Congrats, you've installed your first preset.

Repeat this step for every preset (7 in total).

Yes it takes a little effort but once installed, you can use the presets easily to edit your photos in one-click. After applying the preset you can still make your own additional edits or changes.

IMPORTANT! Save the download file or link somewhere on your computer or in a note in your phone so that you can always find it back in case you need to install the presets again. For example when you buy a new phone.

Installation tutorial

Time to have fun and start editing with your presets!

1. Add a photo to Lightroom and swipe right and click on **'PRESETS'**

2. You can find your presets in the folder **''USER PRESETS'**

3. Apply the preset you like most and edit more if you like.
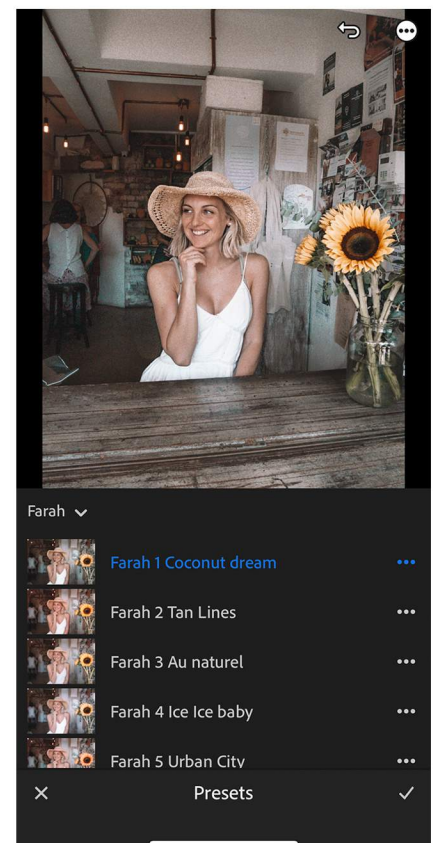

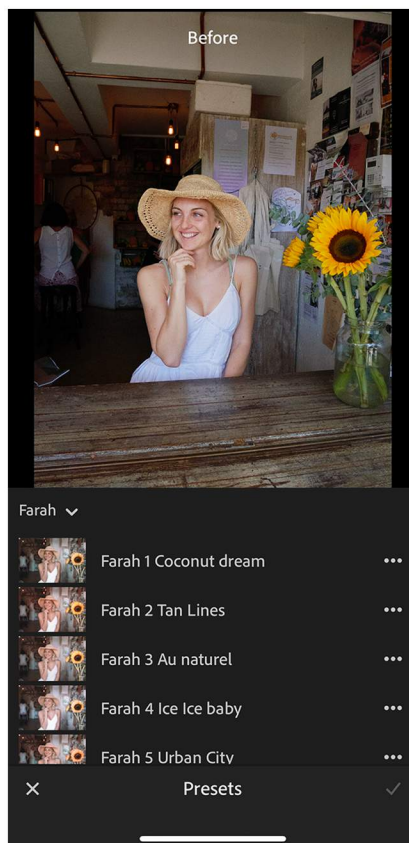

Use #Farahpresets to make a chance to get a shoutout!
