Summary.

The technology with its digital currency is well established. Blockchain first appeared in 2008 because confidential transactions over the Internet required enormous trust between buyers and sellers.

As we read more about blockchain, I realized that it has enormous potential as a tool for the common good. Unfortunately, little has been written about the relationship between blockchain technology, ethics, and human rights.

It is a fact that technology has permanently changed our culture and even changed our brains, for better or for worse. The Internet sees an influx of new users from all over the world who consider it one of the most significant innovations of humankind.

Then, what if we as humans use technology for something more extraordinary, for example, charity / nonprofit activity? Charities have the opportunity to engage with several new donors. Looking across borders, fundraising platforms that accept cryptocurrencies are the most accessible first place to look for charities.

Blockchain for humanity.

However, Nonprofits face severe challenges with trust: About a third of Americans do not trust charitable groups to spend their funds well, and more than 60% of people worldwide do not believe that groups can accomplish their mission.

What if we focused on implementing blockchain for ethical and human rights purposes – perhaps even more importantly? Can we make a better one that creates a humane environment?

Problem

Blockchain
for humanity.

The main concerns in charitable giving are transaction fees charged on donations, potential corruption by the mediators administering funds and services, and lack of accountability within nonprofits and other NGOs regarding how the money is spent.

Things are similar regarding social sector funding, and the real impact can be vague and hard to track. Along with the lack of transparency, transaction costs are usually high.

Problem Keyword

Blockchain
for humanity.

TRUST

COMMUNICATE

IMPACT

The major problem with the charity in three simple word.

Computers are incredibly fast, accurate, and stupid — humans are incredibly slow, inaccurate, and brilliant.

Together they are powerful beyond imagination

The Solutions

Blockchain technology is primarily designed to eliminate corruption and opacity through a long transaction process that is hard to track.

Blockchain technology offers a new way of record-keeping that cuts out mediators and centralized locations. This radical change could make all kinds of transactions cheaper, safer, faster, and more democratic.

Blockchain
for humanity.

What is HUMAN Project

Blockchain
for humanity.

We are Humanize Human and call ourselves The Human Project, a Blockchain-enabled transparent donation platform. We unlock the power of blockchain and make technology work for people.

Our project is the \$HUMAN token with our HUMAN App, and it is an autonomous fundraising platform built for charity. We aim to restore trust in the online donation model and address people's concerns about trust and the impact of the conventional donation. And the misuse of their data and the potential for hacking. All personal information is stored on the blockchain and can only be accessed by charities with donor permission.”

What is HUMAN Project

Everyone should set something aside for those less fortunate than themselves. Our mission is to help people be more generous, more often. We just want to humanize humans.

01. Disintermediation

The technology of blockchain was expressly designed to work without needing a 'trusted' third party. This means that all transactions in the network happen directly from person to person, without interference.

Apart from this obvious financial gain, peer-to-peer transactions can lead to quicker response times in time-sensitive disasters such as earthquakes. Most significantly, disintermediation could provide access to financial and governmental services for people all over the world.

02. Transparency

The structure of blockchain has a strong democratic aspect. Over time, the history of transactions gets locked in 'blocks' of data, creating an unforgettable record of all the movements ever made.

Everyone in the network, no matter how many people are involved, can verify the order in which the entries are made. Checking the chain is like reading tree rings or examining fossils; the blocks show us records of the time.

03. Decentralisation

The last feature that is worth mentioning is the concept of decentralization. The distribution of information across a network of computers — instead of storing it in a centralized database — makes it nearly impossible to delete, add, change or steal sensitive information from the blockchain.

This transparency of transactions makes it much harder to act in ways that benefit participants at the expense of other participants, leading to a more democratic and inclusive system.

How Humanize Human Work?

Blockchain
for humanity.

Fundraising Project :

Project created by fundraiser, but verified by Humineze Human.

Humanize Project :

Collaboration project with partner, such as Binance Charity. Or the original Humanize project.

Our Human Pillars

Blockchain
for humanity.

Don't you want to see us help each other? Every \$HUMAN is valuable to others. Together, we can build a better world and humanize every human most simply.

Protect the Mother Earth

The health of our planet is our legacy to generations still to come.

Healthy Bodies and Minds

We believe it's a fundamental human right to have access to quality care and treatment regardless of socioeconomic status or geographical borders.

We are Equal

Breaking down barriers and building opportunities to ensure no one is left behind.

Stop the Poverty Gap

We envisage a world, where cryptocurrency is used to level the playing field and put an end to poverty.

Education for The Future

The children of today are the leaders of tomorrow. The education they receive will build the foundations of their actions.

How's *The Human Project* funding?

Blockchain
for humanity.

- 01. Corporate Partnership and Company Gift**
- 02. Digital Community Building**
- 03. Social Enterprise**

The Roadmap

Stay on our roadmap

Phase 1

- Build Community & Partnership
- Create Smart Contract
- Initial Promotion
- Presale on Pinksale
- Launching on PancakeSwap

Phase 2

- The charity added to library
- Coingecko Listing
- CoinMarketCap Listing
- Massive Promotion
- Partnership With Binance Charity

Phase 3

- Humanize Web App Developed
- Humanize Web App Launch
- Massive Promotion
- Tier 2 Exchange Listing
- 100 Humanize projection

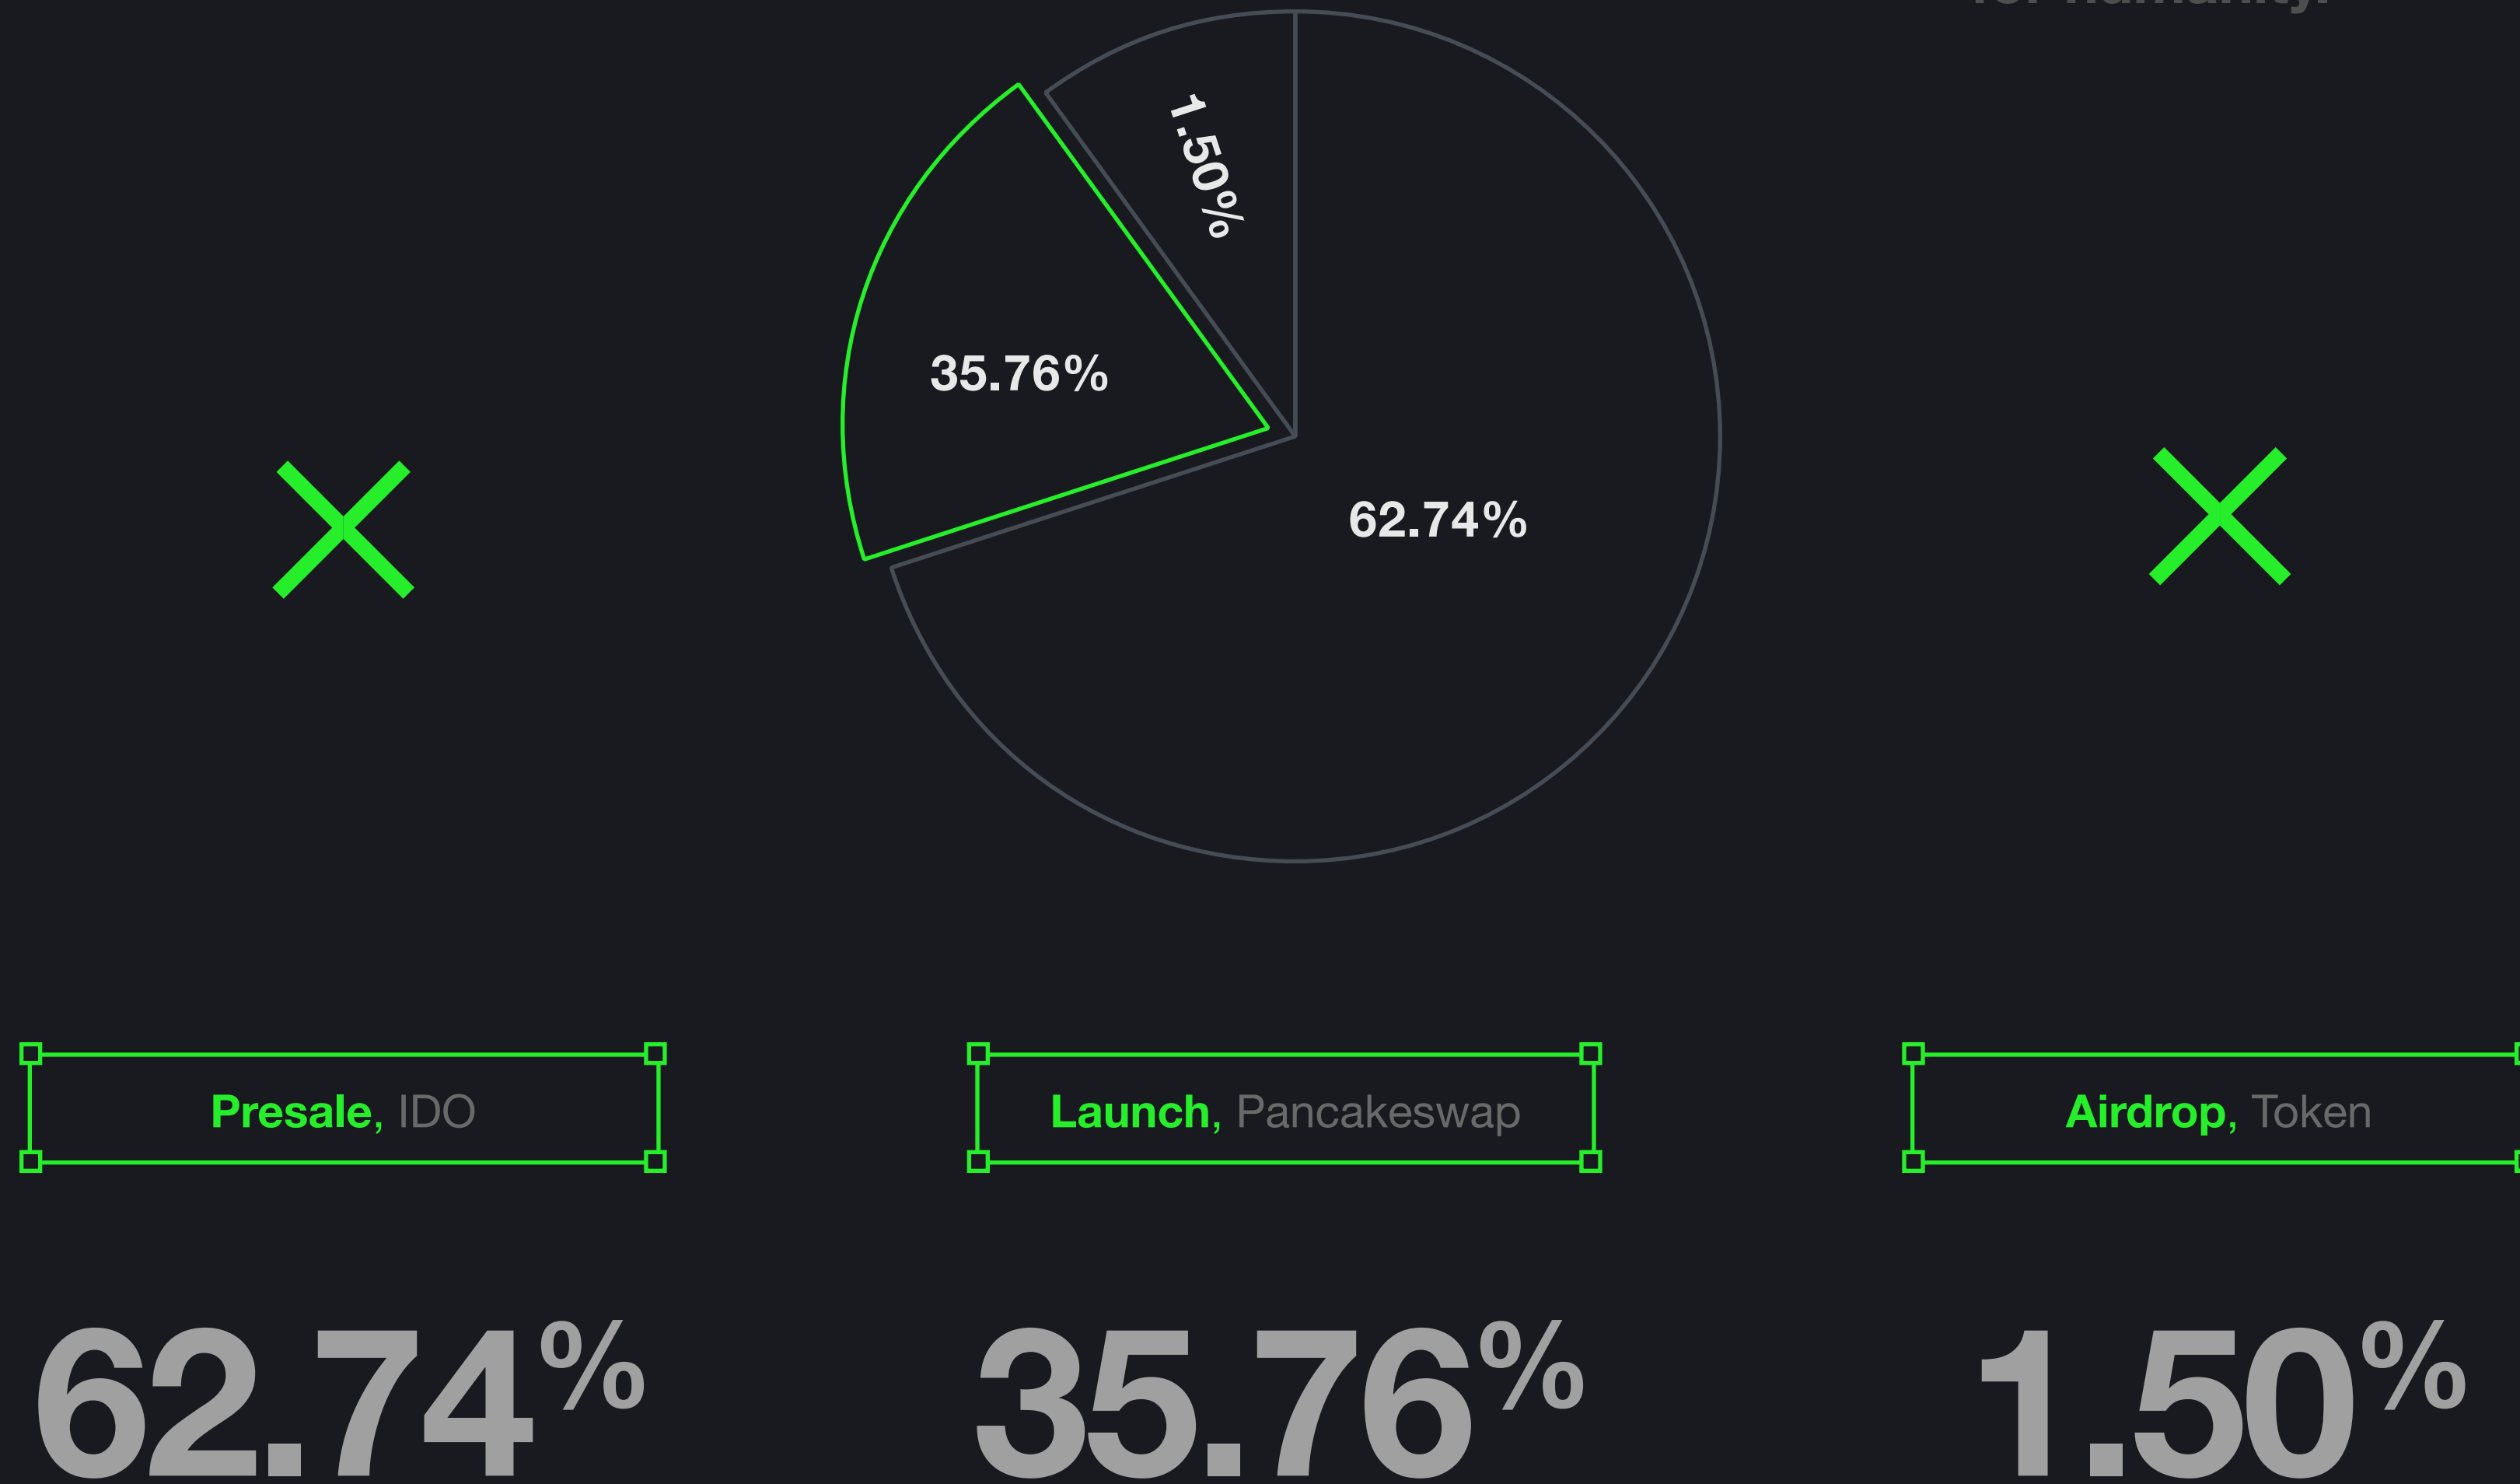

Phase 4

- Humanize Mobile App
- Tier 1 Exchange Listing
- Multichain
- 1000 Humanize projection
- The largest platform for Charity

We build perfect tokenomics to ensure all align between charity, token price, and holder benefit. Check our tax and tokenomics below and be a part of the revolutions.

The Tokenomics

Tax Distribution

Blockchain
for humanity.

Did you know **2% of our tax returns to the holder in BUSD?** And all tokens belong to the community.

Tax Model.

5%

To donate to Humanize Human platform, you need to have \$HUMAN. Why? Because we will earn tax 5% per transaction. Please check the detail of where this tax goes.

2% - Back to Holder - In BUSD

The more you hold \$HUMAN, the more you earn BUSD. 2% of our token return to the holders, HODL!

1% - Buy Back and Burn

1% is for buyback and burn. It's automatic and coded into our smart contract. It will decrease the supply over time, and maintain price stability.

1% - Marketing and Charity

Massive promotion is coming for the continuation of Humanize Human. Collaboration project with a partner, such as Binance Charity or the original Humanize project.

1% - Liquidity.

Beside buy back and burn, we also maintain the token price by adding to our liquidity.
