

# Portable Water Filter System

Most of your better portable water purifiers get rid of 99% of all toxic heavy metals like fluoride, chlorine, aluminum, radiation, mercury, lead and other chemicals like glyphosates from pesticides, fungicides, herbicides and chemicals that are allowed to be in our “safe” drinking water. You absolutely need to have your tap water filtered, and getting your own portable water filter will allow you to be healthier and always have access to clean drinking water for yourself and loved ones.

# Water Filter System Reviews

## Gravity Water Filters

Gravity Water Filters are portable water filters that can be used anywhere you are. These are some of the best portable water filters you can buy because they filter out so many toxins and make your water from any source, into highly purified clean drinking water. Some even produce alkaline water.

I love the Big Berkey, they have smaller portable water filter models as well, depending on your needs. Great for home gatherings and parties as well. Highly durable and easy to use and clean too.

## Pitcher Water Filters

There are many types of Pitcher Water Filters that are portable and easy to use. These are probably the easiest to use and clean, and are great for filtering tap water into healthy drinking water. Some even produce alkaline water.

# Zeolite Water Filters

Zeolite Water Filters are RO based filters that have the added benefit of Zeolite. Zeolite is a natural alkaline mineral that traps radiation, fluoride and heavy metals. It also has the unique properties that it stops viruses cold and is also a natural cancer preventative and holistic treatment. These are powerful filters for those who want to best you can get and actually want to improve their health by leaps and bounds.

Portable Water Filter

## Emergency Water Filters

Every home should have an emergency water filter kit. If something happens and they have to shut off your water (or even electricity) for any length of time you need to be able to have a good way to keep fresh drinking water available for yourself and your family.

I recommend keeping a few 5 gallon water bottles on hand and a good filter kit to store water for any emergency. A good drum type storage water filter can do the job and buy you a lot of piece of mind if it ever hits the fan!

## Portable Water Filter

And also keep a lifestraw handy in one of your first aid kits or drawers so if you have to run out the door you will have something that you can get by with for the mean time!
