## Flower fertilizer

METROP MR2 is a concentrated liquid fast acting flower fertilizer for the flowering and fruiting phase of plants and trees, universally developed for cultivation in pots, the open ground and in hydroponic systems.

In order for the plant to produce large, full flower buds, the plant needs bloom nutrients with a high potassium content.

This high potash fertilizer allows the plant to produce large flower and fruit buds.

Plants in the fruiting phase have a high requirement for Potash because most Potassium in a plant or tree is in the fruit.

The optimum phosphorus-potassium content for maximum fruit thickness is 1:2. Twice as much potash than phosphor.

A fertilizer with a high potassium content in combination with a bloom stimulator ensures more fruit development.

METROP MR2 contains 40% Potash against 20% Phosphor.

Due to the high potassium content, MR2 makes your fruit buds fuller and healthier and the fruit tastes much better.

An additional pk 13 14 fertilizer is no longer necessary.

Metrop MR2 contains many trace nutrients for the production of plant-specific phytonutrients, enzymes, hormones and vitamins.

All this makes Metrop MR2 the best fertilizer for fruit trees.

NPK 10-20-40+TE

[Metrop MR2 is a high concentrate flower fertilizer.](#)

- Max 100ml per 100L water - Hydroponics/potting soil

- Max 3Litre per Ha - Agriculture
