. The origins of the title are disputed. According to G. Ostrogorsky (Byz. Geschichte 153–65), Manuel I created it in 1163, under Hungarian influence, for his heir presumptive Alexios (the future Béla III) who appeared as despotes in a document of 1167 (P. Wirth, Byzantina 5 [1973] 424). Already before 1163, however, despotes was an epithet for the highest nobility, applied on seals to sebastokrators and caesars (L. Stiernon, REB 21 [1963] 292; A. Kazhdan, ZRVI 14–15 [1973] 41–44) or even used as a separate title (e.g., Stephen Kontostephanos: Zacos, Seals 1, no. 2723). From the 13th C. emperors bestowed the title on several individuals (primarily their sons) simultaneously, and it did not signify the right to succession. Under the Palaiologoi, despotai were active both in Constantinople and at the head of the largest appanages—Thessalonike, Epiros, and Morea. Only Morea, however—and even it not without doubts (P. Wirth, BZ 56 [1963] 353)—can properly be called a despotate; for Epiros the term was employed only in sources from the late 14th C. onward, predominantly of Western origin (L. Stiernon, REB 17 [1959] 124–26). The term penetrated into Bulgaria (15th C.) and Serbia—the first known Serbian despotes was Jovan Oliver in the 14th C. The rulers of Kerkyra in the 15th C. were also named despotai.

DETERMINISM, or a belief in the strict causality of events, was a concept developed by Greek philosophers, esp. Demokritos; the Byz. retained the theory that ananke, heirmarmene, automaton, or tyche was an impersonal force determining the behavior and fate of humans regardless of their free will. The Eastern church fathers rejected determinism. Thus Eusebius of Caesarea (Praep. evang. 6.11) refuted the idea that the stars determined human actions. He argued that God, as creator, stands above the stars, while reward or punishment is meaningless without the freedom of human will. Eusebios's concept can be found in such church fathers as Gregory of Nyssa (PG 45:168B), and was reaffirmed later on by Manuel II (PG 156:419–42). Nikephoros Gregoras delineated two contrasting views: either that divine pronoia ruled over mankind or that necessity (ananke) governed men's fate, a view ascribed by him to John (VI) Kantakouzenos (A. Kazhdan, Byzantium 50 [1980] 320–22). Determinism was a presupposition of astrology.

The treatise entitled On the Predestined Terms of Life, which is attributed in the MS tradition either to Germanos I or to Photios (as a part of his Amphilochia), presents another aspect of antideterminist polemics (ed. C. Garton, L. Westerink [Buffalo 1979]). The problem discussed in the treatise is whether God predestines and foresees all the events of human life and death (in which case murderers only fulfill divine orders) or whether our evil actions could persuade God to change his previous decision—in other words, whether God acts as an impersonal force or is a personal deity changing his decisions in accordance with our behavior and prayer. This treatise, based upon Basil the Great, accepts the second solution.

The problem was debated anew in the mid-12th C., when Nicholas of Methone launched an attack against a treatise that was falsely attributed to an unnamed church father and that defended the doctrine of aoristia, the lack of any predestined terms of life. The discussion was again revived in the 14th–15th C., esp. by Plethon (I. Medvedev, Vizantiskij gumanizm [Leningrad 1976] 104–29).

DE THEMATIBUS (Περὶ τῶν θεμάτων), conventional title of the book written by Constantine VII or under his auspices on the geography of the empire. The book consists of two parts dealing
respectively with the East and the West. Each part is divided into sections dedicated to individual themes (Anatolikon, Armeniakon, etc.), treating the origin of the name, boundaries, and history of the area. Much of the information, however, is taken from Stephen of Byzantium and Hierokles and describes the situation of the 6th C.; later changes and events are mentioned only infrequently. Thus the work falls within the framework of encyclopedic endeavors of Constantine VII such as the Excerpta. The date of production is hotly debated. The book used to be considered a "juvenile work" of Constantine and dated to the period 934–44; recently scholars have begun to attribute it to a later year, after 952 (T. Lounghis, REB 31 [1973] 299–305) or at least after 944 (H. Ahrweiler, TM 8 [1981] 1–5).

ED. De thematicus, ed. A. Pernats (Vatican 1952).

DEUTEROS (δεύτερος, lit. “second”), eunuch in charge of imperial insignia: thrones, curtains, vessels, and apparel. His staff included ho epι ton allaximon (see ALLAXIMOI), VESTITORS, and ho epι ton axiomaton (keepers of insignia and ceremonial garments for dignitaries). DIAiArioi with their primikerios were subordinates of both the deuteros and the papias. According to Beljaev, there were two distinct groups of diaiarioi, but Burby (Adm. System 128) suggests that the same dialiaroi were under the command of both eunuchs. The deuteros was considered the assistant of the papias; at least he substituted for the papias when the latter was ill.

DEVASTATIO CONSTANTINOPOLITANA, a brief but detailed account of the Fourth Crusade between 1202 and 16 May 1204 inserted into the MS of the Annales Herbeiopenses. The Latin eyewitness's identity is controversial, but he may have belonged to the entourage of Boniface of Montferrat or, less probably, that of Baldwin of Flanders. M. Kandel's arguments (Byzantion 4 [1929] 179–88) for the Devastatio Constantinopolitana's dependency on the letters of Baldwin I to Pope Innocent III are not conclusive.

DEVELTOS (Δεβελτος, Δηβελτος) or Deultum, city and fortress in Bulgaria about 20 km southwest of Burgas, controlling the north-south coastal road. An episcopal see from late antiquity, in the 8th C. Develtos was a major Byz. defensive position against the Bulgarians. Captured by Krum in 812, it became a strong point on the Bulgarian defensive earth wall constructed by Omurtag, which ran from the Black Sea to the river Marica. With the treaty of 846 Byz. regained Develtos, but Symeon of Bulgaria recaptured it in 896.
After 927 it became once again a Byz. possession, and at the end of the 12th C. part of the Second Bulgarian Empire; it remained in Bulgarian hands until falling to the Ottoman Turks in 1396. Due to its location, Develtos was a center of trade and accordingly a seat of kommerkiarioi from the mid-9th C. onward (Zacos, Seals 1, no. 285; 2, no. 159bii).

Lit. E. Oberhummer, RE 5 (1905) 260. — R.B.

DEVGENIEVO DEJANIE (Deeds of Devgenij), Slavonic prose version of Digenes Akritas. The Devgenievo Dejanie survives only in three defective MSS of the late 17th and 18th C. and in fragments copied from a lost 16th-C. MS. Together they comprise five episodes: the adventures and marriage of the “tsar Amir” and his Greek bride, and the birth of Devgenij; Devgenij’s youth; Devgenij’s defeat of Filipap and the warrior-girl Maximiana (Philopappos and the Amazon Maximo of the Greek original; A. Schmaus, BZ 44 [1951] 495–508); Devgenij’s courtship and marriage to Stratigovna (i.e., the daughter of a strategos); and Devgenij’s victory over the tsar Vasilij. The last episode has been interpreted as indicating a profoundal tendency in the Greek epic; E. Trapp insists, however, that such names occur only in the Slavonic version and not in the Greek original (Byzantina 3 [1971] 201–11). It has been claimed that the Slavonic translation reflects the “original” of the “literary” version of Digenes, in some respects comparable to the Grottaferrata MS, but also that the Slavonic is merely a contaminated adaptation of a late offshoot of the Greek tradition. The translation is often assigned to pre-Mongol Kiev, though many scholars favor a 14th-C. southern Slav provenance.

DEVIL (διάβολος), Satan, the prince of demons; the name was interpreted by the majority of church fathers as “calumniator.” He was considered incorporeal by Gregory of Nyssa (PG 46:456A) and other church fathers (e.g., Theodoret of Cyrhrus, PG 85:473D). By the 11th C. the theory arose that the Devil and demons had opaque bodies; Niketas Stethatos refuted this opinion, but Pselllos developed it (A. Ducellier in Le Diable au Moyen âge [Paris 1979] 202f). In Manichaean and later Bogomil doctrine the Devil appears as an eternal principle and the cause of evil; the Christian perception of the Devil was developed as a refutation of this dualist view. The Devil is a creature, one of the ANGELS, who, possessing free will, changed his nature and out of pride and wickedness revolted against God. As the enemy of God the Devil is hostile to mankind, always trying to entrap men, esp. those of saintly character; however, he involuntarily benefits humanity since man can prove his virtue in this contest.

In everyday practice the Devil’s foreknowledge (albeit limited) and power sometimes leads to confusion of good and evil forces, but a man possesses the means (esp. the cross) to dispel him. The Devil was defeated by Christ but allowed to continue his activity against mankind; ignorant of his destiny the Devil blasphemes against God but at Christ’s Second Coming (PAROUSIA) he will be thrown into fire with his host. Magicians were said to use the Devil’s help in achieving their goals. The Byz. presented the Devil as a snake or dog, as Ethiopian or black, and as baskanos (calumniator), having the evil eye (G. Bartelink, OrChP 49 [1983] 390–406). His epithet was kosmokrator, “world-ruler.” ANTICHRIST was his “general” in the war against the Good.

DEVILO (Δέβολις [Deabolis], Διάβολις [Diabolis]), a fortress and bishopric on the Via Egnatia south of Ohrid (precise location unknown), first mentioned in connection with Basil II’s conquest of Bulgaria: in 1018 he subdued a revolt in so-called Diabolis (Skyl. 360, 43, 60). As a kastron under the jurisdiction of the bishop of Kastoria, Diabolis appears in Basil’s grant of a privilege to the Bulgarian church in 1019; only in a later list
(Notitiae CP 13:835) is Diabolis named as the second bishopric of Justinana Prima, or Bulgaria. Theophyllaktos of Ohrid (died early 12th C.), however, speaks of the city as the see of Kliment of Ohrid (ca.900) and the center of his school, but no independent sources confirm this late evidence. In 1072 the rebellious Bulgarians captured Diabolis before attacking Kastoria.

Devol played an important role during the Norman war against Alexios I, and in 1108 the emperor forced Bohemund to sign there a treaty with the empire, in which Bohemond conceded vassal dependence on Byz. Devol remained an important stronghold in the 13th and 14th C.

DEVSIRME. See JANISSARIES.

DEXITRUM JUNCTIO. See MARRIAGE RITE.

DHŪ-NUWĀS (Διύνος), ruler of Himyar (517–25). A native of South Arabia, he seized power by overthrowing his predecessor (probably Ma‘adi karib); he converted to Judaism, took the name of Joseph (Yūsuf), and, seeking alliance with Iran, turned against Greek and Ethiopian Christian merchants active in Himyar. Malalas (Malal. 433:13–17) relates that Dimnos, the king of the Himyarites, murdered Roman merchants and stopped their trade with Ethiopia and India. The Axumite expedition (probably led by Elesboam or his father) to Himyar was an immediate response to the policy of Dhū-Nuwās. At first compelled to flee, Dhū-Nuwās gathered forces and in 518 reconquered the cities of Zafār, Muhwan, and Najrān; many Christians were killed. According to an inscription, Dhū-Nuwās’s general slaughtered all of the inhabitants of Muhwan and burned its church. Dhū-Nuwās tried to gain the support of Iran and the Lakhmids but failed, whereas the Roman-Ethiopian alliance was strengthened; in 525, with the help of the fleet sent by Justin I, Elesboam again invaded Himyar. In a battle on a seashore Dhū-Nuwās was killed by an Ethiopian soldier whom Yu. Kobiščanov (VizVrem 25 [1964] 234f) identifies as Abraha. Al-Tabari, however, knew a legend that Dhū-Nuwās preferred suicide to disgrace and threw himself, with his horse, into the sea. After his death South Arabia reverted to Axumite rule.

DIABATENOS. See DABATENOS.

DIADEM. See CROWN.

DIADOCHOS (Διάδοχος), bishop of Photike in Epiros, prominent opponent of MONOPHYSITISM in the 450s; born ca.400, died before 486. Little else is known, though a possible connection with Victor Vitensis has been suggested (H.-I. Marrou, REA 45 [1943] 225–32). Diadochos’s major work, One Hundred Chapters on Spiritual Perfection, was widely admired by many Byz. Its three major concerns are to advocate the virtues of asceticism; to stress the three virtues of faith, hope, and esp. love as the basis for spiritual contemplation; and to combat the MESSALIAN notion (condemned at the Council of Ephesus in 431) of demons in the soul by arguing that evil exists only as a consequence of sin. A homily on the Ascension, a Catechism, and the Vision (in which the author conducts a dialogue with John the Baptist in a dream) also survive.

Ed. Œuvres spirituelles, ed. E. des Places (Paris 1966), with Fr. tr.

— B.B.

DIAKONIA. See CONFRATERNITY.

DIAKONIKA (διακονικά, from διάκονον, “deacon”), liturgical exclamations, LITANIES, DITYCHS, etc., of the DEACON. The book in which diakoniκa
were collected was called a diakonikon or hierodiakonikon, though these texts were ultimately incorporated into the euchologion. There are a few extant diakonika rolls (e.g., Sinai gr. 1040 of the 12th C. [Dmitrievskij, Opisanie 2:127–35]).

Lit. Taft, Great Entrance xxxii–xxxiii. – R.F.T.

DIAGONIKON. See Pastophoria.

DIACRITICS. Ancient Greek was divided into a number of dialects, all of which were mutually intelligible. As cities lost their autonomy to Hellenistic monarchies and later to Rome, local dialects were replaced by Koine for public communication, gradually degenerated into peasant patois, and ultimately ceased to be spoken. Only the language of the Tsakones in the southeastern Peloponnesos and the Greek of southern Italy show traces of the ancient Greek dialects. These, as they appeared in literature, were known to the Byz. mainly from the compilatory On Dialects of Gregory Pardos. In the Middle Ages a new differentiation of Koine into regional dialects began. These developing dialects were used in literature only occasionally and in regions outside Byz. control and influence, such as 14th-C. Cyprus. Estathios of Thessalonike sometimes quotes contemporary dialect words or forms in his Homeric commentaries, and there are other indications of interest in dialects, as part of spoken Greek, in the 12th C. After the fall of Constantinople, poets and dramatists in Venetian-ruled Crete began to write in the local dialect and to elaborate it for literary use. This literature in Cretan dialect continued to be written until the mid-17th C.

– R.B.

DIAGOLYGOΣ, a literary form of conversation or dispute. Throughout their history the Byz. imitated two main types of antique dialogue: the Platonizing/philosophical and the Lucianic/satirical. The philosophical kind was much used by Christian writers of the 2nd–7th C. The finest examples of the Christian dialogue were written by Augustine in the West and Gregory of Nyssa in the East, who retained the scenic background of the conversation. The Christian dialogue, however, changed the social milieu (in the Banquet of Methodios of Olympos ten virgins are debating the virtues of celibacy) and replaced Plato’s dialectical mode of inquiry with overtly didactic and militant polemic: dialogue ceased to be a method of arriving at the truth and became a vehicle for polemics (e.g., Justin Martyr’s Dialogue with Tryphon) communicating the message of salvation (Hoffman, infra 162). Voss (infra 348) asserts that another formative influence on the Christian dialogue was that of Jewish disputations over the Torah. In the 6th to 8th C. dialogue was used for ascetic indoctrination (Pope Gregory I the Great, who was nicknamed Dialogus; Maximus the Confessor) or solving theological problems (Patr. Germanos I [2], On Predestined Terms of Life). The philosophical dialogue is found later in the Palaiologan period; thus Gregoras wrote a number of Platonizing dialogues, esp. Florentios, or On Wisdom, devoted to polemic against Barlaam. John Katares defended astrology and used Arabic sources in his classicizing dialogue Hermippos, or On Astrology.

From the 10th C. onward, Lucianic satirical dialogue became popular. Whether pseudo-Lucianic (Charidemos, Philopatris, Timarion), anonymous (Anacharsis), or pseudonymous (Timoteos, or On Demons, ascribed to Psellus), they are set in the world of the past or even in Hades (again, in the wake of Lucian), and in their audacity strain the limits of Orthodoxy. Dialogical elements also appear as part of independent genres; in the sermon, whether prose or poetical; in acts of martyrs (in imitation of judicial interrogation); and hagiography, but rarely in historiography (the introduction to the History of TheophyIaktos Simokattes is couched as a dialogue between History and Philosophy, and Theophanes the Confessor reproduces a dialogue with Kalopodios). Alexios Makrembolites employed the genre for political and moral propaganda. The scholarly erotapokrisis took the structural form of a dialogue. Vernacular poets used the dialogue form in threnoi.

DIALYSIS (διάλυσις), a legal transaction by which parties settled a quarrel existing between them or an uncertainty about a legal situation through compromise. Consequently, a second settlement on the same matter was inadmissible after the conclusion of a dialysis, and any matter that had been decided conclusively in court could not become the object of a dialysis (cf. Peira 7.1,3,6,17). Moreover, a compromise agreement was inadmissible if it led to a result that was not recognized by the legal system (e.g., a divorce by mutual consent: cf. Peira 7.7,8). Apart from this, however, every conceivable matter in dispute (even criminal acts) could be the object of an (oral or written) settlement. The legal situation achieved by the settlement could be changed later only by a challenge to the legitimacy of the dialysis (e.g., in cases of deception or threat).

In the documents, along with this rigorous and readily used form of settlement (cf., e.g., the formulas for division of immovable things and termination of a suit through dialysis—Sathas, MB 6:631–34), various mixed forms were developed. As early as the 6th C. a connection arose between dialysis and the Aquilian stipulation, on account of their common character of “general settlement.” This finally led to the designation of every “conclusive settlement” through, for example, receipts, declarations of guarantee, etc. as a dialysis, even in circumstances where there were no legal uncertainties (cf., e.g., Xerop. no.4-3, a.1032; Pantel. no.4-36, a.1048; Laura 1, no.42-4, a.1081).

-D.S.

DIASTAXIS (διατάξις, Lat. ordo), a book of rubrics for the bishop or priest presiding at the Eucharist, or, less frequently, at Vespers, Orthros, and ordinaries. Diastaxis developed because early euchologion MSS contained few rubrics to regulate the proper celebration of the services. The diastaxis can be traced back as far as the 10th C. (A. Jacob, OrChrP 35 [1969] 249–56), though no MSS earlier than the 12th C. have survived. The most important diastaxis is that of Philotheos Kokkinos, whose codification of Byz. rubrics acquired general authority during the time he was patriarch. His diataxis rubrics for the prothesis were applied ca.1580 to the pontifical Eucharist in the archieratikon (see LITURGICAL BOOKS) of Demetrios Gemistos, notary of Hagia Sophia under Philotheos. The Presanctified diataxis attributed to Theodore of Studios is not authentic in its present redaction. (For diataxis as a form of monastic rule, see Typikon; for diataxis as a will, see Inventory.)

LIT. Taft, Great Entrance xxxv–xxxvii. Taft, “Pontifical Liturgy.”

-D.S.

DIDASKALOS (διδάσκαλος), a general term for laymen or clerics who were teachers of sacred or profane subjects; also, a technical term for those attached to the Patriarchal School at Hagia Sophia and engaged either in instruction in the faith or exegesis of Holy Scripture. Among those attached to Hagia Sophia two groups may be distinguished: an unspecified number of didaskaloi attested from the 11th C. whose status and duties were defined by Alexios I Komnenos in an edict of 1107 (ed. P. Gautier, REB 31 [1973] 165–201), and the trio of didaskalos tou evangeliou (also oikoumentos didaskalos), didaskalos tou apostolou, and didaskalos tou psalteriou known from the 11th and 12th C. The didaskaloi of Alexios’s edict were usually clerics of Hagia Sophia but could be recruited from laymen and monks who were distinguished by their virtuous character and ability to teach. Their function was pastoral, instructing people in the faith and policing their behavior in the capital. The three didaskaloi of Holy Scripture were always deacons and held a rank in the ecclesiastical hierarchy. Their duties consisted of exegesis and preaching, as their didaskaloi ai indicate. There is no consensus of opinion as to their function. The idea that they were teachers of theology has recently been restated (B. Katsaros, Ioannes Kastamonites: Symbole ste melete tou biou, tou ergou kai tes epoches tou [Thessalonike 1988] 163–209). Didaskaloi in both groups usually advanced to a higher position in the church, often becoming bishops or metropolitans. (See also MAISTOR TON Rhetoron.)

-R.J.M.
DIDYMA. See Hieron.

DIDYMOS THE BLIND, last head of the catechetical school at Alexandria; born ca. 313, died ca. 398. Didymos (Δίδυμος) had a reputation for erudition, although he was blind by four and never attended school. He numbered among his pupils Jerome and Rufinus, who attest to his scholarship and influence. His condemnation for Origenism at the Council of Constantinople in 553 may account for the loss of much of his vast corpus. Excerpts from his commentaries on Genesis, Ecclesiastes, the Psalms, and Job survive (with some of Origen) in a 6th- through 7th-C. group of papyri found at Tura near Cairo; their exegetical method is allegorical. Fully or partly extant are On the Trinity, Athanasian in its defense of consubstantiality; On the Holy Spirit (in Jerome’s Latin translation), also urging consubstantiality; and Against the Manicheans. Didymos may have written the Against Arius and Sabellios ascribed to Gregory of Nyssa (K. Holl, ZKirch 25 [1904] 380–98). Other dogmatic and polemical works are lost. Overall, Didymos defends and develops a diversity of theological issues, being orthodox on the Trinity, Christology, and the Holy Spirit, but following Origen in anthropology and eschatology (primarily in the doctrine of the so-called apokatastasis, i.e., the ultimate salvation of all rational creatures—men, angels, and demons).

DIDYMOTHEICHON (Διδυμότηχον, “twin-wall”), city of Thrace, located on a hill above the river Erythros, a tributary of the Hebrós. Giannopoulos (infra 2–7) assumes that Justinian I built the fortress to replace Plotinopolis, situated in a valley somewhere nearby but difficult to defend. By the 9th C. Plotinopolis was completely replaced by Didymoteichon; in fact it had probably already disappeared in the 7th C., and the mention of Plotinopolis by Constantine VII Porphyrogenetos (De them. 1.55, ed. Pertusi 86) is anachronistic. The kastron of Didymoteichon (Beseliev, Inschriften 180f, no. 21) was taken by Krum in 813; its first known bishop, Nikephoros, participated in the council of 879. The fortress is mentioned as the place of exile for Bardas Skleros.

From the end of the 12th C. Didymoteichon appears as one of the most important strongholds in the area, and a sought-after prize for Latins, Bulgarians, rulers of Epiros, and John III Vatatzes, who occupied it ca. 1243. During the Civil War of 1341–147 Didymoteichon was the headquarters of John VI Kantakouzenos who was crowned there in 1341. Matthew I Kantakouzenos held Didymoteichon as his appanage. In the 14th C. Didymoteichon consisted of the citadel (polichnion in Gregoras) and a lower city that was destroyed during the civil war and rebuilt in 1542. The city was temporarily taken by the Turks in 1559 and permanently conquered in Nov. 1561.

The bishop of Didymoteichon became archbishop in the 12th C. and metropolitan in the 13th C. From 1204 to 1206 Didymoteichon was the residence of the patriarch John X Camateros and a center of resistance to the Latin patriarchate of Constantinople.

Some remains of the medieval city survive, including traces of the double city wall with towers and gates, a water reservoir of stone and brick, and the Church of St. Catherine of ca. 1300.

DIE, an instrument for striking coins. It normally consisted of a lower die of bronze or iron that could be fixed in a block of wood and had its upper face engraved in intaglio with the design of one side of the coin, and an upper die consisting of a cylinder of metal that could be held in the hand and had on its lower face the design for the other side. Coins were made by placing blank pieces of metal of the correct weight and fineness between the two dies and striking the upper one with a heavy hammer. No Bvz. coin dies have been preserved: the pincerlike object in the Fogg Art Museum (published as a die by Vermeule) is in reality a bouloterion (see Sealing Implements) for striking lead seals (V. Grumel, REB 15 [1957] 211–14). Their form is not in general likely to
have been different from 7th-C. Sasanian dies, of which three are known, or those of contemporary western Europe. They were evidently produced in limited numbers only, as obverse dies prepared for gold coins were sometimes also used for silver ones, and reverse dies without the names of specific emperors might be carried over from one reign to a later one. The concave coins of the later Byz. period apparently required the use of more elaborate double dies.

DIEGESIS TON TETRAPODON ZOON
(Διήγεσις τῶν τετραπόδων ζώων), or Tale of the Four-Footed Beasts; an anonymous satirical poem in just over 1,000 political verses, dating from the late 14th C. At the instigation of Emp. Lion, the four-footed beasts establish a truce between the carnivorous and herbivorous animals to meet and debate their respective qualities, but the lively discussion degenerates into savage fighting, from which the herbivorous animals emerge victorious. Written at a vernacular level of the language, which includes some of the repeated phrases found also in the late Byz. verse romances, the poem survives in five MSS, of which at least two were intended to be illustrated. It falls within the traditions of Greek fables and animal epics and the western European Roman de Renart and “Debate” poems among animals, such as Chaucer’s Parliament of Foules. The elements of satire, which incidentally give insights into contemporary culinary practice, arise generally out of the implied contrast between animal and human behavior. The conflict between the carnivores (the aristocracy?) and the herbivores (the people?) must reflect the civic turmoil of the late 14th C. Despite the date (15 Sept. 1365) embedded in the text, the Diegesis cannot now be linked to any particular event. Similar Byz. works include the Oparologos, Poulologos, and Synaxarion of the Honorable Donkey.

–E.M.J.

DIEIT. The Byz. ate one to three times a day (see ARISTON and DEIPNON). Attitudes toward food varied: the ascetic ideal praised temperance in diet, and saints are described as surviving on water and beans or wild plants and berries.

There is little information about the food of ordinary people. It consisted primarily of bread, legumes, and vegetables, supplemented by olives, fruit, fish, and wine. Dairy products, except for cheese, played a lesser role. The poor subsisted mostly on vegetables and vinegar, legumes prepared with olive oil, a gruel made of flour or barley, or perhaps an onion omelet (sphoungaton). The fruit and vegetables were varied: apples, pears, grapes, figs, melons, cabbage, leeks, cucumbers, carrots, garlic, onions, zucchini, etc. (Laiou, Peasant Society 28–32). Fish from the sea were preferred to those from lakes or rivers. Sugar was provided primarily by honey. The traditional view is that ordinary people rarely ate meat, but there is evidence suggesting that from the 7th C. onward the consumption of meat increased. The food of monks is better known, thanks to regulations in the Typika; meat was excluded from the monastic diet.

The food of the noble and wealthy classes was sumptuous and even exotic; some products, like caviar and sturgeon, were imported from afar. Wild game adorned the table. Food was often cooked with olive oil; for seasoning, various sauces were used as well as vinegar, pickled cabbage, and spices such as pepper and cinnamon. Desserts and honey cakes made of flour mixed with boiled must (oinoutta) or made of the finest wheat flour in circular shapes (krikelos) completed a rich meal.

Recipes for dishes survive mainly in treatises dealing with the nutritious properties of food and the monthly regimen that should be observed for good health (e.g., by Symeon Seth), but 12th-C. writers such as Eustathios of Thessalonike and Ptochoprodromos take pleasure in describing luxurious dishes. A common dish for rich and poor alike was monokhythron, a mixture of fish, cheese, and vegetables cooked in a casseroles and served as a one-course meal. The author of the
third Ptochoprodromic poem (ed. D.-H. Hessel-
ing, H. Pernot, 55.175–56.186) mentions this dish,
including as its ingredients sturgeon, Vlach cheese,
cabbage, olive oil, pepper, garlic, and sweet wine.
Another rich meal was prepared with salt pork
and cabbage, all drenched with fat. Poultry might
be stuffed with almonds or dough balls and mar-
inated in red wine. Fish was either fried in olive
oil, grilled, or made into soup with vegetables
such as dill, leeks, etc. Drying, salting, smoking,
and pickling were the main methods for the pres-
ervation of food.

DIGENES AKRITAS (Διγενῆς Ἄκριτος), epic-
romance in political verse compiled, perhaps in the
12th C., from earlier material, much of which
may originally derive from oral sources (see Po-
etry, Oral). The text falls into two halves. The
first, epic in tone, concerns Digenes’ father, an
Arab emir, and his marriage to Digenes’ mother,
dughter of a Byz. general. The second, which
has an atmosphere of romance, deals with Di-
gen’s (“born of two races”) and describes his
precocious childhood, his exploits in hunting and
against brigands on the borders (the akrai, which
he guards as “Akritas” or “Akritez”), and his
peaceful life with his bride in their palace on the
Euphrates till death comes to them. The first part
reflects personalities and events from the 9th- and
10th-C. Arab-Byz. wars, as analyzed by H. Gré-
goire. The second is virtually timeless, whether
a survival from the distant past or a later attempt
to recommend harmony between Byz. and the
Arabs. The general worldview presented by the
whole text predates the 11th-C. Turkish invasions
of Asia Minor; many details of geography and
titulature confirm that dating. The most likely
date for the composition of the surviving version,
however, is the 12th C., during the revival of
interest in the romance (cf. the extensive quo-
tations from Achilles Tatius in MS G [Grotta-
ferrata]). The existence of the poem is first attested
at this time by a reference in a Ptochoprodromic
poem to Manuel I Komnenos as a “new Akrites.”

The poem survives in six Greek MSS and a
Slavic version (Devgenievo Dejanie). The latter
is less complex than the Greek, and it is unclear
whether it derives from an early stage of the
Greek text or represents a simplification of the
Greek story. Recent research suggests that four
of the Greek MSS (Trebizond and others) derive
from a 16th-C. compilation and so are of no value
as witnesses to earlier stages. The two older ver-
sions survive in the Grottaferrata and Escorial (E)
texts, which plainly derive from one original text.
They differ greatly, however; the Grottaferrata
version is well-organized and at the middle level
of Byz. linguistic purism, while the Escorial text
is closer to the language of everyday speech but
full of gaps and metrical irregularities. Although
critics are evenly divided on their support of the
Grottaferrata or Escorial text as the more accurate
reflection of their common archetype, recent dis-
cussions have stressed the early elements in both.

Each gives an interesting insight into the life of
the wealthy magnates of the eastern frontier of
Byz. in the 9th to 11th C. Digenes’ palace on the
Euphrates consisted of a stone house at least three
stories high, an elaborate garden, and a courtyard
containing his private church. The ceilings of the
palace were decorated in mosaic with Old Testa-
ment scenes (exploits of Moses, David, Joshua,
and Samson) and a vast repertory of mythological
and History Painting including scenes from the
Iliad, the Odyssey, and the life of Alexander the
Great.

Digenes Akritas has left scattered signs of influ-
ence outside Byz. in Arabic literature and in the
Slavic version, but its greatest impact has been in
modern Greek culture. Digenes and Akritas (rarely
both together) are frequently found in traditional
folksongs (see Akritic Songs), while the hero of
the epic is often used as a symbol of medieval
Hellenism in modern Greek literature and also
represented in objects of art (see Akritic Im-
agery).

Ed. Digenes Akrites, ed. E. Trapp (Vienna 1971). Digenes
Akrites [MS G], ed. J. Mavrogordato (Oxford 1956), with
Eng. tr. Basileios Digenes Akrites [MS E], ed. S. Alexiou
DIGNITIES AND TITLES (ἀξίαι διὰ βραβείων),
ranks in the official hierarchy. Unlike Western feudal titles, Byz. dignities were nonhereditary and bestowed by a brabeion. Four consistent systems of dignities are known: (1) the late Roman system in which membership in the senate served as the major denominator—the clarissimi, later illustres, were senators par excellence; (2) the system of the Taktika in which dignities were concurrent with office, and all officials holding the dignity of protospatharios and higher were considered members of the senate; (3) the Komnenian system in which the dignity depended on relationship with the emperor (son, brother, son-in-law, etc.); and (4) the late Byz. system reflected in pseudo-Kodinos in which the difference between dignity and office disappeared. The development of each system involved an inflation of old titles and their replacement by new ones; thus, the dignities of magistros, patrikios, and so on declined in importance by the mid-11th C., intermediary titles (proedros, etc.) were introduced, and at the end of the century a new system based on the dignity of sebastos elaborated. Sebastos was inflated by the end of the 12th C., giving way to pompous denominations such as panhypersebastos, sebastokryptatos, and probasebastokryptatos, some of which were known earlier. The Kletorologion of Philotheos lists 18 dignities of “bearded men” and eight of eunuchs. The following list, based on the Kletorologion of Philotheos, gives 18 dignities in descending order of importance.

Caesar
Nobelissimos
Kouropalates
Zoste patria
Magistros
Anthypatos
Patrikios

Silentiarios
Stratelates and Apo eparcho

M. Th. F.
DIKAIODOTES (δικαιοδοτης), a high-ranking judge. In a nontechnical sense of “dispenser of the laws” the term was known in antiquity and used in Byz. texts (e.g., NE 19 [1925] 181.6). As the head of a σκερετον, the dikaiodotes is mentioned for the first time in an edict of Alexios I of 1094 (J. Nicole, BZ 3 [1894] 20.6). The dikaiodotes presided over one of the tribunals in Constantinople. The post was very important in a civil career; its holders could obtain simultaneously the office of kanikleios (Laurent, Corpus 2, no.226). Theodore Pantechnes, during his career of 1148–82, exercised the functions of quaestor, dikaiodotes, and eparch of the city (Darrouzès, Tornikès 50f). The precise character of the duties of the dikaiodotes is not yet known. The last mention is that of 1197 (Patmou Engrapha 1, no.11 B.34–35, p.108)—the sebastos and dikaiodotes Michael Belissariotes.

- A.K.

DIKAIOPHYLAX (δικαιοφυλαξ), a title designating a subaltern judge, first attested in Constantinople and the provinces in the mid-11th C., conferred by the emperor on both laymen and churchmen (Laurent, Corpus 2, nos. 902–04; N. Oikonomides, TM 6 [1976] 135). From the reign of Michael VIII the title was conferred exclusively on churchmen by imperial appointment. The dikaiophylax’s duties involved cases of an ecclesiastical nature and required knowledge of civil and canon law. The first dikaiophylax in Constantinople after its reconquest in 1261, the deacon and epito deeseon of Hagia Sophia, Theodore Skoutarites, was empowered to exercise all the judicial functions and rights formerly attached to the office (MM 5:246f). Skoutarites and all subsequent dikaiophylakes were included among the exokatarkoloi, combining one of the titles assigned to the latter with that of dikaiophylax.

Lit. Darrouzès, Officia 109–11.

- R.J.M.

DIKAIOΣ, used only in dative case, δικαίω, “by commission,” was a term formed similarly to ek prosoτo; it designated a deputy (of a patriarch), an administrator acting on behalf of (lit. “in the right of”) the patriarch. The chartophylax is described as acting dikaios tes archierosynes in a novel of Alexios I of 1094 (Zepos, Jus 1:649) and as dikaios tou patriarchou by Balsamon (Rhalles-Potles, Syntagma 2:587.11–12); John Cheilas, metropoli-

tan of Ephesus in the second half of the 13th C., wrote about the professors of the Great Church who taught on behalf of the patriarch (dikaios tou patriarchou) as his representatives, ekklesios (Darrouzès, Ekkles. 388.3–4). In 1350, the synod of Constantinople announced that the hieromonachos Niphon was not the patriarch’s representative (Eis dikaios autou—MM 1:297.25). An act of 1316 (Epiph., no.12.66) mentions also the agent (dikaios) of the protos of Mt. Athos. More than ten other “agents” of the protos are mentioned in the documents of 1322–94, and others are known after 1462 (D. Papachrysanthou in Prot. 161–64). An exceptional case is Theodosios, who signed an act of 1375 as “monk and dikaios (in nominative case) of the Holy Mountain,” not of the protos (Pantel. no.15.21).

- A.K., A.M.T.

DIKTYS OF CRETE, author of what purports to be an eyewitness account of the Trojan War (Ephemeris belli Troiani) but was actually written in the 2nd or 3rd C., as two papyrus fragments of the lost Greek original (P.Tebt. II 268, P.Oxy. XXI 2539) testify. These fragments also support the claims of the Latin translation by “Septimius” (4th C.?) to be a faithful version of the first five books; the remaining books have been condensed into one. Extracts from the original text of Diktys are embedded in the Byz. chronicle tradition, esp. in John Malalas. They have, however, been recast and confused with the work of the otherwise unknown Sisyphos of Kos. Diktys’s account, determinedly rationalistic and eschewing the supernatural, was a major source on the Trojan War for the Byz., for some of whom—e.g., John Tzetzes—Diktys provided a counterbalance to the “falsehoods” of Homer. Diktys’s material is also reflected in the vernacular War of Troy, a close translation of Benoit de Ste. Maure’s French adaptation of the Latin version.

- E.M.J., M.J.J.

DIMODAION (διμοδιαυν, lit. “of two modior”), a secondary tax. In the list of taxes collected in Lampsakos in 1218 it is reckoned as an insignifi-
cant sum (0.6 percent of the whole amount), whereas in a *praktikon* of Lavra of 1321 it amounts to about 14 percent of the *oikoumenon* (Lavra 2, no.109.941). The nature of the *dimodation* is unclear: Solovjev-Mošín (Grēke poulevi 423f) associate it with trade duties, G. Litavrin (VizVrem 37 [1976] 29) with taxes on fruit trees. In many documents it appears together with *charagma* (e.g., Xēnoph., no.29.19; Lavra 3, no.118.196–97); both were said to be collected annually (Ephigr. 7, no.14); it can also be mentioned in a different context, e.g., listed between *zeugaratikion* and *mitaton* (Docheiar., no.25.15).

—A.K.

**DINOGETIA** (Δινογέτεια, mod. Carvân in Romania), city and stronghold that formed a part of the *limes* in *Scythia Minor*. It was located on a small island in the Danube. Excavations have revealed two layers of settlement. The late Roman (4th–6th C.) rectangular fortress was built on a rock dominating the island; it had a cobblestone and brick-paved main street 4–5 m broad and official buildings, such as the *praetorium*, baths, basilica, etc. Dinogetia was damaged by fire, probably during the *Cotrigur* attack in 559, and was deserted ca.600. The fortress was restored by John Tzimiskes and was inhabited, according to coin finds, through the reign of John II Komnenos. Excavations revealed habitations (mostly semisubterranean) and a small church; the population engaged in fishing, agriculture, and carving bone and wood. Connections with Byz. are attested to by coins (some hoards of gold were found), jewelry, and seals, including that of Symeon, *katêpano* of “Paradounabon” (Paristrion). A seal of Michael, “poimenarches of Rhosia,” indicates ecclesiastical connections with Kiev during the first half of the 12th C. Identification of the castle (*phourion*) of Demnitzikos mentioned in Kinnamos (Kinn. 93.19) as Dinogetia (A. Bolšacov-Ghimpu, RESEE 5 [1967] 543–49) remains hypothetical.

**Secular Diocese.** In the early Roman Empire the diocese was a part of a province. In the late 3rd C. the term was applied by Diocletian to a greater area, larger than the province but smaller than the *praefectura* of the praetorian prefect. According to the so-called *Verona List*, ca.297 the empire consisted of 12 dioceses: Oriens (later divided into Egypt and Oriens), Pontus, Asia, Thrace, Moesia (divided later into Dacia and Macedonia), Pannonia, Britain, Gaul, the Seven Provinces (Vienne), Italy (later divided into two parts, with centers at Milan and Rome), Spain, and Africa. At the head of the diocese stood the vicar, but some seem to have been administered directly by the praetorian prefect. The system of dioceses, planned as a vehicle of centralization, created a cumbersome bureaucracy. In the 5th C. it ceased to operate effectively. Anastasios I and Justinian I tried to abolish it (Jones, *LRE* 1:374) and to transfer some functions from the vicar to the provincial governor. The diocesan system disappeared in the 7th C.

**Ecclesiastical Diocese.** The ecclesiastical diocese was an administrative unit modeled on the secular diocese (to be distinguished from its modern usage as an episcopal province). The First Council of Constantinople of 381 (canon 2) mentions dioceses of Alexandria, Oriens, and Asia; so also pseudo-Palladius, in his *Dialogue* on John Chrysostom, speaks of the Egyptian and Asian dioceses; in the 5th C. Sokrates referred to the Pontic diocese. Following the example of secular provincial administration, dioceses were subdivided into episcopal provinces, *eparchia* and *paroikia*. The Council of Antioch of 341 distinguished between the bishop of a metropolis (i.e., *eparchia*) and one of a *paroikia*. The bishops of dioceses acquired the titles of exarchs and/or patriarchs, with the exception of the bishop of Constantinople, who was titled patriarch without being the head of a diocese.

The system of patriarchate-metropolis-bishopric became entrenched in the Byz. church; the diocesan units, on the other hand, disappeared, although territories controlled by the *exarch* resembled, to a certain extent, the late antique dioceses. Nevertheless, canonists of the 12th C.

**DIOCESE** (διοικησις), territorial unit of both secular and ecclesiastical administration.
discuss the term: according to Zonaras (PG 137:420C), patriarchs were the exarchs of dioceses. Balsamon (PG 137:420AB) is even more explicit; he says, with some hesitation, "The exarch of a diοθεσις, I believe, is not the metropolitan of each eparchia, but the metropolitan of the entire dio-
cese; as for the diocese, it comprises many epar-
chiae. . . . Now some of the metropolitan are
called exarchs, but in their dioceses they have no metropolitans subordinated to them; it is plausible
that [our] exarchs are different from the exarchs
of that time [of the time of the council of Chal-
cedon] or that they are the same but have lost the
privileges given to them by the canons [of Chal-
cedon]." The term is not employed after the 12th
C. The word diοθεσις was also used in a general
sense for government or ordering—by Christ, the
angels, the Devil, the church, etc.

DIΟCLETIAN (Διοκλητιανός), emperor (284–
305); born Dalmatia 22 Dec. 243 or 245?, died
Split, 3 Dec. 313 or 316. Diocles, as he was originally
known, rose from an obscure origin through the
army to become comes domesticorum and then
emperor. He ended the anarchy of the 3rd C., in
part by appointing MAXIMIAN as augustus in 283
and Galerius and Constantius Chlorus as cae-
sars in 293, thus forming the Tetrarchy. As
senior emperor Diocletian devoted his attention
primarily to the East, from his residence at Ni-
komedicia. During his reign Diocletian reformed the
administrative structure of the state by ap-
proximately doubling the number of provinces
and grouping them into dioceses, each under the
jurisdiction of a vicar. Diocletian seems generally
to have made a principle of separating military
and civil authority, and most of the governors
had no troops. Late in his reign he apparently
began to appoint duces as military commanders,
usually with jurisdiction that crossed provincial
boundaries. In military policy Diocletian is com-
monly contrasted with Constantine I since he
generally relied on stationary frontier troops, al-
though each member of the imperial college ap-
parently had a mobile field army. Diocletian at-
ttempted to restore the finances of the empire with
reformed coinage and the PRICE EDICT. He re-
gularized requisitions in kind with the ANNONA
based on a system of CAPITATIO-JUGATIO.

Like many of his predecessors, Diocletian iden-
tified himself with one of the gods, in his case
Jupiter. He did not, however, take action against
the Christians until 303, with the beginning of
the Great Persecution, in which scriptures were
to be surrendered and churches demolished. Sub-
sequent edicts dismissed all Christians in state
service, subjected them to legal disabilities, and
finally ordered the arrest of clergy. The perse-
cutions were unevenly enforced, but there were
evidently many apostasies. Byz. tradition remem-
bers Diocletian primarily as a persecutor. On 1
May 305 Diocletian abdicated and went into re-
irement at Split, where he had built a palace.
He emerged from there only briefly to attend the
Conference of Carnuntum in 308, after which his
life is obscure.

Diocletian's physiognomy, esp. his downturned
mouth and short-cropped beard, is familiar from
a number of busts and medallions (Age of Spirit.,
no.5).

DIΟCLETIANIC ERA, an era used in Egypt,
computed from the starting point of 1 Thoth (29
Aug.) A.D. 284. Originating in pagan computa-
tions of the genealogy of the Apis bull and used
in 4th-C. horoscopes, it came to be employed by
Egyptian Christians in the 6th and 7th C. in epi-
taphs, colophons, and eventually in documents.
In the late 8th C. in Nubia it also came to be
called the "Era of the Martyrs," and this name
gradually superseded the earlier designation by
the 13th C.

DIΟDOROS (Διόδωρος), bishop of Tarsos (from
378) and theologian; born Antioch, died before
394. Educated at Athens, Diodoros became a monk
and then hegoumenos of a monastery outside of
Antioch. He was an ardent opponent of Arianism
and of the pagan revival of Emp. Julian. In 372
Valens banished him to Armenia; he was then
recalled and made bishop of Tarsos.

Diodoros played an important role in the mid-
Constantine, commander of the *tagma* of Western *scholae* under Basil II. His career was concentrated in the Balkans: he commanded the troops in Thessalonike and was *archon* of Sirmium; a seal of a *strategos* of “Serbia” is usually ascribed to him (V. Laurent, *ReB* 15 [1957] 190f), but the meaning of “Serbia” remains questionable. It is also unclear whether Constantine was governor of Bulgaria. Married to a niece of Romanos III Argyros, Constantine was accused of conspiring against him, transferred to Asia Minor as *strategos* of the Thrakesian theme, and eventually arrested; he died during an inquest. His son became Emp. Romanos IV Diogenes, whose sons were allies of the Komnenos family: Constantine, married to Alexios I’s sister Theodora, was killed at the walls of Antioch in 1073; Alexios appointed Nikephoros Diogenes governor of Crete.

Nonetheless the family remained inclined to revolt: involved in a plot in 1094, Nikephoros was blinded and exiled to his estates. Several members of the Diogenes family (or imposters who took their name) acted against Constantinople in alliance with foreign princes: Ordericus Vitalis mentions “the son of august Diogenes,” instigated by Bohemund to claim the imperial throne; the *Russian Primary Chronicle* tells about a Cuman expedition against Byz. in 1095 commanded by a certain Diogenes; in 1116 Leo Diogenes, the son-in-law of Vladimir Monomach, participated in an expedition of the Rus’ against Byz. The family’s role declined by the 12th C., and John Diogenes is known only in the modest position of Manuel I’s court orator. In 1254 Constantine Diogenes, *doux* of Leros and Kalymnos, was ordered to conduct a census of these islands; his *praktikon* is still unpublished (Angold, *Byz. Government* 139, n. 110). No data about later members of the family survive.

---

**DIOIKEITES** (διοικητῆς), a term designating several fiscal officials. The origin of the term is obscure. Bury’s suggestion (Adm. System 89) that it was connected with the late Roman *proces* was rejected by Dölger; Egyptian *dioiketai* were fiscal and judicial functionaries on the local level despite their high-sounding epithets (A. Steinwenter, *Studien zu den koptischen Rechtsurkunden* [Leipzig 1920; rp. Amsterdam 1967] 19–25); Theophanes

---

**DIOGENES** (Διογένης), a noble lineage, probably of Cappadocian origin (Attal. 99.21–22, 170.16–17). In the 11th C. Psellus regarded the family as “ancient and flourishing” (Psellus, *Chron.* 2:157, par. 10.2); the first attested Diogenes, however, is
(Theoph. 367.27) uses the word in a vague sense of “administrator.” A clear indication that the dioiketes was a tax collector is given only in Leo VI’s novel 61 and the *Treatise on Taxation* in the Marcian MS (Venice Marc. gr. 173, fols. 276v–281). The first mention of dioiketes is that of Paul, “dioiketes of the eastern eparchiae” in 680 (probably the same as Paul, “dioiketes of the Anatolikon,” whose seal is in Zacos, *Seals* 1, no.2290), although the acts of the Third Council of Constantinople (680–81) do not clarify Paul’s functions. Dioiketai of the eparchiae are known from seals of the 7th and 8th C. (Laurent, *Corpus* 2:645–58). Dioiketai belonged to the sekretos of the genikon but carried out their duties in the provinces. Zacos and Veglery (Zacos, *Seals* 1, p.1880) published 37 seals of various dioiketai linked either to traditional provinces (Bithynia, Galatia, Lydia, Thrace) or new territorial units (Anatolikon), but mostly islands (Samos and Chios, Euboea, Andros, Cyprus, Sicily) and cities, predominantly coastal (Ephesus, Kyzikos, Myra, Rhaidestos, Milletos, Thessalonike). The latest seal (no.3161) is of the early 10th C. Later dioiketai belonged to themes, such as a dioiketes of Boleron, Strymon, and Thessalonike in 1074 (Lavra 1, no.36.5). It is plausible that dioiketai were rewarded by the so-called synetheia (Ivir. 1, no.29.96, a. 1047). The term remained in use in the 14th C. and the office is mentioned in pseudo-Kodinos, but after 1109 the dioiketes was replaced by the praktor. Another dioiketes—of the metata (see Mitaton)—belonged to the department of the logothetes ton ageion (Laurent, *Corpus* 2:297f).

LIT. Dölger, *Beiträge* 70f.

DIOKLEIA (Διόκλεια), a stronghold (kastron) in Illyricum, at the confluence of the Zeta and Morava rivers. Excavations have located it north of modern Titograd and have revealed remains of walls, an aqueduct, and a basilica (C. Patsch, *RE* 5 [1905] 1251).

In 297 Dioklea became the capital of the Roman province of Praevalitana. The kastron was allegedly built by Diocletian—the legend is preserved by Constantine VII Porphyrogennetos (*De adm. imp.* 29.11–14), Kinnamos, and some Latin texts (A. Meyer in *Vesnik za arheologiju i historiju dalmatinsku* 54–59 [1954–57] 35–102). Another tradition asserts that Diocletian was a native of Dioklea (P. Skok in *Starohrvatska prosvjeta*, vol. 1 [1927] 62f). It is unclear when Dioklea became a bishopric (G. Mikulin, *DHGE* 14 [1960] 541) but, at the beginning of the 7th C., Pope Gregory I addressed letters to its bishop. Soon thereafter the city was destroyed by the Avars; in the 10th C. Constantine VII (*De adm. imp.* 35.9–11) noted that the kastron of Dioklea was deserted. Legend has it that the last bishop of Dioklea fled either to Dubrovnik or Antivari.

The name Dioklea was also extended over the entire region along the Adriatic littoral between the theme of Dyrrachion in the south and the town of Kotor in the north. The population was Slav (predominantly Serbian) with strong Roman elements. Constantine VII locates the region of Dioklea near “the castellia of Dyrrachion” and states that in his time the area was populated by the Diokletianoi, a tribe considered by the Byz. as “Scythian” along with the Croats, “Serboi,” Zachloumi, Terbouniotai, and Kanalitai. A seal of Peter, archon of Dioklea, has been dated (Schlumberger, *Sig.* 493) in the 9th C., but it is not known whether Peter was the commander of a Byz. garrison or an independent ruler. The name Dioklea reappears in Kekaumenos (Kek. 168.12) as a site where “Tribounios the Serbos” routed the army of Michael, katepano of Dyrrachion. In 1179 Constantine Doukas was Byz. governor (doux) of Dioklea, Dalmatia, Split, and Dyrrachion (Ahrweiler, *Mer* 260f). It is an established scholarly view that the region of Dioklea or Duklja was also called Zeta from the 11th C. onward.

DIOKLETIANOUPOLIS. See Kastoria.

DIONYSIOS OF TELL MAHRÉ, Jacobite patriarch of Antioch (from 818); died 845. In addition to his successful administration of the Monophysite church in Syria and Mesopotamia under the disabilities imposed by the Islamic government, the fame of Dionysios rests on his reputation as an ecclesiastical chronicler, whose now lost work
was quoted by later writers such as Michael I the Syrian (died 1199) and Gregory Abūl-Faraj.

As a result Dionysios was mistakenly believed to be the author of a universal chronicle in Syriac, written in the late 8th C. by an anonymous monk in the monastery of Zuqin, in northern Mesopotamia near Amida. The Chronicle of pseudo-Dionysios of Tell Mahrē, as the work is now called, is preserved in a unique 9th-C. MS. Its contents record the succession of events from biblical times to the year 775 (it mentions Emp. Leo IV), with the fullest narratives covering the final 47 years (728/9–75), presumably the years of the writer's maturity. The Chronicle is important as a record of the relationships between Byz. and the Arabs in the 8th C. It incorporates the so-called Chronicle of Joshua the Stylicate. The author drew material from a number of earlier sources (such as the Ecclesiastical History of John of Ephesus) for which the Chronicle is itself now an important source.

DIONYSIOS THE AREOPAGITE (Διονυσίως ὁ Ἀρεοπαγίτης), 1st-C. saint; feast day 3 Oct. Dionysios was a noble Athenian, a member of the supreme tribunal of the city, who was converted by St. Paul and selected by him as first bishop of Athens. Maximus the Confessor cites allusions to Dionysios in early sources (Dionysios, bishop of Corinth; Polycarp's letter to the Athenians; Eusebios of Caesarea) but knows little about the saint's biography. The Latin legend confused him with Dionysios, a missionary in Gaul, and developed the theme of his martyrdom. The Latin legend was translated into Greek by an anonymous hagiographer (PG 4:669–84); his text later served as the source for the vita produced probably ca.893 or 894 by Michael Synkellos, who transferred the date of Dionysios's execution from the reign of Domitian to that of Trajan. Symeon Metaphrastes included Dionysios in his menologion (PG 115:1032–49), and his life is briefly described in the Synaxarion of Constantinople, where the saint is portrayed as follows: “He was of moderate height, emaciated, with white and sallow skin, flat-nosed, with puckered eyebrows, sunken eyes, always deep in thought, with large ears, abundant gray hair, a moderately cleft upper lip, a straggly beard, a slight pot-belly and long slender fingers” (SynaxCP 102.8–14).

Representation in Art. Byz. artists imagined Dionysios as an elderly bishop of Athens, who, after his execution, was able to carry his own head around and entrust it to a Christian woman. He is thought to have witnessed the eclipse at the time of the Crucifixion (Khludov Psalter, Moscow, Hist. Mus. gr. 129, fol.45v) and to have been present at the Dormition of the Virgin.

DIONYSIOS THE AREOPAGITE, PSEUDO-, pseudonym of the author of a corpus of theological writings that includes Celestial Hierarchy, Ecclesiastical Hierarchy, Mystical Theology, Divine Names, and letters; fl. ca.500? The author represents himself as St. Paul's disciple, but his true identity is unknown: various candidates have been proposed, including Severus of Antioch, Peter the Fuller, Peter the Iberian, or someone in the circle of John Scholastikos. His theology was irrelevant to the major problem of his era—the relationship between the natures in the incarnate Christ; Dionysios dealt with the same philosophical problem of unity and plurality on a completely different level—even his vocabulary differs from that of his contemporary theologians. Dionysios drew extensively upon the Neoplatonists, esp. Proklos, but he introduced essential revisions in the system of Proklos: Dionysios eliminated the concept of the ψυχή, moved the world of ideas from the νόμος to the “One,” and emphasized the χωρίσμα (separation) between God and created beings.

While dealing with the problem of the Trinity, Dionysios avoided the Neoplatonic construction of the triad that might have been helpful for his purpose (B. Brons, Gott und die Seelenden [Göttingen 1976] 325f.). He stressed God's ineffability and unity and dwelt more on God's attitude toward the created world than on his internal development in the categories of natures and hypostases. The world, created not by God's free will but by innermost necessity, was a static, not a historical
to survive in nearly original form. It sums up a long tradition of linguistic study by Hellenistic scholars. Essentially a series of definitions, sometimes illustrated by examples, the work is based on the usage of poets and prose writers, not on the spoken language. It deals with prosody, phonology (see PHONETICS AND PHONOLOGY), the parts of speech, and MORPHOLOGY, but not syntax. The brevity and clarity of Dionysios's work guaranteed it success as a schoolbook for more than 1,000 years. A mass of commentaries grew up around it, some the work of a single author, such as George CHOIROBOSKOS or HELIODOROS, others catenalike compilations. Dionysios's Grammar served as a model for the Latin grammatical studies of Varro, Remmius Palaemon, and later scholars. It was translated into Syriac—to the structure of which it was ill adapted—and Armenian. The Armenian version in its turn was the object of several commentaries (N. Adontz, Denys le Thrace et les commentaires arméniens [Louvain 1970]). Though largely replaced in the Greek world as a schoolbook in the 19th C. by the Erotemata of Manuel MOSCHOPoulos and similar pedagogical grammars, Dionysios's work greatly influenced the Renaissance study of language. Modern European grammatical terminology is largely based on the work of Dionysios.

DIONYSIUS THRAX

DIONYSIOS THRAX, Greek grammarian and pupil of Aristarchos, whose work on Homeric philology he continued; born Alexandria ca. 170, died ca. 90 B.C. His Grammar (Technē grammaticē) is the earliest surviving systematic treatment of the subject and the only book of a Hellenistic scholar

(1.e., developing) system and consisted of certain hierarchies—angels, institutions, and men; salvation was a result of God's incarnation and philanthropy rather than an active volition of the soul to ascend to God. Dionysios's hierarchical vision of the cosmos was profoundly social—even though H. Goltz (Hierarchiae [Erlangen 1974] 200) overstates it as a "legal and rational type of power organization."

Dionysios's emphasis on the divine unity accounts for his acceptance by the MONOPHYSITES: Severos was the first to refer to Dionysios, and the Monophysites employed Dionysios in the discussions in Constantinople in 532/3; their Orthodox opponent HYPATIOS of Ephesus rejected Dionysios's evidence as a forgery. Later, however, Dionysios was recognized by the Orthodox, esp. MAXIMOS THE CONFESSOR, and PACHYMERES wrote a paraphrase of Dionysios. He was less popular in Byz., however, than among the Syrians and esp. in the West where his hierarchical worldview gave a convenient ideological sanction to the feudal organization.

In 827 a MS of Dionysios was presented to Louis the Pious by a Byz. embassy; soon thereafter the corpus was translated into Latin (M. McCormick, ICS 12 [1987] 218f). The pseudo-Dionysian corpus also attracted the attention of such scholars as John Scotus Eriugena and Robert Grosseteste. As a writer Dionysios made abundant use of composite words, tautologies, and antitheses; such an "obscure" style was meant to reflect the complexity and contradictions of the enigmatic world (Averinçek, Poëtica 139f).

Trapezantine emperor Alexios III Komnenos. The latter became the ktetor of Dionysios, financing the construction of its principal buildings. In 1374 the emperor issued a confirmatory chrysobull (Dionys., no.4); at its head are depicted Alexios and his wife Theodora (Spatharakis, Portrait, fig.136). The monastery also received property and fiscal exemptions from the emperors in Constantinople (Dionys., nos. 3, 5, 10, 13). Dionysios was declared a patriarchal monastery in 1389.

The archives contain 28 Byz. documents dating between 1056 and 1464. In the library are approximately 237 Greek MSS of the 15th C. or earlier (Lampros, Athos 1:319–436; Euthymios Dionysiates, EEBS 27 [1957] 233–71). Its most precious possessions are a richly illustrated lectionary, cod. 587 (C. Walter, DHAE 13 [1985–86] 181–89) and cod. 61, an 11th–12th-C. copy of the homilies of Gregory of Nazianzos. An ivory plaque depicting the Crucifixion above a scene of the soldiers casting lots (BCH 81 [1957] 604) may be of doubtful authenticity.

DIONYSIUS EXIGUUS, Christian scholar; fl.ca.500–ca.550. Dionysius was a monk (abbot in some sources) from Scythia who spent most of his life in Rome. Cassiodorus reports that Dionysius assumed the Latin epithet Exiguus ("the Little") out of humility. His obsessive interest in the chronology of Easter produced his most famous achievement, the first reckoning of historical events from the birth of Christ rather than from Diocletian (284), using 753/4 a.u.c. (ab urbe condita, "from the foundation of Rome") as the year of the Incarnation. He also assembled the first proper collection of Canon law, including translations of Greek laws. His laudable desire to reconcile the churches of East and West prompted him to translate important texts into Latin, for example, the Life of Pachomios; On the Making of Man by Gregory of Nyssa; and the Tome to the Armenians of Proklos, patriarch of Constantinople.

DIONYSOS, Greek god of fertility and wildlife, both animal and vegetable, primarily of wine; in a later myth the son of Persephone. His cult grew in importance during the Roman period when the idea of a happier life in the netherworld was connected with the image of Dionysos, and scenes of Dionysiac myths began to appear on sarcophagi. Proklos refers to an Orphic tradition that proclaimed Dionysos the king of all the gods for six generations, and Macrobius perceives him as the god who combines in himself other deities, such as Helios and Apollo, as the soul of the world (Daszewski, infra 411). Nonnos of Panopolis devoted to Dionysos a voluminous epic, the Dionysiaka, in which the god is primarily a world-conqueror, subduing nation after nation in bloody battles and showing his courage. Finally, Malalas—following, probably, Eusebius of Caesarea—rationalized the ancient myth, humanizing and historicizing the god; he created for Dionysos a human genealogy and made him a mortal deified on account of his miracles and benefactions. O. Nicholson (Byzantion 54 [1984] 253–75) suggests that Galerius viewed Dionysos as his divine protector and interprets Lactantius’s criticism of Liber (Latin form of Dionysos) as polemics against Galerius.

A widespread motif in art—sometimes with connotations of resurrection—until the 6th C., the image of Dionysos disappears thereafter only to return in the 11th C. in the much narrower compass of illustrations to the homilies of Gregory of Nazianzos. Based on the commentaries of the pseudo-Nonnos, these most commonly pictured scenes from his birth and childhood (Weitzmann, infra, figs. 52–58, 164–65) and his military and maenadic companions (see Maenads). In the pseudo-Oppian MS in Venice (Marc. gr. 479), Dionysos is depicted as a handsome youth wearing a short tunic and carrying ivy branches (Weitzmann, infra, fig.119).
DIOSKORIDES, Greek physician and pharmacologist, author of works on pharmacology and herbal lore; fl. ca.65. His De materia medica was a fundamental medical and pharmacological tract in Byz.; numerous physicians attached their comments to Dioskorides’ original text, and occasionally challenged his opinions (J.M. Riddle, DOP 38 [1984] 95–102).

The De materia medica survives in at least ten illustrated MSS. The earliest (Vienna, ÖNB med. gr. 1) is the most luxurious of Byz. scientific manuscripts, with 498 miniatures, mostly full-page paintings of plants in alphabetical order (as against Dioskorides’ original sequence). It also includes depictions of snakes, insects, spiders, scorpions, various animals, and birds to illustrate paraphrases by Euteknios of the Theriaka and Alexipharmaka of Nicander, the Ornithiaka of Dionysios of Philadephia, and similar tracts. Among five frontispieces, one shows seven famous physicians of antiquity, and one depicts Anicia Juliana, daughter of the emperor Gallus Placidus, surrounded by personifications and dropping gold on a copy of the book. A much-abraded acrostic within the octagonal ornament of this page was read by A. von Premerstein (JbKSWien 24 [1903] 105–24) as an expression of gratitude to Juliana from Honoratai (sometimes called Onoratoii), a town near Constantinople, for a church she had built there; in the spandrels of the octagon, putti are depicted building this church, which was completed, according to Theophanes the Confessor, by 512. Added marginalia indicate that the Vienna Dioskorides was in Latin hands for a time after the Fourth Crusade. In the 14th and 15th C. Greek monks in the monastery of St. John Prodromos in Petra made numerous notations in the book. Among the monks was Nathanael, who was also a doctor at the nearby hospital founded by Stefan Uroš II Milutin. In 1406 Nathanael asked John Chortasmenos to have the MS restored and rebound; Chortasmenos partially transcribed the uncial text and added, in minuscule, names of persons and plants. In 1422/3 the MS was still in the Prodromos library; some-

time after 1520 it passed into the hands of the Jewish physician of Süleyman the Magnificent and was eventually purchased by Charles V.

A lavish copy of the Vienna Dioskorides was produced in the 10th C. (New York, Morgan Lib. 652). Romanos II sent an illustrated version to the caliph of Cordoba about the same time.

DIOSKOROS (Διόσκορος), patriarch of Alexandria (444–51); died Gangra 4 Sept. 454. Dioskoros succeeded Cyril as bishop of Alexandria, determined to defend the position of his see and destroy all vestiges of dyophysite Christology, esp. as it was taught by Theodoret of Cyrrhus and Ibas of Edessa. Haughty and impetuous in temperament, he antagonized even some of his natural allies in Alexandria. Dioskoros supported the Monophysite monk Eutyches in his conflict with Palt. Flavian of Constantinople; in 449 he presided over the “Robber” Council of Ephesus, using coercion to secure the victory of Alexandrian theology and the condemnation of Flavian. Two years later at the Council of Chalcedon Dioskoros was in turn deposed and exiled to Gangra, where he soon died; he was not, however, condemned for heresy but only for his strong-arm tactics at the “Robber” Council. Much of the Egyptian church remained loyal to Dioskoros until his death and refused to accept Proterios, who had been named as his successor in Alexandria by the council. Later Monophysite opinion, however, did not always regard Dioskoros with favor, but in some Monophysite circles he was viewed as a saint. A Syriac vita of Dioskoros by his disciple Theopistus is preserved (ed. F. Nau, Journal Asiatique 10 1 [1903] 5–108, 241–310).

—T.E.G.

**DIOSKOROS OF APHRODITO** in Egypt, poet and lawer who represented the people's interests in letters and petitions to the local grandees; died after 585. Dioskoros (Διώσκορος) visited Constantinople in the 550s on family business (V. Martin, *Journal of Egyptian Archaeology* 15 [1929] 96–102). A cache of papyri containing his papers was found in the early 20th C. Apart from classical fragments, they contain his own writings. His prose includes an important Greek-Coptic glossary, petitions and business contracts, and a treatise on metrology. His verses, in assorted meters, range from classicizing exercises to panegyrics and epitaphia addressed to local magnates. Dioskoros's *enkomion* of Justin II provides early testimony on the veneration of the imperial image (L.S.B. MacCoul, *Byzantium* 54 [1984] 575–85). The verses show his fondness for decorative epithets, for self-quotation, and for combining pagan with Christian imagery. What once were thought to be inaccuracies in his versification can now be understood as reflections of Coptic phonology and syntax. Since much of his verse and prose output is preserved in draft stage, it affords an opportunity to see a late antique writer at work.

—B.B., L.S.B. MacC.

**DIOSKOUREI**, Castor and Polydeuces (Lat. Polux), Greek mythological figures; twin brothers of Helen, they share immortality between them, living half their time in the netherworld and half on Mt. Olympus. Represented as riders on white steeds, the Dioskouroi were connected with the astral cult; they were also perceived as helpers of mankind, esp. at sea (e.g., Himerios, ed. A. Colonna, or.q.112–13) and in illness. The veneration of the Dioskouroi continued after the triumph of Christianity: on North African pottery of the 4th C. representations of the Dioskouroi are accompanied by the 12 apostles or the Raising of Lazarus, and on sarcophagi with the scene of St. Peter's arrest (F. Bejaoui, *Ant. Afr.* 21 [1985] 173–77). Pope Gelasius I attests to the existence of a cult of "Castrares" that the people did not want to abandon. The attitude of the church to the Dioskouroi was ambivalent: the church fathers rejected the myth of their immortality; on the other hand, they tried to replace the Dioskouroi by Christian pairs—thus, the apostles Peter and Paul assumed their function as helpers at sea, and Kosmas and Damianos their function as healers. More questionable is the Dioskourian origin of the Cappadocian triplet saints Speusippos, Elasippos, and Melesippos, who are said to have been skilled riders. Niketas Choniates compares the imperial brothers Isaac II and Alexios III Angelos to the Dioskouroi (Nik. Chon. 452.14).

In the MS of pseudo- Oppian in Venice (Marc. gr. 479), Polydeuces is shown in a boxing match with Amykos, king of the Bebyrkes, while Castor is depicted as a soldier. In other miniatures of the same MS the brothers are shown hunting, both on horseback and on foot (Weitzmann, *infra*, figs. 118, 128–29).

—A.K., A.M.T.

**DIOSPOLIS** (Διώσπολις, also called Lydda, Ar. Ludd; George of Cyprus calls it Georgiopolis), a city in Palestine southeast of Jaffa, which became an early center of Christianity. Its bishop was synkellos of the patriarch of Jerusalem, and the see an autocephalous archbishopric. The Council of 415 in Diospolis supported Pelagius (see Pelagianism). According to the Piaenza Pilgrim, a miraculous column stood near Diospolis; as the Lord was being led toward this pillar to be scourged, it was lifted up in a cloud and set down in the middle of the road. The cult of St. George was early attached to Diospolis. Legend has it that George was born in Diospolis and his remains brought there after his death in Nikomediea; pilgrims speak of his miracle-working tomb in Diospolis. Even after 'Amr conquered Diospolis, the city remained a place where George was venerated: in the 10th C. there was a splendid church dedicated to him; a Muslim legend, probably based...
on the image of George killing the dragon, predicted that at the door of this shrine Christ would slay the Antichrist. The remains of a monastery of St. George, built by the Crusaders over a church of Justinian I, are still evident in and around the Greek Orthodox church of Lydda.

(For Diospolis in Bulgaria, see IAMBOL.)

--G.V. A.K. Z.U.M.

DIPLOMACY, conducted for such purposes as negotiating treaties and arranging imperial marriages or exchanges of prisoners, was one of the main activities of the Byz. government and largely contributed to its successes. A solid ideology underlay this diplomacy, which an educated and versatile bureaucracy conducted with subtle pragmatism.

The uniqueness and supremacy of the empire on earth was a concept inherited from Rome and enhanced by the theory that imperial power was obtained by God's will according to God's choice. Following these principles, the ideal would have been to unite all the world under one Christian Roman emperor, always perceived as a peacemaker (airenopoios). This was one long-term objective for Byz. diplomacy, but in the meantime the defense of the empire had to be guaranteed. This basic theory remained practically unchanged throughout the history of Byz., even in its most somber moments.

The existence of other rulers, with varying degrees of sovereignty, was officially recognized. Each had a specific place in the theoretical framework of a big family, the center of which was the Byz. emperor: the designations "son" (often vassal), "brother," "cousin," "nephew," etc., indicated the closeness and the rank that the emperor assigned to each ruler. Following the imaginary example of heaven and the concrete one of the imperial court, a real (and changeable) hierarchy of states was construed on the basis of power, religion, and recognized level of civilization. At the top of this hierarchy, after Byz., came the Sasanian Persians, then the Arabs, with whom the emperor negotiated on terms of quasi-equality.

The western European states—previously part of the empire, but separate from the 5th C. onward—were given mediocre positions, even though they were Christian and had an admitted affinity with the Byz. This hierarchy was manifested in official correspondence in the form of address assigned to each foreign ruler or in the weight of the gold seal (bulla) used to seal the letter sent to him (e.g., in the 10th C. bullae of four solidi were used for letters to the Arab caliph, three solidi for the khan of the Khazars, two solidi for the archon of Rus', one or two solidi for the pope and for the king of the Franks, etc.). These differentiations were even clearer in the way that some treaties were concluded and put in writing.

Whenever possible, the appearances dictated by the above ideology had to be respected. Instead of "paying tribute" the Byz. said they "gave gifts" or, better, granted titles and the accompanying salaries to foreign rulers and their entourages, thus reaffirming implicitly the emperor's supremacy. Only when compelled did the emperors accept humiliation (e.g., Nikephoros I agreed in 806 to pay Hārūn al-Rashīd not only a hefty tribute, but also three nomisma for his personal capitation and three more for his son's). They also agreed to accommodations (oikonomia). Although the Byz. forcefully refused to recognize other Christian emperors, they accepted unwillingly the use of the imperial title by other rulers (Charlemagne, the German emperors, the Bulgarians, and the Serbs); the title "emperor of the Romans" they retained for their sovereign alone. This general ideology, recognized and accepted by most other states, helped the Byz. considerably in conducting their foreign policy, enhanced as it was by the long tradition of the empire.

Diplomacy used various means. Pressure on the other party could be exerted directly by the armed forces, indirectly by allies that Byz. could turn against its enemies, by civil strife that it would provoke, or just by supporting the pro-Byz. political party. On the other hand, to make individual friends, Byzantium used its prestige and wealth as well as its capital, Constantinople, which offered a high quality of life. Close relatives, esp. sons, of foreign rulers, were invited for prolonged stays in Constantinople, where they were exposed to Byz. culture and religious practices (and served as hostages). Foreign rulers were invited to visit
Constantinople, where imperial wealth and power could be displayed while negotiations were conducted.

Marriages of Byz. princes to foreign princesses were accepted from the 8th C. onward; Byz. princesses of blood, close relatives of the emperor, married abroad from the 10th C. onward. Marriages to foreigners were, however, usually arranged with illegitimate children of the emperor or with children of the aristocracy. Royal insignia could be attributed and a sovereign title assigned to a foreign ruler who would agree to become the (adopted) “son” of the emperor, thus recognizing his superiority.

Attribution of Byz. titles in order to create bonds of dependency was practiced throughout Byz. history; in some cases these titles became hereditary to the foreign princes. Gifts or periodic payments were intended to secure the conclusion of a treaty, an alliance, or the prince’s neutrality. Similarly, commercial privileges were granted to foreign colonies (attested from the 10th C. onward). Missions, when successful, attracted the foreign country into the orbit of the Byz. church, which in turn provided the converts (partly or totally) with ecclesiastical personnel. By accepting Byz. Christianity, the foreign ruler became subject to spiritual pressures by the patriarch of Constantinople.

Byz. had no diplomatic service as such but made use of a large, competent, and well-organized bureaucracy, various branches of which would, when necessary, deal with foreign states. Rarely, diplomatic negotiations were conducted by provincial governors (e.g., the Katepano of Italy or the strategoi of Cherson). Foreign policy was decided by the emperor or the Magister Officiorum, later by the Paradeisyeon, and eventually by the Mesazon. Foreign correspondence was prepared in the imperial chancery (under the Palaiologoi, supervised by the megas logothetes). Ambassadors, who also collected intelligence, were assisted by a corps of interpreters, even though Greek, esp. demotic Greek, was a major language of diplomacy in the eastern Mediterranean, also used in negotiations between non-Greek-speaking peoples. Foreign ambassadors were received by the logothetes tou dromou. Very seldom did sovereigns themselves conduct negotiations; usually they were the work of embassies, sent ad hoc, that held discussions mostly with high officials. The permanent foreign representatives in Constantinople (bailo, podestà) had their place in the imperial ceremonies and consequently were in close contact with the authorities.

DIPLOMATICS, the auxiliary discipline dealing with the critical study of archival documents (see ACTS, DOCUMENTARY), has a short history as far as Byz. is concerned. B. de Montfaucon first treated the subject in chapter 6 of his Palaeographia graeca (Paris 1708). Byz. acts were also examined critically by some Athonite monks, such as Cyril of Lavra and Nikodemus Hagiotreites, both in the 18th C. Setting aside the Papyri, one is left with few surviving diplomatic materials, because all Byz. state archives and most monastic ones have perished.

Archives known to preserve Byz. documents are relatively few: the monasteries of Mount Athos (see ATHOS, ACTS OF), Patmos, and Meteor are the main depositories of monastic archives, together with the numerous documents of churches and monasteries preserved in southern Italy and Sicily. Original documents of foreign relations can be found in western European state archives (esp. Genoa, Venice). Many more acts are scattered in various collections, originals or copies in MS codices, including collective copies and medieval chancery records.

The main goal of diplomacy is to study Byz. documents in order to reconstitute the lost archives and Byz. chancery techniques; to classify the preserved documents according to the authorities that issued them; to examine them, be they original or copies (official or unofficial, certified or not, preserved in other documents or in narrative sources), and to establish whether they are authentic or forgeries. The limited probatory value of the written act may explain why the
relatively few Byz. fakes come from periods of political upheaval (such as the 14th and early 15th C. in Macedonia). Moreover, the documents have to be published properly (if possible, with facsimiles) and commented upon adequately in regard to the wealth of information that they contain concerning the administration and the finances, the economy and society, the prosopography and the geography, the historical events that they mention, their language and their calligraphy, even the literary trends and ideology that are reflected in them, esp. in their rhetorical prooimia.

—N.O.

DIPLOVATATZES. See VATATZES.

DIPTYCH (διπτυχος), any laterally connected pair of panels in wood, ivory, or precious metal; the term is customarily applied to leaves more ceremonial in purpose and more elaborate than writing tablets. Ivory diptychs are the best studied. According to the Historia Augusta, ivory diptychs were used to record proceedings of the senate. In 5th-C. Carthage calculi eburnei served to preserve the names and deeds of proconsuls (CChr Ser. lat. 60:220). It is possible that John Chrysostom's allusion to "golden" deltoi (PG 56:110.46) refers to diptychs issued as documents of appointment to high officials. No such literary evidence is available for other subsets: the classes known as imperial and five-part diptychs (see below). Frequently depicted in the Notitia Dignitatum, official diptychs seem to have been framed in gold, an element lacking in presumably privately issued specimens carved with mythological scenes, games, or literary figures (Volbach, Elfenbeinarbeiten, nos. 54–61, 66, 68–69). Even though related in size and technique to the consular diptychs (see below), such private diptychs were probably distributed in much smaller quantities.

Pagan ivory diptychs disappeared in the 6th C., although a parallel Christian series, the so-called five-part diptychs, continued to be issued after that date. Sacred diptychs (Goldschmidt-Weitzmann, Elfenbeinchulpt. II, nos. 40–42, 52–53, 60, 122, 222–23), functioning as folding icons, were less prevalent than triptychs in the 10th–11th C., but hinged panels continued to be used as insignia of office: the Kletorologion of Philotheos (Oikonomides, Listes 93.22–95.1, 127.25–27, 129.4–5) specifies that the emperor should present decorated ivory plaques to candidates for the patriciate, a distribution confirmed in De cer. (248.11). Like the codicil diptychs of late antiquity, these may have contained parchment documents of appointment.

Consular Diptychs. These were panels issued by ordinary consuls upon their accession to office. The earliest surviving specimen is that of Felix, consul in 428; the series closes with the end of the civil consulate in 541 because emperors who thereafter assumed the consulate did not issue diptychs. Normally, consular diptychs bear the name, cursus honorum, and a likeness of the honoree. Rome and Constantinople were the most likely centers of distribution. Diptychs of the 5th C. are generally simple portraits; most 6th-C. examples show the consul presiding over the games that marked his accession. More than 30 identify
a specific consul; a handful of others, although anonymous, probably also belong to the consular series. It is not certain that all such appointees issued diptychs, and the number and nature of recipients must have varied. Gaius Apollinaris St-
ponius (ep.3.6.5–6) indicates that consuls distributed panels to their friends and relatives; the diptychs of Justinian I (521) and Philoxenos (525) bear dedications to the senate or its members. Inscriptions are usually in Latin, occasionally in Greek, though language alone cannot reveal their place of manufacture. Slight variations in iconography, combined with the evidence of technique, point to ivory workshops that produced other sorts of panels (A. Cutler, Byzantion 54 [1984] 75–115); surviving in greater numbers, consular diptychs were serially produced. Their inner surfaces have recesses like those of normal writing tablets, but the notion that these huge slabs of ivory—those of Apion, consul in 539, measure nearly 41 × 16 cm each—were filled with wax and inscribed cannot be verified. Many consular panels were reused for Christian purposes in the Middle Ages. Preserved in this way, they constitute an invaluable tool for modern scholarship since they are precisely datable by the name of the official they bear.

Five-part Diptychs. Known only in ivory, they are paired and sometimes hinged assemblages of five panels attached to one another by tongue-
and-groove joints. Each group of five panels forms a leaf measuring approximately 35 × 30 cm overall. If the so-called imperial diptychs are included, panels survive from 13 such objects. Neither the function nor the dates of five-part diptychs are known with any precision. Office-holders appear on some fragments and a consul is depicted on one (Delbrück, infra, no.47), but this is an insufficient basis on which to suppose, with Delbrück, that five-part diptychs showed the consul's reception of codicilli. On the majority of examples, usually dated between the 6th and 8th C., Christ, the Virgin, the Lamb of God, or a cross occupies the central panel, surrounded by Gospel scenes. Some of these may have been designed from the start as book covers (F. Steenbock, Der kirchliche Prachtinband im frühen Mittelalter [Berlin 1965] 11–21).

“Imperial” Diptychs. A subset of five-part dipt-
ychs, they contain the depiction of an emperor or empress in their central panels. Though no example survives in its original state, there are 12 fragments belonging to eight different specimens; these are customarily assigned to the 5th or 6th C. Images of various dignitaries appear on the flanking plaques, a bust of Christ or a personifi-
cation of Constantinople in the upper register, and barbarians bringing offerings in the lower. “Imperial” diptychs have therefore been thought to celebrate perpetual victory, a theme repeated on some of their inscriptions. On the basis of one example inscribed with a consul’s cursus honorum but lacking his name (Delbrück, infra, no.49), it is assumed that they were presented to the ruler by consuls at their inauguration. H. Thümmel (BS 39 [1978] 196–206) conversely suggests that “imperial” diptychs were presented by emperors to state officials and that examples with Christian iconography functioned as insignia bestowed on high clergy when they took office. (See also Barberini IVORY.)

diptychen. A. Goldschmidt, “Mittelstücke fünfteiliger Elfenbeinentafeln des VI.–VII. Jahrhunderts,” JbKw 1 (1929) 30–
33.

—A.C.

DIPTYCHS, LITURGICAL, lists of names of the living and of the dead proclaimed aloud by the deacon during the Eucharist. The practice is attested from as early as the 5th C. The church of Constantinople had two separate lists, that of the dead being further subdivided into a list of laymen and a list of clergy, with the bishops of Constantinople listed according to the order of their succession. The diptych soon became a vehi-
cle of political struggle. Already in 451 it was prohibited to “read from the altar” the names of the leaders of the “Robber” Council of Ephesus. Names of emperors, popes, and bishops were often erased from diptychs and restored only after some form of reconciliation had taken place.

Sometimes inscribed on double tablets of ivory, liturgical diptychs could be local, as in the Syrian traditions, commemorating representatives of the local church, or ecclesial, commemorating hier-
archs of other churches with which the local church was in communion, or the two combined. Byz. diptychs were the combined type and were chanted by the deacon during the anaphora, not before it, as in the Syrian rites.
DISEASE. The Byz. cherished an interest in diseases and knew how to describe them. Although images created by Psellos are usually static, he was able to show the changes in human appearance caused by disease (Ljubarskiij, *Psell 241f*). Byz. authors produced detailed descriptions of disease—both the pandemic plague and individual illness (H. Hunger in *Polychronion* 244-52). Scientific medicine clearly classified ailments—from plague to rabies, ophthalmic afflictions, leprosy, various skin rashes, cholera, pneumonia, and tuberculosis. Human diseases were understood through the ancient notions of imbalances among the four humors, best known to Byz. medical writers from the works of Galen, although physicians were well aware of the Hippocratic origins of humoral pathology.

Side-by-side with scientific diagnosis was a “demonic” explanation of disease; not only was miraculous healing conceived as a struggle against demons, but even a well-read man such as Photios, who knew Hippocrates, Galen, and Oribasios, explained gastric illness as the action of a fecal demon (PG 101:553A-B). He also assumed that the moon could cause disease (117B-D).

**DISHYPATOS** (δυσπατος, i.e., twice hypatos), title mentioned the first time at the beginning of the 9th C.: the *dishypatos* Thomas was an addressee of Theodore of Studios (PG 99:498C). The *Kletarologion* of Philotheos places the title after that of the *protospatharios*. In the 11th C. the title *dishypatos* was often conferred on judges, anagrapheis, and chartoularioi. The title seems to have disappeared in Byz. by the end of the 11th C., but was known in southern Italy in the beginning of the 12th C. John, son of the imperial *disipatus* Ursus, was mentioned as late as 1178. *Dishypatos* as a family name appears in the 12th C. and becomes relatively common in the Palaiologan period (PLP, nos. 5522-45).

**DISHYPATOS, DAVID,** Palamite monk and apologist; died by 1354, perhaps by 1347. Dishypatos (*Δυσπατος*) was a member of an aristocratic family that was related by marriage to the Palaiologan dynasty. He first appears ca. 1337 as a correspondent of *Barlaam of Calabria.* Despite this connection, he favored the views of Gregory Palamas. In 1341 he was at the monastery of Takekyromene in Paroria, a stronghold of hesychasm, when he was summoned to Constantinople to support Palamas in his struggle with Barlaam.

After the local council of Constantinople of 1341 (see under Constantinople, Councils of) Dishypatos began to compose polemical tracts against Barlaam and Akindynos, notably a *Logos* addressed to Nicholas Kabasilas (ca. 1342) and a lengthy iambic poem of 610 verses in response to Akindynos’s poetical attack on Palamas (ca. 1342-44). In 1346, at the request of Anna of Savoy, he wrote a *Short History of the Heresy of Barlaam and Akindynos.* Some works of Dishypatos were translated into Slavonic languages probably in the second half of the 14th C. and are known in MSS from the 15th C. onward (G.M. Prochorov, *Todrcl* 33 [1979] 32-54).

**DISHYPATOS, MANUEL,** 13th-C. patron of an icon of the Virgin Hagiostoria now in Freising Cathedral. He is sometimes identified with Manuel Opsaras Dishypatos, metropolitan of Thessalonike, 1258-60/1 (PLP, no. 5544). Dishypatos’s offering retains its original silver-gilt votive, on which the image is described as the “Hope of Those Who Have Lost Hope” (*Hs Eipiston Apelpismenon*). Dishypatos is identified as a *kanstresios* (see *Kastresios*); the dodacasyllabic verses are said to have been written by Dishypatos himself (M. Kalligas, *ArchEph* [1937] pt.2, 505). Plaques of the Hetoimasia, archangels, and saints attached to the frame led Wessel (infra) to postulate an enamel workshop in mid-13th C. Thessalonike. The icon, which reached Freising in

---

1440, is described in a Latin inscription on the altar on which it rests as a gift to Gian Galeazzo Visconti “from the emperor of the East.”

A.C.

DISKOPOTERION. See Chalice; Paten and Asteriskos.

DISMISSAL (ἀπόλυσις, lit. “release”), a formula pronounced at the end of a liturgical service or sometimes of one of its parts, as in the apolysis of the catechumens after the reading of the Evangelion (e.g., Maximos the Confessor, PG 91:692D–693A). The formula of the apolysis varied, the major types having been the so-called small and great dismissal; the latter was used after vespers, orthros, and the divine liturgy (Eucharist). 

A.K.

DISTORTION, the alteration in shape or proportion in an image, frequently employed to convey values on a hierarchical scale, the expression of emotion—less often used than in the medieval West—or for purposes of caricature. Despite antique theoretical systems designed to avoid distortion, which were transmitted by Proklos, the absence of coherent perspective often resulted in what, to the modern eye, appear to be deformations of space and proportion. Some distortions, however, are evidently attempts by the artist to compensate for the spectator’s point of view; monumental figures, intended to be seen from below, often appear with disproportionate heads or legs when viewed from appropriate positions. Spiritual values such as asceticism have been held to explain distortion of the human form; some such instances must be attributed rather to artistic incompetence or lack of concern for plasticity.

A.C.

DIVETESION (διβητήσιον, also διβητισιόν), a long ceremonial silk tunic resembling the Latin dalmatic, for use on only the highest state occasions. It was worn, belted, instead of the skaramangion (perhaps over another simpler tunic), under the loros, chlamys, or sagion, esp. by the emperor, but also by certain court officials. Red, green, and white divetesia are mentioned in texts, but the color purple was restricted to the emperor. According to a 10th-C. ceremonial book (De cer. 423.2), Anastasios I wore a sticharion divetesion; the term is encountered frequently in the 9th–11th C. but is not used by pseudo-Kodinos in the 14th C., by which time the garment had apparently been replaced by the sakkos.

In imperial portraits it is not always easy to distinguish between the skaramangion and the divetesion; both seem to have been woven with gold designs and ornamented with panels of gold embroidery on the shoulders and hem. The divetesion (if indeed this is the garment depicted in the portraits) changed somewhat over the course of the 11th and 12th C.: the sleeves grew tighter, and the lower embroidered hem was no longer a strictly horizontal band but extended up the outer edge of each leg into a point or roundel. The comparable tunic that the emperor wore under the loros had immensely wide sleeves.

DIVINATION, foreseeing or prediction of future events or disclosure of hidden knowledge. Various mantic arts were inherited by the Byz. from ancient practice but were transformed and christianized. They can be divided into two major forms: “natural” divination based on the spontaneous observation of the world and inductive (“artificial”) divination originating from the use of special means. To the first group belong the observation of celestial bodies (astronomy), of meteorological events and natural phenomena (e.g., thunder [see Brontologion] and earthquakes), of dreams (see Oniokritikon), of birds (the eagle and others) and animals. The behavior of horses was sometimes alleged to predict the destiny of a new ruler or of a military campaign. According to Haron Ibn Yahya, if imperial horses, when led into Hagia Sophia, took the bridle in their mouths, it meant that the Byz. had defeated the Muslims (A. Vasiliev, SemKond 5 [1932] 159f).

In the 6th C. a dog allegedly was able to divine which women in a crowd were pregnant and which men were adulterers (Theoph. 224.15–27). It is unclear if any special means were used by the
9th-C. Peloponnesian shepherds who announced the fall of Syracuse to the Arabs two weeks before the news was confirmed (Genes. 89.64–75). The natural divination of oracles, the ecstatic and unintelligible utterances of prophets, so fashionable in antiquity, lost significance, yet Niketas Choniates describes a seer, Basilakes by name, active in Rhaidestos, whose nonsensical words and enigmatic gestures were interpreted by his followers as predicting the future.

Inductive divination encompasses the use of various objects, such as books, icons, flour, mirrors, fire, dice, dishes, etc. Herakleios reportedly resorted to bibliomanteia (picking a passage of the Bible at random) to determine where his army should spend the winter (Theoph. 308.15–16). Particular importance was attached to names and letters. The emperor Maurice, for example, predicted that his successor’s name would begin with the letter phi (it happened to be Phokas).

The church condemned, in principle, all types of divination but had to comply with its christianized forms. Thus divination by icons is still attested by Blastares, and Anastasios of Sinai recommended the random opening of the Bible to predict the future.

DIVORCE (διαζύγιον) or dissolution of marriage (διαλύσις του γαμού) was a concept alien to classical Roman law, which acknowledged the right to end a marriage at any time by mutual agreement or by repudiation of the spouse. This principle was preserved in the law of papyri of the 4th to 7th C. (A. Merklein, Das Ehescheidungsrecht nach den Papyri der byzantinischen Zeit [Erlangen-Nuremberg 1967]). Roman divorce, though easy, might involve (if it was considered without grounds) moral condemnation, legal penalties, and material compensation. The Christian church rejected the concept of unrestricted divorce. Constantine I in 331 forbade spouses to send a notice of divorce (repudium) on arbitrary grounds; only if the husband was guilty of murder, sorcery, or grave-robbery was the wife permitted to repudiate him and recover her entire dowry; if she separated on other grounds, she lost everything “to her last hairpin” and was to be deported to an island (Cod. Theod. III 16.1).

Justinian I prohibited divorce by mutual consent, except in cases in which the couple took monastic vows, and established a restricted list of legal causes for separation: conspiracy against the emperor or the spouse; adultery or misbehavior on the part of the wife (dining and bathing with other men, living outside her house, attending circuses games and theaters, and the hunting of wild animals); the husband’s inducing his wife to fornicate with other men or a false accusation of adultery against the wife (nov. 117.8–9). Justin II, in 566, reinstated the Roman tradition (C. Castello in Mneme G.A. Petropoulou, vol. 1 [Athens 1984] 295–315), his rationale being that divorce was a lesser sin than irrational hatred that might lead to attempted murder or suicide.

The indissolubility of marriage was formulated and firmly established in the Ecologa 2:91–3, which listed very few legal grounds for the dissolution of marriage: the wife’s prostitution, impotence of the husband for a period of three years, and one spouse plotting against the other. Some supplementary reasons for divorce were introduced by later legislators, but the principle of the indissolubility of marriage (except for entrance into a monastery) dominated Byz. civil and canon law. One should probably distinguish between divorce proper and the annulment of marriage caused by its illegality (e.g., marriages prohibited by impediments, such as consanguinity) or by the social inequality of partners.

Cases of divorce were brought before law courts, civil and ecclesiastical alike, and their decisions show that in practice the principle of dispensation (oikonomia) was applied more frequently than civil and canon law suggest. Eustathios Rhomaios mentioned cases of divorce by consent (ek synaineoses—Peira 25.37, 25.62), although penalties were exacted; he also included contracts of divorce (Peira 7.8, 25.30) and devoted serious attention to the regulation of the property rights of the divorced couple. In the 13th C. Chomatenos and Apokaukos judged cases of divorce involving people from various walks of life; besides the traditional legal grounds (the husband’s impotence, the wife’s adultery) other reasons were taken into account: incompatibility of the couple, implacable hatred, sodomy, consanguinity; when a husband abandoned his wife and refused to return to her, she might be permitted to remarry.

DIYARBEKIR. See AMIDA.

DJEMILA (anc. Cirtul), site of a Roman colony in Numidia Cirtensis (mod. Algeria). The city was considerably transformed in the second half of the 4th C., when several basilicas, known from both texts and archaeology, were built. Construction dates for the so-called Christian quarter are less certain, although Djemila, like Theveste to the southeast, seems to have enjoyed a huge building campaign in the first quarter of the 5th C. At the heart of this campaign was the construction of two basilicas, each with extensive FLOOR MOSAICS and large crypts under their apses; the relative chronology of these churches is disputed (N. Duval, P.-A. Février, *8 IntCongChrArch* [1969] 241): the larger has a mosaic inscription naming as its founder a bishop Cresconius, whose identification is uncertain. To the west of these churches was built an exceptionally large baptistery in the form of a rotunda. Other buildings were given over to the administration and accommodation of an evidently large clergy. Numerous private residences, such as the “House of the Ass” and the “House of Europa,” had elaborate floor mosaics installed, which Dunbabin (*Mosaics* 256) dates to the end of the 4th C. or the beginning of the 5th; in other houses there was extensive restoration of older pavements. The date at which Djemila was abandoned is unknown.

DNIEPER (Δάναπης, also Βορυσθένης), river flowing south from the Valdai hills to the Black Sea west of the Crimea. Tributaries and portages link the upper Dnieper to the Volga for eastern traffic and to the Dvina and Lovat' for access to and from Novgorod and the Baltic. Byz. references to the Dnieper usually imply its lower section, which curves in an eastward loop through the steppes: Theophranes (Theoph. 357.28) describes the crossing of the Dnieper by the Bulgarians of ASPARUCH; Skylitzes (Skyl. 455.38) states that the Pechenegs are found from the Dnieper to the Danube. From the mid-11th C. the lower Dnieper was controlled by the Cumans, from the mid-13th C. by the Mongols, and in the late 14th and early 15th C. by Lithuania under Vitovt. The Dnieper was used by the Rus' as a route between the Black Sea and northern Europe from the late 9th C., and it became the main commercial artery connecting Kiev, Smolensk, and other towns. The lower part of this route “from the VARANGIANS to the Greeks” (*Povest' vremennych let* 1:11–12) is described in detail by Constantine VII (*De adm. imp.* 9), who pays special attention to its twin hazards: a series of rapids and attacks by the Pechenegs. The Russo-Byz. treaty of 944 guaranteed to Cherson the right to fish unmolested at the mouth of the Dnieper (*Povest' vremennych let* 1:37).

DOBROMIR CHRYSOS (Δοβρομίρος Χρυσός), founder of an ephemeral Bulgarian principality; died after 1201. The name Dobromir is applied to him only in a speech by Niketas CHONIATES (*Orations* 166.14). He probably joined ASEN in his revolt against Isaac II, then changed sides and was sent to defend Strumitsa where he proclaimed himself independent. V. Zlatarski (*Godišniki na Sofijskija Universitet, Ist.-fils. Fak.* 29 [1933] 1–20) hypothesized that he was identical with the "jupanus vel satrapa Bulgariae" mentioned by Ansburt, but P. Mutafčiev rejected the identification (BZ 34 [1934] 205). According to Zlatarski, Dobromir, who, like Ivanco, was hostile to Kalojan, tried in 1197 to make an alliance with Alexios III. Again Dobromir changed sides and established his "principalit" in PROSEK. In a treaty Alexios III acknowledged Dobromir's power over Prosek and Strumitsa and gave him as wife the daughter of the *protostrator* Manuel KAMYTZES. Dobromir ransomed Kamytzes from Bulgarian captivity and in 1201 started a war against Byz. The alliance with Kamytzes did not last long. Dobromir accepted Byz. sovereignty and married the emperor's granddaughter Theodora. Thereafter, he disappears from the sources.

- A.K., C.M.B.
DOBROTICA (Τομπροτίτσας, also called Dobrotić, mostly by Rumanian scholars), a local ruler in Dobrudja; died before 1387. He was the brother of prince Balik (BalicA), whose capital was in Karvuna. In 1346 Balik sent Dobrotica and another brother Theodore to Constantinople to support Anna of Savoy. Defeated by John VI Kanta- kouzenos in 1347, Dobrotica acknowledged Byz- suzerainty. By 1357 or 1366 Dobrotica received the title of despotes. He was Balik's successor, moved the capital to Kaliakra and then to Varna, and acted, in alliance with Byz., against Bulgaria. He expanded his territory from the Byz. frontier to the Lower Danube. Dobrotica gave his daugh- ter in marriage to Michael Palaiologos, the third son of John V, and in 1373 probably supported Michael's unsuccessful expedition against Trebi- zond (Kleistheniken 2:310f). He severed depend- ency from the patriarchate of Tūrnovo and ac- knowledged the jurisdiction of Constantinople.

DOBUDRAJA, a region between the Lower Dan- ube and the Black Sea. In the 4th–6th C. the province of Scythia Minor approximately en- compassed this territory. In the 7th C. the Avars and Slavs penetrated into Dobrudja; ca.680 As- paruch passed through the region and estab- lished his capital in Pliska. The political alle- giance of Dobrudja in the 8th–10th C. is under dispute: Bulgarian historians consider it a part of Bulgaria; Rumanian scholars assert that the Byz. retained control over the Lower Danube. In the 960s Svjatoslav of Kiev claimed the estuary of the Danube, but John I Tzimiskes defeated him and reconquered Dobrudja. The Byz. constructed fortresses on the Danube and encouraged de- velopment of coastal centers (e.g., Chilia), but Dob- rudja was subject to raids by the Pechenegs and other nomads. Under Byz. control the “Roman” ethnic element (Vlachs and future Rumanians) recovered and actively participated in the Bulgar- ian revolt that led to the organization of the Second Bulgarian Empire. Byz. tried to retain the ports of Dobrudja, but was slowly driven out by the Venetians and Genoese. In the 14th C. semi-independent archontes of Slavic and proto- Rumanian origin were active in Dobrudja—Balik, Dobrotica, and others—and Mircea the Elder temporarily annexed Dobrudja to Wallachia. After their defeat of the Crusaders at Varna in 1444, the Ottomans completely occupied the region.

DOCHEIARIOU MONASTERY, located on the southwest coast of the peninsula of Mt. Athos, northwest of the Xenophontos monastery. The origins of Docheiariou (Δοχειαριou) are obscure: it was apparently first established before 1013 by John Dochearios (probably the former cellarer of Xeropotamou) at the Athonite port of Daphne, with a church dedicated to St. Nicholas. Oikono- mides hypothesizes that the monastery was trans- ferred to a new location in the mountains between 1051 and 1056 and, finally, between 1083 and 1108 was moved to its present site near the sea. By the early 12th C. its dedication had changed to St. Michael. At this time the hagoumenos Neophytos, considered the second kitar of the mon- astery, built a larger church and a fortification wall with a tower. He also acquired important properties in Chalkidike and composed a testa- ment (sometime after 1118). From the 14th C. Docheiariou was an imperial monastery. It played no role in the hesychastic controversy; its monks were more involved with temporal concerns and engaged in mercantile shipping. Docheiariou was always a cenobitic monastery inhabited by Greeks. In the early 15th C. the Russian deacon Zosima recounted that Docheiariou was ninth in the Athonite hierarchy.

The archives contain 60 acts of the Byz. period (1037–1424). The will of hagoumenos Neophytos (Docheiara, no.6.29–31, 58–60) boasts of the pre- cious textiles (pepla) he had added to the monas- tery’s treasury and of the ecclesiastical silver, books, and icons he had amassed. At present the library contains approximately 100 MSS of Byz. date (Lampros, Athos 1:233–69), of which cod. 5, a 12th-C. menologion (Treasures 3, figs. 258–68), and four Gospel books are notable for their illustration. The monastery also possesses a relief of the Ascension of Alexander, who is raised to heaven.
by griffins. Docheiariou's present buildings are almost all post-Byz.

-AM.T., A.C.

DOCTRINA JACobi NUPER BAPTIZATI (the Indoctrination [διδασκαλία] of Jacob Recently Converted), a treatise dated in 634 (Bonwetsch, infra, p.xvi) or 640 (Nau, infra, p.715). It takes the form of a pseudo-dialogue (one party only asks questions without entering the discussion) between a certain Jacob and a group of Jews. In its prologue a man called Joseph claims to have been present during the conversation of Jacob with the Jews and to have written it down. In addition to Emp. Herakleios, the title names George, the eparch of Carthage, and it is plausible to suppose that the treatise was produced in Africa.

The main theme of the treatise is the limited character of the message of the Old Testament; only the "new law" brought forth by Christ assures the salvation of mankind. An important theme of the Doctrina is the moral perversion of Jews, which Jacob illustrates by his own activities before conversion. This topic allows the author to describe (in a very vague way) some contemporary events, such as the conflict between the Blue and the Green factions, the "tyranny" of Emp. Phokas, and the Arab expansion under Muhammad. The treatise has survived both in the original Greek (without the prologue) and in Ethiopic and Slavic translations (W. Lüdtke, Archiv für slavische Philologie 33 [1912] 317).

-AM.K.

DOCTRINE OF ADDAI, 5th- or 6th-C. Syriac account of the origins of Christianity in Edessa and environs, which relies on earlier materials. The anonymous work is basically a collection of documents preserved in the archives of Edessa under the names of Hanan, the archivist of Abgar V (4 B.C.–A.D. 59), and Labūmnā bar Sānaq, the king's scribe. The documents consist of a letter of King Abgar to Jesus inviting him to Edessa, which Hanan reportedly delivered personally, bringing back an oral reply, and accounts of the sermons and miracles worked in Edessa by Addai, an apostle sent to the city by Judas Thomas after the ascension of Jesus. The same story appears in digest form, but including a letter from Jesus to Abgar, in the Ecclesiastical History of Eusebios of Caesarea (Eusebios HE 1.13). In the Doctrine of Addai the author reports that Hanan painted a portrait of Jesus, which Abgar installed in one of his palaces. Important themes in the Doctrine are apostolic succession in Edessa, the imperium Romanum as the appropriate civil milieu for Christianity, antipagan and anti-Jewish polemics, the canon of the scriptures, and divine protection guaranteed for Edessa, "the Blessed City."

-S.H.G.

DODECASYLLABLE, a Byz. development of the ancient iambic trimeter, the meter of most dialogue in classical tragedy. Early in the Byz. period, accurate trimeters were written by the long and short syllable patterns of ancient prosody. However, by the 9th C., since Greek had lost the distinction between long and short syllables, a new meter developed around two aspects of the iambic trimeter that could still be appreciated: a basic line length of 12 syllables; and a division after either five or seven syllables by the two caesura patterns of the ancient meter. To this outline was added a set of stress accent preferences that varied according to fashion and personal taste, but observed as an absolute rule a stress accent on the eleventh syllable. A learned writer like John Tzetzes, while conforming to the stress patterns, also judged dodecasyllables for their accuracy as quantitative trimeters, condemning false quantities in his own early work. Most Byz. dodecasylables, however, at least from the 12th C. onward, pay little regard to quantity, esp. the vowels $a$, $i$, and $u$ (the diphthongs $au$, $iu$, and $ui$), whose length is not immediately apparent.

Dodecasyllables were used for works of epic tone after the decline of the hexameter (e.g., by George of Pisidia) and were very frequent in
epigrams and ceremonial poetry. A small proportion of popular poetry also appears in dodecasyllable form, leaving open the suspicion that the verse may have developed at an oral level before being adopted by the written word.

DODEKAOFTON. See Great Feasts.

DOGMA (δόγμα), a term encountered in the New Testament in connection with the edict of the so-called Apostolic Council of Jerusalem (Acts 16:4) where it signifies "what seems right, or good, or reasonable." In Byz. theology, it generally retains an ambiguity, referring variously to opinions or teachings of the church, of pagans, of philosophers, or of heretics. Thus, for example, in the so-called Definitiones Patmenses (OrChrP 46 [1980] 335–37), the word dogma is understood more broadly than in modern usage that has established it as a theological term since the 17th C. In effect, what we now call dogmas, Byz. theology finds in the Creed of Nicæa and Constantinople as well as in the definitions of Anathemas of the subsequent ecumenical councils, and concretely in the Synodikon of Orthodoxy. Thus, dogma means orthodox teaching as "true concept concerning all matters" (Anastasios of Sinai, ed. Uthemann, Viae Dux, 2:6, pp. 10–12).

DOGS (sing. κύων). Used for guarding and rounding up flocks of sheep, but also for hunting or simply as a companion or pet, the dog was particularly indispensable in agricultural communities. It is the inveterate companion of David in Psalter illustration and other works depicting the young shepherd. The Farmer's Law (pars. 25 and 75–77) heavily penalized anyone who killed, poisoned, or injured a sheep dog. The guilty faced corporal punishment and had to pay double for the animal's price. The training of hunting dogs was entrusted to skylagogoi, who took charge of the hounds during the hunting expeditions of the nobility. Hunting dogs were highly prized and might be sent as gifts. The dog’s usefulness is reflected in the Kynosopion of Demetrios Pepa-
gomenos, which describes the breeding and training of dogs and the treatment of their diseases; rabies is mentioned along with observations on its symptoms (R. Hercher, Claudii Aeliani Varia Historia, Epistolae, Fragmenta [Leipzig 1866] 587–99).

The Byz. praised the dog for being man’s most faithful companion. A common and familiar theme is the dog’s revelation of the murderer of its slain master (Tzetzes, Hist. 4:131, 152). We also hear of trained dogs entertaining the public by performing various acts (Malal. 453,15–454,4). Following classical models, Nikephoros Basilakes composed an enkomion for dogs that mentions the use of guide dogs by blind beggars (Porgimnasmi e monodie, ed. A. Pignani [Naples 1983] 136,95–97). Three centuries later Theodore Gazes composed a similar enkomion dedicated to Mehemd II (PG 161:985–97). In hagiography, however, the dog is often depicted as a symbol of evil or even as the embodiment of the Devil (e.g., AASS Nov. 3:517f). Similarly, superstitious beliefs held that a dog seen early in the morning brings bad luck.

DOKEIANOS (Δοκειανός, fem. Δοκειανή), a family name probably derived from the toponym of Dók(e)ia, said to be in the Armeniakon theme or in Paphlagonia. The Dokeianoi were known in the 11th C. predominantly as military commanders; the first, Nikephoros, was katepano of Italy before 1040; in 1040/1 the post was occupied by Michael Dokeianos, who was killed during an unsuccessful expedition against the Pechenegs in 1050; Theodore, magistros and megas doux, was one of the closest supporters of Isaac I, his uncle. Another Dokeianos married Alexios I’s niece Sophia (L. Stiernon, REB 23 [1965] 228) and was granted the high title of sebastos. Anonymous epigrams (Lampros, "Mark. kod." 147f, 161f) mention their son, who died prematurely, and their daughter Irene Kornene, wife of Isaac Vatatzes. The Dokeianoi were rich: Michael possessed a mansion in Paphlagonia (Bryen. 194f), and a charter of 1110 (Lavra 1, no.59,34) mentions "a moat of the Dokeianoi" near Thessalonike; Irene Kornene, according to the epigrams, was raised in luxury, with servants and golden vessels. Despite their relationship with the Kornenoi, the Dokeianoi lost their prominence after Alexios I’s
reign; we know only that a certain Dokeianos was appointed bishop of Dyrachion in 1212. The name appears in later sources, but the late Dokeiani are mostly peasants, clerics, or scribes (PLP, nos. 5560–78). John Dokeianos was a writer in the mid-15th C. (see DOKEIANOS, JOHN).

Lit. Falkenhausen, Dominazione 93. – A.K.

DOKEIANOS, JOHN, rhetorician, copyist, and bibliophile; fl. mid-15th C. Our knowledge of Dokeianos (Δοκειανός) is based almost exclusively on the evidence of his own writings. His earliest work that can be dated with any certainty, an address to the despotes Theodore II Palaiologos, was apparently composed ca. 1436 (Topping, infra 6); he evidently lived into the 1470s, when he wrote an epigram on the deceased patriarch Gennadios II Scholarios. Dokeianos is perhaps to be identified with the John Dokeianos who was teaching at the patriarchal school in Constantinople in 1474. Dokeianos was closely associated with the Palaiologan family, both in Mistra and in Constantinople, and served as tutor to the princess Helena Palaiologina, daughter of the despotes Demetrios Palaiologos.

Dokeianos’s preserved works are primarily rhetorical, such as enkomia and addresses to Constantine XI. A monody on Catherine, Constantine’s second wife, has been attributed to Dokeianos by P. Sotiropoulos (JÖB 35 [1985] 223–29). His love of classical literature is revealed by his frequent citations of ancient authors and allusions to antiquity, and by the catalogue of his personal library, which included volumes of Homer, Hesiod, Aeschines, Xenophon, Aristotle, and Hermogenes. He was also a copyist of MSS, notably Venice, Marc. gr. 520, which includes works of Theognis and Plutarch.

DOLICHE. See Telouch.

DOME (ἡμισφαίριον), a hemispherical vault, distinguished by its pure geometry and by its centralizing role in the planning of buildings. The dome is perhaps the most characteristic feature of Byz. church architecture, lending both internal and external coherence. Domes could be built of stone (e.g., audience hall of al-Mundhir at Sergiopolis, 6th C.), tubular ceramic elements (e.g., San
DOMESTIKOS (δομεστικος), a term designating a broad range of officials, ecclesiastical, civil, and military. Prokopios (Wars 3.4.7) explains the term as the Latin form of the Greek koiminos, "companion." In the church hierarchy they were the heads of specific groups connected with order and ritual (anagnostai, subdeacons, etc.), esp. as conductors of the choirs of singers (Darrouzès, Offikia 596). In the civil service the term is known from 355 for the chief of a bureau, identical to privieros; domestiki of the sekraton or of the epiphories are mentioned on later seals. Domestikoi were influential, some of them close to the emperor, some confidants of important functionaries (O. Seeck, RE 5 [1905] 1296f). By the late 9th C. when Philotheos compiled the Kletorologion, there were two kinds of military domestikoi: the commanders of tagmata, esp. the domestikoi ton scholon, and their subaltern officers who, according to the anonymous book on tactics (ed. Dennis, Military Treatises 252.139–49), stood under the command of the comes. From the end of the 11th C., domestikoi of the themes are also known (Guillon, Institutions 1:588–93), relatively low officials who dealt primarily with theme finances. (See also Megas Domestikos.)

DOMESTIKOS TON EXKOBITON (δομεστικος των Ἐξοκοβιτων), commander of the tagma of the Exkoubitoi. The small corps of excubitores was created by Leo I as a select imperial guard and put under the command of a comes excubitorum (Jones, LRE 1:658), a post that had considerable importance in the 6th and 7th C. The first known domestikos ton Exkoubiton was Strategios, who held the title of statharios, in 765 (Theoph. 438.10–11). Bury (Adm. System 57) suggests that this change in title from comes to domestikos meant degradation of the rank, but the real significance of the shift escapes us because of the paucity of sources. In the mid-9th-C. taktikon of Uspenskij the domestikos ton Exkoubiton occupies a place inferior to all strategoi; in later taktika he was ranked ahead of Western strategoi. In the 10th-C. taktikon of Escorial we find two domestikoi—one for the East and another for the West; Oikonomides (Listes 330) hypothesizes that besides these two there was a special domestikos for Constantinople. In the 11th C. the title of the commander of Exkoubitoi became archon (Skyl. 380.92–93), and a 12th-C. his-

VITALE, Ravenna), or of brick (e.g., Hagia Sophia, Constantinople). The interior of the dome could be either a smooth hemisphere (e.g., St. Irene, Constantinople), scalloped (also known as a "pumpkin dome," e.g., Myrelaion Church, Constantinople), or ribbed (e.g., Hagia Sophia). All these methods of construction and interior articulation appear as early as the 5th–6th C. and persist to the very end of Byzantine architecture. Structurally and iconographically, the Byz. dome descended from Roman antecedents. Yet, unlike Roman examples, Byz. domes were related to basically longitudinal rather than fully centralized buildings. An ingenious system of structural supports, involving either pendentives or squinches, was developed to permit the setting of the dome over the rectilinear space of the naos. In addition to being the crowning architectural element, the dome was also the focus of church programs of decoration.

DOMENTIJAN, Serbian scholar and writer; born ca. 1210, died after 1264. For most of his life Domentijan was a monk in Hilandar on Athos, where he wrote a (very long) Life of St. Sava ca. 1250 at the request of King Stefan Uros I and in 1269/4 a Life of St. Simeon (the former king Stefan Nemanja). Both texts make an impressive display of scriptural and theological learning. They are valuable sources for the historian, but must be used with caution because they are partially derivative. Both draw on the Life of Nemanja by his son Stefan the First-Crowned; in the Life of Simeon, Domentijan copies long passages verbatim. Another unacknowledged source of motifs is the panegyric on Vladimir I by Metr. Iliarion of Kiev. The Life of St. Sava was revised by the monk Teodosije in 1290–92.

R.B.
tiorian (An.Komm. 1:151.19) uses the verb *exarcho* to describe the function of the *domestikos*. It is not known, however, whether this change was official or only due to literary taste, and whether this *tagma* was a united body of *Exkoubitori* or one of the two (or three) divisions (East, West, and Constantinople).

Some seals of the 7th C. bear the name *exkoubitori*, while *domestikos* of the Exkoubiton or the Exkoubitori appears in those of the 8th–9th C.; their titles are *spatharioi* (in the 8th C.), *protopatharioi*, and even *patrikios* (Zacos, Seals 1, no.2403) in the 9th C. Their staff included a *topoteretes*; a *protomandator*, with his *mandatores*; the bearers of ensigns; and *skribones*. This last term, which in the 7th C. probably was a dignity (see Zacos, Seals 1:3;1649) and was combined sometimes with the civil functions of *dioiketes*, *zygostates*, etc., designates in the Taktika of Leo VI (4.6) officers assigned for occasional services.

DOMESTIKOS TON HIKANATON (*domestikos* τῶν Ἰκανατῶν), commander of the *tagma* of Hikanatoi. The origin of the Hikanatoi is obscure; Bury rejects the possibility of their identification with *foederati*, stressing that there is no evidence whatever that Hikanatoi were foreigners. Haldon suggests that the regiment of Hikanatoi was modeled on the *viglia*. According to the vita of Patr. Ignatios, the office was created in 809, and Niketas (the future Ignatios) was the first appointee. Without rejecting this testimony, Bury expresses doubts, but G. Ostrogorsky and E. Stein (Byzantion 7 [1932] 193f, n.2) accept the evidence as valid. The *domestikos* ton Hikanaton is mentioned in all the Taktika of the 9th–10th C., but the evidence from the 11th C. is already questionable since the sources may use Hikanatoi as a family name. Among his subordinates were the *topoteretes*, *chartoularios*, *komites* (see *comes*), and so on. The seals of several *domestikoi* ton Hikanaton of the 9th C. are preserved.

DOMESTIKOS TON NOUMERON (*domestikos* τῶν Νουμέρων), commander of the *tagma* of the Noumera. This *domestikos* is listed in all the Taktika. The first known *domestikos* ton Nourmeron is Leo Lalakon who was active during the reign of Michael III (PG 1055:513B); one of his contemporaries, Theophilitzes, is said to have held the office of the *komes* ton teichon and that of the Noumera (*TheophCont* 655.10–11), which may mean that the two offices were not yet separate. Bury assumes that the *droungarios* of the Noumera mentioned on a 7th- or 8th-C. seal was a predecessor of the *domestikos*. J. Haldon (*Praetorians* 256–75) hypothesizes that the regiment of the Noumera was established in the late 7th C. and had close contacts with the factions. On seals of the 9th C., *domestikoi* ton Noumeron have titles of *spatharioi* and *protopatharioi* (Zacos, Seals 1:1881). The functions of this *domestikos* included protection of the palace and supervision of the city prison of the Noumera. On his staff were the *topoteretes* and *chartoularios*, as well as *tribuni*, *vicarii*, and others. The office does not seem to have survived the 11th C.

DOMESTIKOS TON OPTIMATON, governor of the theme of *Optimatoi* or commander of the *tagma* deployed there. The Taktika do not mention a *strategos* of the Optimatoi. This *domestikos* occupies in the hierarchical lists a position much lower than all the Eastern *strategoi*. Oikonomides (*Liste* 939) emphasizes his function as provider of mules for the army. Nothing is known about his role on the battlefield. The staff of the *domestikos* ton Optimaton was structured like that of other *tagmata*, including a *topoteretes*, *chartoularios*, *komites* (see *comes*), and so on.

DOMESTIKOS TON SCHOLON (*domestikos* τῶν σχολῶν), commander of the *tagma* of the *scholae*. It is plausible that this office originated from that of the *domestikos* on the staff of the *magister officiorum*, who became independent as the *magister* was assigned other duties. The first known *domestikos* ton scholon is the *patrikios* Antony in 767 (Theoph. 442.25–26). In the Taktika the *domestikos* ton scholon occupies the place below the *strategos* of Anatolikon but before the other *strategoi*. The term is rarely used in military books of the 10th C. (e.g., Dennis, *Military Treatises* 292.25).
During the reign of Romanos II the office was divided in two, *domestikoi* of the East and of the West; they are listed in the *taktikon* of Escurial (Oikonomides, *Listes* 263.23–24) but even at that time below the *strategos* of Anatolikon. In reality the *domestikoi ton scholon* was commander in chief of the army (or one of its two sections); from the end of the 9th C. the Phokas family attempted to monopolize the office. Constantine VIII and some of his successors, desiring to restrict the independence of noble families, often granted the office to eunuchs, but from the mid-11th C. the post was returned to the military aristocracy. The *me-gas domestikos* as commander in chief functioned until the fall of the empire, whereas the simple *domestikos* (known at least through 1320) became an honorary title conferred on governors and the like. The staff of the *domestikos ton scholon* included *topoteretai*, *komites* (see *comes*), *chartouariai*, subaltern *domestikoi*, and others.

DOMINICANS. The religious order founded by St. Dominic in 1215 soon became active in missionary work in the East. By 1228 it was firmly installed in the Latin Empire of Constantinople and in the Holy Land. A regional grouping within the order, the Societas Fratrum Peregrinantium, began ca. 1300, was suppressed from 1363 to 1375, then revived. It operated in the Genoese colonies in the Crimea, then in Armenia, Persia, and Georgia.

Members of the order residing in the East, esp. in the Dominican convent in *Pera*, were active as papal legates, imperial ambassadors to the papacy, proselytizers, and polemists. Many became fluent in Greek and wrote theological treatises in that language addressed to prominent Byz., including Andronikos II, hoping to persuade them to accept the Latin teachings on the process of the Holy Spirit and on papal primacy.

In 1309 the Dominican order chose Albertus Magnus and Thomas Aquinas as official teachers of theology. The writings and translations of Demetrios Kydones enhanced the influence of Thomism in Constantinople. In the late 14th and early 15th C. a number of Byz. in Kydones’ circle converted to Roman Catholicism and joined the order, including the brothers Andrew, Theodore, and Maximos Chrysoberges and Manuel Kalekas.

DOMITIANOS (*Δοµιτιανός*), diplomat, bishop of Melitene from 580, and saint; born ca. 550, died Constantinople 10 or 12 Jan. 602; feastday 10 Jan. Domitianos was a cousin of Maurice—Paret rejects Honigmann’s assumption that Domitianos was the son of Peter, Maurice’s maternal uncle. Domitianos spent 582–85 and 591–98 primarily in Constantinople as Maurice’s adviser; Pope Gregory I addressed several epistles to him. He played the key role in the empire’s Persian policy: after Chosroes II fled to Byz. territory in 591, Domitianos became his confidant, accompanied the king on his expedition to Iran, and negotiated the treaty with him. Domitianos directed Maurice’s religious policy in the eastern regions; this policy was—contra H. Grégoire (*Byzantion* 13 [1938] 395f)—intolerant toward the Monophysites. The later Monophysite tradition (e.g., GREGORY ABUC’L-FARAJ) is hostile to Domitianos, accusing him of seizing all Monophysite churches in Mesopotamia and northern Syria and of persecuting the “faithful.” He was guardian of Maurice’s children.

DOMITIUS ALEXANDER, usurper (308–09). He was *vicarius Africæ* and briefly controlled Tripolitania, Numidia, and Sardinia, as well as Africa proper. He was condemned at the Conference of Carnuntum in 308 and defeated by Maxentius, whose rule over Italy was threatened by Domitianus’s control of African grain and recognition of Constantine I. There is disagreement about the date when the revolt was suppressed (Barnes gives 309, Stein 311).

DONATION (δωρέα). Byz. law fluctuated between accepting an oral agreement as a sufficient form of the donation contract and requiring a
written contract or a certain number of witnesses (3–7). Leo VI in novel 50 established the rule that a donation whose value surpassed 500 nomismata was void without a written contract, whereas a lesser donation was valid if confirmed by three witnesses. Byz. law categorized a donation as a specific form of alienation that was usually contrasted with sale (e.g., Docheiari., no. 154). More explicit is a sigillum of Michael VIII of 1267 or 1282 (Docheiari., no. 8.14–16) that cites alternative methods of acquisition: through a kletor’s charter, through an imperial prostagma or other imperial dorea, through purchase, exchange, donation (proskenesis), or improvement of the property.

Even though the mixed form negotium cum donatione was known to Roman law, in Byz. the distinction between sale and donation became obscured, partially due to the concept of the spiritual (psychike) donation, that is, made for the salvation of the soul. Thus, in some charters (e.g., MM 4:408.33) there are clauses stating that the seller of property to a monastery did not accept the full price but granted part of the payment to the monastery as a donation. On the other hand, a transaction could be called dorea even when it was actually a sale (e.g., Kastam., no. 1 [a.1047]). The term “donation” could also cover the medieval precarium remuneratorium: thus, in 1232 Alexios Tesaiotes donated his possessions to the monastery of Lembiotissa, but the family remained on their holding, probably as monastic proskathemenoi (Kazhdan, Agrarmye otnosheniya 160f).

LIT. Zachariä, Geschichte 302–05. —A.K.

DONATION OF CONSTANTINE (Constitutum Constantini), an 8th-C. Latin document, purporting to be an act of Constantine I. Perhaps originating in the chancery of Pope Stephen II (752–57) or Paul I (757–67), it is based heavily on the 5th-C. Legenda S. Silvestri. In the document Constantine I professes his faith (confessio) and grants to Pope Silvester I several imperial insignia and privileges (donatio), the Lateran Palace, as well as Rome, Italy, and the western regions. Some scholars speculate that the Donation was fashioned to bolster Pope Stephen’s negotiating position with the Frankish ruler Pepin (741–68) against the Lombards in 754. More regard it as a papal attempt to diminish Constantinople’s authority by demonstrating that, since Constantine had offered imperial rank to Pope Silvester and since the pope had acquiesced in Constantine’s move from Rome to Constantinople (the new urbs regia), the papacy took precedence over the patriarchate of Constantinople and the pope could transfer the empire’s center from Constantinople back to Rome. Now, however, specialists minimize the document’s political aspect and assert that it was not an official, anti-Byzantine act, but rather part of the rivalry between the Lateran Palace and the increasingly prestigious Vatican Church of St. Peter (R.-J. Loenertz, Aevum 48 [1974] 245, and de Leo, infra 118f, suggest that a Greek monk wrote it in Rome’s Monastery of St. Silvester).

Nevertheless, since the Donation of Constantine contradicted the Byz. claim that Constantine’s translatio imperii had made Constantinople the New Rome, it figured prominently in numerous Latin-Greek polemical exchanges over political and ecclesiastical primacy. The chancery of Otto III declared the document fraudulent, but Pope Leo IX sent a copy to Patr. MICHAEL I KEROUARIOS in 1054, and Cardinal HUMBERT later issued a revised version to support the pope’s dispute with the Byz. emperor and the Eastern patriarchs. Yet in the 12th C. Byz. writers likewise began to appeal to the Donation. Under Manuel I Komnenos, JOHN KINNAMOS effectively used it to attack Western rulers who usurped the imperial title and to deny that popes had the right to confer it, while Theodore BALSAMON used the document to justify Kerouarios’s reaction in 1054 against the papal legates (G. Ostrogorsky, SemKond 7 [1935] 187–204). A Greek translation of the Donation, extant in MSS of the 14th C. (ed. W. Ohnsorge, Konstantinopel und der Oktzident [Darmstadt 1966] 108–23), was likely done as early as the 12th C.

DONATIO PROPTER NUPTIAS (προγαμμαία, πρὸ γάμου δωρεά). From the 4th C. onward, the
wedding gift of a man to his wife—as opposed to the “engagement gift” (ARRHA SPONSALICIA) common in earlier times—became an institution subject to special rules. According to the laws of Justinian I, the husband was obliged to provide a donatio for the benefit of his wife that was equal to her promised dowry (Nov. Just. 97 pr., 1–2). These two assets constituted the marriage property, administered by the husband with limited power of disposal. The question as to who received the donatio after the death of the husband depended on the marriage contract, which, in addition to the legal reversion of the property brought into the marriage, should provide for an equally large profit (kerdos) for either marriage partner from the fortune of the one who died first. If there were children, the widow was due the usufruct from the donatio and a portion of the property equal in size to the inheritance of a child (ibid. 127,3). If the woman married a second time, she lost her portion from the donatio (ibid. 2,1, 22,23). The Ecloga (2,3) explicitly denied the husband’s obligation to provide a donatio of equal value to the dowry and considered it sufficient that the man, “as is common,” increase the worth of the dowry through a gift. Both the Procheiron (tit.6; 9,12,13), and the Basilika (29,1,2) reproduce Justinianic law but without the prologue and the first chapter of novel 97 concerning the equivalence of the donatio and the dowry. In the Epaphroge (tit.19), the donatio appears in a form that has not yet been studied in detail but appears to partly recast that in the Ecloga; it occasioned a detailed contemporary commentary. From the time of the novels of Leo VI, the term dorea is often replaced by hypobolon.

DONATISM, named after its primary teacher Donatus, a rigorist sect that developed within the African church in the early 4th C. in the aftermath of the Great Persecution. The Donatists refused to accept Caecilian as bishop of Carthage because he had been consecrated by Felix of Abthungi, who was accused of betraying the faith under the threat of persecution. A synod of 70 rigorist bishops declared Caecilian’s elevation invalid and consecrated Majorianus in his stead. Majorianus died soon afterward and Donatus became bishop.

Shortly after the battle of the Milvian Bridge in 312 Constantine I offered financial support to the African church in the person of Caecilian. The Donatists appealed to Constantine and a commission was established in 313 under the presidency of Pope Miltiades (311–314) to hear the conflicting claims. This body condemned the Donatists, who appealed to the Council of Arles (314), with the same result. Constantine hesitated to persecute the Donatists openly, but by 316 he had personally condemned them and there was some persecution; in 321, however, Constantine ordered effective toleration. Constans I resumed persecution in 347, but the Donatists resisted, celebrated their rites in secret, and began to turn to violent reaction against government officials and the Catholic party. In 362 Julian ordered an end to persecution, but after his death Donatism was again outlawed. Attacked by Optatus, bishop of Milevis, and esp. by Augustine, Donatism nevertheless remained a vital force until the end of Christianity in North Africa.

The Donatists, who claimed that they were following the teachings of St. Cyprian, appealed to local African and rigorist sentiment. Donatism resembled Novatianism in its rigorism and ecclesiology, but its adherents went beyond most similar groups in their view of the sacramental system: they held that the validity of the sacrament depended upon the rectitude of the celebrant. By the mid-4th C. some Donatists were associated with the circumcelliones, banditlike gangs who terrorized the cities and villas of Africa. The sect was centered in the villages and countryside of Numidia; some scholars have seen the movement as a reflection of “nationalist” or social sentiment.

DONKEYS. See Beasts of Burden.

DOORS were made of a variety of materials, usually wood but also bronze; occasionally they might be inlaid with ivory (bone?) or silver.
Wooden Doors. Wood was the material most commonly used for doors. Some 20 examples survive, generally dated 12th–15th C., normally the main door of a church or of its templon. An unusual concentration is found in Cyprus (Soteriou, Mnemeia tes Kyprou, pls. 142–44). There and elsewhere, Byz. specimens are less elaborate than the 5th-C. doors of Rome and Milan. Structurally, wooden doors consist of either stiles and rails enclosing panels or vertical planks nailed to horizontals. Some small bema doors are made of a single piece of lumber; most are decorated with the Annunciation. A door at the monastery of St. Catherine on Sinai has reliefs of animals, birds, and plants. Openwork leaves survive at Ioannina (A. Zachos, Epychron 3 [1928] 220–22) and doors decorated with a geometric framework at Boulgareli (A. Orlandos, DChAE 2, fasc. 3–4 [1924] 69–73).

Bronze Doors. Byz. manufacture of bronze doors occurred in two periods—a 4th- to 7th-C. continuation of Roman traditions and a medieval revival. Although Constantine I removed from the Artemision at Ephesus the pair of doors decorated with a gigantomachy and erected them at the Senate House in Constantinople (Constantine of Rhodes, vv. 125–52), he apparently also made new bronze doors for his Forum (Preger, Scriptores 2:279f), and Constantius II did likewise (360?) for Hagia Sophia. Doors of the cathedrals of Tyre (314–17, with relief plaques—Eusebios, HE 10.4.42), and Edessa (504/5—JoshStyl, ch.89) were covered in metal revetment. Surviving from the 4th to 7th C. are both cast bronze doors—with silver inlay) in the Lateran Baptistry, Rome (461–68)—and revetted doors—at Hagia Sophia, Constantinople (with copper and silver inlay and appliqué decoration), and at the monastery of St. Catherine on Mt. Sinai (550–65). By the 9th C. techniques of manufacture of bronze doors may have been forgotten, judging by the patchwork example in the southwest vestibule of Hagia Sophia (838–40) and by cases of reuse in Constantinople in the NEA EKKELESIA (880), on the acropolis, and at the GOLDEN GATE (963). The craft was revived, however, by the 11th C. when bronze doors, often decorated with figures and inlaid with silver, were made in Constantinople for export to a series of churches in Italy: at Amalfi (ca.1060), MONTECASSINO (1066), S. Paolo, Rome (1070), Monte Sant' Angelo (1076), Atrani (1087), S. Marco, Venice (1080, 1112), and Salerno (1100), the first five having been ordered by members of an Amalfitan family that had commercial interests in Constantinople as well as Syria/Palestine. The origin of the so-called “Korsun doors” in Novgorod (Byz. or Russian?) is under discussion.

Ivory and Silver Doors, criticized by St. Jerome, are mentioned more rarely in Byz. than in Latin literature and occurred only in lavish contexts. Six (?) of the nine doors leading from the narthex to the nave of Hagia Sophia, Constantinople, were reputed to be of ivory (Preger, Scriptores 1:96.11–12, note). The elefantine pyle of the Daphne in the Great Palace, first mentioned in 802, was used by the emperor on his way to the Covered Hippodrome (De cer. 518.8). Most doors described as ivory were probably wood inlaid with bone, like the examples preserved at the Proto ton on Mt. Athos and at Elsson, restored in 1296 (G. Soteriou, EEBS 4 [1927] 327–31). Alexios I Komnenos ordered the removal and recasting of the silver decorations on the doors of the Chalkoprateia Church in Constantinople, which depicted 12 dominical feasts (E. Miller, RN 11 [1866] 362.20–23; I. Sakkelion, BCH 2 [1878] 118.10–14).

—Ch.Th.B., M.M.M., A.C.

DORMITION (κοιμησις), feast of the “falling asleep,” that is, death, of the Virgin Mary, celebrated 15 Aug. One of the 12 Byz. Great Feasts, the Dormition is preceded by a two-week lent and has an afterfeast of nine days. It has been celebrated on 15 Aug. since the 6th C., replacing an earlier feast of the maternity of Mary found on that date in the earliest Jerusalem sources (A. Renoux, PO 36.2:189–91, 354–57; M. Aubineau, Les Homélies festivals d’Hesychius de Jérusalem, vol. 1 [Brussels 1978] 145–69).

Originally a mobile celebration in Constantinople (M. van Esbroeck, Maxime le Confesseur, Vie de la Vierge [Louvain 1986] xxx), the Dormition had become a fixed feast by the time of Emp.
Maurice; it was celebrated at Blachernai (Theoph. 265f; Nikephoros Kallistos Xanthopoulos, PG 147:292AB). In the Typikon of the Great Church (Mateos, Typikon 1:368–73), the festivities began at dawn with a procession from St. Euphemia to Blachernai for the synaxis. After the liturgy, the emperor offered a banquet for the patriarch and other dignitaries (Philotheos, Kletor. 219.24–221.4). But in the 14th C., the emperor attended both vespers and the subsequent Eucharist at Hagia Sophia instead, resting in the patriarchal chambers in between the services without returning to the palace (pseudo-Kod. 245.11–15).

The variety of Byz. names for the feast, signifying either Dormition or Assumption (analepsis) (M. Jugie, La mort et l’assomption de la Sainte Vierge (Vatican 1944) 185–95; Wenger, infra 422f), reflects differing theological opinion as to whether Mary really died, as was generally believed in Byz., or had been simply assumed into heaven. Both Theodore of Stoudios (PG 99:1696C) and the Typikon of the Great Church call the feast the metastasis.

**Representation in Art.** The most important texts for the iconography are the second homily of John of Damascus on the Koimesis (ed. Kotter, Schriften 5:516–40) and the “Pastoral Letter” of John I of Thessalonike, read during orthros of 15 Aug. (M. Jugie in PO 19:344–438). Both draw on the legend, Transitus Mariae, associated with James (the Lord’s brother), which includes the Dormition in a narrative running from the Annunciation of the Virgin’s imminent death (see Gabriel) through the disappearance of her body (M. van Esbroeck in F. Bovon et al., Les Actes apoecyphes des apôtres [Geneva 1981] 265–85). The earliest preserved representations of the Virgin’s death are 10th-C. Constantinopolitan ivories, isolated litur-
DOROTHEOS, VISION OF, Greek hexameter poem preserved in a unique papyrus codex of the 5th C. (P. Bodmer 29). The poem, in 343 lines, describes the narrator’s journey to the court of heaven where he saw God, Christ, and the “swift angel” Gabriel. Christ was enthroned like a Roman emperor and surrounded by angels uniformed like Roman soldiers and court officials, and bearing such titles as domestikos, praipitositos, primikerios, ostiarios, etc. The man was severely punished for disobedience and vanity, baptized, and indoctrinated by Christ who admonished him to be modest. Probably written by an Egyptian poet, the work marks an important stage in the development of Christian epic.

DOROTHEOS OF GAZA, monk and ascetic writer; born Antioch ca. 500, died between 560 and 580. Born to a wealthy family, Dorotheos received a classical education and became an ardent book collector. He then entered a monastery near Gaza where he came under the influence of the recluse BARSANOUPHIOS, author of a polemic against ORIGEN, and his friend John the Prophet. P. Canivet has suggested that Dorotheos was forced to leave this monastery because of his sympathy with the Origenist doctrines of EVAGRIOS PONTIKOS (REG 78 [1965] 336–46). Dorotheos subsequently (ca. 540) founded and headed his own cenobitic monastery, also near Gaza. He compiled for the monks’ use a set of spiritual instructions (Didaskalai) inculcating the ascetic life. His work was frequently cited by THEODORE OF STOUTOS. The Didaskalai survive in a 9th-C. abridged revision probably made by one of Theodore’s followers; some of its 24 sections may not be authentic. The Didaskalai were translated into Syriac, Arabic, Georgian, and Church Slavonic. Eight of his letters and a small collection of maxims also survive.

DOROTHEOS OF MONEMVASIA, a name (perhaps fictitious) under which was printed a world chronicle that has survived in many MSS whose interconnections are not yet fully worked out. The first redaction ended at 1570. The chronicle consisted of several disconnected sections: biblical and ancient history; lists of Roman and Christian emperors, of Turkish sultans, and of patriarchs of Constantinople; the history of Rome from Aeneas to Emp. John VIII Palaiologos; the history of sultans to Selim II; and the history of the Greek church. The last section contains a prose version of the Chronicle of Morea, the story of the Council of Ferrara-Florence, a chapter on Venice, etc. The original compilation seems to have been based on a “popular” paraphrase of Theophanes the Confessor, Theophanes Continuatus, and the Ekthesis Chronike (which covers the period from 1391 to 1515), as well as several now unidentifiable sources (e.g., for the Komnenian period).

The identity of the author of the original is under discussion: Moravcsik (infra) was inclined to accept the authorship of Manuel Malaxos from Nauplion, K. Sathas (Sathas, MB 3, p. 67') suggested Hierotheos of Monemvasia, T. Preger (BZ 11 [1902] 4–15) hypothesized that the author was an unknown Venetian. Russo and Lebedeva (infra), on the other hand, assume that Dorotheos could be a real person, a bishop of Monemvasia in the 16th C.

ED. Bibliothekon perielexen en synopsei diaphoroum kai exochous historias (Venice 1631; rp. 17 times up to 1818).

DORY (Δόρυ), also called Doros, a region in the mountainous southwestern part of Crimea where, according to Prokopios (Buildings 3.7.13), those Goths settled who did not follow Theodoric to Italy. The kastron or phorourion of Doros was situated in Crimean Gotha; Justinian II sought refuge there in 695. A bishopric was founded in Dory either by the end of the 7th or in the 8th C. Excavation has revealed the ruins of some “cave towns” (Eski-Kermen, Mangup, etc.) in the land of Dory as well as basilicas of approximately 6th-C. date and fortifications.

The name Dory disappears after the 9th C., probably surviving in the form Theodoro (N. Bănescu, BZ 35 [1935] 35f); the name Mangup for this region is first attested in a letter of the Khazar king Joseph (ca. 960): the Goths of Dory were at this time vassals of the Khazars. There is vague evidence that ca. 1223 the towns of Gotha paid tribute to the emperor of Trebizond (M. Tichanova, MatIAssArch 34 [1953] 328f). Vasiliev’s hypothesis (infra 157f) that Constantine Gabras was sent to the Crimea after his independent rule in Trebizond had been terminated in 1140 proves invalid (Kazhdan, Arm. 91).

By the 13th or 14th C. a principedom of Theodoromanget appeared on the site of Dory. Eski-Kermen suffered from the raid of NOGAY in 1299, and probably between 1395 and 1404 Mangup

---

was under the rule of Timur; after Timur’s death, the prince of Theodoro-Mangup, Alexios, regained independence, and the principality retained it, even after the Ottoman conquest of the Crimea in 1475. Around 1425 a fortress and palace were built in Mangup and the Church of Constantine and Helena restored. Greek traditions survived in Mangup, and Greek inscriptions, both funerary and dedicatory, have been found there. In the late 14th C. the hieromonk Matthew of Khazaria wrote in Greek a poetic account of his visit to Theodoro, describing the devastation caused by the raids of Timur.

DORYLAION (Δωρύλαιον, mod. Eskişehir), city of northwestern Phrygia, on a strategic road junction controlling passage from Constantinople to the interior of Asia Minor. A major military post, Dorylaion was frequently mentioned after 741, when it was base of the revolt of Artabasdos. It was a bastion of the Opsikon theme and an aplektos; Arab raids often reached it in the 8th–10th C. According to Ibn Khurdādhbih, Dorylaion was noted for its plains, where imperial pack animals were raised, and for its hot springs. After the Turks captured it in 1086, Dorylaion lay in ruins in a man’s land frequently occupied by nomadic Turkish tribes until Manuel I took the region in 1175, drove out the nomads, and built a new fortress for defense of the frontier (P. Wirth, BZ 55 [1962] 21–29). Soon after the battle of Myriokephalon, however, the city fell to the Seljuks. Dorylaion was a bishopric of Phrygia Salutaris, under Synada. Remains of the fortifications, which surrounded the medieval hilltop town, have entirely disappeared; they indicated two periods of construction, perhaps of the 7th–8th and 12th C.

LIT. MAMA 5:xxii–xvii. —C.F.

DOUKAS (Δούκας, fem. Δούκανα, from doux, "leader, general"), a noble Byz. lineage. The hypothesis of their Armenian origin (doux being a translation of Arm. sparapat, “general”) cannot be proved. The first known Doukas was sent in the 9th C. by Empress Theodora to convert the Paelicians forcibly. The family was very prominent in the early 10th C. when Andronikos Doukas and Constantine Doukas served as military commanders; they became prototypes of two personages in the epic poem Digenes Akritas (see Doukas, Andronikos and Doukas, Constantine). It is not clear whether Andronikos Doukas, who sided with Bardas Skleros in 976, was related to the elder Doukas. One of his sons, Bardas Mongs, commanded the fleet sent in 1016 to Kharzaria (the Crimea). Again it is unknown whether Constantine X Doukas, who ascended the imperial throne in 1059, and his son Michael VII Doukas were related to the elder Doukas as affirmed by Psellus and Nicholas Kallikles; Nikephoros Bryennios even went so far as to assert that their ancestors served Constantine I the Great. A 12th-C. historian (Zon. 3:675f) wrote, on the other hand, that the old lineage died out after the unsuccessful revolt of Constantine Doukas in 913, and Constantine X was a descendant only through the female line. The 11th-C. Doukas, who originated from Paphlagonia, were generals and governors: John Doukas was katepano of Edessa in 1059 (see Doukas, John); his sons were respectively domestikos ton scholon and protostrator; Konstantios Porphyrogenetos, Michael VII’s brother, was a famous soldier, even though he died at age 20 (at Dyrrhachion in 1081).

The Doukai intermarried with many aristocratic families, including Komnenoi (the family name Komnendonoukas was used): Irene Doukaina, Andronikos’s daughter, became Alexios I’s wife; at the beginning of his reign Alexios considered her cousin Constantine Doukas as his heir apparent (see Doukas, Constantine); Irene’s brother, the protostrator Michael, was one of the most important generals at the end of the 11th C.; another brother, John, was megas doux. In the 12th C. the name of Doukas was fashionable and applied to some members of other families (Angelos, Kamateros, Vatatzes, etc.); it is difficult to identify some of the Doukai (the numerous Johns present a particular problem) and impossible to establish their connection with the imperial Doukai. Some were generals, but others served in the civil administration as logothetes, hetairiarches, or vestiaries.

The Doukai were great landowners. Their role
in cultural life was insignificant, although the despotes Andronikos is represented both in the monograms and portraits of a MS of John Klimax in Milan (Ambros. B 80 Sup.), produced between 1068 and 1078. After the 12th C. only those Doukai are known who were interrelated with other lineages and formed "hyphenated" families. Descent from the Doukai was claimed, for example, by George Palaiologos, sebastos and megas hetaireiarches, who included Constantine X Doukas and Michael VII Doukas among his "ancestors" in the painted pronaos of his monastery church in Constantinople. (See genealogical table.)

A.K., A.C.

DOUKAS, historian; born ca.1400, died 1462 or later. Neither his baptismal name nor the date and place of his birth are recorded. His grandfather Michael Doukas, who was a supporter of John VI Kantakouzenos, fled from Constantinople in 1345 and took refuge at Ephesus with the Turkish emir of Aydin. Doukas is first mentioned in 1421, living in Nea Phokaia and serving the Genoese podesta, Giovanni Adorno, as secretary. Subsequently he entered the service of the Gattilusio family, which controlled Lesbos. He went on several missions as envoy to the Ottoman sultan, visiting Adrianople, Didymoteichon, Philippiopolis, and Istanbul.

The History of Doukas begins in 1341 and breaks off suddenly in 1462, in the middle of an account of the Ottoman siege of Mytilene. Doukas was an eyewitness to several of the events he describes, and his narrative is generally considered biased but reliable. He spoke Italian and Turkish, and thus had access to Genoese and Ottoman sources of information. He is the only Byz. historian to describe the peasants’ revolt on the western coast of Asia Minor in 1416–18, led by Bürklüde Mustafa, who advocated a "communistic" way of life and proclaimed the equality of Islam and Christianity (H.I. Cotsonis, BZ 50 [1957] 397–404). In contrast to Kritoboulou’s praise of Mehmed II, Doukas emphasized the absolute immorality and cruelty of the Ottoman sultan. He viewed the Turkish conquests as God’s punishment for the sins of the Byz., but for him Fortune (tyche) was also an important element of historical causation. As a man in Frankish service, Doukas supported a policy of Union with Rome and felt that some
accommodation with the West was necessary to preserve the empire. An old Italian translation of Doukas includes an interpolated section on the battle of Kosovo Polje (M. Dinić, ZRVI 8.2 [1964] 53–67).

**DOUKAS, ANDRONIKOS**, general under Leo VI; died ca.910 in Arab captivity. A *patrikios*, Andronikos won an important victory over the Arabs at Maraş (Nov./Dec. 904, according to Arab sources). Byz. chronicles relate that Andronikos, who was then ordered to join *Himerios* in his expedition against the Arabs, suddenly revolted and “with his relatives and slaves” seized the town of Kabala near Ikonion. After Gregoras Iberitzes besieged him there for six months, he defected to the Arabs; Leo tried to persuade him to return, but through the intrigues of Samonas the Arabs learned of this scheme and put Andronikos in prison, where he probably died. His son Constantine Doukas managed to flee.

The story of Andronikos’s plot raises several questions. C. de Boor, relying on the vita of Patr. Euthymios, dated the beginning of the revolt to summer of 904, whereas A. Vasiliev (Byz. *Arabes* 2.1:181–90), trusting Arab sources, preferred the date of 906/7. R. Jenkins (*Speculum* 23 [1948] 222–25) treated the revolt as part of an aristocratic scheme by Andronikos, Nicholas I Mystikos, and the admiral Eustathios Argyros, who allegedly yielded Taormina to the Arabs in 902. Eustathios’s treason at Taormina was questioned by R.H. Dolley (SBN 7 [1953] 340–53), but Andronikos’s links with the patriarch seem substantiated by the story of Nicholas’s resistance to the *Tetragyam* of Leo VI. Epic elements color the chroniclers’ narration of Andronikos’s history, and eventually both Andronikos and his son Constantine were praised in the epic of *Digenes Akritis*.

**DOUKAS, CONSTANTINE**, general, son of Andronikos Doukas; died Constantinople July 913. Constantine arrested Samonas during his flight to the Arabs and testified in the senate that Samonas was abscending to Syria. Constantine probably joined his father’s rebellion against Leo VI and followed him to Arab territory. Eventually, however, he escaped to Byz., was promoted to the post of strategos of Charsianon and then *domestikos ton scholon*, and fought victoriously against the Arabs. After the emperor Alexander died (June 913), Constantine entered Constantinople with an army and was proclaimed emperor at the Hippodrome; he may have been summoned by Nicholas I Mystikos, who was frightened by the difficult political situation and esp. the Bulgarian threat. Unexpectedly, Nicholas changed his mind and prepared resistance to Constantine, who was killed at the gates of the Great Palace. Begun by aristocrats (including Leo Chotrophaikes, an Armenian named Kourtikios, and many relatives of Constantine), the rebellion was supported by the common people, and accordingly Constantine’s defeat led to mass executions; scores were affixed to stakes on the eastern shore of the Bosporos. Popular legend preserved Constantine’s memory: in the 930s the rebel Basil the Copper Hand assumed Constantine’s name. At the same time the aristocracy praised him and his father as heroes; traces of this glorification are found in the epic of *Digenes Akritis* and in the vita of Basil the Younger. Six miniatures in the Madrid Skylitzes MS depict Constantine’s revolt (Grabar-Manoussac, Skylitzés, nos.277–82).

**DOUKAS, CONSTANTINE**, son of Michael VII Doukas; born Constantinople ca.1074, died ca.1095. Doukas was porphyrogennetos and heir; his enamel portrait accompanies Michael’s on the Holy Crown of Hungary (Wessel, Byz. *Enamels*, no.37). He was betrothed to the daughter of Robert Guiscard. During the reign of Nikephoros III, Doukas’s mother Maria of “Alania” protected him. After the accession of Alexios I Komnenos, Doukas was again recognized as heir and affianced to Anna Komnene; they shared imperial acclamations. *Theophylaktos* of Ohrid com-
posed a basilikos logos or Paideia basilike for him. After the birth of John II, however, Constantine lost his title. In 1094 Doukas entertained Alexios at his estate near Serres. His end is unknown.

Lit. Polemis, Doukai 60–63. –C.M.B.

DOUKAS, JOHN, caesar; died ca.1088. Brother of Constantine X, Doukas was one of the eastern generals who petitioned Michael VI in 1057. During his brother’s reign, Doukas became caesar and helped suppress a conspiracy (1061). While Eudokia Makrembolitissa and Romanos IV ruled, Doukas upheld the rights of his nephew, Michael VII. The Doukas family’s enmity to Romanos appeared when Doukas’s son Andronikos caused the retreat at Mantzikert, which left Romanos in the Turks’ hands. When Romanos was released, Doukas led a coup that excluded Romanos and Eudokia from the throne in favor of Michael VII. Doukas’s sons Andronikos and Constantine led Byz. forces against Romanos, and Doukas ordered Romanos’s blinding. He introduced Nikephoritizes to Michael. In 1074 Nikephoritizes sent him as commander against Roussel de Bailleul; defeated and captured, Doukas became (half-willingly) Roussel’s puppet-usurper. Captured by the Turks and then ransomed, he became a monk to evade punishment. In 1078 he encouraged Michael to abdicate. He sponsored the marriage of his granddaughter Irene Doukaina to Alexios I Komnenos, enthusiastically joined the Komnenoi when they revolted, and helped select Alexios for the throne. He corresponded with Psellos, and the earliest known MS of Constantine VII’s De administrando imperio comes from his library.

DOUKATON (δουκάτον), rare term designating a territorial unit. Hagiographical texts of the 6th–7th C. understand doukaton as a district under the command of a doux: doukata of Palestine (Cyrol of Scythopolis, ed. Schwartz, p.150.1) or of Alexandria (in Philostorgios, HE 167.26–27). This meaning reappeared in the 10th C. Constantine VII used the term in an antiquarian context when describing the division of the Roman Empire into eparchiae, hegemoniae, doukata, and the so-called consular provinces (De them., ch.1.59–61, ed. Pertusi, p.62). For him, doukaton was both the land of the Venetian doge (De adm. imp., 28.47–50) and a part of a strategis (59.88–89). The term was also used in the treaty with Bohemund of 1108 to designate the princeedom of Antioch (An.Komn. 3:135,28–29).

DOUKATOPOULON (δουκατόπουλον, pl. doukato-pouloi), a coin referred to in some fragmentary accounts from Thessalonike of the early 15th C. (S. Kugéas, BZ 23 [1914–19] 149). Badaro called it a ducatello or duchatello and valued it normally as 1.5 keratia, thus identifying it with the smallest silver coin (approximately 1 g) then being struck at Constantinople, the 1/16th of a hyperpyron and 1/8th of a stauraton. Its name, a diminutive of “ducat,” resulted from its being a continuation of the depreciated basilikon ducat of the 1340s.

Lit. Hendy, Economy 54 of. –Ph.G.

DOULOPAROIKOS (δουλοπάροικος, from doulos (“slave”) and paroikos), a category of peasants whose nature is unclear. The term appears in four chrysobulls dating between 945/6 and 1079 that grant or confirm tax-exempt status to the douloparoi held by certain monasteries in the vicinity of Thessalonike. In addition, a passage from John Tarchaneiotes’ Diegesis (probably from the early 12th C.), describing the arrival of the pastoral Vlachs on Mt. Athos, states that these Vlachs served the monks of Athos “like douloparoi.” In these sources douloparoi seem to bear no fiscal or service obligations toward the state and their status seems to be hereditary. Oikonomides suggests that douloparoi were agricultural slaves and freedmen who held land from their masters in return for corvées and a part of their harvest. On the contrary, Litavrin (Viz. Obiscestuo 86) considers douloparoi as peasants working on demesne lands and possibly identical with akeimones and aporoi.

It remains unclear whether douloparoi can be equated with the douleutai and douleutoparoi (MM 5:11.19) of documents of the 13th C. A charter
larger district, sometimes called doukaton: Antioch (after 969), Chaldia (969), Thessalonike, Adrianople (after 971), Mesopotamia (976), and Italy. The doux of Koloneia is mentioned in the story of the Forty-two Martyrs of Amorion (ed. Vasil'evskij, Nikitin, 29-36), but this may not reflect official terminology. H. Ahrweiler (BCH 84 [1960] 65ff) identified doux with katepano. The term was also applied to the domestikos ton scholon (N. Oikonomides, TM 6 [1976] 142) and, along with megas doux, designated commanders of the fleet. After the 12th C. the term lost its prestige and the governors of small themes were called doukes (D. Angelov, BS 12 [1951] 60).

DOUR (μπούρις, Lat. dux), general. The term dux acquired a technical sense at the time of Diocletian (first mentioned in 289) when it designated the military commander of limitanei stationed within the borders of a province, with the official title dux limitis provinciae illius. The mobile troops of comitatenses were put under the command of the dux by Anastasios I in 492. The dux normally functioned separately from the civil administration; only in a few provinces (Isauria, Mauretania, the Thebaid) did the governor combine both military and civil functions. Also exceptional were cases when the dux administered troops stationed in several provinces. With the decline of the Roman administrative system, the term dux came to be employed to indicate a subaltern officer, merarches or commander of a moira (Strategikon of Maurice 1.3.12-13), while the governors of themes were eventually called strategoi.

From the 2nd half of the 10th C. the term was revived to indicate the military commander of a
and dowry deeds show. However, deviations from these norms did exist; many are documented in the Ecloga, the Epanagoge, and certain treatises and scholia.

M. Th. F.

DOXOLOGY (δοξολογία, lit. "glorification"), a liturgical formula of praise, esp. the concluding exclamation (ekphonesis) of a prayer. Simple doxologies, used with great frequency in liturgical services and by church fathers to conclude sermons, are found already in the New Testament. As a response to the Arian crisis (see ARIANISM), Trinitarian doxologies ("Glory to the Father through the Son in the Holy Spirit") were leveled ("Glory to the Father and to the Son and to the Holy Spirit"). The "Great Doxology," or Gloria ("Glory to God in the Highest"), an elaboration of Luke 2:14 sung only at orthros and apodeikticon, is to be distinguished from the widely used "Lesser Doxology" ("Glory to the Father").

R. F. T.

DOXOPATRES, JOHN, 11th-C. rhetorician, commentator on APITHIONOS and HERMOGENES. It is unclear whether Doxopatres (Δοξοπατρής or Δοξαπατρής) used their works in the original or via Byz. commentators, such as JOHN GEOMETRES, whom he cites in his writings. The life of Doxopatres is obscure. He quoted an inscription from the apse of Hagia Sophia in Constantinople praising Romanos III for his generous donation of 50 "talents" of gold (Mercati, CollByz 2:291f). He also wrote an ETHOPONIA on the words that Michael V would have pronounced after his dethronement. 'Tzetzes referred to Doxopatres' works.

A. K.

DOXOPATRES, NEILOS, theologian and canonist of first half of 12th C.; baptismal name Nicholas. Doxopatres (Δοξουπατρής) held a combination of ecclesiastical and secular offices in Constantinople: deacon of Hagia Sophia, patriarchal notary, and imperial nomophylax; his title was protoproedros of the protosynkelles. Before 1142/3 he took the monastic habit and left for Sicily, where he worked at the court of Roger II. He was commissioned by Roger to write a treatise on the five patriarchates (first in the form of an epitome), in which he not only attacked the concept of Roman PRIMACY, but also developed the idea of Constantinople's superiority in the PENTARCHY. In so doing Doxopatres differed radically from those southern Italian Greeks like PHILAGATHOS who defended papal primacy (J. Siciliano, BSIEB 6 [1979] 175). This book on the patriarchates exists also in an Armenian translation. G. Mercati (ST 68 [1935] 64–79) attributed to Doxopatres an anti-Latin polemical treatise titled On Oikonomia, of which only two books are preserved. Doxopatres produced marginal notes to ATHANASIUS of Alexandria.

Ed. F. N. Finck, Des Nilos Doxopatres "Taxis ton patriarchikon thronon" (Marburg 1902).

DRAMA (δράμα), ancient term designating action on a stage. With the disappearance of the THEATER, the term lost its literal meaning and was used either metaphorically (e.g., drama of life, of the world), or came to signify "story." Sometimes the term drama or its derivatives were applied to works in DIALOGUE form produced not for the stage but reading: thus CHRISTOS PASCHON is variously titled in the MSS as hypothesis dramatike, tragedy, or just stichoi (verses). The term could be used to characterize a romance; for example, Photios describes the romance of HELIODOROS and some other ancient romances as dramatikon. A later romance, that of Eusathios MAKREMBOLITES, was also called a drama. The term was used fig-

DREAMS AND DREAM VISIONS. In the medieval world dreams and dream visions were considered significant sensory phenomena that could predict the future or grant understanding. This belief derived partly from classical traditions. At the same time, church fathers accepted the dream as a regular means of divine revelation (M. Du laey, Le rêve dans la vie et la pensée de saint Augustin [Paris 1973] 35–127). Dreams were considered to have played a critical role in the conversion of non-Christians, in the lives of saints, and in imparting divine knowledge. Problems resulted, however, from the acceptance of dreams: (1) dream interpretation had been connected intimately with pagan divination and augury; (2) if God could speak in one’s dreams, then so could the devil and demons; (3) some heresies like Gnosticism and Montanism manipulated dreams to assail Orthodoxy and to sanction its own doctrines; and (4) a dream could have earthly causes (physiological, psychological, or intellectual factors). Therefore, Byz. writers concentrated on the classification of dreams by type and provenance in order to determine what sorts of dreams had a divine origin and therefore were authoritative.

Many conflicting systems of dream classification existed (A. Kessels, Mnemosyne 22 [1966] 389–424); the most common was the fivefold system, based on the dream’s prophetic ability. The enhypnion and phantasma were nonpredictive dreams: the former is caused by mental or physical distress or a preoccupation with daily concerns, while the latter is the distorted image that a dreamer perceives between the sleeping and waking state. Three types of dreams were significant: the oneiros, a symbolic dream that usually required interpretation; the horama, or prophetic vision; and the chrematismo, a dream wherein God or some divine emissary proffers information or advice. At first, the horama was emphasized because of its greater religious authority and the nonsymbolic clarity of its contents; moreover, because of Iconoclasm, dream images were viewed as suspect and thus the dream came to be considered an inferior activity of the human soul.

Despite an influx of Arabic texts on dreams and a growing interest in pagan dream interpretations (Artemidorus of Ephesos, a dream interpreter of the 2nd C., was known to the Souda and the Philopatris), oneirocriticism became thoroughly Christianized, with dream books (oneirokeftika) passing under the names of biblical or historical personalities. The Oneirokeftika of Achmet Ben Sirin is the best known example of Christian dreamlore. The cult of saints was closely interwoven with dreams used for predicting the future and for healing the sick, whereas demonic visions, esp. of sexual character, were condemned. Imperial propaganda also employed the dream topic in order to demonstrate the divine origin of the emperor’s power.

– S.M.O.

DRIMYS (Δριμύς), a family name meaning “sharp” or “angry” (Koukoules, Bios 6:484). In the mid-11th C. Psellos (Scripta min. 2:69.17) referred to a “very noble” Drimys involved in litigation over a property. Leo Drimys, spatharakandatos and strategos, known only from his seal, may have lived even earlier. A different Leo, vestes, is known from another, later 12th-C. seal: he was a governor (judge or katepanos) of Bulgaria. Zlatarski (Ist. 3:17) identified him with the “župan or satrap of Bulgaria” mentioned in Ansbart’s chronicle. Demetrios Drimys was governor (prator) of Hellas and Peloponnesos in Andronikos I’s reign and judge of the velum and protoasekretis under Isaac II. Members of the Drimys family did not occupy high posts thereafter, except for Dionsios Drimys, parakoimomenos ca.1300. John Drimys, a “Westernner” and priest in Constantinople, pretended to be a relative of the Laskaris family; in 1305, backed by the Areites and probably by the lower classes, he organized a conspiracy against Andronikos II (I. Ševčenko, Soc. & Intell., pt.IX [1952], 149f). The synod of 1305 condemned Drimys and he was banished. V. Laurent’s attempt to identify him with another pro-Laskaris con-
spirator, Glykys, does not seem valid (A. Kazhdan in Charanis Studies 79–81). According to Ševčenko, it is tempting to associate the arrest of Manuel Moschopoulos with Drimys’s plot.

LIT. PLP, nos. 5827–32. —A.K.

DROMON (δρόμων, “runner”), a term first used in the 5th C., generally referring to several similar types of decked warships emphasizing speed over weight, which became the mainstay of the Byz. navy. Prokopios (Wars 3.11.15–16) describes swift dromones powered by one bank of rowers, but later sources indicate two banks, one above the other (Taktika of Leo VI, 19.7). The dromon also had two masts, sometimes three, supporting triangular lateen sails. Its standard length is calculated at approximately 40 m, the breadth at 5.5 m. Smaller dromones carried a complement of 100 men, but larger types could carry as many as 290 or more (De cer. 670.3–6). Offensive weapons included a ram fixed to the prow and a launcher shooting Greek fire mounted on the forecastle. An important advantage over Arab vessels was the wooden tower (xylakastron) amidships from which catapults and archers could fire down on the enemy, while hides soaked with water were hung along the sides to protect the ship against enemy incendiaries. In combat their sails were furled and the masts lowered; a sea battle in the 11th-C. Kynegetika MS (Furlan, Marciana 5, fig.36a) shows mastless vessels, their sides protected by shields between which project eight or ten oars. Their shallow draught also made them useful for amphibious operations, as evident from Nikephoros II Phokas’s efficient disembarkation of his army on Crete in 960 (Leo Dic. 7.15–8.12).

DROMOS (δρόμος, lit. “course”), also the “imperial (demosios) dromos” (John Lydos, On Magistacies 2.10.24, 29), Latin cursus publicus, the system of imperial post and transportation. The state post that existed during the early Roman Empire was reorganized by Constantine I or by Diocletian. It consisted of two sections: the regular (platys) dromos for goods and the accelerated (oxyx) dromos for imperial officials and their baggage. The former was served by oxen pulling carts (angareia), the latter by horses and mules. It was forbidden to harness horses to carriages. On the roads, stations (mansiones, Gr. stathmoi) were established to change animals and to rest; they served also to collect goods for state transportation. Prokopios (SH 50.9) says that a rider without baggage could cover a distance of 5–8 stathmoi a day. Control over the dromos belonged to the department of the praetorian prefect who was the only official to grant evictions, the documents entitling a person to use the dromos. Eventually, the surveillance of the dromos was taken over by the magister officiorum and in the 7th or 8th C. by the logothetes tou dromou. According to seals, there was a distinction between Western and Eastern dromoi. The provision of animals, carriages, and hay was a burden imposed primarily on the exkoussatoi of the dromos. A chrysobull of 1109 speaks of the “burden of dromos and shipping” (Laure 1, no.58.8–9), and charters of tax exemption include a clause concerning angareiai and additional angareiai (parangareiai) just after “the supply of grain” (Patmou Engrapha 1, no.5.74–75). The term demosios dromos was employed also for the roads themselves (Iuvr. 1, no.22.19).

DROUGOUIBITAI (Δρουγουβιται), the name of two settled groups of Sklavenoi, one in southern Macedonia (between Thessalonike and Berroia) and another in Thrace around Philippopolis. The first vowel appears variously in the sources as “a,” “o,” and “ou.” The name is suspiciously close to the “DREGOVICI” of the Kievan chronicle. Vasmer (Slaven 177) suggests a Slavic etymology, but O. Pritsak (SetStu 30 [1983] 404) proposes a Turkic derivation. They appear in the Miracles of St. Demetrios together with four other Sklavene groups, among them the Sagoudatay, who lived along the left bank of the Bistrica River, southeast of Thessalonike. The Drougovibitai of the Miracles had their own “kings.” They paid tribute to Byz. and were required to go to war as allies of Byz.

The name survives in later documents. A charter of 897 mentions the village of Dragobountoi (Laure 1, no.11.15–18); a certain Dragoboundos was a neighbor of the Iveron monastery in 1047
DROUNGARIOS (δρογγαρίος), a military rank first mentioned in the early 7th C. During the 7th and 8th C., a droungarios in the provincial armies (themata) represented a high rank, immediately below tourmarches and above komes, and in command of a droungos of as many as 1,000 men, later a bandon of between 200 and 400. However, 9th- and 10th-C. sources indicate a gradual decrease in the authority of the droungarios. In the 911 expedition to Crete, the droungarioi commanded no more than 100 men each (De cer. 656.14–15), and in 949 the droungarioi figure only slightly higher than the common soldiers in rank and pay (De cer. 666.19–20, 667.10, 669.9). By the 11th C., droungarios and komes were equivalent ranks (Kek. 294.21–22), eventually merging into the combined office of droungarokomes.

DROUNGARIOS TES VIGLAS (δρογγάριος τῆς βιγλᾶς), or of the arithmos, commander of the tagma of the vigla. The first mention of this droungarios is in the work of a 9th-C. chronicler (Theoph. 466.3–5) who relates that in 791 Empress Irene sent the spatharios and droungarios tes viglas Alexios Mosele against rebellious soldiers in Armeniakon. The major function of this droungarios was guarding the emperor on expeditions and in the palace. The droungarios was the emperor’s confidant and an active military commander. In the 10th C. represented among the droungarioi tes viglas are generals and members of aristocratic families such as Eustathios Argyros, John Kourkouas, and Manuel Kourtikios. Under the command of the droungarios were officials such as the topoteretes, chartoularios, and komites (see Comes); one of these, the akolouthos, is known only for this tagma.

About 1030 the function of the droungarios tes viglas changed radically (N. Oikonomides, TM 6 [1976] 133f.), and he became a member of the judiciary. Eustathios Rhomaios, author of the Peira, occupied this post. From the second half of the 11th C. the epithet megas was added to this title (Laurent, Corpus 2, nos. 891–97). The droungarioi as judges were primarily members of the civil nobility—from families such as the Keroularioi, Kamaferoi, and Makrembolita; among them are several writers such as John Skylitzes, John Zonaras, and Gregory Antiochos. On the other hand, Constantine Komnenos and a certain Kontostephanos were probably not droungarioi tes viglas, but droungarios tou ploimou (A. Kazhdan, BZ 76 [1983] 384). Droungarioi tes viglas existed until the end of Byz.; pseudo-Sphrantzes (Spht. 340.31–32) equates them with the chief of the Janissaries.

tou ploimou. The role of the navy having diminished in the 11th C., the droungarios of the fleet, now called droungarios tou stolou, commanded primarily the battleships of Constantinople (Oikonomides, TM 6 [1976] 146). Even though under the Komnenoi the post was given the epithet megas, the droungarios lost his preeminence in the navy and was replaced by the megas doux; nonetheless, the post of the megas droungarios remained highly ranked, and in the 13th and 14th C. it was held by members of the families of Gabalas and Mouflon. The staff of the droungarios included the toptoteretes, chartoularios, komites, and others. C. Mango (RSBS 2 [1982] 299f) hypothesized that a chartoularios of the navy existed in the 7th C., but there is no direct evidence to support this hypothesis. The function of the komes of the hetairia, who was under the droungarios, is disputed; Bury (Adm. System 111) considered him a commander of foreign marines, while Oikonomides (Listes 340) argued he was commander of a special detachment of guards.

DROUNGOS (δρούγγος, δρόγγος, from the German thrunga), a word with three meanings. (1) Prior to the 12th C., a droungos was a subdivision of the army of a theme, commanded by a droungarios; it was larger than a bandon but smaller than a tourma. (2) From the end of the 12th C., the term designated certain mountainous areas of Attica, Lakonia, and Epiros, and was synonymous with zygos (“mountain range” or “pass”). (3) During the 13th and 14th C., the term was applied to the military or paramilitary corps assigned to such mountainous areas.

DRUM, a cylindrical, polygonal, or, less frequently, square element providing visual and structural support for a dome. The drum served to elevate the cupola and accommodate windows illuminating a building’s interior. It developed from an essentially buttressing function in Roman domes. In 6th-C. architecture, the drum became a more open system of independent wall buttresses separated by windows, directly related to the internal, structural ribs (e.g., at Hagia Sophia, Constantinople); yet a drum does not actually elevate the dome above its base (hence the term “false drum”). From the 9th C. onward, drums were used almost exclusively to elevate and visually accentuate domes externally. Through the 13th C. drums tended to be relatively squat, but in the 14th C., their proportions became considerably attenuated (e.g., Holy Apostles, Thessalonike). Drums also underwent a process of increasingly more elaborate external articulation. From simple geometric forms (cylinder, octagonal, or polygonal prism), they evolved into highly elaborate structures through the use of engaged colonnettes, recessed arches, surface textures, and other treatments.

~S.C.

DRUNKENNESS (μέθη) was condemned as a grave sin and social evil by the church fathers, such as Basil the Great in his homily Against Drunkards (PG 31:444–64). In actual practice, however, wine drinking was a popular pastime, in private, at banquets and public feasts, and in taverns. The Book of the Eparch (19:3) prohibited the operation of taverns on Great Feasts and Sundays before the second hour of day, and ordered them closed at the second hour of night. Patr. Athanasios I (Ep. 44:22–26) urged Andronikos II to fine anyone entering a tavern for the purpose of drinking, from Saturday evening to Sunday. Byz. moralists condemned drunkenness; one historian (Nik.Chon. 54:54–56) saw in alcoholism a principal reason for the decline of the empire. Some emperors were presented by historians as drunkards, for example, the Greens are reported (Theoph. 296.25–27) to have mocked Phokas, exclaiming, “You have drunk again of the cup; you have lost again your senses”; it is unclear whether it was a genuine insult or an apotropaic incantation. Michael III was presented by hostile historiography as a drunken sot, a characterization that may be fabricated. Literati used the theme of drunkenness for parodies—Manuel II’s diatribe Against Drunkenness or grotesque vernacular verses like the Physiological Tale of Peter Zyphomoustos, the Father of Wine (G. Protopapa-Boufoulidou, EEBS 39–40 [1972–73] 594–611)—or for mild ridicule, as in Psello’s

DUALISM is a modern notion, probably first used by Thomas Hyde (1700) in his Historia religiosi veterum Persarum. Technically, it denotes religious understandings, worldviews, or philosophical theories in which there appear two original principles fundamentally irreconcilable and opposed to one another. It may also include those religions typified by an eschatological dualism, for example, Manichaeanism and most systems of Gnosticism, which see an eschatological superiority of good over evil. Byz. also encountered dualism among the adherents of Messalianism (Euchitai), Paulicians, and Bogomils or Phoun- dagiagites.

In a broader sense one can speak of an anthropological dualism. The Platonic doctrine of the soul and intellect predominant in Byz. emphasized their distinction and thus implied a dualistic conception of the body, of matter, and of the imagination. Byz. adopted an ethical dualism inherited from the New Testament. This appears esp. in the Gospel of John in the contrast between the world of darkness and the Kingdom of Light; but while this referred to the fundamental contrast stemming from belief and nonbelief, it could be converted into an ontological statement.

—K.-H.U.

DUBROVNIK (Lat. Ragusium; Gr. Ραοῦσιον, Ραγουσιον; Ital. Ragusa; Slavic Dubrovnik), port city and fortress in DALMATIA. It was founded probably in the 7th C., according to Constantine VII Porphyrogennetos, by refugees from ancient Epidaurus, which was destroyed by the Slavs and Avars ca.615. It was under Byz. authority; an Arab siege in 866–67 strengthened the Byz. presence. The city remained under Byz. domination until 1205, with intermittent Venetian (1000–1030) and Norman rule (1081–85, 1172, 1189–90); it became an archbishopric in 1022. For a while in the 11th C. it was the seat of a Byz. theme. It was under Venetian control from 1205 to 1358, and then became a self-governing patrician city-state under Hungarian protection until 1526.

An important center for maritime commerce, Dubrovnik played a prominent role as intermediary in the metal trade between the Balkan hinterland and the West in the 13th–15th C. In the 13th C. representatives from Dubrovnik signed three treaties with the despotate of Epiros that granted their merchants free trade in Epiros on the condition of paying 3 percent kommerikon: only the purchase of grain was restricted and special customs duties had to be paid for weaponry and horses. If there was a treaty with Andronikos II of ca.1320 (Reg 4, no.2433), it was of short duration, since Dubrovnik sided with Venice against Byz. In 1451 the city received new trade privileges from Constantinople, through a chrysoibull of Constantine XI, and from the despotate of Morea, through argyroibrin of Thomas and Demetrios Palaiologos (M. Andreeva, BS 6 [1935–36] 110–65).

Dubrovnik became a very prosperous, strongly fortified city, with remarkable urban development (well-planned and paved streets, stone houses, churches and palaces, a sewage system, an aqueduct, medical services, pharmacies, a hospital, an orphanage, etc.). Byz. interest in Dubrovnik is reflected in a description of the city by Chalkokondyles (2:285, 15–23), who emphasized that Dubrovnik, founded by the "Illyrians" (evidently Slavs), was governed by good laws in an aristocratic manner.

—B.K., A.K.

DUN (Δούβις or Τίβιν), early medieval capital of ARMENIA on the east bank of the Azat River some 20 km south-southeast of modern Erevan. Duin may have been founded in the 4th C. (Moses Xorengač'i, 3:8 vs. pseudo-Pawstos Buzand, 3:8), but it probably did not replace Artašat as capital until a century later. After the Arsacid dynasty fell in 428, Duin became the seat of the Persian and then the Arab governors of Armenia as well
as of the Armenian *katholikos* until the 9th C. The city was captured by both Herakleios (629) and Constantine IV (652/3), but it did not remain in Byz. hands. In the Bagratid period Duin did not regain its status as capital; Muslim emirs controlled it more often than Armenian kings. The last Byz. attempt to reconquer Duin in 1045 failed.

Despite the great earthquake of 893 which nearly destroyed the city, recent excavations attest its importance, and both Prokopios (*Wars* 2.25.1–3) and 10th-C. Arab geographers praise Duin as an international trade center famous for its textiles. The city continued to flourish under the Zak’arids when the Georgian queen T’amara used it as her winter residence after 1203; only in the 14th C. did Duin gradually decline as a result of the Mongol conquest of Armenia.

**DUIN, LOCAL COUNCILS OF.** The first church council at Duin, convoked in 505/6, was directed against Nestorianism; the Armenian church accepted the *Henotikon*, underscoring its anti-Chalcedonian tendency, and thus took the first step toward Monophysitism. These anti-Nestorian ideas were further developed in the “Letter of the Armenians to the Orthodox in Persia.”

The second synod, of 554, formally rejected the council of Chalcedon. Hr. Bartikjan (*Istočniki dlia izučenija pavelikaniskogo dvizhenija* [Erevan 1961] 26–31) questions the traditional view that the synod dealt not only with Nestorianism but also Paulicianism and that its decisions are the first evidence concerning the Paulicians in Armenia.

**DUKLJA.** See Diokleia; Zeta.

**DURA EUROPOS** (now Sâlihiyyah in Syria), Seleucid/Roman settlement on the Euphrates River near the Persian frontier, destroyed after it fell to the Sasanians in 256. For Byz. studies Dura Europos is notable, among other things, for the wall paintings in its synagogue (now removed to Damascus) and other cult buildings and for its Christian “house church.” Of a type that preceded the congregational church built on the plan of a public building (e.g., the basilica), this house church was an ordinary house, built ca. 240, whose rooms surrounding a courtyard were designated for congregational activities (instruction, celebration of the Eucharist, baptism). One room was decorated in fresco with individual narrative scenes from the Old and New Testaments. By contrast, the walls of the synagogue were painted with continuous bands of interrelated scenes from the Old Testament, and the Mithraeum and Temple of the Palmyrene gods displayed carved and painted sacrificial scenes. The figures in all types of compositions are distinguished by frontality and an intense gaze directed outwards. Most of these iconographic, compositional, and stylistic features occur later in Byz. art.

**DURRÊS.** See Dyrrachion.

**DUŠAN.** See Stefan Uroš IV Dušan.

**DUX.** See Doux.

**DYER** (*bêoîs*). The profession was common in the late Roman Empire, and the term *baphes* often appears in papyri (Preisigke, *Wörterbuch* 1:261) and inscriptions (J.-P. Waltzing, *Études historiques sur les corporations professionnelles*, vol. 3 [Louvain 1899] nos. 121–28). Basil the Great (PG 31:568A) uses another term, *deusopoi̇s*; this dyer prepared a vat for tincture (*baphe*) and then dyed fabric in *purple* or some other color. “I imitate *deusopoi̇s*,” says Theodoret of Cyrhhus (PG 81:232A), “by imbuing the water of the holy baptism in the color of blood.” A *deusopoi̇s* worked in the Stoudios monastery in the early 9th C. (Dobrokloškij, *Feodor* 413). An epitaph of a young Jewish dyer was discovered in medieval Corinth (J. Starr, *BNJ* 12 [1936] 42–49). The *Book of the Eparch*, however, does not mention a guild of dyers, even though *Peira* 51.7 cites *baptike*, the dyeing profession, as an example of a somateion.
The Book of the Eparch itself twice mentions ba-phika, dyes that were imported from Syria and sold by perfumers (myrepsi), and, in the chapter on serikarioi, the legislator prohibited dyeing silk with blood. It is difficult to explain this silence on the dyers' guild; serikarioi could have dyed silk themselves, but it is also possible that they dealt with a somatikon of dyers omitted from the Book of the Eparch. Nicholas I Mystikos (Letters, no.139,11–13) emphasized the durability of Byz. dye, which could not be washed out.

-A.K.

DYING. Byz. writers often described the process of dyeing, both in cases of massive numbers of deaths (during a plague, hostile invasion, etc.) and in individual instances. Some descriptions of this kind are conventional and standardized. Thus, the death of pagans and heretics was presented contemptuously—a legend depicted ARIUS as dying in a public lavatory—and their physical sufferings were enormously exaggerated (e.g., Theoph. 427.25–28, 448.12–21). Martyrs and saints, on the other hand, were typically represented as dying peacefully, without pain; they had a positive attitude toward death, rejoicing at their approaching union with God. Other descriptions contain valuable observations (e.g., Anna Komnene's detailed depiction of her father's death), are sincere in their sympathy (Prodromos's image of his dying friend, Stephen Skylitzes), and, in contrast to the usual static portrayals, acquire dynamism in displaying the decay of the human body (Ljubarskij, Psell 241f).

Confession and the eucharist were administered to the dying by a priest; unlike the Latin church, Byz. priests also performed the uncion of recently deceased people as well as the sick and moribund. Many Byz. tried to assume the monastic habit before they died: a 12th-C. historian (Nik.Chon. 221.52–222.64) describes the last hours of Manuel I, for whom the courtiers were unable to find a monk's cloak of proper size. Pious people on their deathbed expressed concern about their relatives or brethren; thus, Lazaros of Mt. Galistos allegedly had died and was being lamented by his monks, when he unexpectedly opened his eyes and signed the typikon of his monastery.
-AP.K. A.K.

DYNAMIC STYLE, a term introduced by Demus (infra) to identify and characterize a highly mannered stylistic trend datable toward the end of the 12th C. Distinguished by elegant, often elongated figures, contorted poses, and esp. by an unnatural reduplication of thick, undulating drapery folds (e.g., at the overfall of the himation and the hem of the chiton), the dynamic style was first recognized in a series of geographically separated, dated mural cycles (Kurbinovo, Lagoudera, Monreale). Undated icons and MSS have more recently been linked to (and dated according to) this stylistic trend.

-G.V.

DYNAMIS (Δυναμις), the embodiment of Power, or Strength, personified as an armed, winged female. Ultimately derived from the goddesses who protected warriors in Classical art, Dynamis attends David in his fight with Goliath in the Paris Psalter (Cutler, Aristocratic Psalters, fig.248) and in the illustration of marginal Psalters; she is opposed to Alazoneia (Boastfulness), who abandons the giant. A similar but unidentified figure protects David on sarcophagi of the 4th and 5th C.
-A.C.

DYNATOI (δύνατοι, lit. "powerful"), legal term designating prominent office- or titleholders potentially capable of using their positions to aggrandize themselves at the expense of weaker neighbors. According to the normative formulation of Romanos I Lekapenos (Zepos, Jus 1:299.1–9), the dynatoi were comprised of the following categories: high officials of the army, central bureaucracy, and provincial administration; magistroi, patrikioi, and holders of senatorial dignities; metropolitans, bishops, and hegoumenoi; and administrators of imperial and ecclesiastical foundations. As this definition was predicated upon social rather than economic status, the dynatoi probably included some possessors of modest fortunes, but substantial wealth was considered a normal attribute (Zepos, Jus 1:210.5–11). The highest posts and dignities were frequently, although never hereditarily, transmitted among a
limited number of families, some of which by the 11th C. had begun to form an inchoate aristocracy.

The 10th and 11th C. witnessed increasing, at times forcible, encroachment by the dynatoi on peasant landownership, threatening the empire’s social equilibrium and jeopardizing its chief source of taxes and soldiers. Emperors from Romanos I to Basil II enacted legislation to arrest this phenomenon as well as to curb the particularistic influence exercised by the dynatoi over provincial society at the expense of centralized imperial authority. The earliest novel directed against the dynatoi, that of Romanos I, used to be dated 922 (Reg 1, no. 595), but this date is questionable; the first dated edict (Reg 1, no. 628) is that of Sept. 934, which bars dynatoi from obtaining peasant lands. Basil II subsequently voided all such acquisitions made after this date and abolished the 40-year statute of limitations that had hitherto protected these transactions (Reg 1, no. 783). Special restrictions were placed upon landholdings of powerful monasteries and upon the alienation of stratiotika ktemata to dynatoi, and dynatoi were forbidden to retain tematic soldiers in their personal service or to interfere with local commercial fairs; they became liable—through the allelengeyon—for the tax arrears of poorer neighbors.

The term dynatoi was used in charters as well as in law codes: a judge’s decision of 952 deals with an allotment encircled by the lands of dynatoi, so that no weak neighbor could exercise the right of protimesis over it (Lauria 1, no. 4.22–23); an act of 1037 excludes any dynaton prosopon from inheriting certain land (Esphig., no. 2.24). Thereafter the term fell into disuse.

A.J.C.

DYRRACHION (Δυρραχιον, Slav. Drač, Albanian Durrës, Ital. Durazzo, anc. Epidamnos), city on the eastern shore of the Adriatic Sea, the western terminus of the Via Egnatia, capital of the province of Nova Epirus. Despite earthquakes in 341 and 522 and an Ostrogothic sack in the 480s, Dyrrachion remained a major port and for-

tress in the area; Anastasios I, a native of Dyrrachion, provided the city with a triple wall and citadel, rebuilt by Justinian I. The question of Slavic settlement in the region is disputed. In the first half of the 9th C. the fortress was in Byzantine hands, and a theme of Dyrrachion was established: the strategos of Dyrrachion is mentioned in both the 9th C. Taktikon of Uspenskij (Oikonomides, Listes 49.17) and seals of the first half of the 9th C. (Zacos, Seals 1, nos. 2521, 2655); Ja. Fergus, on the basis of a letter of Theodore of Studios, hypothesized that the theme was founded under Nikephoros 1 (12 CEB, vol. 2 [Ohrid 1961] 83–92).

The city, although a metropolitan see (Notitiae CP 3.20), was a stronghold rather than an economic center as it had been in late antiquity; according to Anna Kомнене (An.Kомн. 1:142.3–13), Dyrrachion occupied only a part of ancient Epidamnos whose ramparts were ruined. The old city played an important role during Basil II’s war against Bulgaria and during the revolt of Deljan. Nikephoros Bryennios and Nikephoros Basilakes, successively doukes of Dyrrachion, revolted in the 1070s. The Normans attacked it several times: Robert Guiscard took the city in 1081, Bohemund besieged it in 1107–08; in 1185 William II of Sicily pillaged it. From the 12th C. onward, Venetians (and later merchants from Dubrovnik) used Dyrrachion as a port for the export of local products (salt, wood, hides) and tried to establish their political power over the city, but were opposed by Michael I Kомненос Doukas of Epirus, Manfred of Sicily, Serbs, and Byz. In 1392 Venice occupied Dyrrachion and held it until 1501 when it fell to the Ottomans.

The role of Dyrrachion in the Byz. ecclesiastical hierarchy gradually diminished: the metropolitan had eight suffragans in the 9th C. but none by the end of the 12th C.—its territory was taken over first by Ohrid and then by the Latin archbishopric of Bar (Antivari). By the 14th C. Albanians became the dominant inhabitants.

DŽVARI. See Mq’zet’a.
EAGLES (sing. ἀετὸς). The most majestic of birds was employed as both a sacred and a secular emblem. In myth the eagle appears as an instrument of God's will, announcing the selection of the capital or promotion to the imperial throne: Skylitzes relates the prophecy regarding the future Basil I, overshadowed in his cradle by an eagle's wing, as depicted in the illustrated Madrid MS (Graber-Manoussacas, Skylitzés, no.202). The motif of an eagle battling a snake occurs in floor mosaics, as a sculptural group in the Hippodrome of Constantinople, and probably as a military emblem (L. Maculevič, VizVrem 16 [1959] 185–202), symbolizing the victory of Good over Evil. As an aspect of imperial symbolism, the consuls carried an eagle-topped scepter, which is depicted on their diptychs. This form of scepter disappeared from coins in the reign of Emp. Philippikos. The eagle may have symbolized the emperor in the early 6th C.: J. Engemann (in Festschrift Wessel 109–15) has interpreted the Anastasios Plate in the Sutton Hoo Treasure in this light. Eagles with rings in their mouths and jeweled collars are found on imperial silks of the late 10th or early 11th C.

The date of the introduction of the double-headed eagle in Byz. has been much discussed. It was certainly employed by members of the Palaiologan dynasty (Belting, Illum. Buch 64, figs. 35–36), perhaps to suggest that the empire looked both to the East and West. It was appropriated by John VI Kantakouzenos for his footstool (Spatharakis, Corpus, vol. 2, fig.477) and by the Venetians for the state barge that welcomed John VIII. Perhaps the latest occurrence is on the pavement in the Metropolis at Mistra, where Constantine XI was crowned. The single-headed eagle continued in imperial portraits, such as that of Alexios V in the Choniates MS in Vienna (Belting, ibid., fig.15).

In patristic exegesis the image of the eagle represented a supernatural envoy, an angel, or Christ himself. As an Evangelist symbol it normally indicated John, although on occasion it was used for Mark. In the Physiologos the eagle is a symbol of regeneration. (See also Coats of Arms.)

EARRINGS (ἐνώπτια) have been found, often singly, throughout the Byz. world, mostly in funerary contexts but also in treasures. They may be made of gold, silver, bronze, gilded bronze, and/or enamel, with or without added precious and semiprecious stones or glass paste. Most are designed to pierce the earlobe as a simple hoop that fastens into a knob or ball. In the late antique period the fashion was hoops of wire, with or without additional decorations of granulation, braid, or beads. By the 6th–7th C. the popular style was a hoop or a flat lunette shape, with pendant chains ending in one or more gems, pearls, or beads. Examples of this type are worn by Empress Theodora and her ladies in the mosaic in S. Vitale, Ravenna. Gradually the lunette shape changed from a solid form to filigree; by the 10th C. it was three-dimensional and basket-shaped, with extensive granulation. This type is often hard to distinguish from Islamic jewelry. Simple bronze earrings with traces of gilding have been found in many excavations and demonstrate a popular market for "costume" jewelry, imitating pieces produced in more costly materials.

EARTHQUAKES (sing. σεισμός). Since most of the Byz. world lay within a region esp. vulnerable to earthquakes, a quake is recorded for almost every year of Byz. history, the best documented being those at Constantinople. As in pagan times, the Byz. interpreted quakes, like other natural phenomena, as heavenly portents, signifying either
forthcoming catastrophe or divine displeasure at the sins of man. To atone for the divine anger manifested through quakes, the Byz. developed various liturgies, held processions, and frequently sought the intercession of a local holy man. Sometimes relics were employed as a talisman to ward off quakes. As a perpetual reminder of the power of God’s wrath, an annual commemoration of many devastating quakes took place on the anniversary of their occurrence; some became part of the liturgical calendar, at least at Constantinople and Alexandria. The Byz. were little interested in the natural causes of quakes, but there were always a few advocates of the Aristotelian explanation that quakes were caused by the movement of winds in subterranean caverns. An 11th-C. historian (Attal. 88.22–89.2) found it necessary to refute this theory. Photios, in his sermons and in the Bibliotheca, presented the traditional view that quakes are caused by our sins; pseudo-Symeon Magistros (TheophCont 673.10–12), however, accused him of teaching that quakes were caused not by mankind’s sins but “by abundance of water.” The most significant quakes at Constantinople occurred in 365, 348, 447, 525, 557, 740, 886, 869, 989, 1064, 1296, and 1346. A full list is in Grumel, Chronologie 476–81, but a modern catalog is needed.

EASTER (Πάσχα), the feast of the RESURRECTION (Anastasis), the Jewish Passover christianized, with Jesus being the new paschal sacrifice and lamb (see AMNOS). By the beginning of the 3rd C., the focus of the feast, which originally commemorated the entire victorious passover of Jesus from death to life, narrowed to the resurrection. BAPTISM at the Vigil preceding the feast makes the Christian as well as Christ protagonist of the rising. The First Council of Nicaea canonized the celebration of Easter on the Sunday after the first full moon after the spring equinox. The Eastern use of astronomically inaccurate paschal tables and calendar led to differences in calculating Eastern and Western Easter. From the 4th C. onward, Easter was prepared for by LENT and with its fasting and CATECHUMENATE, and more immediately by HOLY WEEK. Its celebration extended through the following week, called “bright week” or “renewal,” and throughout PENTECOST until its closure (apodosis) the day before the ASCENSION.

Easter liturgy in Constantinople is detailed in the Typikon of the Great Church (Mateos, Typikon 2:82–97) and in books of ceremonial (De cer., bk.1., ch.35; pseudo-Kod. 231.17–238.4). Later Byz. Easter services, of Palestinian origin, are found at the end of the TRIODION and the beginning of the PENTEKOSTARION.

In Constantinople the Easter vigil began HOLY SATURDAY evening in Hagia Sophia with festive VESPERS, during which the customary three lections were expanded to a series of fifteen Old Testament readings, eight of which were always read, with the others added only if necessary to occupy the people until the BAPTISMS and anointings were finished and the procession was ready to enter. After the first lection, the patriarch went to the Great Baptistery, where he blessed the waters and the oil of the catechumens and incensed around the baptismal font thrice, then anointed and baptized the phoizomenoi. After the conferral of baptism, the patriarch led the neophytes, now vested in robes of white, to the Church of St. Peter just east of Hagia Sophia, where he administered to them the SACRAMENT OF CHRISTMATION (confirmation). After all had been chrismated with myron, the patriarch, accompanied by twelve bishops, led the neophytes in solemn procession, to the chant of Psalm 31[32], into Hagia Sophia to join the waiting congregation for the Liturgy, which began not with the usual TRISAGION but with the baptismal TROPAIION from Galatians 3:26. At this liturgy the neophytes completed their initiation by receiving COMMUNION for the first time.

ECCLESIASTICAL HISTORIANS, conventional name for a group of historians whose works were dedicated to the history of the Christian church. Eusebius of Caesarea was the founder
of the genre, followed by Gelasios of Caesarea, Philostorgios, Sokrates, Sozomenos, and some other writers of the 5th and 6th C. The objective of Eusebios was to show the heroic progress of Christianity from the apostolic age to the victory of the new religion; this victory was achieved primarily due to the charismatic emperor Constantine I. History acquired a providential and teleological character, the line between miracle and reality was blurred, and political history merged with the biography of the holy man. The successors of Eusebios, both orthodox and heretical, stressed the local element, the piety of saints and bishops, and native traditions. In the 6th C. Theodore Lector, in his compilation, tried to gather from his predecessors all substantial evidence concerning the development of Christianity after Constantine. Many of the works of ecclesiastical historians (e.g., Basil the Cilician, John Diakrinomenos) are lost and known only from fragments or from the Bibliotheca of Photios. After Theodore Lector, the genre practically disappears, and church history tended to be combined with general political history. In the 14th C. Nikephoros Kallistos Xanthopoulos returned to the genre when he composed his antiquarian Ecclesiastical History, based on the works of earlier church historians and some hagiographical texts.

—A.P.

ECLIPSES (sing. ἔκκλησις). The computation of a lunar or, even more, a solar eclipse was a difficult problem for Byz. astronomers, but one that was often tackled, it seems, just to display the astronomer’s superior knowledge. Early surviving examples of eclipse computations are those by Pappos and Theon in the 4th C. and by Stephen of Alexandria in the early 7th. Thereafter, until the Palaiologan period, there survives only one eclipse computation, for 1072, in a text based on an Arabic source (A. Jones, An Eleventh-century Manual of Arabo-Byzantine Astronomy [Amsterdam 1987]). Anna Komnene (An.Komn. 2:92f), however, records how Alexios I Komnenos used a prediction of a total solar eclipse to his advantage in negotiations with the Pechenegs (K. Ferrari d’Occhieppo, JOB 23 (1974) 179–84). In the late Byz. period interest in eclipse prediction revived: we have computations in the translations from

ECCLESIOLOGY (ἐκκλησιολογία), a modern term to designate the study of the nature of the church. In Greek patristic literature and Byz. apologetic and dogmatic surveys, the church was never an object of systematic theological speculation. This lack of ecclesiological development, however, was not deliberate for the church was ultimately the context of all theology, the presupposition of all theological speculation. Besides, the church as a sociological phenomenon, as a visible institution with its own administrative structure and unity within the framework of the empire, was frequently the object of conciliar and imperial legislation. Texts such as the Nomokanon of Fourteen Titles, the Epanagoge with its theory of the two powers, and the canonical corpus of the Council in Trullo are in fact a rich source of information on church structure, discipline, and ecclesiastical ideas. Equally, practical problems generated by canon law, such as the relationship between ecclesiastical and imperial legislation, were often the object of debate by canonists (cf. Balsamon, PG 104:981B–C).

In addition, from the 11th C. various authors dealt extensively with such issues as the prerogatives of a metropolitan and his relationship to the patriarch, right of appeal, celibacy, the functions of the patriarch as president of the synod, canonical questions raised by the Arsenite schism, and episcopal or clerical elections, depositions, ordinances, and resignations. Another essentially ecclesiastical problem was of course the debate over primacy (cf. Pentarchy). The church’s understanding of itself as an institution did not, however, emphasize structure or juridical categories exclusively, for these, it was realized, could never adequately exhaust or define the ultimate reality of the church as a divine and earthly community.

—A.P.
Persian and Arabic in the 1290s, in the treatises by Nikephoros Gregoras and Barlaam of Calabria in the 1330s, a number of such computations for the years 1374–1408 executed by John Abramos and his successors, and one by Michael Chrysokokkes in 1435.

Eclipses were, of course, one of those natural phenomena regarded as ominous in Byz. The texts that instructed Byz. on how to interpret these omens include Ptolemy (Astrological Effects 2, 5–10), Hephaestion of Thebes (Astrological Effects 1, 20–22), John Lydos (On Omens 9), Rhetorios of Egypt, and Theophilos of Edessa (Astrological Effects 6–7) as well as chapters of astrological texts translated from Arabic such as those of Abū Ma’shar and of Abū Hâmid al-ʿArab (“possibly Achmet ben Sirin”). The eclipse that marked the Crucifixion was often indicated in art by the averted heads of the Sun and Moon.

Observations of Eclipses and Their Use for Dating Events. Reports of eclipses in Byz. documents are to be used with caution. Although astronomically verifiable, the observational locations of most recorded Byz. solar and lunar eclipses are difficult to determine because of lack of precision in the historical records that is frequently compounded by textual corruption. Following the Aristotelian tradition Byz. scholars ascribed eclipses to natural astronomical causes, but the majority of the Byz. population interpreted them as divine signs or omens. Some eclipses were therefore invented or redated to suit a particular predictive purpose such as that of Pachymeres (Pachym., ed. Failler 159,4–6) for the death of Theodore II Laskaris in 1258. As in the case of comets, earthquakes, and fires, the annual commemoration of an eclipse (such as that of 8 Aug. 891) was occasionally incorporated into the liturgical calendar (Synax. CP 878,9–16). The most reliably attested Byz. solar eclipses occurred on 6 June 346; 28 Aug. 360; 19 July 418; 14 Jan. 484; 29 June 512; 4 Oct. 590; 5 Nov. 644; 5 Oct. 695; 15 Aug. 760; 16 Sept. 787; 14 May 812; 8 Aug. 891; 22 Dec. 968.

**ECLOGA** (Εκλογή τῶν νόμων, lit. "selection of the laws"), a law book issued in Mar. 741 (rather than 726) by Leo III and Constantine V. The Ecloga presents in 18 titles the most important legal standards for everyday life, representing the first official attempt at a revival of the administration of justice after over 100 years. Among the few substantive innovations are the restrictive divorce law (Ecloga 2.9), a regulation concerning division of war booty (18), and the penal law (17). The section on penal law introduces, in addition to a great number of punishable sexual offenses, a new system of punishment by mutilation that echoes the offense; it is surely to this that the announced “improvement in the sense of greater clemency” in the title of the law refers, because of the extensive restriction of capital punishment.

The originality of the Ecloga lies above all in its form. Its concise compilation of legal material and the fact that its selection and arrangement was oriented more to the circumstances of life than to legal systems made the Ecloga a prototype of the Byz. legal handbook. The Ecloga appears to have been quickly supplemented by the Appendix Eclogae (ed. L. Burgmann, S. Troianos, FM 3 [1979] 24–125), a heterogeneous collection of mainly penal law regulations. Along with the Appendix, which included the Nomos Stratiotikos, the Farmer’s Law, and the Rhodian Sea Law, the Ecloga constituted a corpus of secular law unrivaled until the end of the 9th C.

Under the Macedonian dynasty, the Ecloga was replaced, in a move to reappropriate Justinianic law, by the Ἐπαναγωγή; the latter, however, remained strongly indebted in content and form to the Ecloga, as did the Prochiron, issued somewhat later, whose polemic, as Schminck has shown (Rechtsbüchern 641), was directed not against the Ecloga but against the Epanagoge. The continuing popularity of the Ecloga is attested by the existence of numerous copies and compilations (some of southern Italian origin), the Zakoń Švédny Ljude and other Slavonic translations (see Law in Slavic Countries, Byzantine), an Arabic adaptation (ed. S. Leder, Die arabischen Eclogae [Frankfurt
am Main 1985), and an Armenian translation (see Law in the East, Byzantine).

-L.B.

ECLOGA AUCTA, an adaptation of the Ecloga. Designated in one MS as the “second Eklogadion,” it probably antedates the Macedonian period. As far as can be determined from the indirect (Ecloga privata aucta) or fragmentary transmission, the author borrowed the structure and style of the Ecloga and copied some of its chapters verbatim, but revised, replaced, or expanded the rest. The changes are characterized by a renewed rapprochement with Justinianic law; the mutilation punishments of the Ecloga are eliminated, with the exception of castration for sodomy (17.12b).

LIT. Troianos, Poinatios.

-L.B.

ECLOGA BASILICORUM, a legal commentary composed in 1142 by an unknown lawyer on a selection from the Basilika, which existed at the time but has not been transmitted independently. The commentary was intended to cover all 60 books of the Basilika but actually comprises only the first ten. Its sources are chiefly the complete text of the Basilika with scholia, the paraphrase of the Institutes by the 6th-C. jurist Theophilos, and the legal writings of the 11th C. The commentary is characterized by explanatory paraphrases, examples (thematismoi), short introductory explanations (protheorai), and quotations of legal principles (kanones). Recent imperial legislation is incorporated, and concrete examples are provided, esp. for the area of court procedure. The beginning of the work, as handed down, is not original.

ECLOGA PRIVATA AUCTA, a compilation of the Ecloga and Ecloga aucta. It is itself poorly transmitted, but nonetheless provides crucial evidence for the text of the Ecloga aucta. The pro-
ECONOMY. The Byz. economy was based primarily on agriculture; the intensive cultivation of land was typical of the littoral areas in both the Balkans and Asia Minor, whereas in the mountainous regions a pastoral economy predominated. Urban life was also concentrated mostly along the coastline. The means of production were limited as is typical of the Middle Ages—the ergasterion, operated by a family (with the help of one or two laborers) and located in the same building as the living quarters, was the main site of industrial activity, larger factorylike units being reserved for state needs (mint, armories, production of luxury goods); but even the “factories” were assemblages of individual producers rather than cohesive entities. In the countryside, production was organized on small parcels of land with the help of traditional agricultural implements requiring manual labor with only a limited use of animal power. The use of natural power resources was restricted mainly to water mills for grinding grain and to the automata at imperial palaces; the mechanical “pre-revolution” of the 12th and 13th C. touched Byz. only insignificantly, and the wind mill (in evidence by 1300) appeared here later than in the West. Nevertheless, until the end of the 12th C. Byz. was considered the wealthiest country of Europe, rich in grain, wine, dairy products, clothing, and jewelry.

Transportation (see Travel), like production, was limited. Poor roads rendered impossible overland trade of any significance, and the Byz. were mediocre sailors. The Roman domination over Mediterranean commerce was weakened by the Arabs in the 7th C., and Byz. maritime activity was sharply curtailed by the growth of the Italian maritime republics from the 12th C. onward. The Byz. did not organize trading expeditions on a large scale, preferring to attract their neighbors to Constantinople, Thessalonike, or Trebizond rather than to sail ships or organize caravans to foreign centers, although some Greeks traveled to the Crimea, Egypt, and Montpellier.

A monetary economy was always a characteristic of Byz., although some fluctuations in its history can be observed: unquestionably dominant in the 4th--mid-7th C., it declined thereafter; it was then revived first in Constantinople and the littoral areas (after 800) and then inland; it was extremely active from the 11th to mid-13th C., but subsequently Byz. coins were replaced by Italian currency, as the Levantine trade was transferred to Venice and Genoa and their colonies on Byz. soil. A barter economy, including rents and salaries in kind, existed not only in the countryside but also in Constantinople where officials and physicians were paid for their services, in part, with grain, fodder, and clothing.

Surviving figures on the Byz. budget and private wealth are not reliable; it can, however, be safely stated that Byz. aristocrats derived their incomes more from their salaries (and related revenues) than from their estates (G. Litavrin in VizOče [Moscow 1971] 152–68). Assets were expressed in terms of money rather than land. An example is the dowry of Theodora (Manuel I’s niece), which consisted of 100,000 hyperpers, plus 10,000 hyperpers for wedding expenses as well as jewelry, clothing, carpets, etc., estimated at 40,000 hyperpers, whereas her husband, Baldwin III of Jerusalem, gave her as a gift the city of Acre (William of Tyre, PL 201:734AB). Contrasting with this reality is the concept of Byz. moralists (e.g., Kekaumenos) that land is the most honorable source of income. The nonmonetary wealth of Byz. aristocrats consisted of livestock as well as land. Income from trade was held in low esteem, sometimes even despised.

The state played a major role in the Byz. economy: it levied taxes on land and trade, retained the privilege of minting, possessed certain monopolies, exercised control over guilds, and owned vast lands and workshops. All these supplied the state with large revenues. At the same time, the state had enormous expenses: for the army and diplomacy; for the salaries of dignitaries; for building activity; and for various largesses for ecclesiastical institutions, officials, and the needy. The largesses either took the form of direct donations, or conferral of the right to a portion of taxes, or exemption from taxation. The concentration of resources (in money and in kind) in the state treasury and their generous distribution among officials, churches, and indigents (primarily in Constantinople) created in the capital an atmosphere conducive to the increased production of various goods (esp. objects of luxury and
religious cult) and for the marketing of grain, meat, fish, etc. Constantinopolitan merchants, unlike those of Venice and Genoa who sought distant markets and resources, were not aggressive but conservative, awaiting imports and spoiled by the constancy of state demands.

There are many blank spaces in the picture of Byz. economic development, but it can be presented tentatively as follows: the late Roman economy was evidently prosperous but based on the exploitation of the countryside by the city and of the province by the capital. By the mid-7th C. the urban economy was in decay, trade shrinking, the monetary economy contracting; on the other hand, the countryside recovered after its previous stagnation and was able to compensate for the lost provinces. In the 9th and 10th C. slow revival concentrated around Constantinople, whereas in the mid-11th–mid-13th C. it was the provincial town that benefited most and the countryside that was able to supply agricultural goods to neighboring countries. The domination of the Italian republics in the Mediterranean led to greater economic activity in Byz. territory, but Greek merchants and the Byz. state harvested only a slight portion of the growing revenues.

ECUMENICAL PATRIARCH (οἰκουμενικός πατριάρχης). Only in the 6th C. did the term come into regular use as a courtesy title for the archbishops of Constantinople (Mansi 8:1038A, 1042D, 1058A). Patr. Menas, for example, used it in 536 (Mansi 8:959B). By the end of the century, under John IV Nesteutes, that title was also being used in official correspondence. Finally, by the 9th C., under Photios, it entered official protocol in addressing the patriarch. Michael I Keroularios was the first to introduce it on his seal (Laurent, Corpus 5.1, no.16).

Strictly speaking, the qualifying term denoted the superior Orthodox patriarch of the ecumenical empire of Byz., whose see was also the imperial capital. It did not mean “universal” bishop, but “superior” bishop (H. Grégoire, Byzantien 8 [1933] 570f). The title therefore was not intended to deprive Rome of its honorary primacy within the pentarchy; nor did it imply universal jurisdiction over the entire church. Still, Popes Pelagius II (579–90) and Gregory I the Great were scandalized by it (Mansi 9:1213C–E).

EDESSA (Ἕδεσσα, mod. Urfa in Turkey), capital of the province of Osroæne until it was lost to the Arabs ca.640; it remained an important Christian and commercial center in the Islamic world until at least the 13th C. Situated in the Mesopotamian plain, Edessa is dominated on the south by a high rock and crossed by the Daisian River. Little remains of late Roman Edessa apart from sections of Justinian I’s circuit walls, the temenos walls of the present Great Mosque (which stands beside what was probably the north-south cardo), traces of various structures on the acropolis, and rock-cut tombs. Local written sources, however, supply concrete details concerning the period.

Edessa was christianized in the 2nd C. when its king, Abgar IX (179–216), accepted the faith. The event was recorded in various legendary accounts that attribute the conversion of the king, identified by Eusebius as Abgar V the Black (4 B.C.—A.D. 7, then 13–50), to a correspondence with Christ, who sent him the Mandylion. The text of the letter was inscribed as a talisman above the city gates and the Mandylion came to be displayed in the cathedral. Christianity at Edessa was eventually represented by four groups (Monophysites, Nestorians, Chalcedonians, Maronites). Church building is recorded in the Chronicle of Edessa (of ca.540): a cathedral (312/13–23); its baptistery (369/70); and at least seven other churches (345–471), including that of the Apostle Thomas, visited by Egèria. Altogether 30 churches are known by name. Bishops and governors provided charitable and civic amenities between 458 and 505: infirmary, towers, bridges, circuit walls, aqueducts, baths, praetorium. Eulogios also provided 6,800 xestai of oil to light public porticoes. Following a flood Justinian rerouted the Daisian River and rebuilt the damaged southern part of the city, including the Cathedral of St. Sophia and the Antiphores, the latter being, apparently, an open space in front of a forum. In 578–603 Bp. Severos erected porticoes and “numerous constructions” (Michael I the Syrian, Chronicle 2:373).

Edessa was a literary and intellectual center of Syriac culture, whose writers included the theologians Aphrahat, Ephrem the Syrian, and Rab-

BULA of Edessa as well as Joshua the Stylist and Dionysios of Tell-Mahre. The theological school, founded in 363 by immigrants from Nisibis, was closed in the 5th C. for Nestorian bias; it was subsequently refounded at Nisibis.

During the 6th-C. Persian military campaigns, Edessa remained a rich, impregnable city. When it finally fell under Persian control from 602 to 628, it supplied Chosroes II with 120,000 pounds of silver, much of it from the furniture revetments of St. Sophia and the city’s wealthy inhabitants. Herakleios resided there after his victory over the Persians in 628. Conquered soon thereafter by the Arabs, Edessa was recovered in 944 by the Byz., who removed the Mandylion to Constantinople. The city fell to the Crusaders in 1098. The local Chronicle of 1234 records the conquest of Zengi in 1146 as particularly devastating, as was undoubtedly that of the Mongols. (For Edessa in Macedonia, see Vodena.)

EDESSA, COUNTY OF. The first Crusader state in Syria, the county included Edessa and Saruj east of the Euphrates, and Tell Bashir, Kesoun, and other towns west of it. In 1097 Baldwin of Boulogne was invited by the Armenians of Edessa to aid them; their lord Thoros adopted Baldwin. Thoros was soon murdered by his own people (A.A. Beaumont in The Crusades and Other Historical Essays Presented to Dana C. Munro [New York 1928] 104–12), and Baldwin became count. Armenians constituted a large part of the county’s inhabitants. The Byz. never yielded their claim to Edessa, but it was too remote for them to exercise authority. After Zangi took Edessa, the area west of the Euphrates was preserved. In 1150, following the capture of Count Joscelin II, Countess Beatrice sold Tell Bashir, Aintab, Duluk, and a few other fortresses to Manuel I, who agreed to garrison them and pay Beatrice and her children a life-income. The Byz. troops, however, proved insufficient, and in 1151 Nur al-Din easily seized these places.

EDICT OF MILAN, the name given by modern scholars to the first decree granting toleration to Christianity, supposedly issued by CONSTANTINE I and LICINIUS as a result of a meeting in Milan in 313. The text of the edict, given by Eusebius of Caesarea (HE 10.5.2–14) and Lactantius (Lactant. De mort. pers. 48.2–12), grants religious freedom to both Christians and non-Christians and orders the return of confiscated church property. The authenticity of the edict was called into question by O. Seeck (ZKirch 12 [1891] 381) who pointed out that, according to Lactantius (Lactant. De mort. pers. 34; cf. Eusebius, HE 8.17.3–10), Galerius had issued a similar edict of toleration in 311. Others (e.g., Christensen, infra) have more recently argued that the originator of the edict was Licinius and that he was following in the tradition established by Galerius. Both Constantine (in 306) and even MAXENTIUS (in 311) had declared toleration prior to 313 and the whole concept of the “Edict of Milan” should probably be discarded. Nevertheless, the question continues to be debated (see M. Anastos, REB 25 [1967] 13–41).

EDICTUM (ἐδικτον), edict, term used for general laws following Roman tradition. Edicta were usually addressed to groups (all the emperor’s subjects or the inhabitants of a region or the members of a profession), but some were addressed to individuals (top officials, lay or ecclesiastic); they were usually signed by the emperor and countersigned by the quaesitor. The edictum differed from the sanctio pragmatica (pragmatikos typos) in that the latter was used for special laws, with general application but issued in response to a private request. With increasing frequency, laws were called novellae (constitutiones; see Novels), nearai (nomothesiai), or sakrai (from sacra lex). From the end of the 11th C. onward legislation was promulgated more and more in the form of a chrysobull or a prostagma.

EDIRNE. See Adrianople.

EDUCATION (παιδεία) in Byz. was based on two contradictory principles: Greco-Roman tradition and Christian faith. Christianity, in its extreme, rejected ancient civilization as permeated by false mythology, permissive and cruel morality, and a deceptive image of the world and its history; being a “religion of the Book,” however, it required of its followers an elementary aptitude for reading (see LITERACY) and the memorization of essential texts. The resolution of this contradiction was to maintain traditional educational methods and to make pagan literature acceptable by allegorical interpretation, by alleging derivation from Old Testament sources, by discerning in it a foreshadowing of Christianity, or by concentrating on the form while rejecting the content. Egyptian exercise books of the 4th–7th C. still contained mythological names and traditional maxims and anecdotes used for teaching reading and writing. Children in schools continued to be given the “venom” of Homer and the poets to develop their knowledge of language, while their upbringing was supposed to supply them with an “antidote” of moral precepts.

The 7th C. was a watershed in the development of education. By that time the tertiary schools (universities) had disappeared, and even secondary schools (those of grammar) became rare. In the 9th C. the young CONSTANTINE THE PHILOSOPHER was unable to find a grammatikos in Thessalonike. The scholarly curiosity of youth had to be content with private teachers, in the form of individual teacher-student connections, as was the case with LEO THE MATHEMATICIAN who found on Andros a “wise man” to teach him rhetoric, philosophy, and arithmetic. The vast majority of those who overcame illiteracy acquired only the rudimentary skills of reading and writing with the help of parents and local literate men. Thus JOSEPH THE HYMNOPHограф, who was born to a well-to-do family, was taught by his parents; there is no mention in his vita of a professional teacher or of Joseph’s going to school. NICHOLAS OF STOUDIOS was educated by his parents and continued his studies, from the age of ten, in the Stoudios monastery. These two examples may be atypical, however, and should be used with caution, since Joseph was born in Sicily and became a refugee in the Peloponnese, while Nicholas was destined to be a monk. Other saints’ vitae on occasion mention teachers (didaskalois) to whom children were sent to learn hiera grammata, the act of reading. The vita of THEODORE OF EDessa, which
describes the saint’s education by a sophist Sophronios whom the Edessenes had as a “common teacher” and who taught the boy grammar, rhetoric, and philosophy, is exceptional for 9th-C. saints; in reality it is a later hagiographic “romance” of the 10th C., reflecting the situation of the subsequent period.

This shift occurred in mid-9th-C. Constantinople when Caesar Bardas organized the Magnaura school to revive the “external [secular] wisdom” that had been neglected by previous generations “which wallowed in boorishness and illiteracy” (TheophCont 185.2–5). Leo the Mathematician, the head of the school, taught philosophy, while his student Theodore instructed in mathematics, Theodegios in astronomy, and Kometas in grammar. This school was revived or refounded by Constantine VII (TheophCont 446.1–22). Two sources provide insights into school life of the 10th C.—the vita of Athanasios of Athos, who started as a popular teacher in Constantinople, and the correspondence of the anonymous teacher (see Teacher, Anonymous). Secondary education, under control of the state, was concentrated in Constantinople and was organized on the private basis of teacher-student relations. It had as its major goal the formation of the higher echelon of functionaries. The main subject of teaching was grammar (with elements of eloquence and philosophy); students also studied the dead language of the ancient classics. The subject matter for training was Homer, Aelian, Demosthenes, etc., with the Bible added to this classical heritage. Epimerisms to the Psalms from the school of George Choiroboskos served as a textbook.

The 11th and 12th C. marked a new level in the development of Byz. education. An attempt was made to reintroduce the tertiary school, the University of Constantinople. Other educational institutions were also active in the capital, including the school at the Church of the Holy Apostles described in detail by Nicholas Mesarites, where the classes combined students of various ages, from children learning to count on their fingers to medical doctors discussing the pulse. The Patriarchal School was created, the new schedographia was applied as a method to enhance independence of thought, and competitions of students took place. The greatest intellectuals of the time were involved in education, including John Mauropos, Michael Psellus, Eustathios of Thessalonike. Unlike Western universities, however, the Byz. school of the 11th–12th C. was not granted legal independence; it functioned under the sway of the state, its main figures (nomophylax, maistor ton rhetoron, hypatos ton philosophon) being institutionally imperial officials. Moreover, from the end of the 11th C. onward the church was acquiring institutional impact on education.

The fall of Constantinople in 1204 was a heavy blow to education, which had been concentrated in the capital. An attempt to found a Latin university in Constantinople was stillborn. In the Greek-controlled territories of the splintered empire there seem to have been no formal academic institutions, but only individual teachers who attracted small groups of devoted followers; thus the young Nikephoros Blemmydes wandered from one teacher to another, via Nicaea, Smyrna, and Skamandros. He established a school with five students at the monastery of Gregory Thaumaturgos in Ephesus. After the recapture of Constantinople in 1261 Michael VIII founded a “school of philosophy” headed by George Akropolites. The school of Maximos Planoudes in Constantinople ca.1300 was linked with a monastery, although it was also supported by imperial grants (stieresia). Nikephoros Gregoras had his school in his room (oiikikos) in the Chora monastery. All these private schools concentrated on grammar, even though time and again the disciplines of the quadrivium are proudly mentioned. Much information on education in the 14th and 15th C. is contained in the letters and other writings of Theodore Hyrtaenos, George Lekapenos, and John Chortasmenos. The last evidence on Byz. schools is the correspondence of 1453 (J. Darrouzès, REB 22 [1964] 122), which mentions a school in Adrianople administered by a didaskalos and his young assistant. It was under the patronage of the local judge and was probably attached to his house.

—A.K., R.B.
EGERIA (4th C.), a wealthy nun from the western Mediterranean or a land on the Atlantic coast (Aquitaine? Galicia?) who left a detailed account (approximately one-third extant) of her journey to the Holy Land in 381–84. The earliest graphic account of Christian pilgrimage to survive, her Travels records observations and responses to a variety of Loca sancta in Palestine, Syria, and Egypt. Included are elements of the natural terrain (e.g., trees “planted by the patriarchs”), humble tombs and houses traditionally associated with heroes of the Old and New Testaments, churches that had been recently built by Constantine I, holy men (esp. in Egypt), and the local religious community and liturgy (particularly in Jerusalem). Indeed, her account is most valuable for what it reveals of the topography, piety, and esp. the liturgy of the Holy Land as pilgrimage was acquiring its distinctive Christian character and a rapidly increasing number of participants.

EGNATIA, VIA, Roman military road running across the Balkan peninsula, built in the second half of the 2nd C. B.C. It had two starting points on the Adriatic: Apollonia and Dyrrhachion. Thence it passed by Lychnidos (Ohrid), Heraclea Lynkestis (near Bitola), Edessa, Pella, and reached the Aegean Sea at Thessalonike. It then cut across the base of the Chalkidike peninsula to Amphiopolis and Philippi and originally terminated at Kypselas on the Hebros (Marica). Its extension to Byzantium appears not to have borne the name of Egnatia. From the Hebros the road went to Herakleia (Perinthos, Marmara Ereğlisi), then (before Constantine I) struck inland to avoid the lagoons of Athyras (Büyük Çekmece) and Rhegin (Küçük Çekmece), passing through Kainophrourion (Kurfait?) and Melantias (Yarım Bursuz?); it reached Byzantium at the gate of Melantias. By ca.330 the stretch from Herakleia to Byzantium was shifted to the coast and made to pass by Selymbria, Athyras, Rhegin, and what was to become the suburb of Hebdomon before terminating at the Golden Gate of Constantinople.

A number of milestones have been discovered, some of them post-Constantinian in date. The last epigraphically attested evidence of upkeep is of the reign of Valentinian and Valens (364–75), but Prokopios of Caesarea (Buildings 4.8.5) records that the stretch between Hebdomon and Rhegin was first paved by Justinian I. Whatever its physical condition, the Egnatia remained a major route of overland communication for much of the Middle Ages.

EGYPT. As a province of the late Roman Empire, Egypt was simultaneously the principal source of the vital grain supply and the seedbed of a flourishing and original culture. Thoroughly reorganized by the reforms of Diocletian, the region was divided into six provinces for most of the period—Aegyptus I and II, Augustamnica, Arcadia, and Thebaïd I and II—and integrated into the fabric of the empire. The 4th C. was a time of radical and profound change. The old Roman metropolis with its administrative division called a nome (the chora) became a civitas plus its territorium; the hinterland was made up of rural administrative districts (pagi) presided over by praepositi who took the place of the old strategoi. The taxation system was completely reworked according to principles of abstract productive units and collective responsibility. The workability of the liturgy system, which compulsorily assigned civic and administrative functions to members of the town councils and the decurion class, was shored up by ties to the central authority. The governor of Egypt was the Augustalis, with duces and praesides under him in the provinces. By 382 Egypt constituted a diocese of its own with its capital at Alexandria.

After the Great Persecution in 303, the Christian Church became a prime originator and carrier of culture in Egypt. The Coptic language emerged alongside Greek in the Bible and church services and eventually in record-keeping and public documentation; native Egyptian thinkers and writers were in the vanguard of thought in philosophy, theology, and belles-lettres. The monastic movement, beginning with Antony the Great and Pachomios, captured the imagination and channeled much of the best talent of Egyptian society.
The 5th C., less well documented, saw a further transformation from the mobile world of post-Constantinian society to a new pattern of greater stability. The Codex Theodosianus already reflects the growth of patronage and of attachment to one’s idia (Lat. origo, “place of origin”), which was to shape late antique Egypt. The fixed land-tax (demosios) payable in money did away with the older differentiated categories of land. The growth of the large estate (oikos) and the privilege of independent tax collection (autoprageia) are difficult to trace in the extant sources, but it may be assumed that they were substantial and their effects favored locally based productivity. The large monasteries became great landowners, encouraging both economic and literary output. The increasing centralized power of the patriarchate of Alexandria, under such bishops as Cyril and the monastic leadership of Shenoute, encouraged Egyptian ecclesiastical independence prior to the Council of Chalcedon (451). Open controversy over what constituted authentic patriarchal authority and succession produced polemical literature, liturgical experimentation, and the beginnings of a self-defining Egyptian Christian hagiography, esp. monastic biography. The first effort to compose a history of the Egyptian church in Coptic also occurred in the later 5th C. Egyptian poets traveled widely (see Poets, Wandering), serving as court officials and envoys; Nonnos of Panopolis reshaped the late Greek epic and told the Gospel story in hexameters.

The tax reforms of Anastasios I (before 518) and the thorough reorganization of Egypt by Justinian I’s Edict 13 (probably 538/9) together restructured and centralized the administration and its bureaucracy. The doux of each province held both civil and military power, and local tax collection was managed by pagarchs, officials of the notable class who succeeded to the functions of the old decurions. The large landowners of each area grouped together as syntelestai to look after their interests and maintain the rights of their tenants. The estates of these proprietors functioned in a quasi-public manner: the rent (phoros) payable to an estate’s central office came to function as a tax revenue, while the tenants of an estate performed jobs equivalent to compulsory services (letourgeiai). The embole or annual grain shipment to Constantinople was maintained using vessels belonging to both magnates and monasteries. Financial records were extremely thorough, as the abundant surviving papyri attest. By the 6th C. Egypt possessed a rich local culture that integrated with striking success classical pagan learning and a strong locally based Christianity. Comparative prosperity encouraged a flowering of the visual arts, esp. sculpture and textiles (see Coptic Art and Architecture), and an active literary life in both Greek and Coptic, producing works ranging from encomiastic poetry to philosophy, theology, homilies, and saints’ Lives. Coptic jurisprudence also came into its own.

The successors of Justinian developed varying economic and religious policies for Egypt. Under Maurice all official documents had to begin with a Christian invocation. Abundant papyrus documentation in both Greek and Coptic attests to the continuing vitality of economic and social institutions; the numerous papyrus codices of classical
and patrician literature produced in the later 6th–early 7th C. illustrate the ongoing currents of Egyptian cultural life. Coptic visual art continued to flourish. Herakleios’s revolt against Phokas led to his taking control of Egypt ca. 609. During his reign the Persians occupied Egypt between 618/19 and 628/9, leaving behind papyrus documents in Pahlavi. Herakleios’s appointee to the Chalcedonian patriarchate, Kyros “the Caucasian,” also discharged civil functions. Both Benjamin I, the non-Chalcedonian patriarch, and the influential Upper Egyptian bishop Pesynthios of Coptos lived to be eyewitnesses of the Arab conquest, as did the monastic founder Samuel of Qalaman and the chronicler John of Nikia. The political takeover of Egypt by a Muslim military force proceeded piecemeal (640–42). Historians still have not satisfactorily explained the reasons for its success. Most of the late antique administrative structure remained in place for about a hundred years, but after ca. 800 the old culture began to die.

EIDIKON (éidíkon), imperial treasury and storehouse. The etymology of the word is disputed; Guillard supported the view that it originates from idikos, “private,” whereas Bury (Adm. System 98) flatly rejects this derivation and E. Stein (Studien 149) connects the term with the word eidos, “ware.” Accordingly, it remains uncertain whether the eidikon was the emperor’s private treasury, that is, the successor to the department of the Comes rerum privatarum, or a special state treasury that had no connection with the emperor’s patrimonium.

The first mention of the eidikon is in the 9th C., from the reign of Theophilos; Laurent’s assertion (infra 305) that the institution was autonomous from the 7th C. is not supported by any evidence. The eidikon was a storehouse of precious goods, such as gold and silk as well as various materials for the needs of the army and the navy, and Arab dress for spies. The eidikon functioned as a state treasury; one of its responsibilities was the payment of roga to senators. The head of the eidikon was called eidikos (variants idikos and edikos) or epi tou eidikou, and from the 11th C. logothetes tou eidikou. In addition to regular notaries, his staff included archontes ton ergodosion and directors of the armamenton and of the warehouses in the Great Palace. The sekretos of the logothetes tou eidikou was still functioning in 1081 (Lavra 1, no. 43,65), and eidika (in the plural) are mentioned in a formula of exemption in 1086 (Lavra 1, no. 48,50). Thereafter the department seems to have been abolished; Guillard suggests that it was replaced by the logothesion of the oikeiakoi.

EILITON (ειλίτων, lit. “wound, wrapped”), a cloth spread over the top of the altar for setting the eucharistic elements, the Byz. equivalent of the Latin corporal. Eilita were of linen (Symeon of Thessalonike, PG 155:317B) and possibly silk. In the post-Byz. period their function was superseded by the antimension. As with other altar cloths, such as the endyte, the eilita were given symbolic significance in liturgical commentaries, esp. as the winding sheets of Christ (e.g., pseudo-Sophronios in PG 87:3985B). No Byz. eiliton has survived. Although it is generally believed that eilita were unadorned, they may, in fact, have had decoration: several painted representations of altar-tables show the eucharistic vessels placed over eilita-like covers decorated with corner gamma, for example, the Melchizedek and Abel mosaic in S. Vitale, Ravenna, and the Communion of the Apostles mosaic in St. Sophia, Kiev.

EISAGOGE. See ΕΠΑΝΑΓΟΓΗ.

ΕJMIAΣΩΝ. See ΒΑΛΑΡΣΑΠΑΤ.

EKDİKOS. See ΠΡΟΤΕΚΔΙΚΟΣ.

EKDOΣIS (ἐκδοσις, “issuing, publication”), or editio (Lat.), recension of the text of a work of literature made available by the author or by an editor for copying. First used by Alexandrian scholars to
denote a recension of the text of Homer, in Byz. usage ehdosis often denotes a particular version of a text believed to have been approved by the author. Thus Photios (Bibl., cod.77) owned copies of two ehdoseis of the History of Eunapios and the first ehdosis of the Atticist lexicon of Ailios Dionysios (Bibl. cod.152). The Breviarium of Patr. Nikephoros I and the History of Niketas Chroniates survive in two variant recensions that are possibly the work of the author. Sometimes successive ehdoseis of a text have become amalgamated in the MS tradition and can be reconstructed only in part by textual criticism, as is the case with the Ecclesiastical History of Eusebius of Caesarea. Early versions of official texts were sometimes suppressed and replaced by later versions; thus the first version of the Codex Justinianus, issued in 528, but lost, is known only from the preface to the second edition, published ex repetita praelectione (De emendatione Codicis Justiniani, par.4). The term ehdosis is sometimes used in the Palaiologan period for a version of a classical text—most often a play—accompanied by marginal notes and other explanatory matter and prepared by a scholar for teaching purposes. It also sometimes denotes a collection of the letters or speeches of a Byz. writer, often in chronological order, as in the case of Michael Chroniates, and prepared by the author himself or by a friend or pupil. In antiquity and the Middle Ages there is nothing corresponding to an “edition” of a printed book. Handwritten books are never entirely uniform.

—R.B.

EKKLESIARCHES (ἐκκλησιάρχης, fem. ἐκκλησιάρχισσα), sacristan, a church official who was responsible for setting out the liturgical books, sacred vessels, eucharistic wine and bread, and for providing the appropriate number of candles and lamps for lighting the church. In monasteries, the ekklesiarches was one of the leading officials, appointed by the superior. At the Be-baias Elpidos Nunnery in Constantinople, the ekklesiarchissa, together with the oikonomos, was second only to the superior; at Lips, however, she was subordinate to the skewophylakissa (see Skewophylax). The ekklesiarches not only prepared the church for services, but led the monks or nuns in the singing of the offices, making sure that they knelt or stood at the proper moment, made responses correctly, and that no sections of the office were omitted or recited in wrong order. The ekklesiarches also maintained proper discipline among the monks or nuns. The typikon of Bebaias Elpidos (pp.45.19-47.31) states that the ekklesiarchissa should be a good singer who is very familiar with the liturgy, esp. since she is responsible for the instruction of novices in the chanting of the office. The ekklesiarches at the Petrizes monastery (Typikon, ed. Gautier, p.69.827-30) received an annual stipend of 20 nomismata.

—A.M.T.
EKPHRASIS (ἐκφρασις), a formal description. Well known in ancient literature, description received its formal definition in the rhetoric of the Roman Empire: the textbooks considered an ekphrasis as a descriptive speech (logos) whose goal was to make the subject visible; HERMOGENES lists as subjects of ekphrasisis persons, places, periods of time, actions, and feasts. NICHOLAS OF MYRA adds to this list works of art. The theoreticians of rhetoric perceived the ekphrasis as a kind of PROGYNASMA, but in practice the ekphrasis was essential to many major genres (epic, historiography, romance, hagiography, etc.) or existed as a separate unit in prose (ekphrasis proper) or verse (epigram). While persons and actions became in practice the subject of other rhetorical genres, primarily panegyrics, ekphrasesis focused on the description of works of art, mainly buildings, either secular (e.g., by PROKOPIOS OF GAZA, CHORIKIOS, CONSTANTINE MANASSES) or sacred (by GREGORY OF NYSSA, PAUL SILentiARIOS, NICHOLAS MESARITES); epigrams often dealt with minor artifacts. Ekphrasesis of cities were typical of the earlier period (e.g., LIBANIOS on Antioch), disappeared for a long time, but were revived in the 13th–15th C. by THEODOROE II LASKARIS, Theodore Metochites, Bessarion, and John Eugenikos. Ekphrasesis of religious feasts were common, often inserted in a sermon. Rhetoricians also produced descriptions of everyday objects: gardens (usually embedded in a romance), hunting scenes (Constantine Manasses, Constantine Pantechnes), and fairs (TIMARION). Even parodical and critical ekphrasesis are known: SYMEON THE THEOLOGIAN describes the silly behavior of the lazy merchant at a fair, and GREGORY ANTIOCHOS the shabbiness of Serdica.

EK PROSOPOU (ἐκ προσόπου), a generic term for deputy or representative, similar to ANTIPOSON. The Taktika of Leo VI (ch.4.7, PG 107:701C) applies this term to the strategos as imperial legate; Basil BOIOANNES, strategos and katepano of Italy, calls himself ek prosopou in a document of 1023 (GUILLOU, Byz. Italy, pt.VII [1961], 28.30–31). Various functionaries, even metropolitans, had ek prosopou as deputies. In the Taktika of the 9th–10th C. the ek prosopou occupied a place lower than strategos and was considered a temporary representative of the strategos, katepano, or kleisourarches. AHRWEILER (infra) hypothesizes that the ek prosopou had primarily fiscal functions but the evidence is not clear. Kekaumenos (Kek. 196.20) forms a noun ekprosopike for the district under an ek prosopou and states that it, along with archontia, could be a risky source of income; the ek prosopou of various themes (ANATOLIKON, BOUKELLARION, etc.) and regions (ATHENS, PHILIPPOLIS, etc.) are named on seals. In the 11th C. the asekretis Michael served as ek prosopou of [the logothetes] ton agelon (ZACOS, SALS 2, no.845). The term probably disappeared after the 12th C., but in a document of 1214 (?) an obscure tax, ekproseptikon, is listed after kaniskion (Paimou Engraphe 1, no.23.9; cf. no.36.13).

EKTHESIS (Εκθεσις, “statement of faith”), the formula issued by Emp. Heraclios at the end of 638 in an attempt to reconcile Chalcedonians and Monophysites by supporting MONOTHELETISM. The text of the Ekthesis, which was written by PATR. SERGIOI I of Constantinople, attempted to end disputes concerning MONOENERGISM by forbidding a discussion of the energy in the person of Christ, while asserting that the two natures of Christ were joined by a single will (see FREE WILL). The formula “one will” had been proposed by POPE Honorius I (625–38) in a letter to Sergios. Although the Ekthesis was accepted by local councils in Constantinople in 658 and 659, Heraclios soon realized the futility of his conciliatory attempt and did not press the issue. Constans II withdrew the Ekthesis, replacing it with the Typos (see TYPOS OF CONSTANS II) in 648. The Ekthesis was condemned at the Third Council of Constantinople in 680 (see under CONSTANTINOPLE, COUNCILS OF).

ED. MANSI 10:901–98.

EKTHESIS NEA (lit. “new setting out”), the only known Byz. chancery handbook, dated 1 Sept.
1386. Preserved in many MSS, it concerns letters (pittakia), mainly those written by ecclesiastics. Though not a true formulary, it lists opening (and eventually concluding) formulas used by the patriarch of Constantinople in letters addressed to other patriarchs, autocephalous archbishops and suffragan metropolitans and archbishops; opening formulas used by the patriarch and by metropolitans when writing to other ecclesiastics and to lay rulers; presentation of the patriarchal pittakia; opening formulas for all kinds of letters of laymen and of ecclesiastics (only in MS Sinai gr. 1609); and transfers and promotions of bishops (ceremonies, documentary formulas). The Ekthesis Nea is interesting for the political and social ideologies reflected in the formulas and for the unique insights it provides into the patriarchal chancery's secret methods of preventing or discovering forgeries: the usage or lack of a seal, the kind and placement of the seal, the format in which the letter was folded, and the formulation and placement of the address all had to be combined according to strict, complicated, and secret rules in order to guarantee the authenticity of the document.

ED. AND LIT. Darrouzès, “Ekthesis Nea.”

ELATIKON (ελατικόν, probable etymology, “for marching”), an accessory tax mentioned in several documents of the 11th C. (e.g., Ivið., no.30.33; Lavra 1, no.39.7; Pantel., no.3.30), always in connection with synethia. According to a treatise on taxation (ed. Dölger 122.21–22), synethia was collected for the dioiketai (an act of 1047 speaks of the synethia of the dioiketes and of elatikon [Ivið., no.29.96]), whereas elatikon was received by taxeotai (probably the subalterns of the dioiketai), whose functions are not known. A novel of Alexios I, the so-called Palaia logarike (see Logarike, Palaia and Nea), states that elatikon is collected by the genikón and transferred to officials called sekretoí (Zepos, Jus 1:332.20–23). An act of 1098 directs that synethia and elatikon, as well as another secondary tax, dikeraiosexapollon, be paid to the owner or partial owner of the village (or of its part), Maria Basilakina (Dölger, Schatz., no.65.13–14). Elatikon was calculated as a certain part of the main tax, and the total of synethia and elatikon from a single estate should not rise above 10 nomismata (Zepos, Jus 1:333.41–43).

ELEOUSA MONASTERY. See VELJUSA MONASTERY.

ELEPHANTS (sing. έλεφας). The Byz. knew both the African and Indian elephant; Kosmas Indikopleustes (3:353–54) distinguished between the Indians, who domesticated the elephant, and the Africans, who hunted them. Byz. armies frequently encountered war elephants during the Persian Wars (Prokopios, Buildings 2.1.11; Agath. 110.8–11, 119.4–8). In the early 7th C. Heraclios made a triumphal entrance into Constantinople in a chariot drawn by four elephants that were exhibited in the circus and the Hippodrome (Nikeph. 22.20). By that time, however, the elephant was not widely used for warfare. The author of the Anonymous Treatise on Strategy (6th C. or later) did not discuss fighting with elephants because he considered their use obsolete (Dennis, Military Treatises 44.20–21).

Their appearance in the empire was a rare sight. Marcellinus Comes reported the arrival of an elephant in Constantinople in the reign of Anastasios I (MGH AuctAnt XI.2.94, 33–34), while John of Ephesus (3.2.48, 3.6.10) described the “pious” behavior of several such beasts in the Hippodrome under Justinian I, perhaps booty from the Persian War. Constantine IX Monomachos obtained an elephant and a giraffe for his zoo in Constantinople (see ANIMALS). In the Diegesis ton tetrapodon zoon (106.943) the elephant is mocked because his legs lack joints. The Physiologos (128–33), however, portrays the elephant as a sacred animal whose characteristics and habits symbolize man’s fall and salvation. As the source of ivory, its tusks were always prized; esp. large examples are shown among the offerings to an emperor on the Barberini Ivory.

Statues of elephants stood in public places in Constantinople (Parastaseis 80.18–19, 98.9–13). In most surviving mosaic representations the ge-
nus is indeterminate, but the peristyle mosaic at the Great Palace of Constantinople clearly depicts both an African and an Indian elephant, one attendant upon Dionysos, the other engaged in an animal combat. An African elephant is depicted with some verisimilitude in the Venice MS of the Kyngeletika (see Oppian), fol.36r; others, much more fantastic, occur among the fauna that adorn the frames of canons tables.

ELESBOAM (Ἐλεσβωάς, Ἑλλησθεαῖος), also called Kaleb Ella Asbeha; Christian king of Axum (from ca.520); saint; born ca.500, died ca.540. In alliance with Justin I, Elesboam led an expedition to Hîmår in 525, defeated the native king Dho-Nuwas, and set in his place Sumayfâ' Ashwa', who was eventually overthrown by Abara; the latter nevertheless remained Elesboam's vassal. Elesboam's victory inscription was discovered in Ma'rib (A. Caquot, Annales d'Ethiopie 6 [1965] 223–26). Elesboam did not succeed in transforming South Arabia into a fully integrated part of Axum. Malalas (Malal. 457ff) describes the luxury of his costume and of his chariot pulled by four elephants.

Elesboam was a Monophysite and the Axumite church acknowledged the jurisdiction of the Monophysite patriarch of Alexandria. In Christian tradition he appears as a builder of churches and destroyer of idols in South Arabia (I. Shahid, DOP 33 [1979] 55–66).

ELIAS (Ἠλίας), a spatharios and retainer of Justinian II sent in 711 with a naval expedition to Cherson and installed there as governor. Elias soon joined the revolt of Philippikos, whereupon Justinian murdered his children and "compelled his wife to marry her Indian cook" (Theoph. 379.16–17). After Philippikos entered Constanti- nople, Elias was detailed to pursue Justinian into Asia Minor. Finding the emperor's camp at Damatrys and inducing his Byz. and Bulgarian troops to desert him, Elias personally decapitated Justinian and returned the head to Constantinople.

Lit. Stratos, Byzantium 5:157–75.

ELIAS I, patriarch of Jerusalem (23 July 494–Aug. 516); born ca.430, died Aila, on Red Sea, 20 July 518. An Arab by birth, he spent his early youth as an anchorite in the Nitrian desert. During the Monophysite persecution of Timotheos Ailouros Elias took refuge in the lavra of Euthymios the Great in Palestine, and in 473 was ordained priest. While serving at the Church of
the Anastasis in Jerusalem he founded two monasteries near Jericho. His episcopate was troubled by Monophysite infiltration into Palestine. In his resistance he received the help and repeated support of St. Sabas. At the council of Sidon (511) the dissident opposition failed to force him to denounce the Council of Chalcedon. His attitude ultimately caused his deposition and banishment (Aug. 516) to Aila as Monophysitism was strengthened under Emp. Anastasios I. But his stand was also a factor in the failure of Anastasios to impose Monophysitism as the official faith of the empire. Significantly, the emperor's selection of a successor to Elias marks the beginning of Constantinople's interference in the internal affairs of the patriarchate of Jerusalem and in the appointment of its patriarchs.

ELIAS BAR SHINAYÁ, a scholar, monk, and priest of the Nestorian community; metropolitan of Nisibis (from 1008); born Nisibis 11 Feb. 975; died after 1049. Bilingual in Syriac and Arabic, he has to his credit a long list of works in both languages, only a few of which have been published in modern editions or studied by modern scholars. His particularly important contributions to scholarship were in Syriac grammar and lexicography, religious dialogue with the Muslims, and historiography. Elias was the only Nestorian man of letters to compose a universal history in Syriac, and it is this work alone, usually called the Chronography, that is well known. It survives in a unique MS (London, B.L. 7197) that dates from the writer’s own era. The Chronography is in two parts, the first of which includes the universal chronicle and a list of canons; the second part is a treatise on the calendar systems of the several communities in the Oriental patriarchates, complete with conversion tables to tabulate the references from one system to another. For Byz. history the chronicle is valuable for its notices of military engagements between the Arabs and the Byz., esp. in the 10th and early 11th C.

—S.H.G.

ELIAS EKDIKOS, theologian, fl. 11th C. (Beck, Kirche 588) or 11th-12th C. (Disdier, infra). His biography is unknown, and his works are often ascribed to other authors: Maximos the Confessor, John of Karpathos, Nikephros Moschopoulos (N. Tomadakes, Athena 78 [1980–82] 284f). His major work is a Florilegium entitled Other Chapters, a compact presentation of Christian piety. Elias distinguishes three elements of the human being: the body (connected with aisthesis, the capacity of feeling); the soul with its faculties, dianoia (“thought”) and logos; and nous (“reason”). The human being is normally mired in passions, but while Maximos considers all the passions as directed against nature, Elias is ready to accept that corporeal passions are kata physin (“according to nature”). The main path to salvation is, according to Elias, through acquiring apatheia, liberation from passions, and the fear of God is an important means to achieve this end. Apparently Symeon the Theologian influenced Elias, but he differs from Symeon in the system of his imagery, preferring agricultural and military metaphors and similes (Kazhdan, “Simeon” 18).

Ed. PG 90:1401–61 (under the name of Maximos) and 127:1129–76.

—A.K.

ELIAS OF ALEXANDRIA, Neoplatonist commentator of Aristotle (6th C.), possibly the same person as Elias, prefect of Illyricum in 541, although the title apo eparchon could have a different meaning. He seems to have succeeded Olympiodoros of Alexandria ca.565–70 as the head of the Alexandrian philosophical school and was in turn succeeded by David the Philosopher. The MS tradition of Elias is confused and the distinction between him, David, and the so-called pseudo-Elias as well as their distinction from earlier authors is not always clear. It is assumed that the oeuvre of Elias includes commentaries on Aristotle’s Organon, on Porphyry’s Isagoge, and
probably *Prolegomena to Platonic Philosophy* as well as some minor works. Although officially Christian, Elias supported the ancient idea of the eternity of the world, whereas David mentions this doctrine without discussing it. Elias also followed Olympiodoros in defending the priority of the universal in nature as well as in logic.

---

**ELIAS SPELEOTES**, saint; born Reggio Calabria 864?, died nearby at Saline, 11 Sept. 960. His vita, which attributes to him a longer life than that of the first hermit, Antony, mentions very wealthy parents and an accident that maimed his hand and led to the surname Monocheir (“One-Hand”). After unsuccessful attempts at becoming a hermit in Muslim Sicily and a recluse in Rome, Elias ultimately found a spiritual master in his Calabrian homeland, the monk Arsenios. Together they fled Muslim attacks by crossing to Patras in the Peloponnesos. Upon returning to Reggio, they met **ELIAS THE YOUNGER** and his disciple Daniel, with whom Elias dwelt at Saline after their two masters had died. He then moved north to Melicucca, near Seminara, where he began to direct crowds of followers, first in a lavra involving many small caves, and then, after a vision of himself nurturing a hive of bees, in a monastery in a large cave. Elias was also a scribe who copied many books. His Life, written at Melicucca at least a generation later, features control over animals, exorcisms, prophesies, and ecstatic trances. He reportedly warned the patrikios Byzalon that he who resists the emperor resists the divine order and precisely predicted this rebel’s death.

---

**ELIJAH** (’Há‘és), Hebrew prophet who was taken up to heaven in a fiery chariot. John Chrysostom contrasted Elijah with Christ: in ascending to heaven, the former gave his cloak to Elisha (4 Kg 2:13), whereas the latter gave the gifts of grace (charismata) to his disciples (PG 50:450). In a second homily Chrysostom compared Elijah’s cloak with the eucharistic body (sarx) of Christ (PG 49:46). These ideas were not taken up in the
visual arts, although Elijah’s Ascent (4 Kg 2:11–19) appears as early as the Via Latina catacomb in Rome. More extensive narrative cycles are found in the Sacra Parallela, as illustrations to the Book of Kings, and, surprisingly, in the diakonikon of the church at Morača (1252), where Elijah’s birth and ten other scenes from his life are depicted (A. Skovran-Vukčević, ZRVI 5 [1958] 149–72). Elijah’s most frequent appearance is in the New Testament image of the Transfiguration. Because of his association with mountains, Elijah’s name was attached to monasteries and settlements in lofty locations throughout the empire. A 12th-C. icon at Sinai (Soteriou, Eikones, no.74) may be due to a local cult on this mountain. Basil I was esp. devoted to Elijah, founding or rebuilding many churches dedicated to him. Elijah is occasionally cited in hagiography, as in the vita of David of Thessalonike (ed. Rose, ch.16.31).

- J.H.L., A.C., C.B.T.

ELIS. See Andrawida.

ELISABETH THE THAUMATURGE, mid-5th-C. saint; born near Thracian Heracleia, died Constantinople; feastday 24 Apr. Elisabeth was born to a “noble and rich” couple, after a long period of sterility, on their estate on Thrakokrene (later Abydenoi). Orphaned at 15, she divided her gold, silver, and other property among the poor, emancipated her slaves, and confined herself in the nunnery of St. George on the Mikros Lophos, in Constantinople. Two years later her paternal aunt, hegoumene of the convent, died, and Patr. Gennadios I appointed Elisabeth in her place. Leo I conferred on the nunnery an imperial estate of St. Babylas in Hebdomon where a dragon dwelt. Elisabeth, in imitation of St. George whose convent she headed, “sealed” the dragon with her cross, spit on him (W. Lackner, AB 92 [1974] 287f), and trampled him to death. She performed cures, including posthumous healing miracles. An anonymous Life of Elisabeth is preserved in a 14th-C. MS, but Halkin (infra) dates this vita before 591 on the basis of an argumentum ex silentio (no mention of the Avar devastation of Herakleia). It is plausible that Elisabeth’s legend is a female version of St. George and the dragon.

- A.K.

ELIŠE, author of an Armenian History describing the unsuccessful revolt led by Vardan Mamikonian against Sasanian overlordship in 450/1. Of Eliše little is known, and it is debatable whether he wrote as an eyewitness (as he claims) or whether this History was written after that of Lazār oF P‘arpi, who describes the same events somewhat differently.

Eliše’s History is one of the most sophisticated works in early Armenian literature. Speeches, letters, and dialogue enhance Eliše’s message; according to him, nation and Christian faith are one, the apostate and the traitor are identical. Eliše was familiar with a wide range of Greek and Syriac texts, but his main model was the Maccabees. The setting is Armenia and Iran; Eliše notes that the Byz. emperor Marcian abandoned the Christian Armenians to their fate. Some later Armenian writers (e.g., Vardan Vardapet) adduce this war of 450/1 as the reason for the absence from the Council of Chalcedon of bishops from Greater Armenia. Numerous theological works are also attributed to Eliše, but their authorship is most uncertain.

- R.T.

ELPIDIOS (Έλπιδος), a patrikios sent as strategos to Sicily by Empress Irene in Feb. 781. Within two months he was accused of supporting Caesar Nikephoros and his brothers who were aspiring to the throne; Eplidios may even have proclaimed himself emperor. Irene sent the spatharios Theophilos to arrest Eplidios; when the Sicilians would not surrender him, she had his wife beaten, tossed, and imprisoned with his sons in Constantinople. Perhaps it was in reaction to the revolt of Eplidios that Irene sought an alliance with Charlemagne through a marriage between his daughter Rotrud and her son Constantine VI (C. Tsirpanlis, Byzantina 6 [1974] 347). In 782 Irene
dispatched a large expedition to Sicily, forcing Elpidios to flee to North Africa, where the Arabs reportedly invested him with imperial regalia. In 794 he accompanied Sulaymân, the son of Hārūn al-Rashîd, on a raid into Byz. territory (E.W. Brooks, EHR 15 [1900] 741).

ELPIOS THE ROMAN. See Oulpios.

EMBASSIES, FOREIGN. Foreign ambassadors and their retinues were received at the frontier by the service responsible for the imperial post; on their way to Constantinople, they were accompanied by officials (basilikoi), were provided with safe-conducts (sometimes chrysobullai), used the post (dromos) facilities, and were offered food and hospitality by the taxpayers of the regions that they crossed (this was a secondary tax). Once in the capital, they were in contact with the magister officiorum and in later centuries the logothetes tou dromou, who also accompanied them in official meetings. They were the responsibility of the scrinium barbarorum (early period) and resided in a special residence, the apokrissiarkion. The emperor tried to impress them by displaying his power and wealth and by stressing his supremacy among rulers, sometimes by using mechanical gimmicks (automata); then he might invite them for meals and eventually have direct discussions with them, such as the ones vividly described by Liutprand of Cremona. Simplicity prevailed in the later centuries with the decline of the empire. The exchange of presents was a standard feature of all incoming and outgoing embassies, whose security was guaranteed by the receiving state, sometimes (for barbarians) by giving or exchanging hostages. (For outgoing Byz. embassies, see Ambassadors.)

EMBOLOS (ἐμβόλος), the regular late antique word for a colonnaded street, also denoted the porticoes that lined it. The frequent appearance of the term in texts and inscriptions of the 4th–6th C. reflects the appearance of the cities, in which emboloi were a prominent element, common to any place of size or pretension. The streets often served as main arteries through the cities (though many were closed to wheeled vehicles). The colonnades provided access to shops which formed the major commercial centers, often replacing the ancient agoras. As commerce flourished, vendors’ booths were often set up between the columns, and shops were extended out into the street despite official prohibition. Emboloi were particularly prominent in Constantinople where they connected all parts of the city. Principal emboloi in Constantinople were those of the argyropratai, of Domninus, of Leontios, and of Zeuxippos as well as the Grand (Makro) and the New (Neos) emboloi. After the 7th C., emboloi in provincial cities generally lost their function and were frequently built over with houses.

EMBROIDERY, either of silver (ἀργυροκέφαλης) or of gold (χρυσοκέφαλης, also chrysosolenokenteta, chrysoklabia, and chrysoklabaria) was used for the costume of emperors and high functionaries, liturgical cloths, etc. It was executed by skilled artisans, or chrysoklabaroi: Theophanes (Theoph. 469.3–4) refers to an imperial workshop of chrysoklabaroi in Constantinople; Philotheos speaks of imperial tailors, chrysoklabaroi, and goldsmiths as participating in court ceremonial (Oikonomides, Listes 133.9–10); and an Epitaphios in Berat (ca.1376) is signed by a chrysoklabares George. The De ceremoniis frequently mentions embroidered costumes but rarely describes them in detail; once it speaks of the emperor’s purple maphorion as covered with gold-embroidered roses (De cer. 529.15). The lóros, esp. that worn by emperors, was particularly sumptuous, embroidered with gold and precious stones. The finest embroideries were done with silk, gold, or silver threads on purple, red, or blue silk backing. Silk threads were used primarily for faces and occasionally detail. Most of the design was embroidered with gold and silver threads made either as metal strips wound around a silk, often colored, yarn (these are known as chryso- and argyronemata or by the attributive solenotos or klapotos) or as finely drawn wires (known
as *syrmata*); both were applied by couching. Embroideries could also include pearls and enamels (e.g., on the Great Sakkos of Patr. Photos of Moscow, 1409–13).

Except for a few fragments from Egypt, surviving embroideries are late in date; the Halberstadt KALYMMATA of ca. 1195 are probably the earliest datable example. Other important specimens include the 13th-C. St. Lawrence textile sent to Genoa by Michael VIII Palaiologos (now in the Palazzo Bianco in Genoa) as well as the so-called Dalmatic of Charlemagne, and the Thessalonikē aer, both 14th C. The use of embroidery in the decoration of textiles appears to have increased with the decline of silk weaving and a greater demand for specific figurative compositions on liturgical cloths and costume in the Palaiologan period.

EMESA (Ἐμέσα, Έμεσας, Αρ. Ήμίς [Homs] in Syria), city of the province of Phoenicia Libanensis, at the crossing of routes from PALMYRA to the sea and from DAMASCUS to the north. It became an autocephalous metropolitan see under the patriarch of ANTIOCH after the head of John the Baptist was discovered there in Feb. 453 by monks of the Spelaion (Cave) Monastery; the relic was placed in the cathedral and venerated by pilgrims. Although about 300 Greek inscriptions from Emesa (dating from the 1st C. B.C. onward) have been published (*IGL* Συρ. 5, nos. 2202–501), there are relatively few other archaeological remnants of the antique city; those of the Byz. period include a basilica and funerary chapel (ibid. 2205–11). The vitae of local saints, such as Julian of Emesa, and esp. the vita of SYMON of EMESA by Leontios of Neapolis (C. Mango in *Byz. und der Westen* 25–41) mention other, public buildings: a hippodrome, theater, two baths. ROMANOS THE MELODE was a native of Emesa. The city was under Persian rule from 609/10 to 628.

There are several conflicting accounts of the loss of Emesa to the Arabs in 635–36. Then Abū 'Ubayda al-Jarrah abandoned Emesa, and the Byz. force entered the city (Donner, *Conquests* 132f.), but after the defeat of Yarmuk the situation changed and Herakleios left Emesa. The Arabs seized the city without bloodshed after the population had paid a ransom (71,000 dinars) and probably turned the Church of St. John into a mosque (N. Elisseeff, *Et* 3:397); the urban properties left vacant were divided up among the Muslims (Donner, *Conquests* 247). Emesa remained under Muslim control thereafter except for short periods in the 10th C.: the Arab geographer al-Iṣṭākhri (951) praised the climate, soil, and paved streets and markets of Emesa, but lamented the damage caused in the area by the Byz. (G. Le Strange, *Palestine under the Moslems* [rp. Beirut 1965] 533f). Nikephoros II Phokas occupied Emesa in 969 and took away the head of John the Baptist; JOHN I TZIMISKES levied tribute there in 975; the Byz. burned the city in 983 and Basil II extended his authority over it in 995, setting fire to it yet again in 999.

LIT. P. Peeters, "La Passion de S. Julien d'Emēse," *AB* 47 (1929) 44–76. –M.M.M.

EMIR (ἀμιρᾶς, εμίρης), Turkish form of Arabic title ʿamīr, generally meaning "commander" and largely used by the Islamic peoples. In early Islamic times only commanders of armies used the title, but later persons exercising administrative and financial authority adopted it. Under the Seljuk it was given to military officers and to younger princes. In the late 13th and in the 14th C. it was used by lesser rulers such as those of the Turkish states that succeeded the old sultanate of Rûm; it was finally used by the Ottoman sultan. The term appears in early Byz. sources (e.g., THEOPHANKES THE CONFESSOR) as a loanword from the Arabic. The names of some Byz. families (e.g., Amiropoloi, Amiroutes) originate from this title. The *Song of the Amiras (Emir)* forms the first section of the epic *Digenes Akritas*. It was gradually used alternatively with or replaced by the Turkish title BEG.

EMMANUEL. See Christ: Types of Christ.
EMMAUS (Ἐμμαύσης, Ar. ‘Amwās), identified by Sozomenos as Nikopolis, and, according to Eusebios of Caesarea, “a famous polis” in Judaea, on the road from Jerusalem to Jaffa. It was an autocephalous archbishopric under the jurisdiction of Jerusalem. It contained several goals of pilgrimage—a healing spring and churches. Ruins of a church and baptistery with mosaics of the 5th/6th C. were discovered there. The city also had a Jewish and Samaritan population. Conquered by the Arabs between 634 and 638, it was decimated by the plague of 639. Emmaus was displaced by Diospolis and then Ramla, and later pilgrims give confused testimony concerning its location. The Byz. church was rebuilt in the Crusader period.

It remains debatable (R. Janin, DHGE 15 [1963] 428) whether the Emmaus mentioned in the Gospels as the place where Christ had revealed himself to two of his disciples can be identified as Emmaus-Nikopolis.

—G.V., Z.U.M.

EMOIONS (πά το πάθη) were defined by Nemesios as a kind of movement (kinesis): movement according to nature is evil, whereas movement against nature is emotion or passion (PG 40:673C). Ancient ethics created an ideal of freedom from emotions—apatheia or ataraxia—and church fathers inherited from the ancients a condemnation of emotions, which were identified as vices; thus Theodore of Mopsuestia wrote, in accordance with Romans 7:5, of sinful passions working in our body (PG 66:808A). The hegumenos Dorotheos in the 6th C., however, drew a distinction between the two—pathe are evil desires and hamartiai (vices) their energies, or realizations (PG 88:1621D). Theologians emphasized consistently that God has no emotions and is apathes (Gregory of Nyssa, PG 45:49B).

The solemnity of Byz. ceremonial, ecclesiastical and imperial alike, rejected emotional movements; an uncontrolled gesture or unbalanced behavior were signs of barbaric, uncivilized upbringing, whereas an ideal appearance presupposed “measure,” “balance,” and “rhythm,” or harmony and symmetry (Ljubarskij, Psell 235f) in contrast to emotional outbursts. Ammianus Marcellinus described the “statuesque” pose of Constantius II, and the imperial portraits of the 4th C. presented motionless, “stony” figures. Patience was treated as a necessity in any situation and would be rewarded in heaven (E. Osborn, Ethical Patterns in Early Christian Thought [Cambridge 1976] 133). Hagiographers also emphasized that their heroes and heroines acted without emotion in the most distressing situations, even on the verge of death. At the same time, the Byz. distinguished between good and bad emotions: laughter was a bad emotion, whereas tears (see CONTRITION) were always welcome and indicated a sympathetic character; the gentle smile also fit the ideal of sanctity. Strong emotions such as passionate love of God were also acceptable in Christians. The PASSION OF CHRIST is the focus of the theology of salvation. From the 12th C. onward Byz. writers presented emotions even more boldly (e.g., delight in dancing and even obscure body language); they participated enthusiastically in processions and even displayed emotions that trespassed on the conventional moral code.

Representation in Art. In art, emotions were expressed less through physiognomy than through gesture. D. Winfield (DOP 22 [1968] 128) suggested that painters limited themselves to two basic facial attitudes: one for emotional disturbance, one for tranquility. Confronting innumerable impassive saints, the modern observer may doubt even the second category (L. Brubaker, Word and Image 5 [1989] 19–32). The reason for this lack of animation was not necessarily the sacred nature of the image: similar expressionless faces characterize scores of warriors, mimes, and dancers on bone caskets and boxes, the largest preserved class of secular art. Manuel Chrysoloras (PG 156:57D–59A) echoed the 3rd-C. theoretician Philostratos (Die Bilder, ed. O. Schönberger [Munich 1968] 4.21–22), who had prescribed that artists convey dispositions, as these are reflected in faces. The steeply angled brows of mourners in the Vienna GENESIS convey obvious feeling, but, while many 5th- and 6th-C. images show open-mouthed horror or smiling pleasure, no extant works of art display the range of expressions that CHORIKIOS OF GAZA and Nicholas Mesarites purport to describe. Except for the sorrowful Virgin in Crucifixion scenes, emotional manifestations are rare even in the “pathetic” phase of 12th-C. MONUMENTAL PAINTING;
in the 14th C., the Massacre of the Innocents is performed by murderers treated at worst as CARICATURES.

LIT. Maguire, "Depiction of Sorrow." —A.K., A.C.

EMPEROR (called BASILEUS, AUTOKRATOR, also DESPOTES), the pinnacle of Byz. POLITICAL STRUCTURE and society, whose extraordinary position is reflected in virtually every creation of Byz. civilization. The ideology of his power came from Rome, refashioned by Christian and Hellenistic conceptions. The divinely promoted emperor was considered to have been elected commander in chief, whether it was the army, senate, or CITIZENS that acted as God’s agents by their ACCLAMATION. This lack of juridical clarity helps explain the LEGITIMACY of military success, the absence of hereditary succession (designated successors were made co-emperors), and the vitality of USURPATIONS.

From the 7th and 8th C. onward, Byz.‘s new social conditions fostered the gradual appearance of a legitimacy of birth—PORPHYROGENETOS—and lineage. The providential ruler chosen by God (ek theou on coins—DOC 3.1:179) was conceived as God’s representative on earth, the sun and serenity were his chosen metaphors, and he enjoyed unique liturgical and executive privileges within the church (A. Michel, Die Kaiseracht in der Ostkirche (843–1204) [Darmstadt 1959]). As the source of law, he was not bound by it (Basil. 2.6.1; cf. e.g., Leo VI, nov.47) and some believe he possessed a right of land ownership over the entire empire (Kazhdan, Gosp.klass. 229–35). Although Byz. frequently revolted against emperors and killed or toppled them, and their effective authority was somewhat ambiguous, few questioned the idea of emperor. The reality of his power lay in a professional army and a bureaucracy expert at extracting wealth through elaborate taxes and extensive private revenues, the whole enhanced by PROPAGANDA and the emperor’s centrality to Byz. mentality and PATRIOTISM—a system unparalleled in European states before the 13th C.

The emperor was distinguished from his subjects (douloi) by his seclusion in the PALACE and his way of life (a living archaism in the 10th C.); by a sacral status inherited from the IMPERIAL CULT; by his use of PURPLE and GOLD (e.g., CHRYSOBULLS), CEREMONY, and INSIGNIA; and by a sanctity indirectly derived from the cult of Constantine I and the commemoration of his successors in the Synaxarion of Constantinople. He was united with his subjects by the exercise of his powers, his justice (cf. the story of Theophilos and the marketplace: TheophCont 87.9–88.3) and PHILANTHROPY, by ceremony and prayers that concretized their mutual relations, by their oaths of allegiance, and by their payment of taxes. His relations with the aristocracy were explicitly defined by the office and dignities he granted them.

By Ostrogorsky’s count, 88 emperors ruled Constantinople from 324 to 1453 for an average reign of about 13 years, or 12 without the exceptional longevity of the Palaiologoi (an average of over 19 years from 1259 to 1453). This apparent stability contrasts with high turnover in periods of crisis (e.g., 695–717, seven emperors came to
power in 22 years; 797–820, five in 23; 1055–81, seven in 26; 1180–1204, six in 24) and numerous failed usurpations. The unusual political and administrative continuity favored by this longevity must be reckoned a factor in Byz. survival.

Patterns of the transmission of power changed significantly, the most important trends being the decline of election—partly supplanted by successful usurpation—and the growth of family succession in later dynasties of Komnenoi and Palaiologoi. The period 324–610 saw ten designated successors take power without significant violence against the senior emperor; seven of these successors were family members, six more were elected, and four took power violently, although among them Constantine I and Julian could claim family and institutional rights. Family and usurpation loomed larger from 610 to 1204, when 32 co-emperors succeeded, 25 of whom were offspring and six more coopted into the imperial family; Michael I Rangabe might claim election, but he was the son-in-law of Nikephoros I. Twenty-one took power violently.

The family dominated late Byz. succession: eight emperors, all with close family connections by blood or marriage, took power as designated successors, although two used violence to enforce their claims; moreover, the two elected emperors were sons of emperors. Of the four usurpers, two were closely related to a predecessor.

The institutional background of emperors reflects the political structure: the early Byz. army (324–610) supplied 12 emperors, the bureaucracy only Anastasios I, while the imperial family provided nine emperors, if one includes Constantine I and Basiliskos. The period of the 7th–12th C. reflects the triumph of lineage, and the bureaucracy and palace milieu gained against the army: the former supplied roughly one emperor for every two from the army. The bureaucracy disappears as a recruiting ground for late Byz. emperors.

Except for Zeno, the European provinces supplied all early Byz. emperors of known background born outside of Constantinople down to Tiberios II; thereafter, Asia Minor (with some exceptions, e.g., Irene and Basil I) predominated for emperors born outside Constantinople, reflecting its enhanced economic and social significance. In its final centuries, the empire's reduced size severely limited the possibilities and their significance.

Most new emperors came from the aristocracy. Nonetheless, the rise of nonaristocrats to supreme power through imperial service (e.g., Justin I, Basil I, Michael IV) was an exceptional but persistent phenomenon down to the Komnenoi; more common, probably, was the rise of second-generation aristocrats (e.g., Valens, Justinian I). Aristocratic background and the premium Byz. placed on literacy meant a high level of culture among the overwhelming majority of emperors, many of whom, like Justinian I, Constantine VII, or Manuel II, have left significant writings. (For list of emperors, see Byzantium, History of.)

M.McC.

EMPHYTEUSIS (ἐμφύτευσις), in the 4th C., the term referring to a set of administrative regulations whereby estates belonging to the crown were transferred to private cultivators. By the late 5th C. emphyteusis had developed into a specific type of written contract governing long-term, usually perpetual leases of real property applicable not only to crown lands but to holdings of private and ecclesiastical landlords. Emp. Zeno defined emphyteusis as a right distinct from lease or sale, although possessing certain qualities of both (Cod. Just. IV 66.1). An emphyteuticus could not be evicted as long as he paid an annual fee (solita pensio) or presented to his master receipts (apodochae) for public services; his tenement was heritable and could be alienated unless the tenant had lost the contract, emphyteuticum instrumentans (Cod. Just. IV 66.2–3).

In case of sale, the owner possessed a right of preemptive purchase and was otherwise entitled to a payment equal to 2 percent of the purchase price. Persons undertaking an emphyteutical contract were required to pay an initiation fee, to keep the land in cultivation, and to return it unimpaired. Special restrictions (Justinian I, novel 120) were placed on the use of emphyteusis for ecclesiastical lands in order to prevent the alienation of church property. Later jurisprudence adhered closely, with some simplifications and modifications, to Justinianic regulations. After the 7th C. emphyteusis appears primarily to have been
applied to ecclesiastical property. Legal texts retain the traditional meaning of the term (e.g., D. Simon, S. Trojanos, FM 2 [1977] 67f) up to the 15th C. (e.g., Xenoph., no.32.29–30), whereas in documents of the 15th–15th C. the term emphyteuma was applied to the urban milieu (Constantinople, Thessalonike, Serres) and denoted, like enotikon, “house rent,” the annual payment for a house built by the tenant (A. Kazhdan, JÖB 39 [1989] 22).

EMPORION (εμπόριον, μπόριο in later sources, e.g., the Chronicle of the Tocco), a term of ancient origin (J. Rougé, Recherches sur l’organisation du commerce maritime en Méditerranée sous l’empire romain [Paris 1966] 108) designating a place of trade, found along frontiers, coasts, and trade routes. Primarily associated with seaports, they are also attested in inland areas, such as Thrace and Bithynia. Niketas Choniates (Nik.Chon. 75.56–57) defines the emporion of Corinth as “the lower polis.” In charters emporia (usually juxtaposed with kastro) are small settlements of urban type where ships can be docked (Lavra 1, no. 55.59–60, a.1102). Near the emporion tou Kotzinou, on the island of Lemnos, was the kastron of the same name (Dionys. no. 25.12–15, a.1430), and the Lavra of Athanasios was said to own a house in the kastron Kotzinou and two more in the emporion (Lavra 3, no. 164.4–5, a.1415), which according to another document (Lavra 2, no. 77.108, a.1284?) was located at the seashore. The term might designate a commercial quarter of a town, a market situated outside the urban fortifications (e.g., emporion of Adrianople), or a settlement which was in itself a marketplace, as in the case of Sagoudaous, donated by the sebastokratr Isaac Komnenos to the Kosmosoteira monastery at Bera. In scholarly literature the term also has a number of meanings—from early medieval trading settlements in the West (R. Hodges, Dark Age Economics [New York 1982] 47–65) to small Byz. towns (Litavrin, VizObstěstovo 122–24) to great coastal cities (M. Sjuzjumov, VizVrem 8 [1956] 26–41).

EMPRESS (augusta, αὐγούστα, βασιλίσσα; cf. E. Bensamar, Byzantium 46 [1976] 243–91). Legally, the empress depended on the emperor (Digest 1.3.31; Basil. 2.6.1; Scholia Bas. 2.6.1), but in favorable circumstances late Roman empresses, such as Pulcheria, Ariadne, Theodora (wife of Justinian I), or Sophia (wife of Justin II) might wield great power, esp. through a regency. Their social background (e.g., the marriage of Honorius and Arkadios to generals’ daughters) illuminates the empire’s changing political structure; conversely, the case of the wife of Justinian I, Constantine VI, or Theophilos shows how such marriages generated power and influence for the woman’s family. Newcomers on the throne tried to solidify their power by marriage to an established empress, from Marcian and Pulcheria to Nikephoros III Botaneiates and Maria of “Alania.”

In the late Roman period the status of empress was granted only grudgingly to imperial women: of the first 26 emperors’ 30 known wives (324–527) only nine were augustae. Four others became augustae as mother, sister, etc. These early augustae issued coinage, authenticated documents with lead seals (Licinia Eudoxia—Zacos, Seals 1, no.2759), wore imperial insignia, and possessed their own retinues. Their public life, largely separate from their spouses, involved a kind of parallel court and ceremonies with the female elite (McCormick, Eternal Victory 203f). Like Leontia (602), some became empress at their husband’s accession, some on marriage, and others afterward or not at all, whence the different coronation options in De ceremoniis (De cer., bk.1, chs. 39–41). The reasons are not always clear, but down to the 8th C., at least, empress status could follow the birth of a male heir (D. Missiou, JÖB 32.2 [1982] 489–98).

The solidification of Byz. aristocratic lineages and the Komnenian privatization of the state probably enhanced the power of the empresses. They kept most earlier privileges and wives became empresses more regularly—for example, Alexios I crowned Irene Doukaina one week after his accession and his dynastic successors’ spouses appear to have been simultaneously crowned and married or affianced. As Irene, Theodora (wife of Theophilos), Zoe, Eudokia Makrembolitissa, Maria of Antioch, and Anna of Savoy show, successful female regency became more frequent, while Irene, Zoe, and her sister Theodora even ruled briefly in their own names. From Anna
Dalassene's administration of the empire onward, acts issued by empresses survive that compare with those of their male counterparts and that show them administering very considerable wealth (F. Barisić, ZRV 13 [1971] 143–202; U.V. Bosch in Mel. Dujčev 89–102).

From 788 to 881 sources mention bride shows for selecting imperial spouses. Diplomacy began to bring foreign wives for emperors in the 8th C., when marriages with Khazar princesses were followed by failed negotiations for Frankish ones. Foreign brides might be coached in the Greek language and Byz. customs before arriving in Constantinople (Theoph. 455.23–25) and changed their names when they assumed Byz. identity. Their geopolitical status peaked under the Komnenoi, with brides from the German Empire and Capetian France. Such alliances became so usual in late Byz. that a ceremony was established for the adventus of imperial fiancées from abroad, but Palaiologan wives came from lesser echelons of regional potentates.

ENAMELS. Enameling is a means of embellishment in which glass, colored with metallic oxides, is heated until it melts and fuses with metal. Although enameling techniques varied over time and place, the Byz. were best known for their cloisonné enamel, in which cells divided by thin strips of gold (cloisons) are filled with glass and fired. After cooling, the composite surface of glass and metal is ground and polished. The lustrous result became the norm for enamels of the 10th–12th C., which were used on icons, reliquaries, book covers, chalices, and crowns, and even sewn onto ecclesiastical vestments.

The Byz. precursor of cloisonné was a technique in which enamel, often thinly applied, was contained within loops of filigree (either wire or strips set on edge) that determined the outline of the desired motif. The earliest example is a medallion portrait of a 5th-C. empress (Wessel, Byz. Enamels, no.2), probably Licinia Eudoxia, consort of Valentinian III. This filigree technique was in use at least until the 7th C.

Cloisonné enamel was the technique used from the 9th C. onward, and Buckton (infra) has suggested that the origin of Byz. cloisonné technique is to be found in the Carolingian world. Whatever its origin, the technique was well established in Byz. for reliquaries and enkolpia by the time the votive crown of Leo [VI] was made (Treasury S. Marco, no.8). The emperor appears in a loros and stemma on one of the medallions. The busts of Leo and of saints on these medallions have backgrounds of translucent green, which is characteristic of 9th-C. enamel.

Already apparent here is the substitution of enamels for precious stones, which were still used on other votive crowns. Gems are again absent on a chalice inscribed "Lord, help the Orthodox emperor Romans" (ibid., no.10), an ancient sardonyx vessel, the lip of which is enclosed in a metal band with enamel images, including those of Christ, the Virgin, and Lazaros the icon painter. Their haloes and garments, displaying a great variety of blues, are silhouetted against the gilt metal, instead of having an enamel background. This technique became standard from the 10th C. onward and is responsible for the "typical" Byz. enamel, with the figure isolated against the gold of the plaque or medallion. A second sardonyx chalice with an identical inscription was likewise brought to Venice as booty from Constantinople in or after 1204 (ibid., no.11).

Numerous enamels have been seen as products of late 9th–10th-C. Georgian art, but work from the Caucasus is hard to distinguish from Byz. examples; further difficulties of identity and authenticity are raised by the alterations and forgeries undertaken by 19th-C. dealers and restorers. Unquestionable, datable Byz. enamels include the Limburg an-der-Lahn Reliquary and some precious objects of the 11th C. usually interpreted as crowns of Constantine IX (Wessel, Byz. Enamels, no.32) and Michael VII (the so-called Holy Crown of Hungary—Studien zur Machtssymbolik des mittelalterlichen Ungarn, eds. F. Fülep, E. Kovács, Zs. Lovag [Budapest 1983]).

Constantinople as a source of "export enamels" is also apparent in two enameled triptychs, possibly brought to the West by Wibald of Stavelot. The most celebrated example is the Pala d'Oro, the largest surviving complex of such materials; part of it was in Venice by the early 12th C. The original form and content of this object is much debated, not least the question of which of several empresses named Irene is depicted on it. It is
certain that the Pala was enlarged and further embellished with loot from the Fourth Crusade, including enamels of six scenes of the lives of Christ and the Virgin. According to Sylvester Syropoulos, these enamels were recognized in 1438 by Patr. Joseph II as coming from the Pantokrator monastery in Constantinople (S. Bettini in Treasury S. Marco 41f).

Byz. enamels are distinguishable from Venetian work by the fineness of their cloisons and their saturated colors, qualities esp. evident on icons such as the full-length St. Michael in Venice (Treasury S. Marco, no.19), the effect of which is accentuated by gemstones. In the case of other pieces of the 12th—13th C., enameled backgrounds have reappeared, now using opaque colors, not the translucent green of the 9th C. This technique has been attributed to Thessalonike (Wessel, Byz. Enamels, nos. 60, 63). From the late 14th C. onward, enamel was increasingly used in conjunction with other media: cloisonné tondi depicting archangels, prophets, and church fathers were juxtaposed with repoussé scenes on the silver-gilt cover (Treasury S. Marco, no.20) of a Greek lectionary, copied by a certain Sophronios at Ferrara before 11 Nov. 1439. Among the latest Byz. enamels are the eight medallions at the extremities of the gilded filigree cross inside the Bessa- rion Reliquary.

ENANTIOPHANES. See Anonynous, "Enantiophanes."

ENCAUSTIC. See Icon: Painted Icons.

ENCHEIRION (ἐγχειρίων), a rectangular piece of soft material, embroidered with gold thread, that was worn as a vestment by a bishop over his sticharion. It was attached to his belt so as to hang down over his right thigh. Its use was apparently restricted to bishops. First attested as a vestment in the book of pseudo-Germanos I on the liturgy (PG 98:396B) and in a letter of Patr. Nikephoros I (PG 100:200C) and in representations of the late 10th C. (Menologion of Basil II, pp. 54, 74, 188, 254, 340), the encheirion was replaced during the 14th C. by the stiffer, lozenge-shaped epigonation.

ENCYCLOTICAL (lit. "circular"), in the narrow sense of the word, a formal pastoral letter sent by the pope to the entire church; the term was used from 1740 (E. Mangenot, DTC 5.1 [1939] 14). However, in late Roman practice the terms enkyklios epistolai or enkyklios grammata were applied to "circulars" written by church fathers of great authority: thus, Clement of Rome reportedly wrote enkyklioi epistolai "to be read in holy churches" (Epiphanios, Panarion 30.15.2). Origen sent en- kyklia grammatata (Eusebius, HE 6.18.4); Alexander of Alexandria wrote 70 enkyklioi epistolai addressed to various bishops and devoted to the refutation of Arianism (Epiphanios, Panarion 69.4.3). The term was applied also to letters of certain patriarchs: Anatolios in 451/2, Gennadios I in 458/9, Pyrrhos in 639, Paul II in 642, etc. Theophanes the Confessor (Theoph. 22.16) relates that the First Council of Nicaea dispatched to Alexandria, Libya, and the Pentapolis an enkyklios epistolai concerning the Arian heresy. Evagrius Scholastikos (HE 3.7) employs the term antenkyklios, saying that Emp. Basiliskos, fearing the resistance of Patr. Akakios, withdrew his previous pro-Monophysite enkyklios and issued antenkyklios confirming the decisions of the Council of Chalcedon. The term enkyklios apparently fell into disuse after the 10th C.

-A.K.

ENCYCLOPEDISM, a conventional term introduced by Lemerle to replace the less precise "Macedonian Renaissance" as a characterization of Byz. culture of the 9th C. through the beginning of the 11th C. The main feature of this period was the "organization" of an administrative and cultural structure; for this purpose various manuals were produced—on the bureaucratic hierarchy (taktika), on tax collecting (see Taxation, Treatises on), on military tactics and strategy (strategia), on agriculture (geoponika); Ro-
MAN LAW was systematized in the BasiLika and related texts, and rules for the guilds of Constantinople (the Book of the Eparch) were issued. It was also a period of active transliteration of texts from uncial to minuscule and of attempts to gather, observe, and appreciate the ancient heritage—from Photios’s Bibliotheca to the Souda. The systematization and “organization” also covered such spheres as education, hagiography (Symeon Metaphrastes), and church decoration. The activity of Constantine VII Porphyrogenetos and his court was the focal point of new tendencies, resulting in the compilation of such works as De thematibus, De administrando imperio, and De ceremoniis. The epoch produced many polymaths, like Leo the Mathematician, Photios, and Arethas of Caesarea, but the emphasis was not on creativity, but on copying and collecting.

ENDYNE (ἐνδύνια), a cloth that covers the top and all four sides of the altar. Apart from a possible instance in the museum of S. Marco in Venice, only representations of such cloths survive from the Byz. period, most from the 6th to 7th C., as in the Melchizedek mosaic at S. Vitale and the bema of Sant’Apollinare in Classe, both in Ravenna. Textual references to endyntai continue from the mid-6th C. until the end of the empire; special attention is paid to them in the De ceremoniis since, on Great Feasts, emperors either kissed or changed these altar vestments (see Speck [1966] infra, nos. 18—24). Although the endyntai represented in the Menologion of Basil II (pp. 14, 324, 358) have only geometrical ornament, those referred to in earlier literature are much more elaborate. Paul Silentarios (Friedländer, Kunstbeschrieb. vv. 759—805) tells of a purple silk altar cloth at Hagia Sophia in Constantinople bearing images of Christ, Peter, Paul, and, on its hem, hospitals and churches founded by Justinian I. Bp. Victor of Ravenna had a cloth of gold and silver with his own likeness made for the Basilica Ursiana, and Archbp. Maximian’s endyntai for the same church had not only his portrait but “the whole story of our Lord” (Agnellus, ed. Holder-Egger, 324.28—33; 335.37—40). The Iconoclastic Council of 754 (Mansi 13:332B) declared that figure-bearing cloths might not be destroyed but could be altered with the permission of the patriarch and the emperor. Thereafter most references occur in typika, such as that of the Petritzos monastery (ed. Gautier, REB 42 [1984] 123.1730—33), and inventories such as that of Patmos (ed. C. Astruc, TM 8 [1981] 22), since endyntai were a favorite offering of church benefactors.

ENERGY (ἐνεργεία). According to Clement of Alexandria, Origen, Eusebius of Caesarea, and other church fathers, the activity of the Logos in creation and redemption derives ultimately from God the Father; it is opposed by the “activity” (energeia) of the demons (energoumenos = “demon-possessed”). In the writings of the church fathers the doctrine of the divine energies reaches its zenith in the definition of the two energies, or wills, in Christ, corresponding to his two natures, as opposed to the doctrine of Monotheletism. Important for the philosophical orientation predominant in late Byz. thought is the real distinction between God’s essence and his energies (in the plural, but referring to the Trinity as a unity) represented by Gregory Palamas, set in the framework of the Orthodox doctrine of grace and knowledge in opposition to Barlaam of Calabria. According to Palamas, the three divine persons necessarily remain hidden and inaccessible to the faithful, while the uncreated energies—which are one with the divine essence and, accordingly, representations of it (as, e.g., the light of Transfiguration)—convey to him participation in divine life.

As a result of the unsystematic and polemical manner of expression characterizing his occasional writings and his somewhat arbitrary and selective use of the theology of the church fathers, Palamas attracted a long line of opponents, both in his lifetime and later (e.g., Gregory Akindynos, Nikephoros Gregoras, the Kydones brothers, John Kyparissiotes), who believed that knowledge of God was connected essentially to the Creation. Both sides appealed, rightly or wrongly, to pseudo-Dionysios the Areopagite, or at least to various aspects of his apophatic and cataphatic theology.

ENGASTRIMYTHOS (ἐγκαστρίμυθος, lit. “belly-talker”), a witchlike descendant of the ancient Sibyls or prophetesses. Engastrimythoi, often male, were ventriloquists who disguised their voices and made mantic utterances, as if a deity or demon were acting within and speaking through them. Their activities are attested in the 4th C. by pseudo-Justin (PG 6:1324A) and in the 5th C. by Theodor of Cyrhrus (PG 80:337C); in the 6th C. a female engastrimythos was admitted to the imperial court after Justin II showed symptoms of insanity, in order to “make known the facts about his illness” (vita of Symeon the Stylite the Younger, ed. P. van den Ven 1:180, ch.209.15–16). Canon 60 of the Council in Trullo condemned people who feigned possession; the practice must have continued, however, as Theodore Balsamon, in his gloss to this canon, denounces those “who feign being possessed as a means of profit, and proclaim certain things with the evil, satanic gaze of the prophetesses of the pagans” (Rhalles-Potles, Syntagma 2:441.13–15). (See also Oracle; Sibylline Oracles.)

ENGLAND ( Бретания). The Roman province of Bretania was probably abandoned by the empire after 428 or even 442 (H.S. Schultz, JRS 23 [1933] 36–45), but some contacts with the East seem to have been maintained. In the 6th C. Prokopios of Caesarea had copious information about remote Bretania, which he viewed as lying at the extremity of the known world; the 6th–7th-C. SUTTON HOO TREASURE also provides evidence for these links, and the 7th-C. vita of JOHN ECLEMON mentions a ship from Alexandria carrying zinc from Bretania. Two Greeks, Theodore of Tarsos (archbishop of Canterbury) and Adrian (born in Africa), played an important part in the English church of the 7th C., ushering in a brief period of Greek cultural and religious influence on the island (see Bede). Some English pilgrims visited Byz., and Byz. influence on English political terminology is reflected in the title of King Athelstan, basilisc Anglorum (a.931).

Official diplomatic relations resumed in the mid-11th C., attested to by several Byz. seals found in England—one of Sophronios II of Jerusalem (ca.1059–64) (V. Laurent, NC 72 [1964] 49f) and one of the envoy John-Raphael, after 1066 (V. Laurent, NC 71 [1963] 93–96). After the Norman conquest some Anglo-Saxon refugees offered their services to Alexios I and are mentioned as Inglinoi in several of his chrysobulls (C. Head, Byzantium 47 [1977] 186–98). Alexios I established an English colony at Kibotos or Chevetot (on the Gulf of Astakos). English VARANGIANS are mentioned
as late as 1329. Several Byz. diplomatic missions to England are recorded in the 11th and 12th C. Manuel I Komnenos sent embassies in 1170, 1176, and 1177 and conducted a lively correspondence with King Henry II (1154–89), no doubt in the hope of securing his support against the French and Normans, who threatened the empire. The Latin conquest of Constatinople (1204) contributed to a renewed but short-lived English interest in Greek learning during the 13th C., as evidenced by the collection of Greek MSS by John of Basingstoke, who actually studied in Athens, and the scholarship of the Franciscans Robert Grosseteste and Roger Bacon. The last major contact between Byz. and England occurred in 1400 when Manuel II Palaiologos visited England for two months in a largely unsuccessful attempt to enlist the financial and military support of Henry IV (1399–1413) against the Turks.

ENKAINIA (ἐγκαίνια), ceremony of dedicating or consecrating a city (e.g., Constantinople, 11 May 330), a secular monument (e.g., Constantine I’s mausoleum, 21 May 337), or a church (also called kathiriosis). The term had been applied to the Temple in Jerusalem, but by the 4th C. Eusebios of Caesarea used it to describe the dedications of churches in Tyre and Palestine. The purpose of enkainia was to make the space holy, and early Christian writers stressed the similarity between baptism and the dedication of a church; accordingly, lustration with holy water occupied an important place in the enkainia rite. Usually preceded by a synaxis, the ceremony was concentrated around the altar, which was washed, anointed, and covered; a procession with relics and exorcism also formed a part of the ceremony. These ritual steps are summarized by Patr. Germanos I in his commentary (Germanos, Liturgy 56) and commented on at length by Symeon of Thessalonike (PG 155:395–398). The vita of Patr. Euthymios describes the enkainia of the Church of the Anargyroi at Psamathia: monks from nearby monasteries spent the entire night in prayer and thanksgiving, and at dawn a procession of torchbearers, with the cross and Gospel book, wended its way to the newly built church. After the dedication the hegoumenos of the Psamathia remained inside the building for 40 days.

According to Athanasios of Alexandria (PG 25:612B), the dedication of a church was impossible without the order (prostaxis) of the emperor. The rite of enkainia could be performed by the patriarch, e.g., Photios conducted the enkainia of the Nea Ekklesia (1 May 880). The date of such a ceremony was often chosen to coincide with one of the Great Feasts, as in the case of Justinian I’s Hagia Sophia (25 Dec. 537). Enkainia was also the term used for the annual celebration of the dedication of a church (Mateos, Typicon 2:186), and esp. the Triumph of Orthodoxy.

EN KEREM (Ar. ‘Ayn Karim), a site 7 km west of Jerusalem with remains of three churches of the 5th/6th C.: two basilicas, one of which was dedicated to the Holy Martyrs of God, and a chapel of the Visitation. Some vague evidence indicates the place’s connection with the cult of John the Baptist; there was an 8th-C. church of St. Elizabeth “in the village of Encharim,” and EPIPHANIOS Hagiopolites locates “the family house” of John on “Mt. Carmel,” which is interpreted by Wilkinson (Pilgrims 156) as En Kerem.

The site is related to the legend in the Protoevangelion of James (22:3), according to which St. Elizabeth and the infant John were saved during the Massacre of the Innocents by a mountain that opened up to conceal them. A clay Eulogia in Monza portrays this event (Vikan, Pilgrimage Art, fig.12).

ENKLEISTOS (ἐγκλειστος, “enclosed”), term attested from the 4th C. for a monk or nun who confined himself or herself in a cell, under a vow of perpetual seclusion. An enkleistos might either lead the solitary life of a hermit, as in the case of
St. Pelagia (who disguised herself as a monk and lived in a cell on the Mount of Olives in Jerusalem), or, like St. NeophytoS Enkleistos of Cyprus, be attached to a monastic community after a period of isolation. NeophytoS lived in a cave, which he excavated and enlarged so that it could accommodate a tomb and a chapel for the celebration of the liturgy. He eventually became the hegoumenos of a koinobion but performed no administrative duties, leaving them to the oikonomos and docheiarios of the monastery. The typikon of NeophytoS is the only monastic rule that prescribes that the hegoumenos must be an enkleistos; the typikon of the Euergetis Monastery in Constantinople permitted the hegoumenos to be an enkleistos, but did not require it (C. Galatariotou, REB 45 [1987] 132ff). Other enkleistoi who achieved sanctity were David of Thessalonike, who reportedly spent 70 years in an enkleisterion (John Moschos, PG 87:2921B); Stephen the Younger (PG 100:1148C); and Plato of Sakkoudion.

-A.M.T.

ENKOLPION (ἐγκόλπιον, lit. “in” [or “on] the bosom”), an object with Christian imagery, or containing a sacred relic or inscription, worn around the neck. Enkolpia were produced in virtually all materials used for jewelry. They could take the form of a simple disc, with figures, scenes, and/or inscriptions, or be a container of some sort. The enkolpion protected the wearer by means of its imagery or, in the case of a reliquary, by its contents.

The term enkolpion may encompass many other objects—phylakteria, eulogiai, amulets. Enkolpia were in use from the 4th C. onward and have been found throughout the Byz. world. Literary accounts describe them given as gifts or as belonging to individuals: a 12th-C. historian (Nik.Chon. 451.85–87) records one that depicted the Virgin Mary, to which Isaac II Angelos was esp. attached and which he embraced while confessing.

-S.D.C., A.C.

ENKOMION (ἐγκόμιον), or panegyric, a speech of praise. The authors of ancient rhetorical textbooks identified enkomion with epideictic of the good in general (thus Theon in RhetGr, ed. Spenigel 2:61.22), and accordingly Menander Rhetor (pp. 2–6) believed that enkomia included praise of cities, men, animals, accomplishments, and arts; he excluded only hymns to the gods. As special types of enkomia, Menander lists the basilikos logos and, reluctantly, the prosphonetikos logos.

Byz. practice, however, distinguished enkomion from ekphraseis and limited it to the praise of persons: saints, emperors, patriarchs, and others. The praise of saints was the subject of hagiography; the emperor and patriarch were eulogized by official rhetoricians on regular days (Epiphany and the Lazarus Saturday, respectively), and enkomia in prose and verse were delivered on special occasions—weddings (Epithalamion), funerals (Epitaphios or Monody), victory celebrations, and so forth. Encouraging elements occur in historical works, even though some historians, following Lucian, tried to distinguish between enkomion, a consistent praise of a person, and history, which aimed at the truth (Ljubarskij, Psell 139ff). On the other hand, the enkomion of one person might prove to be an invective against another. Panegyrics of private persons, side by side with those of emperors and patriarchs, became common from the end of the 11th C. At the same time parodical enkomia were composed
on frivolous subjects, for example, on a flea (by Michael Psellos, and later Demetrios Chrysoloras).

LIT. Hunger, Lit. 1:120–32. –E.M.J., A.K.

**ENNOMION** (ἐννομίον, from nome, “pasture”), a tax and/or charge on pasture land and/or on the right of pasturage. The term was used in Hellenistic and Roman papyri as well as in several inscriptions (S. Avogadro, Aegyptus 14 [1934] 293–97). In Byz. it appears first in Peira 37:2 and is frequent in later praktika. In Peira, ennomion is a charge paid by the owners of livestock grazing on a common pasture; the collected sum was divided between the owners of the pasture (including those peasants who had no livestock) according to the amount of state taxes paid by each. In a praktikon of 1073, ennomion is a part of the lord’s revenue collected from certain pastures (Patmos Engrapha 2, no. 50.123–24, 136) and measured per capita: 1 miliresion for a horse or ass, 1 nomisma for 100 sheep (ibid., no. 50.314–315). A metrological treatise (11th C. or later) calculates the ennomion of sheep also as 1 nomisma for 100 animals but gives a higher rate for other livestock (water buffaloes, mares, and cows)—1 nomisma for 3 animals (Schilbach, Met. Quellen 59.30, 60.10–14). In later documents, ennomion appears as an annual payment inscribed in praktika, and its correlation with the telos-oikoumenon does not seem to be fixed: thus, in a charter of 1319, “the ennomion of sheep and swine” together with the charge on bees makes 24 percent of the entire payment (Lavra 2, no. 106.22–23); in a praktikon of 1321—together with linobrochion (see Banality), about 5 percent (Xenoph., no. 15.24–27); in a praktikon of 1317—together with aerikon, 3 percent (Lavra 2, no. 104.165–66).

It is difficult to distinguish the ennomion levied on livestock (the melissenonomion, a charge on beehives, is also known) from the dekaeia on herds (choirodekaeia and probatochoirodekaeia). Ennomion was usually collected by a private owner: thus Andronikos II Palaiologos in 1319 granted the monks of Hilandar the right to levy the emperor’s relatives, archontes, stratitai, and all laymen and clerics who let their animals graze on the pasture of the village of Georgela (Chil., no. 41.73–82). But it could be a state levy—thus, in 1447 a metochion of the Lavra on Lemnos was granted 200 sheep free from ennomion (Lavra 3, no. 171.9–10).

**ENOCH** (ʾĒwōḵ), son of Cain or Jared and father of Methuselah; one of the biblical patriarchs. The Book of Enoch stands first in pseudo-Athanasius’s list of apocrypha. Three major versions of it survive. Enoch I, known only in an Ethiopic translation from Hebrew or Aramaic, is a work of the Hellenistic period. Enoch II exists only in Old Slavonic. It is an enigmatic text, probably translated from Greek (ca.1000?), although N. Meščerkij (TODRL 19 [1963] 130–47) suggested the possibility that it was translated directly from Hebrew. Enoch II describes how the patriarch was taken up to God through seven heavens and then returned to describe his vision. Its theology is uncompromisingly monotheistic, its ethics permeated by sympathy with the needy and by sexual chastity. The date of the original composition cannot be established. Enoch III, a Hebrew apocalypse of the 5th–6th C., deals with a journey of Rabbi Ishmael into heaven, where he met Enoch, son of Jared, whom God had elevated above the angels and appointed as his viceroy.

**ENOIKION** (ἐνοικίον), rent paid for a leased property. In classical antiquity the term enoikion, meaning house rent, seems to have been distinguished from phoros, rent for the lease of a workshop (ergasterion); already in late Roman Egypt, however, the two terms were confused (Fikman, Egrp 44). Often used in the Book of the Eparch, enoikion designated primarily the rent for an ergasterion, but merchants staying in mitata also had to pay enoikion. The term and its cognates continued to be used in late documents: an act of donation of 1338 mentions three ergasteria enoikiaka (Kouloum., no. 18.44) near the emporion of Serres. Sometimes the word enoikiaka is used as a noun to designate rooms for rent (Lavra 2, no. 71.70); in an act of donation of 1115 (Lavra 1,
no.60.35), however, enoikiaka are contrasted with houses and evidently mean workshops.

Michael Attaliates collected the enoikion of 24 nomismata for a bakery, 14 nomismata for a perfumery, and 5 nomismata for "houses" used by a physician (P. Gautier, REB 39 [1981] 43.440–45). Charters also provide some data about the amount of enoikion: in 1294, 200 hyperpers for a tower (pyrgos) containing several workshops (e.g., for shops selling woolen garments) and a kitchen (MM 4:286.4–7); in 1342, 700 hyperpers for a chain of shops—grocery stores, perfumeries, a bakery, and vegetable markets (Lavra 3, no.123.115–33); in 1419, 30 hyperpers for "houses" (Xénoph. no.32.21); in 1445, eight nomismata and a vessel of flaxseed oil for a workshop processing flaxseed (Lavra 3, no.168.4–7). In a prestolagma of 1202 (MM 3:50–53) the rent for houses and ergastera is called either enoikion or emphyteuma; the latter term is usually explained as the rent for a newly established shop.

The payment of rent sometimes caused discontent in Constantinople. As a result, on one occasion Emp. Romanos I paid the enoikha of impoverished inhabitants of the city (TheophCont 429.22).

Lit. Bk. of Eparch 153f. —A.K.

ENTABLATURE, a horizontal beam carried on columns marking the juncture of load and support in trabeated construction. In ancient architecture the entablature was divided proportionately into three parts, bottom to top: architrave (or epistyle), frieze, and cornice. In arcuate architecture (Roman, early Christian, and Byz.) entablatures disappeared to be replaced by a molding, sometimes elaborately carved, marking the crowns of the arches carried by the columns, the floor level of the galleries, or the springing of major arches supported by piers. Entablatures were used in Old St. Peter's (central nave only) and survive in S. Maria Maggiore, Rome; at Studios and Sts. Sergios and Bakchos (exedrae only), Constantinople; Church of the Nativity, Bethlehem; and in the columnar TEMPLA of Byz. churches built during and after the 9th C. (See also IMPOST BLOCK.)

—W.L.

ENTERTAINMENT. For amusement the Byz. enjoyed games and spectacles such as CHARiot RACES in the hippodrome, triumphal processions, visits of foreign dignitaries and ambassadors, religious festivities and panegyres (see FAIR), banquets, and ceremonies that provided recreation and excitement. The streets were also the setting for various kinds of shows with exotic or strange animals and wild beasts. Performances were given by acrobats, jugglers, magicians, actors, and mimes. Apart from this kind of popular entertainment people found recreation in board games such as chess, in gambling, and in various sports. Hunting, hawking, and equestrian sports attracted mostly the aristocracy. The common people went to taverns, where they engaged in dances and jesting, while baths and the theater gradually declined in importance. On certain holidays, like the feastday of Sts. Markianos and Martyrios or the January festival, there was CARNIVAL-like masquerading and processions in which even the clergy participated along with the people.

ENTRY INTO JERUSALEM. Celebrated on PALM SUNDAY, Christ's Entry marks the beginning of his PASSION (Mt 21:1–11, Mk 11:1–10, Lk 19:29–40, Jn 12:12–19). Its imagery shifted with shifting interpretations of the Passion. On the 4th-C. Junius Bassus sarcophagus (Volbach, Early Christian Art, pl.42), the Entry adopted the iconography of imperial ADVENTUS that itself had already shaped the Gospel account. Showing a youthful Christ astride a donkey greeted by the personification of Jerusalem, the Entry proclaimed the Passion as Christ's victory over death and the beginning of his sovereignty in the eternal Jerusalem. A different, more narrative inflection characterizes the 6th-C. versions (ROSSANO GOSPELS, fol.1v), where Christ is a mature man seated side-saddle and welcomed by palm-waving crowds who lay their coats in his path. The Passion had by now acquired an emphasis on sacrifice, and henceforth a narrative version of the Entry focusing on Christ's humanity predominated. Post-Iconoclastic art replaced the personified city with the figure of a mother and child; other symbolic details are the Spinario, or boy removing a thorn from his foot (Berlin ivory—Rice, Art of Byz., pl.115), and the prophet Zechariah (cf. Zech 9:9). Palaiologan art emphasizes the steepness of Christ's downward path to symbolize his descent into Hell.
ENVERI, 15th-C. Turkish poet and chronicler. All that is known of his biography is that he accompanied MEHMED II on campaigns to Wallachia, Bosnia, and Lesbos in 1462–63. He was the author of the Desturname (Book of the Grand Vizier), a universal history commissioned by Mehmed II’s grand vizier Mahmud Pasha (who functioned in an official capacity 1455–68). Written in Turkish verse, the Desturname was completed in 1465. Relevant to Byz. studies is book 18, which celebrates the Aydinoğulları, or emirs of Aydın, chiefly Umur Beg (died 1348), and books 19–22, which cover Ottoman themes to 1464. Enveri’s unparalleled account of Umur Beg’s campaigns rests on excellent, evidently contemporary sources. Its value in clarifying the liaison between John VI Kantakouzenos and Umur Beg during the Civil War of 1341–47 is demonstrated by P. Lemerle (L’Émirat d’Aydin, Byzance et L’Occident, Recherches sur “La Geste d’Umur Pacha” [Paris 1957]). Enveri’s treatment of the Ottoman dynasty in books 19–20 also depends primarily on an anterior source, but is much less detailed and significant. His information in books 21 and 22 about Mahmud Pasha, a scion of the Angeloi who converted to Islam after 1451, is of great importance.

ENVIRONMENT. The Byz. perceived their natural surroundings mostly in standardized, conventional terms: the desert was the region of “mountains and caverns and holes in the earth” (e.g., Barlaam and Ioasaph, ed. Woodward, Mattingly, p. 48.20–21), the mountains precipitous and unassailable, the sea seething with waves. When a civilized area was described, the accent lay on its material assets, not its pleasurable aspects: cities were said to possess temperate climate, fertile soil, and sweet water in abundance. The image of the world was usually presented as a catalog of abstract designations of individual categories. The vocabulary of a writer (e.g., Niketas Choniates) might contain numerous names of trees, flowers, and animals, but these flora and fauna were reminiscences of ancient scholarship rather than live elements of real environment. The gardens in romances are as deprived of individuality as the emotions revealed in this setting.

Some exceptions, however, can be discovered. Gregory Antiochos describes a miserable winter in Bulgaria—the barrenness of the land, the ears of travelers assaulted by the bleating of sheep and the grunting of pigs: the description is sarcastic but vivid (Kazhdan-Franklin, Studies 219f). Gregory is esp. rich in fresh images of nature: a tree reflected in a pool (Greg. 2:705, 10–19); the kingfisher building its nest in the sand in stormy winter weather (3:130f); Mt. Athos, blessed with forests and flowery meadows, where in the morning the nightingale, singing in a grove, blends its song with the matins prayers of monks (2:714f). Also notable are the letters of Manuel II Palaiologos, who frequently describes his natural surroundings, whether a storm at sea, a barren plain in Anatolia, or the pleasures of the environs of Thessalonike, with their cool springs, shady trees, fragrant flowers, and birdsongs (eps. 16, 45, 67, 68).

EPANAGOGE (Ἐπαναγογή, Return to the Point), correctly Eiasagoge (Εἰσαγωγή τοῦ νόμου, Introduction to the Law), a law book of the emperors Basil I, Leo VI, and Alexander, divided into 40 titles. Patr. Photios took part in the composition of the work, which was probably promulgated in 886; he wrote the preface and the two most important titles (2 and 3), on the emperor and on the patriarch. The Epanagoge was to serve as an “introduction” to the comprehensive legislation known later as the Basilika and to replace the Eclaga of the Isaurian emperors. The source of the Epanagoge, which comprises nearly all spheres of law, is almost exclusively the Corpus Juris Civilis, whose regulations were to a certain extent intentionally altered or even falsified; the Eclaga, too, served as a model. Although the Epanagoge stopped being officially circulated soon after its promulgation and was replaced by the Prochiron
about 20 years later, many of its regulations were adopted into private law books (Epanagoge aucta, Epanagoge cum Prochiro composita, Syntagma of Matthew Blastares). The law book is transmitted in few MSS; extensive scholia to it have been preserved which sometimes comment critically on the text.

Epanagoge Aucta, a law book that consists of 54 titles and an appendix; it is based on the Epanagoge and, from Title 17 onward, the Prochiron. The Basilika were also used as an important source. The unknown compiler was acquainted with the legislative works produced under Leo VI; thus he summarized approximately 30 Novels of Leo VI, gave preference to the marriage property law of the Prochiron, and often detached the new regulations of the Prochiron from their context. He knew that the Ecloga was an “Isaurian” law book (15.8). The Epanagoge aucta, which is transmitted in about 10 MSS, bears the rubric “Leo the emperor” and shows no traces of later laws. Thus, it is probable that it originated soon after Leo’s death (912).

ED. Zepos, Jus 6:49–216.

Epanagoge cum Prochiro composita, a law book in 42 titles that is composed of the Epanagoge and the Prochiron. In some of the few surviving MSS, the compilation also includes excerpts from the Basilika as well as numerous marginal glosses. Some scholia to the Epanagoge (esp. to title 19) are integrated into the work. The law book, fragments of which have been preserved in a palimpsest MS of the 10th C., is ascribed in its rubric to “the emperor Leo the Philosopher,” and was presumably produced soon after the death of Leo VI (912).

Eparch (ἐπαρχὸς or ὑπαρχος), the name of several officials, the most important of which was the eparch of the city; other officials bearing this title were the eparchs of lesser towns. Except in the case of Thessalonike, they are known only from the late Roman period, and in Thessalonike the eparch acted under the supervision of the doux. Guillaud (infra) also gives a list of eparchs as chiefs of offices (eparch of the court, nykti eparchos, and so on), but J.-C. Cheynet (BS 45 [1984] 50f) argues that some of them never existed while others functioned only during late antiquity. Thus the eparch of the army is known in the 6th C. but not after that date (A. Failler, REB 45 [1987] 199f). The title of apo eparchon (the former eparch) is known primarily from sources of the 6th–8th C.

Eparchia (ἐπαρχία), province, the term used by narrative sources, primarily of the 11th and 12th C., as synonymous with the official theme. In ecclesiastical vocabulary eparchia meant an episcopal province.

LIT. Ahrweiler, “Administration” 69f. —A.K.

Eparchius Avitus, Western Roman emperor (9 July 455–18 Oct. 456); born Clermont, Gallia, ca.395–400, died 457?. A member of the Gallic aristocracy, Eparchius was descended from the patricia Philagrius (PLRE 1:693), of whom nothing is known. Eparchius was related to many senatorial families, Gaius Apollinaris Sidonius being his son-in-law; he served under command of general Aetius and enjoyed Visigothic support. Eparchius was praetorian prefect in Gaul in 439. In 455 Petronius Maximus appointed Eparchius magister militum and sent him as envoy to the Visigoths; when Petronius was murdered, first the Visigoths and then the Gallic nobles urged Eparchius to accept the diadem; he was proclaimed emperor at Arles. Eparchius sent an embassy to Emp. Marcian asking for recognition but did not receive it, even though he boasted that his request had been granted. After his return to Italy, unable to stop the Vandal pillaging or to revitalize the grain supply of starving Rome, Eparchius incurred the hatred of both the indig-

EPARCH OF THE CITY (ἐπαρχος τῆς πόλεως), successor of the late Roman urban prefect, the governor of Constantinople. The eparch of the city was considered supreme judge in Constantinople and its vicinity, second only to the emperor, and was the chief of police responsible for order, decoration, and ceremonial in the capital; as the head of the city police the eparch also had jurisdiction over prisons. Other functions were to control commercial and industrial activity in the capital, as reflected in the Book of the Eparch. Christopher of Mytilene characterizes in detail the symbolism of the eparch’s attire and of the trappings of his white horse (no.30.12–26); for example, the gilded copper bosses on the horse’s harness represented the eparch’s concern for the poor. In the Kletorologion (9th C.) Philotheos lists the following members of the eparch’s staff: symponos, logothetes tou praitorion, district judges, geitoniarchai, parathalassites, exarchs and prostatatai [of the guilds?], boullotaí who appended seals to merchandise, and others; of this list, the 10th-C. Book of the Eparch mentions exarchs and prostatatai, boullotaí, and sympones (possibly in a different function), but it introduces other assistants of the eparch—the legatarios and the mitotoes, inspector of the quality of silk textiles (Stückle, Zunft 93). After 1204 the role of the eparch declined and his office was divided up among several kephalatikeunotes (K.-P. Matschke, BBulg 3 [1969] 81–101) under the pressure of feudal forces. Seals of the eparch of the city dating from the 6th to the early 13th C. are known (Laurent, Corpus 2:545–79).

EPEIKES (ἐπεικὴς, on seals regularly epiketes), official on the staff of the homes tou staulou, who is mentioned in all taktika of the 9th and 10th C. According to a 10th-C. ceremonial book (De cer. 480.1–3), he was responsible for providing the fodder and water for horses as well as horse-shoes, bridles, and saddles. His function was probably the management of the imperial stables—at any rate, a seal of the 8th or 9th C. belonged to the “epiketes of the imperial stables” (Zacos, Seals 1, no.1806), and the owner of another was an “imperial epiketes” (no.2480C). Basil, the “epiketes of the basileus” (Skyl. 179.73; he is called just a plain epiketes in TheophCont 362.17), participated in the conspiracy of Samonas. At the end of the 10th C. Christopher Doukas was called Epeiketes, an epithet viewed by Polemis (Doukai 27) as a nickname. It is unclear how the term penetrated into the Armenian milieu—in the 1060s an Armenian “Pecht” served as a doux of Antioch; an Armenian prince “Epicht” was murdered by Greeks ca.1078 (Kazhdan, Arm. 124–26).

LIT. Oikonomides, Listes 339. —A.K.

EPEIREA (ἐπιειρεία, lit. “abuse, contumely”), a term that, at least from the 10th C. onward, was used by fiscal officials to designate extraordinary state “requisitions” (Lemerle, Agr. Hist. 167) or special taxes (Dölger, Beiträge 61). An act of 927 contrasts the state (demoteles) epereiai with military service (strateiai), both due for the land (Iuvir., no.1.8–9); an act of 974 (?) mentions epereiai side by side with angareiai, aplektos, and the (illegal) mitaton (Lavra 1, no.6.22–23). Later documents sometimes give a list of epereiai; thus, an act from ca.1200 includes angareiai, kastroktsiai, psomozemia, and several other charges (Xerop., no.8.17–18). A privilege of 1199 has an unusual list of epereiai connected with trade: kommerkcion, dekateiai (tithe) of wine, charge tor shipping (naulon), etc. (Palmou Engraphe 2, no.59.7–8). The term demosiakhe (state) epereia (e.g., Zepos, Jus 1:366.8) indicates that the central government was owed these charges, whereas Theophylaktos of Ohrid spoke of douleiai and epereiai required by local authorities (Letters, ed. P. Gautier, no.12.20). Accordingly an act of 1429 mentions “the demosiakhe and other epereiai” (Lavra 3, no.167.19–20), and a chrysoff of 1405 refers to “epereia archontike and demosiakhe” (Binon, Xeropotamou, no.20.24).
Thus, the term seems to have no strict, technical meaning. Having a connotation of “abuse” it could denote various types of charges and was primarily employed in the clauses of tax exemption. It is, however, questionable whether the exemption “from all epeereiæ” designated, as Solovjev and Mošin (Grčke povijesti 437) suggest, freedom from all taxes.

- M.B.

EPHESUS (* Ἐφεσός, near mod. Selçuk), seaport of Aegean Asia Minor. As capital of the province of Asia, Ephesus enjoyed considerable prosperity due to commerce, banking, and the patronage of the proconsul and the metropolitan bishop. Constantius II, Arkadius, and esp. Justinian I adorned the city, which is best known from its remains. They indicate that classical public works and services—theater, market, baths, the civic center, and marble-paved, colonnaded streets lined with shops—were maintained and that richly decorated private houses continued to be built until the early 7th C. The city was christianized by the 4th C. and saw the erection of churches and monumental crosses and the transformation of open public spaces as private buildings encroached on them. The numerous Late Antique buildings usually used spolia and were adorned with frescoes, mosaics, and marble. Prosperity ended ca.614, when large parts of Ephesus were destroyed (by Persians or earthquakes), never to be restored.

New fortifications enclosed less than half the ancient city and created a new defensive center around the Church of St. John a mile away. Its walls were probably a response to the Arab attacks that began in 654. Ephesus became a city of the Thraesion theme; in the 10th C., it was the center of a tourma of the theme of Samos. Ephesus was the site of a major regional fair in the 8th C., which generated considerable revenue. By the 9th C., neglect and the resultant silting had ruined the harbor and the city had moved to the hill around the Church of St. John to become an inland fortress. The city survived the attack of the Paulicians in 867/8 or 869/70, had Italian concessions after 1082, and was occupied by the Turks 1090–96. It was then usually known as “Theologos” (after St. John) or simply the Kastron.” In 1147 Ephesus was host to the Second Crusade and in 1206 recognized the Laskarids, under whom it became a center of learning. Nikophoros Blemmydes taught here, with George Akropolites and Theodore Laskaris among his pupils. The late 13th C. brought Turkish threats, temporarily dispelled by the Catalan Grand Company, which made Ephesus its base in 1304; it fell to the Turks of Aydin the same year.

Traditions that associated Ephesus with St. Paul, the Apostle John, the Virgin, and the Seven Sleepers made it the natural site for the councils of 431 and 449 and the frequent goal of pilgrimage.

Monuments of Ephesus. Ephesus preserves numerous civic buildings and two huge churches: the Basilica of the Virgin, seat of the councils, built in the 4th C. and twice rebuilt on a smaller scale after the 6th C., and the Basilica of St. John. The latter, the largest and most important church in the city, had its beginnings in the tetrapylon martyrion erected over John’s purported tomb as early as ca.300 and was mentioned by Egeria (29.10) in the last quarter of the same century. Probably ca.450 a cruciform church with a wooden roof was built on the site, incorporating the tetrapylon at its crossing. The western arm, with one or two narthexes, contained a nave and two aisles, while the eastern arm had four aisles and terminated in an apse. The church was rebuilt under Justinian I, with work beginning before 548 and completed prior to 565. The cruciform plan was maintained but the building was now covered with a series of six domes resting on massive piers. The western arm, longer than the others, consisted of two such bays, while the crossing, north, south, and east arms each had a single bay in a design described by Prokopios (Buildings 5.1.4–6) as closely resembling that of the Church of the Holy Apostles, Constantinople. The church was flanked by an octagonal baptistery built in the 5th C. and a domed, octagonal skewophylakion, or sacristy, erected in the late 6th or early 7th C. St. John’s was the scene of an annual miracle when healing dust issued from the evangelist’s tomb at the time of his feast on 8 May.

- C.F. M.J.
Ephesus, Councils of. Two important councils were held in Ephesus.

Council of 431. The third ecumenical council was summoned by Theodosios II to settle the conflict between the Antiochian Christology of Nestorios of Constantinople and that of the Alexandrian school represented by Cyril. Lasting from 22 June to 22 July, the council had approximately 150 participants at its opening. The lively political and ecclesiastical rivalry between the patriarchal sees of Alexandria and Constantinople complicated the long-standing opposition between the two schools. Although the council did not formulate its own Christological statement, it did accept that of the First Council of Nicaea (325) as interpreted by Cyril. In effect, it approved his theology that the humanity and divinity of the incarnate Christ were united in one hypostatic union—homoousis kath'hypostasin. By so doing, it formally recognized the propriety of Mary's title Theotokos (God-bearer), which Nestorius had denied. Finally, the council also condemned the beliefs of Pelagius (see Pelagianism) as heresy. These matters were decided before the arrival of John I, patriarch of Antioch, and his delegation. The latter understandably refused to accept the Cyrilian majority's condemnation of Nestorius. A brief schism followed, ending in 433 when Cyril and John were finally reconciled. The doctrinal and ecclesiastical victory had nevertheless gone to Alexandria. Cyril's rival, Nestorius, and his theology were crushed and humiliated. Ephesus is the first general council with extant original acts.

Ephoros (ἐφόρος, lit. "overseer"), term for an ancient Spartan magistrate, revived in the 11th C. It is not found in the Taktika of the 4th and 10th C. On seals, ephoroi bear the high ranks of proedros and vestes and sometimes combine their duty with judicial functions, as in the case of Theodore, judge of the velum and ephoros. On the other hand, charters of 1044–88 mention the ephoroi of imperial kouratoreiai who, according to N. Oikonomides (TM 6 [1976] 198), administered all the kouratoreiai over the entire empire. The staff of the ephoros included notaries and domestikoi. The term is found in the letters of Theodore Prodromos (PG 193:1299A) and Michael Italikos (ep.18). At the end of the 12th C. Niketas Choniates held this post, but it disappeared after 1204.

Ephoros was also the term for the lay administrator of a monastery, who was responsible for its economic management; the term is first attested in the 11th C. Other terms used for this position—epitropos, antileptor, and prostates—are found in 10th-C. sources. The ephoros was granted ownership (kryptai) of the monastery and its properties and was supposed to be its protector, assuring for
example, that it received fiscal exemptions (M. Nystazopoulou, Symeikta 1 [1966] 85–94). The ephoros might play an important role in the election of the hegoumenos and would have the power to remove him. Galatariotou (infra) concludes that an ephoros was more commonly appointed by aristocratic ktetors or founders; nonaristocratic tytpika either deliberately refrain from making this sort of appointment or appoint an ephoros to serve primarily as a contact with the outside world and to represent the monastery’s business interests and not to intervene in the internal administration of the monastery. In aristocratic typika, the ephoros is usually a relative of the ktetor, and the term is often a euphemism for a charistikarios (Ahrweiler, Structures, pt.VII [1967], 3f), who received financial benefit from the monastery, which he was granted as charistikion. Such ephorosoi sometimes abused their privileges and brought ruin on the monastery.

In a nontechnical sense, the term ephoros was applied to the ecclesiastical oikonomos and sakellarios (Dattouzès, Ofskia 555.1–2).

EPHRAIM, mosaist who worked with BASILIUS PICTOR in 1169 in the Church of the Nativity at BETHLEHEM. Ephraim’s name is found in the Greek portion of a partially preserved bilingual inscription formerly situated above the Gospel scenes in the church’s choir. It describes him as historiographos kai mouziatoros, names MANUEL I, AMALRIC I, and Raoul, bishop of Bethlehem, and gives the date for the work’s completion. The inscription is fully recorded on the flyleaf of a monastic miscellany, now Jerusalem, Greek Patr. Taphou 57.

EPHRAIM (Ἐφραίμ), chronicler from Ainos in Thrace; fl. at the end of the 15th C. or early 14th C. Ephraim is known only from his chronicle in dodecasyllables that presents the history of Old and New Rome through their rulers, from the 1st C. A.D. to 1261. It is followed by a verse catalog of the bishops of New Rome from the foundation of the church by the apostle Andrew to the accession of Patr. Isaiah in 1323. The latter is the only chronological indication for Ephraim’s life. The chronicle’s sources are ZONARAS, NIKETAS CHONIANES, and George AKROPOLITES, and is most detailed for the period 1204–61. Ephraim is true to his sources; variations and departures from them are minor and can be ascribed more to the needs of the meter than to independent knowledge.

EPHREM THE SYRIAN, theologian and hymnographer; saint; born Nisibis ca.306, died Edessa 9 June 373; feastday 28 Jan. Born probably to Christian parents (although his Syriac Life states that his father was a pagan priest), Ephrem spent most of his life in Nisibis, serving as a deacon. After the Persian occupation of Nisibis in 363, he moved to Edessa. Hagiographical accounts (e.g., the spurious sermon ascribed to GREGORY OF NYSSA) credit him with confronting ARIANISM in Egypt and visiting BASIL THE GREAT at Caesarea. His diverse writings (exegetical, dogmatic, polemical, ascetic), mostly in verse, were composed in Syriac but translated into Armenian, Greek, Latin, and Church Slavonic. Most important is his liturgical poetry, which includes hymn cycles on church feasts, funeral hymns, and polemics against various heresies, esp. those of ARTUS, BARDESANES, and MANI. Two other favorite themes were grim descriptions of the Day of Judgment and the supreme virtues of the Virgin Mary. Ephrem was a major influence on the development of Syriac and Byz. HYMNOGRAPHY. Despite some modern scepticism (J. Grosdidier de Matons, Romanos le Mélodie et les origines de la poésie religieuse à Byzance [Paris 1977] 22f), his impact on ROMANOS THE MELODE in terms of theme and imagery (e.g., heat, light, the “thorny nature” of man) seems certain (W.L. Petersen, VigChr 39 [1985] 171–87).

Representation in Art. Ephrem was depicted as a monk with a scant beard from at least the 10th C. (Weitzmann, Sinai Icons, no.B-58). The
scene of his death, a popular post-Byz. composition, had its origin in the Byz. period: the corpse of the saint, laid out on a bier in an open landscape, was surrounded by vignettes of eremitical life, showing monks at work in their rocky cells or preparing to descend by various means of transport for the funeral. These elements, which appear already in 11th-C. MSS of the Heavenly Ladder of John Climacus, were occasionally used for scenes of the death of other saints as well (e.g., Arsenios the Great).

EPHTHALITES (Ἐφθαλίται), a Hunnic people whose history and nomenclature are not clear. Many scholars assume that the peoples variously referred to as (H)Ephthalites, White Huns, Yeta, Hayatila, Chionites, and Kidarites are related and of Hunnic origin. Christensen (infra) believes the Kidarites and Ephthalites to have been different peoples on the basis of Prokopios, who says that the latter were white-skinned. In any case, the presence of this single group (or plurality of groups) in Sasanian Iran is demonstrable from the 4th C. through the reign of Chosroes I Anushirwan in the 6th C. Migrants from Mongolia, they settled along the Oxus River probably in the late 4th C.; under their king Grumbatras they participated in the expedition of Shāpūr II against Byz. Mesopotamia in 359; as Kidarite Huns, they settled in Bactria and Gandara in the 5th C. They participated in the dynastic struggle on behalf of Pērōz against his brother Hurmazd III in 457 and later took Pērōz captive. This evidently inaugurated a period of strife and tension, settled finally in 557 by Chosroes Anushirwan who, in alliance with the Turkic khan Silzboulos, crushed the Ephthalites and divided their lands with the Turks.

The ethnological discourse of Prokopios (Wars 1.3) on the Ephthalites indicates that they were sedentarized and yet also retained Central Asiatic shamanistic customs; for example, the hetairai of the chief were interred alive with their deceased master.

EPIBOLE (ἐπιβολή, Lat. adjectio sterilium) was the official transfer of abandoned land, together with its fiscal obligations, to relatives, co-contributors, or members of the same village or fiscal unit. The measure, initially meant to stabilize state revenues, enhanced the development of the fiscal communities described in 8th–10th-C. texts; it ended by indicating a complicated procedure by which, at every revision of the cadaster, the kanon was reassessed, taking into consideration the previous assessments and all eventual increases or decreases of fiscal obligations or taxable assets of each fiscal unit (village or large landowner); the established fiscal burden was then distributed to individual contributors. The basic characteristics of the institution survived in the late 11th and early 12th C., but the way it was actually applied had by then changed considerably owing to the decline of small landed property and the increase of state lands and large privileged private properties. At this time officials began to consider the possibility of a unified rate of epibole for the whole empire.

EPIC. Several types of epic flourished in the late Roman period: (1) PATRIA, or histories of cities such as Tarsos, Berytus, and Nicaea; CHISTODOROS OF KOPTOS wrote patria in epic verses on Constantinople, Thessalonike, and other cities (Al. Cameron, Historia 14 [1963] 489); (2) epic enkomia of famous persons, primarily emperors and high officials, by such authors as Claudian (who wrote both Latin and Greek epics), the empress Athenaia-Eudokia, Kyros of Panopolis, and Corippus; (3) mythological epics by Nonnos, Quintus of Smyrna, Kollouthos, Mousaios, etc.; and (4) biblical epics, an attempt to reproduce various Old and New Testament episodes in hex-
ameters; of these the paraphrase of St. John's Gospel, probably by Nonnos, is the most remarkable. Many of these epics are lost (esp. the city histories) and known only from fragments or citations in Libanius, the *Soula*, and other sources. Proklos defended Homer against Plato's criticism (S. Koster, *Antike Epotheorien* [Wiesbaden 1970] 99–114), while introducing a threefold division of poetry: the sublime, full of divine virtues; the middle, having educational purposes; and the lower, which with the help of imitation and fantasy leads the soul into error.

Epic form was occasionally used for works without epic content, such as didactic poetry. Dionysios Periegetes (2nd C.) and Oppian (3rd C.), authors popular in Byz., wrote in hexameter, as well as Markellos of Side, a physician of the 2nd C. From the 4th C. onward, hexameter was replaced in didactic works by iambic trimeters and prose; on the other hand, *centost* preserved Homeric meter and vocabulary but were sometimes far removed from an epic character.

After the first half of the 7th C., epic disappeared, although even much later (12th C.) poets praised imperial military achievements in hexameter. The last 7th-C. epic *enkomiom*, by George of Pisidia, was already iambic. The later epic Digenes Akritas differs in meter, content, and language from earlier examples and is closer to the tradition of soldiers' songs than to Homer.

---

**EPIFANII PREMUDRYJ**, or Epiphanius the Wise, monk of the Trinity monastery of St. Sergei near Moscow; died ca. 1420. His reputation as the most florid hagiographer of Rus' rests primarily on his vita of St. Stefan of Perm' (died 1395). The vita's elaborately expressive and emotive verbal devices are sometimes thought to be a literary and aesthetic extension of the spirituality of hesychasm, although features of the style can be traced to Serbian vitae of the 15th–14th C. and indeed to Byz. rhetoric (M. Mulić, *TODRL* 23 [1968] 127–42). Epifanij parades his knowledge of patristic and Byz. hagiographic traditions and of the Greek language, and he was prominent among those who represented the hesychast culture of Constantinople and Athos in Rus' (see KIPRIAN), probably having spent time in Constantinople and Athos himself. He wrote an *enkomiom* and, in 1418,
a vita of St. Sergej of Radonež (died 1392), which survives in a version reworked by PACHOMIJ LOGOFET. In a letter to the archimandrite Kirill of Tver', Epifanij describes the activities and working methods of THEOPHANES THE GREEK, from whom he requested and copied a miniature depiction of Hagia Sophia in Constantinople.

EPIGONATION (ἐπιγονόται), a lozenge of stiff embroidered cloth worn as a vestment by a bishop over his sticharion. It measured about 30 cm on each side and was attached to the belt so as to hang down over the right knee. Its use was restricted to bishops at least until the 14th C. First mentioned in the 12th C. by Theodore Balsamon (Rhalles-Potles, Syntagma 4:178.25–66), who states that it represents the cloth with which Christ washed the feet of the apostles, the epigonation gradually replaced the softer encherion. The earliest surviving examples, which date from the 14th C., are embroidered with an image of the Anastasis.

EPIGRAM (ἐπιγραμμα), originally an inscrip- tion, esp. a funerary inscription; in Hellenistic and Roman times a short poem, usually in elegiac couplets, often with an erotic or satiric theme. In the early centuries of Byz., though caustic cynicism and eroticism can still be seen in epigrams (e.g., of Palladas and later of Paul Silentiarios and Agathias), such subjects were already being replaced by soberer topics that reflected a christianized society, as in the funerary epigrams of Gregory of Nazianzos. Thus the epigrams of George of Pisidia or Theodore of Studios frequently deal with icons, saints, or church festivals. Epigrams were also used in doctrinal polemics, as during the Iconoclast period, or to vent personal spleen (as in Constantine of Rhodes).

During the 10th C. anthologies of classical and Byz. epigrams were made, first by Kephala and later by the anonymous compiler, or compilers, of the Anthologia Palatina (see GREEK ANTHOLOGY). Epigrams continued to be a fertile genre whose wide-ranging and prolific practitioners included John Geometres, John Mauropos, and Christopher of Mytilene. From the 12th C. onward there is a tendency, as in the poems of Theodore Prodromos and Manuel Philes as well as in numerous anonymous verses, for epigrams to revert to their primary use as dedicatory inscriptions attached to votive offerings (icons, church vessels, etc.) and on tombstones (cf. Lampros, "Mark. kod." 3–59, 123–92). A particular form of epigram was the metrical inscription on seals (sometimes one line long), giving the name, title, and office of the seal owner. Still used, nevertheless, for an enormous variety of topics normally written in 12- and 15-syllable lines, they are perhaps now best called "occasional verse."

EPIGRAPHY. A discipline of Byz. epigraphy does not yet exist. While it cannot be said that it will occupy the same central position as it does in classical studies, it can nevertheless make a substantial contribution in a variety of fields (e.g., institutions, prosopography and onomastics, linguistic frontiers, etc.). Ideally, it should encompass all types of writing except in MSS, in particular the following:

1. Inscriptions on stone, including graffiti
2. Painted and mosaic inscriptions (those on mosaic pavements, which form an important group, cease with very few exceptions in the 7th C.)
3. Objects of household and religious use, including jewelry and amulets
4. Coins, seals, and weights
5. Brick stamps (limited primarily to the 4th–6th/7th C.)
6. Ivories and steatites

For some of the above categories (ivories, steatites, coins, and seals) we do have more or less complete corpora, but most of the other material remains extremely scattered in works such as publications of individual monuments, excavation reports, regional surveys, and museum catalogs, where Byz. inscriptions are interspersed with antique ones.

Strictly speaking, Byz. epigraphy ought to include all inscriptions originating within the empire, whatever their language (Greek, Latin, Syrian, Coptic, Armenian, etc.). In practice, however, those in indigenous languages have been left to their respective specialists and attention has been concentrated on those in Greek and Latin. The boundary between the latter two up to the 6th C. runs across the Balkan peninsula, roughly along a line from Dyrrachion to Odessos (Varna) and in Africa between the Roman provinces of Libya and Tripolitana. The use of the two “prestige” languages, however, particularly of Greek in the eastern provinces, does not necessarily reflect the most commonly spoken language in an area; for example, in Syria up to the Arab conquest the vast majority of inscriptions are in Greek. A case may also be made for including in the sphere of Byz. epigraphy regions outside the empire where Greek inscriptions of Byz. character have been found (e.g., Nubia, 8th–12th C.). Greek was also used in Proto-Bulgarian inscriptions, and the Alans wrote their inscriptions in Greek characters (10th–12th C.).

The first aim of the epigraphist is correct reading, which involves the resolution of abbreviations, monograms, and cryptograms, and familiarity with formulas and titulature. A concurrent preoccupation concerns the evolution of script, since it permits the dating of inscriptions within broad limits when an absolute date is not given, which is in the majority of cases. By and large, Byz. inscriptions before the year 1000 are in capital letters, written without division between words and hardly ever accented. Ligatures between vertical letters (like M, N) are frequent; that of ο plus υ (.yahoo) comes into widespread use from the end of the 5th C. onward. Abbreviations are limited to titles, professions, dates, nomina sacra, and the conjunction kai. An important change in script occurs in the early 11th C.: abandoning its earlier sobriety, it strives after an ornamental effect. It borrows an increasing number of ligatures and abbreviations current in MSS and places one letter above or within another with a consequent loss of legibility. One can almost say that the content becomes secondary to calligraphy.

The thematic classification of inscriptions, as it has been elaborated for classical antiquity, is only partly applicable to the Byz. period. The following breakdown is tentative:

1. Sacred texts
2. Decrees (practically none after the 6th/7th C.) and grants of privileges. The latter are extremely rare, but note the painted chrysobulls in the Brontochion church, Mistra (ed. G. Millet, BCH 23 [1899] 100–118), and at Stagoi.
3. Tokens of official control or regulation (coins, silver stamps, weights, brick stamps)
4. Marks of ownership (e.g., boundary stones) and authentication (seals)
5. Records of building and/or decoration
6. Honorific inscriptions accompanying statues or portraits (almost none after the 6th/7th C.)
7. Records of death (epitaphia and commemorative graffiti)
8. Acclamations
9. Invocations, pious and magical formulas
10. Dedications, often introduced by the formula Deesis tou doulou
11. Epigrams, often on small objects (e.g., ivories, icon frames, crosses, etc.)
12. Painters’ “signatures” (none before the 11th C. and rare thereafter)

It should be noted that many inscriptions, esp. those in verse, are preserved by way of MS tradition—the Greek Anthology, among the works of poets such as Theodore Prodromos and Manuel Philes—although it is often difficult to determine whether their compositions were in fact inscribed. As an example of a real inscription preserved in this manner we may quote the epigram on the Sangarios bridge (attributed to Agathias), which is found in the Palatine Anthology (AnthGr 9:641) and Constantine VII Porphyrogenetos (DeThem. 5, ed. Pertusi 70.21–26).

EPILEPSY. See Insanity.

EPIMANIKIA (ἐπιμανίκια, ἐπιμάνικα), a pair of detachable gold-embroidered cuffs worn as a vestment over the sleeves of a bishop’s sticharion. Contrary to Lampe, who says that epimanika are first mentioned in the Liturgy ascribed to John Chrysostom, the first reference is that by the mid-11th C. Patr. Peter III of Antioch, who spoke of encheiria, epimanikia, and epitrachelia ornamented with gold as details of the patriarchal costume (PG 120:800C). They occur in representations of bishops as early as the mid-10th C. (e.g., Bible of Leo Sakkarios, fol.9), or even the late 9th C. (tympanum mosaics in Hagia Sophia, Constantinople); it is not entirely certain, however, that these early images show detachable cuffs. The use of epimanika was still restricted to bishops in the late 12th C. according to Theodore Balsamon, who says they represent the bonds that encircled Christ’s wrists during the Passion (Rhalles-Potles, Syntagma 4:478.16–24). All the epimanika that have survived date from the post-Byz. period.

—N.P.S.

EPIMERISMS (sing. ἐπιμερισμός, “distribution, parsing”), elementary word-by-word commentaries on literary texts intended for school use and comprising parsing, morphology, orthography, prosody, semantics, and etymology. Epimerisms on Homer existed from late antiquity. George Choiroboskos composed epimerisms on the Psalms, which were in use as a schoolbook in the 10th C. The classicism of the Palaiologan period led to the composition of epimerisms on select works of Aelianus, the Philostrati, and Agapetus by such scholars as Maximos Planoudes (S. Lindstam, Eranos 19 [1919–20] 57–92) and Manuel Moschopoulos. George Lakapenos even composed epimerisms on a collection of his own letters. Anonymous epimerisms on prayers and other short religious texts are numerous and impossible to date. The epimerisms on Homer and the Psalms were originally separate books, while the later epimerisms seem from the first to have been written in the margins or between the lines of the text that they were designed to explain. Used for grammatical instruction as well as for textual exegesis, epimerisms were therefore sometimes detached from their texts and rearranged alphabetically. Akin to the epimerisms on literary texts were the word-by-word grammatical explanations of scheide, short pieces of text, often of ambiguous meaning, which were widely used in schools from the 11th C. onward for instruction in grammar (see Schedographia).

—R.B.

EPIPHANIES (Ἐπιφάνεια, biblical and Syr. Hamath, Ar. Ḥamāh or Ḥamāt in mod. Syria), city on the Orontes River and bishopric of Syria II. A Roman temple was transformed (by 400?) into a church, which was later rebuilt (in 595?) and dedicated to the Theotokos and Sts. Kosmas and Damianos. There are epigraphic references (5th–6th C.) to this building and to another church and a winter bath at Epiphaneia (IGLSyr 5, nos. 1999–2004). That part of the Kaper Koron Treasure of 6th–7th-C. liturgical silverware that is known as the Hamah Treasure was reportedly found at Epiphaneia. Evagrios Scholastikos was born in Epiphaneia. After the Arab conquest of the city in 636–37 (Donner, Conquests 112, 148–51) the Church of the Theotokos was transformed into the Umayyad mosque, which still survives, although Nikephoros II Phokas is said to have burned the mosque of Epiphaneia during a raid in 968.

—M.M.M.

EPIPHANIES. Appearances of a god or beneficent manifestations of the divine in a human context, epiphannies were a staple of late antique paganism in both religious and state imperial cults. Mystery cults organized their rituals around epi-
EPIPHANIES, shrines of healing gods recorded miraculous cures as epiphaniations, and the imperial cult celebrated as an epiphany the emperor's birthday, arrival in a new place, accession to office, outstanding deeds, and ceremonial appearances at court. Christ's life, too, came to be understood in terms of theophanic events, or epiphaniations. The 6th of Jan. (EPHANY) was the earliest feast celebrating Christ's manifestation as divine and united the Baptism, ADORATION OF THE MAGI, and miracle at Cana. Christ's early life was dotted with epiphanies marked by angelic appearances (ANNUNCIATION, admonitions to Joseph, heavenly hosts at the NATIVITY); apocryphal Gospels added others. The single such appearance during his ministry is the TRANSFIGURATION, but his miracles, being beneficent manifestations of the divine, were also regarded as epiphanies, and they early acquired the appropriate iconography with a disciple to serve as a witness. Epiphanies recur in the PASSION and its aftermath: the ENTRY INTO JERUSALEM, patterned after an imperial epiphany, the ANASTASIS, ASCENSION, and PENTECOST. (See also VISIONS.)

- Epiphanies, bishop of Salamis (Constantia) in Cyprus (from 367); saint; born Eleutherospolis in Judaea ca. 315, died at sea en route to Salamis from Constantinople 12 May 403. First prominent as founder of a monastery near his birthplace (ca. 335), Epiphanios served as metropolitan in Cyprus for 96 years. A rigorous Nicene, he combatted all heresies, esp. Origenism; his struggle against the latter involved him respectively with JEROME and THEOPHilos of Alexandria in serious conflict against JOHN 11 of Jerusalem (394) and JOHN CHRYSOSTOM at Constantinople in 402. He was equally hostile to classical education, perhaps deliberately affecting a poor Attic style, which, according to Jerome, enabled him to reach the masses through his writings.

His most important works include the Ankyrotos (lit. "holding fast like an anchor"), the Panarion (or Refutation of All the Heresies), and a volume misleadingly entitled On Weights and Measures, which is actually a biblical dictionary. His criticisms of religious art (now generally thought to be genuine) prefigure the Byz. controversy over ICONOCLASM. Epiphanios recommended to Emp. Theodosius I that curtains adorned with sacred images be removed and used for burial shrouds and that frescoes be whitewashed (Ostrogorsky, Bilderstr. 67-75; Mango, Art 41-43). His works were translated into a number of medieval languages, including Armenian, Georgian, Arabic, Syriac, and Church Slavonic.

-E.B., A.M.T.

EPIPHANIOS HAGIOPOLITIS, the author of the first Byz. description of the Holy Land; fl. end of the 8th C. (J. Darrouzès in DHGE 15 [1963] 615) or in the 9th C. (Hunger, Lit. 1:517). Nothing is known of him. His short PROSKYNETARION begins with his journey via Cyprus and Tyre to Jerusalem, from which he took trips to Alexandria, "the great Babylon of the Pharaoh," Raithou, and Mt. Sinai, and to Gethsemane, the Jordan River, and Galilee. The Loca sancta described are connected with the Old Testament (Joseph's warehouses, Moses' miracles); with Christ, the Virgin, and people related to them (e.g., the tomb of Lazarus); and with some saints (the tomb of Kyros and John in Edessa). Certain monasteries are named, as are the places where the patriarch of Jerusalem officiated. Some sentences of Epiphanios duplicate a section of a legend about Constantine I the Great, but it remains unclear which of the texts has priority. Neither the Arab presence nor Charlemagne's protectorate are mentioned. Epiphanios used to be confused with his namesake from Constantinople, the hagiographer who compiled vitae of the apostle ANDREW and of the Virgin.

-A.K.
EPIPHANY (τὰ Ἔπιφάνεια), the feast of lights (la phota), also called ta theophania, celebrating the Baptism of Christ in the Jordan River. Epiphany originally commemorated not a single event, but a mystery, the appearance of salvation in Jesus revealed in a cluster of New Testament events, principally Jesus’ birth and his baptism. Histori- cizing tendencies in the 4th C. led to a separation of the cluster: the Nativity was moved to 25 Dec. and the Baptism was then celebrated by itself on 6 Jan. The feast gained importance during the controversies over the divine origins of Christ and with the subsequent definitions of the First Coun- cil of Nicaea.

Epiphany is celebrated with a solemnity matched, among the fixed Great Feasts, only by that accompanying the Nativity. There is a preparatory Sunday, a four-day forefeast, a paramone vigil (as before the Nativity) that includes a blessing of the waters, a synaxis honoring John the Baptist on the day following the feast (7 Jan.), and eight days of afterfeast (Mateos, Typicon 1:174–91). The blessing of the waters, an important part of the ritual, is attested already in 387 at Antioch by John Chrysostom (PG 49:365f). According to a 10th-C. ceremonial book (De cer., bk.1, chs. 3, 25–26), the patriarch and the emperor celebrated the vigil at the Church of St. Stephen the Protomartyr at the Daphne Palace and the Epiphany rite itself in the Church of Hagia Sophia; on the day of Epiphany the emperor, honored at a number of receptions by the factions, confirmed new mag- istroi to office.

Representation in Art. The feast of the Baptism of Christ was represented by the 3rd C. and had acquired its standard composition by the 6th (Cathedra of Maximian): Christ frontal or in profile in the water, John the Baptist to one side, angels to the other, the dove descending in a light-burst from above, the personified Jordan below. Post-Iconoclastic versions added a cross in the water, referring to the cross at the pilgrimage site in Palestine (Hosios Loukas); two disciples and the axe at the root of a tree (cf. Lk 3:9; Menologion of Basil II, p.299); swimmers, linking this with John’s other baptisms; and a dragon in the depths, associating Christ’s descent into the water with his descent into Hades (see Anastasis). The Baptistry at Hagia Sophia in Constantinople (by 1200) embedded the Baptism in a cycle of scenes of John’s ministry. In Palaiologan art the Baptism was incorporated in such a five- to seven-scene cycle, and Christ’s precipitous descent into the water was emphasized to permit analogies with his descent into the cave at birth and into Hades at death. Only in miniatures in the 12th C. MS, Chicago, Univ. Lib. 965 (fols.37r, 61v) is the Baptism separated from the descent of the Spirit in accordance with Scripture (Lk 3:21–22).

—R.F.T., A.W.C.

EPIROS (Ἐπιρος), northwestern Greece, a mountainous area between the Pindos and the Ionian Sea, with a rich coastal area, important for its connections with the West. Perhaps under Diocletian the province of Epiros was separated from Achaea, and by the time of the Verona List (produced between 328 and 337) it was divided into the provinces of Old Epiros (in the south) and New Epiros (in the north), both administratively part of the diocese of Moesia, later transferred to that of Macedonia. According to Hierokles (Hierokl. 651.3–654.1), Old Epiros (capital Nikopolis) had 12 cities and New Epiros (capital Dyrrachion) had nine. The area was plundered by the Vandals in the 5th C. and many of its cities were fortified or refortified by Justinian I (F. Wozniak in Nikopolis, ed. E. Chrysos [Preveza 1987] 263–67). Epiros was overrun by the Slavs in the late 6th–7th C. and most of the cities disappeared. Restoration of Byz. control came largely from the sea beginning in the 8th C. The themes of Dyrrachion and Nikopolis were created in the 9th C. By the end of the 12th C. many smaller territo- rial units were organized: a chrysobull of 1198 lists the provinces of Dyrrachion, “Jericho et Cani- non,” Ioannina, Drynopolis, and Nikopolis; some of them included private units—episkepes, called pertinentia in the Partitio Romaniae (in Arta, Acheloos, Lesiana, etc.); the Partitio also lists “chartolatarata” of Glavina and of Bagentia. In the 13th C. an independent principality (see Epiros, Despotate of) emerged, engulfing all these areas.

Epiros was inhabited by Greeks, Slavs, Albani- ans, and Vlachs; Italians also penetrated the area. The ecclesiastical center of Epiros until ca.8oo was Nikopolis; it was later succeeded by Naupak-
tos, whose suffragans in the 10th C. were Bun-
ditzza (probably not Boudonitzza?), Aetos, Ache-
loos, Rogoi (or Arta), Ioannina, Photike or Bella,
Adrianoupolis (Drynoupolis), and Boutheroton
(Noticiae CP 7:575–83). Many early Christian
churches have been found, esp. at Nikopolis and
along the coast, while later monuments are more
common in the interior, esp. around Arta.

Epiroou kata ten protobyzanite epoche (d-’st’ aiona),”
~T.E.G.

EPIROS, DESPOTATE OF, one of the independ-
ent Greek states established after the fall of
Constantinople in 1204 during the Fourth Cru-
sade, along with the empires of Nicaea and Tre-
bizond. The term despotaton can be properly ap-
plied only for the 14th-15th C.; it is first used in
a chrysobull of 1342. Although belonging to the
Angelos dynasty in Constantinople, the early rul-
ers of Epiros used the family names Komnenos
and Doukas. The state was founded by Michael
I Komnenos Doukas, who gained control of the
entire northwestern coast of Greece and much of
Thessaly. His ambitious brother Theodore Kom-
enos Doukas captured Ohrid in 1216. The-
odore, who dreamed of recovering Constantinople,
took Thessalonike from the Latins in 1224 and
was crowned as emperor, thus briefly setting him-
sell up as a rival to the emperor of Nicaea. In
1242, however, Theodore’s son John was forced
by John III Vatatzes to substitute the title des-
potes for “emperor,” and in 1246 Thessalonike
was annexed by Nicaea. During the reign of Mi-
chael II Komnenos Doukas, Nicaean forces tem-
porarily conquered much of Epiros after the bat-
tle of Pelagonia (1259). But Epiros recovered its
independence by 1264 and continued to be ruled
by Greek despotai until 1318, when it came under
the control of the Italian Orsini family (1318–37).

After a brief period of restoration of Greek
rule, Epiros was occupied by the Serbs in 1348.
The Chronicle of Ioannina describes the un-
popular rule of Thomas Preljubovic over Ioan-
nina from 1366/7 to 1384, while Arta was gov-
erned by the Albanian clan of Spata. In the late
14th C. Ioannina returned to Italian control, first
under the Florentine Esau Buondelmonti (1385–
1411) and then under the house of Tocco, which
also acquired Arta from the Albanians. Epiros
was conquered by the Ottomans in the 15th C.;
Ioannina fell in 1430, Arta in 1449. The geo-
ographical isolation of Epiros, esp. the barrier of
the Pindos mountain range, enabled it to remain
separate from the Byz Empire until the Turkish
conquest, but the Byz. emperors always regarded
rulers of Epiros as rebels and maintained the right
to confer the title despotes.

In the 15th C. Epiros was populated primarily
by Greeks alongside whom lived Slavs (for whom
the names of Macedonians, Bulgarians, and
Droogobites were used), Albanians, Vlachs,
Jews, Turks, Armenians, and Latins. The surviv-
ing documents reflect a society composed primar-
ily of free peasants who formed communities and
enjoyed the right of protomesis. Towns had a
strong landowner class, mostly free peasants; de-
pendent peasants were rare (D. Angelov, Izvestija
na Kamara na narodnata kultura, seriija: Human-
itarni nauki 4:3 [Sofia 1947] 3–46). The region
consisted of several themes (e.g., Bagenetia, Ache-
loos, Skopje, and Drama) which normally in-
cluded a single town and its environs; the gover-
nor of a theme was usually called doux, but also
kephale, energon, etc. (D. Angelov, BS 12 [1951]

A.M.T., A.K.

**EPISCOPALIS AUDIENTIA**, identified in the *Codex Justinianus* as the juridical powers and privileges conferred upon bishops. Actually, Christian leaders had heard and decided disputes involving members of their local congregations since Christian antiquity. Only under Constantine I did such arbitration receive official recognition. Constantine introduced the episcopal tribunal into Roman civil legal procedure by ordering that either party in a suit might have the case heard by a bishop. By the early 5th C., however, the government modified this, restricting the bishop’s juridical powers to mediation and stipulating that both parties to the dispute had to consent (cf. *Cod. Just.* I. 4-7, 8). In sum, episcopal judicial activity in civil matters had ceased to exist, except in the form of arbitration inter volentes (“between willing parties”). Under Justinian I, however, a layman involved in a dispute with a cleric was once again able to bring his case to the bishop’s court (nov. 86). Moreover, a law of Heraclius (Reg 1, no. 199) stipulated that all civil suits brought against clerics in Constantinople were to be heard by the patriarch (cf. the later decree of Alexios I, Reg 1, no. 1071).

In trials involving clergy the bishop continued to act as judge. Episcopal tribunals, in fact, had jurisdiction over all civil and disciplinary cases in which the litigants were clergy. Conciliar legislation insisted that such trials were the exclusive concern of ecclesiastical courts and that clerics could settle their differences only in such courts (Council of Chalcedon, canon 9).

A.P.

**EPISKEPSIS** (ἐπισκέψις, lit. “care, inspection”), a fiscal term with three different meanings. (1) Most commonly, it refers to a particular property belonging to the imperial domain (basilike episkepsis—Dölger, *Beiträge* 120.19), a fiscal unit composed of a collection of properties held by the emperor or a member of the imperial family and sometimes by other individuals (in 10th–13th-C. documents). The monastery of Patmos was granted annually 700 modioi of grain from the emperor’s episkepsis on Crete but, at the end of the 12th C., it was impossible to provide the monastery with grain, since the government had given these episkepsis over to some local nobles for a cash payment (MM 6: 131.6–10). (2) Episkepsis could refer to a fiscal division of a theme (in documents up to the 12th C.). (3) The term was also used to describe the actual daily “administration of property,” particularly of imperial property.

**EPISKEPTITES** (ἐπισκεπτῖτης), a subaltern official mentioned in the 9th-C. *Klerorologion of Philotheos*; there were episkeptitai in the departments of the dromos, the eparch of the city, the agelai (see *Logothetes ton Agelon*), and the kouratores. The majority of them were administrators of imperial domains (the so-called episkepsis), such as the protospatharios Stephen, episkeptites of the imperial ktemata in 996 (Iovr. 1, no. 10.6). Episkeptitai of several locations, small and large (including Peloponnesos and Armeniakon), are mentioned on seals. Ecclesiastical episkeptitai were accountants dispatched by the oikonomos (MM 5: 355–35).

A.K.

**EPISTOLAE AUSTRIACAE**, collection of letters assembled at Metz late in the 6th C. that documents Byz. diplomacy and military relations with the Merovingian Franks. This activity was prompted chiefly by Constantine’s efforts to buy effective military support for Byz. operations in Italy. King Theudebert I sent two letters to Justinian I (eps. 19–20, between 536 and 538 and 546/7, respectively) and one letter to King Thou-
Epistolae Visigoticae, 7th-C. collection of letters that preserves the courteous correspondence of Sisebut, king of the Visigoths, and Caesarius, patrikios and governor of Byz. Spain. Their contents concern negotiations with Constantinople ca.615 (F. Görres, BZ 16 [1907] 530–32) for a peace treaty to end Gothic military successes against the Byz. during the disastrous early period of Herakleios.

Epistolography, or the art of writing letters, a genre of Byz. literature akin to rhetoric, popular with the intellectual elite. Copious examples survive from all periods, in more than 150 published collections containing approximately 15,000 letters (Mullett, infra 75). Antecedents for the form exist from the classical period (e.g., the letters of Aristotle or Plato, whether genuine or spurious, or those of Herodes Atticus), and also in the Pauline Epistles of the New Testament, which themselves show awareness of Hellenistic epistolary practice (as described by, e.g., pseudo-Demetrios, On Style, chs. 223–35). Byz. letters preserved substantial elements of the ancient genre—in form, composition, and the system of imagery; direct quotations and borrowings were very common.

The first flowering of the Byz. letter, combining influences from both the Christian tradition and the classical Greek, appeared in the 4th C. with the collections of Emp. Julian, Libanius, Synesios, and the Cappadocian Fathers (who became a model and quarry for later writers). To this period also belongs the fictitious correspondence of the apostle Paul with the philosopher Seneca that survives only in a Latin version. After the 4th C., letter writing became less fashionable, although some voluminous collections are preserved (esp. that of Isidore of Pelousion); after Theophylaktos Simokattes the genre virtually disappears until its revival by Theodore of Studios and Photios. Thereafter it plays a leading role as a literary genre, becoming esp. popular in the Palaiologan period. The peak of epistolographic activity falls in the 11th–12th C., when such masters as Psellus, Eustathios of Thessalonike, Gregory Antiochos, and Michael Choniates worked, and John Tzetzes created an original, albeit unwieldy, genre of letters accompanied by verse commentaries.

The theoreticians of late Roman rhetoric, Hermogenes and Aphthonios, ignored epistolography, but it is discussed by other theoreticians of the Second Sophistic and later, esp. in the pseudonymous Epistolary Characters (between the 4th and 6th C.) wrongly attributed to either Libanius (J. Sykutris, BNJ bb 7 [1930] 108–18) or Proklos. Theon of Alexandria (1st–2nd C.) classed epistolography as a progymnasma under the heading of ethopoia, or character drawing, for the opportunities it gave to depict character. Pseudo-Proklos suggested a definition of the letter as a written conversation (hormilia) between people who are separated and produced a sophisticated categorization of 41 types of letter. He emphasized the ideals of clarity (sapheneia) and reasonable length. The clearest indication of the Byz. concept of the ideal letter can be found in letters that themselves discuss the form, as in the letter of Gregory of Nazianzos to his nephew (ep.51, ed. Gallay). There he recommends that letters should be brief, clear, and phrased like a conversation.
with an absent friend and should treat serious topics with elegant expression. Epistolography received no attention in the general handbooks until the 14th C., when Joseph Rhakendytes devoted a chapter to it in his encyclopedia. The technique of letter writing was presumably taught by example from model collections, such as MS Patmos 706.

Byz. letters survive mainly in copies, with the exception of numerous papyri and late letters that were preserved in the fabric of bookbindings (J. Darrouzès, REB 22 [1964] 72f and n.3). They were nearly always intended for publication, either in the sense of public reading or through circulation as a collection. Some collections of letters were made from copies kept by the authors, others were gathered from the recipients by a later editor. Evidently many an author (e.g., John Tzetzes) rearranged and edited his letters before issuing the collection. Letters were frequently, if not normally, meant to be read aloud, not just to the intended recipient but also to an appreciative audience. Evidence for such occasions is intermittent but persistent from the 4th C. to the Palaiologan period. In this way epistolography filled the gap created by the disappearance of the theater; like rhetoric in general, letter writing uses theatrical terminology.

Byz. lacked regular mail service. Imperial letters were sent with special couriers; private individuals used friends, casual acquaintances, or servants as letter bearers (grammatophoroi). Letter writers sometimes complain of the difficulties of finding a suitable emissary. For example, the governor Theodore Branas dispatched a letter announcing the invasion of the Cumans with a monk who was walking to an annual panegyris in the town of Kouperion; the monk, however, "stuffed the letter in his bosom and consigned it to the darkness of his black robes," and failed to deliver it (Nik.Chon. 500.78–92). The grammatomorph was supposed to be a "living letter" (empsychos epistle) and convey factual information, while the letter served as a literary ornament added to the message. Often the letter was accompanied with a gift that could range from a book to fish and fruit.

Letters can usefully be divided according to their purpose, into official, private, and literary examples. The letters dispatched by emperors, patriarchs (Nicholas I, Athanasios I), and officials, as well as petitions addressed to them, functioned as documents and were eventually quoted and referred to as such; some official letters are preserved in the minutes of meetings where they had been read aloud. Private letters were limited to the exchange of opinions between two correspondents, whereas literary letters were addressed (at least by implication) to a broader audience and often dealt with invented persons and situations. According to their content, letters can be divided into diplomatic, theological, and scholarly examples; letters of recommendation, indoctrination, and censure; and letters of consolation. Many letters express only banal politeness and standard friendship with conventional complaints about the correspondent’s silence. The erotic letter died out after Aristaiinetos.

The letter was not clearly distinct from related genres. The connection between conversation, homily, and letter was close, and a number of sermons exist in letter form. A letter could grow into a theological tract, as did Photios’s lengthy letter to Asot I (ed. B. Laourdas, L. Westerink, 3 [1985] 4–97), or into a historical work, such as the epistle of the monk Theodosios to Deacon Leo on the capture of Syracuse in 880 (Hunger, Lit. 1:359f). The preamble to a major work could take the form of a letter; Photios’s letter to his brother Tarasios introduces his Bibliotheca. On the other hand, larger literary works could include letters; thus Kantakouzenos (Kantak. 3:94.2–99.9) quoted in his History the vernacular letter of the sultan of Egypt.

Though the Byz. letter may have aimed at originality combined with ornamentation and elegance in phrasing, variation in theme was not so important. A standard structure evolved, including—as expected—a greeting, inquiries after the correspondent’s health, statements of the subject matter, and closing expressions of good will. Under Christian influence, however, certain formerly standard phrases changed. Thus in the exordium the old formula “A greets B” was usually replaced by “B is greeted by A,” since according to the Christian tradition of tapeinotes (see Modesty, Topos of) it was improper for the author to place himself first. Alongside the old formulaic conclusion “Be healthy” appears an elaborate prayer for divine blessing on the addressee and his family. The letter was considered a rhetorical piece, and the correspondent sometimes asked to be forgiven for his inadequacies.
Special attention was paid to *prooimia* that showed the correspondent’s extensive knowledge of biblical and classical literature. Formulaic content was accompanied by vivid observations, witty jokes, and expression of true feelings. Certain topics recur, giving scope for the writer’s ingenuity in phraseology: the letter was a sign of friendship, it was a gift, it revealed the sender’s soul, it united separated friends while lamenting the distance that divided them and the loneliness this entailed. It must be remembered that the real subject matter of a letter was often delivered orally by the courier; hence, though obscurity for its own sake was not recommended, letters frequently contain generalities rather than specific details, thus increasing the already existing trends toward “deconcretization” and abstraction. At times, and esp. when a writer can be detected borrowing phrases and even complete letters from other authors, one feels that Byz. letters rarely include any “real” information.

Nevertheless, the genre is an important source for studying Byz. history and culture. Many describe or allude to crucial events and are esp. useful for establishing the relations between various members of the intelligentsia and the intellectual atmosphere of the empire. Because letters are part of a conversation rather than a source of direct information, the chronology and identification of the persons or events mentioned may be difficult; the problem is sometimes alleviated by the presence of lemmata, or headings, with some factual indications, or by the existence of chronologically ordered collections of letters, frequently prepared by the author himself (Tzetzes, Michael Choniates, etc.). Sometimes, however, the lemmata were added by a later editor and provide erroneous information on the names and offices of the addressees. Another problem is that fictitious letters can be intermixed with real ones or form a special collection. In MS tradition the body of the correspondence is usually divided, with the letters of each correspondent forming a separate unit; the establishment of interconnected pairs remains, as a rule, problematic.

---

**EPITAPHEIOS** (ἐπιτάφιος, ἔπος), technical term with two meanings.

**Liturgical Cloth.** The large piece of silk used in the Burial of Christ procession at the Holy Saturday *orthros*, symbolically interpreted as the bier of Christ, was called an *epitaphios*. *Epitaphios* are usually embroidered either with the image of the Dead Christ (Ἀμνος) or with the Lamentation (threnos) and inscriptions. They evolved from Late Byz. *aeres*, which they resemble in their overall shape and figural decoration, but the texts on the *epitaphios* derive from Paschal hymns, esp. the *troparion* beginning *Noble Joseph*. The appearance
of epitaphios as distinct liturgical cloths coincided with the formalization of the Holy Saturday ritual in the early 14th C. Surviving Byz. epitaphios, all fine gold and silk EMBROIDERIES, include those of John of Skopje (1349) and Syropoulos (late 14th C.), both at Hilandar; of Nicholas Eudaimonoianes (ca. 1407, in the Victoria and Albert Museum, London); and that of Euphemia and Eupraxia (ca. 1405, Putna).

Funeral Speech (ἐπιτάφιος λόγος). Menander Rhétor distinguished several types of epitaphios: a pure ἐνκόμιον (usually delivered some time after the death of the person commemorated), monody, consolatory speech (παραμυθητικός), and epitaphios proper; in the three last types the elements of praise, lamentation, and consolation are to be mixed in different proportions.

Byz. practice did not retain this categorization, and rhetoricians employed the terms indifferently. Encomiastic epitaphios were composed to commemorate biblical personages or saints, usually in connection with the translation of relics; they formed a kind of sermon. Secular epitaphios were pronounced or written, in prose or verse, relatively soon after the death of their subject. The subjects of epitaphios were emperors, patriarchs or other ecclesiastics, relatives or friends of the rhetorician, and—esp. from the late 11th C.—members of the high aristocracy. Apart from the insights they can offer into the structure of family life (e.g., George Tornikios on Anna Komnene’s upbringing), epitaphios frequently provide valuable prosopographical information and other historical details.

In late Roman epitaphios praise and lamentation prevail: in Himerios and Libanios the mention of blessed future life (mákrasmos) is minor. Even later, in the lamentation included in Digests Akritas, the theme of the irrevocability of the loss predominates. Under Christian influence, however, the theme of consolation was added, and the rhetor began to downplay the feeling of loss...
and to emphasize the forthcoming heavenly reward. Normally conventional and objectified, epitaphioi sometimes became a means to express personal emotions, as in the monody on Stephen Skylitzes by Theodore Prodromos. On the other hand, some writers exercised their skill in mock-heroic laments for dead birds (Constantine Mnasess, Michael Italikos).

EPI TES KATASTASEOS (ἐπι τῆς καταστάσεως, lit. "chief of presentations"). Since katasasis also means "order," Bury (Adm. System 118f) rendered the title as master of ceremonies and connected the epi tes katasasis with the late Roman comes dispositionum; G. Ostrogorsky and E. Stein (Byzantium 7 [1932] 206–10) noted that the scrinium dispositionum is unknown after 534 and connected this official with the comes admissionum. The 10th-C. De ceremoniis links the epi tes katasasis with silentiatoroi and even considered him as one of the silentiatoroi (De cer. 238.4) and as a member of the kouboukleion (503.5–6), the service of the imperial bedchamber. The 9th-C. Taktikon of Us tenskj refers to him twice (Oikonomides, Listes 57.25, 59.17), situating him first between the protoanotarios of the dromos and the archon of the armenaton, that is, among the civil officials, and secondly, at the bottom of the list of courtiers, concurring with the information of the De ceremoniis. Another problem is raised by the Kletorologion of Philotheos, which defines the post as a special axia (ibid., 109.7) and states that its staff consisted of hypatoi, vestitores, silentiatori, and syn kelittoi (125.8–12), who at least in part were dignitaries rather than court officials.

LIT. Oikonomides, Listes 309. –A.K.

EPI TES TRAPEZES (ὁ ἐπὶ τῆς τραπέζης), aulic courtier in charge of imperial banquets; he introduced guests, together with the pinkernes waited upon the emperor, and delivered dishes from the emperor’s table to the guests. The epi tes trapezes was a eunuch; seals from the 8th C. onward indicate that he sometimes combined his duties with those of the koubikoularios or parakoimomenos. The vita of Maximos the Confessor mentions an epi tes trapezes as existing in the mid-7th C., but this evidence must be used with caution since the text is of later date. Some epi tes trapezes commanded troops and fulfilled special state assignments. Seibt distinguished the epi tes trapezes from the domestikos tes trapezes (known from 680 onward) who was not a eunuch. The epi tes trapezes possessed a varied staff, called hypour gia, and was assisted by a domestikos tes hypour gia. Along with the emperor’s epi tes trapezes there was a banquet chief for the empress, known both from the Taktika and from seals (Seibt, Bleisiegel, nos. 48–49). Seibt hypothesizes that in the 7th C. the epi tes
trapezes assumed the major functions of the kastresios; ca.800 certain of these functions were in the hands of the kenarios. From the 13th C. both epi tes trapezes and domestikos tes trapezes were high ranks conferred on nobles; among the holders of this dignity were members of such families as Tarchaneiotes, Nestongos, and Notaras. Both terms appear in later romances (P. Pieler, *JÖB* 20 [1971] 194, 213, 218). Nikephoros Gregorazs relates a legend that the dignity of epi tes trapezes, from the time of Constantine I the Great, was hereditary for the princes of Russia.

**EPITHALAMION** (ἐπιθαλάμιος λόγος), a speech in either prose or verse to celebrate a marriage, whether of a private individual or a member of the imperial family. Examples survive from the 4th C. (e.g., Himarios, or.9, with a protheoria, “introduction,” on the principles governing the composition of epithalamia); the 6th C. (e.g., Choririos of Gaza, or.5, on a triple wedding, and the epithalamion of Dioskoros of Aphrodito); and esp. from the 12th C., when many imperial couples were hymned in this way (e.g., Theodore Prodomos, on the wedding of the sons of Anna Komnene and Nikephoros Bryennios). The genre, considered a form of enkomion, early attracted a rich collection of erotic allusions drawn from Greek mythology (cf. Menander Rhetor, *On Epideictic Speeches*, ch.6), which in the 12th C. combined with imperial imagery to produce a new and bewildering exuberance of plant, animal, and cosmic symbolism.

**EPITHEG** (ἐπιθητος) can be considered as a rhetorical trope (Martin, *Rhetorik* 264). Greek authors rarely used the term (e.g., the 2nd-C. grammarians Apollonios Dyskolos, in *Grammatici graeci*, ed. R. Schneider, G. Uhling, vol. 2.2 [Leipzig 1910; rp. Hildesheim 1965] 56f); Latin theoreticians stressed that epithets were to be used sparingly. Eustathios of Thessalonike, in his commen-

tary on the *Odyssey* (*Eust.Comm. Od.*, p.1459.32–35), noticed the deliberate use (or avoidance) of epithets that would demonstrate the author’s attitude toward heroes. In late Roman and Byz. practical aesthetics, epithets acquired an exaggerated importance. First, many writers (pseudo-Dionysios the Areopagite, Nonnos of Panopolis, Germanos I) strove to create very long epithets, mostly composites, to stimulate the imagination and to reveal the enigmatic nature of the cosmos. Second, the growing role of ceremonial in society enhanced the creation of rigidly formalized epithets (the emperor was always eusebes, “pious,” the serpent, “wicked” or “creeping”), so that the epithet was becoming an antonomasia, that is, an appellation substituted for a proper name, as the “Queen of Cities” was a designation for Constantinople. The individual writer had to reconcile two contradictory principles—the trend toward pompous epithets and the patristic prescription of plain and “truthful” exposition (the latter quality was consistently praised in Photios’s *Bibliotheca*). Byz. literature presents a broad range of stylistic approaches, from the matter-oftactness of John VI Kantakouzenos to the agglomeration of epithets in epideictic oratory.

**EPITIMION** (ἐπιτιμίων), a penalty imposed on a penitent by the priest following sacramental confession. The term was already in use by the 4th C. (Basil the Great, *PG* 32:721A). As a rule these penitential exercises, mentioned in Byz. canonical and ascetical literature, presupposed repentance and consisted of prayer, fasting, Scripture reading, prostrations, almsgiving, and, on occasion, temporary exclusion from the Eucharist. They were distinguished by their largely positive character and relative mildness from such formal punishments (*timoriai*) as excommunication, suspension, or deposition, which were inflicted by the church for more serious transgressions such as heresy or apostasy. Since sin was understood as a disease rather than a legally punishable crime, *epitimia* in Byz. penitential practice and theology were viewed as corrective remedies, that is, as a form of spiritual healing. At any rate, they were never reduced to a payment of a fine due to God. In sum, the Western juridical notion of sin as a violation of the law, in which penance constitutes
punishment or satisfaction payable to God, is for the most part not a feature of Byz. penitential literature.

—A.P.

EPITOME LEGUM (Extract from the Laws), the conventional term for a law book that has been transmitted in various versions. The oldest version must have been closely related to the Epitome Laurentitana, which contains 50 titles, follows the title sequence of the Prochiron and dates to "the first year of Constantine, the son of Leo" (g13–914?). "In the first year of Romanos" (921) an extensive revision of the text was made that altered also the sequence of titles. The author of both these versions must have been the Symbios named in the preface. The aim of the law book was presumably an improvement and expansion of the Prochiron; the additions, most of them dealing with private and penal law, were based almost exclusively on the Corpus Juris Civilis. The MS tradition of the Epitome Legum is limited. The published edition (of Zachariä von Lingenthal) is based on the MS Oxford Bodl., Barocc. 173, for titles 1–23, and on Vat. gr. 2075 (which represents another version) for titles 24–45.

—A.S.

EPI TON ANAMNESEON (ἐπὶ τῶν ἀναμνήσεων), an official who, according to a 14th-C. ceremonial book (pseudo-Kod. 185f), used to record warriors and other people distinguished by their exploits; in the 14th C. he had no clear-cut function. Guillard (infra) views the epi ton anamnesen as the successor of the magister memoriae, a late Roman official in the bureau of the magister scriitorum and asserts that the office of epi ton anamnesen existed long before Constantine IX. He includes George Spanopoulos, a contemporary of Alexios I, in the list of "memorialists" even though the text explicitly calls Spanopoulos "the former genikoς" (Zepos, Jus 1:334.3–5). Very few epi ton anamnesen are known. Under Andronikos III, the epi ton anamneson Spanopoulos acted as mesazon, according to a vague expression of Kantakouzenos (Kantak. 2:991–2); another epi ton anamneson, Logaras, addressed a letter to Andronikos III (S. Lampakes, EEBS 42 [1975–76] 405). There were also epi ton anamnesen in the patriarchal chancery—one of them, Petriotes, composed a preamble to a patriarchal letter of 1365 (MM 1:472.28–29) and several other documents (Darrouzès, Offkia 357. n.3).

LIT. Guillard, Titres, pt.XXIV, 147f. —A.K.

EPI TON DEESEON (ἐπὶ τῶν δεήσεων), official whose duty was to receive petitions addressed to the emperor and to answer them. He is usually considered the successor of the late Roman magister memoriae (or a memoria) who, according to the Notitia dignitatum, dictated adnotationes and preces; it should, however, be noted that the office of a certain Benivolus, memoriae scriiniis praesidens (Rufinus of Aquileia, Church History 7.16), is rendered in Greek by Sozomenos (Sozom. HE 7.13.5) not as epi ton deeseon, but as ho epi tois grammateusi ton thesmon; his function was to formulate laws (O. Seeck, RE 2.R. 2 [1923] 898). The earliest known epi ton deeseon is Theodore, owner of a seal of the 7th C. (Laurent, Corpus 2, no.290). The epi ton deeseon has no title higher than protospatharios on seals through the first half of the 11th C. The importance of this official rose in the second half of the 11th and the 12th C., when he was not only honored as protoproedros (Laurent, Corpus 2, nos. 253–54), but the office was held by members of the noblest families, such as the Komnenoi, Skleroi, Kamateroi, and Kastamonital. George Chatzikies was still active as epi ton deeseon in 1321 (Reg 4, no.2450), and the office is mentioned by pseudo-Kodinos. The Klerotologion of Philotheos omits any mention of the staff of the epi ton deeseon but at least one seal of a notary of petitions is known (Laurent, Corpus 2, no.255). There were also provincial epi ton deeseon—in Sicily, Peloponnese, and so on—known by their seals, as well as epi ton deeseon of the patriarch (Darrouzès, Offkia 378f); one patriarchal epi ton deeseon was Eustathios of Thessalonike.

—A.K.

EPI TON KRIGEON (ἐπὶ τῶν κρίσεων), judicial office created between 1043 and 1047, before the
foundation of the law school under a nomophylax. A scholion to Basil. 7.1 (ed. H.J. Scheltema, ser. B, 1:36) lists the *epi ton kriseon* as one of four effective judges holding tribunals, alongside the *droungarios* (τες νιγλας), quaestor, and eparch. According to Attaleiates, the court of an *epi ton kriseon* had to resolve the legal problems presented to it by thematic judges—as Οἰκονομοί (ΤΜ 6 [1976] 134) suggests, due to the low level of legal knowledge of provincial judges—but it was not a court of appeal. Seals of several *epi ton kriseon* survive, including one of [Alexios?] Aristenos. The *epi ton kriseon* is not mentioned as the head of one of the four courts in Manuel I's novel of 1166, but is mentioned in the 12th-C. *Ecclesia Basilicorum* (e.g., at B.9.1: 64 = C.7.44.1 [p. 372 of Burgmann's edition]). The office existed at least until 1204; Niketas Choniates was one of the last *epi ton kriseon*.

**EPI TOU KANIKLEIOU.** See Kanikleios.

**EPITRACHELION** (ἐπιτραχελίας), a liturgical stole, generally of silk, which was worn over the *sticharion* only by priests and bishops. The narrow strip of cloth, about 2 m in length, hung down in front in two overlapping panels that were sometimes fastened together. Though representations of *epitrachelia* are not found before the 10th C., the term is attested as early as the 8th C. (Germanos, *Liturgy*, ch.18, ed. Borgia 17.16–20); according to pseudo-Germanos, the *epitrachelion* or *phakielion* represents the cloth on Christ's neck by which he was dragged to his Passion. In the artistic representations, all that can be seen of the *epitrachelion* is its fringe and its lowest band of ornament (since it is generally covered by the *phelonion*), but actual *epitrachelia* that have survived from the 14th or 15th C. have an elaborate embroidered decoration: images of saints standing under arcades, or busts within roundels. The figures are outlined in pearls.

**EPOIKOS** (ἐποίκος, "inhabitant"), term designating free peasant-taxpayers in the *Treatise on Taxation* (Dölger, Beiträge 119.24) and in certain, mostly 13th-C., documents. In the latter, the word is at times applied to *paroikoi* (MM 4:255.20–30), inhabitants of towns (e.g., Ioannina—MM 5:82.12), as well as "clerics, soldiers and all the common people" (Sathas, MB 6:641.20–21), and appears to mean simply "resident."

**EPOPTES** (ἐπόπτης, lit. "overseer"), the designation of two officials.

1. The 9th-C. *Kletorologion* of Philotheos mentions *epoiphes* as subaltern officials under the *eparch of the city*; the *Book of the Eparch* ignores them and Stöckle (Zunft 93) identified them with *mitolai*, supervisors of silk weavers.

2. *Epoiphes* were also fiscal functionaries in the genikon whose duty was to check the amount of individual tax payments, allowing reductions (συμπαθείαι) or increasing the required sum. Their activity is described in a treatise on taxation (ed. Dölger), and they are often mentioned in the 11th-C. privileges given to monasteries, along with *exisotai*. The functions of *epoiphe* and *exisotai* are barely distinguishable. *Epoiphes* were stationed in themes. Several charters of 941–56 (Lavra 1, nos. 2–3; Xerop., no. 1) mention a certain *protopatharios* Thomas, *asekrites*, *epoiphe*, and *anagrapheus* of Thessalonike, who directed the sale of *klastata*; a later document (Ivbr. 1, no.30) refers to *sympathaeia* granted by the *epoiphe* Thomas as well as his "addition" (tax-increase) in the same area. The last mention of *epoiphe* is in Manuel I's edict of 1153. Dölger argued that *epoiphe*, together with *exisotai*, are mentioned in a law of 496; this law is preserved only in the *Basilika* (56.8.13), and its attribution to Anastasios I is, according to the editors, H. Scheltema and N. van der Wal (ser. A. 7 [1974] 2570), spurious. Furthermore it is not known when the Greek translation was produced.

Lit. Dölger, Beiträge 79–81. – A.K.

**EP'REM MCIRE** ("the Less"), translator; died end of 11th C. One of the most important Georgian scholars of the 11th C., Ep'rem was educated in Constantinople. His father was Vaçe K'ariĉ'isde of T'ayk'/Tao, who moved to Constantinople with other Georgian nobles in 1027. By midcentury Ep'rem was on the Black Mountain, where other Georgians including George Mt'ac'mindeli were
also active in translating Greek texts. Ep’rem was superior of Kastana from ca.1091 until his death. His renderings of Greek are notable for their clarity and exactness; his output was immense. His translations include patrician works (John Chrysostom, Ἱμίλιες ἐπιστολῶν; Gregory of Nazianzos, Ἱμίλιες; Theodoret of Cyrthus, Ἱστορία); dogmatic theology (John of Damascus, Fountain of Knowledge); mystical theology (pseudo-Dionysios the Areopagite); and ascetic works (Basil the Great of Caesarea, Asketikon; Ephrem the Syrian, Asketikon; John Cassian, De Institutiis, which Euthymios the Iberian had begun on Mt. Athos; and Palladius, Historia Lausiaca).

LIT. Tarchnišvili, Georg. Lit. 182–98. —R.T.

ERAS. See Alexandrian Era; Antiochene Era; Byzantine Era; Diocletianic Era.

ERCHEMPERT, 9th-C. Lombard monk of Montecassino and envoy to Pope Stephen V (885–91). He composed verses for a martyrlogy (ed. in U. Westerbergh, Beneventan Ninth Century Poetry [Stockholm 1957] 77–81) and, at Capua after 885, wrote a Hystoriola Langobardorum Beneventi degencium that traces the history of the duchy of Benevento from 774 and breaks off in 889. Although Erchempert was hostile to foreigners, particularly the Byz. ("equal to beasts and ... worse than Agarenes," ch.81), by whom he was captured in 886 (ch.61), he provides unique information on Byz. Italy and Byz.’s role in the conflicts among the southern Italian principalities and Arabs.

ERGASTERIA BASILICA. See Factories, Imperial.

ERGASTERION (ἐργαστηρίον), a workshop or small retail store, or combination of the two. Justinian I distinguished tradesmen who operated "an ergasterium or other legitimate business" (Cod. Just. IV 92.26, par.2) from the illustres. Cognate terms, such as ergasteriakos (working man) or ergasteriarches (foreman of a workshop), were also used in the late Roman period. It is impossible to calculate the number of workshops in a city, but Justinian’s novels 43 and 59 give a rough idea by indicating that the owners of 1,100 ergasteria in Constantinople that belonged to the Great Church (Hagia Sophia) were exempted from making contributions for funeral expenses. The 10th-C. Book of the Eparch lists ergasteria in Constantinople of argyropratai, vestiopratai, linen merchants, soapmakers, grocers, bakers, and owners of taverns.

Documents also name various kinds of ergasteria, some of which are the same as those mentioned in the Book of the Eparch: sardamarikon ergasterion, a grocery store (Lavra 3, no.123.120–21) or mankiphon ergasterion, a bakery (Lavra 3, no.148.10–11); some are different, such as the workshop of a myrepsos or perfume and unguent maker (Lavra 3, no.123.110), a workshop for the production of flaxseed oil (Lavra 3, no.168.4–5), or a potter’s workshop (Lavra 1, no.4.4); sometimes mills are described as ergasteria. Several documents stress that ergasteria were located in the marketplace or forum. The Book of the Eparch explicitly prohibited argyropratai from working at home, stating that they must ply their trade in their shops on the Mese; linen weavers, on the other hand, were forbidden to sell their goods in their ergasteria but had to peddle them on their backs on market days.

Several workshops (potteries, glass factories, smithies) have been excavated in Corinth, Sardis, and elsewhere. A well-excavated glass factory in Corinth occupied one room in a house and contained only a single furnace; the empty space in front of the furnace was an 11 sq m area that could accommodate only a master and one apprentice. An act of 1419 (Xenoph., no.32.8–10) mentions five grocers’ ergasteria “in the great store” in Thessalonike that were eventually joined and transformed into a wineshop; they also must have been small.

Ergasteria could be the property of landowners (including churches and monasteries) who leased them out. Oikonomides (infra) calculates that the income from an ergasterion equaled about 6 percent of the investment; the tax on the ergasteria that he investigated ranged from about 3 percent to 11–13 percent of the income.
Church fathers used the term broadly in a metaphorical sense: Gregory of Nazianzos calls Alexandria the _ergasterion_ of education (PG 35:761A); Ephrem the Syrian considers marriage “an _ergasterion_ of life” (ed. J.S. Assemani 3:210F); the womb is frequently characterized as “the _ergasterion_ of nature.” Accordingly, a gabled building labeled _ta ergasteria tou martyriou_ in a mosaic at Yaktos (D. Levi, _Antioch Mosaic Pavements_ [Princeton 1947] pl.LXXIXa) probably designates the site of a martyrdom.

---

EROTAPKRIZEIS (ἐρωταποκρίσεις), a distinctive genre of Byz. literature, a combination of _dialogue_ and _gnoma_. _Erotapkrizeis_ are series of questions and answers related to dogma, exegesis, canon law, riddles, etc. They are either anonymous, or the participants in the “conversation” are shadowy figures deprived of any characterization, one of them playing the role of teacher, another the pupil. There is no strict sequence in the development of questions, although some unity of subject matter is preserved. Answers are formulated in gnomic form as an unquestionable truth, leaving no room for uncertainty. _Erotapkrizeis_ are known from ca.400; they gained popularity in the 7th–9th C. when the greatest theologians (Maximos the Confessor, John of Damascus, Photios) worked in this genre; one example is ascribed to Anastasios of Sinai. After the _Amphilochia_ of Photios, the most developed example of _erotapkrizeis_, they became infrequent; Nicholas of Methone and Niketas of Herakleia were among the rare practitioners of the genre. They were revived in the 15th C. by writers such as Symeon of Thessalonike and Mark Eugenikos. The genre (mostly in the form of translations) was popular in medieval Slavic literature (cf. the _Izbornik_ of 1073).

LIT. C. Heinrici, _Griechisch-byzantinische Geschäftsbücher_ (Leipzig 1911).

---

EROTPAIGNIA (Ἐρωτοπαιγνία, “Games of Love”), a collection of vernacular love poems in political verse found in a unique late 15th-C. MS, though the poems themselves are older. The _Erotopaignia_ include three alphabetic _acrostics_ (“Alphabets of Love”), all incomplete and with stanzas of varying lengths; an _Hekatologa_ (“Hundred Words”), a counting song in which a young girl lightheartedly challenges her lover to list the ways in which he has suffered for her; and an assortment of letters, laments, and songs not unlike the songs and letters found in _Libistros_ and _Rhodame_. Once thought to have come from Rhodes (and thus sometimes called “Rhodian Love Songs”), their place of origin is unknown; some of the amatory vocabulary, however, with references to enslavement to Eros, suggest that the _Erotopaignia_ come from the mixed Frankish-Greek milieu that produced the vernacular verse romances. Anonymous, probably not the work of a single author,
ESOTHYRION (ἐσοθύριον), also enthryion, a (fiscal?) term designating lands situated close to the center (καθεδρα) of a chorio and specifically to a (rural) church (e.g., Duchetar., no.60.2). The Treatise on Taxation (ed. Dölger, Beiträge 115.28–30) makes a distinction between esothrya and esothrya, lands of a peasant located within and outside the village; as time went on, the esothrya were transformed into hamlets (agria). Together with autourgia, esothrya were considered the most valuable part of a stasis or estate. The praktika of the 14th and 15th C. often mention esothrya in peasants’ holdings or use specific terms referring to gardens: esokeption (Epshig., no.8.42), esokeption within the chorio (Chil., no.92.28), a chapel with an esokeption (Palmon Engrapha 2, no.74.32–33), esokeption outside the kathisma-courtyard (Dionys., no.23.7), esoperbolion (Xerop., no.18A.60), esoperbolion with nut trees (Epshig., no.14.127), esoperbolion (Epshig., no.14.86). There were also “inner” choraphia. The exo- (outer) designation seems to have been infrequent in later documents: a praktikon of 1284 registers “the inherited arable land of 140 modioi with an esothyron” located somewhat away from the household (Lavra 2, no.73.90).

LIT. Dölger. Beiträge 136f. — A.K.

ESPHIGMENOU MONASTERY, late 10th-C. foundation on Mt. Athos. Located on the northeast coast of the peninsula, 3 km east of Hilandar, the monastery is first mentioned in 998 when Theodore was hegoumenos. Its original name was Espigmenou (“the slaughtered”), perhaps a reference to Christ, the sacrificial lamb. Espigmenou (Ἐσπηγμένου) prospered in the 11th C., acquiring vast properties on the Athoneite peninsula. At this time the monastery housed a certain number of Chalcedonian Armenians, including Theoktistos, who was hegoumenos in the 1090s and became protos of Athos ca.1035. In ca.1001 Nikkephoros, a monk of Espigmenou, was sent on an important mission to the Charsianon, where he founded a monastery and probably exercised influence on the recently annexed Caucasian lands

The establishment reached its zenith in the 14th C., when it was an imperial cenobitic monastery housing 200 monks and owning more than 12,000 modioi of land, chiefly in Chalkidike and the Strymon valley. Among the monks who spent some time in residence there were Athanasios (I), the late 13th-C. patriarch of Constantinople, and Gregory Palamas, hegoumenos in 1335–36, who attempted to introduce hesychasim into the monastery. Stefan Uros IV Dušan issued two chrysothori in 1346–47 confirming the monastery’s titles to various properties, and granting certain tax exemptions (Epshig., nos. 22–23). The history of Espigmenou becomes obscure after the Ottomans took control of Athos in 1430.

The 31 Byz. documents preserved in the monastery’s archives range in date from 1034 to ca.1409, and include early 14th-C. praktika that provide information on peasant households in Macedonia. The library holds more than 100 MSS of Byz. date (Lampros, Athos 1:170–99), the most valuable of which is an illuminated 11th-C. menologion with miniatures on purple parchment (Treasures 2, figs. 327–408). The treasury contains a mosaic icon of the 14th C., depicting the blessing Christ (Furlan, Icone a mosaico, no.35).

ESQUILINE TREASURE, a hoard of mostly domestic objects made in the 4th C., unearthed on the Esquiline Hill in Rome in 1793. The precise contents of the treasure are a matter of dispute as no inventory was made at the time of its discovery. Shelton (infra) demonstrated that of the 61 objects eventually associated with the treasure only 31 can definitely be documented as part of the original hoard; 27 pieces now remain, most of which are in the British Museum. Authenticated items include one bronze ewer and 30 silver objects: nine monogrammed dinner plates (one now missing), a bowl, a flask, the elements of a cherniboxentos set, two caskets. Six furniture
ornaments (= four Tyches of Constantinople, Alexandria, Antioch, and Rome; a Pair of Hands), and six horse trappings. Of the documented objects, in addition to the missing silver plate, a lamp, lampstand, and a second plate have also been lost.

The quality and nature of the objects, which included dinner and toilet articles as well as insignia of office (the Tyches and Hands), indicate that the treasure belonged to a family of high standing. The mixture of pagan imagery and Christian inscriptions is characteristic of the Late Antique period in general. A date of 379–83 for the manufacture of the objects and for their role as wedding gifts was originally hypothesized on the basis of inscriptions on the silver. The names of Secundus and Projecta appear on one casket. Monograms on the plates were deciphered as those of Turcius Secundus, supposedly a member of the gens Turcia prominent in 4th- to 5th-C. Rome, and of his wife Projecta Turcii. The latter was in turn considered to be the Projecta, aged 16, whose epitaph was composed by Pope Damasus (366–84). Shelton challenged these identifications and datings, suggesting instead that the treasure was made over a period of years 330–70 for several members of the Turcius household.

ESTATE. In Byz. various terms, often of períphrastic character, were used to denote the estate: agora (field), oikos (house), ktenata (properties), proasteion (suburb), zeugelatian (lit. “driving a yoke of oxen”); a monastic estate provided with a chapel was called a metochion. An estate usually included a mansion, desmesne land, and lands worked by tenants as well as hilly pastures. Within the estate, the Byz. distinguished the enthyr (or esothyr), located close to its nucleus, from the remote esothyr (Treatise on Taxation, ed. Dölger, Beiträge 115:24–33); they also distinguished autourgia as the most profitable portions of the estate. Balsamon (Rhalles-Poties, Syntagma 2:595,4–18) describes salt-pans, olive groves, vineyards, meadows, wateaways, and pottery workshops as autourgia: he acknowledges the flexibility of the concept, since an autourgia could cease to produce income, while an exochorion proasteion could become profitable. In documents vineyards (L. Petit, IRAK 6 [1900] 29.26–27), watermills (Lavra 2, no.105.24), vivaria, and the enigmatic aulakia and griopholoi (Lavra 2, no.104.177–8) were considered autourgia.

An estate usually did not coincide with the village but occupied a part of it, while the other part of the village either belonged to the village community or formed another estate: thus, in the village of Gradec in 1300, one landlord held 26 peasant households, a collective of owners had 19, one man had eight, another seven, and three lords possessed one household each. Estates could form a complex outside the village or comprise dispersed tenures in different villages.

Estates of the late 4th–5th C.—complete with villas, pasturage, and orchards—are represented in contemporary floor mosaics (Dunbabin, Mosaics 122, figs. 111–13), but Byz. equivalents are unknown.

---

ESTOIRE D’ERACLES, traditional title of the works of a group of French historians of the Crusades, comprising the translation of William of Tyre made in France in 1220–23 and various vernacular continuations of widely varying value and origin. The name derives from the opening words’ reference to Emp. Heraclius in connection with the rise of Islam. The discrepancies and elaborations of the French translation with respect to William’s original Latin seem to have no independent historical value (Morgan, infra [1973] 185–87). Several of the continuations are extremely valuable, particularly that for the years 1184–97, which derives from the lost Holy Land chronicle of Ernoul (presumably Ernoul de Gibel, associate of Baldwin II, lord of Ibelin and Ramla, in Palestine [ca.1187–93]) and sheds light on the fall of Jerusalem to the Muslims in 1187; the reigns of Andronikos I Komnenos, Isaac II Angelos—whose portrait was supposedly painted above the door of every monastery in Constantinople (ed. Morgan, infra [1982] 29), Alexios III Angelos, and Conrad of Montferrand (Morgan 26–30); the Third Crusade; and the conquest of Cyprus (Morgan 116–21) from the perspective of
Outremer. The various continuations give substantially the same account of the Fourth Crusade (ed. de Mas Latrie, 348–95) and provide much data on politics in the Levant and the relations of Byz. and Armenia to the Crusader states.

—M.M.C.

ESZTERGOM RELIQUARY. This silver-gilt and enamel reliquary, kept in the cathedral treasury of the Hungarian city of Esztergom, displays a sizable piece of the True Cross, surrounded by images in three registers: above are two mourning angels; at the center Constantine I and Helena point to the relic in its sunken cross-shaped cavity; illustrations of Christ’s Road to Calvary and Descent from the Cross are below. Between the arms of the cross appear four enamelled disks, with inscriptions reading “Christ gives grace to Christians.” Inset enamel strips with quatrefoils define the borders of the panel and the relic. This panel once formed the inner part of a triptych, the wings of which have been lost. The present frame is a Palaiologan addition. The relicquary’s bright, opaque coloring, its fragmented borders, the rectilinear setting of the cloisons (thin strips of gold) and, in the inscriptions, the iota decorated with a nodule are characteristic of mid-to-late 12th-C. enamels; parallels are the feast scenes added to the Pala D’Oro in Venice after 1204 and two teardrop shaped panels on a composite icon in the Hermitage (Iskusstvo Vizanti 2, no.540). The date of 1190 assigned to the reliquary in the 17th-C. will of Cardinal Kutassy of Hungary therefore seems to be accurate.

ETCHMIAXIN (Ejmiačin). See VALARŠAPAT.

ETERIANO, HUGO, lay theologian and author; born Pisa between ca.1110 and 1120, died Velletri? (Italy) 1182. Eteriano studied theology and philosophy in France and Italy and went to Constantinople ca.1160 with his brother, Leo TUSCUS, who became an imperial interpreter. In Constan-
tinople Eteriano continued his studies and became an adviser to Emp. Manuel I Komnenos on Latin theology and the Union of the Churches. His background in Latin scholasticism was influential in resolving a Christological controversy at the local council of 1166 in Constantinople (see under CONSTANTINOPE, COUNCILS OF) where he argued with DEMETRIOS OF LAMPE. At the emperor’s request, Eteriano, with Leo’s help, wrote a polemical treatise, On the Holy and Immortal God (also known as On the Heresies of the Greeks), which sought to demonstrate that both the Greek and Latin church fathers taught the dual procession of the Holy Spirit (the filioque). The book, written in both languages, was sent to Pope ALEXANDER III in 1177. At the request of two German scholastics, Eteriano compiled the Book on the Difference between Nature and Person (ca.1179), which consisted of translations of Greek patristic texts on Trinitarian theology and his comments on them. Pope Lucius III made Eteriano a deacon and a cardinal in 1182, the year of his death.

—F.K.

ETERNITY (aiōn) can only be defined negatively in relation to time, either as a duration without beginning or end or as existence without change or (temporal) succession. Eternity as an attribute of God was first discussed in the Christian era by ARIUS and the early Arians (e.g., EUNOMIOS). They argued that the Son was generated “before the ages” but was not “co-eternal” with the Father. In this sense, GREGORY OF NYSSA (as the First Council of Nicaea had already done) also opposed the use of the term “unbegotten” as an essential attribute of God the Father, since it excluded the Son of God from the Trinity. The definition of eternity was also linked to the revelation of the name Yahweh, in that the eternal God as “Life itself” transcended even infinity (without beginning, without end). Probably in view of the Gnostic doctrine of the emanation of the aeons, or even the eternity reserved for men and angels, John of Damascus (Exp. fidei 15, ed. Kotter, Schriften 2:43f) admitted that eternity may not always mean “aion” in the strict sense. The Palamite doctrine
of energies with the presentation of a divine, uncreated light came out of the framework of the Cappadocian doctrine of eternity.

**ETHICS**. Ethical reflection in Byz. often took place in the context of discussion of questions of moral theology, in which Christian revelation was the fundamental reference (e.g., for concepts such as **sin, virtue, vice, devil**). Ethics in the strict sense, a philosophical inquiry independent of religion first established as a distinct science by Aristotle, also survived, esp. in the continued interest taken by Byz. thinkers in ancient philosophy. As in the case of his corpus of logic, Aristotle's ethical works formed a core around which Byz. commentaries, glosses, and paraphrases accumulated. His *Nicomachean Ethics* was read with ancient anonymous scholia and those of Aspasios, to which were added partial commentaries by Michael of Ephesus, Eustathios of Nicaea, and a slightly later Byz. anonymous, the whole constituting a corpus translated into Latin by Robert Grosseteste. A paraphrase of the *Nicomachean Ethics* was copied for John VI Cantakouzenos. On the basis of such materials, summaries of ethics were prepared, for example, by John of Damascus, Michael Psellos, and Joseph Rhakendyes.

Another ethical system that had a considerable impact on monastic circles was Stoicism, as represented in the works of Epictetus, Marcus Aurelius, and the stoicizing On Virtues and Vices (*De virtutibus et vitibus*) attributed to Aristotle (and copied for Arethas of Caesarea) and the Concerning the Emotions (*Peri pathon*) attributed to Andronikos of Rhodes as well as in a number of popular moralizing anthologies. An example of an ethical system based on principles Stoic in inspiration is provided by Plethon's treatise On Virtues.

Less broad in appeal was the ethical theory of Neoplatonism as formulated in particular in the *Sentences of Porphyry*. The solutions proposed by the Neoplatonists (esp. Proklos and Ammonios) to the problem of evil—evil is not a substance, but a privation of good, in particular in the form of moral turning away from God—and its reconciliation with free will and divine providence were, however, adopted by Psellos and by the *sebastokratour* Isaac Komnenos. Indeed, in its identification of the ethical good (*eudaimonia*) as union with God, to be attained in contemplation by means of purifying by virtue the soul of its corporeal existence, Neoplatonism had already given, through the Cappadocian fathers, a fundamental structure to Byz. moral theology.

Aristotelian ethics could be integrated into this structure, in Psellos's view, in that the lowest type of virtue, "political virtue," concerns the rationally ordered and harmonious life of man as a union of soul and body, a life formulated by Aristotle and including practical wisdom and political action. The higher levels of virtue, purificatory and contemplative, which Porphyry added to political virtue, indicate for Psellos the path that leads man as immortal soul to transcend the world and reach greater union with God. The same place is assigned to Aristotle's ethics in the Christian life by Eustathios of Nicaea. Barlaam of Calabria proposed in his *Ethics according to the Stoics* (PG 151:1341–64) a similar integration of Stoic and Platonic ethics: Stoic ethics prescribes the ideal life for man as he is; Platonic ethics concerns life beyond this world. (See also behavior.)

**ETHIOPIA** (from *Aðiophes*, supposedly the people with "burnt faces"), the geographical-racial (not political) designation of the region in Africa south of Byz. territory, esp. south of Egypt. The eastern part of Ethiopia including South Arabia was sometimes called *India* and the inhabitants Indians (e.g., Sozom., *HE* 2:24; Theodoret 1:22).

Although Ethiopia was a general designation, it was usually qualified to pinpoint the specific area under discussion. Eusebios (*HE* 2:11.13) specifies Meroitic Nubia when he speaks of the Ethiopia that is ruled by a queen. Prokopios, discussing the Himyarite wars, speaks of "the Ethiopians who are called Axumites" (*Wars* 1:19, 17). Byz. historians were aware of tribal groupings and political units within Ethiopia, for example, *Blemmyes*, Nobades, Axumites. Individuals identified as Ethiopians were to be found in Egyptian monasteries, the most notable being Moses the Black of Sketis (early 5th C.). No part of Ethiopia was
ever included in the Byz. Empire, but in the 7th C., both Lower Nubia and esp. Axum were Byz. allies. The Arab conquest of North Africa cut off Ethiopia from Byz.

ETHIOPIANS (Ethiopæs). From classical times the term Ethiopian referred to all dark races from the Atlantic to the Indian Ocean: specifically, to the Cushite inhabitants of the kingdoms of Meroe and Axum. This inaccurate terminology, reflecting both Ptolemy’s geography and Ethiopia’s own position on the way to India, was inherited by the Byz., whose attitude toward “blacks” greatly differed from that of Westerners (C. Prager, JMRS 17 [1987] 260, n. 5).

St. Moses the Black, a Nubian, is referred to as Ethiopian or Libyan; Theophilus the Indian, possibly from the Maldives Islands, is variously described as Ethiopian, Blemmyes, or Libyan (G. Fiaccadori, Studi classici e orientali 33 [1983] 295–300; 34 [1984] 273 ff. and n. 112). Yet trade with India and events in 6th-C. Najran soon led to a better knowledge of Axum and Adulis, both visited by Kosmas Indikopleustes ca. 518. As allies in control of the eastern routes, the Ethiopians were then favorably regarded by diplomats and merchants alike. Between 644 and 678 the widespread hope of an Ethiopian intervention against the Mesopotamian Muslims in fulfillment of Psalm 67(68):31 still focused on the Axumite power. Methodios of Patara even claimed Ethiopian origins for the Byz. Empire, ultimately equating it with Ethiopia (M.V. Krivyov, in Proceedings of the 9th International Congress of Ethiopian Studies [Moscow 1988] 6, 111–17). After the Islamic conquest of Egypt, the decrease in relations with Nubia and the decline of Axum prevented further contacts between the Byz. and Sudanese or Abyssinian blacks—although the “Ethiopians” serving in Theophilos’s army or those involved in the 904 Arab raid on Triessalonike may have been Sudanese mercenaries.

From the 10th C. onward men of color are indeed mentioned frequently in Byz. literature, but the vast majority of references, following the old Mediterranean stereotype of imaginary blacks, is generic: either connected with scriptural problems (E. Benz, Abba Salama 6 [1975] 17–36) or totally devoid of any anthropological reality, as representing the proverbial darkness impossible to “wash off” (after Lucian, Against the Ignorant Book Collector 28). Bordering upon and overlapping the same cliche are the Ethiopian demons that typify the spirit of fornication in early monastic hagiography (P. Devos, AH 103 [1985] 61–74). Thus Ethiopians became protagonists of disturbing dreams (P.-A. Fevrier, Bulletin archéologique du Comité des travaux historiques et scientifiques n.s. 19 B [1985] 295 and n. 8). This kind of demonology took shape in Egyptian milieux subjected to the savage raids of Nubian tribes, and spread then to Syria and Palestine and later to areas lacking direct experience of “evil blacks”: but color awareness never implied racial prejudice, nor did black chromatic symbolism, of superstitious origin, necessarily refer to ethnic types (F. Lepore, ParAbb 39 [1984] 310–20).

The interpretations of scriptural Ethiopians prevailed over the scanty associations with demons and internal phantoms, whose frightfulness lay, however, not so much in the color of their skin as in other physical features (J. Winkler, JHS 100 [1980] 160–65). Far from the “racial” image of black hypersexuality, the Iliad’s “blameless Ethiopians” (bk.1:423) were models of continence and dignity (which again precluded the identification between blacks and slaves); credited with wisdom and astrological learning, they became a symbol of Christianity’s ecumenical mission, like the black King of the Epiphanies.

The same developments and sensibility are found in the visual arts, esp. MSS of the 11th–12th C. Besides the small and conventional negroid figures used for decoration, Ethiopians with distinctive African traits appear, for instance, the Blemmyes in the Menologion of Basil II; and demons are usually depicted as black. According to the Byz. eschatological perspective, blacks are also shown, chiefly in “Pentecost” scenes, among the nations reached by the preaching of the Apostles (Kazhdan-Epstein, Change 185).

ETHIOPIC LITERATURE, the literature written in Ge'ez, the southern Semitic language of successive Christian kingdoms of the region that is now ETHIOPIA. Of three main periods, only the first, the Axumite period (4th–6th C.), was directly influenced by Byz. literature in the form of translations from Greek religious texts to fulfill the needs of newly christianized Axum. By the 6th C., the Old Testament had been translated from the Septuagint and the New Testament from an Antiochene Greek text aided by reference to a Syriac version. The Book of Jubilees, the Apocalypse of Esdræ, the Ascension of Isaiah, and the Book of Enoch were included in the Ethiopic canon. The Qerlos, a compilation of writings of the church fathers, esp. Cyril of Alexandria; the Synodos, a collection of conciliar decrees; the Lives of Sts. ANTONY THE GREAT and Paul the Hermit; the rule of St. PACHOMIOS, the PHYSIOLOGOS, and various liturgical texts all belong to this period. During the revival of Ge'ez literature (14th–15th C.), vitae of indigenous saints were produced that show indirect Byz. influence via models surviving from the earlier period. After the 14th C., the region, isolated from Byz. since the Arab conquest, developed an indigenous literature subject to some Coptic-Arabic influence. (See also KEBRA NEGAST.)

LIT. F. Cerulli, Storia della letteratura etiopica (Milan 1956).

ETHNARCH (ἐθναρχης, lit. “leader of a people or nation”), a term (possibly of Hellenistic Jewish origin) to designate any ruler of barbarians: thus, Philostorgios (Philostorg. HE 34.7) used it for the Jewish ruler of Himyar, Theophanes the Confessor (Theoph. 268.30) for the chiefs of the Sklavenes, Constantine Manasses (Historiae v.2525) for the Vandal kings, etc. Church fathers designated pagan national gods as ethnarchai, and accordingly Basil the Great (PG 29:656B) considered the angel-ethnarch as a guardian appointed to each ethnos. By the end of the 10th C. the term ethnarch (as well as satrap) entered the Byz. state hierarchy: the Taktikon of Exarchid (Oikonomides, Listes 271.24, 273.29) mentions both the ethnarch and his topteteres. In 1051 Constantine IX appointed the patrikios Bryennios as ethnarch and sent him against the Pechenegs, and ca.1078 Borri. was protoprodros and ethnarch (Brven. 283.2). Since a seal calls him proedros and megas primikertos of the ethnikoi (V. Sandrovskaja, PSb 23 [1971] 29), it is plausible that the ethnarch of the 11th C. was a high-ranking commander of foreign mercenaries.

LIT. Oikonomides, Listes 333. - S. B. B., A. K.

ETHNOLOGY as a separate discipline did not exist in Byz., but ethnological problems were touched upon by various writers. This was not only because of human curiosity but esp. because of the political situation of an empire that constantly had to deal with a variety of peoples attacking it, trading with it, or settling on its territory. The Byz. considered themselves as the chosen people and viewed foreigners as barbarians; they nonetheless left valuable descriptions ranging from folkloric fantasies (e.g., in the vita of MAKARIOS OF ROME), to pragmatic information (e.g., the STRATEGIKON OF MAURICE), to narratives of embassies (e.g., PRISKOS OF Panion). The works of historians (Prokopios, Theophyllaktos Simokattes, Constantine VII Porphyrogenetos, Leo the Deacon, Anna Komnene, Laonikos Chalkokondyles, among others) are esp. rich in ethnological descriptions. Pictorial images of various peoples are to be found in scenes of PENTECOST, in the illustrations to Psalters and Octateuchs, in the images of the LAST JUDGMENT, and in such secular MSS as the Madrid Skylites (M. Garidis, Byzantion 39 [1969–70] 86–91).

The Byz. emphasized the continuity of ethnological groups and applied to contemporary peoples ancient names (such as Scythians) and ancient topos characterizing their behavior, habits, food, and dress (B. Zástérová, BBA 52 [1985] 16–19). Some observers (e.g., Pachymeres) recognized modification in language and clothing because of assimilation; Chalkokondyles noted the process of cultural differentiation over time. Cultural development, unless ascribed to divine influence, was considered as a technological progression from the primitive gathering of food to civilization. In Tzetzes’ view this led to moral decline, whereas Eustathios of Thessalonike connected it with the development of law and righteousness.

ETHPOIOIA (ἠθοποιεία, lit. “character-drawing,” Lat. sermoquatione), a rhetorical figure, one of the PROGYMNASMATIA. According to HERMENEGIDES (ed. Rabe, 9–11), it was “an imitation of the character
of the person described,” such as “what kind of words Andromache would have pronounced while mourning over Hector” (hence the words τίνας ἀεὶ εἰσί μοι γότου in the title of many Byz. etthropoinai). The person had to be a “real” individual, either historical or mythological, but statements put into his or her mouth were invented. Hermogenes divides etthropoinai into ethical (with the emphasis on character), pathetic (with the emphasis on emotion), and mixed.

In the 4th–5th C. (Libanius, Severos of Alexandria, rhetorical school of Gaza) etthropoina remained a rhetorical exercise, drawing the material primarily from mythology and stressing unusual and unreal situations. Some later Byz. etthropoinai (e.g., by Nikephoros Chrysoberges) retain a conventional character. A number of authors of the 10th–12th C., however, developed the genre far beyond a school exercise: even mythological subjects (e.g., Pasiphae’s infatuation with a bull, by Nikephoros Basilakes) could sound erotic and nonorthodox (H.G. Beck, Byzantinisches Erotikon [Munich 1984] 113). At the same time biblical and hagiographical themes were introduced; historical personalities of the day, such as Nikephoros II Phokas, were featured, and elements of everyday life emerged. Eustathios of Thessalonike presented a certain Neophytoς of Mokissos complaining that he had been robbed in a bathhouse. This ethrhoia is full of irony underscored by references to mythology and to Christian moral imperatives. The ethrhoia form was used as an element of other genres, e.g., in Psello’s Chronography (O. Schissel, BZ 27 [1927] 271–75).

After the 12th C. the popularity of ethrhoia declined, the pattern became more conventional, and even Manuel II’s ethrhoia on the words that Timur allegedly addressed to Bayezid I was deprived of any real content (H. Hunger in Studien zu alteren Geschichte Osteuropas 1 [Graz-Cologne 1959] 1561). An exception is Alexios Makrembolites’ Dialogue between the Rich and the Poor, which has the title of ethrhoia.

ETYMOLOGIKA (ἐτυμολογικά), lexika giving the derivation, real or imagined, of words. Early Greek thinkers saw language as a natural phenomenon; the Stoics saw it as a conventional system based on analogy. Both looked for a correspondence between the form and meaning of words and propounded explanations based on this principle. In the 5th C. Oros and Orion made collections of such explanations, which survive only in fragments (Das attische Lexikon Oros, ed. K. Alpers [Berlin 1981]). Ninth C. Byz. scholars drew on these works, as well as on lexika, commentaries, etc., to compile their own etymologia. The earliest, the Etymologicum Genuinum, survives in two 10th C. MSS, but has not yet been completely edited. A slightly later compilation from similar sources, the Etymologicum Gudianum, is probably connected with Phoitos and his circle. The compiler of the Souda used both of these. About the mid-12th C. another compiler drew material from the Genuinum and the Gudianum, as well as from the lexikon of rare words falsely attributed to Cyril of Alexandria. In the independent spirit of 12th C. scholarship he freely abbreviated, transposed, and modified what he found in his exemplars. This compilation, known as the Etymologicum magnum, was used by Eustathios of Thessalonike. The unpublished Lexikon Symeonis, a shorter compilation of the same period, sometimes follows the Genuinum more closely. The explanations offered by the etymologia are often fanciful, for example, ἀγάπη (love) from “to lead everything” (ἀγομέν τό πῶν); γυμνὸς from κυπτρό, “since the naked [man] (γυμνός) stoops (κυπτεῖ) in order to conceal his pudenda in shame”; κάμηλος (camel)—because “she bends her thighs (κάμπτει τοὺς μηνούς)”; λύπη (sorrow) from “to open (λύειν) the countenance (τοὺς ὀφαγάς) for tears.” Nonetheless, these compilations are valuable for the light they throw on the Byz. understanding of their own literary language, as well as for their quotations from lost Greek texts.

ETYMOLOGY, a division of grammar in antiquity, which in the 4th C. acquired special significance as a tool for discovery of concealed links between essence and phenomenon. Broadly applied by Iamblichos, it became fashionable with literati of the 5th C. when various etymologiaka
were compiled. Far from giving scientific explanations, Byz. etymology eagerly suggested multifarious interpretations (Krumbacher, *GBL* 573–75), probing various paths to penetrate behind the sound of the word: thus, *anthropos* was considered to originate from *ano* ("up") and from various verbs meaning "to look" or "to be inclined." During the 10th-C. encyclopedic revival, the search for the etymology of geographical names became popular, and the chroniclers (pseudo-Symeon Magistros, Genesios, etc.) included etymological explanations, partly borrowed from Strabo, partly invented, but as a rule fantastic (A. Diller, *TAPA* 81 [1950] 245–53; Constantin VII’s team of writers in the De *themata*ibus also developed pseudohistorical and mythological etymologies, although the explanations of some names (Boukellariou, Opsikion) are factual (Hunger, *Lit.* 1:532). Etymology appears also as a vehicle of polemic and praise: the names of saints were interpreted as emphasizing their virtue, the names of opponents their folly or vice: thus, Nikephoros Gregoras called the followers of Palamas palamnaioi ("murderers") (H. Hunger, *Aspekte der griechischen Rhetorik* [Vienna 1972] 131f). Eustathios of TheSSalonike effectively used etymologies in his antimonastic polemic, linking asketes with askos ("wineskin") and laura with spoudesilaura ("whore") (Kazhdan-Franklin, *Studies* 152).

EUAGEIS OIKOI (ευαγείς οἰκοι), a category of pious institutions, also called theioi or divine. Probably in the 6th C., the previous philanthropic organizations (see *philanthropy*) created by Christians to assist the poor, the aged, and the infirm became more institutionalized. At the same time they became powerful landowners, and Justinian I in his novel 120 of 544 regulated their rights to acquire or lease properties; in the category of pious institutions the legislator included hostels (Xenodochēia), hospitals, poorhouses (Ptochotropēia), orphanages, and sometimes churches and monasteries as well. Byz. law distinguished between euagneis oikoi and imperial estates; the administration of some pious institutions, however, was incorporated into the state system. In the Taktika of the 9th and 10th C. chartudarii and xenodochoi of euagneis oikoi are mentioned, and in acts of the 11th C. the oikonomos of euagneis oikoi appears. In the 12th C. the latter official was replaced by the *megas* logiastēs of euagneis sekreta (Podnou Engraphe 1, nos. 18.438, 19.26; Laura 1, no.68.1). The term seems to have disappeared after 1204. Specific oikoi such as Eleutheriou and Mangana were closely linked to the economy of the imperial court.

EUBOEA (Εὐβοια, in Western sources Negroponte), large island in the Aegean Sea (second in size only to Crete) off the east coast of Greece. It consists of three parts: the well-irrigated and forested north, a mountainous central section with fertile coastal valleys, and an unproductive south; the central section is separated from Boeotia only by the narrow strait of Euripos. Hierokles (Hierokl. 644.10, 645.6–8) lists four poleis in Euboea: Adephas/Aidepos in the north, Chalkis and Porthmos (mod. Aliveri) in the middle, and Karysos in the south. Some settlements (Avlon, Oreos) are attested as bishoprics from the 8th or 9th C. onward, but nothing is known of their urban character. Archaeological excavations have revealed mosaics, remains of basilicas, and fragments of sculpture through the 7th C., even from remote areas of the island. The establishment of monasteries in the 11th and 12th C. (e.g., Panagia Peribleptos near Polikita) are an indication of Byz. recovery.

Owing to its isolated location, Euboea seems to have suffered little from hostile invasions. Vandal fleets reached the island in 466 and 475, but there is no evidence of Avar and Slavic attacks. Arabs from Tarso attempted to capture Chalkis in the 870s, but details of this expedition are hard to establish (Vasiliev, *Byz. Arabes* 2.1 [1968] 56, n.1); the city was burned by the Venetians in 1171. As an administrative unit Euboea existed at least through the 8th C., as shown by a seal of Kosmas, the dioikētēs of Euboea (Zacos, *Seals* 1, no.2078). Thereafter the island was part of the theme of Hellas and was designated Chalkis or Euripos; from the 13th C. it took the name Negroponte, although Byz. historians continued to call it Euboea until the 15th C. (eg., Kritob. 165.19, Douk. 75.19). From 1332 the Turks began to attack isolated areas on Euboea and in July of 1470 the island fell to them. Until the 15th C. the church
of Euboca was under the administration of Athens. Under Latin domination the church of Euboca was an important outpost of papal power.

Most of the surviving churches on Euboca date from the 13th and 14th C., and are found in the Karystos section of the island. They are small, single-aisled, barrel-vaulted churches, founded, according to their fresco inscriptions, primarily by local couples. Although their fresco programs are fundamentally Byz. in character, some Western iconographic influences are evident, perhaps deriving from Romanesque MSS. Western traits also appear in haloes, painted architecture, and the special outlining of figures (A. Koumoussi, Les peintures murales de la Transfiguration de Pyrgi et de Sainte-Thècle en Eubée [Athens 1987]).

EUCHAIATA (Εὐχαίατα, now Avkat), city of Pontos, west of Amaseia. In the 5th C., Euchaita served as a place of exile for many prominent clergymen, including the patriarchs of Constantinople and Antioch. It was made a city by Anastasios I, who fortified the polisma after an attack by Huns in 515. It was burned by the Sasanians in 615, attacked by the Arab caliph Mu’awiyah in 640, and occupied by Arabs during the winter of 663/4. On this last occasion, while the Arabs plundered the city and demolished the Church of St. Theodore, the population fled to forts in the nearby hills. Nevertheless, the city recovered and the church was rebuilt. Euchaita was a city of the Armeniakon theme; the Arabs ambushed the strategos and captured the treasury of the theme in 810 (Theoph. 489.17–20). The works of the metropolitan John Mauroposes show that the festival of St. Theodore was the scene of a crowded fair in the mid-11th C. Its later history is unknown. Originally a suffragan bishopric of Amaseia, Euchaita became an autocephalous archbishopric by the 7th C.; its increasing importance derived from the cult of St. THEODORE TIRON transferred here from Amaseia. Euchaita became a metropolis under Leo VI. No remains have survived. The relation between Euchaita and the neighboring Eucheneia (named Theodoropolis by John I Tzimiskes in 972) is not clear.

C.F.

EUCHAIATA (εὐχαίατα, “thanksgiving”), principal Christian liturgical service, called the liturgy or the Divine Liturgy in Byz. usage. Based on Jesus’ command (Lk 22:19) to repeat in memory of him what he did at the Last Supper, the Eucharist is first seen (in 1 Cor 10:11) as a ritual meal in which bread and wine are offered and blessed as Jesus’ body and blood in memory of his saving work, esp. his sacrificial death (1 Cor 10:26). Originally celebrated in the context of an agape meal, perhaps daily, by the 2nd C. the Eucharist had been separated from the agape, joined to a service of scripture lections, and associated with Sunday as the ritual symbol of the risen Jesus’ enduring presence among his followers. In the 3rd C. appear the first written formulas of the anaphora or central prayer expressing the service’s significance. Eucharist is considered a sacrifice (thysia) because it is the sacrament of Jesus’ sacrifice on the Cross as well as an icon of the “heavenly liturgy” or permanent self-offering that Jesus offers before the throne of the Father (Heb 8–10, 12:22–4), a favorite theme of Byz. commentaries.

Within Byz., Eucharist was a source of theological disputes, esp. with the Iconoclasts, who held that the consecrated bread and wine were the only true types or rikon of Jesus (S. Gero, BZ 68 [1975] 4–22). Against this the Second Council of Nicaea defined that the consecrated bread and wine are no image, but Jesus himself (Mansi 13:264). The Byz. also quarrelled with others over eucharistic practice (see Latin Rite, Zeon, Epi-
glesis). Byz. eucharistic theology achieved its classic synthesis in the commentary of Nicholas Ka-
silas, who not only maintained a balanced position fair to Latin views, but also found a via media between the two opposing tendencies of Byz. eucharistic theology, represented in the 12th C. by Soterichos Pantéugenos, who seemed to reduce the Eucharist memorial to a subjective

Eucharist was originally celebrated at Byz. only on Sundays, Saturdays, and feasts. By the 8th–9th C. Byz. lectionaries provide lections for weekday Eucharist (P.M. Gy in *Miscellanea G. Lercaro*, vol. 2 [Rome 1967] 255–59), though this was probably only in monasteries since the *Typikon of the Great Church* does not have such lections. Only ca.1053 or 1054 did Constantine IX Monomachos assign revenues to have Eucharist celebrated daily in Hagia Sophia (Skyl. 477.64–69). Daily Eucharist never became the rule in Byz., though the Stoudite *typika* provide for it except on the ferias of Lent and Holy Week (PG 99:1713B). It was celebrated less frequently in monasteries after the introduction of the *Sabbatic typika*, though there was provision for communion via the *presanctified* liturgy on days without Eucharist (Taft, *East & West* 61–80). (For representations of Christ’s celebration of the Eucharist, see Lord’s Supper.)

-E. R.F.T.

**EUCHELAION.** See UCTION.

**EUCHOLOGION** (εὐχολόγιον), prayer book used by the principal liturgical ministers (bishop, priest, deacon) for all services of the Byzantine rite. A vast anthology whose contents vary widely from MS to MS, the early *euchologion* contained the * prayers and diaconika* for the cathedral services of the capital and was the principal *liturgical book* originating in Constantinople. The earliest of the numerous surviving MSS of the *euchologion* is Vat. Barb. gr. 396, dating from the second half of the 8th C. (A. Strittmatter, *EphLil* 47 [1933] 329–67).

Used even in monasteries for the Eucharist, the *euchologion* became more and more monastic in character as the Palestinian hours introduced by the Stoudite monasteries of Constantinople gradually merged with elements of the cathedral hours (*asmatike akolouthia*) to form a new, hybrid, monastic office in Constantinople (see Stoudite *typika*). Arranz (“Asmatikos Hesperinos” 109–16) classifies various MSS of the *euchologion* on precisely this basis: their relative purity in transmitting the *asmatike akolouthia* of Constantinople or their degree of monastic content. A. Jacob, on the basis of their text of the Chrysostom liturgy, divides *euchologion* MSS into two recensions, the ancient and the new, subdividing the former into two families, Constantinopolitan and south Italian. Printed versions distinguish between the *Mega euchologion* (and extracts thereof, such as the *hieratikon* or *leitourgikon*), which contains the Eucharist service, vespers, and orthros, and the *Mikron euchologion* (or *hagiasmaterion*), which contains the other sacraments, blessings, funerals, and occasional services.

-E. R.F.T.

**EUCLID,** ancient Greek mathematician; fl. ca.300 B.C. in Alexandria and perhaps Athens. Euclid’s best known and most influential work, *The Elements*, was the basic textbook on geometry for the Byz., who normally studied it in the revision prepared by Theon of Alexandria. The most famous copy of this revision is Oxford, d’Orville 301, dated 888, which belonged to Arethas of Caesarea. The original version is preserved only in the 9th-C. Vat. gr. 190. Commentators on *The Elements* include Pappos of Alexandria, Proklos, and Simplicios. Leo the Mathematician gained such renown for his understanding of Euclidean theorems that the caliph al-Ma’mun tried to lure him to Baghdad (Lemerle, *Humanism* 173–78). Among later scholars who wrote on Euclid were Maximos Planoudes, George Pachymeres, Niképhoro Grigorás, Isaac Argyros, and Barlaam of Calabria. *The Elements* was translated into Latin (by Boethius) and into Arabic.

Two other works of Euclid, the *Data* and the *Optics*, survive both in an original version and in a revision by Theon. Both works were translated...
into Arabic by Ishāq ibn Hunayn, and there is an anonymous Latin translation of the Optics, perhaps made in the 12th C. Pachymeres used the original version of the Optics in book 3 of his Quadrivium.

The Mirrors, which is attributed falsely to Euclid, is perhaps by Theon. Two musical works, the Introduction to Harmony and the Division of the Scale, are sometimes ascribed to Euclid in Greek MSS; the first is most probably the work of Cleomides, though the second may be in part Euclid’s.

—D.P.

EUDOKIA (Εὐδοκία), feminine personal name. The word is frequent in the New Testament, meaning “good will, favor.” Unknown in the 4th C., the name was evidently coined for Athenais and soon thereafter given also to the elder daughter of Valentinian III. It was not widely used in the early period, even though Theophanes lists four Eudokiai. However, in the late Byz. acts of Lerna, vols. 2–3, Eudokia holds sixth place among female names, between Theodora and Zoe.

—A.K.

EUDOKIA INGERINA ( returnUrl="#" Εὐδοκία Ἰγνερίνα), mistress of Michael III, wife of Basil I, mother of Leo VI and Alexander; born ca. 840, died Constantinople 882/3. She was the daughter of Inger, who was perhaps of Scandinavian origin (Mango). Around 855 Michael took Eudokia as his mistress, angering his mother Theodora and Theoktistos, both of whom hated her “for her impudence” (TheophCont 655,3–4). Despite his marriage to Eudokia Dekapolitissa, Michael apparently continued his involvement with Eudokia Ingerina, although nothing was heard about her for a decade. Kislinger speculates that ca. 856 Michael married her to a son of Caesar Bardas to legitimize her social status and that Bardas took up with her after his son’s death.

In 865/6 she married Basil; the notion that she is named and depicted on an ivory casket that is said to have been a wedding present for the couple has been shown to be false (A. Cutler, N. Oikonomides, ArtB 70 [1988] 77–87). In Sept. 866 Eudokia gave birth to Leo. Some scholars consider this a nominal marriage, arranged by Michael to give legitimacy to Leo, who was his child, but most assert that Leo was actually Basil’s son (Ch. Toul, Parnassos 21 [1979] 15–35). If Eudokia continued as Michael’s mistress, then her son Stephen, born in Nov. 867, would have been Michael’s child as well. With Basil she had Alexander and three daughters; she is portrayed with her two sons in the Paris Gregory. Eudokia became involved ca. 878 with a Niketas Xylinites, whom Basil forced to be tonsured. In 882 she arranged a bride show for her son Leo, at which he chose Theophano, one of Eudokia’s relatives. In his funeral oration for Basil, Leo called Eudokia “the finest of women” (A. Vogt, I. Hausheer, OC 26.1 [1932] 52,18).

—P.A.H., A.C.

EUDOKIA MAKREMBOLOITISSA, empress (22/23 May–31 Dec. 1067); died after 1078. Niece of Patr. Michael I Keroularios, Eudokia married Constantine Doukas by 1049. Before he became Constantine X, she bore him Michael, two other sons, and two daughters; thereafter she had Konstantios and a daughter. She became augusta (empress) during her husband’s reign; as he was dying, she swore, in the presence of Patr. John VIII Xiphilinos, synod. and senate, never to remarry. Following Constantine’s death, she ruled for her sons, the emperors Michael VII and Konstantios, who appear with her on her coins. Supported by the caesar John Doukas, she made her own official decisions. The Turks continued to attack the eastern frontier; Caesarea and the region of Antioch were plundered. The Byz. troops, badly paid and provisioned, were demoralized. Realizing the need for a male ruler, Eudokia obtained from the patriarch the annulment of her oath and selected as her new husband Romanos (IV) Diogenes. She bore him Nikephoros and Leo. When, after the battle of Mantzikert, Romanos was released by Ali Arslan and sought to regain his throne (early Oct. 1071), Eudokia hesitated. The caesar John summarily forced her into her own convent of Phiphoudion; Nikephoros III recalled her to Constantinople. A copy of the Sacra Parallela prepared for Eudokia depicts her with Constantine Doukas and their sons
(Spatharakis, *Corpus*, fig. 126). I. Kalavrezou-Maceneir (*DOP* 31 [1977] 305–25) suggested that Eudokia appears with Romanos IV on a controversial ivory in Paris, against the traditional view that the depiction is of Romanos II and his empress.

**EUDOKIMOS** (Εὐδόκιμος), saint; born Cappadocia 807, died Charsianon? 840. His father Basil was reportedly influential at court, and Eudokimos began his career in Constantinople. Theophilos supposedly appointed him stratopedarches of Cappadocia (although Eudokimos’s low title of kandidatos is incompatible with the high office he allegedly received). He fought victoriously and when he died was buried in the ornate uniform of a general.

His Life is preserved in two versions, one by Symeon Metaphrastes; Ch. Loparev (*infra* [1908]) considered the other to be the original, if not composed by Ignatios the Deacon then at least created in his circle. Actually, however, it was written by Constantine Akropolites (H. Delehaye, *AB* 51 [1933] 270f), who suppressed some details of the Metaphrastic version, itself not rich in information. The first part of the Life is a biography of the saint: although he was a soldier and not a hermit, he displays the whole range of traditional virtues, such as celibacy and concern for the poor. The second section describes miracles performed both at Eudokimos’s tomb and during the translation of his relics to Constantinople; the most vivid is the story of the theft of the corpse from Charsianon, at the request of Eudokimos’s mother, by the monk Joseph (arbitrarily identified by Loparev with Joseph the Hymnographer): the corpse supposedly lifted his arms and legs in order to help Joseph remove his garment. The hagiographer does not mention Iconoclasm; Sevcenko (“Hagiography” 127) calls Eudokimos “a good candidate for an Iconoclast saint.”

**Representation in Art.** Eudokimos, whose portraits first appear in 11th-C. MSS of the menologion of Symeon Metaphrastes, is almost invariably depicted as a young saint in full military costume. In wall painting, despite his natural death, he is paired with true martyr-warriors such as George and Demetrios.

**Eudoxia** (Εὐδοξία), wife of Arkadios and empress (from 9 Jan. 400); died Constantinople 6 Oct. 404. Daughter of a Roman mother and Bauto, a Frankish general of Valentinian II. Eudoxia possessed outstanding beauty (Zosim. 5.3.2). She grew up in Constantinople and married Arkadios on 27 Apr. 395. She bore the emperor five children, including Pulcheria and Theodosios II.

Although pregnant during much of her short reign, Eudoxia was involved in politics and managed to secure the fall of the powerful eunuch Eutropios. Her outspokenness and alleged vanity earned the opposition of John Chrysostom, who reportedly compared her to Jezebel and Salome; the conflict between the two threatened the normal harmony between the people of Constantinople and the Theodosian house. Upon Eudoxia’s urging, Chrysostom was exiled in 403, but popular response forced the court to recall the bishop. He was again exiled in 404. Later in the year Eudoxia suffered a fatal miscarriage, interpreted as punishment for her opposition to the popular bishop.

**Euergetis Monastery,** a foundation of the mid-11th C., located in the European suburbs of Constantinople, approximately 3 km outside the land walls. It was dedicated to the Theotokos Euergetis (Ἐὐεργετής). The original founder, Paul, retired to his country estate in 1049 and built a few simple cells for the handful of monks who joined him in his monastic retreat. After Paul’s death in 1054, his successor as hegoumenos, Timothy, put Euergetis on a solid financial base and constructed a new church and larger katholikon. Timothy, who lived as an enkleistos, was revered as the second founder. Circa 1055 he composed two
DROSILLA AND CHARIKLES: the work contains various allusions to Byz. reality, and the portrait of Dro-
silla, the heroine, coincides verbatim with that of
the ideal bride of his epithalaimion. In the romance
Eugeneianos combines a lofty lyricism with earthy
scenes and parody. Some of his epigrams are also
D. Christides identifies Eugeneianos as the author
of an anonymous dialogue ANACHARSIS OR ANA-
nias and several letters.

EUGENEIKOS, JOHN, churchman and writer; born Constantinople after 1394, died after 1454/5.
The younger brother of Mark Eugeneikos, John
Eugeneikos (Ευγενικός) was a married deacon who
held the positions of notary and nomophylax at the
patriarchate. Like his brother a fierce opponent of
Union, he stayed only briefly at the Council of
FERRARA-FLORENCE. On his way home from Ven-
ice in 1438, he survived a shipwreck and, in re-
sponse to this narrow escape, wrote a work titled
Oration of Thanksgiving (ed. Lampros, infra, 271–
314). Because of his opposition to the council, he
was exiled to the Morea, where he joined the group of literati at Mistra (1439–47). He also
traveled to Trebizond, his father’s birthplace, and
to Mesembria (1454/5). He ended his life admin-
istering the metropolis of Lacedaemonia (Sparta).

Eugeneikos was a prolific author who wrote in a
variety of genres; many of his works are still
unpublished. His polemical writings include an
Antirrhetikos attacking the Decree of Union of 1439.
He composed several paronymiakes and monodies,
ekphrases of icons, a threnos on the fall of Constan-
tinople (which was soon thereafter translated into
Slavic), kanones and hymns, prayers, and sermons.
Recently, A. Sideras ascribed to Eugeneikos an
anonymous monody (Byzantion 54 [1984] 300–
14). His encomiastic ekphrasis of Trebizond (ed.
O. Lampside, ArchPont 20 [1955] 25–36) differs

EUGENEIANOS, NIKETAS, 12th-C. writer. A
disciple or friend of PRODROMOS, Eugeneianos
(Ευγενιανός) led a hard life (according to his
own very rhetorical statements), until he was res-
cued by the sebastos and megas dronangarios Stephen
Kommenos, whose teacher Eugeneianos claimed
to have been. In 1156/7 he wrote a monody on
Stephen; he probably also dedicated an epithala-
aimion to Stephen’s wedding in the early 1158.
Eugeneianos dedicated to Prodomos another
monody in prose, as well as two in verse (C.
37 [1987] 186–209) suggests that Eugeneianos
was the author of an anonymous monody that is
preserved in Heidelbergenesis 18 and has signifi-
cant similarities with a monody of Prodomos
(whom Eugeneianos could imitate). An example
of such imitation is also Eugeneianos’s romance

TYPIKA, a foundation typikon containing a rule for
daily life and a very lengthy liturgical typikon, an
important example of STODOITE TYPIKA.

The foundation typikon, which served as a model
for the typika of the Kosmoseuteia (see BERA),
MAMAS, HELIOUT BOMON, Kecharitomene, and
HILANDAR monasteries, is our primary source of
information about the Euergetes monastery. The
monastic complex included a hospice to provide
lodging and medical care for travelers and the
sick; distributions of food were made daily to the
poor. Euergetes also had a metochion within the
walls of Constantinople. During the Latin occu-
pation of Constantinople (1204–61) the monas-
tery was given as a dependency to MONTECASSINO,
but apparently the Greek monks were not ex-
pelled. St. SAVA OF SERBIA visited the monastery
several times between 1196 and 1235 and was a
major benefactor of the institution. Euergetis
disappears from the sources after the 13th C. It
should be distinguished from the Constantinople
monastery of Christ Euergetes, which possessed
an icon bearing this epithet and was a foundation
of the 10th or 11th C. (A. Cutler, DOP 37 [1983]
42).

SOURCES. Liturgical typikon—ed. Dmitrievskij,
Opisanie 1:256–514. Foundation typikon—ed. P. Gautier,
radically from the *ekphrasis* of Bessarion: while the latter concentrated on the trade of this "em-
porion of the world" and on the architecture of the palace, Eugenikos praised the rustic beauty of
meadows and forests around the city and their gorgeous vegetation. Among his hagiographical
writings is a eulogy of James the Persian (ed. C. Hannick, *AB* 90 [1972] 261–87), of whom Euge-
nikos possessed a relic, and an *akolouthia* for his brother Mark (ed. L. Petit, *SBN* 2 [1927] 195–
235). Of his letters 36 survive, many of them attacking Latin doctrine. In his introduction to the
*Aithiopika* of Heliodoros (H. Gärtner, *BZ* 64 [1971] 322–25), Eugenikos suggested a "mythical"

—A.M.T., A.K.

**EUGENIKOS, MANUEL,** wall-painter, decorated the monastery church of Calendžiča (Georgia) at the behest of Dadian Varneq I, prince of Mingrelia (1384–96). His large body of surviving work has been related to frescoes in the church of Theodore Stratemates at Novgorod and to an icon at Mt. Sinai. Although his name is Trapazente-
"itione, Greek and Georgian inscriptions at Calen-
džiča report that Eugenikos was brought from Constantinople.

—A.C.

Son of the deacon George Eugenikos, who was *sakellios* of Hagia Sophia, Eugenikos received the baptismal name of Manuel. After his father’s death, Eugenikos studied in Constantinople with John Chortasmenos and George Plethon. In 1420 he became a monk on Antigone (Princes’ Islands); two years later he returned to the capital, where he entered the Mangana monastery and was eventually ordained a priest. Shortly before the Council of Ferrara-Florence, Eugenikos was made metropolitan of Ephesus. He attended the council as one of the leading Byz. theologians and presented the extreme Greek position concerning the *filioque* (M. A. Orphanos in *Philoxenia* [Mün-
sichr 1980] 223–32) and purgatory (C. Tsirpanlis, *BS* 37 [1976] 194–200). He was the only Greek delegate who refused to sign the decree of Union (1439). After his return to Ephesus via Constan-
tinople, he was imprisoned for two years on Lemnos (1440–42). Eugenikos has been both criticized as a "narrow-minded obstacle to Union" (Gill) and praised as an uncompromising and consistent supporter of the conciliar Christian tradition (Tsirpanlis). He was canonized by the Orthodox church in 1456; his brother John Eugenikos wrote his vita (ed. S. Petridès, *ROC* 15 [1910] 97–107). An *akolouthia* also survives (ed. L. Petit, *SBN* 2 [1927] 193–235).

In his numerous theological works Eugenikos defends Palamism (e.g., 72 *Kephalaia*) and the anti-Latin position on *filioque* and purgatory. A few of his letters are preserved as well as hagiographical compositions and hymns (*kanones* in honor of the Virgin). He also wrote *ekphraseis* on paintings that indicate his appreciation of art (D. Pallas, *Byzantion* 52 [1982] 357–74) and solutions to philosophical questions (*aporiai*) such as the existence of a soul in animals, evil, and free will. Many of his works remain unpublished.

—A.M.T.

**EUGENIOS** (Eiγένιος), martyr and saint, allegedly a victim of Diocletian’s persecutions; feastday 20 or 21 Jan. In Symeon Metaphrastes (PG 116:497–506) he appears as an associate of the martyr Eustratios (see Five Martyrs of Sèbas-
telia), but in the *Synaxarion* of Constantinople Eugenios is depicted as the principal hero of another group of martyrs, consisting of Valerianus, Candidius, and Aquilas (*Synax.CP* 406–07). In both
cases, the persecutor is Lysias, dux of "Satalea" (Satalea is the name of several towns in Asia Minor and Armenia). Whatever the origin of the legend, by the 11th C. Eugenios became the patron of Trebizond: one of the major churches in Trebizond was dedicated to him, and under the Grand Komnenoi his image was common on the local coins, the so-called aspro komneneata (M. Kuršanskis, ArchPont 35 [1978] 27). His martyrdom is illustrated in the Menologion of Basil II.

John (VIII) Xiphilinos, the future patriarch and a native of Trebizond, compiled the passio of Eugenios and wrote about his miracles (M. van Esbroeck, OrChrP 47 [1981] 392). The latter provide information on climate, everyday life, and on an appearance of the Rus' in Trebizond in the days of "Constantine the Younger." The martyrdom of Eugenios and his posthumous miracles were also the subject of several later works, some anonymous and some by known authors (Joseph, metropolitan of Trebizond [1364–67], John Lazaropoulos, Constantine Loukites) who were active at the court of the Grand Komnenoi in the 14th C. The Miracles by John Lazaropoulos is rich in factual historical material, beginning with Basil I and including both Trebizond and the neighboring lands (Iberia, Chaldea, and even Cherson).

**EUGENIOS OF PALERMO**, high-ranking official at the Sicilian court; admiral (from 1190), translator, and poet; born Palermo ca.1130, died ca.1203. Henry VI imprisoned him in 1195–96; after his release he was appointed master chamberlain of Apulia and Terra di Lavora (1198–1202). Jamison's identification of Eugenios with Hugo Falcandus Siculus has not proved valid. Eugenios belonged to the group of Sicilian intellectuals versed in Arab, Latin, and Greek culture. He translated Ptolemy's works from Arabic into Latin and Sibylline oracles from Greek into Latin; he also wrote Greek poems. He focused on human behavior, treating it on the basis of classical and patristic tradition with a slight tint of personal experience. Eugenios published and perhaps ed-

ited a version of Stephanites and Ichneutae by Symeon Seth, and in his poems he developed the theme of the instability of human life, typical of Byz. didactic literature of the 11th–12th C. He praised the ideal of ascetic life; in another poem he presented the ideal image (eikon) of the ruler—somewhat vaguely, but emphasizing military prowess (v.21.60–66). Many other poems are dedicated to such topics as greediness, garrulity, caluny, and virginity.

ED. Versus iambici, ed. M. Gigante (Palermo 1964), with Ital. tr.

**EUGENIUS** (22 Aug. 392) died 6 Sept. 394. A former teacher of Latin grammar and rhetoric, Eugenius was magister scrinii at the court of Valentinian II when the latter was murdered in 392. When Arbocast, the Frankish magister militum, failed to hold power in his own name, he appointed Eugenius as Western emperor. Eugenius was nominally a Christian but, as a moderate in the religious controversies, he was acceptable to the pagans of Italy, who chafed under the autocratic religious policies of Theodosios I. When Eugenius could not secure the recognition of Theodosios, he threw himself fully into the arms of the pagan party. Under the direction of the praetorian prefect Nicomachus Flavianus paganism revived in Italy. Theodosios elevated his son Honorius to imperial rank in 393 and marched against Eugenius the next year. At the battle of the Frigidus, Eugenius was taken prisoner and executed.

**EUGENIUS III** (Bernardo Pignatelli of Pisa), pope (from 15 Feb. 1145); died Tivoli 8 July 1153. Eugenius spent almost all of his papacy in a struggle against the Romans, who expelled him from the city even before his consecration. A Cistercian and follower of Bernard of Clairvaux, Eugenius sanctioned the Second Crusade (1 Dec. 1145) and
tried to achieve union with the Greeks (Roger II of Sicily, in contrast, tried to use the Crusaders for his own purposes against Byz.). After the failure of the Second Crusade, Eugenius was forced to seek alliance with Roger; he took advantage of Roger’s military support to return to Rome in Nov. 1149 but did not break with Conrad III and his ally Manuel I Komnenos.

EUGENIUS IV (Gabriele Condulmaro), pope (from 3 Mar. 1431); born Venice ca. 1383; died Rome 23 Feb. 1447. After ascending the papal throne Eugenius had to deal with the resistance of many Italian cities, including Rome (from which he fled in 1434, not returning until 1443), as well as church prelates who assembled a council in Basel. He carried on negotiations with Emp. John VIII Palaiologos and transferred the council from Basel to Ferrara, where he brought the emperor, Patr. Joseph II, and their retinue of 700 men. At the Council of Ferrara-Florence (1438–39) a decree of union was signed, but it was short-lived. Eugenius tried to attract to the union other separated Eastern churches—namely the Armenians and the Copts. After the council the pope promised to send a fleet of ten ships to John and to rouse Germany and Hungary to action against the Turks. The fleet was delayed but the papal nuncio Garatoni arrived in Constantinople to outfit ships and crossbowmen. A papal letter to Garatoni of 25 Aug. 1440, however, reveals the growing tensions between the two churches and the inclination of the pope to reduce the patriarchate of Constantinople to the level of an ordinary local church. Eugenius supported the expedition of Hunyadi that ended in 1444 in a defeat at Varna—a disaster that demonstrated the futility of Byz. expectations of a Western crusade.

EUGENIUS VULGARIUS, southern Italian cleric whose surname may indicate Bulgarian background; fl. Naples; ca. 1400. Hoping for material reward, Eugenius dedicated to Leo VI four flattering Latin poems—including one figure poem in the shape of a pyramid, complete with a prose explanation of its symbolism. He also composed verses for Pope Sergius III (964–11) and local potentates and wrote defenses of Pope Formosus (ed. E. Dümler, Auxilius und Vulgarius [Leipzig 1866] 117–39). His metrical martyrology reflects Byz. tradition on Barnabas the Apostle (ed. P. Meyvaert. AB 84 [1966] 360–67).

EUGIPPIUS, abbot of the monastery of Lucullan and biographer; died Castellum Lucullanum, near Naples, after 533. Isidore of Seville mentions the spiritual rule which Eugippus wrote for his monastery. He corresponded with a number of churchmen, including Dionysius Exiguus. Eugippus was also known to Cassiodorus, who (Institutiones 23) deprecates his neglect of secular studies but praises his biblical scholarship, recommending his Selections from the Works of St. Augustine. Eugippus is best known for his Life of St. Severinus, the apostle of Noricum, whose disciple he was and whose remains were deposited at his monastery. This biography was written in some haste ca. 511 to get ahead of an anonymous rival whose study of the monk Bassus provoked fears that his treatment of Severinus would be too literary for ordinary readers. It was sent for approval (duly received) to the Roman deacon Pachianus as a Memorandum (Commemoratorium), a title that disingenuously plays down its own considerable rhetoric. Although giving Severinus his meed of miracles and other supernatural skills, the Life emphasizes secular events, set down in accurate chronological sequence and providing overall a unique eyewitness picture of the last decades of the western Roman province of Noricum, esp. the social life of river towns between Vienna and Passau.

EUKTERION (εὐκτήριον), or eukterios oikos (εὐκτήριος οἶκος), lit. “a house of prayer” and therefore, in theory, any church building. Generally, however, the term was used of private churches—oratories and chapels—distinct from, or appended to, the main places of public worship. Secular and ecclesiastical authorities were anxious to ensure that privately founded eukteria did not subvert or overburden the church’s episcopal structure. Justinian I ordered that construction was not to begin until the local bishop had consecrated the site, approved the priest, and received from the would-be founder (κτητόρ) sufficient funds for staffing and maintenance; donors who could not afford this were encouraged to contribute to the restoration of unused or ruined churches (novs. 57.1–2; 67; 123.18; 131.7). He also prohibited the celebration of the liturgy in the oratories of private houses (novs. 131.9; 58), a prohibition that the Council in Trullo repeated and extended to baptism (canons 31 and 59). Insofar as the prohibition was designed to prevent the dissemination of heresy, it had lost much of its urgency by the end of the 9th C., when Leo VI repealed it as being unnecessarily restrictive now that Orthodoxy was secure “and by divine grace eukteriai oikoi have been erected to God in almost every house, not only of the illustrious, but also of the common people” (nov. 4; see also nov. 15).

This policy ignored, however, the now more serious threat that eukteria posed to the sacramental raison d’être of the public churches and that Patriarch Alexios Stoudites later (1028) attempted to remove by forbidding the use of eukteria for any service apart from the liturgy (RegPatr, fasc. 2, no. 835). According to Balsamon, an eukterios oikos was a church that lacked consecration through chrisma, deposition of martyr relics, and enthronement of the officiating prelate (Rhalles-Potles, Syntagma 4:4581, 4796–9).

131. Beck, Kirche 83–86. —P.M.

EULALIOS (Εὐλάλιος), painter who seems to have flourished as a mosaicist and icon-painter under Manuel I; he is alluded to in several texts of the 12th–14th C. Nicholas Mesarites attributes to him the images of the Pantokrator and the Mys- rophoroi in the Church of the Holy Apostles, Constantinople, and suggests that Eulalios in- serted his own image into the latter scene. This statement was questioned by Demus (infra) but is still consistent with the ethos of 12th-C. monumental painting.

EULOGIA (εὐλογία, “blessing” or “benediction”), the term applied to consecrated gifts as well as to the bread offered optionally at the eucharist or blessed separately and distributed in church or sent as a gift. The term was extended to the “blessing” at departure and that received by a pilgrim through contact with a holy place, person, or object. It could be received either directly and immaterially, for example, through kissing the wood of the True Cross, or conveyed indirectly through a substance of neutral origin (e.g., oil, water, earth) that itself had been blessed by such contact. In the latter case, the material itself, as in Symeon tokens (see Pilgrim Tokens) or its container (e.g., Menas flasks, pilgrimage ampulae) might bear a representation of the sanctifying agent or event. The richest account of Byz. pilgrimage  eulogiai is that recorded ca. 570 by the Placenza Pilgrim, who, for example, reclined on a couch in the Garden of Gethsemane “to gain a blessing” (ch. 17). At the Holy Sepulchre he describes the blessing of little flasks of oil through contact with the True Cross and the blessing of earth brought into the tomb. Pilgrim eulogiai were valued for their amuletic and medicinal powers; Cyril of Skythopolis (ed. E. Schwartz, 110.10–11, 164.14–18, 218.6–7, 228.13–14) for example, writes that St. Sabas (among others) used the oil of the True Cross to exorcise evil spirits; a flask at Bobbio (Giovanni, Ampoules, Bobbio no. 1) is inscribed “Oil of the Wood of Life, that guides us by land and sea.”

EUNAPIOS OF SARDIS, pagan writer and historian; born Sardis 345/6 (PLRE 1:296) or 349 (R. Goullet, JHS 100 [1980] 67), died after 414. Eunapios (Εὐναπίος) lived mainly in Sardis, apart
from five student years at Athens when his parents recalled him, thus aborting a visit to Egypt. His combination of sophistry and medicine (typical for the age) helped him achieve a friendship with ORIBASIOS, famous doctor and confidant of Julian. So did his rancid PAGANISM, the central emotional and intellectual impulse of his writings, albeit he did admire his Christian mentors Chrysanthios and Prohaeresios. His *Lives of the Sophists*, written in or after 399 (T.M. Banchich, GRBS 25 [1984] 183–92), celebrates various Neoplatonists, iatrosophists, and rhetoricians in different degrees of fervor and coolness.

His *History*, surviving only in fragments, formally continued that of Dexippos, and encompassed in 14 books the period 270–414. Its precise structure and date of composition are endlessly debated, as is whether he used AMMIANUS MARCELLINUS as a source or vice versa. Photios (Bibl., cod. 77) knew two versions or EKDOSIS: the original being too anti-Christian for pious stomachs, Eunapios produced a toned-down “New Edition,” clumsily done with subsequent obscurities in the text. His *History* is widely biased toward paganism and Julian, ostentatiously neglectful of precise chronology, and crammed with rhetorical digressions and descriptions of individuals and events; ZOSIMOS exploited it to the point of plagiarism. Photios is relatively kind to his style; modern taste generally prefers C.G. Cobet’s label “most stinking” (*Mnemosyne* 6 [1878] 318).

**EUNOMIOS** (*Evōmios*), leader of Neo-Arians (Anomoians); born ca. 335 in Cappadocia (in Ol- tseris or more probably Dakora), died Dakora ca. 394. Son of a cultured peasant, Eunomios learned the skill of TACHYGRAPHY and served as a teacher in Constantinople. In Antioch he met AETIOS, whose secretary and disciple he became and whose fate he shared, being exiled by Constantius II, recalled by Julian who gave him properties in Chalcedon, and subsequently becoming involved in the revolt of Prokopiou. In 360 (according to Philostorgios) or ca. 366 (according to Sokrates), he was appointed bishop of Kyzikos. After the death of Aetios, Eunomios headed the radical group of Arians and was ordered by Theodosios I to produce their exposition of faith; Theodosios, however, rejected their Anomoian views and banished Eunomios to the lower Danube and then to Cappadocia, where he died.

Like Aetios, Eunomios taught that God the Creator was ingenerate, whereas the Son was created and possessed a different essence and different energy; the Father, the Son, and the Spirit formed a hierarchy of nonconsubstantial beings. Naturally, Eunomios avoided the concept of the Trinity. The Logos-Christ was a created deity and never assumed the human nature—a view that Eunomios shared with the Theopaschites. He introduced a particular form of baptism—a single immersion in the name of the death of Christ (and not in the name of the Trinity). Eunomios professed the power of reason, and contemporaries testify to the clarity of his argumentation. He rejected the idea that God was unknowable: Sokrates ascribes to him the assertion that God does not know more of his essence than we do. Eunomios’s works are lost but some of them (the *Apology, the Apology of Apology, and the Exposition of Faith*) are known in fragments from refutations produced by his opponents (Basil the Great, Gregory of Nyssa).

---

**EUNUCHS** (sing. ἐκτομιός) played an important role in the church, the army, and the civil administration. Several patriarchs were eunuchs: GERMANOS I, METHODIOS, IGNATIOS, and others, the last of them being EUSTATIOS Garidas (1081–84); among generals NARSES was especially famous; among civil officials were EUTROPIOS, SAMONAS, JOSPH BRINGAS, BASIL LERAPENOS, and JOHN THE ORPHANOTROPHOS. High palace dignities such as PRAEFECTUS SACRI CUBICULI and PARAKOIMOMENOS were until the 11th C. held mainly by eunuchs. Eunuchs also served in the houses of aris-
tocrats. Legislation prohibited castration, although Leo VI (nov.60) mitigated the punishment imposed for performing this surgery. Despite this legislation the operation was often performed on both children and adults, including members of the aristocracy. Some eunuchs were imported from the Caucasus, the caliphate, and Slavic countries. Rare at the time of Constantine I, eunuchs acquired importance during the reign of Constantius II in conjunction with the growth of the bureaucratic system; Julian's attempt to restrict the role of eunuchs failed. They retained important positions through the 11th C., but were pushed out of the highest posts under the Komnenian dynasty, as aristocratic ideology with its veneration of manliness became dominant (A. Kazhdan, ADSV 10 [1973] 184–97); they were rare in the 14th–15th C. Because of their fear of homosexuality, monastic leaders tried to exclude the “beardless” from certain monasteries (e.g., on Mt. Athos).

It is usually thought that eunuchs, who had no children of their own nor were allowed to ascend the throne, preserved greater loyalty to their masters. G. Walter (La vie quotidienne à Byzance au siècle des Comnènes [Paris 1966] 95) questioned this thesis, arguing that in reality eunuchs participated in diverse plots and schemes against the emperors. Theophylaktos of Ohrid (Discours, Traités, Poésies, ed. P. Gautier [Thessalonike 1980] 287–331) wrote a defense of the status of eunuchs, demonstrating that they had always played an important role in the palace, in the church, and esp. in the creation of ecclesiastical music. Theophylaktos provided his reader with a list of eunuch-martyrs and named a worthy contemporary, a certain Symeon, who organized a synoikia (community) of eunuch-monks. The monastery of St. Lazaros in Constantinople was reserved for eunuchs by Leo VI (Janin, Églises CP 299).

EUPHARIA, Church of Saint, built in the 4th C. at the place of her burial, about 1.5 km from Chalcidon. It consisted of a basilica with an attached circular martyrion in which the body of Euphemia was kept in a silver sarcophagus. Once a year the body reportedly exuded an effluvium of blood that was distributed in glass ampullae. A painted cycle of Euphemia's martyrdom (in a "roofed passage") is described by Asterios of Amaseia. The Council of Chalcidon was held in the church in 451. The Persian invasions of the early 7th C. caused its destruction and the transfer to Constantinople of the "uncorrupted body," which was housed in the converted great hall of the palace of Antiochos next to the Hippodrome. During the Iconoclastic period the new church was secularized and the relics were thrown in the sea by Constantine V; they were miraculously saved and returned in 796 to the refurbished church, which survived until the end of the Byz. Empire. Excavations in 1942 and 1950–52 revealed part of the palace of Antiochos, including the hexagonal building that housed the church, opening on to a semicircular portico. A late 13th-C. cycle of wall paintings illustrates the saint's martyrdom.

EUPHARIA, Church of Saint, died 16 Sept. 303, according to the Fasti Consulares Vindobonenses (MGH AuctAnt. 9:290). Egeria mentions the cult of Euphemia (Euphemia) in Chaldon, and Asterios of Amaseia describes her annual feast and the pictorial representation of her trial and death by fire. The Church of St. Euphemia housed the Council of Chaldon in 451 (see Euphemia, Church of Saint). Halkin (infra, xvii) dates the earliest passio (preserved in 11th- and 12th-C. MSS) soon after this council. It provides little information, but the details of the trial and execution differ from Asterios's description; for example, Euphemia was supposedly thrown to wild beasts and died in the arena. The Synaxarion of Constantinople (Synax.CP p.811–19) assigns to Euphemia the miracle of determining the decision of the Council of 451: two tomoi, one orthodox and another heterodox (Monophysite), were placed in Euphemia's coffin; after several days the council members reopened the coffin and found the heretical creed under Euphemia's feet and the orthodox one in her hands. Euphemia's cult was popular in Byz. Constantine of Tios (ca.800) related that Leo III ordered her relics thrown into the sea, but two pious brothers saved
them and brought them to Lemnos. In the 15th
C. Makarios Makres reworked this legend. Latin
versions also survive (H. Boese, *AB* 97 [1979]
360–62).

**Representation in Art.** Portraits of the saint
show a virgin martyr clad in a *maphorion* and long
tunic. In the *Theodore Psalter* (fol.163v) and
in some MSS of Symeon Metaphrastes she is shown
flanked by beasts from the arena (in accordance
with the text), while in others she stands nude in
a pyre (as in the description by Asterios) or is
beheaded. A fresco cycle of 14 scenes illustrating
her martyrdom adorns her church in Constanti-
nopole (R. Naumann, H. Belting, *Die Euphemia-
Kirche am Hippodrom zu Istanbul und ihre Fresken*

**Source:** F. Halkin, *Euphémie de Chalcédoine* (Brussels 1965).

sanochism: Leo III, Constantine V and the Relics," *Byz* 8

**EUPHRADES (Ἐὐφρατέας),** legendary architect of
Constantinople during the reign of Constantine
I. He is described as a eunuch, *parakoitomononos,* and
eponym of a church or *gerokomeion* in the
district of Leomakellan in Constantinople. He
is mentioned in the *Patria,* in pseudo-Symeon Ma-
gistros, and in some legends about Constantine.
According to one of the legends, Euphrates built
the city ramparts, developed the sewage system,
excavated cisterns, and erected Hagia Sophia.
Another legend relates that he came to Constantin-
one on the eve of the battle at the Milvian Bridge
and advised the emperor to abandon polytheism
and trust in the true God and his son Christ. Eupha-
ras also reportedly invited inhabitants of various
cities to move to Constantinople and furnished
them with *annonae* and dwellings. He supposedly
provided "the archontes of Rome" with new houses,
fountains, and gardens identical to those they had
possessed in Rome. Euphrates is not mentioned
in any source before the 9th C.

**EUPHRAATES (Ἐὐφράτης),** longest (2,760 km) river
of western Asia. The Euphrates was navigable
from north of Edessa; it was a principal waterway
for transportation, but vulnerable politically and
militarily. Heavily fortified since Roman times, the
river provided the principal means for Persian
expeditions against Byz. Much defensive con-
struction took place in the reigns of Anastasios I
and Justinian I. Important cities along the Eu-
phrates included Melitene, Samosata, Hier-
apolis, Zenobia, and Kirkesion. Stretches of the
Euphrates were part of the Sasanian-Byz. border.
The river continued to be a principal invasion
route for Muslims against Byz. in the 7th–9th C.
Control of its upper reaches, including such
strongpoints as Kamacha, occasioned much Byz.-
Muslim warfare. The Euphrates floods from No-

tember to the end of March, and, esp. in April
and May, carries heavy silt to the Mesopotamian
plain. Its water allowed the agriculture that flour-
ished along its banks, in contrast to the often
parished lands beyond the reach of irrigation.

12. G. Frézoulès in *Le Moyen-Euphrate: Zone de contacts et
EUPHROSyne DOUKAINA KAMATeRA, empress (1195–1209); fl. ca. 1169–1210. She married the future Alexios III Angelos ca. 1169 and bore him three daughters: Irene (born ca. 1170), Anna (born ca. 1171 or 1173), and Eudokia (born ca. 1172 or 1174). Stronger-willed and more intelligent than Alexios, she had great influence over him; she occupied the palace when word of his coup reached Constantinople. Her support for Constantine Mesopotamites created opposition from her son-in-law Andronikos Kontostephanoς and her brother Basil Kamateros, who informed Alexios of her affair with a certain Vatatzes. The latter was executed and Euphrosyne was shut in a convent for six months (1196–97). Upon her return she regained dominance over her husband, although she could not prevent Mesopotamites’ fall (1197). Abandoned by Alexios in Constantinople when he fled, she was arrested, but Alexios V Doukas took Euphrosyne and Eudokia with him when he left Constantinople. After Alexios V and Alexios III met at Mosynopolis, Euphrosyne joined her husband in his wanderings. Carried off to Montferrat with him, she was ransomed by Michael I Komnenos Doukas of Epiros and passed the rest of her life near Arta.

EUPRiPIDEs (Εὐπρίπιδης), Greek tragic poet; born Salamin 480 b.c., died Macedonia 406. Following the tradition of late antiquity, Byz. scholars favored the ten so-called select plays of Euripides. Knowledge of the nine other tragedies was rare but evident in Psellos, John Tzetzes, and Eu-stathios of Thessalonike (cf. Wilson, infra 177, 204). The earliest extant MS of Euripides (Jerusalem, Gr. Patr., Taphou 36) dates from the 10th or 11th C., and his life is included in the Souda. In the early 14th C. the triad of Hecuba, Orestes, and Phoenician Women, which had become standard in the school syllabus, received philological study in the form of scholia and/or recensions by Maximos Planoudes, Manuel Moschopoulos, Thomas Magistros, and Demetrios Triklinos. Of particular significance is the latter’s edition of all 19 plays.

The only attempt at literary criticism of Euripides—Psellos’s comparison of Euripides and George of Pisidia (ed. A. Colonna, SBN 7 [1953] 16–21)—survives in a damaged MS that, because of its poor condition, prevents any conclusions as to Psellos’s verdict. Clearly, however, he admires Euripides for his ability to arouse pity and for his versatility of style. Judging from the number of surviving MSS, Euripides was the most popular of the great tragedians. He influenced the language of the Verses on Adam by Ignatios the Deacon, the Katomyomachia by Theodorus Prodromos, and esp. Christos Paschon.

While scenes from Euripides are represented in the floor mosaics of Antioch, no illuminated Byz. MSS of the plays survive. Nevertheless, K. Weitzmann (Hesperia 18 [1949] 159–210) hypothesized their existence and impact on the Venice Kynegitika (see Oppian). In his view several caskets and boxes depict episodes from the tragedies, notably the sacrifice of Iphigenia on the Volcri Casket and Hippolytos crowned on other ivories. Other scholars, however, connect the Volcri casket with Nonnos of Panopolis.

EUROPA, in Greek mythology daughter of Pho-nix or of Agenor (king of Tyre), who was ab ducted by Zeus disguised as a handsome bull. This episode was known to Byz. authors; for example, Niketas Choniates (Nik.Chon. 142.16–22) compares her with Theodora Komnene, who was se duced by the future emperor Andronikos I. A scholiast to Tzetzes (Hist. 7:369) transfers Europa from Phoenicia to Egypt and makes her the daughter of Nilus. The church fathers rational ized the myth of Europa in the same manner as the myth of Danae, but did not attempt to alle gorize it in a Christian sense, prevented probably by the connotations of bestiality. The rape of Europa is represented twice on the Volcri Casket.
in London (Goldschmidt-Weitzmann, *Eisenbem-
skulpti*. 1, no. 23) and on other ivories.

- A.K., A.C.

**EUROPE** (Εὐρώπη). The Byz. retained the an-
cient concept of three continents—Europe, Libya (Africa), and Asia. Since only narrow straits di-
vided Europe from Libya, Theophranes (Theophr.
95.1–2, 426.3–4) considered Spain “the first
country of Europe from the West Ocean.” The
border between Europe and Asia was more dif-
cult to define. The Bosporos-Hellespont was a
natural dividing line; to the north, the Tanais (Don) River was considered a border—Laonikos
Chalkokondyles (Chalk. 1:123,6–8) assumed that
“the land beyond the Tanais” was larger and
wider than Europe. Prokopios (Wars 8:6.13–15),
however, rejected such a view and—referring to
Aeschylus—established the borderline at Colchid-
dian Phasis. Eustathios of Thessalonike, in
his commentary on Dionysios Periegetes (GGM
2:222.5–12, 264.44–45), acknowledged the exis-
tence of ishmuses that formed buffers between
the continents—Arabia between Libya and Asia,
and the Caucasus, a “large and broad ishmus
between the Caspian Sea and the Euxineos (Black
Sea).” The semilegendarily land of Thoulouse was
viewed as the farthest part of northern Europe.

Europe was considered a geographic unity: ac-
gording to Eustathios (2:264.44–45), it was the
most varied in form among the continents, sur-
passing Asia and Libya in wealth, its production
of fruit, and the virtue of its population, but had
fewer animals. The idea of Europe as a political,
cultural, and emotional concept was not de-
veloped in Byz., even though it emerged in the West in the 13th and 14th C. at the expense of
the concept of Christendom: Byz. was left outside
Europe, which contributed to the relative indif-
ference of the West to the fall of Constantinople.

The name *Europe* was also applied by Greek
authors to a part of Thrace, as both an adminis-
trative and ecclesiastical division.

**EUROPOS** (Εὐρωπός, Ar. Jarābūlus, Ceraulus on
the Turkish-Syrian border), city of Ephrētēnsis
built on the site of ancient Carchemish at a stra-
tegic crossing of the Euphrates River. Its walls
were built by Keler, *magister militum* of Anastasios
1 (JoshStyl, ch.1) and again by Justinian I (Pro-
kopios, *Buildings* 2.9.10). In 542 Europos was made
the military headquarters of Belisarios (Proko-
pios, *Wars* 2.20.24). Circa 525 Monophysite
monks, expelled under Justin I from Seleukia
Pieria, established the monastery of Qenneshre
(“eagle’s nest”) on a height opposite Europos.
After the Arab conquest (639) it became famous
for the preservation of Greek studies until 815;
when the monastery was burned by local people;
it was restored by Dionysios of Tell-Mahre (died
845).

**EURYTANEIA**, modern province in central
Greece. The ancient Eurytanes were a tribe in
Aitolia. The rugged mountainous terrain of the
region has led to its relative isolation; it contains
a number of churches and monasteries, but most
are post-Byz. (J.T.A. Koumoulides, *GORThR* 30 [1985] 61–83). One of the most important Byz.
monuments was the large 9th-C. domed church at
Episkopi, 40 km west of Karpenision, dedicated
to the Dormition (P.L. Vokotopoulos, *He ekkle-
siastike architekonike eis ten dytiken sterean Hellada
It received three distinct programs of wall painting;
the first contemporary with its construction, the
second in the late 10th or early 11th C., and the
third in the first half of the 13th C. Before the
church was submerged beneath the modern res-
ervoir of Kremasta, the frescoes from all three
stages were removed to the Byzantine Museum in
Athens (M. Chatzidakis in *Holy Image*, nos. 2–6).

oloakarnania* (Athens 1985).

- A.C.

**EUSEBIOS** (Εὐσέβιος), personal name (meaning
“pious”). The name first appeared in the 4th C.
and immediately spread widely in the Christian
and the pagan milieu: we know several pupils of
Libanius who are called Eusebios as well as many
officials whose religious beliefs cannot be deter-
EUSEBIOS OF CAESAREA, churchman and scholar; born ca.260, died 339 or 340; according to a Syriac list of saints he was buried on 30 May. He was educated by Pamphilos, a priest in Caesarea, who developed Origen's traditions and enlarged Origen's library; his high esteem for Pamphilos led Eusebius to accept the surname “of Pamphilos.” Pamphilos was arrested in 307 during the anti-Christian persecutions, but he kept working in prison with Eusebius's assistance; he was beheaded in 309. After the execution of Pamphilos and some of his students, Eusebius fled to Tyre and then to the Thebaid.

In 313, however, as soon as the edict of tolerance was issued by Galerius, he was elected bishop of Caesarea. He became Constantine I the Great's favorite and a historiographer and participated in many theological discussions of the period. He perceived the threat represented by Monarchianism and was tolerant, even supportive, of the Arians; allied with Eusebius of Nikomedia he actively contributed to the deposition of the orthodox Eustathios of Antioch in 330 and Athanasios of Alexandria in 335. He also participated in the Council of Constantinople in 336 that attacked the views of Markellos of Ankyra.

As a scholar Eusebius was an outstanding systematic who assembled copious data. His works are devoted primarily to the problems of apologetics and church history. His major apologetic treatises are the voluminous Preparation and Demonstration of the Gospels, both dedicated to the Arian bishop of Syrian Laodikeia, Theodotos. In the Preparation he endeavors to show that “the philosophy and religion of the Hebrews” is more ancient and richer in content than Greco-Roman paganism and exercises a more powerful influence on human life. In the Demonstration, on the other hand, he asserts that Judaism is limited and ephemeral, only a fragile shell, whereas Christianity forms a permanent kernel.

The most important historical works of Eusebios are the Chronicle, the Church History, and the Vita Constantini. In the Chronicle, Eusebios, following in the steps of Sextus Julius Africanus but using other sources as well, gave the lists of ruling dynasties of Chaldeans, Assyrians, Hebrews, Egyptians, Greeks, and Romans, and in brief form events of biblical and nonbiblical history, with special attention (in the last section) to the growth of Christianity. Thus Eusebios emphasized the same apologetic principle that permeates his Preparation: Christianity is not a sheer novelty but a religion properly rooted in the past. Eusebios produced several revisions of the Church History that are reflected in the two families of manuscripts, as well as in the 5th-C. Syriac version: he reworked his text in connection with the drastic changes in the political situation. Nevertheless the main principles of his approach remained consistent: first of all, his ten-book History presents an enormous amount of information, citing earlier works and documents; these citations may not always be dependable, but Eusebius believes that story-telling must be factual in order to be convincing. Second, history is a field in which the Savior is actively leading mankind to a teleologically foreseen future; accordingly, those who follow the Lord's path become victorious and, vice versa, those who emerge victorious are men following in the way of the Lord. In other words,
the emperor is successful because he fulfills the plan destined by God; he is the representative of God on earth. Constantine is praised precisely because he was victorious, and Eusebius makes him more Christian than he really was. Third, only the major patterns of development are salient while certain facts deviating from or contradicting them can be omitted or transformed or replaced by myth (as Crispus's murder is omitted; Constantine's conversion to Christianity is provided with a supernatural setting; and Galerius, the author of the first edict of tolerance, is presented as a diehard persecutor of Christians)—all with the noble aim of emphasizing the teleology of human salvation.

The Byz. often criticized Eusebius. Sokrates called him "double-tongued." The Second Council of Nicæa of 787 prohibited quoting Eusebius as a witness of correct belief. Two events account for such a negative attitude: Eusebius's pro-Arian stance and his rejection of the cult of icons. Despite these "shortcomings," Eusebius obtained great authority and for the Byz. remained the major source for the early centuries of Christianity and a textbook for anti-pagan and anti-Jewish polemics.

EUSEBIUS OF EMESA, bishop of Emesa (from ca.340) and biblical exegete; born Edessa ca.300, died Antioch or Emesa 359. A native speaker of Syriac, Eusebius learned Greek at school prior to exegetical and philosophical training at Antioch and Alexandria; the latter city introduced him to the friendship and Arianism of George, bishop of Laodiceia, though he refused to succeed Athanasios of Alexandria to its see in 339. His advent at Emesa was greeted by riots against his supposedly "too scholarly" personality; intervention by George and the patriarch of Antioch secured his position. Apparently semi-Arian in views, Eusebius was praised for his rhetorical skills and prolific popular writing by Jerome, who singled out his homilies on the Gospels and pamphlets against the Jews, Gentiles, and Novatians. Theodoret of Cyræus mentions treatises against Manichaeans and Marcionites. Greek fragments of his commentaries on Genesis and Galatians show him to follow the Antiochenæ School of exegesis. About 60 homilies survive in whole or part in Armenian (H. Lehmann, Per piscatores [Ahrus 1975]), Greek, Latin, Slavic (M. Matejic in Literatura ruské i folkloristika v čas academikůa [Sofia 1951] 121-135), and Syriac. The pseudo-Eusebian Gallican sermons belong mainly to Faustus of Riez (Eusebius' "Gallanicus", Collectio homiliarum, ed. J. Leroy, F. Glocie, 3 vols. [Turnhout 1970-71]).

LIT. E. M. Buylaert, L'héritage littéraire d'Eusebe d'Emesa (Louvain 1949).

EUSEBIUS OF NIKOMEDEIA, Arian bishop of Nikomeidea (from ca.318); bishop of Constantinople (from 338/9); died ca.342, probably at Constantinople. Eusebius was a fellow pupil of Arius under Lucian of Antioch. After Arius's condemnation ca.320, Eusebius, who had just become bishop of Nikomeidea, organized an epistolary campaign in support of Arius. Although Eusebius subscribed to the decisions of the Council of Nicæa in 325, he was soon exiled to Gaul by Constantine I on charges of supporting the Melitans (see Meletic Schism). After his recall in 328, he became a leader of the extreme Arian party, who came to be known as "Eusebians." He gained the favor of Constantine I and in 337 baptized the emperor during his last illness. The triumph of the Arian party was evident when Eusebius became bishop of Constantinople in 338 or 339. His brief tenure in Constantinople was marked primarily by hostile maneuvering against Athanasios of Alexandria.

Virtually none of Eusebius's writings survive, with the exception of a few letters preserved by the ecclesiastical historians Socrates (Sokr. HE 1.14), Sozomenos (Sozom. HE 2.16), and Theodoret of Cyræus (HE 1.5).

EUSTATHIANS. See Eustathios of Antioch.

EUSTATHIOS (Εὐσταθίος), martyr executed under Hadrian and saint; feast day 20 Sept; prebaptismal name Placidas. His legend is preserved in two Greek passions, one ascribed to Symeon Metaphrastes (a Nuremberg MS presents slight variations—J.-M. Olivier, *AB* 93 [1975] 109f); in a panegyric of Niketas David Paphlagon; in a Latin translation known already in the 9th/10th c. (O. Engels, *Histh* 76 [1957] 119f); and in a Coptic version. When the legend was created is unclear. It has sometimes been viewed as a reflection of Indian motifs that reached Byz. via Syria; traces of the supposed migration have yet to be shown. In its core the legend is a Christian version of the Job story: under Trajan, the rich Roman general Placidas, “stratedates in the language of the Romans,” saw a huge stag with a cross between its antlers and heard a heavenly voice summoning him to baptism. He became Christian with his whole family, assumed a new name (Eustathios or Eustachios), suffered numerous disasters (plague, death of cattle and slaves), left home for Egypt, and was separated from his wife and two sons en route. Unlike the biblical Job but like the heroes of Greek romances (T. Hägg, *Symbolar Osloenses* 59 [1984] 61–63), Eustathios suffered only temporarily, later recovering both family and fame. A new blow struck after Trajan’s death, when Hadrian ordered Eustathios and his family burned in a bronze bull.

**Representation in Art.** Eustathios is depicted in military costume from at least the 10th c. onward. The two most frequently illustrated scenes of his legend are (1) his vision, which appears in Cappadocian and Georgian churches and in the marginal psalters (where, rather than a cross, the image of Christ in the form of an icon appears between the antlers of the stag, and Christ asks, “Why are you pursuing me?”); and (2) the martyrdom of Eustathios and his family consumed by flames inside the brazen bull. Further episodes accompany certain MSS of Metaphrastes.

EUSTATHIOS OF ANTIOCH, theologian; bishop of Berroia (Aleppo) and from 323/4 to 326 (H. Chadwick, *JThSt* 49 [1948] 27–35) or more probably to 328/9 (Hansson, *infra*) bishop of Antioch; born Side, died Traianopolis in Thrace before 337. At the First Council of Nicaea in 325 Eustathios was one of the ardent opponents of Arius; subsequently an Arian synod in Antioch deposed him and in 330 Constantine I exiled him to Traianopolis. In 362 his partisans, called Eustathians, consecrated Paulinos as bishop of Antioch in opposition to Meletios, thus precipitating the (second) Meletian Schism.

Little of Eustathios’s writings have survived; some of his work is preserved in Syriac or Georgian translations (e.g., M. van Esbroeck, *OrCh* 60 [1982] 189–214), and attribution is sometimes questionable. Eustathios attacked ancient philosophers, such as Plotinos (fragment in Syriac—R. Lorenz, *ZNTW* 71 [1980] 109–28). He also criticized the allegorical exegesis of Origen (in *On the Witch of Endor*, the only completely extant work of Eustathios). Fragments of his work *On Melchisedek*, directed against the Melchisedekians, who thought the Priest-King of Salem greater than Christ, are dated in their present form to 420–50 by B. Altaner (BZ 40 [1940] 30–47). The major target of Eustathios was Arianism. His concern was to show that the Logos assumed, in the act of incarnation, the entire man and not the body (oros) only. He strongly emphasized the existence of the two natures of Christ; this later allowed his enemies to accuse him of Nestorianism.

EUSTATHIOS OF EPIPHANEIA (in Syria), historian; died ca.505. His major work, entitled *Brief
EUSTATHIOS OF THESSALONIKE

Church according to the *Souda*, is now lost, but both Malalas and Evagrios Scholastikos drew upon it. It is plausible that this chronicle began with the destruction of Troy and reached the Roman wars against Persia in 502–05. If we can believe Evagrios, Eustathios epitomized pagan (Zosimos, Priskos, etc.) and ecclesiastical (Eusebios of Caesarea, Theodoret of Cyrus, etc.) historians. Eustathios's *Historikon* of the Judaean Archaeology by "Iosepo" is included in the catalog of the library in Patmos of 1200 (P. Maas, *BZ* 98 [1938] 350). Probably the same text is preserved in a MS of the 13th/14th C., Paris B.N. gr. 1555A, where it bears the title *Epitome of the Archaeology by Iosepos* [written] by Eustathios of Epiphaneia in Syria; the short fragment based on *Josephus Flavius* begins with Adam and Eve and ends with Vespasian and Titus.

ED. *FHG* 4:138–42.

EUSTATHIOS OF THESSALONIKE, church official, scholar, and writer; born ca.1115, died Thessalonike 1195/6. The hypothesis of Kiyrakiades (infra, xxxv–xxxvi) that he belonged to the Kataphloron family is not valid. Educated in Constantinople, Eustathios served as a scribe under the future Patriarch Michael III; he became deacon, after 1166 magistros ton rhetoron, and ca.1178 (the traditional date of 1174 is wrong) archbishop of Thessalonike. Eustathios wrote a commentary on Homer, sometimes using the epic for allusions to contemporary events. He also commented on Pindar, Aristophanes, Dionysios Periegetes, and John of Damascus. Although he is studied primarily as an interpreter of ancient texts and collector of lost antique commentaries, Eustathios was an original thinker and a great writer. Politically he supported Manuel I, but dared sometimes to criticize the emperor, esp. for his attempts at accommodation with Islamic doctrine. Eustathios praised military prowess, but censured both venal bureaucrats and greedy and illiterate monks; he defended charistika. In contrast to contemporary views, he set secular ideals above those of hermits in his vita of Philothemos of Opsikon. Eustathios poetized manual (esp. agrarian) labor and developed the concept of historical progress from a primitive way of life to civilization. He rejected slavery as an evil and unnatural institution. As a writer, he endeavored to shift from conventional abstraction to the presentation of great events by means of little details and frequent recourse to sarcasm and irony. He enjoyed life, considered human relations more important than ritual, and loved the richness of language; his plays on words are much more complex than the usual bints at the significance of a name. His sermons and official panegyrics are more conventional than his best works, such as *On the Capture of Thessalonike* (in 1185) or *On the Improvement of Monastic Life*, which expressed his individual attitudes in a series of portraits and vivid scenes.

EUSTRATIOS (Eυστράτιος), hagiographer; died after 602. A priest of Hagia Sophia, Eustratios was a pupil of Euthychios, patriarch of Constantinople, whom he accompanied into exile and whose life he commemorated in a panegyric. He also wrote a biography of the Persian saint Golinduch, based on Stephen of Hierapolis (G. Garitte, *AB* 74 [1956] 422). In his treatise on souls, which survives in fragments and is also mentioned by Photios (*Bibl.* cod. 171), Eustratios defended three points: souls are active immediately after their separation from the [dead] body; they act on their own initiative and not as vehicles of God's powers; they are in need of church services that bring about their "freedom and liberation from vices."

EUSTRATIOS (martyr). See Five Martyrs of Serastela.

EUSTRATIOS OF NICAEA, philosopher and theologian, pupil of John Italos; fl. ca. 1100. Eustratios was not condemned in 1082 with his teacher but was promoted by Alexios I. He supported the emperor in his confrontation with Leo of Chalcedon, became oikoumenidos didaskalos ca. 1115/16 (Daiouzhes, Ecclés. 306, 1.2) and metropolitan of Nicæa. With John Phournes Eustratios participated in the dispute against Peter Grossolano. In 1114 he polemized in Philippopolis against the Armenians. Eustratios commented on Aristotle and proclaimed the importance of logic for theology: even Christ, he wrote, argued with the help of Aristotelian syllogisms (P. Joannou, Reb 10 [1952] 34.22–23). Eustratios developed the concept of the universalia as pure “names,” whereas he regarded only the individual as existing. Accordingly Eustratios stressed the limitations of art, asserting that the artist could not present the substance, but only the appearance of men and animals (Demetrakopoulos, infra, p. 132.9–24); heavenly beings, such as angels, could be painted only symbolically. In his polemic against the filioque, Eustratios, like Phournes, considered the Logos and the Holy Spirit as the hands of God the Father (Demetrakopoulos, pp. 68.29–69.1, 95.5–6), and in his polemics against the Armenians he emphasized the human nature of the incarnated Logos. In 1117 he was accused of heresy: the major charge alleged was his sharp distinction between the divine Logos and Christ incarnate as a slave. Although Alexios I and Patrikios IX (1111–34) tried to rescue Eustratios, he was condemned and forced to abdicate, despite his assertion that the accusation was based on unfinished drafts stolen from him. Rehabilitated after his death, Eustratios was cited as an authority at the council of 1157.

Euthymios, patriarch of Constantinople (Feb. 907–May 912); born Seleukeia in Isauria ca. 834, died proasteion Agathou, on the Bosporus, 4/5 Aug. 917. A monk from his youth, Euthymios sympathized with Prince Leo (the future Leo VI) in his conflict with Basil I; after Basil’s death Leo appointed him hegoumenos of a monastery in the Psamatia quarter of Constantinople, member of the senate and synkellos, and made Euthymios his spiritual director. Euthymios opposed Leo’s “foreign” advisers (the Armenian Stylianos Zaoutzes, the Arab Samonas, and Italian Nicholas I Mystikos), and defended the interests of the traditional court aristocracy. During the crisis

EUTHYMIOS | 755
over the Tetragamy of Leo VI, when Patr. Nicholas sided with the Doukas family against Leo. Euthymios continued to support the emperor; after Leo banished Nicholas, he appointed Euthymios as his successor. The patriarchate of Euthymios brought no peace, and Nicholas was recalled from exile—either by Leo or, immediately after Leo’s death, by Alexander, who banished Euthymios to Agathou.

The writings of Euthymios are insignificant: sermons on the conception of St. Anna and a festal homily on the Virgin. Attribution of certain works ascribed to Euthymios in some MSS is not yet proved (C. van de Vorst, *AB* 33 [1914] 452ff. A. Ehrhard, *BZ* 24 [1924] 186ff). The anonymous vita of Euthymios, composed by a monk of Psamatia after 932 (D. Sophianos, *EEBS* 38 [1971] 289–96), is one of the richest sources for the period from the death of Basil I to the early years of Constantine VII; unfortunately some sections of the MS are lost. A new fragment has been discovered by B. Flusin (*TM* 9 [1985] 119–31). On the other hand, the panegyric of Euthymios by Arethas is conventional and provides only limited data.

---

**EUTHYMIOS OF AKMONIA** (in theme of Opsikion), theologian of first half of 11th C., who used to be confused with Euthymios Zigabenos. His biography is little known. Euthymios states that as a boy, during the reign of Basil II, he visited Akmonia with his mother because of a lawsuit. Later he became a monk in the Peribleptos Monastery in Constantinople. He mentions the death of Romanos III in 1034. Circa 1050 Euthymios sent a letter from Peribleptos to Akmonia to warn his fellow citizens against the menace of the heretics who were called Bogomils in the West (this is the first mention of the term in Byz. literature), but *Phoundagiades* in the Akmonia region; Euthymios was worried that the extreme asceticism of the Bogomils made their teaching attractive to monks. It is quite possible that Euthymios also wrote the so-called first inductive against the Armenians, which was formerly attributed to the *katholikos* Isaac or a certain John of Nicaea.

---

**EUTHYMIOS OF SARDIS**, metropolitan of Sardis (ca. 785–803); saint; born Ouzara (on the frontier of Lykaonia?) 754, died on island of St. Andrew, near Cape Akritas, 26 Dec. 831 (not 824 as previously believed). A leader of the Iconophiles, Euthymios played an important role during the Second Council of Nicea in 787. Some years later, he was accused by Emp. Nikephoros I of participation in the revolt of Bardanes Tourkos and was deprived of his see and exiled to the island of Pantelleria near Sicily. Recalled from exile, he defended the veneration of icons during the reigns of the Iconoclast emperors Leo V and Theophilus and was twice banished. Several letters of Theodore of Studios to Euthymios survive. His vita was written by Patr. Methodios I; a rhetorical panegyric by a certain Metrophanes is also preserved. Methodios relates that Euthymios forced the young woman whom the future emperor Nikephoros I wanted to marry into a nunnery, thus kindling Nikephoros's animosity.

---

**EUTHYMIOS THE GREAT**, a founder of cenobitic monasticism in Palestine; saint; born in Melite 376/7; died in his lara near Jerusalem 20 Jan. 473. Nobly born and dedicated to God from infancy, Euthymios became a priest ca. 396 in Melite. Around 406 he went to Palestine, where he met Theoktistos from Cappadocia (died 466), who became Euthymios's closest associate. Circa 411 they settled in a cave, which served as church for the cenobitic monastery they founded after some hesitation (vita, ed. Schwartz, p.17–3); here the Arab Phylarch Aspebatus converted to Christianity. Leaving Theoktistos as head of the monastery, Euthymios wandered through Pales-
tine and organized monasteries in Marda and Aristoboulia; then he built his lavra 5 km from Theoktistos's monastery; the church was dedicated in 428/9. The lavra had 15 cells, where the monks stayed during the week; on Saturday and Sunday they gathered to eat in the refectory and sleep in the dormitory. Euthymios remained neutral during the first phase of the Nestorian dispute; after the Council of Chalcedon of 451 he sided with JUVENAL of Jerusalem, denounced his rival Theodosios, and helped to win the support of the empress Eudokia. CYRIL OF SKYTHOPOLIS wrote Euthymios's Life.

**Representation in Art.** Generally depicted as a balding old monk with a particularly long white beard (sometimes tucked under his belt), portraits of Euthymios occur as early as the frescoes of BAVT and SAQQARA and wherever groups of desert monks are included. The illustration of nine events in the saint's life adorns a parekklesion (renovated in 1303) adjacent to the Church of St. DEMETRIOS in Thessalonike; the fresco cycle begins before the saint's conception and ends with his death, emphasizing his role as a ministrant of the church and his activity in baptizing Aspebetos (T. Gouma-Peterson, *ArtB* 58 (1976) 168–83).

**EUTHYMIOS THE YOUNGER,** also called Euthymios of Thessalonike, saint; baptismal name Niketas; born village of Opso, Galatia 823/4, died island of Hiera 14/15 Oct. 898. Euthymios was born to a well-to-do family (exupatrides) obliged to give military service (strateia). He married Euphrosyne, also of prosperous background, and fathered a daughter, Anastas. In 841/2 he left his family and fled to Bithynian Olympus to become a monk. He traveled much: twice to Athens, to Thessalonike, to the island of Neoi, and elsewhere. He ascended a column (styles) at least twice and ended his life as a hermit in a cave; nevertheless, the cenobitic monastery was his ideal, and he tried to establish order among dispersed monastic settlers on Athos. Circa 864 Euthymios became a deacon (D. Papachryssanthou suggests that he was a priest) in order to arrange liturgical services for Athanite hermits; ca.870 he converted the ruinous Church of St. Andrew at Peristerai, east of Thessalonike, into a monastery. In a sense, his activity foretold and prepared the way for ATHANASIOS OF ATHOS.

Euthymios's Life was written by his disciple Basil, tonsured ca.875 (erroneously identified by Porfirij Uspenskij as an archbishop of Thessalonike). His eyewitness account has many chronological indications (not always accurate). Basil persistently stresses the importance of manual labor for monks. He mentions Arab raids on Athos and surrounding areas but is quite uninterested in events in Constantinople.

**EUTHYMIOS THE IBERIAN,** saint, also known as Euthymios Mt'aç'mindeli ("of the Holy Mountain"); born Georgia between 955 and 960, died Constantinople, 15 May 1028. Son of John the Iberian and cofounder of the monastery of Iveron on Athos, Euthymios served as superior from 1005 to 1019. He contributed much to the translation of Greek theological and hagiographical works into Georgian (lists of these translations are found in his Life and in the Testament of his father); some sources also ascribe to him translations from Georgian into Greek, including BARRAM AND IOSAPH—the latter is, however, questionable. The *tyfikon* written by Euthymios for his monastery is lost, but it is cited in his Life. The Life of Euthymios and his father was written in Georgian by GEORGE Mt'ac'mindeli ca.1043 and includes valuable information about the revolt of Bardas Skleros.

**EUTOKIOS** (*Eútökios*), commentator on mathematical works; born Ascalon ca.480. A contemporary of AMMONIOS and ANTHEMIOS of TALLES, Eutokios was active in Alexandria and perhaps...
Constantinople in the early 6th C. He is also known to have lectured on philosophy. Eutokios wrote commentaries on three works of Archimedes—On the Measurement of a Circle, On the Sphere and the Cylinder, and On Plane Equilibria. The first two of these commentaries were used by Isidore of Miletus, the last two were translated into Latin by William of Moerbeke at Viterbo in late 1269. Eutokios also wrote a commentary on books 1–4 of the Contes of Apollonius of Perga that is dedicated to Anthemios. Finally it has been persuasively argued by J. Mogenet (L'introduction à l'Almageste [Brussels 1956] 22–34) that Eutokios was also the author of the Introduction to Ptolemy's Great Composition, which was originally the scholia to book 1 of the Almagest to which he refers in his commentary on the On the Sphere and the Cylinder. The Introduction seems to have been used by George Trapezuntios for his Introduction of 1451 (J. Monfasani, Collectanea Trapezuntiana [Binghamton, N.Y., 1984] 674, 687).

Eutokios was not a mathematician of any originality but did understand almost all of the technical material that he commented on. He also preserves a number of solutions by earlier mathematicians whose works are no longer available to us.

LIT. J. Bulmer-Thomas, DSB 4:488–91. Wilson, Scholars 451, 86. —D.P.

**EUTROPIUS** (Ἐὔτρωπιος), favorite of Arkadios; born near the Persian frontier, died Chaledon Aug. 399. An emancipated slave and eunuch, he entered the service of Theodosius I and became the guardian of the young Arkadios. With the support of Stilicho, Eutropius removed Rufinus and replaced him as the most powerful figure in the empire, first as praepositus sacri cubiculi (from 395), then as patrikios (398) and consul (399)—both titles never previously awarded to eunuchs. He granted privileges to the Jews (esp. merchants) and secured the support of the church by appointing John Chrysostom as bishop of Constantinople and by issuing ordinances against heretics and pagans. Eutropius successfully commanded an army against the Huns who invaded Armenia in 397/8. He nevertheless excelled hatred by his avarice, by denouncing and condemning respected officials, by abolishing the church’s right of asylum, by disrupting the alliance with Stilicho when he supported the revolt of Gildo, and by showing contempt toward Gothic mercenaries (esp. Tuirigild and then Gainas). In 399 Eutropius finally managed to offend the empress Eudoxia, who dismissed him. Fearing for his life, the eunuch fled to Hagia Sophia. Chrysostom, in a brilliant speech, requested imperial mercy for the former consul. Eutropius was nevertheless exiled to Cyprus, then recalled and executed. His acts and honors were nullified by an edict of 17 Aug. 399.

The sources (Eunapios, Zosimos, Claudian, etc.) describe Eutropius in extremely negative terms.

**EUTROPIUS**, Latin historian and, according to the Souda, a sophist; born Bordeaux? 4th C. Although there is some discussion about his identity and career, Eutropius apparently held a string of high offices under various emperors: magister epistularum (before 361), magister memoriae (369), proconsul of Asia (371–72), praetor præfect (Illyricum, 380–81), and consul (in 387). Both Symmachus and Libanius addressed letters to him in the period 387–90. In 393 he was one of several historians to accompany the emperor Julian on his ill-fated Persian expedition. Eutropius composed a breviary of Roman history in ten books from 753 n.c. to Valens’ accession in 364. It is conventional in opinions, sober in subject matter, and clear in language. His silence on Christianity does not prove him a pagan, as some believe, as such reticence is a stylistic affectation of many late Roman historians. Eutropius’s book became accessible to the Byz. through the Greek translations of Paionios, a pupil of Libanius (L. Baffetti, BNfbb 3 [1922] 15–36), and of Capito Lysius in Justinian’s time.

**LIT.** Eutropii Breviarium ab urbe condita, ed. G. Santini (Leipzig 1979).

EUTYCHES (Ἐὐτύχης), monk and archimandrite of a suburban Constantinopolitan monastery (from 410); born ca. 370, died after 451 or even 454 (D. Sierron, DPAC 1:1907). An ardent opponent of Nestorius, Eutyches was a staunch supporter of Cyril of Alexandria; he defended the interests of Alexandria at the court of Theodosios II, exercising influence there due to his connections with the eunuch Chrysaphios, his godson. Developing Cyril’s ideas, Eutyches launched the concept of Monophysitism. Theodoret of Cyrhhus attacked him anonymously in the Erastites, and Eusebios, bishop of Dorylaion, accused him of heresy in 448. At his trial later that year, Eutyches denied that Christ had two natures after the Incarnation; he refused to acknowledge even the hypostatical union of two natures in Christ and to accept that Christ was consubstantial (homoousios) with mankind. Patr. Flavian condemned him on 22 Nov. 448, a condemnation subsequently supported by Pope Leo I. Eutyches, however, won the day at the “Robber” Council of Ephesus in 449 when Flavian was deposed. The death of Theodosios II was a heavy blow for Eutyches: he was deposed and exiled to a site not far from Constantinople. Pope Leo, in a letter of 9 June 451, insisted on Eutyches’ banishment to a more remote place. His subsequent fate is unknown.

EUTYCHIOS, patriarch of Constantinople (Aug. 552–between 22 and 31 Jan. 565; 2 Oct. 577–6 Apr. 582) and saint; born Phrygian village of Theios/Theion 512, died Constantinople; feast day 6 Apr. His father was a lieutenant of Belisarios (PG 86:2281BC). Educated in Constantinople, Eutychios became a monk and then katholikos (i.e., superior of all the monks) in the metropolis of Amaseia (col. 2296AB). Justinian I selected him to succeed Menas as patriarch, since Eutychios supported the emperor’s position in the dispute about the Three Chapters. Eutychios presided over the Council of Constantinople in 553 and dedicated Hagia Sophia after its restoration. Probably by 558 relations between Eutychios and Justinian had begun to deteriorate; the emperor urged both him and Belisarios to attend a silentium that investigated the case of some subordinates of Belisarios who were involved in a plot (Theoph. 238.11–13). The patriarch’s opposition to Apthartodocetism aroused Justinian’s anger, and the emperor exiled him to Amaseia, replacing him with John III Scholastikos; after the latter’s death Eutychios was restored by Justin II. Eutychios had a theological discussion with the future pope Gregory I on the question of the resurrection of the flesh.

Of his works (on Origenism, against the Monophysite interpretation of the Trisagion, etc.) little has survived excepting titles. His pupil Eustratius wrote the vita of Eutychios, full of biblical and patristic allusions; it contains some data on Chosroes I’s invasion, and some miracles worked by Eutychios are of interest for cultural history. Thus the patriarch healed a young mosaicist who had been injured by a demon after he was forced to destroy a mosaic in a private house in Amaseia on which the story of Aphrodite was depicted (PG 86:2333D–2340B). Eustratius called his hero “the archiereus of the oikoumene” (col. 2281A), an early case of the use of this title.

EUTYCHIOS, exarch of Ravenna (ca. 728–ca. 751). A eunuch of patrician rank, Eutychios was sent by Leo III to Italy after the murder of the exarch Paul, probably to remove Pope Gregory II for opposing the emperor’s Iconoclasm (Anastos, “Leo III’s Edict” 26–31; D. Miller, MedSt 36 [1974] 102–05). Eutychios went first to Naples and unsuccessfully attempted to have Gregory and the Roman nobles murdered. He then approached the Lombards and agreed to help King Liutprand gain Spoletto and Benevento in exchange for aid against Gregory. When they arrived in Rome (729?), however, the pope won over Liutprand, who reconciled Eutychios and Gregory. Eutychios apparently stayed in Rome, for shortly thereafter (730?) Gregory gave him troops against Tiberius Petasius. The sources do not mention Eutychios further by name, but he is assumed to have been exarch until the Lombards’ capture of Ravenna
EUTYCHIOS (painter). See Michael (Astrapas) and Eutychios.

EUTYCHIOS OF ALEXANDRIA, known in Arabic as Sa'id ibn Baṭṭīq (i.e., “patriarch”); Melkite patriarch of Alexandria (from 22 Jan. 935); born 17 Aug. 877, died Fustat 11 May 940. A learned physician, Eutychios is best known for the Annals that go under his name, a chronography on the Byz. model written in Arabic and extending from the age of Adam to the year 938. The form in which the Annals of Eutychios has been published in modern times is the result of numerous editorial expansions by later Melkite writers. A notable feature of the Annals, in the accounts of the years after the rise of Islam, is the coordination of the reigns of the caliphs and of the Oriental patriarchs with the reigns of the patriarchs and emperors of Byz. The Annals report important events in the history of Byz., such as the so-called Moechian Controversy in the time of Constantine VI, and they propose an eccentric account of Iconoclasm by representing it solely as an overreaction to the abuses of certain iconophiles on the part of Emp. Theophilos (Griffith, “Apologetics in Arabic” 154–90).

A number of other Christian Arabic works are assigned to Eutychios, most importantly a long apologetic treatise, The Book of the Demonstration. It is now clear, however, that this and other texts attributed to him were not written by Eutychios.

EVAGRIOS PONTIKOS (Eváγyrios Pontikós), monastic writer; born Ibara, Pontos, ca.345, died Egypt 399. He was ordained anagnostes by Basil the Great and deacon by Gregory of Nazianzos, who was also his teacher. In 380 he accompanied Gregory to Constantinople, where he attained fame as a preacher; a scandalous love affair, however, soon forced his departure. Having been received by Melania the Elder at Jerusalem, in 383 Evagrios embraced the monastic life in Egypt, living in Nitria and Kellia. He associated with Makarios the Great and Makarios of Alexandria (G. Bunge, Ἰρενίκσσα 56 [1983] 215–27, 323–60) and supported himself as a calligrapher. Evagrios also composed his works on the monastic life during his sojourn in the Egyptian desert.

Evagrios followed Origen, accepting his idea of the preexistence of souls as pure intellectual beings that assumed flesh and became sinful but are to be reconstituted in angelic shape (apokatastasis) and unified with God. Jesus Christ was the single spiritual being who did not fall away from the Logos, although he remained united to the flesh. Asceticism was for Evagrios the main path to salvation. He developed the concept of “practical” behavior, which he interpreted not as the “active” but the anachoretic life; its major purpose was the struggle against eight wicked logismoi, or sinful desires, namely gluttony, fornication, avarice, grief, wrath, torpor, vainglory, and arrogation. Cleansed of these logismoi the pious man would be able to contemplate the created world and divine wisdom.

After Evagrios was condemned for Origenism in 553, many of his works were lost; some are preserved under the name of Neilos of Anykra, some in Syriac, Armenian, Latin, and other translations. Nevertheless his concept of practical behavior, his list of eight logismoi, and his aporphitic style as well as the literary genre of spiritual cenotaria (short catechetical units) or chapters influenced subsequent monastic literature, for example, Cassian, Palladios, and later Symeon the Theologian.

ED. Traité pratique ou le mauvais, ed. A. & C. Guillaumont, 2 vols. (Paris 1971), with Fr. tr. The Praktikos: Chapters on...
EVAGRIOS SCHOLAΣΤΙΚΟΣ, ecclesiastical historian; born Epiphaneia in Coele Syria ca. 536, died after 594. Evagrios was a lawyer (scholastikos) at Antioch, also holding some probably honorary administrative offices. His Church History covers in six books the years 431–594, using both secular and ecclesiastical sources. Photios (Bibl., cod. 29) thought him an undistinguished stylist, but soundly orthodox and commendably interested in the history of images. A Chalcedonian in theology, he treats the Council of 451 at length, but is compromising toward Monophysitism. His secular narrative emphasizes the virtues and achievements of Marcian, Tiberios I, and Maurice. A certain parochialism, however, results in more space being given to the affairs of Antioch (esp. the career of Patr. Gregory [570–93]) than to Constantinople. His style is conventionally rhetorical, but not excessively poetic, and he eclectically uses pagan and Christian models (V. Cairns, ByzF 8 [1982] 29–50). Overall estimates vary widely, often criticizing him for credulity, but his eyewitness accounts, sifting of sources, citation of documents from the archives of the Antiochene patriarchate, and inclusion of bibliography make his history invaluable.

Lit. P. Allen, Evagrius Scholasticus the Church Historian (Louvain 1981).

EVANGELION (ευαγγέλιον), evangelist, the Byz. Gospel lectionary, used chiefly at Eucharist. The evangelion contains only those Gospel passages that are actually read. The first part has the Gospel lections for the mobile cycle, in liturgical order John, Matthew, Luke, Mark. It must not be confused with the tetraevangelion (see Gospel Book), which contains the complete text of the four Gospels, arranged exactly as they are in the New Testament, but with the beginning and end of each passage to be read indicated in the margin and numbered. The second part, known as the synaxarion (wrongly as the menologion), lists the lections for each day of the year from 1 Sept., providing the full Gospel passage unless it already appears earlier in the volume. The Gospel lections for feasts that fall on a fixed date in the church calendar are selected; those of the movable, temporal cycle, which varies depending on the date of Easter, are semicontinuous, i.e., read more or less in the order in which they occur in the Bible text. In the latter cycle, each Gospel is associated with a particular period of the year: John, the period from Easter to Pentecost; Matthew, from Pentecost to the Exaltation of the Holy Cross (14 Sept.); Luke, from then until the beginning of Lent; Mark, throughout Lent.

Usually included in MSS of the evangelion are the Twelve Passion Gospels read at Good Friday orthros. These are a composite series of harmonized readings from the four Gospels, of Palestinian origin, arranged to recount in chronological sequence the events of Jesus' passion and death.

Lectionary Illustration. Evangelia are frequently adorned with Evangelist portraits; further figurative illustration, which is relatively rare, may comprise headpieces, smaller framed or unframed pictures near the appropriate lection, marginal illustrations, and inhabited initials. In the most sumptuously illustrated evangelia the synaxarion section is also illustrated; these MSS date primarily between the 10th and 12th C.

EVANGELIST PORTRAITS, found throughout Byz. art, are prominently represented in the pendentives below the domes of churches, on the templon, on the epitaphios, and esp. in MSS, where they are the most commonly illustrated subject. In physical type, the older, gray-haired Matthew and John contrast with the younger, dark-haired Mark and Luke. In MSS, they are rarely represented standing; they are usually seated, and depicted as writing, meditating, reach-
EVANGELIST SYMBOLS. The four beasts (Zo-
dia) of Ezekiel 1:10—man, lion, ox, eagle—were
associated from the 2nd C. onward with the four
Evangelists of the New Testament. In Byz. art,
they most often surround Christ in Majesty. Thus
they first appear projecting from the mandorla
of the youthful Christ in the apse mosaic at Ho-
stos David in Thessalonike. In several 10th-
through 11th-C. Cappadocian apses showing the
Prophetic Vision, the symbols accompany a ma-
ture Christ; labeled with the words intoned in the
liturgy before the trisagion, the symbols link the
Christ of the image with the revealed Christ of
the liturgy. In various Gospel frontispieces, they
surround the Majestas Domini, echoing certain
Gospel prefices that explain the existence of four
Gospels by referring to the four beasts crying the
glory of “him who sits upon the Cherubim.” In
some Gospel books, each Evangelist is paired with
a symbol. The pairing of symbols and Evangelists
varies from book to book throughout the 11th–
12th C. Only with a late 12th-C. set of verses
found in eight decorative style Gospels does
the pairing standard in the West and in Armenian
art appear: man/ Matthew, lion/ Mark, ox/ Luke,
eagle/ John. Possibly through Western influence, this
pairing becomes customary in Palaiologan art.

EVARISTOS, mid-11th-C. deacon and librarian
(bibliothelax), author of a letter addressed to Con-
stantine VII Porphyrogenetos, “born in the
purple silk.” The letter is preserved only in Ara-
bic. The emperor had commanded Evaristos to
produce a history of the saints “in easy language.”
In his letter Evaristos informs the ruler that he
has sketched biographies of the saints, established
their dates, and verified the records. Evaristos’s
compilation, now lost, was probably a step toward
the comprehensive work by Symeon Meta-
phrastes.

EVE. See Adam and Eve.
EVERYDAY LIFE, in the broad sense, encompasses the entirety of Byz. culture: thus, T. Talbot Rice's book (infra) includes sections on the imperial court, church, administration, army, etc. In the narrow sense, everyday life is ordinary human activity and comprises diet and costume, behavior and superstitions, entertainment, housing, and furniture. The subject is poorly studied and sources are limited: historiography, rhetoric, and liturgical texts are not very helpful, although they are the best known writings; archaeology provides some scattered data; hagiography, documents, and letters offer only small nuggets of information (P. Magdalino, BS 48 [1987] 28–38). The content of mural and book illustration is of mixed evidential value: the costumes, gestures, and attitudes of protagonists in sacred iconography appear to be conventional and often antique, yet peripheral details in both urban and rural scenes may well reflect current circumstances.

While daily life in late antiquity was municipally oriented and situated primarily in open spaces, Byz. funneled its energy inside closed buildings. A comparison of two great vitae, those of Symeon of Emesa (6th C.) and Basil the Younger (10th C.), reveals the change: Symeon is depicted in the streets and squares, Basil within the houses of his supporters. Public life did not totally disappear—some processions and feasts continued to be held in public—but it was significantly contracted: the theater ceased to exist, religious services dispensed with many outdoor liturgical ceremonies, even races and circus games tended to be replaced by carnivals and by sports and competitions, such as polo and tournaments, which were on a reduced scale and socially restricted. The shift from reading aloud to silent reading, the adoption of silent prayer, the abandonment of public repentance, the playing of quiet board games like chess—all these belong to the same phenomenon of "privatization" of everyday life.

With the exception of churches, there was no new construction of public buildings in Byz. towns, and the regular city planning of antiquity, with squares, porticoes, and wide avenues, was replaced by a chaotic maze of narrow streets and individual habitats. The houses of the nobility (villas or mansions) also lost their orderly arrangement, which was replaced by a group of irregularly shaped rooms, bedchambers, terraces, and workshops; also abandoned was their openness to nature in the form of the atrium—with its impluvium, inner garden, and fountain—or naturalistic floor mosaics. Houses became darker, and the shift in lighting from lamps to candles after the 7th C. contributed as well to this change.

The increased use of tables and of the writing desk influenced various habits—from reading and writing (including the format of the book) to dining and games. The bed as the symbol of the most private aspect of daily life became consistently distinct from chairs or stools, which were used for more social occasions. Pottery (see ceramics) grew more uniform and less decorated than in antiquity; it served primarily the private needs of the family, whereas imperial banquets used gold and silver ware.

A respect for the human body determined the form of ancient costume: the body was covered only minimally and there was no fear of nakedness. Byz. costume, however, which began to adopt the use of trousers and sleeves, was a reaction against the openness of antiquity, and heavy cloaks provided people with additional means of concealment.

Patterns of food consumption evidently changed as well: in the ordinary diet, the role of bread decreased, whereas meat, fish, and cheese became more important. Dining habits changed, too, from a relaxed reclining to the more formal sitting on chairs. While we can surmise that the actual diet was not spared by medieval standards, the predominantly monastic ideology of the Byz. condemned heavy meals and praised ascetic abstemiousness.

Bathing habits also changed: the public baths, which had served virtually as a club for well-to-do Romans, almost disappeared and ancient bathhouses were often transformed into churches. Provincial baths were few, located in log huts full of smoke coming from an open hearth.

The nuclear family was the crucial social unit responsible for the production of goods, so that hired workers (misthioi) and even slaves (see slavery) were considered an extension of the family; the education of children was also the family's responsibility. The family was limited to a certain extent by the neighborhood, guild, or village community; it was these microstructures that took charge of organizing feasts. Women, who indisputably played a decisive role in the
household, were compelled to remain in a special part of the house and to wear "decent" dress, which served clearly to distinguish a matron from the PROSTITUTE, whose more revealing costume suggested immoral conduct. The unity of the family was emphasized by the custom of common meals and by the father's right to indoctrinate (sometimes with physical force) all the members of his small household.

Depictions of everyday life are rare as primary subjects in art, although many indications can be gleaned from biblical images in MSS such as the OCTATEUCHS where, for example, scenes of birth, legal penalties, and activities such as threshing and various modes of transportation reflect Byzantine practice. A market scene appears in a fresco at the Blachernai monastery in Arta which depicts a procession of the Virgin Hodegetria. It shows merchants displaying their merchandise in baskets and on benches, fruit and beverage vendors, and their customers. By contrast, ceramic household vessels made for everyday use, when they do contain figural decoration of any sort, show scenes from mythology, fable, or epic.

EVIL (κακία). The core of the problem of evil is how far responsibility for it can be attributed to God. Late antiquity presented two diametrically opposed concepts of evil. The dualistic systems of Gnosticism and Manichaeanism considered evil as a "substance" warring with the good, symbolically treated as a battle of darkness against light. The material world is the realm of evil, created by the inferior deity and contrasted to the divine and heavenly world. In contrast, Proklos assumed that evil had only a dependent existence (parhypostasis) and was caused by manifold factors such as weakness, lack of knowledge, or lack of goodness; he criticized Plotinus, for whom evil was an inherent quality of matter.

Christianity overcame the contradiction after painful vacillations; Origen, for example, viewed the cosmos as consisting of an opposition of light and darkness. The core of the Christian solution is Augustine's view that Adam's original sin was perpetrated contrary to nature (divine nature has no evil in itself); original sin was committed not due to human free will (as was the view of Pelagianism), but by the mysterious dispensation of God, who knows how to transform evil into good. John of Damascus, on the other hand, emphasized that any creation of God was good, but that both angels and mortals were autexousiai, that is, granted freedom of choice to follow God's law or deviate from it; we are responsible for our wrongdoing, just as the criminal, not the judge, is responsible for a felony and deserves punishment. John also drew a distinction between evil "by nature" (deviation from God's law) and "apparent" (subjectively perceived) evil, that is, the hardships and trials of life (including fasting, vigils, etc.) that in fact contribute to our salvation. Redemption from Adam's sin was achieved by Christ's sacrifice and is continued in baptism and other sacraments. John Chrysostom consistently explains Christ's sacrifice as propitiating the Father and reconciling mankind with an angry God. In Christian belief, the devil and his demons are the embodiment of evil; the mission of saints is the battle against demons. Despite the symbolism of light and darkness this struggle is not conceived dualistically, since it evolves under God's paternal care and aims at the improvement of corrupted human nature.

EVIL EYE, a popular amuletic image of the 4th-8th C. characterized by an eye surrounded by a variety of threatening beasts and instruments: lions, snakes, scorpions, daggers, etc. Most often it is found on a bronze pendant amulet whose other side bears the Holy Rider. Amuletic inscriptions against the evil eye, without a representation, are also common (e.g., "the seal of Solomon holds the evil eye"—Russell, infra 540). Both would combat the envious glance that was popularly believed to facilitate the access of demons to a coveted thing or person. The antidote was to display the inevi
table suffering of the covetous individual or, more specifically, of his "evil eye." In *The Testament of Solomon* (ed. C.C. McCown [Leipzig 1922] 18.39) one demon reports: "My power is annulled by the engraved image of the much-suffering eye."

- G.V.

**EVLIYA ÇELEBI,** Ottoman scholar, sipahi, and traveler; born Istanbul 25 Mar. 1611, died Istanbul 1884. Evliya was the author of the ten-volume *Seyahatname* (Book of Travels), professedly a description with considerable elaborations of Evliya's extensive journeys and various sojourns throughout the Ottoman Empire and beyond, primarily for ca. 1630-76. Evliya wrote to entertain and his language is a mixture of learned and vernacular Ottoman. His sources include his personal observations, hearsay, cited and uncited literary works, and his own lively imagination. Assuredly, some of what Evliya wrote is fictitious. Nonetheless, he conveys a plethora of credible data regarding the geography, cities, monuments, institutions, peoples, and cultures of the Ottoman Empire of his time. For Byz. studies, Evliya's work is replete with information concerning the status and development of previously Byz. peoples under Ottoman rule. Book 1 is esp. important for its material on the topography, ethnography, and folklore of Istanbul. No critical edition of this work yet exists.

- S.W.R.

**EVRENOS ("Ephevegel and similar forms),** Ottoman general; died Yenice-i Vardar 1417. Originally a beg of Karasi, Evrenos joined the Ottomans after they conquered that beylik. Evrenos had served from 1359 as general under Süleyman Pasha, Murad I, Bayezid I, Süleyman Çelebi, and Mehmed I. Evrenos participated in virtually all the critical campaigns and battles fought by the Ottomans in Europe during his lifetime. During the 1360s-80s, he led many of the Turkish conquests in Byz. Thrace and Macedonia and captured Corinth in 1397. Evrenos himself acquired vast estates, centered at Yenice-i Vardar (mod. Yiannitsa in northern Greece), the site of his family tombs.

Byz. views of Evrenos were typically negative. Manuel II, writing ca. 1409, attributed to him an "unrivaled" hatred of Christians and extreme cruelty. Among Muslims, Evrenos was renowned for his heroism, piety, and generosity.

- S.W.R.

**EVTIMIJ OF TÜRNNOVO,** patriarch of Bulgaria, teacher, and writer; born Túrnovo between about 1320 and 1330, died Bačkovo ca. 1400. As a young monk in a monastery in Túrnovo he was attracted by Hesychasm, of which he became a lifelong defender. He was the protégé of Patr. Teodosije, with whom he went to Constantinople in 1363. He then spent some years in the Lavra and Zographou monasteries on Athos. Returning to Bulgaria in 1371 he founded the monastery of Holy Trinity near Túrnovo, which became a center of scholarship and literature. Elected patriarch in 1375, he helped in the struggle to preserve Bulgarian independence and to maintain the religious unity of the Bulgarian people. After the Turkish capture of Túrnovo in 1393, he was expelled and imprisoned in the Petritzos monastery at Bačkovo.

Evtimij revised and corrected earlier Church Slavonic translations from Greek and sought to standardize Slavonic orthography and grammar in the face of linguistic change. His original writings comprise Lives of Bulgarian saints (for example, St. John of Rila), panegyrics of saints, theological treatises, and liturgical texts. He extended the flexibility and expressiveness of Old Slavonic and introduced to Slavonic literature something of the culture of mid-14th-C. Byz. His works enjoyed great influence in Serbia, Rumania, and Russia as well as in Bulgaria.

EXAGION (ἐξαγών, Lat. exagium), a unit of weight equal to 1/72 of the heavy Roman libra or Byz. logarike litra [= 4.44 g]. Synonymous terms are stakion, soggio (It.), and mitqal (Ar.). Since the solidus weighed exactly one exagion, the term was also used to refer to the coin. Exagion can also identify the weights used to control gold coins. After 1204 exagia of different weight are reported, that is, they are 1/72 of "pounds" that differed from the logarike litra.

LIT. Schilbach, Metrologie 183, 204. K. Wessel, RBK 2:795-800.

EXAKTOR (ἐξάκτορ), fiscal official in the late Roman Empire whose main function was to exact arrears of taxation; exaktores had under their command a staff of subaltern officials, including praktoreis. Usually attached to a particular city, the exaktor was first appointed by the emperor, later by the curia. After the 6th C. the exaktor disappears temporarily.

The 9th-C. taktika do not mention exaktores, but the 10th-C. Taktikon of Escurial places them between the protasekretis and mystikos. They seem to have retained certain fiscal functions. An act of the 11th C. is signed by John, megas chartoularios of the genikon and exaktor (N. Wilson, J. Darrouzès, REB 26 [1968] 18.18). Tzetzes (Hist. 5,609-11) boasts that his grandfather George was a renowned exaktor who fulfilled the duty of praktor in various themes. At the same time, the exaktor became a high-ranking judge of the imperial tribunal. After 1204 the post is unknown.

EXALEIMMA (ἐξάλειμμα, from exaleipho, "to wipe out, erase" [from the tax roll]), a fiscal term applied to immovable property. The term appears, almost exclusively in documents, from 1259 to

1361, although the adjective exaleimmatikos, as in exaleimmatike stasis, is firmly attested from 1300 until 1420. Exaleimmata were bought, sold, donated, granted in pronoia, reassigned to other paroi, broken up and parcelled between paroi and their lord, and given fiscal assessments comparable to other properties. While V. Vasilievskij (ZMN 210 [1880] 158) first identified exaleimma as escheat, later scholars (Dölger, Sechs Praktika 122; Zakythinos, Despotat 2:240; Solovyev-Mošin, Greke povelje 432) frequently interpret exaleimmata as ruined properties. A few documents, however (Zogr., no.18.11-14; M. Goudas, EEBS 3 [1926] 133f, no.7.6-10; Docheiar., no.40.13-14), demonstrate that exaleimmata could be cultivated properties producing income.

The use of the participle exalipheis in the Treatise on Taxation (Dölger, Beiträge 116.2-6) and later documents through the 12th C. and the use of the adjectival exaleimmenos in mid-11th- to mid-13th-C. documents suggest that an exaleimma was an escheated property, which reverted to the owner's lord (a private landlord or the state in its role as a landlord) as a result of the death or flight of its owner (usually a paroi) without leaving a proper heir. The use of these terms also suggests that in the late Byz. agrarian system, based on the paroi, exaleimma played a role analogous to that held by klasma in the earlier Byz. agrarian system based on the village community.

EXALTATION OF THE CROSS. See Cross, Cult of the.

EXAMPLE (παράδειγμα) was considered by ancient rhetoricians as a trope (Martin, Rhetorik 262), based on the juxtaposition of objects and aimed at exhortation or dissuasion; unlike the parable, examples dealt with actual phenomena and not with possible ones (RhGr, ed. Spengel, 3:200.21-201.2). The church fathers frequently used examples to clarify subtle theological concepts, such as illustrating the Trinity by means of the sun and its rays, or demonstrating the existence of two natures in Christ by the example of the human soul and body. Leontios of Byzantium (PG 86:1453A-C) asserted that theological truth could not be proven by "natural reason" and
EXARCHATE, a new type of territorial and administrative unit created at the end of the 6th C. in CARTHAGE and RAVENNA; these existed until the end of the 7th and the middle of the 8th C., respectively. The external feature of the exarchate was the unification of military and civil power in the hands of the exarch, a reform that had been prepared by partial changes of provincial administration under Justinian I. Structurally considered, both exarchates were territories threatened by constant hostile pressure, populated by people with a language and cultural traditions different from those of Constantinople, strongly rural, with an aristocracy that tended to emigrate to Constantinople and a local church that acquired political power. All this formed a certain antinomy between the strong administration of an exarchate and its tendency toward economic and social separation from the empire.

LIT. A. Guillou, Régionalisme et indépendance dans l'Empire byzantin au VIIe siècle (Rome 1969).

EXCEPTA (Έκλογαι), conventional title of an "encyclopedia" produced by CONSTANTINE VII and his collaborators. According to the preface, the emperor gave orders for necessary books to be collected from the whole oikoumene, excerpted and arranged in 53 sections (hypotheses) dedicated to specific topics. The purpose was to use the experience of the past for moral and political education. One of these hypotheses, De legationibus, is preserved in full, and significant parts of De virtutibus et vitii, De insidiis, and De sententiis also survive. Only the titles are known of several other sections. The compilers used both ancient and Byz. writers; the latest is GEORGE HAMARTOLOS. Some of these sources are now lost. Only from the Excerpta do we know PRISKOS, PETER PATRIKIOS, MENANDER PROTECTOR, EUNAPIOS, and JOHN OF ANTIOCI. The excerpts were slightly edited and supplied with commentaries. The compiler of the Souda used the Excerpta (C. de Boor, BZ 21 [1912] 381–424; 23 [1914/19] 1–127).

EXCERPTA LATINA BARBARA. Sec Barba- rus Scaligeri.

EXCERPTA VALESIANA (or Anonymus Valesii), so called after their first publication in 1636 from a single 9th-C. MS by Henri de Valois (Valesius), comprise two very different works. The first, apparently composed ca. 590, is a biography of Constantine I the Great, entitled Origo Constantini imperatoris. This piece has won much modern praise for its clarity, accuracy, and impartiality; here and there the text corresponds with passages in Orosius. The second excerpt, seemingly written ca. 550, deals with Italy under the Ostrogoths Odoacer and Theodoric the Great in the period 474–526, under the title Item ex libris chronicorum inter cetera. This extract, demonstrably using such sources as the Life of St. Severinus by Eugippius and the Chronicle of Maximianus, bishop of Ravenna (died 556), is equally notable for its anti-Arian bias and unclassical Latin.

- B.B.

EXCOMMUNICATION (ἀφορμοσύς, “casting out”) entailed the exclusion of the transgressor from the community or fellowship of the church and its sacraments, esp. the Eucharist. Offending members included emperors, for example, Leo VI and Michael VIII. The separation from the church’s sacramental life was either absolute or partial, that is, it could be either temporary or for the lifetime of the individual. Thus excommunication could be either “greater” or “less.” (Like the anathema, the greater meant full removal from Christian society.) Once excommunication was imposed, the offender was obliged to express METANOIA and to avail himself of the church’s penitential procedure by which he was gradually reconciled to the church. Thus, ultimately neither partial nor total isolation from the church’s sphere deprived the wrongdoer of membership in the Christian community.

- A.P.

EXECUTION, or capital punishment, the most severe of penalties. The Ecloga lists crimes punished by execution: intentional murder, rape, incest and pederasty, robbery and arson, and esp. crimes against the state—mutiny or lèse majesté, treason or espionage. The death sentence was also to be imposed on apostates from Christianity and those who robbed churches at night, magicians and sorcerers, and heretics (Manichæans and Montanists are specifically named). As the means of execution, the Ecloga mentions primarily the sword, and rarely burning at the stake or hanging on the phourka, the fork-shaped gallows that replaced the cross, which as the Christian symbol was prohibited as a means of execution from the time of Constantine I. Historical texts seldom mention execution. Phourkai were employed for the mass execution of rebels or traitors (e.g., Theoph. 184.4–6; Theoph. Cont 303.17, 877.4); burning at the stake was the fate of Basil the Copper Hand and Basil the Bogomil as well as the slaves who murdered Asylayınasters. Historical texts seldom mention execution. Phourkai were employed for the mass execution of rebels or traitors (e.g., Theoph. 184.4–6; Theoph. Cont 303.17, 877.4); burning at the stake was the fate of Basil the Copper Hand and Basil the Bogomil as well as the slaves who murdered Asylaiosters. Hagiographical legends abound with stories of execution, but it is difficult to distinguish truth from pious invention. There was always a hesi- tancy to resort to execution; in the case of political crime, blinding, exile, or confinement in a monastery often substituted for execution. In the 14th-C. Balkans there was a tendency to replace the death penalty with a fine (B. Krekić, BS/EB 5 [1978] 171–78); the spread of the phoinkon reflects the same tendency in Byz. On the other hand, the government always strove to prevent private persons from carrying out execution, particularly in the form of religious or blood ven- gence (A. Mirambel, Byzantium 16 [1944] 381–92).

- A.K.
EXEDRA (ἐξεδρον), any room, semicircular or rectangular in plan, that opens full-width directly onto an adjacent larger space or room, covered or uncovered. Widely used in antiquity to flank streets, porticoes, and forums, exedrae figured prominently in the interiors of imperial Roman baths, palaces, and villas. Eusebios of Caesarea noted their presence at the basilica in Tyre, the Octagon at Antioch, and the Constantinian Martyrion in Jerusalem. Christian Latin authors (e.g., Paulinus, PL 14:37) apply the term to the apse of a basilica. Exedrae like these, open only to the central room, flanked the Octagon in the Palace of Galerius, Thessalonike, and several Constantinopolitan palaces. Much later they are found at the Nea Moni, Chios, and elsewhere. Concomitant with their role as adjacent rooms, other exedrae were designed as essential parts of centralized churches. Carried on arches that link the major piers, these allow free passage from the central space to the aisles or ambulatory spaces, expanding the breadth while articulating the elevation of the space covered by the central dome (S. Vitale, Ravenna; Sts. Sergios and Bakchos, Constantinople; Hagia Sophia, Constantinople). Exedrae enabled the Late Antique and Byz. architect to transform a square, rectangular, or polygonal plan into a single volume of space unified around a central, vertical axis. Hence their pervasive use in Byz. architecture.

EXEGESIS (ἐξηγησις, lit. “leading out”), hermeneutics, explanation or interpretation of the Bible. The foundations of exegesis were laid by the Alexandrian School, esp. Origen, who suggested that the sacred text had several layers of meaning. He recommended threefold exegesis on the model of a tripartite human nature, consisting of body, soul, and spirit. This approach supposes literal, allegorical, and spiritual senses of the text, or—to put it differently—references to the past, present, and future. Against this, the Antiochene School emphasized the need to grasp the real (historical) sense of the text and saw the basis for this in the contemplation of words, including study of the Hebrew original of the Septuagint. The main direction of Byz. exegesis was to find in the Old Testament testimonies concerning Christ, which were then exploited in the theological disputes of the 4th–5th C. Among the greatest exegetes were Athanasios of Alexandria, Ephrem the Syrian, Theodore of Mopsuestia, John Chrysostom, Gregory of Nyssa, Cyril of Alexandria, and Theodoret of Cyrus. In the 6th C. original exegesis came to an end, to be replaced by study of the exegesis of church fathers and by the assembly of authoritative citations in catena. The Council in Trullo (692) restricted creative hermeneutics; this plus the loss of the knowledge of Hebrew contributed to the decline of exegesis.

EXEMPTION, the term commonly used by modern historians to denote a form of immunity—any of several means whereby persons or property were released from some or all of their state obligations for the benefit of a person or institution, reflecting the basic principle that all property and persons bore fiscal burdens. Some exemptions were temporary (sympatheia, klasma, kouphismos) and were granted and revoked by an apographeus with each fiscal survey (exosis); others were (usually) permanent privileges (exkousseia, ateleia) that could only be granted by the emperor: they exempted merchants from taxes on commerce and owners from the taxes due on their property (land, ships, etc.) or from the taxes (telos, kanon) or supplementary charges (epereia, corvees) owed by their dependent peasants. Yet another category of exemption (astrateia) exempted persons from the service connected with strateia. Permanent exemption from taxation, granted to certain properties of a few privileged monasteries and individuals in the 10th and 11th C., seems to have become almost the rule in regard to large landowners by the 14th C. Scholars view this devolution of fiscal authority to private individuals and religious corporations as either a symptom or cause of the gradual weakening and collapse of state authority in the 12th–15th C.

Lit. Lemercier, Agr. Hist. 122, 168–70. 173f. 308. 244.
EXILE, a form of punishment. Byz. law distinguished two types of exile: *exoria*, banishment or deportation, which could be temporary or permanent, and *periorismos*, confinement within prescribed boundaries (*Basil. 60.51.4*). In defining *exoria* the author of the *Synopsis Minor* (*Zepos, Jus 6:398f*, par. 70) stressed the prohibition against being in the city in which the emperor resided or was passing through. The quaestor had the right to banish illegal aliens from Constantinople. The major difference between *exoria* and *periorismos* concerned the disposition of the property of the criminal: those under *periorismos* had their property confiscated; those under *exoria* retained it (*Zepos, Jus 6:501, par. 80*). The Book of the Eparch several times mentions *exoria* as a penalty for economic crimes; normally, however, exile was reserved for political criminals and suspects, esp. church leaders (*John Chrysostom, Pope Martin I, Theodore of Studios, Photios, etc.*). The place of banishment could be to the border of the empire, an island, or some less remote location; some suspects or criminals were relegated to monasteries or placed under house arrest on their own estates. Experiences of exile varied widely; a special genre of letters from exile presents a broad range of feelings, from nostalgic longing for the capital to complaints about lack of books, starvation, and torture.

EXKOUSSEI (ἐξουσσεῖα), a fiscal official whose functions were similar to those of the epoptes. The term *exosis* designated the fiscal survey that in the 13th C. was carried out by high-ranking functionaries. The distinction between *exosis* and *apographe* (see *Apographeus*) is not clear. In 1254 Constantine Diogenes, who was *apographeus* and *exises* of the islands of Leros (Lerne) and Kalymnos, conducted *apographe* and *exosis* (*Patmou Engrapha 2, no.65.1*); the forged document allegedly signed by Joseph Pankalas in 1261 speaks of the *anatheseis* and *exosis* of the island of Kos (*Patmou Engrapha 2, II.29*); an act of 1407 mentions the *apographike exiosis* [sic] of the island of Lemnos (*Pantel., no.17.9*), a *praktikon* of 1430 the *apographike exisis* of the same island (*Dioryss., no.25.1*). The term *exosis* was employed for surveys of the theme of Thessalonike (*Xénoph., no.12.1*) and elsewhere.

EXKOUBITON. See DOMESTIKOS TON EXKOUBITON.

EXKOSSATOS (ἐξοκοσσᾶτος, from Lat. *excusatus, “excused,” cf. EXKOUSSEIA*), an uncommon term of unclear meaning, applied to people, oikoi, and ships (*plopia*). In the 10th C. some people called *exkossatowi* were engaged in crafts for the imperial household (*De cer. 488.18*, R. Cantarella, *BZ 26* [1926] 31.2). A chrysobull of 1060 distinguishes *exkossatowi* tou dromou from *stratiotai* and *demosiarios* (*Lavra 1, no.33.32–34*); ostensibly, these *exkossatowi* served the imperial dromos. In an early example of the devolution of state revenues to private landowners, documents from the second half of the 10th C. refer to *exkossatowi* or *exkossavomenoi* households granted to the monastery of Iveron, which received their *telos* (*Ivri. 1, nos. 2.21–22, 6.23.33*); in the 13th C., *exkossatowi* households are known (*MM 5:15.6–7*).

Apparently, the designation *exkossatos* did not necessarily imply that the individual, household, or ship served the state or that the *exkossatos* was excused from paying the *telos*. It meant, rather, that the state no longer received some or all of the fiscal obligations owed by the *exkossatowi* (whether *telos* and/or *epereia* is disputed), either because of service to the state (in which case the *exkossatoi*, if a peasant, paid less or no taxes) or because some or all of the *exkossatowi*’s state obligations were granted to a private individual or corporation. In later texts, the terms *exkossatowi* (*MM 5:260.20, a.1342*), *enkousatowi* (the *Chronicle of Morea*), and the Latin *incosati* (derived therefrom) designated privileged individuals, probably exempt from taxes and military service.

EXKOUSSEIA (ἐξουσσεία, from Lat. *excusatio, “release”), a type of exemption from certain obligations toward the state and from *introitus* (the entrance of officials into an estate). As a fiscal term, *exkousseia* appears in documents and literary
texts from the 10th C. through the end of the empire. *Exkousseia* were granted to the owners or holders of a variety of economic instruments that bore fiscal obligations, including land, *paroikoi*, ships, buildings, and animals. The two interpretations of the nature of an *exkousseia* conflict. The most common opinion is that *exkousseia* is essentially synonymous with Western immunity and implied complete tax exemption (*ateleia*) and, in the 14th C., specific judicial privileges over a property owner’s *demesne*. A. Kazhdan (Vizōč [1961] 186–216), however, argues that, at least in the 10th–12th C., *exkousseia* was unrelatable to immunity; it was rather an exemption, not from the *telos*, but from *epereiai*. In the 14th–15th C., *exkousseia* seems to refer to any kind of tax exemption.

**EXOKATAKOIOI** (εξωκατάκοιλοι), term known from the 11th C. onward to designate five (a pentad) or six principal officials of the patriarch or a bishop: *megas oikonomos*, *megas sakkarios*, *megas skeupophylax*, *chartophylax*, the head of the *sakellion*, and later the *protek dikos*.

**EXORCISM** (ἐξορκισμός), an imprecation against the Devil and demons, to drive them away, or out of a possessed person or area; also a liturgical rite for that purpose. Exorcism occurs often in the New Testament. Tertullian considered it an act that any Christian was able to perform, but by the 3rd C. professional exorcists appear. Particular importance was ascribed to the exorcism preceding *baptism*. Other exorcistic rituals, blessings, and prayers contained in the *euchologion* are the *euchelaion* (see *UNCTION*), the “Exorcism of St. Tryphon” recited on Holy Thursday and Easter; the blessing of a field, garden, vineyard, or house; prayers against the evil eye and against evil spirits dwelling in people or in houses.

Hagiographical texts present abundant cases of exorcism—healing of the possessed, the expulsion of demons (in the form of wild beasts, dragons, scorpions, etc.) from the places they had occupied, and the elimination of evil forces preventing a good harvest or catch. Exorcism was performed by imposition of hands, anointing with oil, the sign of the cross, by prayers, and by application of pieces of a saint’s clothing.

**EXPOSITIO TOTIUS MUNDI**, an anonymous treatise preserved in two Latin versions and probably translated from a Greek original; the latter was compiled in the mid-4th C., perhaps ca.360. The treatise begins with a description of Eden, which is populated by *makarenoi* (the Blessed; *carmari* in one Latin version); discussions of India and Persia then follow. This introductory part has parallels (probably originating in the same source) in Greek *hodoporeiai*, or guides, to Eden. After Persia comes the description of “our land,” that is, the Roman Empire: Syria, Egypt (essentially limited to Alexandria), Asia Minor from Cilicia to Bithynia, Thrace (where its “two splendid cities” of Constantinople and Herakleia are treated as equals), Macedonia, Greece, Italy, Gaul, Spain, Africa, and the islands—Cyprus, Crete, Sicily, and Britannia. This part is free of the legendary cast that characterizes the introductory section; in addition to a list of districts and cities, it contains observations on climate, commerce, political structure, and behavior. The treatise shows little trace of a Christian worldview. Its author may have been a widely traveled merchant.

‘EZĀNĀ’ (*Aeúçavā*), “tyrant” of Axum (ca.323 to 340/1 or 347/8) and identical to “Abreha” (Dombrowski, *infra* 162–64); known primarily from
undated, mostly bilingual inscriptions and from a letter of Constantius II cited by Athanasios of Alexandria. F. Altheim and R. Stiehl (Klio 39 [1961] 234–48) denied, however, that the ‘Ezānā of the inscriptions was the Aeizana of the letter, and dated ‘Ezānā to the 5th C. The ‘Ezānā of the inscriptions claimed authority over Himyar and other lands. In the first half of the 4th C. Frumentius, a captive in Axum, started to organize Christian communities, but Christianity was not yet the state religion in Axum. Frumentius traveled to Alexandria, where Athanasios ordained him bishop of “India” (i.e., Ethiopia). In the letter to ‘Ezānā and his brother She’azana, Constantius required Frumentius to return to Alexandria ca.328 and receive ordination from a new Arian patriarch, George. Another attempt to include Axum within the orbit of Byzantine influence is reported by Philostorgios, who recounts that Theophilos the Indian visited both Himyar and Axum in his way to the East; since the embassy was sent by Constantius, it is reasonable to suppose that Theophilos negotiated with ‘Ezānā.

EZERITAI (‘Ezeritai), one of two groups of Sklavenoi attested in the Peloponnesos. An etymology from the Slavic ezero (lake) is evident; D. Georgacas (BZ 43 [1950] 327–30) hypothesized that ezero was a translation of the toponym Helos (lit. “marsh meadow”) near Taygetos, where the Ezeritai settled. In Constantine VII Porphyrogenetos (De adm. imp. 50) the Ezeritai are mentioned, along with the Melingoì, as paying tribute of 300 nomismata; they revolted in the reign of Romanos I, were defeated, and ordered to pay 600 nomismata. Unlike the Melingoì, Ezeritai do not appear in later Byzantine sources, but the bishopric of Ezeri, in the Peloponnesos, is attested in 1340 (MM 1:218.31).

EZRA*. See ZORAVA.
FABLE (μῦθος) was considered by rhetoricians as a type of progymnasma; it had, however, a broader function of communicating a moral message in the form of a short essay with a gnomic conclusion. Classical authors, such as Demosthenes or Aristotle, did not consider fable as a noble genre; it evidently acquired more popularity in the Roman Empire. While Hermogenes treated fable briefly, the orator NICKOLAS OF MYRA (ed. Felten 6–11) devoted an extended paragraph to it. Nicholas defined fable as a fictitious story having no verisimilitude, but illustrating a truth; it dealt either with human beings or animals. Some people also included among fables myths about the gods, but Nicholas considered the latter as a separate genre, mythika diegemata. He stressed the fable’s simplicity of language and the inclusion of an epymythion or moral.

The earliest fable collection to survive, the so-called Collectio Augusta, cannot be precisely dated; the 4th–5th C. is a possible date. Later collections are known throughout the Byz. period (F. Rodriguez Adrados in La fable [Geneva 1984] 182). The Byz. imitated ancient fables, esp. those ascribed to AESOP and Babrius (ca.2nd C.), sometimes paraphrasing and revising them. Some fables are included in the progymnasma of Theon. Libanius, Aphthonios, Theophylaktos Simokattes, Nikephoros Basilakes, and Nikephoros Chrysobelges; some fables exist as chapters in progymnasma, others appear as episodes in lengthier genres. Oriental fables are broadly used in Barlaam and Josaph and esp. Stephanites and Ichnelates of Symeon Syr. In the Palaiologan period the animal epic was developed out of animal fables.

—S.C.

FAÇADE (πρόσωψ, lit. “appearance”), the front or any side of a building designed with the intention of being seen. Initially, the Byz. concept of the façade was based on classical prototypes; hence its use was restricted to a relatively few public building types such as palaces (e.g., the façade of the 5th-C. Palace of Theodoric in Ravenna as represented on a mosaic in S. Apollinare Nuovo, RAVENNA) and, even less commonly, churches (e.g., the 5th-C. façade of the Theodosian rebuilding of Hagia Sophia, Constantinople). As the classical tradition in Byz. waned, so did interest in monumental façades. They returned to importance in the 9th–10th C. The façades of such Constantinopolitan churches as the 10th-C. Myrelaion and the 11th-C. Pantepoptes display a classicizing structural logic. The latter example also exhibits a tripling of recessed arches and pilaster strips, a mannerism characteristic of Komnenian architecture in the capital (e.g., Pantokrator Monastery, Kilise Camii, and Gül Camii). At the same time, in various parts of Greece, a very different, unclassical attitude toward façade articulation emerges (e.g., Panagia Gorgoepikoos in Athens, Merbaka near Nauplion, and Hagia Theodora in Arta). Here we find flat walls decorated by continuous horizontal bands and surface textures, in complete disregard of the building’s interior structure. This attitude toward façade decoration becomes even more widespread in the 14th C., with isolated areas of resistance, as at Mistra, to the general unclassical current.

—A.K.

FACTIONS (from Lat. factio; Gr. μέρος, δῆμος or δήμου, δημόται; sometimes used as technical term), associations that staged circus games; associations of partisans of any one of the four colors inherited from Rome that competed in chariot races. Blues (Veneto) and Greens (Prasinoi) were the chief rivals and seem to have cooperated with Whites (Leukoi) and Reds (Rousoi),
respectively. The theory that factions or demoi resembled political parties is now largely abandoned.

Numerous inscriptions and narrative sources show that the factions’ importance grew as circus racing spread over the Roman East and factional identities were extended to the theater and its professionals in the late 5th C. Factions sat in special sections, raised monuments to their charioteers, and became deeply involved in performing acclamations, as the Hippodrome and its vast audiences attracted a developing imperial ceremonial. The circus’s enhanced political significance—perhaps in tandem with undiagnosed social and economic pressures—aggravated the tendency of excited fans to explode in the insufficiently explained riots that wrecked the cities of the late 5th to early 7th C. (e.g., Nika Revolt), which contemporaries connected with factional rivalry. Certain neighborhoods seem to have been particularly associated with one or another faction (Gascoy, infra); the factions could be mobilized to man the walls of their city in crises and they certainly played a role in the civil war between Phokas and Heraclius. Faction members were a small minority of racing fans in 602, when Constantinople counted 900 Blues and 1,500 Greens. Partisans may have been young and come from comfortable backgrounds. By the 8th C. they were headed by demarchoi. Some members’ titles reveal specialized functions; those of meliatai and poietai underscore the link with ceremonial acclamations that would typify the factions in the 9th and 10th C.

Factional circus strife vanished after the 7th C.; chariot-racing and factions now became restricted to Constantinople and its environs. De ceremoniis details their ceremonial and circus duties; it sometimes distinguishes peratikoi factions—headed by demokratai (the Domestikos ton Scholon for the Blues and Domestikos ton Exkoubiton for the Greens)—from politikoi factions, headed by the traditional demarchoi (e.g., De cer., bk.1, ch.2, ed. Vogt, 1:29.6–31.17), a distinction which perhaps reflects the suburban or urban origin of their members. These organizations were integrated into the imperial administration: the taktika place their officers in the imperial hierarchy (see De cer., bk.2, ch.55, ed. Reiske, 798.20–799.16, for the longest list of personnel) and, in the 10th C., the factions were subordinate to and salaried by the praepositos. The medieval factions kept their special Hippodrome seats; they had their own organs, stables and, for their performances, were assigned phialai in the Great Palace as well as stations on the routes of imperial processions. Blues were particularly associated with the Virgin of Diakonissa church. Each faction certainly counted more than 50 members (De cer., bk.2, ch.21, ed. Reiske, 617.10–13). They might wear wreaths or crowns (stephania) and hold handkerchiefs (encheiria) while performing (e.g., De cer., bk.2, ch.15, ed. Reiske, 577.10–12). Ceremonial poems by Theodore Prodomos suggest that faction-like groups (demoi) were still performing in imperial ceremonies of the 12th C.

FACTORIES, IMPERIAL (ἐργαστήρια βασιλι κάκα). Although production of goods was concentrated in small ercastria, significant numbers of laborers from certain fields of craftsmanship came under the supervision of state officials. Production of weapons, for example, was largely under state control, as were major construction projects: according to a 9th-C. chronicler (Theoph. 440.19–23), Constantine V assembled 6,000 tech nitai (artisans) from various provinces in order to repair the aqueduct in Constantinople and placed them under the supervision of archontes ergodioktai with a patrikos at their head. In addition to the production of weapons, imperial factories were involved in minting coins (see MINTS), weaving (gynaikea), dyeing silk, and making jewelry. Seals list various archontes ton ergodosion; in Laurent’s Corpus (vol. 2) are listed 11 archontes of the blattion, one archon of the chrysokalon (luxurious garment), and one of the jewelry factory. In other sources the state production of silk is most frequently attested: Theophanes (Theoph. 469.3–4) mentions the fire in an imperial workshop (ergodosion) of chrysokabrio; the vita of An tony II Kauleas (ed. A. Papadopoulos-Kerameus, Sbornik grečeskih i latinских pamiatnikov, vol. 1 [St. Petersburg 1899] 18.25) refers to the head of the imperial silk factory; Leo the Deacon (Leo Diac.
146.24–147.2) mentions another head of the imperial histourgia under whom a system of weavers labored. Next in frequency are imperial jewelry workshops—in the 10th C. a high-ranking official, the sakellarios Anastasios, was archon of the chrysochorion (Theroph Cont 892.14–15). Anna Komnene (An.Komm. 2:10.10) speaks of an imperial “foundry” (choneia) where gold and silver were worked. Finally, Nicholas Mesarites describes the ragged crowd of workers at the mint who toiled day and night under the merciless gaze of their overseers.

We do not know how the work in these workshops was organized. It is plausible that some private craftsmen (e.g., lorrottomo) were coerced into working in imperial factories; some contingents of imperial craftsmen consisted of people sent there as punishment for a crime: thus, Theodore of Stoudios (PG 99:1249D) writes about a man condemned for icon veneration who was forced to work with the weavers as an imperial slave. Eusebios of Caesarea also considered the workers in imperial gynaikeia as state slaves. According to the Book of the Eparch, private artisans’ slaves who broke rules could be made into state slaves.

FACUNDUS, bishop of Hermiane in Byzacena; died after 571. He was an opponent of Justinian I’s religious policies. A leading supporter of the Three Chapters, Facundus represents the disillusionment of the African hierarchy after Justinian’s reconquest. He attended synods in Constantinople in 546 and 547–48; there he wrote a defense of the Three Chapters, maintaining that the condemnation of Theodore of Mopsuestia, Ibas of Edessa, and Theodoret of Cyrrhus meant the abandonment of the faith of Chalcedon. In 550 he participated in a council in Africa that condemned Pope Vigilius. After the Council of Constantinople in 553 he continued to write and was, at least briefly, excommunicated.

—T.E.G.

FAIR (πανήγυρις), an occasional or periodic market, that is, one that is not permanent either in terms of time or in terms of structures such as market stalls and, in this way, is distinguished from regular market days. The Greek term panegyris has different meanings, even within the same period and author. Its original meaning being a general gathering, it could refer to a religious feast, a public celebration, a commercial fair connected with a religious celebration, or a purely episodic market, as in the promise of Alexios I to the Crusaders to provide them with “abundant fairs.” The local fair, attested in many parts of the empire, served the exchange needs of the local population. Libanius provides a classic description of the function of a fair in the 4th C., which was the exchange of products among the inhabitants of various villages of the same locality; the network of exchange thus being formed obviated the need of exchange with the city. In the late 10th and 11th C., there is mention of local fairs where the merchants came both from the vicinity and from other areas, and where therefore the exchange involved more than the locality itself. The periodicity seems to be institutionalized.

Large international fairs are also attested, one such being the fair of Chonai during the feast of the Archangel Michael, and the fair of Themalonike, connected with the feast of St. Demetrios, for which the Timarion provides a description. The fairs of the Peloponnesos in the 14th C. seem to fall into an intermediate category.

A tax (kommerkion) was levied upon commercial activity at fairs and could be remitted by the emperor or given as a grant. The kommerkion of the fair of Erethios, remitted in part by Constantine VI in 795, was 100 pounds of gold. In the late 10th C. and after, there is evidence that the powerful, or the communities, or the monasteries of a locality where a fair was constituted, received revenues from the fair. A novel of Basil II (Zepos, Jus 1:27f) suggests that the merchants who participated in a fair could act together and choose its locality, their interests taking precedence over those of the person who had rights over the place (cf. also Peira 57).

---

**FALCONRY.** See Hawking.

**FALIERI, MARINOS** (Μαρίνος Φαλιέρος), poet: born ca.1395, died 1474. One of the most prominent feudal landlords of Crete, Falieri played a major role in the island’s affairs. As a young man (ca.1425–30), he (rather than his grandson of the same name, ca.1470–1527) wrote several short works in rhymed political verse. Though the *Didactic Discourses* (advice to his son) and the *History and Dream* (a dream encounter in dialogue form between the author and his beloved) owe something to Byz. demotic literature (esp. the Spænas poem and the romances Belthandros and Chrysanta and Libistros and Rhodame), they are also influenced by western European literary currents, in particular those of contemporary Venice. This is even more the case with the *consolatio* (Rhima Paregoretike) addressed to his friend Benedicto da Molino. The *Lamentation on the Passion and the Crucifixion* is a dramatic depiction, perhaps based on an icon. The *Erotic Dream*, closely modeled on the *History and Dream* and normally attributed to Falieri, is possibly not by him at all. A man of practical experience rather than wide education (he was familiar with legal Latin and at home in vernacular Greek, while his first language was the Venetian dialect), he—like his predecessors Schalikos and Leonardo Della Porta—is a witness to the cultural life of Venetian Crete in the early 15th C.

---

**FAMILY.** Although the family was the fundamental unit (microstructure) of Byz. society, there was no specific word for it in Byz. Greek: the most common term συγγένεια (synonymia) designated both the nuclear family and kinship in general; relationship through marriage is defined or rather described as “connection and joining” (*Basil. 28:4:11,*). The term *φαμιλία/φαμελία* (from the Lat. *familia*) is found in some acts of the late 14th–15th C. (*Laiou 3, nos. 140:15, 161:15; Dockier, no.53,16,* where it denotes a family household in contrast to one run by a widow.

The Byz. family was primarily a nuclear family, although extended families of 20–30 members are occasionally mentioned in hagiographical and documentary sources. The frequency of occurrence of extended families varied over time and space. According to A. Laiou (*Peasant Society* 80), in the 14th-C. theme of Smyon families were on the average larger than those in Thessalonike. *Ecloga* 2.2, when prohibiting marriages between members of a *syngeneia*, lists the following categories of relatives: parents, children, brothers, sisters, and *exadelpoi*, that is, nephews and nieces; then follow relations by affinity—stepfather/stepmother, father/mother-in-law, brother/sister-in-law, etc. Relations between uncle and nephew were often very close (J. Brenner, *ZPapEpig* 50 [1983] 173–86). A family could also include adoptive children (see ADOPTION) and such members of the household as *mistrhiai*—as potential husbands of a master’s daughter.

The nuclear family formed the household and was the main economic unit in both town and countryside. The husband and wife worked side by side in the fields or in the workshop, and children (see CHILDHOOD) were involved in household activities from an early age, esp. in the country where they tended their parents’ swine or sheep; in cities, the boy might leave the family at an early age to become an apprentice. The Byz. family was a much more cohesive unit than the late Roman family: MARRIAGE was concluded by a solemn MARRIAGE RITE and not mere consensus (A. Laiou, *R* 4 [1985] 189–201); CONCUBINAGE was, at least in theory, abolished; DIVORCE was restricted; BETROTHAL was equated to marriage; the property of the husband and wife was administered as common effects with overlapping rights to both portions.

Although the nuclear family was the cornerstone of Byz. social organization, it was nonetheless limited by several factors. It was viewed as a concession to the frailty of human nature and as taking second place to eremity (see HERMIT) and CELIBACY, which occupied a higher rung on
the ladder of values. In some instances the state controlled the family. Not only were princely marriages often concluded on the basis of political considerations—resulting sometimes in personal tragedies—but on occasion the state imposed marriages (some nuns were compelled to marry monks during the period of Iconoclasm, widows and maidsens were sometimes forced to marry foreign mercenaries) or made a couple divorce if the union was considered socially improper. The state also exercised the right to abiotikon, appropriation of a certain part of the inheritance left by the deceased head of the family (if he died intestate) to the detriment of his relatives. Although kinship and lineage were underdeveloped in comparison with countries of western and northern Europe, they still played a certain role and influenced the functioning of the nuclear family. Some distant relatives were entitled to certain rights, such as protimesis in the sale of land. The rights of the individual within the family were emphasized: there was no right of primogeniture in Byz. law, and the family property had to be divided, at least in theory, among the children of the pater familias (often in equal parts between brothers and sisters) and in this way dispersed, unless the relatives agreed to retain the unity of their properties. For example, in 15th-C. Trebizond, five relatives (syngonikarchioi) possessed land collectively (Vazelon, nos. 43, 44).

As in the West, monks did not marry and produce new families, and monastic propaganda urged children to leave the family and sever their links with their parents. On the other hand, some monks and nuns maintained connections with their close relatives, entered the same (or a neighboring) community, or created artificial, familylike small units. Moreover, unlike the West, Byz. priests and deacons (but not bishops) were allowed to be married. In addition to monks and nuns, there were other groups of people who did not marry but maintained familial relationships: eunuchs who could not procreate children nonetheless preserved close ties with their nephews; teachers of ecclesiastical/state schools who frequently remained single (in expectation of an episcopal see) and favored their nephews; men who kept concubines. Slaves were not permitted to have a legitimate family (at least until the 11th C.), although they did have monogamous unions.

Along with strengthening of family links over time, there was increasing prestige of the woman as wife and mother whose role in the household was decisive. The warmth of relations between parents and children is often stressed in Byz. literature—in evident disregard for the demands of some rigorists (e.g., the author of the vita of St. Alexios Homo dei) who praised the dissolution of family ties. Some heretical dogmas, for example those of extreme Dualist sects, went so far as to advocate the total abolition of the family and rejected sexuality and procreation. As a pivotal institution of social life, the family served as a model for structuring other types of social relations. The emperor was proclaimed to be the father of his subjects, and family terminology and used to describe both his relations to neighboring rulers and some hierarchical ranks (e.g., gambros, son-in-law); family terminology characterized the relationship of the teacher to his disciples (his "sons" or "nephews"), esp. within the sphere of spiritual influence; the concept that in the monastery the spiritual father replaced the biological parents was widespread in Byz.

**FAMILY 2400. Sec Decorative Style.**

**FAMINE (λιμός).** In a marginally subsistent agricultural economy such as that of Byz., famine followed any climatic irregularity that interfered with agricultural, esp. grain, production. Byz. chronicles and saints' lives regularly record the harsh winters, droughts, floods, and plagues of locusts that jeopardized the annual harvest. Because God provided for mankind, any disruption to that provision was interpreted as a sign of divine displeasure with a particular situation or event, as in the case of the famine that followed the deposition of Elias as patriarch of Jerusalem in 516 (Cyril of Skythopolis, Vita Sabae, ch.58, ed. Schwartz 159,7–14). Since bread was a staple dietary requirement for the Byz. population, a
failed harvest could lead to high mortality. Fami-
ines were usually localized, affecting first the
countryside, then the nearby cities. Larger urban
centers, esp. Constantinople, could sometimes de-
lay the impact of famine by controlling the storage
and distribution of grain, but shortages could still
lead to riots as in the capital in 409 and 602.

Major famines occurred in 383–85 (Antioch),
443 (Constantinople), 498–502 (Edessa), 516–21
(Palestine), early 540s, early 580s, 600–03 (Syria),
under Basil I (Skyl. 277f), 927/8 (‘the great fam-
ine’), 1032 (Cappadocia and neighboring areas),
and 1037 (Thrace and Macedonia). From the sec-
ond half of the 11th C. and the 12th C., data on
famines are rare (Kazhdan-Epstein, Change 27, n.
11). Turkish invasions of the 14th–15th C. often
resulted in famines, as did the ‘scorched earth’
policy of Andronikos II when combattting the
Catalan Grand Company in 1306 (A. Laiou, By-
zantium 37 [1967–68] 91–113). The results of fami-
ine were esp. severe in spring when stored grain
had been exhausted: women evidently had a higher
mortality rate during famines than men. Famine
and the miraculous help of a saint is a frequent
theme of hagiographical literature.

the Younger.

FARMER’S LAW (Νόμος Γεωργικος), a legal text
preserved in dozens of MSS from the end of the
10th C. onward. It regulates relations within a
village (theft, trespassing of boundaries, damage
caused by or to livestock, etc.) or, rarely, between
two villages; a tax (extraordinia) is mentioned only
once; two kinds of land lease are regulated, but
not land purchase. There has been considerable
discussion of the date, provenance, and character
of this law code. It has been dated to the 7th C.
(particularly to the reign of Justinian I) and to
the 8th C. (as contemporaneous with the Ecloga).
Its origin has been placed in Italy and in Con-
stantinople—the absence of any reference to olive
groves and horses in the Farmer’s Law suggests,
however, an origin in hilly, inland terrain. It has
been variously viewed as a record of Slavic cus-
tomary law (even though not a single Slavic term
is to be found there); as a selection of Justinianic
norms (the name of Justinian—I or II—is includ-
ed in some MSS); as pre-Justinianic rules; as
biblical, eastern, or Hellenic precepts; as imperial
legislation; and as a private collection.

Whatever its provenance, the Farmer’s Law ref-
lects conditions in the countryside (limited to
certain territories), between the crisis of the mid-
7th C. and the 9th-C. revival. Its context is a
milieu in which the free peasantry dominates,
slaves appear only as shepherds, and ownership
of large landed estates is practically unknown. Of
85 articles of the Farmer’s Law, 40 deal with cattle
breeding, livestock damaging crops, etc., whereas
only 16 are devoted to land cultivation and related
questions, nine to vineyards and gardens, two to
agrarian implements, and four to houses and barns.
Like Western medieval leges, the Farmer’s Law
protected the animal from the neighbor (pars. 38,
59, 51, 53, 54, 85) rather than the neighbor’s crop
from an animal that caused damage (pars. 78–
79). The peasants described in this law own their
individual allotments, while some portion of the
village land is in common ownership. The rela-
tions are similar to those described in the Western
leges barbarorum, but it is unnecessary to seek for
explanation in a direct borrowing (e.g., from the
Italian Lombards)—a similar situation could cre-
ate similar regulations. The Farmer’s Law was
revised by HARMENOPoulos and translated into
Rumanian and Slavic languages.

FARM. Usually designated as staseis in fiscal
documents, farms varied with regard to their size
and location. A regular farm consisted of a house
with its enclosure and well; within the enclosure
were also sheds for hay and straw, pits (goubai)
for grain, pitharia (large, partially buried vessels
for wine and other products), and sometimes wine
presses, animal-driven mills, and stalls. The most valuable parts of the farm were called autourgia. The farm encompassed arable land, gardens, olive groves, and vineyards as well as the right to use common pastures (usually located in wooded hills), but products varied according to terrain and climate: some villages had practically no arable land, others did not cultivate olives or grapes; some farms were oriented toward fishing or the breeding of livestock.

The nucleus of the farm usually formed a part of the village, whereas the land consisted of small scattered parcels (up to 25–33 pieces) planted in such a way that vineyards could border choraphia, etc. There were no "open fields" or systematic redistributions of allotments, but parcels formed stable units normally surrounded by fences and ditches. Besides the principal homestead, a stasis could include hamlets (agridia) located far from the nucleus. Large landowners had farms called proasteia and (as monastic property) metochia, which were sometimes separated from the center of the estate by significant distances.

—J.W.N., A.K.

**FASTING (ιετοεία),** freely chosen total or partial self-deprivation of, or abstinence from, certain kinds of food and drink, usually for a predetermined period, as a means of penance and asceticism. Fasting was practiced either in common, before major feasts of the church, or individually, under the discretion of a spiritual elder. In early Christianity, fasting meant total abstinence from food and drink at least until evening. Later the notion of fasting was extended to include reduction in the quantity of, or abstinence from only certain kinds of, victuals.

On the symbolic or liturgical level, Christian fasting was related to expectation of the parousia, and thus partook of the nature of a vigil; first seen in this way in Asia Minor in the 2nd C. in conjunction with the vigil on the eve of Easter, this fast was later extended to the two days, then to the entire week, preceding Easter (whence Holy Week), finally to 40 days (whence tessarakoste, or lent), to which was prefixed later, in the 6th–7th C., a pre-Lenten "Cheesefare Week." Other lents of the church year, and fasting on the vigils of Nativity and Epiphany, and on two feasts—the Exaltation of the Holy Cross (14 Sept.) and the Beheading of John the Baptist (29 Aug.)—were also added. The Byz. system of fasts was completely in place by the 11th C.

The daily eucharistic fast from midnight until communion, in general use from the 5th C. onward, is also to be understood as a vigil for the coming of the Lord. This symbolism is the basis for forbidding fasting on Saturdays and Sundays and during the 50-day season of pentecost, since these times signified the presence of the Risen Lord, the fulfillment of the Messianic age, symbolized in the Bible by banqueting.

From the 4th C. onward, tradition distinguishes various degrees of fasting, from the total Easter fast of one or more days, to giving up meat (apokreas) or cheese (tyrine). Xerophagia ("dry nourishment") was a fast that lasted until evening, followed by a meal of only bread, salt, and water. Even the Eucharist was thought to break this fast; hence Byz. fast days were "aliturgical," that is, on these days the Eucharist, being a morning service, was either not celebrated at all, or was replaced by the presanctified. In addition to lent, Monday (in monasteries), Wednesday, and Friday were traditional fast days except during the 50 days of Pentecost. Fasting included abstinence from marital relations. Monks practiced more severe and frequent fasting than the laity and never ate meat (E. Jeanselme, 2e Congrès d'histoire de la médecine [Évreux 1922] 1–10).

Church fathers preached on fasting, and it occupies a prominent place in monastic literature (H.-J. Sieben, *DictSpir* 8 [1974] 1175–79) and in hagiographical texts. Saints might refuse even bread for certain periods and feed instead on wild berries, acorns, or dried locusts; the infant Nicholas refused to nurse on fast days, a sure sign of future sanctity. Yet excessive fasting was criticized by some intellectuals as hypocrisy: if we leave our poor brother to fast and die of hunger, says Eustathios of Thessalonike (Escorial Y ii 10, fol.39v), this is not nestia but lesteia, robbery.

FATE. See Determinism; Tyche.

FĀTIMIDS, Shiite Muslim dynasty (909–1171). Its first four caliphs lived in North Africa until Fātimid armies captured Egypt in 973. The Fātimids first clashed with Byz. in 911 at Demona (Sicily). Between 914 and 918 the Byz. governor of Sicily agreed to pay an annual tribute of 22,000 gold pieces, which Romans I succeeded in reducing to 11,000. Byz. diplomatic contacts with the Fātimids included embassies in 946, 953 (truce), and 957/8 (five-year truce), and treaties in 967 and 975. The Byz. unsuccessfully attempted to prevent Fātimid expansion in northern Syria, which was partitioned de facto in 969. Caliph al-Mu‘izz failed to prevent the Byz. reconquest of Crete. Caliph al-’Aziz persuaded Byz. in 987/8 to lift the prohibition against commercial contacts and to allow prayers in his name to be recited in the mosque of Constantinople. He died preparing a major expedition against Byz. as protector of the Ḥamdānids. A Fātimid fleet defeated Byz. in 998, resulting in a ten-year truce in 1001. After Caliph al-Ḥākim destroyed the Church of the Holy Sepulchre in Jerusalem, commercial relations were severed from 1015/16 until 1032. A ten-year treaty, which included permission for Byz. rebuilding of this church, was signed in 1038 and renewed in 1048. Relations cooled after Constantin IX died but briefly improved under Isaac I because of common fear of the Seljuks. Seljuk and Crusader invasions separated Byz. and Fātimid territories, but diplomatic and commercial contacts continued until the end of the Fātimid dynasty.

FAYYŪM (from Coptic Phiom or Piom, the sea), area of Middle Egypt where agriculture was highly developed in Ptolemaic and early imperial times; its capital was Arsinōe (Crocodilopolis). By the early 4th C. the prosperity of the Fayyūm had declined and several settlements were abandoned, but papyrus finds attest to the continuity of the chief city through the 7th C. Churches have been excavated at Tefydni, Madinat Mādī, and Ḥawār. They are generally of basilican plan, with a tripartite sanctuary, but are provincial in character, the nave being often no wider than the aisles. Nearly all the columns are spolia. Medieval sources (al-Nābulūsī, Description du Fayyum au VIIe siècle de l’Hégire [Cairo 1899; rp. Beirut 1974]; see the excerpts of G. Salmon, BIFAD 1 [1901] 29–77) refer to numerous monasteries, of which only a few have left traces. Some sites still called “Dayr” (monastery) have early churches: Dayr al-Naqūl (also Dayr al-Malak Ḥabriyāl) has parts of a 7th-C. basilica; and Dayr al-Banāt, near Dayr al-Naqūl, is a ruined monastic site with remains of a church and refectory. The region is particularly known for its FAYYŪM PORTRAITS.

FAYYŪM PORTRAITS, funerary portraits that survive in large numbers from the Fayyūm. The practice of covering the faces of mummmies with images painted on wooden panels began during the Roman occupation of Egypt, when the native population could no longer afford the traditional, elaborate sARCOPHAGI. At first naturalistic, such portraiture had become increasingly abstract by the time it went out of fashion in the 4th C. The importance of Fayyūm portraits for Byz. art is twofold: on the one hand, their realistic detail offers parallels for contemporary jewelry and clothing, and on the other, their shape, encaustic technique, and abstract, hieratic style contributed instrumentally to the development of 5th–7th-C. ICON painting.

FEAR (φόβος) was divided by Nemesios (PG 40:688B–689A) and John of Damascus (De fide orth. par.29, ed. Kotter, Schriften 2:81) into six categories: oikhoS, hesitation or fear of future ac-
tions; *aidos*, awe or fear of blame; *aishyne*, shame or fear of having acted dishonestly; *kataplexis*, consternation at the sight of a great imaginary apparition; *ekplexis*, terror caused by an unusual apparition; and *agonia*, anguish or fear of failure. John of Damascus (*De fid. orth.* 64.10, ed. Kotter, *Schriften* 2:162) considered cowardice and anguish to be physical emotions, expressed in ways such as sweating and "clots of blood" (*Lk* 22:44).

Church fathers interpreted fear mostly as a spiritual emotion. Basil the Great (*PG* 29:369C) distinguished between a good fear, which brings salvation, and a base fear caused by lack of faith. The good fear was fear of God (often in the formula "fear and trembling [*tremos*]"), which was contrasted with fear of punishment (and with the fear the Hebrews felt before God). In Symeon the Theologian *phobos tou Theou* is a complete and voluntary subjugation to God, self-abnegation and transformation of oneself into a slave of God.

A secular parallel to Symeon’s fear is Kekaumenos’s fear of the ever-present dangers that threaten man in every aspect of his life, such as perils of nature (poisonous mushrooms, falling rocks) or of human relationships (traps laid by friends or subordinates) or of the imperial court with its danger of disfavor. The Byz. felt themselves surrounded by dangerous natural phenomena (earthquakes, storms, drought, locusts, etc.), political turmoil (enemy invasions, rebellions), and social instability; it required enormous faith to overcome fears and maintain optimism. The usage of metaphors implying fear (shipwreck, fire, disease, death) was esp. typical of Niketas Choniates, distinguishing him from Psellos and Gregoras, who stressed the possibility of a happy end after severe trials.

A.K.

**FEAST** (*εορτή, πανήγυρις*). Byz. daily life was dominated by a succession of festivals, whether these were the recurring ones of the liturgical year, or sporadic ones on the occasions of imperial weddings, triumphs, or other ceremonies. Manuel I’s list of feasts (1166) counts 66 full *panegyres* (without Sundays) and 27 half-feasts (R. Macrides, *FM* 6 [1984] 140–55).

The liturgical feasts, both "mobile" and "fixed," are recorded in church calendars. Feasts can be "dominical" (*despotikh*, of Christ), "Mariam" (*Theotokariak* of the Virgin Mary), "sancorial" (of the saints), or "occasional" (commemorating the founding of a city, the consecration of a church, a council, a miracle, a transfer of relics, a natural calamity, etc.). They may even celebrate a dogma or its triumph, e.g., "Trinity Sunday" or the Triumph of Orthodoxy. There is a cycle of fixed commemorations for every weekday, while Sunday always commemorates the Resurrection. Ceremonial for the various feasts is described in the liturgical typikon.

In the *Typikon of the Great Church*, more important feasts were preceded by a vigil (*paramon*), but *Nativity, Epiphany*, and Exaltation of the Cross (see *Cross, Cult of the*) were the only fixed feasts with a fore- and afterfeast (*Mateos, Typikon* 2:294, 311). Later, *Sabbatic typika* distinguished five different ranks of festive solemnity: two classes of Great Feast (dominical and Marian), Middle Feasts, Lesser Feasts, and days of simple commemoration. Only Great Feasts and a few important Middle Feasts merited an all-night vigil, or *agyria*; they may be preceded by a period of fasting. Apart from that, these categories affected chiefly the celebration of *orthros* and *vespers*. Only on Great Feasts did the festal kanon replace at *orthros* the kanon of the movable cycle found in the *oktoechos*, *triadion*, or *pentekostarion*. Middle Feasts had Great Vespers and the Great Doxology at *orthros*, but no vigil. Lesser Feasts had the Great Doxology at *orthros*, but only simple vespers. These categories were not rigid, however, and sometimes elements that (ideally) pertain to feasts of one class were assigned to a feast of a different rank.

Many feasts in Constantinople involved the participation of the emperor. On dominical feasts, he attended services in *Hagia Sophia*, on the Marian feasts he proceeded to the *Chalkoprateia* of Blachernai churches, while on the Thursday of *Holy Week* he performed the ceremonial *Washing of the Feet* mandated by Jesus in *John* 13:14. Numerous saints’ days also included solemn processions around the city (see *LITTE*). A certain number of guests were usually invited to dine at the palace after the feast and could be entertained by *mimes*. The main sources for the emperor’s activities on these days are the *Klerorologion of Philotheos*, *De ceremoniis*, and pseudo-Kodinos.

Food and wine were usually distributed to the population in the city squares, or to the poor.
before monastery gates. Feasts were also accompanied by games in various forms, from horse races to semitheatrical performances. Christopher of Mytilene describes a masquerade, a procession of notaries in costume, one dressed as the emperor, on the feast of their patrons Sts. Markianos and Martyrios (25 Oct.). In the 14th C. the church assumed the staging of biblical stories on feastdays, esp. that of the Three Hebrews. (For the fairs that accompanied feastdays, see Panegyris.)

—R.F.T.

FEAST OF ORTHODOXY. See Triumph of Orthodoxy.

FEEDING OF THE MULTITUDE. Christ's miraculous multiplication of five loaves and two fishes to feed 5,000 people occurs in all four Gospels; a similar episode with 4,000 people (Mt 15:32–59, Mk 8:1–10) was amalgamated with it in both exegesis and art. Suggesting the bread of the Eucharist and its ability to sustain all who come, the scene occurs repeatedly in art of the 4th–6th C., often in conjunction with the miracle at Cana. Initially, it is shown schematically, with only baskets and fishes; 6th-C. versions use figures, but formally, with a frontal Christ blessing food presented by symmetrically placed disciples. The 6th-C. Sinope Gospels (A. Grabar, Les peintures de l'Evangéliaire de Sinope [Paris 1948], pl.III) show bread baskets and people picnicking beside this symmetrical group; this version recurs in 9th-C. monuments. The Feeding is infrequent in later art, appearing only in extensive cycles, but it does develop, becoming more narrative in form. Its eucharistic significance is acted out rather than symbolized, as the symmetrical composition is displaced by scenes of the breaking and distribution of the bread (Monreale-Demus, Norman Sicily, pl.87A–B). This development culminates in richly discursive Palaiologan representations, esp. that at the Chora.

—A.W.C.

FELIX III, pope (13 Mar. 483–1 Mar. 492). Born to an aristocratic Roman family, Felix was elected with the support of Odoacer and tried, at the beginning, to maintain correct relations with Emp. Zeno despite Rome's opposition to the Henotikon. Pressure from the Chalcedonian Alexandrian clergy hardened Felix's anti-Monophysite position, although his legates—willingly or not—entered into communion with Patr. Akakios; Felix demanded deposition of the Monophysite Alexandrian patriarch Peter Mongos and excommunicated the legates and Akakios, thus leading to the Akakian Schism (484). He found support among certain circles in Constantinople, esp. the Akoimetai. The three failed attempts to resolve the schism in Felix's lifetime fit into the broader context of Byz. policies toward Odoacer and Theodoric the Great. One of Felix's collaborators was the future pope Gelasius. The two men contributed much to the increasing papal independence from Constantinople in the realm of dogma.

FENARI ISA CAMII. See Lips Monastery.

FEodosij of Pečera, superior of the Kiev Caves monastery or Kiev-pečerskij monastyr' (ca.1060–74); saint; born Vasil'ev, died Kiev 3 May 1074; feastday 3 May. Feodosij (Theodosios) is regarded as the founder of cenobitic monasticism in Rus' for having introduced into the Caves Monastery the Rule of Stoudios, which he obtained either from a Kiev monk residing in a Constantinopolitan monastery (according to Feodosij's vita by the monk Nestor) or from Michael, a Stoudite monk who had accompanied Metr. George (ca.1065–76) to Kiev from Constantinople (according to the Povest' vremennych let sub anno 1051). The monastery's Paterik (13th C.) also credits Feodosij with hiring Byz. architects from Constantinople to build the monastery's stone Church of the Dormition (founded in 1073). Some 20 written works are attributed to him with varying degrees of certainty. His brief Lenten homilies, which have the best claim to authenticity,
chiefly concern monastic discipline and repeatedly stress the authority of Theodore of Studios. A virulent anti-Latin tract and a letter on fasting attributed to Feodosij are more likely the works of another Feodosij ("the Greek," fl. mid-12th C.), who also translated into Slavonic the letter of Pope Leo I to Patri. Flavian of Constantinople.

FEOFAN GREK. See THEOPHANES "THE GREEK."

FERRARA (Φερρα, ópia), city in Emilia, in northern Italy. The city was evidently founded in the early 7th C., at which time a fortress was built on the left bank of the Po; by the 12th C., however, the Po had changed its course, and by 1438, when Emp. John VIII Palaiologos came to Ferrara, the closest point of disembarkation seems to have been Francolino, about 10 km from Ferrara (Syropoulos, Mémoires 226–234). The fortress belonged to the exarchate of Ravenna, was captured by the Lombards, and in 757 transferred to Pope Stephen II by the Lombard king Desiderius. Under the rule of its Countess Mathilda (1063–1115) the city supported the popes (esp. Gregory VII) against Henry IV of Germany. For several centuries Ferrara struggled against the ecclesiastical supremacy of Ravenna and the political claims of Venice. At the initiative of Pope Eugenius IV, Ferrara housed the Council of Ferrara-Florence during its first phase in 1438 until an outbreak of plague forced the participants to move to Florence. The city seems to have had a small Greek colony concentrated around the Church of St. Julian, near which Dionysios, metropolitan of Sardis, was buried in Apr. 1438 (V. Laurent in Syropoulos, Mémoires 257, n.5).

A.K.

FERRARA-FLORENCE, COUNCIL OF. The council opened at Ferrara (1438–39). It was, however, transferred to Florence on account of the plague. Viewed by Rome as ecumenical, the council aimed at the union of the churches. Its convocation was a concession to the Byz., since Rome had previously refused to accept their demands for a free and open council in which both parties would be treated as equals. All the same, East-West antagonism remained. The papacy looked with contempt on the ruined Byz. Empire and strove for the political subordination of the Greek church, while traditional Byz. distrust of and frustration and disillusion with the West were still very much alive. Besides, the atmosphere was politically conditioned from the beginning. The large Byz. delegation, which included the patriarch of Constantinople, Joseph II, and Emp. John VIII Palaiologos, was also seeking military aid against the Turks.

Despite the council's prolonged deliberations on the controversial issues—papal primacy, filioque, purgatory, azymes—genuine unity was not achieved. Indeed, the basic issues were not fully resolved. Both papal primacy and the filioque were defined in Latin terms. A crucial argument for union, moreover, lost its persuasiveness soon after the council, when the military crusade promised by Pope Eugenius IV was destroyed at the battle of Varna (1444). Not surprisingly, the union decree (6 July 1439) of this council proved just as ephemeral as the union of Lyons (1274). The Byz. church officially repudiated it shortly after the collapse of the empire. Both the Memoirs of Sylvester Syropoulos and the acts of the council itself are unofficial compilations, reflecting their authors' individual views and perspectives.

FESTUS, Latin historian; died Ephesus 3 Jan. 380. The old identification with Rufius Festus Avienius or his son is not valid. Festus is plausibly, though unprovably, equated with Festus of Tridentum in Raetia, governor of Syria and then proconsul of Asia (372–78), a character condemned for his many vices by Ammianus Marcellinus, Eunapios, and Libanius. After several vicissitudes of fortune, he met the poetic fate of dropping dead on the steps of the temple of
Nemesis at Ephesus. Festus's Breviarium is a jejune précis of Roman history from the city's foundation to 369, basically a propaganda piece for the intended Persian campaign of Valens, who may have requested the work as an aide-mémoire, or to whom it may have been addressed in hopes of imperial favor. Several MS headings have it addressed to Valentinian instead, perhaps an error, although some speculate that Festus sent the work to both emperors with different dedications. Highly derivative for the most part, his work has some value for the administrative and military history of the Roman east from the late 3rd–4th C.

FETHIYE CAMII. See Pammakaristos, Church of Hagia Maria.

FEUDALISM, a term often used in modern Byz. scholarship to characterize a variety of Byz. social, economic, and political institutions and relationships. As in other fields of history, scholars disagree on the term's definition and therefore on whether/when Byz. became a "feudal society," what parts of it were "feudal," and whether the term should be applied to Byz. at all. Some academics, esp. Marxists, maintain that Byz. society can be understood only in a feudal context. These scholars variously consider Byz. to have become "feudal" in the 3rd, 7th, or 10th C., depending on such issues as whether the late Roman coloni were already serfs and whether the inhabitants of the 10th-C. village community were free smallholding peasants or dependents of the state (see Demoskarios). On the other hand, those who consider feudalism to be the devolution of public (state) power into private hands debate when and to what extent privileges—fiscal (see Exemption), administrative, and judicial—were granted to large landowners and even to towns, while agreeing that the process of devolution reached its fullest extent in the 14th–15th C.

Others see feudalism as primarily a system of hierarchical relationships among members of the ruling class, and, while the Western feudal con-

ccepts of fealty, homage, the benefice, and vassalage had little expression in Byz., these scholars debate whether the Byz. aristocracy ever became a hereditary, "feudal" nobility. Still others consider it misleading to apply the term feudalism, so laden with its autochthonous western European connotations, to Byz. Even these scholars, however, find it difficult to ignore the parallels between Western medieval and Byz. institutions (whether borrowed or indigenous to Byz.; see Immunity, Lizions, Appanage, Pronoria) and often find it useful to speak, if not of feudalism, then of "feudalizing tendencies" or the "feudalization" of Byz.

FIBULA (περόνη), a fastener for a cloak, shawl, or overgarment, usually placed on the shoulder of the wearer. Made of bronze, gilt bronze, gold, or silver, it is essentially a securing device, as distinct from a brooch, which is primarily decorative and consists of a hinged pin fastened to a front plate. The fibula was made of a single length of wire coiled on itself to produce a spring, while the back was bowed to allow for the bulk of the fabric it held. Its back portion was generally diamond- or lozenge-shaped, or cruciform, but circular fibulae appear by the 6th C. Initially they were plain, then repoussé; later versions are of openwork with gilt, gold wire, pendant gems and pears, and glass paste; eventually they were decorated with cloisonné enamel. Gold fibulae with inscriptions were given by rulers as gifts on state occasions down to the late 4th C. Conversely, plain bronze wire fibulae, resembling large safety pins, have been found in simple burials. The Byz. version of this fastener is generally the 6th-C. type, with rounded back, varying amounts of gold and gems, and sometimes a pendant cross or Christian inscription. The jeweled fibula that Justinian I wears on the right shoulder in the mosaics of S. Vitale, Ravenna, identifies his imperial status.

Plain fibulae of bronze have been found during archaeological excavations in various centers of Greece and Macedonia (e.g., Nea Anchialos, Edessa
FILEFO, FRANCESCO, Italian humanist, teacher, and translator; born Tolentino, Italy 25 July 1398, died Florence 31 July 1481. Filelfo (Φιλέλφος) spent the years 1420–27 in Constantinople as secretary to a Venetian official. He took advantage of this sojourn to study Greek with George Chrysokokkes and with a member of the Chrysoloras family, whose daughter he married. As a result of his studies, he became an ardent philhellenic, brought back to Italy MSS of 40 Greek authors, and named one of his sons Xenophon. He taught both Greek and Latin literature in Bologna, Florence, and Milan.

After his return to Italy, Filelfo was active as a translator of ancient Greek authors such as Xenophon (the Cyropedia) and Plutarch. He maintained close relations with both the Italian and Greek émigré scholars of his day, conducting correspondence in Greek and Latin. Of his Greek letters 110 survive, many on literary topics (requests for books, criticism of literary works, discussion of Aristotelian philosophy). His most frequent addressees were Theodore Gazes (18 letters), Bessarion (16), and John Argyropoulos (10). His letters contain many allusions to classical Greek literature and mythology. He was appalled by the Turkish conquest of Constantinople and recognized the consequent threat to Italy. Gazes addressed to Filelfo his treatise on the origins of the Turks. Filelfo also wrote three books of poems in Greek, of which only a few have been published.

Fifth Ecumenical Council. See Constantinople, Councils of: Constantinople II.
Constantinople, Councils of), which stated that
"the Creed cannot be subtracted from, added to,
altered or distorted in any way . . ." (Mansi
17:516C). Photios composed a lengthy refutation of
the "double procession" following his retire-
ment in 886. It is generally believed that the
interpolated creed was accepted in Rome in 1014.
The interpolation was affirmed as legitimate
by the councils of Lyons (1274) and Ferrara-
Florence (1438–39), but was rejected in the East.

—J.M.

FIRE (δμπρησμός, πῦρ). Fire was an ever-present
hazard in the large, densely populated cities of the
Byz. world; consequently a metropolis like
Constantinople had a squadron of fire fighters
(collegiati) under the jurisdiction of the eparch
of the city in each of its regions. Nevertheless, great
conflagrations, begun accidentally or deliberately,
still engulfed whole sections of large cities as they
spread rapidly along the porticoes and major
thoroughfares. Like earthquakes, fires were in-
terpreted by the Byz. as signs of divine anger; for
example, the fire of 1 Sept. 465 was thereafter the
object of an annual liturgical commemoration
(Synax.CP 6.3–9). Major fires in Constantinople
occurred in summer 388; 12 July 400; 20 June
404; 25 Oct. 406; 15 Apr. 428; 17 Aug. 433; 448;
1–2 Sept. 465; 475; 498; 509; 510; 6 Nov. 512;
15–17 Jan. 532 (during the Nika Revolt); July
548; 13 May 559; Dec. 560; 12 Oct. 561; Dec.
563; Apr. 583; 603; 10 Aug. 626; Dec. 790;
886/7; spring 912; summer 931; 6 Aug. 1040;
after Sept. 1069; before 1194 destroying the
northern region of Constantinople (Nik.Chon.
445.29); 25 July 1197; 17 July 1203 (set by the
Crusaders); 19–21 Aug. 1203; 12 Apr. 1204; 25
July 1261 (the Greeks burned the Latin quarters);
Nov. 1291; 1303; 1308; Aug. 1351; 29 Jan. 1434
(this list compiled after Schneider with slight cor-
rections). Fires outside Constantinople are little
known or studied, though the sources mention
attacks by enemies who set fire to strongholds,
threshing floors, and crops in fields.

The image of fire or flame occupied a signifi-
cant place in theological concepts and in litera-
ture: fire was the major means of punishment in
hell, and a final conflagration was expected at the
end of the world. Metaphorically, the Byz. would
speak of the fire of wrath, passion, heresy, per-
secution, etc. The pagan concept of the divine
nature of fire (e.g., the Persian worship of fire)
was refuted and ridiculed, but the image of God
as fire was retained, as well as the concept of
miraculous fire related to angels and saints. The
Byz. themselves stressed the ambiguous nature of
fire, contrasting material and immaterial (spiri-
tual) fire, divine fire and fire of sin, illuminating
and burning fire.

LIT. A.M. Schneider, "Brände in Konstantinopel," BZ
—B.C.

FIREARMS. Portable firearms were unknown in
Byz. Cannons were developed in western Europe
during the 14th C. and were first used against the
Byz., to little effect, by the Turks in their siege of
Constantinople in 1422. G. Škrivanić (Kosovska
bitka [Cetinje 1956] 28–30) asserts that Dubrovnik
obtained cannons by the mid-14th C. and that
during the battle at Kosovo Polje in 1389 both the
Serbs and the Turks used firearms. But while the
Turks continued to invest in improved siege
guns, the Byz. had neither the materials nor the
money to develop their own cannons. Doukas
(Douk. 307.20–309.27) and other historians re-
counting the fall of the city in 1453 (see Con-
stantinople, Siege and Fall of) tell of the Hun-
garian gunsmith Urban who first offered his skills
to the impeunious Constantine XI Palaiologos
before entering the far more remunerative service
of the Turks. The cannons he built for Mehmed
II the Conqueror, esp. one huge gun capable of
firing a stone weighing over 1,000 pounds, were
instrumental in demolishing parts of the city walls
and blocking the Golden Horn to the ships of
Byz. allies, while the few small Byz. guns were
badly outweighed and outranged.

FIRST ECUMENICAL COUNCIL. See Nicaea,
Councils of: Nicaea I.
FISCAL SYSTEM. Continuing the Roman practice, the state maintained a budget based mainly on agricultural revenues. Indirect taxation, esp. from customs (the octava, then the kommerxion), always burdened the circulation and sale of merchandise. On the contrary, city taxes disappeared after the 7th C.

Payment of taxes has always been seen as a main and inevitable obligation of the population, but devolution of fiscal revenue was also practiced to varying degrees: tax exemptions allowed landowners to keep for their own profit at least part of the fiscal revenues; and fiscal revenues could be the object of outright grants to individuals (logismoi), often as a compensation for services provided to the state (esp. in the pronoia system). Such practices had important social consequences.

First Period (4th to 7th C.). The 3rd-C. crisis and Diocletian’s reforms resulted in a fiscal system based mainly on contributions in kind, first of all on the annonae, the burden of which was distributed to taxpayers following the system of capitatio-jugatio. Fiscal revenue from land was stabilized for periods of time according to the indiction and was eventually increased (or restored in case of abandoned lands) by the epibole. Following the establishment by Constantine I of a stable monetary system based on gold, the fiscal services, eager to collect precious metal, applied increasingly the principle of commutation, in spite of the injustices that this might entail, and ended by officially transforming the land tax into a contribution in gold (chrysoteleia). In 518, public finances were healthy, with attested reserves of 320,000 pounds of gold. Fiscal income was complemented by various secondary taxes and services.

Until the 7th C. at least, the empire’s fiscal services were attached to the praetorian prefect (and, secondarily, to the comes sacrarum largitionum) and functioned through provincial governors and various local authorities (or the latifundary landowners). Synethelai were the main remuneration of tax collectors.

Second Period (8th to 12th C.). The new fiscal system is essentially known from the 9th C. onward, thanks esp. to some treatises on taxation. It was based on the idea that each fiscal unit, be it an individual (pronoia, owning one or more prouastheia), or a village (chorion, a community of small landowners with some communal properties), was expected to produce a stable fiscal revenue each year, following the principle of fiscal solidarity among its members. Until a tax alleviation was granted, neighbors were responsible for the tax of abandoned lots; and if, after alleviation, they agreed to take over such a lot, they were required to pay deferred taxes (opisthoteleia) as if they had already been exploiting it. Solidarity in payment of taxes was brought beyond the limits of the fiscal unit by Basil II with the allelengyon.

The main tax, the kanon, was placed on land (4.166 percent ad valorem; but this “fiscal” value could differ from the real one—Schilbach, 1978, Quellen 59f) and its amount was established according to the epibole for each fiscal unit described in the cadaster; it was increased by the parakoautemata and had to be paid mostly in gold coins (charagma). To these were added the hearth tax and many secondary taxes, corvées, and services (in kind or in money). Some categories of land (those submitted to the stratheia or the dromos) were in principle exempt from secondary taxes, as were those of lay or ecclesiastic landowners that had received a privilege from the emperor (very seldom was the kanon included in such exemptions). Various tithes were collected from state-owned lands.

Fiscal services were under the authority of the logothetes of the genikon, whose representatives operated in the provinces under the supervision of the strategoi: anagrapheis conducted the census, epos tai revised the cadaster, exisotai verified and redistributed the fiscal burden of the contributors, and dioketai collected the taxes. Military obligations related to the stratheia were controlled by the logothetes tou stratiotikou, postal obligations by the logothetes tou dromou. The protonotarios of the theme was in charge of provincial finances and levying most of the secondary taxes and corvées. In the 10th–11th C. provincial judges also collected taxes.

Third Period (12th to 15th C.). The fiscal system, although retaining its main characteristics, changed considerably by adapting to new realities: the development of large landed property, social changes in the countryside (peasants were now increasingly paroikoi, often of the state), enhanced by the development of the pronoun system. The tax collector was now the praktor of a given province, most often a tax farmer. The census,
carried out by the apographeus (whose praktika replaced the systematic cadaster), served as a basis for calculating the fiscal revenues that would be collected by the state (or by landowners who were granted tax exemptions) or would be distributed to pronoia holders. Land was taxed at a flat rate (50 modioi: 1 hyperpyron) and this tēlos was distinguished from the tax on the paraikoi (Oiikoumenon), which was calculated according to principles that are not yet clear. The secondary taxes, smaller in number but not necessarily lighter, presented substantial regional variations (Lefort, “Fiscalité” 315–54).

Between 1404 and 1420, the Byz. administration, established in the Chalkidike after 20 years of Ottoman domination, perpetuated the pre-existing fiscal system with some Islamic taxes—the harac (land tax), the usr (tithe), the kephalatikon (capitation)—and with very few secondary taxes and services (N. Oikonomides, SüdostF 45 [1986] 1–24). (See also Taxation.)

FISH BOOK. See Opsarologos.

FISHING (ἄλειος). Peasants living in villages along the seacoast, or near a river, marsh, or pond, engaged in fishing to secure an important source of protein in their diet. The Great Lavra on Mt. Athos possessed, among its autourgia, two canals for fishing, a fishing boat (harabion), and 60 fishponds (vivaria), while in the list of its paraikoi 56 boats and 374 vivaria are mentioned (Svoroнос in Lavra 4:163); the peasants paid a rent (halevo) for the right to fish. Another rent for fishing was called halieutike tritomoria or tetramoria (third or fourth part). In cities located on the coast there were teams of fishermen, each with a headman (prateuron), like the group of fishermen in Chalcidon whose catch was disappointing until Loukas the Styliote blessed their nets and made them promise to give him a tithe, that is, every tenth fish; the other fish were to be sold (Delehaye, Saints stiles 212f). Smoked fish and caviar were brought to Constantinople from the Azov Sea. Commercial fishing from a small fleet of boats in a sea inhabited by a variety of species illustrates the homily of John of Damascus on the Nativity in the 11th-C. Menologion from Athos, Esphigmenou 14 (Treasures 2, fig.348).

The images of fish and angler had an honorific place in the Byz. system of metaphors. Fish was the symbol of Christ himself (IXΘΥΣ = Ἰησοῦς Χριστός Θεου Υἱος Σωτῆρ), and it was common to send fish to friends as a valuable present; “fishers of men” was an epithet of the apostles.

-F.W.N., A.K., A.C.

FISHMONGER (ἰχθυοπράτης). The term ichthyoprates (or ichthyopoles) existed in Roman Egypt (Preisigke, Wörterbuch 1:705) where the profession seems to have been distinct from that of fisherman or halieus (ibid. 1:56) and that of the vendor of salted and smoked fish or tariheutes (the feminine form tarihepratissa is attested in a 6th-C. papyrus; ibid. 2:578f). Fishermen in Constantinople could sell their catch themselves, like the man described in the vita of Andrew en Krisei (AASS, Oct. 8:141B) who operated in the Forum Tauri and was armed with an ax “that is used by the men of his profession.” The Book of the Eparch, however, strictly distinguished between fishermen and ichthyopratai: the latter would buy the catch at the seashore and on the skalai and sell it in special kamara, vaulted shops, in the fish market, under the control of prostatai—either the eparch’s officials or the guild’s elders. Fishmongers were prohibited from dealing in salted and smoked fish (the privilege of the saldamanrioi or grocers); their profit was set at one miliarion per nomisma (about 8 percent) or 2 folles per nomisma—about 1.5 percent (Bk. of Eparch 17:1 and 3)—a contradiction that is hard to explain. John Tzetzes (ep.81.16–82.2) relates that fishmongers were buying 12 fish for a copper coin on the seashore and selling 10 fish for the same coin on the market, thus making
16.6 percent profit. The annual income of the fisc from the trade in fish was calculated in the 14th C. at 10,000 hyperpers (Greg. 1:428.19–20).

-A.K.

FIVE MARTYRS OF SEBASTEIA, Eustratios and his companions, Auxentios, Eugenios, Mardarios, and Orestes, legendary martyrs under Diocletian, executed in Sebasteia, Armenia; feastday 13 Dec. According to the legend, Eustratios Kyriskes, an officer (skriniarios) in the army of the doux Lysias, proclaimed himself a Christian and was condemned together with the priest Auxentios. Their courage inspired many others to accept martyrdom. Before death they were severely tortured: Eustratios had to wear shoes with sharp nails inside; Mardarios was hanged upside down; Eugenios's tongue and hands were cut off. When Auxentios was beheaded, a miracle occurred: his head disappeared, later to be found at the top of a tree. The collection of Symeon Metaphrastes includes the passio, poor in information; it mentions many ancient mythological personages and authors such as Hesiod, Aeschylus, Plato, and Aristotle. According to the Libri pontificales, the martyrs' relics were transferred to Rome under Pope Hadrian I (772–95), but Arauraka in Armenia, where they were buried, remained a cult center until the 11th C. Niketas David Paphalagon and Michael of Studious wrote Greek eulogies of the martyrs. Armenian, Latin, and Spanish versions of the passio also exist.

Representation in Art. The Five Martyrs of Sebasteia, the "Holy Five," as they were often called, were an extremely popular group, included in many monumental church programs, on icons, and in MSS (e.g., the Theodore Psalter, fol.158r). Their portraits are well established by the 11th C.: Eustratios as a dark-bearded official wearing a special chlamys fastened at the front with several clasps and a white loros or scarf around his neck; Auxentios as an old man in court costume; Eugenios, a younger man also in court costume; Mardarios, wearing a red felt hat; and Orestes, a young beardless soldier wearing a cross around his neck. The Menologion of Basil II (p.241) illustrates their diverse martyrdoms as do some MSS of the menologion of Symeon Metaphrastes; one MS in Turin, which contains nothing but the metaphrastic vita of these saints, is illustrated with a considerable number of miniatures scattered through the text. A painted temple beam depicting 11 posthumous miracles of Eustratios has been preserved at the monastery of St. Catherine on Mt. Sinai; no textual source for the miracles has been found (Soteriou, Eikones, no.113).

FLABELLUM. See Rhipidion.

FLAG. See Battle Standard and Flag.

FLAVIAN (Φλαβιανός), bishop of Constantinople (July 446–between 8 and 11 Aug. 449); died Lydian Hypaepa Aug. 449 or Feb. 450. Elected as successor of Proklos, Flavian immediately entered into a conflict with the court: the eunuch Chrysaphios, favorite of Theodosios II, reprimanded Flavian for not sending presents of gold to the emperor on the occasion of his election, but the bishop refused to yield (Theoph. 98.11–19). Then, in 448, with Pope Leo I's support, Flavian dismissed Bassianos, the popular bishop of Ephesus, whose election had been approved by Theodosios II and Proklos. A crisis erupted when in 448 Flavian condemned and deposed the Monophysite archimandrite Eutyches, a protégé of Chrysaphios. Following an appeal by Eutyches, Theodosios II convened the "Robber" Council of Ephesus (449), which deposed Flavian. The mood in Ephesus was evidently hostile to Flavian; even its bishop Stephen voted for Flavian's condemnation. Flavian was banished and probably died en route to exile, even though shortly afterward the legend arose that he had been murdered by his enemies. Emp. Marcian ordered that Flavian's remains be brought to Constantinople and buried
in the Church of the Holy Apostles. Emp. Leo I and the Council of Chalcedon praised Flavian in 451 as a victim of the Monophysites.

ED. PL. 51:724-28, 731-36.

---A.K.

FLAVIANUS, a Roman senatorial family closely related to and ideologically connected with that of SYMMACHUS. Two Flavius played a signal role under Theodosios I. Virius Nicomachus Flavianus (ca.334-94) belonged to the intellectual elite of Rome and was known as a translator, a character in Macrobius's Saturnalia, and a historian; his Annales, which extended to 366, served as the main source for AMMIANUS MARCELLINUS. He owned estates in Apulia and Sicily. A dogged supporter of paganism, he favored the Donatists in 377, while serving as vicarius of Africa, and was dismissed by Gratian; Theodosios, however, restored him to favor, appointing him quaesitor in 389 and then praetorian prefect for Illyricum and Italy. His son, Nicomachus Flavianus junior, obtained Theodosios's favor even earlier, and served in 382/3 as proconsul of Asia. Dismissed for flogging a decurion, he fled home, escaping the emperor's wrath. Both father and son joined the insurrection of Eugenius; after their defeat, the father committed suicide and the son found asylum in a church. He obtained Theodosios's pardon by accepting Christianity and promising to return the salary he and his father were paid during Eugenius's usurpation. He served in Italy and Africa (until 432) and was three times urban prefect. Their relation to other Flavius is not specified in the sources.

---A.W.C.

FLOOD, THE (κατακαλυσμός). According to the Chronicon Paschale (42.12-16), the inundation of the world (Gen 6-8) completed the period of "barbarism" that encompassed the ten generations from Adam to Noah when men had no ruler and everyone lived in accordance with his own law. GEORGE THE SYNKELOS states (15.24-27) that before the flood men occupied a small area between Paradise and the ocean, but thereafter they started settling all over the earth. Thus the flood was the starting point for the development of individual "nations."

The flood posed a serious problem for exegetes: how to reconcile the extermination of all mankind (except for Noah and his family) with the idea of divine mercy. As John Chrysostom put it (PG 55:448.14-15), the flood allows us to contemplate the balance between God's mercy and God's justice. The flood was caused by men's sins that needed to be punished, but, on the other hand, those who were destroyed have been given time to repent; the mercy of God was symbolized by the olive branch. Previously Origen had rejected other explanations of the flood, such as it being an element of the cosmic cycle or representing a change in the divine plan. The flood was also construed as the prefiguration (typos) of baptism.

FLIGHT INTO EGYPT. The Holy Family's flight to escape Herod's massacre of the young children (Mt 2:13-15) belongs to the cycle of Christ's Infancy. It appears often in 4th- through 6th-C. art, where, cast as an imperial adventus, it assumes triumphal significance: Mary and Christ ride a donkey led by a youth or angel toward a city and the personification of Egypt; Joseph follows. Some versions depict palms, recalling Christ's similarly triumphal Entry into Jerusalem (see also PALM SUNDAY) and a domed city, perhaps Heliopolis, where—according to pseudo-Matthew and The Arabian Gospel of the Childhood of Christ—the idols fell when Christ arrived. The adventus composition recurs in the 10th C. at GOREME, with the youth labeled JAMES. Generally, however, the triumphal element dwindles, and later versions emphasize Christ's humanity. The personification appears only sporadically, Joseph takes the lead (see FRIEZE GOSPELS), and, in certain 12th-C. compositions, he carries Christ on his back (Cappella Palatina at Palermo). Palaiologan painters relished this detail, but also depicted the triumphal scene of the falling idols (CHORA).

---A.K.
The vivid narrative of the Flood and Noah’s Ark (Gen 7:17–8:14) was widely illustrated in the great repositories of Genesis iconography, such as the Cotton Genesis and Vienna Genesis (Weitzmann, Late Ant. Ill., pl.23) but was rare in monumental art.

—A.K., J.H.L.

**FLOOR MOSAIC** (ψηφωτητήμα, λιθόστρωτον), floor covering composed of tesserae, cube-shaped pieces of stone or glass, set into mortar in geometric and/or figural designs. The craft was widespread in the Roman Empire and continued uninterrupted into late antiquity; it flourished from the 4th to the 6th C. but was apparently not practiced in Byz. after the 7th. Late Antique floor mosaics are almost exclusively *opus tessellatum*, i.e., composed of uniform tesserae of variously colored stone—primarily marble and limestone—sometimes supplemented with terra-cotta and/or glass tesserae. Their substrata comprise three layers of progressively finer and thinner lime mortar with ground brick or *pizzocolana*: the *radius* (a layer of coarse mortar poured over packed stones), the *nucleus*, and the setting bed.

Floor mosaic was used widely in public buildings and luxurious residences where it provided a decorative, durable, and waterproof surface; it was apparently less prestigious than *opus sectile*. Figures and ornament of floor mosaics generally follow the style of monumental painting. Scholars have identified criteria of composition and style unique to floor mosaics, but the inherently conservative nature of the craft and variations according to region and quality make dating by style uncertain. Not only ornament, but subject matter and style varied according to region; until the early 4th C., eastern Mediterranean mosaics displayed illusionistic mythological scenes in prominent frames placed in the center of the floor, in contrast to the polychrome depictions of hunts and other subjects from the amphitheater on North African mosaics (see North Africa, Monuments of) or the black-and-white style typical of Rome and Ostia.

In some regions these practices continued during the early 4th C.; elsewhere style and/or subject matter changed significantly. The eastern Mediterranean was particularly conservative. Illusionistic mythological scenes still dominated pavements at Antioch and Shahba-Philippopolis. In the Balkans, some mosaics (e.g., at *Sirmium*) show influence from western Europe, others from the East. Polychrome hunting and marine mosaics with two-dimensional figures distributed across the entire floor, as in Roman North Africa, then became popular in other regions, including Italy. The largest ensemble of early 4th-C. mosaics, at Piazza Armerina, included subjects—hunts, marine scenes, *putti* harvesting grapes—close to contemporary floors in *Carthage*. At *Ganizgrad* in eastern Serbia, *Emp. Galerius* decorated his palace with hunting mosaics. Such subjects were rare in the 4th-C. eastern Mediterranean; those in the “Constantinian Villa” at Antioch are exceptional. After the edicts of toleration issued in ca.311–13 (see Edict of Milan) monumental Christian buildings, as at *Aquileia*, provided new settings for floor mosaics. Christian subjects were combined with preexisting decorative and figural elements. *Synagogues* were also decorated with floor mosaic, sometimes figural, e.g., the zodiac at *Hammath Tiberias*.

By the end of the 4th C., most floor mosaics were ecclesiastical. At this time a vogue for strictly geometric floor mosaics—in churches and secular buildings alike—dominated the eastern Mediterranean, e.g., at Antioch (Kaissie Church), Aphaia, Epidaurus, Salona. They extended as far west as northern Italy, while figural mosaics remained popular in North Africa and Italy.

Most 5th-C. floor mosaics in the eastern Mediterranean, particularly in Syria and Palestine, had figures executed in a two-dimensional style, contained in a geometric framework or regularly distributed across a white ground. The same themes dominated in secular and religious contexts. Depictions of animals alone or in rustic scenes and hunts, rare in the East earlier, now became extremely popular. Usually the subject matter remains secular, e.g., at Huarte (Basilica of Photios), Antioch (Martyrion of Seleucia), Tabgha (Nilotic scenes in *Heptapegon*). Sometimes biblical content was introduced: Adam appeared among the animals at Huarte (Michaelion), Noah’s Ark was depicted at Mopsuestia, the “Peaceable Kingdom” was a popular theme in *Glicia*, e.g., Karlik. Biblical narrative scenes like
the Samson cycle at Mopsuestia are rare in floor mosaics, evidently deemed inappropriate for them. In an edict of 427, Theodosius II forbade placing the sign of Christ on pavements (Cod. Just. 1. 8). In the Balkans, geometric mosaics remained the norm well into the 5th C. When figures reappeared, they were less varied than in Syria. Figure carpets with birds and vessels and the Fountain of Life flanked by deer or peacocks were popular. Geometric floors with donor inscriptions remained common into the 6th C. in Dalmatia and northern Italy. Christian mosaics of North Africa were restrained, tomb mosaics with symbolic motifs being typical.

In the 6th C. floor mosaics continued to flourish in Phoenicia and Palestine, but fewer were laid in Syria than in the 5th. Elements of the natural world, including personifications of seasons and months, remained the most common subjects. Frequently these subjects were incorporated into ornament. The medallion style, characterized by a decorative framework of repeated circles sometimes outlined by stylized vine RINCEAUX, was particularly prominent, as at Kabr Hiram. Mosaics of the period of Justinian I reflect the concept of the church building as microcosm, with the terrestrial world depicted on the floor, e.g., GERASA, Church of St. John, MADABA MOSAIC MAP. At M T. NEBO, compositions symbolic of paradise were placed in sanctuaries. Many synagogues received floor mosaics representing ceremonial utensils and images of the zodiac (Beth Alpha) or animals in vine scrolls (as at Nirim). Depictions of the natural world penetrated into the Balkans by the late 5th–6th C. Personifications of the months appear at Tegea and again at Argos. Elaborate representations of terrestrial creation are seen at Herakleia Lynkestis and the Dometius Basilica at Nikopolis.

In the peristyle of the GREAT PALACE in Constantinople, illusionistic depictions of animals, circus scenes, and vignettes from nature were scattered across a white ground. Although this mosaic somewhat resembles the 5th-C. mosaics of northern Syria, available archaeological evidence suggests a 6th- or 7th-C. date. Seventh-century floor mosaics are rare in the provinces. Only a few crude examples, such as the scenes of everyday life from Deir el-Adas in Syria, can be dated so late. The craft declined together with the provincial cities, although it was briefly revived outside Byz., in Umayyad mosques and desert palaces in Syria and Palestine in the 8th C.

FLOORS. The Greek word πατος (πατος) designated both a story of a building ("second πατος"—Latav 3, no.154.5-6; "fourth πατος"—Koutloum., no.15.93) and "floor" in the usual sense (Patmou Engraphe 2, no.52.170). Ordinary houses had floors made of pounded earth (they were called "without floors," ἀπατός—Patmou Engraphe 2, no.52.165), wooden boards (xylopatoś—MM 3:58.18, or sandopatoś—Patmou Engraphe 2, no.52.168), or might even be paved with marble (μαρμαροπατοś—Patmou Engraphe 2, no.50.103, or πατος dia marmaron—MM 3:55.28-29). Palaces, mansions, and churches often had opus sectile or mosaic floors (see FLOOR MOSAIC). Archaeological data testify to the preservation of ancient techniques of flooring (A.G. McKay, Houses, Villas and Palaces in the Roman World [Southampton 1975] 1981); furthermore, ancient materials were frequently reused for floor renovation (Ch. Bouras, DChAE 11 [1982-83] 101). Mosaic floors were laid on a layer of mortar, which in turn was set on a bed of sand or of crushed marble and small pebbles (A.L. Jakobson, Rannesrednevekovij Chersones [Moscow-Leningrad 1959] 222).

A law of 427 (Cod. Just. 1.8.1) and canon 73 of the Council in Trullo prohibited depicting signs of the cross on the floor lest they be stepped on; the law of 427 was included in the Basilika (Basil. 1.1.6). Balsamon, commenting on these decisions, distinguished between those who depicted the cross on the floor due to their simplicity and excessive piety and those who did it consciously to show their disrespect for the cross (Rhalles-Potles, Synonyma 2:475.28-33).

FLORENCE (Φλωρεντία), city in Tuscany. In the late Roman period the city's territory decreased significantly, though the legend that Florence was destroyed by Totila and rebuilt by Charlemagne strongly exaggerates the events. S. Reparata (over
60 m long) is one of the larger churches built in Italian urban centers in late antiquity, and as such is good evidence for local patronage of ecclesiastical construction. The site of the Roman forum continued to be used in medieval times as a market. Local tradition links the establishment of Christianity in Florence with Eastern influence; A. Amore (in *Bibl. Sacr.* 9 [1967] 494) believes that in 6th-C. Florence a chapel of St. Menas, housing his relics, spurred the development of the local cult of St. Miniasus.

In 1094 Pope Urban II visited Florence, Pisa, and Pistoia calling for participation in the First Crusade, but Florence remained aloof. Later some of the city's high-ranking clergymen participated in the Crusades: Guido of Florence, the cardinal-priest of San Chrysogono, was the pope's legate to the Second Crusade and contributed to the reconciliation between the Byz. and the Westerners; at the beginning of the 13th C. Walter of Florence was bishop of Acre. In the 14th C. the Florentines became more active in the East even though Florence's role was less sophisticated than that of Venice, Genoa, or Pisa: bankers from Florence established themselves at Alexia; the Florentine family of Acciaiuoli became major landowners in the Peloponnese but retained ties with Florence (they were involved in constructing a monastery in Certosa near Florence); the 14th-C. Florentine merchant Francesco Pergolotti demonstrated interest in and knowledge of trade with Constantinople; and the names of Florentines trading with "Turkey" are recorded in Genoese archives (e.g., M. Balard, *Gênes et l'Outre-Mer*, vol. 1 [Paris–The Hague 1973] no. 257, a. 1289). In the 15th C. Florentines tried to receive trade privileges in Constantinople; they were granted a chrysobull in 1439. The despotes of Mistra sent envoys to Florence in 1446 and 1450.

The Florentines participated in preparations for the Council of Ferrara-Florence in the mid-15th C.; they sent a ship to Constantinople to bring some Greeks to Italy (Syropoulos, *Mémoires* 198.5) and were active in persuading the delegates to leave Ferrara, which was ravaged by plague, and to move to Pisa or another city in Florentine territory; finally the council was transferred to Florence at the beginning of 1439. In the 15th C. Florentine humanists had contacts with Byz. scholars such as Plectron. After the fall of Constantinople Florence provided refuge for some Greek intellectuals: thus Demetrios Chalkokondyles (a relative of Laonikos Chalkokondyles) became a professor of Greek language in Florence in 1475; a large collection of Greek manuscripts was assembled in the city.

---

FLORENCE, COUNCIL OF. See Ferrara-Florence, Council of.

FLORILEGIUM (L., lit. "collection of flowers"), a Western medieval term conventionally applied to a Byz. genre of excerpts from earlier authors collected with an explicit purpose. The term is used esp. for theological anthologies, in contrast to predominantly secular collections of *gnomai* or *gnomologia*. A florilegium of quotations from commentators on the Bible, strung together and attached to a biblical text, is called a *catena*; one consisting of secular verse is termed an *anthology*; short *florilegia*, composed of groups of approximately 100 sentences on either religious or secular matters, are known as "centuries."

Richard (infra) distinguishes between dogmatic and spiritual *florilegia*. Up to the end of the 4th C., the former were rare, an exception being the *Philokalia* compiled by Basii the Great and Gregory of Nazianzos from Origen's writings. They became more common during the 5th-C. Christological disputes and during the Monothelete and Iconoclast controversies. A later example is the *Panoplia Dogmatike* of Euthymios Zigabenos.

Spiritual *florilegia* with a moral and ascetic emphasis appear from the 8th C. onward. Richard divides them into three categories. The first includes those based on the *Sacra Parallela* (attributed to John of Damascus) and related texts. The second includes a group of sacro-profane *florilegia* beginning with the *Locii Communis* (or *Capita Theologica*), attributed to Maximos the Confessor, but compiled in the 10th C. They flourished during the period of so-called *encyclopedism* (end of 9th to 10th C.) and in the 11th C. (Melissa). Based on the *Sacra Parallela* and, in their profane part, on *Stobaios*, they were directed toward an educated public of both clergy and laity. The third category includes monastic
florilegia, of which the first example is attributed to Anastasios of Sinai (the Erodotopoiis). They flourished in the 11th C. and later; their authors included Nikicon of the Black Mountain and John IV Onites of Antioch. Although florilegia usually contained sententiae of various church fathers, collections from a single author (e.g., Basil the Great) are known (J.F. Kindstrand, *Eranos* 83 [1985] 113–24).

—E.M.J. A.K.

**FLORIS AND BLANCHEFLOR.** See Phlorios and Platziia-Phlora.

**FOEDERATI** (φοιδεράτοι, from Lat. foedus, "treaty"), in Roman law a term for the barbarian tribes who were allies of the empire. In the 4th C. the term was applied to those barbarian groups that—like the Visigoths in 332—were settled on the territory of the Roman Empire on the condition of providing military service (E. Chrysos, *Dacoromania* 1 [1973] 52–64). The term was transferred to elite (mainly mounted) troops recruited primarily from various barbarian tribes. There has been some confusion over the date of this change. C. Benjamin (*infra*), referring to Malal. 374.12–13, spoke of a certain Areobindus, comes of foederati in the reign of Theodosios I, although he questioned the veracity of this evidence and himself placed the beginning of the institution of the "new foederati" in the reign of Honorius; Malalas, however, made Areobindus a contemporary of Theodosios II, not Theodosios I.

The 5th-C. historian Olympiodorus of Thebes (fr.7—FHG 4:9.6–10) states that the terms boukellariotai and foederati appeared under Honorius, but his evidence may be anachronistic. They are better known from the sources of the 6th C. Prokopios (Wars 3:11.3) stresses the further change in the status of the foederati: while previously only barbarians were enlisted as foederati, in his day anyone could join their ranks.

**FOLIO** (from Lat. folium, Gr. φύλλον, "leaf"), a leaf of a quire, consisting of one half of a folded sheet (bifolium or unio) of parchment or paper. In Byz., MSS only the front of the leaf (i.e., the right-hand page, or recto, as opposed to the reverse side, or verso) is numbered, if there is any numberation at all (most numberation of folios has been added later by owners or librarians). Thus, in modern citations of MSS, folio numbers are qualified by the addition of "recto" or "verso" (abbreviated r and v), e.g., fol.317r or 31v. Normally eight folios (folia), or four sheets, constitute a quire.

—A.M.T. R.B.

**FOLLIS** (φόλλις), a Latin word originally meaning a purse and applied to bags of coins of any metal of determined value. This remained its meaning until the end of the 4th C. The bishop-archon EUPHANORIS of Salamis defines it as a bag of 125 silver pieces. The description of the largest bronze coin of the Tetrarchy as a follis is an anachronism. (It was called a nummus.) With the reintroduction of heavy copper denominations at the end of the 5th C. the term was applied to the heaviest of these, the 40-nummus piece bearing the mark of value M (= 40). This remained the normal meaning of the word until the end of the 11th C., the notional value of folles being 1/24th of a miliareion and 1/288th of a solidus, though it is not likely that these ratios can have been sustained in the 7th–8th C., when the follis's weight fell from the approximately 16 g of the early 6th C. to not much over 4 g. The follis was sometimes called an obol, mainly in literary sources but also in, for example, the Book of the Eparch. After Alexios I's coinage reform of 1092, the follis was replaced as a coin by the smaller tetarteron and as a unit of account displaced by the keration, so the word gradually disappeared from use. Its Italian equivalent follaro (from follis auris "copper follis"), used at Dubrovnik and elsewhere for locally minted copper coins, was applied by Badoer and other foreign merchants to the smallest copper coin of 15th-C. Con-
stamnople, but the Greek name for these is unknown.

**FONDOCA.** See PHONDAX.

**FONT, BAPTISMAL** (κολυμβηθρα, βαπτιστηριον, φωτισμηριον), a built or stone-carved basin in a special annex of the narthex or atrium of a church or an autonomous baptistery. Until about the 7th C., a large font, set deep into the baptistery floor, was mainly intended for the baptism of adults; this could be square, rectangular, circular, hexagonal, octagonal, cross-shaped, four-lobed, or multi-lobed in plan. Later, however, smaller fonts, carved in marble or cast in bronze and usually chalice-shaped, were used for the baptism of children only. At Hosios Loukas the font is decorated with lion masks (R.W. Schultz, S.H. Barnsley, *The Monastery of Saint Luke* [London 1901] 32). Other important examples are the roughly octagonal font at the monastery of Hosios Mietios (*ABME* 5 [1939-40] 103, fig.51) and a round one from the Church of the Holy Apostles in the Athenian Agora (A. Xyngopoulos in *Euriterion ton mesaionkon neuomian tes Hellados*, vol. 1.1, no.2 [Athens 1929], fig.74).

**FOOT-STOOL** (υποποδιον, σουππεδιον), a normal concomitant of the throne and a symbol of relative superiority within sacred or social hierarchies. Following Isaiah 66:1 and Psalm 109:1, Christ is sometimes represented seated in heaven with his feet on a footstool connoting the world. At ceremonies, the emperor stood or sat with his feet on a podium, a purple cushion, or porphyry disc (rota); in his portraits a more or less elaborate footstool is customary. When the figure of the emperor was centrally placed, even between an archangel and a church father (Spatharakis, *Portrail*, fig.72), the emperor's footstool implies that he outranked them. When a ruler or other mortal flanks a sacred figure, he is rarely elevated in this fashion. Ecclesiastics are almost never shown raised on a footstool. Some wooden footstools included a heating device (Koukoules, *Bios* 2:2:80f).

**FOOD.** See Diet.

**FOOLS, HOLY** (σαλοι), a group of saints gifted with extreme foresight who, in their humility, pretended to be half-witted ("fools for Christ's sake"). The series of holy fools begins with Symeon of Emesa who embodied—in an extreme form—protest against the traditional values of urban civilization; the Life of Andrew the Fool is less extreme. The author of the Life of Basit the Younger says that this saint claimed to be "foolish" (although he remained wise and learned) in order to escape the traps of the Devil (ed. Veselovskij, 1:50:33-4). The unpredictable and enigmatic actions and words of these saints manifest their freedom from earthly bondage and their attachment to the heavenly world. A secularized version of the holy fool is found in the Life of Philaretos the Merciful, whose extraordinary generosity was viewed as "foolish" by his family and who was rewarded on earth with worldly well-being. Byzantine salo found continuators and imitators in the Russian *juridince*.

**FOOTWEAR** (υποδηματα). In antiquity there were three kinds of footwear: open sandals fastened with leather straps, shoes covering the foot, and high boots. All three types were used in Byz., but boots seem to have become most common: the term *tspanion* shifted from the sandal to the boot; Niketas Choniates (*Nik.Chon. 322.26-27*) considered white boots, *krepedes*, reaching up to the knees, as the typical footwear of a laborer; in artistic representations, the emperor and members of his family are always depicted wearing the same type of high red boots, adorned with little rows of pearls, esp. at the tips and ankles. The Virgin Mary is shown wearing this kind of footwear, although without pearls; their bright color contrasts with her dark robes. Angels too wear such boots when clad in the imperial loros.

Courtiers are depicted as shod in black, though
little can be seen of the form of their shoes under the long tunics. Active figures in shorter tunics are shown wearing high boots to the mid-calf, composed either of what looks like soft white leather above a hard black sole or of strap-work like a high sandal; in many of these cases it is hard to determine what is legging and what is shoe. Shepherds, such as those in scenes of the Nativity, occasionally wear fleece leggings above bare feet; bare feet are otherwise rare, reserved for peripheral figures such as demoniacs. John Chrysostom considered it shameful to appear in the agora without *hypodemata*, but going barefoot was a common form of penance and mortification of the flesh.

In art, monks and the clergy are depicted as wearing low black slippers, surely the *kaligia* mentioned in *typika*; for example, at the Pantokrator monastery in Constantinople a monk was issued two pairs of *kaligia* annually (P. Gautier, *REB* 32 [1974] 65.609–10), at the Kosmoseitara at Bera one pair (L. Petit, *IRA 19* [1908] 49.17). In the late Roman period one form of sandals was called *kamagia*. *John Lydos* (*De mag. 30.22–32.5*) described them as black footgear supporting the sole and toes and bound with leather straps to the ankle. They formed a part of the patrician costume. There were also military *kamagia* (*Lat. campagi militares*), mentioned in Diocletian’s Price Edict; according to Malalas (*Malal. 322.10–11*), soldiers wore *kamagia* and *chlamydes* at festivities. In the *Kletorologion* of Philotheos and *De ceremoniis*, *kamagia* are the footgear of officials.

Footwear was produced by shoemakers from leather and cloth, esp. silk. Shoes were usually black or white, though bright colors (purple, green, blue) had social significance and were worn by the emperor and officials of highest ranks. Information on the price of shoes is scarce: in Diocletian’s Price Edict it ranges between 50 and 120 denarii, in a Vazelon document of 1272 *kaligia* cost two asporoi.

**FOREIGNERS** (*έβοι, also *ethnikoi*) were equated in the late Roman Empire with *barbarians* since it was assumed that the empire encompassed the entire civilized world, the *oioumenes*. Foreigners were either direct enemies or mercenaries and *foederati*. In the late 4th and 5th C. they dominated the Roman army, providing such high-ranking generals as *Gainas*, *Stilicho*, and *Aspar*; this provoked a xenophobic reaction sometimes expressed in demands for the restoration of a native army (*synesthes*), sometimes in massacres of Germanic garrisons (whose soldiers were also unpopular as Arian heretics), and sometimes in attempts to replace foreigners by local tribes such as the *Isaurians*. After the 7th C. the mass recruitment of foreigners as mercenaries ceased, even though some foreign contingents (*e.g.*, the “Persian tagma” of *Theophobos*) served in Byz. armies. The late 9th-C. *Kletorologion* of Philotheos (*Oikoumides, *Listes* 177.29–30*) lists as *ethnikoi* the *Khazars*, *Hagarenes*, *Franks*, and the enigmatic *Phargani*. The recruitment of foreigners (*Rus’*, Franks-Normans, Englishmen, etc.) increased after the end of the 10th C. They formed a special corps of *ethnikoi* (*e.g.*, *Lavra 1, no.33.82*) under the command of an *ethnarches* (*Oikoumides, *Listes* 271.24*) or *primikerios* of the *ethnikoi* (*Zacos, *Seals* 2, no.732*).

In the 12th C. the role of Turkish mercenaries became probably more important than that of Westerners. At the same time the character of Western infiltration began to change: from the 12th C. onward, Western residents tended to be diplomats and advisers rather than military commanders; an esp. significant group among them were *merchants*, primarily Italians (Venetians, Genoese, etc.), who settled in special colonies in both Constantinople and the provinces.

The government tried to make foreigners adjust to Byz. conditions: they were given lands and sometimes tax privileges, and marriage with Greeks was encouraged: the vita of Athanasia of Aegina refers to an edict that required all single women and widows to marry *ethnikoi* (*F. Halikin, *Six médiévistes d’histoire byzantine* [Brussels 1987] 181.7–9*). The attitude toward foreigners outside the empire was also shifting: the system of *foederati* gradually disappeared, and the concept of equilateral alliances with western, northern, and eastern powers (Frankish and later German empire, Caliphate, Khazar Khaganate, etc.) was introduced; the relations with allies were regulated by political and commercial treaties. Nevertheless the perception of foreigners as barbarians, heterodox, and schismatic prevailed; Kekaumenos argued against raising foreigners to high rank, Constantine VII
Porphyrogennetos discouraged imperial marriages with foreigners, and the number of such matches remained limited in the 10th and 11th C. In the 12th C. this attitude began to change, and the number of marriages with foreign princes increased dramatically. Niketas Choniates emphasized that there were bad and good foreigners and dared to create an idealized portrait of Frederick I Barbarossa. Commercial competition and the increasing political dominance of Italians in Byz. cities as well as the narrow-minded policy of the Catholic church and the Frankish princes on territories occupied by the Crusaders contributed to growing animosity against Westerners, while economic collaboration, mixed marriages, and the need for joint resistance to the Turks created a basis for better mutual understanding. This ambivalent situation is reflected in the unsuccessful attempt at Union of the Churches.

FORGERY, LITERARY, a work whose actual author differs from the author whose name appears in the title. One should distinguish between medieval and modern forgeries. The latter were the creation of scholars (primarily from the 16th to early 19th C.) and were either ascribed to famous church fathers (e.g., A. Harnack, Die Pfaffen-Irenäus-Fragmente als Fälschungen Pfaffen nachgewiesen [Leipzig 1900]) or were anonymous like the fragments of Toparcha Gothicus. Medieval forgeries include both legal (laws and documents) and literary texts. Byz. forgeries were prompted primarily by religious zeal, the need to refute heretical views and corroborate those of the author by apostolic or patristic authority, or to promote the veneration of a local saint or martyr whose biography remained obscure. Political interests of the state, of an institution (like the papacy), or noble family could play an important role, and economic claims were involved in issuing bogus monastic charters.

The forms of forgery varied: modest alterations and interpolations, fake translations (W. Speyer, JbAChr 11–12 [1968–69] 26–41), fake quotations in florilegia, false prooimia to genuine works, apocrypha, Lives of saints of Apostolic times purportedly written by their disciples (e.g., Pankra-}

Tios of Taormina), pseudonyms, and false minutes of authoritative assemblies. The author of a fictitious text might even imitate archaic handwriting (L. Rydén, DOP 32 [1978] 132–34). Among the most notorious ancient and medieval forgeries are the Historia Augusta, pseudo-Dionysios the Areopagite, the Apostolic Constitutions, and the Donation of Constantine. Many works were ascribed to famous writers (some to several different ones); others appear under unknown names, but the events described are chronologically misplaced.

FORMOSUS, pope (from 6 Oct. 891); born Rome; ca.815/16, died 4 Apr. 896. Bishop of Porto from 864. Formosus served as legate of Popes Nicholas I and Hadrian II. In 866/7 he led a mission to Bulgaria to bring the country under Roman jurisdiction (Dujčev, Medioveco 1:183–92). He also played an important role at the Council in Rome (July 869) that anathematized Photios. A candidate for the papacy in 872, Formosus was defeated by John VIII and soon thereafter deposed from his bishopric and banished. He was restored to his see, however, in 883 by Pope Marinus I and was elected pope after the death of Stephen V, despite already being bishop of another see. After he ascended the papal throne Formosus sought the support of Arnulf, king of the eastern Franks, who entered Rome and was crowned by Formosus. In his relations with Constantinople Formosus maintained neutrality between the parties of Photios and Ignatios.

FORMULARIES, model books for drafting documents; used by major chanceries and, more
often, by less educated and less pretentious notaries. They reflect the reality that prevailed at a certain moment and in one particular part of the empire (the hypothesis of regional formularies has been suggested on the basis of the preserved notarial acts). Such collections of formulas, mostly from the 13th C. onward, are preserved in literary and legal MSS. The chancery formulas were classified either by possible addressee or in order to guarantee the respect of etiquette (as shown in the Ekthesis Nea), or by subject in order to provide the proper rhetorico-philosophical prefaces for solemn documents (e.g., Prooimia).

-N.O.

FORTIFICATIONS. Fortification was a necessity that has left traces throughout the Byz. Empire, providing the most abundant and massive class of remains. Principles and techniques were inherited from the Romans; Byz. added little but consistently maintained a tradition of massive stone fortification. In the Roman defensive system, the main fortification was along the frontier (limes) where the bulk of the army was stationed, forming a network of fortresses strengthened by a deep militarized defensive zone. Within the empire, fortification was rare.

The invasions of the 3rd C. brought significant changes: thereafter, cities were regularly surrounded by walls, a response to the constant danger of attack. Major Byz. settlements were fortified and typically situated on a defensible hilltop. The fortress (kastron), which contained the garrison and civil and ecclesiastical officials, often became the core of a settlement that extended outside the walls (emporion). Characteristic Byz. fortifications consisted of fortified commercial cities (e.g., Constantinople, Thessalonike, Attaleia); thematic capitals (Nicaea, Ankyra) that were important military bases; subordinate military outposts (Kotyaion); and forts that commanded routes by land (Malagina) and sea (Hieron). For the rural population, refuge sites were extremely important, usually consisting of large and remote hilltops where the population of a district could flee at the time of attack. Monks also felt the need for defense, so monasteries in the countryside were commonly fortified (N.C. Moutsopoulos in Pyrgoi kai Kastra [Thessalonike 1980] 8-43).

Byz. fortified sites were defended by man and by nature. Byz. defenses typically consisted of a curtain wall with projecting towers of varying shape and heavily fortified gates. They were massively built, with a core of mortared rubble and a facing whose nature varied with time and place. Elaborate fortifications had a lower outer wall (proteichisma). A moat (taphros) was common at sites on flat terrain. Defense was from platforms on the towers, where catapults and ballistas were employed, and from the parapets of the walls, manned by archers. Often a city had, besides the outer line of fortification, an inner citadel (koula in Kekaumenos). Larger fortifications had additional defensive levels in chambers within walls and in towers. Fortifications were generally designed to take advantage of a natural situation, usually a steep hilltop, a river, or other obstacle. Many were located for strategic reasons at road junctions, mountain passes, river crossings, or narrow straits.

While large structures like the walls of Constantinople, Nicaea, or Attaleia and barrier walls such as the Hexamilon were imperial foundations, most Byz. fortifications are anonymous, and building inscriptions are very rare. It is likely that the majority were built and maintained by the government through imposition of the kastroktesia, though the numerous refuge sites were probably the results of individual initiative. In the 11th C. and later, concessions allowed individuals to build fortifications on their estates, lay and monastic alike. The walls of Constantinople were manned by troops of low ranks, nomera, and teichistai, supplemented by the citizen militia; provincial fortifications were defended by the thematic troops, and minor fortifications by local landowners and citizens.

Byz. fortifications show a distinct historical development, with constant change until the end of the empire. The greatest Byz. fortification, which served as the model for many others, though never equalled, was the "land wall" of Constantinople (see under Constantinople, Monuments.
der Manuel I there was a defensive system, the Neokastro, which included the massive walls of Pergamon and several smaller forts set back in the hills. By his time, the idea of regular or decorative facing was in decline, and the strong concrete core was simply faced with rubble, covered by plaster for protection against the elements or the hooks of an enemy; walls were normally reinforced with an internal network of wooden beams which also attached the facing to the core. Adaptation to technological change is visible at Constantinople and Kotyai, where Manuel I built towers suitable for the installation of the new heavier catapult, the trebuchet, and for use of the crossbow. The Laskarids were also great fortification builders, with notable results at Nicaea. Under the Palaiologoi, Western techniques, such as tall keeps and machicoulis, played an increasing role. The last advance appears in the walls of John VIII at Constantinople, with round ports for firearms, which were fundamentally to transform fortification.

Until the 12th C., the art of fortification was far more developed in Byz. than the West. The great stone fortifications of the 7th C. have no counterpart in Europe. The Crusader castles built in Syria, the Peloponnese, and elsewhere, however, had innovative designs; and after the Crusades the West surpassed Byz., which has nothing to compare with the sophistication of French and English fortifications of the 13th C. Nevertheless, the walls of Byz. cities, which were usually far longer than those in Europe, proved adequate until the advent of cannon.

FORTY MARTYRS OF SEBASTEIA, saints; feastday 9 March. According to the homily of Basil the Great (PG 31:508-40), they were soldiers condemned for their Christian beliefs; forced to stand naked all night in an icy lake, they froze to death. Their corpses were burned and the ashes thrown into the water. Gregory of Nyssa and esp. Ephrem the Syrian developed the theme. Ephrem (or his Greek editor) provided a date and location for the martyrdom, near Pontic Sebasteia.
tyrdom was almost as widespread and established as any biblical feast scene: forty half-naked men of varying ages standing huddled together in shallow water, some intrepidly supporting the faint, others praying or cowering with apprehension while Christ above witnesses their plight. Forty crowns sometimes hover in the sky over their heads. This composition, an almost "academic" study in male physique, was reused for the representation of a group of the damned in the Last Judgment frescoes in the parekklesion at CHORA. The basic composition, which appears first on 10th-C. ivories, was occasionally expanded to include an image of the bathhouse and the guard who substituted at the last moment for the single member of the group who lost heart and fled to the warmth of the bathhouse (e.g., at ASINOU). Other episodes of the legend were also illustrated: the attemptedstoning of the saints, the beheading of the survivors of the frozen lake, and the burning, dispersal, and gathering of the relics (in the marginal Psalters, Der Nersesian, L'illustration II 92f, and in the prothesis of the Church of St. Sophia in OHRID). These scenes may reflect a lost cycle in Constantinople or in the martyr's church in Caesarea.

-A.K., N.P.S.

FORTY-TWO MARTYRS OF AMORION, legendary saints executed in 845 by the Arabs in Samarra; feastday 6 Mar. The monk Euodios wrote the martyrs' legend, probably soon after the event described. In a verbose preamble, he theorized that the adoption of heretical opinions by emperors caused all Byz. defeats; the capture of AMORION in 838 was the last link in the chain. Evidently confusing the caliph al-Mu'tasim (833–42) with his son al-Wāthic (842–47), during whose reign the martyrs were executed, Euodios credits "Abesak," the protosymbolos of the Ishmaelites,
with seizing Amorion after a 13-day siege, slaugh-
tering all the inhabitants and soldiers, and
leading the commanders of seven themes into
captivity. Theological discussions between the
martyrs and various people dispatched to the jail
by the protosymboulos (gymnosophists, officials,
Greek traitors) make up the core of the legend.
The martyrs remained steadfast during their seven-
year ordeal, rejecting Islam and defending Chris-
tian values. Ethiopian executioners murdered them
on the bank of the Euphrates. Apparently the last
example of the genre of collective martyrdom
(which did not survive the 9th C.), Euodios’s leg-
end was important to later literature; V. Vasil’ev-
skij (infra, 101f) suggested that Theophanes Con-
tinuatus was aware of Euodios; several versions
of the legend appeared, including one ascribed
to Michael Synkellos.

Representation in Art. Unlike their counter-
parts, the Forty Martyrs of Sebasteia, these mar-
tyrs were rarely represented; they appear merely
as a group of courtiers in chlamyses and tunics in
a MS of the menologion of Symeon Metaphrastes
in Messina (Univ. Bibli., San Salvatore 27, fol.172v).

Ed. Skazanie o 42 amorijskich muzenikach, ed. V. Vasil’ev-
skij, P. Nikitin (St. Petersburg 1905).

FOUNTAIN OF LIFE. The fountain of life
(Gen 2:10) and its water were pervasive images
of Christian salvation. Baptistry decoration
throughout early Christendom showed the drink-
ing harts of Psalm 42:1 (see DEER) or birds flank-
ing vases. A 5th-C. floor mosaic at lunca in Tu-
sisia shows the four rivers of PARADISE flowing
from a circular fountain that recalls the Holy
Sepulchre in Jerusalem; from the 7th C. onward
the Holy Sepulchre itself was called “the fountain
of our resurrection.” Hymns call Christ a fountain of
life and the source of the life-giving water that
flows through the Gospels to nourish the Church
and link the water that flowed from his side at
the Crucifixion with baptism. Art reflects this lit-
erary image only in the frontispiece to a 12th-C.
Gospel book (E. Akurgal et al., Treasures of Turkey
[Geneva 1966] 119); there, to illustrate a verse
calling the Evangelists rivers of the Word, the
Evangelists are depicted with John pointing to
Christ as their source. A fountain came to signify
the harmony of the Gospels—fourfold but issuing
from one source—and the ornamental vases with
birds or beasts found in illuminated MSS may
refer to this. The Virgin Mary was known as the
Zoodochos Pege, or “life-giving fountain.”

FOURTH ECUMENICAL COUNCIL. See
CHALCEDON, COUNCIL OF.

FOWL, DOMESTIC. The Geoponika (bk.14)
preserves excerpts from ancient agronomists on
domestic fowl, describing pigeons and hens as well
as peacocks, pheasants, geese, and ducks; the Poul-
ologos has almost exactly the same assortment
of fowl—hens, pigeons, geese, pheasants, and
peacocks. Chickens provided the Byz. with the
best meat: the hen (ormitha) in the Poulologos (vv.
260–65) boasts that her chicks (poulia) have been
eaten by bishops, exarchs, priests, Varadariotes,
ambassadors, emperors, and senators, while a 12th-
C. author (Eust. Thess., Opuscula 311, 42–54) de-
scribes a fat, white ornis marinated in wine and
stuffed with dumplings. Chickens formed part of
the kaniskion (e.g., Iur. 1, no.29,97), and hens’
eggs were common even in the houses of the poor
(S. Papadimitriu, Feodor Prodrom [Odessa 1905]
165, n.107). John III Vatatzes encouraged the
development of the poultry “industry” in western
Asia Minor and presented his wife with a beautiful
crown acquired with money earned from the sale
of eggs. Domestic birds other than chickens were
rare; the martyr Tryphon is said to have fed geese
in his boyhood (Rudakov. Kultura 281, n.96).
Peacocks were popular on the estates of great
FRANCISCAUS, the Order of Friars Minor or Minorites (called φράτριοι by the Byz.). Founded by Francis of Assisi in 1209, the order expanded rapidly, numbering approximately 3,000 friars by 1221. It soon planned missionary expeditions to the East to convert the Muslims. Francis himself made a trip to the Holy Land in 1219 and then preached at the court of the sultan in Egypt. Other Franciscans soon became involved in missionary activities in the East, including Constantinople and Kaffa. By 1220 the Franciscans were influential at the court of the Latin Empire of Constantinople. In the 13th C. the Franciscan province of Romania expanded to roughly 20 convents. A number of Franciscan theologians, many of whom spoke Greek, served as papal legates to the Byz. court in Nicaea to discuss controversial points of theology, thus preparing the way for the Union of Lyons in 1274. The earliest of these was the English Franciscan, Haymo of Faversham, a master of theology at the University of Paris, whom Pope Gregory IX sent to Emp. John III Vatatzes in 1234 to discuss the UNION OF THE CHURCHES. The practice continued until the decisive missions of the Greek-born Franciscan, John Parastron, who accepted Mi-
Michael VIII's profession of faith prior to the Council of Lyons and also acted as interpreter there.

The most visible mark of the order's presence in the capital during the Latin occupation of 1204-61 is a cycle of frescoes devoted to the life of St. Francis in Kaleshriane Camii. When the Byz. recaptured Constantinople in 1261, the last Latin patriarch of the city left a member of the order there as his vicar, although the Franciscan convent was evidently abandoned. In ca.1296, however, the Franciscans returned and kept a convent in Constantinople until they were again expelled in 1307. Thereafter they maintained their house in Pera, continuing to serve as imperial emissaries to the pope as well as papal envoys to the imperial court throughout the 14th C. Some Franciscan churches built in the Greek provinces still survive, esp. on Crete.

FRANKOPOULOS. See Phrangopoulos.

FRANKS, a Germanic people, probably formed during the 3rd C. from a regrouping of several different tribes that inhabited the eastern bank of the lower Rhine. Subdued by Constantius Chlorus and Constantine I, the Franks were heavily recruited into the Roman army and a segment known as the Saliæ was settled in what is now the Netherlands. In the early 6th C., the Franks were united politically by Clovis (Chlodovechus, 481/2-511), who extended Frankish rule over the whole of Roman Gaul with the exception of Septimania and Provence. Clovis also converted to Orthodox Christianity, the first barbarian king to do so. This conversion and his victory over the Visigoths (508) contributed to a Byz. perception of the Franks as potential allies against the Arian Gothic kingdoms and later the Lombards in Italy. Merovingian kings from Clovis onward were frequently honored by Constantinople with the titles consul and patrikios.

Relations between the Franks and Byz. were often strained over conflicting interests in Italy, a situation exploited by the papacy in its struggle to extricate itself from Byz. control. The papal coronation of Charlemagne in 800 brought the Franks into political, religious, and ideological competition with Byz., while Charlemagne's victory over the Avars was a threat to Byz. influence on the Lower Danube. The decline of the Frankish empire in the 9th C. and its division into three parts by the Treaty of Verdun in 843 decreased the rivalry; Arab attacks on Italy even contributed to an alliance between Louis II and Basil I. In the 10th C. the role of the Western Empire was assumed by Germany, and creation of the kingdom of France began.

FRANKOPOULOS. See Phrangopoulos.

FRANKOPOULOS. See Phrangopoulos.
FREDERICK I BARBAROSSA (lt., lit. “Red-Beard”), king of Germany (1152–90) and Western emperor (crowned Rome 18 June 1155); born ca. 1125, died near Seleucia in Isauria 10 June 1190. When he succeeded Conrad III, Frederick (Φρεδερίκος) considered marrying a Byz. princess. He deemed the invasion of southern Italy (1155–57) by Manuel I a threat to his own claims there. When Manuel allied himself with William I of Sicily (1158), Frederick became his major Western opponent. Against Byz. pressure Frederick sought to maintain German ascendency over Hungary; with the installation of Béla III, Manuel triumphed there. From 1165 Manuel subsidized the League of Lombard towns in northern Italy, which in 1176 defeated Frederick (P. Classen, Ausgewählte Aufsätze [Sigmaringen 1983] 155–70). Pope Alexander III also opposed Frederick and ca. 1166–67 considered recognizing Manuel as sole emperor (ibid., 176–83; R.-J. Lille, ByzFg 9 [1985] 237–43). When in 1189 Frederick led the German portion of the Third Crusade through Byz. territory, Isaac II (to fulfill his agreement with Saladin) attempted to trap him in Thrace. German devastation compelled Isaac to yield (Treaty of Adrianople, 14 Feb. 1190). Frederick passed through Byz. Anatolia with little friction. Niketas Choniates admired Frederick’s devotion to the Crusade’s goal.

FREDERICK II HOHENSTAUFEN, king of Sicily (1198–1250), German emperor (1212–50); born Jesi 26 Dec. 1194, died Fiorentino 13 Dec. 1250. In his long struggle with the papacy, Frederick found it useful to build up contacts in Byz., esp. with John III Vatatzes (E. Merendino, Byzantino-Sicula 2 [1974] 371–83). By the late 1230s rumors were circulating in the West that Vatatzes had promised to do homage to Frederick if he helped him recover Constantinople. The Nicaean emperor contributed troops to Frederick’s forces at the siege of Brescia in 1238. In return, Frederick barred passage through southern Italy to forces going to the rescue of Latin Constantinople. If never technically a vassal, the Nicaean emperor allowed himself to be bound very closely to Frederick by marrying Frederick’s illegitimate daughter, Constance Lancia (“Anna”), ca. 1244 (Reg 3, no. 1779). Vatatzes gained little from this alliance.

When papal forces defeated Frederick at Parma in 1248, Vatatzes decided that more might be gained from the papacy. In 1249 the Nicaean emperor reached an understanding with papal envoys over the question of the Union of the Churches. The Hohenstaufen connection seems to have polarized the Nicaean court between those who wanted rapprochement with the papacy and those, like Theodore II Laskaris, who favored a continuing understanding with the Hohenstaufen. Theodore was much impressed by this upholder of the ideal of imperial authority in the face of the challenge from the papacy.

Frederick’s chancery was able to conduct its diplomacy with Byz. in Greek. Frederick’s patronage of Greek men of letters contributed to the last flowering of Greek literature in southern Italy, centered on the monastery of S. Nicola di Casole (M. Gigante, Poeti bizantini di Terra d’Otranto del secolo XIII [Galatina 1986]).

FREEDOM (ελευθερία), a concept developed in antiquity as the opposite of slavery and potential enslavement by the barbaric world. Freedom was conceived of as the possibility of free actions limited by virtue and responsibility, that is, by inner and social factors. Stoicism introduced the concept of determinism (as opposed to free will) and saw freedom as the acceptance of fate. Christianity made the problem even more complex by replacing blind fate with God’s providence (pronoia) and by emphasizing the ethical and soteriological aspect of freedom. The problem became evident in discussion incited by Pelagius (see Pelagianism) and in Christian refutations of Manichaean dualism. John of Damascus, using Ne-
MESIAS and some other predecessors, formulated that man is autéxousios, possessing free will, and responsible for evil-doing since God cannot be the cause of bad behavior; neither necessity (anánke or heimarmene, for eternal phenomena), nor nature (for plants and animals), nor Tyché (for chance events), nor automaton (sheer coincidence) determines events (Exp. fidei 39.23–39, ed. Kotter, Schriften 2:97). Man is free to choose his actions, even though sometimes providence provides his plans from achieving fulfillment (Exp. fidei 40.17–18, p.98). Freedom can be the source of wrongdoing: the ideal of behavior is the renunciation of desires and full subordination to God, whereas demons and evildoers are free.

Parallel to this transformation of ancient freedom into Byz. subordination was a shift in the perception of slavery: the saint became the slave (doulos) of God, the courtier the slave of the emperor. Political eleutheros acquired a new meaning not connected to the idea of a free and civilized society: eleuthera began to designate tax exemption, and eleutheroi were those people free from state taxes.

—A.K.

FREE WILL (θέλημα γνώμικών, “will of choice”), a concept that stands at the center of the controversy over MONOTHELETISM. Patr. Sérgios I argued in his letter to Pope Honorius that two contradictory wills in Christ, the divine and human, cannot be accepted because such an idea would establish in him two “subjects” or “persons,” thereby falling into the heresy of NESTORIANISM. It is the hypostasis of the Logos who is freely obedient to God, experiencing no conflict and moving the human reality of Christ.

For MAXIMOS THE CONFESSOR the doctrine of “one hypostatic will of the Logos” leads to the negation of a free human will in Christ, and consequently to the abrogation of the nature of the soul. On the other hand, he agrees with the Monothelites that any opposition to the will of God, even in Gethsemane, must be excluded in Christ, and that a unity that consists only in a common goal possessed by two wills is not suffi-

cient to protect against this. Further, he agrees that such a view ultimately implies Nestorianism. The human will of Christ, so he argues, must be understood as a capacity of self-determination belonging to human nature, but not as a will of choice. Such a gnomic will is found only in a “person” or hypostasis “enabled” to make decisions, or better, condemned, because this freedom of choice is merely a deficient mode of freedom, rooted not in man’s true nature, but in his existential condition after the sin of Adam. For MAXIMOS, Adam possessed no gnomic will before his sin, and yet he sinned.

John of Damascus took up the doctrine that Christ possessed no human gnomic will on account of the hypostatic union; yet one can speak of one gnomic will of Christ precisely because of the hypostatic union and the unity of the willed objective (meaning that “in both his natures he wills and acts for our salvation”). “For the natural human will” in Christ willed the same as God (Exp. fidei 36.104, 120–23, ed. Kotter, Schriften 2:91f). Photios, who quotes this text in his AMPHIOCHIA (80.60–86, ed. L.G. Westerink, 5:113f), concludes that neither God nor Christ has a gnomic will (80.184–225, p.111f).

—K.-H.U.

FRESCO TECHNIQUE. A modified 

buon fresco, involving the application of lime-binding pigments directly to a layer of fine wet plaster added over an initial plaster coat, was used throughout Byz. times as an alternative to mosaic for wall decoration. No Byz. term corresponds exclusively to this technique. Because of its relative cheapness or its inherent modeling potential, fresco became increasingly popular in the 13th–14th C.

Examination of frescoes as well as literary allusions to painting indicate that pigments were applied in layers, even though the mixing of pigments in the modeling of flesh is found occasionally. Final flesh pigments, black or dark ochre outlines, and white highlights as well as inscriptions were normally added only after the initial layers of the painting had dried, a practice that has contributed to their loss. The range of color was limited to natural pigments that remained stable in conjunction with the lime of the plaster, for example,
lime white and lime putty, ochres varying from bright red and yellow to dark brown, earth green, and carbon black. A black wash was commonly used under blue (azurite) or green to produce a dark ground. The appearance of more expensive pigments such as ultramarine blue (from lapis lazuli) and gold and silver foil distinguish lavish works. Vermilion is also not unusual, although it tends to turn black. The rich coloristic impression given by many surviving fresco programs is a testament to the ingenuity with which masters manipulated their limited palette.

A.J.W.

FRIENDSHIP (φιλία) was an important category of ancient ethics, praised in both myth and philosophy. The church fathers, although not rejecting philia, contrasted it with true spiritual love or agape. According to Basil the Great (ep.133, ed. Y. Courtonne, 2:47.1–2), “corporate” friendship is a condition fostered by long association. Byz. epistolography preserved a stereotypical attitude toward friendship, with pertinent complaints about the friend’s silence. In the 11th C. the question of friendship was much discussed; Symeon the Theologian and Kekaumenos denied that friendship was a virtue, the latter opposing it to the nuclear family and the former the individual path of salvation. In contrast, Michael Psellos highly approved of friendship in theory and acted energetically on behalf of his friends in practice. In Niketas Choniates, the notion of philia acquires a broad range of meanings: alliance between states, semifeudal allegiance, political support, respect, although “pure friendship” appears infrequently. While antiquity emphasized primarily male friendship, the church fathers introduced the concept of heterosexual friendship between two celibate persons; equal “in Christ,” the partners in this relationship appear often as the male instructor and female apprentice.

A.K.

FRIEZE GOSPELS, conventional term for illustrated MSS in which successive scenes, in the narrative order of each Gospel, are arranged in strips across the page and within the body of the text block. Illustrations of these MSS also include headpiece miniatures (S. Tsuji, DOP 29 [1975] 165–205) and Evangelist portraits. Only two such books (Florence, Laur. 6.26 and Paris, B.N. gr. 74), of the 11th or early 12th C., survive.

A.C.

FRONTALITY, the arrangement of figures in a work of art so that the beholder engages them face to face. Like the related principle of symmetry, it is fundamental in Byz. composition. Following the decline of three-dimensional sculpture, which allowed a virtually infinite variety of axes and poses, frontality became pronounced on aedicul reliefs such as the base of the Obelisk of Theodosios in the Hippodrome and generally in portraits and portraiture. Almost invariably the most important figure in an image is shown in this manner, although in compositions such as the Anastasis the effect may be mitigated by the protagonist’s attitude toward other participants. Established in icon painting by the 6th C., frontality became a dominant formal characteristic, allowing immediate recognition of a holy figure, his or her accessibility and, above all, the intensity
of private communication. That the Byz. were
conscious of this unmediated experience even in
monumental decoration is demonstrated by the
ekphrasis of the Pantokrator in the Church of the
Holy Apostles (Constantinople) written by
Nicholas Mesares (ed. Downey, 870, 901).

Swoboda, "Die Frontalfigur zwischen Spatantike und

FRONTIER (δέρνον). In antiquity the frontier was
considered as a demarcation line between the
civilized οίκουμενε and the "savage" world of the
BARBARIAN: its significance was more cultural than
political and therefore fluctuated. Regular rela-
tions with the Persian Empire, and later with the
Arab caliphate, contributed to a clarification of
the legal concept of a frontier, while necessities
of defense produced a concrete, physical notion
of a border. Prokopios, who paid serious attention
to the problem of frontiers, recognized them as
following natural barriers—rivers, mountains,
deserts, seas; the Limes was a manmade fortified
frontier. The idea of frontier, however, was not
consistently applied: for a long period Cyprus was
shared between the Arabs and the Byz., while
considered (theoretically) as parts of Byz. territory
under the command of Byz. officials (or local
rulers adorned with Byz. titles). Intermediary zones
populated by bilingual settlers, subject to regular
raids from both sides and owing uncertain allegi-
ce, commonly existed along Byz. frontiers
(such was the milieu of Διγένες Ακρίτας). This
legal disequilibrium resulted in the application to
state frontiers of terms such as ηυροθερια or συνο-
ρια, which were normally used for rural boundary
marks. The existence of foreign enclaves made
the system of frontiers even more confused.

Border areas, despite their dangerous military
situation, contributed much to cultural and ethnic
exchange (by means of mixed marriages) and
often served as cradles for new development: thus
the new nobility of the 11th–12th C. came from
the borderlands of eastern Asia Mi-
nor and Macedonia, and innovative military tac-

FRUIT (καρποί) was an important component of
the Byz. diet. The GEOPONIKA (bk.10.74) pre-
serves an ancient categorization of fruit into αφορά
(soft) and ακρωδρα (hard-shelled); to the latter
group, besides the walnut, chestnut, and pistachio,
belonged the pomegranate. The ΠΩΚΟΠΟ-
ΓΟΣ gives a long list of fruit: quince, citron, pear,
apple, cherry, plum, fig, etc., whereas the walnut,
almond, and chestnut form a separate category
characterized as "Vorangiani." The peach ("Per-
\'\'sian apple") was also known. Fruit trees were
planted in gardens, while nuts and chestnuts usu-
ally grew in groves. A poor peasant might possess
only a single tree, as did an alterikos in the vita of
Michael Maleinos (L. Petit, ROC 7 [1902] 563,12–
19) whose only asset was a pear tree. The πρακτικα
of the 14th C. mention pear, fig, walnut, cherry,
almond, and mulberry trees; according to Laiou
(Peasant Society 297), the peasants of the Iveron
estates in the village of Gonatou owned, on the
average, 20 trees each in 1320. Calculations by N.
Kondov (infra) show that in the northern Balkans
the pear tree was more common than the apple
and the cherry tree more common than the plum.
Wild berries were also gathered; some saints are
described as picking wild strawberries (λιθαμάρια).

Some fruits were grown for market, but the
Byz. preferred produce from their own gardens:
the fruit imported by Bulgaria, stated Gregory
Antiochos (J. Darrouzès, BS 23 [1902] 279,39–
48), was spoiled—the apples wrinkled, the pears
bruised, the figs dried up, having lost their sweet-
ness during their lengthy transport.

As in the Roman tradition, artists continued to
use fruit and foliage as symbols of abundance.
attached to wreaths and other forms of ornament.

FRUIT BOOK. See Porikologos.

FULCHER OF CHARTRES, priest; participant in and chronicler of the First Crusade; chaplain of Baldwin I; born ca.1058, died 1127/8. At Jerusalem in late 1101 Fulcher began a Jerusalem History (Historia Hierosolymitana), whose lost first version apparently narrated events to 1105 and was known, for example, to Guibert of Nogent. Fulcher later pursued his account down to 1124; ca.1127 he revised and continued the whole to constitute its present form. William of Tyre exploited his work, and in the 13th C. it was shortened and translated into French. Fulcher's first sections (pp. 171–214) record the Crusaders' travels across the Balkans, his wonderment at the wealth, beauty, merchants, and "20,000 eunuchs" of Constantinople, relations with Emp. Alexios I, and the siege of Nicaca. He documents the return of some of the Crusaders to Europe via Constantinople (pp. 318–21), Bohemund's war with Byz. in 1107–08 (pp. 518–25), and deplores Venetian raids on the Byz. Aegean in 1125 (pp. 758–61).

-M.M.C.

FUNERAL (κηδεία). This rite had a double purpose: to say farewell to the deceased and to assist the soul in its ascent to heaven. The ritual had three major stages: preparation of the body and soul at the home of the deceased, the funerary procession, and the graveside service and burial. Preparations began immediately after a person's death with the washing and clothing of his body. Normally, relatives washed the body with warm water mixed with wine and spices, anointed it with perfume, wrapped it in appropriate garments, and closed the eyes and mouth. All these stages are subsumed in representations of Christ's Passion (K. Weitzmann in De arthibus opuscula XL, ed. M. Meiss [New York 1961] 476–90).

Typical burial garb consisted of a swaddling linen cloth and the shroud. White linen garments were customary among the majority; for example, Constantine I the Great was buried in his white linen baptismal robe. Monks and clergy, however, were clad in clerical vestments according to their rank. Luxurious garments often distinguished imperial or wealthy personages. Exceptions were made to meet the last wishes of individuals: thus, the vita of the 9th-C. saint Eudokimos reports that he asked his colleagues to place him in a coffin dressed in military garb with an attached sword and to give him honors of a strategos, the position he occupied in his lifetime (ed. Loparev, pp. 209:8.30–35; 210:8.5). Those devoted to him even covered his coffin with the blanket under which he died (ibid., 211:9.20). On the other hand, Melania the Younger was buried in garments associated with saints (vita, ed. Gorce 268.13–270.3).

After burial preparations, the corpse of a lay person was displayed on a small couch in a room or vestibule of a house for mourning and lamentation by family and friends. The body was oriented so that it faced east, with hands crossed on the chest and holding an icon; candles and incense burned alongside the corpse. Sometimes holy bread was put into the corpse's hands, but the church prohibited offering communion to the dead. The singing of psalms over the body served to protect the soul against demons. The coffin of a monk or cleric was placed in the narthex of a church. When Lazaros of Mt. Galesios died, his body was brought into the church, laid on the floor, and his leather chiton and fetters removed; then, probably after washing him, the monks replaced his chiton, laid him on a couch in the narthex, and prepared a coffin of cypresswood (AASS Nov. 3:587E–588A).

Following the visitation period, the funeral procession set off for the burial with lamps and burning incense, the cortèges of saints or emperors attracting large crowds. If the corpse had to be transported some distance to its final resting place (e.g., Alexios, the older son of John II), it was embalmed or simply placed in a closed coffin.

Mourners typically engaged in lamentations and tragic gestures (tears, beating the chest, pulling out the hair). Chrysostom, however, urged the replacement of wailing with the singing of psalms. Some rigorously ascetic saints also protested against
exaggerated expression of emotions: Basil the Younger (vita, ed. Vilinski 1.333.13–23) forbade laments and beating the chest at his funeral, since he considered it a time of rejoicing and entrance into “the spiritual marriage chamber.”

Furniture. The main pieces in a Byz. household were beds; tables; various seats (benches, chairs, thrones); stools; chest with locks; and “small towers” (pyrgiskoi) for precious objects. In a broader sense, furnishings included carpets, cutlery (katapetasmata), and lighting devices (lamps). Hagiographers and authors of sermons often mention precious pieces of furniture, covered with ivory plaques, silver, or gold. On the other hand, wills and inventories of the 11th–15th C. list icons; books; and gold, silver, bronze, or glass vessels, but are strangely silent about beds, tables, and chairs.

Furrer (γουνάριος). The word gounarios is unknown before the 6th C. Fikhman (Egipet 90) suggests that kauzheplokos and related terms used in some papyri designated furriers, but their context is unclear. S. Calderini (Egypit 26 [1946] 17) translates it as “weaver of wool.” Constantinopolitan furriers had their shops in the Forum (of Constantine?), where as early as 532 the basilica of the gounarioi; the structure was damaged at least twice by fire (Janin, CP byz. 98). In 14th-C. Constantinople there was a flourishing business of processing furs imported from the north: a contract of apprenticeship to a furrier survives from this period (G. Ferrari dalle Spade, SBN 4 [1935] 264), and a Latin document of 1313 mentions a furriers’ house in the quarter of Peltiarii or “furriers” (Loenertz, ByzFrGr 1425, no.4). Many furriers were Jews, esp. Jews from Venice (Matscheke, Fortschrift 96f).

Fustät, Al-, medieval Egyptian town at the southern end of the Nile delta. In late Roman times the site was occupied by the fortress of Babylon, and it was the camp (fusatoi) of the besieging forces of ʿAmr ibn al-ʿAsh in 640/1 that evolved into the Arab town. From a garrison for Arab forces advancing across North Africa, al-Fustāt soon became the capital of Egypt. Its position gave it control over Nile commerce, particularly the vital grain trade, and a leading role in traffic moving along the southern Mediterranean coast. Byz. ships often called at al-Fustāt, Byz. goods (esp. textiles) were extensively traded, and by the time of the Fāṭimid many Byz. merchants and craftsmen had settled there.

Al-Fustāt also figured in the conflict with Byz. More securely situated than the often-raided coastal towns, it served as a naval base and a market for the spoils of piracy and war. In 1168 the town was burned by the Fāṭimid vizier Shāwar to prevent its capture by Amārīc I of Jerusalem. Already affected by repeated plagues and famines, unrest, and increasing competition from neighboring Cairo (founded 968), it did recover somewhat, but by the 13th C. was no longer of much importance.

—L.G.
GABALAS (Γαβαλᾶς, fem. Γαβαλίνα), a family that served primarily with the fleet. Both the origin of the name and the early history of the family are unclear. S. Kourouses rejected the suggestion that the name originated from Gabala-Biblos and hypothesized a connection with the Old Testament Gaballos. The family’s link with the Arab Jabala, the father of the Ghassânid king Arethas, or the late Roman patricius Gabalas (Seibt, Bеlsieglе, no.129) cannot be established. Kourouses claims that the Gabalas family was known at least from the 9th C., but the seal of John Gabalas, dated by K. Regling to 850–1050 (BZ 24 [1924] 99ff) is insufficient for such a dating, and other seals of various individuals named Gabalas provide only meager information. Documents cite late 12th-C. members of the Gabalas family; two were high-ranking officials of the fleet: the protonobilissimos hypertatos Stephen (Seibt, supra, no.158) and John (Laumas 1, no.67,34). After 1204 the Gabalas family took control of Rhodes: the caesar Leo Gabalas signed a treaty with the Venetians against John III Vatatzes in 1234; Leo’s brother John succeeded him in 1240. John III captured the island in 1249. One of his navy commanders, also a Gabalas (Ahrweiler, “Smyrne” 169, calls him John), was megas drongarios until 1266/7 (PLP, no.3293). John Gabalas was megas drongarios in 1341 (Kantak. 2:118.21–23): he probably supported John VI Kantakouzenos but then betrayed him and became megas logothetes by 1344. Guillaume (Institutions 1:542) believes he was drongarios tes viglas, but, in view of the family traditions, presumably he commanded the fleet.

In the 13th C. members of the Gabalas family possessed lands in the Smyrna region. Some of them were church officials and some were intellectuals, including Manuel Gabalas (see GABALAS, MANUEL). None is known as a member of the administration after the mid-14th C., except for Michael Gabalas, oikeios of Manuel II ca.1400 (PLP, no.3310). The settlement of some family members in Crete can be explained by the traditional interest of the Gabalas family in maritime business.

—A.K.

GABALAS, MANUEL, also known as Matthew of Ephesus; metropolitan of Ephesus (1329–51); born Philadelphia ca.1271/2, died before 1359/60. Gabalas began his career in Philadelphi as anagnostes, deacon, and then as protoonotarios (1309–12) of Metr. Theoleptos. He lost his position because of his opposition to Theoleptos’s continuing anti-Arsenite stance. He was widowed in 1312. In 1321 he became a priest and, after reconciliation with Theoleptos, chantophylax of Philadelphi; in 1322/3 he took the monastic habit. He spent much time in Constantinople, where he became acquainted with literati such as Nikephoros Gregoras and Nikephoros Choumnos. He continued to live in the capital even after his appointment to Ephesus because his see was under Turkish occupation. He spent the years 1332–37 in Thracian Bysis, where he was named metropolitan kat’epidosin (i.e., to obtain additional income besides that from his own see). When he was finally able to enter Ephesus in 1339, local Muslims made his life miserable by barring him from the cathedral (which was converted into a mosque) and throwing stones at his house (ep.55). Because of his opposition to Palamism, he was eventually deprived of his see.

Gabalas was also a writer; his 63 surviving letters treat literary and philosophical topics and make frequent allusions to Homer and Plato. He also wrote three treatises on the Odyssey. His other works include an oration to Andronikos II and three monodies. Reinsch (infra 45–57) recently identified Gabalas as the author of 200 Chapters on moral themes (cf. A. Angelou in Maistor 259–67). Gabalas also worked as a scribe, copying, for example, Vienna, ÖNB, theol. gr. 174, an autograph MS of his own works.
Gabras, Michael, writer and official of the imperial chancery; born ca. 1290, died after 1350. Almost nothing is known of Gabras except for the internal evidence of his voluminous correspondence. A resident of Constantinople, he eked out a meager living as a bureaucrat, and seems to have had continual (or pretended) financial difficulties: many letters to his friends are requests for necessities such as bread, salt, fish, wheat, and barley.

Gabras was the author of a number of rhetorical works, including eulogies of his mother and father, four orations to Andronikos II, and a monody on the deceased Michael IX. He also wrote “criticism of books” and a book on dreams. None of his oeuvre has survived, except for a large group of 462 letters dating between 1308 and 1327. These are addressed to 111 different individuals, including luminaries such as Andronikos II, John (VI) Kantakouzenos, Nikephoros Choumnos, and Theodoret Metochites. Despite the emphasis upon style over content common to Byz. epistolography, Gabras’s letters are not without interest. Some are requests for favors, complaints about his health, and lamentations over the death of his brother, John; many others deal with literary matters as Gabras exchanges MSS with his friends and seeks their opinion of his own work.

Gabriel (גֶּרֶבְרָיאַל, in Hebrew meaning “man of God”), angel; feastday 26 March. Gabriel appears in the Old Testament in the vision of Daniel (Dan 8:15–16, 9:21–22) and in the Gospel of Luke (Lk 1:11–13, 19, 26–38) as the messenger announcing the forthcoming births of John the Baptist and Jesus Christ. He was popular in Jewish legend and apocrypha as a guardian of the world and as a destroyer of enemies and sinners; for Muslims he is the one who revealed the Qur’an to Muhammad. In Christian tradition Gabriel was promoted to the rank of Archangel (not conferred upon him in the Bible) and revered either together with the Archangel Michael or in connection with the Annunciation.

Gabriel’s function as a messenger was expressed by his carrying a walking staff, but he could also be depicted frontally as a guardian, clad in the imperial garb of an archangel holding globe and scepter, accompanying, along with Michael, the figure of Christ or the Virgin (e.g., the bema mosaics in Hagia Sophia in Constantinople, Nea...
Mone on Chios). Gabriel is shown crowning the emperor Basil I in the 9th-C. Paris Gregory (fol. Cv). His role in the Annunciation, one of the Great Feasts, assured his presence in nearly every church program and on innumerable icons as well as in cycles of the Akathistos Hymn; Gabriel appears also in images of the Virgin of the Passion and in extended cycles of the Dormition as the angel who brings the news to the Virgin of her impending death. Although he occasionally joined Michael in performing a miracle, Gabriel had no miracle cycle of his own.

There were at least five churches or chapels in Constantinople dedicated to Gabriel (Janin, Églises CP 66); a church of Gabriel in Miletos is also known (Grégoire, Inscriptions, no. 220bis).

GABRIEL HIEROMONACHOS, composer who lived and worked at the monastery of Xanthopoulos; fl. Constantinople first half 15th C. He may be the author of Discourse on the Signs of Chant, known from 16th-C. MSS. This treatise discusses the meaning of the neumata in allegorical and etymological terms.

GABRIELOPOULOS (Γαβριηλόπουλος, fem. Γαβρηληπολύνα), a family known in the 14th C. Stephen GabrieLOPOULOS established his rule over Thessaly sometime between 1318 and 1325 with a formal recognition from Constantinople of his dependency; he bore the title of sebastokratōr. Until his death in 1332/3 he possessed Stagoi, Trikkala, Phanarion, and several other castles. After a period of struggle for Thessaly, Michael GabrieLOPOULOS gained control there; in June 1342 he issued a charter in favor of the archontes of Phanarion, guaranteeing privileges such as freedom of disposition of their property, exemption from taxes and billeting, strict conditions of military service, freedom from responsibility for treasonous relatives, and the tribunal of peers (C.P. Kyrkis, Hellenika 18 [1964] 73–78). As the lord (authenthes) of the area, Michael swore an oath that confirmed these privileges. His further fate is unknown. Other GabrieLOPOULOS are known at the same time in the Strymon region: a GabrieLOPOULOS made a donation to Esphigmenou before 1318 (Esphig., no. 14.198), a certain GabrieLOPOULOS possessed one third of the village of Krousovo before 1347 (no. 23.16). The family’s relationship to George Kydones GabrieLOPOULOS (fl. 1348–83), physician and writer (see George the Philosopher), is unclear. A certain GabrieLOPOULOS was exiled in 1370 for possessing books on magic.

Lit. PLP, nos. 3430–35. B. Ferjančić, Tsarilja u XIII i XIV veku (Belgrade 1974) 168–89. —A.K.

GAETA (Γαήτη), port on the Italian Tyrrhenian coast, of importance to Byz. in the 8th C.; during the Lombard conquest of central Italy, it assured communication between Rome, Naples, Sicily, and Constantinople. After the fall of the exarchate of Ravenna (751), Gaeta, which was part of the duchy of Naples, remained officially Byz. Between the end of the 9th and the beginning of the 10th C., however, the dynasty of the local hypatoi—called duces after 915—gradually became independent. Constantine VII considered Gaeta a part of Longobardia (De adm. imp. 27.46–52). The economic interests of Gaeta were predominantly related to those of the neighboring papal states; accordingly the city participated in the silver circulation of northwestern Europe, in contrast to the rest of southern Italy, where Byz. and Arab gold coinage prevailed. Nevertheless merchants from Gaeta are attested in Constantinople during the 10th–11th C. In 1032 Gaeta was conquered by Pandolf IV, the Lombard prince of Capua, and in 1064 by the Normans.

GAGIK I (Gakikios), last major Bagratid king of Armenia (989–ca. 1017–20). Gagik was able to maintain a senior position vis-à-vis the other Bagratid kings of his time ruling in Kars and Lori, esp. after the death of David of Tav'k/Tao, whom he supported against the Kurdish emirs of Azerbaijan. The divided kingdom of Vaspurakan offered no challenge to Gagik, who also acquired considerable territory in the east at the expense of Siwnik', to which, however, he returned certain
eclesiastical privileges. Gagik's dominant position allowed him to withstand pressure even from Byz.: when Basil II reached the Armenian border in 1000 to claim the bequest of David of Tavk' / Tao and the other Armenian and Georgian rulers were hastening to submit to Basil, Gagik remained defiantly inside the walls of his capital, Ani. For the rest of his reign, which marked the peak of Bagratid power in Armenia, his authority remained unchallenged; Ani, whose cathedral was completed by his queen, became a major administrative and cultural center.

NGG

GAGIK II, last Bagratid king of Armenia (1042–45); son of the anti-king Ashot IV; died Kzistraî ca.1079/80. At the death of his predecessor John Smbat, Byz. demanded the surrender of Ani with the support of the pro-Byz. party in the capital. The imperial troops, however, failed to take the city and the opposition party crowned Gagik king in 1042. In 1045, the young king was persuaded by Byz. to journey to Constantinople, where he was detained and induced to abdicate in exchange for the title of magistros and domains in Cappadocia (possibly Charsianon and Lykandos, though Byz. and Armenian sources disagree on the location). Meanwhile, the katholikos surrendered Ani to the Byz. After Gagik abdicated, he composed a defense of Armenian doctrine (preserved by Matthew of Edessa), which Gagik is said to have delivered at Constantinople in 1065. Gagik was apparently murdered by the Byz. to avenge his slaying of the metropolitan of Caesarea. A Byz. seal bearing the name of Maria, “the daughter of Kakikes Aniotes,” is preserved (A. Kazhdan, Byzantium 42 [1972] 602).

NGG

GAINAS (Γαϊνας), general of Gothic origin; born north of the Danube, died in the northern Balkans before Jan. 401. Having begun his career as a common soldier, he was one of the commanders who led Theodosios 1's barbarian troops against the usurper Eugenius in 394; the next year, in collaboration with Stilicho and Eutropios, he accomplished the fall of Rufinus and became comes rei militaris (395–99). Appointed magister utriusque militiae in 399, he was ordered to march against the Gothic commander Troadigild, but instead joined forces with him and engineered the fall of Eutropios. Power was seized, however, by the anti-Germanic group of aristocrats headed by Aurelianos. Gainas secured the latter's exile, and, acting in alliance with Kaisarios, the former praetorian prefect, he entered Constantinople with Gothic contingents. The Goths, Arian in belief, were opposed by the populace, whose anti-Germanic sentiments were expressed by John Chrysostom and soon thereafter by Synesios. Gainas tried to obtain a church for the Arians, to seize money belonging to the bankers, and to occupy the imperial palace, but failed. On 12 July 400, Gainas's troops were massacred. Gainas escaped to Thrace, where he met with resistance from the local population. The administration in Constantinople sent some other Goths under the command of Fravitta against him. In the meantime Gainas was killed by the Hunnic chieftain Uldin. At the beginning of 401, Aurelianos returned to the capital amid a triumphant welcome. Kaisarios withdrew from politics; Fravitta was executed, and the “Gothic party” was defeated. In the early 5th C. the exploits of Gainas and his fall from power were the subject of two epic poems (Sokr. HE 6.6.36), since lost, and were probably the theme of the Column of Arkadios in the Forum of Arkadios.

NGG

GAISERIC (Γαϊςερηκος), king of the Vandals (from 428); born 389, died 25 Jan. 477. Gaiseric led the Vandals from Spain to Africa in 429 and undertook its conquest. Peace with the Romans in 435 divided Africa between the two peoples. After a Roman expedition failed in 441, Gaiseric negotiated a treaty in 442 with Valentine III whereby the Vandals received further territory (Africa Proconsularis, Byzacena, eastern Numidia). In the 450s Gaiseric became involved in European affairs, urging Attila to attack the Visigoths, capturing and sacking Rome in 455, taking Valentin-
ian III's widow Eudoxia and her daughters back to Africa, and raiding the coast of Greece. In 460–61 the Western emperor Majorian built large fleets to attack the Vandal king, but the latter captured them before they set sail. Gaiseric made regular attacks on Italy, in part to further the imperial claims of Olybrius. The elevation of Anthemios in 467 meant greater Eastern involvement and led to the ill-fated expedition against Gaiseric under Basiliskos in 468. Probably in 476 Gaiseric made peace with Emp. Zeno.

Gaiseric was an Arian and systematically persecuted the Orthodox; he discriminated between Romans and Vandals in his kingdom and promoted the latter. Under Gaiseric Vandal naval power shook Roman control of the Mediterranean and spread terror as far as Alexandria.

**GALAKRENAI** (Γαλακρέναι, "fountains of milk"), site of several Byz. monasteries on Asiatic shore of Bosporus, near Chaledon. Scholars have been unable to identify the precise location of Galakrenai, evidently a place where springs of water were made milky in color by a solution of carbonate of lime. Three different monasteries are attested in this group.

1. The monastery of Galakrenai, first mentioned in 535. It may have been here that a lavishly illuminated copy of the homilies of Gregory of Nazianzos (Vat. gr. 463) was written in 1072 by Symeon, a pupil of a Theodore who was superior of "the monastery of Galakrenai" (J.C. Anderson, *DOP* 32 [1978] 178–83).

2. The monastery of Nicholas I Mystikos, founded by the patriarch ca.900. He retired to Galakrenai for five years after his deposition from the patriarchate in 907 and was buried there after his death in 925.

3. The monastery of John the Rhaiktor, founded by this official in the early 10th C. He was tonsured there in 926, after being accused of complicity in a plot to assassinate the emperor Romanos I Lekapenos. This monastery had a metochion in Constantinople. During the Latin occupation of the capital, John the Rhaiktor's monastery was given to the prior of the Pisan Church of St. Peter, located in Constantinople. After the Byz. recovery of 1261, the monastery, reduced to six monks, became a metochion of the Constantinopolitan monastery of St. Demetrios of the PalaioLOGOIs.

It is unclear which of these monasteries was given to the PANTOKRATOR MONASTERY in Constantinople as a metochion in the 12th C.

- A.M.T., A.G.

**GALATA** (γάλατον, Γαλατάς, etym. unclear), settlement occupying a promontory on the north side of the Golden Horn facing Constantinople. Originally called Sykai, by ca.425 it had become an integral part of the city, of which it formed the 13th Region. It possessed a theater, baths, dockyard, and other facilities (Notitiae urbis Constantinopolitanae, ed. Seeck, p.240.1–23). Defensive walls were probably built in the course of the 5th C. In 528 Sykai was granted the status of a city and renamed Joustimanoupolis. It may have been abandoned in the 7th C. since later sources do not mention a city. Instead we find a fort (kastellion), ton Galatou, situated on the seashore, which served as a point of attachment of the chain barring the mouth of the Golden Horn (first attested in 717).

Churches and monasteries of Galata include St. Irene (on the site of present-day Arap Camii), dedicated in 551. Many more were just outside Galata, including the cruciform martyrion of the Maccabees (4th C.), St. Thekla, St. Konon, and the leper-house of St. Zotikos. The area to the east of Galata, known as Argyropolis (Turk. Top-hane) is mentioned in the legend of St. Andrew as the site where the apostle ordained Stachys as first bishop of Byzantium.

Probably in the 11th C. Galata became a Jewish quarter that attained a population of about 2,500 (Jacoby, *Société*, pt.II [1967], 175–89). The Crusaders captured the fort in 1203 and destroyed the Jewish quarter. Attacked by Michael VIII in 1260 and occupied the next year, Galata was granted by him to the Genoese (1267), the precise limits of the colony being defined in a document in 1303. Despite stipulations to the contrary, the Genoese built walls around their settlement, which they gradually enlarged. A city of Western aspect, Galata became extremely prosperous thanks to international trade. It capitulated to the Turks in 1453, retaining many of its privileges, but quickly
declined as a commercial center. The name *Pera*, as used in the 13th–15th C., is synonymous with Galata.

No Byz. remains survive at Galata. The Genoese walls, of various dates and now to a large extent dismantled, include the Galata Tower (mid-14th C., much rebuilt).

---

**Galatia (Γαλατία),** the northern hill region of the central Anatolian plateau, stretching from the mountains of Paphlagonia to the Salt Lake and from the Sangarios River eastward past the Halys. The region was sparsely inhabited, with few cities but a large rural population in its fertile areas; it produced wheat, sheep, and goats. Galatia gained strategic importance from its location on the highways from Constantinople to the eastern frontier.

The province of Galatia was created under Diocletian with its capital at Ankyra. Galatia was divided into Galatia I (metropolis Ankyra) and Galatia II, or Salutaris (metropolis Pessinus), ca.398. In 535, Justinian I gave the governor of Galatia I the title of comes, with both civil and military powers to deal with endemic brigandage; the reform was revoked in 548. Gelimer was granted estates in Galatia after his defeat. The civil province lasted into the 8th C. (Zacos, *Seals* 1, nos. 136, 3189), by which time Galatia had become part of the Opsiakion theme, then the Boukellarian. The ecclesiastical province, embracing all Galatia from the time of Constantine I, was also divided ca.398; its parts persisted through the Byz. period. Late mentions of Galatia in narrative sources have geographic, not administrative meaning.

**Lit.** *TIB* 4:54–58.

---

**Galea (γαλέα, from γαλέος, "swordfish" or "small shark"),** a term first used in the 10th C. to denote light, rapid *dromones* powered by one bank of rowers (*Naumachica*, ed. A. Dain [Paris 1949] 21). They were commonly used as messenger ships or for reconnaissance in enemy waters. Pirates are usually said to have *galeai*, which seem to be oar-powered ships, lighter and more nimble than an ordinary *dromon*.

**Lit.** Ahrweiler, *Mer* 414. **E.M.**

**Galen, Roman physician and philosopher;** born Pergamon 129, died Rome? ca.210. The mark of this single Roman medical writer on Byz. medicine was extraordinary; his adaptations of the Hippocratic four humors as well as his use of Plato, Aristotle, and the Stoics in creating an all-encompassing medical theory ensured his use as a source by learned Byz. physicians from Oribasios to John Aktouarios. Oribasios was the first to make a synopsis of Galenic medicine; the extant sections of his *Medical Collection* show the first stages of a Byz. adeptness in fusing parts of Galen’s works with contemporary medical practice; this streamlining tendency continued through the medical encyclopedias of Aetios of Amida, Alexander of Tralles, and Paul of Aegina. Yet the best Byz. medical authors did not simply borrow the quotations of “lost” authorities as they might be found in Galen, but generally went back to the original texts when they were available and set them in an assured context with those of the great Pergamene. Oribasios, for example, apparently consulted directly the *Materia Medica* of Dioskorides, and probably formulated the first Greek alphabetical listing of drugs in Dioskorides’ work, the ancestor of so many alphabetical “Dioskorides” texts in Greek, Latin, and Arabic. Oribasios’s technique in using Dioskorides side-by-side with Galen was followed by almost all later Byz. medical encyclopedists. Not only professionals but also educated Byz. (e.g., Michael Choniates) read Galen, who was popular enough to become a comic figure in the Timarion. By the 13th–14th C., Galen had become the authority on medicine in Greek, Latin, and Arabic (see also Instancy). His quasi-monotheism, best seen in *Use of the Parts of the Body*, made his medicine and medical philosophy easily adaptable to Christian and Islamic canons.

GALERIUS, more fully Caius Galerius Valerius Maximianus, caesar under Diocletian (293–305) and Augustus (from 1 May 305); born Romulianum in Illyricum ca. 260, died Nikomedea May 311. Galerius presumably rose through the army and may have been praetorian prefect under Diocletian. As Caesar he was responsible for much of the Balkans; his primary residence was at Thessalonike, where remains of his palace can still be seen. He carried out wars against the Carpi on the Danube (295) and against the Persians (297–98), the latter commemorated on an arch in Thessalonike (see Arch of Galerius). After Diocletian's abdication Galerius became senior emperor in the Tetrarchy, with Maximinus Daia as his Caesar. In 307 he opposed the proclamation of Maxentius as emperor. The next year he convoked the Conference of Carnuntum, the result of which was the appointment of Licinius as Caesar and the redivision of the empire. Lactantius pictures Galerius as an outspoken pagan, persecuting Christians in his own territories and responsible for Diocletian's edicts against the church. He continued the persecution until he fell gravely ill; in 311, shortly before his death, he anticipated the Edict of Milan by granting toleration to the church. Galerius is remembered in the Byz. tradition as the archetypal persecutor, properly punished for his crimes by a painful death.

GALERIUS, ARCH OF. See Arch of Galerius.

GALESIOS, MOUNT (Turk. Alamandağ), monastic center north of Ephesus, on right bank of the Kastros River (Küçük Menderes). Monks were first attracted to this holy mountain in the 11th C. by the stylite St. Lazaros. Three monasteries, under one hegoumenos, were built near the successive sites of his pillar: (1) the Savior, reserved for 12 eunuchs; (2) the Theotokos, for 12 monks; and (3) the Anastasis, for 40 monks. A diatyposis for the three institutions is incorporated in the Vita S. Lazar (AASS Nov. 3:585). A fourth monastery, the Theotokos of Bessat, was imperial and had its own hegoumenos; it housed 300 monks in the 11th C. but rapidly declined. Near the mountain was the convent of Eupraxia, which served as a residence for female relatives of Galesiot monks.

Galesios entered a period of obscurity after the death of Lazaros, but in the 13th C., with the establishment of the empire of Nicaea, a "monastery of Galesios" again attained prominence. Two early Palaiologan patriarchs, Joseph I and Athanasios I, were former Galesiot monks, and a third, Gregory II of Cyprus, wrote a new version of the Vita Lazar. The monastery was reputed to have a rich library and had an active scriptorium (F. Halkin, Scriptorium 15 [1961] 221–27). Its history came to an end in the 14th C. when it was captured by the Turks (AASS Nov. 3:503).

GALESIOATES, GEORGE, patriarchal official and writer; born Atrymyttion or Constantinople? between 1278 and 1280, died after 1346. Galesiotes (Γαλησιώτης) was apparently a family name and does not indicate that he was a monk at Mt. Galesios (F. Halkin, Scriptorium 15 [1961] 225–27). Galesiotes studied with Gregory II of Cyprus and then with Manuel Holobolo, to whom he later addressed a funeral monody. As a secular cleric, he began his career as archon of Hagia Sophia (ca.1303); he succeeded George Pachymeres as protektos ca.1310. He held this post until 1334, when he took charge of the sakellion. Galesiotes' works include a monody for Theodore Xanthopoulos and, according to S.I. Kourouses, a lament on the collapse of the dome of Hagia Sophia in 1346 (EEBS 37 [1969–70] 247–50). He was probably also the author of an oration of thanksgiving for the Christian naval victory over the Turks off Atrymyttion in 1334 (V. Laurent in Eis mnemen K. Amantou [Athens 1960] 25–41). In collaboration with George Oinaioites, he prepared a paraphrase, in simpler language, of the Imperial Statue of Nikephoros Blemmydes.

H. Hunger and O. Kresten have recently proposed that the George Galesiotes who copied patriarchal documents from ca.1325 to 1357 is to be distinguished from the author Galesiotes, and suggest that he was a younger contemporary, perhaps his nephew (Hunger-Ševčenko, Blemmydes 33f).

GALIC. See GALITZA.

GALILEE, STORM ON THE SEA OF. Matthew 8:23–27. Mark 4:35–41, and Luke 8:22–25 tell of Christ sleeping in a storm-tossed boat on the Lake of Galilee. Awakened and upbraided by his disciples, he calmed the storm, chiding them for their lack of faith and eliciting their awe. The scene is illustrated only in extensive cycles in: FRIEZE GOSPELS, in marginal Psalters at Psalm 89g, in several DECORATIVE STYLE MSS, and at CHORA. The richest depiction, that in the Florence frieze Gospel (fol.120v), shows the boat three times: with Christ and the disciples seated, with Christ asleep and then rebuking a personification of the wind, and with Christ chiding the disciples.

GALITZA, or Galić (Γάλιτζα, also “Galatikon” in Theodore Prodromos—A. Kazhdan in Okeanos 356), town on the Dniester and center of one of the principalities of Rus’. Vladimirko of Galić (1141–53) was an ally (or vassal; hypospondos in Kinn. 115,19) of Manuel I against Geza II of Hungary. Vladimirko’s son Jaroslav harbored the future emperor Andronikos I in 1165, but Manuel’s diplomacy secured Andronikos’s return. ANTONY OF NOVGOROD mentions a Galician embassy to Constantinople in 1200, possibly negotiating for the campaign of Roman of Galitza against the Cumans in 1201 (Nik.Chon. 522,26–523,35). The bishopric of Galitza, under the metropolitan of Kiev, was founded between 1147 and 1153. In the 14th C. it was sporadically raised to the rank of metropolis (Notitiae CP, nos. 17,157, 18,159). Casimir of Poland, requesting a metropolitan from Patr. PHILOTHEOS KOKKINOS in 1370, after his annexation of Galitza (MM 1:577,29–32), mentions four previous incumbents, and when Metr. Antony was appointed in 1371 bishoprics of Cholm, Turov, Peremyśl, and Volodimer were put under his jurisdiction (MM 1:579,23–24). In the mid-13th C. Galitza played a conspicuous role in the transmission of Byz. literary culture in Slavonic translation: the best texts of the translations of MALALAS, JOSEPHUS FLAVIS, and the ALEXANDER ROMANCE all derive from Galician compilations.

GALLA PLACIDIA (Γάλλα Πλακίδια), more fully Aelia Galla Placidia, Augusta of the Western Roman Empire (421–50); born 388 (S.I. Oost, CPL phil 60 [1965] 1–4) or 393 (S. Rebenich, Historia 34 [1985] 372–85) in Constantinople or Thessalonike, died Rome 27 Nov. 450. Daughter of Theodosios I, she spent most of her life in the West. When Rome was sacked by Alaric in 410 the Visigoths carried Galla Placidia off to Gaul, and in Jan. 414 she married the new king Athaulf. After his death she was returned to the Romans. On 1 Jan. 417 Galla married the patrician Flavius Constantius to whom she bore the future emperor Valentinian III and a daughter, Justa Grata Honoria. In Feb. 421 Honorius proclaimed Constantius augustus (as Constantius III), but Theodosios II refused to recognize his accession. There are some vague indications that Constantius made warlike preparations against the East, but he died on 2 Sept. 421. Galla Placidia was accused of treason and conspiracy against her brother Honorius. She sought sanctuary at the court of Theodosios II in 423. After the death of Honorius the Eastern court used Galla Placidia and her son to assert indirect control over the West. Valentinian was brought to Italy and created augustus, with Galla Placidia exercising regency over him, a power she shared increasingly with the magister militum Aeitus. She was an ardent supporter of Orthodoxy and a generous donor of churches, esp. in Ravenna, but she also knew how to maintain a modus vivendi with Arians. Her only known portrait is on solido struck under Valentinian III.

GALLERY (ὑπερψοφος, κατηχουμενος, κατηχου- μενον), a corridor above the aisles and narthex of a church, opening fully onto the space of the
nave through arcades or colonnades. Galleries occur in major churches throughout the empire from the 4th to 13th C. Reserved elsewhere for women or (in early centuries) for catechumens, galleries in palace chapels or churches became the preserve of the emperor or local ruler and his court, in part because they provided easy access to the church from upper levels of adjacent palaces (Hagia Sophia, Constantinople; St. Sophia, Kiev); portions of the gallery in the Hagia Sophia, Constantinople, served as the parakyptron and metatorion and were the setting of church councils. Canon 97 of the Council in Trullo (692/3) forbade priests and laymen to live in galleries with their wives (a ban renewed by nov. 73 of Leo VI). Galleries were introduced into all types of churches: longitudinal basilicas, whether tria-xao (extra muros) basilica at Philippi; St. Demetrios, Thessalonike) or domed (St. John, Ephesus; S. Marco, Venice), and centralized churches, whether circular (Konjul, Macedonia), polygonal (S. Vitale, Ravenna); tetraconch (S. Lorenzo, Milan; Zuari‘noc‘), or otherwise. They do not appear in the naves of basilicas where major fresco or mosaic cycles were planned in continuous sequence of images. While galleries become less common after the 7th C., they reappear with some frequency in the 13th–15th C., most notably in Mistra and other provincial capitals. Galleries enhance the majesty of ecclesiastical spaces; may add substantially to the cost of the structure; identify imperial, royal, or princely presence; and exhibit society divided between the people below and the aristocracy above.

—W.I. K.M.K.

GALLIPOLI. See Kallipolis.

GALLUNIANU TREASURE, dated to the 6th C. and found in 1963 near Poggibonsi in Tuscany, Italy, 2.5 km from Galognano. Now in the Pinacoteca of Siena, the treasure contains six silver objects (four chalices, one paten, one spoon). Two objects bear inscribed dedications made by, respectively, Svegeruna and Hinnigilda (names of
Germanic, perhaps Gothic, origin), with one mentioning the “church of Gallunianu,” a place identified with the modern village of Galognano. All six objects resemble comparable types found in Asia Minor and Syria and have been ascribed to local Byz. manufacture in the mid-6th C., on the eve of the Lombard invasion. In size and composition (type of objects and dedications) the Gallunianu Treasure is similar to contemporaneous silver treasures from other Byz. villages.

M.M.M.

**GALLUS** (Γάλλος), more fully Flavius Claudius Constantius Gallus, caesar of the eastern part of the empire (from 15 Mar. 351); born on the estate of Massa Veternensis, Etruria, 325/6, died near Pola end of 354. Nephew of Constantine I and half-brother of Julian, he survived the massacre of his family in 337 and lived out of public view until Constantius II made him caesar. Constantius then gave his sister Constantia to Gallus in marriage and stationed him in Antioch so that he could deal with the Persian threat while Constantius suppressed the usurpation of Magnentius. Gallus succeeded in keeping the Persians at bay. He was a fervent Christian of Arian persuasion; he reportedly placed the relics of St. Babylas in the temple of Apollo at Antioch to silence the demon’s prophecies. Ammianus Marcellinus condemns the cruelty of Gallus, his bloody suppression of a Jewish revolt in Palestine, and the murder of some subordinates, but R. Blockley (infra) considers these charges unfair. In 354 he was recalled and executed by orders of Constantius.

T.E.G.

**GAMES, BOARD,** were inherited from antiquity and common among all layers of society. There were several kinds of board game: in addition to chess Koukoules (infra) distinguishes among dice (kybola), backgammon (tablola) or checkers (petteia), and knucklebones (astragalismos), but the exact difference between them is hard to define. It is reported (Malal. 345.16–17) that Theodosios I transformed the temple of Artemis in Constantinople into a tableparochion or gaming room for dice players. Gambling by clergy, however, was prohibited by canon law (PG 137:125C–128B). The major reason for the prohibition was the Byz. tendency to abstain from playing with tyche or fortune. Anna Komnene, who approved of chess, was very critical of other board games. They became ubiquitous during the late period: in 1437 Per Tafur saw gaming boards in the imperial library of Constantinople (N. Wilson, GRBS 8 [1967] 54). John Choummos (end of the 13th C.), in a letter to a “philosopher” (Boissonade, AeneNov 215f), describes gambling along with feasting and dancing as main elements of an entertainment during the calend: “the spotted bones,” he says, “promptly changed the mood of men, making some happy and others sad.” Sachlikes complains (or rather boasts) of his losses at gambling.

Excavations have uncovered many dice and other gaming pieces of uncertain date. Game boards have been found, scratched crudely on paving slabs of roadways and buildings. These are mainly of two types: circles divided into wedge-shaped sections and rectangles divided into square sections.

**GAMBROS** (γαμβρός), properly “son-in-law,” term that in the 12th C. became a semiofficial title encompassing a broad group of nobles linked to the emperor by affinity—husbands of the em-
GAMZIGRAD, modern name of a fortified site in the province of Dacia Ripensis, north of Niš in Yugoslavia. Thanks to an early 4th-C. inscription reading “Felix Romuliana” (D. Srejović, Stinarar 36 [1985] 51–60 and fig. 1), it can be identified as the Romyliana mentioned by Prokopios (Buildings 4:4). Pseudo-Aurelius Victor, in his epitome, relates that Galerius was buried in a place called Romylium in honor of the emperor’s mother, Romula.

Monumental walls with 20 octagonal towers and elaborate gates to the west and east surround the site. Inside this fortification excavations have revealed two temples, one of which may be the mausoleum of Galerius, and palatial structures; mosaic pavements include Dionysiac and hunting scenes. Fragments of marble cult statues and of porphyry figure(s) of an emperor survive; architectural sculpture depicts royal themes. This imperial complex was erected at the beginning of the 4th C.; construction occurred in two phases, apparent in both fortifications and interior architecture. It deteriorated soon after the death of Galerius but was reconstructed at the end of the 4th or early 5th C. and survived through the 6th C. The nature of the site changed, however: two Christian churches, simple dwellings, and workshops were built. According to Prokopios, Justinian I restored Romyliana. A basilica dating to the late 6th C. was the latest monumental construction. Afterwards the area acquired a rural character.

GANGRA, LOCAL COUNCIL OF. This council was convened ca.341 (date disputed) to condemn the radical asceticism associated with the Eustathians (see EUSTATHIOS OF ANTIOCH). Its only surviving document is a synodal letter consisting of 29 canons and a concluding epilogue (sometimes viewed as an additional canon) addressed to the episcopate of neighboring Armenia. The ascetics under judgment were primarily accused of rejecting family life and marriage (including married clergy), promoting social revolution by encouraging slaves to disobey their masters, in-
sisting that the rich could not enter the Kingdom of God, inspiring women to dress like men, and maintaining their own private liturgical assemblies while rejecting those of the church. Although evidence is lacking, the theological and socioeconomic implications of these ascetic novelties were no doubt discussed at length. Their explicit condemnation by the council is nevertheless balanced by a forceful affirmation (in the letter’s epilogue) of traditional asceticism and continence. The canons constitute our earliest and, hence, crucial evidence for the origins of monasticism in Asia Minor. Despite their provincial origin, they were included in all the major canonical collections of the church; Balsamon and Zonaras commented on them (PG 137:7233–73).

SOURCE: Marsi 21095–1122.

GANOS, MOUNT, holy mountain in Thrace, on the western shore of the Sea of Marmara, about 15 km southwest of Rhaistoe. Located near the small town of Ganos (Γάνος, mod. Gazióy), by the 10th or 11th C. the mountain was the site of a federation of monastic communities, headed by a protoi (Lauraint, Corpus 5.2, nos. 1228–32). One of its most famous protoi was John Phournes, who assisted Euthymios Zigabenus in the compilation of his Panoplia. Its monasteries suffered destruction during the attacks of the Bulgarians in 1199, the Crusaders in 1203, and the Catalan Company in the early 14th C. In the late 13th C. the future patriarch Athanasios I founded a double monastery there and clashed with the pre-Unionist bishop of Ganos who had been installed by Palt. John XI Bekkos. Maximos Kausokalibites spent the early part of his career on Ganos.

—A.M.T.

GARDEN (κήπος, also called περιβολιον). Essential to Byz. horticulture, gardens formed a valuable part of a domestic establishment, providing its members with fruit and vegetables. Even a poor monastery had a garden (e.g., vita of Meletios the Younger, ed. V. Vasil’evskij, PSS 17 [1886] 21.17–19), and most peasants, according to Athostite praktika, had vineyards and small garden plots (Latoi, Peasant Society 33). Big farms, like that of the Argyropoulou in 15th-C. Thessalonike, which raised vegetables for market, are also known. There was no clear distinction between vineyards, gardens, and kitchen gardens: vines often grew together with (and upon) fruit trees, and vegetables were raised under trees; accordingly “mixed” terms such as ampelokephal (vineyard-garden) were used. Gardens were usually established where there was access to water; in instances where irrigation was used, the plot was sometimes qualified with the adjective hypopotion (drinking). Probably the term chersoperibolôn designated allotments where no irrigation system had been installed. Vineyards and gardens were usually surrounded by a fence and a ditch (already mentioned in the Farmer’s Law), and later even by a brick wall, and special guards were commonly used to prevent trespassing.

Pleasure gardens occupy an important place in Byz. romance as a place for romantic encounters, and the garden of Eden played a significant part in Byz. cosmology.

GARIGLIANO, or Liris, a river in southern Italy (in the area of Gaeta). In the second half of the 9th C. there existed on the right bank of the Garigliano an Arab colony dangerous both to Rome and to Byz. possessions in southern Italy. In the next century Pope JOHN X forced the Arabs to retreat to the Garigliano from Narni and Ciculi. In 914 the coalition that arose against the Arabs of the Garigliano region included the newly elected pope, Constantinople, and Berengar of Friuli as well as Spoleto and several other southern Italian principedoms. In June 915 the Byz. fleet blocked the estuary of the Garigliano, and a united army (including the troops of Nicholas Picingli, strategos of Longobardia) forced the Muslims to flee to the mountain peaks. In Aug. 915, pressed by famine, they tried to escape but were killed or captured. A legend asserts that the apostles Peter and Paul appeared and encouraged the Christian army.
GARIZIM. See Neapolis.

GARLAND, rope woven of leaves, usually laurel, sometimes with fruit or flowers and, like the wreath, suggestive of ceremonial splendor. Common in Late Antique art, garlands were sometimes carried by putti and combined with masks in the classical tradition. They frequently festooned official and funerary monuments, for example, the Mausoleum of Diocletian at Split, consular diptychs, and sarcophagi.

Garlands decorated vaults and arch soffits in monumental painting and mosaics throughout Byz. art, e.g., Church of the Acheiropoietos, Thessalonike, apse mosaic of Hagia Sophia (Constantinople), and the Chora Monastery. Framing elements consisting of garlands appeared in floor mosaics, textiles, and book illumination, for example, the Paris Psalter. They were most common from the 4th to 6th C. and again in the 9th to 10th C.

GASMOLIOS (γασμούλιος, also βασμούλιος, etym. unknown), a descendant of a Byz. and a Latin (most often a Byz. female and a Latin, esp. Venetian, male). The word first appears in sources of the second half of the 13th C. Following the reconquest of Constantinople by Michael VIII Palaiologos in 1261, gasmoulai were recruited in large numbers as mercenaries to form the core of the light-armed contingent serving aboard Michael's refurbished fleet, this Gasmonikon appears in several naval campaigns during the 1260s and 1270s. Despite Andronikos II's reduction of the fleet in 1285, some gasmoulai remained in the service of the emperor, others served aboard Latin ships or acted as pirates in the Aegean. Later they seem to have played a significant military role in the Civil War of 1341–47. By the mid-14th C. service in the fleet as a gassaul (gasmoulite douletis) had lost its ethnic character. Gasmonoi served the Ottomans in the second half of the 14th C., and gasmoloi with a hereditary military obligation (servitio et tenimento vasmula) served the Latin rulers in the Aegean in the 15th–16th C. A number of gasmolai were Venetian nationals. Their nationality was a source of friction between the empire and Venice from 1277 until the 1320s.

GATE, CITY, designated by πύλη, the same word as "door," formed an opening in the city walls, usually in the form of an arch. The gate marked the point where the principal urban thoroughfare changed into a highway. Through the gate the city communicated with the outer world: goods were imported, livestock driven to market, troops departed and returned, visitors and processions entered. Some portals were the setting of ceremonies, such as adventus. The gates sometimes consisted of wide passages for carriages and narrow wickets for pedestrians. Gates were the weak point in the system of fortifications; they had to be barred at night and guarded by special watchmen who had possession of the keys; they were flanked by towers.

The Roman practice of embellishing the main entrances in city walls was pursued at Split, Gamzigrad, and other towns and camps. Gates were decorated with statuary set in niches and colonnades resting on corbels to either side and above the gate. Other examples are preserved at Nicea, Nikopolis, and the north and south gates at Seriopolis. Apart from the Golden Gate and those of the Blachernai quarter, the names of seven of Constantinople's gates are known. Most derive from the region of the city in which they were situated, local churches (e.g., St. Romanos), or destinations beyond them (Pege, Rhetion). Towers flanking these gates bear many inscriptions attesting to their imperial sponsorship or restoration. There is little basis for the widespread supposition that some gates were reserved for military use only.

In Byz. symbolism the pyle (gate or door) played an important role: both heaven and hell were supposed to have gates; Christ was a gate in the tower that represented the Church, and the gate facing east was a typo of the Virgin. In iconography, the gate stood for the city in the Entry into Jerusalem, for the province in the Flight
INTO EGYPT. Book illustrators employed a *pyla* (a pi-shaped framed headpiece) at the “entrance” of many texts.

GATTILUSIO (Γαττιλούζος) or Galtusi, Genoese family that ruled Lesbos from 1355 to 1462. The Levantine branch of the family was founded by Francesco I, an adventurer who was reportedly instrumental in securing control of Constantinople for John V Palaiologos in Nov. 1354 (Douk. 67–69). He was rewarded with marriage (summer 1355) to the emperor’s sister Irene (who took the name Maria) and with lordship over Lesbos. In 1356 he helped Amadeo VI of Savoy recapture Gallipoli (Kallipolis) from the Turks. Doukas called Francesco a “good and faithful friend” of John V; he accompanied the emperor to Rome in 1369. Francesco died in the earthquake that struck Lesbos on 6 Aug. 1384, together with two of his sons, Andronico and Domenico.

He was succeeded by his son Francesco II (1384–1403), whose daughter Irene (later Eugenia) married John VII Palaiologos and was the mother of the short-lived Andronikos V (N. Oikonomides, *Thesaurismata* 5 [1968] 28–31 and “Ivory Pyxis” 331f). To underline their Palaiologan connections, the Gattilusio family made frequent use of the double-headed eagle on their coins and heraldry. The family ruled over Lesbos until 1462, when Niccolo Gattilusio was forced to surrender to the Turks. They also acquired control of other northern Aegean islands and coastal lands, including Ainos, Thasos, Samothrace, Lemnos, and Palaia Phokaia. The salt beds of Ainos and alum mines of Phokaia provided substantial income. An important source for the later history of the family is Doukas, who was in the service of the Gattilusio and went on embassies for Dorino I (1428–55) and Domenico (1455–58). (See genealogical table.)

GAUFREDUS MALATERRA, Benedictine monk who accompanied other Normans to southern Italy and who evidently belonged to the entourage of Count Roger I of Sicily; died before 1101. At Count Roger I’s request Gaufredus authored *On the Deeds of Roger Count of Calabria and Sicily and his Brother Robert Guiscard*, a history of the Normans from ca. 1058 to 1099. Dedicated to Angerius, bishop of Catania, the work mixes prose with verse and apparently was left unfinished. Although the earlier part contains legendary material, the contemporary section offers unique details on prosopography and military events of the Byz.-Norman conflict in southern Italy, possibly furnished by Roger’s court. Gaufredus considered

Based on A. Luttrel, *DOP* 40 (1986) 103–12.
the Byz. too soft to make good warriors (bk.3, ch.13), but his account sheds much light on Byz. CALABRIA, esp. on George Maniates (bk.1, chs. 7–8), and the subjugation of Calabria (bk.1, chs. 9–37). He describes how Guiscard exploited Michael VII’s deposition (bk.3, chs. 13–14) and the Norman assault on Greece (bk.3, chs. 24–29, 33, 39–41).

M. McC.

GAVRIIL OF LESNOVO, Bulgarian hermit and saint; born Osiche near Kriva Palanka, f. 11th–early 12th C. Gavril founded the monastery of the Archangel Michael (later known as the Lesnov monastery) on the slopes of Mt. Plavitsa, near the village of Lesnovo (now in the Yugoslav republic of Macedonia). Established in the period of Byz. rule in Bulgaria, it became a center of learning and book production throughout the Middle Ages. In the second half of the 14th C. the saint’s remains were removed to the Church of the Holy Apostles in the capital city of Tarnovo. The present monastery church was built in 1347 by the Serbian despot Jovan Oliver on the site of Gavriil’s original church. The fine frescoes are probably of the same date.

GAYANÉ. See VALARŠAPAT.

GAZA (Γαζά, Ar. Ghazzah), ancient city on southern coast of Palestine that remained prosperous until the end of the 6th C., when the PACENZA PILGRIM (ch.33) called it a “lovely and renowned city.” Gaza lay inland, almost 5 km from its harbor at Constantia. It was a center of trade with Mecca; according to Arabic legend, Hashim, great-grandfather of Muhammad, died there. Gaza resisted the penetration of Christianity and until the beginning of the 5th C. possessed a pagan shrine of Zeus Marnas (the Marneion), which was finally destroyed by Porphyrios of Gaza, probably in 492. Even after the extinction of paganism, Gaza remained an important focus of ancient culture; teachers at its school of rhetoric included CHORIKIOS OF GAZA and PROKOPIOS OF GAZA, while DOROTHEOS OF GAZA was an influential monastic writer. On the MADABA Mosaic Map, Gaza is shown as a large city with colonnaded streets crossing its center and a large basilica in the middle, probably the church erected over the Marneion. A mosaic dated by Greek inscription to 508/9 was found during the excavations of a synagogue on the seashore; it represents David as Orpheus, and dressed as a Byz. emperor (A. Ovadiah, IEJ 19 [1969] 193–98).

When Gaza was conquered by the Arabs under ‘AMR in 635, the soldiers of the garrison were massacred; the Christian civilian population survived, however, and the city remained the seat of the governor of the Negev. In 723–26 the pilgrim Willibald saw a church in Gaza. The sequence of ceramic finds near Gaza indicates that soon thereafter the area was abandoned (L.Y. Rahmani, IEJ 33 [1983] 219–30). Probably recovered by the 10th C., Gaza was again in ruins when it fell to the Crusaders. They fortified it anew from ca.1149, and a lower town of merchants and peasants grew up around the citadel. The citadel of Gaza played an important part in the Crusaders’ conquest of ASKALON. Saladin captured Gaza in 1187, but Richard I Lionheart retook it and the Latins held it until 1229. Gaza was never a goal of pilgrimage, but an EULOGIA stamp with a representation of the Virgin was found near there (L.Y. Rahmani, IEJ 20 [1970] 105–08).

Gazes, Theodore, A.K., Z.U.M.

Gazes, Theodore, Greek émigré teacher and translator in Italy; born Thessalonike ca.1400, died Policastro in Calabria 1475/6. The early career of Gazes (Γαζή) is poorly documented. Before 1440 he moved to Italy and taught Greek in Ferrara, Naples, and Rome, where he joined the literary circle of Bessarion. In Ferrara he wrote the Introduction to Greek Grammar (D. Donnet, Byzantion 49 [1979] 133–55), which became the standard textbook for humanists and was highly praised by Erasmus. He also delivered a speech called On the Importance of Greek Studies, in which he emphasized the value of reading Greek literature as preparation for participation in political life. Gazes contributed much to developing mutual knowl-
edge of the Latin and Greek worlds; he translated Cicero and Claudian into Greek and made Latin translations or paraphrases of Xenophon, Aristotle, and some patristic texts (e.g., Chrysostom's commentary on Matthew). The study of Aristotle, whom Gazes tried to reconcile with Christian doctrines on the Trinity, on the immortality of the individual soul, and on the incarnation, led him into polemics with Plethon, the consistent follower of Plato.

Gazes supported the policy of Union of Churches, in which he saw the only means to stop the Ottoman conquest. His letter to Francesco Filefo, a treatise on the origin of the Turks (PG 161:997–1006), attests to his interest in their history. Moreover, Gazes argues against Plethon's fatalistic concept of the Turkish invasion as a revenge for Alexander the Great's conquest; he lays the foundation of historical criticism, drawing a contrast between Plethon's account and the history of the Turks as presented by "Skylax" (i.e., Skylitzes), whom Gazes finds closer to Strabo.

GEITONIARCHES (γειτονιαρχής), the chief official of the geitonia. According to the 6th-C. GREGENTIOS (PG 86:577D), the king of the Himyarites established in his capital 36 regions and appointed to each a geitoniarch with a sekretos. In the late 9th-C. KLETOROLOGION OF PHILOTHEOS the term designates subaltern officials of two departments—that of the eparch of the city and that of the demarchoi. The scanty evidence creates problems. If 10th-C. geitoniarchai were in fact district magistrates, it seems strange that Philotheos speaks of only 12 geitoniarchai (Oikonomides, Listes 209.22), whereas there were 14 districts in Constantinople. Secondly, if the geitoniarchai of the demarchoi were local supervisors, then it is curious that there was only one geitoniarchai of each color (Cameron, Circus Factions 92, n.3).

GELASIOS OF CAESAREA, nephew of Cyril of Jerusalem, died 395. Gelasios (Γελάσιος) was elected bishop of Caesarea in 367. As a Nicaean, he naturally fell foul of the Arian emperor Valens and was ousted, but came back on the accession of THEODOSIUS I. THEODORET OF CYRRHUS (HE 5.8) commends the purity of both Gelasios's doctrine and his life. JEROME (De vir. ill. 130) observes that he wrote quite well, but did not publish. At least some works circulated, however, since a number of authors do cite him. PHOTIOS (Bibl., cod.89) distinguishes two or three Gelasioses of Caesarea and lists their works, among which was the Church History, which ends with the death of Constantine the Great. Its relationship to the last two books of the continuation by RUFINUS OF AQUILEIA is much disputed (J. Schamp, PBR 6 [1987] 45–52; idem, Byzantion 57 [1987] 360–90). Only fragments survive, as is the case with his Exposition of the Symbol, possibly similar to the catechetical lectures of his uncle Cyril. A polemic Against the Anomaenae mentioned by Photios is lost.

GEITONIA (γειτονία), neighborhood, quarter; the term was esp. often applied to Antioch, where Malalas (Malal. 417.14) mentions various geitoniai. Some geitoniai are known by name: in Evagrius Scholastikos (HE 2.12), Ostrakine; in Malalas (272.6), Skepane; and in Theophanes (Theoph. 68.16), Iobiton. G. Downey (A History of Antioch [Princeton 1961] 478) suggests that Ostrakine was the potters' quarter. Theophanes (296.6) also mentions the geitoniai of the Blues in Constantinople, and in an excerpt from Malalas (T. Mommsen, Hermes 6 [1917] 380f) a geitonia la Mazentiolou in Constantinople reappears. A.P. Djakonov's theory (in VizSh 155) that geitoniai were centers of factions is now rejected.

The term geitonia disappeared after the 6th C. but the term geitonema ("neighborhood") continued in use. The hagiographer of GREGORY OF DEKAPOLESI (vita, ed. Dvornik. 63.22–26) reveals that geitonema gave some right to a neighboring piece of land.

- B.B.
GELASIOS OF KYZIKOS, church historian; died after 475. The name of Gelasios (Γελάσιος) is preserved only by Photios (Bibl., cads. 15 and 88); the MSS of his writings, of which the oldest and the most important codex is Milan, Ambros. gr. 534 of the 12th and/or 19th C. (i.e., later than Photios), are anonymous. Of his life is known only what he himself says in the preface to his History: he was a son of a priest in Kyziko and composed his work during the rebellion of Basiliskos in order to refute the statement of the partisans of Eutyches that the fathers of the Council of Nicaea allegedy had been inclined to the Mono-ophysite creed. The title of the book was Ekklesiasti- tike historia (Church History), replaced in later tradition by the title Syntagma of the Holy Council in Nicaea. The book begins with Constantine I the Great's assumption of power; the manuscript breaks off at the description of the synod in Tyre in 335. According to Photios, the history originally extended to the end of Constantine's reign; the Bibliotheca also records that Gelasios rejected the view that the emperor was baptized by a heretic and affirmed that Constantine was Orthodox. For his compilation Gelasios used some sources that are still extant (EUSEBIOS OF CAESAREA, RUFINUS, SOKRATES, THEODORUS OF CYRHIUS) as well as some texts now lost, such as the Church History of Gelasios of Caesarea, the Church History of a certain John, and the documents of the Council of Nicaea, particularly the address of Constantine to the Council and the dialogue between the Fathers of Nicaea and the Arian philosopher Phaidon.

—A.K., B.B.

GELASIUS I, pope (from 1 Mar. 492); died 21 Nov. 496; probably an African by birth. As archdeacon and papal secretary under FELIX III, Gelasius exerted influence even before his election to the papacy. He contributed much to developing the concept of papal primacy. Unlike his predecessor leo i, Gelasius sought support from the barbarians, esp. THEODORIC THE GREAT. When Emp. Zeno and particularly Anastasios I inclined toward alliance with Alexandria against Rome, he favored severing relations with Constantinople. He rejected the Henotikon and accused Patr. AKAKIOS of heresy; his opposition to Constanti- nople was formulated in instructions (communitorium) sent to Theodoric's magister officiorum Probus Faustus Niger. In his treatises, Gelasius developed the idea of papal authority as parallel to that of the emperor—as a governor of all the Romans based on the jus publicum—but with the emperor receiving his power from men and the pope from God. Accordingly, Gelasius stated that the canons of the Council of CHALCEDON (451) had validity only insofar as they were acknowledged by the papacy, and he denied the legality of canon 28 (H. Anton, ZKirch 88 [1977] 79-82). It was probably under his auspices that the legend of Pope SILVESTER developed.

—A.K.

GELATI, a monastic academy southwest of Ku- taisi in Georgia, founded by DAVID II/IV THE RESTOREK in 1106 and completed under King Demetrius (1125-56). The katholikon, a domed cruciform building with low chapels inserted at the four corners, is completely frescoed, save the apse, which carries a mosaic of the VIRGIN NI- KOPOUS. The subject and medium are both rare in Georgia, suggesting Byz. work, as does the presence of a lengthy Greek inscription. The pose of the Virgin, however—standing and closely flanked by archangels—and the enamel-like colors, are local features, as is the juxtaposition of the mosaic with frescoes (now obscured by 16th- and 17th-C. work) in the nave. Twelfth-century frescoes in the narthex represent the Seven Ecumenical COUNCILS.

—A.T.

GELIMER (Γελίμερ), last Vandal king (530-34); born North Africa at unknown date, died Galatia at unknown date. The son of Gelaris, great-grand- son of GAISERIC, and nephew of kings Guntha- mund and Thrasamund, Gelimer became king
after his overthrow of the philobyzantine Hilderic on 19 May (Stein, infra 311) or 15 June 530 (Courtois, infra 269). This act and his haughty rejection of the demand of Justinian I that Hilderic be handed over created a diplomatic pretext for the Byz. reconquest of North Africa. Belisarios’s landing of an expeditionary force in Sept. 533 surprised Gelimer, who ineptly directed the Vandal resistance; Belisarios subsequently defeated the Vandals at Ad Decimum on 13 Sept. 533. Gelimer unsuccessfully tried to besiege Belisarios at Carthage, was crushed at Tricamarum in mid-Dec., and fled to Mt. Pappa on the border of Numidia during the winter of 533–34. In Apr. 534 Gelimer surrendered to Belisarios, effectively ending Vandal resistance. Gelimer was brought to Carthage, and then in the summer of 534 with his wife and children to Constantinople, where he was exhibited in a triumph in the Hippodrome. Justinian gave him an estate in Galatia but denied him the rank of patricius because he refused to renounce Arianism. Despite his earlier reputation for military prowess, Gelimer was a poor military commander whose complex and moody personality (according to Prokopios, Wars 3:19.25–29) caused his lack of steadiness and inability to rule or to save his kingdom and people.

—S.D.C., A.C.

GENEALOGY OF CHRIST, enumerated in Matthew 1:1–17 (40 names) and Luke 3:23–38 (56 names), is commemorated on the Sunday before Christmas. Illustrations of Christ’s ancestors are rare: for example, Paris, B.N. gr. 64, fol. 103–117, and the two FRIEZE GOSPELS where the ancestors appear as witnesses to the Incarnation. The 43 ancestors named in the liturgy adorn the inner narthex domes of the CHORA, and ancestors appear in the nave of the Church of the Nativity at Bethlehem (12th C.). Christ’s Davidic ancestry through his mother, Mary, is frequently emphasized: David is axially aligned with Christ in monumental cycles and accompanies him in Gospel headpieces (Parma, Bibl. Pal. 5—Nelson, Preface & Miniature, frontispiece); the marginal PSALTERS illuminate Psalm 71 with an image of Mary, who also prefaces aristocratic Psalters; and the TREE OF JESSE flourishes in Palaiologan art.

—W.E.K.

GEMS (λιθάρια) in Byz. were used for JEWELRY, on horse fittings, weapon mounts and scabbards, and religious items, such as crosses and liturgical vessels; they could also be attached to textiles. All types of precious and semiprecious stones were used, the most common being carnelians, emeralds, sardonyx, jasper, haematite, lapis lazuli, amethysts, and rock crystal. Stones were used in their natural crystalline form wherever that occurred, polished or carved into CAMEOS and ringstones. They were rarely faceted, even though the use of diamonds for cutting diamonds was known. Gems were used in conjunction with gold, silver, and other materials. Thirty stones, of seven different kinds, are combined with marble and glass paste on Justin II’s reliquary cross (C. Belting-Ihm, JbRGZM 12 [1965] 142–68). A law of Leo I (Cod. Just. XI 12[11]) expressly states that private individuals were forbidden to use pearls, emeralds, and hyakinthoi (sapphires, aquamarines, amethysts?) on harness trappings but were allowed to use other gemstones. The imperial monopoly on the use of specific gems may have been entirely for economic reasons or could imply belief in the amuletic value of such stones. The two most important works on the healing powers of gems were written by EPIPHANIOS OF SALAMIS and MICHAEL PSELLOS.

GENESIOS (Γενέσιος), conventional name of the 10th-C. author of the anonymous “History of emperors” that is preserved in a single MS (Leipzig, Univ. Lib. gr. 16); an 11th-C. hand wrote the text of Genesios, but on fol.248 another, later hand has inserted the notation “Genesiou” (F. Steinman, VizVrem 21 [1914] 37–39). There have been numerous attempts to reconstruct the biography and genealogy of Genesios, who has been given the first name of Joseph (a Joseph Genesios is mentioned in the preamble to Skylitzes) and
proclaimed the son or grandson of a certain Armenian Constantine (A. Markopoulos, ZRVI 24–25 [1986] 103–08). Written at the court of Constantine VII, the chronicle encompasses the period 813–86 and presents events from the viewpoint of the Macedonian dynasty.

The problem of its interrelationship with Theophanes Continuatus is complicated: because Genesios stated that he employed eyewitnesses and rumors (p.3.11–12), he used to be considered the source of Theophanes Continuatus; comparing the texts, however, leads to the conclusion that he borrowed his material from the continuator (esp. from Vita Basilii) or that they both depended on the same source. F. Barisic suggests that Genesios used Sergios the Confessor (Byzantion 31 [1961] 170f.). Genesios’s composition is loose, full of insertions and non sequiturs. Especially poor is the last section, on Michael III and Basil I; its allegedly precise data turn out to be either invented or suspect.

GENESIS, first book of the Old Testament, which deals with the Creation. Illustration of the Book of Genesis is found most abundantly in two fragmentary MSS that are unrelated iconographically.

The Vienna Genesis (Vienna, ÖNB Theol. gr. 31; 6th C.) now consists of 24 folios of an estimated 96. It is a sumptuous book, written in silver ink on purple-dyed parchment. The layout is conceived around the illustrations, with the lower half of each page given over to the artist and the text in the upper half abbreviated from the Septuagint. No manuscript quite like it survives. Theories about the origin of its iconography and style have led to an attribution to the region of Syria/Palestine, although the purple parchment might seem to point to Constantinople itself.

The Cotton Genesis (London, B.L. Cott. Otho B.VI; 5th C.) once contained the full text of Genesis and some 360 miniatures, but a fire in 1731 reduced it to charred and shrunked fragments. Scholarly ingenuity has reconstructed in large part its original layout and to some extent the appearance of its miniatures. This was possible after study of iconographically related material, notably mosaics in the porches of S. Marco at Venice, which, since the work of Tikkanen (1899), have been accepted as closely related descendants of miniatures in the Cotton Genesis. The Cotton Genesis has been attributed to Egypt, in part on the basis of its interest in the Joseph story and enthusiasm for Nilotic landscapes, beehive granaries, and pyramids.

Further cycles of Genesis illustration in the early period are implied by the Octateuchs and monuments such as the mosaics of Monreale. Yet, in contrast to the situation in and after the 10th C., when it is often argued, artists frequently made reference to pre-Iconoclastic artistic treasures, it is striking that the Cotton and Vienna Genesis MSS seem to have been unknown in the East. Both had reached Venice and been consulted by artists by the early 14th C. at the latest (for the Vienna Genesis, see H. Buchthal, Historia Tria Nova [London 1972] 47–52). Genesis illustration is usually held to be characterized by its literalism. Significant elements were derived from extrabiblical sources, notably Jewish and Christian legends and exegesis, which probably entered the pictorial traditions before the 6th C.

GENIKON (γενικόν), major fiscal department that dealt with assessment of land and other taxes, maintaining the lists of taxpayers, and collecting payments (Dölger, Beiträge 194f). It also served as a tribunal for fiscal cases; Basil I is said to have presided over trials in the genikon. It occupied a special building allegedly constructed by Constantine I and located within the Great Palace. The building was destroyed by Isaac II (Janin, CP Byz. 176f).

The head of the genikon was the logothetes tou genikou. The office is distinct from that of the genikos logothetes, who was a high-ranking provincial kommerkarios in the 6th–7th C. The first mentioned head of the genikon logothesion was
the (former?) monk Theodotos ca.692. N. Oikonomides (Dated Seals, no.23) attributed to him the seal of Theodotos “monk and genikos logotheites.” Under the logotheites were various officials: megas chariouarios, chariouarioi of the arkai, epoptai, dioiketai, komes hydaton, oikistoi, kommerkiarioi, komes tes lamias, etc. The role of the genikon declined under the Komnenoi but recovered under Andronikos I and the Angeloi. After 1204 the term logotheites tou genikou survived only as a title, often conferred on intellectuals such as George and Constantine Akropolites and Theodore Metochites. The chrysobull of 1302 mentioning the sekraton of the genikos logotheites (Xerop. 235.40) is a forgery. Pseudo-Kodinos refers to the logotheites tou genikou but admits ignorance of his functions. The last logotheites tou genikou was probably Iannes [sic] Androuses in 1380 (PLP, no.90111).

GENNADIOS I, patriarch of Constantinople (Aug./Sept. 458–between 17 and 20 Nov. 471); born ca.400. A man of wonderful memory and excellent education, he was highly praised by Gennadios of Marseilles. A consistent opponent of Alexandrian political and theological independence, Gennadios polemicized in his youth against Cyril of Alexandria and later deposed Timotheos Alouros. On the other hand, he was a true ally of Pope Leo I and composed an enkomion of the pope’s tome addressed to Flavian and directed against Eutyches. In 458 or 459 Gennadios sent an encyclical epistle condemning simony (RegPatr, fasc. 1, no.143). Gennadios enjoyed fame as a miracle worker: Theodore Lector relates that the patriarch healed a painter whose hand withered because he dared to depict Christ with the attributes of Zeus; when the avanorton Charisios refused to improve his behavior, Gennadios predicted his death, which indeed occurred the next day. Little has survived from his exegetical and dogmatic works. Neophytos Enklestios wrote a eulogy of Gennadios, whom he compared to Daniel the Stylite and Andrew the Fool (H. Delehaye, AB 26 [1907] 221–28).

GENNADIOS II SCHOLARIOS, theologian and patriarch of Constantinople (6 Jan. 1454–56, 1463, and 1464–65); baptismal name George; born Constantinople between 1400 and 1405, died Mt. MONOIKEION ca.1472. He is sometimes referred to as Kourteses, perhaps his mother’s name. A student of Mark Eugenios, John Chortasmenos, and Joseph Bryennios, Gennadios taught logic and physics in Constantinople. By 1438 he was didaskalos, senator, and krites katholikos. He attended the Council of FERRARA-FLORENCE, where he took a Unionist position. By 1444, however, Gennadios became an avowed opponent of Union of the Churches and inherited from Mark Eugenios the leadership of the anti-Unionist party. He was consequently deposed (1446/7) from his official positions and ca.1450 took monastic vows at the Charsianites monastery. Gennadios was captured by the Turks in 1453; after his release he served three times as patriarch. He sought to reach a modus vivendi with the Turkish authorities, urged a policy of oikonomia with respect to infractions of the canons, and hoped for spiritual revival among the Orthodox. In the interlude between his patriarchates, he retired to the Prodromos monastery near Serres; he later died and was buried there.

Gennadios knew Latin well and admired Latin scholarship, esp. the works of Aquinas, of which he prepared translations and commentaries. He wrote an ardent defense of Aristotle, who had been attacked by Plethon, and sought to incorporate into Byz. thinking scholasticism and the Thomist interpretation of Aristotle (G. Podskalsky, Theologie und Philosophie 49 [1974] 305–23). His extensive writings include anti-Union treatises; expositions of the Christian faith for Mehmed II (A. Papadakis, Byzantion 42 [1972] 88–106); and essays on divine providence, predestination, and the origin of the human soul.

GENNADIUS OF MARSEILLES, Latin theologian; died between 492 and 505. His biography is unknown, and most of his works (including books against Nestorios and Eutyches) are lost.
His book *On Famous Men*, which is a continuation of *Jerome*, is our most important source concerning Christian writers of the 4th and esp. 5th C. Cennadius knew both Greek and Latin, he described only those works he himself had read, and he tried to be objective in his approach. He viewed Pelagios as a heresiarch; at the same time he had no praise for Augustine, rejecting his concept of predestination.

A.K.

**GENOA** (Γένα) [Genova], port city in Liguria in northwestern Italy, which after Diocletian belonged to the province of Alpes Cottae. It was a bishopric in the 5th C., and its bishop Paschasius participated in the Council of Chalcedon in 451. Two edicts of Theodoric the Great mention a Jewish community and a synagogue in Genoa. By 539 the city was in the hands of the Byz.; it was taken for a short time by the Franks, but then remained Byz. until the 7th C. The Lombard king Rothari conquered Genoa ca.642 and destroyed its walls. The city recovered in the 10th C. despite Muslim raids in 930–35; in the 11th C. Genoa defeated the Arabs and expelled them from Sardinia; its fleet also sacked Tunis.

The Genoese took part in the First Crusade, sending a squadron of 19 vessels that was instrumental in attacking the Syrian and Palestinian coast. Genoa's abundant archives record Genoese trade activity with Syria, Alexandria, and Constantinople; in 1155 Emp. Manuel I Komnenos, suspicious of Venice, granted the Genoese a chrysobull promising them an embolos and skalai in Constantinople as well as a reduction of the kommerkion. In their penetration into "Romania" the Genoese encountered competition from Venice and Pisa; Manuel I considered Genoa a natural ally in his struggle with Venice, and after 1171 the Genoese position in the empire became favorable. In 1201 the Genoese ambassador Ottobone della Croce received new privileges from Alexios III, and relations were active in 1203 when the threat of the Crusaders' attack on the Byz. capital became imminent (P. Schreiner, *QFI/Arch* 63 [1983] 292–97).

Although Venice benefited enormously from the fall of Constantinople in 1204, Genoa took advantage of Greek hostility toward Venice to secure its position in the Empire of Nicaea. Guglielmo Boccanegra, "captain of the people," concluded the Treaty of Nymphaiion with Michael VIII in 1261, and after the Byz. reconquest of Constantinople the same year Genoa attained a privileged position in the empire, replacing Venice. The Genoese naval victory of 1284 at the battle of Meloria (near Livorno) weakened, if not completely destroyed, Pisa, another rival (Genova, *Pisa e il Mediterraneo tra due e trecento* [Genoa 1984]), making Genoa the major Italian power in the Levant. Genoa established colonies in Pera (see Galata), Chiòs, the Danubian delta (Vicina, Chilia), the Crimean (Kaffa, Soğuda), and Trebizond; alum mines in Phokaia were ceded to the Genoese. From 1292 on, however, the Venetians waged a counterattack that led to a series of wars involving the Greeks, Catalans, and Turks (C.P. Kyrris, *Byzantina* 4 [1972] 331–56; M. Balard, *TM* 4 [1970] 431–69). The treaty of 1352 signed by John VI Kantakouzenos expanded Genoa's privileges in the Levant (I.P. Medvedev, *VizVrem* 38 [1977] 161–72). Thereafter Genoese activity began to decrease, owing to the collapse of the Mongols and the advance of the Ottomans, among other reasons; Pera was lost in 1453, Kaffa in 1475, and Chiòs in 1566.

The Byz. of the 14th C. attentively observed internal strife in Genoa. Theodore Metochites deplored it as an example of the inadequacies of democracy; Gregoras and Kantakouzenos mention Simone Boccanegra's rise to power (1339–44). However, an attempt to demonstrate that Boccanegra's uprising inspired the zealots in Thessalonike (where a Genoese colony allegedly existed) is inconclusive (Ševčenko, *Soc. & Intell.*, pt. III [1953], 609–17).

A textile with a cycle of the Life of St. Lawrence and extensive Latin inscriptions, sent by Michael VIII to his Genoese allies, is preserved in the Galleria di Palazzo Bianco (Cutler-Nebbett, *Arte* 318f). R. Nelson (*ArtB* 67 [1985] 548–66) suggested that frescoes painted in the Cathedral of St. Lawrence in Genoa ca.1310 were the work of an itinerant Byz. artist.

GENRE, LITERARY. The concept of genre is historically determined, and the classical categorization of literature into three genres (lyric, epic, and drama) did not apply to Byz. The Byz. had no coherent theory of genre, except in the case of rhetoric, whose works they divided, in accordance with ancient principles, into various gene and eide (Martin, Rhetorik 9). Some Byz. writers, such as Psellos (Ljubarskij, Psell 139–41) or Eustathios of Thessalonike (Kazhdan-Franklin, Studies 183–87), tried to draw a distinction between certain genres. The principle of classification for medieval literature was functional rather than aesthetic—the objective and the audience addressed were the major criteria of categorization; accordingly, the genres formed an interconnected system that can be characterized as a hierarchy of genres. Each genre was supposed to possess strict rules of stylistic formulas (which some historians of literature call "etiquette"), even though the Byz. accepted the existence of mixed genres. Eustathios justified this formulaic method of composition: although in antiquity Solon demanded that each work of art be unique, now standards had changed, and God and the divine deeds of emperors should be praised repeatedly, retained "as a seal of brilliant character," and promoted everywhere (Regel, Fontes 1:98.21–27). Eustathios argued that the repetitive formulas were necessary for the didactic purposes of Byz. literature.

The type of genre was often, but not in every case, stated in the heading of a work (logos, epitaph, chronic, vita, etc.), but this categorization is not always the author's and in any case is inconsistent. From the point of view of modern criticism, one can distinguish the following major genres: poetry (secular and religious, both with subdivisions), rhetoric (with many subdivisions), and esp. sermons, epistolography, hagiography, theological literature (primarily polemic and exegesis), historiography, admonitions, romance, fable, gnomic, proverbs, and satire. Although scientific and juristic literature contain some elements of literary genres, they belong to the sphere of normative, not didactic and entertaining works.

GEORGEY I VILLEHARDOIN (Στεφάνος Β' Βασιλεύς), prince of Achaia (ca.1209–25/31); born between 1170 and 1175, died between 1225 and 1231. Nephew of the historian George de Villehardeouin, Geoffrey accompanied the part of the Fourth Crusade that went to Syria. There, in 1204, he learned of the capture of Constantinople and set sail for the city. His ship was forced to pass the winter of 1204/5 at Methone, where an unnamed Byz. magnate invited him to help seize that area. Their cooperation prospered until the magnate's death. In summer 1205, his son's hostility forced Geoffrey and his followers to seek out Boniface of Montferrat, then besieging Nauplia. With Boniface's consent, Geoffrey joined William I of Champlitte in conquering the Morea. After William departed for France, Geoffrey did homage to Emp. Henry of Hainault (1209) and became prince of Achaia. Around 1209/10 he took the Acrocorinth (where he constructed a donjon) and then the Lakanion plain, leaving only Monemvasia, the Slavs of Taygetos, and the Mani unconquered. In the feudal organization of the principality, former Byz. magnates assumed a recognized place while peasants continued to pay dues similar to those in Byz. times. The circumstances of Geoffrey's death are unknown.

GEORGEY II VILLEHARDOIN, prince of Achaia (ca.1226/31–1246); born France ca.1195?, died Morea early summer 1246. The son of Geoffrey I Villehardeouin, he came to the Morea ca.1210. In 1217 he married Agnes de Courtenay, daughter of Pierre de Courtenay, Latin emperor of Constantinople. As Pierre's vassal Geoffrey helped the Latins oppose Byz. efforts to reconquer Constantinople. In 1236 and 1238 he fought against John III Vatatzes, who was besieging the capital. The Latin emperor rewarded him with suzerainty over Euboea. During Geoffrey's reign
the principality of Achaia enjoyed great tranquility and prosperity. Since he left no male heir, he was succeeded by his brother William II Villehardouin.

GEOFFREY DE VILLEHARDOUIN (historian). See Villehardouin, Geoffrey.

GEOGRAPHY as a scholarly discipline was inherited by the Byz. from antiquity. Strabo and Pausanias were the favorite sources of Stephen of Byzantium in the 6th C., and interest in Strabo was revived by the 9th C. (A. Diller, Studies in Greek Manuscript Tradition [Amsterdam 1983] 1–62, 137–82): a 9th-C. Heidelberg MS contains a selection of minor geographical works, including the Periplus of the Erythrean (Red) Sea (see Periplus), and an epitome of Strabo (Wilson, Scholars 87). Strabo and Stephen of Byzantium were excerpted in chronicles and leixika, in works by Constantine VII Porphyrogenetus, and elsewhere. The didactic poem on geography of Dionysios Periegetes (2nd C.) also acquired popularity and was commented on by Eustathios of Thessalonike, among others. Ptolemy, however, was more appreciated as the author of the Handy Tables than as a geographer, and Eratosthenes, the most scientific of ancient geographers, remained scarcely more than a name to the Byz.

The late Roman period witnessed an interest in descriptive geography—from accounts of marketplaces and harbors (Expositio totius mundi) to the itineraries of pilgrims (Egeria). The development of this genre stopped after the 6th C. and only slowly revived, beginning with Epiphanius Hagiopolites (end of 8th or 9th C.). The resurgence of travel literature from the 11th C. on shows growing interest in geography, although the Byz. retained a generally negative attitude toward travel. Psellus made ironic remarks about the wandering monk Elias (Ljubarskij, Psell 74–79), and Niketas Choniates ridiculed Patr. John X Kamateros for behaving as if he had journeyed throughout the world. Later this negative attitude disappeared: Gregoras included in his History (Greg. 3:3–75) a lengthy section devoted to his friend Agathangelos, who allegedly spent 20 years traveling around the Mediterranean, describing his journeys in letters. The representatives of Greek travel literature of the 12th–15th C. are John Phokas, Andrew Libadenos, and Laskaris Kanonas. To descriptive geographic literature also belong the narrative accounts of ambassadors to foreign lands, such as Priskos of Panion and Nonnosos in the late Roman period and Constantine Manasses, Nicholas Mesarites, and Theodore Metochites in the 12th–14th C. Many geographic observations, based partly on personal experience and partly on the records of travelers, are contained in historical works from Ammianus Marcellinus to Laonikos Chalkokondyles.

Theoretical geography, however, lagged behind descriptive observations. Cartography was barely known after the late Roman period. Description of lands and cities tended to be replaced by lists of names, as in Hierokles or the Cosmographer of Ravenna, rarely supplemented with information. More elaborate are the lists of themes and esp. of neighboring peoples in Constantine VII's De administrando imperio and De thematibus, which also provide historical and ethnographic data. Various causes hampered the development of Byz. geographic perceptions. First, writers felt the need to reconcile observations and empirical findings with preconceived notions based on the Bible—such a combination of personal experience and traditional stories is typical of Kosmas Indikopleustes. Following another tradition, already found in ancient literature, some Byz. "geographers" uncritically accepted bookish information as true. Even in De thematibus the distribution of cities in ancient times is not distinguished from the situation of the 11th C. Finally, geographic views were strongly influenced by folklore; fantastic notions regarding alien lands and peoples were often blended with reliable information.

In Byz. cosmography views on the shape of the earth ranged from the domed cube (Kosmas) to the globe (Photios), but in both cases the oikoumene was centered on the Mediterranean, which was seen as surrounded by three continents—Europe, Asia, and Libya—that were surrounded, in their turn, by the Ocean. The extremes of the earth—the British Isles, China, and Black Africa—were more often than not presented in legendary form, whereas India had a double existence—both as a place situated on the Ganges and as another identified with Ethiopia. Far in the east was the earthly Paradise, where the four major rivers (see Paradise, Rivers of) supposedly rose.
 GEOPONIKA (Περί γεωργίας ἐκλογαί), collection of excerpts on agriculture dedicated to Constantine VII; probably compiled 944–59. The Geoponika deals with grain production, horticulture, apiculture, and esp. viticulture. In the preface the compiler praises Constantine's victories and patronage of philosophy, rhetoric, and all sciences and arts. Since the state consists of three elements—the army, the clergy, and agriculture (p.26–7)—it was natural to issue an encyclopedia of this kind.

The originality of the Geoponika has been much discussed. Lipić emphasizes the original elements of the treatise (e.g., the author expressed the hope that the Arabs would perish [p.19,16]) and regards the Geoponika as a source for the study of 10th-C. agriculture. Lemeler asserts that the Geoponika contains nothing original except the preface; he argues that the Geoponika was based on the work of Kassianos Bassos the scholastikos (an office that had already disappeared by the 10th C.) and ascribes to him all the personal remarks included in Bassos's Eklogai, a compilation based in turn on the work of Vindanius Anatolios of Berytus (4th C.), mentioned in Photios's Bibliotheca (cod. 169). Gemoll, on the other hand, saw in Kassianos Bassos the compiler of the Geoponika. This very popular book has been preserved in approximately 50 MSS of the 11th C. and later; the Geoponika (or its source) was translated into Arabic, Syriac, and later into Armenian. In 1157 Burgundio of Pisa acquired a MS of the Geoponika and translated it into Latin the section on viticulture.

LIT. Lemeler, Humanism 33–6. W. Gemoll, Untersuchungen über die Quellen, der Verfasser und die Abfassungszeit der Geoponika (Berlin 1884).

GEORGE, saint; principal feastday 23 Apr. No reliable evidence attests his martyrdom, attributed to the time of a legendary Persian king Dadianos and located in Lydda (Diospolis in Palestine); later accounts transferred his execution to Nikomedea and the reign of Diocletian. Nevertheless the veneration of George is attested very early. An inscription of 323 found at Shakka in the Hauran mentions George “and the saints who suffered with him.” A decree of Pope Gelasius I of 496 rejects George's acta as apocryphal; several 6th-C. pilgrims observed the cult of George's tomb in Lydda. The earliest fragments of his passiones are the 5th-C. palimpsest in Vienna, the 6th-C. papyrus from the Negev, and a fragment (ca.1000?) from Nubia (W.H.C. Frend, AB 100 [1982] 79–86). The earliest passio emphasized George's ordeal and endurance; gradually, the theme of George as intercessor developed, esp. in his Miracula (some of which cannot be dated earlier than 1100—A. Kazhdan, Byzantium 52 [1982] 420), in which the saint helped in finding cattle, releasing captives, etc. Unlike the passiones, the Miracula present George as a mounted knight. George, Demetrios, Theodore Stratelates, and Theodore Teron were the most popular military
SAINTS; Emp. John II Komnenos introduced the image of George in military costume on coins. The legend of George's victory over the dragon was known probably only from the 12th C. Many writers such as ROMANOS THE MELODES, Theodore DAPHNOPATES, and Theodore PRODOMOS eulogized George. His *passiones* were translated into Latin, Slavic, Coptic, Armenian, Arabic, and Ethiopic.

**Representation in Art.** Virtually no other saint is so widely depicted in Byz. art as George. His portrait as a youthful warrior, elegantly clad, his hair in tight curls, is an essential feature of every church program, and appears in every other possible medium as well, from painted icons to ivory, from MSS to coins. In the post-Iconoclastic period (mostly after the 10th C., though there is a 9th–10th C. icon with a related image on Mt. Sinai; Weitzmann, Sinai Icons, B.44) George is also shown on horseback, often as a pendant to the mounted St. Theodore Stratelates (B. E. Scholz, *JÖB* 32.5 [1982] 243–53). His martyrdom on the wheel appears in the earliest marginal Psalters, and cycles of his martyrdom, with its long sequence of tortures as well as some of his miracles, are painted in subsidiary areas of churches from the 11th C. onward, esp. in Georgia and Serbia.

Large historiographed icons may contain over a dozen scenes surrounding a central figure of the saint; in some of these the figure of George is in relief, as though to imitate one of the three-dimensional wooden statues (zoana) of George such that he housed in his church in Omorphokeklesia near KASTORIA.

GEORGE BRANKOVIĆ, despotes of Serbia (from 1427); born ca.1375, died Belgrade 24 Dec. 1456. Between 1398 and 1402 BAYEZID I reinstalled George and his brother Gregory in lands confiscated from their father Vuk. George participated in the battle of Ankara in 1402 as a Turkish vassal; after the Ottoman defeat he returned to Serbia via Constantinople and used the temporary weakness of the Ottomans to build up a significant principality. Silver mines at Novo Brdo provided Branković with the necessary financial resources to construct between 1428 and 1430 a new capital on the Danube, the well-fortified Smederevo.

In 1427 Branković inherited the territory of his childless uncle, STEFAN LAZAREVIĆ, and received the title of despotes from the Byz. emperor John VIII. In addition to coping with the increasing
Ottoman threat, Branković had to resist both Venice and Hungary; he lost Belgrade to Hungary in 1427 and had to acknowledge the suzerainty of the Hungarian king. In these conditions Dubrovnik and Constantinople were his natural allies. In 1414 he had taken as his second (or third) wife Irene Kantakouzene, granddaughter of Matthew I (Nicol, Kantakouzenos 184-88, no. 71). Irene’s brother Thomas became one of Branković’s leading generals. A daughter Mars was married to Murad II (I. Papadrianos, Hellenika 19 [1966] 113-16).

In 1439 Smederevo fell to the Turks. In 1444 Branković and Hunyadi, voivode of Transylvania, recaptured Smederevo and in 1444 reinstated the despotate of Serbia. This initially successful Christian crusade against the Turks ended the same year, however, in defeat at the battle of Varna (in which Branković did not participate). Branković resumed his vassalage to the Ottomans and was forced to send a contingent of troops and sappers for the siege of Constantinople in 1453. After the fall of the Byz. capital, Mehmed II repeatedly attacked the Serbian despotate. In 1455 the Turks captured Novo Brdo and in June 1459, after the death of Branković, they took Smederevo, thus ending the last Serbian medieval state. A portrait of Branković with his family is preserved on a chrysobull of 1429 in the Espigmenou monastery on Athos.

—J.S.A.

GEORGE HAMARTOLOS (“the sinner”), or George the Monk, author of a universal chronicle encompassing history from Adam to 842. His biography is unknown, the time of his compilation under discussion. The traditional date of ca. 866/7 has been questioned by P. Lemerle (TM 1 [1965] 259, n.13); W. Regel (Analecta byzantino-russica [St. Petersburg 1891] vi–xiii) hypothesized that George used the Life of the empress Theodora (who died 867) and was therefore a contemporary of Leo VI; A. Markopoulos (Symmetiku 5 [1983] 252–55), although rejecting Regel’s argument, believes that George could not have written before 872. C. de Boor based his edition on a single MS (Paris, B.N. Coisl. 305 of the 10th or early 11th C.), even though various other MSS represent a common archetype (P. Odorico, fOB 32.4 [1982] 39).

George’s Chronicle is very combative and biased. He claims that his “small and modest biblidarion” conveys undorned truth, for it is better “to stammer in the path of the truth than to be false while imitating Plato” (1:2,3–10); whether George had more than textbook knowledge of Plato remains unclear (G. Belliore, Sileno 4 [1978] 23–71). George hates Iconoclasm, Islam, Manichaeanism, and idolatry and often expresses his hatred with a string of obscene epithets. He focuses primarily on the events of ecclesiastical history: thus he dedicates ten lines to Julius Caesar, but 20 pages to Augustus, whose reign coincided with Christ’s birth. George is expansive in describing church councils and quotes abundantly from the church fathers. For the Byz. period his main sources are Theophanes and Malalas; he is independent for 813-42. Some MSS contain a continuation sometimes ascribed to Symeon Logothete, going up to 948 or 1081, even 1142/3. The Chronicle was translated into Old Georgian and Church Slavonic. An illustrated late 13th- or early 14th-C. MS of the latter version, now in Moscow (Lenin Lib. 100), contains an author portrait and a full-page image of Christ enthroned between Michael, prince of Tver (died 1318), and his mother. One hundred twenty-seven miniatures set in the text-columns depict Old Testament, New Testament, and historical subjects. These are derived by Podobedova and others from Byz. chronicle illustration.

—A.K., A.C.

GEORGE KOMNENOS, emperor of Trebizond (1266–80); born after 1254, died 1284 or later. Young and violent when he ascended to the throne, he changed the cautious policy of his father Man-
uel I and took an anti-aristocratic course. He also supported anti-Unionists and, in his foreign policy, attempted alliances with the Golden Horde and some Georgian princes against the Mongols of Persia. In 1278 George replaced his title of despotus with that of basileus to emphasize the independence of his position. This action provoked objections both in Constantinople by Michael VIII and in Tabriz by the Ilkhan Abaga. En route to Abaga, in the mountains near Tabriz, George was betrayed by Trapezuntine nobles, seized by the Mongols, and imprisoned. He was probably liberated after Abaga's death in 1282. In 1284 he (or an impostor) invaded Trebizond; again betrayed, he was captured by his brother John II Komnenos and died in captivity.

--- A.K.

**GEORGE MT'AC'MINDELI** (“of the holy mountain,” Gr. Hagiorites), Georgian translator and hagiographer; born Trialeti 1099, died Constantinople 1065. After long study in Constantinople (1022–34), George went to Mt. Athos; he became superior of the Georgian monastery of Iveron ca.1045, then traveled widely—back to Georgia, to the Black Mountain, and to Jerusalem. George is important for his extensive translations from Greek into Georgian. These include revisions of the Psalms, Gospels, Acts, and Epistles; liturgical and hymnographical texts (the Great Synaxarion, Menaion, Sticharia, and homilies); and patristic texts (Basil the Great of Caesarea’s _Hexaemeron_, Gregory of Nyssa’s _On the Making of Man and Commentary on the Song of Songs_). His most valuable original work (written ca.1044) is a Life of John and Euthymios the Iberian, respectively the founder and first superior of Iveron. George’s own Life was written soon after his death by a disciple, also named George, at the request of George the Recluse on the Black Mountain, where George Mt’ac’mindeli was well known.

--- R.T.

**GEORGE OF AMASTRIS,** saint; born in the town of _ton Kromenon_, near Amastris, died Amastris between 802 and 807; feastday 21 Feb. Born to a family of local nobility, George began at an early age to participate in church administration; he then became a hermit on Mt. Agriosike but subsequently moved to the cenobitic community of Bonyssa (in Paphlagonia?). Patr. Tarasios appointed him bishop of Amastris ca.790, although the emperor supported a different candidate.

The Life of George, preserved in a single 10th-C. MS, consists of a biography, very poor in details, and the description of a few miracles, including the conversion or at least appeasement of the barbarian “Rhos,” who attacked Amastris and tried to despoil the saint’s tomb. The authenticity of this information depends on the date and attribution of the Life: Vasili’evskij (infra) and, recently, Ševčenko (“Hagiography” 123–25) attribute it to Ignatios the Deacon, whereas G. da Costa-Louillet ( _Byzantion_ 15 [1940–41] 245–48) considers it a 10th-C. work. A. Markopoulos ( _JOB_ 28 [1979] 78–82) proposes a compromise solution: that the Life is by Ignatios but the “Russian miracle” is an insertion produced under the influence of _Photios_. Another puzzle in the Life is its lack of anti-Iconoclastic invective, despite George’s evident closeness to Empress Irene and esp. to Emp. Nikephoros I, whose ascent to the throne George allegedly predicted. The hagiographer is exceptionally eloquent when criticizing trade “on land and sea” (p.52f).

--- Source. V. Vasili’evskij, _Russko-vizantijskaja issledovaniya_, vol. 2 (St. Petersburg 1893) 1–73, reproduced in his _Trudy_ 3:1–71.

--- Lit. _BHG_ 668–668e.

--- A.K.

**GEORGE OF CYPRUS,** 7th-C. geographer of whom nothing is known save that he was born in Lapithos on Cyprus. His work is preserved in a compilation ascribed to another obscure individual, the Armenian Basil of Lalimbana, although Darrouzès ( _Notitiae CP_ 34, n.1, 42f) considers this attribution extremely hypothetical; the compilation is assumed to have been written in the 9th
C., and the compiler probably altered the text of George’s work. While accompanied in MSS by notitiae, that is, lists of metropolitan sees, archbishops, and bishops, George’s record, like that of Hierokles, contains secular administrative divisions, including cities (the term polis is usually omitted), kastra, homai (villages), klimata, and, rarely, polechnai (towns), islands, and harbors. George begins with the district under the “eparch” of Rome or Italy, then follows with Africa, Egypt, and the Orient (Anatolike), that is, Glicia, Isauria, Syria, Mesopotamia, Armenia, Phoenicia, Palestine, Arabia, and Cyprus. The list is evidently incomplete.

ED. Descriptio orbis Roman, ed. H. Gelzer (Leipzig 1890) 28–56. 

GEORGE OF MYTILENE. See David, Symeon, and George of Mytilene.

GEORGE OF NIKOMEDIA, metropolitan of Nikomedia (from ca. 860); deacon and chartophylax of Hagia Sophia, preacher, author of various encomiastic works, esp. some devoted to the Virgin Mary. The typikon of the Euergetes monastery (Dmitrievskij, Opisanie 1.1:550,30–32) included George’s sermon on “the thronos of the Virgin” in the service for Good Friday. According to H. Maguire (“Depiction of Sorrow” 162f), George’s introduction of the theme of the Virgin “holding and embracing the body” of Christ influenced the artistic representation of the scene of the DEPOSITION FROM THE CROSS beginning with the 10th C. (an early surviving example is a fresco in the Old Church of Tokali, Göreme). R. Cormack (in Iconoclasm 151–53) hypothesized that the painted wooden reliquary of the True Cross, now in the Vatican, reflects the dramatic description of the Virgin kissing Christ’s bleeding feet in George’s sermon for Good Friday. The homily on the Presentation of Christ published as a work of Athanasios of Alexandria (PG 28:973–1000) is spurious and in some MSS ascribed to George of Nikomedia (CPG 2 no. 2271).

ED. PG 100:1336–1329. 

GEORGE OF PISIDIA, poet; born probably in Pisidian Antioch, died between ca. 631 and 634. George served as deacon, skevophylax, and referendarios in Hagia Sophia at Constantinople. His unabashedly Christian tone and stylistic innovation of using the iambed trimeter for epic poetry, the first step toward the later POLITICAL VERSE, make him a significant early landmark in Byz. poetry; Psellus even compared him (sometimes favorably) to Euripides (A. R. Dyck, Michael Psellus: The Essays on Euripides and George of Pidisia [Vienna 1986] 25–74). George’s major historical epics eulogize Herakleios, esp. for his campaigns against the Persians and Avars. Imperial virtues and achievements are exalted but emphatically subordinated to God. Some predilection for medical dictation and imagery is observable (J. D. C. Frendo, Orpheus 22 [1975] 49–56). George’s language and themes strive for symbiosis of sacred and profane, classical and biblical; Frendo (infra 186) praises his “dazzling sophistication and intellectual subtlety.” Others celebrated by George include Patr. Sergios I and Bonos the patrakios. Of his religious poetry, George’s best efforts are the iambic hexaemeron on the Creation (which was translated into Church Slavonic) and a rare hexameter piece On the Vanity of Life; also notable are a hymn on Christ’s Resurrection and a polemic against Severos of Antioch. His short poems on religious and secular subjects look back to the Hellenistic and forward to the Byz. epigram.

GEORGE OF TREBIZOND. See George Trapezountios.

GEORGE THE MONK. See George Hamartolos.

GEORGE THE PHILOSOPHER, also known as George (metropolitan?) of Pelagonia, writer of the second half of the 14th C. Virtually nothing cer-
tain is known of his biography, although his classical allusions indicate a secular education. He wrote a (still unpublished) treatise against Gregory Palamas and an enkomion of John III Vatazhes, who was later called St. John the Merciful (Gy. Moravcsik, BZ 27 [1927] 96–39). Moravcsik theorized that George was originally a monk at the monastery in Magnesia where the saintly emperor's relics were preserved but that, under the pressure of Turkish occupation, he moved to Pelagonia in Macedonia. N. Festa also attributed a Lenten homily to Vatazhes' hagiographer (VizVrem 13 [1906] 1–35).

Probably to be distinguished from George of Pelagonia is George Kydones Gabriellopoulos (ca.1323–ca.1383), also known as George the Philosopher, who was a friend and correspondent of Demetrios Kydones (PLP, no.3433; cf. F. Tinefeld, OrChrp 38 [1972] 141–71). This George was probably born in Thessalonike, became Kydones' physician in Constantinople, and then traveled to Cyprus, Palestine, Crete, the Morea, and Genoa. He was a Platonist and, like George of Pelagonia, an anti-Palamite.

A.M.T.

GEORGE THE SYNKELLOS, historian; died after 810. His life is scarcely known; he was a monk and a synkellos of Pat. Tarasios. V. Grecu questioned the hypothesis that George visited Palestine and Syria (BSHAcRoum 28.2 [1947] 241–44). His Selection from Chroniographers (Ekloge chronographias) covers history from the creation of the world to Diocletian (284); perhaps he planned to continue it to his own time but was prevented by illness and death. The work is an antiquarian compilation of various carefully indicated sources (Josephus Flavius, Sextus Julius Africanus, etc.) in separate topical clusters. Even though different layers of George's information are sometimes contradictory or repetitious, his purpose is consistent: to set forth the history of mankind in strict chronological sequence. The presentation is uneven, shifting from dry lists of rulers to descriptions of events. George's choice of material is arbitrary; e.g. in George Hamartolos, only a few lines are dedicated to Julius Caesar, in contrast to a vast section on Augustus. C. Mango's attempt (ZRVI 18 [1978] 9–17) to ascribe to George the authorship of the Chronicle of Theophanes the Confessor was criticized by I. Čičurov (VizVrem 42 [1981] 78–87), who admitted, however, that George could have provided Theophanes with some materials collected for his own work. The only complete MS of George is Paris B.N. gr. 1711, dated 1021 (A. Mosshammer, GRBS 21 [1980] 289–95). Anastasius Bibliothecarius used George for his Historia tripartita.

A.K.

GEORGE TRAPEZOUNTIOS, conventionally termed "George of Trebizond," humanist teacher, rhetorician, and translator; born Crete 3 Apr. 1395, died Rome ca.1472/3. The descendant of Trapezuntios who emigrated to Crete, George moved to Italy ca.1416, converted to Catholicism in 1426, and taught Greek in Vicenza, Venice, and Rome. He attended the Council of Ferrara–Florence as a supporter of the Pope, and in the 1440s entered the papal curia as a secretary. George's translations of Aristotle, Plato, Demosthenes, and the Cappadocian fathers were severely criticized, perhaps unfairly, by some of his contemporaries. His translation of Ptolemy's Almagest fared better, although his commentary was attacked. He also produced a wide variety of writings predominantly in Latin on rhetoric, logic, philosophy, theology, astrology, and astronomy (J. Irmcher, 12 CEB 2 [Belgrade 1961] 362). He dreamed of the unity of mankind, but was shocked by the expectation of Plotho that this unity be achieved on the basis of a revitalized paganism. George built his hope first on papal supremacy, but in 1453 expressed the utopian view (in his Greek treatise On the Truth of the Christian Faith) that the Turkish sultan, converted to Christianity, would be able to conquer the world. George's hopes in this respect were strongly affected by his eschatological vision of the Roman Empire (meaning the papacy) fighting the Antichrist. In 1465
he went to Constantinople as emissary of Pope Paul II to Mehmed II, but his mission was unsuccessful; on his return to Rome in 1466, George was briefly imprisoned for his fulsome praise of the sultan.

George argued that the study of antiquity was useful as preparation for political activity. He had high regard for Cicero, but replaced the latter's ideal of the orator-philosopher with that of the orator-statesman (Monfasani, George of Trebizond 294). George had a hot temper and quarrelsome nature; although a translator of Plato, he turned into an ardent defender of Aristotle in his Comparison of the two philosophers. As a result he was the target of the polemic of Bessarion, Against the Calumniator of Plato. George sharply criticized not only Pletho and Bessarion, but the more moderate Gazes: Plato's closeness to Christianity George considered deceptive, whereas Aristotle, he said, taught the immortality of the soul, creation ex nihilo, and a consistent monotheism; he even anticipated the Christian Trinity (Monfasani, George of Trebizond 157).

GEORGIA. The modern term refers to two areas: eastern Georgia (Georg. K'art'li, Gr. Iberia, Arm. Virk', Pers. Gurgan) and western Georgia (Gr. Colchis, later Lazika; Georg. Egrisi, later Abchasia). These were united politically in Byz. times only in the years 978–1258 and 1330–1491, but had a common language and similar social structure.

The Georgian language (with Mingrelian, Laz, and Svan) belongs to the southern Caucasian, or Kartvelian, group. The literary language is based on the K'art'li dialect and the written tradition (cf. Georgian literature) goes back to the 5th C.

King Mirian of Iberia was converted to Christianity in the 330s by Nino, known to tradition as a captive attached to the court. There were Chris-

tian settlements on the Black Sea coast by the 4th C. Western Georgia accepted Christianity in the same century, but as in Armenia, the populace was not fully converted until much later. In 505 or 506 at the Council of Duin the Georgians and Armenians rejected Chalcedon. At the beginning of the 7th C., however, the Armenian and Georgian churches split; from then on the Georgians remained in communion with the Greek church. This encouraged close contacts, political and intellectual, between Byz. and Georgia; relations with Armenia were intimate but often strained.

The original capital of K'art'li, Mc'er'ata, remained the patriarchal seat after Tbilisi became the political capital in the reign of Vaxtang Gorgasali (ca.440–522). At the end of his reign, dislodged by the Persians, Vaxtang fled for a short time to Western Georgia, which remained under Byz. control. After 523 the Persians installed a marzpan (governor) in Tbilisi, and Iberia with Armenia fell into the Iranian orbit. In the following century the Muslims gained control of both Armenia and Iberia. The enlarged province was ruled from Duin, Tbilisi remaining the center for local administration.

The caliph's hold over Georgia lasted two centuries. In 888, three years after the Armenian Bagratid princes assumed the royal title, Adarnarse of the Georgian branch of that family claimed the title of king. Georgia was not united, however, for Abchasia remained an independent kingdom until the reign of Bagrat III (978–1014).

As the borders of Byz. expanded eastward in the 10th C., upper Tavk' was annexed on the death of its prince David of Tavk'/Tao in 1000. Unlike the Armenian kingdoms, however, which were incorporated into the empire in the 11th C., Georgia remained independent. After Byz. control in eastern Anatolia collapsed following the defeat at Mantzikert (1071), the Georgians extended their sway in Caucasus under David II/IV the Restorer and his descendants. The eastern region of Kakhetia was incorporated in 1105. Tbilisi was regained in 1122 from the Shaddadids (a Muslim Kurdish dynasty of Gandza, which had occupied Ani and Tbilisi after the Turkish conquest of Anatolia). Tbilisi now became the capital; the monastic complex of Gelati near the earlier capital of Kutaisi remained an important center of learning. In 1124 Ani was captured, but during the remainder of the 12th C. it passed back and
forth several times between Georgians and Shād-dadids.

Cultural contacts between Georgia and Byz. were fostered in Constantinople and in monastic centers such as Mt. Athos (where the Georgians had their own monastery, Iveryon), Mt. Sinai (see G. Garitte, Catalogue des manuscrits géorgiens littéraires du Mont Sinai [Louvain 1956]), and Jerusalem. Political ties were strengthened in the 6th C., when the emperor first bestowed titles (usually kouropalates) on Georgian princes. In the 11th C. marriage alliances confirmed those ties: in 1032 Bagrat IV married the niece of Romanos III, following a visit to Constantinople by Bagrat’s mother Maria, herself of Armenian descent; Bagrat’s daughter Maria of “Alania” married Michael VII Doukas and subsequently Nikephoros III. The daughter of David II IV the Restorer married the grandson of Alexios I Komnenos, while the first wife of Andronikos I Komnenos was related to Queen Tamara (who helped Alexios and David Komnenos to seize Trebizond in 1204). Many nobles of Georgian or Armenian descent served in the Byz. army, such as John Tornikios and Gregory Pakourianos.

After 1204 direct contacts with Constantinople were few. The Mongol attack of 1220 curbed the military success of Tamara and her son George IV (1212–23). In 1240 Queen Rusudan (1223–45) appealed to Pope Gregory IX for help. Latin missionaries had been in Tbilisi since 1233 and a Latin bishopric was established there in 1329. Nevertheless, the Georgian delegation to the Council of Ferrara-Florence did not sign the act of Union.

In the 14th C. Georgian control over eastern Georgia and Armenia declined. George VI (the Brilliant, 1314–46) moved his capital to Kutaisi and contacts with the West and Trebizond became more significant. The second wife of Bagrat V (1360–95) was Anna, the daughter of Alexios II of Trebizond; the daughter of Alexander I (1412–42) married John IV Komnenos of Trebizond. Constantinople remained beyond the Georgian horizon, save for unsuccessful negotiations to arrange a marriage between the daughter of George VIII (1446–65) and the last emperor, Constantine XI.

R.T.

GEORGIAN ART AND ARCHITECTURE.

Georgian art retained its distinctive national character throughout the medieval period despite significant foreign influences affecting certain media. Byz. influence was strongest in the 11th–14th C.; it dominated some schools of metalwork (esp. enamels) and painting. Before the Arab conquest Georgian architecture and sculpture followed a course parallel to that of Armenian art and architecture, but, although both nations based their later architecture on the achievements of the 7th C., the experimental Georgian approach after ca.800 has little in common with Armenia’s almost reverential use of 7th-C. models.

Architecture and Stone Sculpture. The earliest Christian monuments are small hall churches and basilicas; centralized domed plans were introduced by the 7th C. As in Armenia, virtually all the churches are constructed of rubble conglomerate faced with tufa; vaults and domes are also masonry. Because most architectural types used in Georgia appear simultaneously in Armenia (Džvari at Mćxet’A [586 (or 587)–604?]) is paralleled by Avan [ca.590], C’romi [626–35] by St. Gayané at Varešapart [630–41]), attempts to assign precedence to either tradition have proved fruitless. The few Georgian church plan types not attested in Armenia include a tetraconch with four small oval chambers inserted between the apses (Ninoc’mind‘a [6th C.??]) and the widely used “three churches basilica,” in which partition walls with only one or two small openings divide nave and aisles into very distinct spaces.

In the early basilican churches, only pier capitals and bases are sculpted; those in Sion at Bolnisi (478–89) carry Christian symbols (the Cross with stags, peacocks) and pre-Christian Georgian or Sasanian motifs (animals pursuing one another, vegetal patterns). Façade programs begin ca.600. Džvari at Mćxet’a displays donors kneeling before Christ and angels. At Ateni (7th C.), separate reliefs show donors at the hunt and Christ and the Virgin. An altar (?) slab from Cebelda combines an image of St. Eustathios and the stag with Old and New Testament scenes and donor portraits. N. Thirry (BK 44 [1985] 169–223) has shown that at least one atelier (in Gugaren) pro-
duced stelae for both Armenian and Georgian patrons, but some forms, such as standing crosses, are attested only in Georgia.

The Arab invasions curtailed building in Georgia, but the experimentation in church plans that typifies 7th-C. architecture had resumed by 800. Somewhat debased standards of construction, with more use of uncut or rough-cut stone facings and less sculpture, suggest the difficulties encountered during this period.

The triumphs of the Bagratids intensified building activity, particularly the foundation and restoration of monasteries. The new, lighter churches dwarf their predecessors. By the early 11th C. finely cut tufa was used again almost universally in Georgia, along with elaborately carved façades: blind arcading, bands of fleshy vegetation, large crosses, Old and New Testament scenes. Exteriors now give little hint of the spaces within: Nikorcminda (early 11th C.) appears to be a blocky inscribed cross, but the north, south, and east arms together conceal five radiating apses.

Monumental Painting. Although Iconoclasm did not affect Georgia, little figurative art other than stone carving survives from before the 9th C. In the apse at C'roni (626–35), Christ holding a scroll, flanked by apostles, is visible in a mosaic and its underdrawing. The only later example of mosaic occurs at Gelati, which has the more traditionally Byz. theme of the Virgin and Archangels.

At Ateni, the 7th-C. fresco program consisted of the Cross in the dome and geometric patterns in the conches. The Cross is often painted in the dome and Christ in glory in the apse; in Tall/Tao and in David-Garedža far to the east are examples from the 11th C. or even earlier. In 10th- through 13th-C. Svanetia, painting may be restricted to the apse, and saints popular locally—George, Julitta, Kyros—appear both as individual figures and in abbreviated cycles.

The Georgian kings and princes of the 12th–13th C. favored Byz. programs of church decoration, although these were altered to fit Georgian church plans and often preserved the unusual placement of the Cross and of Christ. Thus at Ateni in 1080, elements of a typical Byz. program were distributed over the four apses of the 7th-C. tetraconch, while the Cross remained in the dome. The rock-cut hall church of the Dormition at Vardzia (1184–6) is painted with a thoroughly Byz. program, and King George III and Queen Tamara of Georgia appear here in imperial Byz. robes; the Glorification of the Cross has been displaced to the narthex vault. At St. Nicholas in Kinevisi (1208) and at Timotesubani (ca.1220) the dome contains the Cross along with a Deesis.

The program and style of Ahtala (early 13th C.) are typical of late Komnenian painting. The church may have been frescoed by Byz. artists. Palaiologan models were widely accepted, esp. in western Georgia, where Byz. artists worked at Calendzica (1384–96; see Manuel Eugenikos), and probably at Lihni (mid-14th C.). The frescoes of the Church of the Transfiguration at Zarzma (first half of the 14th C.) have iconographic and stylistic ties with the Iveron Monastery on Mt. Athos.

Manuscript Illumination. The earliest surviving Georgian illuminated MSS are 9th- and 10th-C. Gospel books. Their decoration consists primarily of full-page canon tables and standing Evangelist portraits, although the First Druči Gospels of 940 (Tbilisi H-1660) also includes the Virgin and three Miracles of Christ.

More up-to-date Byz. styles were introduced from the 11th C. onward as Georgian monasteries edited and translated Greek texts. The synaxarion of Euthymios the Iberian of 1030 (Tbilisi A-648) resembles contemporary Byz. menologio, as does the 14th-C. synaxarion (Leningrad, Publ. Lib. gr. 01–58); both are bilingual (Greek/Georgian; P. Mjović, Zagreb 8 [1977] 17–23). The Second Druči Gospels (12th C.; Tbilisi N-1667) is a frieze Gospel. The style monn is also represented in the text miniatures of the Homilies of Gregory of Nazianzos (Tbilisi A-109; its frontispiece miniatures, however, are in a broad fresco style). According to a Greek inscription, Michael Koresh illustrated the 13th-C. Vansk Gospels (Tbilisi A-1335) in Constantinople.

Metalwork and Enamel. Metal (esp. silver-gilt) was the favored medium for icons; repoussé was used both for scenes and for the floral grounds of icons set with small enamels. The earliest dated example, the Transfiguration from Zarzma (886), is a very shallow relief with chased lines. Later, figures were modeled almost in the round (e.g., the Ishan Crucifix of 973 and the 11th-C. tondo of St. Mamas on the lion).

Although Georgian figured enamels from the 8th–9th C. are distinct from Byz. work, Greek inscriptions are common (as in other Georgian figural art), and by the 11th C., Byz. influence
was so strong that it is hard to distinguish Georgian from Byz. work.

GEORGIAN CHRONICLES. The term is a loose rendering of K'art'lis Cxovreba (Life of K'art'li [Iberia]), an official collection of some, but not all, historical works written in Georgian between the 8th and 14th C. (For the others, see Georgian Literature.) The process of compilation had begun by the 12th C. In the early 18th C. King Vakhtang VI appointed a commission that edited and amplified it into a continuous whole. Since then earlier MSS have been discovered, the earliest (Queen Anne Codex) dating to the period 1479-95 (C. Toumanoff, Traditio 5 [1947] 340-44).

The first item in the collection is the History of the Kings of Iberia by Leonitus Mroveli, archbishop of Ruisi, giving the legendary origins of the Georgian people. There follow the History of King Vakhtang Gorgasali by Dzuan, giving a semiautobiographical account of that 5th- or 6th-C. king (the Armenian abbreviated adaptation of the first five parts of the Chronicles, made in the late 12th or 13th C., falsely attributes the whole collection to Dzuan); the Martyrdom of King Ar'bel II (died 786); the Chronicle of Iberia, 786-1072 (from whose original title, Cxovreba, the whole collection probably derives its name); the History of the King of Kings, an enkomion of David II/IV the Restorer; the Histories of the Sovereigns, which deals primarily with the reign of Queen T'amar; and the History of the Mongol Invasions, covering the period 1212-1346. The last four items are of special interest for Byz.-Georgian relations.

LIT. C. Toumanoff, "Medieval Georgian Historical Literature," Traditio 1 (1943) 139-82.—R.T.

GEORGIAN LITERATURE. Before the creation of a script for their native tongue, the Georgians used Greek and Middle Persian written in Aramaic script. As in Armenia, at the beginning of the 5th C. church authorities created a script for Georgian based on the Greek alphabet (unlike Armenian, the extra letters are added at the end). The oldest surviving examples of Georgian are the inscription of 493/4 at Boulisi church and undated inscriptions on mosaics in Jerusalem (G. Tsereteli, BK 11-12 [1961] 111-30).

The first texts written in Georgian are translations of biblical and liturgical texts. The translation of the New Testament was based on the earliest Armenian version (the surviving Armenian text is a later revision); in the 10th-11th C. an extensive revision of the Bible based on Byz. Greek MSS was undertaken (B. Metzger, The Early Versions of the New Testament [Oxford 1977] 182-98). The influence of Jerusalem was strong in liturgical texts, reflecting the large number of Georgian monastic establishments in Palestine.

The earliest original composition is the Martyrdom of St. Su'asanik (daughter of Vardan Mamikonean); her cult was popular in both Georgia and Armenia (I. Curtaveli, Martviloobay Su'anikisi, ed. I. Abuladze [Tbilisi 1938; rp. 1978]). After the rupture with the Armenian church in the time of Katholikos Kyrlion (early 7th C.), literary contacts were less significant with Armenia than with Greek centers. Because the Georgians were Chalcedonian, they frequented Constantinople as well as Greek monasteries on the Black Mountain, on Mt. Athos, and in Palestine. Hence translations from Christian Arabic played a significant role in the development of Georgian Christian literature (G. Garitte, Catalogue des manuscrits géorgiens littéraires du Mont Sinai [Louvain 1956]).

Historical works in Georgian date from the 7th C. The texts, both those included in the official Georgian Chronicles and others, primarily concern local matters. Of greater value for the Byzantinist are the Lives of numerous Georgians who were active in Constantinople, Mt. Athos, the Black Mountain, and the Holy Land (Latin tr. of Georgian texts in P. Peeters, AB 36-37 [1917-19] 1-317). Scholars such as Ep'rem Mcire and George M'tac'mindeli translated anew or revised earlier versions of biblical, liturgical, hagiographical, and patristic texts. John Petric treated 11th- and 12th-C. Byz. philosophical traditions. In the same period astronomical and medical texts were translated from Arabic. After the 12th C., however, secular literature (prose and poetry), despite overtones of Aristotelian and Neoplatonic philosophy, was more influenced by Persian models.
GEPIIDS (Γεπίδες), an eastern Germanic people, akin to the Goths. They are first mentioned in the Historia Augusta. In the 4th C. they settled in northern Dacia and were soon subjugated by the Huns. After the death of Attila, the Gepids, commanded by their prince Ardaricus, defeated the Huns at Nedao in 454, leading to the dissolution of the Hunnic confederacy. The Gepids occupied the flatland on the left bank of the Danube and were supported by Constantinople against the Ostrogoths. Sirmium was, for a long period, a bone of contention between the Gepids and the Ostrogoths, but at the time of Prokopios (mid-6th C.) the Gepids held both Sirmium and Singidunum. Justinian I encouraged the Lombards to attack them; allied with the Avars, the Lombards defeated the Gepids in 567/8. After this catastrophe the Gepids disappeared. Many hoards of gold and silver objects, including the princely graves in Apahida (near Cluj), have often been attributed to the Gepids, but the ethnic attribution of 5th-C. archaeological material found in Dacia is difficult—the distinction between Germanic tribes and the local population or Sarmatians is not easy to draw (V. Kropotkin, SovArch [1958] no.2, 316). In the 12th C. the name Gepids reappears in Byz. historiography and rhetoric as a designation of Hungarians (Gy. Moravics, BZ 30 [1929/30] 250).

GERAKI (Γερακί, Γερακί, anc. Geronthrai), town in the Peloponnese, situated between Monemvasia and Sparta; it flourished in the 13th–15th C. The Frankish baron Guy de Nivelet was granted the region after the Fourth Crusade, but ca.1263 it was returned to the Byz. Geraki was an important town of the despotate of the Morea. It fell to the Ottomans by 1460.

A fortress was built by Guy de Nivelet ca.1290 on a hilltop less precipitous than that of Mistra. The fortress was well protected by the mountain ridge save for the southern section where the walls were reinforced by two square towers; the walls, which were 1.5–1.7 m thick, have ceramic decoration. The approximate size of the stronghold was 125 × 60 m.

The Frankish town grew up on the west slope of the hill, while the Byz. town was situated in the plain below. Numerous churches survive in both sites, as well as in the fortress. East of the modern village is an early Christian basilica, now in ruins. To the northwest is the well-preserved Church of the Evangelistria, probably of the 12th C. Its virtually complete fresco program, of the late 12th C., seems to be the work of two painters, probably contemporary with each other and from Constantinople. Moutsopoulos-Demetrokalles (infra 136), however, argues that the frescoes are of two different periods. Southeast of the village is the Church of St. Sozon, of inscribed cross plan and dating to the 12th C., according to Moutsopoulos-Demetrokalles (infra 218); frescoes of the 12th or early 13th C. survive only in the cupola and sanctuary. Very similar in plan is the Church of St. Athanasios (ca.1200); its poorly preserved frescoes (14th C.?*) include portraits of bishops framed like icons. The frescoes of the small single-naved church dedicated to John Chrysostom have survived in their entirety; they are of two layers, one ca.1300, another dated ca.1450.

Within the fortress is the Church of St. George, originally built under the Franks with two naves; a third nave and narthex were added after the Byz. recovery of Geraki. Its frescoes probably date to the second half of the 14th C. A church of the late 13th C., dedicated to St. Nicholas, has frescoes of St. Mary of Egypt and Zosimos on its masonry templon.

About 8 km south of Geraki lies the Church of Hagios Strates, built ca.1430 (S. Kalopissi-Verti in Festschrift Wessel 147–66), which contains unusual
GERMANIKEIA (Γερμανικεία, mod. Maraş), city in the Antitaurus at the edge of the Mesopotamian plain, on roads connecting Asia Minor and Syria. A bishopric of Euphratesis, Germanikeia became a Monophysite center in the 6th C.; it was the birthplace of Nestorios and later Leo III “the Isaurian.” Persians occupied Germanikeia when Herakleios campaigned there in 625. Briefly recovered by Byz., it was destroyed by the Arabs in 657, then rebuilt by them to become a base for raiding Asia Minor. Germanikeia was the scene of constant fighting in the 8th–10th C., when it was usually controlled by the Arabs and attacked by the Byz. In 746, Constantine V transferred some of its inhabitants (including many Monophysites) to Thrace; in 769, the people of Germanikeia, accused of spying for Byz., were deported to Palestine. Michael LACHANODRAKON pillaged the region in 778; Theophilos temporarily reconquered it in 841; and in 879 Basil I made Germanikeia the goal of his eastern expedition, ravaging the suburbs when he failed to take the city. It was finally taken by Nikephoros II Phokas in 903. Germanikeia was the southernmost point reached in the campaigns of Romanos IV in 1068–69. The area was entrusted to Philaretos Brachamios, who created an ephemeral Armenian principality there from 1078 to 1097. Although briefly captured by Alexios I in 1099, it was soon lost to the Crusaders of Edessa.

GERMANOI (Γερμανοί, derived from the Latin Germani), Byz. term for the Germans. Prokopios (Wars 3.11.29, 12.8) defined Germanoi as the former name of the Franks, associating the latter with the Rhineland Germans of the early Roman Empire. Through the 15th C. it remained an axiomatic ethnic formula in Byz. historiography that Germanoi and Frankoi were the same, the only exception being the occasional and even more anachronistic association of the Germanoi with the “Keltoi” (Celts). The Germanic peoples of the Holy Roman Empire were not independently recognized in Byz. sources until the 11th C., and then as Alemanni or Nematzi. Thus, Kinnamos defined the German Conrad III as the king of the Alamanoi and the French Louis VII as the king of the Germanoi.
GERMANOS (Γερμανος), general, nephew of Justin I (PLRE 2:505) or more likely Justinian I; born before 505, died Serdica early autumn 550. Justinian appointed him magister militum per Thracias; he successfully fought the Antae. In 536 Justinian sent him to suppress the revolt of Stotzas and, in 540, to defend Antioch against Chosroes I, but Germanos abandoned the city. Thereafter he fell into disfavor, due esp. to Theodora’s hostility: the empress saw in him a probable successor to Justinian and was angry with Germanos’s marrying his daughter Justina to a powerful leader of the foederati—John, nephew of Vitalian. After Theodora died and Germanos displayed loyalty by refusing to join the plot of Artabanes and Arsakes (who probably were planning to place Germanos on the throne), Justinian changed his attitude toward his nephew. He approved Germanos’s marriage with the Ostrogothic princess Matasuntha of the Amali, which established Germanos as heir to both realms; Germanos was to replace Belisarios as commander of land operations against the Ostrogoths. He assembled an army in Illyricum and frightened the Slavs who had tried to cross the Danube, but died suddenly before the expedition started.

Prokopios (Wars 7:40.9) praises his manliness, justice, and generosity. Germanos showed himself to be a brave warrior. He was immensely rich, kept a personal retinue, and was popular in Constantinople. By his first wife, Passara, he had two sons, one of whom, Justin, was executed by Emp. Justin II; Matasuntha bore him a posthumous son, named Germanos.

GERMANOS I, patriarch of Constantinople (11 Aug. 715–17 Jan. 730) and saint; born between 630 and 650 (Garton-Westerink, infra, p.v) or between 653 and 658 (Lamza, infra 57), died Platanion 730 or 742?; feastday 12 May. Germanos was reportedly more than 90 years old at his death. However, his vita (Lamza, infra 204.73–76) states that in 705, when he reached the middle of his life, Germanos turned 37; this would give him dates of 668–742. E. Stein asserts, on shaky grounds, that Germanos belonged to the family of Justinian I (Klio 16 [1919–20] 207). In 609 Germanos’s father was executed and Germanos castrated. Elected bishop of Kyzikos ca.705, Germanos supported Emp. Philippikos-Bardanes in his sympathy for Monotheletism but opposed Monotheletism after the fall of Philippikos in 713.

As patriarch, Germanos supported Leo III and praised in his sermons Leo’s victory over the Arabs. He was probably that anonymous patriarch who questioned the Paulician Gegnesios (Peter of Sicily, PG 104:1284B–1285A) and permitted him to remain at large; among the issues discussed were veneration of the cross and of the Virgin, sacraments, and baptism, but not icon veneration. It is not clear how and when the patriarch came into conflict with Leo’s policy of Iconoclasm; probably the veneration of the Virgin, to whom Germanos dedicated several sermons, was the major point of dispute. Germanos was forced to resign and was replaced by the Iconoclast patriarch Anastasios.

The oeuvre of Germanos is not yet established; the distinction between his writings and those of Germanos II is occasionally hard to draw. The dialogue On Predestined Terms of Life is sometimes ascribed to Photios; even his authorship of the commentary on the liturgy preserved under the curious title of Church History remains dubious. The commentary was translated into Latin by Anastasius Bibliothecarius. In his genuine works Germanos is revealed as an experienced rhetorician: he created new composite words, such as theobastaktos (PG 98:321A, 324D, 368A) or axiozographistos (PG 98:336CD), used symmetrical structure of clauses (e.g., the chairitesmoi so typical of the poetry of Romanos the Melode), and exquisite puns such as korakes and kerykes (PG 98:265CD). Especially interesting is his dialogue between Gabriel and Mary in the sermon on the Annunciation in which the protagonists converse on different stylistic levels, the archangel being majestic and the Virgin simple and naive. He was a hymnographer who wrote kanones; the Akathistos Hymn has been attributed to him by some scholars. The anonymous vita of Germanos is legendary; it was written not in the 8th (Beck, Kirche 506) or 9th C. (Garton-Westerink, infra, p.v, n.1) but in the 11th C.

GERMIA II, patriarch of Constantinople (4 Jan. 1223–June 1240 [V. Laurent, REB 27 (1969) 136f.]); born Anapulous second half of the 12th C., died Nicaea. Germanos was a deacon at Hagia Sophia when Constantinople fell to the Latins in 1204; he fled to a monastery at Achyraous. In 1223 John III Vatatzes selected him as patriarch-in-exile at Nicaea (A. Karpozilos, Byzantina 6 [1974] 227–49). He was a strong proponent of the Nicene claim to be the sole legitimate Byz. successor state and emphasized his own authority as ecumenical patriarch; he censured Demetrios Chomatemos for crowning Theodore Komnenos Doukas as basileus in Thessalonike (G. Prinzling, RSB 3 [1964] 21–64). By 1232 he had regained control over the dissident church of Epiros, even visiting Arta to establish his jurisdiction (1238).

In 1235, however, he acknowledged the limited autocephalous status of the church of Bulgaria and recognized the archbishop of Tarnovo as patriarch. Germanos was noted as an opponent of Union of the Churches, esp. at the synod of Nicaea-Nymphaion (1234). He wrote several anti-Latin treatises (on the Procession of the Holy Spirit, azymes, purgatory, and baptism), produced numerous homilies, and was also a poet, composing kanones on the seven ecumenical councils and political verses on repentance. Only a small portion of his oeuvre has been edited.

ED. S.N. Lagopates, Germanos ho B' patriarches Konstantinoupolis-Nikaias (Tripolis 1913). For complete list of works, see Beck, Kirche 6071.

A.M.T.

GERMANY, kingdom that succeeded that of the Eastern Franks; the term Germania was applied to it in Latin texts of the 10th C. The Greeks called its population Alamanoi (ALEMANNI), FRANKOI, GERMANOI, and, in official documents, Nemitzoi. The coronation of Otto I the Great in 962 as emperor of the so-called Roman Empire created the problem of "two empires," Byz. at first denying the imperial title to the German king, then acknowledging him as the king or even basileus of the Frankoi. The situation in Italy made the problem even more complicated: Otto I tried to subdue it, and Nikephoros II Phokas supported minor Lombard rulers against Germany. A temporary alliance with Germany was reached by John I Tzimiskes, who married his relative Theophano to Otto II; as a result their son, the half-Greek Otto III, came to ascend the German throne. The political alliance was accompanied by the intensification of economic and cultural links. Despite some frictions, relations between the two empires remained tolerable throughout the reign of Conrad III, when Manuel I married Bertha of Sulzbach. Theological contacts were evident on the eve of the Constantinople local council of 1166–67 (see under Constantinople, Councils of) (P. Classen, BZ 48 [1955] 339–68).

A serious conflict developed when Frederick II Barbarossa sought to retain control of Italy, and Manuel I sent money and armies to support the resistance of Italian cities. Byz. lost the struggle and capitulated to Henry VI. Philip of Swabia used his conjugal connections to intervene in the domestic strife in Constantinople at the time of the Fourth Crusade, while Frederick II Hohenstaufen cherished the expectations of an alliance with John III Vatatzes and a successful war against the infidels. In the 14th and 15th C., Germany, which was in political decline, remained aloof from active involvement in Eastern politics, although emperor Sigismund (1433–37) negotiated with Manuel II; his assistance, however, was not effective.

R.B.H., A.K.

GERMIA (Γέρμα, now Yörme), a city in western Galatia below Mt. Dindymon. It was famed for its healing spring whose fish, with the aid of the archangel Michael, were said to effect cures. When Stoudios, consul in 454, was healed there, he
restored the Church of St. Michael and built homes for the sick and aged. Germaia, under its alternative name Myriangeloi ("10,000 Angels"), became a bishopric by 553 and received a visit from Justinian I in 554, which may have occasioned its promotion to autocephalous archbishopric. A rank it maintained through the Byz. period. Theodore of Sykeon visited Germaia in the late 6th C. and was said to have worked miracles there. It fell to the Turks after the battle of Mantzikert in 1071. The site contains a five-aisled basilica of ashlar masonry with much sculptured decoration; probably built by Studios, it is the largest surviving church in Galatia. Justinian and Theodora extensively restored it. The site is frequently confused with the nearby Colonia Germa.

GERMIYAN (Kemâyva), a Turkish emirate that emerged from the breakup of the Seljuk sultanate of Rûm. Its name probably derives from a Turkoman tribe that appears, in the Greek form "Karmianoi," in an account of the miracles of St. Eugenios worked as early as 1223 (A. Papadopoulos-Kerameus, Sbornik istorii i po istorii Trapezandskoi imperii [St. Petersburg 1897] 131.12). Around 1239 a Turk named Germiyan, established in the Meltene region, was in the service of the Seljuk sultan; ca. 1277 the Germiyan-oglu Husam al-din ibn Alishir founded an emirate with Kütahya (see Köyayı) as its capital. Byz. authors seem to give the dynastic founder's name, Alishir, to any Germiyan-oglu. According to Pachymeres (ed. Bekker, 2:2426.16), Germiyan was the most powerful Turkish state in the early 14th C. Its emirs were apparently the overlords of the Turkish emirs of the Aegean regions; they attacked Philadelphia repeatedly and extracted poll-tax (jizye) from the inhabitants before 1314. According to the 14th-C. Egyptian encyclopedist al-‘Umari (Notices et extrait 13 [1838] 355), they also extracted tribute from the Byz. The emirate produced alum in Gediz (the ancient Kadol), which was sold in the ports of Ephesus (Theologos) and Miletos (Palatia). In 1381 the Ottoman prince Bayezid I married a girl of the Germiyan dynasty and received some territories as dowry. The emirate was annexed by the Ottomans temporarily (from 1390 to 1402) and finally in 1428/9.

—E.A.Z.

GEROKOMION (γεροκομείον), or gerotropheion, home for the destitute elderly, under the direction of a gerokomos. As part of their tradition of philanthropy, the Byz. built special homes for elderly people who could not be cared for by their families. According to the Patria of Constantinople, gerokomeia were founded in Constantinople as early as the 4th C. At least 27 gerokomeia are recorded as having existed at one time or another in the capital, many of them imperial foundations; the best known was the facility at the Pankoktor Monastery for 24 elderly men who were no longer able to work because of infirmity or illness (Typikon, 109.1347–111.1389). The residents received an allocation of food, oil, firewood, and a cash allotment for clothes and incidentals, and were entitled to two baths per month. In case of severe illness they were admitted to the monastery hospital. Other monastic gerokomeia were those associated with the provincial monasteries of Petritzos and Kosmoteira at Bera and the Constantinopolitan monastery of St. George of Mangana. In the mid-10th C. gerokomeia were specifically included in Nikephoros II Phokas’s law forbidding the construction of new monasteries and affiliated charitable institutions in order to curtail their rapid increase and permitting only the restoration of existing institutions (Reg 1, no.699). This legislation was soon revoked, however, by Basil II.

—A.M.T.

GEROKOMOS (γεροκόμος), director of a gerokomeion, or old-age home. Justinian’s novel 7.12 names the gerontokomos as an ecclesiastical official along with oikonomos, xenodochos, orphantothers, and others. Several seals are preserved that belonged to ecclesiastical gerokomoi, such as the priest Theophylaktos and Epiphanius, "gerokomos of [the monastery?] of St. Kyros," both of the 8th C. (Zacos, Seals 1, nos. 2543, 3102). It is unclear whether Constantine, apo eparchion and
gerokomos (seal of the 7th C., ibid., no.1800), was an ecclesiastical or secular official. That the gerokomos could be a former high-ranking official is seen in a later addition to the 7th-C. Life of St. Spyridon (P. van den Ven, *La légende de S. Spyridon* [Louvain 1953] 91f., n.), speaking of a patriarch John, who was gerokomos and later bishop of Trimithous in Cyprus. In the late 9th-C. Kletorologion of Philotheos the gerokomos together with the xenodochos appears as a secular functionary in the department of the sakkellion. His functions are not specified. A xenodochos and gerokomos of Nicaea is known from a seal of ca.900 (Zacos, *Seals* 2, no.269); enigmatic is the undated seal of Constantine primicerius and gerokomos of the Constantinopolitan (?) monastery in Psamathia (Zacos, *Seals* 2, no.426). In the lists of functionaries of the 11th C. another official with the similar name of gerotrophos appears in the same clause as orphanotrophos (Dölger, *Beiträge* 46; cf. Zacos, *Seals* 2, no.487). In the 11th C. a patriarchal official who fulfilled the same functions preserved the old name of gerokomos (Laurent, *Corpus* 5.1, no.134).

**GESTA EPISCOPORUM NEAPOLITANORUM.** See John of Naples.

**GESTA FRANCORUM ET ALIORUM Hierosolimitanorum** (Deeds of the Franks and other Jerusalem Pilgrims), earliest account of the First Crusade from May 1095 to 12 Aug. 1099, by an eyewitness participant, who, to judge from his simple Latin and expert observation of military matters, was a professional soldier in the contingent of Bohemund I, probably from Apulia. The work may have been completed by 1099 and seems to be mentioned in 1101; it was used by a number of later historians of the Crusade like Albert of Aachen and Fulcher of Chartres. The author, who may have known a little Greek (ch.20, p.46), supplies detailed evidence on relations of the Crusaders, esp. Bohemund, with Byz. and their passage through the empire (chs. 2–9, pp. 2–21; ch.27, p.65; ch.30, p.72). Although extremely hostile to Emp. Alexios I, the author admits instances of Byz. assistance and shows no religious animosity. He even implicitly recognizes Byz. logistical skills and admires the Tourkopoulos (ch.8, p.16) as well as the Turks (ch.9, p.21).

**GESTURE**, a movement of the body as an element in a comprehensive system of communication. Human gesturalization can be divided into two categories: “natural” movement (body language) expressing various emotions, and gestures based on deliberate cultural, legal, political, and religious conventions. Both archaic Roman law and barbarian *leges* provided for special gestures to reinforce contracts or the statements of witnesses; Byz. law infrequently applied such procedures, although there is mention of solemn processions that testified to or revised boundaries between two properties. Conventional gestures were used in a broad range of state ceremonies with *proskynesis* as the extreme expression of self-submission and including acclamations, expressions of power and triumph, and the granting of titles and/or offices. The submission of conquered cities could take the form of conventional processions. Gestures accompanied acts of secular and ecclesiastical investiture (e.g., cheirotonia and cheirothesia), formed an integral part of liturgy and prayer, and were used for healing of specific (esp. mental) diseases. Birth festivities, weddings, and funeral ceremonies also involved conventional language of gesture based on actual or feigned emotions.

The largely formulaic contexts in which gesture was used and the immobility and frontality of the human figure lent added importance to signals of the head, arm, and hand. Prokopios's record of the gesture made by the Justinian I statue in the Augustaion and Paul Silentiarios's description (Friedländer, *Kunstbeschreibung*, lines 776–77) read more into Christ's preaching hand than is immediately apparent from artistic expressions of the period. Nonetheless Roman motions of address, triumph, supplication, concord, and meditation endured and were applied to such themes as the acclamation of Christ, blessing, angelic salutes, the Visitation, and Evangelist portraits. To these were added more dramatic, natural movements, for example, a hand covering
the mouth, the cheek or, in extremis, the whole face to express grief. Such physical vocabulary was freely transferred from one scene to another. In and after the 12th C., the number and intensity of gestures multiplied as part of a process in which iconography was enriched esp. with pathetic imagery. At its most sophisticated, gesture carried not only emotional connotations but also ideological significance: according to the sermons of George of Nikomedea, Mary's embrace of the dead Christ emphasized his humanity and thus the reality of the Incarnation.

—A.C., A.K.

GHASSÂNIDS, the dominant group among the Arab foederati in the 6th C. Their most illustrious rulers were Arethas, his son Alamundar, and his grandson Namaan. The Ghassânids fought for Byz. against the Arabs of the Peninsula, the Lakhmids of Hira, and the Persians. They were Monophysites, and this set the emperors against them, Tiberios I and Maurice esp. seeking to weaken their power. The Ghassânids, however, did not disappear in the reigns of Phokas and Herakleios and continued to play an important role in the wars of Byz. The "Saracens" singled out for honorable mention in the bulletin issued by Herakleios after his victory over the Persians in 628 are most probably the Ghassânids. In 636 they appear in the Arab sources as the principal Arab federates of Byz. at the battle of Yarmuk. After that defeat, those Ghassânids still loyal to Byz. settled in central Anatolia, in Charsianon, and Cappadocia. According to al-Tabari, Emp. Nikephoros I was a Ghassânid. The Ghassânids were great builders of churches, monasteries, palaces, and castles; their court was visited by the foremost poets of pre-Islamic Arabia who composed panegyrics for their kings.

—I.A.Sh.

GHĀZĪ (Γαζής), also called Amīr Ghāzī and Gümüştegın Ghāzī; Danişmend emir; died 1134. Eldest son of Danişmend, in 1104 he inherited Sebastia, Amaseia, Neocaesarea, and adjacent towns. Around 1120 he defeated and held for ransom Constantine GABRAS, dox of Chaldia (A. Bryer, The Empire of Trebizond and the Pontos [London 1980] pt. III [1970], 177.) About 1127 Ghāzī acquired Caesarea, Ankyra, Kastamon, and Gangra, becoming the leading Anatolian Muslim ruler. John II took Kastamon in 1132, but Ghāzī recovered it the following year. On his deathbed, he received the title malik from the caliph.

—C.M.B.

GHULĀM (Ar. pl. ghilmān, lit. "pages"), a member of the armed forces of slave status utilized in the Arab caliphate from the 9th C. onward and developed by the Sāmānid. They formed a professional army; according to Ibn Al-Athir (8:157), "a soldier must be able to take with him everything he possesses, wherever he may go, and nothing must hold him back." These troops were manned primarily by young Turkish slaves bought or captured on the northeastern borders of the Sāmānid realm between the Islamic and Turkic worlds. A description of the ghulām system is found in the Sīyāsatnāma of Nizām Al-Mulk. It was this system, introduced into Anatolia by the Seljuks of Rūm and continued by the Anatolian beyliks, that would reach its most famous form in the Ottoman Janissary system.

—S.V., A.K.

GIDOS (Γίδος), a family known in the second half of the 12th and in the 13th C. S. Papadimitriu (VizVrem 5 [1898] 734; VizVrem 6 [1899] 169) considered the name to be the Greek rendering of the Italian name Guido; W. Hecht (Aussenpolitik 85, n.336), however, doubts that Gidio of this period were still Latins.

The Gidio of the 12th C. may have descended from the son of ROBERT GUISCARD named Guido, who deserted to Byz. and became Alexios I's military adviser; Anna Koman (An.Komn, 2:51.10) relates that Alexios suggested to Guido a relationship by marriage. The legendary CHANSON D'ANTIOCHE (v.901, 1033) calls Guido (Guis) the
emperor’s close friend and seneschal but not his nephew, as Chalandon (Commène 1:92) says. Thomas of Toscana (MGH SS 22:498) preserved a legend that William, Guiscard’s son, married Alexios’s daughter and became the lord of his empire, but died without descendants.

Under Andronikos I, Alexios Gidos was megas domestikos of the Orient; he retained his high position after Andronikos’s downfall and in 1194 still commanded the eastern troops sent against the Bulgarians. Andronikos Gidos was Theodore I Laskaris’s general; in 1206 he defeated the Italian allies of David Komnenos. It is hypothesized that he is to be identified with the Andronikos Gidos who ruled Trebizond from 1222 to 1235 (Miller, Trebizond 19).

Lit. Guillard, Institutions 1:408f.  — A.K.

GIUSTINIANI LONGO, GIOVANNI, Genoese hero of the final siege of Constantinople (see Constantine, Siege and Fall of); died Galata or Chios early June 1453. Giustiniani, a member of a distinguished Genoese trading family based on Chios, arrived in Constantinople on 29 Jan. 1453 and offered his services to Constantine XI. He brought with him 700 soldiers and two ships. The emperor gave him the title protosstrator and promised him the island of Lemnos. Since Giustiniani was experienced in siegecraft, he was placed in charge of the defense and repair of the land walls. He fought valiantly against the Turks, inspiring loyalty and courage in both Greek and Italian soldiers. On 29 May, in the final hours of the siege, Giustiniani was wounded and abandoned his post; many Genoese troops then panicked and fled. The Ottoman janissaries took advantage of the ensuing confusion to make their final successful assault on Constantinople. Doukas stresses Giustiniani’s bravery and the severity of his wound, whereas the “siege section” of the Chronicon Maius of pseudo-Sphrantzes (perhaps by Sphrantzes himself) accuses Giustiniani of cowardice and of using his wound as an excuse for flight (Sphr. 426.9–24). His wound must have been serious, since Giustiniani soon died, either in Galata (pseudo-Sphrantzes) or Chios (Doukas).

GILDO, Moorish prince and Roman official in Africa; died on the river Ardalo, near Thereste, 31 July 398. A son of Nubel, the king of Mauritania, Gildo was a client of the family of Theodosios I. In 373, when his own brother Firmus rebelled, he helped Theodosius the Elder put down the revolt. He was appointed comes of Africa in 387/8 (S.I. Oost, CPhil 57 [1962] 29) or 385 (Matthews, Aristocracies 179). He probably preserved hostile neutrality during the revolt of Eugenius. In 397 he broke with the Western court and declared allegiance to the government in Constantinople; he withheld the customary grain shipments from Africa to Rome. In Africa Gildo incited the hostility of the urban population by vast land confiscations and by his favoritism toward the Donatists. Stilicho mounted an expedition against Gildo, and Gildo’s brother Mascezel (whose children Gildo had murdered) was entrusted with the campaign. The Eastern court offered no assistance. Gildo retreated inland, far from the urban centers. Easily defeated, he was killed. The estates he acquired by confiscations formed a special area in North Africa, the Gildonicum patri monium.

GLABAS (Gamma, fem. Glabas, a family name probably of Slavic origin (glava, “head”): Manuel Philes (Philes, Carmina, ed. Miller 2:107, no.57.74–75) clearly recognized the Slavic etymology of the name. From the late 10th C. the Glabades were active in Macedonia: the first, Basil, an illustrious in Adrianople, suspected of pro-Bulgarian leanings, was arrested by Basil II and imprisoned for three years. Another Glabas conspired against Constantine VIII and was blinded. In 1047 men “from the kin of the Glabades” (Skyl. 442.74–75) supported the rebellion of Leo Tornikios in Macedonia. Nonetheless the family remained in Byzantine service: ca. 1050 Niketas Glabas, toptoteretes of the tagma of the scholae, was sent from Adrianople against the Pechenegs. Another (?) Niketas Glabas is named strategos on a seal (Schlumberger, Sig. 667). They did not play any significant role.

GIRDLE. See Belt.
under the Komnenian dynasty, remaining provincial landowners: in the mid-13th C. they still lived in Kastoria (Akrop. 1:90.18–19). The protostrator Michael Tarchaneiotes Glabas was governor of Thrace under Andronikos II (see GLABAS, MICHAEL TARCHANEIOTES). Another Glabas served in the 1330s as a high-ranking civil functionary—megas dioikites and judge (PLP, no.4215). Some Glabades occupied high ecclesiastical positions, for example, Ignatios, metropolitan of Thessalonike (PLP, no.4222), and another metropolitan, Isidore Glabas (see GLABAS, ISIDORE). Women of the family were active as well: Maria Glabaina, known only from her 11th- or 12th-C. seal (Laurent, Corpus 5.2, no.1396), possessed a charistithion and probably founded a monastery of St. Stephen; after 1310 another Glabaina, protostratorissa (perhaps the wife of the protostrator Glabas?), founded a convent (V. Laurent, EO 38 [1939] 297–305). The Glabades were apparently closely connected with the TARCHANEIOTES family.

Lit. PLP, nos. 4200–28. –A.K.

GLABAS, ISIDORE, metropolitan of Thessalonike (25 May 1380–Sept. 1384 and Mar. 1386–11 Jan. 1396); baptismal name John; born Thessalonike? 1341/2, died Thessalonike 11 Jan. 1396. He became the monk Isidore in Apr. 1375. His first years as metropolitan coincided with the future emperor Manuel II's defense of Thessalonike against the Turks (1383–87). Although Glabas urged the citizens to respect and support Manuel, he himself left his see during the siege, was temporarily deposed, and resided for a while in Constantinople. After the capture of Thessalonike (1387), he traveled to Asia Minor to negotiate with the Turks; this perilous trip is described in the monody of Constantine Ivankos (PLP, no.7973) on Glabas. By 1393 he had returned to his see. His sermons (many unpublished) and letters provide evidence for conditions in Thessalonike during the Turkish siege and during the occupation of 1387 to 1403 (A.E. Bakaloopoulos, Makedonika 4 [1955–60] 20–34). He reported that even under the Turkish yoke some Byz. officials remained in their positions. Glabas complained of heavy Ottoman taxation; a sermon of 1395 (ed. B. Laourdas in Prosphora eis Stilpona P. Kyriakiden [= Hellenika, supp. 4, 1953] 389–98) is one of the first Byz. sources to refer to the Ottoman devshirme, the dreaded "child levy" (S. Vryonis, Speculum 31 [1956] 433–43). Glabas argued that the fall of the city was divine punishment for the decadence of priests and monks, and the moral decline of its citizens.

Lit. R.-J. Lochert, "Isidore Glabas, métropole de Thessalonique (1380–1396)." REB 6 (1948) 181–87, with add. V. Laurent, 187–90. PLP, no.4223. –A.M.T.

GLABAS, MICHAEL TARCHANEIOTES (or Michael Doukas Glabas Tarchaneiotes), protostrator; born ca.1235, died after 1304. Glabas is first mentioned in 1260 as the Byz. official assigned to regain Mesembria from the Bulgarian rebel Miko. He held a series of government posts, megas papias, kouropalates, pinakeries, and megas konostaulos, culminating sometime after 1297 in the dignity of protostrator. He waged successful campaigns against the Bulgarians in 1263 and 1278 and fought the Angevins in Albania ca. 1284. In 1297, as governor of the western part of the empire, he was entrusted with defending Macedonia against the Serbs and built or restored 15 fortresses in Thrace. He died soon after his campaign of 1304.

Glabas and his wife, Maria Doukaina Kornene Braniai Panaiologina, were wealthy patrons of the arts. In 1903 they sponsored the restoration of the Chapel of St. Euthymios the Great, attached to the Church of St. Demetrios in Thessalonike (T. Gouma-Peterson, ArtB 58 [1976] 168–83). Glabas also restored the monastery of Pamakaristos in Constantinople; he was buried there in the parekklesion constructed by his widow, who became the nun Martha. Glabas had become a monk before his death and, as an inscription about the apse mosaic records, the chapel was intended as a pledge for his salvation. His military exploits were commemorated in a (now lost) fresco cycle, probably at the Pamakaristos, known from the description in a poem by Manuel Philes.

GLAGOLITIC, the earliest alphabet for the writing of CHURCH SLAVONIC, probably invented by ST. CONSTANTINE THE PHILOSOPHER in the mid-9th C. It consisted of 40 letters, apparently derived partly from Greek MINUSCULE, partly from adaptations of Semitic letters, and partly from characters devised by Constantine the Philosopher himself. Among the Orthodox Slavs, Glagolitic was almost completely supplanted by Cyrillic by the beginning of the 11th C., although in Serbia and parts of Macedonia it survived until the 13th C. The Catholic Slavs of Croatia used it until the late 18th C.

S.C.F.

GLASS, PRODUCTION OF. The term for glassmaker, hyalopos (and variants), is known from papyri, early hagiographic texts, and epistolography (Smets, Viz.obšestvo 86). John Chrysostom (PG 61:142:24–26) was astonished by the glassmakers who transformed sand into a cohesive and transparent substance. The vita of Symeon of Emesa describes the workshop of a Jewish glassmaker in Emesa in which the needy found warmth at the furnace and watched the blowing of vessels that at times burst; Moschos mentions a hyalopos who was blinded by the flame (Rudakov, Kul’tura 149f) and a Jew in Constantinople who was a glassmaker (hyaulourgos) by profession (E. Mioni, OrchP 17 [1951] 93–25). They are relatively seldom mentioned in later texts: thus, in the 12th C. Michael Glykas (Annales 506.7) speaks of a Jewish hyeletpos, but this glassmaker lived in the days of Justin II. There is neither a glassmakers’ guild in the Book of the Eparch nor any evidence that the monks of the Studios produced glass, unless we surmise that the phlaskopoi in this monastery (Dobroklonsky, Istor. 143) blew glass bottles. In the 15th C. some glass wares were imported from Italy (Oikonomides, Hommes d’affaires 104).

Nevertheless, later Byz. objects of glass are well known: vessels (bottles, goblets, cups), often of blue or green glass, sometimes with marvered-in decorations; bracelets; mosaic cubes; window panes; etc. An inventory of 1142 lists glass lamps (Pantel., no.7.25). Literary sources mention chamber pots made of glass (Koukoules, Bchos 2:7:6, n.11). Some late Roman glass workshops were found in Sardis (A. von Saltberg, Ancient and Byzantine Glass from Sardis [Cambridge, Mass., 1980]), Galilee (G. Davidson Weinberg, Museum Haaretz Bulletin 10 [1968] 49f), and other locations. In Corinth two glass factories of the 11th–12th C. were excavated and it is plausible that glass was produced in Constantinople and Paphos. Byz. glass was exported (e.g., several Byz. vessels have been found in Byelorussian Novgorod and in Ani); Romanos I, when dispatching an envoy to Italy, sent with him 17 glass vessels together with a luxurious garment (De cer. 651.13–16).

Technological analysis of Corinth glass suggests that it belonged to the same type as the Roman and Egyptian wares (and probably the glass from Cherson and Belaja Veža-Sarkel), but the Byz. glassmakers learned by the 11th C. to proportion their materials better and to produce more durable glass (F. Matson, AJA 44 [1940] 325–27). Some fragments of Byz. stained glass have been found in Istanbul (see GLASS, STAINED).

A.K.

GLASS, STAINED. Although certainly not as prominent a part of 10th–12th-C. Byz. church decoration as MOSAICS and FRESCOES, stained glass nevertheless had an important role. This is clear from the discovery of the window fragments from the south church of the PANTOKRATOR MONASTERY in Constantinople. Datable to shortly after 1025, they attest to a mature stained-glass tradition, generally similar to that of the West in style and technique, but clearly not dependent on it. Indeed, this monument’s early date suggests that the influence was the other way around. Highly ornamental in effect, Byz. stained glass had more in common with enamelwork than with monumental painting, although large figures dominated each panel. Characterized by large areas of blue and a dark purple-red, it was cast in rectangular pans, unlike Western glass, which was blown. Indeed, the Western monk Theophillus (ca.1110–40) indicates that blue, a color achieved with
GLASS CRUETS, a common type of mold-blown vessels decorated with Christian and Jewish symbols (primarily crosses and menorahs). Distinguished by a squat hexagonal or, more rarely, octagonal body, with intaglio decoration on its side, this vessel type is known in two main variants: "bottles," with short necks (and, occasionally, handles), and "jugs," with long necks, spouts, and handles. Most are of brown glass and nearly all examples are between 8 and 16 cm in height. Findspots and provenance, which point toward Palestine and Syria, suggest sepulchral use. Their remarkable uniformity speaks for a single workshop, whose activity can be dated to the 6th and early 7th C. on the basis of similarities between certain cross types employed and those appearing on coins. A ritual function is beyond doubt, but the often-repeated suggestion that they are pilgrims' flasks is supported neither by ins scriptional evidence nor texts and is difficult to reconcile with the interchangeability of Christian and Jewish symbols that is characteristic of the type. There is also no evidence to support the theory that certain of the crosses replicate the jeweled cross then standing on Golgotha in Jerusalem.

GLASS PENDANTS are small (approximately 2 cm diam.) disks of colored glass—usually blue, yellow, or green—with a suspension loop and a die impression on one surface. Similar in appearance to GLASS WEIGHTS, they were manufactured in the eastern Mediterranean (Egypt, Syria, Palestine) until the 7th C., perpetuating a traditional, inexpensive type of jewelry current among pagans and Jews of the Roman period. Clearly amuletic in function, glass pendants typically bear scenes of protection (the Good Shepherd) or deliverance (the Sacrifice of Isaac); the cross or CHRISTOGRAM also appears, as do representations of one of the Sts. SYMEON THE SYLITE.

GLASS WEIGHTS, small disks (diam. approximately 1.7-2.5 cm) of colored glass—mostly yellow, green, or blue—used as EXAGIA. Their derived weights correspond to the SOLIDUS, SEMISSIS, and TREMIS; they would have been used either with COIN SCALES or BALANCE SCALES. Issued by the EPARCH OF THE CITY, glass weights may be either figural or nonfigural. Figural specimens most often show the eparch, identified by inscription and usually with a MAPPA in his raised hand. More rarely, the emperor is shown, either alone or with simply the MONOGRAM of the eparch. Sometimes one or two eparchs are shown with the emperor or with Christ above (in this case with one eparch only); again, a monogram iden-
titles the issuing official. Nonfigural glass weights usually bear a single monogram (either cruciform or block-shaped). Rare specimens also include numerical weight designations (e.g., KA for 21 siliqua). Closely related to bronze flat weights, glass weights were issued in substantial quantities throughout the 6th C. and into the 7th. From Constantinople they made their way via commercial routes to points throughout the Mediterranean basin. Many duplicates are known.

LIT. A. Vikan-Nesbitt, *Secunda 36f*.

GLEB. See Boris and Gleb.

GLOBOS. See Spilaia.

GLORIOSUS, or gloriississimus (ευνοογοτατος), the highest title of senators in the 6th C. As the old senatorial titles lost their eclat, the state tried to introduce new distinctions. In the mid-5th C. the illustres were renamed magnifici, later excelsi, and in the 6th C. gloriosi. The title was awarded to prefects, magistri militum, magistri officiorum, quaestores, and praepositi sacri cubiculi, whereas comites (see Comes) received the title of magnificentissimus. The title of gloriosus was also granted to some barbarian kings, such as the Ostrogoth Theodoric the Great.

--A.K.

GLOSSAE, glosses and commentary on legal texts and terminology. In the adaptation of the Latin texts of the Corpus Juris Civilis by the predecessors for a Greek-speaking population, most Latin technical terms were left untranslated. The Greek novels of Justinian I and his immediate successors also included a great number of Latin expressions. The rapid decline in knowledge of the Latin language made it necessary to replace most of these words through *exhellenismos*, as the *prooimion* to the *Prochorion* calls it, or at least to comment on them in the MSS. Alphabetically arranged lists of glossae, called lexae rhomaiakai, soon appeared. Some of these lists can be attached to specific works of legal literature; some lists were enlarged or combined with others. Greek words were also adopted as lemmata; the glossae were mixed with Latin-Greek glossae drawn from the works of John Lydos and with short independent commentaries on legal actions and similar concepts of Roman law.

---L.B.

GLOSSARIES, BILINGUAL, lists of words either in Greek with Latin translations or in Latin with Greek translations produced by Carolingian scribes and preserved in MSS from the 9th C. onward. They are based on the so-called *Hermeneumata pseudo-Dositheana* (3rd C.? and various other sources, including *Isidore of Seville* and *Macrobius*. The texts are of different lengths. Thus the *Scholia Graecarum glossarum* contains about 450 Greek terms and definitions; other expanded glossaries are the so-called "Philoxenus" (Latin-Greek) and "Cyrillus" (Greek-Latin); many are short, limited to several words. The etymologies are often more fantastic than those found in *Isidore*, and explanations of Greek words can be completely wrong. The glossaries, however, can be indicative of Western interest in Byz. institutions; for example, the St. Gall glossae of the 9th C. include terms (with interpretations) for Byz. charitable institutions such as xenodochium, pschotrophium, nosochion, orfanotrophium, gerontochion, and bryphotrophium; the definitions are probably drawn from Julian the Antecessor, a Constantinopolitan jurist of the 6th C. (B. Kaczynski, *Speculum* 58 [1983] 1008–17).

---

GLYKAS, MICHAEL, 12th-C. writer; born first third of 12th C., perhaps on Kerkys (cf. Krambacher, GBL 381). As imperial grammaticos, Glykas (Γλυκᾶς) was involved in a plot against Manuel I; according to Kresten ("Styppioteis" 66–70), this scheme was connected with the conspiracy of Theodore Styppioteis in 1159. Blinded (perhaps not totally), Glykas was imprisoned until at least
1164. His identification with Michael Sikidites (Kresten, *op. cit.* 90–92), who was charged ca. 1200 with heresy and magic, is not impossible. Politically Glykas was anti-Komnenian: in his chronicle (*Biblos chronike*) of events from the Creation to 1118, he followed Zonaras in criticizing Alexios strongly. He also condemned Manuel I’s astrological enthusiasm. Glykas’s attitude toward antiquity was critical as well; he rejected all ancient philosophers save Aristotle. He rejected also the idea of *ananke*, “historical determinism”—his polemic against astrology was connected with this antedeterministic approach to history. Both Glykas’s chronicle and his letters, often on similar subjects, were overtly didactic. His substantial additions to the first part of the chronicle are borrowed from the *Physiologos* (F. Sbordone, *BZ* 29 [1929/30] 188–97) and demonstrate Christian moral principles. Proverbs which Glykas collected and abundantly inserted in his works also served didactic ends. His language is plain albeit scholarly, but in his *Verses from Prison* Glykas was one of the first to use the vernacular.

**Gnome** (γνώμη, Lat. *sententia*), pithy saying or maxim. A *gnome* was a type of rhetorical ornamentation, similar to a *proverb*, that was supposedly familiar to the audience and accordingly would evoke predictable sentiments (Martin, *Rhetorik* 257f). Theoreticians of rhetoric, such as Aphthonios and Nicholas of Myra, treated the *gnome* as a kind of *prognymasia* and tried to distinguish it from the *chreia* (Hunger, *Lit.* 1:100f). Collections of *gnomat* (*gnomologia*) were made from ancient authors, both in prose (e.g., Democritus, Isocrates, Epictetus) and verse (e.g., Euripides, Menander of Athens), and were presented either thematically or alphabetically. The distinction between *gnomologium* and *florilegium* is narrow and conventional. Though many scholars use the terms interchangeably, *gnomologium* may be kept for works of predominantly secular content.

The *Eklektik of Stobaios* contained large numbers of ancient *gnomai* used by Byz. writers and by the later (mostly anonymous) compilers of *gnomologia*, of which the fullest is the *Gnomologium Vaticanum* (Vat. gr. 743, 14th C.). Other examples include the *Gnomologium Democrito-Epictetum* (ed. C. Wachsmuth, *infra* 162–216), the *Gnomologium Parisinum* (Paris, B.N. suppl. gr. 134, 13th C.—ed. Sternbach, *infra*), and that of John Georgides (10th C.; Paris, B.N. gr. 1166—ed. Odorico, *infra* 119–255). On the basis of various recensions Wachsmuth (*infra*) tried to reconstruct the text of a *Gnomologium Byzantium* (i.e., the corpus of *gnomai* in circulation in Byz.). To the genre of *gnomologia* also belonged works of more developed character (*Keaumenos, Speanas*, etc.), in which *gnomai* are elaborated in short stories or didactic digressions. Greek *gnomai* were translated into Syriac and Arabic.

—F.M.J., A.K.

**Gnosticism** (from γνώσις, “knowledge”), a loose-knit and variable system of belief based on *dualism* and the premise that the full revelation of God is given only to a select few. It flourished esp. in the 2nd C. The works of Gnostics were condemned and destroyed so that until fairly recently their teachings were known only through the Christian polemic directed against them; the discovery of the *Nag Hammadi* texts, however, makes Gnostic writings directly available. Gnostics ranged from the Valentinians, who taught an elaborate and decidedly non-Christian mythology, to Marcion (died ca. 160), who was a Christian heretic with dualist tendencies. Gnostics associated the God of the Old Testament with Satan, and their Christology was docetic; it was an early rival of Christianity, and much of Orthodox theology was developed to answer its challenge. By the 3rd C., however, Gnosticism was no longer a
threat, surviving in an institutionalized form only among the MANDAENS. Nevertheless, Gnostic ideas continued to be influential in the ALEXANDRIAN SCHOOL, esp. in the writings of CLEMENT OF ALEXANDRIA, ORIGEN, and EVAGRIOS PONTIKOS. Some scholars have seen Gnostic influence in the PAULICANS and BOGOMILS, but this is unlikely except in the most general sense.

- F.E.G.

GOATS (αὐγίδαια). Goats are often mentioned in combination with sheep as aigidoprobata (Lavra 2, 109.361) or may be listed separately (e.g., Lavra 1, 38.36). A household might keep as many as 100 goats (Lavra 2, 109.584), and a monastery a flock of 2,000 sheep and goats.

The Byz. kept goats for milk, cheese, meat, and wool. The term aigeionetaxa (“goat silk”), used by PROCHPRODOMOS (3.77), indicates that their wool was considered a high-quality material. On the other hand, the rough cloak of a holy man could also be made of goat wool (PG 120.45B). The GEOPONIKHA (bk.18.9–10) devotes less space to goats than to sheep, but otherwise there are no data to establish the relative proportions of the two species. According to the GEOPONIKHA, goats were pastured on mountains; the vita of Paul of Latros (ed. H. Delehaye, AB 11 [1892] 481) also tells of a peasant (georgos) who lived with his goats in the mountains, but returned home at harvest time.

- A.K. J.W.N.

GOD (Θεός). Of five known ancient etymologies of the word theos the church fathers retained at least three: from theo, “run”; theoreo, “observe”; and tithemi, “set” (I. Opelt, StP 5 [1969] 392–40). The Christian concept of God originated as a middle way between the pagan idea of gods as “older brothers” of humans, immortal but vulnerable to human passions, and the Eastern concept of the transcendent God, fully distinguished from mankind. Dissatisfied with the pagan idea and esp. hostile to the concept of the divine emperor, church fathers tried to preserve the monothestic principle of the Old Testament without disrupting the ties between God and mankind, thus making possible the “divinization” or salvation of man.

According to Gregory of Nyssa (PG 45.932C), God is unknowable in his essence; thus, the church fathers, using apophatic THEOLOGY, define God primarily with negative epithets, commencing with the negative prefix αὐθ (“without”): thus anachos (without beginning), apermeotes (untimely), etc. (e.g., John of Damascus, Exp. fidei 2:1–12, ed. Kotter, Schriften 2:8f). However, the concepts of oikonomia and incarnation make it possible to bridge the gap between God and man. The incomprehensibility of God created an epistemological problem—how can we learn about God? John of Damascus (Exp. fidei 3:4–5, ed. Kotter, Schriften 2:10) solved it by arguing (see ANALOGY) that our belief in God is natural (physis).

Other qualities of God emphasized his omnipotence and omniscience (usually beginning with pan- (“all”), e.g., PANTOKRATOR) or his justice and PHILANTHROPY toward men. In the political sphere God was considered the guarantor and guardian of the Byz. Empire and of its ruler in particular.

GODFREY OF BOUILLON, duke of Lower Lorraine; born ca. 1060, died Jerusalem 18 July 1100. Leading the Lotharingian contingent of the First Crusade, Godfrey (Γοργοφρέ) peacefully traversed the Balkans until, at Selymbria, he learned that HUGH OF VERMANDOIS was captive in Constantinople, whereupon he devastated the region. Mollified by Alexios I, he pacified his troops and reached the outskirts of Constantinople on 23 Dec. 1096. Alternating peace and conflict between Godfrey and the Byz. culminated in a serious battle outside Constantinople on 2 Apr. 1097. Anna Komnenes says he was attacking the city; pillaging of the suburbs followed. Only after further skirmishes did Godfrey agree to enter Constantinople and swear fealty to Alexios (5 Apr. 1097). Thereafter he mediated between Bohemian
MUND and the emperor. Godfrey played a leading role in the Crusade. After the conquest of Jerusalem he may have become advocatus sancti sepulchri. Anna Komnene calls him wealthy and arrogant and emphasizes his rapid changes of attitude toward Alexios.

—C.M.B.

GODPARENT (ἐνανάδοχος), a sponsor at the sacrament of baptism, one who "stands as a surety," receiving the baptized infant or adult from the "waters of rebirth." All Orthodox Christians, except monks and nuns, could stand as godparents. Some imperial and aristocratic offspring had more than one godparent; other children had only one. Usually the same person served as godparent for all the children of a marriage. Baptism established a spiritual relationship between godparent and godchild and created a tie between godparent and natural parents, "coparenthood" (συνεξελεξία), which manifested itself in gift-giving, social contact, and joint business ventures. Godparents were chosen from among friends and relatives. According to the church fathers, it was the godparent's duty to give moral and religious instruction to his godchildren. A few cases show that godparents sometimes took in orphaned godchildren, raised them, and provided for their education and marriage. Marriage impediments among spiritual relations increased from the 6th C., when godparent and godchild were forbidden to marry, until by the 12th C. the prohibitions were considered to be the same as those for blood relations. Godparenthood has elements in common with adoption.

—R.J.M.

GOLD (χρυσός) was considered the most precious metal in Byz. As with other metals, the location and exploitation of gold sources and mines between the 4th and 15th C. is somewhat a matter of speculation. It was used (sometimes alloyed with silver or copper as billon and electrum) for manufacturing coins, medallions, enamel plaques, luxurious domestic plate and liturgical vessels, and jewelry. Gold foil was used for gilding architectural details (Asterios of Amaseia [PG 40:209B] inveighs against those who dwell beneath "roofs overlaid with gold") and metal objects. It was also used in "gold glass," mosaic tesserae, book illumination, and icon painting, and even woven into textiles and used in embroidery.

Much gold was reserved for imperial use, even if Niketas Choniates (Nik.Chon. 189:57-62) ridicules it as "the color of bile" that has ominous significance when worn during battle. Only the emperor issued chryso-bulls and dined on golden dishes; gilded automata occupied a place of honor in imperial ritual. Theologians interpreted gold as condensed light, as the symbol of incorruptibility, truth, glory, and of the sun.

Many recorded "gold" objects and furniture (such as those mentioned by Constantine VII [De cer., 580, 4; 615:9-10; 593:6]) were probably gilded silver, like the Byz. objects of the 10th–11th C. preserved in San Marco. Very few vessels made of gold survive from the 4th–15th C. Most of a selection of gold jewelry (dated from 350 to 1000) analyzed in 1986 was found to be 86–96 percent pure, that is, more debased than gold solidi of the same period; later jewelry (11th–13th C.) was 80–89 percent pure. Gold for jewelry was worked in repoussé, filigree, and granulation techniques and drawn out as wire and in the form of straps.

GOLDEN GATE (Χρυσαὶ Πύλαι, Χρυσεῖα Πύλη), monumental gate situated at the south end of the land walls of Constantinople, used for imperial triumphs and other state occasions (see CONSTANTINOPLE, MONUMENTS OF). It was constructed under Theodosios, most probably Theodosios II. Built of marble blocks, it consists of three arched openings flanked by square towers. A Latin inscription in metal letters placed on the central arch refers to the gilding of the gate (i.e., of its valves) after the defeat of a usurper (Ioannes, executed at Ravenna in 425). The gate was dec-
orated with various statues. The complex was protected by an outer wall, pierced by a single gate, on either side of which were placed antique mythological reliefs. The latter survived until the 17th C. A fort, built here by John V in 1389/90, was immediately dismantled by order of Sultan Bayezid I. The gate was incorporated into the Castle of the Seven Towers (Turk. Yedikule) erected by Sultan Mehmed II in 1457/8.

There were Golden Gates in some other cities as well, such as Antioch (also called the Gates of Daphne, end of the 4th C.) and Thessalonike (also called the Gates of Bardar). In the 11th C. a golden gate was erected in Kiev.

GONIKON (γονίκον), a category of land ownership. F. Uspeenskij (in Sbornik statej po slavjanovedenju, sostavlennoj i izdannoj učenikami V. I. Lamanskogo [St. Petersburg 1883]) contrasted gonikon and pronoria as hereditary patrimony versus a conditional grant. As a term denoting the origin of property ("parental"), gonikon also distinguished patrimonial land from property received through paradosis (conferred upon a paroikos by his landlord or the state), exaleimma, dowry, and purchase (Chit., no.92) as well as from other relatives. Paroikos who held gonikon could be called gonikarioi (Laiou, Peasant Society 184). In an extended application complementing the term’s literal sense as a titulus acquirendi, imperial grants to religious institutions (e.g., Chit., no.24.14) and laymen often state that property or revenue was henceforth to be regarded as if it were or had become gonikon (hos gonikon . . . kiena [Binon, Kérapotamou, no.20.2], kata logon gonikatoles [Guillou, Méneéée no.6.6]). In these cases, gonikon implied an intensified degree of tenure over the property but not necessarily the right to bequeath or to alienate. Ostrogorsky (Féodalité 134) suggests that at minimum it included the right to profit fully from improvements to a property and could be applied to certain kinds of conditional grants. On the other hand, in an act of 1432 from Trebizond, gonikon is distinguished from property held in simple possession (te diapheraousa nome kai goniakaia—ed. V. Laurent, ArchPont 18 [1953] 263-79, 264.85–86).

The very rare verb gonikewomai means "to make hereditary"; thus, in 1307 Andronikos II Palaiologos granted Alexios Diplomatizes' request that a property already within his oikonomia be "hereditized" (gonikeulhe) so that he could hold it "as gonikon" (katechitai . . . hos goniken—Guillou, Méneéée, nos. 2.3, 9–10); and in 1261 Michael VIII Palaiologos granted land in hereditary tenure (eis charin goniikeulheis) to the Thelematarioi. The fluidity and imprecision in the use of the word is also seen in Frankish Greece; the Chronicle of the Morea employs ionika, pronota, and, in the French version, héritage as equivalents of "fief" (Jacoby, Société, pt.VI [1967], 430–32).

—M.B.

GOOD FRIDAY (μεγάλη [άγια] Παρασκευή), the day of the CRUCIFIXION, the Friday before EASTER, from at least the 2nd C. a day of FASTING. Originally Good Friday had no special liturgical services since it was considered, with Holy Saturday and the Easter Vigil, an integral part of the paschal triduum (three concluding days of HOLY WEEK). By the end of the 4th C. it had become a feast in its own right, celebrated at Jerusalem with a lengthy vigil Thursday night and on Friday with the veneration of the relic of the Cross (see CROSS, CULT OF THE) and an office of litanies on the PASSION of Christ, services that soon spread to Constantinople and elsewhere. The Typikon of the Great Church (Matcos, Typikon 2:76–83) describes a vigil at Hagia Sophia with reading of the Twelve Passion Gospels (see EVANGELION), followed by the veneration of the Passion relics, esp. the Sacred Lance, a service that drew huge crowds and lasted until noon. After the hours of terce-sext, the patriarch held a service for the catechumens at the Church of St. Irene. The day concluded with
the liturgy of the Presanctified at Hagia Sophia. The emperor participated in the veneration of the lance, the service of terce-sext, and the catechism at St. Irene. The introduction of Jerusalem Holy Week customs at Constantinople from the 9th C. led to the demise of these services. According to Antony of Novgorod, in Constantinople by ca.1200, only in the Anastasia church in the Portico of Domninus was there a service to venerate "the Lord's nail and blood" (ed. Ch. Loparev, PPSb 51 [1899] 29). The other churches were merely washed and strewn with blossoms in preparation for Easter.

GOOD SHEPHERD (καλὸς ποιμήν [Jn 10:11], agathos poimen; cf. also Lk 15:3–7), a Christian symbol borrowed from pagan images of a kriophoros (ram-bearer): Christ was perceived by early Christians as both the Lamb of God and the shepherd who cares for his flock. The date of the origin of the Good Shepherd’s representation in art is debatable. Klauser (infra) denied its existence at the time of Clement of Alexandria and Tertullian; he likewise rejected the interpretation of kriophoroi on early sarcophagi as representations of the Good Shepherd. This figure, however, was a favorite image of Christ in the catacombs of the 3rd–4th C. and in small-scale sculpture (K. Weitzmann, DOCat 3, nos. 3, 5). The theme of the shepherd and his flock occurs in early baptismaries and in the baptismal ritual of Eastern churches. The shepherd was depicted standing with the sheep slung over his shoulder or seated among his flock, protecting his lambs, playing a flute, or carrying a milk pail; he is usually a beardless youth wearing a tunic. In the 5th-C. mausoleum of Gallia Placidia in Ravenna the figure is royal, clad in gold and purple robes, and holding a cross-staff instead of a crook. The Good Shepherd does not occur as an independent image after the 6th C.

GÖREME, a valley in CAPPADOCIA, the site of a number of medieval rock-cut refectories, mills, cells, and painted chapels attesting to a thriving monastic enclave for which there is no textual documentation. Churches with elaborate figural decorations include Kiliclar Kilise, a cross-in-square structure (early 10th C.?); El Nazar, a domed-cruiform church (early 10th C.?); the COLUMN CHURCHES; and the Yilanli Group, a series of relatively crudely carved and simply decorated monuments probably dating from the period of Seljuk occupation after 1071. Tokali Kilise, a complex of three churches, retains the most elaborate carving and decoration in the valley. The Old Church may be ascribed to the early 10th C. on the basis of its close stylistic relation to Ayvali Kilise in Gülü Dere. Images in the Pigeon House in Çavuşın (963–69) were derived from those in the New Church, thus providing it with a terminus ante quem. The extremely rich narrative cycles of the New Church are lavishly rendered in a classicizing style with quantities of ultramarine (see FRESCO TECHNIQUE) and gold and silver foil; the cycle is unique within the empire for high-quality monumental painting of the mid-10th C.

GORTYNA (Γόρτυνα, also Gortys), capital of Crete in late antiquity, located in the south of the island. Gortyna remained the capital until the Arab conquest and the establishment of Chandax ca.824–27. An earthquake ca.670 caused much destruction and early Arab attacks prevented substantial rebuilding. Byz. sources speak of the destruction of Gortyna by the Arabs and the martyrdom of its bishop Cyril, although both accounts are probably fictitious (Christides, Crete 92–94) and the city—much reduced—continued to exist after the conquest. The bishop of Gortyna, always a metropolitan, was frequently listed simply as metropolitan of Crete; in the later 10th C. he held the 10th rank in the empire, above that of Corinth, Sicily, and Thessalonike.

The governor's palace (praetorium) was rebuilt
in 381–83 and continued in use into the Arab period, after which it was apparently transformed into a monastery (Sanders, infra 80). The acropolis was fortified, perhaps in the 7th–8th C. The Church of St. Titos, probably built in the early 7th C., is a domed three-aisled basilica with three apses and side aisles terminating in apses; the sanctuary is a triconch with flanking pastophoria. It was probably rebuilt in the 10th C. Another church was constructed in the remains of the temple of Apollo; it may have served as the cathedral until construction of St. Titos.

GOSPEL BOOK. The tetraevangelion (Τετραευγελίων), not to be confused with the Evangelion, contains the text of the four Gospels, arranged exactly as they are in the New Testament, but with the beginning and end of each passage to be read in the margin, and numbered.

The illustration of Gospel books is a subject of major interest. From before the 8th C., only two illustrated Greek Gospel books—the Rossano Gospels and Sinope Gospels (Paris, B.N. gr. suppl. 1286)—survive, but the Syriac Rabbula Gospels is also preserved. Following Iconoclasm, the typical Gospel book was written in minuscule script. Containing prefaces and liturgical aids, it was decorated with canon tables, headpieces, initials, and evangelist portraits and was sometimes produced in diminutive format in combination with the Psalter to form a devotional book. Only rarely did it receive extensive narrative illustration (e.g., the two Freie Gospels). Its prefaces prompted certain subjects, such as evangelist symbols, figures inspiring the evangelists, and the Majestas Domini. Its devotional and liturgical character occasioned preliminary iconic images and miniatures of nonbiblical events that pertain to the text’s liturgical context, for example, the Dormition of the Virgin or the Anastasis. The most innovative MSS were produced in the 11th and 12th C., and many MSS in the Decorative Style (e.g., Karahisar Gospels) survive. In the Palaiologan period, the illustrated Gospel book remained popular, but its decoration was generally restricted to headpieces and evangelist portraits with occasional iconic miniatures.

—R.S.N.

GOSPEL OF NICODEMUS. See Nicodemus, Gospel of.

GOSPELS (Εὐαγγέλια, lit. “good message”). The canonical Gospels are Mark, Matthew, Luke, and John, an evangelical canon established by the end of the 2nd C.; other gospels were proclaimed to be apocrypha. The most ancient papyrus fragments of the Gospels belong to the 2nd C.; from the 4th C. onward complete MSS are known that contain both the Old and New Testament; separate MSS of the Gospels are preserved from the 4th–5th C. (the Freer Gospels from Egypt). The text is preserved in the form of the Gospel book (tetraevangelion) and the Gospel lectionary or Evangelion.

Exegesis of the Gospels created difficulties that the church fathers sought to explain: the four versions of the Gospels differ and sometimes even contradict each other. Origen endeavored to resolve the contradictions by applying allegorical interpretation. Theodore of Mopsuestia, on the other hand, avoided allegorical assimilation of contradictory stories and treated the Gospels as the memoirs of apostles with differing recollections. In the West, Augustine collected parallel, but inconsistent, passages without trying to reconcile them artificially. Although original exegesis did not continue after the 6th C., the matter of discrepancies between the Gospels arose time and again. John I., archbishop of Thessalonike, tried to establish in his homily on the Myrophoroi a concordance of Gospel evidence for Christ’s resurrection. Euthymios Zigabenos and esp. Theophylaktos of Ohrid produced voluminous commentaries on the Gospels.

The plain style of the Gospels also created difficulties for the Byz., who were fond of exquisite rhetoric. Some authors, such as John Chortasmenos, defended this stylistic simplicity against the fashionable Atticism.
GOTHS (Γοθοί), a Germanic people who, according to Jordanes, migrated from the Vistula region to Oium, between the Drinester and the Don. Archaeological remains of the Černjachovo culture have been tentatively identified with them. From 298 onward, the Goths harried the Danubian provinces, Greece, and Asia Minor, and ca. 273 Emp. Aurelian yielded Dacia to them. At this time they probably formed two groups, Vistigoths and Ostrogoths, which moved westward in the 4th C. They played an ambivalent role in relation to the late Roman Empire—as attackers and plunderers, and as foederati. In any case, the archaeological record in the Danube provinces does not suggest an economic crisis during the 4th C. when the Goths were settling this area. Some Gothic generals (Gainas, Trigidild, Fravitias, etc.) became influential at the court in Constantinople. Their leading position in the army incited envy and hostility both among aristocratic intellectuals (such as Synesios of Cyrene) and the population of Constantinople whose spokesman was John Chrysostom, a hostility exacerbated by the Arian creed that had been spread among the Goths by Ulphilas. On 11 July 400 a massacre of Gothic soldiers took place in Constantinople. Gainas soon fled and perished, Fravitias was executed, and the Gothic impact diminished. The hordes of Alaric were turned toward Italy, and the empire was deprived of valuable warriors in the face of the Hunnic invasions.

Both the Visigothic and Ostrogothic kingdoms in the West at times offered formal allegiance to Constantinople. In the 6th C. Justinian I reconquered Italy and a part of Spain, but his success was of short duration: the Goths who were ready to accept the Roman way of life and to form an alliance with the empire were replaced by the much more innovative Lombards. Some Goths remained in Byz. where in the 8th–9th C. the district of Gothograikia existed in northwestern Asia Minor (Kulakovskij, Istorija 3:414–16); they also continued to be found in neighboring areas such as Dory in the Crimca.

GOUDELES (Γούδελαις, fem. Κούδελαινα), a noble Byz. family. The first Goudeles, perhaps of Slavic origin, was blinded by Constantine VIII for his role in a plot organized by Presianos (see Aaroni- os) and other Slavs. The 11th-C. Goudeles were influential magnates in Asia Minor (Christopher Goudeles was magistros and strategos) who took part in aristocratic plots and rebellions of 1034 and 1078. Although related to the noble lineage of Tzirandeles, the position of the Goudeles declined by the 12th C. They reappeared in the 13th C. as military commanders and landowners: the will of the imperial doulos Goudeles Tyrannos of 1294 is a useful description of an estate in the Smyrna region (MM 4:285–87). Some Goudeles were important functionaries, esp. ca. 1400–53: George Goudeles, mesazon of Manuel II; his son John Goudeles; Nicholas Goudeles, an envoy to Russia in 1436 (with Isidore of Kiev) and to Ferrara in 1438 and a defender of Constantinople in 1453. For this Nicholas, or some earlier scion of the family, his widow, the nun Theodoul Palaiologina Goudelina, had a 12th-C. lectionary (Oxford, Bodl. Aust. T. inf. 2.7) bound in leather and stamped with the Palaiologan eagle. She presented it, as an undated entry on folio 357v notes, for the salvation of Nicholas’s soul (Hutter, CBM 1:72 [no. 42]).

GOURIAS, SAMONAS, AND ABIBAS (Γουρίας, Σαμώνας, Ἀβίβας; Syriac Gürjä, Šmona, and Ḥabib), martyrs and confessors, saints; feastdays 15 Nov. and 2 Dec. According to legend, Gourias of Sargai, an ascetic, and Samonas of Canada, his companion, were brought to trial under Diocletian by Mysianos, governor (hegemon) of Edessa, and executed, after severe tortures, on the hill of Bēth-alah-qiqla, north of Edessa. Abibas, a deacon from the village of Tel Sehe, was judged by Lysanias (or Ausonios), governor of Edessa under Licinius, and burned in a cemetery near Edessa. Syriac, Armenian, Greek, Georgian, Arabic, and Latin versions of the legends survive; most schol-
ars assume that the original was in Syriac, although different from the preserved Syriac versions, and probably similar to the Armenian and one of the Greek texts. The author of Abibas's *passio*, Theophilos, claims to have been an eyewitness, but errors in chronology suggest that the legends are later works.

The three martyrs appear together in the story of Euphemia and the Goths, as protectors of a young woman married to a barbarian, taken from Edessa, mistreated, and her baby poisoned; the martyrs miraculously brought her home, and eventually the Goth was executed—on the initiative of Eulogios, bishop of Edessa (378–87). This legend is known in Greek and Syriac; Burkitt (*infra*) tried unsuccessfully to prove that the original was in Syriac. EPHREM THE SYRIAN dedicated a strophe to Gourias, Samonas, and Abibas; JACOB OF SARUG wrote another hymn. SYMEON METAPHRASTES included the legends in his collection; ARETHAS OF CAESAREA wrote a *laudatio* of the martyrs.

**Representation in Art.** The three saints together reflect the three ages of man: Abibas is depicted as a young deacon, the other two as princely martyrs in tunic and *chlamys*, with Gourias generally elderly and Samonas middle-aged. The Euphemia miracle is sometimes treated as an independent text, but no illustrations of it survive. In the *Menologion of Basil II* (p.183), Gourias and Samonas are about to be beheaded, while Abibas is being burned alive in a furnace; in another contemporary *menologion*, there is a scene of the translation of their relics (Athos, Vatop. 456, fol.253r, Weitzmann, *Studies* fig.224).

—A.K., N.P.S.

**GRAČANICA,** a monastery and the seat of the bishops of Lipljan, near Priština (Yugoslavia). The present Church of the Dormition (originally Annunciation) was begun ca.1311, under the auspices of the Serbian king STEFAN UROŠ II MILUTIN, on the site of a destroyed 13th-C. church and a 5th–6th-C. basilica. Milutin’s church is in all likelihood the work of builders from Thessalonike and, possibly, from Arta; in quality, Gračanica exceeds contemporary achievements in these two centers. The church consists of a domed cross-in-square naos, enveloped by a bema flanked by two domed lateral chapels, north and south ambulatory wings, and an inner narthex. Two additional domes cover the corner bays of the inner narthex. The characteristic five-domed scheme at Gračanica is marked by an unusually well-balanced composition and elongated proportions. The exterior displays high-quality cloisonné construction and a restrained application of decorative brickwork. Painted before 1321, the frescoes represent a fairly standard version of the church programs of decoration of the Palaiologan era, including Old Testament prefigurations and liturgical subjects in the bema. Milutin’s charter for the monastery and the death of a Serbian bishop are depicted in the south chapel; portraits of the Nemanjid dynasty arranged in a family tree borrowed from the *Tree of Jesse* appear in the inner narthex. The painters developed the style of Michael (Astapas) and Evtychios, displaying some interest in human anatomy and employing both original and reverse perspective. Gračanica may have been at first intended to serve as Milutin’s mausoleum church, but this idea was subsequently abandoned. The church continued to function as a mausoleum for local bishops and eminent individuals.

—S.C., G.B.

**GRACE (χάρις, lit. “gift”)** is a free and unmerited favor of God. Christianity contrasted itself, as a religion of grace, with Mosaic religion based on the Law. The source of grace is God acting through Christ or the Holy Spirit, always in synergy with man (see SYNERGISM). The INCARNATION was the major vehicle of grace. Christ liberated man from the damnation of sin and opened for him the way of SALVATION and divinization. After the Incarnation the Church mediated grace through the sacraments. The relationship between grace and free will was seldom explicitly discussed in Byz as it was in the West. And yet, the doctrines of gnosis (see Gnosticism), MANICHAEISM, and fa-
talism as well as the philosophical presentation of the soul's similitude to God, present a clear distinction between the image (eikon) of God in man, which cannot be lost, and his likeness (homoiosis) to God, which can be realized only through ascetic labors. Theosis, or deification, is the work of the trinitarian energy in which the Holy Spirit assimilates man to the Incarnate Son of God.

This strongly personal conception of divine activity was questioned from time to time through the conception of the multitude of uncreated energies in Palamism. The theological expression of grace is found also in the idea of the sonship (Cyril of Alexandria, PG 73:156CD) of those who believe and of participation in the divine nature through spiritual rebirth. Earlier mysticism used such phrases as “the presence of the Trinity in the soul” and “the illumination of man,” which was the preferred way for speaking from the time of pseudo-Dionysios the Areopagite and was embraced esp. by Palamite Hesychasm (J. Meyendorff, GregPal 37 (1954) 19–31).

—G.P.

GRADO (Грао), late Roman city and fortress (castrum) on an island south of Aquileia, probably serving as its harbor. The first churches seem to have been built here in the 4th C. In the 5th and 6th C. Grado was used as a place of refuge; in 568, after the Lombard conquest of his city, the bishop of Aquileia, Paulinus I, transferred the see and its treasures to Grado. Eventually, two rival dioceses were formed: vetus Aquileia and Aquileia nova, or Grado. While Aquileia severed its relations with Constantinople and Rome, forming an independent patriarchate under Lombard authority, Grado remained within the Byz. sphere. Its bishop Elias (Greek by origin) supported the principles of the Council of Chalcedon, however, against those of the Second Council of Constantinople of 553; he promoted the cult of St. Euphemia, dedicating the new cathedral to her in 579. The exarch of Ravenna exercised authority over the church of Grado. The patriarchate of Grado was organized probably between 607 and 614 to counterbalance that of Aquileia, and the two sees pursued rival claims to metropolitan jurisdiction over the province of Venetia-Istria until the dispute was resolved in Aquileia’s favor by Pope Alexander III in 1180. The city was in decline from the 11th C., and after 1156 the patriarchs of Grado moved to Venice. There was a Byz. garrison in Grado: inscriptions made by milites of two infantry numeri and a mounted “Perso-Justinianus” numerus have been found.

Monuments of Grado. The well-preserved Cathedral of S. Euphemia encloses a contemporary floor mosaic. The cathedral’s baptismal and its mosaic pavement are older—from the second half of the 4th C. Ninth-century sources mention a throne of St. Mark sent by Emp. Heraclios to the bishop of Grado (ca.630). A group of ivory plaques dispersed in various museums was once commonly ascribed to this throne, but K. Weitzmann (DOP 29 (1972) 43–91) refuted the attribution. S. Tavano (AntAa 12 (1977) 445–89) has returned to the theory that they belonged to the throne. A second, alabaster reliquary throne, now in the Treasury of S. Marco in Venice, is thought by some scholars (Treasury S. Marco 98–105) to have originated as another gift by Heraclios to Grado; but as M. Werner demonstrated (Studies in Iconography 10 (1984–86) 32, n.75), the iconography of its bas-reliefs suggest on the contrary that it may have been made in northern Italy.

—A.K., D.K., A.C.

GRAIN. Wheat was the predominant grain in the empire. Two archaeological finds from Egypt demonstrate that the cultivation of hard wheat, which is easier to thresh and store than the soft wheat of Roman times, began there just before the Arab conquest of the 7th century (A.M. Watson, Agricultural Innovation in the Early Islamic World [Cambridge 1983] 20). Hard wheat was also the major grain in the 10th-C. finds from Beycesultan in Anatolia (H. Helbaek, AnatSt 11 (1961) 90f). Barley was probably cultivated more in the Balkan peninsula, whereas wheat was common in Asia Minor. In the finds from Beycesultan, rye is attested in an insignificant amount, but it increased
occurs during the winter, favoring the sowing of crops in the fall and their harvesting and threshing in the spring. Mirroring such a cycle of production, Michael Psellus admonishes, “The best time for sowing of wheat is thought to be the 11th and 19th of November. Thereafter come many rainy storms, soil and water combining to bring the sowings to fruition” (Boissonade, AneGr 1:242). Harvesting is a normal component of Old Testament illustration. In the Octateuch’s grain is shown being cut with sickles (Uspenskij, Seral’skij kodeks, no.284), but is more often gathered without implements (ibid., nos. 205, 305).

The supply of grain evidently decreased in the 7th C., when Byz. lost Egypt and North Africa to the Arabs and the steppes of the northern shore of the Black Sea also ceased to be a granary for the empire. Moreover, Sicily was conquered by the Arabs in 902. This probably led to the declining consumption of bread in Byz., partly compensated by the growing role of livestock.

**GRAMMAR** (γραμματική). For Dionysios Thrax grammar was “the practical knowledge of the language generally used by poets and prose writers” and was subdivided into topics such as orthography, prosody, morphology, mythology, and figures of speech (but not syntax). It was thus a descriptive study of the language of Greek literature. Byz. teachers continued to use Dionysios’s brief treatise and built round it a vast corpus of commentaries; in their hands, however, as the spoken language diverged more and more from the classicizing language of literature, grammar became prescriptive rather than descriptive, and laid down rules for correct spelling, inflection, meter, etc. The Byz. grammatical grammar (grammatikos), responsible for the second stage in education, tended to concentrate on the study of classical Greek poetry, esp. Homer, leaving prose to the teacher of rhetoric (cf. Theodore of Studios, PG 99:117C-D; Michael Psellus, in Sathas, MB 5:90-92). The principal textbooks used until the 12th C. were Dionysios Thrax with his Byz. commentaries (esp. that of George Choiroboskos), Theodosios’s Canons and the commentaries on it, On Orthography by Theognostos, epimerisms on
Homeric and on the Psalms, and a handbook attributed to Theodore Prodromos. From the 12th C. onward textbook in the form of questions and answers (eroтемата) tended to replace the older manuals. Anonymous erołemata occur in MSS as early as the 12th C., and others were later written by Manuel Moschopoulos, Manuel Chrysoloras, Demetrios Chalkokondyles, and others.

R.B.

GRAMMATIKOS (γραμματικός). In addition to its ancient meaning of “scholar” or “teacher” often used as a sobriquet, the word came to signify scribe or secretary. In the 14th C., pseudo-Kodinos (185,23–24) simply equated grammaticos and notary. An act of 1217 (Reg 3, no. 1693) mentions Nicholas Kaltothes, grammaticos of the imperial vestiarion (MM 4:290,5–6); in 1258 George Probaton was of grammaticos of the theme of the Thrakesion (Ahrweiler, “Smyrne” 160). Several seals of grammaticoi, primarily of the 11th–12th C., are known (Laurent, Corpus 2:663–67). Dölger and Karayannopoulos (Urkundenlehre 64) suggest that the term grammaticos replaced that of asekretis under the Komnenoi. The term also appears in the acts of Athos of the 11th–12th C., probably only as a sobriquet but, at least from 1406 (and possibly already in the 11th C.), it could signify the secretary of a monastery (J. Lefort et al. in Ivm. 1:218). Some patriarchs of Constantinople (John VII, Nicholas III) were called Grammatikoi.

A.K.

GRAND KOMNENOS (Μέγας Κομνηνός), title of the emperors of TREBIZOND. An unofficial epithet of members of the Komnenoi in 12th-C. oratory, it was eventually applied to the Trapezuntine branch of the family, which descended from ANDRONIKOS I KOMNENOS. The first example is a MS note concerning the death of DAVID KOMNENOS (N. Oikonomides, REB 25 [1967] 141, n. 67). The initials MK appeared on the coinage of Emp. George (1266–80) and by 1282 the title was entrenched. B. Hemmerdinger’s hypothesis (Byzantion 40 [1970] 33–35) that the title was based on that of Hohenstaufen was refuted by O. Lampsides (Byzantion 40 [1970] 543–45). The purpose of this titulature was to emphasize the rights of the Trapezuntine rulers to the Komnenian heritage. Accordingly, it was only in Trebizond that the epithet megas was applied to the mesazon. The Grand Komnenoi actively and deliberately emulated the emperors of Constantinople in the construction of fortifications and the patronage of monasteries. Thus ALEXIOS II KOMNENOS enclosed the lower city of Trebizond with a huge wall and fortified Kerasos. He re-founded the monastery of St. Eugenios at Trebizond, as Manuel I of Trebizond (1298–63) or his successor had built that of Hagia Sophia in the same city. On the model of Hagia Sophia, Constantinople, portraits of ALEXIOS IV KOMNENOS

and his son John IV Komnenos flank an image of the Virgin in the tower of Hagia Sophia, Trebizond. From John II Komnenos onward, the Grand Komnenoi supported the monastery of Soumela. Even legends of these rulers aped those of the emperors of Constantinople: as Romanos I of Constantinople allegedly slew a lion, so Alexios II of Trebizond is said to have destroyed a dragon whose head was then publicly exhibited. (See table for a list of Grand Komnenoi of Trebizond.)

GRATIAN, more fully Flavius Gratianus, Western Roman emperor (from 24 Aug. 367); born Sirmium 18 Apr. or 23 May 359, died Lyons 25 Aug. 383. The son of Valentinian I, in 374 he married Constantia, daughter of Constantius II. A pupil of Ausonius, Gratian followed his advice after he succeeded his father in Nov. 375 (with his half-brother, the minor Valentinian II, as co-ruler). Gratian expressed respect for the senate and traditional cultural values such as rhetorical education (S. Bonner, AJPh 86 [1965] 113–37) and promoted men such as Symmachus, Petronius Probus, and Nicomachus Flavianus.

The defeat of his uncle Valens at Adrianople in 378 marked a radical change in Gratian’s policy. Shocked by the Goths’ victory, Gratian withdrew from Illyricum and interpreted the catastrophe as the result of God’s wrath against the people of the region because of their Arianism; under the growing influence of Ambrose he became an ardent Christian and supporter of Orthodoxy. He had the Altar of Victory removed from the senate of Rome, and in 379 or rather 383 (At. Cameron, JRS 58 [1968] 96–99) renounced the pagan title of pontifex maximus. He sought alliances with people like Theodosios I, whom he appointed ruler of the East in 379. The revolt of Maximus in 383 provoked discontent in Gratian’s army. He was assassinated by his own magister equitum.

GRAVE-ROBBING (πυμβαρνυχία) belongs, like SACKLIEGE (hierosylia), to which it is closely related, to crimes against religion. It included every kind of desecration of burial places, esp. the plundering of valuables, the theft of building material, and the unauthorized exhumation of corpses. The type of punishment varies accordingly, ranging from penalties for THEFT to capital punishment (Basil. 60.23; Ecloga 17.14; Nov. Leo VI 96; Balkamon, in Rhalles-Potes, Syntagma 1:207–09, 325f.). Ecclesiastical law, which assigns EPITHEIA to grave-robers, recognizes comparable variations (Basil the Great, canon 66; Gregory of Nyssa, canon 7; and the Byz. commentaries, Rhalles-Potes, Syntagma 4:222, 326–28). Valuable grave goods increased the likelihood of grave-robbing; the desecration of imperial graves may also have been politically motivated. Grave-robbing (klophphoresai to soma, cf. vita of St. Peter of Athos, ed. K. Lake, The Early Days of Monasticism on Mount Athos [Oxford 1909] 34.34f) is a relatively rare subject in hagiography; usually the saint is described as capable of protecting his own grave from desecration (e.g., George of Amastris, St. Nicholas of Myra in 809).

GREAT CHURCH (ἡ μεγάλη ἐκκλησία), the original name of the Church of Hagia Sophia in Constantinople; according to a 5th-C. ecclesiastical historian (Sokr. HE 2.16), the emperor Constantius II “built the Great Church that is now called Sophia.” The edifice took this name no doubt because it was larger than any other church in Constantinople. Even after the church came to be called Hagia Sophia, it continued to bear concurrently the name Great Church (Prokopios, Buildings 1.1.66). By the 8th C. the term was also applied to the patriarchate of Constantinople and by extension to the entire Orthodox Church. The seals of patriarchal officials frequently call them oikonomos, chartolarios, etc., “of the Great Church” (e.g., Laurent, Corpus 5.1, nos. 50–54, 66–71). The expression megale ekklésia or megas naos might also be applied to some larger provincial churches
such as Hagia Sophia in Thessalonike (S. Kaplanneres, Byzantiaka 5 [1985] 84f).

**GREAT ENTRANCE** (ἡ μεγάλη εἴσοδος), ritual procession that opens the second half of the liturgy, the Eucharist, just as the Little Entrance opens the earlier part, the Liturgy of the Word. The deacon carries the paten with the eucharistic bread and the priest the chalice with the wine from the prothesis chamber (see PANTOCRATOR) into the nave of the church, then through the temple to the altar. The entrance of the bread and wine symbolizes Christ’s coming in the sacrament of his body and blood.

The Great Entrance is a ritualization of the primitive transfer of the gifts offered by the congregation: these gifts were brought from the synagogal treasury to the altar by deacons. It is first attested at Constantinople in sources of the 6th C. (Eutychios of Constantinople—PG 86.2: 2400C—2401B), at which time the CHERUBIKON chant was added to accompany it. Formerly called the “entrance of the holy mysteries” (Maximos the Confessor, PG 91.603C) or simply the “preparatory procession of the deacons” (Germanos, Liturg. par.37), it is first called the Great Entrance in the 12th–13th-C. DIATAxis in Athens (Nat. Lib. 662, P. Trempelas, Hai treis leitourgias kata tous en Athenais kodikas [Athens 1935], p.9) to distinguish it from the Little Entrance.

Early commentaries interpreted the Great Entrance also as the angelic procession of the Celestial Eucharist (see LORD’S SUPPER), later also as the triumphal Entry into Jerusalem (see PALM SUNDAY), as Jesus led to the cross, as his burial cortège, his entry into glory, the entrance of the saints and the just, etc. The Great Entrance in Hagia Sophia was esp. splendid on those days when the emperor participated in the liturgy, moving at the head of a vast procession of clergy and members of the court through the church to greet the patriarch at the doors of the temple.

**LIT. R. Taft, The Great Entrance (Rome 1975).**

**GREAT FEASTS** were originally distinguished from regular liturgical feasts on the basis of the special liturgical practices surrounding their celebration. In the Typikon of the Great Church only Easter, the Nativity, and Epiphany were distinguished as Great Feasts; they were preceded by a forefeast in the form of a vigil the night before. The number of Great Feasts eventually increased to 12 (dodekaorton): nine fixed feasts (Annunciation, Nativity, Epiphany, Hypapante, Transfiguration, Birth of the Virgin, Presentation of the Virgin and the Dormition, the Exaltation of the Cross) and three mobile (Palm Sunday, Ascension, Pentecost). The “paschal triduum” (Good Friday to Easter) was so important as to be in a class by itself, beyond the category of Great Feasts.

Only the nine fixed feasts have both a forefeast (proeortia)—usually one day long but lasting five days at Christmas and four at Epiphany—and an afterfeast period (methororia) of one to eight days, plus a closure (apodosis). These same nine feasts, as well as four others—Circumcision (1 Jan.), the Birth (24 June) and Beheading (29 Aug.) of John...
THE BAPTIST, and Sts. Peter and Paul (29 June)—were important enough to have an orthros a single kavon, that of the feast, as well as the Great DOXOLOGY; all have Great VESPERS, and a vigil that is usually an aγρυπνία. Nativity and Epiphany have further festive material the preceding and following Saturday and Sunday and the older Constantinopolitan paramoné as a vigil, instead of the monastic aγρυπνία, the eve of the feast—these being elements retained from the 10th-C. Typikon.

The manner and degree to which the emperor participated in the liturgy of these feasts was not always related to the solemnity of the feast itself. His involvement on Palm Sunday and Easter, for example, was actually less than on some other days.

The choice of what constituted a Great Feast did not in fact always have a purely liturgical basis, and in other contexts the list could be different. The illustrated dokeoartion cycles, which dominate Byz. art in all media from the 11th C. onward, comprise six fixed feasts (Annunciation, Nativity, Epiphany, Hypapante, Transfiguration, Dormition) and six mobile (Lazarus Saturday, Palm Sunday, Good Friday, Easter, Ascension, Pentecost).

Only the dominical Great Feasts totally displaced a Sunday office. Six Great Feasts were followed by a synaxis or closely related special commemoration, to which should be added the commemoration of the Holy Spirit the Monday after Pentecost. (For the artistic representation of Great Feasts, see New Testament Illustration and entries on individual feasts.)

R.F.T.

GREAT LAVRA. See Lavra, Great.

GREAT PALACE (Μέγας παλάτιον), the imperial palace of Constantinople situated on a sloping site between the Hippodrome and the sea walls. Built or begun by Constantine I, it remained the actual residence of the emperors until the reign of Alexios I, who moved his court to the Blachernai palace, and continued as the official imperial residence until 1204. The Latin emperors also lived there.

The archaeological remains of the palace are meager. Apart from a system of artificial terraces (E. Mamboury, T. Wiegand, Die Kaiserpaläste von Konstantinopel [Berlin-Leipzig 1934]), they are limited to: (1) a seaward façade deployed along two re-entrant angles of the sea walls, overlooking the artificial harbor of Boukoleon; (2) a stretch of defensive wall, probably the one built by Nikephoros II Phokas, running north from the old lighthouse tower of the sea walls; and (3) remnants of an apsed hall preceded by a peristyle court (66 × 55 m), the latter decorated with a magnificent floor mosaic. This complex, excavated in 1935–38 and 1952–54, appears to date no earlier than the reign of Justinian I and has not been convincingly identified with any of the palatine buildings known from the textual evidence.

The palace is best known to us as it was in the 9th–10th C. and should be visualized not as a symmetrically planned complex (although parts of it may have been) but as an irregular agglomeration of buildings of various dates separated by gardens and sporting grounds. The three principal texts that help us to recreate the layout of the palace are the De ceremoniis; the description in TheophCont (139–43, 325f) of the buildings put up by the emperors Theophilus and Basil I; and the account by Nicholas Mesarites of the failed coup of John Komnenos the Fat in 1200. On the basis of these and other sources, repeated attempts have been made to reconstruct the palace on paper, the first by J. Labarte (1861). All are highly conjectural.

Of the earlier phase of the palace relatively little is known. It had a monumental vestibule called Chalke opening on to the main street (Mese) to the southeast of Hagia Sophia; an area occupied by the barracks of the palace guards (scholarioi, excubatores, candidati); a “public” section, centered on a big court (called 1 tribunal or Delphax) with meeting rooms (Consistorium, Augusteus) and a dining room (the Hall of the 19 Couches) grouped around it; finally, a residential wing called Daphne, which communicated with the imperial box (Kathisma) in the Hippodrome by means of a spiral staircase (kochlias). A chapel of St. Stephen was added by Pulcheria (ca.428) and another, of St. Michael, before the end of the 5th C. The palace had a harbor or other landing facilities and was certainly protected by a wall. A private sport-
ing ground called "the covered Hippodrome" may have dated from the same period.

The Chalke and guards' quarters were burned down in the Nika Revolt (532) and rebuilt by Justinian I. Justin II is credited with the Chrysotriklinos (Golden Hall), a domed octagon that was to become the throne room and ceremonial center of the palace. Tiberius I (soon after 578) remodeled the north section of the palace to provide new quarters for himself and his family. A further expansion was carried out by Justinian II, who strengthened the palace walls and built a big reception hall called Ioustinianos or the Triklinos of Justinian. The next important building phase was initiated by Theophilos, who erected a two-story complex (the Trikonchos, the Sigma, and several pavilions). Next, Basil I put up residential rooms (the Kainourgion and the Pentakoubouklon), the Nea Ekklesia, and several chapels and laid out a polo ground (Tzynanisterion).

Judging the defenses of the palace to be inadequate, Nikephoros II surrounded what was then the central part of it, i.e., the part overlooking the palatine harbor of Boukoleon, with a strong wall. No further building activity is recorded until the mid-12th C., when Manuel I erected a hall called Manouelites decorated with mosaics depicting his victories (P. Magdalino, *BMGS* 4 [1978] 101–14) and probably another, in the Seljuk style, called Mouchroutas, directly to the west of the Chrysotriklinos. During the Palaiologan period the palace gradually fell into decay; except for the Nea Ekklesia, little of it had survived by the time of the Turkish conquest.

GRECE, the southern part of the Balkan peninsula, encompassing the Peloponnesos, Central Greece (Attica, Boeotia, Akarnania, Aitolia), Northern Greece (Thessaly, Macedonia, Epirus), and the islands of the Aegean and Ionian seas. The traditional concept of an economic de-

cline of Greece during the late Roman period needs substantial revision: even though the destinies of individual cities differed (Thessalonike flourished, while Athens stagnated), classical urban civilization prevailed in the 4th–6th C. and was able to overcome the attacks of the Goths and Huns. The antique city pattern remained despite active construction of churches (T. Gregory in *City, Town and Countryside in the Early Byzantine Era* [New York 1982] 43–73). The situation changed drastically in the 7th C.; it remains under discussion whether it was the result of an internal economic and political crisis (the mechanism of which escapes us) or was caused by the invasion of the Avars and Slavs (whose impact, however, could not have been greater than that of the Goths and Huns). The ancient cities disappeared or were ruralized, construction work ceased almost entirely, and new settlers penetrated down to the southern parts of the Peloponnesos.

The old administrative system (Greece belonged to the prefecture of Illyricum), forming the provinces of Achaia, Thessaly, Macedonia, and Epirus, dissolved, since Constantinople retained control essentially over only a narrow strip along the sea coast with cities such as Thessalonike and Corinthis, whereas in the interior independent principalities (see Sklavinia), tribal units, and semi-independent grand possessions (like those of the widow Danelis) became established.

Ecclesiastical administration also underwent changes by the end of the 7th C.; many bishoprics ceased to exist—at the Council of 680 only the bishops of Lakedaimon, Athens, Corinth, and Argos were present as well as a handful of Macedonian representatives: Thessalonike, Selymbria, Herakleia, Mesembria, Bize, Ainos, Philippi, Amphipolis, Edessa, Uzusa, Dyrachion, Stobi (Ostrogorsky, *Byz. Geschicht e* 107–09); in the *Notitia* of pseudo-Éphimarios 27 metropolitans from Asia Minor are listed and only five from Greece, predominantly from northern regions (Thrace, Rhodope, Haimimontos [see Haimos]). A part of Greece stood under the jurisdiction of Rome until the mid-8th C.

The Byz. reconquest of Greece began at the end of the 8th C. and, though in some districts Slavic villages survived through the 14th C., the country was deeply hellenized by the 10th C. (J. Herrin, *BSA* 68 [1973] 113–26). In the 11th and 12th C. Greece witnessed an economic revival.
greater than Asia Minor: the larger cities such as Thessalonike, Corinth, and Thebes successfully competed with Constantinople as trade and manufacturing centers, and splendid churches were erected throughout Greece. Some writers (e.g., Michael Choniates) deplored the cultural decline of ancient cities such as Athens, but probably this attitude itself indicates the increasing self-consciousness of provincial intellectuals who accused Constantinople of grasping the lion's share of wealth and glory. At any rate, many first-rate literati dwelt in Greek towns and actively participated in local administrative and ecclesiastical life.

Administrative units of Hellas and Thrace were formed in Greece from which gradually other themes separated: Peloponnesos, Nikopolis, Dryrachion, Thessalonike, Macedonia, Strymon, Boleron; other themes encompassed the islands of
the Aegean Sea. Rome lost its jurisdiction over East Illyricum. A notitia of the 8th–9th C. reflects the growing role of Greece in church organization: there are listed 27 metropolitans from Asia Minor compared with ten metropolitans from Greece, including southern sites—Patras, Athens, and Larissa.

After the fall of Constantinople to the Crusaders in 1204, Greece was relatively easily conquered by the Franks, in contrast to Asia Minor where they met a stubborn resistance. Boniface of Montferrat established himself as the king of Thessalonike, then the following Frankish states were created: the principality of Achaia (Morea), and the duchy of the Archipelago (both under the direct suzerainty of the Latin emperor of Constantinople); the lordship of Athens and Thebes standing in a vassal relationship to the king of Thessalonike; Euboea (Negroponte), which was dependent on Thessalonike and Venice; and the county of Kephallenia, in theory held by Venice but actually autonomous.

The centers of Byz. resistance in Greece were the despotate of Epirus and Monemvasia as well as some mountainous areas of Taygetos that escaped subjugation to Achaia. By 1248 Monemvasia had to surrender, but by that time the empire of Nicaea became a factor; in 1259 at the battle of Pelagonia it showed itself as the strongest power in the Balkans, and in 1261 a Nicean general was able to reconquer Constantinople. In 1262 Achaia ceded three strongholds (Mistra, Monemvasia, and Maina) to the Byz. emperor, thus opening the way for the Greek recovery of a part of the Peloponnesos; Michael VIII also attacked Thessaly and Euboea and then penetrated as far as Avion and Dyrrachion. The Byz. reconquest of Greece, however, was short-lived: first the Catalan Grand Company, then the Serb-Serbian offense under Stefan Uros IV Dušan, and finally the Turkish invasion eliminated the successes achieved by the Greeks in the second half of the 13th C.

In the 14th and 15th C. Greece was divided into various independent and semi-independent seigneuries, of which Epiros, the despotate of Morea, and Kephallenia seem to have been the most stable and militarily active; these seigneuries engaged in constant internecine warfare, and also fought against the Turks, Serbs, Albanians, invaders from Italy, and not infrequently Constantinoplc. Nevertheless, the country prospered economically; population density grew; and trade relations with Venice, Dubrovnik, and Sicily flourished. The relations between the Franks and the Greeks were not strictly determined; the Byz. ruling class found a modus vivendi, strengthened by intermarriages; the ordinary Greeks, however, felt oppressed by both Latin knights and Italian merchants, and Orthodoxy, in opposition to the idea of subordination to the pope, served as an expression of ethnic and social hatred.

The Turkish occupation of the Greek mainland was accomplished by 1460 (the conquest of Morea); it put an end to the existence of the multinational agglomeration created in Greece during the 13th–15th C. Some islands continued their independent status for a while longer, partly under Venetian protection.

**GREEK. See Language.**

**GREEK ANTHOLOGY**, conventional title for two collections of ancient and Byz. epigrams.

1. *Anthologia Palatina*, the name given to a collection of about 3,700 epigrams contained in a unique MS, now divided between Heidelberg (Palat. gr. 23) and Paris (B.N., suppl. gr. 384). The MS is usually dated to the 10th C. (A.D.E. Cameron, GRBS 11 [1970] 339–50), but an 11th-C. date has been proposed by R. Aubreton (REA 70 [1968] 32–82; AntCl 38 [1969] 459f). Presenting complex codicological problems, the MS—in which several hands can be distinguished—also includes revisions and late insertions. Created by an unknown compiler, who probably drew on the 10th-C. Kephalaia anthology of pagan classical and late antique epigrams and funerary inscriptions, the *Anthologia Palatina* is set out in 15 books. Of these, books 3–7, 9–12, and probably 13–14 represent the core taken from Kephalaia's collection. Books 1 (Christian epigrams, largely from inscriptions in churches), 8 (funerary epigrams by Gregory of Nazianzos), and 15 (a miscellaneous
GREEK OUTSIDE THE EMPIRE | 873

GREEK FIRE (ὑρίον πῦρ, lit. “liquid flame”). Kallinos was said to be the inventor of the liquid fire that saved Constantinople from the Arabs in 678 and from the Rus’ in 941. Its exact composition and means of propulsion are still uncertain, esp. since the term “Greek fire” was used to refer to various types of incendiary weapons. Although some scholars prefer to understand Greek fire as an explosive compound triggered by saltpeter (E. Pászthory, Antike Welt 17.2 [1986] 27–37), the most likely ingredients included crude oil (obtained from regions east of the Azov Sea [Tmutorokan, Zichia] or from wells east of Armenia listed in De adm. imp. 53.483–511) mixed with resin and sulphur, which was then heated and propelled by a pump (siphon) through a bronze tube (streptone). The liquid jet was ignited either as it left the tube or by flaming projectiles fired after it. The Byz. were careful never to divulge details on the composition or propulsion of Greek fire (De adm. imp. 13.73–103); thus even when the Bulgars captured a great supply of the mixture and firing tubes (Theoph. 499.13–14) they were unable to use them.

The use of Greek fire in sea battles is frequently mentioned in the sources, but it was also used in siege machinery (see ARTILLERY AND SIEGE MACHINERY). The Arab historian Ibn al-Athir describes the terrible effect of flame-throwing tubes during the Byz. attack on Duin in 927, a danger the Arabs were able to avert only by killing the operator (Vasiliev, Byz. Arabes 2.2:150). The remains of a medieval workshop that produced Greek fire “grenades” were discovered in Hama-Emphaneia (P. Peniz, Antiquity 62, no.234 [1988] 89–93).

and central Italy, he sailed to Alexandria; from there, soon after the martyrdom of Christians at Najhran and the Akumite intervention of 525 that ended with the defeat of the Jewish Himyarite king Dhū Nuwas, the patriarch of Alexandria, called Proterios in the vita (but actually Timothy III), sent him as bishop to the land of Hymyar (V. Christides, Annales d’Ethiopie 9 [1972] 115–46). Having consecrated several churches together with the Akumite king Kaleb ‘Elẖa ‘Ašbehā (Elesroam), Gregentios remained in Zafār at the side of Abrahā, the newly appointed Akumite vicery of Hymyar, to reestablish Christian Orthodoxy. He died some thirty years later, on 19 Dec., and was inscribed on this day in the Synaxarion of Constantinople (Synax. CP 328–30; G. Fiaccadori, Egitto e Vicino Oriente 3 [1980] 314, n. 79).

With the name of the saint are also connected the so-called Laws for the Himyaries (BHG 706h–i), and the Conversation with Herban the Jew (BHG 706d); ostensibly forming an integral part of the vita, both are, in different measure, subsequent compilations. The whole dossier was assembled not before the 10th C., although the Laws for the Himyaries shares some points with legal inscriptions from pre-Islamic South Arabia (A.K. Irvine, BSOAS 30 [1967] 290f.), and the Conversation, a cento of passages from various texts, may reflect the drastic efforts of the saint to convert the local Jews.

Gregentios is called Gregory in one MS of the vita (BHG 705a). The latter name (a lectio facillior) appears constantly in the Slavonic tradition and is also found in the inscription on a Cypriot fresco of 1110–18 that portrays the saint (C. Mango, E. Hawkins, Dop 18 [1964] 339 and fig. 44).

Gregorios, graphene tos, archbishop of Zafār, in South Arabia, and saint, II. mid-6th C. His biography is based mainly on haphazard and legendary information (R. Aubert, DHGE 21 [1986] 1385f). According to the vita (BHG 705d) by Palladius, bishop of Najhran, preserved in a Slavonic translation, Gregentios was born in the late 5th C. in Moesia. After journeying to north

GREGENTIOS (Gregentios), archbishop of Zafār, in South Arabia, and saint, II. mid-6th C. His biography is based mainly on haphazard and legendary information (R. Aubert, DHGE 21 [1986] 1385f). According to the vita (BHG 705d) by Palladius, bishop of Najhran, preserved in a Slavonic translation, Gregentios was born in the late 5th C. in Moesia. After journeying to north

GREGORAS, NIKEPHIROS, polymath and historian; born Herakleia Pontike ca.1260/1 (V. Grecu, BSHA 27 [1946] 56–61) or 1293/4 (H.-V. Beyer, JÖB 27 [1978] 129f.), died Constantinople between 1358 and 1361. Orphaned as a child, Gregorios (Γρηγοριος) was initially educated by his uncle John, metropolitan of Herakleia. Circa 1314/
he went to Constantinople to study logic and rhetoric with the future Patr. John XIII Glykys, and philosophy and astronomy with Theodore Metochites. He supported Andronikos II in the civil war of 1324–28, but later also found favor with Andronikos III. Gregoras was a partisan of John VI Kantakouzenos during the Civil War of 1341–47; from 1347, however, when Gregoras succeeded Akindynos as leader of the anti-Palamite party, his fortunes declined. Shortly after taking monastic vows, he was condemned and anathematized by the local council of Constantinople of 1351 (see under Constantinople, Councils of) and placed under house arrest. After his death his corpse was dragged through the streets of the capital.

Gregoras was one of the most versatile scholars of the 14th C. Based at the Chora monastery, where he ran a school and had access to the library of Metochites, he wrote hagiography (including Lives of Michael Synkellos; Theophano, wife of Leo VI; and John of Harkleia), rhetorical works, and theological treatises (antiorthetics against Gregory Palamas). His dialogue Phloaretios, or On Wisdom, a discussion between Gregoras and Barlaam of Calabria, is a successful imitation of a Platonic dialogue. He also maintained an extensive correspondence, wrote treatises on the construction of the astrolabe, and calculated eclipses; his proposals for calendar reform and for the calculation of the date of Easter were not adopted, but presaged the Gregorian reform of 1582.

The most important work of Gregoras was his Rhomaikhe Historia, in 37 books. It covered the period 1204–1359, and he imposed a strict annalistic structure on his material. He emphasized the events of his own lifetime, with particular attention to theological controversy. Gregoras rejected a determinist explanation of historical events, arguing that God is not responsible for men's evil actions, but that he does foresee the future (A. Kazhdan, Byzantion 50 [1980] 320, 324f). Although the history was composed over many years and never properly edited or revised by Gregoras, it is an extremely valuable source for the first half of the 14th C. and as a complement to the memoirs of Kantakouzenos.

---

**GREGORY** (Γρηγόριος), exarch of Carthage and relative of Herakleios; died Sufetula 647. A supporter of the anti-Monothelite position of Maximos the Confessor, the "most pious patrikios" Gregory was already exarch by July 645, when he attended the disputation in Carthage between Maximos and Patr. Pyrrhos and reportedly helped reconcile them (PG 91:287A). In late 646 or early 647, Gregory and "the Africans" rebelled against Constans II. Gregory's actions are partly explained by African estrangement from Constantinople over Monothelitism; local support was strong for Pope Theodore and Maximos (both later accused in Constantinople of inciting Gregory), and during 645/6 various African synods denounced the "heresy." The more immediate cause was probably anxiety about the Arabs' conquest of Egypt. In 647 Abdallah invaded western Tripolitania and marched on Byzacena. Gregory, who had marshalled his forces at Sufetula, confronted him in the nearby plains and was defeated. Theophanes the Confessor (Theoph. 343.25-27) and some Syriac sources record that Gregory fled to Constantinople, but most scholars accept Arab reports that he was killed in battle.

---

Nikephoros Gregorae Epistulae, ed. P.A.M. Leone, 2 vols. (Ma-
he made a truce with the Lombards who threatened Rome in 592 and 593 and reorganized the utilization of church *patronia*, esp. in Sicily (V. Recchia, *Gregorio Magno e la società agricola* [Rome 1978]). Gregory recognized not only the secular authority of the emperor, but also his authority in ecclesiastical matters, provided the emperor did not violate the canons. Gregory did not actively interfere in the domain of the patriarch of Constantinople, although in 595 he examined an appeal from two priests condemned in the Byzantine capital. He recognized the see of Constantinople as the first among the Eastern patriarchates but rejected the claim of John IV Nestor to the title of Ecumenical Patriarch. He was opposed to Maurice and his court and welcomed the usurpation of Phokas, displaying the portraits of the new imperial couple on the Palatine Hill.

Gregory is generally believed to have been the author of the *Dialogues*, although this attribution has recently been challenged by Clark (infra). These Dialogues, which were miraculous stories about 6th-C. saints and deliberations on the immortality of the soul, were translated into Greek by Pope Zacharias, and were popular in Byz. Short anecdotes about Gregory, probably known to John Moschos, as well as pieces in *synaxaria* and *menologia* (F. Halkin, *OrChP* 21 [1955] 109-14), formed the core of Gregory's Greek *vitae*.

**GREGORY II OF CYPRUS**, patriarch of Constantinople (28 Mar. 1283–June 1289); born Cyprus ca.1241, died Constantinople 1290. He was educated in Cyprus, Nicaea, and Constantinople, where he studied under George *Akropolites* (*Autobiography* 177-87). He then joined the ranks of the palace clergy. In 1283 he was elevated to the patriarchate. Although under Michael VIII he supported the negotiations with the West for Union of the Churches, Gregory was disillusioned by its apologists, the “Latinophones,” and with Rome’s unyielding demands for submission. His patriarchate was thus marked by the restoration of Orthodoxy and the formal rejection of the union of Lyons at the local council of Constantinople of 1285 (see under Constantineople, Councils of). Eventually, however, the complex ecclesiastical crisis provoked by the *Armenites*, conservative bishops, and unionists opposed both to his rule and to the Tomos of 1285, forced his conditional resignation (1289).

Gregory played a prominent part in the intellectual revival of the late 13th C., as his correspondence, proverb collection, *enkomia*, declamations, and Lives of the saints indicate. His *Autobiography*—possibly inspired by the *autobio-
graphical reflections of Nikephoros Blemmydes—is a brief yet precious account of the cultural and "academic" background of his youth in Nicaea and Constantinople. His correspondence, too, in an elegant Attic style, contains material evidence for social and economic history (M. Bibikov, ZRVI 17 [1976] 93–99).

LIT. RegPatr. fasc. 4, nos. 1460–1548. Papadakis, Crisis in Byz. —A.P.

GREGORY III, pope (18 Mar. 731–28 Nov. 741) and saint. Of Syrian origin, Gregory was elected unexpectedly after the demise of Gregory II and inherited his predecessor’s conflict with Byz. At the council convened in Rome on 1 Nov. 731, Italian bishops condemned Iconoclasism. Gregory sent messengers to Emp. Leo III, but they either tarried from fear or were detained and arrested. To quell the pope’s resistance, Leo dispatched to Italy a fleet, which was destroyed in a storm in the Adriatic Sea. Then Leo ordered the tenants of the papal patrimonio in Sicily and Calabria to pay their taxes not to Rome, but to the fisc (A. Guillou, ZRVI 19 [1980] 74–78); he also transferred Illyricum to the jurisdiction of Constantinople. In this precarious situation Gregory vacillated between alliance with the duchies of Benevento and Spoletto, on the one side, and with the Lombard king Liutprand, on the other; he even endeavored in 740 to attract Charles Martel as Rome’s protector. Gregory did not disrupt political ties with Byz., however, and urged the Venetians and the archbishop of Grado to support exarch Eutychios when the Lombards forced him to flee Ravena in 737.

GREGORY V (baptismal name Bruno), pope (3 May 996–18 Feb. 999); great-grandson of Otto I the Great. The first pope of German origin, Gregory sought collaboration with Otto III. He found a rival in John Philagathos, the archbishop of Piacenza, a man of Greek ancestry who was close to Theophano, the Byz. mother of Otto. Basil II supported the claims of Philagathos: when the latter arrived in Constantinople for diplomatic negotiations, the emperor sent him back with the Byz. emissary Leo of Synada. Philagathos was proclaimed pope in Rome in Feb. 997 (as John XVI), but in Feb. 998 Otto III reinstalled Gregory and severely punished the pope’s adversaries.

GREGORY VII (Hildebrand), pope (from 22 Apr. 1073); born Tuscany between 1020 and 1025, died Salerno 25 May 1085. Continuing the policy of Leo IX, Gregory worked to establish a strong papacy supported by a reformed clergy. At the beginning of his pontificate Gregory was involved in military actions against the Norman Robert Guiscard. He assembled certain southern Italian princes and was even in touch with North African Christians (C. Courtois, RH 195 [1945] 220–25) in expectation of an alliance against the Normans. Gregory also strove for an accommodation with Byz. He corresponded with Emp. Michael VII and dreamed of organizing a “crusade” to alleviate the plight of Byz. (Cowdrey infra). Everything changed in 1080; as a result of Guiscard’s military success and the conflict with Henry IV of Germany, Gregory accepted Guiscard’s homage on 29 June and recognized his occupation of Amalfi, Salerno, and Fermo. When Guiscard waged war against Byz., Gregory insisted that the Venetians who opposed the Norman penetration into the Adriatic would not support the “excommunicated” (Greeks), and he sent his congratulations to Guiscard after his victory over Alexios I. Sources concerning Gregory’s relations with Armenia, Kiev, and southern Slavs are vague. Matthew of Edessa even relates that the Armenian katholikos Gregory II traveled to Rome in 1075; the pope Gregory attempted to mediate the conflict between Poland and Rus’ and urged Zvonimir to recognize his vassalage to Rome.

GREGORY IX (Hugo, count of Segni), pope (from 19 Mar. 1227); born Anagni ca. 1170 (R. Aubert, *DHGE* 21 ([1986] 1437), died Rome 22 Aug. 1241. He was the nephew of Innocent IV. Gregory spent his pontificate primarily in the struggle with Frederick II. At the same time he endeavored to strengthen the Latins’ position both in Palestine and in Constantinople. He collected money for the organization of new crusades and developed a new system of punishing heretics by sending them to Constantinople for several years (P. Segl, *DA* 32 [1976] 209–20). Gregory insisted that Frederick lead a crusade to Palestine—the pope wanted him to help the Latins and at the same time to divert Frederick from Italy, where he had been attacking papal territory. Gregory tried to increase the power of the Latin patriarch of Constantinople by making him a papal legate, whereas Innocent III had sent an independent legate to check the power of the patriarch (R.L. Wolff, *DOP* 8 [1954] 285–90). Gregory initiated negotiations with the Greek patriarch Germanus II; Germanus’s letters of 1232 to Gregory and the cardinals (*RegMat*, fasc. 4, no. 1256–57) emphasize readiness for Union of the Churches on the basis of papal primacy but complain about the injustice perpetrated by the Latins, esp. on Cyprus. In 1233 Gregory dispatched Haymo of Faversham to Nicara, but negotiations failed.

---

GREGORY XI (Pierre Roger de Beaufort), pope (from 1370); born Limousin 1329, died Rome 27 Mar. 1378. He was the last of the Avignon popes. His principal aim was to return the curia to Rome, a goal that he achieved in 1377 after an expensive war against Florence. Gregory devoted many words—but little money—to the East, where the position of the Christians was seriously threatened, esp. after the Turkish victory at Marica in 1371. The pope subsidized the garrison in Smyrna but was unable to summon a new crusade since only the Hospitallers were ready to offer money and manpower: Venice was at war with Genoa, while other Western states (including Hungary and Aragon) were indifferent or suspicious of the papal project.

---

GREGORY ABUL-FARAJ, Syriac scholar; known as Bar Hebraeus in the West, a sobriquet that translates the name by which he is usually called in Syriac and Arabic texts; baptismal name John; born Melitene 1225, died Maragha, Azerbaijan 30 July 1286. The son of a physician named Aaron, he took the name Gregory when he became a bishop in the Monophysite community. After occupying several episcopal sees, in 1264 Gregory became the bishop of Tagrit, and thus the ma-
GREGORY MAGISTROS, prince of the Pahlavuni family, lord of Bjni in the valley of the Hrazdan River; born Bjni (near Ani) ca.990, died Tarón ca.1058. He was important in the political and intellectual life of Armenia. After Constantine IX occupied Ani in 1045 (ending the Bagratid kingdom), Gregory went to live in Constantinople. He joined a Greek campaign against the Turks in 1048 and was appointed magistros and doux of Mesopotamia. Thereafter he resided at his estates in Tarón, devoted to literary studies and the repression of the Tondrakites. His son Vahram became katholikos (1065–1105) as Gregory III Vakayaser (“martyrophile”); his descendants included NERSÊS ŠNOKHILI and NERSES OF LAMBRON.

Widely read in Greek literature, Gregory translated Plato’s Timaeus and Phaedo and part of Euclid’s Geometry and composed various theological works. His most notable legacy is a collection of 88 letters written on public and private matters in a recondite style full of classical allusions. They are unique in Armenian as conscious imitations of Byz. epistolography.

ED. Grigor Magistros (Hore, ed. K. Kostaneau) (Alexandropol 1910), T'ala'adut'ienk (Venice 1868).

GREGORY OF AKRAGAS, exenate, bishop of Akragas, and saint; fl. ca.700; feastday 24 Nov. Under his name is preserved a commentary on the Ecclesiastes of Solomon (G.H. Ettinger, SfP 18.1 [1886] 317–20). Gregory’s biography, written by a certain Leonios, hegoumenos of the monastery of St. Sabin in Rome, is confusing; it makes Gregory a contemporary of Justinian II and eyewitness to the struggle against the Monotheletes and at the same time a deacon under Patr. Makarios II of Jerusalem (552, 563/4–ca.573). The focal point of the vita of Leonios is Gregory’s arrest in Akragas and Justinian’s intervention with an unnamed pope to release him; the Sicilian bishops are presented as supporting Gregory against the pope. The anti-Roman tendency of

GREGORY DEGHA PAHLAVUNI. See GREGORY TLAY.

phrian or primate of the Monophysite community in the former Persian territories, with his official residence at the monastery of Mar Mattai, near present-day Mosul. Gregory was a polymath whose career and accomplishments represent the full flowering of intellectual life in the Syriac-speaking community in the 19th C. He composed major works in theology, philosophy, mysticism, law, and Syriac grammar.

For the Byzantinist, however, his most relevant work is the Chronicle, a universal history that Gregory composed on the basis of the Chronicle of Michael I the Syrian. Gregory’s Chronicle presents secular and ecclesiastical history in two separate sections, often called the Chronicon syriacum and the Chronicon ecclesiasticum, respectively. The secular chronicle covers the period from Adam to the Mongol invasions; the ecclesiastical chronicle begins with Aaron, the Israelite priest, and continues in the Christian period following the succession of the patriarchs of Antioch, listing only the Monophysite holders of the office after the time of Severos of Antioch. In a second section of the ecclesiastical chronicle, however, Gregory also presents the history of the church in the Persian world, from the time of the apostle Thomas onward, on the basis of Nestorian sources. Gregory worked on the ecclesiastical chronicle until his death in 1286. His brother, Bar Šama, brought it up to 1288. A later writer included a record of events to the year 1496. Gregory’s Chronicle is esp. valuable for the years after 1193, where the chronicle of Michael the Syrian ended, and for the period of the Mongol invasions, which Gregory witnessed.

GREGORY DEGHA PAHLAVUNI. See GREGORY TLAY.
Leontios (was he really a *hegoumenos* in Rome?) also reveals itself when he gives the list of Gregory's works, one of which was dedicated to St. Andrew who is titled the "chief (koryphaios) of the apostles," an epithet usually reserved for the "Roman" apostles Peter and Paul.

—A.K.

**GREGORY OF CORINTH.** See Pardos, Gregory.

**GREGORY OF DEKAPOLIS,** saint; born Eirenopolis, Isaurian Dekapolis, before 797, died 20 Nov. 842 (Dvornik), 841, or even earlier (Mango). After finishing elementary school Gregory stayed 14 years in a monastery, whose archimandrite was Symeon, Gregory’s maternal uncle. Thereafter he started his wanderings: he spent a winter in Ephesus, then set off for Constantinople, but landed in the Prokonnesos, passed through Ainos, Christophopolis, Thessalonike, and sailed to Sicily via Corinth; he stayed three months in a cell in Rome, lived as a recluse in Syracuse, and returned to Thessalonike, from where he visited Mt. Olimpos and Constantinople.

Gregory’s vita, written soon after 842/3, is assigned by three MSS to Ignatios the Deacon; this attribution was questioned by W. Wolska-Conus (TM 4 [1970] 340) but supported by Ševčenko (“Hagiography” 123). Gregory lived through the second period of Iconoclasm but did not himself suffer from persecution: the hagiographer accordingly calls him “a martyr without meals” (Dvornik, *infra* 70.3–4). Gregory enjoyed the vision of divine light and worked miracles (a Saracen tried to kill Gregory, but his hand immediately withered). The Life contains only vague information about a revolt of the *exarchon* of Sklavinia, but provides much evidence on administrative and legal practice in Byz.: a conflict concerning the right of the “neighborhood” (*geitonomia*—p.63.22–26), the *praktor* of the state treasury seizing property not bequeathed by will (p.55.20–24), etc. Images of Gregory, rare in MSS and even rarer in monumental painting, show the saint as a monk with a trim round white beard.

—A.K., N.P.S.

**GREGORY OF NAZIANZOS,** bishop of Constantinople (27 Nov. 380–381), bishop of Nazianzos (382–84), and saint; born 329/30 in Arianos, near Nazianzos, died Arianos ca.390; feastday 25 Jan. One of the Cappadocian Fathers, he was a close friend of Basil, the Great, whose fellow-student he was in Cappadocian Caesarea and Athens. Like Basil, he entered monastic life after completing his education. His homonymous father, bishop of Nazianzos, consecrated a reluctant Gregory as priest in 362; he assisted his father until the latter’s death in 374. In 379 Gregory went to Constantinople, where he was appointed as its bishop. A strong supporter of Nicene orthodoxy, he fought against the adherents of Eunoios at the Council of Constantinople in 381, over which he presided. He then abdicated and returned home where he died after some last years of writing and contemplation.

Gregory was a prolific author, who wrote poetry, including 254 epigrams collected as book 8 of the *Greek Anthology*, orations, and many letters, to such friends as Basil and Gregory of Nyssa. Among his letters are attacks on the heresy of Apollinaris, the so-called *Theological Letters*. His homilies include sermons on specific feastdays, funeral orations for family and friends, a treatise (or.2) on the burden and duties of priesthood, a diatribe (or.20) against the mania at Constantinople for dogmatic controversy, and two gloating accounts of the death of Julian.

The authors of his vitae, the 7th-C. Gregory the Priest (PG 35:243–304) and Niketas David Paphalagon (ed. and tr. J. Rizzo, *The Encomium of Gregory Nazianzen by Nicetas the Paphalagonian* [Brussels 1976]), stress his role in the dogmatic struggle of the period; at the Council of Chalcedon he was granted the official epithet “the Theologian.” Unlike Basil and other contemporary dogmatists, however, Gregory was foremost a rhetorician and poet (H. Musurillo, *Thought* 45 [1970] 45–55) who considered poetic vocation a prophetic activity.
and his works as a sacrifice for God's altar (S. Costanza in Lirica grecia de Archiloco a Elitis [Padua 1984] 235). If Basil's asceticism was communal and monastic, Gregory's centered on his own experience as reflected in his poetic Autobiography; his vision of the world was personal and aristocratic and he stressed his distance from the "crowd" (B. Lorenz, VigChr 33 [1979] 240). Although his observations were personal and individual, he often used conventional situations; for example, although he never married and had no son, he lamented in one of his moral poems the untimely death of a bridegroom and the grief of the parents. He had a sincere belief in the afterlife and Christianity gave him solace against death, so that Gregory treated the Christian paideia primarily as a preparation for the end of earthly existence. To express his experience Gregory often used antiquated meters, albeit with certain modifications (D. Sykes, BZ 72 [1979] 6–15), and exquisite vocabulary. His verses, full of classical themes and images (M. Kertsch, Bilder sprache bei Gregor von Nazianz [Graz 1980]), were not suited for liturgical purposes; nevertheless, his poems were popular among later literati: they were commented upon by Kosmas the Hymnographer and imitated by Prodomos, among others.

Illustration of the Homilies of Gregory. Numerous illustrated copies of his homilies attest to Gregory's significance in later periods. Beyond the Paris Gregory a smaller selection of 16 homilies became popular in the 11th C. Arranged in the order of reading during the church year, this "liturgical edition" was illustrated with images appropriate to the individual feastdays. Among the more elaborate versions is Sinai gr. 339, a mid-12th-C. MS commissioned by the hegoumenos Joseph Hagioglykerites of the Pantokrator monastery in Constantinople; its ornament is related to MSS of James of Kokkinobaphos (J.C. Anderson, ArtB 61 [1979] 167–85).

Representation in Art. Gregory, as one of the three most important church fathers, was invariably included in the procession of bishops adorning church apses, near the figures of John Chrysostom and Basil the Great; he is distinguished by his balding head, healthy face, and squarish beard. The inclusion of Gregory the Priest's biography of the saint into the Paris Gregory MS inspired a whole page of illustrations depicting events from his life (fol. 452r), while the autobiographical references contained in various of Gregory's sermons prompted the inclusion of narrative compositions (Gregory teaching, attending funerals and councils, etc.) in many MSS of the liturgical edition of these sermons. Several of these latter MSS contain an author portrait of Gregory seated at his desk like an Evangelist.

- GREGORY OF NAZIANZOS. Portrait of Gregory writing. Frontispiece of a manuscript of the liturgical homilies of Gregory (Sinai gr. 339, fol. 4v); 12th C. Monastery of St. Catherine, Sinai. The manuscript commissioned by Joseph Hagioglykerites, hegoumenos of the Pantokrator monastery in Constantinople.

---

GREGORY OF NYSSA, theologian, the youngest of the Cappadocian Fathers, and saint; born in the region of Neokaisareia between 335 and 340, died after 394; feast day 10 Jan. He was one of nine children, including an older brother Basil the Great and a sister, Makrina, whose vita he later wrote. Anagnósties by the age of 20, Gregory unexpectedly renounced his post, married a certain Theosebia, and turned to the study of rhetoric. When his brother Basil received the metropolitan see of Caesarea, he ordained Gregory (ca.371) as bishop of Nyssa. Gregory, however, did not meet his brother's expectations: Basil accused him of “simplicity” and “lack of experience” in church administration (Basil, ep.100.27–29, 215.16–17, ed. Y. Courtome [Paris 1957–61]). Gregory became involved in a conflict with the civil government and was forced to leave his see temporarily (376–378); during his absence the pro-Arian party took the upper hand. He returned to Nyssa after the death of Valens. During Basil's life Gregory felt restrained and wrote little (e.g., his essay On Virginity), but after his brother died in 379 Gregory's political and literary activity flourished: he attended the synod of Antioch in 379, served briefly as bishop of Sebastia, supported Gregory of Nazianzos at the Council of Constantinople in 381, delivered funeral orations for members of the imperial family in 383 and 385, wrote his major works (Against Eunomios, the Great Catechesis, On the Making of Man, homilies on the Song of Songs, etc.), and participated in the synod invoked by Patr. Nektarios in 394.

Well read in classical literature, Gregory highly valued Plato and had more respect for Origen than did Basil. He was much interested in scientific problems, and often touched upon physical, physiological, and medical topics. He became involved in the Trinitarian discussions which dominated his era and followed in his brother's footsteps, refining the views of Athanasios of Alexandria and polemizing with the Arians. His personal interests, however, lay in the spheres of anthropology and eschatology; he was esp. concerned with the problem of man's perception of God (theognasia—PG 44:773A); the contemplation of divine beauty, which is the most sublime end of our desires, is made possible by God's creation of man according to His image, "in order that the similar (homoios) might see the similar" (PG 46:176A). At the same time man is a sensual being and therefore is in danger of substituting valuable material objects for the sublime principle. Gregory saw in the Holy Writ and in the "tradition given to us by the fathers" the vehicle of discriminating between the divine and the material. Unlike Eunomios, who affirmed that a complete perception of God was possible through logical operations, Gregory asserted that our knowledge of God was restricted and could be achieved primarily through an ecstasy, "a sober inebriation" (PG 44:992A).

Gregory was respected by the Byz. and called "the father of fathers" at the Council of Nicaea in 787, but he always remained in the shadow of the two more prominent Cappadocian fathers. Some works of other theologians (e.g., Severos of Antioch—see M. Kugener, ROC 3 [1898] 435–51, or Anastasios of Sinai—Beck, Kirche 445) were ascribed to him; in the 14th C. Gregory's concept that all beings, save God, had been created provoked a heated discussion between Neilos Kabasilas and John Kyparissiotes; his statement was interpreted respectively as being a doctrine in support of or in opposition to Hesychasm.

Representation in Art. Gregory's association with Gregory of Nazianzos means that his portrait is included in illustrated MSS of the latter's homilies (Galavaris, Liturgical Homilies 46–48, 53–58, 183–85). A dark-haired bishop with a pointed beard, Gregory of Nyssa is commonly included in the procession of bishops adorning church apses.

-A.K., B.B., N.P.S.
GREGORY OF TOURS, bishop of Tours (from 573): born Clermont-Ferrand ca. 540, died 17 Nov. 593 or 594. An aristocrat of senatorial background and adviser to Merovingian kings. Gregory was the most important historian of Merovingian France. His gift of lively narrative in late Latin produced two works significant for Byz. The Historiarum libri X, or Histories in Ten Books, describes the rising power of the Franks from the 5th C. down to Gregory’s own time. For the early period Gregory used written sources (including valuable extracts from lost Gaulish historians on the usurper Maximus and general Aetius) and oral traditions of debated value. For Gregory, Byz. was simply res publica (bk. 2, ch. 3) and its activities in the West appear in connection with this main theme, from the alliance of Anastasios I with Clovis (2.37–38—M. McCormick in E. Chrysos, Das Reich und die Barbaren [Vienna-Cologne 1989] 155–80), DIPLOMACY (6.2), and Byz. complicity in a Frankish usurpation (6.24, 26–28) to the Franks’ role in Byz.’s war against the Lombards (10.2, Epistolae australiae) and the activities of Byz. merchants in Gaul (7.31). The Histories also provides independent evidence on the ascensions of Tiberios I (5.30—cf. Av. Cameron, JThSt n.s. 26 [1975] 421–26) and Maurice (6.30); Gregory’s information on Justin II, the Persian pillage of a suburb of Antioch, and the defection of Persarnenia (4.40) probably came from Monophysite circles in Constantinople.

The Libri VIII miraculorum, or Miracles in Eight Books (M. Heinzelmnn in Hagiographie—cultures et societe [Paris 1981] 235–57), includes stories reported by travelers, e.g., on Justin II and Empress Sophia (1.5), Patras (1.30), the building of St. Polyeuktos in Constantinople (1.102), and Byz. Italy (Virtutes S. Martini 1.13–16) as well as the development of the cult of icons (R.A. Markus, JThSt n.s. 29 [1978] 151–57). Gregory also wrote the Miracles of St. Andrew (BHL 4390) and, with the help of a Syrian named John, a Latin translation of the account of the Seven Sleepers of Ephesus (B. Krusch, AB 12 [1893] 371–87).

GREGORY SINAITES, hesychast monk and writer; born Koukoulos, near Klaizomenai, ca. 1255 or 1265?, died Paroria 27 Nov. after 1337 (the traditional date of 1346 cannot be confirmed). The exact chronology of his career is uncertain. Born to wealthy parents, Gregory was captured in his youth by Turks. After his release he fled to Cyprus, where he became a monk, and then went to Mt. Sinai. He left Sinai after disputes with other monks and made his way to Athos, via Jerusalem and Crete, where he studied with the monk Arsenios and learned the “Jesus prayer,” the repetition of the phrase “Lord Jesus Christ, Son of God, have mercy on me.” On Athos he reportedly introduced this “prayer of the heart,” a continuous and imageless form of prayer combined with control of the breathing (K.T. Warc, ECHR 4 [1972] 3–22), and was a forerunner of hesychasm. Turkish raids forced Gregory to flee from Athos and eventually to settle at Paroria in Thrace. Here ca. 1330 he founded a monastery on Mt. Katekryomene, which attracted both Greek and Slavic monks and received financial support from the Bulgarian tsar Ivan Alexander. Gregory’s disciples included Romylos of Vidin, Theodosios of Tornado (died 1369), and the future patriarch Kallistos, who composed his biography.

His principal work was the Most Beneficial Chapters [Kephalaia] in Acrostic, 137 short essays on the contemplative life (see Vita Contemplativa). Other chapters treat the hesychastic method of prayer and breathing. Gregory’s Discourse on the Transfiguration identifies the light perceived by mystics with the light on Mt. Tabor.

SOURCE. Vita by Kallistos—ed. I. Pomjalovskij, Zapiski-FilozofstnUniv 53 (1866) 1–64.

GREGORY THE ILLUMINATOR (Γρηγόριος τῆς μεγάλης Ἀρμενίας, lit. “Gregory of Great Armenia”), considered the founder of the Arménian Church and its first bishop; saint; fl. first half of
the 4th C.; Byz. feastday 30 Sept. The two main
censuras of his vita (A and V) differ in a number of
details and each survives in several versions
(Armenian, Greek, Arabic, Georgian, etc.). Ac-
cording to the "received tradition" found in re-
cension A (by Agathangelos), Gregory was of
Parthian origin and the son of the murderer of
the Armenian king Xosrov I. Saved from the
massacre that befell his family, he was educated as
a Christian at Caesarea in Cappadocia. On his
return to Armenia, he miraculously survived tor-
ture for his beliefs by King Trdat the Great.
Gregory preached the new faith to the king and
his court and baptized them. He was consecrated
bishop of Armenia at Caesarea. Though still occa-
cionally disputed, P. Ananian's proposed date
of 314 for the conversion of Armenia now seems
incontrovertible (Mission 74 [1961] 43-73, 317-
60). Gregory sent missionaries to the neighboring
lands of Georgia and Caucasian Albania. Near
the end of his life, he consecrated his son Aris-
takes as his successor and sent him to attend the
First Council of Nicaea. Gregory is said to have
then retired to a hermitage where he died, though
accounts of the end of his life remain unclear.
His mission marks the beginning of hellenizing
influence in the Armenian church as opposed to
the earlier Syrian influence found in the southern
part of the country.

Representation in Art. The earliest known Byz.
portrait of Gregory is the mosaic (now destroyed)
on the south tympanum of the nave of Hagia
Sophia, perhaps connected with Emp. Basil I's
claims of Armenian ancestry (Mango, Materials,
figs. 57-59). Gregory is depicted as an elderly
bishop in many later church programs and in
menologia, where he may appear in the company
of the virgin martyrs Hirip’imneh and Gayanê. The
scene of his beheading in a menologion (B.L. Add.
11870, fol.242v) is without textual basis. Mini-
tures in the Theodore Psalter show him being
released from the pit and converting King Trdat
(fol.48r). His life was depicted in one of the churches
dedicated to him at Ani (1215).

GRIGOR TROYAN (“youth”), a nephew of NERSÉS
SNORHALI of the Pahlavuni family; katholikos in
Armenian Cilicia (1173-93); born 1193, died 1193.
Gregory pursued discussions with the Byz. au-
thorities concerning union of the Greek and Ar-
menian churches. In 1179 he called a synod at
Hrom-klay, the patriarchal see, where NERSÉS OF
LAMBRON made an Oration in favor of compro-
mise, but bishops from Greater Armenia were
opposed. When Emp. Manuel I died in 1180,
negotiations ended. Gregory also sought closer
relations with the Syrian and Roman churches,
corresponded with Pope Lucius III (1181-
85).

GRiffin (γρύψ, γρύφος), mythological creature
with the body of a lion, head of an eagle, winged,
and sometimes having a serpent for its tail; Con-
stantine VII Porphyrogenetos (De cer. 381.1) in-
terpreted it as a hybrid of lion and vulture. Leg-
end placed griffins in the land of the Scythians
and Hyperboreans. Late Roman poets (Claudian,
Sidonius Apollinaris) connected the griffin with
Apollo, as did Servius, the 4th-C. commentator
on Vergil, who lists three symbols of Apollo: the
lyre, griffin, and arrows. Sidonius Apollinaris
describes the chariot of Dionysos as pulled by grif-
fins. According to NONNOS of PANOPOLIS (Diony-
siaca 48:382-83), a griffin, "a bird of vengeance,"
winged and four-legged, flew round the throne of
Nemesis. In the Alexander Romance the hero
flies on griffins. Psello (Sathas, MB 5:246.3-4)
pees with irony of writers who made Alexander
yoke griffins and fly up from the earth. Lexico-
graphers (Hesychios, Photios) confused the griffin
with the hippelektros ("horse-rooster"), another
fabulous animal with four legs, wings, and a hooked
beak.

Associated in Rome with the light-bringing
Apollo, the heads and bodies of griffins formed
Christian lamps in the 4th C. (Age of Spirit., nos.
560-61). But in Byz. the griffin's presence, where
not purely ornamental, may depend on a more
ancient, Oriental tradition that saw it as apo-
ropaic. In this sense, perhaps, griffins flank the
fountain of life and decorate textiles (as on the
costume worn by Alexios V; Spatharakis, Por-
trait, fig.99). Griffins are found frequently on
enamels, on the ornamental pages of illuminated
MSS, and in a great variety of other media where they support the ascension of Alexander.

GROCER (σαλομάριος; in inscriptions usually σαλκυμάριος). According to the Book of the Eparch (ch. 13), grocers were purveyors of preserved meat and fish (smoked, salted, or dried), cheese, butter, olive oil, honey, and pulses of all kinds as well as raw pitch, gypsum, nails, and other goods sold by weight. They were restricted, however, to selling goods weighed with a steelyard rather than with balance scales. Furthermore, they were not allowed to sell products that were the responsibility of other guilds, such as soap, perfume, wine, fresh meat, or linen. Their shops or ergasteria could be located anywhere in Constantinople, on squares and streets, “so that the provisions necessary for life were readily available.” M. Sjuzjumov (BizVrem 4 [1951] 32) hypothesized that saldamaria were businessmen owning sizable storehouses, but this cannot be proven. The Poulogogos (ed. S. Krawczyński, 110.445) accuses the crown of damaging both the grocer (samarades/sardamaries) and the plowman, thus suggesting that the former displayed his wares in the open air. In 1419 the Athonite monastery of Xenophon possessed five ergasteria sardamariaka in the Grand Stoa of Thessalonike (Xenoph., no.32.8–9)—evidently they were not large stores. A chrysolibull of 1342 notes that greengroceries (lachanopoeia) in Constantinople that had been recently acquired by the Lavra of St. Athanasios were transformed into two ergasteria—one for perfume (myrepsikon), the other a sardamariakon (Lavra 3, no.123.121–23).

GROSSETESTE, ROBERT, bishop of Lincoln; English theologian, scholar, and statesman; born Stradbrook (Suffolk) ca.1168, died 9 Oct. 1253. An example of the new type of ecclesiastical trained in the universities, Grosseteste played an important role in the introduction of Aristotelian learning at Oxford. Profoundly learned in Greek, he possibly knew some Hebrew as well. At Lincoln, he assembled a group of scholars (some from southern Italy) and with their assistance translated various Greek texts into Latin, including Aristotle’s On the Heavens, with the commentary of Simplikios, and Nicomachean Ethics, with the commentaries of Michael of Ephesus, Eustroption of Nicæa, and others; the pseudo-Dionysios corpus, with the scholia of Maximos the Confessor; On the Orthodox Faith by John of Damascus; On the Passions, attributed to Andronikos of Athens; and other theological texts.

GROSSOLANO, PETER, sometimes called Chrysolanus, theologian, bishop of Savona, then archbishop of Milan (from 1101 on); died in the monastery of St. Sabas in Rome 6 Aug. 1117. Entangled in the struggle of local parties, Peter was twice forced to leave Milan (1103, 1112). In 1112, en route to Jerusalem, he stopped at Constantinople, where he engaged in discussions with Byz. theologians, including Niketas Seides, Theodore of Smyrna, and others, the major topic being the primacy of Rome. Alexios I, according to a note in a MS of Montecassino, was very supportive of Grossolano. When the latter read his pamphlet On the Procession of the Holy Spirit, the emperor exclaimed that now wisdom came from the Occident to the Orient and that Peter’s treatise made the work of the Greek theologians superfluous (H. Block, DOP 3 [1946] 223f). It remains unclear whether Peter was on an official mission of Pope Paschal II or went to Constantinople as a private individual. After his return to Rome, Peter resigned at the Lateran synod of 1116.

ED. PG 127.911–19.

GROTTAFERRATA, site about 18 km southeast of Rome where the Greek monastery of S. Maria di Grottaferrata (τῆς Κυριοφερράτης) was
founded in 1004 by Neilos of Rossano under the patronage of the counts of Tusculum. Though subject to the Holy See, the monastery followed the Byz. rite; therefore, in 1088, Pope Urban II considered its abbot, Nicholas, a suitable intermediary to send to Constantinople to discuss the question of the azymes. Most of the monks of Grottaferrata were of Calabrian origin. Some, following the example of their learned founder, were able scribes, hagiographers, and hymnographers, and the monastery still preserves an important collection of Greek MSS.

The monastery church, parts of which are 11th-C., was built and decorated according to Italian practice but with some use of Byz. iconography. Over the main entrance is a Deesis in mosaic of the early 12th C.; inside, on the apsidal arch, is a mosaic Pentecost that M. Andaloro (Roma l'anno 1300 [Rome 1983] 253–73) and V. Pace (Boll-BadGr 41 [1987] 47–87) attribute to the time of Innocent III. Three registers of frescoes on the nave walls are recorded but have mostly disappeared. A 13th-C. Hodegetria on the altar shows traits of Cypriot painting. Bessarion was commendatory abbot of Grottaferrata from 1462 to 1472.

GUARDIANSHIP (ἐπιτροπεία, also ἐπιτροπῆ). The prime duty of a guardian was to administer the ward’s property and to arrange the child’s marriage. In Roman law guardianship existed both for wards and for adult women, but imperial legislation later restricted it to wards. The guardianship for minor orphans could be either testamentary or statutory (guardians appointed from among relatives, male or female); in the absence of a statutory or testamentary guardian an official guardian could be appointed. A papyrus of 336 presents the petition of a bishop who wished to avoid the guardianship of some children (Taubenschlag, Law of GRE 162, n.25a). After the 8th-C. Ecloga, the term for guardian, epitropos, was replaced—although inconsistently—by kouvator (Zachariá, Geschichte 162, n.501), whereas epitropos referred primarily to an official representative and administrator (e.g., Lavena 3, no.160.1–2). The termination of the guardianship of minors was established in Roman law at 25 (still in Cod. Just. V 30). Leo VI’s novel 28 mentioned the age of 18 (for girls) and 20 (for boys) but allowed local functionaries to decide the question in every concrete case. His novels 26 and 27 extended to eunuchs and virgins the possibility of adoption of children, and they thus became guardians. Sexual relationships between guardians and their charges were strictly prohibited.

GUERCIO, BALDOVINO (Βαλδόβινος Γέρτζος), Genoese mercenary and ambassador; died before 1201. Guercio entered Byz. military service and fought for John II against the prince of Antioch, probably in 1142–43. Subsequently, he served Manuel I. Fighting Roger II of Sicily (1147–49), he was taken prisoner. He was released, possibly by William I of Sicily in 1158. Guercio became a trustor of the empire and received a house and property that Genoese sources describe as a feudum (“fief”; A. Sanguinetti, G. Bertolotto, Atti della Società ligure di storia patria 28 [1896–98] 471). In Genoa he pursued a distinguished career, while maintaining ties with Byz. In 1179 he escorted Agnes of France to Constantinople. In 1188 Isaac II wrote Guercio about the approaching Third Crusade and recent negotiations with Genoa (ibid. 406f). Following the depredations of the Genoese Guglielmo Grasso, Guercio in 1193 successfully served as an envoy conveying the excuses of his fellow citizens (ibid. 456–59). Because of the piracies of the Genoese Gafforio (1197), Guercio’s feudum was confiscated by the emperor. In May 1201 the Genoese envoy was directed to seek its restitution for Guercio and his heirs.

GUIBERT OF NOGENT, abbot of Nogent (from 1104). Latin theologian and historian; born between ca.1053 and 1064, died ca.1124. Guibert’s works include a critique of relic cults (On the Saints
and the Relics of Saints, ca. 1119) and an Autobiography (De vita sua, ed. E.R. Labande (Paris 1981)). His History or God's Deeds Through the Franks of ca. 1108, an account of the First Crusade (1095–1104), draws on the Gesta Francorum and Fulcher of Chartres supplemented by oral sources. In its eight books of prose and verse (E. Burstein, CahCM 21 [1978] 247–63), Guibert's obsessions triumph over critical acumen where Byz. is concerned. He discusses John the Baptist's reliefs at Constantinople (Historia—bk.1, ch.5; cf. PL 156:624CD), paraphrases part of the controverted letter of Emp. Alexios I to Robert of Flanders (Reg 2, no.1152), and criticizes Alexios ("that most filthy tyrant") as a usurper who vaunted the beauty of Byz. women to lure the French to Byz. Guibert calls Anna Dalassene a witch and claims Alexios's taxation required every Byz. family to prostitute one daughter and castrate one son, whence the shortage of virile Byz. soldiers (bk.1, ch.5). Books 2–3 describe the beginnings of the Crusade from Clermont through the crossing of the Byz. Empire, while the remainder refer frequently to Alexios's relations with the Crusaders.

ED. RHC Oecid. 4 (1879) 117–263, including anony. continuation to 1112, pp. 261–93.

GUILDS (σωστήματα, also somateia); organizations of craftsmen and merchants devoted to promoting the economic interests of their members. The late Roman state created various state workshops, fabricae, to satisfy the needs of the army, bureaucracy, and court, and imposed certain requirements on free collegia, or guilds. The degree of state requirements could differ with regard to different guilds: those collegia that dealt with the supply of Rome, Constantinople, and other major cities (bakers [pistoria], naviculares, swimmongers, etc.) were subject to greater government control than guilds involved in more "private" activity. The state tried to implant the principle of hereditary professions, but there are serious doubts that it managed to achieve this aim—at least, Egyptian papyri contradict the principle (Fikman, Egipt 64–68). Membership in the guild of bakers or swimmongers was considered an obstacle to social advancement. Compulsory association with a profession and restriction to a place of origin is attested even by papyri. At the same time, the members of guilds possessed various economic privileges and often exercised political pressure. The direction of the development of the late Roman guild system is under dispute: F. de Robertis (Orpheus 2 [1955] 45–54) rejected the traditional view concerning the continual strengthening of the compulsory guild in the late Roman Empire and surmised that coercion reached its peak under Theodosios II but ended by the reign of Justinian I.

The 10th-C. guilds as reflected in the Book of the Eparch were privileged corporations protected from the competition of both landowners involved in trade activity and artisans and/or merchants who were not guild members. Admission to the guild was sought by those for whom membership was not compulsory and expulsion from a guild was done as a punishment. Under the leadership of elders, guilds regulated—albeit under the supreme surveillance of the state—the quality and volume of production, prices of goods and salary of the misthioi, and acquisition of wares from outside merchants. Direct services to the state existed but were insignificant. Guilds of 10th-C. Constantinople resembled Western medieval corporations (of the Parisian type) more than the compulsory collegia of the 4th C.

Corporate organizations existed in the 11th C. (Kazhdan-Epstein, Change 51f), but the system seemed to become less rigid in the 12th C.: Nicholas of Methone (A. Demetrakopoulos, Bibliotheca ecclesiastica [Leipzig 1866] 279.12–14) emphasized that the Byz. did not dictate the choice of living place or trade to people possessing the necessary skill; an ordinance of Manuel I (Reg 2, no.1384) permitted the sale of a money changer's shop freely to any "worthy" person. Documents of the 14th–15th C. mention the elders of various corporations (notaries, butchers, makers of perfume) in Constantinople. As for the protomaishores of construction workers in Constantinople and Thessalonike, they were most likely, not the elders of guilds but leaders of teams of builders.

GUILOCHE. See INTERLACE.

GÜLLÜ DERE, valley in Cappadocia near ÇAVUŞIN. Among the ROCK-CUT CHURCHES found in this valley two are noteworthy. Gülülü Dere III, a rectangular church with a single large apse, is often said to have been carved before the 8th C. because of the three large crosses in low relief on its ceiling. The apse is decorated with an elaborate MAJESTAS DOMINI ascribed to stylistic grounds to the 9th or early 10th C. Gülülü Dere IV, also known as Ayvalı Kilise or the Church of St. John, is a small, double-worked complex with an elaborate fresco program. A donor's inscription mentioning the emperor Constantine should probably be dated to the sole reign of Constantine VII between 913 and 920; the name of the monument's principal patron has been obliterated. In addition to a rich Christological cycle, the LAMB OF GOD and a number of Old Testament scenes are depicted. Gülülü Dere IV, the Old Church of Tokatlı Kilise (see GÖREME), and the Church of the Holy Apostles at Sinassos appear to have been decorated by the same atelier (Thierry, Bull-SocAntFr 1971 170–78).

GUNTER OF PAIRS, Latin poet, historian, and theologian; born ca.1150, died after 1208 or 1210. Gunther’s epics show links with the court of Frederick I: the fragmentary Crusader poem Solymarius (ed. W. Wattenbach, Archives de l’Orient Latin 1 [1881] 555–61) draws on Robert of St. Remy and is dedicated to Prince Conrad (died 1196); Ligurinus (ca.1186/7; ed. PL 212:327–476), based on Otto of Freising, celebrates Frederick’s exploits in Italy. Circa 1204 Gunther became a Cistercian monk at Pairs (Alsace), where he composed (25 June 1205–ca.June 1208) the Historia Constantinopolitanæ, a polished account of the Fourth Crusade that mixes prose and verse but is marred by tendentious omissions, such as the transport contract with Venice (ch.6, p.71) and the restoration of Isaac II Angelos (ch.12, p.88). He minimized the bloodshed during the capture of the Byz. capital and stated that Constantinople’s sack merely avenged Greek treatment of the Franks’ putative Trojan ancestors (ch.18, pp.102f); he also exaggerates (e.g., the power of the Byz. fleet; ch.17, p.98), particularly the role played by Martin, his abbot and informant (cf. Longnon, Companions 249f). Gunther seems fundamentally hostile to the Byz., whom he calls “the dregs of the dregs,” (ch.10, p.84), and focuses on Martin’s theft of relics from the burial church of Irene, wife of John II Komnenos (ch.19, pp.105f) and their translation to Paris. Gunther may have written in part to defend Martin from charges levied by his order in 1206. Martin’s booty included relics of Christ, Sts. John and James, etc. (ch.24, pp.120–22) and a Crucifixion icon from the imperial insignia (ch.25, p.125).

GYNAIKEION (γυναίκειον, gynaecemion), in classical Greek, a part of the house reserved for the women; in the late Roman Empire, a type of imperial textile FACTORY. ISIDORE OF SEVILLE (Etymol. 15.6.3) explains the word as “a gathering of women [Greek gynè means “woman”] working with wool.” The gynaecii of these workshops were men, however, not women (R.S. Lopez, Speculum 20 [1945] 6, n.3), and an edict of 365 (Cod. Just. XI 8.3) regulates the status of a free woman who married a gynaecarius. The Notitia dignitatum mentions procuratores gynaeci in Gallia as well as in the East (in the latter case without any precise localization). Constantine I’s edict of 333 (Cod. Just. XI 8.2) refers to gynaecia and dyers’ workshops. Eusebios of Caesarea (Eusebios, VC 2.34.1) considers workers in gynaieia and linen workshops the slaves of the treasury. Sozomenos (Sozom. HE 1.8.3) includes gynaieia among places such as mines and linen workshops to which people were sent to do forced labor. The use of the term in papyri is unclear (Fikhman, Egitet 37, n.218).

In later centuries the word apparently disappeared and its meaning was forgotten. In the title of Basil. 54.16 the Latin term procuratores gynaeci
was rendered in Greek as "prokouratoreis of women," while in paragraph 9 of the same chapter the legislator introduced a reference to "the woman assigned to a gynaikerion" who was seduced or corrupted—whereas no woman had been mentioned in the original law of 385 (Cod. Just. XI 8.9).

**GYPSIES** (Αἰγύπτιοι, mod. Gk. Γόβτοι, i.e., Egyptians), from 1300 onward also called Katsibelois, "wanderers" (cf. Russ. kočevnik, "nomad"—R. Volk, BZ 79 (1986) 1–16). In Greek and Georgian sources from the 11th–12th C. onward gypsies were called Athinganoi-Adsincani even though they had nothing in common with the 8th-C. ATHINGANOI. According to a Georgian legend, the Adsincani were invited by Constantine IX to destroy ferocious beasts that were devouring the game in an imperial hunting preserve. Balsamon describes the Athinganoi as magicians, snake charmers, and fortunetellers; the same characterization was given to them by later authors such as Patr. Athanasios I and Joseph Bryennios. They wandered in Crete (1232) as vagabonds, according to the Irish monk Symon Semeonis; in Corfu (1373) as refugees from Epiros; and in Nauplia (ca. 1400) as an organized Feudum Acinganorum whose gypsy leader John had the title drungarius Acinganorum. Mazaris satirized Aegyptioi as arrogant, beggars, liars, thieves, and practitioners of black magic. They were also siege makers and blacksmiths. Numerous ruins in Greece are still popularly called (from the 14th C.) Gyphtokastra.

—S.B.B., A.K.
HADES, ancient ruler of the underworld and brother to Zeus and Poseidon. In Byz. literature Hades connotes both (1) the underworld, as an equivalent to Christian Hell, as well as more generally, in secular texts, the place where all the dead are, at least initially, congregated; and (2) the personification of Death as a symbol for the tyranny of human mortality. In hymns and homilies from the 4th–6th C. onward Hades (alongside Thanatos, or Death) is portrayed with ravenous jaws and an insatiable belly (cf. Andrew of Crete, PG 97:1048A), swallowing old and young alike, an elaboration of an idea found in the Old Testament (Is 5:14, Pr 27:20). In the Resurrection hymns of Romanos the Melode (Hymnes, ed. J. Grosdidier de Matons [Paris 1967] 4:444, 462, 466, 476–80), Christ’s redemption of Adam involves a physical combat with Hades, followed by humorous squabbling, as in Ephrem the Syrian. References in 12th-C. secular literature are frequent, but mainly unspecific, suggesting the gradual replacement of Hades as personification/agent by Hades as place. The ferryman Charon becomes a more concrete personification of death.

In art Hades is usually depicted in the guise of a venerable pagan god; though often dark-skinned, he is not caricatured. In scenes of the Last Judgment he sits in Hell, with a condemned soul on his knee as the antithesis of Abraham in paradise. He lies pierced in the stomach by the cross (on an ivory of the Crucifixion surely influenced by the hymns of Romanos the Melode, see M. Frazer, MM/9 [1974] 153–61), or fettered like a defeated barbarian king in the dark pit of Hell, or trampled by the triumphant Christ in scenes of the Anastasis.

HADRIAN I, pope (1 Feb. 772–25 Dec. 795). Upon his election to the papacy Hadrian imme-

891
HADRIAN II, pope (from 14 Dec. 867); born Rome 792, died Rome Nov. or Dec. 872. Born to a noble family, Hadrian married before ordination. His election was a compromise between supporters and opponents of the policy of Nicholas I. Since Rome was under the protection of the Frankish ruler Louis II, Hadrian’s pontificate experienced no serious internal crisis, and his disagreement with Anastasius Bibliothecarius was temporary. Although Hadrian had inherited from Nicholas a conflict with Byz., the Arab threat in southern Italy required an alliance involving Louis II, the pope, and the new Byz. emperor Basil I. Patr. Photios became the first victim of their concord, and at the council at Constantinople in 869/70 the papacy’s position toward Photios was upheld. Hadrian supported new Slavic churches in Bulgaria and Moravia, however, against Byz., thus creating grounds for a new confrontation. In 870 Bulgaria recognized papal jurisdiction and was rewarded with the creation of an archbishopric. After the death of Constantine the Philosopher in Rome, Hadrian ordained Methodios archbishop of Pannonia and Moravia, hoping to include this territory in the Roman sphere of influence. Byz. reacted only after Hadrian’s demise: in the 870s Basil I pursued an active policy in the northern Balkans, and the council at Constantinople (879–80), although in an obscure form, retained Byz. claims to ecclesiastical jurisdiction over Bulgaria.

HAGIA SOPHIA (Ἁγία Σοφία, lit. “Holy Wisdom”), name of numerous churches in the Byz. Empire and neighboring countries. Two of the most important were the cathedral church of Constantinople and that of Thessalonike. Others were to be found, for example, in Monemvasia and Ohrid as well as at Kiev.

HAGIA SOPHIA IN CONSTANTINOPLE. The first church on the site, of basilical form, was built near the Milion (see Mese), that is, in the neighborhood of the Great Palace and Hippodrome, by Constantius II (not Constantine as often stated) and inaugurated in 360. It was known as the Great Church (Megale Ekklesia)—the name Hagia Sophia is first attested ca.430—and had the episcopal palace attached to its south side. Burned down by the supporters of John Chrysostom in 404, it was rebuilt, once again as a basilica, by Theodosius II and completed in 415. The only extant part of the Theodosian basilica is a colonnaded porch, probably the façade of the atrium rather than of the church itself (A.M. Schneider, Die Gräbungen im Westhof der Sophienkirche zu Istanbul [Berlin 1941]).

The second Hagia Sophia was destroyed by fire during the Nika Revolt against Justinian I (Jan. 532). Rebuilding was started immediately, under the direction of the architects Anthemios of Tralles and Isidore of Miletos, and the new cathedral was inaugurated on 27 Dec. 537. An
drew his support; Emp. Manuel I Komnenos dispatched an army to aid the rebels. It is still not known whether Hadrian concluded a formal alliance with Byz. William of Tyre presents the pope as the soul of the rebellion, while Kinnamos asserts that Hadrian offered cooperation. The rebellion was a failure, and in 1153 Hadrian signed a treaty with William I in Benevento, followed in 1157 by a Byz.-Norman agreement. The growing tensions with Frederick, however, pushed Hadrian toward Constantinople; the pope’s correspondence with Basil of Ohrid reveals that both parties viewed rapprochement as possible.

HADRIAN IV (Nicholas Breakspear), pope (from 4 Dec. 1154); born Abbot’s Langley, England, between 1110 and 1120, died Anagni 1 Sept. 1159. Hadrian was confronted with the plans of Frederick I to subdue Italy and the growth of Norman power in the south. In the spring of 1155 the barons of Apulia revolted against William I of Sicily, and Frederick unexpectedly with-

—A.K. M.McC.
account of the construction and the technical difficulties that had to be overcome is given by Prokopios (Buildings 1.1.21–78). In large part, Justinian's church is still standing. It is a domed basilica, that is, a combination of longitudinal and centralized planning, nearly square (78 × 72 m excluding the two narthexes), its nave covered by a dome 100 Byz. feet (31 m) in diameter and two semidomes, but at the same time clearly separated by rows of columns into three aisles, with galleries over the lateral aisles and narthex. The original dome collapsed in 558 and was rebuilt by Isidore the Younger some 7 m higher than the first one. The church, rededicated on 24 Dec. 562, was the subject of a descriptive poem by Paul Silentiarios.

The architectural conception of Anthemios and Isidore differed in some respects from the present form of the building. The dome, which may have continued the curvature of the pendentives, produced a more overwhelming impression from inside than the current steeper dome. The north and south tympanums appear to have been pierced by large windows, thus affording a more brilliant illumination. The exterior was unencumbered by buttresses. The liturgical fixtures are known in their post-562 form. They included a gold altar table surmounted by a ciborium; a projecting chancel screen of 12 columns; and, joined to the latter by an enclosed passage (solea), a lofty ambo. Most of these features as well as the top row of seats of the synthronon in the apse were sheathed in silver revetments.

The church was surrounded by subsidiary structures. To the west lay a colonnaded atrium with a fountain at its center; to the north the larger of two baptisteries (the smaller, still extant, being at the southwest) and, at the northeast corner, a circular sacristy (skenophylakion); the south side was flanked by the patriarchal palace (built 595–77), a multistory building whose main apartments communicated with the south gallery of the church. The rooms situated at the south end of the west gallery, which preserve remnants of mosaic decoration, served as offices (sekreta) attached to the patriarchal complex (R. Cormack, E.J.W. Hawkins, DOP 31 [1977] 175–251). At the southeast corner of the church a raised passage connected Hagia Sophia to the Great Palace.

Hagia Sophia was naturally the liturgical center of the capital. Administratively it was joined to three other nearby churches, namely St. Irene, the Theotokos of the Chalkoprateia, and St. Theodore of Sphorakios; all four churches were served by the same clergy, whose establishment was limited by Justinian to 425, but which increased to 525 in the next century. Hagia Sophia also played an essential part in imperial ceremonial and had two rooms (metatoria) reserved for the emperor's use. The itinerary of imperial processions in and out of Hagia Sophia is minutely described in the De ceremoniis.

The most important structural alterations of the church during the Byz. period were the following. Repairs after the earthquake of 869 may have included the rebuilding of the tympanums in their present form (R.J. Mainstone, DOP 23–24 [1969–70] 353–68). In 989 the main west arch collapsed together with the west semidome and a portion of the dome; they were rebuilt by the Armenian architect Trdat. In 1317 massive exterior buttresses were added on the north and east sides of the building. In 1346 the east arch collapsed, bringing down the east semidome and one-third of the dome and destroying the ambo under-
neath; the damage was repaired by 1353 with the restricted means that were then available.

The marble and opus sectile decoration of the vertical surface of the walls is relatively well preserved. The mosaic decoration of Justinian’s church appears to have been largely nonfigural and much of it still survives in the vaulting of the narthex, side aisles, etc. The summit of the dome was occupied by a huge cross in a medallion. After Iconoclasm a program of figural mosaics was undertaken and part of it is preserved: an enthroned Virgin in the apse (C. Mango, E.J.W. Hawkins, *DOP* 19 [1965] 113–52), two archangels in the bema arch, prophets and church fathers in the tympana (Eidem, *DOP* 26 [1972] 1–41). Narrative scenes are known to have existed in the gallery vaults (Baptism, Pentecost, Isaiah’s vision). Other preserved mosaics may be regarded as individual insets. They include a 10th-C. panel of the Virgin and Child flanked by Constantine I and Justinian I in the southwest vestibule; the enthroned Christ with a prostrate emperor (Basil I or Leo VI) at his feet in the lunette above the “Imperial Door”; the imperial portraits (Alexander—P.A. Underwood, E.J.W. Hawkins, *DOP* 15 [1961] 189–217, Constantine IX with Zoe, John II Komnenos with Irene) and the Deesis (late 13th C.) in the gallery. The Pantokrator in the main dome (which was restored in 1355) has disappeared. In 1989 the mosaics on the eastern arch, comprising the figures of John V Palaiologos, the Virgin Mary, and John the Baptist, as well as a Hetoimasia (cf. Mango, *infra* 66–67) came to light.

In 1453 Hagia Sophia was converted into a mosque (Aya Sofya Camii). Apart from the addition of four minarets, it underwent several re-
pairs, the most important in 1573 and the following years, then in 1847–49, the latter carried out by the Swiss architects Gaspare and Giuseppe Fossati.

—C.M.

HAGIA SOPHIA IN THESSALONIKE. The present building, located in the southeastern part of the city, was constructed over the remains of a large five-aisled basilica, incorporating, however, only the central portion of the latter. It is a cross- 
domed building with thick walls, narthex, well-
defined aisles, heavy central piers, and galleries. The building does not fit easily into the history of Byz. architecture and has been variously assigned to the 6th through the 8th C.

Mosaic decoration of the interior can be assigned to several phases. Monographs of Constantine VI and Irene provide a date of 780–97 for the original mosaic decoration of the sanctuary, which included a huge cross in the apse (behind later figural decoration). In the dome is a mosaic of the Ascension, the oldest representation from any dome; the apostles stand on a multicolored rolling groundline, set off from each other by trees. An inscription in the dome states that the work was done under Archbp. Paul in November of the 4th indiction, but the precise year is not given; if Paul is to be identified with a correspondent of Photios, the composition should be assigned to the 880s. In the half-dome of the apse is the Virgin and Child, either contemporary with the mosaic in the dome, or perhaps as late as the 11th C. (Cormack, infra 134). In the narthex are frescoes of the 11th C. (D. Mouriki, DOP 34 [1982] 93 and fig. 26).

The church was the city’s cathedral from 1205 (under Latin occupation), but it may have held this honor at an earlier date. Gregory Palamas was buried in the church in 1359.

HAGIOCHRISTOPHORITES, STEPHEN, politician of lowly origin; died Constantinople 11 Sept. 1185. The son of a tax collector, Hagiochristophorites (Ἀγιοχριστοφόριτς, “bearer of the holy Christ”) lost his nose as punishment for his attempt to marry a noblewoman. The staunchest supporter of Andronikos I, he acquired great influence during Andronikos’s purges; he was labeled Antichristophorites by his adversaries. Andronikos rewarded him with the title of sebastos and the office of a logothetes. Hagiochristophorites helped organize the murder of Alexios II and many trials of aristocrats. He was killed by Isaac (II) Angelos, the future emperor, when he went to Isaac’s house to arrest him.

LIT. Brand, Byzantium 606, 61f. —A.K.

HAGIOGRAPHICAL ILLUSTRATION. The primary focus of Byz. hagiographical (see Hagiography) illustration was portraiture: the particular deeds of individual saints played a comparatively minor role in all but the very earliest period.

The first works of this genre are scenes relating to the death of certain martyrs, located at their martyrium. Though for most of these monuments only written descriptions survive (see Asterios of Amaseia on paintings at the martyrium of Euphemia of Chalcidon), it is clear that the scenes of martyrdom were often expanded into small “Passion” cycles comprising a routine sequence of episodes: arrest, trial, torture, and execution. These sets of images were more closely attached to a particular place than to a specific text.

Funerary portraits, usually orans figures, were set up at the tomb of the saint. These might be copied on liturgical objects (cf. the ivory Menas pyxis), on pilgrim tokens and ampullae, or even on votive panels erected elsewhere in the same sanctuary (e.g., those in St. Demetrios at Thessalonike). A few portable panels painted with portraits of saints have survived from the late 6th to 7th C., primarily at Sinai (Weitzmann, Sinai Icons, nos. B5, 9, 11); their widespread use is attested in written sources, however, as is the assumption that such icons were capable of acting with many of the miraculous powers available to the saint during his lifetime (Kitzinger, Art of Byz. 91–158; R. Cormack, Writing in Gold [New York 1985] 17–94).
Venerated first at tombs in far-flung quarters of the empire, the relics of a great number of these saints were eventually translated to Constantinople and the cults absorbed by the capital. With the establishment of the calendar for the church of Constantinople (see Synaxarion of Constantinople), each saint found his particular place in the celebrations of the liturgical year and, at the same time, began to assume a specific physiognomy. A few saints (such as Peter and Paul) had already acquired fixed features before Iconoclasm, but the arguments raised during that period concerning the identity of an image with its prototype led over the course of the 9th through 11th C. to a growing emphasis on consistency and on the clear definition of the physical features of dozens of other saints as well.

A Byz. hagiographical portrait presents each saint in one of the three ages of man: the beardless youth, the dark-bearded mature man, or the white-haired elder. His features are then further defined by his particular hairstyle and the shape of his beard. Of equal importance is the saint’s costume, which indicates his profession, his rank in the secular or ecclesiastical hierarchy, and even his ethnic origin. Whether the saint is depicted on a large wall mosaic or inside a painted initial, his features and dress, esp. in the 11th C., are so precisely rendered as to be immediately recognizable. Only women are not so clearly distinguished one from another, partly because they usually appear veiled, so that there is no way of indicating the important differences in hairstyle (exceptions are princesses such as Helena and Catherine of Alexandria and the hermit Mary of Egypt). St. Peter carries his keys, the Anargyroi their medical implements, but attributes referring to specific events in a saint’s life were never a common feature of Byz. hagiographical portraiture.

The portrait type, often confirmed by literary tradition (e.g., Oulpios the Roman), generally claimed to reproduce an image of the saint painted while he was still alive. Once visual types were fixed they could be easily transmitted, even by means of written descriptions as succinct as those found in the later painter’s manuals (Dionysius of Founa, Hermeneia tes zographikes techne, ed. A. Papadopoulos-Kerameus [St. Petersburg 1909] 150–70).

The innumerable saintly figures adorning Byz. churches are arranged in groups according to their professional category, following a generally accepted hierarchy in church programs or, more rarely, according to the date of their liturgical celebration. The precise situation and composition of each group was, however, constantly adjusted to suit the specific architectural design and purpose of the church it adorned.

Narrative, such as there was, reemerged very slowly. The portraits of certain saints are regularly accompanied by specific narrative elements (the Miracle at Chonai, Eustathios and the stag, the two Symeon the Stylites on their columns, and the Forty Martyrs of Sebasteia in the freezing lake). These images, found already in the 9th and 10th C., probably go back to lost Constantinopolitan originals, but they are essentially “expanded” portraits, rather than distilled narrative. Calendar cycles, best represented by the so-called Menologion of Basil II, consist primarily of scenes of torture and execution, with each saint receiving exactly the same amount of space, regardless of his general importance or the complexity of his career.

Narrative cycles devoted to a single saint rarely, in fact, appear in MS format, with the exception of a few brief sequences in early MSS of the Homilies of Gregory of Nazianzos and the marginal Psalters. Even the most important Byz. hagiographical collection of all, the ten-volume menologion of Symeon Metaphrastes, was rarely accompanied by any illustration other than portraits.

True biographical cycles are found primarily in icon and monumental painting. A few scenes from the lives of saints Basil the Great, George, and Symeon Stylites the Elder appear in the 9th- and 10th-C. churches of Cappadocia. But comprehensive narrative sequences beginning with the birth and ending with the death of the saint occur first in fresco in the 12th C. and on the so-called vita icons of the early 13th C. Scarcely more than a dozen of these icons survive, most from Sinai and Cyprus; they present the bust or full-length figure of a saint surrounded, usually on all four sides, by a series of 6, 12, or even 16 compartments containing narrative episodes from his life. The form of these vita icons may derive from the practice, esp. popular in the 12th C., of surrounding painted icons with costly metal frames (N. Ševčenko, 14 BSC Abstracts [1988] 321). The fresco cycles have no fixed place in the church but are most commonly found in secondary areas such as...
the nartiex of the pastophoria, often in connection with donor tombs. The number of different saints whose vitae were illustrated in either medium was rather limited: before the 14th C., cycles of saints Nicholas of Myra and George vastly outnumber all others. Miracle cycles are rare, with the exception of that of Eustathios on Sinai (see Five Martyrs of Sebastia).

The formal connection of these narrative cycles with the structure of vita texts suggests that, though their iconography cannot have derived from illustrated MS models (which apparently never existed in large numbers), they may nonetheless have been a response to the prescribed reading of the Metaphrastian Lives at the orthros service in monastic communities, a practice that can be documented from at least the 12th C. (Ehrhard, Überlieferung 2:314–18). Though neither the monumental nor the icon cycles strictly follow the Metaphrastian or any other specific text, either with regard to the general choice of scenes or the details of any episode, they do have their own visual conventions comparable to the topos of the hagiographers (H. Maguire, ArtB 70 [1988] 98–99), such as the conscious borrowing of a familiar biblical composition to illustrate an event in the life of the saint.

No new genres of hagiographical illustration were introduced after the 12th C., though the number of cycles and variety of saints involved increased. In portraiture, there was a gradual loss of physiognomonic precision but a gain in psychological range. The vita cycles, esp. the frescoes, absorbed contemporary Palaiologan innovations in biblical iconography, showing an increased reliance on drama and multifigured compositions. The growing programmatic thrust—whether political, eremitical, episcopal, etc.—of church decoration in this period also frequently affected the content of the hagiographical cycles (e.g., Th. Gouna-Peterson, ArtB 58 [1976] 168–82; S. Tomkević in Miletija u istoriji srpsko naroda [Belgrade 1987] 51–65). Resonances established between biblical and hagiographical cycles grew even more sophisticated as church decoration became more and more elaborate and various otherwise unrelated cycles had to be unrolled on a single wall (Maguire, supra 94–98).

Hagiography, modern term for a genre of Byz. literature whose aims were the veneration of the saint and the creation of an ideal of Christian behavior as well as documentation and entertainment. As a portrayal of historical personages, hagiography overlaps with historiography, conveying historical information, using chronicles as sources, and, in turn, serving as a source for chronicles; as an edifying genre, hagiography may bear resemblance to the sermon. Three major types of hagiography already existed in the early centuries of the empire: martyrion, the account of a martyr’s trial and execution; vita, a saint’s biography; and Apophthegmata Patrum, a collection of wise sayings of hermits. Probably by the 7th C. the description of posthumous miracles was established as a separate type.

Hagiography provides a variety of information to the Byzantinist (F. Halkin, 13 CEB, Main Papers XI [Oxford 1966] 1–10). First of all, saints’ lives convey data concerning their heroes and the monasteries and/or cities where they lived. Second, since a number of saints played important political roles, their biographies contain data, sometimes unique, about momentous events, although the reliability of the evidence may vary from one vita to the next. Some vitae are biased, others indifferent to reality and so concerned with their edifying or propagandizing purpose that chronology is distorted, events invented, suppressed, or transferred from other vitae. More dependable are hagiographic data on everyday life. The style of hagiographical works ranged from highly elevated to simple, inclining toward the vernacular. Sometimes they are full of vivid details, and adventures of heroes are woven into a romance with such elements as travel, shipwreck, concealment, and pursuit. The account of miracles, including posthumous ones, is a typical element of hagiography.

Early hagiography (4th–7th C.) tried to reject the ancient values of urban civilization: the holy man was liberated from his obligations toward society and authority and submitted exclusively to God, for whose sake he was ready to endure poverty, suffering, and tortures; accordingly, the
DESSERT was chosen as the most typical setting for the saint's exploits (ANTONY THE GREAT). When the saint entered the city gates, it was to reject the traditional norms of behavior (SYMON OF EMESA). Family ties were renounced (ALEXIOS HOMO DEI), and the saint was closer to wild beasts than to his relatives. A shameful past, such as prostitution, was not an obstacle to holiness; neither were illiteracy, ugliness, or poverty. Early hagiography emphasized the collective nature of the body of saints: many martyrs met execution in groups, and the wise "fathers" of the *apophthegmata* were a faceless throng, who can hardly be distinguished as individuals. On the other hand, the individuality of the hagiographer was maintained, and the most famous hagiographers of the period (ATHANASIUS OF ALEXANDRIA, JOHN MOSCHOS, LEONTIOS OF NEAPOLIS, SOPHRONIOS OF JERUSALEM) are well-known personalities. The main centers of hagiographic production were the cities and monasteries of Egypt, Palestine, and Syria.

With the general decline of literary activity from the late 7th and through almost the entire 8th C., hagiography diminished; it regenerated slightly before 800, first in the eastern provinces, and flourished from the 9th to 11th C. The passionate denial of ancient ideals that was typical of earlier saints' lives lessened: the daring hermit gave way to the efficient builder of the monastic community (ATHANASIUS OF ATHOS, LAZAROS OF MT. GALESIOS), the wild holy fool made his way into the establishment (BASIL THE YOUNGER), prostitutes and women in disguise were replaced by the ideal matron (MARY THE YOUNGER). The sanctity of family ties was assumed as a virtue, although not consistently (A. Kazhdan, *Byzantium* 54 [1984] 188–92). The saint's political role was highly esteemed, his connections with Constantinopolitan functionaries carefully stressed: some vitae (EUTHYMIOS, patriarch of Constantinople) avoid the miraculous elements, except for the saint's foresight, and emphasize the saint's role in political and ecclesiastical struggles; the Life of IGNATIOS, patriarch of Constantinople, is a purely political pamphlet against Photios. The collectivity of martyrs begins to disappear; it is significant that the story of the FORTY-TWO MARTYRS OF AMORION was produced in several versions, some of which acquired individual heroes. We know little about individual hagiographers of this period, although some of them (Niketas, author of the Life of Philaretos the Merciful, and esp. Gregory, hagiographer of Basil the Younger) provide some personal information. IGNATIOS THE DEACON was probably the only professional hagiographer of the period. On the other hand, the collection and editing of old vitae attracted distinguished writers, such as NIKETAS DAVID PAPHLAGON and esp. SYMON ETAPHTRES.

The Life of Lazaros of Galesios is the last great piece of 11th-C. hagiography. In the 12th C., intellectuals became critical of the image of the holy man: hagiographical production was scanty (P. Magdalino in *Byz. Saint* 52–54), and EUSTATHIOS OF TESSALONIKE composed a spectacular "anti-vita" of PHILOTHEOS OF OPSIKION. At the same time some evidence of popular hagiography is preserved: the Life of Paraskeve was reportedly burned by order of the patriarch because of its vernacular character, and the miracles of ST. GEORGE, some of which should be dated in the 12th C., conjure up an image of the saint as a clever fellow, ready to bargain and conscious of his profit. The authors of "popular" vitae plunged into anonymity, whereas we have the names of some professional writers, such as PRODROMOS and TZETZES, who tried their skill at saints' lives, although their hagiographical essays are not their best work. The interest in AUTOBIOGRAPHY as a redeveloping genre, as well as the propagation of the military ideal, contributed to the decline of hagiography: Psellos attempted to rewrite the Life of AUXENTIOS, permeating his work with autobiographical elements; BLEMMYDES wrote his own biography—he did not expect his disciples to eulogize his virtues.

Some hagiographers of the Palaiologan period (GREGORY II OF CYPRUS, Constantine AKROPOLITES, Theodora RAOULINA) preferred the laudation of saints from earlier periods, while others concentrated on the lives of contemporaries. Some vitae took the form of biographies of politicians (Emp. JOHN III VATATZES, patriarchs ARSENIOS AUTOKEFALOS, JOSEPH I, ATHANASIUS I, ISIDORE I BOUCHERAS) and theologians, such as PALAMAS. Their anti-Palaiologan resistance or principles of church independence are the predominant reasons for the recognition of their saintship (R. Macrides in *Byz. Saint* 68). Other writers emphasized the ascetic life of the hermit (NIPHON, ROMYLOS, MAXIMOS KASOKALBITES).

The Bollandists laid the foundations of the study
of hagiography (H. Delehaye, L’oeuvre des Bollandistes à travers trois siècles (1615–1915) [Brussels 1959]). In the 19th C. a critical approach toward hagiography developed: H. Usener (Kleine Schriften, vol. 3 [Leipzig-Berlin 1914] 74–104) attacked Christian legend from two points—as historical fraud and for the alleged construing of the image of the saint in terms of ancient mythology. Delehaye limited Usener’s hypercriticism and tried to distinguish trustworthy and legendary texts. The Munich school (Ehrhard) and later Bollandists (Halkin) concentrated on collection and classification of hagiographical works, and vitae were broadly used as sources for historical information (Rudakov, Magoulas), but only recently has the tendency developed to use saints’ lives as documents for ideology and social psychology (Brown, Patlagean, Magdalino). In this case the old problem of reliability loses its significance: regardless of its legendary nature, hagiography is an important means of understanding how the Byz. perceived their world.

HAGIOTHEODORITES (Ἀγιοθεόδωριτης), a family of Byz. civil and ecclesiastical functionaries attested from the first half of the 12th C. The first known were Constantine, lawyer, philosopher, and rhetorician at John II’s court, and Nicholas, protos of a monastery (named on a seal). They became esp. influential under Manuel I: John was his favorite but fell from imperial favor; later three brothers played important roles—the logothetes tou dromou Michael (from 1158), the eparch of Constantinople John (ca.1160); and Nicholas, metropolitan of Athens in the 1160s and 70s. Konstas Hagioteodorites served as logothetes ca.1258 and then as Theodore II’s private secretary.

HAIMOS, MOUNT. See BALKANS.

HAIR (κόμη). The Byz. church inherited from primitive Christianity a negative attitude toward hairstyling: “Flowing locks,” says St. Paul (1 Cor 11:14), “disgrace a man,” and the image of the unkempt John the Baptist was an embodiment of the rejection of haircuts. This attitude prevailed more or less unchanged to the last centuries of Byz. Despite this clear-cut ecclesiastical position, the tendency to care about hairstyles emerged time and again.

In the late Roman period, men were clean-shaven and generally wore their hair short; those who wore long hair in plaits or curled were regarded as effeminate. In the 6th C. the youth of the circus factions styled their hair in the “Hunnic” fashion: long at the nape and shaved at the front of the head. By the 10th C. men wore their hair longer, and even monks adopted longer hairstyles, to the dismay of the church. In the 12th C. moralists inveighed against excessive attention to hairstyling. On the other hand, both hair and beard were indicative of social status and deprivation of either was considered a punishment. Hair color was also significant; the term xantha ethne (“blond tribes”) designated the peoples of central and eastern Europe, in contrast to the dark-haired peoples of the Mediterranean.

The predominant hair fashion for women throughout the centuries was parted in the center and held in place with a comb or band. Combs made of bone are often found in archaeological excavations. Outside the house women were expected to cover their head with veils. Both men and women were admonished not to wear wigs or to dye their hair. (See also BARBER.)

HAIR ORNAMENT. Justinian’s Digest (34.2.25.10) classes as jewelry HEADEAR, such as "headdresses,
turbans and half-turbans, a head covering, a pearl hairpin that women are accustomed to possess, saffron-colored [hair] nets." Only traces of such hair ornaments survive, but three main types are depicted in Byz. art.

1. A jewelled band that is worn on the forehead at the hairline. Only the part from ear to ear can be seen; this part presumably continued around the back of the head, under the hair, as a band of fabric.

2. A circlet, often jeweled, worn around a chignon on the top of the head. A jeweled diadem, now in Baltimore (Jewelry: Ancient to Modern, ed. A. Garside [New York 1980], no.420), has been interpreted as this second type, or as part of a jeweled collar. It could also be part of a jeweled band.

3. An ornamented mesh or net, worn over the entire head, reaching to the forehead.

All three types seem to be contemporary and appear in the Theodora panel at S. Vitale, Ravenna.

HALABIYAH. See Zenobia.

HALMYROS ('Αλμυρός, name derived from the salt-flats in the area), commonly known as the "Two Halmyroi" because of its double fortified citadels, city in central Greece on the Pagasitic Gulf south of modern Volos. It is identified with modern Tsingeli and Kephaloia near ancient Halos. In late antiquity an agricultural settlement is attested at nearby Aidonion, with oil and wine presses (N. Nikonos, ArchDelt 26 [1971] Chronikon 312f). In the 12th C. Halmyros played an important role as an entrepôt for Venice, Genoa, and Pisa, succeeding Nea Anchialos and Demetrias as the primary port of Thessaly. The Venetians attacked Halmyros in 1171 as retaliation for the massacre in Constantinople, and in 1198 its ports were again opened to them. In 1204 it was first given to the deposed Alexios III as a place of retirement but soon fell into the hands of the Latins; by 1246 it was under the control of Michael II of Epiros and in 1249 it is attested as the center of a theme of the empire of Nicaea. Halmyros was attacked and occupied by the Catalan Grand Company between 1307 and 1310. The city had a significant Jewish community. The bishop of Halmyros was suffragan of Larissa.

Little remains of the two fortified acropolises or the Byz. town between them, although several churches, many of them belonging to the Italian communities, are attested in documents from the 12th C. onward. Some Byz. sculpture (N. Giannopoulos, BZ 25 [1925] 339-46), seals (Idem, BZ 17 [1908] 131-40; 18 [1909] 502-10), and inscriptions (Idem, BCH 14 [1890] 240-44; 15 [1891] 562-71; 23 [1899] 396-400) have been found. The so-called Alonissos ship, whose wreckage was discovered on the seabed just off the island of Pelagos, was perhaps involved in trade with Halmyros. It contained a large cargo of pottery of the 12th C. (Ch. Kritzas, Athens Annals of Archaeology 4 [1971] 176-82).

HALO. See Nimbus.

HAMĀH. See Epiphaneia.

HAMĀH TREASURES. See Kaper Koraon Treasure; Ma'arak al-Nu'mān Treasure.

HAMDĀNIDS, Muslim dynasty in Mosul and esp. at Aleppo, of Taghibite Arab origin (ca.868-1015/16). The independent emirate was established at Mosul between 930 and 934, and under Nāṣir al-Dawla extended power over most of upper Mesopotamia. Nāṣir was succeeded by his son Abū Taghib, who resisted Byz. attack in 972 but infuriated John Tzimiskes by capturing the domestikos Melias, who died in captivity. In 976 Abū Taghib supported the rebellion of Bardas Skleros. The Ḥamdānī dynasty at Aleppo began in 944 under Sayf al-Dawla. Many Ḥamdānīs left Aleppo because of the Byz. threat. The Ḥamdānīs were forced to maneuver between Fātimids, Buwayhids, and Byz. Sa'd al-Dawla, the son of Sayf al-Dawla, massacred many monks at Dayr Sen'īn, in response to the Byz. invasion of 985. The Byz. governor of Antioch, Michael Bourzikēs, helped the Ḥamdānīs against the Fātimids, but Ḥamdānī power declined after the Byz. treaty
with the Fatimids in 1001. A son of Sayf al-Dawla, Abu'l Hayâ'î, fled to Basil II and later probably converted to Christianity. Sa'd's minister Lu'lû and Sa'd himself prostrated themselves before Basil II in 955. Lu'lû's son Mansûr fled to Byz. in 1015/16 and received a castle for aiding Romanos III in northern Syria in 1030.

HAMILTON PSALTER. See Psalter.

HAND OF GOD. The image of a hand emanating from clouds or an arc of Heaven appears in both Christian and imperial art in the 4th C. Its Christian use surely derives from earlier Jewish art, where it is an image of God's voice or word, amplifying scriptural metaphors of God's hand as his power or protection. In imperial art, the hand displaces fully embodied deities and functions differently and more actively. In medallions of Constantine I the Great, for example, a hand reaches out to crown the emperor or draw him upward at his apotheosis. The gesturing hand of Jewish tradition continues in later Christian art to signify the voice or approbation of God, appearing in such New Testament compositions as the Baptism and Ascension as well as in numerous Old Testament scenes. Other 4th- through 6th-C. images, however, based on the imperial version, show the hand actually drawing Christ upward at his Ascension, or holding a crown over Christ, the Cross, the Virgin Mary, or a saint. This version vanishes in later Byz. art, where Christ himself confers crowns on rulers and performs concrete acts. Probably a distinct, later development is the huge hand holding souls in the LAST JUDGMENT (cf. Wisdom of Solomon 3:1), seen in late Byz. monuments (CHRORA).

The theme of "the king's heart in the hand of God" (Pr 21:1) that, for fathers of the church, had imposed limits on imperial authority, was reinterpreted in the Justinianic period to mean the all-embracing authority of the basileus (H. Hattener, ZSavKan 67 [1981] 1–21).

—A.W.C., A.C.

HAPLOUCHEIR, MICHAEL, member of the senate who eagerly supported Andronikos I in 1183; Eustathios of Thessalonike acrimoniously censured Haploucheir (Ἀπλούχειρ) for his dishonest behavior (Eust. Thess., Capture 44:19–20). He probably belonged to the same family of civilian nobility as Thomas Haplocheir, judge of the velum under Manuel I. Haplocheir has been identified, on good grounds, with the poet of the same name, who wrote a short iambic dramation presenting a debate between a rustic who praises Fortune and a wise man (sophos) who laments his miserable fate and is ready to renounce his fane and become a craftsman. The theme of a poor intellectual's envy of a well-to-do artisan is typical of 12th-C. writers such as John Tzetzes and Theodore Prodromos.

HARAWI, AL-, more fully Taqi al-Din Abû al-Hasan 'Ali al-Harawi, Arab author, ascetic, and traveler; born Mosul, died Aleppo 1215. He had a varied career as preacher in Baghdad and Aleppo and as envoy and confidant of the Ayyûbid sultans, including Saladin. In the course of his missions he traveled widely, to Palestine and Egypt, and in 1175 to Norman Sicily. He also visited Constantinople, where he met Emp. Manuel I Komnenos. His vivid descriptions of the Hippodrome and the statues of Constantinople are partly reproduced by Yakût, al-Qazwînî, and other encyclopedists. His three principal works are the Guide to the Places of Pilgrimage, Memoir on the Ruses of War, and Last Counsels of al-Harawi.

HARAVILLE TRIPTYCH. See Triptych.

HÂRITH, AL-. See Arethas.
HARMENOPOULOS, CONSTANTINE, 14th-C. jurist. Harmanopoulos (Ἀρμενόπουλος) signed a document of 1345 (Chil. 134) as sebastos and judge of Thessalonike; by 1349 he was also a nomophylax, after 1359 krites katholikos. He compiled a “corpus” of secular and canon law. Secular law is represented by the Hexabiblos (Six Books), also called the Procheirion nonon (Handbook of the Laws), of 1345. This compilation grew out of the Procheirion but adds excerpts from the Synopsis Basilicorum, the law book of Michael Attaleiates, the Synopsis minor, the Peira, and the work of Julian of Askalon. Harmanopoulos organized the legal material into a new system, which made it easier to use and thus enormously popular; it is transmitted in almost 70 MSS. In practice it served as a law code (in Greece into the 20th C.) and was adopted in several Slavic countries. Attached to the Hexabiblos as a regular component is the Farmer’s Law, presumably reorganized by Harmanopoulos (I. Medvedev in VizOč [Moscow 1982] 216–33).

Canon law is represented by the Epitome canonum of Harmanopoulos, which contains a selection of canons with commentaries (PG 150:45–168), a confession of faith (PG 150:29–32), and a treatise on heresies (19–29). Some shorter works of Harmanopoulos are also transmitted (lexika, an enkomion on St. Demetrius).

-HARNESSMAKER. See Lorotomos.

HAROLD HARDRADA (or more properly Hardradi, “Hard-Ruler”), king of Norway as Harold III (1046–66); born 1015, died Stamford Bridge, England, 29 Sept. 1066. In 1039 or 1031 Harold (’Arpaγgi) fled from Norway to Jaroslav of Kiev and reached Byz. probably in 1034 (J. Shepard. JÖB 22 [1973] 150). Harold and his Varangians participated in several Byz. military campaigns; in Sicily with Maniakes, in Bulgaria against Deljan, and probably against Muslims in the Aegean. The report in Norwegian sagas of his fight against Pechenegs—in 1036 according to K. Giggaar (BalkSt 21 [1980] 385–401)—and of his journey to Jerusalem is questionable. He was granted the title of spatharokandidatos. A supporter of Michael IV, Harold probably took part in the deposition and blinding of Michael V. Because Constantine IX changed the Byz. attitude toward the Rus’ and Varangians (G. Litavin, VizVrem 27 [1967] 83f) or because he suspected that Harold would join the rebellious Maniakes (A. Poppe, BS 32 [1971] 28), the emperor imprisoned Harold. He escaped and reached Kiev probably in winter 1042/3. In spring 1045 he married Jaroslav’s daughter Elizabeth and possibly incited Jaroslav to attack Constantinople. Byz. coins brought to Scandinavia by Harold in 1045 may have served as models for Danish mints (P. Grierson, ByzF 1 [1966] 124–38; M. Hendy, NChron 10 [1970] 187–97).

-A.K., C.M.B.

HARROWING OF HELL. See Anastasis.

HÂRÜN AL-RASHÎD (’Aapōw), caliph of the ’Abbâsids (789–809); born al-Rayy (near Tehran) Feb. 766, died Tûs (Khurâsân) 24 Mar. 809. He was the son of Caliph Muḥammad al-Mahdî (775–85). In 780 the young Hârûn invaded the Armeniakon and took Semaloues, and in 782 he was enabled by the defection of the Byz. general Tatzaros to advance to Chrysoupolis and force Empress Irene to make peace. During the negotiations he captured and held the eunuch Staurakios until Irene signed a three-year treaty requiring the Byz. to release all prisoners, pay an annual tribute of 70,000 dinars, and make commercial concessions. As caliph, Hârûn strengthened his border with Byz. by building frontier fortresses linking up with Tarsos. He paid special attention to the fleet, which several times attacked Cyprus and Rhodes. In 790 Hârûn’s navy defeated a Byz. force off Attaleia; Theophilos the stratêgos of Kibyrrhaiotai was captured and exe-
cuted after refusing Hārūn’s order to turn traitor. In 796 Hārūn made Raqqa on the Euphrates his chief residence, probably anticipating sustained campaigns against Byz. and eastern Iran. In 798 Abbasid forces invaded Byz. territory to Ephesus. Hārūn initially refused Irene’s request for peace, but, after Khazar attacks on his northern flank, he signed a four-year treaty again requiring the Byz. to pay annual tribute to the Arabs. He personally campaigned against Byz. in 803 and in 806, when he captured Heraclea and Tyana and exacted a humiliating treaty stipulating that Emp. Nikephoros I annually pay 30,000 solidi and a head tax of 3 solidi for himself and his son Staurakios. Hārūn destroyed churches in frontier areas to punish what he thought were pro-Byz. sympathies. He died campaigning in Khurāsān.

—P.A.H.

HĀRŪN IBN YAHYĀ, 9th–10th-C. Arab author. Captured as a civilian (a fact usually ignored by scholars), Hārūn was carried off from Askalan via Attaleia to Constantinople, where he lived for years, perhaps as a slave. His account, a valuable report on Byz. and other Christian nations, includes a detailed description of Constantinople, its walls, gates, statues, relics, water supplies; the Palace, its decoration and furnishings; Hagia Sophia; Christmas festivities; banquets; imperial processions; chariot races in the Hippodrome; the conditions of Muslim prisoners; the route to Rome via Serbia; a description of Rome’s marvels; and a reference to Britain. This account survives in the Book of Precious Things by ibn Rusta (born Isfahan, fl. late 9th–early 10th C.), an Arab anthologist of Persian origin.

Modern scholars have dated Hārūn’s report variously between 880 and 912, due to differences regarding internal clues, the possible date of his capture or release, whether ibn Rusta quotes him directly, and whether all the details are based on Hārūn’s own observations. G. Ostrogorsky (SemKond 5 [1932] 251–57) has argued for 912–13, Alexander’s reign, as the date since no empress or co-emperor is mentioned. Actually, Hārūn describes a typical procession, not necessarily a specific one, and the emperor is depicted as a co-emperor (wearing black and red boots). It is reasonable to date the account to ca.900.

—A-Sh.

HASAN DAĞ, site in CAPPADOCIA. On the north slope of this volcanic cone are a number of churches, including Sangöl and basilicas II and III near Viranşehir of the first half of the 6th C. (?) and Kemer Kilise (Viranşehir I) and Anatepe of the 7th C. (?). These solid, ashlar-faced monuments are most commonly cruciform in plan, although basilicas with both single and double naves also occur. To the north of Hasan Dağ is the Peristrema Valley with a number of rock-cut churches still adorned with painted decoration. Several also retain datable dedicatory inscriptions. Direkli Kilise, a large cross-in-square church, bears an inscription mentioning the emperors Basil (II) and Constantine (VIII) and is thus datable to 976–1025. The single-nave chapel of St. Michael was decorated by the monk Arsenios and his son Theophylaktos, protospatharios and aixiarcho (N. Thierry, JSav [1968] 46, reads taxiarcho) during the reign of a porphyrogennetos, most likely Constantine VIII (1025–28). A dedicatory inscription in Kirk Darğ Atu Kilise dates its paintings to 1283–95. The fresco decorations of several churches, including Yılanlı Kilise, Ağac Atu Kilise, Eğri Taş Kilisesi, and Kocar Kilise, are rendered with a vital primitivism that makes for difficult ascription on the basis of style and suggests the relative isolation of this valley from continuous metropolitan influence.

—A.J.W.

HATS. See HEADGEAR.

HAWKING. The sport of hawking or falconry involved the use of hawks to hunt various birds, such as cranes, wild geese, partridges, and pheasants. For this purpose the falconer (hierakarios)
trained young hawks; those imported from Georgia were esp. prized. Other species besides the hawk were also used. The *Onesophion* (ed. R. Hercher, *Claudii Aelianii Variar Historia, Epistolae, Fragmenta* [Leipzig 1866] 577–79) mentions seven hawk-names, mostly obscure. There is evidence, however, that the falcon was known and used in this kind of hunting.

Some evidence for the early practice of hawking is found in the *Oneirokritikon* of Achmet ben Sirin (232.16–17). From the 11th C. onward a growing number of references described hawking as a sport enjoyed by the ruling class and the emperor. Manuel I Komnenos’s passion for this type of hunting is reflected in an *ekphrasis* by Constantine Manasses. Another contemporary description was composed by Constantine Pantechnes. The growth of interest in hawking is evinced by the practical manuals that circulated at that time. Such a *Hierakosrophion* is attributed to Demetrios Pegasomenos and deals with the breeding and training of the hawk and treatment of its diseases (Hercher, *supra*, 335–516). (See also Protoierakarios.)

---

**HEADGEAR (καλυπτρα).** Until the 11th C. a headcovering was not a usual part of either official or ecclesiastical costume, with the exception of the monastic hood, or *konkoullion*, and the traditional veils of women.

Only the patriarch of Alexandria was entitled to cover his head for the celebration of the Eucharist; thus the Alexandrian patriarchs Athanasios and Cyril are depicted wearing a small black or white cap. In the 14th C. the patriarch of Constantinople wore a white *mitra*, not a mitre but a gold-embroidered veil. St. Spyridon is shown wearing a small straw bonnet (perhaps a pun on his name, which derives from the word for a small basket), Patr. Methodios a headdress knotted under the chin, an allusion to the story that his jaws were dislocated by Theophilos.

Two of the *protopoiodroi* depicted in Paris, B.N. Coisl. gr. 79 wear low red boxlike hats with a tip that flops down over one ear, while two others wear higher white beehive-shaped ones; the latter may be an early form of the *skiadion*. Another form of lay headgear is the turban, the *phakteolis* or *phaktiolion*, which by the 12th C. was no mere orientalism typical of Arabs. Ethiopians, and Palaestinians but common garb, esp. for women. The women depicted with Miriam in a circular dance in a Psalter in the Vatican (Vat. gr. 752, fol. 449v; Spatharakis, *Corpus*, fig. 123) wear huge headresses that must reflect court fashions of the 11th C. Shepherds wear broad-brimmed straw hats, sailors a Western-inspired tight black cap tied under the chin. Israelites wear hoods identical to the *maphorion*.

In the Palaiologan period, hats proliferated; the emperor and other officials wore the *skiadion* and another squarish hat rather like a mitre, whose name is unknown (the *skaranikon*, which is sometimes presumed to be a kind of hat, was most likely a garment). Women wore the *maphorion*, though the empress apparently went unveiled. Young relatives of the emperor wore either nothing on their heads at all, at least while inside the palace and until adolescence (pseudo-Kod. 145.15–18), or a purple headband called a *tainion* (DOC 2.1.81, n. 158).

---

**HEADPIECE**, the decorated frame or panel at the beginning of a text. Pre-Iconoclastic illuminators generally devoted little attention to the embellishment of a book’s title and framed it with only a series of dashes and corner flourishes. But in the Paris Gregory broad borders with classical patterns surround the titles, as do gold *ciboria* and *pi*-shaped brackets in 10th-C. MSS. Occasionally, medallion portraits were added to the *pi* or rectangle, and, in the 11th C., the headpiece displayed increasingly complex figural programs, inspired in part by the decorated *templon*. Many 12th-C. headpieces incorporate the subject matter of frontispieces (e.g., author *portraits*, *evangelist symbols*, narrative scenes), or contain only ornament. As a result, the title, the original pretext for the headpiece, was relegated to a subsidiary status above or below the panel. Complex ornament fills the headpieces of MSS of the Decorative Style. Palaiologan versions rarely include figural elements, but revive Komnenian designs or create more elaborate patterns based on the Islamic arabesque.

Occasionally, medallion portraits were added to the *pi* or rectangle, and, in the 11th C., the headpiece displayed increasingly complex figural programs, inspired in part by the decorated *templon*. Many 12th-C. headpieces incorporate the subject matter of frontispieces (e.g., author *portraits*, *evangelist symbols*, narrative scenes), or contain only ornament. As a result, the title, the original pretext for the headpiece, was relegated to a subsidiary status above or below the panel. Complex ornament fills the headpieces of MSS of the Decorative Style. Palaiologan versions rarely include figural elements, but revive Komnenian designs or create more elaborate patterns based on the Islamic arabesque.**

---

**HEADPIECE, the decorated frame or panel at the beginning of a text. Pre-Iconoclastic illuminators generally devoted little attention to the embellishment of a book’s title and framed it with only a series of dashes and corner flourishes. But in the Paris Gregory broad borders with classical patterns surround the titles, as do gold *ciboria* and *pi*-shaped brackets in 10th-C. MSS. Occasionally, medallion portraits were added to the *pi* or rectangle, and, in the 11th C., the headpiece displayed increasingly complex figural programs, inspired in part by the decorated *templon*. Many 12th-C. headpieces incorporate the subject matter of frontispieces (e.g., author *portraits*, *evangelist symbols*, narrative scenes), or contain only ornament. HEART | 905

HEART (καρδία). The starting point for Christian theology and mystical belief with regard to the heart is the Old Testament command to love God with one’s heart, soul, and body (Dt 6:5). In his commentary on John 13:23–25, Origen explains the heart of Christ as the inner meaning of his teaching, as the divine sense that one can discern more deeply with one’s heart (PG 13:87AB; see also PG 11:129BC–130A). In passages such as these, “heart” is a metaphor for nous (see INTELLECT). However, in view of many different opinions among Greek philosophers, Gregory of Nyssa (PG 44:156C–164D) expressed his doubt concerning this definition of kardia. While Evagrius Pontikos alternated between biblical and philosophical usages, later monastic mystics of experience, such as Diadochos of Photike, pseudo-Makarios/Symeon, and Hesychios Sinaite (6th–7th C.), show a great preference for the term heart in the sense of psyche, conscience, the seat

the Younger, rubbing oneself with holy dust or a Symeon token (see PILGRIM TOKENS) made from the earth of the Wondrous Mountain where the stelite’s pillar stood. Amulets were commonly used as prophylactic devices. Supplicants whose prayers for healing were answered left votive offerings at the shrines in thanksgiving.

Representation in Art. Three categories of depictions of healing may be identified: Christological healing scenes (e.g., in the FRIEZE GOSPELS such as Florence, Laur. Plut. VI 23); illustrated miracula of “doctor saints” such as Kosmas and Damianos (e.g., in the Lectionary, Athos, Pantel. 2—Treasures 2, fig.278); and deluxe illustrated compendia of pre-Byz. medical treatises such as the 10th-C. edition of Apollonios of Kition, On the Setting of Dislocated Bones, and Soranos of Ephesus, On Bandaging. Unfortunately, the latter generally reveal less about contemporary Byz. MEDICINE than about ancient prototypes (Weitzmann, Ancient Book Illum. 18–23). Again, the saint’s miracula are iconographically much less explicit concerning both symptoms and treatments than are the texts upon which they draw, being based, for the most part, on even more “generic” healing scenes developed for illustrated Gospels.

—A.M.T., G.V.

HEALING. Byz. turned to two different sources when seeking cures from illness: to the PHYSICIAN trained in the Greco-Roman tradition and to faith healing; miraculous cures might be provided by a holy man (in imitation of the healing MIRACLES of Christ), by the relics of a saint, or by a shrine at a locus sanctus. A standard topos of hagiographical descriptions of healing miracles is the failure of the physician to effect a cure (even though he received a substantial fee), contrasted with the “free” healing available at the tombs of saints, esp. the Anargyroi, those who took no payment for their services. Among the methods of faith healing were INCUBATION, kissing the tomb, anointing oneself with oil from the lamp suspended above a saint’s tomb, drinking oil or water that had come into contact with the relics, or, in the case of the shrine of St. Symeon the Stylite

HEADPIECE. Headpiece for the Gospel of St. Luke (Patmos, 81, fol.155r); manuscript dated 1334/5. Monastery of St. John, Patmos.

—R.S.N.
of passion and feeling, but also the remembrance of God. For Diadochus (Cap. gnost. 56), for example, the heart is the organ for sensing God. Hesychios (PG 93:1481CD, 1509D) emphasized the need to guard the heart in order to maintain Hesychia and to call upon Jesus Christ alone. Pseudo-Makarios (PG 34:573C) saw the spirit as the (vigilant) "eyes of the heart." Nikephoros Athonites (or Sinaites) in the 14th C. defined the Jesus prayer for Hesychasm (PG 147:963B-964A) in conjunction with the heart: "Settle yourself, collect your mind, breathe in through the nose whence the breath enters the heart. Let the mind with the inhaling breath enter into the heart."

—G.P.

HEARTH TAX, conventional name for any tax levied by household or “hearth” (kapnos), such as the kanonikon. It appears first as a supplementary levy: Malalas (Mal. 246.16–19) relates that the guilds in Antioch, allegedly in the 1st C., had to fulfill a leitourgia from each hearth for the repair of city porticoes. According to Ibn Khurdadbeh, a tax based on hearths was collected in Byz. for military purposes. The kapnikos was probably a tax on households. Even though the kapnikon is not mentioned explicitly after the 12th C., some scholars maintain that it had simply become a component of the telos. On the basis of a mathematical analysis of the telos of 14th-C. paroikoi, Lefort (“Fiscalité” 342f) concludes that only paroikoi without taxable property paid a hearth tax, usually amounting to 1/6 hyperpyron. K. Chvostova (VizVrem 39 [1978] 63–71) rejects Lefort’s method of calculation and assumes that the telos of every 14th-C. paroikos contained, in a latent form, the hearth tax, but it was esp. significant in poorer households. The verb kapnomologein (lit. "to count hearths") was used in a vague sense to describe the activity of tax collectors (Zeus, Jus 1:384.19–20; Mich. Akom. 2:106.29) but not in the specific sense of "levying the kapnikos (or kapnomologion)."

—M.B.

HEAVEN (oḯparoys). Two traditions merged in the Byz. perception of heaven—one popular (Eastern and late Jewish) transferred via the Bible, the other inherited from Greek physics and astronomy. In the Bible, heaven is located beyond the firmament (steromía), a solid vault resting firmly on foundation pillars over the earth and dividing the water into two domains, one above and another below it. When "the windows of heaven" open, the upper water falls on the earth as rain, hail, or snow. The stars are suspended from the firmament. Heaven also meant the space (air) between the firmament and the earth—"the middle distance (chora)" in Byz. terminology. Since the Old Testament often used the word in plural form, it enhanced speculation concerning the number of heavens, the favorite number being seven. Both the imagery and the perception originating in apocalyptic literature of heaven as the place of salvation and of a heavenly Jerusalem (the earthly paradise in the third heaven) were developed in Byz., esp. in the exegesis of the Antiochene School as well as in sermons on Lent, in the Hexaemeron, and in commentaries on Job. Heaven is the handiwork of God, although some Gnostics and Dualists ascribed the creation of heaven to the demiurge. Although distinct from God, heaven was nevertheless perceived as the sphere of the eternal and divine; God’s throne is there, and it is the abode of Christ (whence he will come for the second parousia) and of the Virgin and angels. Metaphorically, "the kingdom of heaven" was construed as the realm of God.

Byz. cosmology was divided with regard to the form of heaven—whether the ancient model of a spherical heaven was to be retained or whether heaven was a flat roof over the cubic world (as in Kosmas Indikopleustes); alternatively John Philoponus conceived heaven as "the all-encompassing space beyond" the spherical firmament that divided it from the realm of the corruptible. Much discussion ensued as to whether heaven is self-limiting and surrounded by the void (PsEllos, De omnifaria doctrina, par.120.1–6), or whether heaven, as the place of fixed stars and moving planets, is of a different substance from the corporeal world, which is composed of four elements; whether it is eternal in its movement; and finally, whether the assertion of the physicists (according to John Italos, Quaestiones quodlibetales, par.11, ed. Joannou, p.13.22–23) that the "heavenly body" occupies no physical space is valid, since otherwise the concept of the corporeal
world would come to a *regressus in infinitum*, the idea of an unmeasurable infinite space.

HEBDOMON (Ἑβδομον, lit. "seventh"; Turk. Bakırköy), suburb of Constantinople situated on the Sea of Marmara and astride the Via Egnatia seven Roman miles west of the Milion (Milliarium). The site of an army camp, it possessed a Tribunal, facing a plain called Kampos (Campus), on which several emperors were proclaimed, starting with Valens (364). Valens resided at Hебdomon in a villa or palace and built a harbor there. A little later churches were erected of St. John the Evangelist (before 400); of St. John the Baptist (391), to receive the relic of his head; and of the Prophet Samuel (411), also to receive his relics. Justinian I rebuilt the palace (called Jucundiana) and the Church of the Baptist. Hебdomon was probably devastated in the 7th–8th C. Arab fleets put in there in 673 and 717. Basil I rebuilt the churches of St. John the Evangelist and St. John the Baptist, which had fallen into ruin. The former, transformed into a monastery, was the burial place of Basil II and was later ceded to Nikephoritizes and, after him, to Empress Maria, wife of Michael VII. By 1260 it was in ruins.

Archaeological remains include a vast open-air cistern to the north of the suburb (Fil Dami), a gigantic granite column, an inscribed statue base of Theodosius II, a circular mausoleum, and parts of the church of St. John the Baptist, similar in plan to S. Vitale, Ravenna.

HEBROS (Ἑβρος), or Marica, river in Thrace, flowing into the Aegean Sea near Ainos. The Hеbros is the largest of the north Aegean rivers, draining the Haimos and Rhodope massifs, through the plains of Serdica, Philippopolis, and Adrianople. It was navigable as far as Adrianople, and there were no fords south of the city. In 1205 the Latins under Henry of Flanders, who were besieging Didymoteichon, were swept away by a sudden flood of the river (Nik.Chon. 624,6–10); the next year Kalojan tried to divert the Hеbros at Didymoteichon in an attempt to take the city (Nik.Chon. 632,23–25). The Hеbros valley was the site of the battle of Marica in 1371.

—T.E.G.

HEGOUmenos (ἡγούμενος, fem. ἡγουμένισσα), the superior of a monastery; related terms were *abbas*, *archimandrite*, *proestos*, or *koimobirates*. A *kathegoumenos* was a *hеgoumenos* who had been ordained, a *prohegoumenos* was a retired or dismissed *hеgoumenos*. *Hеgoumenoi* were responsible for the administration, economic management, and spiritual leadership of a monastic community. They were most often selected from within the monastery, theoretically from among those monks or nuns most revered for their wisdom and piety. The office of *oikonomos* was frequently a stepping stone to the hegoumenate. In the case of an imperial foundation, the *hеgoumenos* might be appointed by the emperor, but most often he or she was designated by a predecessor or elected by the monks or nuns. The procedure of election, which varied considerably from one monastery to another, was regulated by the monastery’s *τυρικος*.

In theory, the *hеgoumenos* possessed autocratic power over the brethren: he would admit new monks, expel dissidents, impose *epitimia*, appoint monastic officials, and supervise their activity. He also ensured the regular and proper observance of the daily offices and all special feastdays and supervised and maintained the monastic properties. He was assisted by a number of officials, such as the *oikonomos* and *ekkleiarχes*. In his spiritual role, the *hеgoumenos* usually served as the *pater pеnumатиκος* or confessor of the monks, even if he was not a priest. His tenure was not limited by any term or checked by any institution; the *hеgoumenos* said to give an accounting only in the hereafter. In fact, however, he was restricted by tradition and by a group of “select brethren”; if caught in malfeasance, he could be deposed (A. Kazhdan, *VizVrem* 31 [1971] 65–67).

The *hеgoumenos* often had special privileges (e.g., better food and drink), had much greater contact with the outside world, and sometimes had influence at the imperial court and patriarchate. A number of patriarchs were former *hеgoumenoi*. Some *hеgoumenoi* abused the prerogatives of their rank and were criticized for dining on expensive delicacies and rare vintage wines, for frequent
bathing, wearing silken garments, and being worldly businessmen. *Hegoumenoi* were, for example, the target of a satire by *Prolhprodromos* (ed. Hesseling-Petmoil, 48–71) and were attacked by *Eustathios of Thessalonike* in his treatise *On the Improvement of Monastic Life* (pp. 258, 57–259, 11).

**HEIR** (κληρονόμος), the one to whom the estate of a deceased person falls, be it alone or with others (synkleronomoi), either on the basis of a will or by way of intestate succession. The heir entered into the legal position of the deceased and was accordingly responsible for the obligations of the testator, just as he, conversely, could put forward the testator’s claims. The heir was also considered a debtor of the legacies bequeathed (*legaton, fideicommissum*) by the testator. The entrance into the inheritance took place informally; the possibility of declining it evidently played no role in practice, since its purpose—keeping one’s own property from being liable for the debts of the deceased—was, from the time of Justinian I, achievable by establishing an inventory (*beneficium inventarium*) that documented the size of the inheritance. The Lex Falcidia guaranteed a limitation on the heir’s responsibility for paying out the bequests made by the testator. All natural persons (including slaves, minors, and the unborn) could inherit, as could corporate bodies, communities, the church, or pious foundations. In addition to the limitations that intestate succession brought with it through its system of preference, there was a set of punishable offenses (e.g., lèse-majesté, heresy) and other factors (e.g., second marriage, status as a concubine [pallake] or illegitimate child [nothos]) that precluded or lessened the right to inherit. (See also succession.) —D.S.

**HEIRMOLIOGION** (εἱρμολογίον), a liturgical MS with or without musical notation, comprised of the heirmoi, the model stanzas referred to at the beginning of each of the nine odes of a kanon and on which the ode’s melody and rhythm are based; heirmoi are also listed in a similar way at the beginning of a kontakion. Since normally only the opening words of an heirmos are given, the heirmologion was a necessary reference tool from which the singer learned the full melody and thus was able to adapt it to any text. The heirmoi, like troparia and sticherai, are either sung to a unique melody (idionela) or are based on another (prosomoia). In comparison with other liturgical books, relatively few heirmologia survive, perhaps because of the heavy use to which they were subjected.

There are two types of heirmologia, both divided into eight sections, one for each musical mode. The first, more common type lists the heirmoi kanon by kanon, giving the heirmoi for each ode within a complete kanon before listing the next kanon’s heirmoi. The other type, mainly found in Slavonic MSS, gives the heirmoi by ode, that is, it lists the heirmoi for all the first odes for every kanon within that mode before moving on to the second ode. The earliest MSS date from the mid-10th C. The texts of the heirmoi are paraphrases of the biblical canticles originally sung during the Orthros, but later replaced by the kanones.

**HEKATE**, Greek goddess of the netherworld, associated with dead souls and evil dreams. Psuedonnon, in his commentary on Gregory of Nazianzos, states that the Greeks believed her to be a goddess identical to Artemis or to Selene or a deity in her own right accompanied by big dragon-headed men. In this company, images of Hekate’s cult statue appear in 11th-C. MSS of the commentary (Weitzmann, *infra*, figs. 70–72). In the late Roman period her cult was celebrated in hidden places, often connected with Dionysos or Mithra. Malalas (Malal. 307, 17–18) ascribes to Diocletian the construction of a subterranean temple of Hekate that had 365 steps leading down to it from ground level.
HELENA, Augusta (from ca.325) and saint; born Drepanon, Bithynia, between ca.250 and 257; died Rome, between 330 (PLRE 1:410f) and 336 (O. Seeck, RE 7 [1912] 2822); feastday 21 May, together with Constantine I. Born of humble status, possibly of Jewish stock (J. Vogt, Classical Folia 31 [1977] 148), she was an innkeeper when she met Constantius Chlorus whose concubine (or wife?) she became and to whom she bore the future Constantine I. Separated from Constantius after his marriage to Theodora, the step-daughter of Maximian, Helena returned to the court only after Constantius had died and Constantine had become emperor. She was no less influential than Constantine’s wife Fausta. On the portrait in the palace at Trier, executed in 321, Helena, crowned, is represented together with Fausta, Constantine’s half-sister Constantia, and the younger Helena, the newly wed spouse of Helena’s favorite, Crispus. In her honor Drepanon was renamed Helenopolis, and the province of Helenopontus was created. Circa 325 both Helena and Fausta received the title of augusta. After the execution of Crispus in 326, Helena may have played a role in the murder of Fausta. Helena was apparently inclined to Arianism, venerating Lucian of Antioch, the teacher of Arius and Eusebius of Nikomedea. In 326 she set out on a pilgrimage to the Holy Land, where she founded and generously endowed churches of the Nativity in Bethlehem and the Ascension in Jerusalem. She sponsored churches in Constantinople and other places, but spent the end of her life in Rome and not at Constantine’s court. She was buried in a splendid mausoleum on the Via Labicana (F.W. Deichmann, A. Tschira, JDAI 72 [1957] 44–110).

Helena’s memory was surrounded with legends, the most important of which was her alleged discovery of the True Cross, in the company of which she is often represented, together with Constantine I. Her cult developed by the 8th C., when the imperial pair of Irene and Constantine VI was compared to Helena and Constantine I. It was sometimes alleged that Helena was a prostitute when she conceived Constantine.

—A.K., A.C.

HELIODOROS (Ἡλιόδωρος), dated by scholars from 2nd to 4th C., from Emesa; author of the Aithiopiaka, the longest and structurally most complex of the surviving Greek romances. That Heliodoros was a Christian bishop, as the church historian Socrates claimed, is unlikely. The Aithiopiaka opens in medias res on a scene depicting the debris of a drunken brawl on the seashore and continues with a series of retrospective narratives that disclose the previous history of the heroine, Charikleia, the white-skinned daughter of the rulers of Ethiopia, and the hero, Theagenes, a Thessalian nobleman. After enduring further hazards appropriate to this genre—attacks by robbers, attempted murder by fire, abductions, etc.—the couple are finally united in marriage and become priest and priestess of the Sun. The novel’s tone is restrained, both linguistically and morally, and perhaps for this reason met with qualified approval in the Greek Middle Ages (see Photios, Bibl., cod.733; Psellos, De Chariclae et Leucippe ludeium), esp. in comparison with the psychologically more venturesome Achilles Tatius. Of the 12th-C. novelists, Theodore Prodromos and Niketas Eugenianos seem to have been particularly aware of Heliodoros’s work. Byz. commentators, such as an unidentifed Philip the Philosopher and John Eugenikos, interpreted the romance’s love affair as an allegory of the soul’s pursuit of a virtuous life.

HELIOPOLIS (Ἡλιόπολις, now Baalbek [Baal-bakk] in Lebanon), Syrian city located in a valley between the Lebanon and Anti-Lebanon mountain ranges. It was a center of paganism with grandiose temples of Zeus, Aphrodite, Hermes, and Dionysos. Constantine I closed these temples, prohibited the veneration of Aphrodite, and built a church there. Christianity continued to meet resistance, however, and Rabuula of Edessa (died 436) was beaten by heathens when he arrived at Heliopolis to demolish the idols. Emp. Julian persecuted Christians in Heliopolis, and the elite of the city remained predominantly pagan until the late 6th C. (John of Ephesus, HE 3.27). In the meantime the government tried to adapt the gi-
gantic shrines for Christian use. Theodosios I reportedly destroyed the temple of Zeus; he tore down the altar and the tower in the Great Court and replaced them with a basilica of St. Peter; ancient sculptures were consistently destroyed. A baptistery was added, and the Hexagonal Court was probably covered in wood in order to create additional interior space. Heliopolis was a bishopric of the province of Phoenician Syria subject to Emesa until 400, when it became part of the newly formed Phoenicia Libanensis under Damascus. Inscriptions (IGLSyr 6 [1967] nos. 2827–31, 2882, 2888) record secular construction: canals in the 4th C. and 430/1 and ramparts in ca.440 and 635/6, on the eve of the Arab conquest. Kallinikos, the inventor of Greek fire, originated from Heliopolis.

The Arabs took Heliopolis in 637 and transformed the sanctuary into a stronghold. In 761 in the district of Heliopolis there was a rebellion under the leadership of a Syrian named Theodore; all the rebels were slain (Theoph. 431.23–26). The city passed to the Fatimids in 972 but was temporarily occupied by John I Tzimiskes in 974. Eventually Saladin established his control over Heliopolis. After changing hands many times it became the chief town of a district under the Mamluks.

HELIOS (Ηλιος), the solar god of Greek mythology, often identified in late antiquity with Mithra and Apollo. In Neoplatonist cosmology, Helios played a significant role. Julian dedicated to him a hymn in which Helios appears as the nous (mind or reason) that contains within itself all the highest ideas; the nous reveals itself as the sun, the visible world’s creator and keeper, which implants the ideas into preexisting but dead matter; man is also the creation of Helios and after his death he returns to Helios, who accepts and stores the souls. The Sol Invictus, or invincible sun, was the symbol of Helios as protector of the emperor in the late Roman period. It is unclear whether Constantine I the Great supported the cult of Helios: T. Preger (Hermes 36 [1901] 457–69) asserted that Constantine erected his own statue as Helios, but J. Karayannopoulos (Historia 5 [1956] 341–57) attempted to reject Preger’s thesis. Christians interpreted Helios euhemeristically as the king of Egypt, the son of Hephaistos. Malalas connected two legendary episodes with “King Helios” as the protector of morality Helios discovered the shameful liaison of Ares and Aphrodite; Romans introduced horse races in honor of Helios, who was to supervise the races between the Earth (the Greens) and the Sea (the Blues). Elements of the veneration of Helios were retained in the popular worldview (H. Grégoire, M. Letocart, REA 42 [1940] 161–64). On the other hand, Christianity also used solar symbolism, presenting Christ as sol salutis (see Sol Justitiae) and accepting Sunday as a holy day. In the 15th C. George Gemistos Plethon addressed Helios as “hegemon of heaven and of every created being” (Alexandre, Pléthon 136). The image of the sun remained the focal point of Byz. imperial propaganda.

HELIOU BOMON MONASTERY. A monastery of Heliou Bomon (Hλειον βομῶν, “altars of the sun”) is first mentioned in the 10th C.; Janin suggests that it is the same as Elaiobomoi (“olive altars”), known in the 9th C. By the 12th C. Heliou Bomon had fallen into decline and was rebuilt by Nikephoros the Mystikos, who also recovered the monastery’s confiscated estates. At this time Heliou Bomon changed its status from a patriarchal to an independent monastery (RegPar, fasc. 3, no.1044). Emp. Manuel I helped support the costs of restoration. Nikephoros’s typikon of 1162 limited to 20 the number of monks at Heliou Bomon and at its metochion in Constantinople, which was dedicated to St. Bassianos. The typikon is closely modeled on those of Euergetis and St. Mamas.

It appears that Heliou Bomon was identical with or was united with the monastery of Eleugmoi, since the typikon refers to the monastery as “Helio Bomon or Eleugmoi.” The Eleugmoi monastery first appears in 10th-C. sources. In 1042 Emp. Michael V was confined there after his deposition from the throne. In the late 12th C. the hegoumenos of Eleugmoi became archimandrite of all monasteries in the Mt. Olympos region. The Eleugmoi monastery was located at modern Kurşunlu
in Bithynia, 12 km east of Mudanya. C. Mango (DOP 22 [1968] 169–76) has identified the 12th-C. Church of St. Aberkios, which still stands there, as the building constructed by Nikephoros. The church has distinctive recessed brickwork, a single nave with dome (now collapsed), an apse with a triple window, and a vaulted narthex.

source: Dmitrievskij, Opytvanie 1:715–69.

HELL was often designated with the classical terms Hades or, more rarely, Tartaros, and also with the biblical word Gehenna. The netherworld of the Byz. was located deep beneath the earth and construed as the realm of the Devil and demons where sinners would be punished after death or after the Last Judgment. The damned underwent different kinds of punishment. The image of Hell was contrasted with that of Paradise and originated from the concept of a reward or punishment in the afterlife for a virtuous or sinful existence on earth.

Origen considered the suffering in Hell as temporary; his eschatology was dominated by the idea of the apokatastasis panton, the cyclical restoration of all spiritual beings and their final return to God. Some traces of this concept are to be found in pseudo-Dionysios the Areopagite, who taught the epistrophē, or return to God. The church fathers, however, rejected the Origenist teaching—both John Chrysostom and Cyril of Alexandria (PG 77:1072B–1088B) defended the idea of eternal punishment in Hell. This latter doctrine was finally accepted at the council of Constantinople in 553.

The Byz. sometimes distinguished several underworlds. Hades could be cast as an intermediate state for the souls of people who lived before the Christian era and who were liberated by the descent of Christ. Hades was also an intermediate place for all souls until the Last Judgment, and, often inhabited by a personification of its ruler, the domain represented in images of the Anastasis. Hades and Gehenna were names for the place of punishment for sinners. In Gehenna there was no possibility for repentance and love of God. The Byz. created special genres of vision and journeys to Hell in which perceptions of the netherworld varied drastically, from a place of torture and suffering (in the vita of Basil the Younger), to a murky area full of animals symbolizing sins (the vita of Andrew the Fool, PG 111:772A–773B), to a site of rest, conversation, and litigation (Timarion).

HELLAS (Ἐλλάδας), Greece, as a generic term usually applied to central Greece south of Thermopylae and the Peloponnesos but excluding Epiros; its inhabitants were sometimes called Helladikoi (Charanis, Demography, pt.XVII [1953], 615–20). The Synekdemos of Hierokles equates Hellas with the province of Achaia. The theme of Hellas was created between 687 and 695 but debate continues about its original extent. Charanis (Demography, pt.XVIII [1955], 172–76) argues that only the eastern parts of central Greece were included, while Zakythinos (infra 54) thinks that Thessaly and the Peloponnesos were also part of the theme. By the end of the 8th C. Hellas was restricted to east central Greece, with Thebes as residence of the strategos or krites. In the 9th–10th C., among the western themes, the strategos of Hellas ranked below those of the Peloponnesos, Nikopolis, and Kibyrrhaioi (Oikonomides, Listes 105.12–15). Perhaps as early as the 10th C. the administration of Hellas was occasionally combined with that of the Peloponnesos, probably for military reasons. After 1205 most of Hellas fell under the authority of the duke of Athens. The church of Hellas was generally under the authority of the bishop of Athens, thus under the papacy until 732/3.

HELLENES (Ἑλλῆνες). The expression Hellen and its derivatives had in the late Roman period two principal meanings: helleniso meant first of all “to speak Greek” and to Hellenikon denoted the Greek language, whereas the noun Hellen with corresponding adjectives and adverbs designated “gentile, pagan” and had a pejorative meaning in the writings of the church fathers; accordingly Justinian I speaks of “the fallacy of impious and
foul Hellenes" (Cod. Just. XV 18.10); on the other hand, Julian (e.g., ep. 22 [ed. Wright] to Arsakios, high priest of Galatia) praises Hellenic "liturgy" and Hellenic good works. The positive self-respect of the Hellenes disappeared after the victory of Christianity, but the ambiguity (Greek language—pagan rite) persisted. Thus Arethas of Caesarea speaks of both "Hellenic language" (e.g., Scripta minora 1:96:25—26) and ofellenizomes as opposed to Christians (1:62:24—5), and in Anna Komnene (An.Komm. 2:34.12) the wisdom of Hellenes and Chaldaeans is contrasted with real knowledge. More complicated is the position of Niketas Choniates, for whom "Hellenic" designates not only language or adherence to paganism, but also Byz. allegiance—the Hellen aner is identical with the Rhomaioi (Nik.Chon. 301.18), and Hellenic poles are Byz. cities (496:50). From the 13th C. onward, the Byz. saw themselves not only as Romans but also as Hellenes (see Hellenism).

Hellenism. Two meanings of the term *Hellenism* are of concern to scholars of Byz. The first designates the consciousness among medieval and modern Greeks of their identity with the inhabitants of ancient Greece and an emphasis on their position as heirs to Greek classical civilization. The second meaning, modeled on the German usage of the word *Hellenismus*, refers to the period in the history of the region of the eastern Mediterranean between Alexander the Great (356—323 B.C.) and the Roman conquest of the region in the late 2nd and 1st C. B.C., also called the Hellenistic period.

1. Devotion to Greek civilization. Throughout the millennium of their empire, Byz. scholars expressed their links with ancient Greek culture through the conservatism of their archaising literary language, which attempted to "atticize" or imitate the Greek written in the Golden Age of Athens. The system of education in Byz. also used a curriculum based heavily on the study of a limited selection of ancient authors; a familiarity, often superficial, with classical Greek literature was presumed among the literati, who made frequent allusions to antiquity in their writings.

A greater emphasis on Hellenism began to manifest itself in the course of the 12th C. and became more marked in the late Byz. period, in the face of continuing conflict with the Westerners and the growing threat from the Turks. Moreover, as the empire shrunk, it lost its multiethnic composition and by the 13th C. was limited, for the most part, to Greek-speaking lands. The Greeks began to call themselves *Hellenes* as well as *Rhomaioi* and to think of themselves as a *genos*, or "nation." Intense interest in ancient Greek culture was a characteristic of the Palaiologan period, culminating in George Gemistos Plethon, who advocated a return to a somewhat philosophical version of ancient Greek paganism, utopian social reforms based on Plato's *Republic*, and the establishment of an independent Greek state in the Peloponnese.

2. Historical period. In the Byz. era, the historians Malalas, George the Synkellos, Kedrenos, and Zonaras were particularly interested in Hellenism. They emphasized, among other themes, the internal strife in which the *toparchiai* (the realms of the diaochoi or successors of Alexander) were involved until they were engulfed by the Romans; they were also concerned with Jewish history under Hellenistic monarchs and with the mission of Jesus. As for the Hellenistic cultural heritage, the Byz. paid special attention to scientific writings (e.g., Prolemy), works on grammar (Dionysios Thrax), didactic poetry (Aratos, 3rd C. B.C.), and epic (Apollonios of Rhodes, 3rd C. B.C.).

HELLESPONT (Ελλησπόντος), a term designating both a strait and a province.

1. Also called "the Stenon," the Hellespont was the strait between the Aegean Sea and the Sea of Marmara, with the cities of Abydos and Lamysakos on the Asian shore and Kallipolis on the European shore. The Hellespont was of obvious
strategic and commercial importance as a major approach to Constantinople by sea. In the 4th–5th C. it was under the command of the archon of the Stenon, who was stationed in Abydos and provided with a flotilla of 5 dromones. Justian I, according to Prokopios, established there a state customs post (teloneion). Seals from the end of the 7th and the early 8th C. mention the apostheke (storehouse) of Hellespont and its kommerkaria; it usually appears as a joint apostheke of “Hellespont and Constantinople” (Zacos, Seals 1, no. 190), or of “Hellespont and Asia, Caria, Lydia, and islands” (nos. 226, 236). Thereafter the term Hellespont disappears from administrative nomenclature, although the strategos of the Stenon is mentioned (Oikonomides, Listes 358, n. 394)—this, however, could refer to the Bosphorus. In 1204 the Venetians gained control of Hellespont and the Latin Empire held most of the land on either side. By 1235, however, John III Vatatzes recovered the area. In the 14th C. the Hellespont was occupied by the Turks.

2. Hellespont also designated a late Roman province in northwest Asia Minor, originally part of the province of Asia, but a distinct entity in the Verona list and in an inscription quoted by Constantine VII Porphyrogennetos (De them. 1.32–33, ed. Pertusi 611); its capital was Kyzikos, and Hierokles (Hierokl. 661.14–15) assigned it 30 cities. The civil province disappeared in the 7th C., but the ecclesiastical diocese survived, with Kyzikos as metropolis (Notitiae CP 1:10) and suffragan bishoprics including Abydos, Germe, Illus, Lampsakos, and Troas (ibid. 1:131). At the end of the 7th C. Justinian II resettled a large number of Cypriots in the region. The city of New Justinianopolis was granted the rights of the diocese of Constantin in Cyprus so that its bishop presided over all the bishops of the province of Hellespont (De adm. imp. 48.11–15). The measure, although confirmed by the Council in Trullo, lost no trace in the notitiae.

HENOTIKON (Ἐνωτικόν, edict of “unity”), theological formula issued by the emperor Zeno in 482 in an attempt to secure reconciliation between Chalcedonians and Monophysites. The text (Eva-

grios Scholastikos, HE 3.14) was apparently the work of Akakios, patriarch of Constantinople, with the assistance of Peter Mongos. The Henotikon sought to end theological controversy by glossing over the decisions of the Council of Chalcedon and ignoring the critical issue of the natures of Christ. It condemned both Nestorios and Eutyches and demanded adherence only to the first three ecumenical councils. The Henotikon proved acceptable to neither side, however; furthermore, it was condemned by Pope Felix III in 484 and gave rise to the Akarian Schism. The Henotikon was a notable attempt by an emperor to solve a theological difficulty by imperial fiat. The Henotikon remained in force during the reign of Anastasios I but was abrogated by Justin I in 519.

HENRI DE VALENCIENNES, French continuing of Geoffrey Villehardouin for events in the Latin Empire of Constantinople from May 1208 to July 1209. Henri is possibly identical with a cleric who authored a verse Vie de S. Jean l’Evangeliste ca. 1200 and apparently accompanied the future Latin emperor Baldwin of Flanders on the Fourth Crusade; he may also be the Master Henry sent to the pope in 1205, who evidently became a canon of Hagia Sophia and witnessed the Concordat of 1210. His History, which was intended as an independent work, was probably composed in 1208 and 1209, and certainly before 1216. It treats the Latin campaigns against the Bulgarians, relations with David Komnenos and Theodore I Laskaris, and Emp. Henry’s struggle against the Lombard knights of the Kingdom of Thessalonike. Although Henri lacks the balance and vision of Villehardouin and delights in speeches and fictitious dialogue, he offers abundant details on historical topography, costume, climate, and other matters.

LIT. J. Longnon, “Sur l’histoire de l’empereur Henri de Constantinople par Henri de Valenciennes,” Romania 69
HENRY VI, Western emperor (1191–97); born Nijmegen, Netherlands 1165, died Messina 28 Sept. 1197. Son of Frederick I Barbarossa, Henry was crowned king of Germany in 1169. In 1185 Henry married Constance, daughter of Roger II of Sicily. The death of William II of Sicily allowed him to claim that throne. In 1194 Henry overcame Norman resistance, led by Tancred of Lecce. In Palermo, he found Irene Angelina, widow of Tancred’s son, whom he married to Philip of Swabia. At Easter 1195, Henry proclaimed a Crusade, partly to levy tribute on Byzantium. His envoys made harsh financial demands on Isaac II early in 1195 and renewed them to Alexios III at Christmas 1196. To meet these, Alexios tried to levy the Alamanikon, but Henry’s unexpected death forestalled dispatch of the money.

HENRY OF BABENBERG, called “Jasonirgott,” first duke of Austria; born ca. 1114, died Vienna 13 Jan. 1177. A half-brother of Conrad III and marquess of Austria after 1141, Henry accompanied Conrad on the Second Crusade. To cement the pact between Conrad and Manuel I, he married (1148 or 1149) Theodora Komnene, daughter of Manuel’s brother Andronikos and Irene Komnene (Barzos, Genealogia 2:171–89). Officially, the court poets hailed the marriage, but Theodore Prodomos, putting words in Irene’s mouth, makes her lament Theodore’s union with a “Western beast” (RHC Grecs 2:768.122). After disputes with Frederick I Barbarossa over possession of Bavaria, in 1156 Henry received Austria as a separate duchy. In 1166 he went to Serdica to try to make peace between Frederick and Manuel. Theodora survived her husband and died 3 Jan. 1183. Their son, Leopold V (born 1157, duke 1177–94), visited Constantinople in 1181 or early 1182 on his way to the Holy Land.

HENRY OF HAINAULT, emperor of the Latin Empire (1206–16); younger brother of Baldwin of Flanders; born Valenciennes ca. 1174, died Thessalonike 11 June 1216. Having joined the Fourth Crusade, in 1204 Henry (Enrico) defeated an ambush by Alexios V. When Baldwin was captured in 1205, Henry became regent; after Baldwin’s death he was crowned (20 Aug. 1206). Following the death of Kalojan, Henry exploited discord among Boris of Bulgaristan, Slav in Rhodope, Strez at Prosek, the Serbs, and Epirus to his own advantage (G. Cankova-Petkova, BHR 4:4 [1976] 51–61). Because of the hostility of the Lombard barons of Thessalonike and northern Greece, in 1208–9 Henry marched to establish Demetrios, son of Boniface of Montferrat, on the throne in Thessalonike. Henry received the homage of Athens and the Morea. In 1211 Henry defeated Theodore I Laskaris at the Rhyniakos River and regained the Anatolian coast from Nikomedea to Atramyttion. He conciliated his Byzantine subjects by welcoming Theodore Branas into his service, offering fair treatment, and preventing the imposition of Western ecclesiastical usages. A 13th-C. historian (Akrop. 1:28.12–19) testifies to the good reputation Henry gained.

HEPHAISTION OF THEBES, astrologer; born Thebes in Egypt 26 Nov. 380. Hephaestion compiled in ca. 415 one of the most important summaries of classical astrology available to the Byz., the Apotelesmatika, or Astrological Effects. This consists of three books: the first on definitions and celestial omens, the second on genealogy, and the third on catastrophic astrology. Hephaestion is in no sense original but rather copies or summarizes earlier texts. Some of these we still possess in Greek (e.g., Ptolemy), some also survive in Arabic translations (most importantly Dorotheos of Sidon), but most are known only from other citations in the astrological literature (e.g., by Ptolemy, Hipparchus, Critiodamus, Thrasyllus, and Antigonus of Nicaea).

The importance that the Byz. accorded to Hephaestion’s work is demonstrated by the existence of four epitomes, two of which were made in ca. 1000 and the last in the School of John Abra- mios in the late 14th C.
HERAKLEIA: HERAKLEIA PONTIKE | 915

HEPTAPEGON (Ar. Ain et-Tabgha, from ἑπταπέγων [χωρίῳ], Hebrew En ha-Shiv’ah, “Seven Springs”), PILGRIMAGE site on the northeastern shore of the Sea of Galilee. Six springs still flow near the remains of three early Christian churches, each with New Testament associations. A small 4th-C. church directly on the shore (beneath the modern chapel of the Primacy of Peter) incorporated a stone table (altar) where, according to tradition, Christ served breakfast to the disciples after the Resurrection (Jn 21:12–13). Pilgrims chipped small pieces from this table “for their well-being” (Égérie, Journal de Voyage, ed. P. Maraval [Paris 1982] 95f). Nearby, a 5th-C. basilica (with a smaller 4th-C. precursor beneath it) commemorated Christ’s Feeding the Five Thousand ( Mk 6:32–44). Its exceptional mosaic pavements, among the earliest figural mosaics in Christian Palestine, depict the loaves and fishes as well as marsh plants, fowl, and buildings. The third church (6th C.) rose above a small grotto where Christ was thought to have uttered the Beatitudes (Mt 5:1–12). These associations were still alive during the Crusades.

HERACLEOPOLIS MAGNA. See AKHNÍS.

HERAKLEIA (Ἡράκλεια). Three cities with this name figured prominently in Byz. history.

HERAKLEIA IN THRACE (anc. Perinthos, mod. Marmara Ereğli), city on the north shore of the Sea of Marmara, at the junction of the Via Egnatia and the main Balkan road to Naissus. Renamed Herakleia by Diocletian (who was Herculean in official terminology), it continued to be called Pe(i)rinthos by antiquarians up to the mid-15th C. (e.g., Kritob. 35-24). According to Propósis (Buildings 4.9.14), it had been the most important city in the province of Europa, but was replaced by Constantinople, which was originally its suffragan. A bishopric in 325, Herakleia appeared as a metropolis in notitiae; the number of its suffragans increased, but Constantinople became independent of Herakleia in 330 or 381 (Dagron, Naissance 418f).

Herakleia was attacked by the Goths after the battle of Adrianople in 378, then by Attila, by the Avars, and the Bulgars. The city is mentioned by many later authors, among others Nicholas I Mystikos (ep.19-42), Skylitzes, Gregoras, and Kantakouzenos, mostly as a geographical site or an ecclesiastical center. The citizens of Herakleia supported Thomas the Slav against Michael II (Theophont. 71.5–6). In the Partitio Romaniae (A. Carile, StVen 7 [1965] 249) “Tyrecc” was assigned to the Venetians. The city played an important role during the civil wars of the 14th C. In 1382, together with Rhaides and some other Thracian towns, Herakleia was given over to Andronikos IV. Little is known about the internal life of the city: a seal of the 9th–10th C. (Zacos, Seals 1, no.1974) belonged to a spatharios and archon of Herakleia, but it is not certain that the Thracian Herakleia was meant. The remains of an aqueduct and at least one church—perhaps that of St. Glykeria, damaged by the Avars in 591 and rebuilt by Maurice—have been preserved.

HERAKLEIA IN CAPPADOCIA (anc. Kybistra), a city of Anatolikon at the southern edge of the Anatolian plateau and the beginning of the pass to the Cilician Gates; now Tont Kalesi near Ereğli. Herakleia gained importance during the wars with the Arabs, who first attacked it in 708 and destroyed it in 806; it was soon restored. Herakleia was the scene of fighting into the 10th C. and consequently appears in the epic of Digenes Akritas. As a bishopric of Cappadocia II, it was always known by its ancient name; it became autocephalous ca.1060. The site contains no significant remains.

LIT. TIB 2.108–90.

HERAKLEIA PONTIKE (mod. Ereğli), a city, bishopric, and excellent harbor on the Black Sea coast of Anatolia; it was in Paphlagonia after Diocletian and then was joined to Honoria ca.385. Theodosios II visited Herakleia Pontike and rebuilt it ca.440 after an earthquake. The Pontic Mountains protected Herakleia Pontike from Arab attack, so that Basil I could draw population from it for his new foundation, Kallipolis. Turks, however, ravaged the area after the battle of Man-
Tzikert in 1071. David Komnenos, brother of the ruler of Trebizond, took Herakleia Pontike in 1205 and made it capital of his domain, called Paphlagonia; he lost it in 1214 to Theodore I Laskaris, who made it a major frontier bulwark. Thereafter it was usually called Pontoherakleia. The Genoese had a colony there after 1261 and bought the city from the weakening empire in 1360; they held it until the Ottomans captured it after 1453.

Late antique Herakleia Pontike occupied a high hill by the sea and spread into the adjacent plain; it withdrew to the hill after the 7th C. The city's walls, rebuilt by David Komnenos, and its Laskarid citadel, are preserved as well as a basilical church perhaps built by Theodosius II.

(For Herakleia Lynkestis, see Pelagonia.)

- C.F.

HERAKLEIOS (Ἥρακλειος), emperor (from 5 Oct. 610); son of the exarch of Carthage; born ca.575, died Constantinople Feb. 641. Herakleios seized power when he arrived with an African fleet to overthrow the “tyrannical” Phokas (G. Rösch, ḪOB 28 [1979] 51–62). The Greens and Patr. Sergios I supported the overthrow. Herakleios found the empire in trouble: the Slavs and Avars were invading the northern Balkans; the Persians exerted severe pressure on the eastern frontier. The general Komentiolos revolted against Herakleios in Ankyra, and in Antioch the partisans of Phokas were still at the helm (Kaegi, “New Evidence” 308–30). The first years of Herakleios's reign witnessed a new Persian offensive, commanded by Shahbaraz and Shahn, which resulted in the Persian capture of Jerusalem in 614 and occupation of Egypt from ca. 619 to 629. Herakleios entertained the idea of transferring the capital to Carthage but gave up the plan at the request of Sergios and the population of Constantinople.

Unable to fight on two fronts, in 619 Herakleios concluded a truce with the Avars. After reorganizing the army (reinforcement of cavalry and lightly armored archers), in 622 he mobilized his forces in Asia Minor, won several victories, and invaded Armenia. The crucial battle took place in 626, when Shahbaraz reached the Bospors and together with the khan of the Avars besieged Constantinople. The attack on 7 Aug. failed; both the Avars and the Persians retreated. In 627 Herakleios was able to invade Persia, inducing panic: Chosroes II was overthrown and Kavad-Shrubya signed a peace treaty. This victory has been seen as the occasion celebrated in the series of David Plates. As a result Herakleios was able to recover the True Cross, which had been captured by the Persians. The success was but temporary: in 634

Heraclios Constantine’s death left the empire in a predicament. Rumor had it that Martina had poisoned him. Little is known of Heraclios Constantine’s personality, but he was popular among the people of Constantinople.

HERAKLES, son of Zeus and Alkmene, the most famous hero of Greek mythology. The Latin Hercules is connected with the emperor and the imperial cult well into late antiquity (cf. Maximian Herculanus). In Byz. literature Heraclakes appears as a standard part of imperial imagery, the defender (Theodore Prodromos, ed. Hörandner, no.16.78) and accomplisher of wondrous deeds (An.Komm. 1:36.11–16). Traces of Prodikos’s allegorical interpretation (Heraclakes at the crossroads) are found in Basil the Great (PG 31:579AB, ch.5.14). In the *Soudu* (2:584) Heraclakes becomes an allegory of the philosopher, who, protected by the lionskin of wisdom, kills the Hydra of desire with the club of rationality. According to K. Weitzmann (*SemKond* 8 [1936] 88f), Heraclakes dragging Kerberos from Hades provided a model for Christ’s raising of Adam in Anastasis scenes. Various anecdotal material survives as well: for example, Heraclakes as high priest (*mystikos, telesos*), who becomes king of Italy after a childhood spent in Spain (Malal. 86.12–17). Most of all, Heraclakes and his labors are used throughout Byz. literature as a symbol of physical power or prodigious achievement, for emperors in particular (Leo Diac. 48.17; *TheophCont* 332.20f). As a symbol of fortitude for both pagans and Christians, he appears frequently on 6th-C. textiles, silver, and ivory (*Age of Spirit*, nos. 136, 139, 206). Some elements of this imagery survive in popular literature. The death battle of Digenes Akritas with Charios, for example, reflects the struggle of Heraclakes and Thanatos (D.A. Notopoulos, *Laographia* 17 [1958] 451–53). Widely and often comically, Heraclakes’ labors are represented on ivory and bone caskets and boxes. Prokopios of Gaza describes their depiction on a clock. Heraclakes could symbolize lust and servitude to women (Nik.Chon. 139.39–43). Sometimes the first night of lovers is compared to a “Herculean labor” (Theodore Daphnopoulos, ed. Darrouzès-Westerink, 17.15).
HERAKLONAS (Ἡρακλωνᾶς), or Herakleios II, emperor (Apr./May–Sept. 641 [until July 642, according to Stratos]); son of Martina and Herakleios; born Constantinople 626, died probably Rhodes, date unknown. Co-ruler with his half-brother Herakleios Constantine, Heraklonas ascended the throne at the latter’s death, but Martina ruled de facto. Supported by the army of Thrace, she attempted to remove Herakleios Constantine’s supporters and primarily the treasurer Philagrios; Patr. Pyrrhos became her main adviser and she pursued a policy of Monotheletism. This internal friction coincided with Arab successes in Egypt. Martina sent Patr. Kyros back to Alexandria; he assumed the civil administration while generals fled to save their lives. The opposition of the senate and of the troops in Asia Minor compelled the emperor to surrender: Herakleios Constantine’s son Constans II was proclaimed co-emperor, and to balance this shortcoming Martina made her son, David-Tiberios, the third basilicus. The compromise was temporary, and the revolt of Valentinos Arsakuni overthrew Heraklonas and his family. After his nose was slit, Heraklonas, with his mother and brothers, was exiled to Rhodes.

HERBAL. See Dioskorides; Scientific Manuscripts, Illustration of.

HERESY (αἵρεσις, lit. “sect, school”), a term used by the church fathers to designate a sectarian or dissident teaching, sometimes that of pagans or Jews (including Manichaeanism) but mainly within Christianity. There was a double terminological difficulty. First, each party accused the other of heresy—thus, the emperor Julian (quoted by Cyril of Alexandria, PG 76:565C) asserted that the tenets of the “Galilaeans,” not those of the Hellenes or Jews, were heresies, and conflicting Christian communities tended to call themselves “orthodox” and their adversaries “heretics.” Second, it is necessary to distinguish heresy, a division on doctrinal grounds, from schism, a split caused by disagreement on church policy and questions “capable of adjustment” (although sometimes doctrinal issues were also involved).

Basil the Great (ep.188.1, ed. Y. Courtonne, vol. 2 [Paris 1961] 121–24) makes the following distinctions between hairesis, schisma, and parasynagogae: heretics are those who are completely severed from the faith, while schism encompasses those unable to find a common solution to certain ecclesiastical problems, and parasynagogai are assemblies of rebellious bishops and priests and of disobedient laymen. As examples of heretics Basil mentions Manichaean, Gnostics (both Valentinians and Marcionites—see Gnosticism), and Montanists (“Pepouzenoi”—see Montanism), while ancient Katharoi, Enkrattai, and Hydroparastatai were schismatics. This theoretically clear distinction was muddied in later usage: when the Latin and Byz churches severed communion both parties employed the terms heretics and schismatics for their adversaries. Works on heresies developed into a common genre of Byz. theological literature (e.g., the Panarion of Ephipanius of Cyprus and Panoplia dogmatica of Euthymios Zigabenos). The Synodikon of Orthodoxy was a regular liturgical condemnation of heresies.

With the conversion of Constantine I the state became involved in the definition of and struggle against heresy, and the legal codes contain various penalties for heretical groups, frequently in ranked order, with more pernicious heresies treated more harshly. Church councils, both local and ecumenical, were commonly called to define faith and combat heresy. The idea of doctrinal error as dissent and a crime resulted from the concept of “political orthodoxy,” that is, an obligatory uniformity on major points of the creed. The proliferation of sects and philosophical schools in antiquity was singled out as a shortcoming of paganism.

The late Roman period witnessed a rich blend of heresies. In the 4th–7th C., the question of salvation was of preeminent importance: in the West it acquired a moral and juristic flavor, focusing on the concept of free will (Pelagianism), whereas in the East ontological problems (the substance of the Trinity, the natures and wills of Christ in his divinity and humanity) were the
major subject of discussion (Arianism, Nestorianism, and Monophysitism). These “heresies” became entrenched outside the empire, while within, by the end of the 7th C., the Chalcedonian view became dominant; the terms Arian, Manichaean, etc., were, however, often applied to various later heresies.

John of Damascus, in his work On Heresies, lists besides the principal heresies a series of proponents of false doctrines rarely mentioned in or completely unknown from other sources, such as the Euchyrianistoi, who denied that Christ received his flesh from the Virgin and asserted that it came from a divine source (ch.82.1–4, ed. Kotter, Schriften 4:49); the Theokatagnostoi, who dared to censure some words and actions of the Lord and holy persons (ch.92.1–3, p.57); the Thneto-psychitai, who drew no distinction between the human soul and body and believed that the soul perished with the body (ch.90.1–2, p.57); the Heliotropitai, who worshiped the heliotrope flower, seeing in it a symbol of the soul ascending to God (ch.89.1–5, p.57); the Gnosiomachoi, who rejected any Christian doctrine (gnosis) since God allegedly did not require anything but good deeds (ch.88.1–4, p.57); the Heiketai, ascetics who were Orthodox in their belief but gathered together with female ascetics in the nude in order to worship God with dancing and singing (ch.87.1–4, p.56f); and the Ethnophrones, who accepted pagan habits such as astrology, divination, incantations, and Hellenic feasts (ch.94.1–8, p.58).

The major religious dissent of the 8th–9th C. was connected with the theological interpretation of the icon—was it an idol that impaired the proper worship of God (the view of adherents of Iconoclasm) or a mysterious link between mankind and the Godhead, instrumental in the mystery of salvation? After the cult of icons was restored, dualism in the form of Bogomilism came to the fore, while from the 9th C. onward, the schism with the West, based on theological and liturgical differences (esp. problems of the fulgone and azymes) developed. In later centuries indigenous Byz. heresies evolved from differing interpretations of the role of institutional and individual paths to salvation: ca.1000 SYMEON THE THEOLOGIAN came under suspicion because he emphasized the significance of the vision of the divine light and the personal links between teacher and disciple to the detriment of the sacraments; in the 14th C. HESYCHASM developed Symeon’s individualistic or mystical approach.

The origins and exact nature of Byz. heresy have been much debated. Some scholars have suggested that heresy was caused by social and economic factors and that the poor and powerless of the empire expressed their dissatisfaction through adherence to heresy. Others have seen heresy as a reflection of otherwise suppressed national aspirations on the part of North Africans, Syrians, Egyptians, Armenians, Slavs, and other peoples of the empire. A third approach is to suggest that heresy reflects the reemergence of earlier pagan philosophical systems or native religions. Economic, political, national, and cultural phenomena may indeed have had an impact on the development and preservation of certain heresies (rivalry between Constantinople and Alexandria, Syrian adherence to Monophysitism, Platonic traditions in Origenism, urban-oriented Arian propaganda, social protest in Bogomilism, etc.), but the essence of Byz. heresies emerged from dynamic forces within Christianity, primarily from attempts to understand the nature of the Godhead and of the world, to comprehend the concepts of evil (including social evil) and good, and to find the best way to salvation.

Representation of Heretics in Art. Heretics, usually shown in poses of submission to church authority, appear in MSS from the 6th C. onward. The heretic Makedonios is depicted groveling before the First Council of Constantinople in the Paris Gregory (Omont, Miniatures, pl.1), while the defeat of another heretic, probably to be identified as Arius, is represented in the Menologion of Basil II (p.108). Arius and Nestorius appear in lectionaries prostrate before church fathers, while Iconoclasts are shown in marginal Psalter illustration whitewashing icons and being trampled by their adversaries. The vision of Peter of Alexandria, as in the Metropolis at Mistra, became an emblem of the Arian disruption of the church and is often found in the decoration of illuminated manuscripts. The representation of heretics in narthexes and monastic refectories seems to be a post-Byz. phenomenon.

HERMES, ancient Greek divinity. Although the myths of Hermes were criticized and ridiculed by Christians, there were some attempts to reconcile his image with the new religion. Early apologists compared his role as the messenger of the gods with that of the Christian Logos. On the other hand, Hermes was considered to be the greatest of Hellenic philosophers, one who "prophesied" the idea of the Trinity and oikonomia; he was allegedly a contemporary of Moses, together with whom he studied Egyptian wisdom; some people even identified him as Moses. Kosmas the Hymnographer (PG 38:496.21–32) says that Gregory of Nazianzos rejected this identification; Kosmas, however, assumes that Hermes was the first to call God "triune."

HERMES TRISMEGISTOS (Ἑρμῆς Τρισμέγιστος, lit. "Thrice-Greatest") is the Greek name given to the Egyptian god Thoth, who, as the divinity of wisdom, was believed to be the author of a number of religious texts. The Greeks adopted these documents, known as the Hermetica, between the 1st and 3rd C. and regarded them as the revelation of Hermes Trismegistos. They combine elements of magic, astrology, alchemy, philosophy, and theology. They were much read in late antiquity, esp. in the 4th C. They were excerpted by Stobaios for his anthology in the 5th C., but between the 6th and 11th C. they practically disappeared from sight in Byz. This must have been partly due to the fact that the occult was never a safe subject in the Christian empire. In the 11th C. Psellos was familiar with parts of the Hermetica, but the next signs of real interest do not appear until the 14th C. The four earliest surviving MSS of the collection date from that century, and there are some references to it in Nikephoros Gregoras.

HERMIT (ἀναχωρητής, ἐρημίτης, ἡσυχαστής), a monk or nun who retired from the world to live a solitary life of prayer and asceticism. The hermits like Antony the Great who withdrew to the desert of Egypt in the 3rd and 4th C. were the earliest Christian monks; eremitism continued to be a prominent form of Byz. monasticism until the 15th C. Later hermits were more likely to live on holy mountains such as Olympos, Auxentios, Athos, Ganos, and Meteora. There were women hermits until the 11th C.; thereafter nuns were found only in cenobitic convents (A.M. Talbot, GOrThR 30 [1985] 16–18). Particularly rigorous asceticism was practiced by the styuite saints and recluses (enkleistoi).

Eremitism was generally considered to be superior to cenobitic monasticism because of the greater hardships associated with the solitary life and the greater opportunities for spiritual improvement. In art (e.g., Der Neressian, L'Illustration II, fig.245) anchorites like St. Onouphrios illustrate the physical self-denial of those who are fed by God. Usually a monk had to spend three years in a koinonion before he could receive permission from the hegoumenos to become a hermit. A number of monks moved back and forth between the cenobitic and eremitic life, ignoring the principle of monastic stability; most holy men spent at least part of their careers in solitude. Still there was tension between cenobitism and eremitism throughout the centuries. Basil the Great, who espoused cenobitism, attacked the eremitic way of life because of the impossibility of material self-sufficiency, excessive concern with the self, and the lack of opportunity to practice charity. Eustathios of Thessalonike criticized the self-centeredness of the hermit who hid away in a cave, likening him to Homer's Cyclops. Another problem for the hermit was his lack of access to the liturgy and sacraments, if he were not a priest (A. Kazhdan, BZ 78 [1985] 53–55). Some hermits solved this problem by attending services on the weekend at a nearby monastery.

HERMOPOLIS MAGNA (Ἐρμοῦ πόλις ἡ μεγάλη, Ar. Ashmunāyn), town in Upper Egypt, metropolis of the Hermopolite nome, an episcopal see from the second half of the 3rd C. (Eusebios, HE 6.46.2). Hermopolis Magna is well known from Greek and Coptic papyri as a flourishing cultural and administrative center. Of the two surviving 5th-C. churches, the larger, which was probably the cathedral, is a transept-basilica, with each arm of the transept ending in a large conch. Many of its columns (spolia from earlier Roman buildings) are still standing. It was part of a large ecclesiastical complex, which was surrounded by porticoes and had two richly adorned propylae.

The other church, a more ordinary basilica, is much less well preserved. Along its south side are vestiges of an underground burial and the foundations of a baptistery.

HERODIAN (Ailios Herodianos), 2nd-C. Greek grammarian who wrote on all aspects of grammar other than syntax, but concerned himself principally with prosody and morphology. His Universal Prosody (Katholike prosodia), now lost, gave in-
formation on the accentuation of approximately 60,000 words. The Philetairos, a short Atticist lexikon attributed to him, is certainly a much later compilation. His only work to survive entirely is a short treatise titled On Singular Words (Peri numeros lexeos). His rich and carefully ordered collections were sources, direct or indirect, for all later grammarians, not least those of Byz. Probably Theodosios of Alexandria (4th–5th C.) wrote an epitome of the Universal Prosody. The treatise of Theognostos, On Orthography, was based largely on Herodian, as was the unpublished On Breathings by Theodoretos (date uncertain). Many Byz. commentaries and grammatical writings draw on Herodian, and in this way enable fragments of his lost works to be reconstructed.

LIT. P. Egenolff, Die orthographischen Stücke der byzantinischen Literatur (Leipzig 1887). Egenolff, Orthog. —R.B.

HERODOTUS, Greek historian; born Halicarnassus ca.485 B.C., died 425. Herodotus was known in 4th-C. Egypt (P.Oxy. VI 857), and papyri of his work are found as far away as Dura-Europos (C.B. Welles, TAPA 70 [1939] 203–12). The extent of the direct familiarity of the Byz. with Herodotus is debatable. Malalas (Malal. 161.5–9) included him in a list of poets and philosophers who were contemporaries of Philip II of Macedon, and in the Parastaseis Syntomoi Chronikai (p.66.1) “the chronographer Herodotus” appears as a source for Constantine I the Great’s murder of his son. Photios (Bibl., cod.60) characterized Herodotus in a few words as a historian of the Persian kings and the usurper Smerdis—a very Byz. perception (or misperception?) of the book.

Interest in Herodotus awakened in the 10th C. The earliest preserved MS dates from this time; the Souda includes Herodotus’s biography, and the Excerpta of Constantine VII contain passages from him. Herodotus’s Persians were considered to be ancestors of the Arabs. Psellus (Mayer, “Psellos’ Rede” 53.208–09) praised Herodotus as the most eloquent writer. In the 12th C. chroniclers such as Zonaras and Manasses had studied his text (E. Jeffrey, Byzantium 49 [1979] 213ff. 234), and other scholars (Gregory Pardos, John Tzetzes, Eustathios of Thessalonike) referred to him. Many authors must have been familiar with Herodotus through reference works, but it seems plausible that Chalkokondyles, in describing the Turks, imitated Herodotus’s legends and tales (Gy. Moravcsik in Polychronion 369f).

HERVE FRANKOPOULOS (Ερβέβητος ὁ Φραγγόπουλος), mid-11th-C. commander of Norman mercenaries in Byz. service. He may have been the founder of the Byz. family of Phrangopoulos. Hervé fought in Sicily under George Manakes (1038–40), allegedly with great success. In Byz. service by 1050, he commanded the Normans on the eastern frontier; transferred westward in that year, Hervé and Katakalon Kekaumenos were defeated by the Pechenegs near the Danube. In 1056, Hervé demanded the title of magistros from Michael VI; rejected, he withdrew to his estate at Dagarabe in the Armeniakon theme. During the winter of 1056–57, he won the support of 300 Franks and led them toward Lake Van (1057). After an initial success over Turks, Hervé and his followers were enticed into Chiat, where he was seized and many of his followers slain. Apparently Hervé gained his liberty and supported Isaac I, for a seal indicates he received the title magistros as well as the office of vestiariates and strateletes of the East (Schlumberger, Sig. 659f). According to Matthew of Edessa, ca.1063 Turks in Amidia bribed a “Frankobol” (possibly Hervé) to hold back from battle; subsequently Constantine X executed him.

HESIOD (Ἡσίοδος), early Greek poet popular in Byz.; born Ascr. Boeotia ca.750 B.C. According to M. West (CQ 24 [1974] 161), the Works and Days is preserved in more than 260 MSS (more than 100 of them later than 1480), the Theogony in approximately 70, and the Shield of Herakles in about 60. The oldest MS of the Works (Paris, B.N. gr. 2771) dates from the second half of the 10th C. Planudes and his circle prepared an edition of Hesiod, providing corrections of minor metrical faults. A subsequent edition was issued by Triklinios, who made grammatical and orthographical improvements in the text. The Souda
attributes to Hesiod other works now lost or surviving only in fragments. Quotations from Hesiod, many of them extensive and sometimes not based on the extant MSS, are found in the Ety-

mologika. Scholia to Hesiod derive from an original of ca. 900; Arethas of Caesarea may have played some role in the annotation of the text.

The Neoplatonist Proklos wrote a commentary on the Works based on earlier comments by Plu-
tarch. He read the poem not as literature but as a textbook for moral and practical guidance (C. Fa-
tation of the myths; he also criticized Proklos's proximity and obscurity. The commentary of Man-
uel Moschopoulos is an unpretentious para-
phrase. An allegorical commentary by the deacon John Galenos (12th C.) also survives (Hunger, Lit. 2:61, n.27). The anonymous exegetis of the Theo-
gony in two Naples MSS is probably of the 13th or 14th C. (M. Capone Ciollarro, Atti dell'Accademia Pontaniana 30 [1981] 113–28) and not of the 11th or 12th C. as formerly thought.

Seventeen illustrated MSS of Hesiod are pre-
served, the earliest of the 11th C.; one example, Venice, Marc. gr. 464, was completed in two stages by Demetrios Triklinos on 20 Aug. 1316 and 16 Nov. 1319 and belonged to Bessarion (Furlan, Marciana 42:25–29). Copies of the Works and Days contain a varying number of images of PLOWS and other AGRICULTURAL IMPLEMENTS.

**HESPERINOS.** See Vespers.

**HESCHASM** (from Ἥσυχασμα, “to be quiet, at rest”), conventional term for the method of mo-
nastic prayer and contemplation (HESCHIA) de-
signed to achieve communion with God through interior quietude. The practice centered on the perpetual "prayer of the heart," the constant re-
citation of the short Jesus Prayer, "Lord Jesus Christ, Son of God, have mercy on me" (for an early Byz. commentary on this prayer, see R.E. Sinkewicz, MedSt 49 [1987] 208–20). This spirit-
tuality of contemplative monasticism can be traced back to the desert fathers. The monastery of St. CATHERINE on Mt. Sinai was an important center for the diffusion of this prayer. Descriptions of such prayer are mentioned in DIADOCHOS OF Pho-
tike and JOHN KLIMAX. The terms hesychastes and hesychia, however, are earlier, even common, in 4th-C. monastic and patristic literature. Typically, hesychastes was often used as a synonym for a hermit or anchorite. Late Byz. writers often at-
tached to the prayer physical exercises designed to achieve concentration (prosoche). These psycho-
smotic methods (cf. Hausherr, infra 9 [1927] 164) were viewed as tools and not as an end. Finally, the entire tradition was unified in Pala-
mism, the doctrinal synthesis of Gregory Palamas.

In addition to its original technical meaning, the term hesychasm is often used to describe 14th-
through 15th-C. political, social, and religious movements. Clearly hesychasm became a social and political phenomenon once it was drawn into the 14th-C. social struggle and the Civil War of 1341–47, but those who joined the opposing camps did not do so on the basis of any inherent rela-
tionship or opposition between Palamism and the sociopolitical conflict. Palamites and anti-Pala-
mites could be found in both camps. In sum, any connection between hesychasm and the feudal nobility associated with Kantakouzenos's forces has never been demonstrated. The familiar "Palamas-Kantakouzenos" identification was ulti-
mately political in essence.

A link has also been suggested between the "withered" art of the late 14th C. and the victory of hesychasm with its supposed Iconoclasm, mo-
nastic rigorism, and opposition to the Hellenistic traditions of the Palaiologan "renaissance." This impoverishment, however, was probably caused by economic factors. Besides, the argument fails to account for the unusual extension of Palaiologi-

an art in the Slavic world, supported by Palamite monastic circles. Although the use of the term hesychasm to describe the different currents of the 14th C. is convenient, it is misleading if only because these currents were far more complex and sweeping than those of hesychast spirituality, which was concerned primarily with contempla-
tive prayer (J. Meyendorff in Okeanos. 447–57).

—Lit. I. Hausherr, "La méthode d'oraision des hes-

HESYCHIA (ἡσυχία, lit. “tranquility”), the key concept in Byz., esp. monastic, spirituality through which man ascends to God. Hesychia involves the stilling of the normal human senses and passions in order to perceive the transcendent God. Inner and outer hesychia were not normally to be found in ordinary society, and hesychia became the particular goal of solitary eremitic or hesychastic monks (Justinian I, nov. 5–3). The “philosophy” of hesychasm consists of three essential points: (1) renouncing the importance of family and the world, (2) renouncing one’s own will and attaining complete obedience, and (3) a life of single-minded, pure devotion to God. The prophets Elijah and John the Baptist were seen as biblical prototypes of hesychia, or silent absorption in God. The hesychast leads a life like the angels, he is the anti-type of the angels on earth. His virtues are solitude, ascetic tears (penthos), fear of God, humility, love, and the capacity to suffer. He avoids physical hearing, seeing, and speaking and dedicates himself entirely to the purification of the heart through watchfulness (nepsis, prosoche; cf. pseudo-Makarios/Symeon, PG 34:517,C). A life filled with the pursuit of uniting hesychia and learning permeates the autobiography of Nikephorus Blemmydes. In the 14th C., the concept of hesychia is central to the psychosomatic method of prayer of Nikephorus Sinaite and the doctrine of energies of Gregory Palamas.

HESYCHIOS (Ἡσυχίος), pagan historian; born at Miletos, died after 582. Son of a lawyer, Hesychios is always described as ἀλευστριος. He wrote a world history in six sections (surviving only in fragments), from the Assyrian king Bel to the death of Emp. Anastasios I in 518. Photios (Bibl., cod. 69), who still had access to the entire work, says Hesychios added a (now lost) supplement on the early reign of Justinian I. The Patria of Constantinople (Pregel, Scriptores 1:1–18) preserves a revised fragment from his account of the history of the city of Byzantium up to the time of Constantine I, which is an imaginative blend of fact and fancy. Hesychios also assembled a collection (Pinax or Onomatologos) of biographies of pagan men of letters, exploited by Photios and acknowledged as a prime source by the Souda, but now lost; a work of similar title and scope surviving under his name (ed. J. Flach [Leipzig 1880]) is spurious and late.

HESYCHIOS OF ALEXANDRIA, 5th- or 6th-C. Greek lexicographer who compiled a lengthy, alphabetically arranged list of rare words, mainly from poetry and local dialects, with their explanations, occasionally supported by brief quotations. Very many of these words are not attested in surviving literature. Hesychios’s main source was the lost Periergonopenetes of Diogenianos of Heraclea (2nd C.), itself an epitome of a longer lexicon by Pamphilos (1st C.). His Lexikon, which survives in a single 15th-C. MS, is both abbreviated and interpolated with biblical and other glosses from Byz. lexika. Arethas of Caesarea may have had access to a longer version of the text and perhaps helped transmit it. Though not much used by Byz. literati because its recondite vocabulary was of little use to the rhetorician, Hesychios’s Lexikon was probably used by Theognostos in his treatise on orthography (K. Alpers, Theognostos Peri Orthographias [Hamburg 1964] 27–60), and by Eustathios of Thessalonike in his Homeric commentaries.

HESYCHIOS OF JERUSALEM, theologian and saint; died after 451; feast day 28 March. Hes-
chios lived as a monk near the Egyptian frontier; by 412, according to Theophanes (Theoph. 83.6–7), Hesychios was a well-known presbyter and preacher in Jerusalem. Circa 428/9 he was present at the consecration of the church of Euthymios’s monastery with Juvenal, patriarch of Jerusalem. The many fragments, scattered and translated into Armenian, Georgian, and Latin, tend to confirm the Byz. claim that he wrote a commentary on the entire Bible. Hesychios’s exegetical method is entirely allegorical, also evincing hostility to philosophy as the source of heretical error. His Christology follows that of Cyril of Alexandria, albeit expressed in less technical language. He attacks Arianism and the heresy of Apollinaris and was himself accused (posthumously) of Monophysite leanings in a letter of Pope Pelagius I (555–61). In addition to biblical exegesis and his various homilies and sermons, not yet all published, he wrote a Church History, lost save for the Latin translation of an anti-Nestorian chapter read at the Council of Constantinople in 553 in denunciation of Theodore of Mopsuestia.

HETAIREIA (étaireia), a unit of the emperor’s bodyguard, whose function is uncertain. Litavrin (VizObščestvo 47) surmised that protection of the emperor was only occasionally the responsibility of the hetaireia, its major function being the administration of a special category of estates. Bury (Adm. System 107) identified the hetaireia with the foederati of the 9th C., an unlikely suggestion (Haldon, Praetorians 246). There were several hetaireiai—three or even four (Oikonomides, TM 6 [1976] 130); they consisted largely of foreigners—Khazars, Pharganoi, probably Rus’, and Hungarians. Bury identified the Pharganoi as Turks from Central Asia, esp. Ferghana; however, a chrysobull of 1079 uses the term Pharganoi for Varangians (Laura 1, no. 38,30), and the term could have been an altered form of this ethnic designation.

P. Karlin-Hayter (JÖB 23 [1974] 116, 116) suggested that the epi megalos hetaireiai (commander of the grand hetaireia) was a subordinate of the hetaireiaches.

By the end of the 11th C. the structure of the hetaireia changed. Bryennios (Bryen. 77.5–8) says the hetaireia was customarily made up of noble youths. The various hetaireiai were probably consolidated into a single unit; Anna Komnene (An.Komm. 1,20.8) speaks of hetaireia in the singular in a scene where Bryennios (269.12–13) used the plural form. Already in the 12th C. and more often in the 14th C. the term hetaireia was employed generically to describe the private retinue of a magnate bound together by an oath.

A.K.

HETAIREIACHES (étaireíearches), also megas hetaireiaches, commander of the hetaireia, a semi-military official (stratarches) responsible for the security of the imperial palace; he also carried out delicate assignments for the emperor and could be placed at the head of an army. Unknown at the time of the mid-9th-C. Taktikon of Uspeiskij, the hetaireiacheres (and megas hetaireiacheres) appears in the Kletorologion of Philotheos at the end of the 9th C. Narrative sources first mention the hetaireiacheres under Michael III. The post acquired particular significance at the beginning of the 10th C. when the future emperor Romanos I Lekapenos held this office; he was succeeded by his son Christopher. The militant emperors of the second half of the 10th C. pushed the hetaireiacheres into the background, but the post regained influence in the 11th C. when some court eunuchs held it. Under the Komnenoi hetaireiacheres was not a high position and was occupied primarily by nobles of the second echeion, even though we find among the hetaireiaarchai some relatives of the ruling dynasty, such as George Palaiologos (O. Lampside, Byzantion 40 [1970–71] 403–06). In the 14th C. pseudo-Kodinos stressed the hetaireiacheres’s functions of control over foreigners rather than his duty as the guardian of the emperor. Under Andronikos II members of some great families (Mouzalon, Nestongos-Doukas) held this post and the hetaireiacheres often functioned on missions far from the palace.
HETOIMASIA (ἕτοιμασία, lit. “preparation”), the prepared throne for Christ’s Second Coming or PAROUSIA (Ps 97). Hetoimasia is the name conventionally given to images of a richly appointed throne bearing—in some combination—Gospel book, Cross, crown, dove, and Passion instruments. The name is not coeval with the image. Initially, in the 5th–7th C., the image signifies not the empty throne awaiting God, but—in accord with antique use of the throne to represent the presence of a god or emperor—God’s mystic presence upon the throne. Similarly, in apses and cupolas from the 12th C. onward, the hetoimasia is flanked by officiating bishops or angels and bears the objects of their devotion: the Passion instruments, which signal the saving power of Christ’s appearance and sacrifice, both in life and in the liturgy, and the dove, which indicates the role of the Trinity in the Eucharist. By the 11th C., however, the hetoimasia is also found in compositions, above all the Last Judgment, that included Christ himself enthroned. In such cases the hetoimasia displays the Cross and Passion instruments just as the True Cross was displayed upon a throne in court rituals; here it represents not Christ himself mystically enthroned, but the sign of his Second Coming. It carried this meaning into its many independent appearances on reliquaries, icons, MSS, and sanctuary arches. In such instances it acquired, from the 12th C. onward, the label of the “prepared throne” of the Second Coming.

HET’UMIDS, second dynasty to rule Armenian Cilicia (1226–1341). The Het’umids were originally lords of Lambrom and Barbaron near the southern approaches to the Cilician Gates, and as such first pursued a pro-Byz. policy at odds with that of the ruling Rubenids. The theologian Nersès of Lambrom was a member of this family. After the death of Leo II/1, the regent Constantine of Lambrom arranged the marriage of his own son, Het’um I (1226–69) to the Rubenid princess Zabel, thus placing his family on the Cilician throne.

After achieving royal power, the policies of the Het’umids then shifted toward recognition of Mongol suzerainty, and Het’um I himself journeyed to the court of the khan in 1253. Cilicia prospered under his rule, and under that of his immediate successor, Leo II/III (1269–89). The latter was helped by Het’um’s brother Smbat the Constable. Serious difficulties arose, however, with the accession of Het’um II (1289–1301) who faced simultaneously the conversion of the Mongols to Islam and the advance of the Mamluks. In 1307 the Mongols executed the new king Leo III/IV together with his uncle, the former king Het’um II, who had abdicated in favor of Leo. Internal quarrels between pro- and anti-Latin parties weakened the realm still further. Osin I (1308–20) was murdered by his relatives; his heir Leo IV/V (1320–41) was killed by the Latinophiles, who then offered the crown to the Lusignans.

HEXAEMERON (lit. “six days”), a term denoting the account in Genesis 1 of the creation of the universe in six days, also connotes the patristic commentaries and other writings on this narrative that form a distinctive literary genre both in Byz. and in the West. Though preceded by Theophilos of Antioch (died after 181), apparently the first Christian user of the word, the nine homilies of Basil the Great on the Hexaemeron are the first patristic landmark. Rejecting pagan theories as self-contradictory, Basil presents a firm Christian view based on Moses’ supposed authorship of Genesis. The universe is not eternal but has a moral purpose. Concerned to show the active role of God as creator, Basil rejects allegory for science, presenting the elements and beauty of the world in a literal way. His sensibly eclectic philosophy and science draw heavily on Aristotle, Plato, and Poseidonios. Basil’s homilies were immediately and enduringly influential. Gregory of Nyssa supplemented them with his On the Making of Man, an anthropological disputation on man’s creation, and the Apologetic Explication on the Hexaemeron, which continues Basil’s rejection of allegory. Other patristic contributors include Theodore of Mop-
tempts (fragments concerning Gen 1–3 survive) and Severianos of Gabala. An outstanding (albeit rare) Byz. poetic treatment is the iambic Hexameron by George of Pisidia (G. Bianchi, Aevum 40 [1966] 35–52). In the West, Basil’s homilies were exploited by Ambrose of Milan and translated into Latin ca. 440 by the African Eustathios; they were also translated into Church Slavonic by John the Exarch. The Hexameron of Robert Grosseteste (written ca. 1232/3) was greatly influenced by the Hexameron of Basil (R.W. Southern, Robert Grosseteste [Oxford 1986] 204–10).

-B.B.

HEXAFOLLON. See Parakolouthemata.

HEXAGRAM (ἕξαγραμμα, lit. “six-grams”), a silver coin of the 7th C. weighing 6.82 g, that is, six grammata or scruples, and probably reckoned 12 to the solidus. Introduced by Herakleios in 615, it was struck in huge quantities throughout his reign and that of Constans II. Specimens of Constantine IV are rare, however, and under his successors it became a ceremonial coin only occasionally struck, ceasing entirely under Anastasios II.

Lit. P. Yannopoulos, L’hexagramme (Louvain-la-Neuve 1978).

-Ph.G.

HEXAMETER, the meter of Homer, enjoyed great prestige throughout the Byz. period. In the 4th–early 7th C. the hexameter was the vehicle of a widespread group of professional poets radiating from Egypt (e.g., Pamprepios, Christodoros, Kolouthos, Nonnos, and Triphiodoros), many of them reaching high civic positions, who concentrated on mythology, ekphrasis, and local history. Their use of the hexameter was extremely complex, adding many rules to those of the Alexandrian poets, which themselves were more strict than those of Homer. It is generally assumed that this complexity was a self-conscious refinement, but some features of their rules plainly relate to the final disappearance of the sense of syllable quantity in Greek, which probably took place within this period. Until the end of the 6th C., the writing of hexameter, though an archaic feature, appears to have remained a living means of artistic expression, rather than the revival of a dead form. Normally, poetry written in hexameter preserves an archaic lexical pattern.

The last poem of this tradition is credibly attributed to George of Pisidia and its form has suggested a possible link to the political verse. Subsequent hexameters are clearly antiquarian exercises, based (with greater or less success) on ancient models, rather than following the development of a live form of expression. Some of the ceremonial verse of Theodore Prodromos, however, is in the hexameter, perhaps implying public recitation in the 12th C. Later, this meter was used by Nikephoros Blemmydes and esp. Theodore Metochites. Surviving treatises on hexameter include one ascribed to Plutarch, another to Herodian (Krubacher, GBL 596ff).

-M.J.J.-A.K.

HEXAMILION (Ἑξαμιλίον, “six-miler”), barrier-wall across the Isthmus of Corinth, from the Saronic Gulf to the Gulf of Corinth (an actual distance of about five miles), designed to defend the Peloponnesos against an attack from the north. Literary and archaeological evidence show that the isthmus was defended at various times in antiquity and plans were made to fortify it during the crisis of the 3rd C. The devastation of the Peloponnesos by Alaric led to the realization of this plan in the early years of the 5th C., at about the same time as construction of the Land Walls of Theodosios II in Constantinople. The wall was 10 Roman feet (nearly 3 m) thick, approximately 8 m high, with towers that were primarily rectangular; a large fortress was located near the former Sanctuary of Poseidon at Isthmia. The fortifications were apparently allowed to fall into disrepair and were restored by Justinian I. The Hexamilion was defended during the time of the Slavic invasions, but it seems not to have been an effective barrier. Niketas Choniates (Nik.Chon. 610.5–7) reports that the isthmus was unsuccessfully defended against the Crusaders in 1205.

In 1415 Manuel II rebuilt the Hexamilion, and during the next half-century it served as the primary defense of the Peloponnesos. The Turks breached the walls in May of 1423 and the future
emperor Constantine XI rebuilt it in 1443; subsequently a prophecy (perhaps inscribed on the wall itself) was circulated to the effect that the Hexamilion would protect a revived empire (F.W. Bodnar, A/JA 64 [1960] 165–72). The Hexamilion fell again to the Turks on 10 Dec. 1446 despite a spirited defense. The Venetians restored the fortifications in 1462. Another Hexamilia, ancient Lysimachia, was a bishopric suffragan to Hierakleia in Thrace (Laurent, Corpus 5:1:229–31).

HEXAPTERYGA. See Seraphim.

HEXAPTERYGOS, THEODORE, teacher and writer; born ca. 1180, died Nicaea ca. 1236. Educated at the Patriarchal School of Constantinople, Hexapterygos (Ἐξάπτερυγος) was evidently the student of George Tornikes and Constantine Stilbes. He became a teacher of poetry and rhetoric in Nicaea and taught George Akropolites and four other students sent to him by Emp. John III Vatatzes in 1234 (Akrop. 1:49.24–50.3). Six tales (diegemata) and a funeral oration on a certain Stephanos, one of his relatives, are extant in a Vienna MS (ÖNB, philol. gr. 254). His seal, bearing a dodecasyllabic legend, is preserved in the Dumbarton Oaks Collection (acquisition no. 58.106.4608).

HIERAPOLIS (Ἱεράπολις, "holy city"), name of two cities in the late Roman Empire, one in Phrygia, the other in Syria.

Hierapolis in Phrygia (now Pamukkale) rarely appears in historical sources, but excavations have revealed significant Byz. remains. Notable among them is the richly decorated octagonal Church of St. Philip, built on the site of the apostle's alleged tomb and surrounded by a large rectangular colonnade in the late 4th/early 5th C. It was never rebuilt after its destruction by fire in the mid-6th C. The site also contains four other large basilical churches of the 5th–6th C.; one of them was built into a Roman bath. The churches, large and numerous for a relatively small city, indicate that Hierapolis was considered a particularly holy site. Secular buildings are poorly known; the city walls have been assigned to the 4th/5th C. By the 10th C. Hierapolis was in decline: churches had been replaced by small chapels; squatters occupied the shrine of St. Philip; and the city came to resemble a village. By 1190 it was ruined and abandoned. Originally a suffragan bishopric of Laodikeia, Hierapolis became a metropolis before 553.

Hierapolis in Syria (Μέμπετζε in Leo Dia c. 165.22, Syr. Mabbug, Ar. Manbij), city in northern Syria, northeast of Berroia (Aleppo); probably under Constantius II it became the capital of Ephratensis. Hierapolis was a military headquarters during the wars with Persia: in 363 Julian assembled his army there. In 540 Chosroes I imposed tribute on the city, and in 590 Komentiolos welcomed Chosroes II near Hierapolis and started his expedition from there into the Persian interior. Ammianus Marcellinus (Amm.Marc. 14.8.7) calls Hierapolis an "ample city." Justinian I had to shorten the extent of its walls since by his time they encompassed abandoned areas and were difficult to defend (Prokopios, Buildings 2.9.13); he also tried to improve the city's water supply.

A religious center in antiquity, Hierapolis became an ecclesiastical metropolis subject to Antioch. The 6th-C. rhetorician Prokopios of Gaza relates that Indians, Phoenicians, Scythians, Hellenes, and inhabitants of Asia Minor congregated in Hierapolis to hear panegyrics. Hierapolis developed into a Monophysite center; Philoxenos of Mabbug was bishop there in the early 6th C., and Thomas of Harqel in the early 7th.

Taken by the Arabs in 637, Hierapolis became a part of the jund of Qinnasrin yet retained Christian churches and relics, perhaps including the Holy Tile, or Keramion (its original location is also assigned to Emesa). Abd Firās, governor of Manbij, was captured by the Byz. in 962 and taken to Constantinople, where he wrote poems about his longing for his city. According to Yahyā of Antioch, in 966 Nikephoros II Phokas forced the
people of Manbij to surrender the Holy Tile to him. Leo the Deacon, however, says that when John I Tzimiskes seized Hierapolis in 974, he found other relics: Christ's sandals and the bloody hair of John the Baptist (Leo Diam. 165.21–166.3). In 1025, Hierapolis was taken once more by the Muslims but was again recovered by the Byz. in 1068, when Romanos IV captured the city and fortified its citadel. The Byz. then retained it until 1086, when it was taken by Malikshān. The Crusaders occupied Hierapolis in 1110/11. John II Komnenos passed the city by without attacking it, and the Greeks never reestablished their rule over Hierapolis.

-M.M.M.

Hieria (Turk. Fenerbahçe). The name (spelling varies, 'Iepia, 'Isepia, 'Hpia) is derived from Hiera Akra. Hieria, an Asiatic suburb of Constantinople, is a promontory, terminating in a little peninsula and situated opposite Chalcedon to the east. Here Justinian I built a palace with a harbor and a Church of St. Mary (Prokopios, Buildings 1.3.10, 1.11.16–22). Hieria was the residence of Heracleios (611, ca.636) and the seat of the Iconoclastic council of 754 (see Hieria, Local Council of). A chapel of the Prophet Elijah was added by Basil I, who also resided there. Further buildings were put up by Constantine VII (TheophCont 451f). Site of one of the emperor's summer palaces, Hieria often served as a reception point of triumphal returns from campaigns in the East. The existence of the palace is documented until 1203, but the archaeological remains (cistern, harbor breakwater, funerary inscriptions) are meager.

Hieria, Local Council Of. Constantine V summoned this council (10 Feb.–8 Aug. 754) at the palace of Hieria in Chalcedon to condemn the veneration and production of images as idolatrous and pagan. The council regarded itself as having ecumenical authority, a claim subsequently rejected by the church because four of the five patriarchs had refused to participate. Actually, the see of Constantinople was itself vacant at the time. The 338 bishops in attendance were guided primarily by the emperor's own theology and devotion to Iconoclasm. Their dogmatic definition insisted that a pictorial representation of God in any form was impossible. They argued that an icon of Christ either depicted his humanity alone, or both his humanity and divinity. That is, it either separated Christ's human nature from his divine, which was Nestorianism, or it confused the two, which was Monophysitism (Mansi 13:252A). Indeed, the only true image of Christ, representing him in his totality, was the eucharist. This ingenious Christological argument, later condemned as heretical by Nicaea II, was clearly intended to go beyond the purely scriptural prohibition of images used previously by Iconoclasts. The council's definition survives solely in the acts of Nicaea II.

Hierissos (Iepirosós, also Erisso), town (kastro) in the Macedonian Chalkidike near the neck of the Athonite peninsula; it was founded on the site of the insignificant ancient city of Akanthos and is known from the 9th C. It formed an urban community that possessed common land (koinotopian), bought and rented lands collectively, was responsible as a whole for paying rent and taxes, and collectively defended its rights in court. A unique act of 982 (Iviron, no.4) bears crosses indicating signatures of 74 notable inhabitants (oikotores) of the kastro, of whom at least 14 had Slavic names (one having signed in Glagolitic). 24 or more of them were clerics (priests, lectors, deacons, etc.), three or five had low secular offices (komes, archon, kouboukleisios) as well as exarch and domestikos who may have been either secular or ecclesiastic, two were described as owners (oikodespotai), and only one was a craftsman—a chalkew (smith). The importance of Hierissos grew as Mt. Athos became a major monastic center—it served as a stopping place on the way to the peninsula. Around 883 John Kolobos founded the Kolobou
HIEROKLES, presumed author of the Synedemos, a geographical list of the cities of the Eastern Empire, dated before 535. Nothing else is known of the man. As preserved, the Synedemos is a bare list of cities, arranged according to provinces and in rough geographical order within the provinces. The document undoubtedly owes its preservation to confusion with episcopal notitiae, which it superficially resembles. The Synedemos, however, seems to have been based on secular administrative documents from the mid-5th C., although additions to the list were made through the reign of Justinian I, at which time Hierokles presumably wrote. It has been suggested that the present text of the Synedemos is an epitome of a fuller, geographically oriented guidebook, but the list of cities is very different from the itineraria and it contains information different from what one would expect in a work of merely antiquarian interest. In format the Synedemos can be compared to the Description of George of Cyprus and to the Paris MS. B.N. gr. 1115A (the so-called "Iconoclast notitiae"), to which it is certainly related. Although there are many errors and lacunae in the text, its reliability as a guide to the overall municipal structure of the empire seems sound.

ED. A. Burckhardt, Hierolēs synedemos (Leipzig 1893). E. Honigmann, Le Synedemos d'Hierolēs et l'apocryphe geographique de Georges de Chypre (Brussels 1939).

HIEROMONACHOS (ἱερομονάχος), or hieromonk, a monk ordained as a priest. Justinian I (nov. 133, 2) decreed that four or five priests were sufficient for each monastery; the typikon for the Petkrittos monastery (ed. Gautier, 59-63) prescribed six priests for a community of 50 monks. The hieromonachos was charged with conducting the services in the monastic church.

HIERON (ἱερόν), name of two places in Asia Minor.

HIERON ON THE BOSPOROS, a fortress guarding the approach to Constantinople, now Anadolu
Kavak. Justinian I replaced its archon with a comes Stemon Pontikes thalasses whose duties included surveillance of shipping and collection of customs at the local demousian telos. By the 9th C. a para-thalassites took the place of this official. The customs revenues of Hieron increased from the 9th C. onward, as traffic with the north grew; they were considered a valuable source of income during the revolt of John (VI) Kantakouzenos in 1345, when both the government and the rebel attempted to increase them. Hieron was attacked in 822 by Thoman the Slav and in 941 by the Rus’, whose fleet was destroyed there. It was taken by the Genoese in 1350 and by Mehmed II in 1452. Hieron contains a powerful fortress (Yoros kalesi), perhaps the work of Manuel I Komnenos, with Genoese rebuilding.

Hieron near Miletos. Hieron was also the Byz. name for ancient Didyme whose famous temple of Apollo, fortified against Gothic attack in the late 3rd C., was repaired by Diocletian and Julian; subsequently a church was installed in it. The fortress was strengthened in the 7th C. and became the nucleus of a new bishopric, Hieron or “the Temple,” a suffragan of Miletos attested through the 12th C. Alexios I Komnenos enlarged the fort (C. Foss, GOrThR 27 [1982] 157f) and used it as a base for his reconquest of western Asia Minor. Hieron, which consisted only of one ancient building and a surrounding village, is important for illustrating the nature of a small Byz. city and bishopric.

Hieronymus. See Jerome.

Hikanatoi. See Domesticos ton Hikanaton.

Hikanosis (ἱκανωσις, lit. “equalization”), a fiscal term used in a treatise on taxation (Dölger, Beiträge 122.41) to designate the operation by which the surveyor ensured that each taxpayer held no more land than the quantity corresponding to the tax that he was paying. The process is also described (ibid. 121.31–32) as assessing “the land that corresponds to the figure (of tax) due by the stichos.” The term hikanosis and its derivatives are found in a number of documents. A chrysobull of Alexios I of 1089 (Xenoph., no.2.14–29) explains that the emperor had established a “norm” (metron) in view of assessing how much land should correspond to each nomisma (of tax paid by the landowner). Also in 1089 Anna Dalassene ordered that the land “imposed” on the monastery of Docheiarion be “equalized in accordance with its payment [teloumenon] to the fisc” (Docheiar., no.2.23–24). In the 14th C. the verb hikanopoiesthai (“perform an equalization”) was applied to the assessment of land in accordance with the granted posotai (Docheiar., no.26.3–4; Dions., no.2.32–33). If, after the hikanosis, it appeared that the taxpayer held more land than he was entitled to (according to the amount of tax that he paid), this “superfluous” land (spirttai ge or perisseia) could be taken away from him.

Hilandar Monastery, Serbian monastery on Mt. Athos, located near Esphigmenou, 2 km inland from the northeastern coast of the peninsula. Originally a Greek foundation, Hilandar (Χελανδάριον) may have been established in the late 10th C. by George Chelandarios (“the Boatsman”); by 1015 it was deserted and had been handed over to the Kastamonitou monastery. The plan of the main church and possibly its opus sectile floor date from the monastery’s foundation, as do portions of the eastern enclosure wall and a large area to the southeast, including the Tower of St. George.

In 1198–99 the monastery was restored as a Serbian koinobion by Stefan Nemanja (died 1199), who took the monastic name Symeon, and by his son Sava, who composed in 1199 a typikon based on the rule of the Euergitis monastery in Constantinople. They constructed a new church and added a refectory, which was later partly rebuilt. By the early 13th C. Hilandar was inhabited by
9o monks. A chapel in an upper story of the Tower of St. George contains wall paintings dated by Bogdanović et al. (intra 64) to the mid-13th C.
The next great benefactor of Hilandar was Stefan Uroš II Milutin, who in 1309 replaced the late 12th-C. kathedikon with a new triconch church with narthex (S. Nenadović, *HilZb* 3 [1974] 85–208; P. Mylonas, *HilZb* 6 [1986] 7–45) and also restored the refectory; he strengthened the monastery’s fortifications and added a tower at the harbor. Originally endowed by Nemanja with 15 Serbian villages, Hilandar became very wealthy and, by the mid-14th C., owned one-fifth of the Athos peninsula, plus lands from Macedonia (esp. Strymon and Chalkidike regions) to Serbia, 360 villages or parts of villages in all. At this time it held fourth place in the Athonite hierarchy. Hilandar was completely independent of the authority of both the protos and Byz. emperor. The hegoumenoi of Hilandar frequently became archbishops of Serbia.

Hilandar became an important Serbian Orthodox religious and cultural center (see SERBIAN LITERATURE): the Serbian writers Domentian, Teodosije, and Danilo were all monks of Hilandar. It was also a treasurershouse of Serbian art. It contains an important collection of icons, notably a mosaic icon of the Hodegetria (Furlan, *Icone a mosaico*, no.7); it is ascribed by V. Djurić to the end of the 12th C. Djurić (*BZ* 53 [1960] 333–51) argued that in the 14th C. Hilandar was a center of icon production, and dated the Ćin (an icon row from the church’s templon) to ca.1360, seeing there the same hand that painted a Gospel book (cod.9) in the monastery’s library. The Serbian variant of Old Church Slavonic developed at the monastery, which housed a scriptorium, a center for translation, and bilingual library. Most of the approximately 1200 MSS preserved at Hilandar are in Slavic; esp. notable are the numerous illuminated MSS of the 13th C. The archives, which include 172 Greek and 154 Serbian documents from the medieval period, provide information on the structure of the countryside, pronota, taxation, and the economic inequality of the peasants.

---

**HIMITATION (μετάφρασμα), a mantle, the Greek equivalent of the Roman *pallium*. It was originally an oblong outer garment of wool or linen, worn over the tunic, and draped over the left shoulder and body in such a way as to leave the right shoulder free. In this specific form it survives in all Byz. representations of figures in antique garb, such as Christ, the apostles, and prophets, but it was apparently not in daily use after late antiquity.

In the Byz. monastic *typika*, the word *himation* refers to a different garment, namely the dark cotton mantle worn by monks (e.g., P. Gautier, *REB* 32 [1974] 65,609) and nuns. When used in the plural (e.g., P. Gautier, *REB* 40 [1982] 67,930), it has the more general meaning of clothing.

**HIMERIOS**, teacher and orator; born Prusias, Bithynia, between ca.300 and 310, died after 380. Himerios ("μετάφρασμα") spent most of his life at Athens, first as a student, then (probably) in an official teaching post. Though his pagan memorialist Eurapios would not think so, his most distinguished students were Basil the Great and Gregory of Nazianzos. He died old, rich, blind, and epileptic. He produced at least 75 speeches and declamations; time has spared only 24, with excerpts and fragments from ten or so others. Thematically, they are the traditional mélangé of the old-style sophist: reworkings of great moments in Athenian history, school lectures, addresses to high officials—elegant nothings, for the most part. Yet Photios (cf. A. Colonna, *Miscellanea Giovanni Galbiati*, vol. 2 [Milan 1956] 95–106), a great admirer of their style, compares his pagan stance to the "secret yappings of dogs amongst us" (*Bibl.*, cod.165), which may suggest he had read items more detectably pagan than anything now extant.
HIMERIOS (Ὑμηριός), admiral under Leo VI; died Constantinople? 912/13. A relative of Zoe Karbonopsina, Himerios belonged to the ranks of civil officials and was given, by chroniclers, the offices of protasekretis and logothetes tou dromou; he had the title of patrikios. Leo VI sent Himerios in 904 to prevent Leo of Tripoli from besieging Thessalonike, but Himerios did not dare attack the Arab fleet; later, however, he won a brilliant victory over the Arab fleet “on the day of the apostle Thomas” (6 Oct.). The exact year of this battle is questionable; Grumel assumes that it occurred in 908, but 905 or 906 are more plausible dates (Vasiliev, Byz. Arabes, 2:1:185, n.1); reportedly sent with Himerios, Andronikos Doukas unexpectedly defected. Arethas of Caesarea praised Himerios’s victory (P. Karlin-Hayter, Byzantium 29–30 [1959–60] 300.28). In 911 Himerios, as droungarios of the fleet, commanded a fleet sent against the Cretan Arabs but was defeated by the Arab admirals Damian and Leo of Tripoli off Chios in April 912 (R. Jenkins, Hellenika supp. 4 [1953] 277–81). After his return to Constantinople, Himerios was imprisoned by the emperor Alexander and died six months later.

HIMS. See EMESA.

HIMYAR, the land of the Himyarites ( latina), a state in South Arabia (now Yemen) that included the littoral on the Red Sea and Indian Ocean (with cities such as Najran and Zafar) and inland territory inhabited by Bedouins. Himyar played an important role in late Roman trade with Axum and India, bringing to the Mediterranean spices, myrrh, silk, etc. For a short time in the 4th C. Himyar was under Axumite domination, as it was to be again in the 6th C. An attempt in the early 6th C. to establish independence under a native ruler, Dhū-Nuwwās, was suppressed by the Axumites supported by a navy sent by Justin I. The new ruler, Abraha, however, while continuing tribute payments to Axum, conducted an independent policy and managed to consolidate his kingdom and to expand its borders northward. Justinian I tried to involve Himyar in active warfare against Persia but the Himyarites avoided direct confrontation with the Persians. Circa 570 some Himyarite chiefs invited the Persians into their country, and King Masruq, the last member of Abraha’s dynasty, fell in battle; Himyar was placed under Persian governors with their residence in San‘ā.

Christianity penetrated Himyar in the 4th C. (acc. to Philostorgios), although Theodore Lector dates its appearance in the area much later, in the reign of Anastasios I. The country became a battlefield between Christianity and Judaism, which had had a strong tradition in Himyar. Christianity, in its Monophysite version, triumphed with military support from Axum and Constantinople; local bishops acknowledged the jurisdiction of Alexandria. When Muhammad sent his first embassy to South Arabia, the emissaries did not meet any serious opposition from the local population, and the Himyarites converted to Islam.

HICIPTRICA. See ANNALES BERTINIANI.
contains miniatures depicting the treatment of sick horses and a portrait of Hierokles (Weitzmann, Grundlagen 24).

Byz. veterinarians were forced to invent fresh words to describe the ailments of animals, quite often viewed as analogous to human diseases, and the drugs prescribed and theories assumed are similar to comparable matters in Byz. medicine as a whole. Farm lore is prominent in the hippiatric literature, much as it is for the simple veterinary care suggested for horses, dogs, domestic birds, pigs, and even bees as listed in the Geoponika.

HIPPOCAMP (ἱππόκαμπος), seahorse, a fabulous monster with a horse’s body and fish’s tail on which sea deities would ride. The hippocamp is infrequently mentioned in literary texts and plays no role in mythology; the church fathers ignore it. The image does often appear, however, in both classical and Byz. art, notably on bone caskets and boxes.

—A.K.

HIPPODROMES, arenas for horse and chariot races as well as other events.

Hippodrome of Constantinople. According to unverified tradition, the Hippodrome was built by Septimius Severus (shortly after 196) and completed by Constantine I, who provided it with an imperial box (Kathisma) and built the Great Palace next to it. It served not only as a sports arena, but also as a setting for the proclamation of emperors and the celebration of triumphs and as a focus for the public life of the city’s population.

As a building the Hippodrome was a typical Roman circus of the period of the Tetrarchy. It was hairpin-shaped, with its gates (Lat. carceres; Gr. κανκελλα, θυραι) toward the northeast and its curved end (Sphendone) pointing southwest. The arena was divided into two tracks by a slightly oblique barrier (Lat. spina, Gr. euripos), upon which were placed obelisks, statues, and other ornamental features. Rising tiers of seats supported on vaulted passages surrounded the arena except for the side occupied by the carceres. Above the seating ran a continuous colonnaded passage. The Kathisma rose along the east side, probably somewhat south of center, while the west side, as in some other Roman circuses, followed a somewhat irregular line. The exact length of the Hippodrome is unknown, but must have been about 450 m. The outer width measured at the base of the Sphendone is 117.5 m and the inner width 79.5 m. The seating capacity may be tentatively estimated as somewhat above 100,000.

The 12 gates were equipped with a mechanism that enabled them to be opened simultaneously. At their center rose a tower surmounted by a quadriga of four gilded horses (which at the time of the Fourth Crusade were transported to Venice, where they remained until recently on the façade of S. Marco). Starting from the gates, the competing chariots made for the turning post (Lat. meta, Gr. kumptes) marking the north termination of the spina, then went round the course seven times in a counterclockwise direction. The finishing line was probably in the western track, directly in front of the grandstands (Gr. demoi) occupied by the partisans of the two main factions. Opposite these grandstands was the imperial Kathisma, corresponding to the palatina of the Circus Maximus. It was built into the seating and appears to have been a two-storied structure, with the imperial loge and a reception hall on the first floor. It communicated with the palace by means of a spiral staircase (Gr. κοχλία) and was protected at the rear by bronze doors, which barred access to the palace in the event the Kathisma was occupied by insurgents, as happened during the Nika Revolt (532).

In the late Roman period chariot races were held frequently, but by the 9th C. they were reduced to about three a year, not counting those for special occasions such as imperial triumphs or the reception of foreign potentates. These special races went on until the Latin occupation. The conduct of the games is minutely described in the De ceremoniis (bk.1, chs. 68–73). A schematic representation of the games has survived among the frescoes of St. Sophia, Kiev.

The structure of the Hippodrome was kept up until ca.1200. In 1203 the west wing was burnt down and soon thereafter the Crusaders melted
down the bronze statues that had decorated the spina, as Niketas Choniates (Nik.Chon. 647–55) records. In the Palaiologan period the Hippodrome, now partly in ruins, was used for jousts. A view, published by O. Panvinio (1600), illustrates its condition in ca. 1480. Surviving portions include the tall substructure of the Sphendone, the substructure of part of the east wing, and three monuments of the spina, namely: (1) the Egyptian obelisk of Thutmose III set on a marble base bearing reliefs and bilingual inscriptions of Theodosios I from 390 (see OBELISK OF THEODOSIOS); (2) the Serpent Column, the central shaft of the Delphic tripod dedicated by the victorious Greeks after the battle of Plataea (479 B.C.); and (3) the masonry obelisk or Colossus, bearing an inscription of Constantine VII recording its re-decoration with bronze plaques. Two marble bases (out of seven), which had supported the statues of the charioteer Porphyrios, have been unearthed in the Turkish Seraglio. In 1952 part of the seating of the west wing of the Hippodrome was excavated.

The Hippodrome was a monument rich in legends. Its Roman origins and pagan associations with the Dioskouroi, Poseidon, Helios, etc., were still remembered in the 6th C. (John Lydos, De mensibus 1:12; 4:30, 73; Malal. 173–77). Various features of it received a cosmic interpretation: the 12 gates denoted the signs of the zodiac; the seven races run round the spina signified the spheres of the planets, the colors of the four factions stood for the four elements, etc. Confused historical memories, e.g., the slaughter of the Nika riot, were woven into the earlier mythology.

**Hippodromes outside of Constantinople.** Hippodromes existed in many other cities of the empire, but all of them went out of use after the 6th–7th C. The old Circus Maximus in Rome was reconstructed in the 4th C., and at the beginning of the same century Maxentius built a circus 520 m long and 42 m wide; an obelisk was erected on its spina or barrier (A. Frazer, ArtB 48 [1966] 385–92). The circus of Maxentius had space for 10,000 spectators. Private hippodromes in Rome are also mentioned (A. Manodori, Anfiteatri, circhi e stadi di Roma [Rome 1982] 225–29). The circus in Carthage, cleared by excavation, seems to have been active through the 5th C.—the area was later used for a rubbish dump (The Circus and a Byzantine Cemetery at Carthage, ed. J.H. Humphrey, vol. 1 [Ann Arbor 1988] 114–16).

The existence of hippodromes in the East is attested to primarily by written sources. Papryri, inscriptions, and occasional references in historical works describe the organization of circus factions (Blues and Greens) rather than the physical structure of the buildings. Data concerning factions survives from Alexandria, Oxyrhynchus, Caesarea Maritima, Antioch, Emesa, Heliopolis, Kyzikos, Ephesus, Priene, Stratonikeia in Caria, and several other cities (A. Christophilopoulos in Charisterion eis Anastasion K. Orlandou, vol. 2 [Athens 1966] 558–60). Hagiographical texts describe horse races in Gaza, the factions of the hippodrome in Emesa, and the hippodrome in Damascus (Rudakov, Kultura 87f). It is plausible to assume that chariot racing declined after the 6th C. and provincial hippodromes are scarcely ever mentioned in later centuries: Eustathios of Thessalonike (Eust. Thess., Capture 106.30) speaks of a politikos (municipal) hippodrome in Thessalonike, but Rudakov is wrong in asserting that the vita of Lazaros of Mt. Galesios (AASS, Nov. 3:580B) mentions horse races in Magnesia; the hagiographer is referring to hippodromia in Constantinople.

The average hippodrome took about five years to build and, when complete, measured about 450 × 70 m. The omission of an upper colonnade, still present at the Circus Maximus, could be because of the lack of a local tradition in equestrian sports or a perceived need for haste in construction. In the late Roman world hippodromes played an essential role as a setting both for court ceremonial and the ruler’s appearance before his subjects. Hence they were frequently built in a city that an emperor determined as his chief residence. Rejecting the pattern that had prevailed down to the time of Constantine I—when hippodromes were built outside the city—most such structures of the 4th C. and after were built within the walls and often next to the imperial residence. Apsidal buildings adjacent to the hippodromes of Sirmium, Milan, and Thessalonike suggest provision for an imperial loge. As at Constantinople, therefore, hippodromes became in effect an integral part of the palace.

---

HIPPOKRATES. See Scientific Manuscripts, Illustration of.

HIPPOLYTOS, in Greek mythology the son of Theseus and the Amazon Hippolyte, a victim of his stepmother Phaedra’s passionate love for him. When Hippolytos repulsed her advances, Phaedra accused him of seducing her, and Theseus asked Poseidon to kill Hippolytos. Phaedra’s attempted seduction appears on a silver plate of the 5th or 6th C. (DOCat 1, no. 7) and again, half a millennium later, in bone carving (Goldschmidt-Weitzmann, Elfenbeinskulpt. I, no. 30). In literature Hippolytos becomes a symbol of chastity: thus Themiostios returns several times to the legend of Hippolytos, emphasizing his sophrosyne (e.g., or. 1:88,9–10, 2:202,11–12). Malalas describes at length the story of Hippolytos, with the intention of exonerating Phaedra and showing that both she and Hippolytos were innocent and that Theseus was fully responsible for their deaths. Diverging from ancient sources, Malalas presents Hippolytos as a man of dark complexion, short-haired, snub-nosed, broad-faced, with sparse beard and large teeth; he also stresses that Hippolytos was a mature and strong hunter and calls him “Theseus’s son by a concubine (pallake)” (Malal. 88,13). It is impossible to judge to what extent Malalas’s story may have been influenced by the “triangle” of Constantine I–Fausta–Crispus; the latter was Constantine’s son by the concubine Minervina (Zosim. 2:20,2), a young but talented military commander, who perished (along with his stepmother Fausta) as a victim of his father’s jealousy.

Hippolytos is depicted in art as a hunter in a MS of pseudo-Oppian in Venice (Marc. gr. 479; Weitzmann, Gr. Myth. 115, fig. 130).

HIRA, Arab city on the lower Euphrates, the capital of the Lakhmids prior to the rise of Islam. Nestorian Christians exiled from Byz. fled to Hira, from which Christianity spread in the Arabian peninsula; the city became officially Nestorian with the conversion of the last Lakhmid king al-Nu‘man (580–602). After his death the city received a Persian governor and in 633 it capitulated to Muslim arms. Hira was eclipsed by Islamic Kufa, but in the 9th C. it produced the most important figure in the transmission of Greek science to the Arabs, Hunayn ibn-Ishaq.

HISTAMENON (νομισμα ἵσταμενον, lit. “standard”), a term commonly applied in the 11th C. to the gold nomisma of full weight in order to distinguish it from the substandard tetarteron. Because the histamenon of the mid-11th C. were concave, the term passed, in the shortened form of stamena (first attested 1090), to the Byz. billon and copper trachaea of the 12th–13th C., used particularly by the Latins in a variety of spellings (stamina, stanmini, etc.). Its exact meaning in any particular case has to be deduced from the context.

LIT. Hendy, Coinage 28.

HISTORIA AUGUSTA (4th C.?), a conventional title for a collection of Lives of Roman emperors and pretenders from 117 to 284, with a real or faked lacuna for 244–59. It was ostensibly written in the reigns of Diocletian and Constantine by six otherwise unknown biographers: Aelius Lamiplidius, Aelius Spartanius, Flavius Vopiscus, Julius Capitolinus, Trebellius Pollio, Vulcacius Gallianus. If it had a preface and Lives of Nerva and Trajan, its emulation of Suetonius would be complete, but too much logic on its part cannot be assumed. In content and form, the Lives are a poor man’s Suetonius, crammed with exotic and erotic details and written in a sometimes remarkable Latin. Much of its documentation and information is demonstrably false and wrong, though it still has to be used when other sources are lacking. The collection parades conventional views of good emperors and senatorial virtues; efforts to equip it with any consistent philosophy have foundered. The current fashion is to follow H. Dessau’s thesis (Hermes 24 [1889] 337–92; 27 [1892]
HISTORIA DE EXPEDITIONE FRIDERICI
History of the Expedition of Frederick), an account of the Crusade of Frederick I, compiled in Austria ca. 1200, possibly by a priest Ansert. The Historia expanded an earlier record (partially preserved, but misassessed by Chrout) by adding a prologue, documents, and annals (1190–97) of events in the Holy Land. The earlier record seems to derive from TEGNO and another participant, probably in Frederick's entourage. The Historia attests diplomatic contacts with Constantinople and Ikonion before Frederick's departure (pp. 151) and quarrels over imperial titles (pp. 49–51). It offers a list of Crusaders (pp. 18–22), a detailed description of their trip and the state of the empire (pp. 26–75), and several Byz. documents (p.29, Reg. 2, no.1592; p.51.13–18, Reg. 2, no.1598; pp. 64.15–66.22, Reg. 2, no.1603). Further knowledge of the lost earlier record comes from an anonymous History of the Pilgrims (History peregrinorum), compiled in the 1190s (ed. Chrout, pp. 116–72).

Both histories overlap somewhat with the brief, factual account of the Gesta Friderici (Deeds of Frederick [on the Holy Expedition], ed. O. Holder-Egger, MGH SRG 27 [Hannover 1892] 78–96), which may also derive from Frederick's entourage. It adds new, vivid details to the crossing of the empire (e.g., the Byz. felled trees to block the road through Bulgaria, p.80).

HISTORIANS, ECCLESIASTICAL. See Ecclesiastical Historians.

HISTORIOGRAPHY, one of the primary genres of Byz. literature. Theophanes the Confessor (Theoph. 3.11–12) used the terms chronographoi and historiographoi to designate historians; this division into history and chronicle, sanctioned by K. Krumbacher, became traditional, although recently serious doubts have been expressed as to its validity. The Byz. themselves did not clearly distinguish between historia and chronikon: the late Roman historians preferred the title History for their works, but from Malalas onward “Chronicle” became the typical heading, not only of George Synkellos, Theophanes, or George Hamartolos, but even of some unquestionably “historical” works such as those by Psellos, Niketas Choniates, or George Akropolites. On the other hand, some authors like Patr. Nikephoros I, Skylitzes, Kedrenos, and Zonaras, who wrote in a chronicle style, used the title History. Eustathios of Thessalonike distinguished between the terms historin (“to write of the past”) and syngraphein (“to write of contemporary events”).

The Byz. contrasted historiography and enkomion, emphasizing that historiography’s objective was pursuit of the truth. Indeed the element of criticism was substantial in historians. This overt or implied criticism, directed against deceased or living emperors and courtiers, was usually juxtaposed with praise for an ideal figure from the past (Constantine I for Theophanes), from contemporary society (Nikephoros III Botaneiates for Attaleiates), or even from the “barbaric” world (Mehmed II for Kritoubolos).

This was conceived as linear, not circular, both by late Roman pagan historians with their concept of eternal Rome (F. Vittinghoff, HistZ 198 [1964] 573) and by Christians according to whom history was moving toward Christ’s parousia or Second Coming. This perception of time as a continuum is obvious in the so-called “world chronicles” that begin with Adam or Creation and treat at length both the biblical and Roman past, whereas ancient Greek history is poorly represented (Jeffreys, “Chroniclers” 237f). It is less evident in works on
limited periods that nonetheless implicitly or explicitly continue each other, so that Theophanes and his continuators, Leo the Deacon, Psellus, Anna Komnene, Niketas Choniates, Akropolites, Pachymeres, and Gregorios present an uninterrupted account of events. The geographic scope was wide for late Roman historians who were very interested in ethnography and the problem of barbarians; after Theophanes, the Byz. oikoumenene shrunk, and with rare exceptions (e.g., Chalkokondyles) historians dealt with territory under Byz. control.

The philosophy of history is providential, God or Prorokia being considered as the ultimate cause of events. Providence could be conceived as in a perpetual dialogue with mankind, sending messages in the form of portents, earthquakes, visions, or miracles, and reacting to humankind's piety or sinfulness; or it could be removed to the background, while Tyche or human activity proved to be the decisive factors in historical development. In the Palaiologan period historiography had to attempt to explain why God had forsaken his “chosen people” and granted victory to barbarians (C.I.G. Turner, BZ 57 [1964] 346–73).

The idea that economic or social causes could influence history does appear in historiography, if rarely (A. Kazhdan, VizVrem 19 [1961] 86f).

Politically and religiously biased, historians expressed their prejudices by direct praise or invective (esp. George Hamartolos) or by tendentious choice of facts and selective omission of undesirable events. The application of elements of historical criticism is infrequent, although occasionally historians present two contradictory versions and appeal to the reader to resolve the contradiction. More often than not historians uncritically copied their sources and thus created confusion and inconsistency. Documents are infrequently cited, but sometimes letters, treaties, or laws are reproduced, whereas speeches are usually artificial creations, modeled upon earlier examples. Statistical information is rarely dependable.

In addition to the truth, “delight” or “entertainment” was a goal of historiography. This purpose was served by anecdotes, jokes, sensational stories, mirabilia, miracles, love affairs, and murder scenes. On the other hand, the authors used rhetorical techniques, embedding into their story ekphrasis and enkomia, tropes and figures, metaphors and similes. Archaism formed a link with the past: by imitation, cliches, and citations from earlier models, the historian established his place in the tradition. The structure of the narrative varied between two extremes—the strictly chronological, annalistic method elaborated primarily by Malalas, Synkellos, and Theophanes, and the biographical approach ("by reigns"), which was already used by the continuators of Theophanes. Very few historical works were dedicated to specific events (e.g., Eustathios of Thessalonike, John Kananos).

Although written primarily in prose, poetry was not excluded as a form of historiography, both for world history and specific historical reigns/events.

HISTORY PAINTING. In Byz., as in ancient Rome, history painting normally depicted climatic events in the lives of emperors, such as acts of courage, victories, and the subjugation of barbarians (cf. Mansi 13:356B). A 12th-C. historian (Kinn. 266.7–9) describes the sponsorship of pictorial celebrations of imperial triumphs as "customary among men placed in authority." Thus John Lydos (De magistratus, ed. A. Bandy, p.114.14–15) reports pictures of the rise of Leo I set up by a praetorian prefect, and Zacharias of Mytilene (HE, ed. E.W. Brooks, CSCO 88, p.41.27–29) mentions a similar tribute to Justin I commissioned by a chartularios. These pictures were displayed in public places, an agora, and a public bath, respectively. But from the 6th C. onward, history painting is found primarily in the precincts of imperial palaces. A mosaic showing Belisarios’ victories over the Vandals and Goths and the reception of their tribute by the augusti covered the ceiling of the Chalke. The emperor Maurice had the story of his life up to his accession displayed in the Karianos portico at Blachernai (Theoph. 261.13–15), and Basil I’s “toils on behalf of his subjects, his warlike exertions and the prize of victory bestowed by God” (Theoph. Cont. 332.19–22) were depicted in his Kainourgion in
the Great Palace. Robert de Clari (Conquête, p. 28) describes pictures above the doors of churches in Constantinople depicting the overthrow of Andronikos I by Isaac II Angelos. Lesser men also commissioned this genre of painting: scenes of ancient history appeared among many others in the palace of Digenes Akritas: Alexios Axouch was criticized for displaying victories of the sultan rather than the emperor.

Eusebios of Caesarea (VC 3.3) and later writers read such pictures allegorically. Euthymios Malakes drew an analogy between depictions of the deeds of Manuel I and the Miracles and Passion of Christ. An anonymous text, preserved in Venice, Marc. gr. Z 524, draws parallels between the same emperor's victories, shown in the house of Leo Sikountenos in Thessalonike, and the conquests of Moses and Joshua. The only Palaiologan works known are the paintings of Michael VIII's victory over the Angevins in the vestibule of the palace, described by Pachymeres (Pachym., ed. Faillier 2:651.1-4). The propagandistic or allegorical nature of such images differentiates them from both the narrative pictures of the Madrid MS of John Skylitzes and the historical episodes in the Paris Gregory (Paris, B.N. gr. 510).

Lit. Grabar, L'empereur 36, 40f, 83f, 93. Magdalino-Nelson, "Emp. in 12th C." — A.C.

HISTRIA (anc. 'Iστρια), a Greek colony on Lake Sinoe, in Scythia Minor, near the shore of the Black Sea, north of Constanța in Romania. The city prospered in the 4th-6th C., when its ramparts were rebuilt three times, some bricks bearing stamps of the time of Anastasios I. Excavations have uncovered a commercial district, with various workshops and private habitations that usually form clusters, and several public buildings, including a basilical edifice of the 6th C. (E. Condurachi in Charisien en Anastasion K. Oriaion, vol. 4 [Athens 1967-68] 161-68). The sector containing two Roman baths of the 2nd C. was a commercial region in the 4th C. and later the location of a basilica and a cemetery; it was abandoned in the 7th C. (A. Suceveanu, Histría 6 [1982] 85-92). In the eastern sector was a large palacelike house.

The period of prosperous activity ended ca. 580; the last excavated layer contains humbler habitations. Numerous coins of Maurice (H. Nubar, Histría 3 [1973] 84) are connected with that emperor's attempt to protect the area against Avar attacks; then the number of Byz. coins decreases and stops after Herakleios. Sporadic coin finds of the late 10th-12th C. (ibid. 227f) indicate a Byz. presence in the region, but Histría did not regain its former significance. In the sector of the Roman baths, an 11th-C. (Pechenç?) tomb was found, containing jewelry of a type also known from Dinogetia and the steppe north of the Black Sea (A. Suceveanu, SCIV 24 [1973] 495-502).

HOARDS, NUMISMATIC. See COIN FINDS.

HODEGON MONASTERY, located in Constantinople east of Hagia Sophia near the sea walls. Hodegon ("Οδήγων, "of guides, conductors") apparently took its name from the monks who led blind pilgrims to a miraculous spring that was able to restore sight. The church was allegedly founded in the 5th C. by the empress Pulcheria to house precious relics, which later included St. Luke's portrait of the Virgin Hodegetria. In late Byz. this icon was removed from the church every Tuesday and carried in procession through the streets, attended by large crowds hoping for miraculous cures.

The monastic complex was built by the 9th C., perhaps by Michael III, and restored again in the 12th C. In the Palaiologan period a scriptorium flourished there, specializing in the production of deluxe liturgical MSS (L. Polites, BZ 51 [1958] 17-36, 261-87). Among its scribes were Chariton (fl. 1319-46) and Iosaph (fl. 1360-1405/6). The Palaiologan emperors had close ties with the monastery and visited it frequently; Andronikos III died there in 1341. During the late 13th and 14th C. the monastery was granted to the patriarchate of Antioch as a metochion, and served as a residence for Syrian monks visiting Constantinople.

HOLOBOLOS, MANUEL, teacher, orator, and active anti-Unionist; born ca. 1245, died Constantinople between 1310 and 1314. In the service of Michael VIII as a grammaticos from an early age, Holobolos (Ολοβόλος) suffered repeatedly at the hands of the emperor. In 1261 his lips and nose were mutilated because he showed distress at the blinding of John IV Laskaris. Holobolos thereupon entered the Prodromos monastery in Constantinople with the monastic name Maximos (W. Hörandner, JÖB 19 [1970] 116–19). In 1265–66, through an appeal of Patr. Germanos III, he was appointed rhetor and assigned to teach, possibly at the school attached to the orphanage of the Church of St. Paul (Pachym., ed. Failler 2:369.5–371.5). Again in disgrace in 1273 because of his anti-Union stance, Holobolos was exiled to the monastery tou Megalou Agrou on the Sea of Marmara. He returned to Constantinople after Michael’s death and was active in condemning the Unionists both in 1283 and at the Council of 1285 in Blachernae (see under CONSTANTINOPLE, COUNCILS OF). In addition to regaining the title of rhetor, he was protosynkellos, according to a letter addressed to him by the Dominican Simon (1299). A monody written for Holobolos by a student and relation, George Galesiotes, states that he was teaching until the end of his life (S.I. Kourouses, Athena 75 [1974–75] 335–74).

As rhetor, Holobolos composed several orations for Michael VIII that are important sources for the early years of his reign (1259–61) and for the restoration of Constantinople after 1261. Holobolos also wrote verses for the emperor and his son Andronikos II to accompany the Epiphany prokepsis ceremony, commentaries on Theokritos’s Technopaignia, and a logos katechetikos for Germanos III.

—R.J.M.

HOLY APOSTLES, CHURCH OF THE, name of numerous churches in Byz. territory, the most famous of which were those in Constantinople and Thessalonike.

HOLY APOSTLES IN CONSTANTINOPLE. The first building on the site in Constantinople was a circular mausoleum erected by Constantine I for his own burial. Next to it a cruciform basilica was built by Constantius II, who deposited in it relics of the apostles Timothy (356) and Luke and Andrew (357—G. Downey, DOP 6 [1951] 72). In 550 the church was rebuilt, again in the shape of a cross, by Justinian I, who added a second mausoleum. The two mausolea served as the burial place of emperors until 1028. After Iconoclasm the church was restored by Basil I and decorated with a cycle of mosaics described in ca.940 by Constantine of Rhodes. The mosaics appear to have been partly redone in the 12th C. and were described once again by Nicholas Mesarites. After the Turkish conquest the church was ceded to Gennadios II Scholarios as the seat of the patriarchate, but he found it unsuitable and moved instead to the Church of St. Mary Pammakaristos. The church was demolished and the mosque of Mehmed II Fatih built on its site. Several of the imperial sarcophagi were salvaged (P. Grierson, DOP 16 [1962] 1–69). The Church of the Holy Apostles resembled that of St. John at Ephesus in its cruciform plan and five-domed elevation, a scheme later replicated at S. Marco in Venice.

—C.M.

HOLY APOSTLES IN THESSALONIKE. The Church of the Holy Apostles (originally the Church of the Virgin) in the western part of the city is a fine example of Palaiologan monastic architecture. On the west and south façades are brickwork monograms and carved inscriptions naming the patriarch Niphon of Constantinople as founder, which would date the church to the period 1310–14; recent carbon-14 analysis of the fabric of the church shows that all of the building was constructed at the same time, but suggests a date of ca.1329. The monk Paul is named as a second keter. The exterior of the church is richly decorated with brickwork patterns of all kinds: zigzags, hook patterns, cross-stitch designs, pendant tri...
angles, grill patterns, and hexagon stars. The west façade of the outer narthex was an open arcade. The church is effectively divided into two parts: a naos with central dome on four columns, plus a narthex, is surrounded by a U-shaped ambulatory with galleries and domes at each of the four corners. The interior is dominated by verticality; the proportion of height to width of the central bay is 5:1. The interior was once adorned with mosaics, on the upper levels only, and with frescoes, presumably executed by a Constantinopolitan workshop, perhaps the same that decorated the Church of the CHORA.

HOLY FACE. See MANDYLION.

HOLY FOOLS. See FOOLS, HOLY.

HOLY MOUNTAIN (ἀγιον ὄρος). A number of mountains (with their environs) in the Balkans, Anatolia, and the Levant attracted substantial numbers of monks and acquired reputations as "holy mountains." Among the earliest were Mt. AUXENTIOS, Mt. SINAI, and the WONDROUS MOUNTAIN, first settled in the 4th and 5th C. LATROS probably received its first monks in the 7th C., OLYMPOS and ATHOS in the 8th–9th C. Until the first half of the 10th C. Olympos was considered the Holy Mountain par excellence; subsequently Athos took pride of place. Mounts GANOS and GALESIOS became flourishing monastic communities in the 10th and 11th C. METEORA was the last to be founded, in the 14th C.

Holy mountains are usually characterized by relative isolation and rugged terrain, and appealed to the desire of many monks to reside in a remote wilderness area (see DESERT). They housed both hermits and *koimobia*; a number of holy men moved from one holy mountain to another in the course of their careers. Holy mountains often tended to be centers of Orthodox monastic resistance to such unpopular developments as ICONOCLASM (Olympos) or the UNION OF THE CHURCHES (Athos, Ganos); at the same time, new spiritual trends (e.g., PALAMISM) might begin in such a monastic center. Holy mountains tended to limit the access of women, whether as visitors or as nuns in permanent residence. Two of them (Athos and Meteor) strictly prohibited the admission of women to the mountain for any purpose; Latros had no numeraries at all; Galesios, Auxentos, and Olympos each had one, which functioned in part to house female relatives of monks who lived on the mountain (A.-M. Talbot, *GOrThR* 30 [1985] 21). –A.M.T.

HOLY RIDER, a modern term encompassing a variety of 5th- through 7th-C. amuletic images distinguished by a mounted figure. Following a well-established Antique iconographic tradition, most examples show the horse at full gallop and the figure, in military garb, impaling a beast or demon beneath the animal’s hooves. In some cases, the warrior is identified as Solomon or, more rarely, as St. Sisinnios; the victim is often a semi-nude female, the she-devil Gyllou (or Alabastria). The intent was not to portray a specific figure or historical event, but rather to evoke virtuous power and, more generally, the triumph of good over evil. Most Holy Rider AMULETS take the form of bronze pendants or haematite intaglio tokens, although the motif is found as well on amuletic rings, armbands, fibulae, belt fittings, and earthen tokens.

LIT. Bonner, *Studies*, nos. 294–326. Vikan, “Art, Medicine, & Magic” 79–82, n.59. –G.V.

HOLY SEPULCHRE. See SEPULCHRE, HOLY.

HOLY SPIRIT (πνεῦμα ἁγιου), third person of the TRINITY. The Holy Spirit appears in early Christian literature as a primary experience of the community and the individual Christian. His activity is manifested in his gifts, esp. the gift of prophecy which thrived in Syro-Palestine and Asia Minor, particularly in MONTANISM. In Christian experience, the Holy Spirit is encountered in the
baptismal liturgy, in the Trinitarian confession of faith, and in the doxology of the Church.

In the 4th C., the Council of Nicaea set forth a simple confession concerning the Holy Spirit: “We believe... also in the Holy Spirit.” But at the Synod of Antioch of 341 this simple formula was expanded and the Holy Spirit presented as the eschatological gift and “paraclete” promised by Jesus. These elaborations reveal that the doctrine of the Holy Spirit was developed in conjunction with the concept of homoousios, the consubstantiality of the Logos with the Father.

The Pneumatomachoi were those who denied the deity of the Holy Spirit and depicted him as a created gift of God. Their most significant opponents were Athanasios of Alexandria and Basil the Great. In his four letters to Serapion of Thmuis, Athanasios unites the Holy Spirit to God himself. The Father effects all things through His Logos in the Holy Spirit, involving not only salvation, but creation as well. This Trinity, moreover, is indivisible, constituting one God. At the Synod of Alexandria held in 362, Athanasios argued for an expansion to the Nicaean Creed by condemning those who said that “the Holy Spirit is a creature separate from the essence of Christ” (PG 26:800A). To contemporaries such language approached Sabellianism (see Monarchianism); Markeleos of Ankyra, for example, had been misunderstood earlier when he said something similar.

A confession concerning the divine nature of the Holy Spirit was formulated for the first time in the theology of Basil and incorporated into the creed of the First Council of Constantinople (see under Constantinople, Councils of). The Holy Spirit is “the Lord, the Giver of Life.” In other words, he stands at the side of God the creator and redeemer. The formula, “He proceeds from the Father,” describes how he is distinguished from the Son within the inner relationships of the Godhead. The unity of worship expressed in the formula, “He is worshiped and glorified together with the Father and the Son,” confirms that the Father, Son, and Holy Spirit are one in essence. “He spoke through the prophets,” does not explain the significance of prophecy, but the unity of Old Testament and New Testament and their divine testimonies. The term homoousios, after the controversies it provoked in the 4th C., was consciously avoided, but, inasmuch as the Spirit is introduced as the third hypostasis of the one divine essence, it was not retracted.

A major issue in Byz. theology concerned the filioque and the Procession of the Holy Spirit “from the Father.” That the Son or Logos participates in the Procession of the Holy Spirit was not called into question in either the Byz. or patristic traditions. Apart from some polemical formulas found in the writings of Photios, no one maintained that the Holy Spirit proceeds “from the Father alone”; rather, the Father is the single “uncaused Cause (aitia)” with respect to whom the Son can hold but a mediating position, a concept wholly in line with Greek speculation on first principles. This was expressed in the popular Byz. formula, “from the Father, through the Son” (ek tou patros dia tou hynon). In precisely this sense, Maximos the Confessor interpreted the formula used by Pope Martin I: the Spirit proceeds from the Father and the Son. As the uncaused aitia, the Father is seen to be the “Ultimate Principle” which does not preclude a mediator (PG 91:136AB).

For Byz. theologians the cause of the controversy was not the coordinating formulas used in Western tradition as much as the addition of the filioque to the Nicaean-Constantinopolitan creed by Western theologians in the 7th C. The first polemical discussion on this point took place at the Council of Gentilly (767). The prelude to the controversy was set up in the Libri Carolini, and in the dispute that erupted in 808 over the use of the filioque in the liturgy of the Benedictine monks of Jerusalem. When Photios in his encyclical of 867 put forth the view that the filioque introduces two principles into the Godhead, thereby dissolving the unity of God (“The monarchy,” he says, “is dissolved into a ‘dysatheism’”), what had been an ecclesiastical question was now made a dogmatic issue.

The Photian Synod of 879/80 (see under Constantinople, Councils of) expressly declared that the filioque introduced a new heresy. Photios and his followers saw in the Procession (probole) of the Spirit a unique property that distinguishes the Spirit as a hypostasis in the Trinity. Both the Son and the Spirit come forth (proodoi) from a single principle: the Son in the manner of generation; the Spirit in the manner of procession, but apart from any mediation. Only in terms of the economy (oikonomia) of salvation does the Son partici-
pate in the sending of the Spirit. Strict Photians, therefore, distinguished between the "economic" and "immanent" models of the Trinity: the Spirit comes forth εκ του πατρος, communicates with mankind διά του θεοῦ (Theophylaktos of Ohrid, PG 123:1224D). This theme is evident in the Byz. theological controversies with, for example, Peter Grossolano or Anselm of Havelberg, or the controversy with Rome over Union of the Churches, particularly under Michael VIII Palaiologos, or at the Council of Ferrara-Florence.

The compromise that the Greek doctrine of mediation expressed by the formula διά του θεοῦ, "through the Son," has the same meaning as the Latin filioque is found already in the teaching of Niketas "of Maroneia." Some Byz. theologians even held views that approached the Latin position. Nikephorus Blemmydes, for example, was originally a strict Photian, but in two of his later writings he maintained that the Son's generation and the Spirit's procession can be differentiated only if the Son participates in the latter. These writings prompted John XI Bekkos to undertake a detailed study of patristic texts, which led to the Union of Lyons (1274). The study of Bekkos, however, had no impact on Byz. theology, which remained essentially Photian.

HOLY TIE. See KERAMION.

HOLY TOWEL. See MANDYLION.

HOLY WEEK (ἡ μεγάλη ἐβδομάς), the week before EASTER, called "great" in Byz. usage, as are its days ("Great Monday," etc.). It originated in the extension to six days of the variable paschal period of fasting that ended at the Easter vigil, a development first seen ca. 250 in Dionysios of Alexandria, Ep. ad Basilidem 1 (The Letters and Other Remains of Dionysius of Alexandria, ed. C.L. Feltoe [Cambridge 1904] 90–105). The Easter vigil was at first the only liturgical service of Easter Week, but Eusebios (HE, bk.2, ch.17.21–22) and Epiphanius of Salamis (Panarion, ed. Holl. 3:523.23) already bear witness to the existence of other vigils during the week, and in 384 Egeria (Diary 30–98) describes a full cycle of stational services in Jerusalem commemorating the Passion week (see GOOD FRIDAY), a cycle confirmed in detail by the 5th-C. Armenian Lectionary of Jerusalem.

The Holy Week services in Constantinople differ little from those of other weeks in the Typikon of the Great Church (Mateos, Typikon 2:66–91). But by the 9th C. the more dramatic Jerusalem services had already begun to influence Constantinopolitan usage and were to predominate with the decline of the cathedral liturgy of Constantinople after 1204.

Imperial participation in the services of Holy Week was most evident on Holy Thursday. The emperor assisted at the liturgy, after which he distributed cinnamon and two apples to the dignitaries, then dined with guests (De cer. 33). There is no mention here of his participation either in the adoration of the Passion relics or in the Washing of the Feet. According to the Typikon, it is the patriarch who washes the feet of 12 clergymen after vespers (Mateos, Typikon 2:72f) as the New Testament account (Jn 13) of the event is read aloud. But in a 14th-C. ceremonial book (pseudo-Kod. 288.10–299.20) the emperor himself washes the feet of 12 poor people before the start of the liturgy.

-R.F.G.

HOMER (Ὄμηρος), "the Poet," was the most widely read and studied ancient author in Byz. For example, Niketas Choniates' History contains 134 quotations from the Iliad (some used several times) and 58 from the Odyssey, whereas the next most popular writer, Lucian, is represented by only 24 passages. Byz. schoolmasters and students were constantly occupied with the Homeric poems, esp. the Iliad, which became a basic text in the curriculum; students memorized much of it. Thus citations from the Homeric epics are found throughout late antique and Byz. literature, although analysis of papyrological data suggests a decrease of interest in Homer in late antiquity. P. Mazon (Introduction à l'Iliade [Paris 1967] 64f) registers 75 fragments of the Iliad from the 3rd C., 17 from the 4th, 16 from the 5th, five from the 6th, and one from the 7th (uncertain papyri
such as the 2nd/3rd C. are here omitted). Nevertheless, educated church fathers quoted Homer: thus, Cyril of Alexandria, who barely mentions Homer's name, was influenced by Stoic tradition and saw in Homer's gods symbols of vices and virtues or metonymies of the elements of the cosmos; he rarely polemized against Homeric polytheism (G. Bartelink, WS n.s. 17 [1983] 62–68). Probably in the 6th C., an otherwise unknown female writer, Demo, wrote a commentary, primarily allegorical, on Homer. Dioskoros of Aphrodito in 6th-C. Egypt owned the famous Cairo codex of Homer and called him “the best poet.”

Interest in Homer revived in the 9th-10th C. The oldest complete MS of the Iliad, Venetus A (= Venice, Marc. gr. 454), which was formerly attributed to the scribe Ephraim and dated before 947 (B. Hemmerdinger, REGr 69 [1956] 433f), is probably from the last quarter of the 10th C. (E. Mioni, Annali della Facoltà di lettere e filosofia dell'Università di Padova 1 [1976] 185–93). The oldest copy of the Odyssey (Florence, Laur. 32.24) is also of the 10th C. The Epimerisms, commentaries of the most elementary nature, were dated by Ch. Theodoridis (BZ 72 [1979] 1–5) to the beginning of the 9th C., but A. Dyck (infra 7) places them in the 9th–10th C. At the same time collecting of scholia began; many of them are contained in Venetus A, but they derive mostly from Hellenistic and Roman sources (N. Richardson, CQ 30 [1980] 265). From Constantinople the knowledge of Homer expanded to Baghdad in the 9th C. (G. Strohmaier, BS 41 [1980] 196–200).

The most important Homeric scholarship dates from the 12th C.—the massive commentaries by Eustathios of Thessalonike and two long commentaries by Tzetzes. Eustathios used the vernacular Greek of his time and drew on the customs of peasants and townsfolk and recent events to explain the epic. He felt that Homer belonged to this world, sensing no distance between the Homeric past and his own day. Tzetzes' interpretation was more antiquarian (he tried to fill in the gaps in Homer's narrative) and allegorical, aimed at revealing historical, moral, and cosmological allegory. Among other commentators on Homer were Isaac Komnenos the Porphyrogennetos and George Lekapenos. Manuel Moschopoulos composed a paraphrase of the first two books of the Iliad, omitting the “Catalog of Ships.” The story of the Trojan War excited the imagination of vernacular authors such as Constantine Hemonos.

In an utterly unclassical manner, Homer is depicted as a young man with long hair in a 9th-C. MS of the homilies of Gregory of Nazianzos (Weitzmann, Gr. Myth., fig.96). Together with Orpheus and Hesiod he appears among the “theologians” attacked by the church fathers.

HOMILY. See Sermon.

HOMIOUSIANS (from ὁμοούσιος, "of like substance"), a group, often called “semi-Arians,” who refused to accept the term homooousios but who believed in the perfect divinity of Christ and the similarity of his divine nature to that of the Father. Although these beliefs may be traced back to Origen, the Homioiusians as a “party” came into existence ca.356 in an attempt to find a compromise between Orthodoxy and Arianism. Leading members of the Homioiusians were Basil of Ankyra, Makedonios of Constantinople, and George of Laodikeia; they were to be distinguished from the Homoians, who maintained closer ties to strict Arianism. The movement met opposition on philosophical grounds since nothing can be “like” God's nature; moreover, the assertion of "likeness" also implies difference, leading on the one hand to charges of polytheism and on the other to the identification with Arianism (Wolffson, Philosophy 336f). The Homioiusians did, however, influence the theology of the Cappadocian Fathers.

HOMOOUSIOS (ὁμοόυσιος, lit. "consubstantial," "of the same substance"), term crucial for the understanding of the relationship among the persons within the Trinity. Not used in the Bible, it was introduced by the 3rd C. in Gnostic interpretation of emanation and probably also in the Sabellian view of God’s epiphanies in history as Father, Son, and Spirit. Origen and his disciples seem not to have applied the term to the Son (R. Hanson in Epiktasis: Mêlanges Jean Daniélov [Paris 1972] 293–303), but the Council of Antioch against Paul of Samosata (268) condemned the consubstantiality of the Father and Son. Paul probably understood consubstantiality in a sense of Monarchianism, perceiving the Son only as an attribute (Logos = reason) of the Father, and the accusation was nothing but a dialectic argument against him. The further discussion of the term was provoked by the teaching of Arius that the Logos was a creation of the Father, his intermediary in the act of salvation and therefore subordinate to him. The teaching was rejected by the creed of the First Council of Nicaea that formulated the belief in the Son of God, born, not created, consubstantial (homoousios) with the Father. The idea of consubstantiality was to protect Monothelism against the concept of a separate God-mediator. The tendency to identify the substance of the persons, however, introduced the danger of Monarchianism that was interpreted as applying the notions of monoousios and tautoousios instead of homoousios and thus removing the hypostatic difference of the persons.

The term homoousios was under attack during the 4th C.; the semi-Arians wanted to replace it with homoeios ("similar") as representing a looser relationship or a recourse to Scripture (cf. Jn 5:19). It was the interpretation of the Cappadocian Fathers that brought forth a synthesis and produced the canonical formula “one ousia (substance), three hypostases.” This formulation preserved the concept of substantial identity as well as numerical difference of Godhead and provided Byz. theology with a weapon against the accusation of tritheism (Anastasios 1, patriarch of Antioch, ed. K.-H. Uthemann, Traditio 37 [1981] 105–08). Despite the opposition of the Pneumatarchoi, the term was also applied to the Holy Spirit. Through the definition of Chalcedon (451) the term entered Christology.

HOMOSEXUALITY (παθησαμωσία, ἀρρενομοιοτητά, ἀρρενοκοιτία), also called the “sin of sodomy” (e.g., Makarios the Great, PG 34:224B), was prohibited by the Old Testament (Lev 18:22) and continued to be condemned in Byz. It was common in the late Roman Empire when an abundance of young slaves and eunuchs created favorable circumstances for its practice. Many church fathers, esp. John Chrysostom, inveighed against this form of sexual activity. Denounced by the church as criminal and contrary to Holy Scripture, homosexuality was prohibited by Justinian I’s novels 77 and 141, which repeated the punishment of death by the sword decreed by Cod. Theod. IX 7.3. The same punishment was imposed by the Ecloga (17:38) and Ecloga ausa (17.6); the latter exempted youths under 15 from the death penalty, sentencing them instead to flogging and confinement in a monastery. Ecclesiastical law punished the sin with two or three years of excommunication. The Penitential of pseudo-John IV Nestitutes instructed the confessor to inquire about the sin of arrenokoiotia (PG 88:1893C) and detailed different forms of homosexuality.

Malalas (Mal. 436.6–15) describes the trial of two bishops accused of homosexuality, Isaiah of Rhodes and Alexander of Diospolis in Thrace. The former was exiled after cruel tortures, the latter castrated and dragged along the streets in an ignominious procession.

Accusations of homosexual behavior sometimes appear in Byz. polemics: thus Theophanes the Confessor (Theoph. 443.15) lists “the impious lust for men” among Constantine V’s vices. Such accusations became less common after the 9th C., probably as a result of the consolidation of family values and developing masculine ideals; in the last
centuries of Byz., however, complaints about homosexuality (e.g., in the writings of Pat. Athanasios I and Joseph Bryennios) were again heard. Homosexuality was found in both male and female monasteries (*typikon* of Phoberou monastery, 80.31–82.9); several *typika* denied access to beardless youths and/or eunuchs in an attempt to protect monks from temptation (C. Galatariotou, REB 45 [1987] 121f).

**HOMS.** See *Emesa*.

**HONORIUS** (*ōnôrios*), Western emperor (from 393), younger son of Theodosios I; born Constantinople 9 Sept. 384, died Ravenna 15 Aug. 423. He was summoned to the West by Theodosios in 394 and assumed power after his father’s death in 395. His elder brother Arkadios ruled the East and the whole empire was never again united. Because of Honorius’s youth the court was dominated by the *magister militum* Stilicho, whose two daughters, Maria and Theodoria, were married to Honorius ca. 398 and 408, respectively. The double portrait of Honorius on a consular diptych of 401 has persuaded most scholars that he is represented, together with Maria, on a cameo in Paris (Delbrück, *Consularidipytchen*, nos. 1, 66). In fear of Alaric, he moved his residence from Milan to Ravenna, which henceforth became the primary Western capital. After the death of Stilicho in 408 the patrician Constantius became the power behind the throne and married the emperor’s sister Gallæ Placidia. In 421 Constantius was made emperor, but his claims were rejected by Theodosios II, perhaps because Honorius was childless and the Eastern court had ambitions in the West. During the reign of Honorius, Rome was sacked by Alaric. Much of Gaul and Spain fell into barbarian hands. Honorius and his brother Arkadios were represented as consuls on the latter’s honorific column in Constantinople.

**HORMISDAS**, pope (from 20 July 514); born Frosinone, Campania, died Rome 6 Aug. 523. Hormisdas inherited the problem of the Arakian Schism but sought reconciliation with Byz. After the revolt of Vitalian, Emp. Anastasios I was forced to seek accommodation with supporters of the Council of Chalcedon and addressed the pope as mediator; Hormisdas sent his emissaries to Constantinople with a *libellus*—conventionally called the formula of Hormisdas—which required the full acceptance of Chalcedon and the condemnation of both the Nestorians and the Monophysites. The negotiations failed, but in 519 under Emp. Justin I a new papal embassy and Patr. John II (518–20) signed an agreement stating that the names of Akakios and his four successors on the patriarchal throne, as well as those of Zenus and Anastasios I, were to be deleted from the diplomas. The personal and ideological victory was, however, Pyrrhic (Caspar, *infra* 130), and in fact the pope’s influence over the eastern part of the empire (including Thessalonike) was drastically restricted; this is in contrast to Hormisdas’s funeral inscription (by his son, Pope Silverius) noting “Graecia’s obedience to your command.”

**HORISMOS** (*ὅρισμος*, lit. “definition”), term for an imperial decree, known from the late 11th C. onward; it was synonymous with the *prostagma*. The rare term *chrysoboullios horismos* designated a less solemn form of the *chrysobull*, which had no words written in red ink except for the emperor’s signature. The term could be applied to the charters of an emperor (e.g., *Koutoum*, no. 8.34), a *doux* (*Lauria* 1, no. 64.99), a despotes, or a metropolitan (*despotikos horismos*—*Xenoph*. no. 32.42).

HOROSCOPE (θέμα, θεμάτιον, ή διάθεμα; ὀροσκόπιον ὀροσκοπεῖον, ὀροσκόπιον) is the ascendant), the representation of the positions in the zodiac at a certain moment of the planets, of the cusps of the 12 astrological places (topoi), and sometimes of other astrological entities such as lots (klērotai). They may be either diagrams, in which case they are usually squares, or simple lists of longitudes. The latter is the normal method of presentation in documentary horoscopes (e.g., on papyri), which also usually are without any interpretation; diagrams are often used in literary sources, esp. astrological treatises, where they are normally accompanied by an interpretation.

Horoscopes may be cast for any significant moment in any of the branches of astrology, and, if interpreted, may provide information on social, economic, and political as well as biographical aspects of life in Byz. Since the seven planets move at different velocities, each horoscope generally represents a situation that is unique within the two millennia that astrology has flourished. They are, therefore, easily datable. Most interesting are the political horoscopes, which include the following:

1. The horoscope of Constantinople for 11 May 330, cast by Demophilos in ca.990 (D. Pingree in *Prismata* 305–15)
5. The horoscopes of the coronations of Alexios I Komnenos (on 1 Apr. 1081) and Manuel I (on 31 March 1143) (Pingree, “Choniades & Astronomy” 138ff, n.29)
6. The horoscope for the year prefixed to his almanac for 1336 by Andrew Libadenos (GCAG 7:152–160)
7. The horoscopes cast by John Abramios for Andronikos IV between 1373 and 1376 (Pingree, “Astrological School” 191–96)  —D.P.

HORSE FITTINGS. See CHARIOT MOUNTS AND HORSE FITTINGS.

HORSES (טַנֶּחָה, also עֲלוֹגָה). Horses were not common in the Roman Empire, where the principal beasts of burden were oxen and mules, and the army relied primarily on foot soldiers. The role of cavalry increased in the 4th–6th C. due to the conflict with mounted barbarians, and by the beginning of the 7th C. the cavalry was the most numerous of the Byz. elite troop formations (D.R. Hill in War, Technology and Society in the Middle East, ed. V.J. Party, M.E. Yapp [London 1975] 37); its role became crucial with the introduction of the kataphraktos. It is plausible to hypothesize that the invention of a new system of harnessing animals to a cart and plow increased the use of horses in everyday life. Late Byz. práktika suggest that only the richest peasants could afford horses, although two horses in one household are attested (Laure 2, no.99.135); less well-to-do villagers might have “half of a horse” (no.99.126.139). Great landowners like John VI Kantakouzenos owned large numbers of horses; Kantakouzenos complained that he lost 1,500 mares when his property was confiscated in 1241/2 (Kantak. 2:185.5–6). In the 11th C. the Athonite monastery of Xenophon (Xénonph., no.1.1541) possessed 100 dray horses and donkeys. The Byz. appreciated “Arab” horses; it is unclear whether the term refers to a breed or to animals imported from the caliphate. Thessaly was famous for its horses (e.g., An.Komn. 1:20.14), and imperial herds of horses were raised in Malagina.

As chariot races declined in significance after the 7th C., equestrian sports like polo and tournaments became popular in the higher echelons of society; horses were also used for hunting by nobles who chased deer and boar on horseback; the mounted knight, whether the emperor or St. George, was a symbol of manliness. Clergymen and women, on the other hand, were supposed to ride mules, and Jews in 12th-C. Byz. were forbidden to ride horses. The Byz. cared about their horses, and hippiatrica or “horse medicine” was a field of special study. The Geoponika discussed their diseases in book 16, and Oppian’s book on horses was popular.

The main elements of the harness of a saddle horse were the leather saddle attached by the girth strap (P. Connolly in Roman Military Equipment ed. M. Dawson [Oxford 1987] 11), the bridle with snaffle bit (Davidson, Minor Objects 337, no.2887), and the iron stirrup. (See also CHARIOT MOUNTS AND HORSE FITTINGS.)

HORTICULTURE, including arboriculture, was practiced extensively throughout the empire. In addition to fruit, the Byz. grew a wide variety of vegetables. Onions and cabbage were esp. important: NICHOLAS I MYSTIKOS (ep.152.3–5) relates that a village had to supply Hagia Sophia with cabbage (kranbe) and was therefore exempted from other state taxes. Legumes or pulses (ospría) of different kinds were also a mainstay of the diet. A donation of 1191 (MM 4:202.17–21) describes a household that possessed 120 modii of grain and 39 modii of three varieties of legumes—beans (phabata) and two sorts of peas (erebinthia). In the praetorian of Baris in 1073 the ratio was different (Patmou Engraphe 2, no.50.119): 410 modii of wheat and barley and only 5 modii of beans. A judicial decision of 1421 incorporates a list of vegetables raised on a garden farm in Thessalonike (Dölger, Schatz., no.102.23–24), including leeks, carrots, onions, garlic, lettuce, cucumbers, and gourds.

The Geoponika (bk.12.2.3) advises the farmer that three elements are necessary for the successful production of vegetables: fertile soil, water, and manure. The same text prescribes remedies for ridding gardens of grubs and insects (bk.12.8).
HOSIOS. See Saint.

HOSIOS DAVID, church in Thessalonike. Located in the northern part of the city, Hosios David is the earliest surviving example of a domed cross plan, dating to the last third of the 5th C. The church, which until 1921 was dedicated to Christ, is 14.75 m on a side; the dome has vanished but the pendentives survive. All but the eastern arm of the cross are accessible from the exterior through doors. In the apse is a mosaic of the young beardless Christ, seated on a cloud, in a rainbow mandorla over the Four Rivers of Paradise, flanked by the Evangelist symbols and figures thought to represent the prophets Ezekiel and Habakkuk or Isaiah. An inscription below invokes Christ as the source of living waters. The mosaic is now generally dated to the late 5th C., although alternatives as late as the 7th C. have been proposed (Kitzinger, Making 141, n.41). Frescoes illustrating four Great Feasts have been discovered in and below the south vault; these date from the third or last quarter of the 12th C. and provide a transition between the style of Nerezi and that of the 13th C., for example, Mileseva (E. Tsigaridas, Hoi toichographies tes mones Latomou Thessalonikes hai he byzantine toigraphike tou 12ou aiwono [Thessalonike 1986]). Other frescoes from the late 13th to early 14th C. have been found elsewhere in the church.

The church served as the katholikon of the Latomou monastery, which is first attested in the first half of the 9th C. when Joseph the Hymnographer took up residence there; it is not mentioned again in historical sources until the Palaiologan period. After the Ottoman conquest of Thessalonike in 1430, it was transformed into a mosque, the Murad Camii.

A legendary tale by the monk Ignatios, hegoumenos of the Akauiou monastery in the 11th C., recounts that the daughter of the emperor Maximin secretly converted to Christianity and commissioned a picture of the Virgin. After it was mysteriously transformed into an image of Christ, she had it concealed under a layer of bricks;

subsequently the Latomou monastery was built on the site. Under the Iconoclastic emperor Leo V, the revetment suddenly fell off, revealing the image beneath (Jalin, Eglises centre 392–94). A 14th-C. icon in Sofia bears the image of Christ, identified by inscription as “Jesus Christ of the miracle of Latomos” (A. Grabar, CahArch 10 [1959] 289–99); it clearly seems to be a copy of the mosaic in Thessalonike.

HOSIOS LOUKAS, monastery and pilgrimage site in Phokis (Greece), known for the wonder-working tomb of its eponymous saint, Loukas the Younger, in the larger of its two churches. The smaller, cross-in-square church, now dedicated to the Theotokos, may be the same as the Church of St. Barbara mentioned in the vita of Loukas. According to Stikas (infra), the smaller church was built between 946 and 955 by Krinites Arotas, strategos of the theme of Hellas, who was resident in Thebes. Bouras (infra), on the other hand, attributed the Theotokos church to the patronage of Romanos II, dating it shortly after 960 on the basis of the marble reliefs of its drum revetment, templon screen, etc. While the Theotokos lacks painted decoration, that of the adjacent katholikon is the oldest mosaic program from the period of the 10th–11th C.

The plan of the larger church, which replaced a little martyrium built after Loukas’s death (953), is complicated by a domed octagonal core allowing squinches to support the main dome. This fell after an earthquake in 1593, but most of the church’s mosaics, including more than 150 images of saints, are preserved. D. Mouriki (CorsiRav 31 [1984] 397) has dated them to the 1020s. The Christological mosaics in the narthex are notable for their severe symmetry, as are the iconlike panels in the naos; in the same style and probably contemporary are frescoes in the northwest, southeast, and northeast chapels (this last specifically connected with Loukas’s cult), as are those in the narthex gallery and in the crypt around his tomb. No document survives relating directly to
HOSIOS MELETIOS, monastery on the south side of Mt. Kithairon (Myoupolis), on the border between Attica and Boeotia, founded ca. 1081 by MELETIOS THE YOUNGER. The monastery flourished in the 12th to early 13th C.; its hegoumenos Ioannikios corresponded with Michael CHONITES. Initially after 1204 Hosios Meletios remained in Greek hands, but in 1218 it was controlled by the Latins and was plundered, perhaps by Theodore Komnenos Doukas of Epiros. The monastery is surrounded by a rectangular fortification. The katholikon is a cross-in-square of Con-

the foundation of the katholikon. Bouras argues that it was built between 997 and 1031; M. Chatzidakis (CahArch 19 [1969] 127–59) suggested the date of 1011, while Stikas proposed that the ktor was Constantine IX. Similar reliefs are found at a metochion of Hosios Loukas at Aliveri in Euboea, dated 1014 by inscription (not 1010, as in A. Grabar, Sculptures II, pls. XXVII–XXVIII, pp. 60f).

HOSPITALLERS

HOSPITAL (ξενών, νοσοκομείον). One of the early Christian customs that impressed pagans was the care of the infirm, ill, and the elderly; by the 4th through 6th C., institutions were established that functioned as combinations of hostels and sick bays. Documentation is controversial for hospitals in the early centuries of the Byz. Empire, and scholars define the term hospital differently, but it seems certain that fully operational institutions for health care of the sick were founded by the 9th or 10th C. in the major cities; Miller (infra) argues for a date as early as the 6th C. The most meticulously documented hospital is that of the Pantokrator monastery in Constantinople (1136). The monastery’s tyôkôon describes in detail the institution’s use of special physicians and five pharmacists who compounded drugs on orders from the attending doctors; the 50 beds were divided among five wards separated by diagnosis of various illnesses. The women’s ward had a female physician (iatraina); two surgeons and two physicians staffed an outpatient clinic. The medical staff included an ophthalmologist, a specialist surgeon for hernia repair, and an attendant who kept the surgical instruments sharp and clean. Other known hospitals include that at the Great Lavra on Athos (10th C.), and in Constantinople the 10th-C. Xenon of Sampson (PG 115:309B–304B) and the Lips Monastery (14th C.). Victims of leprosy were treated in specialized hospitals.

HOSPITALITY (φιλοξενία), an aspect of philanthropy, which pious Byz. practiced both on a private basis (subject to state approval—cf. vita of Gregory of Dekapolis 54.2–7) and institution-

ized in the form of hospices (xenodocheia) for passing travelers in the provinces and for needy provincials who had to stay in Constantinople. Most information on such hospitality comes from monastic sources. Most xenodocheia built after the 9th C. were attached to monasteries. Two late 11th-C. tyôkôa indicate the type of food and shelter provided. At Rhaidesos, Michael Attakeites arranged for pilgrims to the Holy Land and other poor wayfarers to be fed and lodged in an annex to his prochotropheion, where two modioi of bread and a measure of wine were to be allocated weekly for their sustenance (ed. P. Gautier, REB 39 [1981] 49). Gregory Pakourianos established three xenodocheia on the estates of his monastery of Petritzos (Baçkovo), one at Stenimachos near Philippiopolis, and two on the coast road near the mouth of the Strymon. The first, equipped with “many beds,” a stove, and a portable brazier, provided warm accommodation where sick travelers could stay for three nights, or longer in critical cases. This hostel had a daily allocation of two modioi of wheat and two measures of wine—double the amount allocated to each of the other two hostels. In all three, the basic diet of bread and wine was supplemented by a variable cooked dish (prophagion) prepared from dried and fresh vegetables (ed. P. Gautier, REB 42 [1984] 110–15).

HOSPITALLERS, or Order of the Hospital of St. John of Jerusalem, a military-monastic order founded in the Holy Land in the early 12th C. The predominantly French order played a vital role in the Crusader kingdoms, providing military and medical services. After the expulsion of the Crusaders from Acre in 1291, the Hospitallers embarked upon the conquest of Rhodes (1508-10), following a brief interlude on Cyprus. Rhodes remained their base until 1522 when the island was captured by the Ottomans. The Hospitallers exercised a benevolent rule over the local Greek populace, who regarded them as protectors.

Despite their limited numbers and small fleet, the Hospitallers continued their crusading efforts in the 14th and 15th C., primarily against the Turkish emirates on the west coast of Asia Minor, like Menteshe and Aydin. In 1344
involved in the Latin recovery of the port of Smyrna from Umer Beg and defended the lower fortress until 1402 when it was destroyed by Timur. The Hospitallers had few direct relations with Byz. except during the reign of Manuel II. In 1390 they sent two galleys to Constantinople to help Manuel depose his usurper nephew John VII. In desperation after the Christian defeat by the Ottomans at Nikopolis in 1396 (Zakythinos, Despot 1:347), Theodore I Palaiologos sold Corinth to the Hospitallers in 1397 and the rest of the despotate in 1400. The Hospitallers successfully defended the Isthmus of Corinth against the Turks, but withdrew by 1403, at least in part because of the hostility of the local Greeks. By 1404 Theodore had recovered all of the despotate from the Hospitallers.

---

**HOUR (ωρα).** The Byz. divided both night and day into 12 hours each (numbered 1 through 12) so one referred to the “seventh hour of the night” (Theoph. 319.10–11) or the “fourth hour of the day” (ibid. 493–30). Such hours inevitably varied in length according to both latitude and season. The “first hour” (prote hora) was at sunrise; the “third hour” (trite hora) midmorning; the “sixth hour” (hekate hora) noon; the “ninth hour” (henate hora) midafternoon. Hespera (evening) was one hour before sunset, and apodeipnon the period after sunset. In addition to its division into hours, the night could also be divided in accordance with Roman custom into four vigiliae or “watches.” The hours were measured by a sundial or horologion such as a waterclock.

The unequal length of hours made their further partition into smaller components rather difficult and quite theoretical. For everyday life it was usual to refer to the “half hour” and “quarter hour.” A period of time—a “point” or “moment”—was defined as stigme (= Lat. punctum). One of the rare sources to mention it is the vita of Loukas the Styliste (ed. Delehaye, Saints stylistes 229.15–17). For astronomical purposes, however, Byz. computists divided the day into 24 equal hours but employed different systems of division. According to that of Psellos, for example, 1 hour

= 5 lepta; 1 lepton = 4 stigmata; 1 stigme = 12 rhopai (G. Redd, Byzantion 5 [1929–30] 257–15). On the other hand, an anonymous computist of the 11th–12th C. (ed. F. Karnthaler, BN 1 [1934] 5:24–26) measures one hour as equivalent to 5 stigmata, 10 lepta, 150 moirai, 1,200 ripai, etc.

---

**HOURS, LITURGICAL (ωρα),** often called the “Divine Office,” a schedule of daily prayer comprising, with variations depending on the tradition, orthros, the “Little Hours” (First, Third, Sixth, and Ninth, or prime, terce, sext, and none), vespers, apodeipnon, mesonyghtikon (nocturns), and occasional vigils. To these are sometimes added “intermediate” and “Great” or “Imperial” Hours. The Byz. intermediate hours, or monastic mesoria, are said after each of the Little Hours only during the lent preceding the feasts of the Nativity and Sts. Peter and Paul. The “Great Hours,” also called “Imperial,” a form of Little Hours characterized by three scripture lections, a prophecy, an apostle, and a gospel, are celebrated on Good Friday and the vigils of Nativity and Epiphany. Great Hours were first created from elements originally found in a single Palestinian Good Friday vigil service at the ninth hour. Great Hours are not found in the horologion but in the triodion and the menaion for the days indicated.

The hours are a formalization of early Christian private prayer at set times, based on the New Testament command to pray without ceasing. The full cursus results from monastic developments of the 4th C. when the two original hours (orthros and vespers) were filled in with services at the other traditional times of private prayers (third, sixth, and ninth hours and at night).

Most Divine Offices are hybrids resulting from a synthesis of cathedral and monastic usages. One such office was created under the aegis of St. Theodore of Studios (see SToudITE Typika). This “Stoudite” office combined the prayers and diaconika of the cathedral office of Constantinople, contained in the euchologion, with the psalmody and hymns of the monastic office used in Jerusalem, contained in the horologion. By the 12th C. this hybrid Stoudite office had spread throughout the Orthodox world, even back to Palestine; there, at the Lavra of St. Sabas, it was somewhat altered.
to suit the more austere, less rigidly cenobitic lifestyle of the Palestinian anachoretes, and a further synthesis was made (see Sabattic Typika), which eventually took over the field (see Byzantine Rite). Its rubrics were codified by Patr. Philotheos Korkinos (PG 154.745–66). There are two extant 15th-C. commentaries on the hours: the Treatise on Prayer by Symeon of Thessalonike (PG 155.535–670; tr. H.L.N. Simmons [Brookline, Mass., 1984]) and one by Mark Eugenikos (PG 160.1163–93).

—R.F.T.

HOUSES (sing. okkia). In the late Roman Empire houses took two main forms: the insula or apartment house, and the domus or private residence. Descriptions of the regions of Rome in the mid-4th C. list 46,602 insulae and 1,797 domus. The excavations at Ephesus unearthed two insula-type buildings that were constructed in the 1st C., but underwent numerous remodelings up to the 7th C. The ground floor contained vaulted shops above which were situated modest rectangular rooms. The two-story mansion of a wealthy citizen formed a component of one insula. There is no archaeological evidence concerning later insulae, but written sources attest their existence in Constantinople, mentioning “five-roofed” (pentorophoi) houses and containing complaints about neighbors who kept pigs on upper floors. The ground plan of the domus was a peristyle type, containing an inner courtyard (atrium) surrounded by rooms that formed the outer walls of the house. The domus was usually a one-story dwelling with many conveniences, including a bath, kitchen, latrines, plumbing and heating systems, and storage rooms. By the 7th C. the focal point of the house shifted from the atrium to the second floor gallery (hyponeum), where guests were received (E. Mioni, OrChrP 17 [1951] 83–24–25).

A series of laws (Cod. just. VIII 10.12) regulated the construction of a new house or the remodeling of an old one. The law ordained that a distance of at least 12 Greek feet had to be maintained between houses. Repairs to an old house were allowed, but not changes to its original plan. Neighbors’ access to daylight and a view of the sea (esp. in Constantinople) were protected. A balcony could not be built over a street less than 12 feet wide. Furthermore, a staircase leading from the street to the balcony was not permitted because it presented a fire hazard or could obstruct traffic in the street.

The Byz. town houses that have been unearthed in excavations and that date from 1000 onward present several building types. One common plan of a private residence (e.g., at Corinth, Athens, Pergamon, Thebes) was a rectangular building with a central open space that had no peristyle, but perhaps an open-fronted roof; the courtyard and the surrounding rooms on the ground floor served as storerooms for agricultural products (with pithoi placed in the pseudo-atrium), stables, etc. Workshops (ergasteria) were also situated on the ground floor; living quarters were upstairs. Another common plan was a house without a courtyard or with a narrow courtyard in front of the main façade (e.g., at Pergamon and Eupipos). Construction was of poor quality, with frequent reuse of ancient architectural elements. The rooms were small and irregular in shape, and the houses were erected along narrow alleys without any obvious planning.

Written sources demonstrate the same irregularity of the house even in Constantinople. In his foundation charter of 1077 (ed. P. Gautier, REB 39 [1981] 27.159–29.181) Attaleiates describes his mansion in the capital, which consisted of several buildings connected by a common courtyard; the buildings had a ground floor (katageon) and an
upper floor (heliakos) that projected over the courtyard; the mansion also included a chapel and a three-story dwelling with a donkey-driven mill on the ground floor. Another important description is found in a purchase deed of 1320 for a house in Thessalonike (Dölger, Schatz., no. 111.16–26): it was made of stone and brickwork covered with tiles; adjacent was a two-story building with a thatched roof. The houses of the wealthy provided separate quarters for women, usually in the inner part of the building.

Houses in the countryside were usually modest: built of wood, unbaked bricks, or even reeds, they were rectangular in plan and consisted of small rooms and a porch (e.g., at Armatova in Elis [Peloponnesos]); some had only one or two rooms, with earthen floors, open hearths, and a timber roof (e.g., at Lun in northern Italy—B. Ward-Perkins, BSR 49 [1981] 91–98). Nicholas Mesarites describes village houses made of reeds plastered with mud and covered with thatched roofs. In sharp contrast were the mansions of wealthy landowners (like Digenes Akritas), surrounded by gardens and defended by walls and towers (Pyrgoi).

The architectural decoration of houses was usually simple, but noble mansions and palaces might be ornamented with polychrome façades, arcades, and balconies as at Tekfur Saray in Constantinople, or with a columned front as on the site of the Seraglio, or with niches and blind arcades as in Mistra (A. Orlandos, ABME 3 [1937] 1–114). The window openings, wide on the upper stories and narrower on the ground floor level, were mostly semicircular.

HRABŮR ČERNORIZEC ("militant monk"), Slavic monk who wrote a brief and enigmatic treatise, *On the Alphabet*; fl. ca. 880. The authorship, date, and purpose of the work have been much debated since it first came to the attention of scholars in 1824. The text opens with a short discussion of the history of the Greek alphabet, drawing on both classical and Christian sources, and of the invention of the Slavonic alphabet by St. Constantine the Philosopher. It then goes on to a vigorous and passionate defense of the religious use of the *Church Slavonic* language and alphabet against the proponents of the trilingual dogma, who believed that the liturgy could be celebrated only in Hebrew, Greek, and Latin. The consensus today is that the author was a Bulgarian, probably a member of the circle of Tsar Symeon of Bulgaria before his accession, and that the treatise was written between 885, when the pupils of Constantine the Philosopher and Methodios reached Bulgaria, and 893, when Symeon succeeded his father. During this period there was conflict in Bulgaria between users of the new Slavonic liturgy and Byz. clergy using the Greek liturgy. The treatise shows considerable linguistic discernment.

*Ed. O. piomech, ed. A. Giambelluca-Kossova* (Sofia 1986).

HRIPŠIMÉ. See VALARŠAPAT.

HUDÚD AL-ÂALAM (The Regions of the World), an anonymous Persian geographical treatise written in 982/3, and one of the earliest surviving Persian prose texts. A comprehensive descriptive analysis of the world as known to 10th-C. Muslims, it was composed by an armchair scholar utilizing other books (primarily those by Ibn Khurdadhbeh, Jayhani, and al-Istakhri) and oral traditions. The early geographical sources for knowledge of Byz. have been identified as the two Byz. prisoners, Abi Muslin al-Jarmi (redeemed 845–46) and Hârûn ibn Yahyâ (late 9th C.). The dates of their information are quite relevant to the anachronistic description that the Hudûd al-Âalam presents of Byz., including 14 Byz. provinces (three in Europe and 11 in Anatolia), thus repeating Ibn Khurdadhbeh and Qudâmâ ibn Ja'far. Constantine VII Porphyrogenetus, on the other hand, who wrote earlier than the Hudûd al-Âalam, lists 12 provinces in the west and 18 in Anatolia. Furthermore, the treatise’s evidence on Byz. cities is inconsistent. Of the land of Rûm it says, “It has many towns and villages,” and “Each of these provinces... has numerous towns, vil-
lages, castles, fortresses... only to contradict itself: "In the days of old, cities were numerous in Rüm, but now they have become few." By the late 10th C. it would seem that the number and size of cities were in fact on the increase.

---S.V.

HUGEBURG, 8th-C. Anglo-Saxon nun in the Franconian abbey of Heidenheim who composed the stylistically ambitious but grammatically shaky Lives (BHL 8966, 8931) of two brothers who were her relatives: Wynnebald, first abbot of Heidenheim (ca.751–61), and Willibald, bishop of Eichstätt (741–24 Sept. 787), collaborators with St. Boniface in the evangelization of Germany. Willibald dictated his account to Huguburg on 23 June 778; her retelling of his travels (723–29) in Byz. Italy, western Asia Minor, the Holy Land, and Constantinople displays linguistic characteristics distinct from Huguburg's diction and seems to follow closely Willibald's own words. It focuses on pilgrimage shrines but also sheds light on shipping routes and conditions (via Monemvasia "in Slawinia" and the Aegean, 93.1–94.8, 101.16–102.13), towns (Ephesus, "Strobolis" [= Strobilos]), styliates at Miletos (93.15–24), monuments (Jerusalem; tombs of Sts. Andrew, Timothy, Luke, and John Chrysostom in Constantinople; the church in Nicæa, seat of Nicæa I, 101.18–28), general historical conditions (Cyprus's neutrality and peace between Byz. and the Arabs, 95.23–17: plague in Syria, 100.3–9; cf. Theoph. 1:410,19–20), water buffaloes in Palestine (96.10–11), the embassy of Emp. Leo III to Pope Gregory II (100.28–30), and the contemporary state of legends (e.g., an anti-Jewish anecdote about the Virgin's funeral, 97.32–98.5) in one of the most obscure periods of Byz. history. There is no apparent reference to Iconoclasm.

--M.McC.

HUMANISM, a scholarly term often used to designate a certain period of cultural development and, in this sense, identical or similar to the concept of renaissance. Thus, for I.P. Medvedev (Vizantijskij gumanizm XIV–XV vv. [Leningrad 1976] 4) humanism is the "philosophical and literary stream of the Renaissance period." All the cautionary statements applied to the concept of Byz. renaissance(s) remain valid with respect to Byz. humanism, although we can safely assume the existence of individual humanists in Byz. (e.g., PLETHON) or of certain humanistic features in late Byz. culture. It is doubtful, however, that Byz. ever had a humanistic milieu resembling that of Italy in the 14th and 15th C.

From a different perspective, Hunger (Reich 355–59) describes "Christian humanism" as a phenomenon distinct from the Western Renaissance; the core of this humanism is the confluence of Christian and classical elements, a conciliatory attitude toward the ancient heritage. The concept of perpetual humanism meshes better with the idea of Byz. continuity than that of perpetual renaissance since it does not require revivals and their counterpart—cultural gaps or dark ages. Humanism has also been identified with Christian philanthropy and active efforts to alleviate human...
misery (Constantelos, *Philanthropy* 66). Lemerle (Humanism xi) speaks of two Byz. humanisms, the first of which, in the 9th-10th C., “corresponds” (chronologically) to the obscure centuries in the West, whereas the second humanism, that of the Palaiologoi, having been prepared already during the Komnenian period, developed through contacts with the West. Lemerle, however, does not define the notion of humanism.

-A.K.

**HUMBERT** (Oδηπέρτος), cardinal of Silva Candida; born ca.1000, died Rome 5 May 1061. As a monk at Moyenmoutier (Lorraine), Humbert studied Greek; he accompanied Pope Leo IX to Rome and became the principal Greek scholar in the Curia. He translated and responded to the letter on Latin ecclesiastical usages by Leo of Ohrid, sent in 1053 to John, bishop of Trani. Humbert then headed Leo IX’s embassy to Emp. Constantine IX, arriving in Constantinople early in 1054. His letters to Patriarch Michael I Keroularios, treatises against Byz. liturgical practices, and response to Niketas Stethatos inflamed the patriarch and clergy. His intemperate polemics contributed to a controversy that Constantine IX tried vainly to quell. On 16 July 1054 Humbert deposited on the altar of Hagia Sophia a bull excommunicating Keroularios and his followers (PL 143:1001-04). It condemned the lack of the filioque in the Creed and various Byz. liturgical customs, esp. the use of leavened bread rather than azymes. Following his return, Humbert’s self-justifications helped perpetuate the schism.

-C.M.B.

**HUMOR.** Laughter was considered in antiquity as a virtue, a divine quality, and writers (including Plutarch) collected jokes and anecdotes often ascribed to famous personages. An anonymous collection of this kind was produced, probably in the 3rd-5th C., under the title of Laughter-Lover (Philogelos). Christian society, however, rejected laughter; it was replaced by tears of contrition, compunction, and a quiet smile, frequently described as a quality of a saint. Attitudes toward humor nevertheless remained ambivalent: not only did the Philogelos survive in a number of MSS, but Sokrates (HE 6:22) describes a collection of theological jokes attributed to Bp. Sisinnios. Byz. humor might take the form of a fun; for example, in a 12th-C. historian (Nik.Chon. 44:1:23-27), when Isaac II asked for some salt (balas) at dinner, the mime Chaliboures replied, “Let us first come to know these women, and then command others (allas) to be brought in.” The Byz. also found humor in improper or absurd situations such as the lascivious dance of the old lady Maryllis, described by Niketas Eugeneianos (Hunger, *Lit. 2:136*). Exaggerated improper situations were frequently used in personal invective and religious polemic, and in such genres as satire, parody, and epigram; the elements of self-mockery developed as well. The peak of humor was achieved by Christopher of Mytilene, Psellus, Pschoprodromos, Eustathios of Thessalonike, and Sachlikes. There was also coarse and graceless humor, consisting of the culmination of contorted curses.

-A.K.

**HUNGARY,** country founded by the Magyars or Hungarians, a people whom the Byz. called Tourkot and, from the 10th C. onward, Oungroi (early evidence for Oungroi is found in the vita of Basil the Younger). In the 9th C., Hungarians lived in the basin of the Don River and, according to an Arabic source, sold Slavic captives in Cimmerian Bosporos to the Byz. In 887 the Hungarians for the first time entered into direct military contact with Byz.: according to a revised version of George Hamartolos, the Bulgarians invited the Oungroi to put down a rebellion of Byz. captives on the Danube, but the Byz. fleet overcame the Oungroi and repelled their attack (Zlatarski, *Lit. 1*:339ff). In the Byz.-Bulgarian war of 894-96 they acted as Byz. allies but, under pressure from the Pechenegs, moved westward and settled in Pannonia, where they organized their state under the dynasty of the Arpads.

In the 10th C., the Hungarian often invaded the Balkans; a Hungarian legend eulogizes the
chief Botond, who allegedly knocked a hole in the gates of Constantinople with his battle-ax. In 948, two Hungarian princes were baptized in Constantinople. In 953 a Greek monk was sent as bishop to Hungary; the mission was temporarily successful, esp. in the eastern and southern parts of the country, but when István (Stephen) I (1000–
1038), the first Catholic king, defeated rival Byzantine relatives and chief-tains, Greek influence began to decline. Even though Greek monasteries were founded in the 11th C., and Greek-speaking monks lived in some religious houses as late as 1210, the country became increasingly Catholic and Latin-oriented. Byz. goldsmith-work, jewels, ecclesiastical vessels, reliquaries, and coins reached Hungary throughout the 11th–12th C., partly by trade, but mostly as imperial gifts; best known among these are the gold treasure of Nagyszentmiklós, the so-called Monomachos crown (probably a gift to Andrew I) and the crown given to Géza I (now the lower part of the “Holy Crown of Hungary”; see CROWNS).

After László I (Ladislas) penetrated into Croatia and Kálman (Coloman) annexed Dalmatia, the territorial conflicts between Constantinople and Hungary caused several wars; Hungary often made alliances with Serbia, the Normans, and the principalities of Rus’ against Byz. In the 12th C. the situation became very complicated: while there were many dynastic contacts between the Árpád and Constantinople, the support frequently granted to Árpád pretenders by Constantinople caused recurrent tension between Hungary and Byz. When Béla III—who for a while was expected to unite both states under his rule—returned to Hungary, he turned definitively to the West and, from the 13th C. onward, the intensity of Byz.-Hungarian relations decreased. When, however, the Ottoman threat became serious, Byz. turned to Hungary for help: in 1366, Emp. John V Palaiologos visited Lajos (Louis) I of Hungary; in 1423/4 John VIII sought an alliance with Sigismund of Hungary; and in 1434–36 two Byz. embassies visited Hungary during their trips to the West. János Hunyadi, who had been successful in repelling the Turks from the borders of Hungary, was defeated in 1444 when he mounted a crusade that was crushed at Varna, and in 1452/3 he acted too slowly to prevent the fall of Constantinople.

HUNS (Ouvros), an Asian (possibly Turkic) people that appears in Roman sources beginning with Ammianus Marcellinus: it is generally accepted that the Huns are to be identified with the Hsiung-nu of Chinese sources and are related to the Ephthalites in Central Asia. Around 375 the Huns crossed the Danube, conquered the Alans, and expelled the Goths from the steppe north of the Black Sea. They participated in the Visigoth attacks on the empire but after 380 retired north of the Danube. After 450 they moved westward to Gaul. Their attitude toward the empire was ambivalent for several decades: some Huns served as foederati, others organized raids—in 422, under the command of “King” Ruga, they reached Thrace (B. Croke, GRBS 18 [1977] 347–67). In the east, the Huns in 395 crossed the Caucasus but were destroyed by the Romans at the Ephrates. Ruga’s successors were Bleda and Attila. Attila created an “empire” that reached from Gaul to the northern Balkans, but after his defeat by Attila the empire of the Huns disintegrated quickly.

The Hunnic empire was a conglomerate of various nations, including Alans and some Germanic tribes. The Huns were nomads, although archaeological finds include some agricultural implements. They were horsemen, armed with bows and swords, who astonished Romans by their speed and discipline. Prisikos of Panion noted that the Huns treated their slaves well and that Roman craftsmen worked for the Huns. A. Bernštam (Otech istorii ganov [Leningrad 1951]) suggests that the Huns played a progressive role in history by destroying slave-owning societies; E.A. Thompson (A History of Attila and the Huns [Oxford 1948] 209) asserts that in the West the magister militum Attilus, as a representative of the great landowners, looked forward to cooperation with the Huns against the Visigoths and Bagaudae, whereas in the East the ruling class induced Theodosios II to fight Attila.

After the collapse of the reign of Attila, the name Hun was applied to various peoples: some

of them (Sabir, Cotrigurs and Utrigurs) may have been related to the Huns, but for others (Bulgarians, Avars, Hungarians, even Ottomans) it was only an archaizing ethnic designation.

HUNS, WHITE. See Ephthalites.

HUNTING (κυνήγιον). In the Byz. countryside hunting had first of all a practical purpose—protection of the flocks from wild beasts. It also provided meat as a supplement to the diet, although it was not as important as fishing. Farmers snaring hares are represented in MS illumination (e.g., Kádár, Zoological Illuminations 179, 225). They also hunted quail: a post-Byz. text describes a great slaughter of quail in Crete in 1494, when a single night’s catch netted 4,000 birds (Canon Pietro Casola’s Pilgrimage to Jerusalem, tr. M. Newett [Manchester 1907] 316f).

Hunting played a more important role as a pastime of the upper class and is represented on their possessions, such as silks and an ivory casket in Troyes (Athens Cat., no.52). Three emperors (Theodosios II, Basil I, and John II) died in hunting accidents. There were imperial officials called protokynegos and protoberakarios, and hunting images formed a signal element of imperial symbolism. Hunting was also considered a good substitute for military training (cf. Spanias, ed. Wagner, p.6,122–23). Enthusiasm for hunting peaked under the Komnenoi, when special ekphrasis on hunting became fashionable (e.g., by Constantine Manasses and Constantine Pan-technes). On the other hand, Michael Psellus, who was expressing the intellectual outlook of his time, had no enthusiasm whatsoever for hunting (Psellus, Scripta Min. 2:205,3–6).

The quarry of noble hunters was primarily bears, boars, and deer, but smaller animals such as hares and birds were also hunted. The prey of the various social classes—which are distinguishable by their costume—is illustrated in the Venice Kynegetika MS of Oppian. The spear was the most common hunting weapon. Noble hunters rode horses; the Byz. also trained dogs and leopards for hunting as well as various birds for hawking. Pero Tafur (ed. M. Letts, 1451) observed that the Greeks were great hunters with falcons, goshawks, and dogs. The equipment of the fowler was simpler: nets, decoy birds in cages, long cords, bird-line, and reeds. His pursuit is treated in illuminated MSS (Treasures II, fig.300) as one of the seasonal activities evoked by the Easter homily of Gregory of Nazianzos.

HUNYADI, JÁNOS (lxýgchos ó Χουνιάδης, in Chalkokondyles usually Χουνιάτης), Hungarian general and statesman; born between 1407 and 1409, died Zemun 11 Aug. 1456. Probably of Wallachian origin, Hunyadi began his career as a retainer at baronial courts and achieved the high posts of voivod of Transylvania and, in 1446–53, regent for the minor László (Ladislas) V. He also amassed great wealth.

In 1442–43 Hunyadi successfully campaigned against the Turks, reconquering Niš and Sofia. However, the crusade of Varna in which he participated in 1444 ended in disaster. In early 1451 Hunyadi signed a three-year truce with Mehmed II, confirming it on 20 Nov. on condition that the sultan would build no strongholds on the Danube. When Mehmed began preparation for the last siege of Constantinople, Constantine XI sent envoys to Hunyadi. In the fall of 1452, the Hungarians agreed to assist if they received Mesembria as their operational base. After long deliberations, a chrysobull was delivered to Hunyadi that granted him Mesembria (Reg 5, no.3545). In Apr. 1453 Hunyadi’s ambassadors appeared in Mehmed’s camp, threatening to wage war unless the Turks ceased besieging Constantinople. The rumors about Hunyadi’s intervention as well as frightening omens in the Turkish camp caused Mehmed to waver, but the military council insisted on maintaining the siege. It was too late for Hunyadi to intervene, but in 1456, when Mehmed besieged Belgrade, Hunyadi won a victory that stopped the Turkish advance for decades. Soon thereafter Hunyadi died of the plague.
HYAKINTHOS OF CYPRUS, metropolitan of Thessalonike (ca. late spring 1345–spring 1346); born Cyprus, died Thessalonike before 19 May 1346. Little is known of this anti-Palamite hieromonk; he lived at the monastery of the Hodegon in Constantinople and is probably to be identified with the Hyakinthos who carried letters from Nikophonos Gregoras to George Lapites in Cyprus. Gregory Akindynos praised Hyakinthos in his correspondence as “admirable” and “most holy” (ed. Hero, eps. 52.48–49, 60.54). He was made metropolitan by Patr. John XIV Kalekas, but was unable to enter Thessalonike until fall 1345, when the Zealots regained control of the city. His short tenure was marked by persecution of Palamite clergy and monks. Kyrrres (infra) argues that Hyakinthos was the metropolitan attacked in the “Anti-Zealot” Discourse of Nicholas Kabasilas for simony, alienation of property, and imposing fixed taxes on monasteries.

HYBRIS (ὑβρίς), injury to another person through word or deed; it even includes trespassing. Hybris committed in a public place, against a person of standing, or in connection with bodily injury was considered severe hybris. Only the injured party had the right to initiate a suit, which could be either private or criminal (Basil. 60.21). Hybris against a donor or patronus led to the forfeiture of the gift or emancipation; children who committed hybris against their parents were disinherited (Basil. 31.6.6.1; 35.8.41; 48.26.1; 49.2.19).

LIT. Kaser, Privatrecht 2:439. —L.B.

HYDATUS, Latin historian and churchman; born Lemica (mod. Ginzo de Limia) in northern Spain ca. 395, died Galicia? ca. 470. During youthful eastern travels, Hydatius met Jerome at Bethlehem. Back in Spain, he was ordained in 416 and by 427 was consecrated bishop of an unknown see, perhaps Aquae Flaviae (mod. Chaves in Portugal). On a secular trip to Gaul in 431 he met the general Aetius, toward whom he may be too partial. In 460, the Suevi kidnapped and briefly imprisoned him. As a theologian, Hydatius acquired a reputation as an expert on Priscillianism (see PRISCILLIAN), which he opposed.

His Chronicle, a continuation of Jerome’s, covers the period 379–469. Albeit not blind to the world at large, Hydatius focuses on Spain. While prone to inflate casualty figures and unduly partisan, he penned a reliable and well-considered account of most events, giving a uniquely rational reason, surprising in a bishop, for the retreat of Attilla from Rome. Hydatius can be a useful source for Byz. history when his part of the world is involved, for example, the Visigothic vicissitudes of Gallia Placidia.

HYMN (ὕμνος). A religious poem set to fairly simple music and sung in Byz. sacred services. In early Christianity, the term “hymn” was applied to all devotional chant; later it referred only to newly written poems, as distinguished from the scriptural psalms and canticles. The earliest hymns are known to us from the New Testament: the Magnificat, the Song of Symeon, and the short poetic texts quoted by St. Paul in his epistles. Byz. hymns appear first in patristic literature, important early examples being the “Homily on Pascha” (a distant precursor of the kontakion) by Bp. Melito of Sardis and the Phos hilaron and Ho homagenes hymos (see MONOCHORES, HO), two early troparia, the latter ascribed to Justinian I.

Although no original music for these hymns survives, probably, like their Gregorian counterparts, Byz. melodies were largely based on the principle of one tone to each syllable of the text, which made them suitable for congregational singing. Even the music for the hymns of ROMANOS THE MELODES and JOHN OF DAMASCUS is unfortunately lost, but the dramatic character of the texts suggests that they were chanted in a kind of
HYMNOGRAPHY, a fertile and creative area of Byz. literature. A hymn can be defined as a poem on a religious topic, primarily intended for liturgical use and to be sung, but also including verse written for private devotional purposes. The decisions of the Councils of Laodicea (4th C.) and Braga (6th C.) prohibited hymns in the liturgy on other than scriptural themes. Hymn singing was part of Christian worship, as it had been of Jewish practice, from the earliest years. Possible specimens of such hymns can be extracted from the New Testament (e.g., Eph 1:3–14) and from the church fathers (e.g., the Easter Homily of Melito of Sardis), while embedded in the 4th-C. Apostolic Constitutions are hymns such as “Glory in the highest” and “O, gladsome light” (Phos hilaron); other similar hymns also survive on papyrus. The limited evidence leads to the conclusion that these early hymns were written in rhythmic prose, used a simple language, and were sung responsorially. From the 5th C. there are a few indications (e.g., the comments of Abba Pambo [Christ-Paranikas, infra, xxix–xxxi] and the phrases preserved in the Life of Auxentios [PG 114:1416]) that the psalms and canticles were now part of the Orthros and Vespers services and that troparia and stichera, stanzas inserted between psalm verses, were in use (although some monastic communities were opposed to music in services). The earliest hymn writers known by name (Anthimos and Timokles) are also recorded from this period, though none of their works can now be identified.

Hymns had also been written in classical meters (e.g., by Gregory of Nyssa or Synesios), but these, of limited appeal and intelligibility, were unlikely to have been intended for liturgical use. There had developed, however, in response to the evolution of the spoken language and under influence from Syriac literary patterns, increasingly elaborate verse forms that built lines using stress rhythms, an equal number of syllables for phrases in corresponding stanzas, and acrostics. These tendencies culminated in the kontakion, a metrical homily consisting of a prooimion and a varying number of oikos, or stanzas, linked by an acrostic. The kontakion, probably chanted by the preacher with the choir singing the refrain at the end of each oikos, became the dominant form of the hymn in the late 5th–6th C. Though antecedents for many of its features can be found in earlier phases of Greek literature (e.g., in the late 3rd-C. Parthenios of Methodios, bishop of Olympos), the most immediate models exist in Syriac and esp. in the works of Ephrem the Syrian. At its best, as in in the Akathistos Hymn or the Christmas Hymn of Romanos the Melode, the leading exponent of the genre, the kontakion is characterized by vivid dialogue and striking imagery.

Toward the end of the 7th C. the kontakion was replaced by the kanon, for reasons not fully understood, but perhaps connected with a change to a more varied musical setting. As late as the 9th C. kontakia were written (notably by Joseph the Hymnographer), but normally in shortened form for use within the kanon. A kanon, paraphrasing and meditating on the nine biblical canticles which it replaces, consists of nine odes, each made up of an heirmos and several troparia. Innumerable examples of kanones, many as yet unedited, survive either in full or abbreviated service books, such as the Menaion. Notable exponents of the genre include Andrew of Crete, John of Damascus, Kosmas the Hymnographer, and Joseph the Hymnographer.

Though hymns, in the form of kanones, stichera, and troparia, continued to be written until the fall of Constantinople, for all practical purposes by the end of the 11th C. the liturgical calendar was full; few additions were made later. The Orthodox church in southern Italy, led from the Grottaferrata monastery, long remained an active center of hymn writing. Many hymns, like those of Symeon the Theologian, which were not on scriptural subjects, may have been intended for personal use only.

Hymns of all types, whether long forms like the
kontakion and kanon, or the shorter elements like the troparia and stichera, were a vital feature of the services of the Orthodox church, involving psaltes (singer), choir, and congregation. Their language, drawing on the koine of the Old and New Testaments, was rarely complex, though in the kanon, communication seems sometimes to have been subordinate to the musical setting. Limited to paraphrasing biblical passages in ways relevant to a particular feast or saint, the authors’ ingenuity is frequently admirable.

Hymnographers, while predominantly monks and clerics, nevertheless came from all walks of life and included emperors (e.g., Justinian I, Leo VI), some learned scholars (e.g., John Mauro-rous), and a few women such as Kassia (E. Catalygiou-Topping, Diptycha 3 [1982–83] 98–111). With the early acceptance of stress meters at a time when literary compositions were struggling to impose the irrelevant archaic quantitative meters, hymn writers acknowledged the fact of linguistic change and the need for accessibility with greater realism than the classicizing secular poets.

—E.M.J.

**HYPAPANTE** (ὑποπαντή, lit. “meeting”), the Presentation of Christ in the Temple (Lk 2:22–38) at the time of Mary’s purification, 40 days after giving birth. The Hypapante, one of the 12 Byz. Great Feasts, is celebrated 2 Feb.

A Presentation feast is first seen in Jerusalem ca.384; it was celebrated on 14 Feb., this being the 40th day after 6 Jan., the feast of Epiphany, which at that time in the East comprised the Nativity as well as the Baptism. In 518, Severos of Antioch called Hypapante a recent Palestinian innovation not celebrated in either Antioch or Constantinople (PO 29:246.16–26; cf. 38:400–15). Justinian I decreed its celebration throughout the empire (Nikephoros Kallistos Xanthopoulos, PG 147:292A). There is some confusion concerning the date on which the feast was celebrated in Constantinople. Under Justinian it was 2 Feb. (M. van Esbroeck, AB 86 [1968] 351–71; 87 [1969] 442–44), but in 602 the riot that broke out against Emp. Maurice during his procession to Blachernai to celebrate the feast apparently took place on 14 Feb. (M. Higgins, Traditio 1 [1943] 409f).

The Hypapante has one day of forefeast, a synaxis the following day, and seven days of after-feast, which may be foreshortened by an early Lent. Despite the fact that, in the celebration of the feast, the theme of Jesus’ encounter with Sy- meon predominated over that of the Virgin’s puriﬁcation, the Hypapante was considered one of the five Marian Great Feasts and was celebrated by the emperor at the Church of the Virgin at Blachernai.

**Representation in Art.** Rare in art of the 7th and 8th C, the Hypapante attained its standard composition in the 9th. C. Usually showing Sy- meon and Anna standing to the right of a ciborium and altar and the Virgin with the Child and Joseph with his donation of pigeons to the left, the event is presented as a theophanic recognition.
of Christ. Symeon, who perceived Christ’s divinity, displaced the priest at the altar, often assuming his vestments, and Anna may gesture in acclamation. An alternative composition, developed in the 9th C. but widespread only in the 12th, emphasizes the themes of Christ’s sacrifice and Mary’s grief, as Symeon holds the Child over the altar and the Virgin assumes her mourning posture from the Crucifixion. The late 12th-C. image of Symeon alone cradling the Child in the posture of the Virgin Eleousa derived from this composition, showing Symeon as a prophet of Christ’s Passion. Both variants of the full composition and the condensed “Symeon Glykophilon” (“sweet-beloved”) continued into Palaiologan art.

HYPARCH. See Eparch.

HYPATIA (Ὑπατία), Neoplatonist teacher; born Alexandria between 353 and 360 (R. Penella, Historia 33 [1984] 126–28), died Alexandria 415. Educated at Alexandria, Hypatia owed her zeal for mathematics to her father Theon, whose work she assisted and surpassed, revising the third book of his commentary on the Almagest of Ptolemy; her commentaries on Diophantos of Alexandria and the Conics of Apollonios of Perga are lost. Hypatia remained in Alexandria to become that city’s most celebrated and adored teacher of mathematics and Neoplatonism (the version of Porphyry rather than that of Iamblichos). Pupils (Synestios being her most famous one), populace, and statesmen alike succumbed to her dazzling combination of intellect, beauty, virtue (which disappointed would-be seducers), eloquence, and political acumen. All this and her paganization provoked the hatred of Cyril of Alexandria, who may or may not have procured her brutal murder by a gang of hospital attendants (parabalanoi) led by one Peter the Reader.

HYPATIOS (Ὑπάτιος), bishop of Gangra, legendary 4th-C. saint; feastday 14 Nov. His major miracle was the killing of a dragon that had taken up residence in the state treasury under Constantius II, thus causing severe financial problems; Hypatios used his staff, topped with a cross, to kill the dragon, and the icon of Hypatios was allegedly placed at the treasury entrance to protect it. After returning to Gangra with the emperor’s fiscal privilege, the abolition of the tax called xylelaion (Ferri, infra 89.1–5), Hypatios was murdered by partisans of Novatianism.

Several vitae and a passio are dedicated to Hypatios. It was suggested by Ferri that the earliest vita was written in the 5th C. and the passio, teeming with fantastic episodes, between 500 and 700, but F. Halkin (AB 51 [1933] 392–95) demonstrated that his argument was ill founded. If the abolition of the xylelaion reflects the same measure recorded as a law of Justinian I (Malal. 437.17–18), the vita cannot be earlier than the 6th C.; if the Scolian basilicus Chobar was modeled on Kouber-Kuvrat, the passio was produced after 680.

Representation in Art. The Menologion of Basil II (p.181) shows the bishop confronting the dragon by spearing it in the mouth and setting it afire. The saint himself is then killed by a woman throwing stones from an upstairs window (though the title of the page refers to his koinêsis, or peaceful death). The composition is repeated in the illustrated “imperial” menologion in Moscow (Hist. Mus. 183, fol.158).

A.K., N.P.S.

HYPATIOS, general who was briefly declared emperor in 532; died Constantinople 19 Jan. 532. The nephew of Emp. Anastasios I, he was consul ca.500. In 503 he was sent with Patrikios and Areobindus to command a campaign against the Persians. In 513 he was magister militum in Thrace, where his unpopular administration contributed
to the revolt of Vitalian. Defeated in 514, he was deprived of his position, then reinstated, defeated once more, and captured by the rebels. He was commander again in the East under Justin I and negotiated with the envoys of Kavad; the negotiations failed, and after an investigation Hypatios was removed from the court. In 529 he was replaced as the Eastern commander by Belisarios. In 532, at the time of the Nika Revolt, Hypatios was proclaimed emperor but was executed when the rebellion was quelled. His body was thrown into the sea, but was later washed up and buried in the Church of St. Maura; verses supposedly written for his cenotaph survive in the Greek Anthology (AnthGr bk.7, nos. 591–92). His property was confiscated but later restored to his children.

HYPATIOS, bishop of Ephesus (from 531); died ca.541. Early in his bishopric he presided at the conference convoked at Constantinople by Justinian I to reconcile Severos of Antioch and the Monophysites, whom he confounded by showing the spuriousness of the writings ascribed to Diosysios the Areopagite (J. Guillard, REB 19 [1961] 75). He was also the orthodox spokesman at the Council of Constantinople in 536 that anathematized Severos and other Monophysites. In the interim, Hypatios had taken Justinian’s request for a ruling on Theopaschitism to Pope John II (533–35) at Rome. Fragments remain of at least two books titled Miscellaneous Questions, answers to the questions of his suffragan, Julian of Atramytton (H.G. Thümmel, BS 44 [1989] 161–70). They include an important statement on the cult of images in which church art is defended as an appropriate aid for uneducated people to progress from material to spiritual contemplation of the divine. The many citations in biblical catenae suggest his authorship of commentaries on Psalms, the Twelve Prophets, and Luke. An inscription (Grégoire, Inscriptions, no.108) found at Ephesus in 1904 preserves his instructions on the obligations of Christian burial.

HYPATIOS OF ROUPHNIAI, saint; born Phrygia ca.366, died near Chalcedon 466, on 30 June, according to J. Pargoire (BZ 8 [1899] 451); feastday 17 June. A scholastiko, Hypatios’s father educated his son well, but after a family conflict Hypatios left home for Thrace and became a shepherd. At about 20 he joined an ascetic, Jonas, and assisted him in building the fortified monastery of Halmyrisos. Circa 400 Hypatios founded the monastery of Roupphinai; from 406 he was its hegoumenos. From 436 onward, he was considered the “father” of all the monks of Constantinople. His monastery was a community of laborers; the monks earned their living by making woolen garments and baskets and by gardening (pp. 100.14–16, 248.7–14). Hypatios struggled against pagan traditions; he prevented the prefect Leonios from restoring Olympic games in Chalcedon and caused the disappearance of Artemis, a giant female demon (pp. 270–72). He supposedly resisted Nestorianism even before the Council of Ephesus and was connected with the Akoiometoi (E. Wolfe, BZ 79 [1986] 302–09). The preamble of Hypatios’s Life says that it was written by his disciple Kallinikos and discovered by an anonymous “editor” who corrected the style, esp. mistakes caused by “the Syriac dialect.” Bartelink (infra 12) trusts this claim and dates the Life to 447–50. If, however, the preamble is fictitious, the author must have lived later—in the 6th C., according to Beck (Kirche 404).

HYPATOS (ὑπατος), Greek term for consul. Hypatios and apo hypaton (ex-consul) became honorific titles by the 6th C. and declined in importance thereafter. A letter of Pope Gregory I the Great shows that in Constantinople one could obtain cartas exconsulatus for 30 librae (C. Courtois, Byzantium 19 [1949] 541). The seals of hypatoi and apo hypaton are numerous from the 7th–9th C.; the title is usually combined with modest func-
tions, bureaucratic and fiscal, even though sometimes the hypatos could serve as strategos (e.g., Zacos, Seals 1, nos. 918–19). In the Klerotologion of Philotheos hypatos is a title following that of spatharios, and owners of several seals are titled spatharios and hypatos. In the 10th-C. Taktikon of Escurial hypatos appears as an office—according to Oikonomides (Listes 325) with judiciary functions. The texts of the 11th C. again present hypatos as a title but of a higher rank than the protospatharios; the title seems to have disappeared after 1111. (See also Anthypatos; Dihypatos.)

Lit. Oikonomides, Listes 296. Seibt, Bleisiegel 342–45. –A.K.

HYPATOS TON PHILOSOPHON ("chief of the philosophers"), title of the president of the school of philosophy in Constantinople. F. Fuchs (Die höheren Schulen von Konstantinopel im Mittelalter [Leipzig-Berlin 1926] 29f) suggested that the office already existed in the 10th C., but the chrysobull of Romanos I that mentions the hypatos ton philosophon Paul Xeropotaminos (Xerop. 227.18) is a forgery, and Constantine, under Emp. Constantine VII, was kathgetes and not hypatos. Thus the title was apparently introduced in 1047 (or slightly earlier) by Emp. Constantine IX for Michael Psellos, whose successors were John Italos and Theodore of Smyrna (ca. 1112). The office reappears ca. 1165 or 1167, when the future patriarch Michael III received this post. While the first hypatoi were serious scholars who contributed much to the development of philosophy, Michael's appointment had a different purpose, to control the followers of "pagan" philosophy and to defend the purity of Orthodox tenets. The office continued to exist in later centuries: in the 14th-C. lists of functionaries, the hypatos occupies a place between the logothetes tou dromou and megas chartoularios (pseudo-Kod. 300.21–22, 321.48) or is named in the same breath as the "first of the rhetors," dikaiophylax and nomophylax (338.143–45), probably an anachronistic statement reflecting the situation of the 11th C. The hypatoi of the 13th and 14th C. were teachers acting under the supervision of the patriarchate (Fuchs, ibid. 50–52).

HYPERBOLE (ὑπερβολή), one of the tropes, an exaggerated statement whose goal was the embellishment of speech. Byz. theoreticians, following their ancient predecessors, considered hyperbole as an exaggeration beyond verisimilitude (e.g., George Chiroboskos in RhetGr, ed. Spengel, 3:252.25–29). However, a modern critic may view the term beyond its limited role of stylistic ornamentation and consider the Byz. vision of the cosmos as hyperbolic. This was expressed, on the lowest level, through frequent use of prefixes such as poly- or archi- or superlatives (to stress the extreme of certain qualities). It was also expressed, on a higher level, through means used in other medieval literatures as well: endowing the hero (or antihero) with exaggerated qualities such as irresistible power, overwhelming beauty, immeasurable cruelty, or an extraordinary ability to endure pain or deprivation. The hyperbolic vision of people and objects was typical of certain genres, esp. hagiography, hymnography, and epic didactic oratory. Rhetorical hyperbole could be traditional, tinged with antiquarian allusions. Thus Attaleiates asserts that his hero's generosity surpassed the riches of the gold-bearing rivers Pactolus and Chrysorrhoe (Attal. 273.22–274.3; cf., e.g., Strabo 13.4.5), but the same Attaleiates could make more innovative comparisons, as, for example, his description of a victory so bloodless that not a single nose was bloody (Attal. 271.8–9). The use of hyperbole is also found in Byz. art as in depictions of the priest Symeon flying through the air to meet the infant Jesus in the temple (Maguire, Art and Rhetoric 84–90).

Lit. A. Quacquarelli, "Note sull'iperbole nella sacra Scrittura e nei Padri," VecChr 8 (1971) 5–26. –A.K.

HYPEROON. See Gallery.

HYPERPYRON (νομισμα υπέρπυρν, lit. "highly refined"), the gold coin of standard weight (4.55 g) but only 20.5 carats fine, introduced by Alexios I in 1092 and continued by his successors, though a few earlier 11th-C. references show the name already had been applied to nomismata. The term continued in use until the end of the empire, but after gold coins ceased to be struck
at Byz. in the mid-14th C. it became a money of account, divided notionally into 24 keratia. The shortened forms *perperum* (Lat.) and *perper* (It.) are Western. In the Balkans and southern Slavic borderlands it provided in various forms (e.g., *perper, iperpera*) a convenient name for a number of denominations, usually silver, and moneys of account.

**HYPOBOLON** (ὑπόβολον), the term used from the time of Leo VI for the wedding gift of a man to his wife. Formerly called *donatio proprie nuptias*, it had been obligatory since the reign of Justinian I. Leo VI promulgated three novels on the hypobolon. According to the novels, the hypobolon should be of less value than the dowry. In the case of childlessness and the predecesse of the husband, it fell in full to the wife; if the wife died before her husband, it reverted to him (nov. 20). If there were children, the surviving spouse obtained a portion of equal value to the inheritance of a child—as in Justinianic law—but the portion was not calculated on the value of the hypobolon (or dowry) but on that of the entire property of the predeceased (novs. 22 and 85). The amount of the hypobolon to be provided by the husband, or his family, varied. According to the Peira and the treatise *De hypobolo* by Eustathios Rhomaios (ed. D.R. Reinsch, FM 7 [1986] 239–52), in cases of uncertainty the hypobolon amounted to half the dowry; lower amounts were also possible. According to the Synopsis minor (V 4), in default of other agreements, the hypobolon amounted to a third of the dowry.

**HYPOCAUSTUS** (ὑπόκαστωτον), Roman system of radiant heating in which hot air circulated under a floor made of square or circular brick or tile and raised on low piers (*suspensurae*); heat could also rise through flues in the walls. Hypocausts can be found throughout the Roman world in public and private baths and in palaces and upper-class housing. Until at least the 6th C. Byz. builders continued the hypocaust system throughout the empire, both maintaining Roman structures (Müller-Wiener, Bibliothekon 49f) and adding new hypocausts, even in monasteries (A. Berger, Das Bad in der byzantinischen Zeit [Munich 1982] 102–67; Orlandos, Monast. Arch. 100–08).

**HYPMONEMA** (ὑπομνήμα), term designating various kinds of documents (e.g., in P.Cair. Mast. I 67303, II 6731). A hypomnema petition was addressed to the emperor; the response to it was called istsis (see RERIPLIPIUS) or semiosis. A letter of Patr. Athanasios I (RegPatr, fasc. 4, no.1774) mentions hypomniastika as short documents compiled in the patriarchal chancellery and goes on to complain about the greed of copyists who made such compilations; it is plausible that the patriarch was referring to petitions. Usually, however, the patriarchal chancellery defined the term differently. In earlier documents hypomnema designated synodal decisions or minutes (e.g., synodal hypomnemata of 29 Sept. 394—RegPatr, fasc. 1, no.10), but evidently from the 10th C. onward it applied to a patriarchal decree. The first case of its use is allegedly a lost act of Nicholas I Mystikos of 923 (RegPatr, fasc. 2, no.684), but it is only called a hypomnema by Patr. Nicholas III in 1084. A patriarchal hypomnema (e.g., the act of Matthew I of 1398—RegPatr, fasc. 6, no.3066) was a solemn decree provided with a seal and signature; the designation sigilliodes hypomnema was sometimes employed (sigiliion from the mid-13th C. onward). A hypomnema decision or record could be produced in other offices; thus Theodore of Nicæa (mid-10th C.), in a letter to the eparch Constantine, mentions that official’s “wise hypomnemata” (Dorouzès, Epistoloi 304.7).

A special official, the hypomnematos, is mentioned in the 10th-C. tactikon of Beneševic (Oikonomides, Lists 251.26) and later texts. In the above-cited letter of Patr. Athanasios, ko epi ton hypomnematon is one of the senior officials of the patriarchal chancellery. Hypomnema was also a form of panegyric of a saint, e.g., the hypomnemata on the Twelve Prophets (BHG 1591).

**—A.K.**
HYPOSTASIS (ὕποστασις, lit. "substance"), an ancient term used by philosophers and scientists primarily to designate individual or real existence; Plotinos applied it to his supreme principles—the One, Intellect, and Soul. The word appears in the New Testament five times without having any technical meaning, and in its use by 3rd-C. theologians it was not clearly distinguished from ousia (substance); at the First Council of Nicaea it was used as a synonym for ousia. As late as the Council of Sardica hypostasis was conceived of as real existence, and the acceptance of individual divine hypostases proclaimed heretical. Only at the Council of Alexandria in 362 did Athanasios of Alexandria approve the difference between the terms hypostasis and ousia, and in the wake of the creed of the First Council of Constantinople in 381 the Cappadocian interpretation of the Trinity as three hypostases and one ousia became canonical.

Hypostasis was contrasted to the substance or nature of the divinity, and defined as the individual property (idules) of the Father, Son, and Holy Spirit, whereas ousia—as an individual reality—was the element they shared (koonon) that presupposed a Stoic ontology. In Christology hypostasis was equated with the concept of person at the Council of Chalcedon (451). This teaching was further developed by John of Caesarea and Leontios of Byzantium who defined the hypostasis as "being-for-itself" (kath' heauten einai), discerning two degrees of individuation, the nature and the person; this formula was analyzed by Maximos the Confessor and Anastasios of Sinai (ed. Uthemann, Vita Dux 22.4.85–86 [p.303]).

The distinction between ousia and hypostasis was not fully understood in the Latin West, which tended to translate both terms as substantia; this accounted for the Eastern opinion that the West was Nestorian, that is, that the concept of two natures was in fact the concept of two hypostases in Christ. This linguistic misunderstanding appears in John of Caesarea and Anastasios of Sinai.

HYPOTHEC (ὑπόθηκη, lit. "deposit, pledge"), in Roman law, a type of pledge or security. It differed from a pignus in that the object pledged remained with the debtor, even though the rights of possession were vested in the creditor. Justinianic law and Byzantine legal textbooks retained the Roman distinction between hypothec and pignus; thus, a scholion to Basil. 25.1.1 rejects as mistaken the application of the term hypothek to a pignus (enechyrion), arguing that the pignus was contracted by the physical transfer of the object, the hypothec "by simple agreement (symphoron)." A pledge without any actual physical transfer of the object was known in late Byzantine practice; an act of 1285 describes the case of Theodore Bronas who loaned a man 1.33 litrai of silver; when the man died and his widow could not repay the loan, she pledged olive trees to Bronas equivalent to the amount of the debt. She retained the right to regain her trees after having repaid the loan; no interest is mentioned (MM 4:114.21–28).

The term "general hypothek," however, is used in documents with the meaning of "guarantee" (e.g., Docheiari. no.3.3–4; Laura 1, no.53.6), applied not to a pledge but to the sale or exchange of land. The term rhethi hypothekhe, in the will of Theodore Kerameas of 1284, refers to a certain piece of land used as security for a loan (Laura 2, no.75.40–42).

LIT. Buckland, Roman Law 475f. Kaser, Privatrecht 2, par.231.4.

HYRTAKENOS, THEODORE, early 14th-C. writer and teacher in Constantinople; born in Hyrtakos on the Kyzkos peninsula (F. Dölger, BZ 31 [1931] 411f). Hyrtakenos (Ὑρτακηνός) is known only from his writings, which include an enkomion of Andronikos II and monodies for Michael IX, Irene-Yolanda of Montferrat, and Nikephoros Choummos. He also wrote a panegyric of the Theotokos and an enkomion of the anchorite Annas, the miracle worker. His ekphrasis on the Garden of St. Anne is based on a picture that he reports having seen.

His 93 surviving letters are addressed to such luminaries as Andronikos II, Patr. John XIII Glykys (S.I. Kourouses, EEBS 41 [1974] 344–53), Nikephoros Choummos, and esp. Theodore Metochites (21 letters). In them, he complains about his straitened circumstances (surely exaggerated)
and appeals for a siteresion (payment in money or grain) for his services as a teacher and placement on the state payroll. One letter includes a request for a coat lined with fox fur. Other letters describe his exchange of books with friends, requests for copies of MSS, and references to his own library. Constantine Loukites, who was in Trebizond, commissioned him to purchase a copy of the Odyssey in Constantinople (ep.56). Hyrtaenos was well read in classical literature; his correspondence contains an unusual number of mythological allusions and citations of ancient authors.

IAMBLICHOS (Ἰάμβλιχος). Neoplatonist philosopher; born Chalkis (in Coele-Syria) ca. 250, died ca. 325. Iamblichos supposedly learned about Neoplatonism from Porphyry in Rome. Later he established his own school at Apameia in Syria, where he expounded a mixture of Neoplatonism, Pythagorean thought, and eastern mysticism to the detriment of the theories of Plotinus, further dazzling his students with genuine or stage-managed feats of clairvoyance and levitation. His name became talismanic among the pagan rearguard opposition to Christianity, esp. Emp. Julian.

His extant writings comprise a Life of Pythagoras, a Protrepticus (or Exhortation to Philosophy), and three mathematical treatises; the authorship of On the Mysteries, a defense of magic, is disputed but it is probably an authentic work of Iamblichos. A fragment of his treatise on rhetoric survives. Commentaries on Plato, Aristotle, and the Chaldean oracles are mostly lost, as are the essays On the Soul (some fragments survive in Stobaeus) and On the Gods. Eunapios of Sardis (Lives of the Sophists 458 [p.362]) deprecates his uncooly style. Iamblichos influenced the course of Neoplatonism through both his writings and his pupils, eclectically importing all manner of superstitions and eastern beliefs, perverting mysticism into magic, and fitting these new elements into an ever more expanding and abstruse system with a heavy reliance on trinitarian subdivisions.

- B.B.

IAMBOL (Διάμπολες). city in eastern Bulgaria on the river Tundza, sometimes identified as late Roman Diospolis. On the route from Adrianople to the passes over the Balkan range. Iambol played an important role in hostilities between Byz. and Bulgaria as well as in confrontations with invaders from the steppes. Ceded to Bulgaria by Justinian II in 705, it was recaptured in the mid-8th C. by Constantine V and retaken in 812 by Krum. After John I Tzimiskes captured it in 971, it remained in Byz. hands for two centuries. In 1049 the Byz. general Constantine Arianites was defeated by the Pechenegs at Iambol, and in 1093/4 the city surrendered to the Cumans, who held it briefly. From ca. 1190 it was incorporated in the Second Bulgarian Empire. In the late 13th C. Iambol changed hands several times; during the 14th C. it was a Bulgarian frontier city, twice taken and briefly occupied by the Byz. An inscription records the setting up of a column, no doubt to mark the frontier, by Ivan Alexander in 1356/7. In 1373 the Ottoman Turks conquered Iambol.

- R.B.

IASITES (Ιασιτῆς), a noble family known from ca. 1000. Some were generals, such as Nikephoros, strategos of Cherson, and Michael, archon of Iberia, who commanded the troops sent in 1047 against Leo Tornikios. Another (Michael?) Iasites married Eudokia. Alexios I’s daughter, ca. 1110, but soon fell from imperial favor and was expelled from the palace; perhaps his support of John Italos caused his dismissal. The Iasitai were also related to the Keroulario. Some of them founded a monastery in Constantinople before 1158. Later Iasitai are known as judges (Constantine, epi ton derseon), fiscal officials (Iasites, praktor of Bulgaria before 1108), courtiers (Leo, komes tou staoulo), members of the clergy (Michael, metropolitan of Nikomedia, 1285–89), and literati (the monk and hagiographer Job in the 1270s, Gregory in the 14th C.).

- A.K.
IASOS (Ἰάσως), coastal city on a peninsula in Caria, west of Mylasa. It appears in written sources only as a base of the Kilyrriaioi theme and as a suffragan bishopric of Aphrodisias; it was last mentioned in the 12th C. Its excavated remains, however, provide considerable information about the life of a small Byz. city. During late antiquity, Iasos maintained its civic buildings, added several churches, and expanded to the adjacent mainland where large houses, whose remains indicate much activity in processing agricultural products, were built. Its forum was demolished in the 6th C. After the 7th C., the apparent date of a new fortification wall, some parts of the city were abandoned and others changed as public and private structures were ruined and built over with small houses. The remains of these domestic buildings have provided evidence for manufacture of pottery, glass, and iron products. Iasos had evidently become smaller and poorer by the time of the dated evidence (9th–10th C.). Remains indicate occupation through the 13th C.; the region fell to the Turks before 1269.

IATROSOPHISTES (ἰατροσοφιστής), term applied to teachers of medicine and skilled physicians. Iatrosophistai, who survived as a class through the 7th C., were often suspected of cryptopaganism: Sophronios of Jerusalem, in the Miracles of Kyros and John (ed. Marcos, ch.30.2), tells of Gesios, an Alexandrian iatrosophistai, who allegedly was baptized under compulsion and uttered a Homeric couplet while in the font. Only after the saints cured his painful illness (which his own professional skill had been unable to correct) did Gesios convert to Christianity. The cults of healing martyrs such as Kyros and John or Artemios competed with the iatrosophistai for clients by publishing miracle collections that criticized the iatrosophistai for arrogance, high fees, and clinical failure. Epiphanius of Salamis in Panarion 64.67.5 speaks of “iatrosophistic trickery,” associating medical skill with magic. The term is used occasionally in later texts (e.g., Theophilos Protospatharios and the Snouta), but Theophanes the Con-
the city, but after Rabbula’s death succeeded him as bishop. He was, however, unable to maintain peace in the church: he was accused of Nestorianism, and, although vindicated at hearings conducted in Tyre and Berytus, he was deposed by the “Robber” Council of Ephesus in 449. The Council of Chalcedon returned him to his see, where he remained until his death.

Of Ibas’s works only a letter to Mari, bishop of Ktesiphon (Seleukeia on the Tigris), has survived—in a Greek translation of the original Syriac text (ACO, tom. II, vol. i, pt. 3:32–34). Although Ibas reproached Nestorius for rejection of the title Theotokos, all his polemics were directed against Cyril of Alexandria whom Ibas saw as the successor of Apollinaris of Laodikeia. The fathers of Chalcedon approved the theology expressed in his letter, but Ibas’s views continued to be controversial long after his death, and he was condemned in 553 during the Affair of the Three Chapters. After Ibas’s death many of his partisans, teachers and students of the school of Edessa, moved to Nisibis.

-TEG.

IBERIA (“Ἰβηρία”), northeastermost theme of the Byz. Empire, created by Basil II from the inheritance of David of Tav’k/Tao. The precise date of its creation is controversial; the theme was probably organized soon after Basil’s campaign of 1001 and considerably earlier than 1022, when it was consolidated by the emperor’s Iberian campaign. The territories of the theme first consisted of David’s domains, stretching southward along the eastern Byz frontier and into central Armenia, where it included the city of Mantzikert. In 1045, the lands of the Bagratid kingdom of Shirak became part of the theme and its administrative center shifted to Ani. The Seljuks captured this city in 1064, but in 1064/5 the Bagratid kingdom of Kars entered the theme, which included southern Tav’k/Tao, Basean, and Kars, until it disappeared in the 1070s when the Seljuks advanced into imperial territory.

-NGG.

IBERIANS (“Ἰβηροί”). The term “Iberia” was used in Greek with various meanings. Constantine VII Porphyrogennetos (De adn. imp. 25) notes that it could mean Spain or Georgia in the Caucasus. Georgian Iberia corresponds with K’art’li, the eastern part of the medieval Georgian kingdom (see GEORGIA), and is to be distinguished from the theme of Iberia, which included part of northern Armenia but not K’art’li. The various peoples of the Caucasus were often confused; thus John Tzetzes calls the Iberians, Ahasians, and Alans one people (P. Gautier, REB 28 [1970] 208).

“Iberian” was also used for Armenians who belonged to the Chalcedonian rather than the Gregorian Monophysite church (V.A. Arutjunova-Fidanjan, Armjane-chaklidonuty na vostočnych granicaх Vizantijskoj imperii [Erevan 1980]), those whom Armenian sources pejoratively call cayt (see Tzatoi). Hence the typikon of Gregory Pakourianos permits only “Iberians” in his monastery. The term “Iberian” could also be applied to inhabitants of the theme of Iberia or, in its narrowest sense, to a monk from the monastery of Iveron.

IBERON MONASTERY. See IVERON Monastery.

IBN AL-‘ADIM (or Kamāl al-Din), Arab historian and Ayubid official; born Aleppo 1192, died Cairo 1262. He was a member of a prominent family that discharged various official responsibilities under the successive dynastic regimes in Aleppo (see Berroia). He himself, after studies in Aleppo, Damascus, Jerusalem, Baghdad, and the Hijaz, served in Aleppo as a diplomatic secretary, as a judge, and later as the chief minister of the Ayubid regime. In 1260, as the Mongols approached, ibn al-‘Adim fled from Aleppo to Egypt. When they withdrew, he revisited his native city, found it destroyed, and returned to Cairo.
Ibn al-Ądim wrote several works, the most important of which are his two major books on Aleppo. The Ultimate Quest of the History of Aleppo, of which ten unpublished MS volumes survive, is an alphabetically arranged biographical dictionary of men connected with Aleppo. His second historical book, The Quintessence of Aleppo’s History, offers a chronological presentation of material gathered for the dictionary. The chronicle ends in the year 1243. It has the great merit of compiling all sources, and of recording various opinions on historical events and presenting the events in chronological order or according to political states. It includes Aleppo’s relations with the Byz. during the 10th C. and the Crusader period.

IBN AL-ĄTHİR, or ʿIzz al-Dīn Abūḥasan ʿAlī ibn Muḥammad, Arab historian; born Jazirat ibn ʿUmar (on the Tigris) 13 May 1160, died Mosul June 1233. Born into a prosperous scholarly family well connected with the Zangids, he received an excellent education and became a private scholar enjoying official patronage. He traveled frequently, esp. to Syria, where he witnessed some of the campaigns of Saladin and eventually settled in Aleppo.

He composed several biographical works and a history of the Zangids but is best known for his Consummate History, a vast work (from Creation to 1231) considered the acme of Arabic annalistic historiography. The earlier chapters, though largely based on al-Ṭabarī, contain valuable accounts (mostly on military campaigns) from other sources now lost. For the 12th–13th C., he writes from personal knowledge and contemporary informants; though unquestionably preoccupied elsewhere, he offers a fragmentary but useful view of Byz. military history for 1164–1228. He describes the maneuvering between the various powers in Asia Minor and the reception of refugee Muslim princes in Constantinople, recounts several disastrous expeditions of the Komnenoi in Asia Minor, and provides details on the Third Crusade, including Byz. efforts to repel Frederick Barbarossa and the fall of Cyprus to Richard I Lionheart in 1192. The Latin conquest of Constantinople is described in detail. Later reports, though recounting continuing decline, portray Byz. as a still-formidable power.

IBN AL-QALĀNISĪ, Arab historian of Muslim Syria; born Damascus ca. 1072, died there 17 March 1160. A member of a prominent family of Damascus, he twice served as its chief municipal official (tātās). He is best known as the author of the chronicle Continuation of the History of Damascus, used heavily by several later generations of Muslim historians. It covers a dramatic period of Syrian, Mesopotamian, and Egyptian history extending from the mid-10th C. to 1160, overshadowed by the changing fortunes of Byz., Fatimid, Crusader, and Zangid protagonists. For anterior historical events, ibn al-Qalānisī relied on Syro-Egyptian archives and minor chronicles, but he based the coverage of contemporary developments on his own observations, eyewitness accounts, and documentary evidence. Although the work of ibn al-Qalānisī mainly deals with political-social life in Damascus and in central Syria and Palestine, it constitutes a unique chronicle of the first 60 years of the Crusader period written from the Arab vantage point.

IBN BATṬŪTA, more fully Shams al-Dīn Abū ʿAbdallāh Muḥammad ibn ʿAbdallāh, celebrated Arab traveler; born Tangier 1304, died Morocco ca. 1369 or 1377. A jurist by education, his extensive journeys by land and sea covered all Islamic lands and most other countries of Asia and Africa
and included visits to the Crimea, Asia Minor, and Constantinople. His *Travels* were dictated in 1355 at the request of the sultan of Morocco. Although scholars have minor quibbles about his veracity, chronology, and the "editorial" role of his scribe, the *Travels* of ibn Battūta are an invaluable primary source for 14th-C. history. His account of Asia Minor (visited 1331–33) records the rise of the Ottoman principality under Orhan; it is esp. illuminating on the processes of Islamization, Turkification, and Byz. decline. His report on the Crimean Tatars records their relations with the Palaiologoi, including the marriage of a Byz. princess to their khan. During a five-week visit to Constantinople (late 1331), having arrived via the Crimea with the caravan of the returning Byz. princess, ibn Battūta met Emp. Andronikos III and toured markets, churches, and monasteries. Valuable because of the uniqueness of his "private" visit, his sympathetic account also enriches our knowledge of the topography of 14th-C. Constantinople and Byz.-Islamic mutual perceptions.

---

**IBN BIBI**

Arab author of a history, written in Persian, of the Seljuks of Asia Minor (Rûm); fl. 13th C. His father served as secretary at the chancellery of the Seljuk sultan in Konya and went on several diplomatic missions. Ibn Bibi himself made a career at the same court, becoming the head of the chancellery of the secretariat of state.  

Ibn Bibi’s work, *‘Ala’ al-Commands i.e., of *‘Ala’ al-Din Kay-qubâdh I* Concerning *‘Ala’id Affairs*, completed in 1281/2, draws from his personal experiences at the court and covers events, including Seljuk-Byz. relations, from the end of the 12th C. until 1282. It is the only source of information about his own life. Apart from the main text (Istanbul, Süleymaniye, Aya Sofya 2985), there exist an abbreviated Persian version, *Mukhtasar*, composed in 1284/5 by an unknown writer while ibn Bibi was still alive, and a Turkish adaptation, written in the early 15th C. by an Ottoman court historian, Yazıcıoğlu ʿAli.  

---

**IBN HAWQAL**, more fully Abū al-Qāsim ibn ʿAlī al-Naṣīb, Arab geographer of the systematic school (see Arab Geographers); born Nisibis, died after 988. His *Picture of the Earth* is a primary document for the historical geography of the Islamic world, Byz., and other lands. As a merchant-scholar, he traveled widely between 943 and 973, visiting the Caspian Sea region, Fāṭimid Egypt, North Africa, Sicily, Spain, and southern Italy. He knew the Arab-Byz. frontier region well and participated in Arab military expeditions into eastern Anatolia.  

His book (first published before 967 and revised twice, ca. 977 and 988), though begun independently, is essentially a recast of the *Routes and Kingdoms of al-Iṣṭakhrī*, which the aging author requested him to edit when the two met in Baghdad (951–52). A comparison of the two works, with reference to Byz., the Thughur (see *‘Awāṣim and Thughur*), Sicily, and Mediterranean trade, reveals ibn Hawqal’s independent judgment and sense of history, as well as his concern for detail. His maps are also more developed and show some Byz. themes and towns. Equally important are his insightful remarks on Islamic Sicily, the policies of the Ḥamdānids, the military and financial policies of Nikephoros II Phokas, the decline of the Islamic Thughur, and the impact of the Byz. reconquista. Of particular interest is his account of the Banū-Ḥabīb of Nisibis, cousins of the Ḥamdānids who, during the reign of John I Tzimiskes, converted to Christianity and cooperated with the Byz. in their campaigns against the Muslims. Ibn Hawqal reflects subtle Fāṭimid propaganda and is severely critical of the Ḥamdānids.  

---

**IBN JUBAYR**, more fully Abu al-Ḥusayn ibn Jubayr Muḥammad ibn ʿAbd al-Majid, Arab traveler and man of letters; born Valencia 1145, died
Alexandria 29 Nov. 1217. After working as a government secretary in Arab Granada for a time, he made two major and eventful sea journeys to Mecca and back (1183–85 and 1189–91) and a less eventful one in 1204 (Krakovskij, infra) or 1217 (Pellat, infra). Only the first journey is recorded in his extant Travels. Ostensibly a pilgrim to Mecca, his main itinerary included Ceuta, Sicily, Alexandria, Cairo, Jedda, Mecca, Madina, Bagdad, Aleppo, Damascus, Tyre, Acre (the last two were in Crusader hands at the time), again Sicily, Cartagena, and Granada. He traveled on Genoese ships both ways with Christian and Muslim pilgrims and merchants.

His Travels, written in a diary form giving the names of Muslim and Christian months, is an important document for political, economic, and social conditions not only in Islamic lands but also in the Mediterranean world. In particular, it notes the conflicts and peaceable contacts between Crusaders and Muslims; Byz.-Genoese relations; and Sicily under William II, including the conditions of Muslims. It gives, moreover, a valuable description of the cathedral of Palermo and a unique account of the Norman court. He also alludes to Byz.-Norman relations and records the curious echoes in Sicily of recent Seljuk victories over Byz. Especially interesting is his report on Andronikos I's use of Muslim troops in seizing the throne in Constantinople in 1182 (Hecht, Ausstenpolitik 33).

IBN KHURDĀDHBH, more fully Abu al-Qāsim ʿUbaydallāh ibn ʿAbdallāh ibn Khurdādbeh, author of the earliest surviving Arabic administrative geography, including vital details on Byz.: born Khurāsān ca.825, died Iraq ca.912. Of Persian origin, he grew up in Bagdad, where he studied Arabic philology, literature, history, and music. He was director of posts and intelligence in al-Jībāl (ancient Media) and a boon companion of the ʿAbbāsid caliph al-Muʿtāmid (870–92).

Of his ten books, including a world history, only extracts of On Entertainment and Musical Instruments, containing references to Byz. music, and an incomplete version of his Routes and Kingdoms (composed ca.846–70, revised ca.885) survive. His fame rests on the latter book, which is a primary source for Islamic administrative and economic history as well as Byz. military administration. His account of Byz. is based mostly on the lost writings of the Arab prisoner al-Jarmī (released 845), but also on official documents. It preserves a curious report of an Arab scientific expedition to the cave of the Seven Sleepers of Ephesus. More important is his concise information on Constantinople; topography, routes, distances, towns, and fortresses of Asia Minor; official Byz. hierarchy; army strength, revenues, and organization; and the first known Arabic list of Byz. themes, with the earliest mention of Cappadocia and Charsianon as military districts. His work also refers to Byz.'s northern neighbors and international trade.

IBN SHADDĀD. See Bahāʾ al-Dīn.

ICON FRAMES (sing. περιφέριον, e.g., Paniel, nos. 7.21, 53) are usually slightly raised from the surface of the icon and display figural representations, floral or geometric ornament, and bosses. From the 11th C. onward they are frequently recorded in church inventories but may have been in use at least a century earlier. The most elaborate examples were made of precious metals, enamels, and stones or glass beads (Treasury S. Marco 172) or, more frequently, of repoussé silver (M. Chatzidakis, Icons of Palinos [Athens 1985] nos. 1–2). Another technique—cloisonné silver without enamel inlay—appears on numerous frames of the late 13th–14th C. (M. Chatzidakis, JOB 21 [1972] 79–81).

The figural decoration of icon frames consists of busts (laimia) of saints or whole-figure representations (stasidia), sometimes including donor portraits. These form a Deesis composition complementary to the main subject of the icon. Others display Gospel scenes or events from the life of
the depicted saint. Most of the elaborate frames surround venerated icons of the Virgin. They were less often employed on icons of Christ or a church’s patron saint and only rarely on icons of Gospel and other scenes. Simpler frames are restricted to geometric or floral ornament.

ICONIUM. See Ikonion.

ICONOCLASM (from εἰκονοκλαστής, “image-destroyer”), a religious movement of the 8th and 9th C. that denied the holiness of icons and rejected icon veneration. Clerical opposition to the artistic depiction of sacred personages had its roots in late antiquity (Baynes, Byz. Studies 116–49, 226–39). In the 4th C. EUSEBIO OF CAESAREA, evidently drawing on the christology of ORIGEN, denied the possibility of artistically delineating Christ’s image (G. Florovský, ChHist 19 [1950] 77–96). There was also an Iconoclast movement in 7th-C. Armenia (Alexander, History, pt. VII [1955], 151–60). In the early 8th C. several bishops in Asia Minor, notably Constantine of Nakoleia and Thomas of Claudiodiopolis, condemned the veneration of images (G. Ostrogorsky in Mel. Diehl 1:235–38), citing traditional biblical prohibitions against idolatry. Their views became a movement when Emp. Leo III began to support their position publicly in 726 (Anastas, “Leo III’s Edict” 5–41). His order to remove an icon of Christ from the Chalke gate caused a riot. In 730 Leo summoned a silence that forced Patriarch GERMANOS I to resign and issued an edict commanding the destruction of icons of the saints. Persecutions under Leo appear to have been limited to instances of destroying church decorations, portable icons, and altar furnishings; there is no solid evidence of martyrdom.

The usurper ARTABASDOS temporarily restored icon veneration, but CONSTANTINE V broadened the theological base of Iconoclasm by personally writing treaties and organizing silention. Constantine introduced an explicit christological aspect into Iconoclasm by asserting that a material depiction of Christ—who as God is uncircumscribable—threatened either to confuse or separate his two natures. In 754 Constantine summoned a council in Hieria, which condemned icon vener-

ICONOCLASM. Iconoclasts whitewashing an image of Christ. Marginal miniature in the Khudov Psalter (Moscow gr. 129, fol.67r); 9th C. State Historical Museum, Moscow. The Iconoclast with the wild hair is thought to represent the patriarch John VII Grammatikos.

ation as diabolical idolatry and insisted that the Eucharist was the only appropriate, nonanthropomorphic image of Christ. Constantine reportedly rejected worship of relics and attacked the cult of Euphemia of Chalcedon, but the 754 council affirmed the efficacy of the intercession of saints and denied only the propriety of venerating them through material depictions.

The acts of the 754 council were not strongly enforced until the 760s, when several ICONOPHILES were executed, including STEPHEN THE YOUNGER. Constantine rigorously persecuted Iconophiles in Constantinople, esp. monks; strategoi such as Michael LACHANOPODRAKON extended this antimonastic campaign into the provinces. Yet outside the capital Iconoclasm was irregularly supported and often restricted to redecorating churches with secular art. In the capital, according to the vita of Stephen the Younger, Constantine
replaced pictures in the Church of the Virgin at Blachernai with "mosaics [representing] trees and all kinds of birds and beasts...". Yet images of Christ and the saints remained in the seikreta of Hagia Sophia, Constantinople, until 768/9, when Patr. Niketas I (766–80) had them removed (Nikeph. 76.21f). Iconoclasm waned after Constantine’s death: Leo IV persecuted only a small group of officials in Constantinople in 780, and in 787 Constantine VI, Irene, and Patr. TARASIOS secured an official condemnation of Iconoclasm at the Second Council of Nicaea.

The emperors of the Amorian dynasty revived Iconoclasm, but it lacked the vigor of the 8th-C. movement. Leo V deposed Patr. MIKHOPOROS I and summoned a synod in 815 that renounced the restoration of icons and rehabilitated the Hieria council (P. Alexander, DOP 7 [1953] 35–66; idem, History, pt.IX [1958], 493–505). Michael II, although an Iconoclast, did not force the issue. Theophilos, influenced by JOHN VII GRAMMATIKOS, prohibited the production of icons and persecuted prominent Iconophiles, including EUHYMIOUS OF SARDIS, THEODORE GRAPHTOS, and the painter LAZAROS, but in 843, Empress THEODORA and THEOKTISTOS engineered the TRIUMPH OF ORTHODOXY. Although several church councils in the 860s and 870s condemned Iconoclasm again (F. Dvornik, DOP 7 [1953] 67–97), it was no longer a major issue.

While Byz. sources blame external factors like Jewish magicians and Caliph Yazidd II for influencing Leo III and his supporters, modern scholarship offers various explanations for the development of Iconoclasm. Many specialists favor an ideological interpretation: Iconoclasm was the revival of ancient polemics against religious art (Alexander, Patr. Nicephorus 6–22), which harbored vestiges of paganism (Martin, Iconoclastic Controversy); Leo III was attempting to purify religious doctrine and practice because God was punishing the Byz. for idolatry by sending Arab attacks and natural disasters, such as an earthquake on Thera in 726 (C. Mango in Iconoclasm 21). Other scholars emphasize economic motives: the emperors used Iconoclasm to confiscate monastic and ecclesiastical property (M.Ja. Szujiu- mov, Utenye zapiski Svjedlowskogo gosudarstvennego pedagogicheskogo instituta 4 [1948] 48–110). More recently, scholars have stressed the role of imperial power: Iconoclasm was the climax of CAESAR-

OPAPISM (G. Ladner, MedSt 2 [1940] 127–49); the reestablishment of the traditional imperial cult (L. Barnard, Byzantium 43 [1973] 13–29); or the effort of emperors to establish their authority in ecclesiastical matters at a time when they were under pressure to regenerate Byz. society and ward off its external enemies (J.F. Haldon, BS 38 [1977] 161–84). Another explanation considers Iconoclasm against the backdrop of the crisis of early Byz. CITIES: for the secular clergy, particularly bishops, the potentially centrifugal nature of the cult of saints—physically localized and emotionally privatized by holy men, icons, relics, and monasteries—threatened their ability to retain a centralized ecclesiastical authority that could define the holy and shore up the weakened structures of Byz. civic life (P. Brown, EHR 88 [1973] 31f).

Economic and political factors played important roles in the development of Iconoclasm, but the central issue of the controversy was the doctrine of SALVATION. By the 8th C. the Orthodox victory in the dispute over Christ’s human and divine natures had affirmed the possibility of man’s ascent to God, but without delimiting the instrumentality of salvation or the position of the holy in Byz. society. Iconoclasm was genuinely concerned that increasing devotion to icons, by effacing the distinction between the material image and its spiritual prototype, was encouraging idolatry (E. Kitzinger, DOP 8 [1954] 82–150) and thus blurring the crucial distinction between the sacred and the profane. The Iconoclasts accepted only the Eucharist, the church building, and the sign of the cross as being fully holy, because only those objects had been consecrated by God directly or through a priest and were thus capable of bringing human beings in contact with the divine, whereas icons and relics were illegitimately consecrated from below by popular veneration (Brown, supra).

The outcome of Iconoclasm was a partial victory for both sides. The Iconophiles, aided by thinkers such as JOHN OF DAMASCUS, won the theological battle by formulating a theory of images that regarded icons as efficacious vehicles of the holy and having it formally endorsed as Orthodoxy. Yet the Iconophiles owed their triumph to sympathetic emperors, whose authority over church affairs was thereby strengthened. In particular, imperial jurisdiction over monasteries
was established: strong, centralized monasteries (see Studios) were undermined and increasingly replaced by smaller, less cenobitic monasteries under state patronage and control. Moreover, religious dissidents (see Theodore of Studios) failed in appeals to Rome to counter imperial efforts to dictate religious policy. The flight of many active monastic Iconophiles to the West permitted conformists like Photios and Euthymios to hold the patriarchate. Among other consequences, the Iconoclasts' reliance on nonrepresentational religious art contributed to the exaltation of the cult of the cross (J. Moorhead, Byzantium 55 [1985] 165–79), while in the West imperial support for Iconoclasm provoked denunciations from popes Gregory II and Gregory III and pushed the papacy further toward dependence on the Franks (see also Libri Carolini).

ICONOPHILES (εἰκονοφιλεῖς, "lovers of images"), also iconodules (εἰκονόδουλοι, "servants of images"), a term apparently coined during the period of Iconoclasm—it occurs as early as the 8th C. (Lampe, Lexicon 410)—to denote those who defended the holiness of icons and the propriety of icon veneration; they called their opponents iconoclasts (εἰκονοκλάσται, "image-breakers"). Among the most prominent iconophiles were Patr. Germanos I, John of Damascus, Theodore of Studios, Patr. Nikephoros I, Stephen the Younger, Theodore Graptos, and Euthymios of Sardis. Monks were the most ardent iconophiles and suffered particularly under Constantine V and at the hands of Michael Lachanodrakon.

- P.A.H.

ICONOGRAPHY, the demonstrative subject matter of Byz. works of art, imbued above all with Christianity and the cult of the emperor. While history painting, portraits, and personifications were inherited from antiquity and remained abiding subjects, in other areas of content marked changes are discernible. As early Christian concern with typology declined, Old Testament subjects tended to disappear save where themes such as the Ark of the Covenant were newly interpreted. By the 6th C. a broad range of motifs from the New Testament and Apocrypha was in use, as well as an extensive hagiographical repertory. The 9th–11th C. saw new themes created under the influence of the liturgy and homiletic sources; developments intensified in the 12th C. when special attention was paid to such motifs as the Melismos (see Fraction) and pathetic aspects of Christology. A secular repertory drawing on classical mythology was used already in the 10th C., enriched with motifs taken from both everyday life and the West, esp. in the Komnenian era. The multiplication and extension of monumental cycles, often dependent on hymnography, and the elaboration of prefigurations of the Virgin, are marked characteristics of 13th- and 14th-C. art.

ICONODELLES. See Iconophiles.

ICONOGRAPHY. See Templon.

ICONS (sing. εἰκών, "image"). In its broadest sense an icon is any representation of a sacred personage, produced in many media and sizes, monumental as well as portable; in its narrowest sense icon most often refers to a painted wooden devotional panel (see "Painted Icons," below).

Icon Veneration and the Theory of Images. The term eikon was ambiguous, applied even to ancient statues, while other terms of pagan vocabulary, such as stele or agalma, could be used for images of Christ. On the other hand, the Byz. tried to contrast eikon with eidolon (idol), which was an embodiment of pagan cult; sometimes, however, the difference between them disappeared as in the story about a heathen ektypon that turned out to be an image of the Archangel Michael (Malal. 78f).

Christianity inherited a hostile attitude toward
images from the Old Testament prohibition of Exodus 20:4 ("Thou shalt not make . . . any graven image") and from the era of persecutions, when Christians were forced to sacrifice in front of imperial images. Many early church fathers (e.g., Eusebius of Caesarea, Epiphanius of Cyprus) disapproved of icons, esp. those of Christ, since he should be worshiped as an "image (eikon) of the invisible God." Nevertheless, Christians decorated their catacombs and eventually their churches with images that were considered to be holy. Church fathers such as Basil the Great defended the veneration of images as offered not to the picture but to the prototype (PG 32:140C).

The dispute became acute in the 8th and 9th C. during the controversy over ICONOCLASM. The Iconoclasts argued that portrayal of Christ leads either to Nestorian separation of humanity from divinity or Monophysite confusion of humanity and divinity; they considered the eucharistic elements as the only proper "icon" of Christ. Iconophiles, the defenders of icon veneration (primarily John of Damascus, Theodore of Stoudios, Patr. Nikephoros I), developed Basil's idea and elaborated the concept of three levels of image: Christ as the natural image of the Father; man as the divine image by adoption and imitation; and the icon as an artistic image of Christ or the saints. Consequently, they also developed a terminology to differentiate the veneration of icons: they distinguished the relative veneration (timetikel/schetike proskynesis) of the icon and saints from the genuine worship (latreia) of the object depicted and stressed that the purpose of veneration was to arouse devotion. Attacking the Iconoclasts, they connected the latter's anti-iconic attitude with Manichaean (Paulician) and Jewish tenets. John of Damascus emphasized the didactic role of icons, esp. for the illiterate, whereas the LETTER OF THE THREE PATRIARCHS and saints' vitae describe the wondrous power of icons, which could heal the sick and bring retribution on assailants.

The principles of icon veneration were summarized at the Second Council of Nicaea (787), which, however, laid greater emphasis on the tradition of miracle-working icons (such as the Mandylion and other acheiropoieta, likenesses "not made by human hand") than on theological subtleties. Doubts about icon veneration remained alive even after the defeat of Iconoclasm (J. Guillard, AnnEPHE, 50 section. 86 [1977/8] 29–50).

—G.P., R.S.

PAINTED ICONS. The painted wooden panel is the most copiously preserved and longest-lived genre of that very distinctive form of Byz. art, the portable devotional icon. Its history can be studied best from the panels at the monastery of St. Cath- erine, Sinai, the only comprehensive collection of Byz. examples that survives. The earliest preserved panel-painted icons—some 27, all at Sinai—belong to the 6th–7th C. (Weitzmann, Sinai Icons, nos. B.1–B.31). All are on wood and are from 14 to 92 cm high. They use antique media, either encaustic (pigment suspended in wax) or tempera (pigment suspended in egg yolk, the medium found in most post-Iconoclastic panels). Their forms—likewise antique—include single rectangular panels, diptychs (derived from writing tablets), and triptychs (recalling Late Antique devotional triptychs with images of the gods); no round examples survive, but they are depicted in other media and so may have existed. Their portrait compositions echo Late Antique commemorative portraits and imperial lavrata. Thematically varied, with New Testament theophanies, Old Testament scenes promising salvation, and full- and half-length portraits of Christ, the Virgin Mary, prophets, and major saints, they reflect not so much liturgical formulas as private devotions. Chronologically, these panels coincide with extensive evidence in other media and in saints' vitae of images mediating the holy. Thus they seem to reflect a significant stage in the development of the icon, as it moved from private use into more public visibility. The diverse subjects and formats of these earliest panels indicate that most came into the church as private votive donations, and their use remained extraliturgical, focusing individual devotions.

Panels of the 8th and 9th C.—surviving only at Sinai (Weitzmann, Sinai Icons, nos. B.32–B.41)—
TEMPLON emerged as the focus for its public display. Normally stored on hooks in aisles or the sanctuary, panels were moved to the templon—or to a PROSKYNETARION in front of it—on the day of the feast they represented. Shifted in accord with shifting feasts, the panels remained portable, seldom exceeding the height of about one meter accommodated by the templon. In shape, however, they adapted to the rectangular intercolumniations of the templon, and only private panels retained the varied antique forms.

Panels of the mid-11th through 12th C. are characterized more by innovation and proliferation than by standardization. The liturgy, now thoroughly regularized, was enriched emotionally by the incorporation of evocative ceremonies, esp. those of Holy Week. This opened the way for artistic invention within liturgical boundaries, generating new, emotionally charged images based on hymns and prayers: the MAN OF SORROWS, variants of the VIRGIN ELEOUSA, Symeon Glykopilon (see HYPAPANTE), the major bilateral icons (see below). These new themes were suited to, and probably originated as, devotional panels. They coincided with an expanded use of panel-painted icons in both public and private devotion. Richer patterns for the disposition of panels in church and templon emerged, generating new and distinctively Byz. shapes: the long, narrow templon beam displaying a Great Deesis or Great Feasts cycle; the panels hung in the templon’s intercolumniations, usually showing Christ, Mary, John the Baptist, or the church’s patron saint; the holy (or “royal”) doors in the templon adorned with the ANNUNCIATION; the Crucifixion mounted above the templon; the calendar icons, whose registers display the feast images for entire months; and the hagiographical or “vita” icons, showing a saint surrounded by scenes from his or her life. While such images may often have been made of precious materials in the churches of Constantinople, panel painting was generally adopted, proving preferable in scale, weight, adaptability, and affordability. Many more panel paintings survive from the 12th C. than from any earlier century. Sinai itself was fully furbished with panel-painted icons then, and panel painting began to take on a local cast in the byzantinizing cultures of Russia and Italy.

The climactic proliferation of panel painting came in Palaiologan art. The 14th is the first
century in which panel paintings dominate works in other media both numerically and artistically. More panels are preserved than icons in other media; for the first time they survive from all parts of the Orthodox world, reflecting numerous local traditions. Their imagery expands, embracing complex allegories and arcane New Testament and hagiographical events. Other media imitate them: MS illumination contracts to frontispieces resembling icons; monumental painting exhibits grids of iconlike rectangular pictures; in the realm of precious materials, the miniature mosaic (see “Mosaic Icons” below), which attempts to imitate the fluid modeling of panel painting, displaces the more abstract media like enamel. The templon develops into the iconostasis, the opaque screen of fixed icons, tier upon tier.

Little is known about icon painters. Though some were monks, others were clearly laymen, and many practiced in a variety of media (see Artists).

Metal Icons. Vulnerable because their material could be reused, few icons in precious metals survive today. They were numerous in the Byz. era, however, in both public and private contexts. In private use, gold, silver, bronze, cloisonné enamel, and cameos were formed into icons for personal adornment on amulets, pendants, belts, and rings. Byz. wills refer to devotional icons of silver and copper. Silver examples do not survive, though several small bronze panels seem to copy more costly silver models, just as the gilded bronze triptych in London reflects models in ivory (K. Weitzmann, The Icon: Holy Images, Sixth to Fourteenth Century [New York 1978], fig. E). In the public realm, cloisonné icons adorned not only imperial and ecclesiastical vestments and vessels, but also church furniture. The Pala d’Oro in S. Marco in Venice preserves Byz. enamels both from the church’s 12th-C. antependium (altar front) and from the templon beam of the Pantokrator Monastery in Constantinople. These represent Christ, apostles, angels, and Great Feasts. Individual metal icons most often show single figures: Christ, the Virgin Mary, an archangel or a major saint (military saints, Nicholas of Myra). The most spectacular surviving examples are the two cloisonné and relief panels of St. Michael in Venice (Treasury S. Marco, nos. 12, 19); the paired cloisonné plaques there (nos. 9, 14), now used as bookcovers, may originally have been used as devotional panels in Byz.

Mosaic Icons. Some 48 Byz. mosaic icons survive from the 11th through 14th C. Artistic hybrids of outstanding luxury, they unite the portability of panel paintings with the mosaic technique of mural art and the precious materials of metalwork. Wax or resin on wood serves as a setting bed for jewellike tesserae of solid gold and silver, semiprecious stones, ivory, and enamel flux. One
densely that they appear seamless and breathtakingly illusionistic. Sometimes their media are mixed, with molded haloes of gilded gesso around mosaic figures or mosaic highlights in painted fields (Florence diptych).

IC XC NIKA, partly abbreviated form of the Greek Ἰησοῦς Χριστός νικά, "Jesus Christ, conquer," or Ἰησοῦς Χριστός νικά, "Jesus Christ conquers" (DOC 3.1:231). Inspired by Constantine I's vision at the Milvian Bridge, the slogan was repeated during acclamations in the Hippodrome. The sigla occur on various objects, for example, on a commemorative inscription of 740–41 on the walls of Constantinople and cantonned within the arms of the cross on pages of the Paris Gregory and the Bible of Leo Sakearios. In this form they served generally as invocatory or apotropaic signs at the entrances to houses and churches, on bread stamps, and on the backs of icons and ivories. On coins, a similar formula Ἐν τούτῳ νικά was introduced in 641 (DOC 2.1:101); although it was replaced by IC XC NIKA under Leo III, it reappears in the 11th C.

IDACIUS. See Hydatius.

IDIORRHYTHMIC MONASTICISM, an individualized form of monastic life. The term idiorrhythnia (ιδιορρυθνία), meaning "following one's own devices," is found as early as the 5th C. (Mark the Hermite, PG 53.1.1057A), but this type of monasticism did not become at all common until the Palaiologan era and has a negative connotation throughout the Byz. period. In general, idiorrhythmic monasticism has been condemned by the Eastern church (as in the *typhon* for the monastery of Areia, 249.13–14) because of its deviation from the traditional ideals of the koimobion, or cenobitism. Nonetheless, by the late 14th C. the idiorrhythmic regime appears to have become established in some monasteries on Mt. Athos as
an alternative to the cenobitic or eremitic form of monasticism. Idiorrhythmic monks are permitted to acquire personal property; through their labor they earn income to purchase food and clothing. They take their meals separately in their cells rather than in a communal refectory and may eat meat. The organization of an idiorrhythmic monastery also differs from its cenobitic counterpart; instead of the absolute rule of a ἕγουμενος elected for life, the affairs of the monastery are administered by an oligarchic council (σύναξις) of προστάτοι who make decisions and two or three ἐπίτροποι who execute them.

—A.M.T.

IDOL (εἰδωλον), a generic disdainful term used by Christian apologists to characterize pagan gods and their images, idolatry being synonymous with pagan worship. The Christians emphasized that idols were dead and that their veneration was instigated by demons. The term also designated phantoms, ghosts, and hallucinations, but it was applied to statues without derogatory connotation (Av. Cameron, J. Herrin in Parastaseis 31). The multiple meanings of the term became obvious during the dispute over Iconoclasm when the Iconodules were accused of idolatry and had to elaborate a strict distinction between the dead idol that did not represent anything but itself—wood, stone, or metal—and the icon that as the image of God, the Virgin Mary, or saints had to be distinguished from its material in the same way that the parchment, ink, and paint on manuscripts were distinguished from the word of the Lord.

—A.K.

IDRISI, AL-, more fully Muḥammad ibn Muḥammad al-Idrīsī, Arab geographer, cartographer, and botanist; born Ceuta (North Africa) 1100, died Ceuta ca. 1165. Educated in Islamic Cordoba, he traveled throughout Spain and other parts of the Mediterranean world. In 1138 he was invited by Roger II to settle in Palermo, where he led a team of cartographers and researchers that produced a spherical map and a world geography. The resulting Yarning Man’s Journey, or Book of Roger (begun 1139, completed Jan. 1154, under Roger’s official patronage), is perhaps the best work of medieval cartography, marking the climax of Arab geography and demonstrating

Norman Sicily's intellectual achievement. Al-Idrīṣī wrote a summary of this for William I.

Besides his description of Sicily, Italy, Spain, northern Europe, and Africa, some of his material on Byz. is original, though he freely uses earlier Arab geographers. The assumption that he visited Constantinople or Asia Minor is based on a misreading of his statements. He adds new information on later developments, topography, towns, ports, and economic and commercial activity in Byz., Seljuk Asia Minor, Armenia, Trebizond, and the Balkans. His work on Materia Medica seems to distinguish between ancient and Byz. Greek.

—A.Sh.

IGNATIOS OF SMOLENSK, writer; fl. 1389–1405. Ignatij (Ignatios) traveled from Moscow to Constantinople in 1389 in the entourage of Metr. Pimen. After Pimen’s death (Sept. 1389) and the appointment of Kripian, Ignatij remained in Constantinople at least until 1392 and probably in the Balkans and on Athos until ca. 1405. The three works soundly attributed to him—a Journey to Constantinople (1389–92), a Description of Thessalonike and the Holy Mountain, and parts of an Abbreviated Chronicle to 1404—together form a selective diary of Ignatij’s observations. The meticulous details and chronologies make Ignatij’s works valuable and varied repositories of information. Topics on which he is the sole or main eyewitness source include the Don River route to Constantinople; the struggle for the throne between John VII and Manuel II in 1390–91, as reflected in the life of the capital; and the coronation of Manuel II in 1392. Ignatij also provides a list of churches in Thessalonike and the earliest Eastern Slavic description of Athos. His Journey relates his own visits to the sacred sites in chronological order; he neither presents a systematic itinerary nor details legends and stories about the monuments. He does, however, employ some of the formulas and phraseology of the "pilgrim book" genre.

—S.C.F.

IGNATIOS, patriarch of Constantinople (4 July 847–23 Oct. 858; 23 Nov. 867–23 Oct. 877) and saint; baptismal name Niketas; born Constantinople ca.797/8, died Constantinople; feastday 23 Oct. He is sometimes called Ignatios the Younger (ho neos) to distinguish him from the 1st-C. church father Ignatios Theophoros. After the deposition of his father, Emp. Michael I Rangabe, in 813, Ignatios, together with his brothers, was castrated and forced to take monastic vows. He became hegumenos of three monasteries that he had founded on the Princes’ Islands. In the aftermath of the Iconoclast controversy, Empress Theodora appointed him to succeed Methodios I as patriarch without convening an elective synod, since she wanted to avoid stirring up enmity between the Stoumites and the moderates. Ignatios found a modus vivendi with the Stoumites but aroused the opposition of the moderates led by Gregory Asbestas. The patriarch’s position deteriorated when Caesar Bardas took power and exiled Theodora; deprived of her support, Ignatios was forced to resign.

He was replaced by Photios, who had to give some guarantees to the former patriarch and his followers, but the guarantees were soon broken; the appointment of Asbestas to the see of Syracuse became the external cause of the clash. Ignatios, who had been temporarily exiled by Bardas to the island of Terebinthos, was allowed to return to his mother’s palace in the capital. He remained moderate, but the Ignatians attacked Photios and attempted to draw Pope Nicolas I to their side. At first Nicholas was reluctant to support them, stating that Ignatios had been elected noncanonically, but eventually the pope used this conflict as a means to intervene in the affairs of the church of Constantinople.

In 867 Basil I, in his search for a Western alliance, restored Ignatios to the patriarchal throne and banished Photios, but Ignatios refused to yield to the papacy; he managed to draw Bulgaria into the Byz. ecclesiastical orbit and probably sub-
jected the young church in Moravia to Constantinople. This active anti-Western policy of Basil I and Ignatios made senseless their antagonism to Photios; the latter was released from exile, succeeded Ignatios after his death, and contributed to the sanctification of Ignatios. A unique mosaic portrait of Ignatios preserved in Hagia Sophia was probably created shortly after 886. The vita of Ignatios by Niketas David Paphlagon is permeated by hatred for Photios and contains more derision of Photios than eulogy of Ignatios.

IGNATIOS OF NICAEA. See IGNATIOS THE DEACON.

IGNATIOS OF SMOLENSK. See IGNATIUS OF SMOLENSK.

IGNATIOS THE DEACON, writer; born ca. 770-80, died after 845, if the kanon on the Forty-Two Martyrs of Amorion (ed. V. Vasilievskij, P. Nikitin, p. 80.44) ascribed to “Ignatios” belongs to him and not to one of his numerous namesakes. A pupil and collaborator of Patr. Tarasios, Ignatios was ordained by him deacon and became skewophylax; after Tarasios’s deposition (806) Ignatios sided with the Iconoclasts and was later elected metropolitan of Nicaea. He later regretted this change of heart. At some point he became a monk on Mt. Olympos.

The Souda lists his works, including the vitae of Tarasios and Patr. Nikephoros I, funeral elegies, letters, and (now lost) iambics against Thomas the Slav. On a stylistic basis Sevcenko attributed to him the vitae of Gregory of Dekapolis and George of Amastris (in Iconoclasm 121-25). Probably Ignatios also wrote several poetic works, such as verses on Adam (a dialogue between Adam, Eve, and the Serpent), verses on Lazarus and the rich man, moral sentences in alphabetical order; the existence of other Ignatios prevents certain identification. A member of the generation that followed Theophanes and Theodore of Studios, Ignatios revealed interest in the ancient heritage, esp. in Sophocles and Euripides (R. Brown.

ing, REG 81 (1968) 405-07), and emphasized the rhetorical adornment of his speech. Litšč (Ocherki 404-05) hypothesized that Ignatios was represented with Patr. John VII in a caricature in the Kludov Psalter.

Ed. For list of his works, see Tsaatkaim-Lexikon 360-61.

- A.K.

IGNATIUS, PSEUDO-., conventional name for the author of the interpolations made perhaps ca. 360-380 in the text of the letters of St. Ignatius, bishop of Antioch (died ca. 107). The interpolations mainly concern the role of the bishop. The interpolator appears to be a follower of Arrianism, and various candidates have been proposed, for example, Akakios of Caesarea (died 366), Eunomios, Silvanos of Tarso (O. Perler, HistJu 77 (1958) 73-82), and Julian of Halikarnassos. It is possible that he is to be equated with the author of the Apostolic Constitutions.

- B.B.

IGOR, prince of Kiev, successor of Oleg; died 945. In 941 Igor led a fleet of small boats (monoxyla) against Constantinople. Byz. ships under command of the patroikios Theophanes met them at Hieron on 11 June and prevented Igor from attacking the capital. He probably left for Kiev after this failure, but the boats from Rus’ remained in the area for two months, plundering the Bithynian coast (from Pontic Herakleia to the border of Paphlagonia, according to the vita of Basil the Younger). The government of Romanos I recalled some troops of John Kourkouas from the eastern frontier and dispatched Theophanes with a fleet; he used Greek fire and on 15 Sept. destroyed the boats of the Rus’ near the Thracian coast; the remnant of their army headed homeward by land. According to common scholarly opinion, in 943 or 944 Igor again launched his forces against Byz., but Byz. envoys met the army at the estuary of the Danube; after negotiations a new treaty was signed that provided Kiev merchants with less favorable conditions than
those established in the treaty signed by Oleg. Soon thereafter Igor was murdered while collecting tribute from the Drevljane, a neighboring tribe.

—A.K.

IKONION (Ikonov, now Konya), city of Pismia in the mid-4th C., metropolis of Lykoania from ca.370, incorporated into the Anatolikon theme in the 7th C. The execution of Isaurian prisoners in 354 at Ikonion provoked the great Isaurian revolt. St. Thecla was believed to have miraculously saved Ikonion from a later Isaurian attack. Its first metropolis was St. Amphilochos. From the 8th to 10th C., Arabs frequently attacked Ikonion and its neighboring fortress, Kabala. Plundered by the Turks in 1689, Ikonion was the scene of the revolt of Roussel de Bailleul. It fell to the Seljuks in 1084 and flourished as their capital. The city was briefly occupied by the Crusaders in 1097, its suburbs were ravaged by Manuel I in 1146. Most of its Byz. monuments, including the 11th-C. Church of St. Amphilochos, have disappeared, but the Byz. fortress of Kabala and the rock-cut churches of Sile, both in the immediate vicinity of the city, survive.

—C.F.

ILARION (Hilarion), author of *Discourse on Law and Grace* (Slovo o zakone i blagodati) (ca.1049) and a *Confession of Faith* (ca.1051?), metropolitan of Kiev (1051–ca.1054). The *Discourse*, the most sustained and erudite rhetorical work of Kievian Rus' (see Rus', Literature of), celebrates the conversion of Rus' within the context of sacred history: the Grace of Christianity superseded the Law of Moses, just as Sarah the free woman superseded Hagar the bondmaid, and reached Rus' through the divinely inspired free choice of Vladimir I. The homily ends with an *enkomion* to Vladimir and a prayer for the land of Rus'. The *Discourse's* language, typology, style, and structure owe much to Byz. rhetoric and exegeses, leading to conjecture that Iliarion read Greek (F. Thompson, *Slavica Gandensia* 10 [1983] 67–102). Influence from Czech literature is also possible (N.N. Rozov, *TDRL* 23 [1968] 71–85). The appointment of Iliarion, the first native metropolitan of Kiev, by Prince Jaroslav of Kiev and the composition of the Discourse are sometimes interpreted as anti-Byz. acts. The circumstances of Iliarion's election are unknown, however, and the Discourse, proclaiming Vladimir to be a "likeness of Constantine the Great," manifestly presents Byz. as the cultural prototype rather than as a political or ecclesiastical threat.

—S.C.F., P.A.H.

ILIAD. See Homer: *Troy Tale*.

ILLEGITIMATE CHILDREN (vôdotoi), also called *spouriai*, were, according to the *Codex Justinianus*, children both to a concubine (see Concubine), an unmarried woman, or a prostitute (see Prostitution); progeny from the union of a free woman and slave were also considered illegitimate. Illegitimate children were legally deprived of the right to inherit from their father, but had the same relationship with their mother as legitimate children. The classical jurists did not give serious attention to this discrepancy; it was Justinian I who corrected the situation by making the father liable for supporting his children by a concubine. In novel 89 he considered ways of legitimizing *nôthoi*: the most recommended method was to adopt them to the corpus; another valid method was to assign a "charter of dowry" to the mother of a *nôthos*, whether she was freeborn or a freedwoman, or the testamentary statement of a man who had fathered only illegitimate children that they were his heirs. High-born mothers were prohibited by both civil and canon law from making gifts of any sort to their natural children; legitimate offspring were thus protected from any form of disinheritance (J. Beaucamp, *CahCM* 20 [1977] 158).
Later Byz. law essentially retained the rules established by Justinian. In the 13th C. illegitimate progeny still had no right to inherit if there were legitimate descendants, even if they were collateral descendants (A. Laiou, FM 6 [1984] 295f).

Patr. Nikephoros I considered the case of a father’s refusal to recognize his natural son (PG 100.468B); the tribunal had to determine whether they had a physical resemblance; if not, the child was proclaimed ekphyllos, “without family.”

Despite such disadvantages, some nōthoi (usually the children of emperors and courtiers) reached high positions, like the parakoimomenos Basil the Nothos (son of Romanos I), and children of Manuel I and Andronikos I. Illegitimate sons might serve as important hostages, and several illegitimate daughters of emperors were married to foreign rulers as diplomatic pawns.

A.K., J.H.

ILLOS (Ἰλλός), rebellious general of Zeno; died fort of Papyrios (Paperon), Isauria, 488. An Isaurian by birth, Illos together with his brothers Aspalios and Trokoudos supported Zeno’s rise to the throne. In 474 he fought successfully against the barbarians in Thrace; the same year, however, he switched his allegiance to Basiliskos, who sent him to besiege Zeno in Sbide, an Isaurian stronghold; there he again changed sides (Theophanes explains this saying that Basiliskos failed to fulfill “promises”) and helped Zeno recover his throne. He became patrickios and magister militum and, according to Malalas, administered the empire. Zeno’s wife Ariadne and mother-in-law Verina conspired against Illos unsuccessfully in 477 and 478; as a result, Verina was banished. In 479 Illos suppressed the revolt of Verina’s son-in-law Marcellian. In the winter of 481/2 Ariadne organized a third plot against the general. During the assault on him, Illos lost an ear. In 483–84, while in Antioch, Illos prepared a revolt against Zeno; at this time he gained the support of Verina, who crowned his ally Leontios. They were defeated by Zeno’s magister militum John the Scythian in 484 and took refuge in the fort of Papyrios (J. Gottwald, BZ 36 [1936] 88f). Illos and Leontios held out for four years. They were eventually betrayed and executed. With regard to religious policy Illos appealed to the Orthodox against Zeno’s Monophysite tendencies, but he was also sympathetic toward paganism. The soothsayer Pampereios was his adviser during the rebellion. A district in Constantinople was known as ta Illov, and his house there became a church of St. John.

T.E.G.

ILLUMINATORS of Byz. MSS are rarely documented in colophons or otherwise. The common term for an illuminator was zographos, “painter” (I. Ševčenko, DOP 16 [1962] 245, n.6), but probably around the 9th C. another term, chrysographos, “one who writes in gold,” appeared—first mentioned in an obscure author, Meletios the Monk, from the theme of Opsikon (PG 64:1309B).

A few illuminators are known by name: Pantoleon and his team; Theodore of Caesarea, who wrote and illuminated the Theodore Psalter in 1066; Michael Koresis, who “wrote in gold” a Georgian Gospel book in the late 12th/early 13th C. (E. Takaichvili, Byzantium 10 [1935] 659ff). In verses accompanying a dedicatory miniature, the monk Theophanes claimed to be the donor, scribe, and illuminator of the Melbourne Gospels, but donors often took credit for making the object of their generosity. Finally, in the late 14th C. Theophanes “the Greek,” described as an illuminator of books and a painter of churches, was asked to paint a leaf to be inserted in a MS. The practice had long been used by Byz. illuminators, but became increasingly frequent in the Palaiologan era. Generally the scribe wrote the text of the MS, leaving space for the illuminator, who made a preliminary underdrawing, applied the gold ground, and then began to paint, concluding with the faces. (See also ARTISTS.)

R.S.N.

ILLUSTRIS (ἱλλοῦστριος), the highest title of senators in the late Roman Empire. The term was used as a vague epithet much earlier, but acquired a specific technical meaning in the last quarter of the 4th C. First it was bestowed on major officials such as praetorian prefect, ur-
BAN PREFECT, MAGISTER MILITUM, CONSULS, and PATRIKIOL, and eventually on all senators. In the 6th C. the most important illustres were called gloriosi. Not being a hereditary title (Guiland, Institutions 1:66f.), it provided certain privileges, both fiscal (immunity from certain obligations) and ceremonial. The term remained in use in the 7th C. Maximos the Confessor (PG 91:644D) addressed a correspondent as “magnificent illustri,” and the Miracles of St. Demetrios (ed. Lemerle 1:161.7) speak of the “so-called illustrioi.” The term illustri does not appear in the taktika, although both legal and hagiographic texts (until the 11th C.) equate the title PROTOSPATHARIOS with it (e.g., A. Sigalas, EEBS 12 [1936] 355.12–13).

ILLYRICUM (᾿Ιλλυρικῶν), a Roman province in the northwestern part of the Balkans. In the 4th C. attempts were made to create a prefecture of Illyricum, encompassing Pannonia, Macedonia, and Dacia. After 395 this vast territory was divided into Illyricum occidentale and Illyricum orientale with capitals at Sirmium (?) and Thessalonike, respectively. Latin was the lingua franca in western Illyricum. Beginning in the 2nd C. Christianity spread through western Illyricum, the two metropolitan sees, Salona and Sirmium, being of principal importance.

In the 5th to 7th C. Illyricum underwent various invasions by Ostrogoths, Huns, Lombards, and Avars; Slavnoi (second half of the 6th C.); Serbs and Croatians (7th C.); and, after 680, Bulgars, who began to play a decisive role in Illyricum. The ancient cities declined and assumed a rural character (V. Popović in Palast und Hütte [Mainz 1982] 545–66). Those townships that survived were forced to come to terms with new masters (by paying tribute). During the reign of Justinian I, western Illyricum was under the rule of Constantinople, with the center of Illyricum as a whole at Justiniana Prima and, for a time, probably at Sirmium. According to the vita of David of Thessalonike the capital was transferred from Sirmium to Thessalonike; whether it was in fact from Sirmium (Lemerle, Miracles 2:50) or from Justiniana Prima (A. Vasiliev, Traditio 4 [1946] 115–47) is difficult to determine. It is unclear how long Illyricum continued to exist, but by the 9th C. it had been replaced by the theme of Thessalonike; the name Illyricum lost its precise meaning and was used as a descriptive designation for the region of Dyrrachion (as in the Alexiad of Anna Komnene), including Serbo-Croatian territory.

Ecclesiastically, the former Illyricum occidentale remained under the direct authority of the pope. In the 8th C., however, the Iconoclast emperors tried to subordinate it to Constantinople—according to M. Anastos (Sibi 9 [1957] 14–31) in 732/3, according to V. Grumel (RechScRel 40 [1952] 191–200) two decades later. The papacy never recognized this act. By the end of the 9th C. the Byz. founded the theme of Dalmatia, but they had to abandon the region by 1069; they briefly held it again from 1165 to 1180 (Ferluga, Byzantium 141–49).

'IMĀD AL-DĪN, more fully Muhammad ibn Muḥammad al-Kāṭib al-Īsfahānī, Arab writer, poet, diplomat, and chronicler; born Īsfāhān 1125, died Damascus 1201. In 1175, following a colorful career in the service of the 'Abbāsids and of Nūr al-Dīn, ‘Imād al-Dīn joined Saladin to become his ardent friend, counselor, chief diplomatic secretary, and chronicler. After Saladin’s death, ‘Imād al-Dīn returned to private life and devoted himself to literary work. His tomb adjoins that of Saladin.

‘Imād al-Dīn’s books, Qussian Eloquence on the Conquest of Jerusalem and The Syrian Lightning, constitute firsthand sources on Saladin’s wars and politics, with frequent references to his relations with the Byz. Although only the third and fifth parts of The Syrian Lightning have survived, its first (?) part is preserved in al-Bundārī’s abridgement, The Splendor of the Syrian Lightning. Equally important is ‘Imād al-Dīn’s The Assistance of the Weak, the first history of the Great Seljuks. It is based on the lost Persian memoirs of Anūshīrvān ibn Khālid (died 1137), which ‘Imād al-Dīn rendered into Arabic. Its precious information on
the Seljuk penetration and conquest of Asia Minor includes a lengthy account of the battle of Mantzikert. In addition to the full version, extant in a unique MS in the Bibliothèque Nationale, al-Bundârî's abridgment (1226) survives. İmâd al-Dîn also produced a voluminous anthology of 12th-C. Arab poets. As a rule, a virtually untranslatable, overly flowery style characterized İmâd al-Dîn's work. Al-Bundârî's abridgments strip away the stylistic redundancies but retain all the facts.

**LIT.** H. Massâ, *EF* 3:1157f. — A.S.E.

---

**IMBROS (Ἰμβρος, mod. Imroz), island in the northeastern Aegean Sea that, along with Tenedos, controls the entrance to the Hellespont. In late antiquity Imbros was part of the province of Achaea (Hierokl. 649.2), and by the 9th C. it almost certainly was part of the theme of the Aegean Sea. Although not specifically mentioned in *De thematibus*, Imbros provided a primary line of defense for Constantinople against the Arabs. Assigned to the Latin Empire after 1204, it was effectively controlled by Venice; after 1354 it was in the hands of the Genoese descendants of Francesco Gattilusio. By the time Cyriacus of Ancona visited Imbros in 1444, the island was again Byz. and his guide was the Imbriot Michael Kritoboulos. The latter asked Mehem II to grant the island independence after 1453, but it was assigned to the Gattilus of Lesbos. In 1460 Imbros was part of the appanage given to Demetrios Palaiologos, former despot of the Morea. A bishop of Imbros, not mentioned previously, was raised to archiepiscopal status by Manuel II (Notitiæ CP 18.157); he was a metropolitan (21.75) after 1453.

---

**IMITATION (μιμησις) was considered by the ancient theoreticians as an important element of intellectual activity. The imitation of Attic culture was recommended both in late antiquity and in Byz. The Byz. rejected innovation, and even great minds, such as John of Damascus, emphasized the imitateness of their works. Mimesis could have different aspects: direct imitation, such as the Christos Paschon, which is a pastiche of existing verses by ancient poets; writing in the style of a predecessor, like dialogues imitating Lucian. Rhetorical exercises on ancient or biblical topics and borrowing of the stock elements of ancient literature or patristics or using overt or concealed citations were also practiced. Materials that were borrowed or imitated included not only writings of the remote past but works of more recent Byz. authors as well. Sermons, saints' vitae, and historical works teem with such stock elements and citations. The ideological underpinning of mimesis can be found in the declarations of ecumenical councils, such as that in Trullo, which embraced adherence to "the ancient types" (Rhalles-Potlotes, *Syntagma* 2:493-3).
The purposes of imitation were diverse: the author could, by engaging in imitation, demonstrate how well versed he was in literature; he could also, by referring to the knowledge of his audience, stimulate reminiscences and create allusions. He could, by making parallels with biblical or Roman history, stress the eternity of certain phenomena or contrast present times with the glorious (or infamous) past. Truly skillful imitation consisted in employing the same general pattern to emphasize certain details or distinctions or to produce, from the available "bricks," a completely new idea and image. Imitation could also have the force of parody. Byz. literature produced an enormous amount of purely imitative, plagiaristic material, but in talented hands mimesis could become a powerful vehicle of expression. Imitation, then, was not purely servile but an intrinsic part of Byz. culture.

Even while it must be distinguished from customary observance of canonical forms, imitation in the visual arts was more central than in literature to the working methods of craftsmen and more pragmatic in purpose. Using established church plan types, builders replicated venerable models, sometimes with the intention of evoking associations with loca sancta and pilgrimage sites. Painters such as Kallierges could copy entire compositions, yet adaptation and the "quotation" of elements, rather than wholesale appropriation, were more characteristic practices. When an ancient treasure like the Paris Psalter was tapped some 250 years after its creation, its miniatures were not merely copied but made the basis for the invention of new images.

A.K., A.C.

IMMUNITY, a concept borrowed from the terminology of western European feudalism to denote a privilege granted by the emperor that forbade state officials from entering the beneficiary’s domains and performing certain fiscal, judicial, and administrative functions there. Ostrogorsky, among others, viewed exkousseia as synonymous with immunity. On the basis of the exemption formulas found in documents, he concluded that, during the 10th-12th C., immunity implied fiscal rights, that is, freedom from taxation, and that only in the 14th-15th C. did judicial immunity develop, that is, the right for privileged landlords, lay and religious, to judge their paroikoi. Ostrogorsky limited this right, however, to low justice. While fiscal immunity did exist in Byz., though to an extent perhaps not as widespread as in the West, there is some question as to whether judicial immunity existed at all. Some scholars in fact consider the application of the Western medieval concept of immunity to Byz. as inappropriate and misleading and prefer the more limited concept of exemption.

IMPERIAL CULT. Worship of the divinity of the emperor, which had begun as a means for Greek cities to assimilate their relationship with the Roman Empire (S. R. Price, Rituals and Power [Cambridge 1984]), culminated in the adoption of Hellenistic divine kingship by the Tetrarchy. Constantine I’s conversion excluded outright sacrifice to imperial divinity, although ambiguities persisted (e.g., the temple to his family erected at Hispellum [ILS, no.705]). On the local level, priests of the imperial cult probably shed religious functions but continued their political role in city and provincial assemblies well into the 5th and 6th C., esp. in Africa (F. M. Clover in Romanitas-Christianitas [Berlin 1982] 661-74). In the capital, the emperor’s status as God’s representative on earth maintained and even expanded aspects of the imperial cult, esp. the sacredness of imperial persons and institutions concretized by ceremony and by divinizing epithets. Although Constantine avoided divus for his person, his successors revived the custom, whence arose the Byz. usage of theios for the imperial person and institutions and xakra for documents. Proclamations of the emperor and his haloed image, the image’s privilege of asylum and placement on church altars, the custom of receiving objects from the emperor with covered hands, silence, incense, and lighted candles in his presence stemmed ultimately from the imperial cult and characterized Byz. rulership. The church itself transformed and fostered the imperial cult, as posthumous consecratio gave way to elaborate Christian funerals (S. Price in Canadine-Price, Rituals 56-105), imperial obits were commemorated in the Synaxarion of Constantinople,
and the emperor obtained unique liturgical prerogatives reflecting his sacral status.

**IMPOST BLOCK**, a stone block shaped like an inverted, truncated pyramid, placed on the capitals of columns destined to carry an arcade. The impost block probably evolved from the Roman practice of projecting short entablature spurs over capitals of columns placed in front of walls, as at the Porta Aurea of the Palace of Diocletian at Split. The capitals of the paired columns of S. Costanza, Rome, support a short entablature block that functions as an impost block. According to Deichmann, the mature form had its origin in the 5th-C. Greek East, but fully developed impost blocks appeared by ca.400 in Italy at S. Giorgio Maggiore in Naples and in the Basilica Ursiana in Ravenna. Impost blocks, often spolia, were used in Byz. architecture as late as the 14th C. They were placed directly on column shafts in the cisterns of Constantinople and, on a smaller scale, appear directly on columns or posts dividing windows, e.g., at Daphni, Hosios Loukas, and on the exterior of the Holy Apostles, Thessalonike. The impost block is frequently decorated with elaborate patterns of acanthus leaves and Christian symbols. In the 5th C., the impost block and capital merged to form the impost capital.

**IMPOST CAPITAL**, a uniquely Byz. capital created possibly in Constantinople by merging the function of the impost block with the mid-5th-C. forms of the Corinthian capital. The merger was facilitated by the development of the Corinthian capital into cup- and kettle-shaped forms, covered with abstract floral ornament incised and drilled, rather than carved, into the block; in both shape and decoration this late Corinthian capital approached the form of the more geometrically conceived impost block. Some impost capitals show a much diminished impost block on top; some exhibit small volutes at the base or at the top, faint reminders of the Ionic capital. The stages in this development from the mid-5th C. to its climax in Justinian I’s Hagia Sophia have been traced by Strube (infra). The creation of the impost capital marks the end of the classic capital and the appearance of a new form that carries the eye more fluently from column shaft to the arches above.

**IMRU’ AL-QAYS.** See Qays.

**INCANTATION** (ἐπιγονή), a magic song recited over a person or a charm to effect a cure, fend off evil, transfer evil to another, or evoke an erotic response in a member of the opposite sex. Incantations were similar in format, whether of Christian, pagan, or syncretistic provenance. The reciter of the incantation invariably summoned an angel or daimon, without which the charm was believed ineffective. Byz. writers often mention incantations in connection with magic, but seldom quote the actual words used. Canon 36 of the Council of Laodikeia (4th C.) forbade Christian clergics to invent or recite incantations. In the 12th C. Balsamon and Zonaras commented on the practice. Many examples of incantations survive on magical papyri, metal sheets, and small objects. An il]illiterate but dramatic 7th-C. incantation on an amulet calls upon Beliar, the inventor of the evil eye, to flee in the name of Christ from the limbs of the owner (who was perhaps paralyzed?) (*CIG* 4, no.9065). Syncretic incantations often used the names of apocryphal angels of Jewish tradition and “barbaric words.” Pagan incantations are reported in Anatolia and Sicily as late as the 7th–8th C.

INCARNATION (σάρκωςις or ἐνσάρκωςις) refers to the appearance of the Logos in the history of salvation (σωκονομία), distinguished from his generation within the Godhead. It is the classical formula of those Christologies oriented toward John 1:14, "And the Word became flesh." It is distinguished from a Christology that lays emphasis on the Preexistent One "becoming man" (en-anthropēsis—cf. Gal 4:4). The Logos-sarx model, which distinguishes theologians in the ALEXANDRIAN SCHOOL, competed with the Logos-anthropos model of the ANTIOCHENE SCHOOL. When the twonatures formula of the Council of CHALCEDON was accepted by the imperial church, the difference lost meaning since flesh in this Christology no longer implied a theological devaluation of the soul and human freedom of CHRIST. It meant, rather, the full reality of human existence as it was assumed by the Logos without sin (Heb 4:15: cf. FREE WILL). Sarx refers not to the sinful, fleshly existence of fallen humanity (in the Pauline sense), but to human nature as such: to the logos, not the tropos tes hyparxeos. In some texts one encounters the view that this sarx is not an individual reality, but MANKIND as a whole. Soteriology finds its basis in the incarnation, or assumption of the flesh, by the Logos.

Iconoclastic Views on Incarnation. Debate over the relevance of the Incarnation to the depiction of Christ on icons was a key feature of the polemic on ICONOCLASM. The Council at Hieria (754) declared that the "illicit" craft of the painter violated the doctrine of the Incarnation, attributing to artists the notion that they painted the image of the flesh alone (Mansi 13:256A), which, in truth, cannot be separated from the Logos.

INCENSE (θυμίαμα), resins, esp. frankincense from the gum resin of the boswellia tree, that produce fragrant smoke when burned; also the smoke thereof. Incense, imported primarily from southern Arabia, held an important place in Roman medicine and in the imperial cult; it became therefore for Christians a symbol of pagan worship, and church fathers (Tertullian, Eusebius, Augustine) rejected its use (W. Müller, RE supp. 15 [1978] 761–64). A change in the Christian attitude toward incense began by the end of the 4th C. Ephrem the Syrian refers to it; John Chrysostom mentions its use in processions to martyrs' shrines and even in church; and Christian censers of the 4th C. have been found. In the liturgy, incense is burned over charcoal in fixed burners or, more usually, in portable censers.

Christian use of incense is (1) fumigatory, as perfume, as at funerals; (2) honorific, when objects (such as icons, gifts, or the altar), or persons are censed in veneration; (3) exorcistic, chasing away evil spirits, as when the church is incensed at the beginning of a service; and (4) oblationary, when burnt in offering, as a sign of prayer or propitiation, a notion found esp. in the Syrian and Coptic traditions. In Byz. usage only ministers in major orders (deacon, priest, bishop) cense at services. In Constantinople incense was carried in processions at the EUPHRASIT or a LITEN, etc. At VESPERS incense is burned (in conjunction with Ps 140:2) as a sign of penance and prayer. At the SUNDAY resurrection vigil of festive orthos (Taft, Liturgy of the Hours 280f, 288f) it symbolizes the service of the MYRPHOROCH.

INCEST (καταμαθία, lit. "mixing of blood," a term unknown in ancient Greek; Lat. incestus) was treated in different manners in Roman and in Oriental law, the latter condoning matrimonial relations between close relatives. In the 3rd C. Roman jurists, yielding to the Oriental system, distinguished between marriages with lineal relatives that were considered illicit and collateral marriages that were permissible although not recommended (Digest 23:2:68). The attack on incestuous marriages began with Diocletian's law of 295 (F. Klingmüller, RE 9 [1916] 1248) who proclaimed them "barbarian monstrosities" and threatened execution as punishment. Diocletian's attitude toward incest was supported by the church fathers (for instance, BASIL THE GREAT, ep. 180, ed. Y. Courtonne 2 [Paris 1901] 88–92, more closely defined by canon 54 of the Council in Trullo) and civil legislators; special attention was paid to consecutive marriages of a man to two sisters and a woman to two brothers as well as marriage to a niece. Though the threat of the death penalty appears in some laws (e.g., Constantius II in 342—Cod. Theod. III 12.1), other legislators lessened the punishment.

The extension of the concept of incest de-
INCISED WARE. See Sgraffito Ware.

INCUBATION. The practice of spending the night at a sacred precinct, pagan or Christian, until the god or saint of the shrine appears to the suppliant in a dream and cures him of disease, injury, or insanity, has continued from antiquity to the present day. Pagan temples often had dormitories, but Christian churches usually allocated an aisle of the basilica to those seeking cures. Pagan incubation endured throughout the 5th C. Constantine I suppressed the shrine of Asklepios at Aegae in Glicia but other sites continued to function, among them the temple precincts at Epidaurus in Greece (at least until 354) and the temple of Isis at Menouthis on the Nile Delta (until the 5th C.). The temple, dormitory, and sacred spring of the Asklepion in Athens probably housed a Christian healing cult from the second half of the 5th C., and the inscription “Saint Andrew” (J.S. Cregan, A.E. Raubitschek, Hesperia 16 [1947] 29) permits the hypothesis that the basilica was dedicated to the apostle Andrew. Incubation became popular in Christian churches in the 6th C., as the Acts of Sts. Kosmas and Damianos attest. Incubations at rural martyria developed as a social protest against the incompetence of, and high fees charged by, physicians. Among places where incubation was practiced in the 7th C. were the basilica of St. Isidore on Chios and the martyrion of St. Artemios in Constantinople. Miraculous healing by incubation is attested throughout the Byz. period; in the 14th C., for example, a man was exorcised of a demon by sleeping next to the coffin of the patriarch of Constantinople, Athanasios I (A.M. Talbot, Faith Healing in Late Byzantium [Brookline, Mass., 1983] 18f., 78–80).

—F.R.T.

INDIA (‘India’) maintained both economic and political relations with the late Roman Empire. Eusebius of Caesarea relates that Constantine I received ambassadors from India, allegedly as an acknowledgment that his sovereignty extended to the ocean; according to Philostorgios, Constantine dispatched a certain Theophilos to India, where he found some Christian followers of the apostle Bartholomew. The Indians also sent embassies to Emp. Julian—probably in connection with his preparations for war against Persia—and Malalas mentions an Indian ambassador to Constantinople ca.530. Late Roman coins, esp. those of Arcadius and Honorius, have been discovered in India.

Trade with India, testifed to by Kosmas Indikopleustes, took four routes: via the Euphrates and Persian Gulf to Taprobana (Ceylon); via the Red Sea to the Indian Ocean; by overland caravan routes via Persia; and by caravan travel north of the Caspian Sea and across Central Asia. The primary exports from India were spices, incense, and probably precious stones: “the wealth of India,” according to the Vita Basilii, decorated the chapel of St. Clement in the Great Palace.

Kosmas provides some factual information about India, but from antiquity onward many legends were created about this distant land; India was portrayed as the home of pious and wise gymnosophists (a reflection of the Brahmans). Nonnos of Panopolis wrote an epic poem on the god Dionysos’s expedition against India and his victory over the Indian king Deriades, achieved with the help of a fleet summoned from Arabia.

After the Arab conquest of the Near East in the 7th C., Byz. contacts with India were severed. Knowledge of India’s location grew vager and it was often confused with Ethiopia ("the inner
INDIANA of earlier sources. Byz. legends (Barlaam and Ioasaph, Alexander Romance, Vita of Makarios of Rome) dwelt on the miraculous features and extreme piety of India, a country located somewhat near Paradise. John of Karpathos wrote a tract addressed to Indian monks, but for him India was a nebulous notion. Photios expressed an antiquarian interest in India by including in his Bibliotheca (cod. 72) the description of the country by the 5th-c. B.C. author Ktesias—full of legendary data such as the manticora, a beast with a human face, and people with dogs’ heads. Psellus (Scripta min. 2:10.2–5) ridiculed a man who allegedly traveled to Egypt, Ethiopia, and India. Some Indian influences reached Byz via Persian, Syriac, or Arabic sources: thus Symeon Seth produced a Greek version of the Kali-la wa-Dinna and Planoudes a tract entitled Calculation According to the Indians.

Personifications of India or representations of its inhabitants have been recognized in floor mosaics and the Barberini ivory. These are usually identified by their double-horned fillets; more certain attributes are the tigers that accompany the women on a silver plate in Istanbul (Rice, Art of Byz., pl. 43).

—A.K., A.C.

INDICATION (ινδικτιων or έπιδεύματος), initially an extraordinary tax in produce imposed by the emperor in order to meet specific needs. It was regularized on a yearly basis by Diocletian (five-year cycle) and finally under Constantine I became a 15-year cycle (starting in Sept. 312) during which the amount of the indication was to remain unchanged. In spite of this, extra indications (extraordinariae, superinditiones) were occasionally imposed. Because the fiscal and calendar years coincided (1 Sept.–31 Aug.), the word indication acquired a chronological meaning that it kept after losing its fiscal one: it indicated one year within the 15-year cycle, without specifying which cycle. According to K.A. Worp (Archiv für Papyrologie 33 [1987] 91–96), indication-dating in the papyri was not a result of the edict of 472 but became mandatory after Justinian I’s novel 47 of 537. In spite of its lack of absolute chronological precision, the Byz. used indication dating in everyday life and in administration. In order to calculate the indication corresponding to a given year of the Christian era, add 3 to the year, then divide the total by 15; the remainder is the indication (if the remainder is zero, the indication is 15).

—N.O.

INFAMY (ἀτιμία), the deprivation of honor, appears in Justinianic law as a penalty for wrong or unseemly conduct, such as not obeying trade regulations, disgraceful behavior in the army, misconduct in family relations, and certain criminal offenses. Infamy brought with it the restriction of certain rights or privileges, for example, the right to act as witness. The Ecloga (2:8.1) considers as atimos the widow who enters a second marriage before completing the 12-month term of mourning—she would lose any right to her former husband’s property. The Book of the Eparch (e.g., 18:5) punishes infringement of trade relations with flogging, cutting off the hair, a parade of infamy (thriambos), and exile. The public disgrace of infamy was used in political and religious struggles (e.g., to humiliate monks during Iconoclastic persecutions): the victims, sometimes made to ride backward on an ass or mangy camel, were preceded by a herald announcing their crime; their faces might be blackened, and they were ridiculed, beaten, or pelted with stones by the crowd. The parade could be followed by exile (e.g., Patr. Euthymios) or even execution (Emp. Andronikos I).

—A.K.

INFANCY OF CHRIST, specifically the period from the Annunciation through the Flight into Egypt (Mk 1:18–25, 2:1–23; Lk 1:26–55, 2:1–52; Protoevangelion of James, chs. 11–21). Christ’s infancy was illustrated esp. extensively during the centuries of the Christological contro-
verses (4th–7th C.): cf. S. Maria Maggiore in Rome (5th C.); Cathedra of Maximian and St. Sergius, Gaza (6th C.); Monza and Bobbio Am-pulliae. These cycles include numerous apocryphal scenes from the Protoevangelion that enhance their miraculous, theophanic content. With the exception of churches in Göreme and the huge, byzantinizing churches in Kiev, Norman Sicily, and Venice with their vast wall spaces, the Infancy cycle was reduced in 10th- through 12th-C. monumental painting to its major liturgical feasts: Annunciation, Nativity, Presentation of Christ (Hypapante). Likewise liturgically inspired is the 11th-C. Sinai icon conflating the many events celebrated on 25 Dec. (Nativity, story of the Magi), 26 Dec. (Flight into Egypt), and 29 Dec. (Massacre of the Innocents) (K. Weitzmann, Icons from South Eastern Europe and Sinai [London 1968] 23). Only certain densely illuminated Gospel and Lectionary MSS of the 10th–12th C. retained lengthy narrative cycles (Frieze Gospels; Athos, Dion. 587, 11th C.—Treasures 1, figs. 247–52, 260). Palai-ologan art saw a rich resumption of Infancy imagery in both monumental painting (Chora) and the MSS illustrating the Akathistos Hymn (J. Lafontaine-Dosogne, Byzantion 54 [1984] 671–702).

-A.W.C.

INFANTRY (πεζικών). Modestly equipped and slow to move, Byz. infantry nevertheless fulfilled an important defensive role in support of ca-
vality. It secured routes, guarded fortresses and encampments, and provided a mobile base for cavalry on campaign. Infantry was also indispensible for sieges and in terrain unsuited to cavalry. Foot soldiers were usually deployed in a square formation that they maintained in battle, on the march, and in camp. To judge from the totals given in the stratagima, infantry made up the bulk of the the army, outnumbering the cavalry by a ratio of 2:1 or 3:1. Three types of infantrymen are distinguished: heavy infantry armed with spears and swords, protected by corselets, caps, and shields; archers; and light infantry, armed with javelins and slings. A fourth type, menaulatos, armed with a heavy pike (see Weaponry), was created in the 10th C. for use against armored cavalry (E. McGeer, Diptycha 4 [1986–87] 53–57). Byz. and Armenians were preferred as heavy in-
fantry, while foreign mercenaries (such as the Rus') served as light infantry. The 10th-C. Escurial Taktikon mentions the hoplitarches or com-
mander of the infantry force in expeditionary armies and his subalterns, the taxiarhchai (also chilarchai), who commanded units of 1,000 men (Oikonomides, Lister 335f).

The sources offer scant details about the eco-
nomic status of infantrymen. A 12th-C. his-
torian (Zon. 3:506.3–8) lists them below cavalry and above sailors in levels of military service (strat-
tea); it seems likely that they were drawn from the poorer stratiotai who could at least afford the simple equipment used by infantry (W.T. Treadgold in Okeanos 624f). LIT. E. McGeer, "Infantry versus Cavalry: The Byzantine Response," R.E.B 46 (1988) 135–45. —E.M.

INFERTILITY (ατταιωσις) was considered by the Byz. as a terrible misfortune; there are abundant stories of barren couples who sought the help of physicians, holy men, shrines, or magic in order to overcome this condition. A passage in Digenes Akritas (Grottaferrata version VII 180–88, ed. E. Trapp, p.342) evoked the grief of the childless Digenes and his wife Eudokia as they prayed daily for a baby. The vita of Antony the Younger indicates the enormous sums paid to doctors to cure barrenness. Amulets were a popular means of increasing fertility. Men's sterility could also be remedied by a saint as evidenced by John Moschos's tale (PG 87:2977D–2980A) about a precocious baby who at the age of three weeks was able to point out his father, who was previously thought to be sterile. The biblical prototype of the barren Sarah rewarded with fertility only at a venerable age was often used in hagiographical texts.

—J.H., A.K.

INGOTS (μαξα, μαξια, massar), fixed weights of metal cast into bars or related shapes for convenient transportation and distribution. Gold, silver, and copper coins and bullion collected as taxes at provincial treasuries were melted and formed into ingots. These were weighed and stamped by officers of the Comes Sacrarum Largitionum before being sent to mints for the striking of coins. As the solidus was struck 72 to the pound, it is supposed that mints were issued with gold bars of this weight. Numerous gold and silver ingots
survive from the late 4th C., particularly from the Western Empire; they often bear one or more stamps, similar to the silver stamps applied to objects. Occasionally found together with imperial anniversary dishes, these ingots may (like large no dishes) have been used to pay military and other government personnel.

—M.M.M.

INHERITANCE. See Heir; Succession.

INITIALS, ORNAMENTAL. Compared with Latin scribes, Greek copyists, always more faithful to ancient traditions, were slower to enlarge and decorate initial letters. In the 6th C., small initials were filled with miscellaneous designs or outlined with dots. In contrast, the 9th-C. Paris Gregory contains large jeweled and floriated initials, accompanied by birds and snakes, and an epsilon with a blessing hand, later a common motif. Small figural initials also appear in the period, but the apogee of the decorated letter was in the 11th and 12th C. The 11th C. saw inventive combinations of animals, but it was the influential painters of the 12th-C. MSS of James of Kokkinobaphos who established long-lasting conventions for zoomorphic initials. Figural initials began to depict narrative scenes as well as single figures of the text’s author or narrator. Particularly in lectionaries, the person represented may belong to a larger group displayed about the page, thus pictorially uniting the entire surface. Figural initials are less common in the MSS of the Decorative Style and all but disappear in the Palaiologan period, but zoomorphic initials continue to be used for centuries.

INK (μέλαν, μελάνιον) in antiquity was made of soot; this durable black ink is still very well preserved on papyri. In Byz. MSS various kinds of inks with metallic components are to be discerned, a brown gallnut ink being one of the most wide-spread. For writing on purple codices, silver or gold ink was used. Sometimes other colors such as light blue or greenish also occur in MSS. Red ink serves to emphasize a heading (lemma), initials, or other prominent words, letters, or text passages. Purple ink has a particular function in imperial documents: the emperor signed with purple ink, and the head of the imperial chancellery, the kanikleios, wrote logos in a designated spot, also using purple ink. This official therefore wore an ink bottle attached to his garment, as is sometimes seen in miniatures. Some antique ink bottles and a few Byz. ones have been preserved, among them a silver bottle with metrical inscription in the treasury of the cathedral at Padua.

—W.H.

INN. Privately owned inns (pandocëria, lit. “accepting everything”) in both town and countryside provided accommodations for all kinds of travelers and their animals. John Chrysostom (PG 56:111.50–53) states that pandocëria were established everywhere along the roads so that travelers and beasts of burden could stop and rest. Nicholas Mesarites in the 12th C. vividly described an inn in the small kastellion of Kyr George near Nicaea (A. Heisenberg, Quellen und Studien zur späthistorischen Geschichte [London 1973] 2.2 [1923] 40f): his companion awoke in the morning, kindled a fire in the hearth from the previous day’s ashes, put an earthenware pot on an iron tripod, and began his breakfast, holding the meat in his left hand and cutting it into pieces with a knife, washing down the meat and bread with wine, while poor Mesarites suffered from the smoke that filled the room. Inns were not only places to sleep, eat, and drink, but also to find sexual pleasures: the mother of Theodore of Sykeon worked as a prostitute in a country inn (Vita, ed. Festugière, vol. 1, ch. 3.6–14) and, according to legend, Helena, the future mother of Constantine I, was a whore in an inn owned by her father (AB 77 [1959] par. 2.3). The vita of Andrew the Fool refers to brothels as “inns of fornication” (PG 111:652C).

The remains of a late Roman inn survive today,
17 km southwest of Urfa: there are three rock-cut caves, two of which were animal stables, and a cistern; the rooms for travelers were in a separate structure, now destroyed. An inscription, probably of the 3rd C., identifies the site as "an inn [pandocheion], well, and caves" built by Aurelius Darius, governor of Osrhoene "so that travelers may enjoy refreshment and repose" (C. Mango, Oxford Journal of Archaeology 5 [1986] 223–31).

Distinguished from pandochea, which were profit-making establishments, were xenodochia, guesthouses founded in a spirit of philanthropy to offer Christian hospitality. The mitaton for Syrian merchants in Constantinople was a type of inn as well. The world as a temporary abode was compared to an inn by Didymos the Blind (PG 39:780D) and other authors. —A.K., A.M.T.

INNOCENT II (Gregory Papareschi), pope (14 Feb. 1139–24 Sept. 1143). He was the scion of a noble Roman family, whose election to the papacy led to a schism within the curia; his adversaries elected antipope Anacletus II from a rival family of the Pierleone, who was supported by Roger II of Sicily. Innocent sought German assistance, but Conrad III was slow to act; the papal expedition against Roger ended in Innocent's defeat and capture and the treaty of Mignano (27 July 1139), in which the pope recognized Roger as king.

Innocent disapproved of the claims of Emp. John II Komnenos on Antioch; in a letter of 28 Mar. 1138 he excommunicated the emperor and prohibited Latins from serving in the Byz. army. Several months later, however, the pope changed his position and opened negotiations with John in an effort to establish friendly relations with Byz. No positive results were achieved.

INNOCENT III (Lothar of Segni), pope (from 8 Jan. 1198); born Anagni 1160/1, died 16 July 1216. The collapse of German power after the death of Henry VI in 1197 allowed Innocent to accomplish the moral and administrative restructuring of the Roman church and to acquire great influence throughout the Western world. He also tried to expand papal jurisdiction over Armenia and Bulgaria. He worked toward union with the Greek church on condition that Byz. recognize papal primacy, but in the beginning, at least, he was willing to discuss differences in rite.

The organization of the Fourth Crusade put the problem in a new light: at first Innocent apparently hoped to use the Crusader army against the Saracens in Sicily (E. Kennan, Traditus 27 [1971] 246–48). Even though the pope supported the German king Otto IV (1198–1218), the rival of Philip of Swabia, he accepted Philip's appointee Boniface of Montferrat as leader of the expedition. The Crusaders' capture of Zara created a new political and moral dilemma. The pontiff disapproved of the attack on a Christian city but recommended continued collaboration with the Venetians, whose resources were necessary to execute the plan (A. Andrea, I. Mottiff, BS 33 [1972] 6–25). M. Zaborov (VizVrem 5 [1952] 152–77) argued that diversion of the Crusade toward Constantinople was Innocent's own scheme; this may be an exaggeration, but the Latin seizure of Constantinople in 1204 seemed to be a political success for the reformed papacy.

Innocent's predecessors usually denied Constantinople's claim to the status of patriarchate. Now, with Constantinople in Western hands, Innocent endorsed the Greek concept of five patriarchates and associated Constantinople with the activity of the apostle John. However, he had to accede, although reluctantly, to the election of the Venetian Thomas Morosini as Latin patriarch of Constantinople. The pope sent legates (Peter Capuano, Benedict) to Constantinople, where they had debates with the Greek clergy: although their words were conciliatory, they in fact demanded that the Greeks conform to Latin doctrine and rite. The Greek hierarchy was restructured and put under the jurisdiction of the Latin church, and Latin monastic orders expanded in the empire. These measures failed to achieve church union, however, and Innocent soon began to treat the Byz. as heretics and schismatics. In 1213 Innocent received letters from certain Greek monks who complained about the Cistercians. The latter had acquired the Chortaites Monastery, near Thessalonike, from Boniface of Montferrat; later, Henry of Hainault, the Latin emperor of Constantinople, installed Greek monks there, but in 1212 the Cistercians, armed with Innocent's mandate, expelled them. Although the pope ordered
Cardinal Pelagius of Alban to investigate the situation, the Chortaites monastery remained in Cistercian hands, and by 1223 its owners had even been granted the monastery of the Holy Archangel in Negroponte (E. Brown, *Traditio* 14 [1958] 78–81).

INNOCENT IV (Simbaldo Fieschi), pope (from 25 June 1243); born Genoa ca. 1200, died Naples 7 Dec. 1254. Innocent carried the war against Frederick II to its climax. In the summer of 1244 the pope fled to Lyons to organize a coalition against Frederick. In 1245 he convened the First Council of Lyons. His aim was to sever Sicily from the German kingdom, and in 1252 he tried to offer Sicily to Richard of Cornwall (son of King John of England) and to Charles I of Anjou. His Eastern policy was determined primarily by two factors: the need to protect the remnants of the Latin state in Palestine, esp. after the Crusaders’ defeat at Gaza in 1239, and to secure assistance against Frederick. In March or April of 1245 Innocent sent Andrew of Longjumeau to negotiate with the Egyptian emir Fakhr al-Din; in a letter of 15 Aug. 1246, Fakhr al-Din claimed that atrocities in Jerusalem had been committed without the knowledge of the Ayyubid sultan and promised to repair demolished buildings and to support pilgrimages, which were lucrative for the Ayyubids (K.-E. Lupprian in *Das heilige Land im Mittelalter* [Neustadt an der Aisch 1982] 77–82).

Innocent also sought alliance with the Mongols (K.E. Lupprian, ST 291 [1981] 48–56). He worked for a union with "schismatics" and "heretics" under papal jurisdiction: in a letter of 22 Mar. 1253 he blamed the Catholics on the island of Melos for going too far in rapprochement with the Greeks, but he was ready to recognize some differences in rite if the Eastern church would accept papal primacy. The Nicene emperor John III Vatatzes was eager to reach an agreement and to receive the pope’s assistance against the Latin empire of Constantinople (P. Þavoronkov, *VizVrem* 36 [1974] 113–16), but the negotiations were interrupted by the deaths of John and Innocent in 1254.

Thus, the Byz. did not appreciate innovation and claimed to have stuck to tradition. Imitation or repetition of the standard authorities was praiseworthy. The idea of plagiarism did not exist. Reforms were usually couched in terms of the restoration of the past rather than of innovation: Psello, while criticizing Isaac I Komnenos for drastic changes, referred to God who did not create the world instantaneously but took an entire week (*Chron.* 2:121, par.62–9–12). In the same vein Gregoras (Greg. 2:796.2–12) censured the Zealots in Thessalonike for their rule that had no precedents, aristocratic or democratic, and was

---

INNOVATION (καινοτομία), in the narrow sense, as used by theologians, primarily of the 6th–7th C., described the new doctrine of the miracle of Incarnation. Kainotoma is defined by Maximus the Confessor (PG 91:1313C) as Christ’s assumption of “our flesh without semen” and the Virgin’s giving birth without desolation. More often the word was used in a broader sense of novelty and breach of tradition and applied predominantly to heretical doctrines or even rebellions. According to Psellus (Chron. 1:103, par.27.14), many of his colleagues called the revolt against Michael V “a senseless kainotoma,” while in Kekaumenos kainotomia designates illicit actions or illegal gain (A. Kazhdan, *VizVrem* 36 [1974] 156) rather than unexpected damage (G. Litavrin, *VizVrem* 36 [1974] 170). Accordingly, the expression kainos theologos, “new theologian,” had a pejorative connotation (P. Wirth, *OrChr* 45 [1961] 127f.), and Niketas Stethatos spoke ironically about new teachers or a new prophet (neos prophetes) (A. Kazhdan, *BS* 28 [1967] 4, n.8). The customary title “the New Theologian” given to the mystic Symeon is a misinterpretation—he was Symeon the Younger, the theologian (H.-G. Beck, *BZ* 46 [1953] 57–62).
not even a "new species" derived from existing forms but emerged spontaneously as a "strange ochlocracy." This negative attitude toward innovation does not mean that Byz. culture totally lacked originality. For example, there were remarkable novelties of both content and style, esp. in monumental painting, in and after the 9th C.

—A.K., A.C.

INSANITY, a disease that was viewed by the Byz. in a contradictory manner: some people with abnormal behavior were proclaimed holy fools, but insanity and esp. the epilepsy confused with it were interpreted as caused by demons. Accordingly, the Byz. lost the classical definition of epilepsy as "holy disease," or hiera nosos, a term transferred to leprosy (A. Philipsborn, Byzantion 33 [1963] 223f).

Byz. theoreticians generally hearkened back to the notions of Galen that madness was the result of too much black bile, causing the diseased imbalance of humors called melancholy (cf. Alex. Trall. 1:590–617). A second Galenic concept was the idea of the three pneuma (Vital, Psychic, and Natural) that also caused madness when balance among the three was disturbed; one meets continual reference to "passions" (esp. those of lust) as particularly engendering insanity. Galen's Passions and Errors of the Soul (ed. W. de Boer [Leipzig-Berlin 1937]) provided a model of sorts, from which many Byz. physicians derived their basic concepts of madness, although numerous cases of pure insanity had clear records of cure through religious miracles, not medical or pharmaceutical treatment. As treatment of insanity, saints used exorcism and incubation in special churches.

—J.S.

INSCRIPTIO. See Acts, Documentary.

INSCRIPTIONS, LAPIRARY, are incised or carved in relief on stone or marble, the letters sometimes heightened in color. They may be divided into two periods: the first from the 4th to the 7th C., the second from the 7th to the 15th. In the first period epigraphy continues to play the same role, closely tied to city life, that it had played under the pagan empire; in the second period its scope becomes more restricted. We may divide stone inscriptions (sing. τίτλος, τίτλου) into the following principal categories:

1. Funerary inscriptions are very numerous in the first period and are found on stelae, sarcophagi, loculi, and other forms of burial. Persons of high status are often commemorated in hexameter. There is a wide spread of lower-class epitaphs (artisans, shopkeepers, soldiers, minor clergy, etc.) recording the name of the deceased and his/her father; place of origin (often providing evidence of migration); occupation; length of life; date of death (day of the week, month, indiction), seldom in absolute terms (i.e., by consulship, regnal year, or local era in the Eastern provinces). Sometimes curses are added against anyone making unauthorized use of the tomb; the price paid for it may also be mentioned. There is a particularly full series of epitaphs from Korykos, another from Tyre. Constantinople with its environs, Corinth, and other places have also yielded a fair number.

In the second period epitaphs become much rarer and those of ordinary persons almost nonexistent, which suggests that they were buried in unmarked graves. This development may account for funerary graffiti, such as those scratched on the columns of the Parthenon in Athens, separated from the place of burial. As for persons of rank, there is a tendency toward longer and longer verse epitaphs, inscribed on the sarcophagus or on slabs attached to an arcosolium.

2. Honoric inscriptions on statue bases or accompanying the portrait of a prominent person (emperor, official, charioteer), usually in verse, were still fairly common in the first period (many preserved in the Greek Anthology), but absent in the second.

3. Building inscriptions appear on public monuments and works of fortifications, seldom on private houses. This category continued into the second period, while undergoing considerable contraction.

4. Inscriptions recording edicts and tariffs were practically absent in the second period, the latest known example perhaps being the grant of a salt pan to the Church of St. Demetrios at Thessalo-
nike by Justinian II (688/9). The conciliar "edict" of Manuel I of 1166 (C. Mango, DOP 17 [1963] 315–30) is essentially a religious text.

5. Acclamations addressed to emperors and circus factions are usually introduced by the formula Nika he tyche. They are absent in the second period.

6. Boundary stones are practically absent in the second period, except for those delimiting the Byz.-Bulgarian frontier (Beševliev, Inscriften, no.46). Milestones along public roads appear to cease in the 5th C.

7. Inscriptions regarding rights of ownership or the place (topos, thesis) occupied by persons in a theater, a market, or even a church form another category. They are absent in the second period.

8. Religious texts, invocations, and curses are also the subject of inscriptions.

LIT. Corpus inscriptionum graecarum, 4 (Berlin 1877).

---

INSIGNIA (σημεῖα), characteristic emblems used to express symbolically the social and political position of an individual or an institution. Byz. only embryonically developed the heraldry of hereditary familial coats of arms so typical of Western feudalism, but it did establish systems of personal, institutional, and imperial insignia. The word semeion was also used to designate both a standard or banner (e.g., a Persian semeion placed on a tower—Chron. Pasch. 554.8–9) and a theological symbol, such as the sign of the cross, baptism, or a miracle.

Personal insignia are known primarily from seals that depict images of Christ, the Virgin, the cross, and various saints, the most popular of which were military saints (George, Demetrios, and Theodore), the Archangel Michael, and St. Nicholas; more developed scenes (e.g., the Annunciation) appear rarely. The saint is considered a patron (often the owner of the seal was named after him), but it is not yet clear to what extent the owner consistently used the image of his patron saint and accordingly whether the semeion should be considered a genuine emblem. Some patterns of usage are evident: thus, generals frequently adopted military saints as patrons, whereas civil functionaries preferred Michael and Nicholas. Seals reveal a certain consistency and continuity of semeia for local churches; thus, the metabolics of Ephesus had as their patrons either the apostle John or the Virgin.

The emblems of officials are better known. The Notitia dignitatum represents the insignia of important office holders ca.400; thus, the emblems of the praetorian prefect of Illyricum were the codicillus (diploma of appointment) with imperial portrait, the so-called theca (i.e., pen case and ink pot), and a horse-drawn state coach reserved for the use of the prefect (P.C. Berger, The Insignia of the Notitia Dignitatum [New York–London 1981] 25–37). Later insignia are listed in such texts as De ceremoniis of Constantine VII or in pseudo-Kodinos.

Insignia can be divided into symbolic emblems (as represented in the Notitia dignitatum or on coins) and real objects. The latter encompassed costume including footgear, the crown, weaponry and horse trappings, the throne, and symbols of authority or piety, such as the scepter, sphaira (orb), and askia. The form and color of these garments and objects differed, reflecting the hierarchical ladder. Thus, in pseudo-Kodinos, the despotes was granted the privilege of wearing the skadios covered with pearls, with a veil bearing the name of the owner embroidered in gold; the sebastokrator had a gold and red skadios with gold embroidery (syrmateion), but no pearls are mentioned; the megas domestikos wore a klapoton (not syrmateion) skadios, that is, one decorated with small golden squares in the shape of a nailhead; the megas doux wore a klapoton skadios, but without a veil, and so on.

In the late 6th C. the Kleruologion of Philotheos divided all functionaries into two major categories: those who were invested with some form of insignia (brabeion), and those who were appointed by the word of the emperor. Among official insignia Philotheos mentioned the charte (codicil); a golden staff; the fblatorion, a cloak secured with a fibula; a golden chain; a golden whip decorated with precious stones; and a sword ornamented with gold and ivory plaques.

Imperial regalia, partly developed from the insignia of Roman magistrates (e.g., consuls), partly derived from the East, partly created anew, were above all characterized by the exclusive right to use the color purple (while green and blue were the colors of certain high-ranking officials). A special costume decorated with gold, pearls, and precious stones distinguished the emperor from
his entourage. The order in which the different elements of imperial costume (divetesion, chlamys, skaramangion, etc.) were put on was prescribed by court ceremonial, and the usage of a particular garment was usually linked with carrying particular objects (scepter, etc.). The ceremonial also prescribed a change in the imperial regalia at certain stages of processions and receptions. The different elements of the regalia varied in importance: the crown and chlamys always held pride of place, whereas the scepter and shoes (tzangia) probably assumed significance only by the 10th C. Different crowns and garments were employed for different festivities.

The Byz. saw a symbolic meaning in various insignia: the sphaira designated the universal power of the emperor, the akakia his mortality and submission to Christ. A poem of Christopher of Mytilene (no. 30.12–26) gives an example of the symbolic interpretation of the insignia that belonged to the eparch of Constantinople: his simikinthion ("apron," probably the lorias) symbolized the uninterrupted series of his good works; the tawny orange boots his divine paths; the white horse his shining virtue; and the brazen bosses of his horse trappings, which were alloyed with gold, symbolized his generosity, since he distributed gold and bronze among the needy.

INSPIRATION commonly designates the workings of a (divine) spirit. In Christianity it refers particularly to the Holy Spirit who acts on the authors of the Bible. Their works, according to 2 Timothy 3:16, are "inspired by God" (theopneustos, a Hellenistic term to indicate the phenomenon of "divine rapture," "divine emotion," and ecstasy) and an operation of divine empneusis. The books of the Bible are not the work of man, but prophecy (2 Pet 1:20–21): this is the term preferred by the church fathers to describe the Bible as the work of God. Therewith, inspiration also means the influence of God on the prophets, and then the Apostles (to be distinguished from the possession of the Spirit in Christ: Nicholas of Methone, ed. A. Demetrakopoulos, Ekklesiastikse Bibliothek, vol. 1 [Leipzig 1866; rp. Hildesheim 1965] 199–218), and the saints; finally it includes all "charismas," inspirations of God, and esp. enthusiastic experiences. Certain writers, esp. hagiographers, emphasize that they are or are said to be humble sinners who function only as the tool of the Holy Spirit. The notion of inspiration serves primarily and largely to maintain authority, and so in Byz. one speaks of the inspiration of the councils, the church fathers, or the ecclesiastical canons. Finally, in the political sphere, there is inspiration of the emperor, who, crowned by the Holy Spirit, rules through the Holy Spirit's inspiration. (See also SOPHIA.)

INSTITUTES. Promulgated by Justinian I through the constitution "Imperatoriam" of 21 Nov. 533 and compiled at his order by the law professors THEOPHILOS and DOROTHEOS, under the direction of TRIBONIAN, the Institutes are at once a textbook in four books and law. As a textbook they are closely modeled, in the arrangement of the material, on the Institutes of the jurist Gaius (2nd C.), from which many of their texts are derived. The writings of the classical Roman jurists—mostly in their form as preserved in the Digest—and Justinian I's own constitutions also served as sources. Justinian explicitly endowed the Institutes with the force of law in the introductory constitution "Imperatoriam" (ch.7). A Greek paraphrase of the Institutes that resulted from the law course of Theophilos served as a "quarry" for later Byz. legal textbooks (Psello, Synopsis legum) and legal lexika (adet), because of its pedagogical arrangement of the most important legal topics (personae, res, actiones) on the one hand, and its numerous explanations of Latin legal terms on the other. Various fragments from Greek revisions of the text of the Institutes—which are more or less similar to
the Theophilos text—are found in legal MSS and can even be detected in the *Hexabiblos* of HARMENOPOULOS.

INTAGLIO, conventional term denoting a subcategory of glyptics (carved hardstones), on which, in contrast to CAMEO, the design is incised. Preferred stones were jasper, carnelian, haematite, and rock crystal, for any of which glass might occasionally be substituted. The technique is most characteristic of ring bezels and cone SEALS, where it was essential to their sealing function, and of pendant amulets, where it was apparently valued for its beauty and, perhaps, for its similarity to Greco-Egyptian gem amulets (Bonnier, *Studies*, nos. 294–97, 334–39). Intaglios were far less popular among the Byz. than among the Romans or Saracens, and their technical quality relatively inferior. Monograms were preferred for sealing intaglios, while various biblical scenes, icons, or magical creatures or symbols might appear on the amulets. Relatively common during the 5th–7th C., gemstone intaglios are rare thereafter, although the occasional appearance of fine figural specimens from succeeding centuries attests to preservation of the tradition, probably among craftsmen who regularly incised metal, whether for ring bezels, cone seals, coin dies, or *bouloteria* (see Sealing IMPLMENTS).

-G.V.

INTELLLECT (*νοεῖ*), the human mind, was conceived in accordance with ancient Greek metaphysics as the immaterial or spiritual cognitive faculty, referring to unity and transcending the differences of rational discourse, “reconciling all oppositions” (BASIL THE GREAT, ep.8.g, ed. Couronne 1:39.11–13). Although the *nous* functioned in a different way from sensorial perception (Maximos the Confessor in scholia on pseudo-DIONYSIOS THE AREOPAGITE), ANASTASIOS OF SINAI (ed. Uthemann, *Viae Dux* 2.566–67) defined it as the “contemplative perception” (*αισθησις theoreitike*) that brings forth the LOGOS in the unity of language and thought. Differentiated from the SOUL, *nous* is a divine spark in the soul possessing the capacity of knowing God. It is the instrument of contemplation that prepares the human way to perfection, but needs constant purification, since it can be obscured and coarsened by sin. *Nou* was metaphorically represented as light, eye, and charioteer.

Pseudo-Dionysios speaks of angelic intelligences or powers as *noe* (pl. of *nous*). The Byz. also employed the terminology of PLOTINOS who considered the divine Intellect as the first emanation of the One. The epithet *nous* was applied both to the Father whose Son was “the Logos of the Nous” and to the Son.

For the Origenists of the 6th C., Christ was the “self-alienating Nous” who is to come, at the end of time, for the salvation of fallen spirits “in various bodies and under various names.” All intelligent beings or *noe*, before the aversion or disgust that is caused by their vision of God and leads them to apostasy, were but “one substance, one force, one energy,” and they will acquire such status again at the end of time owing to their unity with God the Logos and the loss of any individuality. Only one *nous* had preserved his union with God the Logos in the vision of God, namely one that at the end of time will be revealed as Christ in multiple forms in order to initiate the *apokatastasis*, that is, the restoration of the original unity. In this teaching on the beginning and the end of time, the metaphysics of the intellect becomes a cosmological myth and drama; this teaching overlaps with Gnostic speculations that resolve the entire cosmos and all its species in a single undifferentiated unity; in other words, alienates them. A contrasting view is represented by the hierarchical world view of pseudo-Dionysios. In the tenets of Byz. mystics and in the doctrine of the Trinity one can see the merging of these two tendencies.

-K.-H.U.

INTELLECTUALS in the late Roman period were connected primarily with the urban environment: they received their training in universities and occupied positions as teachers, lawyers, rhetori-
cians, physicians; they were members of the local aristocracy or belonged to its milieu. Alongside them two new groups of intellectuals developed, theologians and officials. The crisis of the late antique polis was accompanied by the disappearance of the urban "intelligentsia"—cultural activity ca. 800 was concentrated around monasteries, not the curia as it was in antiquity. The encyclopedism of the 9th–10th C. contributed to the development of a secular intelligentsia, but through the 11th C. intellectuals were primarily state and church bureaucrats, closely connected with Constantinople and its administrative machinery. Professional intellectuals came to the fore in the 12th C., but even in this period their careers were often crowned by appointment to a bishopric. Nevertheless, intellectuals of the 12th C. argued that they held a specific social position and had a right to remunerations granted by the state, church, or private patrons. The increasing social importance of the medical profession (A. Kazhdan, DOP 38 [1984] 43–51) also reflects this shift. Ševčenko's analysis of the status of late Byz. literati (infra) demonstrated that the court of Constantinople continued to be the center of intellectual life, even though more than half of the writers can be assigned to the ecclesiastical sphere; only a few were of humble origin.

**INTELLIGENCE, MILITARY AND POLITICAL.** Surrounded by hostile powers and peoples, the Byz. state constantly required political and military intelligence to defend itself and to expand its influence beyond its borders. The De administrando imperio (10th C.) outlines the interests served by political intelligence, such as desirable alliances, trade routes, and diplomatic strategy, and by counterintelligence, used to awe foreign ambassadors with Byz. power and to withhold state secrets from them. Information was channelled to the logothetes tou dromou from many sources, including merchants, travelers, former prisoners of war, embassies, and Christian communities outside the empire.

Military men paid close attention to the equipment, skills, tactics, and character of various enemies; their observations were recorded in the Strategikon of Maurice (bk.11) and the Taktika of Leo VI (bk.18) with suggestions on how best to adapt to each one. The De velitatione (10th C.) describes the surveillance of the frontiers by local units, which monitored enemy invaders to ascertain their strength and intentions; the necessity of reconnaissance while on campaign is repeatedly emphasized in the Strategika. In preparation for offensive expeditions, merchants were sent into enemy lands to collect information (De cer. 657.3–12), and grudging tribute to their effectiveness comes from Ibn Hawqal, who criticized the Arab authorities' inattention to them (Configuration de la terre, tr. J.H. Kramer, G. Wiet, vol. 1 [Paris 1964] 193).

—E.M.

**INTEREST (tòkos, lit. "child").** According to the law of Justinian I, there were two sorts of interest: based on a contract (agreement, stipulation); automatically owed by law in some kinds of transactions, such as interest on debts to minors or to the fisc or owed by an official of a society if he used the society's funds for his own purposes. The 8th-C. Ecloga does not mention tokos; in the early 9th C. Emp. Nikephoros I abolished all forms of interest (Theoph. 488.11) with the exception of interest due to naukleroi (probably on account of their occupational risk). Basil I also prohibited interest as contravening Christian ethical values. Leo VI, however, revoked this prohibition in novel 83, since "the average man is unable to attain such heights of morality and must abide by human, not divine laws."

Maximum interest was defined by Basil. 23.3–74 in accordance with Justinianic law: the normal rate of interest was set at 6 percent, but the illosstrioi could not ask more than 4 percent, whereas merchants were allowed 8 percent, increased to 12 percent if they were involved in maritime operations. In novel 83 Leo VI allowed only a standard 4 percent rate of interest. Peira 19.1 gives a higher rate: regular interest was 6 nomismata per pound (litra) of gold, while argyropratai could charge 8 nomismata; protospatharioi were limited to charging 4 nomismata. Since in
the 11th C. there were 72 nomisma to the pound, the rates were 8.3, 11.1, and 5.6 percent, respectively. Circa 1400 much higher rates of 15 and 26.6 percent are found in the decisions of Patr. Matthew I. (See also USURY.)

-A.K.

INTERIOR SPACE, the depiction of an enclosed area, was generally of little concern to artists in Byz. and was left to the spectator's understanding of a scene to supply. Thus in the Rossano Gospels no physical distinction is made between the room in which Judas returns the silver and the yard in which he hangs himself. Painters normally declined to define the area in which an event took place, even one specified in a text as occurring indoors. Scenes calling for an interior setting, such as the Last Supper or the Dormition of the Virgin, were furnished with a summary architectural backdrop, occasionally supplemented with a swag, signifying an interior space, thrown over a wall or swung between piers. Other symbolic devices of this sort include open doors, thrones, altars, and tables. Even in the 14th C., when there is some evidence for the reuse of Late Antique motifs and of loans from the West, ancient Roman and new Italian perspective schemes were ignored; interior spaces became ever more elaborate and ever less rational.

-A.C.

INTERLACE, a regular pattern formed of two or more interwoven or plaited bands, usually as a filler or border ornament. In contrast with the technical precision achieved through the use of compass and ruler in many Latin examples, Byz. versions of interlace, particularly in MSS. seem to have been composed freehand. Again unlike Latin interlace, Byz. examples are usually symmetrically constructed along an axis. In this they also differ from the arabesque, an overall decorative pattern based on stylized leaf- and scrollwork developed by the Arabs that appears in Byz. by the 10th C. As a twisted rope pattern or in the form of large and usually regular medallions alternating with smaller circles, a simple interlace formed of two strands was ubiquitous throughout the Byz. period; multiple band interlace also appears, particularly in works produced in or influenced by Italy. Interlace was esp. popular in MSS, textiles, and metalwork.

Simple, two-strand interlace is often referred to by scholars as guilloche. It appears on capitals and moldings, as at the Nea Moni on Chios, as well as in MSS from the 6th C. (Vienna Dioskorides) to the end of the Byz. period, as it was particularly popular as a text divider.

-L.Br.

INTERPOLATIONES. When charging the compilers to assemble the Digest, Justinian I authorized them to make alterations, where necessary, to the texts of the classical jurists (Cod. Just. I 17.1.7). He also allowed "editorial" interventions of this sort in the compilation of the Codex Justinianus ("Constitutio Haec," ch.2 = CIC 2, p.1). These interpolations into the original texts, though intentional, are discreet; they have promoted considerable research aimed at reconstructing the original versions of the texts. The writings of the Antecessores occasionally aid in the detection of the interpolations both because they were sometimes based on older stages of the text (Thalalios) and because they were composed with knowledge of the pre-Justinianic legal situation. Conscious interpolations, which actually change the content of a text, are rarely encountered in Byz. legal literature after Justinian. In the Basilika the texts of the Corpus Juris Civilis were incorporated usually without any intentional alterations. In some cases, however, interpolations of the original texts of Justinian can be observed in the Basilika. These interpolations correspond to several innovations in law that Leo VI decreed in his novels (M.Th. Fügen, SubGr 3 [1892] 23-35).

INTERPRETER (ἐρμηνευτής or διερμηνευτής), official on the staff of the LOGOTHESES TOU DROMOU; in the Palaiologan period they were under the command of the megas diermeneutes and the praitor tou demou. Bury (Adm. System 93) identified them with the interpretes diversarum gentium in the officium of the MAGISTER OFFICIORUM. Some interpreters, such as the protospatharios Krinites in the mid-10th C., performed diplomatic duties. The corps of professional interpreters existed through the whole history of Byz., even though the sources rarely mention their participation in later embassies (I. Medvedev, VizVrem 33 [1972] 132, n.18). The gambros and diermeneutes Loukas Notaras took part in negotiations with the Venetians in 1448 (Reg 5, no.3516; MM 3:224.16). Besides participating in embassies, interpreters served as translators for negotiations in Constantineople and compiled documents in foreign languages. The epithe megalas was applied to the term in the 12th C. (first mention ca.1160) to designate the chief interpreter. On seals one finds the titles of the interpreters of the Romans, Bulgarians, Varangians, and English (Laurent, Corpus 2, nos. 469–71; Zacos, Seals 2, no.706).

EXCERPT. Excluded from the inheritance as long as their parents were living. If some or all of the children of the deceased had died, leaving children, the latter divided up the portion of the inheritance allotted to their parents. If the deceased had no descendants, then his parents and his siblings inherited equal portions. Grandparents of the deceased succeeded to the inheritance only if no siblings or parents survived. If there were no such (living) relatives left, the estate was divided among the stepsiblings of the deceased (who had only one parent in common with the deceased), followed by all collateral relations. Before the year 548 (Nov. Just. 127), spouses could inherit from their deceased partner only when there were no relatives at all. Thereafter, providing they had children and did not remarry, they were given equal ranking with the children, that is, they could inherit, together with the children, an in capita portion. Adopted children were treated like legitimate children. Illegitimate children inherited from their mother and, together with her, one-sixth of their father's estate, provided that the deceased did not leave a wife or descendants from a legitimate marriage. If there were no eligible heirs at hand, the inheritance fell to the state.

INTESTATE SUCCESSION (ἡ κληρονομία ἐκ ἀδιαθέτου) occurs when a deceased person has left no will. If the problems that necessarily arise in this case—the appointment of an heir and division of the inheritance—are resolved by the norms of inheritance law, then intestate succession is equivalent to legal inheritance. This was the situation in Byz., where, with the exception of a few small changes (as, e.g., the trimoira), the late antique regulations on legal succession established in final form by Justinian I remain binding. These regulations provided that a deceased person be succeeded in the first place by his children, who took his place collectively and in equal shares. If there were grandchildren, they were

INVENTIVE (ψόγος), with ENKOMION, constituted the genre of EPIDEMIC ORATORY, according to the authors of rhetorical textbooks (e.g., Rabe, Prolegomenon 58.15). Even though Libanius produced several PROGYMNASMATA of inventive, only APHTHONIOS (Progymnasmata, pp. 27–31) included a separate paragraph on the psogos. Later commentaries on both Aphthonios and HERMOGENES (e.g., Rabe, Prolegomenon 75.4–5) likened the pairing of enkomion—inventive to judicial speeches of accusation and defense (APOLOGY). The term psogos, having a pejorative sense (blame or censure), was not employed for titles of inventives; thus, Libanius entitled his inventive (or,46) simply “Against (kata) Florentios.” The genre of inventive was popular in Byz. society, the major subject of blame being inclination toward paganism (see also POLEMIC, RELIGIOUS), as in the pamphlet on Choi-
rospakhites by Arethas of Caesarea (1:200–12). The style of invective was sometimes very crude, consisting of accumulated curses, as in Constantine of Rhodes, who ardently formed very long composites, such as “Helleno-worshiper-Christ-blasphemer.” Elements of invective could penetrate even hagiography; thus Niketas David Paplagos transformed his vita of Patr. Ignatios into an invective against Photios. Twelfth-century invective (Anacharsis, the “biography” of a certain Bagoas by Basilakes) had a moral rather than religious emphasis, and later invectives form a parallel to Italian humanist invectives of the 15th C. (P. Canivet, N. Oikonomides, Diptycha 3 [1982–83] 21–25).

INVENTORY. Inventories, variously termed Breibion, apographe (Pantel. no.7-4), katastichon (Lauro 3, no.146.42), etc., often accompanied wills and lists of donations. They contain important information on relics, icons, textiles, manuscripts, bookbindings, and a great variety of liturgical vessels. Among the most important inventories are the following:

Inventory (5th–6th C.) of a church at Ibion, Egypt (H. Leclercq, DACL 7.1:1408–25)
List of regalia and relics in the Church of the Pharos and other chapels in the Great Palace at Constantinople (De cer. 640.1–641.5)
Will of Eustathios Bolias (1059)
Diataxis of Michael Attaleiates (1077)
Inventory of the monastery of Petrizzo in the typikon of Gregory Pakourianos
Inventory of the monastery of S. Pietro in Spina, Calabria (after 1135), ed. Montafacon, Pal. Graeca 403–07
Inventory of the Kecharitomene nunnery, ca.1120–30
Inventory of the Xylourgou monastery on Mt. Athos (1142), in Pantel., no.7
Two inventories (May 1192, 13 Oct. 1202) of the so-called Palace of Botaneiates near Kalybia, ed. MM 3:x–xv, 55–57

Inventory of the monastery of St. John, Patmos (1200), ed. C. Astruc, TM 8 (1981) 15–30
Inventory of the possessions of the monastery of the Virgin at Skoteine in 1247
Will (1330/1) listing bequests of Neilos, founder of the monastery of the Prodromos on Mt. Athos, Docheiair., no.17
List of icons, Gospel books, and textiles in the monastery of the Virgin Gabaliotissa at Vodena, given to the Great Lavra on Mt. Athos in May 1375 (Lauro 3, no.147)
Patriarchal inventory of Hagia Sophia, Constantinople (1397), MM 2:566–70
Inventory of the Eleousa monastery at Veljusa (1449), ed. L. Petit, IRAIK 6 (1900) 114–53

INVOCATION. See Acts, Documentary.

INVOCATION. See Epiclesis.

IOANNIKIOS (Ioannikios), saint; born in the village of Marykaton, near Lake Apollonia, Bithynia, perhaps between 752 and 754, died in the monastery of Antidion, 3 Nov. 846 (J. Parigore, EO 4 [1900–01] 75–80); feastday 3 or 4 Nov. He was probably of Slavic origin (Ph. Malingoudis, Hellenika 31 [1979] 494–96). As a peasant boy Ioannikios herded swine; at 19 he joined the army and later fought courageously in the battle of Markellai (summer 792) against the Bulgarians. After the Byz. defeat, he withdrew to Bithynian Mt. Olympos, wandered across Asia Minor, lived in solitude, and finally took the monastic habit. An ardent Iconodule, Ioannikios was compelled by Leo V’s persecutions to flee to Mt. Alsos. Later, Ioannikios supported Methodios I and helped him attain the patriarchate.

Ioannikios’s vita is preserved in two versions and in a reworking by Symeon Metaphrastes. One hagiographer, Sabas (perhaps author of the Life of Peter of Atra), claims to have known Ioannikios (AASS Nov. 2.1:376f) and inserts a number of chronological indications, not always sound (e.g., it is questionable that Ioannikios was already 40 at Markellai). Peter, the second ha-
The text appears to discuss the historical figure of Ioannina, who is associated with the monastery of St. Ioannikios and the city of Ioannina. The text also references the chronicle of Ioannina and the reign of Thomas Prejubović, who ruled from 1366/7 onwards. The text mentions the historical significance of Ioannina and its location in the Byzantine Empire, as well as its cultural and political importance.

**Representation in Art.** The saint is depicted as a monk, and in miniature paintings he is sometimes associated with the image of a mountain; in two MSS of the *menologion* of Symeon Metaphrastes, this mountain is accompanied by the female personification of Mt. OLYMPOS.

**Sources.** AASS Nov. 2.1:332–435, PG 116:335–92.

**IOANNINA** (*Ioánnina*), city of northern EPIROS, situated on a peninsula on Lake Ioannina; the unnamed “well-fortified polis” built by Justinian I for the citizens of ancient Euroia (Prokopios, *Buildings* 4.1.39–42) can probably be identified as Ioannina. The name Ioannina, however, appears only in the 9th C. as a suffragan bishopric of Naupaktos (Notitiae CP 7:580). Anna Komnene mentions Ioannina three times without any comment. In 1082 it was temporarily taken by the Normans. After 1204 Venice claimed the city, but control fell to the despotate of Epiros, and the theme of Ioannina was created in 1225. Besieged by Nicaean troops after the battle of Pelagonia in 1259, Ioannina remained in Epirot hands until 1318, when it was taken by the Byz. and raised to metropolitan status (E. Chrysos, *Dodone* 5 [1976] 337–48). In Feb. 1319 Andronikos II issued a chrysobull (Reg 4, no.2412) listing the privileges of the citizens of the *atey* Ioannina: elements of local administration, exemption from trade duties and military obligations outside the city, confirmation of city customs and of its possessions. This chrysobull is a unique document describing city immunity.

Ioannina fell to Stefan Uroš IV Dušan ca.1348 and passed to SYMEON UROȘ after 1355. Thomas Prejubović ruled in Ioannina from 1366/7 onwards; his tyrannical reign is described in the *Chronicle of Ioannina*. In his struggle against the Albanians Prejubović called upon the Ottomans in 1380. Frightened by Albanian attacks, the citizens acknowledged Carlo Tocco as ruler, and he transferred his summer residence there. In 1430, however, soon after his death, Ioannina was ceded to the Turks.

Little is left of the Byz. monuments of Ioannina. According to K. Tsoures (EpChron 25 [1983] 132–57), the walls on the so-called acropolis of the Demotikon Mouseion and the city walls were built in the 10th C.; the acropolis of Iç Kale in 1082; in 1204–15 the city walls and acropolis of the Demotikon Mouseion were reconstructed; in 1367–84 additional fortifications were erected, including a tower with the inscription of Thomas (evidently Prejubović).

**IOASAF OF VIDIN,** Bulgarian bishop and writer; fl. ca.1375–1400. Ioasaf was a monk in a monastery at or near Vidin. At the request of Prince Ivan Sracimir of Vidin, he was ordained metropolitan of Vidin in Sept. 1392 in Constantinople by Patr. Antony IV. He was sent on a diplomatic mission to Târnovo shortly after the city fell to the Ottoman Turks in 1393 and returned to Vidin with the relics of Sts. Philothea and Petka (Paraskeve). His panegyric on St. Philothea is preserved in the Rila Panegyrikon, copied in 1479 by Vladislav Gramatik. It follows the stylistic model of the panegyrics of Evthimij of Târnovo. Although the work contains many hagiographical clichés, it also provides much information on the condition of Bulgaria at the beginning of Turkish rule.

**IOEL.** See Joel.
IONIAN SEA (Ἰόνιον [Ἰόνιον] πέλαγος), the closed waterway between Greece and Italy, separated from the ADRIATIC SEA on the north by the straits of Otranto. The Ionian Sea provided the major communication link between Byz. and the West: ships generally sailed up the coast of Greece, before either crossing west to Italy or continuing up the Adriatic to DYRRACHION, RAVENNA, and VENICE. In Italy the Ionian Sea bordered on Calabria and Apulia. The seven larger islands of the Ionian Sea, the so-called Heptanesos, were KERKYRA, Paxos, Antipaxos, Leukas, Ithaca, Kephalaenia, and Zakynthos. In late antiquity Kerkyra and Leukas belonged to the administrative sphere of Epiros, Kephalaenia and Zakynthos to the province of Achaia; accordingly, the northern islands were in the ecclesiastical jurisdiction of Nikopolis, the southern islands under Corinth. It is probable that the theme of Kephalaenia, established before 809 (Oikonomides, Listes 352, 364), combined the islands of the Ionian Sea. The islands changed hands in the 13th–14th C. (despotate of Epiros, Manfred of Hohenstaufen, Charles I of Anjou) but from the end of the 14th C. the northern group was under Venice, while the southern group belonged to the house of the TOCCO.

IPHIGENEIA, ancient Greek goddess of fertility, later a heroine, the daughter of King Agamemnon. According to pseudo-Nonnos (PG 36:989D-992A), Iphigeneia had to be sacrificed by the Greeks in Aulis in order for them to obtain favorable winds for their voyage to Troy; she was miraculously replaced, however, by a doe (elaphos; see DEER) and transferred to the Tauri in Scythia where she ruled as the priestess of ARTEMIS, sacrificing all foreigners to the goddess. The same myth is told by NONNOS OF PANOPOLIS and by Malalas, Nonnos (Dionysiaka 13:186) mentioning also "the empty barrow of Iphigeneia" near Athens.

The theme of Taurian inhospitality was popular in Byz. literature, the Tauri/Tauroscythians usually being identified as the Rus'. The myth of Iphigeneia herself attracted some Christian literati; thus Gregory of Nazianzos, in his funeral panegyric of Basil the Great (PG 36:504B), after listing some legendary hunters (Artemis, Orion, Actaeon), mentions "the virgin replaced by a doe," a story that he is ready to accept as not completely fabulous. It is not clear why he used in this case such Christian terms as parthenos and elaphos (sometimes perceived as a symbol of Christ himself) and whether or not he had in mind the Old Testament legend of the sacrifice of Jacob. On the other hand, the phrase in his speech against Julian (PG 35:592A), "the sacrifice in Troy of the royal girl," has no Christian allusions and probably does not refer to Iphigeneia, who was sacrificed in Aulis.

An ivory panel of the 10th-C. Veroli casket (London, Victoria and Albert Museum) depicts the sacrifice of Iphigeneia at Aulis (Weitzmann, infra, fig. 214). The iconography is probably derived from an illustrated MS of the plays of Euripides.

IRAN, or Persia, a state that occupied territory from the frontier of the Roman Empire to the borders of India. Called the Parthian Empire under the Arsacid dynasty, it preserved a shaky balance of relations with the Roman Empire in the 1st–3rd C., the frontier being largely defined by the Euphrates. In 226 the dynasty of the SAŞANIANS terminated the rule of the Parthian Arsacids and shaped a powerful empire that rivaled Rome and Constantinople until the 630s. Even though warfare dominated the relations between the two empires, there was also lively cultural exchange, active trade (see SILK ROUTE), and exchange of envoys. Christianity (notably Nestorianism) was entrenched in Iran, Persian cults (esp. Mithraism) and ideological movements (Manichaenism) penetrated into the Roman Empire, and certain features of the Roman fiscal system and court ceremonial can be attributed to the influence of the Persian administrative system.

After the Arab conquest of Iran (ca.633–50) the country was incorporated into the caliphate; subsequently, when the 'Abbásids established their capital in Baghdad (750), Iran became its core territory. The caliphate preserved the Sassanian
fiscal system and the old type of officialdom, but changed the language of bureaucracy to Arabic. By the end of the 10th C. Islam replaced Zoroastrianism as the religion of the majority of Persians. The political decline of the caliphate permitted the formation of independent Persian dynasties—the Tahirids (810–73) in Khurāsān, the Saffārids (887–900) in Seistan and Khurāsān, the Sāmānids in Bukhāra, and finally the Būyids (Buwayhids) in western Iran (935–1055) and Ghaznavids (977/8–1187) in the east. During the first half of the 11th C. most of these princedoms fell into the hands of the Great Seljūks of Baghdad. In the 12th C. the Mongols conquered the territory of the former Sasanian realm, and in 1258 Hūlāgu seized Baghdad, ending the rule of the ʿAbbāsids there and founding the state of the ʿIlkhāns, which paid nominal homage to the Great Khan in China. In 1335, with the death of the last ʿIlkhān, Abu Saʿīd, the Mongol dynasty of Persia came to an end and the country was divided between several minor dynasties. Timur again united it, but only temporarily; soon after his death, the Persian part of his enormous empire was occupied by the Turkomans before being conquered by the Ottomans.

The Palaiologan emperors of Constantinople and the emperors of Trebizond engaged in trade and diplomatic relations with various rulers of the former Persian territory, ʿIlkhāns, Timurids, and Turkomans, and Byz. scholars of the 13th–14th C., like Gregory Choniades, had contacts with their Persian colleagues. (For the literature of medieval Iran, see Persian Literature.)

IRENE (Εἰρήνη), feminine personal name (meaning “peace”). Irene, a daughter of Zeus, was the personification of peace in antiquity; the word was used, at least in Ptolemaic Egypt, as a personal name. In late Roman society the name was rare and had a mythological tinge: Justinian I dedicated to Irene (Peace) and Sophia (Wisdom) the greatest churches in Constantinople. There are many martyrs of this name, but it is difficult to determine when the accounts of their passions were produced; in the tale of Licinius’s daughter Irene, who was baptized by Timotheos (St. Paul’s pupil), it is clearly stressed that her given name was Penelope and she was christened Irene by an angel. Only one Irene is mentioned by Sozomenos (Sozom., *HE* 1:1:14–5), and that in a legendary context: her father, St. Spyridon, made her talk after her death and burial. No Irene is listed in *PLRE* 1–2 and Prokopios knows only the Church of Irene. The first Irene mentioned by Theophanes the Confessor (*Theoph. 410.1*) is the Khazar princess, who married Constantine V and was given the name Irene. Thereafter, the name became more frequent: Skylitzes names four Irenes, Niketas Choniates seven. In the late acts of *Laurav*, vols. 2–3 (13th–15th C.), 36 Irenes appear, and the name holds fourth place among women. As in the case of the wife of Constantine V, a number of foreign-born empresses took the name Irene upon their marriage to a Byz. emperor, perhaps to symbolize peaceful relations between the two nations (cf. *Berta of Sulzbach; Irene-Yolanda of Montferrat; Adelaide of Brunswick, married to Andronikos III*).

IRENE, empress (797–802); born Athens ca.752, died Lesbos 9 Aug. 803. In 768 Constantine V brought Irene to Constantinople, where she was crowned and married to Leo (IV). In 771 she gave birth to their only child, Constantine (VI). Irene was a devoted Iconophile; a rumor circulated that Leo discovered two icons in her possession and thereafter refused to sleep with her (Cedr. 2:19:117–20:3). After Leo’s death in 780 Irene ruled as regent for Constantine for ten years. During this period Irene was cured of a hemorrhage by the waters of Pege; she presented rich gifts to the Church of the Virgin there and set up mosaic portraits of herself and her son (AASS Nov. 3:880BC). In 790, when the army refused Irene’s demand for precedence over him, Constantine deposed her, and she resided in the suburban palace of Eleutherios until recalled in 792. In 797 she dethroned and blinded Constantine, thus becoming the first female Byz. autocrat, but was herself toppled by Nikephoros I in 802 and exiled to Lesbos.

During her regency and rule Irene relied on advisers like the eunuchs Staurakios and Aetios and weakened the empire militarily by removing
IRENE DOUKAINA

IRENE DOUKAINA, wife of Alexios I Komnenos, empress (1081–1118); born Constantinople ca. 1066, died 19 Feb. 1123 (W. Hörandner, ed., Theodoros Prodromos: Historische Gedichte [Vienna 1974] 188 and n. 23) or 1133 (Skoulatos). Daughter of Andronikos (son of the Caesar John Doukas) and Maria of Bulgaria, Irene married Alexios ca. 1078. Between 1083 and 1098 she bore him Anna, Maria, John II, Andronikos, Isaac, Eudokia, Theodora, Manuel, and Zoe (Kleinhroniken 1:55f). Although the marriage sealed the alliance of the Doukas and Komnenos families, at his accession Alexios (urged by his mother Anna Dalassene, and perhaps attracted to Maria of "Alania") hesitated to crown Irene. After a week, demands by John Doukas and Patr. Kosmas I forced her coronation, but she remained overshadowed by Anna Dalassene until the latter's retirement. Although Anna Komnene draws an admiring picture of her parents' relationship, the fact that from 1105 Alexios frequently insisted that Irene accompany him on campaign shows that he hesitated to leave her to intrigue in Constantinople. When Alexios was on his deathbed, Irene pressed him to name Anna's husband Nikephoros Bryennios as heir. After John II's accession, although she had not joined the conspiracy of Anna and Bryennios, Irene was forced to retire to her convent of Kecharitomene. Noted for her charity and intellectual accomplishments, she probably inspired Bryennios's history and patronized or corresponded with literary figures such as Manuel Straboromanos, Theophylaktos of Ohrid, Michael Italikos, and Theodore Prodromos. Her portrait appears on the Pala d'Oro.

—C.M.

IRENE, CHURCH OF SAINT. According to tradition, this church of Constantinople was already a Christian church before Constantine I enlarged it and gave it the name of Eirene (Peace). Before the inauguration of Hagia Sophia in 360 it served as the cathedral of Constantinople. By the 5th C. the two churches were contained within the same precinct, served by the same clergy, and regarded as forming the complex of the patriarchate. Burned down in 532, St. Irene was rebuilt by Justinian I. Destroyed by the earthquake of 740, it was reconstructed, probably by Constantine V. The church was never turned into a mosque, but became an arsenal after the Turkish conquest. The second largest standing church of Constantinople, it has the form of a domed basilica with a flat, second dome covering the west bay. The lower part of the building is Justinianic, whereas most of the upper part dates from after the earthquake of 740. The Turks altered the colonnades. The apse contains a mosaic cross of the Iconoclastic period; further remnants of mosaic remain in the narthex and nonfigural painting is extant in the south aisle.

—P.A.H., A.C.
IRENE OF CHRYSOBALANTON, 10th-C. abbess; saint; feastday 28 July. According to her anonymous hagiographer, she was born in Cappadocia ca.845 and died in Constantinople ca.940. The account of her life as presented in her vita is as follows: born to a rich and influential family (related to the Gouber family of Constantinople), she was sent as a girl to the capital to participate in a BRIDE SHOW designed to find a wife for Michael III. After arriving too late, she entered the convent of Chrysobalanton; within three years she became the hegoumene, despite her youth. She is depicted as an ideal ascetic, an efficient administrator of her convent, and as a preacher who attracted crowds, esp. women of the senatorial class. On one occasion she intervened with the emperor to save the life of a kinsman who was accused of a conspiracy against the throne. She reportedly died at age 97 without showing any signs of advanced age.

The vita of Irene (BHG 952) was probably produced in the late 10th C. during the reign of Basil II; Rosenqvist (infra), who points out inconsistencies in the chronology of events, concludes that the biography should be treated as a work of fiction and terms it a “hagiographic novel.” The vita is an important source for Byz. magical practices and attitudes toward sexuality, since Irene had to deal with the frustrated passion of one of her nuns, who had abandoned her fiancé, as well as with a lovesick vinedresser. The Life depicts the triumph of image worship; churches were decorated with icons on their walls and on panels of bronze, silver, and gold. When Irene appeared to Emp. Basil I in a vision, he sent a protovestarios to her convent with an artist to paint the abbess’s portrait, so that the emperor could confirm that the woman in his vision was really the hegoumene of Chrysobalanton.

SOURCE and LIT. The Life of St. Irene Abbess of Chrysobalanton, ed. J.O. Rosenqvist (Uppsala 1986), with Eng. tr. --A.K., A.M.T.

IRON (σιδηρός), the commonest metal. M. Lombard (Les métaux dans l’ancien monde du Ve au Xle siècle [Paris–The Hague 1974] 125, 149f) notes that the eastern part of the Roman Empire had two major centers of iron working: the region of Trebizond and Sinope and the area around Bosra, Damascus, and Tyre. After the latter region was lost in the 7th C., Byz. needed constantly to import iron. Another productive area was Noricum. Iron was a strategic metal that could not be exported (J.-P. Sodini, Ktima 4 [1979] 85). Unlike precious metals, however, small amounts of ore were available in many places. When Edessa was besieged in 502/3 each household was obliged to deliver 10 pounds of iron. In the 9th C. the proasteion of Tzampouros (in the Trebizond region) sent iron annually to the nearby monastery of St. Phokas (A.I. Papadopoulos-Kerameus, VizVrem 12 [1906] 140.10–12). Stefan Uroš IV Dušan’s chrysobull of 1347 imposes a yearly payment of 600 INGOTS (mazia) of iron on local smithies or siderokausia (Lavra 3, no.128.33). As precious objects iron ingots are mentioned sometimes.
in lists of monastic properties (five siderou mazaea—Pantel., no.7.28) or in wells (four syderon komatia—Xerop., no.9A.15).

Iron could be worked with comparative simplicity. Traces of primitive iron metallurgy have been found even in rural areas of the Crimea of the 8th–9th C. (A. Jakobson, Rannesrednevekovye sel’skie poselenija Jugo-Zapadnoj Tavriki [Leningrad 1970] 164–68). It is unclear whether smiths knowingly hardened iron into steel by the addition of carbon; the tempering of iron by plunging it into water is mentioned in both classical and Byz. sources.

The most important use of iron was in the production of weapons. Iron tools, such as hammer, tongs, and anvil, were primarily used to work metal (Koukoules, Bios 2:1:218f); other tools were used for wood (borer, plane, etc.) and stone. Each household normally had wooden, bronze, and iron utensils (Lastra 1, no.59.49), and an inventory of 1142 lists various iron agricultural implements belonging to the monastery of Xylourgoú: hoes, plows, sickles, axes (Pantel., no.7.27). Iron tie rods were employed to strengthen buildings (A. H. S. Megaw, DOP 18 [1964] 296). Doors and gates were made of iron, as well as anchors, chains, candlesticks, coin dies, sealing implements, and so on. Some minor iron objects have been found in excavations, for example, at St. Polyeyktos in Constantinople and in Corinth: locks and keys, nails, dowels, clamps, etc. (Davidson, Minor Objects 137–40, 199–203).

-M.M.M., L.Ph.B.

IRRIGATION (αρδευμα). A hot climate and frequent droughts led to a constant concern in Byz. about water. A developed irrigation technique, which made use of various water-lifting devices (water screw, suction pump, compartmented wheel, bucket chain, etc.), existed in the Roman Empire, primarily in Egypt and, paradoxically, in the Western provinces (Oleson, infa 285–91); data referring to Syria, Palestine, or Greece are scanty—for instance, a water-driven wheel with compartmented rim on a mosaic of 469 from Apameia. The Price Edict of Diocletian several times mentions water mills, but not water-lifting machines. Asia Minor and Greece relied more upon collecting water in cisterns than irrigating lands by canals and water-lifting gears, even though such terms as “conduit” (amara) and “water pipe” (ache- tos) are common in Greek texts. Eusebios of Caesarea (PG 20:1345B), when speaking of ardeuma, means “the winter downpours.” The tytikon of the Kosmoteira monastery in Bera describes a complex construction for collecting water that went from the spring via a conduit to a receptacle protected from the sun and dirt. In other cases, as described in Kallimachos and Chrysorrhoos, a cistern might be filled by special water bearers. Water was used for irrigation (ardeia) of vineyards and gardens (e.g., Chin., no.54.30–31) or olive groves, as well as for water mills; a case on Crete around 1118 describes a conflict between a mill owner and farmers tilling the “irrigated cho- raphia” (MM 6.9614–22) who were deprived of water by construction of the mill.

The Byz. did not build great canal networks. Justinian dreamed of a canal project between the Melas, a tributary of the Sangarios, and the harbor of Nikomedea, but the idea was abandoned (F. G. Moore, A.J.A 54 [1950] 108–10).

-A.K., J.W.N.

ISAAC I KOMNENOS, emperor (1057–59); born ca.1007, died ca.1060 or 1061. After his elevation by fellow generals rebelling against Michael VI, Isaac was crowned on 1 Sept. 1057. He rewarded his supporters. The populace obtained the desired officials for their organizations, and Patr. Michael I Keroularios gained more authority. Isaac’s purpose was to refill the treasury and so revive the army and the empire. A histamemon (Grierson, Byz. Coins, no.919), representing him standing with unsheathed sword, gave great offense because it violated the tradition of the emperor as a man of God. Isaac regularized tax collections; he pitilessly pursued debtors to the state. Monastic landholding was restricted, and donations by previous emperors to individuals were annulled. He pruned the bureaucracy’s excrescences. Psellus criticizes his haste and harshness. Salaries of officials, esp. senators, were reduced, yet Psellus asserts that Isaac had to rely on himself and other civil bureaucrats. Keroularios’ challenge forced Isaac to remove him (8 Nov.
ISAAC II ANGELOS, emperor (1185–95, 1203–04); born ca.1156, died Constantinople 28/9 Jan. 1204. He had a bookish education (Nik.Chon. 365,72–74) but no deep intellectual interests. After he resisted the order of arrest issued by Andronikos I, he was acclaimed emperor by the people of Constantinople on 12 Sept. 1185. Despite his noble birth, Isaac relied on bureaucrats (notably Theodore Kastamontes, Constantine Mesopotamites, and Demetrios Tornikios) to support him against aristocratic rebels such as Alexios Branas. He sold governorships and other offices but also chose some officials on merit. His attempts to make his favorite monk, Dositheos, patriarch of Constantinople proved unsuccessful. Niketas Choniates (Nik.Chon. 442,33–443,82) expatiates on Isaac’s “mad passion for erecting huge buildings.” The emperor added baths and apartments to the Great Palace and Bakhchernai and created artificial islands in the Sea of Marmara, but he also razed the Genikon and the monastery of Mangana and looted the Nea Ekklesia.

Isaac preferred a life of ease at court, yet willingly campaigned in person when necessary. After defeating the invasion of William II of Sicily, he arranged to take Margaret, daughter of Béla III, as his second wife (his first is unknown). The tax levied for the wedding raised discontent among the Vlachs and Bulgarians, which Peter of Bulgaria and Asen I exploited. From ca.1186, Isaac was involved in continual warfare with them; he was repeatedly defeated. The section of the Third Crusade led by Frederick I Barbarossa did much damage as it passed through Byz.; only by timely concession did Isaac avoid an attack on Constantinople. He succeeded in making peace with Venice, Genoa, and Pisa. Around 8 Apr. 1195, near Kypsella, noble conspirators led by Alexios III overthrew and blinded Isaac. After Alexios fled in 1203, the courtiers brought Isaac to rule jointly with his son Alexios IV. He soon became senile or demented, and, conveniently for Alexios V, died of natural causes.

ISAAC KOMNENOS, basileus of Cyprus (1184–91); born ca.1155, died Iconion 1195/6. Grandson of Isaac, brother of Manuel I, he was sent (ca.1174/5) as governor to Cilicia, where the Armenians captured and imprisoned him. About 1182, he was passed to Bohemund III of Antioch. Andronikos I, influenced by his mistress ‘Theadora, Isaac’s aunt, ransomed him with the Templars’ help. About 1183 or 1184, Isaac falsified imperial letters appointing him governor and went to Cyprus. Once accepted, he proclaimed himself basileus; his coinage shows him wearing imperial garb (Hendy, Coinage 136–42). The uniformly hostile sources charge him with tyrannical acts rivaling those of Andronikos I: murders, maimings, abuse of wives and virgins, confiscations of property, harsh taxation. About 1186 or 1187, Isaac II Angelos dispatched a fleet to regain Cyprus, but Isaac Komnenos defeated the troops on land while his ally, the admiral Margaritone of Sicily, overcame the Byz. fleet. Cyprus’s conquest by Richard I Lionheart ended Isaac’s tyranny. Released ca.1194 after imprisonment in Acre and Margat, Isaac went to Iconion; from that base he sought to arouse Turkish and Byz. opposition to Alexios III. He was allegedly killed by poisoning.

ISAAC OF ANTIOCH, 5th-C. Syriac writer. His writings, of Monophysite cast, are often confused with those of Isaac of Amida, who was Orthodox and lived in the first half of the 5th C. (died before 461). More than 200 poetical works are attributed to the two Isaacs, but it is still unclear exactly which works are to be attributed to which Isaac. Isaac of Amida wrote works on the capture of Rome in 410, on the city of Constantinople (ca.441), and on the earthquake in Antioch in 459. Isaac of Antioch is particularly noted for a lengthy poem on the parrot which chanted the Trisagion with the addition “Who was crucified for us”; he also wrote exhortations to monks on repentance and the perfect life.

ISAAC OF NINEVEH, Syrian mystical theologian; fl. ca.680. Born in the region of Qatar on the Persian Gulf, Isaac became a Nestorian monk and eventually bishop of Nineveh (i.e., Mosul); five months later, however, he abdicated and went to live in the mountains of Ḥuzistan in southwestern Iran. He reportedly lost his sight during his studies. Isaac composed (in Syriac) treatises, dialogues, and letters on ascetical and mystical topics. Probably in the 9th C. some of his works were translated into Greek by the monks Patrikios and Abramos, of the Lavra of St. Sabas in Palestine. The translators tried to make Isaac more acceptable to Orthodox readers by eliminating some of his references to suspect authors, such as Evagrios Pontikos, and replacing them with references to more official church fathers. Isaac presented the way of salvation as consisting of three stages: repentance, purification, and perfection. The fear of Hell serves as a strong stimulus in the search for righteousness. Isaac rarely thinks in terms of deification but speaks of seeing God as if in a mirror, an ancient image in Syriac religious writing. Prayer plays the major part in Isaac’s ideal behavior. His works were used by some Byz. writers (e.g., Peter Damaskenos, Sy-

ISAIAS (Ἡσαῖας), one of the four major (i.e., longer) prophets. Much read and interpreted by the Byz., there are surviving commentaries on the Book of Isaiah attributed to, among others, Eusebios of Caesarea, Basil the Great, John Chrysostom, Cyril of Alexandria, and Theodoret of Cyrhus. The major significance of Isaiah was seen in his prophecy, interpreted as foreseeing Christ’s advent. “Isaiah is the most divine of all prophets,” says Theodoret (PG 81:216A), “... since he clearly predicted everything—the benediction coming from Abraham and David, the birth of the Savior by the Virgin, various miracles and healing, the envy and rage of the Jews, the passion and the death, the resurrection from the dead, the ascent to heaven, the choice of the apostles, and the salvation of all nations.” In contrast, Chrysostom mentions “Isaiah’s prophecy about Christ” only in passing, but strongly emphasizes “the ready tongue and sublime character” of the prophet and his great concern for ordinary people with whom he sympathized and whose sufferings he shared (PG 56:11.12–25). The Synaxarion of Constantinople (9 May) included Isaiah as a martyr whose relics were allegedly brought to Constantinople and placed in the Church of St. Lawrence near Blachernai; here Isaiah worked miracles, esp., according to legend, for ordinary people—a laborer in a vineyard, a fisherman, a silversmith, etc. (H. Delehaye, AB 42 [1924] 257–65).

Representation in Art. Images of Isaiah among the Old Testament prophets are frequent in monumental art, where he is usually depicted as an old man, with long gray hair and beard. His principal appearances in a narrative context are
connected with the biblical Odes. In the Paris Psalter, for example, these are illustrated individually: the first (Is 26:9–20) literally, with Isaiah flanked by personifications of Night and Dawn; the second (Is 38:10–20) in a straightforward narrative supplemented by a personification of Prayer. Isaiah’s martyrdom, based on an apocalyptic legend, is represented in the Paris Gregory (Omont, Miniatures, pl.49) and his prophetic vision (Is 6), in which a seraph places a hot coal upon his mouth, in MSS of Kosmas Indikopleustes.

—J.I., A.K., J.H.L.

ISAURA (Ἰσαύρα, mod. Zengibar Kalesi near Bozkr), ancient capital of Isauria, flourished until the 4th C. when it lost its status as city and bishopric because it was a center of Isauran unrest. Zeno restored both and assigned it a new name, Leontopolis. A mint was established at Isauro in 617/18 during the campaigns of Herakleios against the Persians. Thereafter Isauro disappears from history, but the bishopric still existed in the 11th C. From the site, but contains Hellenistic fortifications that show Byz. repairs; four churches, including a large basilica with a tower and an octagonal church; and numerous inscriptions. Isauro is sometimes confused with Isauropolis on the north side of the Taurus.

—C.F.

ISAURIA (Ἰσαυρία), mountainous district of southern Asia Minor, inhabited by tribes who lived in small towns, long resisted central control, and frequently descended to ravage the adjacent plains. Although the Constantinopolitan government considered these tribes barbarian and brigands, they formed the core of the imperial army in the 5th C. Isaurians were famed as builders who sent their teams as far away as Constantinople and Syria, and probably as gardeners, their most popular saint being Konon the Gardener. Diocletian joined CILicia Tracheia to the Isaureian homeland to form the province of Isauria, whose capital was Seleukeia; the western part was detached in 370 and assigned to Lykaonia. Because of constant danger from the tribesmen, Isauria was frequently governed by a military commander (comes); this situation became permanent after 535. The region was severely afflicted by revolts and military conflicts in the late 4th C., and in 493–66, after the Isaurean victory over Germanic mercenaries, the Isaurians spread throughout Asia Minor. Calm prevailed when an Isaurean chief, Zeno, was emperor (474–81) and Isauro saw much construction. Troubles resumed in the late 5th C., continuing until Anastasios I finally crushed the tribes in 497. These wars were the impetus for widespread fortification. The coast of Isauro was always important for trade, which was still active in the late 7th C., the date of seals of Kommerkariaoi of Isauro (one of them—Zacos, Seals 1, no.158—combined this office with the military position of stratelates). Thereafter, the coast suffered greatly from Arab raids. Isauro was absorbed in Anatolikon, then became a separate kleisoura called Seleukeia under Theophilos, as part of his efforts to strengthen the frontier. Romanos I promoted it to a theme ca.930. Divided into coastal and interior regions, it had a garrison of 5,000. The ecclesiastical province of Isauro long survived, though called Pamphylia after the early 10th C.; the cult of the local saints Thekla and Konon attracted pilgrims. According to legend, Leo III was an Isaureian, Konon by name.

ISAURIAN DYNASTY, family that ruled from 717 to 802 and included Leo III, Constantine V, Leo IV, Constantine VI, and Irene; it was so called because a probable interpolation in Theophanes the Confessor (Theoph. 391.6) says that its founder, Leo III, came from Isauroi, although he was actually born in Syrian Germanikeia (K. Schenck, BZ 5 [1896] 296–98). The 15th-C. notion that the Isaurean dynasty was able to revive the empire as a result of its military and administrative reforms was questioned by Ostrogorsky (infra). The dynasty is most closely associated with imperial support for Iconoclasm, which Leo III introduced, Constantine V enforced, and Irene suspended. Despite the siege of Constantinople by Maslama in 717 and the campaigns of Hārūn
AL-RASHID, the Isaurian dynasty resisted the Arabs and stabilized the border with the caliphate in eastern Asia Minor. In Italy, however, RAVENNA was lost to the Lombards, and the Franks successfully challenged waning Byz. authority.

P.A.H.

ISIDORE (Ἰσίδωρος), jurist, ANTECESSOR, one of the eight addressees of the Constitutio Omnem of Justinian I from the year 533. He composed a Greek paraphrase of the CODEX JUSTINIANUS, several fragments of which (esp. those of book 8, titles 53–56) have been preserved among the scholia to the BASSILICA. Also transmitted there under his name are fragments of a paraphrase of the DIGEST (concerning book 22, titles 3–5).

A.S.

ISIDORE I BOUCHEIRAS (Βούχειρα or Βούχείρας; cf. Tinnefeld, infra 160, n.1), Palamite patriarch of Constantinople (17 May 1347–Feb./Mar. 1350); born Thessalonike between ca.1300 and 1310, died Constantinople. Eldest of ten children, Isidore was educated in Thessalonike and then went to Athos to study with Gregory Sinaites. Around 1325 Turkish attacks forced his return to Thessalonike, where for ten years he led a hesychastic circle. Circa 1335 he was tonsured by Gregory Palamas on Athos; he accompanied Palamas to the local council of Constantinople of 1341 (see under CONSTANTINOPLE, COUNCILS OF). He was elected metropolitan of Monemvasia the same year but was never consecrated. In 1344 he was deposed and excommunicated by JOHN XIV KALEKAS because of his Palamite views.

With the victory of JOHN VI KANTAKOUZENOS in 1347, Isidore was restored to favor; he was elected patriarch, performed the second coronation of John VI and the marriage of JOHN V PALAIOLAGOS. He also appointed Palamas as metropolitan of Thessalonike. His brief patriarchate was uneventful; he was taken ill in Jan. 1350, composed a final testament, and died soon thereafter. Isidore was noted as a hymnographer, but none of his poetry has survived.

A.M.T.

ISIDORE OF KIEV, metropolitan of Kiev and all Russia (1436–39); born Monemvasia ca.1385, died Rome 23 (J. Gill, LThK 5 [1660] 788) or 27 April 1463 (Gill, infra 76). Educated in Constantinople, Isidore became a monk in the Peloponnese. In 1417 he returned to the capital, where he was subsequently made hegoumenos of St. De-
metrios monastery. He served as ambassador for John VIII Palaiologos to the Council of Basel in 1434. After his elevation to the metropolitan see of Kiev, Isidore attended the Council of Ferrara-Florence and signed the decree of union. Shortly thereafter he was appointed cardinal and sent to Moscow as a papal legate. On his return to Moscow in 1440 (Krajcar, infra 387), however, Grand Duke Basil II (1425–62) imprisoned him for his Unionist sympathies. He managed to escape to the West, where he devoted his remaining years to various papal missions on behalf of the Union of the Churches. One such embassy brought him to Constantinople, where he proclaimed the union (12 Dec. 1452). When the city fell several months later, he was imprisoned but again escaped. In 1459 Pope Pius II (1458–64) appointed him Latin patriarch of Constantinople. His literary output, in contrast with his rather active ecclesiastical and diplomatic career, was small. Some of his correspondence and speeches (at Basel and Pavia) have been published.

ISIDORE OF MILETUS, architect associated with Anthemios of Tralles in the design and construction of Hagia Sophia, Constantinople; died before 558. He issued a revised edition of the works of Archimedes, wrote a commentary on Heron of Alexandria’s treatise On Vaulting of the late 1st C., and invented a compass with which to construct parabolas. One of his students, Eutokios of Askalon, commented on Archimedes, while another added book 15 to the Elements of Euclid. Isidore consulted with Anthemios and Justinian I on the problem of flooding at Dara.

ISIDORE OF PELOUSION, ascetic and writer; saint; born Alexandria between 360 and 370, died after 433; feastday 4 Feb. Isidore lived as presbyter and monk in a monastery near Pelousion on the Nile. Nikephoros Kallistos Xanthopoulos (PG 146:1249–53) calls him a pupil of John Chrysostom, which perhaps should not be taken literally. The Souda dubs him philosopher and rhetorician, while his Orthodoxy, erudition, and style are commended by Severos of Antioch and Photios (ep. 207.18–19, ed. Laourdas-Westerink, 2:107). Much of this praise is merited by his 2,000 or so surviving letters, originally collected at the Akoinetoi monastery in Constantinople according to U. Riedinger (ZNTW 51 [1960] 157), a pseudonymous work by some Akoinetoi monks. The prime interest of the letters is theological, revealing Isidore as a careful, rather than hysterical, opponent of heresy, rebutting Arianism and Manichaeanism in elegant Greek, while addressing Cyril of Alexandria on the hypostatic union and also warning against contemporary tendencies toward Monophysitism. Isidore is equally level-headed on biblical exegesis (resisting extreme allegorism) and on ascetic and moral principles. A lost work, Against the Hellenes, may have shown him in a less temperate mood. Some of his letters were translated into Church Slavonic (I. Dujcev, BS 23 [1962] 327f).

ISIDORE OF SEVILLE, bishop of Seville (from ca.600); prolific author and churchman in Visigothic Spain; born in Byz. Spain? ca.570, died 636. His attitudes toward the Visigoths and Byz. appear to have been complex. In Constantinople, Leander, his brother and predecessor at Seville, had negotiated an alliance between Byz. and the Visigothic usurper Hermenegild (579–84) and become friends with the papal aposcriarius Gregory (the future Gregory I the Great) as well as a correspondent of Patr. John IV Nestéutes. How far Isidore’s Etymologies, or Origines (ed. W.M. Lindsay [Oxford 1911])—the basic encyclopedia of the medieval West—reflects contemporary
reality is controversial, but it certainly records the Visigothic destruction of Byz. CARTAGENA (15.1.67; cf. H.J. Diesner, Philologus 119 [1975] 92–97) and mentions the Byz. ship type durcon (dorkon, 19.1.10; cf. D. Claude, Der Handel im westlichen Mittelmeer während des Frühmittelalters [Göttingen 1985] 47). Both recensions of the aggressively pre-Gothic The History of Goths, Vandals, and Suevi narrate the Goths’ confrontations with the Byz.—sometimes called simply milites—from the 4th to 7th C., particularly the contest for southern Spain. Events in the History are dated by the provincial era and the regnal year of Byz. emperors. Isidore cites the burden of Byz. taxation as a cause of loyalty to the barbarians (ch.15). His chronicle draws largely on VICTOR TONNENSIUS but implicitly develops an anti-Byz. theme (M. Reynellet, MEFR 82 [1970] 363–400); its final section notes Byz. events from Justin II to Herakleios, including Avar attacks, strife between factions, and the loss of “Greece” to the Slavs (P. Charanis, BZ 64 [1971] 22–25). The literary biographies of Famous Men treat Latin authors of Byz. Spain, Justinian I, JOHN OF BICLAR, Victor Tonnensius, and Patr. John IV of Constantinople.

ISIDORE OF THESSALONIKE. See GLABAS, ISIDORE.

ISIDORE THE YOUNGER, architect; fl. mid-6th C. He was the nephew of ISIDORE OF MILETUS and chief architect (mechanopoioi) of the commission responsible for rebuilding the dome of Hagia Sophia, Constantinople, after its first collapse in 557 (Prokopios, Buildings 2.8.25; Agath. 5.9). Of his work there remain in situ 12 ribs in the north and south sectors of the present dome (the west sector exhibits the restoration of Trdat, 986–94; the east sector, the restoration of 1347–54). The younger Isidore’s dome is about 6 m higher than the original; his work shows greater care and precision than was exercised in later restorations. Isidore the Younger collaborated with John of Constantinople in building new fortifications at ZENOBIA on the Euphrates, and he may be the Isidore named in an inscription of 550 from Chalkis ad Belum (IGLSyr 2 [1939] nos. 348–49).

ISLAM, POLEMIC AGAINST. Attacks on Islam were written by both Christians living within the caliphate and those in Byz. territory. The polemic produced in Arab-controlled lands was predominantly apologetic and decreased after the 11th C. Byz. polemic, on the other hand, continued until the end of the empire, and its goal was refutation rather than apology. The amazing success of the Muslims in the 15th C., however, diverted the focus of the discussion; the defeat of the Christians was certainly to be explained not by the superiority of Islam but by the sins of the Greeks.

Vestiges of early polemic are attributed to the 8th C., but their MS tradition is questionable. The letter of Leo III to the caliph ‘Umar II (717–20) survives only in translation (the Armenian version is preserved in Ėlōwond), and among works on the subject by JOHN OF DAMASCUS only a chapter in his book On Heresies seems to be authentic, albeit interpolated. THEODORE ABU-QURRA tried to defend Christianity in a pragmatic form accessible to his Muslim audience. NIKETAS BYZANTIOS launched an attack on Islam; he was followed by the monk Bartholomew of Edessa. The most important polemicists of the later period were John VI Kantakouzenos, who composed a treatise against Islam, and Manuel II, who wrote a Dialogue with a Persian.

Earlier Byz. polemic relied primarily on hearsay information about Islam, and John of Damascus was content to ridicule outlandish legends. Niketas Byzantios, on the other hand, studied the Qur’ān, probably in a Greek translation. The discussion concentrated on theological, moral, and political problems. The central theological problem was the consistent monotheism of Islam that could not be reconciled with the Christian concept of the Trinity and the incarnation of the Logos. The Christian apologists responded that such an approach deprives God of his reason (Logos) and spirit, and implicitly severs the link between mankind and the Godhead; Niketas called the God of Islam holosphairos, “all-spherical,” or holosphyros, “solid,” emphasizing matter as his essence. In the
field of morality, Christian apologists stressed the superiority of the Christian monogamous family over Islamic polygamy and sodomy; they also criticized the hedonistic tendencies of Islam as reflected in its image of Paradise. Another Christian argument was the defense of the thesis of free will against the belief in predestination that contributed so much to the idea of the Islamic holy war.

Politically, each side tried to demonstrate the lack of unity in its adversary: the Muslims criticized the Christians for being split into 72 races, while the letter of Leo III asserts that Islam is torn apart by schisms more serious than those that used to rage in the Christian world. While defending the truth of their religion, Christian apologists affirmed that MUHAMMAD was a false prophet and a licentious man and that the Qur’ân was a false book. The Byz. church required Muslim converts to anathematize the God of Muhammad, the prophet himself, the caliphs, and some tenets of Muslim dogma. Manuel I, who settled many Turks in Byz. territory, encountered strong resistance from the clergy when he tried to have the anathema of the “solid” (holosphyros) God of Muhammad deleted from the catechetical books.

With difficulty he prevailed and an anathema against Muhammad and all his teachings was substituted (Nik.Chon. 219.51–219.70).

—A.K.

ISLAMIC INFLUENCE ON BYZANTINE ART. Islam as a religion and political entity had an impact on Byz. as early as the mid-7th C., but it hardly affected the arts during the Umayyad Caliphate, which adopted Byz. forms rather than transmitting its own. Although scholarly opinion is divided on these issues, early Islam may also have had some effect on the changes in coinage introduced by Justinian II and on Iconoclasm. No significant impact of a new Islamic art was in fact possible before the appearance of techniques, styles, and subjects that were consciously and formally new and different from Byz. ones or before the growth of centers of taste, production, and consumption that could compete with Constantinople and the other major cities of the empire.

The usually accepted time for the appearance of a coherent new Islamic art is the end of the 8th C. when BAGHDAD, the recently founded ‘Abbâsid capital, began to outstrip Constantinople in wealth and resources. Later, CORDOBA, Cairo (al-Fustât), and many other North African, Syrian, Mesopotamian, and Iranian cities developed as centers of artistic production competing with both Baghdad and Byz. The preponderant impact, however, would always be from the East, as the Islamic world inherited from Sasanian Iran the partly real and partly mythic function of representing to the Mediterranean world the exotic East and because more consistent—friendly or hostile—Byz. relationships existed, with Eastern rather than Western Muslim societies. The most important post-‘Abbâsid Islamic dynasties and periods for which significant official or commercial contacts with Byz. can be assumed or shown to have had artistic components are the Fâtimid, the Seljuks, and, from the 13th C. onward, the Turkish beylûks of Anatolia, among whom the Otomans became the most prominent.

A chronology or typology of the impact of Islamic art on Byz. is difficult to establish, but some specific examples outline its probable pattern.

One of the earliest examples is the palace of Emp. Theophilos in Constantinople with its wild animals, automata in the shape of birds or lions, and garden of artificial trees made of precious metals. According to textual descriptions, this palace was similar to ‘Abbâsid palaces in Baghdad. Ruins of a palace on the Asian side of the Bosporos (possibly Bryas) with a domed audience hall can also be related to a sequence of partly earlier Islamic palaces (S. Eyice, CahArch 10 [1959] 245–50). Possibly, however, these Byz. or Muslim examples and the stories around them simply derive from the same antique sources.

More complete series of objects with Islamic motifs appear during the Macedonian and Komnenian periods, and in fact down to the Latin conquest of 1204. Textiles, esp. silks, use roulades with animals or hunting scenes typical of Islamic and earlier Iranian designs, just as clothing, esp. official or expensive costume, tends to adopt “oriental” cuts and motifs. Ceramic vessels and tiles used for the decoration of buildings
pick up several techniques (sgraffito, splash, luster imitation) developed in the Muslim world and at times even some of their motifs. Enamels used on the crown of Constantine IX and on the Pala d’Oro show dancers and hunters typical of Islamic objects, even though the technique itself is not Islamic. A rather remarkable series of silver objects with courtly and other scenes found in Central Russia has been interpreted as Byz. but contains many Islamic features (Darkević, Svetsko ieskusstvo 232).

The imitation of Arabic writing, esp. its angular style known as Kufic, becomes a common decorative motif in Greek churches; this type of ornament has been called “pseudo-Kufic.” By 1200, according to Nicholas Mesarites, a palace known as the Mouchroutas (probably some misunderstanding of the Ar. mahrātah, “cone”) or “Persian house” stood to the west of the Chrysotriklinos; it was covered by a stalactite dome with paintings. A curious glass cup looted by the Venetians in 1204, now in the Treasury of S. Marco in Venice, contains, next to beautifully copied antique motifs, the imitation of an Arabic inscription so well done that it seems legible (Le trésor de Saint-Marc de Venise [Paris 1984] 180–83). The underwater excavations at Serçe Liman off the coast of southern Turkey (G. Bass, JGS 26 [1984] 64–69) uncovered a Byz. ship, probably of the 11th C., carrying thousands of objects in glass and other techniques originating from the Byz. Empire as well as Iran, Syria, Egypt, and perhaps even China. As early as the 11th C., a donor in a Cappadocian church is represented wearing a turban (Thierry, Nouvelles Églises, pl.94).

Such examples could easily be multiplied and from the 9th C. onward traces of Islamic influences are found in Byz. Nevertheless, in comparison with the art of other Christian groups in western Asia (Armenians, Georgians, Syrians, Copts), who were under Islamic political domination, Byz. art was less consistently affected. Islamic influences hardly ever occur in religious art and never affect style and expression, the formal means by which Byz. art differentiates itself from other medieval traditions. In other words, Islamic forms played almost no role in the Byz. visual expression of Christianity.

Islamic themes are most apparent in the secular art of emperors and in many aspects of material culture. There are several explanations for this phenomenon. One is that, in the 8th–12th C., Islamic artisans and a Muslim patronage developed, originated, and sponsored a large number of technical inventions in ceramic, textiles, glassmaking, and metalwork; these were, for the most part, easily transmissible and improved the quality of objects used in daily life. The ship of Serge Liman was one example of a widespread trade in practical objects and, wherever these objects were made, they share the very Islamic objective of enhancing the potential of everyday activities. Both Byz. and Islam used the same Late Antique sources, and resemblances are therefore sometimes misleading. What Muslim princes introduced into the language of imperial art is an emphasis on representations of pleasure (dancing, singing, music, hunting) as an expression of power and wealth. Thus, the Islamic impact was first thematic, then functional or technical, and more rarely formal.

In a phenomenon somewhat similar to the impact of classical art, Islamic elements appear as significant components of Byz. art in the 9th–12th C., when the Byz. felt strong enough to incorporate such exotic themes as seemed interesting. Islamic influence is less immediately apparent in later times. When Byz. was weaker, its material culture more consistently shared with neighboring Turkish or Turkified establishments; the maintenance of an unadulterated Christian art was an unwritten necessity for self-identity and survival.

–O.C.

ISOCHRISTOS. See ORIGEN.

ISRAEL (Ἰσραήλ), the chosen people of the Bible. The etymology of the name was explained by the church fathers as either “seeing” (“the mind seeing God” in Makarios the Great, PG 34:880B) or “conquering” (Justin Martyr, PG 6:765D). The church fathers distinguished the old Israel, whose rejection of Christ caused their subsequent sufferings, from the new chosen people, the Christians; Israel became a designation of the church and also of the Byzantines. In Byz. rhetoric of the
12th C. the image of Israel often appears in a context of expectations: after present miseries “the new Israel” will be elevated by the “wise architect,” just as the old Israel was liberated by Moses (e.g., Nikephoros Basileakes, ed. Garzya 61.34–62.3). Niketas Choniates, while describing the defeat at Myriokephalon (Nik.Chon. 188.19–26), recalls “a seed left for Israel,” so that God’s inheritance should not utterly disappear.

In Old Testament illustration the chosen people were often seen as allusions to Byz. ideology and current events. Triumphs and epiphanies experienced by leaders such as David, Moses, and Joshua frequently include assemblages of men, women, and children; elaborations upon their respective biblical accounts, these suggest the fortunes of the Byz. themselves. The Crossing of the Red Sea, depicted in MSS such as the Bible of Leo Sakellarios, was interpreted as the living Christian’s entry into the Promised Land through the grace of baptism. The ode (Ex 15:1) sung by the Israelites on this occasion is prescribed in De cer. (610.3–5) as appropriate to the celebration of triumphs over the Arabs and received special attention in aristocratic Psalter illustration. The theme is translated from a particular historical setting to a transcendentral plane in the liturgy. Most developed among such biblical metaphors is the Joshua Roll, which has been interpreted as an epic of Holy Land conquest by Nikephoros II Phokas or John I Tzimiskes (M. Schapiro, GBA 35 [1949] 161–76), even though neither of these emperors ever reached Palestine. —J.L., A.K., A.C.

**I斯塔克里, Al-**, more fully İbrahim ibn Muḥammad al-I斯塔克rí, geographer and cartographer of Persian origin who wrote in Arabic; born I斯塔克 lí near ancient Persepolis) late 9th C., died Baghdad after 952. His Routes and Kingdoms (written 933–50) is the earliest surviving work of the systematic school of Islamic geography (see Arab Geographers). It is based partly on the now lost Maps of the Regions by al-Balkhî (died after 926), on written and oral reports as well as al-I斯塔克rí’s own observations as a traveler throughout the Islamic East. Beginning with a map of the world, it then concentrates on Islamic territory, dividing it into 20 regions with maps, and includes a map and brief description of the Mediterranean. It is unclear whether he traveled in the Mediterranean regions. His first maps of Egypt and North Africa were criticized and updated by his junior continuator, ibn Hawqal. Several later cartographers redrew al-I斯塔克rí’s maps. His work was extensively used by later Arab and, more particularly, by Persian and Turkish geographers.

His information on Byz., the frontier regions (prior to the Byz. capture of Melitene, 934), and the Mediterranean is less detailed than that of ibn Hawqal, the latter often entirely superseding it in this respect. It is, however, still valuable for Byz.’s northern neighbors, particularly the Khazars, Rus’, Slavs, and Bulgarians.

**İstanbul.** See Constantinople.

**Isthmos.** See Corinth; Hexamilion.

**Istria** (Istria), peninsula extending into the northeastern Adriatic Sea, part of the Roman provincia Venetiarum et Histriae, which bordered on Dalmatia to the south. The Tabula Peutingeriana presents Istria as an area of numerous cities. The region lay south of the mainstream of barbarian raids and retained its Roman character until the end of the 6th C. Ostrogothic domination (493–539) did not leave substantial traces in the material culture, and excavations on the peninsula have uncovered both Byz. coins of the 6th C. and traditional Roman houses (G. Bordenache in Rendiconti. Accademia d’Archeologia, Lettere e Belle Arti, Napoli 34 [1959] 177–96). The restoration of Byz. rule in Istria in the mid-6th C. was of short duration: the Lombards invaded it in 568 and gradually reduced Byz. territory to the littoral. In 680 the Lombards took Friuli and established the border between themselves and the empire; the remaining Byz. section formed a part of the exarchate of Ravenna until the fall of the latter to the Lombards in 751. Thereafter Istria constituted an independent administrative unit under the authority of a local tribunus but was not a theme (FeVluga, Byzantium 68–70).

Archaeological excavation has revealed the precarious situation in Istria during the Lombard, Avar, and Slav invasions: on the one hand, tombs
of soldiers, for example, a cavalryman from Brežac of ca.600; on the other hand, strongholds with rural population, some of them episcopal centers (Pola, Parentium, Tergeste, etc.). In Parentium (Porfeci), Bp. Eufrasius completed a complex of ecclesiastical buildings in the 6th C. The slavization of Istria began at the end of the century; there were two streams of Slavs—Slovenians (in the north) and Croatians. The Roman population maintained its position primarily in the region of Pola; while cemeteries of the 7th–8th C. are predominantly pagan, several churches were built during this period (e.g., St. Sophia in Dvograd dated by a lost inscription to 770).

In 788 Charlemagne took Istria and, in the treaty of Aachen (812), made Byz. formally renounce this territory. Eventually Istria became a base for Venetian penetration of the Balkans.

- I.Dj.

**ISTROS.** See Danube.

**ISTVÁN II.** (Stephen), king of Hungary (1116–31); born ca.1100/1, died 1 Mar. 1131. Son of Kálmán (Coloman, r.1095–1116), István was a rival of his uncle Álmos, who (with his infant son Béla) had been blinded by Coloman. At the start of István’s reign, Álmos fled to Constantinople, where Alexios I and John II supported him. Around 1127, because of a trade dispute or because John refused to yield Álmos, the Hungarian king raided Byz. territory, destroying Belgrade, and plundering Niš (Naissus) and Servida. Around 1128 John responded with an expedition that took Chramon (Kama) and the land between the Sava and the Danube and defeated the Hungarians north of the Danube. Once he had withdrawn, the Hungarians retook Chramon and destroyed Braničevo. John returned (ca.1129) and rebuilt Braničevo. Although István’s plans were betrayed, John was forced to withdraw. Around 1129 or 1130 peace was concluded between István and John.

**ITALIC PAPYRUS,** incorrect representation in writing of the high front vowel i, and in a wider sense incorrect representation of vowels, in Medieval Greek. Greek orthography became fixed in the classical period and was not modified to take account of the radical phonological changes, particularly in the vowel system, which took place between Hellenistic and Byz. times. Papyrus documents show frequent confusion of ei and i by the 2nd C. B.C. and of η and i a little later. Confusion of ω and υ appears from the 1st C. A.D. Confusion of both of these with i is infrequent before the 9th C. The outcome is that from the 9th C. ι, η, ι, ι, ο, ι, and ι represented the same sound and were frequently substituted for one another in writing. In the same way ο and ο, αυ and ι were confused. Manuals of orthography laid down rules for correct spelling of words containing these phonemes. The ordinary man, however, cared less about accuracy than the schoolmasters, and incorrect substitution was common in documents, MSS, and even in inscriptions and on the seals of high officials throughout the Middle Ages and later. The reason is that most copyists carried their text from exemplar to copy in the form of an auditory image, which they then wrongly translated into visual symbols in the act of writing. Although these errors rarely gave rise to misunderstanding, occasionally they caused serious corruption, often worsened by the attempts of subsequent copyists to make sense of the text they found in their exemplars. Thus συν οικισμον becomes συνιστησων, τι ου των becomes τοιοισων, and δαιτα becomes δε τα.

**ITALOS, JOHN.** See John Italos.

**ITALY.** (Italia). In the 4th–5th C. the dioecesis Italica consisted of two vicariates: the regio annonaria (with its capital at Milan), encompassing the provinces of Venetia-Istria, Emilia-Liguria, Alpes Cottiae, and Raetia, and the regiones urbicariae (capital at Rome), composed of Tuscany-Umbria, Picenum-Flaminia, Campania, Samnium, Calabria-Apulia, Lucania-Bruttium, Sicily,
Sardinia, and Corsica. The traditional assumption that Italy went through an economic crisis in the 4th–5th C. has been questioned; ancient municipia survived in Italy at least through the 6th C., and agricultural production remained stable in the Annonarian vicariate in northern Italy (L. Ruggini, *Economia e società nell’Italia annonaria* [Milan 1961]); K. Hannestad (*CEB*, vol. 2 [Belgrade 1964] 155–58) assumes that after the crisis of the 4th C. Italian agriculture flourished under Ostrogothic rule.

In the 4th and 5th C. Rome (and later Milan) served as the residence of the Western Roman emperors. The Western emperor was at first the colleague and often the younger brother of the (senior) Eastern augustus (Maximian Herculeus under Diocletian, Constans I under Constantius II, Valentinian I and Gratian under Valens, Honorius under Arkadios) but subsequently became an independently elected ruler. The authority of the Western Roman emperors in Italy ended in 476 with the overthrow of Romulus Augustulus by the Herulian Odoacer. Soon thereafter, in 488, the Ostrogoths invaded Italy;
by 493 they took Ravena and established their kingdom. Under Theodoric the Great the Ostrogoths enjoyed de facto independence of Constantinople but still acknowledged its suzerainty. The economic and social changes of the Gothic period (493–555) are as yet inadequately understood. Archaeological evidence in conjunction with the works of Cassiodorus, however, indicates a general separation of Italy from the unified Mediterranean economy and the emergence of regional economies throughout the peninsula. Justinian I expended great effort to restore Byz. rule over Italy; his lengthy war against the Ostrogoths caused much hardship for the local population. After the Byz. reconquest, Justinian’s measures, esp. the Sanction Pragmatica, were aimed at restoring the prewar situation and latifundia of Roman landowners, which had been partially seized and divided by the Goths and their Italian allies. Byz. rule in Italy was soon challenged; in 568 the Lombards invaded Italy and quickly occupied its northern part. The Byz. retained Ravena and Venice in the north and Apulia, Calabria, Lucania, and Campania in the south. Sicily was able to repel the Lombard attacks and also stayed in Byz. hands. The remaining Byz. possessions formed an administrative unit—the EXARCHATE of Ravena. Gradually, a third factor emerged on the scene—the Papacy, which expanded its jurisdiction in Sicily and elsewhere.

The political makeup of Italy changed again during the 8th C. Byz. lost Ravena to the Lombards in 751, but strengthened its position in southern Italy and esp. Sicily, transferring their ecclesiastical jurisdiction to Constantinople and confiscating the papal estates; the territory was substantially hellenized and firmly incorporated into the Byz. administrative system based on THEMES. The Lombard kingdom became decentralized, resulting in the establishment of several independent duchies (Benevento, Salerno, and later Capua); in the mid-8th C. its northern part was conquered by the Franks, who became a new factor in the struggle for hegemony in Italy. Relying on Frankish support, the papacy rejected Byz. suzerainty and gradually formed an independent state (by 800).

Arab raids, which began (in Sicily) as early as the mid-7th C., increased in the 8th and 9th C. and forced the Byz., popes, Franks, Lombard rulers, and semi-independent cities (NAPLES, AMALFI, GAETA, Venice) into an anti-Muslim alliance (although in some cases Italian cities and principalities preferred the support—or peace terms—granted by the Arabs). The alliance was not effective, however, and by the beginning of the 10th C. Sicily was essentially lost to the Arabs. In the 10th-C. political struggles, two major powers predominated in Italy: Byz., which retained firm control in southern Italy, and the Ottonians, who inherited Frankish claims and interests in Italy. Before 969 the Byz. KATEPANATE of Italy was created, later (ca. 1040) replaced by the doukaton of Italy. The administrative term Italia, which was used in Greek sources synonymously with Longobardia, did not include Calabria and Sicily; thus Argyros, son of Melo, was titled “doux of Italy, Calabria, Sicily, and Paphlagonia” (Falkenhagen, Dominazione 48–63). At the same time the term could be applied to the whole peninsula (without Sicily) and to the Frankish kingdom of Italy.

Abundant Greek and Latin private documents reveal much about the southern Italian villages of the 9th–11th C. They did not employ the open field system; the peasantry paid rent predominantly in kind; free and semifree peasants were numerous; and villages often concluded contracts with the lords that fixed payment amounts and defined the rights of peasants (M.L. Abramson, VizVrem 7 (1953) 161–93).

In the 10th C. neither Germany nor Byz. was sufficiently successful at subjugating Italy; the early 11th C. saw a peaceful but unstable situation interrupted by the short-lived campaign of George Maniakes. In the same century appeared a new power that replaced both the Byz. and the Arabs—the Normans, who established their state in southern Italy and Sicily. At the same time another new factor emerged, namely, the commercial cities of northern Italy (Venice, Genoa, Pisa, etc.), which eventually came to dominate trade in the eastern Mediterranean. In the 12th C., Byz., for the last time, attempted to recover its possessions in southern Italy. The empire often had the support of Italian cities (Ancona, Milan, Venice), but the Norman resistance, the lack of mutual understanding with the papacy, and esp. the powerful interference of the German emperors made the Byz. efforts fruitless.

The conquest of Constantinople by the Fourth Crusade in 1204 deprived Byz. of its status as a
world power, making any further intervention in Italy impossible. In contrast, Italian republics began to penetrate the territory of “Romania”; they had been granted commercial privileges and tax exemptions since the late 10th C., but during the 12th C. Byz. maintained control over the Italian colonies and skillfully played off their rivalries. The defeat of 1204 opened up the Levant to the Venetians, who together with the Genoese exercised domination over both Constantinople and the Byz. provinces. Sicily, esp. under Charles I of Anjou, served as a base for hostile operations against Byz. Both Italian trade domination and the transformation of Byz. into a source of food supply for Italy contributed to the empire’s growing poverty, although individual Greek merchants and artisans maintained their activity and operated with substantial capital. Cultural contacts between Byz. and Italy developed in the 14th and 15th C., with Greek books and scholars penetrating the Italian intellectual milieu. The Ottoman threat fostered discussion of a political and religious alliance, but Italian military assistance remained insignificant and could not prevent the fall of the empire to the Turks.

A.K.

ITINERARIUM PEREGRINORUM (Account of the Pilgrims’ Journey), a Latin history of the Third Crusade probably written by an English Templar in the Holy Land (at Tyre?) between 1 Aug. 1191 and 2 Sept. 1192, and certainly before 1194 (H. Möhring, Innsbrucker historische Studien 5 [1982] 149–67). In addition to firsthand experience and oral sources, the author used a lost account of the Crusade of Frederick I. The Itinerarium Peregrinorum describes Frederick’s crossing of the Byz. Empire and his difficulties with Isaac II’s Pechenegs and Bulgars (291.20–296.7), insisting on Greek inferiority and their hatred of innocent Latins (292.12–293.9). It also treats the conflict with the Seljuk sultanate (296.11–300.6) and Greek fire (323.20–324.18). Between 1216 and 1222, Richard, canon and later prior of Holy Trinity, London, revised the Itinerarium Peregrinorum and combined it with a Latin translation of the Estoire de la guerre sainte (History of the Holy War), material from Roger of Hoveden, and a lost English account of the Crusade to produce a new version (ed. W. Stubbs, Chronicles and Memorials of the Reign of Richard I, vol. 1 [London 1864; rp. 1964]).

M.McC.

IVAJLO, Bulgarian tsar (1278–79). Known to the Byz. as Lachanas (“cabbage”), he was a swineherd who believed that he had a mission from God to save Bulgaria from the Tatars. A series of victories brought him broad popular support. He overthrew Constantine Tich in 1277, but Turchino held out under Tich’s wife Maria (Nicol, Kantakouzenos 19–20, no.15). She preferred to marry Ivajlo and bring him to the throne, rather than allow her uncle Michael VIII Palaiologos to impose his own nominee. She was overthrown while Ivajlo was away fighting the Tatars. He inflicted a series of defeats on the Byz. armies sent to support John Asen III (1279–80), but was forced to turn to the Tatars for help. Khan Nogay had him murdered at a banquet.

M.J.A.

IVAN III, grand duke of Moscow and Vladimir (co-ruler from 1450, prince from 1462); born 22 Jan. 1440, died Moscow 27 Oct. 1505. Son of Basil II, Ivan substantially expanded Muscovite territory during his reign, annexing both Great Novgorod (1478) and the principality of Tver’ (1485). In 1472 Ivan took as his second wife Sophia Palaiologina, niece of Emp. Constantine XI. Thereafter he occasionally called himself “tsar” and began to use the emblem of the two-headed eagle on his seals. In 1492 Metr. Zosima referred to Ivan as a “new Constantine” and called Moscow a “new city of Constantine.” In the aftermath of the fall of Constantinople to the Turks, Ivan assumed the role of defender of Orthodox Christianity and declared (in 1470) that the patriarch of Constantinople had no jurisdiction over the church of Moscow. Current scholarship (Obolsensky, Commonwealth 364–67; Meyendorff, Russia
IVAN ALEXANDER, Bulgarian tsar (1331–71). Descended from the Asen dynasty on his mother's side, Ivan Alexander reached the throne as a result of a coup d'état supported by a faction among the boyars. Throughout his reign he strove to prevent formation of an anti-Bulgarian coalition in the Balkans. Allied from 1332 with Stevan Uroš IV Dušan, Ivan inflicted a severe defeat on the Byz. in that year and regained some territory south of the Balkan range. During the Byz. Civil War of 1341–47 he supported John V Palaiologos against John VI Kantakouzenos and as a result added to his dominion a number of towns north of the Rhodope mountains, including Philippopolis. Later his hostility to Byz. led him to ally himself with the Ottoman Turks and with their help to recover several fortresses on the Black Sea coast. In 1365, however, he was defeated by Amadeo VI of Savoy and the Hungarians, both of whom supported papal plans for church union. He maintained good relations with Dubrovnik and Venice. His policy of giving parts of his kingdom as appanages to his sons contributed to the fragmentation of the Second Bulgarian Empire and to its inability to resist Turkish pressure. A notable patron of literature and art, Ivan made Tîrnovo the seat of a flourishing Slavic literary culture, which later influenced the development of Russian culture. Several MSS written and illuminated for him survive. He was married twice, to Theodora, daughter of the Romanian prince Ivano Basarab, and later to Sarah-Theodora, a converted Jew.

IVANKO (Iβαγκιος), nephew of Asen I (Akrop. 1:21.1f) and founder of an independent Bulgarian principality; died after 1200. In 1196 Ivanko assassinated Asen. Niketas Choniates attributes this murder to Ivanko’s involvement in a love affair with the sister of Asen’s wife. He also suggests (Nik.Chon. 471.86) that Ivanko was possibly incited by the sebastokratōr Isaac Komnenos. Ivanko’s attempt to establish his power in Tîrnovo failed: Asen’s brother, Peter of Bulgaria, besieged the city, and, lacking assistance from Byz., Ivanko had to flee to Constantinople. There he was betrothed to the emperor’s granddaughter Theodora and received the name Alexios. Alexios III appointed him governor of Philippopolis. Around 1198 or 1199 Ivanko proclaimed his territory independent, allied himself with Kalocsan, and assisted a Cuman raid into Macedonia. After some unsuccessful expeditions against Ivanko (during which the protosprotar Manuel Kamitzes was taken captive), Alexios III lured him into a trap (1200). Deceived by a false oath, Ivanko entered the imperial camp, where he was immediately seized. His brother Mitos (Mitja?) fled, and Ivanko’s ephemeral principality in Rhodope was annexed by Byz.

IVERN MONASTERY, Iberian (Georgian) establishment on the northeast coast of the peninsula of Mt. Athos, approximately 4 km from Karyes. Until between 1010 and 1020 Iveron (Iβηρον) was called the “monastery of the Iberian” or “of Euthymios”; thereafter it was called the “lavra of the Iberians.” The first Georgians to come to Athos were John the Iberian and his son EUTHYMIOS THE IBERIAN, who entered the Great Lavra of Athanasios in the 960s before moving to nearby kellia. In 979/80 the ascetic/general John Tornikios, after winning a battle over the rebel Bardas Skleros and amassing vast amounts of booty, returned to Athos to found a new lavra for Iberians at the site of the monastery “tou Kie-mentos.” At this time Tornikios received the Kołobu Monastery from Emp. Basil II. Under the first hegoumenoi—John the Iberian (980–1005), Euthymios (1005–1019), and Euthymios’s cousin George (1019–29)—a scriptorium was established for the translation of Greek religious texts into Georgian and the copying of Greek and Georgian MSS. Thereafter Iveron continued to be an important center of Byz.-Georgian cultural interaction and the dissemination of texts in Georgian. In the mid-11th C. the translator and hagiogra-
pher George Mt'ac'mindeli served as hegoumenos. The number of monks at the monastery reportedly grew to 300, and Iveron initially owned more land than Lavra. In addition to extensive properties on Athos, Iveron had possessions in Chalkidike, the Strymon valley, and Thessalonike.

Throughout the Byz. period there was rivalry at Iveron between the community of Greek monks, who were in the majority, and the Georgians; the two groups celebrated the liturgy separately. The Georgians were in authority in the early period, and held their services in the katholikon, even though they were outnumbered. In the 14th C., however, the Greeks gained dominance at Iveron; an act of 1356 (RegPatr, fasc. 5, no.2396), noting that the Greek monks were "more numerous and capable," stated that the hegoumenos was to be Greek and that the Greeks were entitled to hold their services in the principal church. Although it appears no typikon was ever written, chapters 34-70 of the vita of John and Euthymios, which describe the organization of Iveron, resemble a monastic rule.

The archives contain over 150 documents of Byz. date; those published to date (the earliest is of 927) deal primarily with sales and donations of property; they provide valuable information on the topography and prosopography of Macedonia. The will of Kale Pakouriane (of 1090) contains a long list of liturgical vessels and textiles given to the monastery. Iveron's library preserves a major collection of 337 Byz. MSS, in addition to 86 Georgian MSS, including unique hagiographical codices. The most important Byz. books are cod. 463, a lavishly illustrated 12th-C. copy of Barlaam and Ioasaph (Treasures 2:60-91, 306-25), and the 13th-C. Gospel book cod. 5 (ibid. 34-53, 296-303).

The katholikon, which has undergone numerous restorations and modifications, was originally built in 980-83 and is one of the oldest surviving Christian structures on Athos. Dedicated to the Virgin, it is a cross-in-square church, with side chapels added later. Its pavement probably dates to the mid-11th C.

IVERPOULOS, JOHN. See PETRITZOS MONASTERY.

IVORY (élephas), made from elephant tusks, the principal organic material used in the creation of ceremonial and useful objects, icons, and appliqués for furniture and doors. Dependent on commerce with Africa and India, the availability of ivory varied greatly, although the appeal of its exotic origin and lustrous nature never waned. Its reputation in late antiquity as an imperial material is indicated by the barbarian offering of a giant tusk on the Barberini ivory. In fact, from the beginning of the 4th C. until at least the mid-6th, ivory was relatively cheap: in Dioscorides' Price Edict, its cost per pound is one-fortieth of an equivalent weight in silver.

Abundant statuettes, caskets and boxes for medications and other items, and decorative plaques were carved in Egypt and exported, as were the 8 stools and 14 chairs sent by Cyril of Alexandria to the court of Theodosios II. Egypt as a source of worked ivory (as against bone carving), which is attested by both papyri and excavations, had been contested but is now confirmed by finds at Abū Minā (J. Engemann, JbAChr 30 [1987] 172-186). By the 4th C. ivory was also carved in Constantinople. An edict of 337 (Cod. Theod. XIII 4.2) includes ivory workers in a list of artisans who were exempted from civil obligations so that they might improve their craft and teach it to their children—a clause that suggests the means by which techniques were transmitted. The widespread manufacture of ivory diptychs is apparent from an edict of 384 (ibid. XV 9.1) forbidding all but ordinary consuls to issue them. While many consular diptychs can be ascribed with certainty to Constantinople, the place of origin of the cathedra of MAXIMIAN and the so-called five-part diptychs remains disputed, as does that of the scores of surviving pyxides (see pyxis) decorated with pagan or Christian subjects. While the consular diptychs can be precisely dated, other pre-Justinianic ivories cannot.

It is probable that Constantinople's access to ivory was disrupted in the late 6th and 7th C. There is no evidence for ivory carving in the
ensuing “Dark Age,” although such activity has been claimed for Christian workshops in Syria-Palestine. When the ivory trade resumed—possibly no earlier than the reign of Leo VI—East Africa was in Arab hands. Thereafter, ivory was a coveted substance, used in the fabrication of far fewer types of objects than before the 7th C. and generally reserved for sacro-political emblems and ecclesiastical artifacts. The aulic connections of the material are epitomized in a relief in Moscow (Goldschmidt-Weitzmann, Elfenbeinskulpt. II, no. 35), apparently made in direct response to the beginning of Constantine VII’s sole rule in 945. The dates of other pieces with imperial images and/or inscriptions are disputed, but their function is perhaps indicated by three relatively large triptychs. Few in number compared to the more than 200 smaller icons that survive, they are much more elaborately carved and may have been revered in private chapels of the imperial court and the urban elite. The only ivory staurotheca (ibid., II, no. 77) has a later inscription that says it was used by an emperor Nikephorus (Botaneiates?) to put the barbarians to flight.

Many ivories were sent to the West, where they were applied to the covers of books, the contents of which provide termini ante quem for these plaques. Such exports continued until ample Western access to raw ivory, occurring in and after the 11th C., put an end to this commerce. No Byz. pieces have been shown to belong to the 12th C., a period when emperors and other dignitaries commissioned their portraits in other expensive materials. This absence suggests that supplies of ivory were diverted at their source to the West. Substitutes were then prized: John Tzetzes records his gratitude for a “Russian-carved” inkwell (or inkstand?) made of walrus (or narwhal) tusk that he received from Leo, metropolitan of Dorostolon (J. Shepard, ByzF 6 [1979] 215–21). Only one object with imperial likenesses, a tiny circular box at Dumbarton Oaks that depicts members of the family of John VIII, can be attributed with confidence to Palaiologan craftsmen.

No ivories are listed in preserved wills and very few in monastic inventories and typika. Nothing is known of modes of production. Since the corpus of Goldschmidt and Weitzmann, pieces dated to the 10th and 11th C. have been divided into five groups, supposed to be the products of different ateliers, but there is no basis on which to assume the existence of workshops in this medium other than the fact that craft practices were transmitted to successive generations. That ivory workers also carved bone and steatite is a more plausible hypothesis, given the technical, iconographical, and formal resemblance between products in these three media. A late reference to ivory is made by Anna Komnene (An.Komm. 1: 112.21f) who compares the grace of her mother’s hands to ivory carved by some artificer. For this workman she uses the generic term technites, whereas in late antiquity this craft had been practiced by specialists known as elephantourgoi.

IZBORNIKI (lit. “Selections”) of 1073 and 1076, the two earliest extant dated nonliturgical MSS from Rus’; also known as the Izborniki of Svyatoslav (i.e., Jaroslavič of Kiev, 1073–76) from the eulogy in the 1073 MS and the colophon in the 1076 MS. The 1073 Izbornik (Moscow, Hist. Mus. Sinod. Sobr. 1043) contains a translation of a Greek florilegium close to that of Vat. gr. 423 and Paris, B.N. Coisl. gr. 120. The 1073 MS is one of more than 20 MSS of this translation. The core of the work is a version of the Erotapokrisis ascribed to Anastasios of Sinai. It is flanked by briefer theological, rhetorical, and chronological articles by, for example, Michael Synkellos, Theodore of Raithou, George Choiruboskos, and Patr. Nikephoros I. Its prototype was Bulgarian: the enkomion to Svyatoslav was originally addressed to Tsar Symeon of Bulgaria (but cf. L.P. Žukovskaja, ed., Drevnerusskij literaturnyj jazyk v ego ot-nosenii k staroslavjanskomu [Moscow 1987] 45–62).

The 1076 Izbornik (Leningrad, Publ. Lib., Sobranie Ermitažnoe 20) is the only complete MS of its type and does not reflect an equivalent Byz. florilegium. Rather it contains extracts from previous Slavonic translations, at least in part via previous Slavonic compilations (including passages from the florilegium represented in the 1073 Izbornik). In character it is gnomic and hortatory, with substantial segments of, for example, Ecclesiasticus, the Centuria ascribed to Patr. Gennadios I, the Sententiae ascribed to Hesychios of Jerusalem, John Climax, Agapetos, and Apos...
PHTHEGMATA PATRUM. Some of its sources are unidentified, and its provenance—Kievan or Bulgarian—is disputed.

IZMARAGD (from Gr. σμάραγδος, “emerald”), a compendium of ethical instruction compiled in Rus’, probably in the early 14th C., initially in 88 chapters. The precepts in Izmaragd, aimed mainly at laymen and priests, concern the life of a Christian in society: marriage, work, relations with authority, charity, and the blessings derived from reading. The sources of Izmaragd overlap with those of other Slavonic compilations (the Izborniki of 1073 and 1076, Zlatostrij, Zlatoust) and include translated extracts from pseudo-Chrysostom, the Centuria ascribed to Patr. Gennadios I, the Pandektes of Antiochos and of Nikon of the Black Mountain, Ephrem the Syrian, Anastasios of Sinai, pseudo-Athanasios, Ecclesiasticus, the vita of Niphon of Constantia, and Barlaam and Ioasaph. Izmaragd also contains works ascribed to Kirill of Turov, Feodosij of Pečera, and Serapion of Vladimir. A second version in 165 chapters probably dates from the late 15th C. It draws on a similar range of sources (though only 50 chapters are borrowed directly from the first version), with additional material from Palladios, John Moschos, and the Dialogues of Gregory I the Great.

JABALA, the first attested Ghassānid chief in the service of Byz.; died ca.528. Around 500 he appeared as a warrior in occupation of the island of Iotabe, which had been captured in the reign of Leo I by Amorkesos. After hard-fought battles, Romanos, the energetic doux of Palestine, was able to force Jabala out of Iotabe and restore Byz. rule. In the general settlement with the Arab tribes who attacked the frontier, Anastasios I concluded a peace with the Ghassānids in 502 that made them the dominant federate group in Orions. Jabala remained the principal figure in Byz.-Arab relations for another quarter of a century. The Ghassānids became staunch Monophysites, a fact reflected in the appearance of the Monophysite firebrand Simeon of Beth-Arsham at Jabala’s camp in Jābiya ca.520, invoking the extension of aid to the Christians of Najran and South Arabia. Jabala probably died at the battle of Thanuris (528) while fighting in the Byz. army against the Persians.

LIT. I. Shahid, The Martyrs of Najran (Brussels 1971) 272-76.

JACOB BARADAUS (Βαραδαύς, Syr. Burde’ana, “man in ragged clothes”), Monophysite bishop of Edessa (from 542/3); born Tella, Osroene, ca.500, died Kasion, near the Syro-Egyptian frontier, 30 July 578. He was the organizer of the Monophysite church, called Jacobite after him. In 527/8 the monk Jacob went to Constantinople, where he became a favorite of the empress Theodora and also gained the support of the Arab chieftain Ḥarīth ibn-Jabala (AReTHAS). When Ephraim of Antioch (527-45) launched a severe attack against the Monophysites, Theodora urged Theodosios, Monophysite patriarch of Alexandria, to consecrate two bishops in Syria to counterbalance Ephraim’s activities—Theodore in Bostra and Jacob in Edessa (542/3).

According to John of Ephesus (PO 19:154), Jacob’s diocese extended over most of the East, where the Monophysite cause had been severely weakened by Justinian’s persecution. Jacob was tireless in his missionary activity, appointing Monophysite bishops in many cities, including Chios, Ephesus, and Antioch. Although much of his work was in Asia Minor and along the coasts of the Mediterranean, most of the bishops were drawn from Syrian monasteries, giving the Monophysite hierarchy a distinctly Syrian character. Justinian attempted to arrest Jacob, but he was frequently in disguise (hence his sobriquet) and was never caught. Some of Jacob’s letters, written originally in Greek, have survived in Syriac.

JACOBITES, Syrian MONOPHYSITES, followers of JACOB BARADAUS. Although Monophysitism had individual followers from the time of the Council of CHALCEDON, the movement was not given firm institutional form until the missionary activity of Jacob Baradaeus beginning ca.542. The Jacobite church traced its roots to Patr. Theodosios of Alexandria (535-66), who consecrated Jacob. Although many Jacobite churches were established in Asia Minor and the Aegean Islands, the hierarchy of the church was made up largely of Syrian monks who brought with them their language and spiritual ideals. Jacobite missionaries spread their teachings as far as Persia, but their real centers were the villages and monasteries of Syria, and many bishops lived in desert monasteries rather than cities. The Jacobite church survived the Persian and Islamic conquests, although with decreased numbers, into modern times.

JACOB OF SARUG (or Serugh), Syriac poet and theologian; born Curtam, near Sarug on the Euphrates, ca.451, died Batnan 29 Nov. 521. Edu-
icated in the Nestorian school of Edessa, he nevertheless became a follower of Cyril of Alexandria. He served as cherepiskopos in the district of Sarug and in 519 was elected bishop of Batan. Jacob's religious creed was attacked by his contemporaries: Nestorian chroniclers characterized him as a turncoat who accepted the beliefs of the ruling emperor (P. Krüger, OstkSt 13 [1964] 15–32); an anonymous Monophysite accused Jacob of falling at the end of his life into a horrible heresy, that is, the creed of Chalcedon (P. Krüger in Weg-zeichen [Würzburg 1971] 245–52). In his works Jacob did not follow the final formula of Chalcedon but taught that the incarnate Christ was “one nature out of two.”

A prolific author, Jacob left homilies in prose and verse as well as numerous letters; not all of these have survived. He interpreted Scripture in an allegorical or typological manner: Moses had to place a veil over his face after the Theophany on Mt. Sinai because the Israelites were not mature enough to receive the divine truth; it was removed, according to Jacob, after the Incarnation that allowed the world to see the Son of God openly (S. Brock, Sobornost 3 [1981] 70–85). The theme of the Incarnation attracted Jacob: he perceived it symbolically as “three wombs”: Mary’s womb, the womb of the Jordan (baptism), and the womb of Sheol (death, or the baptism on the cross), and discovered the prefigurations of these baptisms in the Old and New Testaments (S. Brock, OrChrAn 205 [1976] 325–47). A man of Christian culture, Jacob strongly opposed any remnants of classical civilization and sharply criticized theatrical performances (W. Cramer, JbAChr 23 [1980] 96–107).

—T.E.G.

JACOB'S LADDER, a ladder ascending to heaven seen by the Hebrew patriarch Jacob during his dream (Gen 28:10–22). John Chrysostom (PG 59:454–55), Theodoret of Cyrhhus (Histoire des moines de Syrie, ed. P. Canivet, A. Leroy-Mol-ingen, vol. 2 [Paris 1979] 216, ch.27.1.4–5), and others interpreted it as a metaphor for the ascent to God. As an image for the Virgin, it figures in the Akathistos Hymn; the biblical account was read at the Great Feasts of the Virgin (Birth, Annunciation, Dormition).

Representation in Art. The ladder was illustrated already by the 4th C., for example, at Dura Europos and the Via Latina catacomb, and appears in 5th- and 6th-C. Genesis MSS and the Octateuchs. It was the explicit model for illustrations to the Heavenly Ladder of John Climacus, and icons based on this text. Jacob is shown ascending the ladder on the Brescia Casket (Volbach, Elfenbeinarbeiten, no.107), depicting the ascent to God rather than the details of the Old Testament account. In Palaiologan painting (e.g., in the CHORA) the ladder appears as a prefiguration of the Virgin (S. Der Nersessian in Underwood, Kariye Djami 4:334–36).

—J.H.L., C.B.T.

JAMES (λακωβος). Three individuals named James were associated with Jesus; as a result there has been confusion over their identities. (1) The apostle James Major (“the Great”), the son of Zebedee, was the elder brother of the apostle John; he preached in Palestine, was beheaded, and was commemorated on 15 Nov. and 30 Apr. (2) The apostle James Minor (“the Less”), son of Alpheus, was martyred by clubbing and was commemorated on 9 Oct. (3) James, the “brother of the Lord” (adelphotheos), was Christ’s half-brother. He became the first bishop of Jerusalem, was martyred when the Jews pulled him from the height of the Temple, and was commemorated on 23 Oct. The last two Jameses are sometimes conflated.

The Epistle of St. James in the New Testament is usually attributed to James adelphotheos; John Chrysostom wrote a commentary on this epistle (PG 64:1039–52). Several other works were ascribed to this James: the Protevangelion of James, a homily on the Dormition (actually a compilation of John I, archbishop of Thessalonike [M. Jugie, Po 19 (1926) 344–438]), and a dialogue with John the Theologian on the departure of the soul (Anecdota graeco-byzantina [Moscow 1893],
ed. A. Vassiliev, 317–22). The ancient liturgy of St. James is also traditionally ascribed to the brother of the Lord. James was praised by various authors, including Andrew of Crete, Hippolytos of Thebes, and Niketas Paphlagon. The center of his cult in Constantinople was the Church of the Virgin Mary in Chalkoprateia.

**Representation in Art.** James the *adelphotheos*, although not an apostle, was conflated with them in artistic representations: James Major and James Minor often wear his episcopal robes, and his white hair sometimes replaces their brown hair. The figure of James Major—known with his brother, John, as “thunder-voiced”—illustrates Psalm 76:19 in several marginal Psalters; here, as in the scene of their calling, both are beardless youths. In the scene of the Transfiguration, James Major is brown-haired; it is as a mature man with brown hair and beard that he is shown preaching at Psalm 19 in the marginal Psalters and at his martyrdom in a MS in Paris (B.N. gr. 102—H. Kessler, *DOP* 27 [1973] pl.1).

—J.I. A.K., A.W.C.

**JAMES OF KOKKINOBAPHOS** (an unidentified monastery), the author, probably of the 12th C., of six homilies on the Virgin. Nothing is known of his life. A. Kirpičnikov (*Letopis* 2 [1892] 255–80) identified him with another James, the author of letters addressed to the *sebastokratirissa* Irene Komnene; this identification remains debatable. The homilies are devoted to the life of the Virgin from her conception to her visitation with Elizabeth. They are preserved in two deluxe MSS, Paris, B.N. gr. 1208 and Vat. gr. 1162, probably from the second quarter of the 12th C., which were profusely illustrated by the major atelier then active in Constantinople. Their numerous initials, both floral and zoomorphic, and their elaborate headpieces are hallmarks of this atelier, which also produced the Codex Ebnerianus.

—R.S.N., A.K.

**JANISSARIES** (γιανισταρι). According to the traditional etymology, a term deriving from the Turkish yeni çeri, “new army,” which was the Ottoman sultan’s personal army or Kapıkulları (lit. “slaves of the Porte”), the troops of the palace. The army of the Janissaries was the result of the devshirme (Turk. “collection, recruiting”), an Ottoman institution, namely the periodical levy of Christian boys living within the sultan’s territories (*dhimmi*) for training to fill the ranks of the Janissaries and later to enter palace service or the administration. The same term is used in the earliest Ottoman sources with the meaning of *pencik*, that is, the collection of the fifth part of the prisoners, an old Islamic institution, called by the Byz. πεμπτον (Kantakouzenos) or πενταμορφία (Chalkokondyles) and by the Latins *pemdensity* (Venegro-Cretan text of 1402). The earliest reference to the *devshirme* as an institution applied to the sultan’s subjects appears in the Life of St. Philotheos of Athos, apparently composed in the second half of the 14th C. (B. Papoula, *SiōdostF* 22 [1963] 259–80), and in a sermon of Isidore Glabas, metropolitan of Thessalonike, delivered in 1395 (S. Vryonis, *Speculum* 31 [1956] 433–43). The Greek term *gianitarioi* also designated the Christian guards of the Byz. emperor ca.1437. In that case it probably constituted the Greek rendering of the Latin or neo-Latin *ginetarii, ganetalioi, janizeri, etc.*

—E.A.Z.

**JARMĪ, AL-**, more fully Muslim ibn Abī Muslim al-Jarmī, Arab official and warrior who wrote books on Byz. based on information obtained as a prisoner of war; fl. 9th C. His biography is only known from al-Maṣʿūdī, who describes him as an eminent man in the Arab-Byz. frontier region. He was captured by the Byz. ca.837 and was released in 845. His writings on Byz. are now lost. They were used by ibn Khurdaḏbeḥ, Qudāma, and al-Maṣʿūdī (and probably ibn al-Faqih, ca.900). According to al-Maṣʿūdī (*Tanbih* 191), al-Jarmī was well informed on Byz. His writings dealt with historical, political, administrative, topographical,
and strategic matters as well as the northern neighbors of Byz. Al-Jarmi’s description of Byz. themes and other aspects of the Byz. army and administration are extremely accurate and detailed, forming the core of practically all such accounts in Arab geographers. Of special importance are his descriptions of routes into Byz. Asia Minor and practical instructions on the suitable times for raids into Byz. territory.

JAROSLAV (Ierosothlápos), prince of Kiev; son of Vladimir I of Kiev; baptismal name George; born 978, died Kiev 20 Feb. 1054. Victorious in his war for the succession, Jaroslav became the ruler of all Rus’ in 1036. In 1037 he began to construct the new city of Kiev on the Constantinopolitan pattern, with its own “Golden Gate” and stone churches. The Cathedral of St. Sophia (see Kiev) contains a fragmentary fresco of the founder Jaroslav and his family. His victory over the Pechenegs turned their main raids toward the Danube and the Byz. provinces. In 1043 he sent a naval expedition of about 400 vessels and up to 20,000 men against Constantinople; defeated in the Bosporus by the Byz. general Theophanes, the fleet returned home with serious losses. Six thousand warriors lost their boats, but reached shore and were taken prisoner; many were blinded. The attack on Constantinople can be seen as either a belated attempt to support George Maniakes or a trade conflict. The peace treaty of 1046 restored the alliance, sealed by the marriage of Constantine IX’s daughter to Jaroslav’s son, Vsevolod.

In 1051, after Jaroslav nominated Iarion as metropolitan of Kiev, the bishops of the Russian eparchy elected and consecrated him, basing their action on the Nomokanon of Fourteen Titles. Although they ignored the designate and consecratory rights of the patriarch of Constantinople, Byz. jurisdiction itself was not in question since, no later than 1054, a Greek named Ephraim who bore the title of protopráedros ton protosynkellon was metropolitan of Kiev.

JEREMIAH (Iesemías), one of the four great prophets, also considered to be the author of the Old Testament Book of Lamentations; feastday 1 May or 4 Nov. (Halkin, infra 111). Origen wrote commentaries on both books (Jeremiah and Lamentations), offering an allegorical rather than a “historical” interpretation; thus in some cases (e.g., Werke 3 [1983] 5,8) he discarded the exegesis of Jeremiah as a reference to Christ and insisted on explaining his words as allusions to mankind’s moral infamy. After John Chrysostom and esp. Theodoret of Cyrhus, the image of Jeremiah as prophet of Christ’s advent became entrenched in Byz. The Synaxarion of Constantinople and the imperial Menologion of the 11th C. (Halkin, infra) have Jeremiah announce to the Egyptian priests the fall of their idols and the birth of the Savior in the manger. Byz. legend ascribed to Jeremiah a miraculous power to expel asps (identified as crocodiles). He is described as a short man with a sharp-pointed beard. His memory was celebrated in the Church of Apostle Peter, near Hagia Sophia (Janin, Églises CP 398).

Representation in Art. Images of Jeremiah are found principally among the prophets in monumental art and in the Prophecy Books. The depiction of Jeremiah with long dark hair and beard in Florence Laur. 5,9 (late 10th C.) is one of the most monumental images of Byz. illumination, but his book offered little to the repertoire of narrative iconography, even in contexts such as the Sacra Parallela.

—J.L., J.H.L., A.K.

JERICHO (Ierikhó, Hebr. Yeriho), ancient city in the southern Jordan Valley that flourished during the late Roman period: the Madaba mosaic map represents it with ramparts, gates, and palm trees. By 325 Jericho was a bishopric. After the earthquake of 551 Justinian I ordered the repair of its churches of Elisha and the Virgin; the latter is identified as a large 6th-C. basilica uncovered at Tell Hassan. The remains of successive churches of the 4th–9th C. were discovered at Khirbat en-Niţla, as well as an 8th-C. synagogue. The city became a monastic center, with a hospital and
several hospices; a mosaic floor with a Nestorian inscription was found. Among the city’s attractions for pilgrims was Elisha’s spring.

Jericho was destroyed by Persian and Arab invasions and became a village; John Phokas (ch. 20) describes the area as countryside covered with gardens and vineyards, but Constantine Manasses (ed. K. Horn, BZ 13 [1904] 333–280–87) saw only a stifling sandy valley. The Crusaders built a castle and Church of the Trinity at Jericho.

—G.V., Z.U.M.

Jerusalem, more fully Eusebius Hieronymus, biblical exegete and translator, saint; born Stridon in Dalmatia 331 (Kelly) or ca. 348, died Bethlehem 30 Sept. 420. Jerome was early exposed to both classical and Christian culture at Rome, being baptized and studying under the scholar Donatus. Years of travel and asceticism in the West and East followed. He learned Hebrew as a hermit in the Syrian desert. Jerome was ordained at Antioch, where he studied Greek and heard Apollinaris lecture. A visit to Constantinople in 381 acquainted him with Gregory of Nazianzos. Back in Rome he became secretary to Pope Damasus (366–384), also functioning as spiritual and worldly adviser to wealthy Roman ladies, such as Melania the Younger. After the death of Damasus, renewed travels ended at Bethlehem where he ruled a newly founded monastery and devoted himself to scholarship.

Jerome’s translation of the Bible into Latin (Vulgate) is preeminent among his writings. Voluminous biblical commentaries are enriched by the secular learning brought to bear on sacred texts. Equally important for his contemporaries were his De viris illustribus (On Famous Men) of 392, a catalog of 135 Christian authors, both Greek and Latin, from St. Peter to himself, and his Latin paraphrase and expansion of the Chronicle of Eusebius of Caesarea, a world history from the birth of Abraham to 325, with much emphasis on chronology and synchronization of events. His many letters mirror the social and intellectual life of the times. He also wrote vituperative attacks on heresies and heretics, the fruit of his passionate involvement against Arianism, Origenism, and Pelagianism. Jerome’s famous dream, in which God invited him to choose between Cicero and Christianity, crystallizes the dilemma of how to reconcile the old Roman culture with the new Christian religion.

—B.B.
city, of which the empire's Christians were scarcely aware.

This changed dramatically in 326 when, according to tradition, HELENA reached Jerusalem. The year before, Bp. Makarios of Jerusalem had secured permission from Constantine I at the Council of NICAEA to destroy the Capitoline temple. While removing the foundations, in Helena's presence, workmen uncovered an empty tomb which was identified as that of Christ. A rock nearby was taken to be Golgotha. This discovery created a sensation among Christians and quickly stimulated PILGRIMAGE from as far away as the western provinces. Constantine ordered a basilica (which became the city's episcopal see) constructed just to the east of the tomb. Retaining its Roman plan, Aelia now became a Christian city and, in common parlance, was once again called Jerusalem or “the Holy City.” An outpouring of public and private wealth gave the city's topography a Christian appearance. Besides the complex surrounding the Holy SEPULCHRE, Constantine built the Eleona church on the MOUNT OF OLIVES and a great basilica in BETHLEHEM. By the end of the 4th C. the Roman noblewoman Poimenia had financed the Ascension Church (Imbomon) near the Eleona, and unknown benefactors the Church of the Apostles on Mt. Sion and a church in Gethsemane. Bishops such as Cyril of Jerusalem became the most powerful men in the city. Constantine enforced Hadrian's edict excluding Jews from Jerusalem but permitted them entrance to mourn the destruction of the Temple—in Christian eyes salutary proof of Christianity's triumph. With similar symbolism but opposite intentions, Julian the Apostle lifted the Hadrianic ban and resolved to rebuild the Jewish Temple. Work began in 362/3 but was soon suspended. Christian pilgrims to the Temple Mount were shown the bloodstains of Zacharias there (Prot-evangelion of James 23.2–3) as well as the standing Herodian retaining walls (of considerable height) and the various underground chambers said to belong to Solomon's palace. By the end of the 4th C., virtually the entire pagan population had embraced the victorious faith. By 381–84, when EGERIA visited Jerusalem, asceticism had struck root, and monks and consecrated virgins, many from abroad, formed an important part of the populace. Mainly Western ascetic communities existed on the Mount of Olives by 375, and a decade later ST. JEROME and his protegé Paula founded rival monasteries in Bethlehem. Immigrant ascetics like MELANIA THE YOUNGER helped the city's economy with generous endowments to churches, monasteries, and XENOCHAEA.

Like PALESTINE as a whole, Jerusalem profited from traffic in RELICS. Rich in ordinary “blessings” (see EULOGIA), Jerusalem also possessed the wood of the TRUE CROSS; bits of it, acquired for a price, or stolen, or given as presents, soon made their way across Christendom. Similarly, Bp. JOHN II of Jerusalem took control of the relics of St. Stephen the Protomartyr, which came to light in 415. In 420 or 421 John's successor dispatched Stephen's right arm to Constantinople, in return for which Theodosios II sent money to Jerusalem and dedicated a gem-encrusted cross on Golgotha.

Melania influenced ATHENAIOS-EUDOKIA, consort of Theodosios, who first came to Jerusalem on pilgrimage in 438/9 and then, exiled from the court, settled permanently (ca.443–60). Eudokia endowed monasteries, founded hostels for pilgrims and the poor, and built churches to the Virgin at Siloam—on the south flank of Jerusalem's eastern spur—and perhaps at the Sheep Pool, the latter commemorating Mary's birth. Eudokia's Basilica of St. Stephen, north of the city, remained the largest church for a century. Above all, the exiled empress built a new fortification wall whose defensive perimeter finally incorporated Mt. Sion and the southern suburbs as far as Siloam. In the mid-5th C., Jerusalem reached a pinnacle of population and wealth unequaled since the Herodian period. Despite this, CAESAREA MARITTIMA held primacy among the sees of Palestine until 451, when Bp. JUHENAL of Jerusalem secured the patriarchate (see JERUSALEM, PATRIARCHATE OF).

After Constantine and Eudokia, Justinian I ranks as Jerusalem's third imperial benefactor. He built the Nea Ekklesia of Mary Theotokos, the city's largest church, and extended the main colonnaded street south to its west façade. This completed the urban plan of Jerusalem as depicted on the MADABA MOSAIC MAP.

In 614 the Persians besieged and captured Jerusalem with heavy destruction and loss of life, gave the city over to the Jews, and carried off the True Cross (Expugnationis Hierosolymae AD 614 re-
censiones arabicae, ed. G. Garitte, 2 vols. [Louvain 1974]). Herakleios forced the Persians to withdraw; the return of the city’s talisman is variously dated to 629, 630, and 631 (V. Grumel suggests 21 March 631 [ByzF 1 (1966) 139–49]); within the decade, however, Jerusalem fell to the Arabs. About March 638, after a long siege, Patri. Sophronios surrendered Jerusalem to the Caliph ‘Umar, who refrained from praying at the Lord’s Tomb and thus preserved the site for Christianity. The Muslims, who likewise called Jerusalem “the Holy City” (al-Quds), built their shrines, the Dome of the Rock and the al-Aqsa Mosque, on the Temple Mount. Christian pilgrimage continued on a smaller scale. In 1009 the mad Fatimid caliph al-Hakim leveled the Holy Sepulchre, but Constantine IX soon restored it (R. Ousterhout, JSAH 48 [1989] 66–78).

The Crusaders entered Jerusalem in 1099 and established the Kingdom of Jerusalem (see JERUSALEM, KINGDOM OF). Europeans ruled the city from 1099 to 1187 and from 1229 to 1243, gave the Church of the Holy Sepulchre its present form and built the Gothic Church of St. Anne. They turned the Dome of the Rock temporarily into a church, the Templum Domini, and the knightly Order of Templars established itself in al-Aqsa. Despite subsequent rebuilding, the Old City today retains the urban plan of the Roman and Byz. periods.

In art, biblical exegesis, and theology a celestial Jerusalem paralleled and sometimes reflected the terrestrial city. Conforming to biblical prophecies about Jerusalem, this conception became an archetype of the human soul, of the Christian church, and of individual church buildings. It provided an image of paradise, as in Revelations 21–22 and the 10th-C. vision of the Monk Kosmas (Synax.CP 111–14), where the heavenly city with golden streets and a palace could equally be Constantinople, sometimes called by the Byz. the New Jerusalem.

Pilgrimage Sites. In addition to the Holy Sepulchre, six sites in Jerusalem were of special interest to pilgrims.

1. The House of Caiafas, where part of Jesus’ trial took place and Peter denied him (Mt 26:57–75), was east of Mt. Sion. Peter’s repentance (Mt 26:75) was remembered there in the early stationary liturgy of Holy Thursday. By the 6th C. at the latest, a church of St. Peter replaced “ruins” of at least the house and continued to be a focus of interest through the Latin Kingdom.

2. The Garden of Gethsemane, just east of the city, was the site where Jesus prayed (Mk 14:32–42) and was betrayed by Judas (Mk 14:43–50). Early pilgrims used Gethsemane as a place of prayer. By the late 4th C. a church was built there; probably the earthquake of 746 destroyed it. Sources refer to a rock or a cave of the betrayal. The Breviarium, Patri. Eutychius of Constantinople, and the Piacenza Pilgrim held that Jesus had a supper at Gethsemane; Eutychius distinguishes this “first supper” from the “second” meal at Bethany (Jn 12:2) and the “third,” that is, the Last Supper (see LORD’S SUPPER). A certain Theodosius set the WASHING OF THE FEET at Gethsemane, which was also identified with the tomb of the Virgin’s DORMITION.

3. The Praetorium, or residence of Pontius Pilate (Mk 15:16), was in fact in the area of the Tower of David, but the place pointed out to Byz. pilgrims was in the Tyropoean Valley. A church existed there from the mid-5th C., decorated perhaps with murals depicting the narrative of Mark 15:16–20. From the 6th C., pilgrims were shown the stone (with footprints) upon which Christ stood during his trial, Pilate’s seat, and a portrait of Christ.

4. The Sheep Pool (pool of Bethesda, John 5:2) was located near the east gate of the city. Excavations have shown that the site was originally a pagan healing shrine; porticoes enclosed its two pools during the Roman period. By the mid-5th C. a “Church of the Sheep Pool” was on the spot, with a courtyard overhanging the pools. It was the locus sanctus not only of the healing of the paralytic (and preserved his couch), but also of the birth of the Virgin.

5. Siloam was a pool on the south side of the city where Jesus sent the blind man to wash and be healed (John 9:7). A traditional healing shrine, it was enclosed by a square colonnade in Roman times, and, in the 5th C., marked by a church that attracted the sick (PIACENZA PILGRIM, Travels 24) seeking the EULOGIA of the waters. Remains of both stages have been found by excavation.

6. The Tower of David, on the site of the present Citadel, is portrayed on the Madaba mosaic map as two towers to the right of the west entrance to the city. The name was applied generally to the originally three-towered fortress built there
by Herod the Great, where Byz. pilgrims believed David had composed or recited the Psalms.

—R.G.H., G.V.

JERUSALEM, ASSIZES OF, designation given to a group of treatises, chiefly of the 13th C., which record the procedures, customs, and laws of the kingdom of JERUSALEM; some of the royal laws (“assizes”) incorporated data from the 12th C. The principal group of treatises, composed in Old French by Jean d’Ibelin and others, relates to the usages of the High Court of the kingdom, which judged cases involving the king and his barons. These represent Western feudal law, interpreted by the baronial jurists as to weaken royal power. A second, smaller group of treatises records the practices of the Court of Burgesses, esp. that at ACRE, which tried cases involving nonnobles, chiefly merchants. Of these latter treatises, the Livre des Assises des Bourgeois was strongly influenced by a Provençal compilation ultimately deriving from the Codex Theodosianus. Because these codifications continued in use on Cyprus, parts of them were translated into Greek for the benefit of the formerly Byz. inhabitants. Jean d’Ibelin’s treatise influenced the Assizes of ROMANIA.

—C.M.B.

JERUSALEM, KINGDOM OF, Crusader state that existed from 1100 to 1187. Following the Crusaders’ capture of Jerusalem in 1099, the kingdom was established with the coronation of Baldwin I, 25 Dec. 1100. Its kings claimed suzerainty over other Crusader leaders, the princes of ANTOCH and the counts of EDessa and TRIPOLI. While Byz. claimed sovereignty over some Crusader states in Syria-Palestine, only in the reign of Manuel I was an effort made to assert supremacy over the kingdom. In order to secure assistance against Nur al-Din and Saladin, Baldwin III and Amalric I sought an alliance with Manuel. The latter’s patronage at Bethlehem is commemorated by the mosaicist EPHRAIM in a Greek inscription (1169). But Byz. exercised no real sovereignty over the kingdom. Initially, the Greek Christians of Palestine accepted Crusader rule. By 1187, however, those in Jerusalem were sufficiently alienated to be willing to help Saladin take the city (2 Oct. 1187). After the Third Crusade, the kingdom was reestablished at ACRE.

—C.M.B., A.C.

JERUSALEM, PATRIARCHATE OF. The see’s prestige, as the original mother church of Chrystendom, was first formally recognized at NICAEA I (canon 7). The extensive building program and support of the emperors, beginning with CONSTANTINE I, were crucial in its eventual rise to patriarchal status. Despite Nicaea’s acknowledgment, however, its incumbents remained subject to the metropolitan see of CAESAREA MARITIMA (under the jurisdiction of the patriarchate of ANTIOLH), which had precedence as the capital of the administrative province of Palestina Prima. Finally, at the Council of CHALCEDON, Jerusalem was ranked fifth as an independent patriarchate with power of jurisdiction over the three provinces of Palestine: Caesarea, Skythopolis, and Petra (cf. S. Vailhé, ROC 4 [1899] 44–57), comprising 59 bishoprics. The skillful diplomacy of Patri. Juvenal was largely responsible for this change. Still, the new patriarchate never became a force in church politics or achieved the prominence of the other major sees. Its decline began with the Persian attack on the city (614) and its conquest by the Arabs (638), when most of the bishoprics disappeared. Vacancies, as in the other patriarchates under Muslim rule, were frequent, although in 1027 an agreement with the caliph allowed the installation of imperial candidates. Jerusalem kept direct relations with Rome, and, during and after the events of 1054, was not automatically anti-Latin. Nonetheless, with the arrival of the Crusades and the establishment of a rival LATIN PATRIARCHATE OF JERUSALEM, relations with the Latins gradually deteriorated. Many of the patriarchs during this period lived as exiles in Constantinople.

LIT. Papadopoulos, Hierosolym. G. Fedalto, “Liste vescolii del patriarchato di Gerusalemme I. Gerusalemme e Pa-
The chapter on the guild of the argyropratai in the 10th-C. Book of the Eparch refers frequently to chrysochooi; the relationship between the two terms is unclear. Chrysochooi were specifically prohibited from working in their own houses and had to set up their workshops on the Mese. They were also forbidden to purchase more than one pound of uncoined gold (bullion) at a time. Sjuzjumov (Bk. of Eparch 136) considered the chrysochooi jewelers and the argyropratai inspectors who controlled the sale of precious metals, jewelry, gems, and so forth, while Stöckle thought that the argyropratai were both jewelers and inspectors.

JEWELRY (κόσμος, lit. “ornament”). Byz. jewelry continued Greco-Roman traditions but was also influenced by Eastern decorative and nonfigural types, with an admixture of local elements wherever in the empire it was produced. The forms of objects made by jewelers in Rome, Constantinople, Athens, Antioch, or Alexandria thus varied considerably. Byz. jewelry may generally be distinguished by its extensive use of color, usually achieved with gems or enamels. In his preface to the best-known medieval handbook on artistic technique, the Western monk Theophilus (ca.1110–40) specifically associates color with the Greeks. This 12th-C. notice is late witness to a tradition reverting to the 3rd or 4th C., when niello, seems first to have been applied to gold and silver. But the association of gems and ornament with Byz. in the Western mind persisted at least down to the time when German envoys to Constantinople in 1196 pointed out that they were not “worshipers of ornaments and garments secured by brooches suited only for women” (Nik.Chon. 477.82–83).

Our knowledge of Byz. jewelry comes from examples found in treasures, accounts of items that have not survived, and illustrations in mosaics, painting, textiles, metalwork, and MS illumination. The procession of female saints in the mosaics of S. Apollinare Nuovo, Ravena, shows matching sets of hair ornament, earrings, necklace, bracelet, rings, and belt fittings. Gold plaques and gems were sewn on clothing, and antique coins were incorporated into other items.
of personal adornment. The importance of precious stones is indicated by their frequent imitation in the borders of miniatures in MSS and on mosaic pavements and wall panels as much as by the jeweled walls in depictions of the heavenly cities of Bethlehem and Jerusalem, and gem-encrusted thrones, crosses, liturgical vessels, and book covers.

Byz. jewelry is further characterized by the extensive use of Christian iconography and sacred objects, worn thus for protection as well as ornament. These pieces could incorporate an inscription or symbol, an image, a cross or Christogram, or be carried in an enkolpion, an invention of the Byz. Jewelry was not only an outward symbol of faith or wealth but also served as a badge of office. Special fibulae, rings, and belt buckles, awarded by the emperor and often inscribed, indicated status within the civil service or the army. Belisarios rewarded his soldiers with arm-bands and torques (Prokopios, Wars 7.1.8). Jewelry was also made to adorn and protect animals. Floor mosaics show race horses wearing jeweled trappings and hunting dogs with gem-studded collars. Apotropaic devices (e.g., ivy leaf, swastika, sunburst, crescent) as well as Christian symbols decorate charms and amulets worn by animals.

A great variety of techniques was used in the manufacture of jewelry. Gemstones were mainly polished. They might then be drilled and/or carved as a cameo or engraved as a seal. Metal might be cast or worked in repousse, then have added niello, enamel, or engraving, or be cut into opus intarsiale. It could also be made into a simple wire, which was worked as filigree or drawn through successively smaller holes in a wooden or metal board. This wire was used in fine gold work and incorporated into textiles.

While members of the imperial court adorned themselves with crowns, necklaces, great ropes of pearls, and large gems, ordinary people also had access to the work of jewelers. Their products, known from archaeological excavation, were usually made of gilded bronze imitating gold or had colored glass paste simulating gems in rings and earrings. Bracelets in this category tend to be fairly plain; there are surprisingly few traces of necklaces, with the exception of fragments of chain and ornaments, such as amulets or crosses, that may have been suspended on the chain. Glass bracelets—a form of jewelry probably invented for the mass market in Roman times or intended as a substitute for ivory or precious metal—are found in large numbers, sometimes in contexts that suggest local manufacture.

Because of the mixture of styles in many pieces, dating is often hard to establish. Gems were often set into a new ring or even recarved. Antique coins included in jewelry provide only a terminus post quem for dating. An inscription on an item often helps, as may controlled excavation. Representations of jewelry in datable works of art can also provide a base for comparison.

In very broad, general terms, the evolution of Byz. jewelry was from simple to complex, from light to heavy, from small to large, but these criteria must be applied with care. Earrings started out in the 4th C. as simple hoops and, by the 10th–12th C., were open filigree work with multiple projections in a three-dimensional form. They were complex but light. Bracelets changed from narrow, solid, or cutwork bands to wide, hinged bands, sometimes worked in repoussé. Necklaces developed from simple chains or strands of beads, made of polished and drilled stones and pearls, to more complex forms with multiple hanging elements. Early gold and silver gem-mounts were made in an openwork technique; by the 11th–12th C. they were solid and rather heavy in appearance. In all cases, however, the combination of influences listed above must be studied along with techniques used in cutting stones by wheel or burin, types of enamel, working of metal (e.g., cast, opus intarsiale, granulation), and methods of working links in a chain. The study of this technology is still at a very early stage. When sufficient context is lacking, as is often the case with “mass-produced” work—the so-called costume jewelry of gilded bronze and glass—one can only try to fit such pieces as far as possible into this general typology.

JEWISH ART AND ARCHITECTURE. The influence of Jewish art and architecture on the history of Byz. art is a much debated problem. The fact that, in spite of Exodus 20:4, Jews had
developed artistic practices by the 1st C. B.C. allows the possibility that Jewish models helped shape Christian art, which first arose only in the late 2nd/early 3rd C. Key to the whole discussion has been the synagogue at Dura Europos (before A.D. 256), the only Jewish monument with an elaborate program of narrative and symbolic art. According to Weitzmann (K. Weitzmann, H.L. Kessler, The Frescoes of the Dura Synagogue and Christian Art [Washington, D.C., 1990]), the paintings at Dura were derived from an illustrated Septuagint, from which, in turn, came motifs and compositions in Christian art that strikingly resemble the Dura paintings. Since direct evidence of illustrated Jewish MSS in late antiquity is lacking, however, other scholars have inferred other means of transmission (oral or literary tradition, the tradition of monumental art itself, or of certain minor arts [finger rings], etc.) or have argued against the possibility of any influence at all. H. Brandenburg (q IntCongChrArch, vol. 1 [1978] 331–60), for instance, has described the Christian and Jewish arts of Late Antiquity as arising out of the *koinē* of the late Roman world, this common source accounting for their similarities. After the 6th C. evidence of Jewish artistic practices in Byz. virtually disappears.

—W.T.

**JEWISH LEGENDS, ILLUSTRATION OF.** Ever since the discovery in the 1930s of the synagogue at Dura Europos with its extensive decorative program of anthropomorphic religious scenes, art historians have enthusiastically debated the possible existence of biblical and nonbiblical illustration among hellenized Jews of late antiquity and its potential role in the formation of Early Christian Old Testament iconography. The accepted approach has been to isolate nonbiblical iconographic elements among Christian Old Testament picture cycles and to match them with their appropriate textual tradition within the vast body of Jewish legends. Thus, the hitherto unexplained “court official” going through a gate in the miniature of Joseph's promotion by Pharaoh in the Vienna Genesis (ed. Gerstinger, pl.32) is identified on the basis of Jewish legendary texts as Potiphar hurrying home to tell his wife of Joseph’s exaltation (O. Pächt in Festschrift Karl M. Swoboda [Vienna 1959] 219). Usually left unresolved, however, is whether the sources were visual or textual—that is, by way of lost Jewish art or by way of Jewish textual traditions adopted by and popularized among Christians. The Potiphar legend cited above, for example, is attested in several Christian authors whose works were popular at the time and in the region (Syria-Palestine, 6th C.) where the Vienna Genesis may have been produced (H. Näf, Syrische Josef-Gedichte [Zurich 1923] 73–75).

—G.V.

**JEWISH LITERATURE** used by Byz. Jews and Christians included the Hebrew Bible, Hellenistic apocrypha—in Judeo-Greek translation—Jubilees (Little Genesis), and Old Testament and some New Testament pseudepigrapha. Along with the Greek works of Josephus and Philo, these influenced subsequent Byz. language, style, and culture. After A.D.70, Jews wrote down and further developed their oral tradition, which was encyclopedic for internal Jewish intellectual and social concerns. This Hebrew and Aramaic literature included Mishnah (2nd-C. code) and Talmud (3rd–5th-C. commentary); responsa; midrash (ethical and historical folklore, e.g., “Throne and Hippodrome of King Solomon”); apocalypse (e.g., 10th-C. Hazon Daniel, which comments on emperors from Michael III to Constantine VII); mystical works (e.g., Eben Saphir, a 14th-C. kabbalistic and Aristotelian commentary on the Bible that includes contemporary historical data); numerous commentaries on the Bible; and oral tradition by Rabbanite and Karaite Jews. This extensive literature contains valuable linguistic and historical material for Byz. studies, esp. the demotic translations of biblical books, bilingual dictionary aids, and extant marriage contracts. Of particular interest are Megillat Ahimaa, an 11th-C. family chronicle from southern Italy in rhymed prose; Sepher Yosippon, a unique 10th-C. history of ancient Israel based on the Vulgate and Hegesippus, which Judah ibn Moskoni of Ohrid reedited and expanded (ca.1356); a Hebrew translation of pseudo-Kallisthenes' Alexander Romance; and
abbreviated Hebrew translations of nonextant Byz. chronicles that preserve unique historical data. A prolific religious and secular poetic tradition followed Jewish patterns and contemporary styles. Secular studies include monographs on medicine, astronomy, mathematics, and philosophy, esp. by Shabbetai Donollo (913–ca.982) and Shemaryah Ikrītī (1275–ca.1355), who castigated Byz. philosophers for failing to understand Creation. A number of valuable historical sources are extant, such as Benjamin of Tudela and Jacob ben Elia’s unique account of 13th-C. persecutions in Epipos and Nicaea.

**Jews** (Ἰουδαῖος, Ἰβραῖος), also called Israelites, term used for the ancient inhabitants of Judah and Israel as well as for Byz. citizens who practiced Judaism. Byz. Jewish history has two aspects: the history of the Jews in Israel, where their autonomy was recognized, and that of the Jews of the Greek-speaking diaspora, where they formed an integral part of the Byz. population.

**The Jewish Community of Israel.** This community was organized under a bureaucracy of scholars headed by a nasi, called in Greek “patriarch of the Jews.” After the destruction of Jerusalem (A.D.70), Jews established new administrative centers in the Galilee (Usha, Sephoris, Tiberias), where they flourished until the 7th C. Christian-Roman legislation periodically restricted their right to hold slaves, proselytize, build new synagogues, work for the government, teach in public institutions, or serve in the army. These discriminatory laws, summarized in the codes of the 5th–6th C. and epitomized in the Ecloga and Basilica, were designed to limit the Jews’ enfranchisement, separate them from Christians, and support the view that God rejected the Jews. Rabbinic leadership also erected social barriers to preserve the Jewish community. Christian imperial policy in Palestine paralleled these restrictions and emphasized the church’s claim as the New Israel: churches and monasteries were built on biblical holy sites, and Hadrian’s ban on Jewish settlement in Jerusalem or its environs was periodically enforced. During the Muslim conquest, Sophronios still argued that Jews had no right to settle in Jerusalem; they were allowed, however, to mourn one day a year (9th of Ab) at the ruins of the Temple (the Byz. city dump) as a demonstration of God’s rejection of Old Israel.

The ability of the Jews to survive the Christian onslaught in their own land slowly deteriorated despite sporadic revolts (most important of which was in 351) and an attempt to rebuild the Temple with Julian’s permission. In 429 the office of nasi was recognized as vacant by Theodosios II; as a result the autonomous central Jewish leadership in the empire was effectively abolished. Justinian I clashed with the Jews on many fronts. His Code repeated a number of Jewish liabilities and introduced new restrictions. He also interfered with Jewish religious practices (Nov.146; Prokopios, Buildings 6:11:22). Jews fought alongside the Vandals and the Ostrogoths against Byz. attempts to reconquer the Western Empire; they participated also in the Nica revolt in Constantinople and the rioting of 580. Justinian ended their autonomous rule of Jotaba (ca.535), which had lost its independence under Anastasios I (498). They rebelled in 556, again in 578 (together with Samaritans), and assisted the Persian conquest of Palestine in 614–17. Herakleios slaughtered many in revenge after his reconquest and even forcibly baptized Jews, despite his promise to Benjamin of Tiberias not to harm them.

**The Jewish Diaspora.** The Jews flourished in both commercial and administrative centers and in smaller locales. Their quarter, called Hebraike, was usually located near the market and running water. Many of these communities dated from the Hellenistic period, for example, Berroia in Macedonia, Patras, Thessalonike, Crete; many are known from southern Italy: Bari, Oria, Siponto, Venosa, Otranto. Jews also lived in Ioannina, Ohrid, Kastoria, Adrianople, Serres, Mistra, Nicaea, Attaleia, Ephesus, and Philadelphia. Benjamin of Tudela visited some 25 Byz. Jewish communities and describes Patras, Krissa, Thebes (2,000 inhabitants), Corinth, Chalkis, Armiyo, Drama, Kallipolis, Constantinople (2,500 inhabitants), and the islands of Lesbos, Chios, Samos, and Rhodes. Modern scholars extrapolate Benjamin’s unique population data (approximately
9,000) to a Byz. Jewish population ranging from 12,000 to 100,000 based on differing interpretations of his numbers (individuals, heads of families, families, or guild members) and adding locales not mentioned. In Constantinople Jews lived at various times along either shore of the Golden Horn (e.g., Hebraike shala and Pera) and in the Chalkoprateia and Vlanka quarters. Under the Palaiologoi, some Byz. Jews obtained Venetian and Genoese privileges and lived in their quarters. Jews worked as dyers and weavers (silk and wool), tanners, furriers, smiths and glassmakers, wholesale and retail merchants both international and local, real estate agents, physicians, translators, scribes, and agriculturalists.

The Jewish communities, led by rabbis appointed with government consent, enjoyed autonomy in religious and social affairs. The rabbi was chief judge and spokesman for the community and in larger cities was assisted by various functionaries (e.g., teachers, ritual slaughterers) supported by a communal tax system. The community supplied social services: education, care of the sick, dowries for orphans, burial in a Jewish graveyard, etc. Part of the communal taxes went to the government, although whether there was a special Jewish tax is undetermined despite much scholarly speculation. Financial support to the nasi was diverted after 429 to the imperial treasury and called aurum coronarium. When and if this tax was abolished is uncertain. Jews contributed to the archiphereikitai of the Sanhedrin in Israel, which flourished until the Muslim conquest, and to the 10th- and 11th-C. academies.

Jews regularly immigrated into the empire from Muslim and western Christian lands. These immigrants rapidly became culturally assimilated and strongly identified with Byz. culture, although there was occasional social tension with native Jews. There was close contact with Khazaria, whose Jewish kings welcomed refugees from Romanos I's persecution of Jews, and later with Crimean Karaites. The attitude of Jews toward Byz. was ambivalent. Predating Christianity in many Greek-speaking areas, they now lived among a triumphant, arrogant, and multiethnic Christian population whose literature, religion, liturgy, and art derived in part from Jewish sources. They experienced anti-Semitism through imperial policy, intellectual snobbery, and ecclesiastical polemic. Byz. religious art, save for canonical Old Testament figures and scenes, confined representations of Jews to such pejorative contexts as among the Damned in the Last Judgment. There were Jewish scholars with whom Christians (e.g., Platon) studied privately and who occasionally responded through biblical commentary and liturgical verse; they were forbidden, however, to insult Christianity. Their doctors, skilled in Greek and Arabic medicine, treated the general population: an Egyptian Jew was physician to Manuel I. Yet Byz. ecclesiastics consistently denigrated Jewish doctors: even though 9th- and 10th-C. hagiography shows some respect for Jewish doctors, it expresses suspicion of their education and disdains for their religion.

Occasional debates with Christians are recorded; some may have led to conversion, which the church heartily encouraged. Still, few voluntary conversions are attested, the most famous being CONSTANTINE THE JEW; Makarios, spiritual adviser to Manuel II; and possibly ROMANOS THE MELODE. The Byz. church consistently opposed forced baptism of Jews (such as those effected by Herakleios, Leo III, Basil I, Romanos I Lekapenos) for theological reasons and upheld the right of Jews to practice their ancestral religion. Jews replied to imperial persecution by identifying with Esau/Edom, the biblical adversary of Israel. In nearly every century, but esp. during periods of international tension, there were messianic hopes for and occasional movements toward the repatriation of Jews to an independent Israel. The fall of Constantinople in 1453 was marked both by such messianic expectations and by a moving Hebrew lament for the city.

JOB ('Iàwà). To judge by the number of surviving MSS, the Book of Job, an account of the suffering of an innocent man, was read significantly more in Byz. than in the West. Origen led the church fathers in distinguishing three types of just man, represented by Noah, Daniel, and Job. A CATENA on Job was compiled, probably in the 6th-C. circle of Prokopios of Gaza. The COMMENDATIO ANIMAE
includes Job, and references to him in hagiography were frequent. For instance, the Life of St. JOHN ELEEMON (ch. 28) compared the saint to Job in his virtuous response to catastrophic loss. The monk Niketas patterned the opening of his Life of St. PHILARETOS THE MERCIFUL on the Book of Job (L. Rydén, 17 CEB, Major Papers [Washington, D.C., 1986] 542f).

**Representation in Art.** The scene of Job on his dung heap (Job 2:8) was widely illustrated, occurring already in the 4th C. (e.g., sarcophagus of Junius Bassus, died 359) and as the frontispiece to Job in the 7th-C. Syriac Bible of Paris (B.N. syr. 341) and the 10th-C. Bible of LEO SAKELLARIOS. It occasionally appears later in monumental art (e.g., Hagia Sophia, Trebizond). After the Psalter, Job was the most frequently illustrated Old Testament book in Byz. A large group of catena MSS were illustrated with an extensive cycle. These fall into an early group (Patmos 171; Vat. gr. 749; Venice, Marc. gr. 538, dated 905; Sinai gr. 3) and a more numerous group of 12th- through 14th-C. MSS. All contain a dense narrative illustration interspersed with the text of Job 1 and 2—the subject of lengthy comments in the catena—and a repetitive, formulaic treatment of Job’s discussions with his visitors. The miniatures in the first group, esp. Sinai gr. 3, treat the setting illusionistically, which suggests an early model; the Patmos Job may be a product of the years of Iconoclasm.

Job is usually represented as a patriarchal figure with long white hair and beard, cut short in due course (Job 1:20). His youthful appearance in the Leo Bible may be explained as a misunderstanding of this shaven-headed type. Job may also appear as an ancestor of Christ, even as a king, owing to the SEPTUAGINT conflation of Job with JObab, King of Edom (Job 42:17d, Gen 30:32–33).

**JOEL** ('Iωλ), compiler of a world chronicle beginning with Creation and ending in 1204; fl. first half of the 13th C. The work is basically a list of rulers (Jewish, Oriental, Roman, and Byz.), their length of reign, and the cause of their death. The period from the reign of Alexios I Komnenos to 1204 is treated most briefly; the rapid changes in ruler from Manuel I’s death to 1204 demonstrate the inevitability of the blow of divine justice in the form of the Latin conquest. Joel is perhaps also the author of an unpublished THRENOSES on the Latin conquest of Constantinople.

**JOHN** ('Iων), Semitic personal name (etym. “God’s grace”). The name appears in the Old Testament in the form Ioana (1 Chr 3:15, 26:3, etc.); in the New Testament, Johns play an important role, esp. JOHN THE BAPTIST and JOHN the apostle. From the end of the 4th C. onward we meet the name in Rome and Asia Minor (O. Seeck, RE 9 [1916] 1743–47; PLRE 1:459), at first infrequently—Ammianus Marcellinus does not mention a single John. Then the name acquired popularity. Sozomenos cites 11 Johns, including the Baptist and the Apostle—second only to EuSEBIOS (14); in Prokopios there are already 32 Johns, followed far behind by THEODORE (11) and PAUL (10). The name maintains its dominance in Theophanes the Confessor (67), but in Skylitzes.
(48) and Anna Komnene (14) John is second to Constantine, with 60 and 15, respectively. In the acts of Athos, however, it remains dominant: *Lavra*, vol. 1, encompassing the 10th–12th C., lists 90 Johns ahead of Nicholas (42) and George (41), while *Lavra*, vols. 2–3 (13th–15th C.) includes 350 Johns and 275 Georges. John was the third most common imperial name and the most frequently used by patriarchs of Constantinople (14 individuals). In panegyrics the typical epitaph of John was *charitonymos*, "named after grace"; another, "the son of thunder" (after Mk 3:18) was applied specifically to the apostle. By the 12th C., if not earlier, the composite Kaloioannes ("good John") was created.

A.K., A.M.T.

**JOHN**, apostle and saint; often called John the Theologian; feastdays 26 Sept., 8 May, and others. The son of Zebedee, he was considered to be the author of the fourth Gospel and of three epistles in the New Testament canon; already in the 3rd C. Dionysios of Alexandria had rejected the possibility of John's authorship of the Apocalypse (Book of Revelation). His Gospel was widely commented on: Origen compiled a lengthy commentary in order to refute the views of the Gnostics; he was followed by Didymos the Blind, John Chrysostom, Cyril of Alexandria, Ammonios of Alexandria, and Theodore of Mopsuestia. The major problem for exegesis was the difference between John and the three synoptic gospels, so that some doubts concerning its authenticity were expressed, esp. by the so-called *alogen*: Epiphanius of Cyprus censured this heresy and tried to show that the Gospels did not disagree. Nonnos of Panopolis compiled a metrical paraphrase of the Gospel of John. The epistles attracted less attention.

John was popular in hagiography and homiletics; numerous apocryphal acts as well as homilies survive, among others by pseudo-Chrysostom, Andrew of Crete, Cyril of Alexandria, and later writers such as Constantine Akropolites, Palamas, and Makarios Chrysokophalos. Byz. legend made John a grandson of Joseph the Carpenter and thus nephew of Jesus; after Mary's Dormition he preached throughout Asia Minor and was exiled by Domitian to the island of Patmos. Frustrated by the apostasy of his disciple (a local bishop who became a robber), John attempted suicide by poison, but the cross he wore negated its effect. From Patmos John went to Ephesus where he worked miracles and died peacefully. At least eight churches in Constantinople were dedicated to John (Janin, *Églises CP* 264–70).

**Representation in Art.** John has two guises in art: young and beardless as the beloved disciple; white-haired, balding, and long-bearded as the visionary evangelist. As the disciple, John appears in scenes of his calling, his mother's plea, the Transfiguration, Last Supper (see Lord's Supper), Crucifixion, and at Christ's tomb. In this guise, he is indistinguishable from the young disciple who witnesses Christ's actions in countless scenes. John barely figures in Acts illustration and his further imagery draws on apocrypha: his prominent role in the Dormition of the Virgin; his voyage to Patmos (Codex Ebrnerianus, fol. 302v), where he dictated his Gospel under divine inspiration; and his self-burial at Ephesus (Menologion of Basil II). As an evangelist, John is shown seated before a desk (see Evangelist Portraits) or standing and dictating to his secretary, Prochoros—an image also drawn from his apocrypha. Consistently in the latter composition and sometimes in the former, the divine inspiration he receives is shown by an arc of Heaven or the Hand of God. In Paris, B.N. gr. 93, the hill behind him becomes a mandorla, stressing his ecstatic condition. The frontispiece of a lectionary in the Skeouphylakion at Iviron, Athos, likens him to Moses on Sinai (Xynigoroupolis, *infra*, pl.54). Only rarely (e.g., Moscow, Univ. Lib. 2280, fol. 347r, of 1078) is he portrayed as the author of the Apocalypse.

—J.L., A.K., A.W.C.

**JOHN I**, patriarch of Antioch (429–441/2). Before his elevation John had been a student at Antioch with Nestorios. Although John disapproved of his friend's repudiation of the title Theotokos and even wrote to him counseling moderation, he supported him against Cyril of Alexandria in the ensuing controversy over Nes-
TORIANISM. John’s unintentionally late arrival for the opening of the Council of Ephesus (431) prompted Cyril to proceed with Nestorios’s condemnation. This resulted in a countercouncil, in which the Antiochian delegation headed by John had Cyril condemned. The moderates of both parties, however, desired peace and, in 433, signed the so-called Symbol of Union that ended the schism. In effect, John implicitly agreed to the condemnation of Nestorios in return for Cyril’s toleration of Antiochian terminology regarding the duality of the nature of Christ. Also, both men accepted the legitimacy of the term Theotokos. Nevertheless, their more extreme followers rejected the settlement. The resulting tension led directly to the “Robber” Council of Ephesus (449) and the Council of Chalcedon. Some of John’s correspondence with Proklos of Constantinople, Cyril, and Theodosios II dealing with the Nestorian dispute has survived.

ED. Letters—ACO 1,1,1:93–96. 119; 1,1,4:7–9. 33: 1,1,5:124–35; 1,1,7:84, 146, 151–61; III, IV, passim.
-A.K.

JOHN I, pope (from 13 Aug. 523); born Tuscany, died Ravenna 18 May 526. In 525/6 the Ostrogothic ruler Theodoric the Great sent John to Constantinople as head of a delegation to protest imperial measures against the Arians. After the end of the ARAKIAN SCHISM Emp. Justin I sought rapprochement with Rome and arranged a spectacular welcome for the pope: the wording of the Liber pontificalis humilavit se pronus suggests that the emperor performed prosynesis. John celebrated the Easter liturgy in Constantinople, while Patr. Epiphanius (520–35) was relegated to a secondary role in the service. All of this made Theodoric suspicious, and, despite the success of John’s mission, he detained the pope in Ravenna where he died several days later. The recorded details of John’s imprisonment and martyrdom appear to be fictitious.

-A.K.

JOHN I, archbishop of Thessalonike, politician, writer, and local saint; died ca.630 (Stiernon) or ca.649 (Jugie). John participated in the defense of Thessalonike against the Avars and Slavs and was responsible for introducing the feast of the Dormition to that city. He wrote the first version of the miracles of St. Demetrios and several homilies, among which those on the Dormition were the most popular. In them John, having promised to remove all heretical elements from the narrative of Mary’s death, placed an unusual emphasis on the filial affection of Christ for his mother. He also stressed St. Peter’s primacy over the other apostles.

-A.K.

JOHN I DOUKAS, sebastokrator of Thessaly (1267/68–1290); born Epirus ca.1240?, died 1289 or earlier. He was the illegitimate son of Michael II Komnenos Doukas of Epiros and half-brother of Nikephoros I Komnenos Doukas of Epiros. Married to the daughter of the Thessalian VLAH chieftain Taron, John led a contingent of Vlach troops to support his father at the battle of PeLagonia (1259). According to George Akropolites (Akrop. 170,5–9), John surrendered to the Nicene commander after the Epirot army fled in despair. Pachymeres (Pachym., ed. Failer 1:119–21), on the other hand, relates that John treacherously agreed to attack the Latin forces after being insulted by William II Villehardouin. After the battle John repented his actions and returned to his father.

Upon Michael II’s death (1266 or 1268), John’s rule over Thessaly was confirmed, with its capital at Neopatras. Although Michael VIII Palaiologos married his nephew to John’s daughter and granted John the title sebastokrator in the effort to secure an alliance, John became an implacable enemy of the Byz. emperor. He defeated an imperial army sent to besiege Neopatras (1272–73), entered into commercial agreements with the Angevins, and ardently opposed the UNION of the CHURCHES. He convened a synod at Neopatras in 1277, attended by anti-Unionist exiles, which anathematized Michael VIII and Patr. JOHN XI Bekkos (R.-J. Loeneretz, OrChP 31 [1965] 374–408). It was on a campaign against John in 1282 that Michael VIII fell ill and died. The Church
of Porta Panagia near Trikkala, built by John in 1283, contains portraits of the sebastokrator and his family (A. Orlandos, ABME 1 [1935] 8, 33–35).

JOHN I TZIMISKES (Τζιμισκής), emperor (969–76); born Chozana, Armenia, ca.925, died Constantinople 10 Jan. 976. John was a general of Armenian origin; according to Leo the Deacon (p.92.1–5), his name was an Armenian version of the Greek Mouzakites, meaning “of short stature.” He was related to the Kourkouas family; his mother was the sister of Nikephoros II Phokas; and his first wife Maria was the sister of the magistros Bardas Skleros. John first distinguished himself under Constantine VII by capturing Samosata in 958. He was the staunchest supporter of Nikephoros II but later changed sides. Head of an aristocratic coup, he murdered the emperor on the night of 10/11 Dec. 969 with the help of Nikephoros’s wife Theophano. Yielding to the demands of Patr. Polyeuktos, John banished Theophano; he then married Theodora, Constantine VII’s daughter and the aunt of the legitimate emperors, Basil II and Constantine VIII. Acting in close concord with the church, John cancelled Nikephoros’s legislation against church land ownership. Two rescripts (sigillia) of 974 and 975 manifest John’s flexible policy toward monastic land ownership: although his fiscal functionaries proclaimed the necessity of restoring “to the emperor” state-controlled peasants who fled to the dynatoi and onto church property, they permitted a number of peasants to remain on monastic proastelia “by virtue of previous chrysobulls.”

John conducted an energetic foreign policy: he repelled Svjatoslav from Bulgaria (971), subduing part of this country; concluded an alliance with Otto I (972); and fought successfully in Syria. In 970/1 the patrikios Nicholas, a eunuch, defeated the Fatimids army near Antioch (P. Walker, Byzantium 42 [1972] 431–40), and in 975 John led a victorious campaign into Syria, forcing Damascus to pay tribute and capturing Beirut. The unsuccessful siege of Tripoli, however, was a setback, and John’s claim of conquests in Palestine (in a letter to the Armenian king Ašot III) does not find support in Arabic sources (P. Walker, Byzantium 47 [1977] 301–27). Matthew of Edessa preserves a legend that at the end of his reign John returned the crown to Basil II and retired to a desert monastery (M. van Esbroeck, BK 41 [1983] 71); on the other hand, there were rumors that he had been poisoned by Basil the Nothos.

Apart from his coins, only one portrait of John is known. The Madrid Skylitzes MS, however, richly illustrates his career with 41 miniatures, including his conspiratorial arrival at the Boukoleon palace, arranged by Theophano, and her subsequent expulsion—both by boat. John’s triumphal entry into Constantinople in 971 (Grabar-Manoussacas, Skylitzès, fig.221) shows him accompanied by a horse-drawn icon of the Virgin.

JOHN II, bishop of Jerusalem (386/7–417), succeeding Cyril of Jerusalem; born ca.356. He was a monk in Jerusalem before his election to the episcopate. His Origenist sympathies were denounced by Epiphanius of Salamis, both in a sermon delivered in his presence in Jerusalem in 392 and in two letters, one of which survives in a Latin translation made by Jerome. His pro-Origenist position also caused John to break with former friends such as Theophilos of Alexandria when the latter switched from support to condemnation of that belief.

John may be the author of the five Mystagogical Catecheses, addressed to neophytes in Easter week, that form part of the collection of Cyril of Jerusalem’s 24 catechetical lectures. One MS does attribute them to John, others give joint credit to Cyril. Possibly John revised these lectures, which Cyril had written and delivered.

JOHN II, metropolitan of Kiev (ca.1077–89), of Greek origin. A writer on canon law, John was praised in the Povest’ vremennykh let for his
erudition (PSRL 1:208); the belief that he was the uncle of Theodore Prodromos is probably incorrect (A. Kazhdan in Okeanos 357f; S. Franklin, BS 45 [1984] 40–45). John addressed a letter (with a treatise on the azymes appended in the Greek version) to the (anti-)pope Clement III (1080–1100) and wrote a set of Canonical Responses to the monk James. The letter focuses on Latin "innovations," mainly as listed in the 867 encyclical of Photios (Saturday fasts; the eating of cheese, eggs, and milk during Lent; celibate clergy; confirmation exclusively by bishops; the filioque), but with additional emphasis on the azymes. The tone is firm but conciliatory. John’s Canonical Responses treat miscellaneous practical difficulties encountered by the propagandists of Byz. Christianity in Rus’; pagan customs in public and private life, marriages and other contacts with non-Orthodox foreigners, and the proper behavior and organization of the clergy. John’s main source is the Nomokanon of 14 Titles, but the suggestion that he was responsible for its translation (R.G. Pichoja, ADSV 11 [1975] 133–44) is tenuous. Some scholars believe that John composed the extant office to Boris and Gleb.

—S.C.F.

JOHN II KOMNENOS, emperor (from 15 Aug. 1118); born Constantinople 13 Sept. 1087, died near Anazarbos 8 Apr. 1143. John succeeded his father Alexios I against the wishes of Irene Doukaina and Anna Komnene; the latter conspired on behalf of Nikephoros Bryennios. Byz. historians describe John’s reign only briefly. His domestic policy is little known. Austere in manner, John tried to regulate even the costume of his courtiers; he was nonetheless tolerant and eschewed maiming as a punishment. He entrusted military command to noble relatives but put civil administration in the hands of men of obscure origin, such as John of Poutze and Stephen Meles, the logothetes tou dromou. John centralized the ad-

ministration of the army and navy and for this purpose charged the state treasury with maintaining vessels and their crews, previously the burden of the maritime regions (Lemerle, Agr. Hist. 234–36). He founded the monastery of the Pantokrator and wrote its typikon. The dynastic sense that underlay this foundation also prompted other works, including a lost mosaic of John mourning his dead father whose victories were depicted (Magdalino-Nelson, “Emp. in 12th C.,” 126–30). A mosaic in Hagia Sophia portrays John, his wife, Irene, and, to one side, his son, Alexios.

John capitalized on Alexios I’s military successes. Most of John’s wars were in Anatolia, esp. against the Danismendids (he captured Kastamonu and Gangra after the death of Ghazī in 1134). He subdued the Rubenids of Cilicia (1137) and made Raymond of Poitiers his vassal (1138), but the ensuing campaign from Antioch to inner Syria failed before the walls of Aleppo and Shayzar. In the northwest, John crushed the Pechenegs in 1122 (not 1123 as in B. Radojičić, ZRVI 7 [1961] 178) and defeated the Serbians and Hungarians in 1127–29 (not 1125 as in Radojičić, 182f). He attempted to annul Venice’s privileges but in 1126 was forced to yield to a Venetian expedition. Theodore Prodromos was John’s official eulogist. Allegedly John died in a hunting accident, but one cannot rule out the possibility of assassination (R. Browning, Byzantium 31 [1961] 229–35).

JOHN II KOMNENOS. Portrait of the emperor and his wife Irene; mosaic, Hagia Sophia, Istanbul.
JOHN III KOMNENOS, emperor of Trebizond (1280–97); born ca.1262/3. died Limnia, near Trebizond, 16 of 17 Aug. 1297. Son of MANUEL I KOMNENOS of Trebizond, John succeeded his brother GEORGE KOMNENOS as ruler of Trebizond. He initially incurred the anger of the Byz. emperor Michael VIII by styling himself “emperor and autokrator of the Romans.” Michael sent frequent embassies to the “ruler (archegos) of the Lazes,” as Pachymeres (Pachym., ed. Bekker 2:270.9) calls John, to criticize his wrongful use of the imperial title. In 1282 John went to Constantinople and married Michael’s daughter Eudokia, receiving the Byz. title despotes; he then changed his imperial title to “emperor and autokrator of all the East, the Iberians, and the transmarine provinces.” The chief events of John’s reign were the siege of Trebizond in 1282 by the Georgian king David IV (V) and the brief usurpation of the throne in 1284/5 by John’s half-sister Theodora (M. Kuršanskis, REB 33 [1975] 187–210). John was a patron of the SOUMELA monastery.

LIT. Miller, Trebizond 27–32. PLP, no.12106. –A.M.T.

JOHN III, patriarch of Antioch (4 Oct. 996–July 1021). His surname Polites perhaps derives from the fact that he was a native of Constantinople. Originally chartophylax of Hagia Sophia, he was elevated to the see of Antioch by Emp. Basil II following the abdication of Agapios (978–96). Since John feared that, before he reached his sede, his predecessor might attempt to recover the throne, he agreed to be consecrated in Constantinople and thus to renounce (in writing) his right to be ordained by the metropolitan of Antioch. This questionable act, by which Antioch became ecclesiastically subject to Constantinople, was later revoked by Patr. Peter III, but it is not known with what success. The practice probably continued.

During his tenure John also chose to surrender to Orestes, patriarch of Jerusalem (986–1006), the annual sum of money sent by the church of Georgia to Antioch for the preparation of the Holy Chrism, which the Georgians now received from Jerusalem. John did not, however, abandon his privilege of confirming the KATHOLIKOS of Georgia, or the right to be commemorated by the Georgian episcopate in the liturgy. An extract of John’s only known work, Responda de baptismo, addressed to Theodore of Ephesus, was published by Allatius. This reply was probably written while John was still chartophylax; normally, canonical questions requiring no synodical decision were referred to this official.

ED. L. Allatius, De aetate et interstitii in collatione ordinum (Rome 1638) 215.

JOHN III SCHOLASTIKOS, patriarch of Constantinople (31 Jan. 565–31 Aug. 577); born Sirnis near Antioch ca.503 (L. Petit, DTC 8 [1947] 830), died Constantinople. First a lawyer (scholastikos) in Antioch, in 548/9 he was sent to Constantinople as apokrisarios of the patriarch of Antioch. Justinian I, shortly before his death, selected John to replace EUTYCHIOS as patriarch. John crowned Justin II and supported his policy. John of Ephesus presents the patriarch as an eager anti-Monophysite who ordered persecution of the Monophysites through all the provinces; John of Nikiu, on the other hand, ascribed to him a book, Mystagogia, that allegedly dealt with a single substance of Christ, both divine and human (Beck, Kirche 423). Photios (Bibl., cod.75) mentions a catechetical sermon of John on the Trinity, delivered in 567/8, that was refuted by John PHILOPONOS; the doubts of W. Kroll (RE g [1916] 1792) concerning this evidence are not valid. Probably while still in Antioch, John composed the SYNOGOGE OF FIFTY TITLES. Haury (infra) identified him with John Malalas on the basis of the similarity in names, origin, and scanty biographical data. Although possible (Hunger, Lit. 1:314ff), the identification is far from certain.

JOHN III VATATZES, emperor of Nicaea (from ca.15 Dec. 1221); born ca.1192, died Nymphaion 3 Nov. 1254. He married Irene, daughter of THEODORE I LASKARIS, and ca.1244 Constance
JOHN IV KOMNENOS, emperor of Trebizond (1429–1459/60?); born before 1403 (Kursansiskis) or ca.1404/5, died 1460. Son of Alexios IV Komnenos and Theodora Kantakouzene, as a youth he murdered his mother's suspected paramour and rebelled against his father. He then fled to Georgia, where he married the daughter of King Alexander I (1412–42). In 1427 he went to Kaffa and in 1429 returned to Trebizond where, with Genoese assistance, he overthrew his father and had him assassinated (V. Laurent, ArchPon 20 [1955] 138–43). John's reign was preoccupied with defending Trebizond against the continuing onslaughts of the Turks, both Turkmans and Ottomans. He evidently favored union with Rome in hopes of Western assistance against the Turks (A. Bryer, ArchPon 26 [1964] 395f.). After the fall of Constantinople, the Ottomans attacked Trebizond by land and sea in 1456 and forced John to pay tribute to Mehmed II. By his second wife, a Turk, John had a daughter Theodora whom he married to Uzun Hasan, chief of the White Sheep Turkmans, in exchange for the Turkoman pledge to defend Trebizond against the Ottomans (M. Kursansiskis, ArchPon 34 [1977–8] 77–87).
