- X. Where to buy waxed leather wallet for men?

Leather wax with English name is Waxy Leather. In the simplest terms, wax leather is leather (processed) with technology and chemicals (usually Chrome Tanned Leather.

It will then be rubbed onto a layer of wax and depending on the purpose of the wax used can be thick or thin and there are many different types of wax, so the wax skin is divided into several types and it varies. The wax itself is more or less dry or wet, thick or thin ...

II. Is cow leather good?

The noticeable feature of waxed leather is its rough, translucent, and quite scratch-resistant surface. But in particular, this is considered a characteristic advantage in this skin.

It will be horizontal and vertical scratches on the surface, the marks may be noticeable. Not shiny, not pompous, beautiful wax skin in the eyes of those who understand it best.

The scratches will fade over the years but not permanently, the other marks create unique patterns, separate and not mixed.

When burning, you will hear the burning smell of biscuits, while most other skin types will burn up smell of burnt hair.

III. HOW MANY LEATHER SKIN TYPES HAVE BEEN?

Waxed leather is divided into two main categories: patent wax and mill wax

III.A SKIN SKIN

is the kind of skin that has been scrubbed, worn out the grain so it doesn't have any veins, no more skin defects, and the smooth surface. After that, depending on the purpose of use, waxed leather can be printed, printed, printed, printed, or smooth as the original.

III.B SKIN WAX MILL

is a type of skin with striae, including insect bites or scars, etc. The mill skin is usually selected from raw leather with a beautiful surface, the skin is not selected, will be transferred to face treatment. patent leather or more.

Basic distinction between natural grain leather and fine grain print is quite simple, looking at the overall skin and paying attention to the distribution of wrinkles of the mill leather because it is completely natural so it will be uneven, about the position. such as the groin, abdomen, armpits, part of the neck, the skin will have more striae, the deeper into the skin of the skin and the back, the skin will be less striated. And patent leather, the whole skin will be grain.

Waxed and waxed leather is further divided into wet and dry waxed leather. The name says somewhat about the characteristics of wet wax skin, this skin has a greasy surface, its skin is heavy, a lot of wax, so it is especially easy to scratch, the color of wet wax skin is often dark and fresh.

III.C DRYING SKIN

the surface is smoother, the skin is lighter, the amount of wax is less, the scratch is lower than the wet wax, the color of dry wax skin is not as fresh as wet wax skin. For both types of waxed skin, just scratched with a light touch will return to its original state. Wet and dry wax leather will also be divided into several categories.

III.D WET WAX SKIN

is further divided into two categories: crazy horse wax and oily wax. The listener often misunderstands crazy horse wax leather as horse skin. This is a type of cowhide favored by

many guys because of its beauty, dusty, toxic and strange. The surface of crazy horse wax leather is still rough, the color is very impressive. Besides, oily skin is less rough, the skin is glossy, but still rough and scratched.

Regarding dry wax skin, this is a common skin type but can easily be confused with nubuck skin.

because the surface is rough, evenly colored and unchanged, but it is more prone to scratches, a stiffer surface, and a distinctive wax smell. In dry waxed leather, there is a type called buck wax leather. This leather has a sharp, velvety velvety surface, resembles nubuck leather, but the effect is lighter and waxy in nature. Very little skin abrasion, strong absorbent surface. In addition, dry wax skin also has crazy horse leather. As well as the wet wax side, the dry dry horse wax skin also changes color, but the skin is lighter, the surface is rough but not hissing, feeling more smooth. Pull-up wax leather - a hybrid of wax and pull-up leather, resembles oil wax in luster, crazy horse wax in color change, and also prone to scratches. In many places, pull-up wax skin is also called oil wax because of their similar characteristics.

III.E DAIRY OIL

when affected, the color will still change but the surface is more smooth, the surface is smooth but still rough and easy to scratch. This type of skin still changes color, but not as much as crazy horse wax leather and is still very popular.

III.F LEATHER WAX NUCK

The name also partly tells the origin, this is a cross between wax and nubuck leather. This leather has a sharp, velvety velvety surface and feels like a nubuck leather, but feels lighter and is still waxy in nature. Because it is crossbred with nubuck leather, the skin is very little scratched, highly absorbent and often confused with nubuck leather. This leather is often used as a shoe to pair with jeans.

III.G WHAT IS PULL UP LEATHER

Waxed leather is also known as (pull up aniline leather), it is leather that is tanning according to Aniline method, then it is oiled or waxed, so it has the durability of Aniline leather but because it is covered with an outer layer so after a period of use the skin will be worn out and expose a brighter skin similar to the shiny streaks in places where it is rubbed a lot, and also make the wallet more likely to scratch.

To put it simply, waxed cowhide is a type of skin that people know by technology with a layer of chemicals, this layer of chemicals is usually Chrome soluble. After a thorough tanning process, the skin will be removed and rubbed into a layer of wax. Because the needs and purposes will be different, so many different types of wax skin will be created, and it will be different in the layer of wax that rubs up more or less, dry or wet, thick or thin ...

It can be said that the pullup leather is the most beautiful, most expensive skin of the pullup cow formed by: choosing the best piece of leather then dyeing, traditional aniline coating, then pull up by: wax crackle, savage and Finally, a protective layer on the skin.

III.H WHAT IS HORSE LEATHER?

Many people would think crazy horsehair is a type of horsehide. But not so, this is a type of cowhide so it can be called crazy horse wax cowhide. Cow skin is covered with a layer of wax called "crazy horse" (crazy horse). Wax helps skin become dusty more personal.

In the process of tanning, a special wax called Crazy horse is applied to the grain of cowhide.

Then, when the piece of skin is brushed, rubbing creates heat. This heat causes the wax to melt and melt away, creating a changing color and natural scratches on the skin.

IV. WHAT IS THE ORIGIN SOURCE OF CALLED SKIN CALLS?

Leather wax with English name is Waxy Leather. In the simplest terms, wax leather is leather (treated) with technology and chemicals (usually chrome) and then rubbed on with wax. Depending on the purpose of the wax used, the wax can be thick or thin and there are many different types of wax, so the wax skin is divided into several types.

To put it simply, waxed cowhide is a type of skin that people know by technology with a layer of chemicals, this layer of chemicals is usually Chrome soluble. After a thorough tanning process, the skin will be removed and rubbed into a layer of wax. Because the needs and purposes will be different, so many different types of wax skin will be created, and it will be different in the layer of wax that rubs up more or less, dry or wet, thick or thin ...

V. WHAT IS THE PRESERVATION OF LEATHER SKIN?

The durability of the product depends on the way the skin is stored, if you store it well, the waxed cowhide will promote its good use. If you do not know how to preserve skin, it will be worse than in the beginning.

For products made from waxed cowhide you should leave them in a separate location, avoiding the wax layer to stick to other objects. Should be kept in a ventilated place away from direct sunlight and moisture of the ground.

How to store it

For unfinished wax skin?

We preserve by separating the same type of skin from other skins to avoid the spread of color from skin to skin, the spread of wax from the waxed skin to the little waxed skin (the phenomenon of darkening of the skin).

Open the wax skin often and clean with a clean (dry) towel.

Leave wax in a dry place, avoid direct sunlight, avoid moisture from the ground, walls.

If the skin is moldy, spray the diluted glass with spray water and use a clean, spiral wipe to place it. Change towels when passing to a different location to avoid mold spread. Then let the skin air dry naturally without drying, without sun exposure (easily causing dry, brittle skin).

If the mold is heavy, it is necessary to treat both the back and the front with the above method but using a separate brush for the back.

For finished wax leather?

Preserving finished wax leather is basically the same as preserving finished waxed leather. But with the finished product, you should stuff the soft squeezed newspaper inside to absorb moisture, keep the shape.

Avoid getting into the rain, or getting water on the product, if it is wet, it should be dried and air dried in the house to avoid mold.

Clean and clean regularly to make sure your skin doesn't get moldy.

VB HOW TO CLEAN

If your skin is moldy, use a diluted glass spray, spray it, and use a clean, spiral washcloth at the mold location. Change towels when passing to a different location to avoid mold spread. Then let the skin dry naturally, do not dry or sun exposure (High temperatures will make the

skin dry, brittle). If the mold is heavy, it must be treated inside and outside with the above way but using a separate brush for the inside. Clean and clean regularly to make sure your skin doesn't get moldy.

For waxed leather shoes, you should stuff the soft squeezed newspaper inside to absorb moisture, keep the form. Avoid rain, or water on the product, if wet, need to be dry and ventilated to avoid mold.

For stains that are difficult to wipe with a dry towel you can use a brush and detergent, but only a few drops of detergent and have to dilute out. Then use a scrub brush gently to avoid discoloration. Try to try cleaning agents with skin first to avoid unwanted effects on wax leather products.

BECAUSE. WHAT ARE THE ADVANTAGES AND DISADVANTAGES OF SKIN SKIN VI.A ADVANTAGES:

On the outside you can easily see that wax skin is a type of skin that expresses personality because of the dirt and always has the ability to bring a specific substance to a product you use. Wax leather is durable, especially the more it scratches it, the more it looks beautiful, so it can bang freely without the fear of making the product you wear. Another interesting feature is that the wax skin has a very clear ability to water (meaning that the more the antique is used, the better it is) because the inos are easily scratched, leaving many scratches on the water. more glossy and hardier

VI.B DISADVANTAGES:

Because it is easily scratched as mentioned above, many people will not like it. Compared to other types of skin wax skin will look quite old due to the wax on the surface. In addition, this type is quite prone to mold if exposed to humid environments and do not know how to preserve. A little more because the wax on the outside, this type is quite easy to stick to the clothes, although washing is still going, but quite a lot of people pay attention to that. Waxed skin makes it difficult to eat edge paint (in the long run, it is easy to peel off the paint), so wax skin is usually left on or gummed.

VII. WHAT IS THE PROCESS OF SKIN SKIN AND HOW IS IT DOED?

- Leather is tanned, then stained
- Then spray onto the skin surface of a traditional aniline dye for even coloring.

There are traditional methods to create pull ups, shrunken grain (grain shrinkage), savage (wild), wax crackle (stretch marks).

As a final step, sometimes a light protective layer (like a wax) is sometimes applied to make the skin more resistant to dust.

- Pull Up skin if covered with a layer of color will make the skin changed and no longer good.

VIII. HOW TO KNOW WHAT WAX SKIN IS COMPARED TO OTHER SKIN TYPES

- Light scratches on the surface to see if the skin leaves a lighter colored mark or not. If you feel the scratches are lighter, then 90% of them are Pull Up skin, however, the remaining 10% are Nubuck skin because there are several skin types with similar characteristics.
- The other way is to wet your finger and rub gently on the skin to see if it darkens or not. If it's a Pull Up skin, you will notice that when it is wet, it will be dark, but when it is dry it will not be.
- In addition, you can also apply a protective cream like shoecream to the surface of the shoe

and let it dry. If the cream is dry and you don't see any marks then it's a pullup skin.

IX. APPLICATION OF SKIN SKIN IN REALITY.

IX.A WAX LEATHER PLACE - WHEN LEVELING UP

In fact, among the countless leather lines, wax leather has always easily captured the hearts of the majority of users - especially with the high-grade wax leather wallet product line. Dusty, careless, and arrogant, all create a very unique wax skin.

Wax skin often has a distinctive wax smell compared to other skin types and has an open pore structure. The soft, smooth skin and the biggest plus point is that the longer you use it, the better it will look.

This makes it easy to relate to each person's life. Each person is born with different starting points, experiencing many waves. Everything will pass but the memory is permanent, never lost. More and more waves, people become more mature and complete.

IX.B HOW TO PRESER WAX LEATHER

A small drawback of wax skin is that it is very easy to spread color to other objects, so the best way we will preserve the wax leather wallet separately, restricting the wallet to near other items, especially clothes.

To keep the wallet looking fresh, use a clean, dry cloth to wipe away the dirt on your skin after use, which will not only make the leather on the wallet brighter but also prevent the wallet from sticking to it. After a long time, it will be difficult to clean later.

X. Where to buy waxed leather wallet?

If customers are in need of business of cheap simili belts
